We publish below the details of the accounts of the BIRD-HEIGERS group of jute mills for the half-year ended last September. During this period trading conditions continued to be difficult. The directors say that "during the half-year under review simultaneous business in standard constructions could only be concluded at a loss and the earning of even gross profits in the industry is dependent on taking correct speculative views as to the course of raw jute and goods prices."

They further comment that against the above background, shareholders may be interested to know that the approximate cost to the Bird/Heigers group of jute mills of the benefits, apart from wages and dearness allowance now granted to jute mill labour, is as follows:

Statutory leave	11,00,000	per year
Festival leave	9,00,000	" "
Sick leave	3,00,000	" "
Provident fund	15,50,000	" "
Retiring gratuities	5,00,000	" "
State insurance	2,50,000	" "
Total	46,00,000	" "

In addition to the above, the latest Tribunal Award has increased the wages bill by approximately Rs. 14,00,000 a year.

"The desirability of improving the standard of living of jute mill worker is not in question but,

with production costs thus substantially increased, the difficulties facing the industry in working at a profit under current market conditions will be readily appreciated. It should also be pointed out that the group's annual charge for depreciation is now approximately Rs. 35 lakhs. With growing competition from Pakistan and elsewhere, it would appear likely that the next few years will prove an extremely difficult period for the Indian jute mill industry," the Directors comment.

The ROHTAS INDUSTRIES, LTD. earned a profit of Rs. 83.77 lakhs for the year ended last October, against Rs. 66.20 lakhs in the previous year. Bringing in Rs. 4.47 lakhs there is Rs. 88.24,346. General reserve gets Rs. 15 lakhs (same) and taxation reserve Rs. 20 lakhs (Rs. 25 lakhs). The ordinary dividend is the same at 15%, leaving a carry-forward of Rs. 4,91,624.

The directors say that the programme of paper factory modernisation and expansion is proceeding satisfactorily. Shipments of the two Yankee paper machines have been made and the glazing cylinders are expected to arrive by the end of March this year. A new cutting machine of 10,000 tons output per year is arriving this month and is expected to go into operation by the end of this year.

The production of clinker from the second kiln has been satisfactory while that from the first kiln did not yield the anticipated results because the machinery supplied for modernisation had to be altered several times. The decline in the total production of cement has been due to these operational difficulties and consequent interruptions. The position is, however, improving.

The expansion of the caustic soda plants to meet the increased requirements of the pulp and paper factories was taken up. The Vanaspati factory worked in full swing and its products are finding improving demand.

Providing Rs. 4.95 lakhs (Rs. 1.75 lakhs) for taxation and Rs. 1.03 lakhs (Rs. 1.07 lakhs) for depreciation, there is a profit of Rs. 6.89 lakhs of ANGLO BROTHERS, LTD. for the year ended last August, against the previous year's profit of Rs. 1.90 lakhs. Bringing in Rs. 2,39,798 and making other adjustments there is Rs. 9,43,961. The dividend has been declared at 20%, including a bonus of 7½% against 12½%. General reserve gets Rs. 1.75 lakhs after transferring an equivalent amount from reserve for post-war research which is no longer required. The carry-forward is Rs. 3,43,961.

BETTER SENTIMENT IN BOMBAY

BANK RATE RUMOURS HINDER PRICE RISES

EXCEPTING occasional minor dips, following settlement difficulty in Calcutta and the increased U.K. bank rate, equity prices on the Bombay stock market have improved this week on short-covering and replacement buying. Good corporate news helped sentiment. Reports that the profits of cotton mills for 1955 will show an improvement assisted in raising prices of textile shares. There is also a general feeling that the uncertainties of the budget have been substantially discounted at current prices.

The decision on the methods of issuing Tata Iron's rights shares has been welcomed, and as a result the price improved from Rs. 224 to Rs. 225-8. Indian Iron hovered around Rs. 32-10 due to selling pressure from Calcutta. Premier Construction improved to Rs. 177-8 on higher distribution. Tata Locomotive were steady around Rs. 140-8 on the announcement of expansion plans. Mahindra and Mahindra were included in the cash list and quot-

ed Rs. 12-2. Larsen and Toubro rose to Rs. 12-2, in active trading on dividend hopes. Alcock Ash-down climbed to Rs. 370 on interested buying.

Some smart rises occurred in mill shares. Bombay Dyeing, for instance, improved from Rs. 516-4 to Rs. 523-2. Century were higher at Rs. 483 on dividend prospects. Indu Ordinary were quoted at Rs. 12-8-6, as were Svadeshi at Rs. 211. Simplex made Rs. 195.

Interest in banking shares was subdued. Central making Rs. 47-4, India Rs. 153 and United Commercial Rs. 49-8. Among insurance shares, New India came to hand at Rs. 39-12 and Oriental were a shade higher at Rs. 3,969.

Selective buying was seen in the miscellaneous group. Tata Chemicals were supported at Rs. 16-8, as were Scindia Steamship at Rs. 16-5-6 on freight increase prospects. Walchandnagar firmed up to Rs. 243-2 in response to the higher dividend. Belapur Sugar lacked interest at Rs. 213 on fears of an excise levy. Bombay-Burmah were quoted at Rs. 532-8 due to lower tea prices. National Rayon rose to Rs. 220-8 on bear-covering. Associated Cement moved around Rs. 202-12 and the news of the rights issue was awaited with keen interest. Hindustan Motors were available at Rs. 9.

There was a flutter in shares of electricity undertakings on reports that the industry has obtained a favourable verdict from the Central electricity authority on the question of paying dividends at more than 3 percent, even in cases of arrears of depreciation. As a result, Ahmedabad improved to Rs. 104-1, Tata Hydro to Rs. 132 and Tata Power to Rs. 1,365.

THE WEEK'S TRANSACTIONS

(In the following list of stocks and shares in which transactions have taken place during the past week the figures indicate: Opening Quotations—Highest for the week—Lowest for the week—Closing Quotations—Quotation for the Corresponding Closing Date a Year Ago, the last named being shown in parenthesis and will not be given where such a quotation is not available).

New Delhi

STATE CORPORATION FOR LIFE BUSINESS

DEFINITION OF PRINCIPLES

FOR COMPENSATION

(FROM OUR NEW DELHI CORRESPONDENT)

PARLIAMENT commenced its Budget Session during the week. Two Bills, one replacing the Life Insurance Nationalisation Ordinance and the other seeking to establish a Life Insurance Corporation were introduced. The second Bill also indicated the principles for determining the compensation to be paid to the life insurance companies which are being taken over by the Government. For dealing with disputes that might arise in the process of nationalisation, the Bill provides for the constitution of a Tribunal which will be presided over by a judge or an ex-judge of a High Court or the Supreme Court. The Life Insurance Corporation will be established on a date to be announced by the Government with an original capital of Rs. 5 crores which will be provided by the Central Government. The Corporation will have the sole monopoly of carrying on life insurance business in India and on and from the appointed day any certificate of registration under the Insurance Act held by any insurance company shall cease to have effect after a certain date, to be appointed by the Government, in so far as it authorises him to carry on life insurance business in India. Payment of sums assured for the policies issued by insurance companies, the liabilities of which have been vested in the Corporation under the bill, shall be guaranteed by the Central Government.

The Corporation shall consist of not more than 15 members. Before appointing a person as a member, the Central Government shall satisfy itself that the person to be appointed has no such financial or other interest as is likely to affect prejudicially the exercise of his functions as a member. A member who has, directly or indirectly, interest in a contract made or proposed to be made by the Corporation shall not take part in any deliberation or discussion of the Corporation with respect to that contract. The general superintendence and direction of the affairs and the business of the Corporation will be entrusted to an Executive Committee which may have a Managing Director as a whole-time officer. Zonal offices of the Corporation will be established at Bombay, Calcutta, Delhi and Madras and subject to the previous approval of the Central Government the Corporation may establish such other zonal offices as it thinks fit.

The duty of the Corporation will be to carry on life insurance business whether in or outside India. Its other functions include capital redemption business, annuity certain business or reinsurance business in so far as such reinsurance business appertains to life insurance business. In the discharge of any of its functions the Corporation shall act, as far as possible, on business principles. On the appointed day the assets and liabilities of existing insurance companies carrying on life insurance business in India will stand transferred to the Corporation, and all contracts, agreements, etc. which were in effect before the appointed day and which have been so transferred will remain in full force. Suits, appeals or other legal proceedings which have been pending will similarly be continued in the name of the Corporation. From the appointed day, every whole-time employee of an insurance company whose business has been transferred to and vested in the Corporation shall become an employee of the Corporation on the same terms and conditions as he enjoyed before transfer. The Central Government, however, retains the right, for the purpose of rationalisation, to reduce pay scales or alter the terms of service of the employees.

For settlement of disputes arising in the process of nationalisation, the Act provides for the constitution of a Tribunal consisting of three members appointed by the Central Government, one of whom shall be a person who is, or has been, a judge of a High Court or has been a judge of the Supreme Court. He will be the Chairman of the Tribunal. The Bill provides that the decisions of the Tribunal may be enforced in any civil court as if it were a decree by that court. The Tribunal will take action on the cases referred to it by the Corporation where the insurance companies whose business has been transferred to the Corporation had acted prejudicially within two years before 19th January, 1956. These include transactions completed "without consideration" or for "inadequate consideration" or for "excessive consideration." The Tribunal will also have to decide on disputes concerning compensation to be paid to the insurance companies.

The principles governing compensation have been defined in the bill as follows:

"The compensation to be given by the Corporation to an insurance company who has allocated to shareholders any share of the surplus as disclosed in the abstracts prepared in accordance with Part II of the fourth Schedule to the Insurance Act in respect of the last actuarial investigation relating to his controlled business as at a date earlier than the first day of January 1955, shall be computed in accordance with the provision contained in paragraph 1 or paragraph 2, whichever is more advantageous to the insurer.

"Paragraph 1. Twenty times the annual average of the share of the surplus allocated to shareholders as dis-

closed in the abstracts aforesaid in respect of the last two actuarial investigations as at dates earlier than the first day of January 1955."

"Paragraph 2.

Ten times the annual average of the share of the surplus allocated to shareholders as disclosed in the abstracts of aforesaid in respect of the last two actuarial investigations as at dates earlier than the first day of January, 1955, plus the paid-up capital or assets equivalent thereto or, in the case of a composite insurer, that part of the paid-up capital or assets equivalent thereto which has or have been transferred to and vested in the Corporation under this Act less the amount, if any, of expenses or losses or both capitalised by the insurer for the purposes of Form A in the Schedule to the Insurance Act."

"For the purpose of paragraphs 1 and 2 where an insurer has allocated to shareholders more than 5 percent of any such surplus as is referred to therein, the insurer shall be deemed to have allocated only 5 percent of the surplus, and where an insurer has allocated to shareholders less than 3 percent of any such surplus, the insurer shall be deemed to have allocated 3 percent of the surplus."

To other insurance companies which are not covered by the conditions stated above, compensation will be paid taking into consideration the assets and the liabilities of the companies as they stood on 19th January, 1956. For an insurance company which has no share capital or has no share capital on which dividends or bonuses are payable or an insurance company which is an unincorporated body of individuals, compensation shall be in the form of an addition at the rate of rupee one per thousand in respect of the sum assured (excluding bonuses) under each "with profit" policy.

The Bill provides for the issue of directions to the Corporation by the Central Government on matters of policy involving public interest and lays down that the Corporation shall be guided by such instructions. If any question arises whether a direction given by the Central Government relates to a matter of policy involving public interest or not, the decision of the Central Government will be final. The Bill also indicates the types of insurance to which its provisions will not apply. These include the Post Office Life Insurance Fund and any schemes in existence in which the payment of the money is assured by the Government on account of certain compulsory deductions made by

wool, bristles and lemon-grass oil. The scheme was proposed to be extended to other commodities like sandalwood oil, spices, turmeric, vegetable oils, groundnuts, hides and skins.

Labour Policy in the Second Plan

A meeting of the Panel for Labour will be held here on 20th February, the Planning Minister, Mr. Guizari Nanda, presiding. The Panel, it will be recalled, has been set up to advise the Planning Commission on the formulation of the labour policy for the second five year plan. At its last meeting, the Panel set up three sub-Committees, whose reports, will be considered next Monday. The following are some of the important recommendations of the sub-Committees:

Trade Unions:

It was agreed that the laws relating to trade unions and industrial relations should be revised to give effect to the following recommendations of the sub-Committee. It was agreed that the number of outsiders on the executives of primary unions should be reduced from 50 percent to 25 percent or to four, whichever was higher. Persons who had worked for at least five years in the same industry should not be treated as outsiders, but the number of such persons on the executive should not exceed

five percent of the strength of the executive. Such persons could be allowed in addition to the number prescribed for outsiders.

It was agreed that five office-bearers of each primary union should be protected against victimisation. In the case of federations the number might be raised up to ten. Rules or directions should be issued to regulate the procedure to be followed by the prescribed authority for granting or withholding permission. Applications for permission should be disposed of expeditiously. There should be adequate provision for dealing with allegations of victimisation of workers other than those protected.

Compulsory Adjudication and one Union for Each Industry:

A view was expressed that compulsory adjudication had undermined the strength of trade unions and that trade unions were generally weaker today than they were under the old Trade Disputes Act, which contained no provision for compulsory adjudication. If compulsory adjudication were given up, 90 percent of the disputes would, it was said, be settled voluntarily through conciliation and arbitration. Ten percent of the disputes might not be so settled, but there was no harm in leaving them

to the parties involved except in a grave emergency when emergency measures could be enacted. There was also a suggestion that the principle of compulsory adjudication should be abandoned for a period of three years and the results watched.

Association of Labour with Management:

The Committee agreed that the association of labour with management should be real and effective and not formal. The Committee felt that instead of the appointment of worker directors, it might be better to create, in the first instance, councils of management as suggested by a member. The council of management should consist of three directors and three workers' representatives. The management should supply full information on all subjects to the council of management, which would be entitled to discuss all matters pertaining to the establishment. The scope of the discussions in the council of management would be far wider than that in a works committee. Simultaneously the management should also make adequate arrangements for giving workers administrative power and responsibility in such matters as welfare activities, canteens, health, education, safety etc. The budget for such purposes would be settled and placed at the disposal of a committee of management. This would be done without transferring the legal responsibility of the management for safety and welfare under the various enactments. Matters appropriate for collective bargaining would be excluded from the scope of the council of management. It was agreed that representatives of both employers and workers should draw up a detailed scheme on the lines mentioned above. To begin with, councils of management should be set up in large establishments where trade unions were sufficiently well-organised. The workers' representatives should be elected by the entire establishment and not by the members of the representative union only. It was felt that a further meeting would be necessary to give concrete shape to these ideas. Meanwhile members were requested to consider the suggestions and to send in their views at an early date.

It was agreed that there should be a standing machinery for the implementation of awards and that such machinery should be effective. The precise details should be worked out having regard to the new set up of labour courts and tribunals envisaged in the amendment Bill now before Parliament.

Discipline:

The principle that adequate steps should be taken to discourage illegal strikes and lock-outs and go-slow tactics was accepted. It was felt that the details of the provisions might require further scrutiny.

Draft of New Industrial Policy

A small Committee composed of the various Secretaries dealing in economic affairs—Messrs. Bhattacharyya, Jha, Moon, and Tirloksingh—has been busy drafting the new industrial policy for the consideration of the Union Cabinet. The Committee, among other things received a note from Professor P. C. Mahalanobis, urging that the Government should have the right to enter any field of industrial activity and should progressively enter such fields of activity which were largely profitable and, as such, could enable the Government to finance development.

Bonus for Shipping

It was disclosed in Parliament that the Government of India has sanctioned Rs. 187.20 lakhs as bonus, carrying four percent interest, to Indian Shipping Companies during the three years ending 31st March, 1956 to acquire eight ships for the coastal trade. During the same period Rs. 194.22 lakhs 24 percent interest, were sanctioned for acquiring 20 ships for the overseas trade. Of the 20 ships for the overseas trade, seven have already been delivered, three will be delivered by the end of 1956, another three by March 1957, two by June 1957 and one by June 1958. The total tonnage of 28 ships is placed at 152,939; including 23,382 GRT for coastal trade.

Indo-Japanese Trade

Further enquiries confirm earlier reports that India is not prepared to sacrifice its power to safeguard Indian industries against unfair competition from Japan. One formula sought Japan's agreement that it would not seek redress under the G.A.T.T. in the event of India taking steps to safeguard its interests against Japan's dumping of goods. This did not meet with Japan's approval. Under the second formula, Japan would have the right to seek redress of G.A.T.T. after India had taken action against the import of Japanese goods, which, in India's opinion, Japan was selling below their cost. This formula likewise remains unacceptable to Japan.

Criticism of Machine Tool Factory

A reference, it will be recalled, was recently made by the Commerce and Industry Minister to the comments made on the working of the Government Machine Tool Factory by the Rolls Royce Team, which had come out to India in connection with the Aero-engine Project. The Rolls Royce Team, it is learned, had observed that "although considerable expenditure has been incurred in equipping the factory with high quality machine tools, there is a serious deficiency of skilled labour and, in consequence, many machine tools are lying idle whilst the utilisation of others is on the average very low." Mr. Krishnamachari's remarks were in defence of the British expert Mr. Skaife, who had similarly criticised the Machine Tool Factory.

London

FISCAL MEASURES TO REDUCE TRADE GAP

BANK RATE HIGHEST IN 25 YEARS

(FROM OUR LONDON CORRESPONDENT)

THE January foreign trade figures came as a shock, for they demonstrated that the credit squeeze is proving inadequate to maintain the country's economic balance, let alone staving off the crisis which has been threatening throughout the past year. Exports, in spite of keen competition from Germany and other Continental countries, are still being well maintained and, including record re-exports of £14.2 million, totalled £272.1 million. That is one percent less than the average for the fourth quarter of 1955, but is still 6½ percent above the average for the whole of that year. Unfortunately, imports reached a new record at £346.3 million, which is 7 percent higher than the average for the whole of 1955 and 3½ percent higher than the average for the fourth quarter. The trade gap widened to £74.2 million, which takes us back almost to the worst deficits of the first half of last year. The gap was £12.1 million more than the monthly average for the fourth quarter of 1955 and just over £2 million larger than the average for the whole year. What is more, the usual seasonal drop in shipments to Canada brought exports to the vital dollar countries down to £26.1 million, or 15½ percent below the monthly average for the fourth quarter of last year.

That is the position after a year during which the Government has been endeavouring to stimulate exports and restrain imports. Obviously there is something lacking in the methods it has adopted, and equally obviously other means must be introduced quickly to halt the deteriorating trend, more especially as it was engendering a move against sterling on the exchange market. Any anxiety about Mr. Macmillan postponing further action until April has been dissipated. The City anticipated early action and has not been disappointed. On Thursday came the expected raising of the Bank rate to 5½ percent—to the highest level for the past 25 years—and an announcement by Mr. Butler that the Chancellor of the Exchequer would make a statement in the House of Commons the following morning of further measures to be taken to meet the situation. These will be debated on Monday and Tuesday on a Government motion to approve them, but the Opposition is tabling a censure motion.

Anti-Inflation Battle

There was no doubt whatever that Mr. Macmillan meant business when he made his announcement on Friday. "We must all join in the battle against inflation," he said, and proceeded to indicate that that was indeed to be the case by announcing reductions in the bread and milk subsidies so that these commodities are to cost a penny and a halfpenny more, respectively, a pound and a pint. He rejected the Socialist ideas of physical controls, such as building licences and restrictions of imports, indicating that he proposed to continue the monetary measures already introduced and to strengthen them further. The raising of the Bank rate was only the first step. A further tightening up of hire purchase arrangements is the increasing of down payments to a minimum of 20 percent where it is now 15 percent and 50 percent where it is now 33½ percent, while certain specified items are to be controlled still further by 50 percent down payments and maximum repayment periods of two years. With regard to cutting Government expenditure, Mr. Macmillan gave brief details of the Defence and Civil estimates, which total £1,499 million and £2,481 million, respectively, or increases of £5 million and £112 million over the original estimates. Aggregate expenditure was about 3 percent in excess of demand over a year ago, which in view of the higher costs, actually represented a fall in terms of demand on labour and materials. The credit squeeze to reduce capital investment and consumption must be intensified, and among measures which would help the rise in interest rates the Chancellor announced the suspension of the investment allowance and the return of the former initial allowances in force in 1953, save in the case of definite contracts already placed and expenditure on the construction of ships and on scientific research.

As regards the cutting back of Government expenditure, Mr. Macmillan said the subject was under constant examination. The nationalised industries, he said, had agreed to reduce their programmes by just under £50 million, and capital expenditure financed direct by the Government would be reduced by more than £20 million. The Post Office is to save £5½ million. Home Defence £10 million by restricting storage facilities and stock-piling and new capital projects for the new towns would be deferred as far as possible.

Restrictive Practices Bill

The Government's proposals for curbing monopolies were made known in the new Restrictive Practices Bill, which follows broadly the outline already forecast in an earlier despatch. It takes a course between the majority and minority reports of the Monopolies Commission on the range of practices referred to it. It does not debar the range of practices illegal, as proposed by the majority, but it applies to all known restrictive practices affecting production, processing and supply of goods, including common prices

and level tendering. It goes further than the minority by insisting that the onus of justification must rest on the parties to any agreement. The establishment of a judicial procedure comparable to that of the High Court, will satisfy the majority of Conservatives, who are suspicious of administrative tribunals. The provision of a summary procedure, whereby established precedents can be applied to subsequent cases, is an answer to the expected Socialist criticism that the procedure will be laborious and slow. The powers of the Registrar to discover agreements are formidable. They are clearly aimed at the possible resort to clandestine understandings to evade the provisions of the Bill. Penalties for offences against the registration provisions are severe. The Bill specifically states that individuals, such as directors, managers or secretaries of companies, may be personally liable. Policy with regard to the order in which various classes of agreements are dealt with is kept in the hands of the President of the Board of Trade. He will therefore be open to questioning in Parliament on the exercise of these powers. Otherwise, the Bill takes the whole question of restrictive practice outside the political field.

It is hoped that the Bill will be passed by July, but in spite of the Government's efforts to meet possible objections in advance the measure will undoubtedly prove controversial. The main criticism at present is directed against the presumption that all agreements are against the public interest and must be justified, and in some quarters against the inclusion of price-maintenance arrangements, while on the other hand the seven grounds for justification of such agreements are looked upon as providing too many loopholes for evasion or delay in compliance. To justify an agreement the court must be satisfied that: (1) the restriction is reasonably necessary to protect the public; (2) removal would deny the public substantial and specific benefits; (3) the restriction is reasonably necessary as a defence against a large firm in the same trade, itself resorting to restrictive practices; (4) it is necessary to enable the parties to negotiate fair terms with others who control a preponderant part of the trade; (5) the restriction is essential to a certified redundancy scheme; (6) removal of the restriction would be liable to cause widespread, serious and persistent unemployment or damage the export trade; (7) the restriction is reasonably required to maintain another restriction found not to be contrary to the public interest.

Finance for Indian Steel Works

The financing of the proposed new steel plant in India advised by the British mission has been the subject of considerable negotiation lately, but this is now reported to have reached a decisive, though not necessarily final, stage. The cost of the project, originally estimated at between £80 million and £85 million, has now been raised to nearer £110 million as a result of the recommendations of the consultants to the Government of India for a larger plant having some reserve capacity. As the structural steelwork and the productive equipment are to come from abroad, it looks as though about half this finance will have to be raised externally. The raising of a loan of £50 million on the London market under present circumstances—with the credit squeeze intensified and interest rates what they are now—would be not only difficult but expensive, and though the prospect was considered at one stage it is now understood that the idea has been dropped.

It seems likely that the British supplying companies will offer to raise, with the backing of the banks, something like £11 million of medium-term credit. The British Government may be willing to grant a credit of perhaps £18 million itself. Interest rates would perhaps not be fixed for the whole period of the credit but based on bank rate. The balance of £23 million to £25

million would be met in the first place from India's sterling balances in London, which are at present earning the Treasury bill rate of just over 4 percent. When the present monetary squeeze is over and interest rates have fallen back again, the possibility of replacing these sterling balances by a loan issue may be considered. If agreement can be reached on some such scheme a decision to place the contract in this country may be expected to follow in the near future.

Plain Talking to Lancashire

Lancashire got some plain speaking from Mr. H. E. Pardoe, the retiring president, at the annual general meeting of the Manchester Chamber of Commerce, and it will be taken to heart for Mr. Pardoe is also the chairman of one of the largest textile exporting firms in the city with a long experience of the industry's problems. He criticised the entire industry's conduct, censuring the Cotton Board, the trade unions, spinners, and manufacturers alike for shortsighted and misguided policies. Individually, the various sections and organisations had shown themselves restrictive and unenterprising, and collectively they had joined together in a chorus of gloom which had undermined confidence further and further, and given comfort and encouragement to Lancashire's competitors. He quoted average profit and dividend figures in the spinning sector over the past three years to show that the talk of a slump was hardly justified, especially as they arose from the use of only 65 percent of capacity. "Just what this policy of high profits on a small turnover has cost the whole industry it is impossible to estimate, but it is certain that the industry has lost quite a lot of the 30,000 operatives who have left it during the year through this unfair and shortsighted policy." Turning to the price maintenance scheme operated by the Yarn Spinners' Association he said that double the suggested five-year period for the scheme had passed and £3 million of taxpayers' money had been provided for re-equipment, with negligible results. "Surely, having regard to these facts and the present very restricted size of the industry, it really is time a little competition was introduced into the official policy of the industry, and competitive efficiency encouraged where at present only a system of price management obtains."

Mr. Pardoe's remarks on the rôle of the Cotton Board in the past and what it might do in the future are particularly interesting, seeing that the five-yearly review of its activities is now being made by the Board of Trade. He felt that the organisations which determined the industry's policy had overplayed their hand on the subject of cloth imports. One had to admire the ability of the Cotton Board to produce a unified voice on this subject for so long, but he felt that a more convincing case might have been made out if a minority view had sometimes been expressed. Speaking of its future he said: "I hold the view that unless the independent sectional organisations of the industry are prepared to use the Cotton Board more for formulating their policies than as a medium for propagating them, the benefits which can arise from such an organisation must be so restricted as to cause the question of its continuance to be seriously considered. I would like to see it as the champion of private enterprise and a bulwark against all forms of restrictive practices, whether indulged in by labour or employers. This is a valuable task which the Board could carry out."

Brevities

Mr. L. J. Ralli, a member of the staff of Ralli Brothers, has been appointed to the Board of Directors. Mr. D. F. Campbell has been appointed Deputy Chairman of the Indian Steelworks Construction Company.

Tramp shipping freights, which rose last year by 22 percent, were still rising in January. For that month the index of the Chamber of Shipping of the United Kingdom was 144.3, compared with 140.1 in December, 1955.

PROSPECTING • DRILLING • PRODUCING • REFINING

(FROM OUR MADRAS CORRESPONDENT)

A similar anomaly is found in the plan's optimistic expectation of employment opportunities for the new entrants to the labour force and of relief of under-employment in agriculture and in village and small-scale industries. The Commission's views on agrarian reforms, says *The Hindu*, are calculated to create a new and large class of unemployed out of the land owners. As for the tenant, though he will benefit at the expense of the owner, that will not eliminate the problem of under-employment for him. The unattached agricultural labourers

Extension of the Public Sector

As for heavy machinery, the Government's anxiety to reduce the country's dependence on imports is understandable. But there are obvious dangers in an indiscriminate expansion of heavy industry, without regard either to the possible

Taxation Measures

The Planning Commission's statement that "for the community as a whole, the basic decision is as to the quantum of investment to be undertaken" and that "given this decision, the system has to put forth the 'surpluses needed', comes in for sharp criticism in another *Hindu* editorial dealing with resources for the plan. Instead of starting from the basis of a fairly accurate estimate of available resources, both domestic and foreign, the plan has proceeded on a pre-determined programme of outlay. While all the debates since November have not revealed one new source of funds undiscovered by Professor Mahalanobis, there has been an increase in the outlay proposed by him by Rs. 500 crores, with the result that the overall deficit in resources amounts to as much as one half of the expanded outlay of Rs. 4,800 crores. The paper continues that Rs. 800 crores of external aid (representing four times the assistance received for the first plan) expected by the Commission might not materialise. "A four-fold increase in external aid, after the Government's strident declaration about its socialist objective and its intention to nationalise insurance and sectors of private trading, is either a juvenile piece of make believe or a pious expectation that the contentands in the 'cold war' will outbid each other in coming to the rescue of India's democratic socialism." But the least dubious while certainly the most dangerous item in the draft plan's resources budget is the provision of Rs. 1,200 crores under deficit financing.

Deficit Financing

The dangers of deficit financing came in for some close examination in Dr. B. R. Shenoy's fifth lecture in the Sir William Mayer series under the auspices of the Madras University. Dr. Shenoy referred to the argument that large deficit financing since Independence had not produced the disaster which theory had predicted and that far from prices soaring, until recently, the problem had been to prevent a price decline in the agricultural sector. This argument, the lecturer said, ignored the fact that the inflationary impact of large deficits had been largely neutralised firstly by deficits in international payments and, secondly, by a reduction in the public debt holdings of the banking system (including the Reserve Bank), both of which had the effect of withdrawing money from circulation. In the early part of this period, owing to the inherited liquidity of war finance and large balance of payments with the public the net financing activity of commercial banks was moderate. This situation had been changing rapidly in the recent past.

With the comparative price stability of public debt and the increase in its buyers, commercial banks had been, once again, net buyers of Government securities. Thus, the moderating influences had been replaced by expansionary forces. During the past 24 years, money supply had expanded by about Rs. 335 crores, the increase in the past year alone being Rs. 200 crores. This was beginning to have its price effect. The fact that prices continued to fall until the middle of 1955, notwithstanding the expansion in the money supply, was due to certain special factors. These two years (1953-55) experienced heavy increases in agricultural output, chiefly foodgrains. There was also a record increase in industrial output. But the rate of expansion in the money supply outpaced the rate of increase in output, even after allowing for these special factors, beginning from about the middle of 1955. Dr. Shenoy concluded that deficit financing hereafter might conceivably produce an accentuated effect upon money supply and might cause an accelerated rise in prices.

Need to Attract Foreign Capital

Mr. D. C. Kothari, in a recent speech, said that if with the nationalisation of insurance companies, banks were also nationalised, the Government would become the single largest holder of ordinary shares in India. This could mean that the Government could have a greater control over a larger area than was intended in the Industrial Policy Statement of 1948. If the private sector had to play its rôle in capital formation, Mr. Kothari urged, the Government should define the respective fields of the private and public sectors. Incidentally, he attributed the steep fall in the prices of shares of joint stock companies to the nationalisation of life insurance companies. Referring to foreign capital, Mr. Kothari said that it was essential to create a good climate to attract foreign investments. At present, the foreign investment in India was about Rs. 420 crores, which was about 42 per cent of the total investments in joint stock companies. Looking at the prevailing tempo in the country, he thought it was not likely to attract foreign capital. Foreigners, he said, should be assured of the safety of their investments and, in case of nationalisation, be guaranteed fair compensation. Further, he concluded, there should also be an assurance of repatriation of their capital and profits, and reciprocity of taxation.

UNCERTAINTY REGARDING OVERSEAS ORDERS

THE trade thinks that a barter agreement involving live goods has been reached between India and Russia, but no indication has been given by the Government on quantity, price or terms. The uncertainty has led to a series of rumours being spread by speculators, all of whom claim to have "inside information" but whose versions vary widely on the main points. Each operator has chosen the version that suits him and acted accordingly, resulting in a period of instability. In general, the uncertainty has caused prices to fall, although at first they were very steady on hopes of business. There is still an air of expectancy about, which gives the impression that big business is not far away. Other overseas buyers have shown no interest at the present levels, and appear to be content to sit out and watch developments. Mills have shown no great desire to sell as the steadiness of the fibre market leaves hardly any margin of profit in simultaneous business.

Raw Jute Unaffected by Goods Markets

In spite of the price fluctuations in the gunny market, fibre prices have shown very little change. An easier tendency prevails at the close, but there is a general lack of interest from mills. Upcountry markets continue to trade firm, as imports are small, and these conditions have governed the general attitude of the Calcutta markets. Sellers, although showing a keen interest in business, are not inclined to reduce prices to any great extent, but are offering freely at the current levels. Imports into the Cossipore markets have been maintained at last week's high level, but this has had very little effect on rates as all arrivals have found ready buyers in mill representatives and Calcutta baling interests. Arrivals are reported to consist mainly of low quality jute but this has not deterred interested parties.

THE JUTE MARKETS

Manufactured Goods : Last Thursday being a holiday, all markets were officially closed. When they opened on Friday morning, there was very little change from last week's closing rates. In heavy goods, B Twills showed a small advance of 2 annas in the February position to Rs. 114 a 100 yards, but April-June shipment was unchanged at Rs. 114-8. In hessian, the position was reversed and February 40in. 10oz. remained at Rs. 40-10 while forward shipment rose by 2 annas to Rs. 40-14 a 100 yards. Persistent and conflicting rumours regarding the Russian order had a bullish effect, and during the day sacking rates rose by Rs. 1 for all deliveries, with hessian showing a 2-anna rise in sympathy. Saturday's market opened at a higher rate, but prices soon began to ease in the absence of definite news, and over the week-end an easier trend developed. On Monday, quotations for both hessian and sacking fell by 2 or 3 annas, and in the absence of overseas or local enquiries prices continued to decline. Speculative activity was prominent at this stage, and had a bearish influence on quotations. By Tuesday morning, February B Twills had dropped to last week's closing rate of Rs. 113-14. Forward shipment, although losing 10 annas, improved its premium over the near position to 14 annas. In hessian, near and forward shipment both lost 4 annas and 40in. 10oz. quotations were based on Rs. 40-10 and Rs. 40-12 respectively. At this stage the market received no enquiries and dull trading conditions prevailed. At the close the market is slightly easier and opening quotations on Wednesday morning are as follows:

	February	March	April-June
	Rs.	Rs.	Rs.
40in. 8oz.	33-12	33-4	32-14
40in. 10oz.	40-4	40-7	40-10
B Twills	113-8	113-14	114-4
Heavy Ceers (Plain)	111-8	113	113-12
A Twills	137-4	137-4	137
Liverpools	129	129	128-8
Cornspicks	116-8	116	115-12

Raw Jute: For the second week running the raw jute markets have been very inactive. Mills have shown a complete lack of interest and the business reported is negligible. In spite of this there has been little change in the quoted rates, and prices have ruled fairly steady under the influence of the upcountry markets. Although sellers are keen for business, they have shown a certain amount of reluctance to enter into contracts below the quoted rates. Their attitude however has not really been tested, as the only indications given out over the week were at current rates, and then the buyers withdrew due to a surplus of offers. The gunny markets have lent no support to the fibre section, and while the present conditions of uneconomic trading exist, it is unlikely that mills will show much interest. The Pakistan markets continue to show a premium of Rs. 3 to Rs. 4 over the Indian ones, and no business is reported in this section. Many sellers have decided to ship fibre consigned to themselves at Cossipore Ghat in the hope of being able to find buyers be-

fore the consignments arrive. Ready bills of lading, both of Indian and Pakistani jute, are being offered freely without arousing any interest among buyers. Quotations throughout the week were based on Upper Assam jute at Rs. 30 a maund basis Bottoms for February-March shipment, but these rates were nominal in the absence of business.

The only business reported during the week was small lots of Dhuhri-Northern at Rs. 30 a maund basis bottoms for February-March shipment, and also local Northern at the same price. Upper Assam jute was reported at Rs. 29-12 a maund. In the Tossa section Cuttack was done at Rs. 31 and Murshidabad District at Rs. 30 a maund basis Bottoms for February-March shipment. Business in the Daisee section was very limited and consisted of Bottoms only at Rs. 31-8 and assortment Daisee at Rs. 30 to Rs. 30-8 a maund basis Bottoms for February-March shipment. Daisee Mesta was neglected but business passed at Rs. 27-12 a maund basis Bottoms.

At the close the market is unchanged and opening quotations on Wednesday morning were as follows:

Indian Jute :	Landed at Mills Rs. a md. basis	Shipment
	Bottoms	
Lower Assam	30-8	February-March
Upper Assam	30	"
Northern	30	"
Murshidabad White	29	"
Daissee ex Agency	30-8	"
Daissee ex Cossipore	30	"
Daissee Meeta	27-12	"
Local Packing (Northern)	30	"
Bimli	28 for F.A.Q.	"

Tossa is quoted at Re. 1 a maund above the price of white jute.

Pakistani Jute :	Rs. a maund basis	Shipment
	Bottoms	
Jat	34	February-March
District	33-8	"
Northern	32-8	"
Jat Cuttings	130 a bale	March-April

Imports into the local Cossipore markets have improved, and over the week a total of 800 wagons arrived at the sidings. Most of these contained Western Area jute and jungli mesta, but there was heavy demand for all arrivals which tended to keep rates steady.

At the close Kishengani jute is quoted at Rs. 29-0 a maund for garsat quality. The Daissae markets continue to rule very steady although there is very little business passing. In the case of mesta, small business has been reported as imports are fairly good, but covering business has been restricted as current prices are well above the average price at which business was done previously. At the close quotations in Sheoraphuli were based on Daissae at Rs. 27-8 a maund for garsat quality.

Mufussil: There is very little to report from either the Indian or Pakistan upcountry markets. Imports are exceedingly small, and heavy demand from balers has ensured a certain amount of price stability. Rates remain above Calcutta quotations by several rupees, and at the present moment there is no sign of a fall. Quotations in Dhubri at the close were based on Rs. 26 a maund garsat quality, while those in Narayanganj were quoted at Rs. 33 a maund for Jat Bottoms and Rs. 26-8 a maund for Jat X Bottoms.

Arrivals of Raw Jute

In January 1956, 723,930 bales of raw jute arrived in Calcutta and at mill stations. In the corresponding month of 1955, arrivals were 578,690 bales. Of the arrivals last month 531,990 bales were of Indian origin and 191,940 bales were from Pakistan. In January 1955, arrivals from India amounted to 470,690 bales, while those from Pakistan totalled 108,000 bales. Thus, in January 1956, arrivals from India were 61,300 bales more than in January 1955, while those from Pakistan showed an improvement of 83,940 bales, making an overall increase of 145,240 bales. The revised total arrivals during the current season now amount to 38,92,400 bales, made up of 29,25,940 bales from India and 966,460 bales from Pakistan. Compared with last season, arrivals from India are down by 13,990 bales, while those from Pakistan show an increase of 297,260 bales, making an overall increase of 283,270 bales.

PROGRESS OF JUTE TECHNOLOGY

The Technological Research Laboratories of the Indian Central Jute Committee have made several useful findings relating to the manufacturing process and quality control of jute products. A detailed account of the progress made during 1949-54 is given in a brochure by Dr. P. B. Sarkar, published by I.C.J.C. The elastic and frictional properties of jute and substitute fibres, filament length, binning treatment, etc. are some of the more important items of physical research done at these laboratories. With the object of throwing light on the susceptibility of jute and other

fibres to weight finishing processes, their reaction to actual service conditions, and to improve their serviceability, the nature of some constituents, e.g. fat and wax, mineral matter and hemicellulose, as also the size of the alpha-cellulose molecule, has been studied from the chemical point of view.

The bulk of jute hemi-cellulose, constituting about 25 percent of the fibre weight, consists of six molecules of xylose in combination with one of methyl-glucuronic acid. The hemi-cellulose is suggested to be the cementing material for the short fibre elements forming the filament. It is acidic and highly hygroscopic and is responsible for many of the characteristics of jute. The brochure enumerates the methods worked out for peroxide bleaching, rot-proofing, softening hard root cuttings, brightening dark hessian, preserving the common sizing material, etc. and some of these have been given mill trials. Priced at Rs. 2 or 3s., the brochure may be had from the Office of the Publicity Officer, Indian Central Jute Committee, 4, Hastings Street, Calcutta-1.

U.S. BURLAP CONSUMPTION AND STOCKS

U.S. burlap consumption got off to a good start for the new year. At 72 million yards last month, this was an increase of 10 million yards over January last year but was 2 million yards less than during December. U.S. burlap stocks at the end of January showed little change, being 4 million yards below the previous month and 2 million yards below January last year. The 243 million yards included 136 million yards spots and 107 million yards alofts. Appearing below are two tables which include the January figures—(1) based on member reports to the Textile Bag Manufacturers Association and the Burlap and Jute Association and (2) projected to represent the estimated consumption and stocks for the entire industry:

**You're in the hands of
a million-miler when you
fly Pan American**

Like the Master of Over-ocean Flying shown here, more than 1200 Pan American pilots have flown over one million miles each. 100 of them have flown over three million miles.

That's the kind of experience Pan American gives you, plus all these extras at no extra fare:

- More frequent flights at more convenient times to more places.
- Superb food and service. Meals aloft by Maxim's of Paris on all first class flights.
- More berths to more cities (small charge) ... bedlength Sleeperette® service on first class flights.
- More overseas flying experience—carried over 13 million passengers over one billion miles.
- Choice of tourist or first class service around the world.

Let your Travel Agent arrange your trip—his services are free. Or call Pan American in:

THE FOREIGN JUTE MARKETS

RAW MATERIAL PRICES EASIER
(FROM OUR DUNDEE CORRESPONDENT)

THE jute markets generally are softer and they have every appearance of lower prices coming along. Reports from Pakistan say that the position of raw jute out there is still quite firm, but shippers are showing a willingness to accept lower terms here. There are a number of secured parcels being offered and the profit-taking is creating considerable irregularity in the fibre market. Mill Firsts, for instance, were offered at £100, but the lowest quotation openly declared is £104, while Mill Lightnings have been sold at £90, and are still offered at the rate, yet there are more sellers quoting £95 than there are at £90. There are quotations for Mill Hearts at £85 lowest, and new minimum prices are now possible for grade Tossa-4 and grade Tossa-4 at £100 and £90 respectively, also crack Daisies-4 at £91 and grade is rather higher than the minimum at £83, all c.i.f. U.K., new freight rate. Spinners here have not been keen to follow the advanced prices and extremely little business has been done in white jute since the year opened. Rather more has been done in Daisies-4 and Tossa-4, as these are the only grades on which spinners could make a profit in selling jute yarns at last week's prices. They are not keen to sell at all just now if white yarns are desired by the buyers. Offers of Mill First Marks and above are now seldom made and it looks as if there was not much of this class of jute in the Pakistani crop this season. Dundee spinners are considered to be fairly well bought this season, probably all their requirements to the end of June. Continental spinners are also said to be buying sparingly. It is reported that some of the jute being sent to the Continent from Pakistan is of pretty poor quality. In Dundee, however, there are not many arbitrations and generally speaking, spinners are pleased with the jute proffered to them.

Plantation Topics

NORTH INDIA TEA EXPORT

CEILING REMOVED

With a view to encouraging auctions of tea in India, the Government of India in July 1955 fixed a ceiling of 140 million lbs. on tea consigned from North India to London for auctions out of the 1955 crop. It has since turned out that the crop in North India in 1955 amounted to a record figure of over 533 million lbs. This increase in production has coincided with a world-wide recession in the price of tea. The 1955-56 season sales of tea for export in the Calcutta auctions up to 7th February, 1956 amounted to over 170 million lbs. as against 159 million lbs. in the corresponding period of 1954-55. In spite of this improvement in the export auctions, it has been represented by producers and trade interests that a relaxation of the ceiling may help in the stabilisation of prices at an economic level. The Government has accordingly decided to allow the export of unsold North Indian tea to London auctions freely up to 31st May, 1956.

LONDON TEA PRICE TRENDS

The steady decline in the price of tea at the London auctions has brought the rate for North Indian plan broken pekoe to 35d a lb, the lowest level for about three years, says a report from London. The present price compares with the peak of nearly 84d reached during the boom early last year. The recent hand-to-mouth buying by U.K. blenders has been further encouraged by the news that the Indian Government has withdrawn its limitation on the amount of tea saleable through foreign auctions during the remainder of this season. Last July, the North Indian Government restricted the amount of tea for sale in London from the 1955 crop to 140 million lbs. Traders point out that there is an over-supply of lower grades in the world and that by the end of June a surplus of 50 million lbs is estimated. It is not a very reassuring outlook for producers of common tea as current levels are generally unprofitable.

COCHIN TEA SALES

At Dust Sale D, 360,000 lbs. of tea were on offer. Demand was stronger in the market, particularly for Black Middle East types. Best Liquorings were 3 to 4 annas dearer. Others were irregularly 1 to 2 annas higher.

NEW LEAF DISEASE IN SOUTH INDIA

Production of tea in South India during December registered a steep fall over the production in the previous corresponding month. The crop for December 1955 was 7.7 million lbs. compared with 10.7 million in the previous December. This has wiped away the gain obtained in the previous month. The year-end figure was 129 million lbs. compared to 128.5 million lbs. in 1954. However, this fall is not much regretted in view of the very low price of tea. Finer plucking and the attack of fall in the South Indian crop during December. South Indian planters are getting worried at a new leaf disease which they call "flush worm" attack. The "flush worm" rolls up the tender leaves of the tea bush and multiplies at an alarming speed. No effective remedy has been found for this disease so far. The scientific department of the United Planters' Association of Southern India has despatched one of its senior officers to conduct a research campaign. In Peermade, where the "flush worms" are worrying the planters most, an intensive field study is being made.

COLOMBO RUBBER PRICES

The following prices have been issued by the Rubber Board of India from the weekly market report published by the Colombo Brokers' Association:

	Closing prices on 16-2-1956 (Rupees a lb.)	Average for the period (Rupees a lb.)
Sheet:		
No. 1	1.51	1.51
No. 2	1.48	1.48
No. 3	1.45	1.45
No. 4	1.21	1.21
No. 5	1.16	1.16
	Sheet cuttings 1	1.10
	do 2	1.05
Crepe:		
Water white		
R.M.A. IX	1.22/23	1.24
R.M.A. 1	1.21/22	1.23
	Crepe No. 2	1.22
	do 3	1.20
Scrap Crepe:		
Sc. crepe No. 1	1.08 Nom	1.11
Sc. crepe No. 2	1.00/05	1.05
Sc. crepe No. 3	.90/98	.96
Flat Bark	.80/85	.84
	Sc. crepe 3X	1.01

To arrive at f.o.b. Colombo prices add \$3.4 cents a lb in respect of rubber other than scrap crepe and 31.4 cents in respect of scrap crepe to the above market prices.

FINANCES FOR THE PRIVATE SECTOR
DURING THE SECOND PLAN

OBSTACLES TO INDIVIDUAL SAVINGS: ROLE OF FINANCE CORPORATIONS

By Dr. Prem Chand Jain

THE first five year plan will come to a successful end in March. Most of the targets have been fulfilled in both the public and private sectors. Now the second five year plan is being framed, and larger investment is expected in both sectors. The private sector will be given a greater rôle than it has been given in the first, with a proposed investment of Rs. 2,300 crores. Proper thought however has not been given as to how finances would be obtained by this sector. In this article, the possibilities of finance from different sources are discussed.

The private sector can secure long-term finance from the fresh issue of capital, ploughing back of profits, finance corporations and foreign investment. During the last few years, the amount of fresh issues has been encouraging. Since 1953 there has been an upward trend as shown in Table I. Fresh issues increased from Rs. 32.0 crores in 1952 to Rs. 100.7 crores in 1954. In 1955 they are expected to be still higher. In the first six months of the year, they amounted to Rs. 67.78 crores. Most of the issues have been well received by the market many of them being oversubscribed. But we cannot conclude from this that there is plenty of money in the capital market or that capital has become more enterprising.

Issue by Established Companies

A very substantial portion of the fresh issues belonged to the old companies for expansion and modernisation. In 1953, they accounted for 72.41 percent of the issues and in the first two quarters of 1955, for 57.27 percent of the total new issues. Most of these issues were made by old, well-established and reputed companies at par. In these cases the market value of the shares was much higher, and the rate of dividend quite attractive. Therefore, there was every expectation of capital appreciation and a good return. Because of this expectation the public purchased them somehow whether from their own savings or by borrowing from banks or other sources. All of them have not been absorbed by real savings.

In the case of new companies, the issues were successful when they were made by the companies under the management of good managing agents. In many cases the issue to the public was made after the import of machinery with the help of financial institutions or the hire-purchase system. In these cases, equity shares promised return on capital within a year or two after issue. But we cannot be as optimistic about the success of all issues in the coming years.

TABLE I.

Year	Fresh Issues.			Percentage of fresh Issues	
	Amount (Rs. crores)	Initial	Old Cos.	Initial	Old Cos.
1951	21.6	27.2	48.8	44.26	55.74
1952	12.7	19.3	32.0	39.69	60.31
1953	18.4	48.3	66.7	27.59	72.41
1954	57.9	42.8	100.7	57.50	42.50
1955 (first six months)	29.0	38.8	67.8	42.73	57.27

The success of issues ultimately depends upon the amount of savings and willingness to invest. The propensity to save depends upon the total income and its distribution, taxation and cost of living. During the second plan, the national income will increase and that will help savings. There will be better distribution due to progressive taxation. The upper classes will be left with a smaller amount of money to invest. The lower income groups, living now at subsistence level, will naturally be inclined to use an increase in income to improve their standard of living rather than save the extra amount unless there are proper and adequate incentives for saving. The attraction of a better standard of living is an obstacle to savings in a poor country. Therefore, the drive to provide an incentive for the middle and lower classes through lower taxation on savings and by other means needs to be accelerated.

There is a proposal to impose fresh taxation to the tune of Rs. 450 crores during the next plan period. The Government hopes that higher taxation will lead to a curb on consumption. But that is a wrong assumption. Higher taxation would lead only to an increase in the cost of living. The people who are living on marginal or submarginal standards would not be able to reduce consumption. The axe would fall on the savings and the propensity to save would decrease. Deficit financing to the tune of Rs. 1,200 crores may also lead to some rise in the cost of living, particularly in the first two years when the deficit will amount to Rs. 400 crores and Rs. 300 crores respectively. If there is a rise in the price of consumer goods, the inclination to save would be further affected.

Conditions of Investment

The willingness to invest depends upon confidence in promoters, upon the psychology of

the investor himself and the general atmosphere within and outside the country. The new Companies Act, passed recently will create some difficulty. Under the new Act no managing agent will be allowed to manage more than 10 companies. But at present, almost all the reputed and well-known agents are either managing more than this number, or are very close to the limit. Therefore, they will not be able to float many new companies. This is bound to create obstacles to the success of issues by new companies in a country where success has depended largely upon the name of the managing agency house. It is necessary therefore to start promoting and issuing houses to overcome this difficulty. Such a step would also help in the starting of more risky ventures. The essential characteristic of the promoter of a concern is that "he does not aim at acquiring a permanent share in its control. Such a relatively dull life makes no appeal to him; and once his baby is out of its swaddling clothes, he is off to seek new worlds to conquer".

The necessity for such institutions has been felt for some time. Now that the new Act, has been passed there should be no delay in their establishment by the Government. This has already been done by certain countries. For example, there has been a Nacional Financiera—a Government Agency in Mexico since 1941 which acts as a promoter directly or jointly with private interest. In Argentina, the Industrial Credit Bank has an industrial promotion section. The willingness to invest also depends upon the rate of dividend. The expectation of a reasonably high dividend works as a great incentive for investment in industries. Generally, Indian industries pay higher dividends when there are higher profits. But in a few cases, even when there has been substantial increase in the profits, raising of the dividend has not been allowed by the creditor—the Government or the financial institutions. This conservative policy will have an adverse effect on the flow of capital not merely in the company concerned but to industries generally.

Willingness to invest also depends upon the nature of the investor. In the future, with a better distribution of income, the importance of institutional investors, particularly of the life insurance companies, is steadily increasing. The

total sum assured has increased from Rs. 744.65 crores in 1950 to Rs. 921.90 crores in 1954. At present their net investments amount to Rs. 20—25 crores each year out of which more than 60 percent is invested in Government and semi-Government securities against less than 20 percent in the U.S.A. The progress of life insurance is bound to be accelerated during the second plan due to better education and better distribution of income. But the announcement has already been made to nationalise the industry.

Nationalised insurance will not be as willing as private insurance to invest in the private sector. Amongst the economic policies, the policy of progressive nationalisation is the greatest obstacle to private investment. It is true that the Government has given the assurance repeatedly that there will be no nationalisation without compensation. But after the enactment of the last amendment to the Constitution, the adequacy of the compensation cannot be questioned in any court of law. To encourage the investor and clear his mind of any doubts it is desirable that the Government should specify the basis of compensation for nationalised concerns.

Ploughing Back Profits

Ploughing back of profits has been an important source of finance for expansion and modernisation in many countries. In the U.S.A., retained profits and other reserves account for more than 50 percent of the total business resources. In Western Germany, business profits are estimated to provide more than 40 percent of investment finance. In India also, this method has played not an insignificant rôle. According to the sample survey of 407 old companies by the Taxation Enquiry Commission, out of the total capital formation of Rs. 320 crores between 1946-51, Rs. 117 crores or 36.6 percent was found from reserves. According to another sample survey of 746 companies, held by the Reserve Bank, 37.7 percent of the profits after taxation was ploughed back between 1950-52. But after the amendment of Sec. 23A of the Indian Income Tax Act, there will be some difficulty in ploughing back profits in certain companies.

The companies affected by this Section will find it difficult to accumulate profits in excess of 100 percent of their paid-up capital plus outstanding loans. The amended Section compels these companies to slow down their rate of ploughing back after this level. Even companies which do not come under this Section will be faced with their own problems. Sometimes, reserve capital is not taken into account in the determination of the rate of return while fixing the price of the product. There are also certain difficulties in the issue of bonus shares. The issue of bonus shares, was stopped by the Controller of Capital Issues for some time. No bonus shares were issued during the first six months of 1955. Now bonus issues are being allowed. But it has not been decided finally yet whether or not these issues will be taxed. The Taxation Enquiry Commission was

ATOMIC POWER FOR AIRCRAFT

RESEARCH BY BRITISH MANUFACTURER

ROLLS-ROYCE announces that it is working on the development of atomic power units for aircraft. Research work on light-weight reactors has, in fact, been going on for the past 18 months. The successful evolution of a practical atomic engine for aircraft depends, says Rolls-Royce, on "the solution of problems through research and development requiring unusual and frequently novel research equipment which has to be specially designed and constructed to high standards of accuracy and safety". A hint as to the nature of the most complex of these problems is contained in the announcement which states that the research team has been supplemented with specialists from outside, one of whom is Dr. S. G. Bauer from Harwell, an authority on high temperature liquid metals. It is probable that atom-powered aircraft will employ the jet propulsion system in one form or another. But whereas the efflux temperature of a conventional turbojet may reach 1300°-1500° Fahrenheit, it may reach as much as 400° Fahrenheit in an atomic engine. Consequently, the development of metals which boil only at very high temperatures is of prime importance.

In one version of an atomic engine the cycle of operation would be similar to that of a turbojet—air being drawn in through the intake, compressed, mixed with fuel and detonated in the combustion chambers, and released, thus propelling the aircraft and, at the same time, revolving the turbine which turns the compressor. The combustion

chambers would be replaced in an atomic engine by a reactor, which would be used to produce a flow of gas at high pressure and temperature. To keep the reactor's temperature to within manageable limits, it has to be cooled, and this can be done in several ways. It can be constructed with air-cooling passages, or made so that a coolant can be pumped through, and the heat dissipated in a heat exchanger—similar in principle to a car's radiator. The evolution of a satisfactory coolant is, however, a major problem in itself—liquid sodium being one of several possible solutions that have been investigated.

A third possibility is the use of a steam-turbine system in which water under pressure is used as a coolant. An advantage of this principle is that the whole power of the engine can be used for propulsion. Pressure is removed from the water when it has done its job cooling the reactor and the resultant steam is used to power the turbine before being condensed and passed back, under pressure, through the reactor again. Atomic-powered rocket engines would be less complicated. The coolant would be pumped through the reactor and out of the tailpipe, the range of the aircraft or missile being determined by the amount of coolant carried.

Dangers of Radio-Activity
Another problem associated with atomic aircraft engines is the shielding of the crew and passengers from radio-activity emitted by the reactor. This necessitates a metal screen of great thickness. If lead were used—this being one of the most effective metals—a thickness of two feet would be necessary thus incurring a tremendous weight penalty. Other problems include the crash risk—radio-activity could be scattered over a wide area—and landing weight. On gas turbine and piston-engined aircraft, fuel consumed in flight reduces the aircraft's landing weight, but this does not apply to an atomic-powered aeroplane. Both undercarriage and structure would have to be stressed for landings at maximum weight and

greater speed. But a long-range conventional aircraft designed to carry 100,000 lb. of fuel (enough for perhaps 5,500 miles) could travel the same distance with .05lb. of uranium 235, the "fuel" for an atomic engine. Indeed one pound of U235 could supply as much heat as the burning of more than 1½ million gallons of petrol. Thus, atomic-powered aircraft would have almost unlimited range and the first examples may therefore be large bombers, ocean-patrol flying boats (perhaps on the lines of the model exhibited by Saunders-Roe at last year's S.B.A.C. Exhibition), and transports.

INDIAN CONTRACT FOR U.K. FIRM

Simon-Carves Ltd. have received from the Tata Iron & Steel Co. Ltd. a contract of about £1½ million for the reconstruction of two large coke oven batteries and the building of 18 new ovens at the Tata steelworks at Jamshedpur. A total of 124 ovens is involved. Simon-Carves have built all four of the coke oven batteries now installed, which comprise a total of 216 ovens with an annual carbonising capacity approaching two million tons of coal: the first three batteries were built about 20 years ago, and the fourth was completed in 1953. Under an earlier contract Simon-Carves are already engaged in reconstructing the oldest of the first three batteries and the second and third are now to be reconstructed under the new contract. Much of the material used will be of Indian origin, and the work will be done by Indian labour under the direction of the Simon-Carves resident technical staff. Besides this coke oven construction, Simon-Carves have recently completed or are at present carrying out a number of contracts placed with them during the last two or three years for the building of new steelworks equipment at the Tata works at Jamshedpur, including a new steel melting shop, blast furnace ore bins, open-hearth furnaces, soaking pits, and the relining of blast furnaces.

WHAT'S NEW IN PRODUCTION METHODS ?

What's better, faster-working, more economical, more accurate? What's the shape of things to come in production engineering? For all the answers, come to the...

INTERNATIONAL MACHINE TOOL EXHIBITION 1956

Olympia · London · England June 22—July 6

(Sundays excepted)

Here, under one vast roof, for close study and comparison at first-hand, the Machine Tool Trades Association (of Great Britain) will present an extensive show of the most modern machine tools and allied equipment from the world's leading makers—British, European, American.

This show will surpass in information value a whole library of catalogues, a mile of correspondence. You can see the machines themselves at work in actual production. You can discuss with the world's best informed experts your own production problems and plans.

The huge range of exhibits includes machine tools, engineers' small tools, gauges and measuring equipment, testing equipment, presses and power hammers, heat-treatment plant, woodworking machinery.

This will be Europe's outstanding engineering display of 1956. Be there! Be sure to be there! Note the dates and make your plans now!

Organized by The Machine Tool Trades Association (of Great Britain), Victoria House, Southampton Row, London, W.C.1, England.

Books and Publications

RURAL CREDIT

The General Report of the All-India Rural Credit Survey. Abridged Edition (Published by the Reserve Bank of India. Pages 301; price Rs. 2).

The Report of the All-India Rural Credit Survey is considered an excellent study of some of the basic features of India's rural economy, as also of the sociology of the villages. It has now gained extra importance due to the Government's acceptance of most of its recommendations, some of which have been implemented already. Popular interest shown in the report has consequently been considerable. The Reserve Bank authority has therefore brought out this abridged edition of the *General Report* at a price which brings it within the reach of practically every student of economic and public affairs in the country. The work of condensing the original report has been carried out with extreme care and those who have read the *General Report* will not feel that any vital elements are missing. The arrangement of the chapters is good, and the correct sequence has been maintained, and a helpful index appended. It should be noted that the rural credit survey Report consists of three volumes; entitled, (1) *The Survey Report*, (ii) *The General Report* and (iii) *The Technical Report*. This edition is related to the second. The other two Reports are in course of publication.

The Madras Stock Exchange Official Year Book 1955-56 (Compiled by the Madras Stock Exchange Association Limited, 322/323, Linghi Chetty Street, Madras 1. Pages 646; price Rs. 7-8.)

This year's edition of the annual publication dealing with the affairs of the Madras Stock Exchange has been considerably enlarged. Details are included of all Madras companies quoted and nearly one hundred companies quoted in Bombay, Calcutta and other markets, thus materially widening its field of service. An analysis of the companies' workings is provided in each case and information received up to 31st October, 1955 has been incorporated. Arranged in sections for easy reference, the book provides a comprehensive and indispensable guide to all investors.

Bonus by Gulshan Pandhi, Labour Adviser, Delhi Factory Owners' Federation. (Printed at the Arun and Rajive Printing Press New Delhi. Pages 15; price Rs. 2.)

After the enforcement of the Industrial Disputes Act of 1947 workers started claiming bonus as a matter of right, and since the first issue relating to this demand was raised before the full Bench of the Labour Appellate Tribunal, certain principles governing bonus awards have been laid down. In a pamphlet dealing exclusively with this vexed question, Mr. Pandhi discusses the formula most commonly adopted for the calculation of bonus and the general factors which should be taken into consideration in determining the relation of bonus to actual wage structure. A list of brief summaries of the most important decisions taken on the subject up to the present time should prove a useful guide to managements and labour alike.

Who Makes Machinery: Buyers' Machinery Guide for 1955. (Published for the Association of German Machinery Manufacturers, Frankfurt, (Main) by Hoppenstedt Wirtschaftsverlag GmbH, Essen, Ruhr.)

The 17th edition of this practical guide provides complete and up-to-date information on suppliers and manufacturers of machinery in Western Germany. Divided into three sections conveniently indexed, the manual covers the whole range of the machinery, plant and precision tools as well as the products of industries relating to mechanical engineering.

Insurance World January 1956, Silver Jubilee Number. Edited by S. C. Roy. (Published by Amalendu Mohan Roy, 15, Chittaranjan Avenue, Calcutta-13. Pages 172; price Rs. 1.8 for this issue only. Annual subscription Rs. 6.)

The silver jubilee number of this monthly publication appears at the beginning of a critical year for Indian insurance, and the issue naturally includes several articles dealing with the problems and prospects of life insurance under State management. Other contributions deal with Indian insurance over the last 25 years, trends and developments in all the leading Indian companies, giving a clear and concise picture of India's achievements in this important field.

DIESEL-ELECTRIC LOCOS
FOR TISCO

Whether it is pulling molten metal cars from furnace to furnace, transshipping iron ore from railway yards to works, or moving a mass of hot metal from the Blast Furnaces to the Duplex Plant, speedy haulage is an integral process in the continuous production of steel.

Tata Iron & Steel Co. Ltd. had the foresight to appreciate the operational advantage of the diesel-electric over the steam locomotive for this important operation, when in 1934 they ordered a 30-ton GE diesel-electric locomotive, first of its kind to have been shipped out of the U.S.A.

Usefulness has been proved in service. Tata's Steel experts have signified their confidence in General Electric by putting into service at Jamshedpur, last year, ten 30-ton, three 35-ton and four 25-ton new diesel electric locomotives. These provide motive power for increasing important haulage duty resulting from the programme for the expansion of the steel plant.

General Electric is proud of its research, engineering experience and equipment being utilised in the service of India's largest steel plant... to promote the country's industrial progress.

JOINT STOCK COMPANIES' DEBENTURES

JOINT STOCK COMPANIES' PREFERENCE SHARES

Dividends are cumulative and shares carry a preferential claim on the property for the payment of capital and on the profits for dividend except in case of companies marked otherwise. Months against names of companies indicate approximately times of payment of dividends.

THE STATE OF THE CAPITAL MARKETS

NEED FOR STABILITY AND ENCOURAGEMENT

A NEW phase in the affairs of the Indian stock exchanges is about to open. The six months following the Budget have in the last few years, been favourable for market dealings. If they have brought no substantial mark-up of general price levels, they have usually seen an increase in business transacted. This year, the markets have suffered from more than their customary pre-Budget dullness. The collapse of the past few weeks, culminating in Calcutta's serious settlement difficulties, has left behind a great deal of doubt and anxiety about the future. But it has also improved technical positions to an extent which did not take place last year when the markets subsequently showed themselves to be poised for one of the best years in their history. They are now, therefore, in fairly good shape to retrieve some of the ground they lost. Perhaps not all the ground. Part of it represented serious overtrading which had no justification in economic facts, while the facts themselves have undergone a change since the boom. But at least that much ground should be regained which represents the growth which normal markets ought to make in an economy planned for rapid expansion. Writing before the 1956 Budget, it is not possible to judge how Mr. Deshmukh's proposals are going to affect the picture. But it is likely that all but the most crippling possibilities have already been discounted and that if the Budget is only mildly severe, prices will follow trends similar to those of last year.

It is vitally important to the successful start of the second plan that the stock exchanges should revive. The new socialism, even under its present identity without the qualification of "socialistic pattern", still provides for a mixed economy. Government borrowing and the expansion of the private sector are equally important items in the plan. Healthy stock markets are essential if corporate and individual savings are to be tapped successfully. It is not yet known how the nationalisation of life insurance is going to affect the markets. But it is probably quite safe to assume that it will not add one extra anna to the savings which could have been secured had the companies remained under private management. It must then be the individual and the ordinary corporate investor to whom the markets must look for the extra resources required. The investing habits of these savers have been badly shaken in the past few weeks and there are too many signs that confidence is low. The swing to socialism must, of course, be paid for, and it is unfortunate that the Government rarely considers the investor's peace of mind before making alarming pronouncements about the future course of economic affairs. But it is still true that there are fair prospects for the investor who can discount current events and look far enough ahead. It is one which holds little promise of windfall gains, but does offer reasonable returns taken all round. If the events of the next few months can convince the investor that this is true, then the ambitions of the second plan, even in their recently expanded form, need not look so wild after all.

Moderate optimism can be based on a number of factors. The most important is the extent of deficit financing expected under the second plan. This is bound to introduce an inflationary element into future company profits, part of which will not doubt be skimmed off by additional taxation. Some benefit will remain, however, if only in the form of stronger financial positions. New ventures are more likely to succeed than fail under such circumstances and, provided he makes his choice wisely, the investor stands to gain comfortably from the rapid appreciation of freshly laid down capacity. It is true to say that investments in all industries connected with development, provided they escape nationalisation, can be expected to yield fair returns for many years to come. The Plan's need for foreign exchange is also significant.

This will mean that exporting industries

a little cement on the way to a State multi-purpose river valley project. Some months ago, Capital expressed the anxiety that this is precisely what might happen, with the result that private trade and industry would be left out in the cold. Mr. Shastri's analysis brings that anxiety a long and firm step nearer. On his own showing, which has not yet been openly contested by the Planning Commission, the present shortage of 5 million tons in the railways carrying capacity for goods is likely to increase by 1961 to about 14 million tons. In the circumstances, the rigours of the priority system in goods traffic, which is operated with thinly disguised partiality to the Government's own needs, can hardly be expected to relax. The contrary may happen.

It is against this background that the Budget proposals have to be considered. The Planning Commission, apparently conscious of the deficiencies, has left the railways with an itching temptation by saying that if they can find the money over and above the Rs. 1,125 crores allotted under the five year plan, they are welcome to use it for further expansion schemes. This is precisely the temptation to which Mr. Shastri has now succumbed. In fact, he confesses as much when he says that "the railways must endeavour to increase their earnings so as to meet the contribution required of them, and, if possible, something more, in order to reduce the margin between the present lower targets and the original targets of transport capacity." It is the sum total of the justification offered for his proposal to levy a surcharge of one anna in the rupee on all freight traffic, with the exception of grains and pulses, fodder, manure, khadi, newspapers, newsprint and books. The surcharge will increase earnings by Rs. 11.6 crores in the coming financial year, and Mr. Shastri hopes that it will "ultimately help in building up capacity to the original targets."

There are two criticisms to be made of this proposal. The first is that Mr. Shastri is entirely wrong in suggesting that the increase in freight costs will be small, and that it should cause little or no hardship. He misleads when, in choosing practical examples, he discusses the impact on small units of various commodities—for instance, when he says that the surcharge will amount to only half a pie a seer on vegetables carried up to 200 miles. Half a pie sounds much less than Rs. 11.6 crores, and is undoubtedly a better figure to emphasise when seeking approval for a measure that will mean a considerable increase in the costs of trade and industry. But it does not give the correct perspective, and is best avoided. The process of "atomising" the cost of a particular service or commodity to a small individual consumer is a popular pastime among those who desire to mulct him. It would have made little difference to the Railway Minister's fundamental case if he had forsaken such examples, and said simply that most freights were going up by 6½ percent; that they would bring in substantially larger revenue; and that industrial costs would rise.

The main criticism of the surcharge proposal, however, centres not on the manner in which it has been justified, but on the aim it is intended to serve. Mr. Shastri explains that of the Rs. 1,125 crores allotted for the railways' expansion plan, they have been asked to find Rs. 375 crores from their own resources. Towards the latter figure, Rs. 225 crores will be contributed through the depreciation reserve fund, and Rs. 100 crores from revenue, including expenditure on open line works, interest on railway fund balances, and revenue surpluses. That leaves a gap of Rs. 50 crores, hence the surcharge of 6½ percent. (The gap may actually be bigger if the railways later decide on expansion beyond what is now contemplated, as they wisely might.) It is clear that the surcharge is intended to finance a capital expansion for which the railways have not been given the money (or rather, have not been allowed to retain the money). This raises an important issue of business principles and methods, to which the railways and their bulky shareholder have been known to pay much lip-service in recent years. The idea of concerns financing large-scale expansion from revenues is widely frowned upon for very good reasons, the chief of which is that the economic justification for such financing cannot be tested in the light of later returns. The need to amortise resources used in an expansion scheme and pay an economic return on them—which are at once the surest criteria and the surest guarantees of their efficient use—is ignored, and it is ignored at the cost of the consumer. It would be interesting to know what Mr. Shastri and his colleagues might think if private semi-monopolies raised prices for the ostensible reason that they needed money for expansion, without asking their shareholders to make any contribution. There is no valid reason why present consumers should be compelled to pay for the new projects of an expanding concern before these have brought them tangible benefit. Mr. Shastri referred to these objections contemptuously as "theoretical doctrines of the allocations of expenses" when he addressed the Indian Merchants Chamber in Bombay on the day after his Budget speech. It

would be interesting to know whether, as a matter of policy, the "theoretical doctrines" will be thrown overboard just as contemptuously by the Government if private concerns chose to make similar proposals. More specifically, would the Government allow steel companies to finance their expansion plans by permitting them much higher retention prices, which would not involve any sacrifices from shareholders? A fairly clear answer to the question has already been given, but apparently it has slipped past the Railway Ministry unnoticed.

In this context, it is necessary to remove one or two misconceptions that might arise out of the Railway Budget papers. The first is the idea that the railways will be able to find from their own internal resources only one-third (Rs. 375 crores) of the total five year plan outlay of Rs. 1,125 crores on their expansion, and that the rest will come as a generous gift from a large-hearted Central Government. This is incorrect; what the Central Government will be giving the railways is what, under a more rational finance convention, would to some extent have been the railways' own money. The Government of India has for many years used the railways as a milch cow to feed its own revenues. Under the Railway Finance Convention, it takes from the railways, as dividend, four percent of the capital invested, whether the years are fat or lean; many a private shareholder would envy a guaranteed return of such size. This dividend brought the Central Government Rs. 34.96 crores in 1954-55; it will bring Rs. 36.07 crores this year and no less than Rs. 39.67 crores (budgeted) in 1956-57. Thereafter, to quote Mr. Shastri, "the dividend liability to general revenues on account of increases in the capital overhead will rise very steeply." The Government of India has every reason to expect a return from its investment in the railways, but whether that return should be trimmed to meet the vigorous expansion plans is a point of more than ordinary commercial interest. As it is, it is a rather lucky shareholder. Consumers pay for expansion before they taste its fruits, dividends go on rising, while the new facilities are officially admitted as likely to be offered to few outside Government enterprises.

THE RAILWAY BUDGET

	Actuals 1954-55	Budget 1955-56	Revised estimate 1955-56	Budget 1956-57
(Rupees in Crores)				
Gross traffic receipts	286.78	292.50	314.10	345.00
Working expenses	206.09	206.80	214.41	124.30
Net miscellaneous expenditure	6.63	7.49	8.95	13.04
Appropriation to reserve fund	30.00	35.00	45.00	45.00
Total	242.72	249.29	268.36	282.34
Net railway revenues	44.06	43.21	45.74	62.66
Dividend to general revenues	34.96	36.07	36.16	39.67
Net surplus	9.10	7.14	9.58	22.99

THE BUSINESS MAN IN SOCIALIST INDIA

IN its impatience to achieve what it now calls a "Socialist pattern of society", the Government has been extending swiftly its control, and ownership, throughout the economy. The public sector has been growing at a rapid pace, and the private sector has been subjected to so much of external restraint that it is beginning to feel that it exists merely under sufferance, or as an appendage to the public sector, and is destined to play only a secondary rôle. The dynamic qualities of private enterprise and its usefulness to the plan objective of quick national income growth have been recognised. But the necessary freedom and incentive essential to its operation are being denied. What explains this curiously contradictory attitude?

Mr. W. H. J. Christie gave an analysis of the situation in his address to the sixty-eighth annual general meeting of the Upper India Chamber of Commerce, last week in Kanpur. The address had no air of a pontifical pronouncement; it modestly described Mr. Christie's own observations on the course of economic events in India over the past 15 months—a remarkably eventful period during which the Imperial Bank was nationalised, the mammoth company law passed, a socialist Budget voted and more rigorous labour laws enacted—as the "impression of an unprejudiced outside observer". "A nation" he observed "which has achieved great things, is poised and impatient for a further advance towards the goal of a higher standard of living and greater equality of wealth and opportunity. Its leaders know what they want, but are tempted, perhaps from overconfidence, perhaps from mistrust, to drive and compel where they should guide and persuade, to

experiment with inadequate resources, when perhaps they should allow the instruments of their policy to acquire a little more experience, and to jump to conclusions, which may be wrong, about who are on their side and who are not." This did not mean that Mr. Christie's impressions were wholly unfavourable, and he quickly added: "The outside observer would not see anything perturbing, wrong or disastrous in all this; indeed he would see much that is commendable."

Yet the elements of danger that existed in the present situation had to be recognised, "particularly if the present leaders should change". The Government had acquired so many arbitrary powers to control private industry that one of its Cabinet Ministers, Mr. Krishnamachari, had confessed to a feeling of alarm that the powers were truly overwhelming. Mr. Christie therefore felt concerned about the business community which he represents, and the picture of its prospects that he drew was not a happy one. The business man in India was not really free to do anything, and varying the words of a king of England who 50 years ago said "We are all socialists nowadays", Mr. Christie observed: "What was a paradox then, is nearer to truth today; and in the India of 1956, we must accept the fact that we are all socialised now." His appraisal of the business man's rôle was equally objective: "We are not just individuals with sore feet, but, whether we like it or not, part of a revolutionary army on the march, and the war to which we are marching is the war against poverty."

The Government appeared to have a different opinion. In the obsession of its ideology, which in the words of a shrewd foreign observer (was it Jennie Lee?) is a "mixture of liberalism, Gandhism and Marxism", or an "intellectual cocktail" to quote Mr. Christie, the Government does not allow this dynamic striking force to render the service that it wanted, in the war against poverty. Evidently, the cocktail was proving too intoxicating due to wrong proportions of the mixture, and the Government, as Mr. Christie said, has now left "private enterprise pinioned, bound hand and foot, and the illusory remnant of freedom and initiative that is left to business men is as much as the convict has in his daily walk for exercise round the prison yard." On top of this, Mr. Christie was anxious about what the next Union Budget had in store. He hoped that the next signpost on the political cross-road, meaning of course the Budget, would not turn out to be a gallows tree.

CURRENT COIN

Durgapur Steel Plant.—The success of the negotiations between India and Britain to set up a one million ton steel plant at Durgapur, West Bengal, is most encouraging. For some time there were doubts whether the monetary stringency in Britain—the most important of a number of difficulties—would allow her to offer terms suited to the urgency of India's need to build a steel plant cheaply, quickly and on favourable credit conditions. The agreement which was reached last week seems satisfactory from the point of view of both parties. India has done some hard bargaining and has managed to get the imported cost of the project reduced by £11 million. Imported plant and equipment will now cost £324 million net. Of this, the British Government is to lend India £15 million, and a syndicate of British banks has agreed to allow a credit of £111 million. The rest will come from India's free sterling balances, which she will be able to replenish when necessary by raising a loan on the London market to which the British Government will accord trusteeship status. The Government loan will be at the rate of interest at which the U.K. Treasury borrows from the market. India has also been able to secure a waiver of the escalator clause providing for unforeseen rises in labour and other costs and a provision of 5 percent for errors and omissions in the estimates. Expenditure on the project within India—the rupee cost of erection, engineering, materials and freight in India—is estimated at Rs. 39 crores. The Indian Steelworks Construction Company, a consortium of British concerns which has conducted the negotiations, will carry out the entire work of erection and civil engineering at the site, under the supervision of the Indian Government's consulting engineers. The plant is expected to be in full production in 1961, though it will start making pig iron in 1959. The scheme will be finalised by 15th May, and will then be put up to the Indian Government and its consulting engineers for approval. The consortium is meanwhile preparing the final specifications in detail and computing the exact prices. Indians will be trained in the U.K. to replace the British experts who will operate the project in the early stages.

Increase in Freight Rates Urged.—Mr. Dharamsey M. Khatau in his speech from the chair at the 36th ordinary general meeting of the Scindia

Steam Navigation Company Ltd., drew attention to the very real problems facing Indian shipping. Reviewing the Company's progress during 1955, Mr. Khatau attributed the "unsatisfactory results" to four main causes: The dockers' strike in the U.K.; congestion at both U.K. and Indian ports; the "go slow" policy of port and stevedoring labour and the steep rise in costs of stevedoring, marine dues, coal and oil within the last year. Neither would expenditure during 1956 be likely to diminish. On the contrary, Mr. Khatau pointed out that considerably more will have to be spent on ship repairs, stevedoring costs will increase still further with the introduction of the piece rate system of pay and the price of fuel oil is steadily rising. While the Company proposes to employ 18 new ships on the India-U.K.-Continental run, for the six already ordered from Germany, Rs. 8½ crores will be borrowed from the Government and the purchase of an additional four or five ships will involve another loan of about Rs. 5 crores. In view of the country's increasing requirements during the second plan period Mr. Khatau expected a distinct improvement in freight earnings in this service. It is easier, however, to adjust overseas freight rates to higher costs of operation than coastal freights subject to Government control, and Mr. Khatau stated bluntly that "unless rates of freight are raised to meet operating costs, acquisition of fresh tonnage is impossible." The tonnage plying on the coast today is wholly inadequate for the available cargoes, and while it has increased by only 44,000 g.t. since 1950, about 20 percent more tonnage is required today to carry the same volume of traffic. The price of a standard coastal ship, costing in 1950 about Rs. 44 lakhs has now almost doubled. The Coastal Conference believes that the rates of freight should be fixed at a level to meet the costs of "operation, normal depreciation, reasonable provision for rehabilitation and fair return on capital employed" and pending the submission of the Rail-Sea Co-ordination Committee's report, has urged that coal and general cargo rates be increased by 15 percent from 1st March, 1956. It is scarcely surprising that coastal shipping should press for an increase in freight rates when an 8,000 d.w.t. vessel can lose as much as Rs. 4,000 for each extra day's delay in port, due to no fault of its own. As Mr. Khatau said, dock and port disturbances in 1955 both here and in the U.K. caused a delay of some 380 sailing days. Much has been said about the relative prices of rail and sea freight, but it is obvious that every available means of transport will have to be mobilised to handle the traffic expected during the next five year plan. The Government has just taken over the Eastern Shipping Corporation and it is to be hoped that a closer and more realistic approach to the real reasons behind the slow progress of India's shipping will ensue. Vigorous action will be required to restore a normal rate of turnaround of vessels. The problem of dock labour will have to be tackled, the existing dock facilities improved, mechanical handling of bulk cargo instituted and cargo apportioned so as to reduce the number of ballast runs to a minimum. Finally, if a long delay in the commissioning of new ships is to be avoided, the delivery from the Hindustan Shipyard, lagging far behind its original schedule, will have to be speeded up.

Capital Changes in E.I.D.—The address of Mr. C. R. Srinivasan from the chair to the shareholders of the East India Distilleries and Sugar Factories Ltd. at the recent annual meeting, was chiefly an explanation of the purpose underlying the proposed acquisition of shareholding interests in Parry and Co., Madras, and the changes in the capital structure of the E.I.D. that would follow. The chairman said that while it was estimated that the consumption potential of sugar would move up to a little over 2,200,000 tons by the end of the second five year plan, there was still "the aura of uncertainty shrouding the future of the sugar industry." The company could not therefore depend so much upon the profit potential and it must expand its interests in other directions to service its large capital. Besides, the new company laws which were coming into force from 1st April forced "the need for some hard thinking" on reconstruction both in structure and management. An offer to acquire the whole of its issued ordinary share capital had been made to Parry and Co., Madras, on terms which were advantageous to E.I.D. shareholders. The price offered had been amply covered by real assets, and on a dispassionate consideration of the terms as a whole, it was, in fact, only paying a fair value on investments and none on the services. Besides, the terms included the purchase of Parry's 1955 profits, which would exceed Rs. 10 lakhs after servicing preference capital, and he did not see any reason why this figure would not be maintained in future or even increased. The extra shares proposed to be created in E.I.D., including the present A share capital, would not claim more than Rs. 3 lakhs a year as dividend. The advantages to the E.I.D., he pointed out, were thus obvious. Furthermore, there were many other indirect advantages. The proposition has not gone through due to the difficulties created by certain shareholders—

who complained firstly, the ratio of one E.I.D. B share to five Parry ordinaries fixed as the basis of purchase, maintaining that it was unfavourable to the former; and secondly, against the proposed integration of both A and B classes of shares into one category of ordinary stock, value £1 each, on the ground that the interests of the holders of the latter class of shares were being sacrificed. Mr. Srinivasan explained how the first complaint was baseless and gave the assurance that measures would be taken in due course to protect the rights of B shareholders by issuing additional bonus shares to them, through the capitalisation of existing reserves.

International Monetary Fund.—Presiding over the joint sessions of the 10th annual meeting of the I.B.R.D. and the I.M.F., Mr. Ahmed Zaki Saad, chairman of the Boards of Governors, stressed the increasing attention being given by both the Bank and the Fund to the problems of the under-developed countries. Both of these international institutions, Mr. Saad pointed out, had made notable contributions towards the three pre-requisites of economic development—finance, technical skill and stable economies. Within the last decade, he said, the Bank had made loans totalling over \$2,000 million to some 40 member countries while the Fund had transactions with 27 member countries exceeding \$2,000 million, which had helped to provide the stability of international trade and payments necessary for progress in development. He hoped, however, to see the Bank playing a more active rôle as lender and technical adviser in the Middle East and other under-developed areas. There is no country in the world, said Mr. Saad, whose people and government do not recognise that orderly and continuous economic growth is the indispensable basis of welfare. This is true of nations in all stages of development, but the under-developed countries, continued Mr. Saad, are goaded by an even sharper necessity to attain and maintain a satisfactory rate of growth. They must find ways of increasing production not only to deal with the growth of population but to augment the per capita consumption. Firstly they are under intense social and political pressure to speed up

their economic growth. To develop an integrated system of industry and agriculture they must find ways of accelerating the building of the basic plant of a modern economy particularly in the fields of communications and power. Secondly, the mobilisation of savings is no less necessary because every country must rely primarily on its own savings for economic development, but an essential supplement to internal savings, is imported or foreign capital. To mobilise savings in under-developed countries is a difficult matter and if the country is poor the total will be disappointingly small. To induce these savings, said Mr. Saad, it is necessary to change investment habits, improve and establish financial institutions, reform the fiscal system and safeguard the currency and foreign exchange system. Foreign investment can not only provide funds for industries where large amounts of capital are needed for a single investment but give access to foreign technology on a wider scale. Neither is it enough, he said, that under-developed countries provide opportunities for foreign capital, the developed countries on their part must continue their efforts to facilitate the flow of capital to other parts of the world. In his concluding remarks, Mr. Ivor Rooth, chairman of the Executive Board and Managing Director of the I.M.F., assured the various Governors that the problems of under-developed countries would continue to receive special care. The Governor for India had welcomed the Fund's attitude towards the schedule of charges and Mr. Rooth said that the staff was working on this problem and that later in the year the Executive Board would consider the advisability of modifying these. Both India and Pakistan had stressed the need for a revision of the quota limits insignificant. A review of quotas, said Mr. Rooth, has been begun, and he looked forward with confidence to further progress and friendly collaboration in the solution of world financial problems.

A MASTER'S LIABILITY FOR HIS SERVANTS' ACTIONS

THE LAW OF "VICARIOUS RESPONSIBILITY"

(FROM OUR LEGAL CORRESPONDENT)

THIS is the latest Indian case on the law of what is called "vicarious responsibility," whereby a master is sought to be made liable to a third party for an act of his (the master's) servant. The maxim on which this liability depends is *qui facit per alium facit per se* (who acts through another acts through himself), and one mentions it with hesitation, having developed down the years a profound distrust of all these Latin tags. In fact, it is submitted that it would be an excellent thing if the whole lot of them were scrapped and finally consigned to the juridical dustbin. Designed to effect simplicity, they cause confusion. When the reader comes to the facts in this particular case, let him try his hand at applying the doctrine *qui facit per alium facit per se* to those facts. If he is not a lawyer, the reader, almost without doubt, will say that in that terse, incisive sentence of six brief words the whole problem is answered. But it is not. Very far from it. And the reason—as it is with some many of these doctrines based on a few portentous words of Latin doggerel—is that the exceptions have drowned the rule. The maxim, in regard to the law of master and servant, purports to lay down as a general principle that the master is responsible to the outside public for what his servant does, that, in the century-old words of Lord Chancellor Cranworth, "where an injury is caused to anyone by the negligence of another..... (if) the person whose neglect caused his injury was at the time.....acting not on his own account but in the course of his employment as a servant

in the business of a master.....in such a case the master is responsible." Thus, if you, being a contractor, have workmen working on a building, and while I am lawfully under the scaffolding, one of the workmen drops a bucket of whitewash over my head, thus injuring me and my habiliments, the law will assume that it was you who from above did the deed. *Qui facit per alium facit per se*. And you will have to pay. Coming nearer our point, which concerns the loss of goods, let us take a few illustrations for which we are indebted to Mr. Barwell's great work on the subject. Note the cautious wording of the report as if Mr. Barwell had been afraid of going a little too far with the treacherous maxim.

Some 60 years ago, Mr. Uitzen dined out in London. On such occasions it was his custom to patronise a fashionable restaurant owned by a Mr. Nichols, and he did so on this warm summer evening. Subsequently, Mr. Uitzen sued the restaurant proprietor for damages. We will continue in the words of the report: "A waiter, not at the plaintiff's request, though without the plaintiff in any way objecting, took the plaintiff's overcoat and hung it on a hook behind the table at which the plaintiff sat, and where it was not within the plaintiff's view during dinner. While the plaintiff was dining, the overcoat was stolen. The defendant Nichols was held to be a bailee of the coat and to have been negligent in regard to its safe custody." It's no use haggling about a 60-year-old leading case, but wherein lay the negligence? The waiter "took" the coat (one might visualise, from that word, a reluctant Mr. Uitzen being divested of his raiment) and was simply performing his duty in so doing. Mr. Uitzen not "in any way objecting". Why should he? He wanted presumably to dine in comfort. The coat was "not within the plaintiff's view during dinner." What was negligent about that? Was it the waiter's duty to choose a hook so situated as to enable the customer during dinner steadfastly to stare at his overcoat lest thieves do break in and steal the same? However, let us take the waiter's negli-

gence for granted. The point is that his employer was responsible for it. *Qui facit per alium.....*

Consider a more modern leading case which is of interest to professional men. The case concerned a justly eminent and irreproachable firm of solicitors in England. Now, the busier a firm is, whether it be of solicitors, architects, accountants, stockbrokers or as the case may be, the more unavoidable it becomes for it to delegate important work to responsible, trusted but technically unqualified subordinates. This great firm did so, and had left a clerk with much control over its business and its conduct. There is nothing wrong about this practice. All over England, especially in ancient county towns, you will find in long-established solicitors' offices an autocratic, testy old gentleman known as the managing clerk. He is much more than that really. He is an institution, and veteran clients of the firm rely on his advice much more than they do on that of the junior partners. But, in this particular case, the clerk was accorded so wide a scope that he was enabled to defraud a client of the firm who was dealing with him in good faith and in the belief that what was advised and the procedure adopted by the clerk were with the knowledge and approval of the firm. The solicitors were held liable. They were negligent in failing to control or supervise the conduct of the servant whose action in fact caused the damage. *Qui facit per alium facit per se*.

It is at this stage that the reader is invited to reconcile the maxim with the facts and with the decision in the following case from Allahabad.

Certain minor children, a boy and a girl, were entitled to valuable jewellery. This was years ago, and in 1927, to safeguard the then infants' property, application was made to the District Judge of Allahabad, before whom the jewellery was produced, that it might be deposited in a bank or in any place which the court might deem proper. No one objected; a list of the jewellery was made, it was weighed by the court order and the jewellery after inspection was entrusted to the Nazir. The duty of the Nazir, as laid down by the General Rules (Civil) of 1926, was to place the jewellery in a substantial box and this box was to be sent every evening to the treasury or to the Imperial Bank for safe custody and was to be brought back every morning from there. The Nazir, however, placed the property in one of the two safes which were kept in his office. Time rolled on and on an evening in March 1930 the Nazir—and we quote here Brij Mohan Lall, J. in the Allahabad High Court—"for reasons which do not appear from the record, failed to send the cash box to the treasury. This fact was perhaps noticed by others and a theft took place at night. Both the safes and the cash box in the Nazir's office were broken open and the contents were removed." They were never traced. The children's jewellery was gone. Apparently their guardian, their father, was not informed of the disappearance, for in 1941, 11 years after the theft, we find him applying to the District Judge for the return of the jewellery.

This application was rejected by the District Judge on the not unreasonable ground that there was no longer in his possession any jewellery to be returned. The learned judge added by way of comfort assurance to the father that "if he has any grounds he may file a regular suit." The father did file a regular suit. It was for the return of the jewellery or Rs. 25,000, its value and interest thereon. The suit was against the U.P. Government. As for the "any grounds" they were that both the judge and the Nazir had been guilty of negligence in that they had ignored the provisions (quoted above) laid down by law for the safe custody of the ornaments, and that as the result of this negligence the ornaments had been stolen. Both the judge and the Nazir were Government servants. They had had possession of the jewellery in their duties as such servants. Wherefore, it was urged, the Government was liable for their negligence. *Qui facit per alium.....* The Civil Judge—confirmed later on this point by the High Court—found that both the District Judge and the Nazir had been guilty of negligence as alleged, but dismissed the suit on grounds with which the High Court dealt later. This was in 1944, some 14 years after the theft. The infants, now adults, appealed, and after another 11 years or so the appeal was heard and determined, about a quarter of a century from the date of the loss. The case may or may not drag on still by way of further appeal. *Jarndyce v Jarndyce* again. How exasperating it is to the Dickensian to read these constant charges of exaggeration and then find their author substantiated well over a century later! The reason is that in India there are too few judges and too many administrative delays.

The former infants lost their appeal. The High Court held that the Government is not liable for orders passed by courts of justice. "Although the presiding officers of the courts may be Government servants in the sense that their salaries are paid by the Government and their appointment and removal rest with the Government, yet it goes without saying that once appointed they are independent of the Government. The Government cannot dictate nor even suggest to them in what manner they should decide a particular case. Since they are totally independent of the Government in the discharge of their duties, the Government is not liable for their acts on the ground that it cannot control the said Acts."

[Md. Murad v U.P. Government. A.I.R. 1946 (Jan.) Allahabad 77.]

Barwell on Master and Servant. pp 297-317.

A DITCHER'S DIARY

sent being conducted. Another important comment he made was that Russian economists have not been taking the trouble to study facts. I submit that this is a fault with communists and socialists the world over. Anyway, it is all very heartening because I cannot see the Russian people, in spite of being fenced off from the world for forty years, staying satisfied much longer with the tit-bits thrown to them after military demands have been met. And there is really no point in Russia building a war potential as large as that of Western Europe and the United States put together, because it would not mean that she was their equal when fully mobilised. An economy's power lies in its overall size and flexibility, not in the dimensions of its engineering industry taken alone. I hope it will not be long now before the Russian people realise this too.

On the wall of a concert hall in an American city the management is said once to have hung the notice "Please do not shoot the pianist. He is doing his best." Nothing so thoughtful was done at the performance of Mrs. Marie Ashton, the Manchester housewife, who recently played a piano for 132 hours non-stop at the Gaiety Theatre, Leith. I wonder why. The more the better may have been all right for the French artist who, on being informed by his holidaying wife that she had been putting on added pounds, wrote back saying, "Now there is more of you to love, darling." But I do not think it applies to the present case, or, for that matter, to music generally. I am not surprised that Mrs. Ashton should have collapsed after the effort. Although the Reuter report omits to give the other side of the story, I have a strong suspicion that the audience—if there was any of it left at the end barring, of course, the patient clock on duty—equally fell martyrs to melody. Perhaps it is unfair to suggest that because she played for so long Mrs. Ashton must be a poor performer on the piano. But I can hardly help it, because I do not know that there has at any time been a great pianist from Paderewski to Benno Moiseiwitsch, (who, incidentally, will be delighting Calcutta audiences next week) who has had to play his instrument to tatters in marathon sessions to become what he is. Feats like Mrs. Ashton's lead me to conclude that with a certain type of person, "Do it longer if you can't do it better" is fast becoming a motto in life. It at least helps one into the headlines. As readers will perhaps recall, only a few months ago one Kevin Sheehan, an Irishman, talked his way there in 133 hours.

To write an obituary is one of the most melancholy of a columnist's duties. I did it last week, and, to my regret, I find myself doing it again this week. Mr. G. V. Mavlanar, who died last Monday, was one of the most outstanding of India's Parliamentarians. I do not suppose he was a man for the masses; his popularity among them was comparatively restricted. But he was a quiet and devoted worker on a high and, for a country new to parliamentary practices, somewhat unfamiliar to parliamentary life. He took the presidential chair in the former Central Legislative Assembly in 1946, and then became Speaker of the present Lok Sabha. In this position he not only succeeded by his dignified neutrality in winning the good opinion of both sides of the House, but in initiating permanent measures for the sound and proper functioning of parliamentary democracy. One of them was the annual conference of the Speakers of the various States for the discussion of problems common to both themselves and the Centre. In fact, his interest in parliamentary activities was such that he

was frequently participating in these even when they were being held outside India. He was associated with the Commonwealth Parliamentary Conference, Inter-Parliamentary Conferences and the Commonwealth Speakers' Conference. Only recently he was honoured by being elected chairman of the Commonwealth Parliamentary Association. Although he was only sixty-eight when he died, his mature counsels and old-world grace are going to be widely missed.

If the drift of India's socialism is towards the "managerial society", which it seems to be, the advice of one of the world's leading authorities on the problems of management, Lt. Colonel Urwick, who is at present on a tour of the country, will repay careful consideration. Speaking at Bombay the other day he said that progress here could only be achieved if business management were placed on a sound footing. He did not define the word sound, but I think I know what he had in mind. And I think he would be the first to agree with me, having heard something about the remunerations which the consultants employed by his own firm of Urwick Orr and Partners are getting, that the main difficulty here is incentive. Management cadres are always being talked about, but how they are to be reconciled with the ideals of a welfare state have not yet been squarely faced. Nowhere more than in the problem of incentives for the initiative and responsibilities of management are the words of the late Nurse Edith Cavell, "Patriotism is not enough" more appropriate. Soviet Russia began by supplementing it with the chilly prospect of the Siberian salt mines and more lately by the obviously more efficient method of the large tax-free perquisite-laced incomes. The United States has all along preferred the large expense account. Britain has still not made her mind up, and is suffering for it. India's choice must be made soon but the trend seems already to be towards the Soviet model. I am writing this before the Budget, so I suspect the problem will be even more acute in a few hours time. From what Mr. C. A. S. Sim said at the annual meeting of the Bengal Chamber last Saturday, it is obvious that this is just about the greatest difficulty facing honest tax-paying business in this country today. Whether it is solved through increased tax evasion or by creating a body of citizens enjoying special privileges, is simply a choice between evils in a welfare state. But it is one which will have to be made unless Lt. Colonel Urwick's advice is to go unheeded.

I believe that one of the provisions of the Plantations Labour Code is that tea gardens should provide family-planning clinics for their workers.

The rugged square-jawed planter, in our childhood's thoughts
Braved the Indian panther, the loneliness and droughts.
But illusions gained in infancy are dispelled by more than time
Though the firmament's inclemency has brought no kinder climate.

Nor has the age of wisdom shattered all our dreams
For our hero yet still imperium, though 'plying welfare schemes.
He now faces other dangers on his mountain-side abode
Today's planting engenders the Plantation Labour Code.

And so recede the rigours due to pests and blights
and tash-mets.
Since these are trivialities 'gainst umbrellas and free blankets.
Superb in *genus homo*—such jobs are not for cynics
For now what odds he has to face—in family-planning clinics.

Q. What is this man doing?

A. Grinding.

"Precision is our Motto."

All component parts of 'BRUSH-KIRLOSKAR' motors are machined to the closest tolerances.

The above picture shows the grinding of a Squirrel cage rotor of 'BRUSH-KIRLOSKAR' motor to a close tolerance of 0.0005". The rotors being ground to very close limits ensure a uniform air gap between stator and rotor resulting in smooth starting.

For all your requirements of suitable electric drive Write to:

ANNUAL REPORT.

To be submitted to the Shareholders at the Fiftieth Annual Ordinary General Meeting to be held at the Registered Office of the Bank, Mahatma Gandhi Road, Fort, Bombay, on Thursday, the 8th March, 1956, at 4 o'clock in the afternoon.

Directors' Report for the year ended 31st December, 1955.

The Directors submit to the Shareholders the Balance Sheet and Profit and Loss Account for the year ended 31st December, 1955. The Auditors' Report is also annexed.

The transactions for the past year, including the balance brought forward from the previous year, Rs. 9,10,851-5-5, have resulted in a profit of Rs. 94,01,630-2-5.

An interim dividend was paid for the half-year ended 30th June, 1955, at the rate of 6 per cent. free of income-tax on the Paid-up Capital of Rs. 1,50,00,000, which absorbed Rs. 15,00,000-0-0.

Provision made for Income-Tax and Super-Tax for the year Rs. 25,00,000-0-0.

Bonus to Staff Rs. 12,75,000-0-0.

The Directors now propose—

To pay a final dividend for the half-year ended 31st December, 1955, at the rate of 10 per cent. free of income-tax, making 16 per cent. for the year, on the Paid-up Capital of Rs. 2,50,00,000, which will absorb Rs. 25,00,000-0-0.

To place to the Bank's Landed Property Account Rs. 3,00,000-0-0.

To carry forward to the next account Rs. 13,26,630-3-5.

Total Rs. 94,01,630-2-5.

The Bank's business continued to function satisfactorily.

The Official Bank Rate remained stationary at 3½%.

Branches were opened during the year in India at Delhi and Bangalore and abroad at Dar-es-Salaam (Tanganyika).

In accordance with Article 82, read with Regulation 78 of Table "A" of the Indian Companies Act, Mr. Ambalal Sarabhai, Mr. Dinsha K. Daji and Mr. Ramniwas Ramnarain retire from the Board by rotation, but are eligible and offer themselves for re-election.

The Shareholders are requested to appoint Auditors for the ensuing year and to fix their remuneration.

COWASJEE JEHANGIR, Chairman.

AMBALAL SARABHAI, JOSEPH KAY, DINSHA K. DAJI, RAMNIWAS RAMNARAIN, BHAGVANDAS C. MEHTA, K. M. D. THACKERSEY, A. D. SHROFF, MADANMOHAN MANGALDAS, Directors.

D. R. THOM, General Manager.

H. T. COULTAS, Chief Accountant.

Bombay, 2nd February, 1956.

N.B.—The Dividend, when sanctioned, will be payable on and from Saturday, the 24th March, 1956, to Shareholders whose names are on the Register on 8th March, 1956. Dividend Warrants will be posted to Shareholders at their Registered Addresses. Early intimation should be given to the Bank of any change of address.

BALANCE SHEET AS AT 31ST DECEMBER, 1955.

REPORT OF THE AUDITORS TO THE SHAREHOLDERS.

We have audited the foregoing Balance Sheet of the Bank of India Limited, as at 31st December, 1955, and also the foregoing Profit and Loss Account of the Bank for the year ended upon that date, in which are incorporated the authenticated returns from Branches, and report that—

(a) we have obtained all the information and explanations we have required and have found them to be satisfactory;

(b) the transactions of the Bank which have come to our notice have been within the powers of the Bank;

(c) the returns received from Branch Offices of the Bank have been found adequate for the purpose of the audit;

(d) in our opinion, the foregoing Balance Sheet and Profit and Loss Account are drawn up in conformity with the law;

(e) such Profit and Loss Account shows a true balance of profit for the year;

(f) such Balance Sheet Exhibits a true and correct view of the state of the affairs of the Bank according to the best of our information and the explanations given to us and as shown by the books of the Bank; and

(g) in our opinion, books of account have been kept by the Bank as required by Section 130 of the Indian Companies Act 1913.

A. F. FERGUSON & CO., Chartered Accountants.

S. B. BILLIMORIA & CO., Chartered Accountants.

Bombay, 2nd February, 1956.

Statement pursuant to Section 132-A of the Indian Companies Act of 1913 as amended by Act XXII of 1936.

The Profit and Loss Account of the Bank of India Limited for the year ended 31st December, 1955, does not include any profit or loss of its subsidiary, the Bank of India (U.K.) Nominees Limited (a Nominee Company operating in the United Kingdom), as no profit was made and no loss was sustained by that subsidiary. All expenses incurred were borne and paid by the Bank.

AMBALAL SARABHAI, JOSEPH KAY, DINSHA K. DAJI, RAMNIWAS RAMNARAIN, BHAGVANDAS C. MEHTA, K. M. D. THACKERSEY, A. D. SHROFF, MADANMOHAN MANGALDAS, Directors.

D. R. THOM, General Manager.

H. T. COULTAS, Chief Accountant.

Bombay, 2nd February, 1956.

THE BANK OF INDIA (U.K.) NOMINEES LIMITED.

BALANCE SHEET. 31ST DECEMBER, 1955.

Capital Authorised and Fully Paid-up:	£ 100	Cash at Bankers	£ 100
100 Ordinary Shares of £1 each.			
	£ 100		£ 100

Signed on behalf of the Board
J. DONALDSON,
S. H. BRADFORD, Directors.

We have obtained all the information and explanations which we have required and which to the best of our knowledge and belief were necessary for the purposes of our audit. In our opinion proper books of account have been kept by the Company. We have examined the above Balance Sheet which is in agreement with the books of account in our opinion such Balance Sheet gives the information required by the Companies Act 1948 in the manner so required and is properly drawn up so as to exhibit a true and correct and fair view of the state of the Company's affairs at 31st December, 1955, according to the best of our information and the explanations given to us and as shown by the books of the Company.

No Profit and Loss Account has been prepared as the Company has no income and the expenses are paid by the Holding Company.

Company Meetings

THE EAST INDIA DISTILLERIES AND SUGAR FACTORIES LTD.

CHAIRMAN MR. C. R. SRINIVASAN'S SURVEY

Speech delivered by Mr. C. R. Srinivasan, Chairman, East India Distilleries & Sugar Factories Limited, at the Annual Meeting of the Company on Thursday the 23rd February, 1956, at 4 P.M.

Gentlemen,

For the first time in the history of this Company, with a record extending to well over 50 years, of great achievements in the industrial sector to its credit, you find an Indian presiding over the Annual Meeting of the Company. I have ventured to draw your attention to this fact for the reason that it has a significance that should not be missed. The E.I.D. is a sterling Company registered in U.K. but with all its business interests in India. The management and control of the Company were shifted to India with the advent of Swaraj and vested in a Board of Directors, on which the majority at the moment continues to be Europeans. In keeping with the spirit of the times, however, I expect an Indian majority to serve on the Board presently. During recent years the majority of shareholding also has moved to this country and in due course I expect the Company will be placed on the Indian Register with a rupee capital. We are today on the edge of an expanding economy and naturally it is expected of every concern operating in the country to give of its best in the service of the Motherland. It is in the confident hope that I can count on your goodwill and co-operation to make this Company play its allotted role in the redemption of our economy that I have made bold to accept additional responsibilities.

Litigation

That this confidence is not misplaced has been abundantly proved by what has happened during the past 48 hours. Shareholders in Madras will doubtless be aware of the litigation in which the Company and its Directors have recently been involved and which precluded us from proceeding with the consideration of one of the resolutions to be placed before you at the Annual General Meeting on the date convened, and with the consideration of any business at the Class Meetings and Extraordinary General Meeting convened for the same date. The main contentions of the Plaintiff who is a substantial shareholder in your Company were (a) that your Company was offering to pay too high a price to the Ordinary Shareholders of Parry & Co., Ltd., who include certain of your Directors as stated in the documents annexed to the Directors' Report circulated to you, (b) that the ratio of 5 Parry & Co., Ltd. shares for one E.I.D. 'B' share was unfavourable to the E.I.D. 'B' shareholders and (c) that the proposed capitalization of reserves in favour of 'A' shareholders in the Company and equalising it with the 'B' share rode roughshod over the rights of the 'B' shareholders. Following the appeal I had made when adjourning the Meetings, discussions were held by members of your Board with the shareholders concerned and I am happy to inform you that we were able to satisfy him that the price offered and the ratio proposed for exchange of shares by your Company to Parry & Co., Ltd. Ordinary shareholders were fair and reasonable. Incidentally I think it right that in view of the publicity that the case has attracted I should make it clear to you that such of the Directors of your Company as may claim to control the major shareholding in Parry & Co., Ltd. had suo moto at the time the original offer was made offered to accept a smaller price for those shares than that offered to individual shareholders namely Rs. 4/8/- as against Rs. 5/6/-. This is clearly set out in the terms of the offer of the 18th October, 1955. This is prima facie evidence of their bona fides. As regards the other points made by the Plaintiff who claims to speak for certain other 'B' shareholders also, his case was that the 'B' shareholders were being unfairly treated by the proposed conversion of 'A' shares into Ordinary Shares. It has never been the practice of your Board to attempt to roughshod over the rights of any class of shareholders and the argument that the resolution deprives 'B' shareholders of their rights to surplus profits in

the Company while only conferring on them the right to share in the surplus assets on liquidation is not without force in the present context. Your Board after careful consideration of the matter has now come to the conclusion that they should approach the necessary authorities with a view to obtain permission to capitalize reserves to the extent of 75,000 pounds and issue simultaneously bonus shares to existing 'B' shareholders also in the ratio of 1 to 4, being the same ratio as the contemplated bonus issue in favour of 'A' shareholders. On receipt of assurances that this consent would be sought and that the Class Meetings and that part of the Extraordinary General Meeting dealing with the capitalization of reserves would be adjourned to a suitable date the Plaintiff withdrew the suit. It is but fair that I should state that the Plaintiff has shown by the way he reacted to my appeal that the action he took was not intended in his own self-interest or for his own benefit but to safeguard what he considered to be the rights of the shareholders generally and 'B' shareholders in particular. Whilst Ordinary Shareholders of Parry & Co., Ltd., who have accepted the offer made to them by your Company, will have elected to accept 'B' shares in lieu of cash will not participate in the proposed bonus issue to existing 'B' shareholders I am happy to state that the rights will be fully protected as a result of a generous decision taken by the shareholders of the Coromandel Investment Trust Ltd. The persons concerned will receive in due course a letter from the Coromandel Investment Trust advising them of what is proposed.

Imports

Let me now deal with what is relevant for consideration at the Annual Meeting. The Report and Accounts for the year ended 30th September, 1955 have now been in your hands for some time and with your permission I propose to take them as read; the Report of the Directors as usual gives a very full account of the activities of the Company during the year under review and I do not think there is any need to amplify what has already been stated in the Report except to express the hope that you will share the satisfaction of the Board in the substantial improvement in the profits of the Company which has been recorded during the year under review. During the 1954 sugar season, the estimated all India consumption of white sugar fell to 17 lakhs of tons as against which the production of the Indian factories amounted to slightly more than 16 lakhs of tons. The Government continued to import sugar and imports in this country during the season were over 5 lakhs of tons. This has resulted in an increase in the level of sugar stocks in the country from approximately 60,000 tons at the commencement of the sugar season to approximately 5,25,000 tons at the end. Licences have been issued for the integration of new units of production and the Second Five Year Plan estimates consumption potential to move up to 22 and odd lakhs of tons by the end of the period. Desirous as I am to give due weight to this estimate, I wonder if it is prudent for this Company to depend so much on the profit potential of the sugar industry to service its large capital. You will remember that Mr. S. G. H. Davis, my predecessor in office, in his address at the last Annual Meeting referred to the aura of uncertainty shrouding the future of the sugar industry. This uncertainty, I am afraid, continues to prevail and your Directors have therefore given time and thought to the possibilities and potentialities of your Company expanding its interests in other directions. The changes in Company Law which are due to come into force from April next, emphasize also the need for some hard thinking in respect of reconstruction both in structure and management.

Parrys in the Picture

It is against this background that in October last your Directors decided to make an offer to Messrs. Parry & Co., Ltd., for the purchase of the whole of the issued Ordinary Share Capital of the Company. Particulars of this offer and the advantages we expect to accrue are clearly set out in the Directors' Report. The novelty of the proposal for one thing and the terms offered for another have attracted attention and provoked comment in some quarters but it only needs dispassionate consideration to establish that the proposal is made on a fair and equitable basis, and if anything the E.I.D. shareholders stand to benefit by the transaction. Parrys have an established reputation all over the country. A study of their last Balance Sheet will bear out that the price we offer is amply covered by real assets. It is relevant to point out in this context that no price is offered for the goodwill of Parry & Company; no compensation is paid either for the benefit arising from the agencies held by this firm; nor is any consideration paid for the transfer of a well-knit organisation, operating in the main cities of India and holding valuable internal and international connections. In fact, E.I.D. will only be paying fair value on investments and none for services.

The purchase will include the Parry 1955 profit, subject to a small interim dividend of 5% paid in last October, and the profits for the year will be higher than the figure for 1954. After servicing the Parrys Preference Share Capital, the net amount of Parry's profits available for E.I.D. equity will exceed 10 lakhs and there is no reason to presume on the date available that this figure will not be maintained and improved upon in future. The ordinary dividend on the extra shares we propose to create in E.I.D. including the present 'A' share capital will not cost more than 3 lakhs a year and therefore the advantages of the purchase as far as the E.I.D. is concerned are obvious. Apart from the direct benefits I have above referred to, the indirect advantages that will accrue to the E.I.D. are even more important, in the dynamic conditions which prevail today. We are on the threshold of a new industrial era and whoever can command talent and resources will most certainly play a great part in the build-up of our new economy. The E.I.D. has the resources but has not the advantage of independent talent at its control to make good. Parrys offer that in good measure and in the new set-up contemplated, E.I.D. will control Parrys

and not vice versa. Directed by a Board whose concern will be to study and serve Indian interests and possessed of the advantages that an institution like Parry's can offer I hold that the future of the E.I.D. is assured. I commend therefore, in all sincerity, the resolution that is placed before you in this behalf for confirmation.

Shareholders have been duly notified that following this meeting, Separate Class Meetings of 'A' and 'B' shareholders and an Extraordinary General Meeting thereafter will be held. Since giving notice and as a result of exchange of views with shareholders and what had alternative suggestions to make in the adjustment of equity between 'A' and 'B' shares prior to their integration into one Class, the Board of the E.I.D. desires that these two Class Meetings be adjourned with your permission to Thursday, the 29th March, 1956, at 3-30 p.m. to enable the Board to take necessary action on the lines indicated. As a consequence consideration of the first resolution set out in the notice of the Extraordinary General Meeting to the shareholders will also stand adjourned to the same day at 4 p.m. But the Extraordinary General Meeting will, however, proceed to consider and, if thought fit, to pass the second resolution notice of which has been duly given. I hope I shall have your support for this course of action.

Misunderstanding Clarified

In view of the misunderstanding that has prevailed in some quarters I feel I should avail myself of this opportunity to set out the position in proper perspective. The first resolution intended to be placed before the Extraordinary General Meeting but now to be adjourned proposes that the nominal and paid up value of each 'A' share which was reduced to 16 shillings in 1903, should be restored to 1 pound and that 'A' and 'B' shares should both be converted into a new class of ordinary shares ranking pari passu. The class of ordinary shares in this context is that 'B' shareholders were not primary shareholders of the Company. The original shareholders of the Company were Parry's. It is in this context that 'B' Preference Shareholders and 'A' shareholders, shareholders came to be created to adjust equities between these two; and that was taken on hand in the first stage of reconstruction. When people talk of the rights of 'B' shares they seem to forget that without 'A' shares there would have been no 'B' shares. I have heard arguments advanced that the equities of 'A' shareholders are sufficiently covered by the initial allotment of 'B' shares to them. Obviously, my mind is merely begging the question. Obviously, bonus shares can only be allotted to the then existing shareholders. The present position is that the 'A' shares are entitled to all surplus assets of the Company and 'B' shares to all surplus income. It cannot be denied that any scheme for reorganisation or development must inevitably trench on the rights of one or the other class of shareholders. By way of illustration, I may point out that this question cropped up when Parrys Confectionery Ltd., was promoted and 'A' shareholders had to be satisfied that their rights would be adequately safeguarded. The powers that 'A' shareholders possess over surplus assets therefore are neither unreal nor illusory as some imagine. Should the Company be transferred to the Indian Register for example the problems posed would prove very real indeed. On a balance of considerations, the proposals should normally commend themselves if it is remembered that 'B' shares were largely the creation of 'A' shares that they came into existence to achieve a definite purpose, and that if the interests of 'B' shareholders to recover their freedom of action for separating and streamlining their range of activities as and when need or occasion arises. However, during the last few days as I have already indicated another point of view has been firmly put before us and it could not be ignored. It is so that these two classes of shares should be merged into one. Only the question of capitalising a part of the reserves for the purpose of raising 'A' shares from 16 shillings to 1 pound before merging them with 'B' shares it is argued is inequitable and it has been suggested that in order to protect the interests of the present 'B' shareholders it would be desirable to capitalize and reserve 75,000 pounds from the reserve and issue it to present 'B' shareholders simultaneously. The idea is that if 20,000 pounds are to be capitalized for 80,000 pounds worth of 'A' shares in the same proportion 75,000 pounds may be capitalized for 300,000 pounds worth of 'B' shares. Certainly the Company can afford to do this from its reserves. Such a step will eliminate any undercurrent of discontent it is certainly worth attempting. The Directors are agreeable to do so but time is needed to make an application to the Controller of Capital Issues and get Government sanction for this additional bonus issue. That is why this adjournment is proposed.

The second resolution is conditional and consequential upon the Company's offer dated the 18th October, 1955, to purchase the Ordinary Shares in the capital of Parry & Co., Ltd., becoming effective, in which event that Company will cease to be Managing Agents for your Company which will then become Director-controlled. It is therefore necessary that the Articles of Association should be altered in order to remove the present powers of the Managing Agents and to provide for the appointment of Executive Directors and for the provision of powers for such Directors.

Auditors

Before concluding, there is one other point I should like to refer to. For some years past the Auditors of the Company have received remuneration of Rs. 6,000/- per annum in respect of their statutory audit and have, in addition, received a fee of Rs. 5,000/- per annum plus out-of-pocket expenses, for carrying out an internal audit of the Company's factory accounts. The Auditors are of the opinion that the factory audit should form part of their statutory audit and have accordingly requested that the remuneration be voted to them should be Rs. 10,000/- per annum, plus out-of-pocket expenses, and the resolution has been framed to this effect. The total amount payable to the Auditors will therefore be Rs. 1,000/- per annum more than in past years, this sum representing the cost of the factory audit at Neillukuppam, applicable to Parry's Confectionery Limited.

In conclusion I would like, on behalf of us all, to express our appreciation of the services of the Company's staff and labour during the year under review which have so largely contributed to the satisfactory financial results. Before proposing the adoption of the Report and Accounts for the year ended 30th September, 1955, I shall be glad to answer any question which any shareholder may wish to put to me regarding the Report and Accounts.

THE SCINDIA STEAM NAVIGATION CO., LTD.

CHAIRMAN MR. D. M. KHATAU'S REVIEW

Summary of the speech delivered by the Chairman, Mr. Dharamsey M. Khatau, at the 36th Ordinary General Meeting of the Company held on Wednesday, the 22nd February, 1956, at 4 p.m. at Scindia House, Ballard Estate, Bombay.

Gentlemen,

I assume that, as usual, you will permit me to take as read the Directors' Report and the Audited Accounts for the year ended the 30th June, 1955, which have been in your hands for some time now.

It is regrettable that the results this year have been less satisfactory than in the previous year. There are four main causes for this. The Dockers strike in the U.K. and the congestion at U.K. and Indian ports and the 'Go Slow' of Port and Stevedoring Labour caused a delay of 380 voyage days. The load of rice at Rangoon was about 400 tons per day as against the anticipated 800 tons per day on which the freight rates were based. This caused considerable loss. The cost of stevedoring has risen to the extent of about 15% over the previous year. The cost of Marine Dues, Claims, etc. have also gone up. The cost of coal increased by about As. 7/10/- per ton. The necessity of chartering vessels to fulfil commitments for rice liftings from Burma was unprofitable. This would not have been necessary if the construction of ships at the Visakhapatnam Shipyard had proceeded according to programme.

In view of the unsatisfactory results the Managing Agents have agreed to accept Rs. 8 lakhs only and waive the balance of Rs. 2,26,951/- provided that the amount so waived is exempted from Income-tax in their hands. Our thanks are due to the Managing Agents for this gesture.

Our Reserves and Surplus now amount to Rs. 6.51 crores against Rs. 6.27 crores last year. Our Specific Reserves have increased from 5.29 crores to Rs. 5.91 crores at the end of the year.

As we are in need of finance for further modernisation of our tonnage, we have requested the Government to release Rs. 2.47 crores invested in the shares of Hindustan Shipyard Ltd. and Eastern Shipping Corporation Ltd.

Coastal Freights

The tonnage plying on the coast today is not sufficient to carry all available cargoes. From 1950 to 1955 Coastal tonnage has increased only from about 200,000 tons gross to 244,000 tons. Due to prevailing unsatisfactory conditions all round about 20% more tonnage is now required to carry the same volume of traffic. To meet the increasing demand and relieve the pressure on Railways more coastal shipping is needed; but the prevailing prices which used to be very high. A standard coastal ship which used to cost about Rs. 44 lakhs in 1950 would now cost about Rs. 80 lakhs. Unless rates of freight are raised to meet the operating costs, acquisition of fresh tonnage is impossible.

The Coastal Conference therefore decided to increase the freight rates for General Cargo by 10% from 1st June and request Government for same. Before increase in Coal rates from May 1955. Before these increases could be effected, it was suggested by Government that the freight rate structure of the coast should be maintained until the Rail-Sea Co-ordination Committee reported its findings. On further representation Government have allowed a meagre increase of 5% in the rates on coal and general cargo from 15th October last.

The Coastal Conference believes that the rates of freight should be fixed at a level to meet fully the costs of operation, normal depreciation, reasonable provision for rehabilitation and fair return on capital employed. The present Coastal fleet has many old vessels which will require replacement at no distant date. A provision for rehabilitation of fleet out of date is therefore necessary. There is no reason why a return of 10% on Gross Block value should not be granted in the case of shipping, while fixing the rates of freight, as is allowed by the Tariff Commission for other industries. On the above basis the short-fall of earnings over the operating expenses comes to 28% of the earnings. For a new ship the short-fall comes to over 50%. While I am not suggesting that the rates should be enhanced to this extent, I trust Government will recognise the necessity to provide reasonable incentive to shipping companies for expansion of tonnage.

Pending submission of the Report by the Committee, the Conference has urged that as an interim measure coal and general cargo rates be increased by 15% from 1st March, 1956. I hope the Government will grant early relief in this connection.

India/U.K.-Continent Trade

The combined liftings of the two Indian Lines—Messrs. India Steamship and ourselves—of the exports from India to the U.K. and Continental countries are about 15% of our total exports to these countries. As soon as the new ships in these trades, delivered we intend to employ 18 ships in this country. Even so, in the entire overseas trade of this country, the participation of Indian Lines comes barely to 5%. We have, therefore, still to go a long way towards the target of attaining a 50% share in the carriage of our overseas trade. But we are going to expand and I wish to emphasise that it is the ambition of the Indian Lines to participate equally in the carriage of the foreign trade of this country.

Tonnage Programme

The question of building new ships for the coast is very difficult. I have already informed you about the very unsatisfactory state of affairs on the coast at present. Needless to repeat that no shipowner can think of building new ships for the coast unless the existing conditions show material improvement.

Prospects for the Current Year

I would now like to acquaint you with the prospects for the current year as they appear to me. On the expenditure side, costs of operation under various

heads show no signs of decrease. Actually there is bound to be increased expenditure under certain items; for example, we shall have to spend considerably more on ship repairs in view of a larger number of ships having to be put through special surveys during 1955-56. Some of these ships are older and will, therefore, require heavier repairs. Stevedoring costs are already high and will increase further on account of the introduction of Piece Rate system of payment to labour. As regards fuel-oil, there was an increase of sh. 5/- in the prices with effect from March, 1955, and a further increase of sh. 7/6d. from 1st January of the current year; from the 15th of the next month the prices will further increase by about sh. 3/-. On the other hand, as I have already stated, two German-built and two Visakh-built ships were delivered to us during 1955. Three of them will have been in commission practically for the whole of the current year and one for nearly six months. The increase of 10% in freight rates from February 1955 together with comparatively brisk movement of cargoes from the U.K. and Continental ports to India will show its full effect in the current year. The further increase of 10% in rates which will be effective from next month will be only partly reflected in the current year. A distinct improvement in our freight earnings in the India/U.K.-Continent service may therefore be expected. On the Coast, so far as working conditions at ports are concerned, one may hope that the corner will be turned as a result of the introduction of the Piece Rate system of payment. The rate of freight on salt from Saurashtra to Calcutta has been fixed at Rs. 31/4/- per ton for the year 1956, which is Rs. 3/2/- more than the previous rate. The rates on coal and general cargoes were increased by 5% last October. Any further increase that it may be possible to secure in coastal rates will not be fully reflected in the current year. Having regard to the position I have indicated, it appears to me that on the whole the working during the current year should be reasonably satisfactory compared with the year under review.

new light
on your
overheads

Actually its good lighting.
Fluorescent lighting—Philips.
Cutting overhead costs, and giving you over 3 times the light on the job. All workers, office employees and factory labour, who have had experience of this new light correctly handled, will agree that they can work a lot better over a length of time under fluorescent lamps. Less eye-strain, fewer mistakes, quicker work, and an improved general atmosphere, these are the results of better lighting. And working tests have proved that Philips Fluorescent Lamps, used with quality control gear, have a burning life of 7500 hours, which is just about 4 years. These are a few reasons why Philips Fluorescent Lamps & Fittings are being installed in homes, offices and factories throughout the world.

PLANNED LIGHTING BY PHILIPS

Philips are fully prepared to provide you, without any obligation on your part, advice for a planned lighting system. Call them in and discuss it. Philips Electrical Co. (India) Ltd.

GILT-EDGED LEAD RISE IN STOCK MARKETS

INDUSTRIALS IRREGULAR: FOREIGN BONDS SUBDUED

London, 29th February.

THERE was a sustained recovery in the stock markets during the past week, although it slowed down after the week-end on evidence of the growing effects of the credit squeeze and other economic measures. The recovery in gilt-edged was the main feature, and other domestic sections followed the trend there. Business throughout was small, but bear-covering and small investment buying found the markets short of stock as there was little selling. The firmness of sterling and the Chancellor of the Exchequer's statement in Parliament that disinflationary measures were adequate in the present circumstances assisted the recovery in gilt-edged which also attracted buyers through their attractive yields. In addition, it was widely believed that there would be no further increase in Bank rate, so prices of securities were unlikely to go lower and might well advance if the economic situation improved. Compared with previous levels, gains of more than a point were seen in gilt-edged, with the 3½ percent War Loan nearly two points higher. The recovery in securities was primarily responsible for the continuation of the recovery in industrial equities. But the latter turned irregular towards the end of last week and these conditions continued after the week-end. Nevertheless, prices were higher than a week ago, with the Financial Times Industrial Ordinary index about three points up. The irregularity of industrials followed further news indicating that the credit squeeze and the disinflationary measures were taking effect. Foreign bonds were subdued while prices moved irregularly and within narrow

limits for the most part. Rails attracted little attention but dollar stocks were several points higher in response to the advance on Wall Street. Gold shares drifted lower in idle conditions but losses were small, while diamonds lost ground on the news of a large Russian diamond discovery. Coppers advanced in response to the rise in the metal price, while tins were firm for similar reasons. Oils recovered with the rest of the market and the leaders recorded sharp gains, but rubbers tended lower following the fall in the commodity price. Tea shares fell back before steadying towards the end of the week following the appearance of a few buyers.

The Money Market

The money market experienced its first penal borrowing at the new Bank rate, although it was on a small scale. This occurred on Monday, when credit was in very short supply and 5 percent was paid for overnight accommodation. On subsequent days, conditions progressively improved, until by the end of the week money was easy and day-to-day loans ruled on the basis of 3½ to 4 percent. Turnover in bills was moderate, with Mays sold at 5 percent. At the Treasury Bill auction, the rate was lowered by 1s percent. Applications for £220 million worth of 91-day Bills totalled £404,435,000, of which the former amount was allocated at an average rate of 10½ 5/8d last week. Offerings this week will consist of £240 million of 91-day Bills. The Bank of England return for the week ended 22nd February showed that notes in circulation were unchanged at about £1,779 million, while bankers' deposits were £7 million lower at about £242 million. Fine trade bills were unchanged.

Stock Market Prospects

The Investor's Chronicle market newsletter writes: The higher Bank rate has been largely discounted. Undoubtedly Britain is entering a deflationary readjustment which will be painful while it lasts. The big question is whether the Government, having at last faced up to the economic situation, is prepared to back its remedies with the needed political courage. Gilt-edged offer some bargains, especially for taxpayers. The outlook for industrial shares is clouded as profits will be more difficult and dividends are unlikely to be raised but there will be buying opportunities. In the short term, there is probably something to be made on Kaffirs.

Activity on Wall Street

Convertible bonds advanced last week, with sentiment aided late in the period by the improvement on Wall Street. Bethlehem Steel and Sinclair Oil were prominent. Rails also tended to improve in more active dealings. U.S. Government securities were slightly easier in quiet trading, most of the declines being in intermediate issues. World Banks were dull. In the foreign section, German Nationals developed renewed firmness with Cologne 6½ percent prominent. Greek 7 percent advanced while Italians were higher with the public utility 3 percent of 1977 in demand. Denmark, Serbs and Norwegians were unchanged or slightly higher. South Africans improved fractionally to reach a new high before easing. Australians advanced in moderately active dealings. A number of Japanese issues improved. South Americans were quiet and mixed.

Manganese Ore Firm

Firm conditions continued in the manganese ore market last week. Indian 46-48 percent ferrograde was quoted at 92d to 98d a long ton units, c.i.f. Continent, against 90d to 92d recently. Satisfactory demand is reported from both sides of the Atlantic. Meanwhile, there is some speculation on whether the Indian Government will reimpose the export duty of 15d ad valorem to improve its competitive position. At that time the price was much lower at around 68d. Some quarters in London feel that it would be unwise to reimpose the export duty with prices at the present high levels.

Fluctuations in Hongkong Gold

Hongkong gold prices last week showed the widest movements in four years, fluctuating over a range of \$(HK)9. The steadiness was attributed to the improvement of sterling in New York. The market opened quiet but later rose sharply. Values eased at the close on profit-taking. The fluctuation in U.S. notes contributed to the wide movements. Business in c.i.f. Macao goods was reported to be brisk following fresh arrivals.

U.K. Exchange Control Simplified

The U.K. Commissioners of Customs and Excise have announced a simplification of exchange control formalities. This has been approved by the Treasury in order to assist the export trade. At present, exports to countries outside the sterling area require complete exchange control declarations for all goods of a value exceeding £25, i.e. b. Under the new arrangements the limit has been raised to £250, and from 27th February the completion and lodgement of exchange control is not required for exports up to and including £250 in value i.e. b. There is one exception: the new procedure will not apply to the export of private gifts in kind exceeding £25 in value, for which special permission will still be required.

Ceylon orders British Cables

An order for underground electric cables worth £265,000 has been placed by the Ceylonese Ministry of Transport & Works with a British firm. The contract is for the supply and installation of 35 miles of 33,000-volt, 11,000-volt, and auxiliary pilot paper-insulated underground cables. The 33,000-volt and auxiliary cables will feed various substations in Colombo, while the 11,000-volt cable is to reinforce and extend the existing system to meet present and future power loads.

Finance in India and Abroad

THE BUDGET ESTIMATES

ANOTHER OVERALL DEFICIT IN 1956-57

PRESENTING his sixth annual Budget in Parliament on Wednesday evening, the Finance Minister, Mr. C. D. Deshmukh, said that the current year's revenue deficit of Rs. 17.35 crores was now expected to be converted into a surplus of Rs. 12.31 crores, due largely to an improvement in excise duties and a saving in Defence expenditure. The overall deficit was now estimated at Rs. 22.22 crores, against Rs. 32.7 crores originally anticipated. For the coming financial year, at the existing levels of taxation, revenue was estimated at Rs. 493.6 crores and expenditure at Rs. 545.43 crores leaving a deficit of Rs. 51.83 crores on revenue account. The overall deficit for the next financial year was planned at Rs. 390 crores.

The revised estimates for the current year indicated that the revenue deficit of Rs. 17.35 crores estimated in the current year's budget was now likely to be converted into a surplus of Rs. 12.31 crores. The improvement was due to a rise in revenue of Rs. 20.09 crores and a shortfall in expenditure of Rs. 9.57 crores.

Despite the abolition or reduction of a number of export duties during the year, the Customs revenue stood almost at the same figure as originally anticipated due to improvement in import duties. Similarly, the income-tax receipts were not expected to show any variation. The major increase in revenue had occurred under Union excise duties, which were now estimated to yield Rs. 7.73 crores more, and in the Posts and Telegraphs revenue, which was expected to be Rs. 1½ crores better. There was also a formal increase in revenue of Rs. 11.2 crores on account of sale proceeds of evacuee property which was offset by a corresponding increase in expenditure on its transfer to the compensation pool. Of the savings in expenditure, Rs. 3.16 crores were in Civil expenditure and Rs. 17.61 crores in Defence expenditure, arising mainly from difficulties in procuring supplies; but these were offset by the transfer of Rs. 11.2 crores to the compensation pool, leaving the net savings at Rs. 9.57 crores.

Budget Estimates for 1956-57

The Finance Minister estimated the next year's revenue, on the basis of existing taxation, at Rs. 493.6 crores and expenditure at Rs. 545.43 crores, leaving a deficit of Rs. 51.83 crores on revenue account. The revenue from Customs would be less by Rs. 15 crores, while Union excise duties would go up by Rs. 5.45 crores. The former was due largely to the full year's effect of the abolition of export duties made this year, cessation of imports of sugar and reduction in the imports of motor spirit as a result of the increase in indigenous production. The last item, together with an improvement of Rs. 1.2 crores in tobacco, explained the increase in Union excises. Other significant increases were Rs. 6.3 crores in income-tax and Rs. 3.5 crores in the dividend payable by the railways but these would be offset partly by a decrease of Rs. 1.62 crores in the Posts and Telegraphs revenue.

Defence expenditure, estimated next year at Rs. 203.9 crores, showed an increase of Rs. 18.9 crores over the revised estimate for the current year due to the normal expansion of the Navy and Air Force and, in the case of the Army, to the carryover of demands for stores which had not materialised in the current year. Civil expenditure next year was expected to be Rs. 43.37 crores more on account of the rising tempo of development expenditure. The expenditure on nation-building and development services was placed at Rs. 23 crores more than the current year. The provision for Community Development and National Extension Services had been increased by Rs. 1.4 crores, for welfare of scheduled tribes, scheduled castes and backward classes by Rs. 3.4 crores, for grants to the Central Social Welfare Board and expenditure on social and moral hygiene by Rs. 1.6 crores and for expenditure on displaced persons by Rs. 2.7 crores.

Capital Expenditure

The revised capital outlay in the current year was estimated at Rs. 170 crores as against the Budget estimate of Rs. 223.3 crores. Of the saving of Rs. 53.3 crores, Rs. 40 crores occurred under State trading schemes due mainly to lesser imports of wheat and sugar and Rs. 6 crores in the payment of compensation to displaced persons.

For the next year, capital expenditure was estimated at Rs. 316.7 crores, of which Rs. 113 crores were for railways, Rs. 26.3 crores for Defence, Rs. 44 crores for the three new steel plants, Rs. 20 crores for cash compensation to displaced persons, Rs. 9.5 crores for Government trading schemes mostly for purchase of foodgrains and Rs. 5 crores for the Life Insurance Corporation. In addition, the estimates included, against the original estimate of Rs. 355 crores, Rs. 327 crores this year and Rs. 386 crores next year for loans to State Governments and others mostly for the execution of projects in the plan.

Ways and Means

The overall deficit this year was expected to be of the order of Rs. 22.22 crores against Rs. 32.7 crores assumed in the original Budget. As the opening balance of the year was about Rs. 18 crores less than the minimum balance of Rs. 50 crores, the expansion of Treasury Bills would amount to Rs. 240 crores. Unlike the previous year when a

combined loan was floated to cover the needs both of the Centre and of the States, the normal procedure of separate loans by the States and the Centre was followed. A sum of Rs. 103.7 crores was subscribed to the new 3½ percent National Plan Bonds, 1965 - Second Series, floated during the year. Small savings were likely to attract Rs. 65 crores, against Rs. 52 crores in the original Budget. But the second plan had fixed the target of collections through small savings at Rs. 500 crores.

For the next year the overall deficit was estimated at Rs. 390 crores, the whole of which was expected to be met by expansion of Treasury Bills. Summarising the Ways and Means position for the coming year, the Finance Minister concluded that the Government needed Rs. 52 crores for meeting the revenue deficit and Rs. 703 crores for financing the capital outlay and loan requirements. Against this, it hoped to raise Rs. 100 crores from the market loan, Rs. 70 crores from small savings, Rs. 85 crores from foreign aid and Rs. 110 crores from other miscellaneous debt and remittance transactions. This would leave a gap of about Rs. 390 crores to balance the Budget.

THE BUDGET PROPOSALS IN BRIEF

THE following is a summary of Mr. Deshmukh's new taxation proposals:—

- (1) Duty on liquid gold for glass manufacture raised from 3½ percent to 6½ percent.
- (2) Duty on flashlights and flashlight cases raised from 39.28 percent to 50.1 percent.
- (3) Tea slab duty in present range of Rs. 3-4-0 reduced.
- (4) Excise duty on all categories of cotton fabrics, except dhosis and saris, raised by six pice per square yard.
- (5) New excise duty on vegetable non-essential oil at half anna a pound on oil factories operated by power.
- (6) Excise duty of six pice a pound on straw-board.
- (7) Supertax on incomes above Rs. 70,000 per annum increased. With this adjustment the rate of tax on the highest slab of income, i.e. above Rs. 150,000 would be 91.1 percent as against the present rate of 85.6 percent.
- (8) Tax on registered firms: Nine pice per rupee on income Rs. 75,000. Up to Rs. 175,000, one anna. Partners of registered firms will get rebate on their share of income for income-tax but not for super tax.
- (9) A tax of two annas on bonus issues.

Editorial comment on the Budget proposals will be published in next week's issue of "Capital".

- (10) Inland telegram charge increased from 12 annas to 13 annas for ordinary, and from Rs. 1-8 to Rs. 1-10 for express.
- (11) Registration fee increased from six annas to eight annas.
- (12) Reopening of income-tax evasion cases: present time limit, namely, 31st March, 1956 to be abolished. All fraudulent evasion cases in future will be reopened.
- (13) Rebate of one anna given to non-section 23(A) companies in respect of undistributed profits has been withdrawn.
- (14) Penal super tax on Section 33 companies (pure investment companies) raised from four annas to eight annas in the rupee on undistributed profits.
- (15) While rate of super tax payable by Indian companies will remain unchanged, there will be levied in addition a super tax on dividends above six percent. The rate being two annas when the dividend distributed is in excess of six percent but below ten percent, and three annas on distributions above ten percent.
- (16) Excise duties at four annas per gallon on high-speed diesel oil and vapourising oil. Duties of Rs. 30 a ton and Rs. 15 a ton respectively on other diesel oils and furnace oils.
- (17) A duty will be imposed on soap produced by non-power-operated units at somewhat lower rates than the existing rates for power-generated units and with exceptions to small-scale units.

THE CALCUTTA MONEY MARKET BETTER SHOWING OF BILLS

Wednesday, 29th February.

MONEY is still extremely tight in the market. Demand from the sugar industry, on account of raw jute purchases, and for the holding of stocks of foodgrains upcountry, is running at a high level. There has been no increase in the bank rate, but pressure on money supplies is reported still to be growing. Extremely tight conditions have persisted in the interbank market throughout the week and the call rate has been increased to 3½ percent.

There has been a better supply of export documents in the market this week. The biggest increase has been in tea bills, but there has also been a few on account of gummies. Remittance has been good. Sterling continues to strengthen and the dollar rate is now quoting Rs. 47½.

Bullion was firm on good support. Silver advanced from the previous week's level of Rs. 174-15 to Rs. 175-14, quoted today. The rate for ready was quoted at Rs. 176-4. The London rate declined

to 79½d. The price of foreign silver in New York rose from 90-5/8 to 90½ cents.

Gold ruled steady in sympathy with silver and the price rose from Rs. 101 to Rs. 102-3. The sovereign at Rs. 63-5 showed a gain of 2 annas.

Tenders for Rs. 1 crore of 91-day Government of India Treasury Bills, which were opened on Tuesday, 28th February, totalled Rs. 1,02,75,000. The average rate of acceptance was unchanged at Rs. 2-8-6 percent per annum. Tenders at Rs. 99-6 were accepted in full and those at Rs. 99-5-9 were allotted approximately 95 percent. Tenders for Rs. 1 crore of 91-day Treasury Bills will be accepted at all centres up to Monday, 5th March. During the week ended 24th February, Treasury Bills for Rs. 2,58,50,000 were sold in favour of the Reserve Bank of India.

The return of the Reserve Bank of India for the week ended 24th February, 1956, showed a fractional rise of Rs. 43 lakhs in the total note issue to Rs. 1,415.44 crores but notes in circulation declined by Rs. 3.98 crores to Rs. 1,402.85 crores. In the Banking Department, deposits showed an all-round rise. Deposits of the Government of India and other Government accounts rose by Rs. 1.96 crores and 3.06 crores to Rs. 66.51 crores and Rs. 16.12 crores. Balances of commercial banks were Rs. 1.04 crores higher at Rs. 55.16 crores. Balances held abroad declined by Rs. 3.46 crores to Rs. 67.66 crores, as did investments by Rs. 11 lakhs to Rs. 49.28 crores. Other loans and advances increased from Rs. 53.51 crores to Rs. 56.15 crores, of which advances to scheduled banks against usance bills totalled Rs. 18.72 crores (Rs. 21.64 crores). These advances amounted to Rs. 21.67 crores since 1st January, 1956. Ways and means advances stood at Rs. 3.60 crores against Rs. 3.84 crores. Other features showed little change.

The return of the State Bank of India for the week ended 17th February, 1956, shows a rise of Rs. 2.67 crores in total deposits to Rs. 238.27 crores. Investments in Government Securities and other authorised investments are up by Rs. 18 lakhs and Rs. 15 lakhs to Rs. 106.95 crores and Rs. 9.75 crores, respectively. Advances, including loans, cash credits and overdrafts, and bills discounted and purchased have increased by Rs. 1.38 crores to aggregate Rs. 120.82 crores. Cash and balances, are in consequence, shown at 20.61 crores or Rs. 72 lakhs less.

The statement of the position of scheduled banks for the week ended 17th February, 1956, discloses Demand and Time liabilities at Rs. 630.11 crores (Rs. 6.47 crores on account of borrowings from banks) and Rs. 416.89 crores (Rs. 3.26 crores) compared with Rs. 628.08 crores (Rs. 6.19 crores) and Rs. 413.50 crores (Rs. 3.26 crores), respectively in the previous week. Cash has advanced by Rs. 1.38 crores to aggregate Rs. 36.31 crores, while balances with the Reserve Bank have declined by Rs. 2.40 crores to stand at Rs. 49.90 crores. There is a drop of Rs. 1.55 crores in investments to Rs. 377.44 crores. Advances and bills discounted at Rs. 690.99 crores reveal an increase of Rs. 5 crores. The ratios to total liabilities of cash and balances, and of advances and discounts are, in consequence, shown at 8.2 percent and 66.0 percent against 8.4 percent and 65.9 percent.

The profit of the BANK OF INDIA, LTD. rose by Rs. 7.90 lakhs to Rs. 84.91 lakhs for the year ended December, 1955. Bringing in Rs. 9,10,851 there is Rs. 94,01,630. Interim dividends at 6% (same) absorbed Rs. 15 lakhs. Taxation takes Rs. 25 lakhs (Rs. 29 lakhs) and the bank's landed property account Rs. 3 lakhs (nil). The final dividend has been raised by 2% to 10%, making 16% (14%) for the year. The carry-forward is Rs. 13,26,630.

Deposits were Rs. 7.17 crores better at Rs. 67.55 crores. Advances rose by Rs. 6.35 crores to Rs. 46.10 crores, as did investments by Rs. 63 lakhs to Rs. 20.50 crores. Cash was higher by Rs. 18 lakhs to Rs. 9.70 crores.

The directors of the NATIONAL BANK OF INDIA LTD. have declared second interim dividend for the year to 31st December, 1955 of 7½% less income tax.

DEFICIT IN CALCUTTA PORT TRUST 1956-57 BUDGET

NEED FOR RIGID ECONOMY IN EXPENDITURE

THE revised estimates for 1955-56 presented at a meeting of the Calcutta Port Commissioners on 27th February, show income at Rs. 9,55,73,526 and expenditure at Rs. 9,21,02,050.

The estimated increase of Rs. 1,16,79,750 in the total income shown by the revised estimates is mainly due to the change in the pattern of traffic coupled with an anticipated increase of 350,000 tons in the volume of traffic likely to pass through the Ports during the year and the increased income expected from storage charges. It is stated that under the conditions now prevailing, it is difficult to forecast with any degree of accuracy the probable trend of traffic during the coming year, and the income figures have been based on the following tentative assumptions:—

- that imports of salt will be the same as in 1955-56 or 500,000 tons,
- that imports of foodgrains and flour will be 130,000 tons less than during 1955-56 or 50,000 tons,
- that imports of petroleum including lubricating oil will be 50,000 tons less than during 1955-56 or 950,000 tons,
- that imports of other cargo will be the same as in 1955-56 or 1,40,000 tons,
- that exports of coal (cargo and bunker) will be the same as in 1955-56 or 1,920,000 tons,
- that exports of gunnies will be the same as in 1955-56 or 950,000 tons,
- that exports of ores will be the same as in 1955-56 or 1,000,000 tons,
- that exports of tea will be 40,000 tons more than during 1955-56 or 200,000 tons,
- that exports of other cargo will be the same as in last year or 600,000 tons.

On the basis of the above assumptions, it is expected that the traffic passing through the Port during 1956-57 will amount to 7,570,000 tons and the income to Rs. 9,20,91,926. The total expenditure for the year is estimated at Rs. 9,27,17,253 and the financial year 1956-57 is expected to close with a deficit of Rs. 6,25,329 in the Revenue Account. This is mainly due to the shrinkage in the volume of traffic likely to be handled during 1956-57 as compared to the previous year and to small increases in expenditure under certain heads.

The result of the year's working may be better than that foreshadowed by the budget estimates but this depends to a very large extent on the actual success of the various drives launched by the Government for stimulating the export trade and the increased flow of plant and machinery from abroad as the result of the rapid execution of projects such as the erection of new steel plants, expansion of Tata Steel Works etc., in the areas served by this Port. As detailed information in this connection is not available to the Commissioners, it will be necessary as in the past year to enforce rigid austerity on all items of port expenditure.

Capital Expenditure

The budget estimates for 1956-57 have been prepared as in the last two years on an austerity basis keeping in view the large amount to be spent on the execution of the projects covered by the first and second five-year plans. The expenditure on works in progress and on firm contractual commitments is estimated at Rs. 5,23,21,006 and this figure includes the sum of Rs. 4,66,11,125 to be spent on sanctioned projects carried over from the first to the second five-year plan and Rs. 20 lakhs on one of the projects covered by the second five-year plan but already sanctioned. The expenditure on new works covered by the second five-year plan is estimated at Rs. 90.1 lakhs and a sum of Rs. 10 lakhs only has been allotted for new works falling outside the scope of the second five-year plan. The figure detailed above have been compiled on the assumption that the entire outlay of Rs. 13.02 crores on new projects covered by the second five-year plan and the major portion of the expenditure—Rs. 231.93 lakhs on the execution of River Training Works at the Fulta-Hooghly Point Reach—carried over from the first to the second five-year plan will be met out of Government aid in the shape of loans. The need for such a large measure of assistance from the Government in the present state of the Commissioners' finances is overwhelming. On this basis it will be necessary for the Commissioners to borrow from the Government Rs. 5.50 crores and also float a loan of Rs. 2 crores and which Rs. 1.55 crores will be utilised towards the repayment of the debt outstanding against the 51 percent 1926-56 loan (first) of Rs. 1 crore and the 5 percent 1926-56 loan (second) of Rs. 1 crore. The capital account for 1956-57 is expected to close with a debit balance of Rs. 2,04,779.

The original estimates for the Hooghly Pilot Service, 1955-56 showed a surplus of Rs. 12,010 in the working of the Pilot Service. The year is expected to close as per revised estimates with a surplus of Rs. 25,110 which will be carried forward to the next financial year. The income for 1956-57 is estimated at Rs. 29,43,000 and the expenditure at Rs. 30,30,048 showing a small deficit of Rs. 87,048.

To cover this deficit, part of which will be met out of the opening credit balance of Rs. 25,957, it will be necessary to transfer Rs. 70,000 to the Revenue Account from the Revenue Reserve Fund—Pilotage.

Revised Estimates for 1955-56

Submitting the revised estimates for 1955-56 the Chairman states that the financial year is expected to close with a surplus of Rs. 34,71,476 as against a deficit of Rs. 28,98,214 foreshadowed by the original estimates for the year. It is proposed to utilise Rs. 20 lakhs of the surplus towards rehabilitating the Revenue Reserve Fund the resources of which have been depleted during the last two years by meeting revenue deficits. The balance will be transferred to the Vessels Replacement Fund as the amount available in that Fund needs to be augmented owing to the considerable additions to the Commissioners' fleet and the consequential rise in the net risk figure.

(i) Revised estimates for 1955-56

The capital expenditure in 1955-56 on sanctioned works in progress and on firm contractual commitments including the sum of Rs. 2,93,81,777 to be spent on projects covered by the first five-year plan is estimated at Rs. 3,30,34,604. The year is expected to close with a credit balance of Rs. 24,28,727 after taking into account the sum of Rs. 2.5 crores to be advanced by the Government as loans inclusive of Rs. 50 lakhs already received, for financing the projects falling under the Government's sphere of assistance in the first five-year plan. A loan of Rs. 90 lakhs was also raised by the Commissioners during the year and this has been utilised to repay the amount outstanding against the 6 percent 1925-55-56 loan of Rs. 1.25 crores.

The Pilotage Account is expected to close with a surplus of Rs. 25,110 and this will be carried forward to the next financial year.

NEW BRITISH LONG-RANGE AIRLINER

TURBOPROP ENGINES ENSURE FLEXIBILITY

BRISTOL, in announcing the 187 long-range turboprop airliner, state that it will be able to operate with full load from every Class 1 airport in the world all the year round. This means that it will be able to take off from aerodromes such as the one at La Paz, Bolivia, which is 13,500 ft. above sea level, with 130 passengers and a full load of fuel—that is, enough for a practical stage distance of some 7,000 miles. The 187 represents Bristol's and Great Britain's continuing faith in turboprop aircraft and is a development of the manufacturer's design philosophy. The Britannia 100, the first examples of which have already been delivered to B.O.A.C., will enter service this year—in August, according to the Ministry of Transport and Civil Aviation. The longer range Britannia 310 is due to be in transatlantic operation within the next year or two, and will be fitted with Proteus engines like the Mk. 100.

Speed with Economy

The B.E. 25-engined Britannia is scheduled to make its debut in 1959-60. It is designed for a greater range and speed than previous models, improvements made possible by the installation of the more powerful B.E. 25 powerplant of the projected 187. Basically an 8,000 h.p. engine, it is limited to 4,000 h.p. an output that can be maintained from sea level to 17,000 ft.; thus full power is available for take-off from airfields situated at places such as La Paz. The 187 is scheduled for the early 1960's, say the makers. Although experience acquired in designing and building the Britannia will be useful, this aircraft is of completely new conception. Its all-up weight is to be some 200,000 lbs.—compared with the 287,500 lbs. of the DC-4—yet its passenger capacity, 130, will be almost identical. It is designed to cruise at around 500 m.p.h. with full load of passengers and fuel. Bristol claim that, while the 187 will be capable of flying non-stop from London to San Francisco, its economy of operation will be 25-30 percent more than a big American turbojet aircraft. Moreover, it will also be able to operate economically over stage lengths of only 1,000 miles, thus attaining a degree of flexibility impossible with large turbojet airlines.

Absence of Vibration

Other advantages of the turboprop-powered 187 will include quietness—the Britannia, known as the "whispering giant" in Africa where it undertook its first overseas proving flights, is justly famous for its silence—and lack of vibration, generally agreed to be the most fatiguing element in flight in piston-engined aircraft. The 187's greatest attribute, however, will be its ability to operate, with full load, from all existing terminal airports, many of which will have to be lengthened before very large turbojet airlines, such as the DC-8, can be accommodated. These expensive measures will not be necessary for the 187. A runway of 15,000 ft. will be necessary at Denver in the United States, situated a mile above sea level, from which to operate large turbojet airlines—some 5,000 ft. more than at sea level. Even aerodromes, such as La Paz, situated at more than 21 miles above sea level, or others where the temperature remains high for most of the year, will constitute no obstacle to efficient operation of the 187. The constant-power characteristic of the B.E. 25 engines will ensure maximum performance under these conditions with full load.

Stocks and Shares

MARKET UNCERTAIN ABOUT BUDGET

TWO MAIN PROPOSALS FOR TAX INCREASE AFFECT COMPANIES

Wednesday Night.

STOCK market trading in this evening's Budget session was marked by violent fluctuations in the price of most of the speculative counters. The main points of the Budget, so far as the market is concerned, seem to be the increased supertax on distributed profits, and the new tax of two annas in the rupee on bonus shares. It was clear that operators could not make up their minds whether this was or was not a good Budget from the market's point of view. The price of Indian Irons opened at Rs. 32-2, reached a maximum of Rs. 32-14, touched a minimum of Rs. 31-4 and closed at Rs. 31-12. Operators were uncertain how to take these important proposals for fresh taxation affecting companies which came as bad, though not unexpected, news for the market.

The following are the closing prices of the main speculative shares.

Indian Iron	Rs. 31-12
Indian Copper	Rs. 6-11
Texmaco	Rs. 20-12
Orient Paper	Rs. 33-2

PRICES FALL IN PRE-BUDGET TRADING

Wednesday Evening.

WITH settlement difficulties out of the way, the Calcutta market enjoyed improved trading which, by Monday, had brought higher prices in a number of speculative scrip. Only Indian Irons remained completely lifeless. As the Budget drew nearer, however, the market relapsed into quieter conditions, with operators weighing the various rumours of tax increases which have been current.

Details of the week's pre-Budget trading follow.

The Government securities market opened quiet, but in the second half of the period under review, buyers appeared and this assisted a small recovery. The official denial of a possible upward revision in the Indian bank rate had a salutary effect, but 3% Conversion Loan 1956, in the absence of official support, at the previous level of Rs. 80 was marked back sharply to Rs. 99-11 while 3% 1958 was asked for at around Rs. 99-8. In the medium-dated group, 2½% 1961 was firm at Rs. 93-6 while 3½% 1960 and 2½% 1962 were taken at Rs. 93-6 and Rs. 93-12. Three percent 1959-61 turned sellers at the lower rate of Rs. 92-2 while 3 percent 1963-65 and 1964 were both easier at Rs. 94-9. Among National Plan issues, 3½% 1961 was traded down to Rs. 99-6, but closed one anna better; 3½% 1964 was marked at Rs. 98-8 while 3½% 1965 was quoted at around Rs. 98-5-6. In contrast to the trend of non-terminable loans, long-dated issues continued firm with both 3% 1966-68 and 1970-75 improving by one anna in each case to Rs. 92-6 and Rs. 88-13 with buyers over. Provincial loans were rather dull with the exception of 4% 1967 issues, which were sought after because of the approach of the interest date (tomorrow). Four percent West Bengal 1967 was better at Rs. 100-2 while 4% U.P. 1967 had unsatisfied buyers at Rs. 99-14; other issues were unchanged with little business passing.

Among miscellaneous Preference shares, Gillanders changed hands at Rs. 71. Indian Iron at Rs. 109-8 and Indian Standard Wagon were taken at Rs. 142. Muir Mills were quoted at Rs. 85-8 and Shree Gopal Paper at Rs. 123. Among jute, Hooghly were done at Rs. 14-7 and Rameshwara at Rs. 10-4.

In the banking section, Hind Bank were transacted at Rs. 38 and United Commercial were crossed at Rs. 48-8. United Bank of India "D" shares were placed at Rs. 4-13.

Among railway shares, Dehri Rohtas were crossed at Rs. 13 and Baraset-Basirhat at Rs. 10-8. In the cotton section, there was a small enquiry for Kesoram at around Rs. 16-6. Elgins were done at Rs. 27-4 and Cawnpore Textiles at Rs. 9-2. Dunbar came to hand at Rs. 289, New Victoria at Rs. 2 and Swadeshi Cotton Preferred-Ordinary at Rs. 11-4.

Coal shares were slightly better with Bengal improving from Rs. 537 to Rs. 542. Burrakur were quoted nominally until yesterday at Rs. 14. From today, free dealings were permitted in the shares and the closing quotation was Rs. 13-10. Amalgamated were taken at Rs. 23-4 and Borra at Rs. 27-8. Central India were marked at Rs. 7-1 and East Indian at Rs. 32. French Valley were done at Rs. 22-10 and South Karanpura at Rs. 10-12. Ranegunge were steady at Rs. 11-6, Talchar were marked at Rs. 3-7 and Western Bengal at Rs. 7.

The disappointing dividends proposed by three jute mills in the Jardine Henderson group brought a hush to the jute section. Howrah proposes to pay four annas for the half year against ten annas for the previous period, while both Reliance and Bally have decided to pay no dividends. Howrah were marked back to Rs. 23-12, Bally from Rs. 155 to Rs. 147 and Reliance from Rs. 11-8 to Rs. 11.

Agarpara were quoted at Rs. 12 while Chitavalsah met with small enquiry at Rs. 15. Kamarhaty eased from Rs. 170 to Rs. 166 and Kankannarrah from Rs. 124 to Rs. 120. National receded steadily from Rs. 27-8 to Rs. 26-6. Nellimarla were placed at Rs. 11-6 and New Central at Rs. 15-8.

Electric supply shares were dull and very little business was reported. Calcutta Electric changed hands freely around Rs. 13-8, Jubulpore were crossed at Rs. 15-6 and Patna at Rs. 11-10.

Sugar shares were dull and neglected. Shree Krishna Gyanoday Old were marked at Rs. 12-8 and Dyer Meakin Breweries at Rs. 6.

In the engineering section, Indian Iron & Steel were quoted nominally up to yesterday at Rs. 33-8 (fixed price), but cash transactions were reported with the permission of the stock exchange authorities at between Rs. 33-6 and Rs. 32-8. With effect from today free dealings were permitted and the closing price was Rs. 32-2. The feature in this section was Braithwaite, which on the announcement of an increased dividend spurred from Rs. 26-4 to Rs. 28-8. Indian Standard Wagon were also a good feature and were marked up from Rs. 160 to Rs. 168. Jessops were steady at Rs. 59 as were Richardson & Cruddas at Rs. 26-12. Textile Machinery improved from Rs. 20-6 to Rs. 21-3, but reacted at the close to Rs. 20-6. Marshalls were depressed at Rs. 6-12 while National Iron & Steel were steady at Rs. 7-14. Kumardubi Engineering changed hands at Rs. 11-7.

In the miscellaneous section, Bengal Paper were steady at Rs. 121 as were India Paper Pulp at Rs. 23. Titagur were quoted at Rs. 44 and Orient, after being done up to Rs. 34-6, eased at the close to Rs. 33-2. Shree Gopal were marked at Rs. 18. Ashoka Cement were placed at Rs. 10. Dalmia Cement Ordinary at Rs. 14-4 and Sone Valley were unchanged at Rs. 7-8. Concord of India Insurance were done at Rs. 11-4 and New Asiatic were quiet at Rs. 4-12. India Steamship receded from Rs. 8-4 to Rs. 8. Angelo Brothers recovered slightly to Rs. 22-12 and Assam Saver recovered slightly to Rs. 5-2. Bengal Flour were reported at Rs. 29-8 and Clive Row at Rs. 11. British India Corporation recovered from Rs. 11-7 to Rs. 11-9 but reacted again at the close to Rs. 11-6. Gillanders Arbuthnot changed hands at Rs. 14-6. National Tobacco, on expectations of a satisfactory dividend, improved from Rs. 10-10 to Rs. 11-8. Martin Burn followed the announcement of a higher dividend, were sought after at the improved rate of Rs. 28. Indo-Burma Petroleum were quoted at Rs. 41-4 and a parcel of Indian Cables changed hands at around Rs. 30. Metal Box were better at Rs. 25-8 but Rohtas Industries were quiet at Rs. 19-12. Rallis India were depressed at Rs. 34 while National Insulated Cables were fairly steady at Rs. 21-6. In the mining section, Indian Copper, on expectations of an early decision regarding the proposed bonus issue, recovered smartly from Rs. 6-6 to Rs. 6-12, but reacted at the close to Rs. 6-7. Karanpura Development moved up from Rs. 18-12 to Rs. 19-8 and there was a good enquiry for Metal Corporation which recovered from Rs. 11 to Rs. 11-12.

As a result of more encouraging reports from the tea auctions, prices of selected tea shares improved, particularly of Assam companies although turnover was again meagre. Baghmari had buyers at Rs. 21-2 and Bishnath advanced from Rs. 35-8 to Rs. 37-3. Bormah Jan were crossed at the lower rate of Rs. 17 and there was some enquiry for Brahmapur, the price being taken up to Rs. 9-8. Brooke Bond were fairly steady at Rs. 20-10 and Dhelakhat improved by 8 annas to Rs. 18. In contrast, Dufflaghur were marked back to Rs. 40-14. Gillapukri were crossed at Rs. 30-8 as were Grob "B" at Rs. 18-4. Methoni jumped Rs. 1-8 to Rs. 21 on selective enquiry and Te

carry-forward is Rs. 1,23,973 against Rs. 1,41,421 brought in.

The directors say that in order to minimise the rising tendency of costs, the Jagatdal mill was closed at the end of last year and the Upper mill commenced working on double shift as from 2nd January, 1956. This rationalisation is calculated to reduce the eventual cost of re-equipment. Active investigations are proceeding for a suitable new use of the building and facilities at the Jagatdal mill. The first consignment of modern machinery for the Middle mill has arrived at site and erection will proceed over the next six months.

The ORIENT JUTE MILLS COMPANY incurred a loss of Rs. 37,672 for the half-year ended last November, compared with the previous half-year's profit of Rs. 1.61 lakhs. Transferring Rs. 1 lakh from dividend equalisation reserve and bringing in Rs. 58,095 there is Rs. 1,05,423. The dividend has been cut by Rs. 1 to Rs. 4 per share, leaving a carry-forward of Rs. 3,783.

BOMBAY MARKET CLOSING QUIET

OPERATORS AWAIT BUDGET

Wednesday Evening.

IRREGULAR trends in restricted activity marked this week's trading on the Bombay stock market. Equities improved on good corporate news, and textile mills, in particular, met with demand on the hope that mills' profits will be satisfactory. Top gains were, however, erased towards the close by selling pressure, following adverse rumours about the Budget. It is feared that increased outlays for the second five year plan will force the Finance Minister to raise taxation. A sharp fall in Government securities, combined with weaker Calcutta advices, was an additional dampening influence.

After rising to Rs. 232, Tata Ordinary declined to 223, on profit-taking, and Indian Iron moved lower from Rs. 33.5 to Rs. 31-11-6. Larsen and Toubro were a steady feature and improved to Rs. 15.2 on dividend prospects. Alcock and Ashdown declined from Rs. 37.12 to Rs. 36.5. Premier Construction fell by Rs. 7 to Rs. 172-8. Tata Locomotive lost at Rs. 137-8.

Cotton mill shares closed below their best levels. During the early part of the week, Kohinoor improved on buying from informed quarters, but the price later declined to Rs. 327 because the company's report did not fulfil market expectations. Bombay Dyeing weakened to Rs. 514-6. Century to Rs. 466 and Simpler to Rs. 188. India United Ordinary were marked at Rs. 12 and Svadeshi at Rs. 210.

Miscellaneous industrials declined in sympathy with the general trend. Belapur Sugar was lower at Rs. 212-8 on fears of an excise levy. Associated Cement slumped to Rs. 301-4 on uncertainties about the right issue. Scindia Steam fell to Rs. 15-14 in spite of a good report. Hindustan Motors changed hands at Rs. 8-15 and Premier Automobiles at Rs. 83. B.B. Petrol eased further to Rs. 3-12-6 and Indian Copper to Rs. 6-8 after Rs. 6-15. Shivrajpur were marked down from Rs. 102-8 to Rs. 100-8, following the distribution of a dividend at Rs. 8 a share. This fell below market expectations. Tata Oil slumped from Rs. 43-4 to Rs. 42 on rumours of an excise levy. Mahindra and Mahindra were a shade better at Rs. 12-12. National Rayon declined to Rs. 217-8, as did Walchandnagar to Rs. 241-4.

Insurance shares were devoid of interest. New India were on offer at Rs. 39-12 and Oriental at Rs. 3,960. Business in banking shares was restricted. Central came to hand at Rs. 47-8 and Bank of India at Rs. 152, despite a good report. United Commercial were quoted at Rs. 49.

Electricity undertakings disclosed losses where changed. Ahmedabad Electric declined to Rs. 100-10 when the final dividend was cut, making a total distribution of Rs. 5 a share against Rs. 6-8 a share. Andhra Valley lost at Rs. 1,286-4 and Tata Hydro at Rs. 131.

THE INDIAN BANK, LTD.

Head Office: North Beach Road, Madras.

Branches and sub-offices throughout South India, in Bombay, in Calcutta and in New Delhi.

New Delhi

BRITISH STEEL PLANT OFFER ACCEPTED

U.K. GOVERNMENT LENDS £15 MILLION: BANKS £11½ MILLION

(FROM OUR NEW DELHI CORRESPONDENT)

THE Government of India and I.S.C.O.N. (Indian Steel Works Construction Company) have concluded the main part of the agreement concerning the setting up of a one-million ton steel plant at Durgapur. It is expected that all the remaining details will be settled within the next three months. The plant, machinery and equipment and a considerable part of the steel structures, refractories and other materials required will be supplied by the member firms of the British Consortium. The Consortium will also carry out the entire work of erection and civil engineering at site in collaboration with the consulting engineers of the Government of India. The foreign exchange

AIDING THE GOOD EARTH

The Sindri Fertilizer Factory is the largest and most modern of its kind in Asia. Built at a cost of Rs. 23 crores this giant scheme includes gas ammonia and sulphate plants, a 90,000 storage silo, a power house and 12 miles of railway track. Apart from large quantities of other materials, no less than 12,000 tons of STEEL went towards the construction of this project which is designed to produce 350,000 tons of ammonium sulphate annually for India's agriculture. The enriched soil will yield 875,000 tons of extra food for the country each year—a valuable contribution from a new enterprise.

Uttar Pradesh

U.P.'S DEFICIT BUDGET

ADDITIONAL TAXATION
PROPOSED

(FROM OUR LUCKNOW CORRESPONDENT)

ADDITIONAL taxation to the tune of Rs. 9.5 crores has been proposed to cover the estimated revenue deficit in the U.P. budget for 1956-57 which was presented to the State Legislature yesterday. In his budget speech, the Finance Minister, Mr. Hafiz Muhammad Ibrahim, attributed the deficit to the impact of increased expenditure under the second five year plan. The physical targets of the first plan were achieved in U.P. without the imposition of fresh financial burdens but the second plan, whose size has already been cut and re-cut, cannot be implemented without recourse to taxation. Mr. Ibrahim neither specified which particular taxes are to be increased nor the amount proposed, although he made particular mention of the sales tax. The general impression in the lobbies was that this caution was dictated by the coming general elections.

The overall size of the State's second plan has now been fixed at Rs. 248 crores, made up of Rs. 85 crores of revenue expenditure and capital expenditure of Rs. 162 crores. Out of this, provision has been made in the budget for a net expenditure of Rs. 12.32 crores on plan schemes on the revenue side and for Rs. 30.85 crores on the capital side, making a total of Rs. 43.17 crores. Out of the revenue expenditure of Rs. 12.32 crores, a sum of Rs. 5.8 crores is expected to be provided by the Centre and the rest will have to be met by the State. In the same way, out of the capital expenditure of Rs. 30.85 crores, assistance amounting to Rs. 26.5 crores will be available from the Government of India and the rest will have to be found by the State. Thus, the total net budget of Uttar Pradesh for 1956-57 comes to Rs. 147.41 crores out of which Rs. 94.91 crores is revenue expenditure and Rs. 52.5 crores capital expenditure. Against this, the estimate of revenue receipts in the budget year comes to only Rs. 85.36 crores, so that revenue expenditure exceeds the anticipated revenue by Rs. 9.55 crores.

Industries in the Second Plan

The Finance Minister said he expected that a loan of Rs. 32 crores (calculated to the nearest crore) would be granted by the Union Government for development purposes, Rs. 2 crores for community development projects and Rs. 3 crores for the purchase of fertilisers. As "special" features of the budget, the Finance Minister proposed a reduction of 50 percent in the primary school fees and certain marginal concessions to Government servants in receipt of pay not exceeding Rs. 200. Reviewing the industrial development in the State during the first plan period, the Finance Minister said that the number of registered factories in the State had risen from 971 to 1,743. The second plan makes provision for the establishment of industrial estates on the same lines as those in the U.K. at a cost of Rs. 1 crore. Another Rs. 1 crore has been provided for co-operative sugar factories. Small-scale and village industries claim

Rs. 9.76 crores and Rs. 5.5 crores has been allotted for heavy industries.

The shape of heavy industries to come in Uttar Pradesh may not, however, become fully known until the Committee of Inquiry under the chairmanship of Mr. B. M. Birla has had time to submit its report. Meanwhile, the Government has announced plans to double the capacity of the State cement works at an estimated cost of Rs. 1 crore and to treble the output of its precision instruments factory. Several projects for establishing new lines of manufacture in the private sector are also under consideration, including rayon pulp, soda ash, textile machinery parts, railway wagons and coaches. In order to attract private industrialists, it has been proposed to allow a rebate of 25 percent on electricity rates in the case of new industries. It is expected that as a result of schemes undertaken in the budget year, employment will be found for 350,000 persons although the Finance Minister was careful to add that "the exact number of persons who will secure employment will be known only later on."

Fall in Agricultural Price Index

Making out a case for increased taxation in the State, the Finance Minister claimed that there has been a substantial increase in the income of the total population of the State, from Rs. 1,500 crores in 1948-49 to Rs. 1,824 crores in 1954-55. "This rise," he said, "was solely due to an increase in the quantum of production in the State during this period. The method adopted in this calculation saves the comparison from the fluctuations of price variations because it is made on the assumption that the prices prevailing in the year 1948-49 remained constant." That this assumption is without foundation may be inferred from his admission elsewhere in the budget speech when he says: "The index of agricultural wholesale prices in U.P. has been showing a continuous decline since 1951.....The index has actually gone down to 57 in May 1955 (base 1948).....The cultivator's position has been unfavourably affected by price variations during the last two years." The Finance Minister is not unaware of the weakness of his position and he is driven to the conclusion: "The main point to be noted is that there has actually been almost a constant increase in our production. This cannot be denied although the effect of changes in prices may present a somewhat different picture."

Industrial Tribunal's Decision

The U.P. Industrial Tribunal held that the absence of workmen from seven mills in Kanpur on May Day in 1953 amounted to an "illegal strike." The Tribunal, in its award given on 22nd February, declined to ask the managements of these mills to restore the continuity of service of the workmen concerned. About 29,000 workers absented themselves on May Day 1953. The managements treated this absence as a strike and they informed the workmen that their continuity of service necessary to earn annual leave under Section 79 of the Factories Act had been broken. Conciliation having failed, the Government referred the matter to the Industrial Tribunal. The workmen's contention was that their celebration of May Day was not a strike but a "spontaneous mass absenteeism." The managements, on the other hand, contended that the absence of a large body of workmen was indeed a strike. "The Tribunal in rejecting the workmen's contention observed: 'There is no occasion for directing the employers to restore the continuity (of service) and ignore the break because the cause of the break was an act of the workers themselves.'"

Voting on Account

The Chief Minister of U.P., Dr. Sampurnanand, has announced that with effect from next year the Government will switch over to the system of "voting on account," in order to enable the House to devote more time to the budget debate. Under this system, the Assembly will be able to continue the debate during the budget year after voting the sum required by the Finance Minister to keep things going. The Chief Minister is of the view that the size of the budget having increased, the number of days available for its debate should also be increased. He would have liked to introduce the change in the present year but this was not possible owing to the large volume of legislative business on hand and the need for making the sessions short in order to release members to go back to their constituencies for the election campaign.

State Government Buys More Shares

The State Government has decided to purchase shares of the U.P. Financial Corporation to the value of an additional Rs. 25 lakhs during the present year. The Corporation, which was set up to provide financial assistance to medium and small-scale industries, has an authorised capital of Rs. 3 crores and issue shares, in the first instance, of Rs. 50 lakhs. Of the 50,000 shares of Rs. 100 each, the State Government owns 18,000 and the rest have been distributed between the Reserve Bank, scheduled banks, insurance companies and others.

Ceiling on Land Holdings

A sample survey which will form the basis for legislation on ceilings on land holdings in the State is being carried out by the U.P. Land Reforms Commission in co-operation with the Planning Commission. The survey, which covers 304 selected villages in the State, aims at a statistical study of the various gradations of land holdings. According to the Planning Commission's recommendation, ceilings are to be fixed at three times the family holding of an average family not exceeding five members.

Bombay

SMALL REVENUE SURPLUS
IN BOMBAY BUDGETDEMAND FOR RELIEF IN MOST
HEAVILY TAXED STATE

(FROM OUR BOMBAY CORRESPONDENT)

THE State Budget, presented by Dr. Jivraj Mehta, Finance Minister, during the later part of last week, was in many ways unexceptional. The expected rise in taxation during the first year of the second plan feared both by the public and the business community did not materialise. One of the main reasons given for this welcome state of affairs is that in view of the proposed re-organisation of the State during the second half of the year the budget has been framed more or less on a caretaker basis. Considerations for the general election, which may come at the end of the next financial year, are also believed to have played their part. One of the new taxes expected was agricultural income-tax, at least on estate farming, which would have affected the sugar industry in the State. In fact, there has been no change whatever in the existing structure of taxation for next year's Budget which is expected to end with a small surplus in the revenue account. This anticipated surplus amounts to Rs. 23.43 lakhs with revenue receipts estimated at Rs. 78.10 crores and expenditure at Rs. 77.87 crores. The following table gives a comparative outline for three years:

	1954-55 (Accounts)	1955-56 (Revised)	1956-57 (Budgeted)
Revenue Receipts	79,48.02	79,72.21	78,10.08
Revenue Expenditure	71,49.62	78,69.25	77,86.65
Surplus	7,93.40	82.96	28.43

It may be remarked that the revenue surplus for 1954-55, which was anticipated at Rs. 57.69 lakhs, was found to be much higher, amounting to Rs. 7.93 crores.

The Budget

The Budget statement, apart from one or two interesting new features, was mainly pre-occupied with the first and the second plans and ways and means for making the latter as successful as the former. The financial target for the first plan of Rs. 146.31 crores, the largest for any State Government, has been practically realised. On the expenditure side, Rs. 111.97 crores has been incurred up to the end of 1954-55 on the programme of developments under the plan, and a further amount of Rs. 35.24 crores is likely to be spent before the end of the current year. The Finance Minister observed that the most striking and comforting feature of the fiscal operations of the State was its resilience and readiness to assess and overcome its financial difficulties. Dr. Mehta felt happy that "neither prohibition nor the plan responsibilities have left us poorer. The Congress Government, in following the ideal of the welfare State, has more than kept intact the financial resources left by the British administration. These funds will be a great source of strength to us and will help us to meet the liabilities that we accept for the second plan."

State's Second Plan

Speaking about the second plan, the State Finance Minister observed that the draft plan provided for an outlay of Rs. 282.86 crores during the plan period, exclusive of certain schemes which would continue as Central schemes. This amount was revised by the Planning Commission and the share of the State was now placed at Rs. 264.4 crores. The Government had, however, not yet been able to work out which items of this revision. However, whatever cuts were made to keep in line with this revision, the high priority assigned to irrigation and power as well as schemes likely to increase employment opportunities would still form the main features of the second plan. He stated that nearly 43 percent or about Rs. 120 crores of the total outlay on the second plan would be spent on the irrigation and power development in addition to the provision of Rs. 5 crores for minor irrigation and tube-well schemes. With the accent on rapid industrialisation during the next five years, he estimated that the demand for power by the end of the plan period would be about 752 M.W. against the potential installed capacity of 512 M.W. The second plan would, therefore, provide Rs. 44 crores for the completion of the existing power projects, as well as for new projects.

Dr. Mehta stated that for financing the second five year plan, additional resources had to be found from taxation in the light of the recommendations made by the Taxation Enquiry Commission. He said: "I am glad to observe that in its survey of State taxes, the Commission has generally endorsed the taxation policy of this State. Excepting land revenue and the general sales tax for which it has made recommendations from an all-India angle, the Commission's recommendations generally support our taxation policy. What is more, in some notable and hitherto controversial taxes like stamp duty on forward markets and electricity duty on power, the Commission has suggested that other States should take up measures adopted by us. We have recently examined the resources for the second five year plan." The draft plan required that all States together would have to raise an additional revenue of Rs. 225 crores from taxation during the second plan period. In Bombay, credit had been taken for an additional revenue of Rs. 6.8 crores from taxation, existing and new, but this figure Dr. Mehta hinted might have to be

revised so that Bombay could play its full part in this task. Furthermore, the State would be called upon to mobilise all its resources by way of borrowing. The State should not merely try to maintain its rate of borrowing in 1956, which was about Rs. 10 crores, but would have to try to increase it to large cities. As the savings generated by rising incomes would be more widely diffused, the State would henceforth have to take wide measures to mobilise and secure all possible savings available from smaller towns and villages. Even after this, it was pointed out by the Finance Minister, that to fulfil the financial target of the second plan, the State would require Central assistance to the extent of about Rs. 175 crores, about 20 percent of which might be in the form of grants and the rest as loans. The State's debt to the Government of India during the first plan period had increased from Rs. 18.57 crores in 1951-52 to Rs. 68.61 crores in 1955-56. This debt was likely to increase by Rs. 140 crores by the end of the second plan period.

Capital Expenditure

The 1956-57 budget provides for a capital expenditure of Rs. 26.74 crores for schemes other than of State trading and exclusive of the expenditure of Rs. 3.55 crores on roads which is being made from the State Road Fund. On the revenue side, an item of special interest in next year's budget is the provision made for the establishment of industrial estates. The plan provides for setting up industrial estates at an estimated cost of Rs. 85.95 lakhs. Under the scheme, it is proposed to select a number of areas in the State and to develop them by clearing and laying out the land and providing certain essential facilities such as water, drainage, roads, power, etc. These developed plots will be divided into suitable sites and made available to industrialists wishing to set up factories. The establishment of these estates is designed to facilitate the rapid growth of industries and thus to provide new opportunities for employment. As a first step it is proposed to acquire an area of 2,500 acres at Atale near Kalyan and to develop it into an industrial estate. The district is well suited for the development of chemical industries, lies within easy reach of Bombay and is served by the main railway line. Industrialists are willing to establish factories in this area provided necessary facilities are provided by the Government. The budget for next year provides an amount of Rs. 20 lakhs for the purpose. It is also proposed to undertake preparatory work in connection with the selection of sites, study of facilities available, local reactions and other relevant factors for the establishment of similar estates in other parts of the State. Other items of interest include a loan of Rs. 3 crores to the Bombay Electricity Board for the execution of various power projects, and the provision of Rs. 1.33 crores and Rs. 70 lakhs for industrial and low-income group housing schemes respectively.

Public Reaction

The general reaction to the budget can be summed up in the words of the President of the Indian Merchants' Chamber on the one hand, and a leader of the Praja Socialist Party in the Assembly, on the other. The retiring President of the Chamber believed that the Finance Minister had lived up to his reputation. Having already taken care to tax to the maximum in the previous four years in this most heavily taxed State, the Finance Minister had imposed no new burden in this eve-of-election budget. He added, however, that with a revenue surplus of Rs. 8 crores one would have naturally expected a relief in sales tax, motor vehicles tax, stamp duty and petrol tax. Mr. Chinnai suggested that even now it was not too late to remedy matters. Dr. Amul Desai, P.S.P. M.L.A., said: "Though it is heartening to note that there is no new taxation, it is at the same time disconcerting to see that there is no reduction in taxes in the most highly taxed State nor any change in the cumbersome system of two-point sales tax. The business community would have stressed that the present two-point system puts on us. This was also echoed by some other members of the Legislature who were of the opinion that the Finance Minister should have given some tax relief, as the people had borne the burden of taxation, more than in any other State, for the last four years."

Indian Merchants' Chamber

The annual meeting of the Indian Merchants' Chamber was inaugurated by the Union Minister for Railways and Transport, Mr. Lal Bahadur Shastri. The reaction of the business community in Western India to some of the Government's recent economic policies was expressed candidly. Mr. P. M. Chinnai, the retiring President, in the course of his address to the Chamber, called attention to the fact that while the second five year plan was in the last stage of finalisation, vague reports of expanding nationalisation, even encroaching on the sphere of trading activities, were current. He therefore felt it necessary to appeal to over-zealous exponents of nationalisation to pause and consider the psychological consequences of such steps which were bound to shake the confidence of the private sector, at a time when all efforts should be directed towards its revival. Dealing with the draft outline of the second five year plan, Mr. Chinnai pointed out that in an underdeveloped economy, the major problem was one of reconciling the imperative need for raising the standard of living by increasing the consumption standards from the present marginal level with the equally important necessity of new capital formation. The problem became more complex when compared with the rate of income growth in highly industrialised countries, or even for that matter, of totalitarian economies. He said: "We must, there-

fore, fix our targets in terms of the actual capacity of our economy to generate the rate of savings and the capital formation so necessary to build up the required volume of investment. Judged from this point of view and having regard to the annual increase in the population, the rate of increase in the national income as envisaged and the consequent rate of domestic savings appear to be very much on the high side." Coming to the question of deficit financing, Mr. Chinnai observed that if, as conceived under the strategy of the plan, village and hand industries failed in any manner to meet the growing demand for consumer goods, the emphasis on capital saving methods might well land us between two stools. Large-scale capital using methods might get discouraged without other methods filling the gap. He said: "We may thus have the worst of both, the worlds, the consequences of which will be inflation and non-fulfilment of the investment planned." Mr. Chinnai urged that in view of the difficulties in the way of increasing the budgetary resources by additional burdens and the dangers of deficit financing, it would be more appropriate to phase the plan in such a manner as to avoid all possible adverse repercussions on the economy. He also suggested the implementation of the provisions for perspective planning which would involve a review of the plan from year to year and adjustments made in the light of experience gained from time to time. Taking advantage of the presence of the Transport Minister, Mr. Chinnai drew attention to the fact that the growing tempo of manufacturing activities in the various industries would naturally create a corresponding increase in the volume of traffic to be handled by the railways. If the railway system was not geared up to sustain the manufacturing operations envisaged, then the progress of the development contemplated in the second plan would be seriously jeopardised.

Railway Working Expenses

In reply, Mr. Lal Bahadur Shastri asked the business community to fall in line with the new policies of the Government in order to serve the larger interests of the people. A new social order had to be built in which poverty and unemployment had no place and the total wealth of the country would be distributed on an equitable basis. At the same time, Mr. Shastri agreed that, while the interest of the masses could never be ignored, individual initiative should find a place. He reminded the richer community that India was faced with abnormal conditions and had to tackle colossal problems which required them to function in a revolutionary situation. This would necessarily mean some sacrifice and austerity in many walks of life; but if they wanted to build the country anew and to put it on a solid foundation, there was no alternative for this generation but to put up with sufferings and put in hard work. Replying in general terms to the various points affecting the railways and transport, raised in the President's speech, Mr. Shastri observed that there could be no two opinions that the expansion of transport held the key to the future industrial expansion of the country, and if the railway system was not geared to sustain the manufacturing operations envisaged in the plan, the progress of development contemplated would be seriously jeopardised. He also pointed out that the working expenses position of the railways, as disclosed in the last three years, was not deteriorating steadily but was one of steady improvement. The ratio of the ordinary working expenses to earnings declined steadily from 73.6 percent in the year 1953-54 to 71.9 percent in the year 1954-55 and was expected to be 68.3 percent in 1955-56. Mr. Shastri said: "I am sorry that my Budget speech should have come as a disappointment to Mr. Chinnai, who has repeatedly expressed himself against any part of the development finance being met by increasing the current charges. The position however has to be reviewed, not from the angle of any theoretical doctrines of allocation of expenses, but against the background of the limited finances which the Planning Commission has so far been able to allot to the railways, notwithstanding its great concern at the prospect of a short-fall in passenger and goods transport capacity from the targets originally envisaged and the paramount need to avoid any factor which might jeopardise the successful implementation of the entire plan. It is in these circumstances that I have to propose to Parliament the levy of a surcharge of 1 anna in the rupee on all freight charges, with certain exceptions. I am sure you will weigh this aspect of the problem carefully and perhaps agree with me that we should under no circumstances run the risk of a possible short-fall in the rail transportation capacity."

Shipping Targets

Referring to the shipping targets, Mr. Shastri said that by the middle of 1957, the country would have reached the target of 600,000 g.r.t. The limitations of finance had been responsible for lesser targets visualised in the second five year plan. He hoped, however, that the Indian shipping companies would come forward and utilise the provision actually made in the plan within as short a period of time as possible.

CORRECTION

In our Bombay Letter appearing in the issue of Capital dated 26th January 1956, page 125, under the paragraph headed "Site for Atomic Reactor", Mr. K. G. Milne has been wrongly reported as having described Ahmedabad as the ideal site for India's first atomic power station "because of its proximity to the coalfields and the easy availability of water resources." What Mr. Milne actually stated was that Ahmedabad was suggested as a possible site "as it was a large city far from coal and water resources."

Consumers of jute cloth and bags are showing very little interest now and this is reflected in the yarn end of the trade. Manufacturers are sitting back, awaiting a return to previous prices before the rise on 3rd February, but shipment white jute will require to fall £11 to £12 a ton. Twist is quiet but steady and sacking yarns continue in fair request in view of the great demand for sacking. Manufacturers are now quoting November delivery as earliest. Calcutta goods are irregular and easier from last week at 60s 9d for 10oz. 40in. hessians and 47s 3d for 74oz. March, and 61s 3d and 46s 9d April-June, with "B" twills quoted at 173s 3d and 174s 9d respectively, all f.o.b. Calcutta.

BELGIUM'S JUTE EXPORTS

The export trade of the Belgian jute industry in 1955 recorded a good advance over the previous year, reports The Jute Bulletin of the Indian Central Jute Committee. Trade estimates place the total burlap output last year around 28,000 tons against 25,000 tons in 1954. Exports of jute yarn are estimated to total 20,000 tons, an increase of 2,000 tons over the 1954 figure. The value of overall exports by the jute industry for the first nine months of 1955 is shown as B. Frs. 704 million against B. Frs. 626 million in the same period of 1954. November production of jute cloth by the Belgian mills showed a slight increase to 3,696 tons compared with 3,611 tons in October. Yarn output remained unchanged from the previous month's level at 6,652 tons. Belgium imported 227 tons of used and 563.3 tons new bags during October. The sole source of supply for the latter was India. Exports during the same month totalled 474.2 tons, all used bags. The jute industry is likely to benefit by the proposed special tax to be imposed on textiles. The tax is intended for application to imports from countries which subsidise their exports.

DROP IN WEST GERMAN EXPORTS

Provisional estimates of West German jute goods production for 1955 place the output of cloth at between 73,000 tons and 74,000 tons and that of yarn at about 92,000 tons, indicating little change from the 1954 figures, reports the Indian Central Jute Committee in its latest issue of The Jute Bulletin. Sales to the domestic market held to a satisfactory level round about 80,000 tons, while exports showed a drop of 60 percent as compared with 1954 when some 10,000 tons of West German production were absorbed in foreign markets. Yarn production in November declined to 7,900 tons from over 8,000 tons in October. The weaving mills produced 6,050 tons of cloth against 6,300 tons in October. The members of the Manufacturers' Association reported having received in November about 10,300 tons of raw jute compared with 5,400 tons a month ago.

Plantation Topics

COCHIN TEA SALES

AT Sale No. 5, a total of 1,200,000 lbs. of tea was on offer. Demand was less for Low Medium and Medium types, which were irregularly 1 to 2 annas easier, particularly Fannings. Good Medium and best quality teas also were in very strong demand, and prices advanced following quality. Whole leaf grades were strong. Middle East types were much easier. Bazar buyers were quiet.

INDIAN RUBBER PRODUCTION AND CONSUMPTION IN JANUARY

Indian rubber output in January was 2,083 tons, according to the Rubber Board of India. Exports and imports during the month were nil. Consumption by manufacturers was 2,453 tons. Stocks with estates and dealers on the last day of the month totalled 4,822 tons, including 1,259 tons in transit. Stocks with manufacturers on the same date amounted to 2,258 tons. Manufacturers also used 222 tons of reclaimed rubber, the month-end stock being 540 tons, and consumed 64 tons of synthetic rubber of which they held a total stock of 561 tons at the end of the month.

COLOMBO RUBBER PRICES

The following prices have been issued by the Rubber Board of India from the weekly market report published by the Colombo Brokers' Association:

	(Rupees a lb.) Closing prices on 17-2-1956	(Rupees a lb.) Average for the period
Sheet:		
No. 1	1.51	1.51
No. 2	1.48	1.48
No. 3	1.45	1.45
No. 4	1.21	1.21
No. 5	1.16	1.16
Sheet Cuttings 1	1.07	
do	2	1.05
Crape:		
Water white	1.21	1.22
R.M.A. No. 1X	1.20	1.21
R.M.A. No. 1	1.20	1.20
Crape No. 2	1.17	
No. 3	1.17	
Scrap Crape:		
Sc.Crape No. 1	1.06 Nom	1.08
Sc.Crape No. 2	.98/1.04	1.03
Sc.Crape No. 3	.90/95	.93
Flat Bark	.80/84	.82
Sc.Crape 3X	.96	

To arrive at f.o.b. Colombo prices add 53.4 cents a lb. in respect of rubber other than scrap crepe and 31.4 cents in respect of scrap crepe to the above market prices.

Books and Publications

THE JUTE FIBRE

The Jute Fibre by S. N. Kar, B.Sc. (Published by the Book Society, 2, College Square, Calcutta. Pages 126; price Rs. 5.)

The author of An Introduction to Jute Spinning has now compiled this small handbook intended primarily for students and apprentices in the jute trade. The book covers a wide field ranging from the physical properties and chemistry of the fibre through cultivation and grading to the treatment of jute textiles. The latest advances in research have been freely drawn on and all who are interested in any way in India's jute industry will find The Jute Fibre both instructive and interesting.

The Eastern Economist Annual Number Edited by E. P. W. da Costa M.A. (Oxon). (Published by Devi Prasad Sharma at the Hindustan Times Press for the Eastern Economist Ltd. 52, Queensway, New Delhi. Pages 133; price Rs. 5.)

The Annual number of The Eastern Economist has been devoted to a study of India and the Communist world. With the establishment of an economic partnership between India and Russia, the entry of the Communist countries into trade agreements and industrial relationships with India and the consequent repercussions all over the free world, an assessment of the whole situation from India's point of view is particularly apt. The journal is divided into three sections: the first political, the second economic and the third dealing with the mind and philosophy of India contrasted with the way of life of the Communist world in which the Eastern Economist points out there are no parallel lines.

Calcutta Markets

HEAVY WITHDRAWALS BEFORE TEA EXPORT SALE

FAIR GENERAL DEMAND FOR DUSTS

AT Sale No. 37, held on 27th and 28th February, there were heavy withdrawals before the Export auction, reducing the quantity on offer to 59,240 packages. There was a fair general demand. The best CTC Fannings and stylish whole leaf grades were often several annas dearer. Other types of Fannings, except the poorest types, met with good demand and were fully firm, while any teas showing seasonal improvement were well supported. Medium and Low Medium B.O.P.s were the weakest feature and were a full one anna easier. All other sorts were from 1 to 1 anna lower.

At the internal auction, 19,000 chests of Dusts were on offer. There was a fair general demand. The very best CTC's were the strongest feature, selling often several annas above valuations, while the more ordinary teas of this description were also dearer. Black leaf teas suitable for the Middle East were also in strong demand. The remaining teas were firm except for the poor liquoring types which were from 1 to 1 anna easier.

About 4,370 chests of Leaf were on offer, which met with fair demand but at very irregular rates, prices generally tending easier. The 155 chests of Green Tea received fair support but at lower rates than in the previous sale.

Shipments during February until the 24th were 22,387 packages, comprising shellac 15,830 packages, seedlac 4,325 packages, buttonlac 431 packages, others 1,801 packages.

After early hesitancy, the markets finished very firm towards the end of the week and gains were recorded in some sections. The American coal trade was steady around 70s for single voyages and a 700,000-ton contract to Antwerp-Rotterdam over four years from October 1956 is reported at 48s 6d. Calcutta-Colombo paid 75s for tanker account. Grain trades were distinctly alive and following the settlement of the dock strike, Australian charterers came to the market at 152s 6d from West Australia to Antwerp-Hamburg range fixing up to June-July loading positions. The River Plate put on 1s 3d at 125s 3d for March loading and there is a good enquiry from the Pacific Coast where an end April vessel secured \$12.25 with free discharge to Bombay. Various ore fixtures were concluded among which Bombay-Northern range paid \$17.50 for April-May loading and Bombay-Japan the good rate of 125s f.i.o. for 1st week March tonnage. Better rates were conceded in the Time Charter section with a Liberty obtaining 38s, delivery Tyne, redelivery India.

FREIGHT MARKETS FIRM

During the week ended 28th February, sugar sales in the Calcutta market averaged 4,200 bags daily. Arrivals a day were 7,000 to 8,000 bags and stocks totalled 150,000 bags. Rates for ready sugar ex-Kantapukur delivery were Rs. 31-12 for ordinary grain and Rs. 32-12 to Rs. 33 for big grain. Ex-mill rates varied from Rs. 27-10 to Rs. 27-12. But business was restricted pending the Union Budget proposals. The market was steady at the beginning, but towards the end prices eased by 2 to 4 annas.

SUGAR MARKET EASY

During the week ended 28th February, sugar sales in the Calcutta market averaged 4,200 bags daily. Arrivals a day were 7,000 to 8,000 bags and stocks totalled 150,000 bags. Rates for ready sugar ex-Kantapukur delivery were Rs. 31-12 for ordinary grain and Rs. 32-12 to Rs. 33 for big grain. Ex-mill rates varied from Rs. 27-10 to Rs. 27-12. But business was restricted pending the Union Budget proposals. The market was steady at the beginning, but towards the end prices eased by 2 to 4 annas.

LINSEED

Values were almost unchanged during the past week while firm conditions were maintained. Following a generally easier tendency in the U.K. for linseed oil, where prices declined notably earlier in the week, local crushers were rather reserved and little business was reported during the week for seeds; while shippers showed little interest in making fresh commitments in linseed oil until the position regarding the export duty had been clarified. An improvement has been reported in U.K. prices of linseed oil, however, and local sellers again appeared to be reserved, with a better demand from buyers for ready as well as forward positions. Latest quotations were as follows: February-March Rs. 24-8 a maund; April-May Rs. 21-8 a maund.

HIDES AND SKINS

The market ruled quiet. Stocks were higher than in the previous week.

Bazaar Sales

(Between 21st February and 28th February, 1956)
Cowhides: Wet salted (Ord.) 6,000 pcs. on the basis of Annas 9 to Annas 10-6; Wet salted (Ord.) 11,000 pcs. on the basis of Rs. 7-12 to Rs. 8; Wet salted (Slaughtered) 16,800 pcs. on the basis of Rs. 12 to Rs. 21.

Goatskins: Wet salted (Daisee, Killed) 96,300 pcs. on the basis of Rs. 250 to Rs. 260, Rs. 275 to

Rs. 335 and Rs. 240 to Rs. 375; Assam-Dinajpur-Murshidabad 23,500 pcs. on the basis of Rs. 280 to Rs. 300; Muzaffarpore-Patna 13,400 pcs. on the basis of Rs. 270 to Rs. 315.

Bazaar Stocks

(28th February, 1956)
Cowhides: Wet salted 2,200,100 pcs.
Goatskins: Wet salted (Daisee, Killed) 32,000 pcs.; Assam-Dinajpur-Murshidabad 87,000 pcs.; Muzaffarpore - Patna - Pakur - Purneah - Kissen-ganj 5,22,000 pcs.

SHELLAC MARKET QUIET

During the week ended 29th February, the market remained quiet. The range of quotations was as follows:

Pure Buttonlac	Rs. 146 to 145 buyers.
Lemon No. 1 Shellac	Rs. 149 to 145 buyers.
Lemon No. 2 Shellac	Rs. 143 to 139-8 buyers.
F. O. Std. 1 Shellac	Rs. 138 done and buyers, 136/135 buyers.
Pure TN Shellac	Rs. 134 to 130 basis done and buyers.
4% I.T.N. Shellac	Rs. 123 to 120 buyers.
No. 1 Kusmi Seedlac	Rs. 140-8 to 140-8 value.
No. 2 Kusmi Seedlac	Rs. 135 done, 133 value, 130 buyers.
Fine Bysaky Seedlac (Manbhumi)	Rs. 126-8 to 123 buyers.
Fine Bysaky Seedlac (C.P.)	Rs. 120 done, 116, 116-8 buyers.
Ordinary Bysaky Seedlac (C.P.) Under 5%	Rs. 106 to 104-8 buyers.
Ordinary Bysaky Seedlac (C.P.)	Rs. 100 done and buyers, 96 buyers.
Kireelac	Rs. 53-8 buyers, 52 value, 50 buyers.

Shipments during February until the 24th were 22,387 packages, comprising shellac 15,830 packages, seedlac 4,325 packages, buttonlac 431 packages, others 1,801 packages.

BRITISH TITANIUM NOW CHEAPEST IN THE WORLD

Imperial Chemical Industries Ltd. announces a reduction in the price of their raw titanium to about 21s (below \$3) a lb., compared with the current price of \$3.45 in the U.S.A.—at present the largest producer and user of raw titanium. This is now the lowest price in the world. Only ten or twelve companies have so far entered the field of raw titanium production on a large scale, and there has been keen competition between them to improve extraction techniques so as to cheapen their product, which is the raw material for the producers of wrought titanium products for industry. In consequence, from a price of \$5 a pound at the beginning of 1954, the price of first-grade titanium has dropped in five successive reductions to \$3.45.

The plant constructed by I.C.I. to produce 1,500 tons of titanium a year by a new sodium process of its own development came into operation in 1955. The new method has given titanium important advantages in its physical form. Instead of the coke-like "sponge" of the conventional Kroll process, the titanium is in the form of small granules which can be pelleted with alloying materials into a form ideal for the difficult process of melting. Titanium was first discovered in 1790, but it was not until after 1925, when the first sample of high-purity metal was produced, that the full potential of titanium began to be realised. When free from harmful impurities, titanium can be alloyed to possess the strength of stainless steel, and it is little more than half the weight. It has the highest strength-to-weight ratio of any commercial metal, and it has outstanding resistance to corrosion. These properties make it immediately attractive for aircraft construction, and for jet-engine components, and much wider fields of use are opening up as the cost is reduced.

RISE IN PRODUCTION OF WHITE SUGAR

According to the Directorate of Economics and Statistics, Union Ministry of Food and Agriculture, the production of white sugar on the basis of the first forecast for the 1955-56 season is estimated at 1,686,000 tons as compared to 1,590,000 tons (actual) during 1954-55. This shows an increase of about 100,000 tons or six percent over the previous year's production. The increase is expected to take place in many States, prominent among which are Bihar, Bombay, Hyderabad and Madhya Bharat. Some decline is expected in U.P., Madras and Andhra.

COMPANY AND PUBLIC NOTICES

THE BISHNAUTH TEA COMPANY LIMITED.

NOTICE is hereby given that an Extraordinary General Meeting of the Members of the abovenamed Company will be held at the Registered Office of the Company, 4, Mangoe Lane, Calcutta on Thursday the 22nd day of March, 1956 at 12 o'clock noon to consider and if thought fit to pass, with or without modification the following resolutions namely:—

1. (As an Extraordinary Resolution). That the authorised capital of the Company be increased from Rs. 16,50,000 to Rs. 40,00,000 by the creation of 2,35,000 New Ordinary Shares of Rs. 10 each.

2. (As a Special Resolution). That Article 4 of the Company's Articles of Association be altered as follows:—

In lines 1 and 2 the figures "16,50,000" and "1,65,000" shall be deleted and the figures "40,00,000" and "4,00,000" substituted there- after respectively.

3. (As an Ordinary Resolution). (a) That it is desirable to capitalise a sum of Rs. 16,50,000 being part of the undivided profits of the company standing at the credit of the General Reserve Account and accordingly that the said sum of Rs. 16,50,000 be capitalised and that this amount be used as a capital bonus which shall be applied on behalf of the persons who are on the 3rd day of March, 1956 the holders of the 1,65,000 issued Ordinary Shares of Rs. 10 each in the Company in payment in full for 1,65,000 new Ordinary Shares of Rs. 10 each credited as fully paid and that such 1,65,000 new Ordinary Shares credited as fully paid shall be accordingly allotted to such persons in the proportion of one new Ordinary Share for every one issued Ordinary Share held by them respectively on the 3rd day of March, 1956 and that the said new Ordinary Shares so distributed shall rank in all respects *pari passu* with the existing Ordinary Shares save and except that they shall not be entitled to participate in any dividend declared in respect of any period ending on or before 31st December, 1955 and shall be treated for all purposes as an increase of the nominal amount of the capital of the Company held by each such Shareholder and not as income.

(b) That pursuant to the above resolution and in satisfaction of the said capital bonus the Directors be and they are hereby directed to allot and distribute 1,65,000 new Ordinary Shares credited as fully paid up amongst the persons who on the said 3rd day of March, 1956, are the holders of the 1,65,000 issued Ordinary Shares of the Company in proportion to the issued Ordinary Shares held by them.

(c) That the draft of the Agreement providing for the allotment of the said new Ordinary Shares in satisfaction of the said capital bonus submitted to this Meeting and signed in the margin by the Chairman thereof by way of identification be and the same is hereby approved and that the Directors be and are hereby authorised to affix the Seal of the Company to duplicate engrossments of such Agreement as and when the same shall have been signed on behalf of the members holding Ordinary Shares in the Company on the 3rd day of March, 1956, by some person to be appointed by the Directors in that behalf under Article 152 of the Articles of Association of the Company.

The Share Transfer Books of the Company will be closed from 5th March, 1956 to 8th March, 1956 inclusive.

Calcutta, the 11th February, 1956.

THE GOHPUR TEA COMPANY LIMITED

NOTICE is hereby given that an Extraordinary General Meeting of the Members of the abovenamed Company will be held at the Registered Office of the Company, 4, Mangoe Lane, Calcutta on Thursday the 22nd day of March, 1956 at 12-10 o'clock in the afternoon to consider and if thought fit to pass, with or without modification the following resolutions namely:—

1. (As a Special Resolution)—That the Company's Articles of Association be altered in manner following:

(a) In Article 156 line 6 from the words "and the Directors shall give effect to such resolution..." to the end of the Article shall be deleted.

(b) After Article 156 the following new Articles 156-A and 156-B shall be inserted.

"156-A.—Any General Meeting may resolve that any moneys investments or other assets forming part of the undivided profits of the Company standing to the credit of any Reserve or other Fund or in the hands of the Company and available for dividend (or representing premiums received on the issue of shares and standing to the credit of the share premium account) be capitalised and distributed amongst such of the shareholders as would be entitled to receive the same if distributed by way of dividend and in the same proportions on the footing that they become entitled thereto as capital and that all or any part of such capitalised fund be applied on behalf of such shareholders in paying up in full any unissued shares, debentures or debenture stock of the Company which shall be distributed accordingly or in or towards payment of the uncalled liability on any issued shares and that such distribution or payment shall be accepted by such shareholders in full satisfaction of their interest in the said capitalised sum".

"156-B. For the purpose of giving effect to any resolution under the two last preceding Articles the Directors may settle any difficulty which may arise in regard to the distribution as they think expedient and in particular may issue fractional certificates and may fix the value for distribution of any specific assets and may determine that cash payments shall be made to any members upon the footing of the value so fixed in order to adjust the rights of all parties and may vest any such cash or specific assets in trustees upon such trusts for the persons entitled to the dividend, or capitalised fund as may seem expedient to the Directors. Where requisite a proper contract shall be filed in accordance with Section 104 of the Act and the Directors may appoint any person to sign such contract on behalf of the persons entitled to the dividend or capitalised fund and such appointment shall be effective".

2. (As an Ordinary Resolution)—(a) That it is desirable to capitalise a sum of Rs. 3,38,000 being part of the undivided profits of the company standing at the credit of the General Reserve Account and accordingly that the said sum of Rs. 3,38,000 be capitalised and that this amount be used as a capital bonus which shall be applied on behalf of the persons who are, on the 3rd day of March, 1956 the holders of the 33,800 issued Ordinary Shares of Rs. 10/- each in the Company in payment in full for 33,800 new Ordinary Shares of Rs. 10/- each credited as fully paid and that such 33,800 new Ordinary Shares credited as fully paid, shall be accordingly allotted to such persons in the proportion of one new Ordinary Share for every one issued Ordinary Share held by them respectively on the said 3rd day of March, 1956 and that the said new Ordinary Shares so distributed shall rank in all respects *pari passu* with the existing Ordinary Shares save and except that they shall not be entitled to participate in any dividend declared in respect of any period ending on or before 31st December, 1955 and shall be treated for all purposes as an increase of the nominal amount of the capital of the Company held by each such Shareholder and not as income.

(b) That pursuant to the above resolution and in satisfaction of the said capital bonus the Directors be and they are hereby directed to allot and distribute 33,800 new Ordinary Shares credited as fully paid up amongst the persons who on the 3rd day of March, 1956, are the holders of the 33,800 issued Ordinary Shares of the Company in proportion to the issued Ordinary Shares held by them.

(c) That the draft of the Agreement providing for the allotment of the said new Ordinary Shares in satisfaction of the said capital bonus submitted to this Meeting and signed in the margin by the Chairman thereof by way of identification be and the same is hereby approved and that the Directors be and are hereby authorised to affix the Seal of the Company to duplicate engrossments of such Agreement as and when the same shall have been signed on behalf of the members holding Ordinary

Shares in the Company on the 3rd day of March, 1956, by some person to be appointed by the Directors in that behalf under Article 156-B of the Articles of Association of the Company.

The Share Transfer Books of the Company will be closed from 5th March, 1956 to 8th March, 1956, inclusive.

Managing Agents.

Calcutta, 23rd February, 1956.

RICHARDSON & CRUDDAS LTD.

NOTICE

NOTICE is hereby given that an Extraordinary General Meeting of Shareholders of Richardson & Cruddas Ltd., will be held at 12, Old Court House Street, Calcutta, the Registered Office of the Company, at 11-30 A.M. on Wednesday, the 21st March, 1956 to consider and, if thought fit, to adopt with or without modification the following resolutions proposed as specified, that is to state:—

As an Extraordinary Resolution

1. Be it RESOLVED that the first sentence of Clause 5 of the Memorandum of Association of the Company be amended to read:—

"The Capital of the Company is Rs. Three Crores divided into 75,000 5/- per cent (Income-tax free) Cumulative Preference Shares of Rs. 100/- each and 22,50,000 Ordinary Shares of Rs. 10/- each subject to being increased or reduced or converted into stock in accordance with the Articles of Association of the Company and the legislative provisions for the time being in force in this behalf."

instead of

"The Capital of the Company is Rs. One Crore divided into 40,000 5/- per cent (Income-tax free) Cumulative Preference Shares of Rs. 100/- each and 6,00,000 Ordinary Shares of Rs. 10/- each subject to being increased or reduced or converted into stock in accordance with the Articles of Association of the Company and the legislative provisions for the time being in force in this behalf."

As Special Resolutions:

2. Be it RESOLVED that Article 5 of the Articles of Association of the Company be amended to read:—

"The Capital of the Company is Rs. 3,00,00,000 divided into 22,50,000 Ordinary Shares of Rs. 10/- each and 75,000 5/- per cent (Income-tax free) Cumulative Preference Shares of Rs. 100/- each"

instead of

"The capital of the Company is Rs. 1,00,00,000 divided into 6,00,000 Ordinary Shares of Rs. 10/- each, 40,000 5/- per cent (Income-tax free) Cumulative Preference Shares of Rs. 100/- each."

3. Be it RESOLVED that the Article 6 (a) of the Articles of Association of the Company be amended by deleting the full stop after the words:—

"nor confer any voting rights"

and adding thereafter

"except to vote on a poll only in proportion to the paid-up share value of the preference shares of the paid-up share value of the ordinary shares of the Company and only on resolutions placed before the Company which directly affect the rights attached to the Preference Shares".

4. Be it RESOLVED that the existing Article 100 of the Articles of Association of the Company be reconstructed to read:—

"On a show of hands every member present in person shall have one vote and upon a poll every member present in person or by proxy shall have one vote for every ordinary share of Rs. 10/- held by him and ten votes for every Preference Share of Rs. 100/- held by him where vote for preference share is admissible as hereinbefore mentioned provided that no member shall be entitled to vote so long as any dues on his shares remain unpaid and also provided that the holders of preference shares shall have no right to vote either in person or by proxy at any General Meeting by virtue of or in respect of their holdings of preference shares unless a resolution is proposed affecting the rights or privileges of the holders of preference shares or for the winding up of the Company"

instead of

"On a show of hands every member present in person shall have one vote and upon a poll every member present in person or by proxy shall have one vote for every share held by him provided that no member will be entitled to vote so long as any dues on his shares remain unpaid and also provided that preference shareholders shall not be entitled to vote."

By Order of the Board,
S. B. INDUSTRIAL DEVELOPMENT CO. LTD.,
Managing Agents.
The 15th February, 1956.

THE EAST INDIA DISTILLERIES & SUGAR FACTORIES LIMITED.

The Speech made by Mr. C. R. Srinivasan at the Annual General Meeting held on the 23rd February, 1956 has already been published.

2. At the Meeting:

(a) The Report of the Directors and the Accounts for the year ended 30th September, 1955 were adopted.

(b) The consideration of the Resolution relating to the declaration of dividends was adjourned to 11 a.m. on the 27th February, 1956.

(c) Mr. G. N. Noel-Tod and Mr. V. Ramakrishna, I.C.S. (Retd.) were re-elected Directors of the Company.

(d) The remuneration of the Auditors was fixed.

(e) Resolution No. 5 approving the acquisition by the Company of the Ordinary Share Capital of Parry and Company Limited was approved.

All resolutions were passed *nem con*.

3. The Class Meetings of the 'A' and 'B' shareholders were adjourned to the 29th March, 1956 at 3-30 p.m. and 3-45 p.m. respectively. Consideration of Resolution No. 1 of the Extraordinary General Meeting was adjourned to 4 p.m. on the 29th March, 1956.

4. The Directors of the East India Distilleries and Sugar Factories Limited have pleasure in announcing that their offer to purchase the Ordinary Share Capital of Parry and Company Limited as set out in their letter of the 18th October, 1955 and confirmed at the Annual General Meeting of the Company on the 23rd February, 1956 has been accepted and effect thereto has been given.

5. The allotment of shares to those shareholders of Parry and Company Limited who opted to take 'B' shares in this Company in exchange for their Ordinary Shares in Parry and Company Limited was duly made at a Meeting of the Board of Directors held on the 26th February, 1956.

6. At the adjourned Annual General Meeting held at 11 a.m. on the 27th February, 1956, final dividends for the year ended 30th September, 1955, without deduction of Indian Income Tax, at the rate of 5% on the Company's 'A' Share Capital and at the rate of 10% on the Company's 'B' Share Capital, together with a special additional dividend of 5% on the Company's 'B' Share Capital were declared, payable on the 14th March, 1956 to shareholders on the Register as at the close of business on the 29th February, 1956.

By Order of the Board,

PARRY'S HOLDINGS LIMITED,
Secretaries.

MARTIN BURN LIMITED.

NOTICE.

AT a Meeting of the Board of Directors of Martin Burn Limited, held on 25th February, 1956, the Directors recommended the payment of a dividend at the rate of Rs. 1-8-0 per share on the Ordinary Shares ranking for dividend for the year ended 30th September, 1955. In addition the Directors have recommended a cash bonus of Four Annas per share on the Ordinary Shares ranking for dividend. These recommendations await sanction by the Shareholders at the Annual General Meeting of the Company to be held on Wednesday, 28th March, 1956.

The Ordinary Share Register of the Company will be closed from the 21st to 28th March, 1956, both days inclusive, and the dividend and cash bonus, if sanctioned, will be paid on or after the 23rd April, 1956.

By Order of the Board,

MARTIN BURN LTD.,

MadrasTHE FIRST BUDGET OF THE
SECOND PLANLEVY ON BETTERMENT IN PROFITS: MIDDLE CLASSES
ESCAPE FRESH DIRECT TAXES

THE most encouraging feature of Mr. Deshmukh's 1956 Budget proposals is that, with one exception, they are not as socialistic as had been expected. Judging from the many spine-chilling rumours circulating before 29th February, it appeared the Finance Minister was about to abandon all principles of responsible budgeting to the dictates of ideology. This has not occurred, at least conspicuously, and although no man need be congratulated simply on doing his duty, it would be unrealistic not to appreciate the strength of the prejudices which appear to have been resisted. This is not altogether a good Budget for private industry and it contains a number of unsatisfactory points which recall the inadequate thinking about possible consequences which was such a feature of last year's. But the burden on industry as a whole should not prove too great to be offset by the increased profits which come with development, while the individual has the consolation that, at least for the time being, incentive has not been completely discredited in the progress towards socialism. Only the proposal to increase the super-tax on personal incomes above Rs. 70,000 a year stands out as being purely ideological in character. It is easy to see why this proposal has been introduced and to argue that it will have little effect when the burden on marginal income in this range is already so high. But it is not so easy to ignore the cost to incentive, the increased attraction towards evasion, or the reminder that such a piece of economic nonsense as a ceiling on incomes has not yet been completely rejected. This ideological gesture stands alone among a set of proposals which are otherwise fairly reasonable, if not altogether well thought out and carefully drafted.

Revenue during the financial year 1955-56 appears to have been buoyant. The Finance Minister has sensibly made this the excuse for keeping new taxes to the minimum. An expected revenue deficit of Rs. 17.35 crores has turned out to be a surplus of Rs. 12.31 crores, largely due to an improvement in the yield from excise duties, a saving in defence outlays and a shortfall in expenditure. The overall deficit has declined from an expected Rs. 327 crores to Rs. 222 crores. Taking the improvement into account, this year's revenue deficit has been fixed at Rs. 51.83 crores and the overall figure at Rs. 390 crores. New taxes are expected to raise about Rs. 35 crores, leaving a gap to be filled by the expansion of Treasury bills. This does not appear to be an unrealistic picture. Provided agricultural output can be maintained, industrial expansion continues at its present rate and there is no large unpredicted fluctuation in international trade, the new burden should not be beyond the capacity of the expanding economy to bear. Indeed, the total size of this year's taxes suggests that one commendable principle might have been established—that new impositions will in future be made only when the nation's wealth has grown sufficiently to meet them.

To say that the Budget provisions are comparatively free from ideology and not too large for the economy to shoulder if expansion continues, does not mean that all are well chosen or completely devoid of anomalies. The new tax on profits is unfortunate for the development of industry as a whole, probably hits the best managed firms hardest, and may involve serious and unjust consequences for those companies which come under Section 23(A) of the Finance Act. The increase in the penal super-tax on pure investment companies will fall heaviest on the more responsible and honest among them, while the new tax arrangements for registered firms appear not only to contain injustices, but to be particularly severe for professional partnerships. The tax on bonus issues can be excused only if they are made from future profits, and as one among a structure of betterment levies. Its economic effect is certainly laid, while

the Taxation Enquiry Commission has already denied its fairness.

Some form of profits tax was only to be expected. Development is bound to swell the earnings of many companies in a way which will not be accounted for completely by increased enterprise and initiative. It is only right that the Government should have a share of any increment which results chiefly from its own activities. By exempting distributed dividends below six percent of paid-up capital, the Finance Minister has ensured that the shareholders of new companies, and those whose profits are unable to enjoy the stimulus of development, will not be seriously affected by this provision. For the ordinary run of industrial companies, where managements have been no more than moderately conservative, the consequences of this extra imposition should be no more than can be paid from higher future earnings. Where the effect will be felt badly by those companies which vary widely from year to year and at times represent a substantial percentage of paid-up capital. A number of tea companies are in this category. Their profits follow the fortunes of the world's tea markets and are proportionately larger in good years to offset the bad. The fact that only 60 percent of these companies' profits are classed as agricultural income may only partly mitigate the effect, especially if they are also included under Section 23(A). Here a serious injustice appears to arise, which could scarcely have been Mr. Deshmukh's intention. Under this Section, companies are forced to pay

IMPROVED PROSPECTS FOR PRIVATE COLLIERIES

I.M.A. CHAIRMAN POINTS TO MANY REMAINING DIFFICULTIES

THE outlook for the coal industry has become distinctly more hopeful in recent months. It has been realised that industrial development cannot be rapid until the country's biggest source of energy is exploited more fully—a process which has been hampered for many years by the fact that most units of the industry have been made to work at an uneconomic level, transport has been short, and nationalisation threats have discouraged investment. None of these handicaps has yet disappeared, but the evidence suggests that a more realistic attitude is being taken in dealing with them. Under the second five year plan, it is estimated that the annual production of coal will have to be raised to 60 million tons by 1961, as against an aggregate output of 38 million tons during 1955. It was proposed some time ago that most of the increase in production should take place in the public sector. But the view is gaining ground that this will not be possible since the Government does not have the money. The private sector might well therefore be asked to increase annual production by substantially more than the eight million tons or so indicated for it under the original targets. Since it is prepared, and able, to find the investment necessary for expanding production by the entire 22 million tons, and not just eight million tons, the Government's eagerness to divert any part of its already limited financial resources for this purpose seems illogical. But political considerations necessitate it, and the fact must be accepted, though it is hoped that economic realism will allow the targets for the private sector to be substantially exceeded later.

No major Indian industry has in recent years been treated more shabbily by the Government than coal. Evidence that this attitude still continues, though in diluted form, is to be found in the address from the chair delivered by Mr. B. Mitter at the annual general meeting of the Indian Mining Association in Calcutta last Friday and published elsewhere in this issue of Capital. The industry has been asked to invest vast new sums for increasing production, but is denied the assurance that it will be allowed to earn proper returns in years to come. No security against nationalisation is offered, although the Government is well aware that in a mineral industry such as coal a return on the capital outlay can be expected only after many years. The sole indication that has been given, in Mr. Mitter's words, is that "if producers in the private sector made plans for increasing their production, full compensation, after taking into account depreciation, would be paid for whatever money was laid out with the approval of Government for this additional production." The merits of the formula are largely superficial, for it contains three main weaknesses and may prove to be nearly unworkable in practice. The first weakness is the way it ignores the fact that in an extractive industry such as coal, which works a wasting asset, a steady flow of new investment is necessary even if production is to be merely maintained. It is therefore technically impossible to distinguish between capital outlay for maintaining production and capital outlay for increasing production. To illustrate the point, Mr. Mitter gives the hypothetical example of a property which is being worked through two shafts, and in which a small area round the shaft bottom has been developed. "In order to develop in accordance with approved mining methods the remaining area of the property towards its boundaries, more haulage engines, motors, switches, cables, steel wire ropes, rails and a host of other things would be required. Such additional installations, far from increasing output immediately, may only enable the mine to maintain its output for five, ten or even 15 years, until the depillaring stage is reached, when output will rise sharply. Will the capital outlay on such additional plant and machinery be regarded as necessary to maintain output or to increase output?" No distinction is possible, Mr. Mitter declares, between the two forms of capital investment.

The second defect in the formula lies in the proposal to pay compensation on capital outlay less depreciation. Mr. Mitter points out that if a company invests a crore of rupees on fresh capital development and is nationalised in, say, five years' time, "the depreciated value of the outlay would be very substantially less than this crore at the end of five years. At the same time, in the course of these five years, the company can hope to earn very little by way of return on its investment." The formula is therefore liable to work unfairly even against those who are prepared to spend the large extra sums of money on development. A further complication is that, since Government approval is necessary before the initial investments are made, it seems to be implied that an account has to be kept of every single item of plant and machinery installed at each individual colliery for

an indefinite period. Various practical and procedural problems are likely to arise, and Mr. Mitter feels that it might be almost impossible to maintain satisfactory records. A more comprehensive formula, he hopes, will be evolved, which will transcend the limitations of the one now proposed.

A major factor hampering the expansion of the coal industry is that the returns it offers are extremely low. The controlled selling prices fixed by the Government are based on the production costs of eight years ago, and have not been raised despite the fact that those costs have been steadily increasing. Profit margins have become smaller and smaller as a result; in many cases they have disappeared altogether. Mr. Mitter deals tersely with the argument that an increase in coal prices should be restricted because it would force up general industrial costs. He points out that the argument applies equally to other basic materials such as cement and steel, and adds: "Whilst this aspect should no doubt be borne in mind, I am sure you will all agree that no single industry should be made to subsidise others if its own economics justify an increase in selling prices." It has been suggested that costs will tend to fall when production increases and transport improves but Mr. Mitter points out: "What is needed now is to make today's controlled selling prices reflect today's costs, and if the industry's costs go down in future, there is no reason why future prices should be impervious to such changes."

Transport seems likely to remain a serious worry for coal producers despite the large expansion of railway facilities proposed under the five year plan. The worry can hardly have been assuaged by the gloomy estimates of extra facilities given by Mr. Lal Bahadur Shastri in his railway budget speech. Mr. Mitter suggests that fuller use be made of coastal shipping in order to lessen the strain on the railways; and "coastal freight rates for coal should be readjusted so as to bear a closer relation to rail freight rates. At present the disparity is glaring, and this prevents the optimum utilisation of these two forms of transport." To what extent the railways have been unable to fulfil their promises is evident from the fact that in 1946 they claimed to be confident of attaining within two years a daily loading of 3,600 wagons in the coalfields of Bengal and Bihar. Nine years later, in 1955, the average of daily loadings in these two areas was only 3,262 wagons. The shortage of facilities has led to a serious waste of the coal industry's resources. Stocks have accumulated at pitheads, locking up huge amounts of working capital, and a substantial portion of these stocks has been lost through spontaneous combustion. Nearly as serious is Mr. Mitter's charge that State collieries are being favoured in the allocation of wagons; he hopes that the discriminatory practices will not be extended when facilities are provided to import plant and machinery for expanding production.

CURRENT COIN

Rural Credit and the State Bank.—Dr. John Matthai's speech from the chair at the first annual general meeting of the State Bank of India in Bombay last week outlined plans for extending banking facilities to the rural areas—which was one of the main reasons for nationalising the "Imperial". The State Bank is under a statutory obligation to open 400 new branches during the first five years of its existence, or such extended period as the Central Government may specify. As a first step, 100 places have been selected which are confined mostly to district treasury centres and the more important sub-treasury centres. The assistance of State Governments and district authorities is being sought to secure accommodation; and supervisory and clerical staff is being trained for the new branches. A factor which restricted the Imperial Bank's efforts in this direction was that, as a private shareholders' bank, it could not afford the heavy expenditure involved in opening new branches which were likely to prove unremunerative. The State Bank is in a better position since losses on unremunerative branches beyond an agreed figure will be met from an "Integration and Development Fund", into which are paid the dividends due to the Reserve Bank on its holding of 55 percent of the total issued capital in the State Bank. According to Dr. Matthai, an essential part of the rural credit programme is that there should be more facilities for the storage, warehousing and marketing of agricultural produce. An all-India Central Warehousing Corporation and State Warehousing Corporations will be set up shortly to provide storage facilities. The move is welcome from the State Bank's point of view as it "will increase our ability to make advances against suitable secu-

rity to the small producer in the rural areas." An unfortunate feature of Dr. Matthai's speech was his suggestion that banks should join together to keep down interest rates, and if they cannot join together, the Government should take action. It is difficult to appreciate why official intervention should be necessary in what is purely a commercial matter.

Need for Expanding Exports.—To meet the foreign exchange needs of the second five year plan, India will have to participate in international trade to a larger extent than has been the case so far. It has been estimated that the total requirements of foreign exchange to finance capital goods purchases, both for new and replacement demand in the economy, will amount to Rs. 1,600 crores. Considering the trend of deficits in India's balance of payments in the past several years, it is clearly beyond the capacity of the country to find an adequate trade surplus for this purpose. Since India does not expect foreign assistance at more than half this figure, as the draft outline for the second plan estimates, and the Finance Minister is said to be even more pessimistic (his estimates of likely foreign aid amounting only to Rs. 300 crores) only two alternatives are now open. The industrial development programme must be cut according to the actual amount of trade surplus plus foreign aid available—this figure can be reinforced by drawing down existing foreign exchange reserves—or foreign capital must be attracted. Finding an appreciable trade surplus will indeed be an uphill task, since most of the traditional export industries are now facing increasing competition in world markets. Furthermore, the plan policy of employment and welfare is unlikely to help that course. It is more likely to contribute to the difficulties. These add up to a number of problems which are obviously too complicated to be solved by any single, simple device. Business views on these questions were provided by Mr. Chinobhai C. Javeri, president of the All-India Exporters' Association and Mr. Shantilal M. Shah, President of the All-India Importers' Association, both of whom stressed their importance. Mr. Javeri, speaking at the recent annual general meeting of his association, discussed their whole range, and it was his opinion that there was no room for cutting imports since the volume allowed at the moment was the minimum. On the contrary, imports of consumer goods would have to be stepped up as a cushion against the larger money supply which the plan expenditures would create. The need for raising India's exports as much as possible was therefore obvious, though the review of India's foreign trade and of its static structural pattern that he provided later in his speech, warranted little optimism on this matter. Mr. Shah was mostly concerned with discussing specific matters. He complained against some less desirable aspects of India's import policy, although he welcomed generally the latest half-yearly policy covering the period January-June, 1956, and he was most emphatic in his argument against the State entering the field of foreign trade. He quoted the recommendations of the official Committee on State trading in 1952 and those of more recent bodies, such as the State Enquiry Commission, to prove his case that State participation in a field which called for wide experience and a high degree of efficiency and skill, would prove disastrous, as indeed it did when some State Governments tried it in sugar, cloth and yarn and some other commodities. The Government should at least be wise after the event.

Private Enterprise Offers to Co-operate.—The speech of Mr. Shantilal Mangaldas to the twenty-ninth annual session of the Federation of the Indian Chambers of Commerce and Industry was marked for its sober realism in the assessment of the prospects of private enterprise in this country. While noting the fact that the State had been spreading its ownership and control over the economic activity in pursuit of its socio-economic policy, Mr. Mangaldas suggested that the aim of raising the general standard of living—which private enterprise also shared—could just as well be served without the Government "running or owning the business in the physical sense", with some exceptions. The powers of a modern State were enormous in so far as its control over the economic life of the people went, and the Government of India could achieve all its objectives "through the type of regulation and control which obtains at present and by taking control of strategic heights of the economy." From this point of view, Mr. Mangaldas considered the recent nationalisation of life insurance wholly unnecessary. He thought that despite all the socialistic objectives of the Government which theoretically went against the very existence of private enterprise, the business man had a definite part to play in the "task of building up a prosperous India". He recalled the observations of the Prime Minister, made some time ago, which pointed to the same conclusion. He therefore offered the co-operation of the Federation and all its constituents in the fulfilment of that magnificent task. The value of the talent and experience of the private sector to the economy of the country was

beyond doubt. It had already played a splendid part in the first plan. Yet the second plan gave it a relatively unimportant place. The shortfall in investment targets in this sector was really no index of its performance, since the expenditures on capital replacement and addition were actually less than estimated at the beginning of the first plan due to subsequent price falls. The production indices, agricultural and industrial, should be better yardsticks of judgment. In the second plan, investment targets for the private sector were just 40 percent more than those realised during the first plan, whereas the targets for the public sector were nine times the actual level of expenditure during the past five years. Making allowance for the three steel mills and the need for increasing investment in that sector, Mr. Mangaldas felt that in the circumstances obtaining in the country, the nature of these allocations might actually lead to a slowing down of the pace of development, since certain lines of activity which were now in the hands of the private sector to a large extent were to be exclusively preserved for the public sector. He therefore pleaded for flexibility in the approach to economic development. The two sectors should supplement each other's activities. The effect of the new Budget proposals, said Mr. Mangaldas, would be adverse to the flow of venture private capital since the levy of a super-tax was proposed on dividends, and he pointed out that the consequences in that case might check industrialisation itself. The means and ends had therefore to be realistically balanced. He suggested a similar policy in the field of small-scale industries and employment.

Problems for Paints.—The report of Mr. B. Banerjee from the chair at the annual general meeting of the Paint Federation, held in Calcutta last week, discussed a number of vexatious problems which paint manufacturers face in their routine dealings with the Government. In the first place, he referred to the numerous excise problems which had cropped up since the re-imposition of excise duty on the bigger units on 1st March, 1955. These had involved endless representations to the Government, often with little useful result. The Government had of course changed the ad valorem rate of duty to a tariff basis of excise collection, but the latter system had posed its own problems. He attributed their origin to a general lack of liaison, particularly between the Customs and Excise authorities and the industry. The Member (Excise) of the Central Board of Revenue had given an oral assurance that he would pursue the Federation's suggestion for the establishment of regional Excise liaison committees. Mr. Banerjee, therefore, hoped that by next year the situation will have "resolved itself into a reasonably smooth working system." Secondly, Mr. Banerjee could not understand how the re-imposition of excise duty on the bigger and more efficient units in the industry, which were now bearing heavier cost burdens and the simultaneous encouragement to small producers through duty exemption, could help the Government's ambition of expanding paint production in the country to meet the growing needs of the second plan period. Moreover, the small units, despite the subsidy, were under no obligation to improve the quality of their output. When the Federation's representatives had met the Planning Commission to discuss the prospective demand for paints during the next plan period, they had pointed out that since the existing major producers were working considerably below capacity and could meet all additional demand (of which no precise estimate could be available due to several imponderable factors), no new units should be allowed to be set up. Nor could there be any place for small-scale units in the industry because of the highly technical process of paint manufacture which would be economically undertaken only on a large scale.

India's Wood Screw Industry.—The vexed question of the effect of import policies on indigenous products has once again been raised. Mr. D. V. Virmani, in his presidential address at the 6th annual general meeting of the Screw Manufacturers Association asked the Government to ban the import of wood screws. He pointed out that as the installed capacity of the industry is almost double the estimated demand for the next five year period, there is no necessity for even a token import of five percent. In addition to wood screws, said Mr. Virmani, local manufacturers are capable of turning out many other varieties such as countersunk head wood screws, lathe pointed, and galvanised cone head roofing wood screws. Due, however, to the Government's policy of allowing 100 percent import of these categories, the Indian factories have received no demands and therefore have only manufactured them in sample lots. The production programme of the industry is also being hampered, said Mr. Virmani, by an inadequate supply of raw materials, 50 percent of which will have to be imported from overseas, and "unless the import duty levied on the imports of wire rods and steel wire is removed, it would not be an economic proposition." Here Mr. Virmani makes his most important point, for if the required quantity of goods can be supplied locally at a competitive

price and of a comparable quality, it is clear that no consumer would willingly go through the complicated processes involved in importing a similar product. It is the old story of the man who pays the piper calling the tune. Manufacturers would do well to make a rational approach to their marketing problem and find out why potential customers prefer imported varieties. They can then effect the necessary adjustments. Modern methods of market research have frequently revealed unexpected idiosyncracies on the part of the buyer, which, by taking a little thought, the producer might overcome quite simply.

Stretch-to-Fit Hosiery Development.—Hosiery which will stretch to fit almost any foot or leg size has been on the market for some time, but has not found as much favour as it might have done because in the package it has a somewhat unconventional appearance (which disappears when it is actually worn) and because of the somewhat higher cost. The second of these deterrents may well be eliminated as a result of the development of a new machine by a Maclesfield firm of textile machinery makers. The new machine telescopes five of the operations involved in the production of the crimped synthetic yarns used in this stretchable hosiery into one, and therefore reduces the cost. Its makers—Ernest Scragg and Sons, Ltd.—believe that at a lower price the demand for stockings that stretch to fit will be greatly increased, and only two sizes need be produced. Under the normal system, to put a crimp into a synthetic yarn it is necessary to process the yarn on a number of different machines and to set the crimp in place by heating the yarn in a steam oven. The new machine not only incorporates all the processes creating the crimped effect but also contains electrical heating units which set each thread individually. The makers claim that it increases production by at least 500 percent and that with a standard type of yarn its output a spindle over a 24-hour period can be four ounces, compared with about three-quarters of an ounce under the old system. If the machine is taken up by the industry on a large scale, it seems likely that a great deal more clothing made from crimped synthetic yarns will be available to the public.

A "No-iron" Cotton Fabric.—A new cotton dress fabric, said to need almost no ironing, is being marketed by the Tootal Group, of Manchester. Called "Tootale", the new fabric is the product of nine years' research. Announcing the new fabric, Mr. A. V. Symons, chairman of the company, said that it was of major importance to the future of cotton. As with the new synthetics, the extent to which garments made of the new fabric might require a touch of the iron depended entirely on personal taste and the style of the garment. Consequently, the company preferred to talk in terms only of "minimum iron" rather than "non-iron" properties, but in many instances extensive tests had shown that there was, in fact, no need to use an iron at all. The company, he said, was arranging not only to produce this new fabric itself, but also to make the process available to its licensees among textile manufacturers and finishers throughout the world. This development marks real progress in one of the directions which seem to offer especially good prospects. The introduction of nylon and the other wholly synthetic fibres has brought to consumers' notice the usefulness of garments which need little or no ironing after they have been washed, and there is keen interest in cotton garments which have that labour-saving quality. These will no doubt cost less than comparable garments made from the man-made fibres, and this should prove a great advantage to the firms which produce, finish and market them.

Employment in January.—The number of employment seekers registered at the employment exchanges all over India during January, 1956, declined by 5,890. There were 142,106 fresh registrations against 147,996 in December, 1955. The total number of persons seeking employment through the exchanges at the end of January was 7,173,456 indicating an increase of 25,387 from the figure at the end of the preceding month. The increase in the number of employment seekers was largely in the unskilled and clerical categories. The number of placements made by the exchanges during the month was 14,753 compared with 16,817 during the previous month; this recorded a fall of 2,064. Of the placements secured, 5,588 were in Central Government departments, 5,871 in State Government departments and 32,943 in non-Government establishments. The number of employers who used the services of the exchanges during the month was 4,995 against 5,330 during the preceding month. The number of vacancies notified by the employers was 21,105 compared with 25,514 in December. The number of vacancies notified, therefore, recorded a fall of 4,409. Displaced persons seeking assistance from the employment exchanges numbered 46,740 at the end of the period. The exchanges placed 860 applicants in jobs and registered 6,471 during the period.

THE RELATIVE VALUES OF LIFE INSURANCE SHARES

FACTORS GOVERNING COMPENSATION

By N. T. Raju

THE solvency, stability or profitability of life insurance business is notoriously elusive. Even disinterested opinions may vary widely as to the actual financial position of a life office and consequently the value of the shareholder's interest in the business may not be capable of being easily ascertained. Moreover, the circumstances of each life company differ from those of another though the companies may fall into a few broadly similar groups. Hence, using a common yardstick for determining the value of a life company share or of life business to a composite insurance company cannot but result in gross inequities to some and windfall profits to others.

The Life Insurance Corporation Bill, introduced in the Lok Sabha last week, proposes to deal with the problem of compensation by a few simple rules. Apparently, the rules seem to be better suited for application to ordinary commercial and industrial companies rather than to the special features of a long-term business like life insurance. Apart altogether from this aspect the proposed methods ignore some of the fundamental principles relating to the price structure of investments. As the Bill is to be referred to a Select Committee it is possible that the anomalies may be rectified if attention is drawn to them in time.

Trading Profits

Before examining the provisions in the Bill regarding compensation to shareholders it would be advisable to study a brief outline of the nature of trading profits in life insurance business. Firstly, the valuation surplus, of which trading profits form a part, depends on the basis adopted for the purposes of the valuation. A conservative basis will, by creating hidden reserves, add to the stability of the life company and so curtail the surplus thrown out. It adds to the policyholders' future security by restricting current returns. A liberal basis, on the other hand, will have contrary effects. It would therefore be clearly unfair and unjust to determine the quantum of compensation as a function of the distributed surpluses only. It will penalise the prudent office which sacrifices immediate gains for future solidarity.

Secondly, all successful life offices have been steadily growing in size and the progress is very likely to be maintained for many years to come. That being the case, even if the rate of surpluses does not improve, their amount will be on the

increase. When a constant fraction of the surpluses is allocated to shareholders, increasing dividends result, provided the share capital remains either stationary or increases less steeply than the volume of surpluses. In this respect, life insurance shares are intrinsically different from commercial or industrial shares which have to look for a higher rate of earnings to receive higher dividends. Lastly, sharp increases in new life business do not necessarily bring in their train immediate profits. The heavy initial expenses incurred on new life policies together with high lapse rates may impose a temporary strain on the office and as a result may substantially distort the appearance of surpluses. Therefore, when offices are rapidly growing, as at present, current disclosed surpluses may be understated and so may not be a fair basis for assessing the value of insurance shares.

Compensation Clauses

The Life Insurance Corporation Bill proposes to relate the compensation paid to life offices to the annual average of the share of surplus allocated to shareholders at the last two actuarial investigations prior to 1st January, 1955. The amount of compensation would be 20 times this annual average or 10 times the annual average plus the paid up capital, whichever is greater. For this purpose, allocations to shareholders out of a surplus exceeding five percent or falling short of three percent would be ignored. The provisions, by considering surpluses divorced from the valuation basis, bear harshly on the prudence factor mentioned above. Other things being equal, the more recent the valuation date, the larger the surplus, so that offices whose valuation dates happened to fall on 31st December, 1954 are more fortunate than those who had their valuations earlier. The valuation of individual offices on a uniform basis and on a fixed date will produce surpluses which would form a more equitable base for determining compensation.

In addition, it may be stated that the trading profits earned up to the valuation date stand transferred to the profit and loss accounts and from 20th January, 1956, the date of the Insurance Ordinance, to the day on which the Life Insurance Corporation comes into existence, that is for the period during which management but not ownership of life insurance business vests in the government, the shareholders will be compensated for

loss of profits. This transition period is unlikely to be longer than six months. But there is no mention of compensation for the period between the last valuation date of an office and the date of the Insurance Ordinance, a period which cannot be less than one year but may be as long as three years. It is obviously inconsistent that attention should be concentrated on the loss of profits during the short transition period, and accrued but not earned profits since the last valuation date, totally forgotten.

Capitalisation of Earnings

The rate of compensation will be 20 times the annual average surplus allocated to shareholders at the last two valuations where such surplus (not exceeding five percent of the annual average total surplus) is not less than 10 percent of the share capital. When it is less, the quantum of compensation will be 10 times such annual average surplus plus the paid-up capital. The former would mean capitalisation of defined earnings at five percent interest per annum free of income tax and the latter at a lower rate of interest. Determining values by capitalising incomes has to keep in view the expectation of maintaining incomes in future. The less the certainty of maintaining the incomes the higher should be the rate used for capitalisation. Prescribing a uniform rate of interest irrespective of the standing reputation and past history of individual companies and their profits does not appear to be logical or indicative of fairness. It would appear equally illogical to prescribe as compensation for an office whose relevant annual average earnings were, say, four percent of the paid-up capital, the paid-up capital plus 10 years' earnings.

Composite Offices

It is usual for composite insurance companies not to include any part of their share capital in the Life Balance Sheet, the only exceptions being the General Assurance Society and the Swadeshi Bima. The compensation to shareholders is calculated on the same lines as for pure life offices, but part of their share capital and equivalent assets allocable to life business have to be transferred to the Life Department and therefore to the proposed Life Insurance Corporation.

In practice the effect on composite offices would depend on the trading profits arising in their Life Departments. Where there are no trading profits or deficits in the Life Department, the nationalisation of life business would not bring in any compensation as the amount of compensation would be the amount of paid-up capital allocable to the Life Department. When the trading profits are small, the compensation would amount to 10 times the annual average surplus as defined. When, however, the trading profits are substantial the compensation would be 20 times the annual average surplus as defined, less the paid-up share capital allocable to the life business. Only the General Assurance, National Insurance, New India and probably Andhra will qualify for compensation on the basis of 20 times the annual average shareholders' surplus. The net amount of compensation which other composite offices could receive would be equivalent, at the maximum, to the share capital allocable to the life business. Some, as mentioned earlier, may not be able to obtain any net compensation. Where there are deficits the amount of compensation may fall short of the paid-up capital or equivalent assets allocable to the life business and consequently a net payment to the Life Insurance Corporation accompanies loss of the Life Department. Of the companies transacting solely life business, only Bharat Insurance, Bombay Life, Empire of India, Hindustan Cooperative, Industrial and Prudential, Lakshmi, National Indian, Oriental, United India and Western India, will be eligible for compensation on a 20 times the surplus basis.

The Case of the Oriental

In the case of the Oriental, the premier life office of the country, the last two valuations were as at the end of 1951 and 1954 and 41 percent and 31 percent respectively of the distributed surplus was allocated to shareholders. The annual average of the shareholders' portion of the surplus was a little over Rs. 6 lakhs and 20 times the average works out to as much as Rs. 122 lakhs, the share capital being Rs. 6 lakhs. In other words, each share of Rs. 200 gets over Rs. 4,050 as compensation. Had the proportion of surplus allocated to shareholders been 5 percent, the maximum allowable for compensation purposes, each share would have received nearly Rs. 5,500. Had the proportion of surplus allocated to shareholders been 71 percent, the maximum permitted by the Insurance Act and had there been no 5 percent limitation for determining compensation, each share would have received over Rs. 8,000, a figure close to but below that proposed by that company as compensation under their mutualisation plan. Actually, Oriental's share was quoted in the Bombay market at Rs. 3,960.

Foreign Companies

The manner of ascertaining the quantum of compensation in the case of foreign companies is almost similar. As these companies have no share capital in India, the amount of share capital allocable to the life business taken over forms a deduction from the quantum of compensation. In effect, the basis is equivalent to that prescribed for composite offices having no share capital in their Life Departments. An adjustment to the surpluses disclosed at the relevant valuation dates will have to be made for that part of the surplus which corresponds to their life business in India not vesting in the proposed Life Insurance Corporation.

A DITCHER'S DIARY

Heath Robinson air about it had, I was told, a 6,000 gallons an hour capacity, which seems a lot to me. The needs of the modern motorist had received their usual attention. An adaptation to the standard combustion engine promised to dispense with petrol in favour of kerosene, while a single-valve unit, capable, so it was said, of developing a high horsepower, offered freedom from over-heating and the risk of burning out. Both were obviously waiting only for the foresight of another Henry Ford. But application of genius is not always easy even when it is practicable, and unfortunately I saw no invention which could claim to be able to reconcile the introduction of economy devices with their possible Luddite reactions. Where such obstacles were unlikely to be encountered, however, was in one invention designed to produce fuel gas from cow-dung. Although some people who are hard to please might object if it happens to flavour the food cooked on it, I thought this a really bright idea.

The speech the Prime Minister gave to the annual session of the Federation of Indian Chambers of Commerce last week-end made interesting and encouraging reading. An empirical approach to socialism is the right one, especially if the ultimate goal is as inevitable as Mr. Nehru says it is. But I was left wondering if this kind of soothing syrup is going to be enough in future to satisfy the fears of industrialists. It is difficult for, say, a private colliery owner to appreciate what Mr. Nehru said about there being no place for rigid dogmas when he sees a State-owned pit being sunk near his own and knows he could open up the same seams at a tenth the cost. The President of the Federation, Mr. Shantilal Mangaldas, pointed to the greater importance given the public sector in the first plan. This may have been inevitable when the emphasis was on agricultural development, but now it is on industrial, there seems no good reason why there should not be a change, unless of course the reason is ideological. Fears were expressed at the session about the State's incursions into private industry, as well they might be after the unceremonious nationalisation of life insurance companies. No wonder industrialists fear more is on the way after what Mr. Deshmukh said of the firms doing general business, and after the recent rumours about the Government's plans for private banking. It is not surprising that some see the imprint of the cloven hoof on Mr. Deshmukh's Budget proposals when he shows himself capable of such spitefulness towards private enterprise as he did in his report or the Life Insurance Bill the other day. Mr. Deshmukh's arguments may have stood high in his own estimations, but they cannot rank anywhere with those who are not blinded by dogma. It is all very well to point to the mote in private industry's eye, but who can doubt the promise of the beam in the public sector's when so much of the pressure towards further nationalisation is coming from persons whose only motive is self-interest and whose only spur is jealousy? I agree with Mr. Nehru that dogma should have no place in the system India is building. But I confess myself bewildered at the extent to which the practice is deviating from the theory.

It does not matter much if seventeen children are hurt by a collapsing staircase. Not, it would appear, if they are the property of parents in low income brackets and the staircase belongs to a Calcutta Corporation school. At least, this is the impression one gets from the apparent inaction following the scandalous and might-have-been-tragic incident which took place on the premises of such an institution in Linton Street on 16th February. Since then I have been searching for further news on the subject to assure myself that the city fathers have been alerted. But it was not until last week that it cropped up at a meeting of the Corporation, and then almost by accident. It was not considered important enough to figure on the agenda, but Mr. N. N. Mookerjee, an ex-Mayor, forced notice to be taken by rising "on a point of urgent public importance". It was he who disclosed that the school authorities had repeatedly brought the deplorable condition of the school premises to the attention of the Municipal Standing Education Committee, and that the Committee had, on its part, just sat pretty after filing a suit before the Rent Controller against the owner of the premises for his neglect of their upkeep. Another member pointed out that along with the Linton Street school two others were closed because of the insecure condition of the premises. This will deprive, temporarily so it is said, about two thousand pupils of their schooling. I do not see from the way the Corporation schools are run that this loss is going to be so terrible. On the contrary, I am glad, like most citizens, that the Corporation has for once thought ahead, and thus perhaps saved the lives and limbs of those poor children who are unfortunate enough to be forced to pursue their education in its schools. The Corporation has not much reputation to lose in this field, but I am quite sure it will not have to work much harder at doing less before what little is left becomes nought.

Already in this sub-continent linguists has caused a variety of evils—broken limbs, burnt railway stations and much else. In Ceylon, I note, it is going to cause beads. Local poets in the southern part of the island have, according to newspaper reports, threatened to nourish these all-too-rare items of male facial furniture if Sinhalese is not made the sole State language. I must say the gesture is manful enough and by no means unpoetic. Although Tennyson—himself a bearded one—never met Homer in the flesh, he described him, apparently without raising a protest from any quarter, as one who had a hundred winters snowing upon his breast from cheek and throat and chin. Shakespeare is often pictured with a thinly—although neatly—cloaked nether jaw. To come nearer our times, Tagore wore one of the most magnificent of beards, while for struggling modern poets some attempt at fungus cultivation often appears to be indispensable to the character. All this is very well. But I do not see how sporting flowing beards can possibly solve any problem, except perhaps a razor blade famine. What I am wondering is whether the southern Sinhalese poets have so far given up hope as already to have decided on jungle warfare. Do they propose to fight the United National Party, which is said to have given the pledge to install Sinhalese as the only State language, from behind the cover of their beards? The witches assured Macbeth that nothing born of woman would defeat him "till Birnam Wood shall come to Dunsinane". But Malcolm's army covered itself with branches torn from those same woods and approached Macbeth in the shape of a moving forest, so worsting him in battle. Have the poets of southern Ceylon something like this in mind?

"Dad, why isn't a man allowed to have more than one wife?"

"Son, when you're older you'll understand that the law protects those who cannot protect themselves."

THE DITCHER.

READY REFERENCER

ON THE INDIAN COMPANIES ACT, 1956,

by JOHN G. ROW, Advocates, MADRAS.

A UNIQUE AND MOST helpful book, the outstanding feature of the book being the exhaustive grouping together of the sections of the Act pertaining to various persons concerned with Company Law and explaining the provisions in a language easily understood by laymen. The first Chapter deals with the officer in charge of the affairs of an existing company, what he should know and do immediately or in the near future on account of the changes introduced by the Act. 350 pages and also the last Act as an appendix. This book must be in the hands of everybody concerned with the Act particularly executives of companies. Price Rs. 20/- per copy if order received before 1-4-1956; thereafter Rs. 25/-.

A monthly supplement to keep the Law up-to-date will also be published. Price Pre-publication Rs. 10/- and thereafter Rs. 24/- per year. Place your orders for the book and/or Supplements with EXPRESS PUBLISHERS (PRIVATE) LTD., 33, Broadway, MADRAS-1. (Telephone: 3841. Telegram: THOMPRESS).

CHAIRMAN DR. JOHN MATTHAI'S SURVEY

Speech by the Chairman, Dr. John Matthai, at the First Annual General Meeting of the Shareholders held in Bombay on 29th February, 1956.

I have much pleasure in welcoming you to the first Annual General Meeting of the Shareholders of the State Bank of India.

I would like at the outset to dwell briefly on the genesis of the State Bank and the objects Government had in view in forming it so as to be able to assess the results that have been achieved in the first six months of our working. On the 20th December, 1954, the Finance Minister announced in the Lok Sabha the decision of the Government of India to establish effective control over the Imperial Bank of India as a first step towards the setting up of a State Bank of India. This decision was taken by Government on the recommendations of the Committee of Direction of the All-India Rural Credit Survey, which had suggested inter alia other measures, the creation of "one strong central State-partnered commercial bank in co-operation with the existing money-lenders' branches spreading over the whole country for stimulating banking development by providing vastly extended remittance facilities for co-operative and other banks and following a policy which would be in effective consonance with national policies adopted by Government without detracting from the canons of sound business. Following this announcement the State Bank of India Act was passed by Parliament in May, 1955.

On the 1st July, 1955 the State Bank of India came into being and the undertaking of the Imperial Bank of India, which was formed in 1921 by the amalgamation of the three Agency Banks, was transferred to the new institution with the exception of the assets and liabilities of foreign branches to which a reference will be made later in my speech. The process of transfer from the Imperial Bank to its successor Bank was completed smoothly and it is a matter of gratification that the good work put in by all concerned and the satisfactory arrangements made have enabled the change-over to take place without any dislocation of activities either within the Bank or in the general economic life of the country. It will be agreed that, with the establishment of the State Bank, a new chapter has commenced in the history of banking in India.

Central and Local Boards

The Bank started to function under the direction of a Central Board and three Local Boards at Bombay, Calcutta and Madras. Initially appointed by Government, consisting of men of outstanding ability and experience in various fields of economic activity. The Central Board has had a variety of difficult problems to face during its initial period and I would like to take this opportunity of expressing my appreciation of the help and co-operation the Directors have extended to me in handling them.

Foreign Offices and Foreign Exchange

In regard to the transfer of the assets and liabilities of the undertaking of the Imperial Bank to the State Bank, as stated by the State Bank of India Act, it was felt that, while there would be no difficulty about the transfer in India, it was doubtful whether such "vesting" would be recognised even effect in foreign countries. As a precautionary measure, it was therefore decided to get legal advice, to provide for the continuing existence of the Imperial Bank as a legal entity beyond the "appointed day" to enable it to make over its assets and liabilities at its foreign branches to the State Bank. Accordingly, the State Bank of India Act was amended by an Ordinance on the 23rd June, 1955, which was later passed into an Act of Parliament on the 21st September, 1955. The present provision is that the Imperial Bank shall continue nominally in existence for the purpose of enabling the transfer of assets and liabilities in London, Burma, Ceylon and Pakistan to be effected. While the bulk of these assets and liabilities have already been transferred to the State Bank, there are still a few legal formalities to be completed for effecting the transfer completely and as soon as these are utilised the Imperial Bank as a corporate entity will cease to exist.

While on the subject of our foreign branches, I would mention that these continue to serve a useful and important purpose. We have during the past six months expanded the question of opening new branches in foreign countries with the object of fostering Indian trade and expanding our activities, particularly in the field of foreign exchange to which we attach much importance. For diverse reasons, our progress in the matter of further expanding foreign exchange business has been slow, but in view of the great expansion in India's foreign trade, which will result from the Second Five Year Plan, it is our intention to adopt a more vigorous drive towards attracting what we consider to be our legitimate share of this important sphere of banking business.

Branches in Pakistan

In so far as our eight branches in Pakistan are concerned, the Pakistan Authorities have informed us that, in accordance with their policy, not allow any of our bank to open a branch in the interior of the country. The bank of India will be allowed to operate in port towns only. The position now is that, while our branches at Karachi, Chittagong and Narainagum may be allowed to continue permanently and those at Lahore and Dacca up to the year 1959, our branches at Rawalpindi, (Sind), Mirpurkhas and Lahore will not be allowed to function beyond the 30th June, 1956. Arrangements will therefore be made to close these three branches as required by the Pakistan Authorities. While on the subject of Pakistan Branches, I would like to say that the loss has been suffered by us as a result of the devaluation of the Pakistan rupee which took place in August last.

Branch Expansion and Rural Credit

I now pass on to deal with the question of the expansion of banking facilities in rural areas which is one of the main objectives before us towards furthering the banking development of the country. Arising from the recommendations of the Rural Banking Enquiry Committee, 1950, the Imperial Bank of India had, in consultation with the Reserve Bank of India,

agreed to open 114 branches (both new and Treasury Pay Offices to be converted) during the period 1st July, 1951 to the 30th June, 1956. Up to the 30th June, 1953, 63 offices had been opened by that Bank and since that date a further 20 offices have been established, leaving 31 centres with branches which still to be opened. The State Bank has a statutory obligation to open 400 new branches during the first five years of its existence or such extended period as the Central Government may specify in this behalf. The places where such additional branches are to be established have to be determined by the Central Government in consultation with us and the Reserve Bank. As a first step in this process, 100 places have been selected which are confined mostly to district treasury and the relatively more important sub-treasury centres. It is obviously not possible to include every centre which requires banking facilities in the initial list. These 100 centres, together with the 31 centres left over, will be covered in the first programme and thereafter a further list will be drawn up.

It must be stated that the Imperial Bank experienced considerable difficulty in securing suitable premises and, in some cases, where accommodation was available in the local treasury buildings, there was inordinate delay in effecting the necessary alterations and additions to make them suitable for the Bank. The Reserve Bank gave the Imperial Bank the requisite assistance in several cases, this nature of control. In the present case, however, for reasons beyond but even so the progress is slow. In the present phase of the expansion programme, with the assistance of the Reserve Bank, we are intensifying our efforts to open branches as expeditiously as possible. The Reserve Bank of India have been requested to ask the various State Governments to instruct the District Authorities to give all possible assistance to the Bank in securing accommodation for the office and, where necessary, for the members of the staff. I am sure that wherever it is proposed to open new branches, I need hardly add that the staff will be being made up by us to recruit and train the staff, both supervising and clerical, required for the phased opening of branches.

One of the chief reasons which prevented the Imperial Bank from pursuing a more vigorous policy of expansion was that, as a private shareholders' bank, it could not afford the heavy expenditure involved in opening new branches which were likely to prove unremunerative. This position has changed in the new context, as provision has been made in the Act for meeting the losses beyond an agreed figure, on unremunerative branches, from an "Integration and Development Fund" into which are paid the dividends due to the Reserve Bank on its holding of 55% of the preferred capital in the State Bank.

An essential part of the development of the rural credit programme is the availability of adequate facilities for storage, warehousing and marketing of agricultural produce, in which the country has been lacking. The Government of India are shortly setting up an All-India Central Warehousing Corporation and State Warehousing Corporations with a view to affording facilities for storage and marketing of agricultural produce. With effective State participation will soon come into existence, in which we, along with other interested institutional agencies, will be required to play our legitimate part. I welcome this move in the larger interests of the country and, from the point of view, may be said to be a step which will increase our ability to make advances against suitable security to the small producer in rural areas.

Remittance Facilities

Passing now to the question of providing extended remittance facilities for co-operative and other banks, which was one of the objects Government had in view in setting up the State Bank of India, we have, as agents of the Reserve Bank, agreed to liberalise the existing remittance facilities for co-operative banks and banks (and State co-operative banks who enjoy similar facilities) by permitting free transfer facilities twice (instead of once) a week, with effect from the 1st November, 1955. This matter will be reviewed during the year with the object of considering what directions remittance facilities for other banks and other financial institutions could be further liberalised without imposing any undue burden on our working.

Interest Rates and Collection Charges

The State Bank's schedule of charges for the negotiation and collection of bills and interest rates on advances have been fixed in relation to its operating cost and the comparative rates charged by other banks. These rates are necessarily subject to review from time to time in the light of prevailing business and monetary conditions. The transaction of business with the Bank into a charge does not by itself justify releasing the bank on basis on which the rates are fixed. In any action which the Bank may be called upon to take in the matter, apart from the normal considerations governing the problem, it is necessary to take account also of the obligation of the bank to the public and the mounting cost of its banking in such cases on account of the successive Bank awards.

Another matter which affects banks generally and which requires careful consideration is the gradually increasing burden of interest paid for attracting deposits. I understand that an attempt was made in 1962 to reach an agreement amongst banks in the matter of fixing ceilings on deposit rates. Unfortunately, this did not succeed with the result that each bank now pursues its own policy in this highly competitive field. I cannot but view with concern the present trend amongst banks to offer increasingly higher rates of interest to attract deposits and consider that this is unhealthy competition which should be discouraged. A voluntary agreement amongst banks appears to be the solution, but if this is not possible because of the diversity in their size and standing, the alternative is for Government to consider suitable action for regulating deposit rates.

Bill Market Scheme

At this point, I feel I must make a reference to the helpful role played by the Reserve Bank of India through their bill market scheme inaugurated in 1952, by which cash was provided to banks against com-

mercantile bills, in terms of Section 17 (4) (c) of the Reserve Bank of India Act, the scheme has been introduced, under which the Government has been rendering considerable assistance to banks, including Gurugram, during the busy season. When the scheme was introduced, the Reserve Bank agreed to charge interest at $\frac{1}{2}$ per cent below the Bank Rate as a concessionary measure to popularise this method of finance and also to bear a part of the cost of the stamp duty incurred by banks in converting demand bills into usance bills. The Reserve Bank recently announced that, as the scheme is now well established and as the resources of banks have now materially changed, advances under the scheme will be made at $\frac{3}{4}$ per cent instead of $\frac{1}{2}$ per cent, and the Government will bear a portion of the stamp duty, will be withdrawn, effective from the 1st March, 1956. Although this step will result in some increase in the cost of our borrowings under the scheme, I consider that, under existing monetary conditions, it is a move in the right direction.

State-Associated Banks

The subject of the amalgamation of State-associated banks with the State Bank of India has been receiving our attention. While the broad outlines of this policy to be followed in this regard must await future developments, we are exploring, in consultation with the Reserve Bank, the feasibility of taking over some of the minor State-associated banks. We have made a beginning in this regard and have set arrangements in train for an investigation of a few selected institutions with a view to making a fair and reasonable appraisal of their position and the problems that will have to be faced before integration takes place.

Small-scale Industries

The Second Five Year Plan accords high priority to the development of village and small-scale industries. Government are providing greater credit facilities to these industries under the State Aid to Industries Acts by liberalising the conditions for distribution of loans. While Government assistance would go some way, the bulk of the credit finance would have to be provided by institutional agencies operating in the field, whose support is likely to prove of more permanent value to the industries concerned. While the State Bank does not differentiate between small and large scale industries in the credit facilities provided, we feel that more positive efforts should be made to ascertain the credit requirements of small-scale industries and to devise methods by which substantial assistance could be made available to them so as to place them on a firm footing.

Small industries run by co-operative societies naturally look to the co-operative credit organisation for assistance. Small industries requiring working capital for short periods and able to provide readily realisable security are normally helped by commercial banks. Those which require long-term capital on a non-repayable basis usually approach the Industrial Financial Corporations. The credit requirements of small industries cannot however be adequately satisfied unless a scheme is evolved for co-ordinating in an effective manner the activities if the above credit agencies. The initiative for planning such a co-ordinated scheme came from the Reserve Bank of India. In this connection, we have had exploratory discussions with the representatives of the Reserve Bank of India and various institutional agencies. A 'pilot' scheme for providing credit to small-scale industries at certain centres in the three Circles of the Bank has been set up and the arrangements for its functioning are now in progress to work out a scheme. In the light of the experience so gained, a general scheme for providing credit in a co-ordinated manner by the State Bank and the institutional agencies concerned will be drawn up and extended to various centres in the country. A new law facilitating the work of the various institutions in the field of co-operative branch organisation, we are arranging for the services of our branch agents to be placed at their disposal in the matter of compiling and furnishing opinions and confidential reports on the worth of prospective co-operative societies and generally assisting such credit agencies in their operational activities in the centres where they are not represented.

Section 31 (3) of the State Bank of India Act

Before passing on to consideration of the accounts and other matters of interest, I would like to refer briefly to Section 31 (3) of the State Bank of India Act which prohibits Directors of the Bank, even if they are merely ordinary shareholders in companies borrowing from us, from being present at any meeting of the Executive Committee (or the Executive Board) (or the Local Board) when advances for such companies are being considered. This restriction often results in the want of a quorum for the meeting when the majority of the Bank's Directors are "interested" in the matter. It is a disadvantage which is not shared merely that of shareholder, thus necessitating the postponement of consideration of such proposals.

It will be agreed that this is not satisfactory

the point of view of the Bank or its constituents and it is expected that Government will take early steps to remove the present disability which is hampering the expeditious conduct of the Bank's business.

Balance-Sheet and Profit and Loss Account

Turning now to the accounts, although the State Bank has been in existence only for the best six months, I propose to compare the figures of our first Balance Sheet as at the 31st December, 1955 with the corresponding figures of the Imperial Bank of India as at the 31st December, 1954 and similarly the Profit and Loss Account figures for the last half-year with the figures for the corresponding period in the previous year. Thus, it will be seen from our Balance Sheet that Fixed Deposit, Savings Bank, Current and other Accounts stood at about Rs. 226 crores as compared with Rs. 231 crores at which this item appeared a year previously. Although there is a decrease of Rs. 5 crores over the year, the present position must be considered satisfactory if the downward trend in our deposits which started early in the year soon after the Government's announcement of their decision to assume effective control over the Bank is taken into account. The deposits which fell from Rs. 202 crores in January, 1955 to Rs. 184 crores in June, 1955 and this drop of Rs. 19 crores can only be explained by the initial apprehension in the minds of the public regarding the future policy of the Bank and the continuance of its commercial character in its altered status. I am glad to say, however, that any fears entertained in this regard have proved entirely groundless as is evident by the steady increase in our deposits in India during the past six months, which reached the figure of Rs. 202 crores at the end of December, 1955, thus almost regaining the level of January, 1955.

On the other side of the Balance Sheet, our total advances have shown satisfactory improvement and

at about Rs. 107 crores are some Rs. 5 crores higher than a year previously. Amongst our assets, investments at Rs. 116 crores were some Rs. 8 crores up on the year. While a substantial portion of our investments portfolio consists of short-dated Government securities and Treasury Bills, we have, consistently with our enlarged responsibilities, participated in and taken up State Financial Corporation Shares and Land Mortgage Bank Debentures in suitable lots. It is needless for me to state that our investments appear in our Balance Sheet at a figure lower than their market value. Of the remaining assets, cash in hand and with other banks stood at around Rs. 29 crores which represents a little over 13% of our total deposits as compared with the 15% cash ratio which last year's Balance Sheet disclosed.

I come now to our trading results from which it will be found that, after allowing for interest paid, our gross profits for the half-year at over Rs. 351 lakhs are approximately Rs. 40 lakhs better than those of the corresponding period last year, as against which our charges are up by a like amount of Rs. 40 lakhs. The principal increase in charges is in respect of Establishment which cost us some Rs. 35 lakhs more than in the corresponding period of 1954. Of this, Rs. 23 lakhs have gone to the clerical, cash department and subordinate staffs and represent for the most part increases in salaries, allowances, etc., arising out of the adjustments made in implementing the Gajendragadkar Award, which was published in August, 1955. In the result, our net profit for the last half-year, at approximately Rs. 68 lakhs is about the same as that for the corresponding period in the previous year.

Dividend

The dividend has been declared by the State Bank at the same rate as was done by the Imperial Bank in June, 1955 and the previous years, viz., 16% per annum. This on the purchase price represents a net return of about 4.5%. By far the largest part of the sum distributed as dividends is payable to the Reserve Bank. Although, in terms of the notification issued by the Reserve Bank, it was laid down that the new shares of the State Bank would be issued to those shareholders who applied for such shares, in lieu of the compensation payable to them, at a price of Rs. 350/- for each share of Rs. 100/-, only a small proportion of the old shareholders applied for the new shares, with the result that the Reserve Bank of India are at present holding a major portion of the State Bank shares. It follows, therefore, that the private shareholders who benefit from the dividend payable by the State Bank form only a very small minority and the matter consequently is one which affects the investing public to a small extent only.

At this stage, it is appropriate to refer to a suggestion which has been made that a note be incorporated on the Bank's share certificate to the effect that the share was issued at the rate of Rs. 350/-. The matter was given full consideration and it was, however, generally felt that, while there was nothing in law to

preclude the inclusion of such a note, it was most unusual for a share certificate to mention anything more than the nominal amount of the share. Apart from the fact that this suggestion may not meet with the approval of all the shareholders, there are practical and technical difficulties involved which prevent its wholesale adoption. As the issue price of Rs. 350/- was announced by the Reserve Bank by a special notification, it was considered unnecessary to make a note on the share certificate as suggested. The shareholder's natural desire to see that the price of Rs. 350/- at which the share had been acquired is taken into account in determining the rate of the dividend has already been duly fulfilled by the State Bank declaring its dividend at the rate of Rs. 8 per share for the half-year which is the equivalent of 16% per annum.

Industrial Disputes and Awards

As you are aware, the banking industry has been passing through a difficult time during the past 8 years with disputes between banks and their employees dragging on from one Award to another without reaching a final solution. Arising out of the modifications made by Government in the Labour Appellate Tribunal's decision, which was implemented by the banks in November, 1954, the Bank Award Commission was appointed by Government to conduct a fact-finding enquiry, which submitted its recommendations in July, 1955. This Award, known as the Gajendragadkar Award, confirmed the decisions of the Labour Appellate Tribunal, with certain modifications and was accepted in toto by Government. Parliament have also given their approval to the Award by passing the Industrial Disputes (Banking Companies) Decision Act, 1955. The banks have accepted the terms of the Award and have interpreted them in a liberal manner, although their impact on certain institutions was considered to be onerous. The employees have taken objection to certain cuts that have been imposed upon them by the application of the Award and have, without resorting to the constitutional remedies provided in the Act, indulged not only in demonstrations but in various forms of direct action, which disrupted normal banking business in a number of centres, particularly in Calcutta. As a result of the intervention of the Chief Minister of West Bengal, to whose sympathetic and untiring efforts I would like to pay a special tribute, the employees in Calcutta agreed to complete the annual closing of accounts and also work overtime to clear arrears. This has been done and conditions have since returned to normal in the affected centres.

In regard to acts of indiscipline committed by employees, the State Bank had to take action, in consultation with other banks, by issuing charge sheets. These, however, have not been proceeded with so far in the hope that better relations will hereafter be established between the banks and their employees. It is necessary for me to utter a warning that no institution, whether public or private, can possibly survive if respect for constituted authority is absent

or gross indiscipline prevails. While it is impossible to overlook or condone acts of indiscipline committed by employees in violation of the laws, which is tantamount to flouting Parliament's authority, there can be no objection whatever to employees following approved trade union methods to ventilate their legitimate grievances and safeguard their rights and to work for the amelioration of their conditions of service. In fact, a move in these directions would lead to the creation of an effective machinery for solving labour problems by means of mutual consultations and to the establishment of healthier relations which will be for the benefit of the parties concerned and the country as a whole. Now that the unhappy events of the recent past are over and normal work is proceeding, it is a matter for consideration, if satisfactory conditions for smooth working of banks hereafter can be ensured, whether further avenues should not be explored to remove any undue hardships to the employees.

Personally, I have great faith in direct and friendly talks across the table with the leaders of the Staff Unions and in exchanging ideas frankly with them with a view to arriving at an amicable settlement wherever possible. I have already made a beginning in this regard and have met office-bearers of the Unions in Calcutta, Bombay and Madras. The talks I have had have been useful and I am confident that this approach will contribute to a clearer understanding of the problems and a closer appreciation of the realities which have to be faced by both parties. I make an earnest appeal to all concerned to co-operate in finding a satisfactory solution to this problem and, for my own part, I would be prepared to do my best so that the unpleasant chapter of strained relations between banks and their employees is finally closed.

Tribute to the Staff

Before I conclude, I must pay a warm tribute to the Supervising Staff of the Bank for their loyal and devoted service during an exceptionally difficult period. Apart from the many transitional problems, which arose from the change-over to the Bank's new status, the difficulties due to disputes with our employees placed upon the Supervising Staff a heavy load of responsibility. I am grateful to them not merely for the work done by them but for the spirit in which they have done it. I would like also, in spite of the unfortunate happenings to which I have referred, to add a word of appreciation regarding the work done by the clerical and other staffs. I know the bulk of them are loyal and normally discharge their duties faithfully and competently and I shall be failing in my duty if I do not acknowledge the good work they have done during the period under review.

My thanks are specially due to the Managing Director, Mr. S. K. Handoo, whose experience and knowledge of banking problems and whose administrative ability have been of the greatest value to us. I wish to place on record my deep appreciation of the energy and zeal with which he has applied himself to the discharge of his responsibilities as the first Managing Director of the State Bank of India.

Chairman's Speech

INDIAN MINING ASSOCIATION

CHAIRMAN MR. B. MITTER'S REVIEW

Speech delivered by Mr. B. Mitter, Chairman, Indian Mining Association at the Annual General Meeting on 2nd March, 1956 at 11 a.m. at the Bengal Chamber of Commerce and Industry.

Gentlemen,

The year that has passed since we last met has been primarily concerned in giving concrete shape to the future and the Second Five-Year Plan has dominated the affairs of the Coal Industry. I need hardly emphasise how vital it is for the industrial development of the country that the aspirations of the Plan should be met by actual attainments, nor need I stress how closely its success hinges on the ability of the Coal Industry to meet its new responsibilities.

In the past the Industry has on the whole been able to give the country all the coal it required and if on occasions some consumers have had to go short, the cause was usually to be found either in special circumstances such as prevailed during the last War, or in the limitations of transport.

The task before the Industry today is however greater than it has ever been called upon to face in the past. It is required to make available 60 million tons of coal by 1960 as against the 38 million tons produced last year. The achievement of this target in the short space of five years undoubtedly poses a problem of formidable proportions, but with the concentrated and co-ordinated effort of all who are in a position to help, there is no reason why the goal should not be successfully attained. In coal the pattern of production is one in which collieries worked by private enterprise operate alongside those worked by Government, and, in the context of the immense increase of potential required, there is ample scope for both to develop and to make their respective contributions towards a common cause. For this mixed economy to function effectively it is important to create an atmosphere in which both the sectors can work to maximum effect in close co-operation. They should both have equality of opportunity and both be allowed to operate under similar conditions.

Private Ownership

In some quarters there is a tendency to take every opportunity of casting aspersions on the working of collieries under private ownership. No one claims that in an industry which has several hundred individual producing units conditions everywhere are ideal. Similarly I think it would be difficult even for the stoutest champion of State enterprise to establish that the Government collieries are models of perfection. Negative generalizations against the private sector serve little useful purpose, and, at a time when so much depends on the fulfilment of the Coal Plan, the accent must be on creating divisions but on mobilising all our resources behind one gigantic effort.

To achieve the success we all desire it is important to examine what are the obstacles which stand in the way and I propose therefore, within the time available to me, to lay before you what in my view are some of the main problems facing us at present. In mentioning these difficulties however, I wish to emphasise that, contrary to what some people are only too ready to assume, there is no desire on our part to be obstructive in any way. On the contrary I believe that only by a frank statement of difficulties will it be possible to devise remedies to overcome them.

To achieve the new momentum in production required by the Plan, it is obvious that vast new development programmes will have to be launched involving large financial outlays. In the private sector we are prepared to marshal our own resources and to finance behind these development projects and to finance them very largely from our own resources. However, when we are faced with accepting normal commercial risks in the course of business, we cannot ignore the fact that, in a mineral industry like coal, it must necessarily take many years before any return on the capital outlay can be expected. We had accordingly hoped that Government would be in a position to give the Industry some reasonable security of tenure in the face of frequent mention of the possibility of nationalisation. Government have unfortunately found themselves unable to give any security of tenure but it has been indicated that, if producers in the private sector made plans for increasing the production and laid out money for the purpose, then in the event of nationalisation, would be paid for whatever money was laid out with the approval of Government for this additional production. Whilst we welcome the reasons which prompted this indication, it must be emphasised that the formula is too limited in scope and its application in practice is fraught with too many difficulties to enable it to instil any great sense of confidence amongst those who are not only able but eager to undertake large scale capital outlays on development work.

Compensation

If the formula is examined it will be seen to consist of three main parts, which lay down that compensation would be paid on capital outlay for increasing production, that it would be paid on capital expenditure less depreciation, and, finally, that it would be paid only on expenditure incurred with the approval of Government. As regards the first part, in an extractive industry like coal which works a wasting asset, even the maintenance of existing levels of production requires a steady flow of new investments and it is technically impossible to distinguish between capital outlay for maintaining production and capital outlay for increasing production. The two are very closely linked when incurred in one and the same mine, and even the sinking of a new shaft in the same or another property might be regarded as necessary for maintaining production.

An example may help to illustrate the point. Let us assume, for instance, that a property is being worked through two shafts and that a small area round the shaft bottom has been developed. In order to develop in accordance with approved mining

methods the remaining area of the property towards its boundaries, more haulage engines, motors, switches, cables, steel wire ropes, rails and a host of other things would be required. Such additional installations, far from increasing output immediately, may only enable the mine to maintain its output for five, ten or even fifteen years until the depilating stage is reached, when output will rise sharply. Will the capital outlay on such additional plant and machinery be regarded as necessary to maintain output or to increase output? The outlay is necessary to maintain present production but it is equally necessary to increase future raisings. Examples such as this can be easily multiplied to bear out the fact that no distinction is possible between the two forms of capital investment. Turning to the second part of the formula, it is suggested that compensation would be paid on capital outlay less depreciation. If a company were to invest a crore of rupees on fresh capital development and Government were to decide to acquire the Industry, say in five years time, then taking into account the rates of depreciation applicable in the Coal Industry, the depreciated value of the outlay would be very substantially less than this crore at the end of five years. The company can hope to earn very little by way of return on its investment. Consequently, the outlook can hardly be construed as being reassuring to those who contemplate making large financial commitments. As regards the approval of Government to items of expenditure, if the necessity of having the initial investment approved by Government were conceded, should the formula imply that an account had to be kept of every single item of plant and machinery installed at each individual colliery, and, further, that this had to be done for an indefinite period, various practical and procedural problems would multiply and make the satisfactory maintenance of the records extremely difficult. If not impossible, both from the point of view of Government as well as that of individual producers.

In the absence of any security of tenure, the terms of compensation are naturally of great significance to those who are making ready to make large investments of money in developing the coal resources of the country. Furthermore, years from the time, in its present shape, postulates the laying down by Government of certain intricate procedural arrangements in regard to maintenance of records before any new development work can be undertaken. In view of all these considerations I hope Government will find it possible to evolve a more comprehensive formula which will transcend the limitations of the one mentioned. As stated by various Government spokesmen from time to time and even during the debate on the Fourth Amendment to the Constitution that the objective of Government was not to deny compensation but only to make it non-justiciable. If that is the avowed objective of Government, then the present suggestion militates against the fulfilment of the objective.

Inadequate Transport

In considering the general state of the Coal Industry I cannot recall any occasion over the years where reference has not been made to the inadequacy of transport facilities available for moving coal. Nevertheless, I must dwell for a while on this old problem which, under the impact of the Second Plan, has assumed new dimensions of magnitude and urgency.

After the inevitable strains and dislocations caused by the last World War the Railways have made commendable efforts to restore the position, and to improve upon it, but the situation still remains one in which the capacity available is sadly deficient in relation to requirements. In 1946 the railways had stated that they were confident of attaining within two years a daily loading of 3,600 wagons in the coalfields of Bihar and Bengal. In 1955, however, after a lapse of nine years, the average number of wagons loaded daily in these two areas was only 3,262. Although this figure was a slight improvement on the 1954 figure of 3,205 wagons, it is manifest that the improvement is not keeping pace with the expanding output. When production plans are being designed to raise the output of coal by 22 million tons in five years, the Industry is apprehensive that transport is not being expanded sufficiently to cope with the vastly increased traffic which will be offering. I referred the other day from another platform to the cut in allocations for the Railway Ministry under the Second Plan. Since then the General Managers of our Railways have together given voice to what has been described as "a chorus of complaints" emphasising their difficulties arising from shortages of steel, cement and timber. They are reported to have expressed misgivings about the ability of the Railway to adhere to its schedules of work. Planning, in their view, has become increasingly difficult and so their plea for more assurances for the future.

If there is any substance in these reports which have appeared in the Press, they naturally give rise to doubts as to whether adequate importance is being attached to the imperative necessity of achieving the closest co-ordination between the production and transport of coal. We are familiar with the results of the lack of such co-ordination in the shape of accumulated stocks at the pitheads and losses caused by spontaneous combustion. The Railway Budget presented last week also indicates that the development plans will be inadequate to cope with the level of coal production envisaged. The success of the Coal Plan cannot be assured unless transport can move the expected volume of traffic and I would urge that even greater efforts must be made for the breaking of this bottleneck.

Apart from directly expanding the capacities of the Railways, one way in which the strain on the railway system can be mitigated would be to make fuller use of coastal shipping for the carriage of coal. From this Association we accordingly welcomed the setting up last year of the Rail-Sea Transport Co-ordination Committee and urged before it our views that coastal

freight rates for coal should be readjusted so as to bear a closer relation to rail freight rates. At present the disparity is glaring and this prevents the optimum utilisation of these two forms of transport.

Within a restricted field, the possibility of improving transport was examined in 1955 by a Committee set up to investigate Pilot and Depot Capacities in the West Bengal and Bihar Coalfields. This Committee has made some recommendations but only from the short period aspect of meeting requirements up to the end of 1957. Although it was limited to examining Pilot and Depot Capacities, the Committee felt that the existing route and junction limitations would have to be liberalised considerably in order to achieve a lasting solution and, it became obvious during its deliberations, that the transport problem could not be considered satisfactorily in small segments. For the movement of coal a more comprehensive policy was required and not merely the stringing together of a number of ad hoc expedients.

Equity in Transport Facilities

Since it appears almost inevitable, however, that for some time to come at least the insufficiency of wagon supplies will continue, steps should be taken to ensure that such supplies are available for coal loading in an equitable manner. It seems to have become the practice for the State collieries to get first priority in such allocations to the detriment of collieries in the private sector. It is some times said that in fact no discrimination is made, the wagons being allotted strictly on the basis of priority. This is, however, merely a form of sophistry for, if every order placed with a State colliery is ipso facto given a high priority, the resultant position is unaltered. If private enterprise is to be given a fair chance of expanding output, distribution of wagons should be made without arbitrarily subordinating the claims of one integral section of the Coal Industry to the dictates of another.

The expansion of production and the development of new collieries will necessitate provision of new sidings and there are indications that the Railways are now not averse to the construction of sidings on Assisted Terms. This is undoubtedly an improvement on their previous policy, followed for some time, of confining only applications on Private Siding Terms. There is a possibility, however, that the rules governing the provisions of Assisted Sidings may be revised with a view to increasing the financial burden on the owners and proportionately easing the burden on the Railways themselves. If the terms are modified in this fashion the effect would be to saddle on the owners most of the onerous provisions of private sidings. Private enterprise has already expressed its eagerness to embark on large financial outlays for the development of collieries and I trust that in respect of sidings no fresh impositions will be made as compared with the Assisted Terms known to the industry previously.

Imports

Turning from availability of transport, the expansion in production contemplated under the Second Plan will make it necessary for large scale import of such plant and machinery as are not made in this country at present. Since Government collieries themselves would be interested in such imports, there is need to ensure that collieries in the private sector are not discriminated against in respect of import facilities, and further that, on the procedural side, all unnecessary hold-ups are obviated. In regard to essential requirements produced in India, some co-ordination at a high level is called for to see that the Coal Industry gets its fair share. I would like to stress in this connection that the position of cement supplies is far from satisfactory and is already causing considerable concern to colliery owners. The present allocations are quite insufficient to meet existing demands of the Industry and this raises the doubt as to whether sufficient quantities will be available for capital works required in connection with the Plan.

Some of the largest coal producers in the country, for instance, applied between them for a total of 2,564 tons of cement for period IV of 1955 against which actual allocations issued by the Cement Adviser amounted to only 428 tons. This insignificant figure included 178 tons of the more expensive sea-borne supplies from South India. Even though the collieries concerned agreed to accept their full balance requirements in cement imported from South India, against over Rs. 50 per ton more than cement produced in Eastern India, the shortfalls were not made good. The example I have cited applies to a very large number of privately run collieries and perhaps I may be permitted to enquire whether the State collieries are in a similar position both as regards the proportionate allocation against demands as well as allocation of cheaper cement from factories located nearer the coalfields.

The mention of the cost of cement brings me to the wider issue of production costs and prices. To shoulder effectively its onerous responsibilities, the Coal Industry must be placed in a position where it can secure an adequate selling price for its output. I think most of you are already aware that today's controlled prices are based on production costs of eight years ago and that over these eight years costs have moved steadily upwards, thus narrowing considerably the margin left to the Industry. This process is still continuing.

Welfare

Under the Coal Mines (Temporary) Regulations introduced last year, for instance, additional precautions are required to be taken in regard to open cast workings and there are new stipulations governing the use of winding ropes, the construction of precautionary fire dams and the installation of electric lighting underground. The new Mines Rules (1955) require, amongst other things, additional provisions for First Aid personnel and equipment, ambulance rooms, shelters and canteens. They also provide for employment of a much larger number of Welfare Officers who are required to have certain specified qualifications and to be of a certain status. The draft Electricity Rules, gazetted in 1954, lay down many stipulations regarding earth leakage protection gear, flameproof gear, and switching gear at sub circuits. They restrict the length of trailing cables, thus necessitating more gate-end boxes. Furthermore, they require that all cables in certain areas are to be double-wire armoured.

All reasonable measures necessary to ensure the better working of mines, whether in the State sector or in the private sector, have our full support. It must be realised, however, that to implement all these new rules and regulations costs money. In so far

as these provisions are progressive they are welcome, but the dynamics of progress cannot be contained indefinitely within the straight-jacket of an inflexible price structure.

It is appreciated that coal being a basic commodity, the level of its selling prices has a bearing on costs in other industries; but these considerations apply equally to important commodities like steel and cement. Whilst this aspect should no doubt be borne in mind, I am sure you will all agree that no single industry should be made to subsidise others if its own economics justify an increase in selling prices. Nor can such an increase be denied on the ground that when production goes up in future, and when transport is available to move this increased production, costs would tend to go down. Consideration of this vital problem should not be allowed to languish in vague generalities of this nature. What is needed now is to make today's controlled selling prices reflect today's costs, and if the industry's costs go down in future, there is no reason why future prices should be impervious to such changes. I would suggest that Government should no longer delay a comprehensive review of coal prices and that the results of this review should be made known at the earliest opportunity.

Labour costs, as you are aware, constitute the most important single element in the cost of producing coal, and the wage structure of the industry is being reviewed at present by the All-India Industrial Tribunal. The issues before the Tribunal are of great consequence and its findings, which are expected shortly, will no doubt have an important bearing on the future of the Coal Industry.

Stowing and Washing

You have heard in the past references to the question of stowing and the quantum of assistance received for it. There has been no change in the position in the last year and the subsidy continues to be grossly inadequate. The rules governing the grant of assistance are in a large measure illogical, with the result that they give rise to various anomalies. For instance, owing to the peculiar rules governing de-

preciation, capital investment on mechanisation is penalised as compared with inefficient installations worked manually. Again under the present rules a colliery situated on a river bank receives the same limit of assistance as a colliery situated many miles away from the source of sand supply. These and many other cases have been the subject of discussion for some considerable time but measures are still awaited to rectify the position. Nor is any solution yet available to the complaint that payment of stowing subsidies continues to be six months or so in arrears. There is need for urgent action in this matter as the present practice is a source of considerable hardship to those collieries which stow and, in so doing, implement one of the best known methods of promoting safety as well as of conserving coal.

Very close to the subject of stowing is that of washing and for some time now the question of arranging supplies of washed coal for the Steel Works has been before the Government and the Industry. I trust that before long we shall have a clearer picture both as to the location of washeries and as to the price to be paid for washed coal.

Gentlemen, the years that lie ahead hold a great opportunity for the Coal Industry to make a significant contribution to the industrial growth of the country. The very magnitude of the expansion envisaged poses a challenge however, and there are many problems to be tackled. To overcome them we must all strive to our utmost and must all pull together. If the authority and power of Government is linked in a joint endeavour with the resources and potentialities of private enterprise, I am sure we shall be able to face with confidence the challenge of this new opportunity.

I would like to conclude, gentlemen, by thanking your Vice-Chairman and the outgoing Committee for the help and support they have given me during the last twelve months. My appreciation also goes to our Secretariat, both here and in the coalfields, for the work they have put in, and finally, I wish to thank your technical adviser, Mr. L. J. Barracough, and all the others whose untiring efforts have proved so valuable to me during the past year.

GOLD AND DOLLAR RESERVES

The Sterling Area's gold and dollar reserves rose by \$61 million during February and stood at \$2,210 million at the end of the month. Announcing this in London on 2nd March, the Treasury said that defence aid estimated at \$6 million was received from the United States during the month. A sum of \$8 million was paid in gold or dollars to the European Payments Union (EPU) in respect of January, and \$2 million was paid to creditors of EPU in bilateral settlements. On the provisional figures for the month, the United Kingdom had a deficit of £8 million with EPU, which will fall to be settled in March—75 percent in gold or dollars and 25 percent by an increase of the debt to EPU.

The gold and dollar reserve figure for February, say London observers, will be welcomed not only because it is the best figure in the series since the middle of 1954, but also because it continues the underlying improvement which financial commentators have detected over the past five months if the persistent adverse balance with Western Europe and special items of debt repayments are allowed for. But it will take many months' instalments of the magnitude of February's \$61 million before the reserve figures can be considered as at a satisfactory level. And this is the time of year when the reserves benefit most from seasonal factors. The United Kingdom's balance with the Organisations for European Economic Co-operation (OEEC) countries is the least satisfactory aspect of the picture. Britain's own trade balance with Western Europe was adverse in January, and may again be so in February. But the British position in EPU is determined by many factors other than her own trade. Even so, it is noteworthy that at this week's Ministerial meetings of OEEC countries in Paris the United Kingdom has affirmed its adherence to OEEC's trade liberalisation programme.

Finance in India and Abroad

THE CALCUTTA MONEY MARKET

INTERBANK MONEY VERY TIGHT

Wednesday, 7th March.

THE seasonal pressure on available funds has continued in the money market during the past week. Demand on account of sugar and raw jute is unchanged and accommodation is still being asked for against grain and seeds stocks. There is a tendency for scheduled banks' advance rate to increase in response to the strong demand at present prevailing. Money in the interbank market continues to grow tighter and, although the official call rate has increased by 1 percent in the past week to 3½ percent, some transactions are reported to have taken place at 4 percent.

Last week's improvement in the supply of export documents has been maintained, with an encouraging number of tea bills in evidence. Remittance has been very good. Sterling has weakened on the world's markets and the dollar rate is now quoting Rs. 47½.

THE FINAL BUDGET ESTIMATES

NEW TAX PROPOSALS EXPECTED TO YIELD OVER RS. 34 CRORES

WE publish below a summary of the Budget and revised estimates for 1955-56, and the Budget estimates for 1956-57.

	REVENUE		
	Budget 1955-56	Revised Budget 1955-56	Budget 1956-57

			*Effect of Budget Proposals.

NOTES ON IMPORTANT FEATURES

IN THE FINANCE BILL

Clause 2 prescribes the rate of income-tax and super-tax and surcharge thereon for the financial year 1956-57. The variations from last year are:

- (1) under personal rates, a small increase and steadier graduation in super-tax rates on incomes of over Rs. 70,000;
- (2) under corporation rates, for Indian companies additional super-tax at 2 annas a rupee on bonus issues, and at 2 annas and annas 3 a rupee on dividend distributions in excess of 6 percent and 10 percent of paid-up capital, and an increase of 1 anna 6 pies a rupee in super-tax for Indian branches of foreign companies; and finally
- (3) a new small graduated income-tax of 9 pies to 1 anna 6 pies a rupee on registered firms.

Clause 3 amends section 2 of the Income-tax Act.

Sub-clause (a) amends the definition of "dividend" so that accumulated profits on distribution (whether capitalised or not) would be treated as dividends in the event of liquidation of a company.

Clause 4 substitutes for the existing clause (XIVa) of section 4(3) a new clause relating to tax exemption to foreign technicians. The new clause extends the exemption to technicians in the employment of Government or local authority or a corporation set up under any special law, and defines the expression "technician" for determining eligibility for tax exemption under the clause.

Clause 5 amends section 7 of the Income-tax Act relating to salaries.

Sub-clause (a) raises the exemption limit for contribution to deferred annuity and family provision schemes under the first proviso to section 7 from one-sixth to one-fifth which is also the limit

for abatement for provident fund contributions and life insurance premia under section 15(3).

Sub-clause (b) inserts a new clause (iia) in section 7(2) relating to deduction from salary income; and provides for a proportionate allowance of the maintenance and normal wear and tear of a conveyance used by an employee for the purposes of his employment.

Clause 7 amends section 10 of the Income-tax Act.

Sub-clause (a) secures that initial depreciation allowance will not be available for new buildings erected and new plant and machinery acquired after 1st April, 1956.

Sub-clause (b) inserts a new provision specifically authorising disallowance of a portion of the expenditure and allowances of a company attributable to the amenities provided to a director or a substantial shareholder in certain circumstances.

Clause 9 inserts a new clause (Aa) in section 14(2) exempting from tax the proportionate share of a partner in the income-tax payable by a registered firm. This is consequential upon the amendment made in section 23(5)(a) making a registered firm liable to income-tax.

Clause 11 extends the tax exemption at present available to new industrial undertakings by a period of five years, i.e. up to 31st March, 1961.

Clause 13 raises the flat rate of super-tax, applicable to non-residents under section 17(1), from the existing rate of 1 anna, to 3 annas in the rupee, thereby restoring the rate which was applicable before 1st April, 1955.

Clause 14 amends section 23(5).

Sub-clause (a) amends sub-clause (a) of section 23(5) making a registered firm liable to pay income-tax (but not super-tax) independently of the tax payable by the individual partners of the firm on their share of profits.

Sub-clause (b) amends clause (b) of section 23(5) in order to exempt unregistered firms from payment of income-tax to which registered firms will now be liable.

Clause 15 amends section 23A.

Sub-clause (a) raises the flat rate of super-tax payable by investment companies on their undistributed profits if their distribution of dividends falls short of the prescribed minimum from 4 annas to 8 annas, while retaining the existing rate of 4 annas for other companies.

Sub-clause (b) makes a clarificatory amendment securing inclusion of accumulated profits not transferred to reserves for determining the applicability of the proviso to section 23A(1) to the case of a company.

Clause 18 amends section 34.

Sub-clauses (a) and (b) remove, subject to certain conditions, the time-limit of eight years in section 34(1) for concealment cases and for cases of total escapement of income arising from non-submission of returns of income under section 22.

Sub-clause (c) amends section 34(1B) giving the right of settlement, now available in cases reopened under section 34(1A), to cases reopened under section 34(1) (a) also in respect of re-assessments for the war period (1939-40/1947-48).

Sub-clause (d) amends section 34(3) and removes the time-limit for completion of assessments involving concealment, whether relating to original proceedings or re-assessment proceedings.

Clause 19. The amendment to section 35(8) is consequential upon the amendments to section 34. The new section 35(9) enables the amount of income-tax deemed to have been paid by a shareholder on dividends under section 49B or section 18(5) on the presumption that the full tax assessed on the company would be paid by it, to be reduced in the event of any portion of the tax not being paid by the company within three years from the financial year in which the dividend was declared, and consequential recovery to be made from the shareholder.

The new section 35(10) authorises recovery of the rebate of income-tax allowed on profits retained by a company in any year, if such profits are subsequently distributed as dividends.

Clause 20 substitutes a new section for section 37. The new section clarifies the powers of Income-tax Officers in regard to examination of witnesses and production of accounts, and gives powers to search and seizure etc., to Income-tax Officers specially authorised by the Commissioner.

Clause 21 amends section 38 and empowers the Income-tax Officers and Assistant Commissioners to obtain general information or verified statements of accounts and affairs from any person for the purpose of the Act. The amendments are on the lines of a similar provision in the Taxation on Income (Investigation Commission) Act, 1947.

Clause 23 amends section 49D and enables unilateral relief to be given with effect from the assessment year 1948-49 on agricultural income-tax paid in Pakistan on incomes liable to assessment in India also.

Clause 24 amends section 58. Sub-clause (a) renders clause 14(2)(Aa) inapplicable for purposes of super-tax. This amendment is consequential upon the amendment to section 23(5)(a) as only income-tax and not super-tax will be payable by a registered firm.

Clause 25, which amends section 58F, raises the limit for abatement in respect of contributions to recognised provident funds from one-sixth to one-fifth, consistently with the limit for rebate on life insurance premia, etc.

Clause 29 seeks to increase the duties on certain items and to rationalise the items relating to certain kinds of mineral oils, as set out in the Second Schedule. The import duty on liquid gold for glass making and on flash lights and flash light cases is being enhanced in the interests of the indigenous manufacturers of these goods. The duty on complete spectacles is being brought up to the same level as that on spectacle frames to prevent evasion of duty. India being a signatory to the "International Convention to Facilitate the Importation of Commercial Samples and Advertising Material", the scope of the exemption hitherto accorded to trade catalogues, advertising circulars, etc., is being amended so as to bring it into line with the obligations undertaken under that Convention. A duty equal to the excise duty is being added to the Customs duty for some articles on which excise duties are now being imposed.

Clause 34. The amendment proposed in item (a) seeks to substitute a more precise definition for the existing definition of "kerosene" in the first Schedule.

Similarly, the amendment in item (b) substitutes a more precise definition for the existing definition of "motor spirit".

Item (c) proposes an increase of 6 pies a square yard on all varieties of cotton fabrics except coarse dhoties and sarees.

Item (d) proposes the discontinuance of the exemption from excise duty on rayon or artificial silk fabrics manufactured by or on behalf of the same person in one or more factories in which less than 25 powerlooms in all are installed.

Item (e) proposes an excise duty on soap manufactured without the aid of power by any manufacturer. It also seeks to amend the definition of "soap" so as to remove certain exemptions contained therein.

Item (f) discontinues the existing exemption from excise duty for "strawboard" and places it in the same category as "millboard".

Item (g) amends the definition of "paints, pigments, etc." in order to remove therefrom the exemptions for manufacturers whose output of some of the articles does not exceed 50 tons a year.

Item (h) brings under duty vegetable non-essential oils, refined diesel oils, vaporising oil and industrial fuel oils.

Self-Sufficiency in TUBES

On March 7, 1956, the works of the Indian Tube Company were formally opened in Jamshedpur by the Hon'ble Dr. Sri Krishna Sinha, Chief Minister, Bihar.

The Tata Iron & Steel Co. Ltd. and Stewarts & Lloyds Limited, the largest producer of steel tubes in Europe, have jointly sponsored this project. A Fritz-Moon Mill with an annual capacity of 12,000 miles of

tubes (90,000 tons by weight) at a cost of Rs. 3 crores has been installed. A separate Electric Resistance Weld Mill for the manufacture of some 13,000 tons of high quality precision tubes will be in operation by 1957, and Government's permission is awaited to instal a third mill to make seamless tubes.

When all the three mills are commissioned the country's requirements of practically all varieties of steel tubes should have been met.

THE INDIAN TUBE COMPANY (1953) LTD.

Bullion was steady. The price of silver moved around the level of Rs. 174 quoted to-day. The rate for ready was quoted at Rs. 174.4. The London silver price advanced from 78d. to 79d. The price of foreign silver in New York remained the same at 914 cents.

Gold ruled steady in sympathy with silver and the price rose from Rs. 100-8 to Rs. 101. The sovereign at Rs. 62-11 showed a gain of 3 annas.

Tender for Rs. 1 crore of 91-day Government of India Treasury Bills, which were opened on 6th March, totalled Rs. 1,36,00,000. The average rate of acceptance fell from Rs. 2-8-6 to Rs. 2-8-5 percent per annum. Tenders at Rs. 99-6 were accepted in full and those at Rs. 99-5-9 were allotted approximately 55 percent. Tenders for Rs. 1 crore of 91-day Government of India Treasury Bills will be received at all centres up to 12th March. During the week ended 2nd March, Government of India Treasury Bills for Rs. 5,75,50,000 were sold in favour of the Reserve Bank.

The Reserve Bank of India has served a notice on the Dhubri Mahamaya Loan Company Limited, Dhubri (Assam) informing the Bank that in terms of the first proviso to Sub-Section (2) of Section 22 of the Banking Companies Act, 1949, a licence to carry on banking business in India cannot be granted to it. The issue of this notice makes it obligatory on the part of the bank to cease transacting the business of banking as defined in Section 5(1)(B) of the Act, and it would not therefore, be in order for it, among other things, to accept deposits of money from the public.

The statement of the position of scheduled banks for the week ended 24th February, 1956, discloses Demand and Time liabilities at Rs. 631.06 crores (Rs. 4.41 crores on account of borrowings from banks) and Rs. 418.08 crores (Rs. 3.27 crores) compared with Rs. 630.11 crores (Rs. 5.47 crores) and Rs. 416.89 crores (Rs. 3.26 crores), respectively in the previous week. Cash has declined by Rs. 1.49 crores to aggregate Rs. 34.82 crores, while balances with the Reserve Bank have advanced by Rs. 3.36 crores to stand at Rs. 53.26 crores. There is a drop of Rs. 2.18 crores in investments to Rs. 375.26 crores. Advances and bills discounted at Rs. 697.01 crores reveal an increase of Rs. 6.02 crores. The ratios to total liabilities of cash and balances and discounts are, in consequence, shown at 8.4 percent and 66.4 percent against 8.2 percent and 66.0 percent.

The return of the State Bank of India for the week ended 24th February, 1956, shows a drop of Rs. 1.34 crores in total deposits to Rs. 236.93 crores. Investments in Government securities are down by Rs. 1.83 crores to Rs. 105.12 crores, while other authorised investments remain unchanged at Rs. 9.75 crores. Advances, including loans, cash credits and overdrafts, and bills discounted and purchased have decreased by Rs. 40 lakhs to aggregate Rs. 120.42 crores. Cash and balances are, in consequence, shown at Rs. 23.78 crores or Rs. 3.17 crores higher.

The Mercantile Bank of India, Ltd. has declared second interim dividend of 7 percent less tax.

NEDERLANDSCHE HANDEL-MAATSCHAPPIJ, N.V. made a profit of Rs. 7.11 lakhs for the year ended last December in respect of business done through the branches in India. Deposits stood at Rs. 1.52 crores; investments and advances amounted to Rs. 20.27 lakhs and Rs. 3.10 crores, respectively. Cash was shown at Rs. 49.59 lakhs.

Stocks and Shares

STOCK MARKET STRONGER IN POST-BUDGET TRADING

SPECULATIVES DECLINE FOR TODAY'S CLEAR: HIGH CARRY-FORWARD CHARGE FOR IRONS

THE stock market has been quietly steady since the Budget a week ago. Prices recovered rapidly from their low pre-Budget levels as operators assessed the various provisions. But early this week speculatives receded again due to the approach of today's clearing. These counters might now be affected by slight payment difficulties. The carry-forward charge for Indian Irons is abnormally high at four annas a share. The general undertone of the market remains steady and buyers have appeared for a number of scrip in the engineering and miscellaneous sections. In spite of the fact that the shadow of the recent payment trouble has not yet apparently cleared, the market seems technically to be in fair shape. Details of the week's trading follow.

With the exception of long-dated loans, the gilt-edged market ruled quiet, and there were more sellers than buyers. Three percent Conversion Loan continued to meet with selling pressure and the price eased further to Rs. 77. In short-dated loans, 3% 1957 was asked for at Rs. 99-9 ex-voucher, while 3% 1958 was taken at around Rs. 99-8. In the medium-dated group, 3% 1959-61 had sellers at the lower rate of Rs. 98-1, both 3% 1963-65 and 1964 were traded at around Rs. 94-9, while 2½% 1961 had buyers over up to Rs. 93-6 and 2½% 1962 was marked at Rs. 93-12. In National Plan issues 3½% 1961 was initially marked down to Rs. 99-6 but closed higher at Rs. 99-7, 3½% 1964 and 1965 were dealt in initially at Rs. 98-7 and Rs. 98-5 respectively, but closed one anna better in each case. Long-dated loans continued firm with 3% 1966-68 improving further to Rs. 92-7 and 3% 1970-75 to Rs. 89. Trading in State loans was once again confined almost entirely to 1967 issues, and 4% West Bengal and Rs. 99-9 ex-voucher respectively. Four percent Bombay was traded at Rs. 100-7 while 4% Hyderabad was marked at Rs. 99-4.

Very little business was reported in Preference shares during the period under review. In the miscellaneous section, Bharat Collieries were done at Rs. 56-8 and Calcutta Electric were offered at Rs. 11-6. A small lot of Dalmia Cement fully paid-up Preference changed hands at Rs. 99-8. Gillanders Arbuthnot were done at Rs. 109. Indian Standard Wagon were enquired for at Rs. 142. New Victoria were marked at Rs. 3-14 and a few transactions were reported in Rohas Industries "B" at around Rs. 64. A small lot of Shaw Wallace was crossed at Rs. 84-8 and a solitary transaction was done in Shree Gopal Paper at Rs. 124. Jute Preference shares were neglected and only two transactions were reported, namely, in Rameshwara at Rs. 59 and Hooghly Mills at Rs. 14-8.

In the banking section, Hind Bank were quiet at Rs. 36-12 while Punjab National were fairly steady at Rs. 44-8 as were United Commercial at around Rs. 45 ex-dividend. United Bank of India "D" shares changed hands at Rs. 4-14.

No transactions were reported in railway shares.

In the cotton section, Jayshree Textiles were dealt in freely at around Rs. 6-4. Bowreah, on the announcement of a fresh issue of capital, dropped sharply from Rs. 340 to Rs. 302. Kesorn improved from Rs. 16-4 to Rs. 16-10 with further buyers at the latter rate, while New Victoria changed hands freely at around Rs. 2. Swadeshi Cotton Preferred-Ordinary were quoted at around Rs. 11-12.

Prices of coal shares showed little variation. Bengal were quoted at Rs. 544, Borra at Rs. 27-8, Pench Valley at Rs. 22-12 and East Indian at Rs. 32. Central India and West Bengal were both a shade better at Rs. 7-3 and Rs. 7-1 respectively. Burrakur fluctuated between Rs. 14-2 and Rs. 13-10 to close at Rs. 13-11. Equitable changed hands at Rs. 32-4. Hurriladih at Rs. 22 and New Beerboom came to business at around Rs. 11-8 and Parasea at Rs. 13-5.

Jute shares were devoid of interest, business was at a minimum and prices on the whole tended to sag. Here is a chart showing representative price movements.

	Opening	Closing
	1-3-56	7-3-56
Anglo India	195	192
Chitavalah	15-2	19-7
Empire	21-8	21
Howrah	23-12	23-12
Lawrence	144	135
National	26-8	26-2
Reliance	11	10-14

Electric supply shares were more or less unchanged and business was of a retail nature. Calcutta were quoted at Rs. 13-9 and Muttra were placed at Rs. 7-11. A small odd lot of Mirzapur was done at Rs. 5-4.

Sugar shares ruled quiet, particularly Carew, which dropped from Rs. 10-13 to Rs. 10-3. Cawnpore were unchanged at Rs. 21-4 as were Champarun at Rs. 31-8 and Ramnugger at Rs. 24. United Provinces were a shade better at Rs. 23-12.

In the engineering section, Indian Iron & Steel fluctuated between Rs. 33-3 and Rs. 32-2 to close at Rs. 32-8. Braithwaite were steady at Rs. 27-14 and Burn & Co. improved from Rs. 307 to Rs. 312. Indian Standard Wagon were wanted at Rs. 171-8 and Jessops were quoted at the higher rate of Rs. 34-8 ex-rights. Richardson & Cruddas improved from Rs. 27 cum dividend to Rs. 26-4 ex-dividend and Textile Machinery were steady at Rs. 21-1. National Iron were taken up to Rs. 8 but close easier at Rs. 7-10.

In the miscellaneous section, Bengal Paper, on interested buying, rose to Rs. 127 while Titagur were steady at Rs. 44-8. India Paper Pulp met with investment enquiry and were taken at the higher rate of Rs. 24. Orient were steady at Rs. 34-7 as were Shree Gopal at Rs. 18-6. Ashoka Cement were quoted at Rs. 9-14 and Sone Valley at around Rs. 7-8. Concord of India Insurance were offered at Rs. 11 and New Asiatic at Rs. 4-10. A solitary deal was reported in Standard General at Rs. 4-10. India Steamship were steady and improved from Rs. 8-4 to Rs. 8-12, but closed easier at Rs. 8-6. Calcutta Landing & Shipping changed hands at Rs. 15. Aluminium Corporation improved from Rs. 9-8 to Rs. 10-4 and Indian Aluminium (Rs. 10 paid-up shares) rose from Rs. 18-12 to Rs. 20-4. Indian Cables met with strong enquiry and improved from Rs. 30 to Rs. 32. There were many buyers of Godfrey Phillips at around Rs.

STATE BANK OF INDIA

Successors to the Imperial Bank

The need of the day

Our country's economy is expanding rapidly and with the Second Five Year Plan in sight it will gather further momentum. The need for a strong and efficient banking system has never been greater than today as the nation's savings require to be pooled and managed in a resourceful, confident and prudent manner.

The State Bank fulfils these expectations. It has started upon

The Government of India has entered into an agreement with the U.S.S.R. for the purchase of 20 drilling rigs at a cost of Rs. 21,53,400. The rigs, according to the agreement, "shall be shipped by the suppliers as soon as possible but not later than the first quarter of 1956." The drilling rigs will be

Indian tonnage at the beginning of the first plan was 390,000 g.r.t. The plan contemplates an addition of 215,000 g.r.t. raising Indian tonnage to 600,000 g.r.t. by the end of March 1956. Tonnage at the end of 1955 was about 480,000 g.r.t. Already vessels totaling 120,000 g.r.t. are under construction in Indian and foreign yards, to be delivered progressively by the middle of 1957, when the plan target of 600,000 g.r.t. will be attained. The monetary provision in respect of shipping expansion schemes made in the first plan is about Rs. 26.31 crores. Practically the whole of this amount has been sanctioned as loans to Indian shipping companies for acquiring tonnage (Rs. 23.54 crores) and for investment in the Eastern Shipping Corporation (Rs. 2.59 crores). It is proposed to add about 300,000 g.r.t. to Indian tonnage during the period of the second five year plan so that a target of approximately 90,000 g.r.t. may be attained by 1960-61. The Planning Commission has agreed to a monetary provision of Rs. 45 crores, including a carry-over of Rs. 1 crore from the first plan period, for this purpose. The Commission has also agreed to request the Transport Ministry that it should progress the acquisition programme warrant additional investment, the present allocation could be increased. It is estimated that by the end of the second five year plan, Indian shipping should be in a position to carry 15 percent of the country's overseas trade against the present figure of 5 percent. The delay in achieving the target set for the first five year plan is mainly due to the delay in obtaining deli-

very of vessels constructed in India and abroad and the scrapping of more tonnage than originally anticipated, about 91,000 g.r.t. as against 60,000 g.r.t.

Control of Tea Acreage

The International Tea Agreement, regulating tea production expired in March 1955 and India finds it difficult to agree to international control of tea acreage under the present conditions. Apart from the world's two main producing countries of India and Ceylon, Pakistan is also pressing for a share in the trade.

Prospects for General Insurance

Some important announcements were made in Parliament by the Finance Minister, Sir Chintaman Deshmukh during the week. Replying to the debate in the Life Insurance (Emergency Provisions) Bill, which seeks to validate the Ordinance taking over life insurance business, Sir Chintaman said that nationalisation of the Imperial Bank "is as far as we go—subject to our taking over some nine State-owned banks in former princely States. This is our present thinking on the subject." The Finance Minister also had something important to say on the subject of general insurance. The Government had decided against nationalising general insurance as it felt that "no vital purpose" would have been served in the implementation of the second plan. But, he added, "we are aware of the malpractices in the general insurance business also and if there is no significant improvement, we may have to re-examine the question."

Indo-British Air Agreement

An Indian delegation, consisting of the Joint Secretary, Ministry of Communication, Mr. D. C. Das, Deputy Director, Civil Aviation, Mr. K. M. Raha and another officer of the Civil Aviation Directorate, Mr. S. C. Sen, will be proceeding to London next month for the annual review of the Indo-British Air Agreement.

Trade Proposals from Eastern Europe

Three trade delegations from Communist countries are here to negotiate agreements with India. They come from Yugoslavia, Poland and Soviet Russia. Yugoslavia, it is learned, has offered to supply ships, railway equipment, steel and electrical machinery. The Polish Mission is seeking to replace the present agreement by a three-year agreement. The Russians are here to reach agreement on specified commodities under the framework of their trade agreement. They will also negotiate for a shipping service between the two countries.

Indian Finance Commission

A former Punjab Minister, Sardar Ujjalsingh is being appointed a Member of the Indian Finance Commission. The Chairman will be Mr. K. Santhanam and Mr. M. V. Rangachari will also be a member. An economist and a High Court Judge are being appointed to complete the Commission's personnel.

Dock Labour Regulations

Regulations are being issued shortly, for the conditions of service of dock labour. They will be applicable to dock labour in Bombay, Calcutta and Madras. As recommended by the Dock Labour Tribunal, wages will be regulated by results. On one hand there will be a provision for incentive and on the other, provision against a worker overworking to the detriment of his health.

U. K. GOVERNMENT'S MEASURES BEGIN TO TELL

BANK ADVANCES SLOWED DOWN

(FROM OUR LONDON CORRESPONDENT)

ALMOST every day brings fresh news that the Government's restrictive measures are beginning to work. It is true that in the four weeks to mid-February bank advances showed an increase, but this was only to the extent of £36 million against £100 million in the corresponding period of 1955 and overdrafts are fairly normal at this season of the year to help meet tax payments. On the other hand, sales of radios, radiograms and television sets showed a much bigger fall than is usual during January, although the proportion financed by hire-purchase showed little variation; but Mr. Macmillan's new restrictions on the latter were not then in force. In the motor industry stocks are accumulating and home sales becoming difficult to put through. As the pressure on the consumer is being passed on to the manufacturer, production schedules are being cut back and short-time working is increasing in the industries affected to an extent sufficient to cause some concern to the unions as well as some employers anxious to maintain their labour forces against the better times to come. So far this has not been reflected in the production index, which for January, according to preliminary figures, is expected to be 139.140 (1948-100) as against 136 for December and 135 for January, 1955. The increase is tapering off, but not as yet by a great deal. The decisive figures will be those for unemployment particularly those of the next couple of months, but more particularly those of jobs vacant and their relation to the number of those seeking jobs. It is in the narrowing of the gap here, especially in the engineering industry and in the less highly paid industries, that success or failure can best be judged.

Neither the facts and figures, nor the unions' anxiety about unemployment quite link up with the present eager demands for higher wages, or indeed for the amounts that are being granted. Nearly two million workers received weekly wage increases totalling over £730,000 in January, that is, more than 7s. each. It raised the index of wage rates to 156 from 154, against the fall of one point in the index of retail prices to 153. Since then the miners have been granted an increase of 14s. a week, menial workers in the nationalised electricity industry have received 14s. 8d. and other employers in this field have had to follow suit even though they have indicated that they believe there is no justification for this increase. The engineers this week have secured increases ranging from 9s. 6d. to 12s. 6d. Many thousands in other industries have also been given increases, and even more thousands are still negotiating claims. The squeeze is at work, but its good effects could well be nullified unless it is also extended to wages. But will the unions appreciate that fact?

The Threat of Competition

The engineers' wage increase of 9 percent will add £70 million to the industry's wage bill, but the workers have other claims still under consideration—more pay for night and Sunday work and more for normal overtime and a general pay increase for women engineering workers—which, the employers estimate, would swell the wage bill by another £164 million a year if they were granted. Could increases of these dimensions be absorbed or would they have to be handed on to export customers? That is a problem which is exercising the minds of many executives. Mr. Miles Beevor, Managing Director of the Brush Group, who has recently returned from a tour of the Middle and Far East had some solemn words to say on the subject this week. He warned his audience that British engineering exports were already outpriced in major markets, that "Iron Curtain" countries were making some sensational low tenders, and that there would be a serious situation if British prices increased further. The warning is not new, for it has been given often enough in the past five years, and those who do not wish to accept it point to the fact that engineering exports have been flourishing nevertheless. Mr. Beevor admits that the leaders of the industry can be accused of crying "wolf" too often, but he sticks to his point that export prices have risen as far as is safe. British equipment, he says, has a reputation for quality and can still be sold by good agents at a price disadvantage of 10 percent to 15 percent, but there is no hope if the price difference is to be 30 percent to 40 percent.

It was against this background that Sir Anthony Eden invited members of the T.U.C. and representatives of more than one employers organisation to meetings on 5th and 7th March. The purpose was a "general discussion" of the economic situation, covering wages, prices, the cost of living, and inflation. Similar meetings with the chairmen of the nationalised industries and with the Federation of British Industries will follow on 14th and 19th March. Mr. Harold Watkinson, Minister of Transport, has given a hint of the line the Prime Minister and the other Ministers who will be with him at these talks, will follow. "The era of exhortation is over; the Government means business. It has given a lead. If the country will respond to it we shall be surprised how quickly we can get ourselves to rights again. If the response is not forthcoming, we shall have to take more drastic measures."

On the more positive side, the Government's plans, covering a five-year period, to expand technical education, have been announced in a White Paper and, in view of prevailing circumstances, has had a good reception. The plan is to be put in hand immediately. Building worth £80 million will be started and £17 million worth of equipment will be needed. "Technical education," it says, "must be brought within the reach of all in this country and offered generously to those from overseas. The Government is confident that this task will be undertaken willingly by the nation." The main proposals are: (1) To raise the capacity of advanced courses at technical colleges in England and Wales from 9,500 to 15,000. (2) To make the "sandwich" courses a main avenue of advance to the highest technological qualifications. In "sandwich" courses students learn at college but spend part of the year earning in industry. (3) To concentrate most full-time or "sandwich" courses at technological level in colleges of advanced technology developed from existing colleges. These colleges "are of crucial importance." (4) To increase the number of technical State scholarships and allow ordinary State scholarships to lead to technological awards. Local authorities will be asked to give major awards at the same rates as to university students. (5) To double the figure of 355,000 students released by employers for day-time study. In Scotland it is intended to develop pre-apprenticeship, day release and practical craft courses for young workers. The plan includes £12 million for building and equipment in Scotland.

Insurance Premiums Cut

Mr. Macmillan's plans to encourage the small saver are being eagerly awaited, but it is interesting to find that the insurance companies have no intention of being left behind in the race. The cost of life assurance—an important medium of saving—is being reduced by the National Provident Institution. This company has lowered its premiums as well as increased its rates of interim bonus. The latter step has already been taken by many other companies. In deciding to cut its rates of premium the National Provident has given a useful lead which may well be followed before long by other companies.

As typical examples of the reductions, the new premium for whole-life with profits assurances, age 40 next birthday, is £31 14s. 2d. a £1,000 assured, compared with the old premium of £33 13s. 4d. For with profits endowment assurances, age 40 next birthday, the new rate is £43 18s. 4d. against £45 10s. 10d. On a whole-life assurance with profits for a person aged 20 next birthday, the premium rate is down from £20 1s. 6d. to £17 15s. 10d.

Indian Steelworks Agreement

The announcement regarding the conclusion of an agreement for the building of a new steel mill at Durgapur in West Bengal by a group of British firms was followed by one from Lazard Brothers, the merchant bankers, that they have arranged credit facilities for a total amount of £11,500,000 to be made available through five banks, namely, Lloyds, Barclays, District, Glyn Mills and Martins, which will be used to pay the manufacturers of the equipment. The British Government has also offered a credit of £15 million towards the total cost of the project, the external cost of which is estimated at "about £50 million." These credits will finance payments in the latter half of the delivery period; during the earlier part, the Government of India will meet due payments from its sterling balances.

The successful outcome of the negotiations are widely welcomed here, but the full extent of the effort involved is not perhaps generally appreciated. Considerable prestige hangs on the smooth and efficient execution of this contract, which is being looked upon as competing in many ways with the three other steelworks proposed for erection in India by Russian, German and American interests. To meet this it seems inevitable that the planned expansion of the British steel industry will have to be slowed down so as not to overload the plant-making capacity of this country. It says the plant-making capacity of this country. The much for the long-standing relations between the two countries that this fact, though not openly admitted, is being accepted not only by the Government but by industry as well. But there is a likelihood factor to be considered, and that is the likelihood that India will still seek a loan on the London market when conditions are more favourable, for her second five-year plan—of which the new steel works is only one of many development projects—visualises a gap in foreign exchange resources in the region of £800 million. The support of the insurance companies would be essential to the success of any loan of that type, and at the moment they are not too happy at the recent nationalisation of life insurance in India. It is to be hoped this mood will have passed, to say nothing of the present stringency, by the time the need arises.

Union Views on Textile Imports

The trade union side of the cotton industry has been the first to make public its reactions to the rejection by the President of the Board of Trade of Lancashire's case for protection against cheap imports from India and Hongkong. After a meeting of the Legislative Council of the United Textile Factory Workers Association in Manchester it was announced that the unions had decided to press for a demonstration meeting of representatives of all sections of the industry to protest against the Government's refusal to help. They will put forward this proposal at the next meeting of the Council.

Ceylon

BIG SUGAR PROJECT FOR GAL OYA VALLEY

NO DECISION ON WORKING OF ILMENITE DEPOSITS

(FROM OUR COLOMBO CORRESPONDENT)

THE Gal Oya Development Board, which is handling a Rs. 25 crores multi-purpose irrigation project based on the Gal Oya (Rock River) similar to the Damodar Valley Scheme in India, has called for world tenders for financial and managerial participation in a Rs. 27 crores sugar project to be situated in the Gal Oya valley. The project, which has been approved by the Government of Ceylon, will be managed by a limited liability company in which the Gal Oya Board will have a controlling interest. The decision to start a sugar project in the Island was taken following favourable reports from about six experts from America, the U.K., Japan and India. These experts reported that the quality of the sugar cane that could be grown in the valley, would be easily the best in the Asian region. The reports were based on surveys conducted at the experimental sugar cane plantations in the Gal Oya valley.

The Gal Oya Board has already started planting sugar cane on a 10,000 acre site in the valley, and expects to begin operations as soon as the new Company is formed. Initially the Board expects to produce about one-third of Ceylon's domestic sugar requirements, and small quantities of by-products. The company to be formed will not receive any special protection from the Government of Ceylon, but will have to compete with imported sugar. No difficulty is anticipated on this account, as white sugar is retailed in the Island at 67 cents a lb. and brown sugar at 60 cents. The Gal Oya Board is confident that the proposed Company can make this commodity available at much cheaper rates.

Ilmenite Scheme Unresolved

The exploitation of Ceylon's vast ilmenite deposits, valued at over Rs. 30 crores, is expected to be delayed much longer than was earlier anticipated, as the Government of Ceylon is undecided as to whether these deposits should be worked as a public venture, or given to private industrial interests. The ilmenite deposits are found at Pulmoddai, in the Eastern province. There are over four million tons of sand on the beaches of this small seaside town, bearing the valuable mineral, as well as smaller quantities of rutile, monazite and zircon. In June last year the Government called for tenders from Ceylonese and foreign industrial groups, for the exploitation of these sands. Eight Ceylonese firms, tied up with a number of big mineral refining groups from overseas, tendered. The offers from three of these firms were selected for final consideration. A sub-committee, consisting of the Ministers of Finance, Industry and Trade, was appointed to examine the offers, which were backed by such well-known names as Krupp's of Germany, Williams and Hopkins of the U.K. and the National Lead Corporation of America.

All these firms had indicated that they were prepared to provide the equipment necessary for dressing the ilmenite sands for export and further processing. These firms were also prepared to invest capital in the venture, in the event of an absence or insufficiency of local capital. The Ministerial sub-committee, after much deliberation, failed to agree on the award of the tender, as the Minister for Industries held the view that such a vital national asset should not be operated to the exclusion of the public of Ceylon. The Government is now considering two proposals before them. One is the formation of a public company, with nominal Government participation. The other is the awarding of the rights to exploit these sands to a group of Ceylonese industrialists, in return for which the Government will receive Rs. 10,000 as goodwill, a royalty on every ton of sand taken for dressing and a reasonable tax on all exports. It is unlikely that the Government will take an early decision on this matter, as it is now preparing for the General Elections to be held in April. Meanwhile those interested in the ilmenite deposits fear that if the exploitation of these sands is unnecessarily delayed, the present demand for Ceylon ilmenite might cease.

Gloomy Days for Tea

Tea, the Island's principal export commodity appears to be up against lean times. A recent survey of the tea industry by the Department of Census and Statistics, made some startling disclosures. According to the survey, 263,257 acres of the total 575,504 acres of tea under cultivation in the country, will shortly become uneconomical to keep in production. In addition it has been found that the yield per acre in Ceylon is lower than that of India or Pakistan, her chief competitors. The comparative figures for yields per acre in the three countries incorporated in the survey are: Ceylon 598 lbs. an acre, India 770 lbs. and Pakistan 757 lbs. It has also been disclosed that nearly 20,000 acres of tea land were planted in 1890 or earlier, and even allowing for replacement, a large number of tea bushes have now reached the age when deterioration sets in. It is estimated that the tea industry would have to undertake the replanting of something like 5,570 acres a year for the next 10 years with high yielding bushes, if the present levels of production are to be maintained and later bettered. The cost of replanting an acre of tea has been estimated at between Rs. 4,000 and Rs. 5,000.

Madras

ADDITIONAL TAXATION IN MADRAS AND ANDHRA

TWO MORE DEFICIT BUDGETS

(FROM OUR MADRAS CORRESPONDENT)

THE Governments of Madras and Andhra have just presented their first Budgets for the second five year plan period. The Madras Budget, in its revised estimates for 1955-56, shows a revenue of Rs. 52.7 crores and an expenditure of Rs. 54.9 crores. The revenue deficit of Rs. 2.2 crores is due largely to the unexpected expenditure on cyclone relief in three southern districts. The deficit might well have been larger if the agricultural income-tax on plantations had not yielded Rs. 50 lakhs more than originally anticipated. The Budget estimates for 1956-57 show a revenue of Rs. 59.3 crores at the existing level of taxation and an expenditure of Rs. 62.4 crores, leaving a revenue deficit of Rs. 3.1 crores. The estimated 1956-57 revenue shows a rise of Rs. 6.6 crores on the 1955-56 revised estimates. Half of this increase however must be discounted because for the first time gross receipts under "land revenue" and "stamp duties"—not, as previously net receipts after deducting land cesses and stamp duty surcharges payable to local bodies—are shown under these heads as "revenue". In addition, disbursements to local bodies are shown on the expenditure side, so that the estimated total expenditure of the Budget is correspondingly increased. The other half amounting to Rs. 3.5 crores of the revenue increase will be accounted for, among other things by the agricultural income-tax on plantations which, according to the Finance Minister, is turning out to be a very paying proposition. As for the revenue deficit in the Budget year, it might well have been Rs. 6.5 crores if certain expenditure items of an essentially capital nature had not gone to the credit of the revenue Budget instead of being debited to the revenue account as in the past.

Although the revenue deficit in Madras is smaller than it might have been, some additional taxation will be necessary to cover part of the gap. The measures proposed are: The tax on diesel oil to be increased from 1½ annas a gallon to 4 annas; an additional sales tax on sugar of one anna in the rupee at any one suitable point; the rate of supply of electric energy to licensees and bulk consumers, except those served by the Madras City Electricity System to be stepped up by 30 percent, the increase not applying to new industrial concerns for the first three years after the commencement of production; and full ryotwari assessment on quit-rent inams. The one tax relief proposed is the exemption from sales tax on the sale of palm-gum at all points. The additional tax revenue will enable the Government to reduce the deficit to Rs. 1.7 crores which will be left uncovered.

Capital Expenditure

The Budget provides for an expenditure of Rs. 13.1 crores on electricity, Rs. 5.9 crores on irrigation, Rs. 4.2 crores on roads and buildings, Rs. 1.9 crores on industrial development, Rs. 1.3 crores on public health and Rs. 1.2 crores on other items. The total ways and means requirements including capital expenditure and loans and advances will amount to Rs. 34.5 crores; this, the Budget assumes, will be met by loans from the Centre and the open market. As the proposed outlay in the Budget on schemes included in the second plan is Rs. 38.0 crores, the contribution of the revenue side towards the financing of plan schemes may be estimated as comparatively small. The question is whether the Madras Government will be able to raise the required finances. There is reasonable hope that in view of the large deficit financing contemplated in the Union Budget the Centre might fulfil its obligations under loans and advances and grants to the State Government. There is still the likelihood of a shortfall in the second plan's first year outlay although most of the new schemes numbering nearly 500 will be launched. These include the opening of 400 State-owned seed farms of 25 acres each, of which 50 are to be started in the Budget year; a dairy scheme for Madras City; the opening of 50 more N.E.S. or Community Development Blocks; the starting of a State Warehousing Corporation; subscription to the share capital of three proposed co-operative sugar factories and 600 more villages to be electrified.

Andhra's Deficit

The Andhra Budget, in its revised estimates, shows a revenue of Rs. 22.4 crores and an expenditure of Rs. 26.4 crores, leaving a deficit of Rs. 4 crores in the current year. The Budget estimates for 1956-57 show a revenue of Rs. 23.7 crores and an expenditure of Rs. 27.0 crores, leaving a revenue deficit of Rs. 3.3 crores. The deficit will be partly covered by new taxation measures which will yield about Rs. 2.2 crores. These measures in respect of which legislation has already been passed, are: full ryotwari assessment on quit-rent inams; the levy of an additional single-point sales tax on certain varieties of mill cloth; a surcharge on land revenue; a purchase tax on raw tobacco and a revision of court and suit valuation fees.

The Andhra Budget provides for an expenditure of Rs. 4.4 crores on irrigation projects other than Nagarjunasagar; Rs. 1.8 crores on the Nagarjunasagar project; Rs. 5.7 crores on electricity and Rs. 3.6 crores on other items. Loans and advances to local bodies, co-operative institutions, cultivators, etc., will account for Rs. 4.9 crores or Rs. 1.8 crores after deducting recoveries. Repayment of loans will absorb Rs. 4.7 crores. Thus the ways and

means requirements for the Budget year will be of the order of Rs. 23 crores including the revenue deficit. This amount will be raised by loans from the Union Government to the amount of Rs. 15.9 crores (as against Rs. 17.7 crores in the current year) and by an open market loan of Rs. 6 crores. Even then the budget year will have an overall deficit of Rs. 2.7 crores. The Andhra Government expects that an increase in sales tax by a suitable revision of the rates of levy will enable it to cover the revenue deficit.

New Schemes in the Second Amount

According to the Andhra Finance Minister, the amount of expenditure on the second plan for the State has been fixed at Rs. 116 crores. At the end of the plan period an additional area of 570,000 acres is expected to be brought under irrigation and 1,600 towns and villages are expected to be electrified. The per capita consumption is expected to increase from 10 to 20 units while the entire State will be covered by N.E.S. and community projects. In the private sector, licenses have been issued by the Government of India for four new spinning mills, two sugar factories, three cement factories, a ferro-manganese plant and a factory for the manufacture of sugar phosphate and mixed fertilisers. Expansion of the existing cement and sugar factories has also been sanctioned by the Central Government. The proposal to start six co-operative sugar factories is still under consideration.

Criticism of Tax on Dividends

The President of the Madras Stock Exchange, in a statement on the Central Budget, alleged that it makes serious inroads into corporate finance. He maintained that the proposed levy of a tax on amounts distributed as dividends in excess of 6 percent directly affects equities on the Stock Exchange. In South India, companies which did not capitalise their reserves in the past or, having applied for bonus issues by way of capitalising reserves, failed to receive the necessary sanction, will be affected by the new levy. It appears that they will be penalised for their inability to spread the profits over a larger area of equity capital and thereby be compelled to pay high dividends on a small capital. The fact of sanction for bonus issues being persistently withheld over the last two years is not without significance. In many cases such sanction has been allowed only in the last few weeks. Low-capitalised plantation companies and those which have already paid the announced dividends together with the few textile companies that have been reputed dividend-payers will come under the new tax provisions and may have to curtail dividends. Any reduction in dividends is bound to result in a depression of capital values and will affect, even in the short run, capital formation.

The President, expressed surprise at the lack of any announcement modifying the Government's present stand on Sec. 23A of the Income-tax Act, which compels companies where there is concentration of capital in a few hands to pay the entire profits as dividend where the reserve is equal to capital and 60 percent where the reserve is less than the capital. "In the absence of such modification, one can only describe the present position as one in which companies are made to squeeze out the reserves in copious dividends under the exigencies of Section 23A, and Government come in at the other door to collect the penal tax on large dividends."

Excise Duty on Cloth

He felt that the excise duty on all varieties of mill cloth, which constitutes a substantial item of revenue, will increase the burden on the lower income groups and rural consumers of cloth, while the several miscellaneous levies are bound to make them poorer. The increase in registration and telegraph rates adds to office expenditure, both corporate and non-corporate, while the tax on partnership firms seems to have nothing to commend it except its novelty.

(FROM OUR BOMBAY CORRESPONDENT)

Reactions to the Budget from other sources were also equally critical. In the opinion of Mr. A. D. Shroff, the well-known financier and industrialist, the private sector had never been in such a state of dependency as in recent months since the notorious 1947 Budget. The Finance Minister's proposals of direct taxation completely confirmed the fears that the Budget would further cripple the capacity of private enterprise in making any effective contribution to the second plan. Without using the expression of ceiling on incomes, the Finance Minister had very subtly imposed an effective ceiling by grading the slabs of super-tax on incomes over Rs. 70,000, with the result that those whose income exceeded Rs. 1,50,000 would have to pay over 91 percent in taxes. This would affect not

An Economist's Assessment

Bombay Port Trust Budget

The Budget estimates of the Bombay Port Trust as approved by the Trustees of the Port were also formally released on the same day as the Central Budget. The main features of the Port Trust Budget have been known for some time. The estimates revealed an anticipated surplus of about Rs. 70 lakhs for the coming year, while the current year is expected to close with a surplus of Rs. 1.17 crores. In spite of the surplus, however, the existing surcharge of 33.3 percent under the

The Good Record of I.C.I.C.

The first annual report issued by the Industrial Credit and Investment Corporation reveals that by the end of 1955, the Corporation had given substantial financial assistance in one form or another to 11 applicants. Some 25 more applications were still under examination. That the Corporation meets a long felt need in the industrial sector of the country is evident from the fact that a continuous flow of enquiries for loans or for other forms of financial assistance covering a wide range of industrial activities has poured in from all parts of the country. Of the propositions approved, five were related to the underwriting of public issues of ordinary or preference capital, four called for direct subscription to ordinary or preference capital and two were requests for loans. The industries which the Corporation had agreed to assist were the manufacture of paper, electric equipment, fuel injection equipment, chemicals and equipment for the textile industry, the refining of sugar and metal ores and cotton spinning. The amount which it was agreed to provide ranged from approximately Rs. 5 lakhs to Rs. 1 crore. The report adds that during this initial period, considerable attention had been given to the problem of underwriting public issues of capital. In carrying out this work, the Corporation intended to establish a regular organisation for this purpose. During this period, the income of the Corporation by way of interest and dividend amounted to Rs. 32.16 lakhs, in addition to the underwriting commission and brokerage to the extent of Rs. 2.03 lakhs. The net profit after meeting all expenditure came to Rs. 25,33,421 during the year. Out of the above profit, the directors have written off Rs. 1.09 lakhs by way of preliminary expenses and Rs. 1.42 lakhs by way of brokerage on shares issued. Other appropriations included Rs. 5 lakhs to the General Reserve, Rs. 10.57 lakhs for reserve for taxation, Rs. 7,000 as bonus to staff while the amount of Rs. 7.16 lakhs is carried forward. Thus no dividend has been declared. It may be recalled that the paid-up capital of the Corporation is Rs. 5 crores in 500,000 shares of Rs. 100 each. The interest-free advance from the Central Government is Rs. 7.50 crores. Investments in Government and Government-guaranteed securities as on 31st December, 1955 amounted to Rs. 10.39 crores, in debentures Rs. 50 lakhs and in ordinary and preference shares of industrial companies amounting to Rs. 66.39 lakhs. Loans to industrial companies amounted to Rs. 10.25 lakhs. Cash and bank balances stood at Rs. 6.92 crores.

AUSTRALIAN ENQUIRIES FOR SACKING

Goods Markets Await Foreign Orders

The gunny markets were depressed at first on the expectation of adverse Budget proposals, but recovered after the Budget and interest was revived. It was rumoured that Australia was showing interest in Twill sacking, especially cornsacks, and speculative covering in these fabrics tended to push up prices. Enquiries were also received for Sugar Twills, and this, coupled with local shipping covering in heavy Cees, instilled confidence into the market. Rumours were again prevalent about the long-awaited Russian order, but reference to it no longer had any great effect. Operators in general thought that substantial overseas orders would be placed in the near future, and manipulated the market accordingly.

Manufactured Goods: The jute goods market opened confidently on Thursday morning following the favourable Budget news and sackings prices showed a general increase of about 1 annas a 100 bags. Hessians were slower in their reaction and opened unchanged on Thursday morning, with 40in. 10oz. standing at Rs. 40-3 for B Twills for and Rs. 40-12 for April-June, B Twills for the same shipment were Rs. 11-4 and Rs. 11-5 respectively. Local shippers covering in plain Cies maintained prices despite the lack of overseas interest, and was enough to lift prices a further 4 annas in packing and 2 annas in hessian by Friday morning. The advance continued slowly throughout the day under pressure from speculators, but very little real goods business was reported. Saturday morning opened quietly, but hopes of overseas orders caused a fair amount of covering business, mainly in heavy goods, and the market ruled firm. Over the week-end, reports of very steady raw jute markets in Pakistan brought about further speculative buying, and by Monday morning heavy goods recorded a rise of 8 to 12 annas according to the fabric. Expectations of substantial overseas orders continued to lift prices, and with the raw jute markets firm, very steady conditions prevailed. On Tuesday morning, ready B Twills had risen to Rs. 11-12, with forward shipment at a premium of 10 annas. These quotations were Rs. 1-8 above the week's opening rates. Hessians advanced in sympathy and 40in. 10oz. rose to Rs. 40-12 for ready shipment and Rs. 41-6 for April-June, this being 10 annas higher than at opening. The biggest rise in heavy goods was in cornsacks when business was plentiful enough at Rs. 110-8 a 100 bags for April-June shipment, which was Rs. 2 a 100 bags above last Thursday's quotations. The market was very steady at this stage and the general tendency was for prices to rise but only small business was reported. At the close, sackings rates were again

In Pakistan, the markets were very steady due to rumours of a short crop. Demand for all cate-

PRICES MOVE UP

(FROM OUR DUNDEE CORRESPONDENT)

Calcutta goods have improved, but the tone is quieter. Hessians were quoted at 61s 6d for 40 in. 10 oz. and 47s for 7½ oz. March-April-May and 62s and 46s 9d June, with B Twills at 176s 3d and 176s 6d respectively, f.o.b. Calcutta. The Association of Jute Spinners and Manufacturers now publish a monthly table on the productivity "Ladder", showing by code how each firm's output in terms of man-hours has progressed in the various operations of batching, spinning and winding. Firms can gauge their own output with others and find out how the difference, if any, has arisen. The object is to raise productivity through the mutual exchange of experience.

Closing date March 28, 1956 at 12 noon.

Calcutta Markets

PRICES IMPROVE AT TEA EXPORT AUCTION

GOOD DEMAND FOR DUSTS

AT Sale No. 38, held on 5th and 6th March, offerings in the Export auction consisted of about 54,000 packages, for which there was a better general demand. The very best C.T.C. Broken and Fannings were keenly competed for and often sold many annas above brokers' valuations, while stylish Whole Leaf grades were also several annas dearer. Fannings grades were an irregular feature and were mostly 1 to 3 annas dearer while the more ordinary whole leaf grades and clean broken were fully firm to 1/2 anna dearer. Low Medium and poor liquoring stalky kinds opened 1 to 1 1/2 annas lower but closed fully firm to occasionally dearer, while any teas which showed an improvement in quality were keenly competed for.

Quotations			
Clean Black Pekoe	...	...	1 15 0
Plain B.P.	...	...	1 4 6 to 1 5 0
Medium Assam B.P.	...	...	1 7 0 to 1 7 6
Best CTC Assam B.P.	...	...	Not quotable.

At the Internal Sale, offerings of Dusts consisted of 19,700 packages, for which there was a good general demand. Black leaf teas suitable for the Middle East received fair support at about last rates, while the best CTC Assams with good liquors were the strongest feature and were several annas dearer. Medium Assams and Dooars with improved cup quality advanced by 1/2 to 1 1/2 annas but those with plain liquors and poor leaf appearance were irregular and generally easier. There were a few lines of Darjeelings on offer, which received good support, especially the flavoury kinds.

Quotations			
Medium Donars Dust	1 7 0 to 1 8 0	2 8 6 to 2 9 0	
Medium Assam Grains	1 8 6 to 1 9 6	2 10 0	
Best Assam CTC Dust	2 12 0 to 2 14 0	3 3 0 to 3 4 0	

The Leaf offerings consisted of 4,700 packages, for which there was an improved demand. Most teas were selling at 1/2 to 1 anna above last rates.

FREIGHT MARKETS STEADILY FIRM

THE main interest continued to centre on the American coal and grain trades, and the peak rate of 72s was again reached. Fixtures were made to a variety of destinations with Japan paying \$ (U.S.) 16 for August-September loading and a newbuilding 15,000 tonner taking 47s 2d to Continental ports for four years' consecutive voyages commencing in January 1957. A direct fixture to Nantes was done at 90s for March. An interesting announcement which is bound to have a steady effect on markets was the purchase of 1,200,000 tons of wheat by Russia from Canada to be shipped in equal quantities over the next three years. Maritime Pacific shippers put out enquiries for 200,000 tons over March-May to Vladivostok and Nakodka at 115s. The Indian ore trade was represented with Mormugao-Genoa at 85s f.i.o. and Antwerp-Emden range at 110s gross terms. A handy-sized vessel obtained £30,000 lump sum f.i.o. for scrap. Colombo-Japan, and Rangoon-Constantza rice paid 158s f.i.o.s. Some interesting trip time-charters were concluded by Japanese interests, 41s 6d being paid for a 8,425-ton motorship, delivery Greece re-delivery

Japan via Mormugao, and 58s for a 10,000 tonner, delivery Madras.

SUGAR MARKET EASY

During the week ended 7th March, sugar sales in the Calcutta market averaged 3,000 bags daily. Arrivals were 6,500 bags a day and stocks totalled 175,000 bags. Rates for ready sugar ex-Kantapur delivery were Rs. 30-12 for ordinary grain and Rs. 32-3 for big grain. The rates have eased by 12 to 14 annas following the publication of the Central Budget in which no fresh duties have been levied on sugar.

LINSEED

Firm conditions were maintained in the market and prices reacted to somewhat higher levels. Conditions were generally unsettled following the budget announcement of an excise duty of a half anna per pound levied on oil crushed by power-operated mills, and owing to this factor, together with the prevailing scarcity of ready supplies, very little trading was reported in the local market. Prices in the oil section were well maintained and whilst there was little change in U.K. prices of linseed oil, little fresh business resulted. The latest quotations were as follows: March Rs. 25 a maund; April-May Rs. 22-8 a maund.

HIDES AND SKINS

The market ruled steady. Stocks were higher than in the previous week.

Bazaar Sales

(Between 28th February and 5th March, 1956)
Cowhides: Wet salted (Ord.) 6,000 pcs. on the basis of Annas 10-6 to Annas 11; Wet salted (Ord.) 20,000 pcs. on the basis of Rs. 8 to Rs. 9; Wet salted (Slaughtered) 18,000 pcs.

Goatskins: Wet salted (Daisee, Killed) 13,500 pcs. on the basis of Rs. 245 to Rs. 285; Rs. 315 to Rs. 335 and Rs. 337-8 to Rs. 375; Assam-Dinaipur-Murshidabad 14,000 pcs. on the basis of Rs. 290.

Bazaar Stocks

(5th March, 1956)

Cowhides: Wet salted 2,43,000 pcs.
Goatskins: Wet salted (Daisee, Killed) 13,500 pcs.; Assam-Dinaipur-Murshidabad 1,21,000 pcs.; Muzafferpor - Patna - Pakur - Purneah - Kissen-ganj 5,22,500 pcs.

SHELLAC MARKET STEADY

During the week ended 6th March, the market remained steady. The range of quotations was as follows:

Pure Buttonlac	Rs. 145 to 147-8 buyers.
Lemon No. 1 Shellac	Rs. 145-8 to 148 buyers.
Lemon No. 2 Shellac	Rs. 140-8 buyers, 142 done and buyers, 143 buyers.
F. O. Std. 1 Shellac	Rs. 136/137 buyers, 138 done and buyers.
Pure TN Shellac	Rs. 132 to 134 basis done and buyers.
4% I. T. N. Shellac	Rs. 121-8 to 125-8 buyers.
No. 1 Kusmi Seedlac	Rs. 141 to 144 buyers.
No. 2 Kusmi Seedlac	Rs. 131 to 135 buyers.
Fine Bysaky Seedlac (Manbhumi)	Rs. 125-8 to 129 buyers.
Fine Bysaky Seedlac (C. P.)	Rs. 119 to 121-8 buyers, 123 done and buyers.
Ordinary Bysaky Seedlac (C. P.)	Rs. 105-8 to 109-8 buyers.
Ordinary Bysaky Seedlac (C. P.)	Rs. 96-7 to 99 buyers, 100 done and buyers.
Kireelac	Rs. 50 buyers.

Shipments during March until the 2nd were 2,692 packages comprising shellac 1,963 packages, seedlac 1,692 packages and buttonlac 37 packages.

COMPANY AND PUBLIC NOTICES

THE JAY SHREE TEA GARDENS LIMITED

NOTICE is hereby given that the Tenth Ordinary General Meeting of the Shareholders of the Company will be held at the Registered Office of the Managing Agents at 8, Royal Exchange Place, Calcutta on Wednesday, the 28th March, 1956 at 3 P.M.

The dividends are payable on application after the 10th April, 1956, to the Shareholders whose names are registered in the Books of the Company on the 29th March, 1956.

The Share Transfer Books of the Company will remain closed from the 2nd April to 10th April, 1956, both days inclusive.

By Order of the Board,
RAMDUTT RAMKISSENDASS,
Managing Agents.

Dated, 2nd March, 1956.

SAPOTI TEA COMPANY LIMITED.

NOTICE is hereby given that an Extraordinary General Meeting of the Shareholders of Sapoti Tea Company Limited, will be held at its Registered Office No. P-8, Mission Row Extension, Calcutta on the 24th day of March, 1956 at 12-30 p.m. to consider and if thought fit to pass the following resolutions as Ordinary resolutions with or without any modifications:—

- That is desirable to Capitalise a sum of Rs. 3,00,000 being part of the undivided profits of the Company standing at the credit of the General Reserves as on 31-12-54 and accordingly that the said sum of Rs. 3,00,000 be capitalised and that this amount be used as a Capital Scrip issue which shall be applied on behalf of the persons who are on the 24th day of March, 1956 holders of 60,000 issued Ordinary shares of Rs. 10 each in payment in full for 30,000 new Ordinary shares of Rs. 10 each and that such 30,000 Ordinary shares credited as fully paid, shall be accordingly allotted to such persons respectively in the proportion of one new Ordinary share for every two issued Ordinary shares held on the 24th day of March, 1956 by such persons respectively but that in the case of fractional entitlements the shares in which such entitlements are represented be allotted to Sri L. C. Kanol, a Director of the Company as Trustee for those shareholders concerned and the sale proceeds thereof be distributed amongst those shareholders concerned in proportion to their respective entitlements, and that the said new Ordinary shares so distributed shall rank in all respects pari passu with the existing shares save and except that they will not participate in dividends declared in respect of any period ending on or before 31st December, 1955 and shall also be treated for all purposes as an increase of the nominal amount of the Capital of the Company held by each such Ordinary shareholder and not as income. Provided that the allotment of the said new Ordinary shares shall be subject in the case of members resident out of India, to the consent of the Reserve Bank of India being obtained thereto in accordance with the provisions of the Foreign Exchange Regulation Act, 1947.
- That pursuant to the above resolution and in satisfaction of the said Capital Scrip issued, the Directors be and they are hereby directed to allot and distribute 30,000 new Ordinary shares credited as fully paid up amongst the persons who are on the 24th day of March, 1956, holders of the 60,000 issued Ordinary shares of the Company in proportion to the issued Ordinary shares held by them, but so that in the case of fractional entitlements, the shares in which such entitlements are represented shall be allotted to Sri L. C. Kanol, a Director of the Company, as Trustee for those shareholders concerned and that such shares shall be sold by the Trustee and the sale proceeds thereof be distributed amongst those shareholders concerned in proportion to their respective entitlements.
- That the draft of the agreement providing for the allotment of the said new Ordinary shares in satisfaction of the said Capital Scrip issued submitted to this meeting and signed in the margin by the Chairman thereof, by way of identification be and the same is hereby approved and that the Directors be authorised to affix the Seal of the Company to duplicate engrossments of such agreement as and when the same shall have been signed on behalf of the members holding Ordinary Shares in the Company on the 24th day of March, 1956 by some person to be appointed by the Directors in that behalf.

The Share Transfer Books of the Company will remain closed from 17th to 24th March, 1956, both days inclusive.

By Order of the Board,

L. C. KANOL,

Director.

BENGAL POTTERIES LIMITED.

NOTICE

NOTICE is hereby given that an Extraordinary General Meeting of the Shareholders of the Company will be held on Friday, the 30th March, 1956, at 3-30 P.M. at the Registered Office of the Company at 45, Tangra Road, Calcutta, to consider and if thought fit to pass with or without modification the following Resolutions:—

(1) As Special Resolutions:—

(a) "That Allied Distributors & Co., a firm at present consisting of Messrs. Bharat Ram Charat Ram & Co., Ltd., The Hindustan Selling Agencies Ltd., Shri R. K. Agarwal, Shri S. K. Agarwal, The Gupta Collective Farms Ltd., and Messrs. K. L. Poddar & Sons Ltd., sole selling agents of the Bengal Potteries Ltd., shall continue to be such sole selling agents after the commencement of the Companies Act, 1955, on the existing terms and conditions, subject however to such alterations as respects the period of their appointment as may be necessary in terms of the said Act."

(b) "That Shri H. P. Bhagat, Shri G. K. Bhagat and Shri R. N. Bhagat, who are officers in the service of the Bengal Potteries Ltd., shall remain in the service of the Company after the commencement of the Companies Act, 1955, subject to such agreements as the Managing Agents may on behalf of the Company enter into with them."

(2) As an Extraordinary Resolution:—

"Resolved that the Capital of the Company be increased to Rupees One Crore by creation of 27,03,115 new shares of Rs. 2/8/- each ranking for dividends and in all respects *pari passu* with the existing shares in the Company, and that out of the said 27,03,115 new shares, or so much thereof, which the Directors may decide to issue at par, for subscription, with the permission of the Controller of Capital Issues, 1,00,000 shares of the face value of Rs. 2/8/- each in the first instance, be issued to Mr. G. Bhagat (or his nominee or nominees) of 11, Rawdon Street, Calcutta, for consideration, payable in cash and thereafter the balance of the issue remaining after allotting the said 1,00,000 shares to Mr. M. G. Bhagat (or his nominee or nominees) as aforesaid, be offered, to the existing members of the Company, as nearly as circumstances admit, in proportion to the existing shares held by each member of the Company as on the date of issue."

(3) In the event of the Extraordinary Resolution referred to above being passed with or without modification, the following resolution will be proposed as a special resolution:—

"That Article 4 of the Articles of Association of the Company be altered in the following manner, that is to say:—

(a) The figure 1,00,00,000 shall be substituted for the figure 32,42,212-8-0.

(b) The figure 40,00,000 shall be substituted for the figure 12,96,885.

(c) The figures 30-3-56 shall be substituted for the figures 19-6-47"

(4) As a Special Resolution:

"That Article 47 of the Articles of Association of the Company be altered by deleting the words 'By Extraordinary Resolution.'"

By Order of the Board,

BHARAT RAM BHAGAT & CO.,
Managing Agents.

45, Tangra Road,
Calcutta-15.
Dated 5th March, 1956.

EXPLANATORY NOTES.

To comply with the provisions of the New Companies Act, 1955, which is due to come into force from 2nd April, 1956, it is necessary that certain actions taken by the Directors and the Managing Agents are approved by the Shareholders in General Meeting.

1. The appointment of Messrs. Allied Distributors & Co., as sole selling agents has to be approved by the shareholders by a special resolution under Section 294 of the New Companies Act, 1955. Of the partners in Allied Distributors & Co., Shri R. K. Agarwal and Shri S. K. Agarwal are relatives of Shri Bishan Swarup Agarwal, a Director of Bengal Potteries Ltd., Shri Shri Ram and Shri Shri Dhar, Directors of the Bengal Potteries Ltd., are also Directors of Bharat Ram Charat Ram & Co., Ltd., Shri G. K. Bhagat and Shri R. N. Bhagat, relatives of Shri M. G. Bhagat, a Director of Bengal Potteries Ltd., are Directors of Hindustan Selling Agencies Ltd. Both Bharat Ram Charat Ram & Co., Ltd., and Hindustan Selling Agencies Ltd., are partners of Allied Distributors & Co.

2. According to Section 314 of the New Companies Act, 1955, certain categories of persons may be appointed to an office or place of profit under a Company only with the previous consent of the shareholders accorded by a special resolution. Shri H. P. Bhagat, Shri G. K. Bhagat and Shri R. N. Bhagat are related to Shri M. G. Bhagat, one of the Directors of the Company.

3. An ordinary resolution to increase the Capital of the Company was passed at a General Meeting held on the 18th February, 1956, at the Registered Office of the Company, but an amendment to the resolution provided that in order to comply with Article 47 of the Articles of Association of the Company the resolution be again passed as an extraordinary resolution.

4. Neither the Companies Act of 1913 nor the New Companies Act of 1955 require an Extraordinary Resolution to increase the Share Capital of the Company. It is thought fit to bring Article 47 of the Articles of Association in conformity with the statutes and therefore a special resolution is being placed before the shareholders to alter Article 47.

THE BENGAL PAPER MILL CO., LTD.

NOTICE is hereby given that an Extraordinary General Meeting of the Company will be held at the Registered Office of the Company at 21, Netaji Subhas Road, Calcutta, on Thursday, the 29th day of March, 1956, at 12 noon to consider and, if thought fit, to pass the following Ordinary Resolutions:—

(1) "That as from the date of the commencement of the Companies Act, 1956, subject to the approval of the Central Government, Balmer Lawrie & Company Limited shall be and are hereby reappointed the Managing Agents of the Company for a period of ten years, and that as from that date the Managing Agents shall hold such office upon the terms and subject to the conditions contained in the draft Agreement previously circulated to the members of the Company and submitted to this meeting and for the purposes of identification signed by the Chairman thereof and that, accordingly, the Directors be and they are hereby authorised to enter into an Agreement with Balmer Lawrie & Company Limited in terms of the said draft subject to any modification thereof that may be agreed between the Company and the Managing Agents for the purpose of complying with any condition imposed by the Central Government in granting its consent as aforesaid."

(2) "That as provided in Clause 9 of the said draft Agreement Balmer Lawrie & Company Limited and any Associate or Associates of theirs (as defined in sub-section (3) of Section 2 of the Companies Act, 1956) be and are hereby authorised to retain any commission or other remuneration earned or to be earned by them respectively as the managing agents, secretaries and treasurers, manager, agent, secretary or selling or buying agent of any firm, body corporate, or other concern in respect of any goods, power, freight, repairs or other services, including insurance, for the sale, purchase, supply or rendering of which a contract has been or is to be entered into by such firm, body corporate or concern with the Company provided that the prices or amounts charged to or received by the Company are at rates which are not less favourable to the Company than the market rates or which are otherwise reasonable."

A copy of the draft Agreement referred to in the proposed Resolutions accompanies this Notice.

By Order of the Board,

BALMER LAWRIE & CO., LTD.,
A. T. MONTGOMERY,

Director,

Managing Agents.

Calcutta, 1st March, 1956.

MARTIN BURN LIMITED.

NOTICE

Calcutta, 27th February, 1956.

NOTE:—Payment of any Dividend declared will be made only to those members whose names are registered in the Books of the Company on the 29th day of March, 1956, or to their Mandatees.

No applications for Warrants will be necessary. Claims on behalf of holders of shares on blank transfer will not be entertained.

MARTIN BURN LIMITED.

NOTICE

AT a Meeting of the Board of Directors of Martin Burn Limited, held on 1st March, 1956, further consideration was given to the question of the distribution of profits as shown in the accounts for the year ended 30th September, 1955, and it was resolved that the Cash Bonus recommended in the resolution passed on 25th ultimo be increased by One Anna per share free of Income Tax.

The Directors further resolved that the above-mentioned additional Cash Bonus of One Anna be incorporated in the Report and Accounts for the year ended 30th September, 1955.

The Directors, therefore, now recommend a Dividend of Rs. 1/8/- per share on the Ordinary Shares of the Company for the year ended 30th September, 1955 together with an additional distribution by way of Cash Bonus of Five Annas per share, both without deduction of Income Tax.

This Dividend and Cash Bonus if passed by the Shareholders will be payable on and after 23rd April, 1956 to those members so entitled who are registered in the Company's books on the 28th March, 1956. It was agreed that the Ordinary Share Register of the Company be closed from the 21st to the 28th March, 1956.

By Order of the Board,

A. G. GIDLEY,

Secretary.

2nd March, 1956.

These notes refer to the Debentures on the next page.

Option to repay at par on 6 months' notice—

(a) after 3 years from date of issue.

(b) at any time

(c) on or after 1-1-61.

(d) after 14-11-63.

Option to repay on 6 months' notice—

(e) at any time after 30-6-61 at 101%.

(f) at 101% between 1-1-60 & 31-12-64.

(g) at 102% after 30-6-59 but before 30-6-64.

(h) on or after 31st July 1950 at Rs. 102% or at par on or after 31st July 1955.

Option to repay on 3 months' notice—

(i) at any time at 3% Premium.

(j) at 1% Prem after 1-3-54 but before 1-3-57 and 1% Prem on or after 1-3-57.

(k) at any time at par.

(l) at any time after 31-3-62 at the rate of 1% Premium

(m) Redeemable at 103% on 31-12-61 with option to redeem on any interest date at same premium after 30-6-59

(n) at any time on two months' notice.

(o) to be redeemed at a premium of 10% Rs. 70,000 to be redeemed annually by drawing on 3 months' notice with option to redeem all after 6 years from date of issue on 4 months' notice. Option not exercised, repayment to be made after full term.

Option to repay.

(p) at par after September, 1958.

(q) at par on or after 1-12-59

(r) on 30-6-62 or any subsequent interest payment date on one month's notice

(s) Rs. 1 lac Debentures to be redeemed annually by drawing from 1-6-56 with option to redeem at 100% between 1-6-57 to 1-6-60 and at 101% afterwards.

JOINT STOCK COMPANIES' PREFERENCE SHARES

Dividends are cumulative and shares carry a preferential claim on the property for the payment of capital and on the profits for dividend except in case of companies marked otherwise. Months against names of companies indicate approximately times of payment of dividends.

A BAD YEAR FOR THE TEA INDUSTRY

I.T.A. CHAIRMAN BLAMES OVER-PRODUCTION
AND CONTINUING HIGH COSTS

THE prospects for the tea industry are rather better now than they were at the beginning of the year. London and Calcutta auction prices are rising, the ceiling on exports for sale abroad has been removed and the chances of international regulation have improved. This was the brighter side of the background to the report which Mr. H. K. Stringfellow, retiring chairman, laid before the annual general meeting of the Indian Tea Association last week. The darker side—that of high inflexible costs and excessive tax burdens, remains. The year has been a bad one. But that is a hazard which is inescapable for those who grow tea. The really distressing fact is that such a well-run industry has been unable, through no fault of its own, to make all the adjustments necessary for facing and overcoming adverse trading conditions. This season's losses are having to be met from last season's profits. But the problem of how the industry will meet the coming year if it should be another lean one and especially if it should be merely the second in a bad series, remains obscure. Tea is facing what threatens to be a period of chronic world over-production, which might or might not be solved by international regulation. If it is not, then the prospects of the north Indian tea industry being able to compete successfully under present working conditions are not promising.

The reason for this is still the size and rigidity of the cost structure. No industry is being forced to carry a larger welfare burden nor as great a multitude of tax levies. There has been no sign this year that the load is likely to be lifted for any reason other than impending disaster. While this remains true, the working of the tea industry will be difficult whether the year is good or bad. Steps can be taken to improve short-term items and possibly even the long-term threat of excess world production. But until the industry is relieved of all but its fair share of taxes and welfare provisions, it is not easy to see how it can continue to prosper taking good years with bad. One of the most significant of the matters referred to by Mr. Stringfellow was the decline in the Association's membership which "is a further indication of the belief that organised industry is more vulnerable than the smaller, independent unit both to the attention of union workers and Government pressure." This is the least satisfactory method of adjustment to prevailing conditions. But it is one which may spread if a more realistic attitude is not taken towards the industry's difficulties. Mr. Stringfellow's mention of the decline in China's "once flourishing export trade" was appropriate. Fiscal blunders, similar to those he spoke of as having been responsible for so much of the north Indian industry's prosperity, might eventually be its downfall, unless it is appreciated throughout both good and bad years, that the present conditions under which the industry has to work are neither reasonable nor healthy.

Of the three entities which have forced the industry into its present strait-jacket—the trade unions, the State Governments and the Central Government—it is the last which, quite properly, is usually the most flexible. A recent and creditable example of this has been the decision to remove completely the ceiling on export teas for sale on the London auctions. The step was both welcome and startling, if a little late to have much effect. It is this a sign that Government circles are becoming more impressed with the futility of interfering with free market forces, especially when overseas buyers are expected to shoulder the expense, it can be counted a good omen for private industry generally. This might seem a rash conclusion at which to hint. But if it is not true, it is difficult to explain why the Government should abandon so completely its previous stand when there were obvious alternatives open. There is little doubt that the scheme suffered from being too ambitious in the first place. If a proportion of total output rather than an absolute figure had been

chosen for the quantity to be allowed for sale abroad, the industry might have been saved some of its difficulties during the past few months. Had more attention been paid to the Auction Committee's warnings about warehouse space, the recent disorganisations in the flow of tea from the gardens to Calcutta could have been avoided. Finally, if the simple economic fact had been appreciated that markets tend to grow only where conditions are most favourable for them, there would have been no need at all for incurring the disadvantages of regulation. The fact that the Government has chosen to drop the scheme for the time being is an encouraging sign that flexibility exists, even if consistency is lacking. What contribution it has made to the industry's troubles is not easy to judge—certainly it has not been as large as the straightforward fact of excess supply throughout the world and restricted demand for stocks in the United Kingdom. If it is now decided to drop the scheme for good as an experiment that has failed, although this is not necessarily proved, the Government has the consolation that the Calcutta auctions will quite likely continue growing without any deliberate inducement from it.

If the realism which has just been shown towards the auction problem could now be extended to cover coal, among other supply matters, a substantial contribution could be made to the industry's peace of mind. The supply problem is a continual source of anxiety to the gardens, and that of coal makes just about the biggest contribution. It is to be hoped that Mr. Stringfellow's expectations from the Coal Commissioner will not be disappointed. The acknowledgment of the part which the Tea Board has played in resolving supply difficulties was a timely one.

The emphasis which the I. T. A. chairman laid on quantity rather than quality as the reason for

the past year's troubles appeared to underline the growing necessity for international regulation. The difficulties which at present delay the introduction of such a scheme are sufficiently well known to require no further comment. Ceylon's attitude is still the stumbling block. But if Mr. Stringfellow's warning about world demand is as valid as it would seem to be, Ceylon's long-term interest in regulation is every bit as great as India's. Indeed, it is greater if the advantages to India of a large internal market are considered. The news that demand shows little prospect of expansion anywhere in the world at the moment is alarming. There is no doubt about the competition tea is facing, especially for the favours of the younger generation. Whatever the continuing activities of the Tea Council in the United States and the prospects of a Tea Bureau being set up in Britain, it is probably the internal market to which the Indian industry will increasingly look in future. There has been little sign of expansion in this recently. Its growth is likely to be in direct proportion to the rise in the standard of living and that will take time; perhaps a long time. Until then, some attempt to regulate world exports seems the only way to prevent the main producers cutting each others' throats in bad years. Unilateral crop restriction by the north Indian industry, unless it is also necessary for improving

the five year period, the external assets of the Reserve Bank have fallen by only Rs. 151 crores, and the external assistance utilised amounts to Rs. 204 crores. The improvement in the country's economic condition—especially the large increase in food production—has made a major contribution to this encouraging record; but the importance of foreign aid, particularly in the crisis of 1951, cannot be under-estimated.

It is important to recognise the sources from which this generosity has been forthcoming, and here the Finance Ministry's survey is to be commended on presenting the details clearly. Of the total offer of Rs. 300 crores, the largest aggregate contribution made by any single country has come from the United States. Demagogues and arm-chair politicians might do well to make a special note of the fact that this country has offered India assistance totalling around Rs. 238 crores during the period of the first plan. They would do well also to contrast this with the fact that the one country which conspicuously has not earned even a bare mention in the Finance Ministry's survey is the Soviet Union, whose contribution to the plan has been precisely nil, apart from fulsome tirades against the "capitalists and traitors" of the Nehru Government. Before the learned historians and commissars of Moscow try to submerge this fact in their current re-writing of the history of Indo-Russian relations, it is only proper that the people of this country should take particular note of it. The Rs. 238 crores that the Americans have offered India during the past five years have not been utilised to spread the less likeable aspects of "the American way of life", or to dump in this country surplus junk. It has come in the form of a Rs. 90-crore wheat loan at a time of dire need; in the form of steel, which still remains very short; as equipment for essential projects concerning irrigation, hydro-electric power and the railways, and in the form of facilities to improve agriculture and education. Excluding the U.S. wheat loan and the grant of Rs. 5.4 crores from the Ford Foundation, the Rs. 142 crores (\$298 million) India has been offered under the Indo-U.S. Aid Programme has been intended mainly for industry and mining (\$95 million); for agriculture and community development (\$75 million); for agricultural commodities, very largely wheat (\$36 million); for transport and communications (\$34.5 million); for social services (\$33 million); and for irrigation and power (\$22 million). The long dead hand of American imperialism, which used to be seen by India's communists in every nook and cranny of the nation's political and economic structure, is nowhere to be found in these figures—especially if one considers the terms on which the assistance has been given.

Next to the United States, the largest amount of foreign aid has come as a grant of nearly Rs. 36 crores from Canada under the Colombo Plan. Smaller, but nonetheless significant grants have been offered by other Colombo Plan countries also—Rs. 101 crores by Australia, Rs. 1.2 crores by New Zealand, and Rs. 50 lakhs by Britain. These have been put to a variety of uses, ranging from the supply of urgently needed commodities to the provision of facilities for transport and hydro-electric projects. The British contribution may seem small in comparison with what has been offered by other countries, but it is important to bear in mind that Britain is, for India, by far the largest single source of private foreign investment. As the Reserve Bank's latest *Survey of India's Foreign Liabilities and Assets* has shown, no less than Rs. 137 crores out of the gross increase in foreign business investment of nearly Rs. 180 crores (between July 1948 and December 1953) was from the U.K. There is no reason to believe that trends in later years have been very dissimilar. The World Bank, whose programme of assistance to India began earlier than that of some of the other contributors, has offered as loans for private and State projects in this country, Rs. 12 crores during the period covered by the first plan, having already loaned Rs. 20 crores before it.

The scale of foreign aid India has received during her first plan, though it has exceeded initial expectations, suggests that there is no scope for complacency as far as requirements for the second are concerned. There is a wide enough difference between the Rs. 300 crores offered during the past five years and the Rs. 800 crores needed during the next five, to ensure that strenuous efforts will be necessary to make India even more "aid-worthy" than she is. The importance of these efforts will be much greater than it has been in the past, for any shortfall in foreign aid is liable to have much more serious consequences than the mere dropping of one or two projects. The consequences will not be measurable purely in terms of loan and grant statistics. The bold expenditure programmes, and especially the huge scale of deficit financing proposed under the second plan, threaten to give rise to inflationary forces which could make for instability. If the shortage of foreign exchange does not allow these inflationary pressures to be fully controlled, their effects are likely to be transmitted to every single sphere of economic activity, thereby putting an end to planning and to all economic progress, planned or unplanned. The

danger is one that the country would do well to be constantly aware of. This is all the more necessary in view of recent changes in the international political and economic climate which can hardly be claimed as having made India a more attractive proposition in the eyes of her most dependable foreign investors. The existence of excellent investment opportunities abroad, not least in the countries which have hitherto assisted India generously; the tighter credit conditions which have accompanied the growing prosperity of Western Europe and the Americas; and the increasing U.S. emphasis on military rather than economic assistance—are among the important adverse factors to be reckoned with in future. But there is no reason to believe that India will fail completely in her plans for securing investment. Perhaps more than any of the newly-independent countries of Asia, she has shown herself to possess the material and moral substance which attracts the foreign investor. Against such a favourable background, it would be unfortunate if the quibblings of domestic and international politics were allowed to deprive her of so large a proportion of the foreign resources she badly needs.

The following table gives the figures of external resources authorised, estimated utilisation up to 1955-56, and the balance expected to be available for the second five year plan:

	Authorisation	Loan or Grant	Amount expected to be available utilised up to 1955-56	Balance in second five year plan
(Figures in lakhs of rupees)				
U.S.A.				
Wheat Loan	90.91	Loan	90.91	—
Indo-U.S.	102.54	Grant	70.34	32.20
Aid Programme	39.29	Loan	7.60	32.29
I.B.R.D.	12.00	Loan	8.16	3.82
Colombo Plan				
Australia	10.45	Grant	5.26	5.19
Canada	35.64	Grant	19.19	16.15
New Zealand	1.19	Grant	33	86
U.K.	50	Grant	33	17
Ford Foundation	5.40	Grant	1.99	3.41
Norway	27	Grant	13	12
Total:	297.59		203.88	93.71

TUBE MAKING IN INDIA

THE Indian Tube Company (1953) Ltd., whose works Bihar's Chief Minister opened recently near Tata's steel works at Jamshedpur, is a splendid example of Indo-British co-operation in a vital field of industry. The result of collaboration between the two great industrial houses of Messrs. Tatas and Stewarts and Lloyds, this enterprise, as Mr. J. R. D. Tata said in his message, represents an "industrial asset of great potential value to the country which, in the years to come, will make a growing contribution to the country's economic and industrial development, to the conservation of foreign exchange, to the problems of unemployment and to the development of other Indian industries." The tube company will do all these. Besides, it will serve as an example to other Indian houses and foreign concerns seeking an opening in India. The scope for it must expand with the planned development of basic industries in the next quinquennium, if only the Government will be as helpful as it has been in this case. Dr. Sri Krishna Sinha, in his opening speech, was quick to recognise the value of such co-operation to the economic progress of India, particularly to the development of secondary industries. Unfortunately, the second five year plan has devoted much less attention to the development of these industries than it should have. Presumably, it has been left to the private sector to fill the gap.

The Indian Tube Company is therefore taking the right place in India's growing industrial structure, and at the right time. As Bihar's Chief Minister pointed out, the irrigation plans of the country will continue to make a heavy demand on such steel products as pipes and tubes. So will India's growing industrial economy—an opportunity which should be to the advantage of this venture. The Tube Company, as Sir Jehangir Ghandy stated in his speech, has already put up one plant, is constructing another, and the sanction of the Government has been sought for a third. The plant constructed already is called the Fretz Moon mill, because it will produce tubes through what is technically known as the Fretz Moon process. The capacity of the plant is approximately 90,000 tons a year, which is said to represent by far the greater part of the country's demand. Construction work on the second plant, called the electric resistance weld mill with cold rolling, has already begun. The projected capacity is 13,000 tons a year of high quality precision tubes. These two, together with the seamless tube plant when it is put up, will, Sir Jehangir claimed, meet all

the domestic requirements of steel tubes, except for a relatively small tonnage of tubes of diameter larger than 6½ inches. He paid a tribute to the British partners, who are in charge of the design and construction of the plants, for spending as much as 74 percent of the total capital outlay within the country itself, the rest being expended abroad on essential materials. Moreover, Stewarts and Lloyds have so trained the Indian technical personnel that all but three engineers manning the plants are Indian. This is an excellent record, and Mr. Stewart gave the assurance that his firm would continue the policy of training more Indians in their works in England "as and when more men are required for the further plants to be established." Tatas also hold the majority shares in the enterprise, and their partners readily agreed to the proposition when the former put it forward.

CURRENT COIN

N.B.I. Chairman's Review.—Caution is the keynote of the statement (an extract from which appears on a later page) circulated by Mr. J. R. D. Tata, chairman, to shareholders of the National Bank of India with the report and accounts for the year ended last December. The balance-sheet reflects an encouraging expansion, but Mr. Michie says that "this trend is much more likely to be reversed than continued during 1956." Net profits have risen and the dividend has been maintained; it is pointed out however that, "in common with other banks, we have suffered a considerable fall in the value of our holdings in Government securities but this has been taken care of internally." Mr. Michie sums up the prospects on a mildly hopeful note when he says that "this of all times is not one in which to indulge in prophecy, but in so far as our immediate future is in our own hands, I see no reason to be pessimistic." The chairman's remarks on economic conditions in the countries in which the Bank's chief interests lie are among the more notable features of the annual statements. This year, Mr. Michie notes that in India there has been a welcome increase in agricultural productivity, particularly of foodstuffs. Imports in 1955 as a result fell to a new low of just over 750,000 tons. The production targets under the first five year plan have generally been reached or exceeded, and the Government is approaching the second plan with "some confidence." Mr. Michie spotlights two proposals to raise part of the resources needed for the next plan which have not hitherto been very widely noticed. One is to reduce the backing of the paper currency from 40 percent to 30 percent, thereby enabling the note circulation to be increased by Rs. 135 crores. The other is to revalue the gold in the paper currency reserve according to the I.M.F. rate of \$35 an ounce, thereby raising its value by Rs. 78 crores. The second, he says, "is an entirely logical move." Reviewing recent trends in Indian economic policy, including the aim of establishing a socialist pattern of society and the nationalisation of life insurance, the chairman says that there has been "a recrudescence of uncertainty in the minds of industrialists, Indian and foreigner alike, regarding the Government's further intentions towards the private sector, and this uncertainty has not been relieved by the principles of policy outlined by the authors of the second five year plan." A somewhat similar complaint apparently applies also to Burma, but Mr. Michie makes some optimistic remarks about the economic prospects in Ceylon.

Private Sector's Anxiety.—The address of Sir Cowasjee Jehangir, chairman, to the shareholders, at the fiftieth annual ordinary general meeting, at the Bank of India reflected the serious anxiety which the private sector as a whole now feels about its future. Making a pointed reference to the Government's economic policy which is having a wholly constricting effect on the freedom of private enterprise, he said: "To an increasing degree the actions of the Government dominate more and more the commitments of traders and the more dependent upon their assessment of the probable future policies of the Government." He then went on to enumerate the various measures taken in recent months in pursuit of the socialist goal, such as the Budget of 1955, the new Companies Act, the nationalisation of the Imperial Bank, and the nationalisation of life insurance. He went on to express the outspoken view that the Companies Act "appeared to have been drafted, to some extent, with regard to considerations other than those concerning the needs of trade and industry and the interests of shareholders and investors." The legislation, as it was now, bristled with many inconsistencies and incongruities. It was his opinion that it would have to be substantially amended before long, if it was to be made really workable. The nationalisation of life insurance, in particular, had caused much uneasiness. In the first place, the manner of take-over by Ordinance was utterly undemocratic, and the terms of compensation offered were far from fair. He knew the case of one life insurance company whose

shareholders would receive even less than half of what they should get by a correct actuarial valuation of their shares. The proposed levies on dividends, bonus issues and on undistributed profits of investment companies were a curious device of double taxation. The tax on the latter would compel the companies to declare higher dividends, which the Government would tax. Every obstruction, feared Sir Cowasjee, was thus being placed in the way of the private sector for which reason it might not be able to prove equal to the rôle assigned to it in the second plan. When it failed to fulfil the targets, "the Government may have an excuse for nationalising all industries." His speech also contained a reference to the prevailing bank rate which was out of line with the current market rate of interest. That compelled banks to pay higher interests on deposits and charge less on advances.

Soap Manufacturers' Grievances.—Mr. Naval H. Tata's presidential address at the 21st annual general meeting of the Indian Soap and Toilettries Makers' Association contained a strong protest on behalf of India's indigenous soap industry, the bone of contention still being the familiar one of foreign competition. This time however it comes from within the country. According to Mr. Tata, the relative totals of installed capacity—that of the foreign combine in question and that of the indigenous industry—the latter can barely utilise 25 percent while the former is utilising more than 70 percent. He wisely pointed out that remedial measures could only be found by a correct assessment of the causes behind the sad plight of the Indian sector. These Mr. Tata instanced as the domination of the Indian market by a foreign combine whose brands had been established over a number of years coupled with the price of vegetable oils and the undeveloped state of the oil crushing industry. While every sympathy is felt for the indigenous industry in its struggle to establish itself, its situation is far from unique. It is unfortunately one which is faced daily in the world's markets by any new product entering the field in competition with recognised brands. The protective measures urged by the Association, such as application to the Tariff Commission, are more inclined to act as a disincentive to the production of superior goods. The modern manufacturer must perforce win over public opinion by establishing the quality of his product and selling it at a competitive price, by presenting it in attractive packages and through prolonged advertising campaigns. In this last connection, Mr. Tata points out with regret that the Publicity Subcommittee of the Association, although aware of the need to enlist public support, is considerably hampered by the lack of response from members. As far as price is concerned, vegetable oils, which constitute the principal raw material, account for nearly 50 percent of the cost of washing soap. Although the import duty on these has been reduced, a wider exploitation of the indigenous resources would ensure adequate local supplies, while an improved extraction of oil by means of the solvent oil process, would undoubtedly help to reduce the price of Indian soap. As Mr. Tata suggests, the setting up of a national laboratory for research into oils, fats and other products would do much to improve this sector of the economy and at the same time materially assist the indigenous soap manufacturers.

U.S. Business Boom Flattens.—The news that President Eisenhower will run for a second term has removed one of the major uncertainties surrounding the business outlook in recent months, says the First National City Bank of New York in its monthly letter on U.S. business and economic conditions. This announcement will bolster optimism in view of the confidence with which the business and investment community has regarded the present Administration. There is no way of knowing precisely how much political uncertainties weigh in business decisions, and there has been much reason to believe that the forward plans of business men, involving record expenditures for plant and equipment, were firmly grounded on faith in expanding markets and on the need to keep up with competition in introducing new products, cutting costs and building for the future. Nevertheless, the political climate is always to be reckoned with. The new year appears to be carrying on from where the old year left off, with little change in the high rate of business activity. The long rise in overall production and trade has evidently come to a halting point, but there are few indications of decline. Industrial production, retail sales and construction work in January, on a seasonally adjusted basis, were about the same as in December, and the highest for any January in history. Preliminary data indicate that business in February has followed much the same level course. Compared with the first two months of 1955, substantial gains in the neighbourhood of 5 percent to 9 percent for various measures of production and trade, have been realised. The forecasters who have so generally predicted that 1956 in the aggregate will show increases over 1955 can show that so far the figures are running their way.

and that gains are being accumulated against the time when comparisons may be less favourable. The industrial production index, seasonally adjusted, has held at 143 or 144 (1947=100) since last October. This is a record high level. Retail sales, after seasonal correction, have moved sideways for the same length of time. The stability of these and other comprehensive measures, however, does not signify a standstill in business. It conceals adjustments of output in individual lines, shifts in markets, and changes in inventory and order positions. The principal curtailment has been in passenger car output; automobile sales, seasonally adjusted, have also declined somewhat. But during the same period the soft goods industries and mining have advanced to new highs, and despite the automobile slackening, durable goods production has been maintained close to its peak by increased output of machinery and equipment, trucks, building materials and steel. Retail sales of other goods have expanded to offset the easing in automobile sales. Thus adjustments are being made without marked effect on aggregate activity.

The Coal Industry in 1955.—The output of coal in India increased to 38.22 million tons in 1955 from 36.88 million tons in 1954, according to provisional estimates released by the Chief Inspector of Mines in India. Despatches of coal also increased from 32.03 million tons in 1954 to 32.91 million tons in 1955. Coal stocks at pit heads at the end of the year amounted to 3.61 million tons. The average year employment at the coal mines in India was 340,615 in 1955 against 332,320 in 1954. On an average they worked about 8.5 million man-shifts a month in 1955 against 8.3 million man-shifts a month in 1954. Average absenteeism was of the order of 14.0 percent in 1955 against 13.3 percent in 1954. Output per man-shift worked by miners and loaders increased from 1.09 tons in 1954 to 1.10 tons in 1955. The productivity of underground and quarry workers also increased from 0.58 ton in 1954 to 0.59 ton in 1955. The average weekly cash earnings of colliery labour increased slightly from Rs. 12.2 in 1954 to Rs. 12.5 in 1955. The average weekly hours showed a fractional increase and remained more or less stationary at 47. An appreciable improvement has been recorded in the use of mechanical equipment. During the year, about 8.5 million tons of coal were cut by coal-cutting machines, 1.3 million tons conveyed mechanically and 120,000 tons loaded mechanically. The corresponding figures for 1954 were 8.2 million, 1.2 million and 93,000 respectively.

The Outlook for Nickel.—The increased tempo of industrial activity in Canada, the United States, Europe and elsewhere stimulated a higher demand for nickel in every established field, according to the annual report for 1955 of the Mond Nickel Co. Ltd. Larger amounts of nickel were required for defence and the demands of the U.S. Government stockpile continued to be substantial. While civilian industry did not obtain all the nickel it wanted, it received additional supplies from the record output. Compensating for its increased defence demand, the U.S. Government initiated a programme of diverting to industry some of the nickel it had scheduled for stockpile. The company expects that the nickel demand will continue at high levels throughout 1956 and that its output will find a ready market. A continued heavy demand is also indicated for copper, platinum metals and other products. To make a full contribution to current supplies, the company will again operate at maximum capacity. At the beginning of 1955, the nickel supply outlook for that year was encouraging. It was evident that world production would increase, and there were indications of a downward trend in defence requirements. Contrary to indications, these requirements increased substantially. It is stated that, during 1956, the defence requirements for nickel will remain high. On the other hand, total free world nickel production should again increase; and, in the United States, nickel diversions to industry from the scheduled intake for stockpile should be higher than during the previous year. The total supply for civilian industry in 1956 is expected, therefore, to be larger than in 1955, although still falling short of the anticipated demand. Record world production of nickel, achieved through the increased output of established producers and the entry of new producers, has been stimulated by world events since 1950. To sustain nickel production at the current or at the even higher levels anticipated in the years to come requires the creation of a peace-time market very much larger than now exists. "We have spent half a century in building markets for nickel. To contribute to the growth of future markets, we are applying this experience in market development and are further expanding our research and sales activities. Our confidence in the success of this programme is evidenced by the fact that, simultaneously with market development, the company is pushing forward its exploration and mine development programmes in the interest of future supplies of nickel," it is stated.

THE NATIONAL BANK OF INDIA LIMITED

BALANCE SHEET AGAIN REFLECTS EXPANSION

MR. J. K. MICHIE'S REVIEW OF TRADING CONDITIONS

The annual general meeting of The National Bank of India, Ltd., will be held on March 27 at 24, Bishopsgate, London, E.C.

The following is an extract from the Statement by the Chairman, Mr. J. K. Michie, circulated with the report and accounts for the year to December 31, 1955:—

Our balance sheet again reflects expansion, the total of our consolidated figures being £168,653,013 against £162,031,432 at 31st December, 1954. For reasons which are alluded to later this trend is much more likely to be reversed than continued during 1956.

After full provision for taxation, bad and doubtful debts and other necessary reservations our consolidated net profits are £421,839 against £385,924 for the previous year. The two dividends declared total 15% which is the same rate as for 1954.

Of the resultant balance as last year £75,000 has been transferred to Premises Account and £85,000 has been allotted to Contingencies Reserve Account against £70,000 last year. The balance carried forward has been increased by £15,892 at £342,158.

In common with other Banks we have suffered a considerable fall in the value of our holdings in Government securities, but this has been taken care of internally.

India

Irrigation schemes, the increasing supply of water from tube wells and improved methods of agriculture have all contributed to a most gratifying increase in agricultural productivity, particularly of foodstuffs, and imports in 1955 fell to a new "low" of just over three-quarters of a million tons. This additional production is all wanted to keep ahead of the growth of population.

Generally, the production targets set for the first five-year plan have been reached or exceeded and Government is facing its second programme with some confidence.

An outline of this has recently been published which provides for a total investment of Rs. 6,100 crores (£4,575 millions), of which investment in the public sector will be Rs. 3,800 crores (£2,850 millions) whilst investment in the private sector is placed at Rs. 2,300 crores (£1,725 millions). The ratio of public to private investment is 62% to 38%. Combined development expenditure by Central and States Governments is to be of the order of Rs. 4,800 crores (£3,600 millions). The broad aims are to create 10 million additional jobs, of which 8 millions will be non-agricultural, and progressively to raise national income by 25% and per capita income by 18% between now and 1961. We sincerely hope these aims will be achieved. It is proposed to finance the plan to the extent of 50% from budget surpluses and loans. £200 millions is to come from deficit financing while £400 millions is expected from foreign sources, leaving a gap of £200 millions to be filled.

Finance for Government Programme

In a proposed amendment to the Reserve Bank of India Act indications are given of how part of the finance for the plan is to be found. There are two proposals, one to reduce the backing of the paper currency from 40% to 30%, thereby enabling the note circulation to be increased by Rs. 135 crores, the other to revalue the gold in the Paper Currency Reserve to the International Monetary Fund rate of \$35 per ounce, thereby raising its value by Rs. 78 crores. The second is an entirely logical move.

The Planning Commission purposes the creation of a socialist pattern of society and that includes "a more even distribution of wealth and power" with limited ceilings for personal net incomes. Higher taxation is therefore in view.

As a part of her economic policy India has just announced her decision to nationalise Life Insurance so that she may channel the growing funds from this source more directly into the five-year plan than happens through the individual investments by Companies in Government securities, etc.

The immediate results of Government's action have been a sharp and general fall in Stock Exchange values and a recrudescence of uncertainty in the minds of industrialists, Indian and foreigner alike, regarding Government's further intentions towards the private sector, and this uncertainty has not been relieved by the principles of policy outlined by the authors of the second five-year plan.

The Imperial Bank of India is now the State Bank of India and a controlling interest has been acquired by Government through the Reserve Bank of India. It was fore-shadowed that certain other indigenous Banks would be included in the new State Bank, but so far this has not been done. The primary reason for the change of ownership and control was the provision of banking facilities in rural areas at a faster tempo than a purely commercial undertaking could justify.

Industrial Disputes

A very regrettable feature of the banking year has been the strikes and at times near-riots initiated by banking Clerical Staffs at Calcutta, Bombay and other of the principal cities which arose out of certain provisions in the Industrial Disputes (Banking Companies) Decision Act, 1955, which laid down the general lines on which staff should be paid.

At time of writing the atmosphere is one of comparative peace, but if the Central Government is to lay down rules they should at least ensure that they are kept by both sides. The alternative is anarchy and the impossibility of Banks carrying out their obligations under the Negotiable Instruments Act, which in turn would mean the paralysis of business, a state of affairs which was within a hairbreadth of happening in Calcutta early in January.

Throughout our history in India we have taken pride in the good relations that have existed in our offices and we regret exceedingly that these have been disrupted—we hope only temporarily—by circumstances beyond our control. To all those who in most

difficult conditions have helped to keep the machinery of banking from coming to a full stop we offer our sincere thanks.

Ceylon

Generally the economic picture of the Island is a favourable one. Lower rice prices combined with a larger internal production greatly improved her balance of trade. Rubber prices have remained at remunerative levels, but the course of tea prices has borne a close resemblance to that of rubber and no one can yet say that it has settled at "normal", although it is thought that the principal factors which caused last year's extreme swings have worked themselves out. The recent rapid increase in Ceylon's rice production is a fine achievement although at the moment a severe drought is causing a setback. The target is 650,000 tons per annum which would go far to meet the needs of the increasing population.

The Development Finance Corporation I mentioned last year has not yet been formally constituted, but this is expected to happen in the very near future.

It has just been announced that an oil refinery is to be built near Colombo by British and American oil interests, which will be an important addition to the economy of the Island.

Colombo Plan

The Colombo Plan is being steadily enlarged and the tempo of development in Asian member countries continues to rise, as is indeed highly necessary, for it is estimated that the population over the area covered by the plan is increasing at the rate of 10 millions per annum.

In the not very long run, in spite of very satisfactory increases in food production in deficit countries, there seems to be a certain market for any rice Burma and/or Siam can export, particularly as per capita standards of nutrition are still estimated to be below the 1939 level.

It is only right to point out that at least two-thirds of the Colombo Plan funds are found by the countries which benefit, but outside aid is not only in money and to date 7,200 men and women have been or are

being technically trained outside the area. The long-term advantages of this scheme will be very great.

Bank Rate Rises

A year ago to combat inflation the Bank of England rate was raised to 4½%, later the "credit squeeze" was ordered, but even together these measures unfortunately have been proved inadequate. As I write the Bank rate has been hoisted to 5½% and other measures taken aimed to restrict spending. During 1955 production in the United Kingdom was increased by about 4½%, but spendable incomes rose by 7½%, and as by and large these incomes were spent we had inflation to at least the extent of the difference. The sharp fall in the gold and dollar reserves is another disquieting feature and is a reflection of our adverse trade balance. So without doubt we shall have further and very necessary anti-inflationary measures imposed upon us, as we as a community having failed to impose them on ourselves.

In a totalitarian society there is no comparable problem. Management and labour just have to produce prescribed "norms" and, of their production, only a certain percentage is released for internal consumption, the balance being ploughed back into development or directed into export. As only a small percentage of each annual increment in production is earmarked for domestic enjoyment, the rate—though not necessarily the volume—of increase in gross national product is greater in, say, Russia, than in democratic countries.

Possible Effects Overseas

As a British overseas bank our interest in the economic measures taken by this country lies partly in the repercussions they have elsewhere. For instance, it is vital that the United Kingdom should be able to continue to make important contributions to the Colombo Plan and to other similar developments within the Commonwealth as well as to expand its investments abroad through private enterprise. If we cannot do these things we shall lose our place in the markets and in the regard of the countries concerned.

It has also to be realised that the effects of the credit squeeze do not begin and end in London or in the United Kingdom. It is true that the centre of the sterling area naturally takes the first pressure; but the effects of action at the centre necessarily work their way outwards, and it would be idle to suppose that borrowers nearer the periphery of the sterling area will remain unaffected by recent monetary measures in this country. It will be of interest to watch the longer-term effects in this wider context. Overseas banking cannot but be made increasingly aware of this aspect of the squeeze during the current year, and I would not be surprised to see firmer rates in many countries which to outward appearances so far have not been affected.

1954 £139,614,754		1955 £139,614,754	

NOTES

- Securities to the nominal value of £265,000 (1954—£265,000) have been lodged as security for Government accounts and for guarantees issued to Indian Government Departments.
- Bills receivable rediscounted amount to £246,364 (1954—£159,632) of which up to 23rd February, 1956, £130,31 have run off.
- There are forward contracts outstanding for the purchase and sale of Bills and Telegraphic Transfers.
- Liabilities have been incurred in respect of building contracts for new premises amounting to approximately £495,000 (1954—£389,000).

REPORT OF THE AUDITORS TO THE MEMBERS

We have obtained all the information and explanations which in the best of our knowledge and belief were necessary for the purpose of our audit. In our opinion proper checks of account have been kept by the Bank so far as appears from our examination of these books and proper returns adequate for the purposes of our audit have been received from Branches not visited by us. We have examined the above Balance Sheet which is in agreement with the books of account and Returns. In our opinion and in the best of our information and according to the explanations given to us the Balance Sheet gives the information required by the Companies Act, 1947, in the manner thereby authorised for Banks and on such basis the Balance Sheet gives a true and fair view of the state of the Bank's affairs as at 31st December, 1955.

We have also examined the annexed Consolidated Balance Sheet and Consolidated Profit and Loss Account of the Bank and its Subsidiaries dealt with thereby with the audited accounts of these Companies. In our opinion such Consolidated Balance Sheet and Consolidated Profit and Loss Account have been properly prepared from such accounts and, on this basis, give a true and fair view of the state of affairs and of the profit or loss of the Bank and its Subsidiaries as far as concerns members of the National Bank of India, Limited.

London, 24th February, 1956.

COOPER BROTHERS & CO.,

Company Meeting

THE BANK OF INDIA LIMITED

SIR COWASJEE JEHLANGIR'S SURVEY

Extracts from the Speech of the Chairman of The Bank of India Limited, Sir Cowasjee Jehangir, B.A., C.B.E., K.C.I.E., delivered at the 50th Annual Ordinary General Meeting of the Shareholders of the Bank held at Bombay on Thursday, the 8th of March, 1956.

The year saw far-reaching events take place in the direction of state ownership and the progress towards a socialist state in India. Such events included the passing of the Finance Act, 1955, with drastic, and almost penal, increases in the taxes on salaries and incomes, the nationalisation of the Imperial Bank of India and the submission of the Companies Bill which has now become an Act. To an increasing degree the actions of the Government dominate business and the commitments of traders are more and more dependent upon their assessment of the probable future policies of the Government.

The new Companies Act, which was passed on the 18th of January last and comes into force from the 2nd of April, is a gigantic and voluminous piece of legislation which, I believe, I am correct in saying, goes further in a number of respects than corresponding legislation in any other country. The Act would appear to have been drafted, to some extent, with regard to considerations other than those concerning only the needs of trade and industry and the interests of shareholders and investors. The comprehensive and far-reaching character of the legislation will give rise to many difficulties and there will be inconsistencies and incongruities and I think you will find that substantial amending legislation will have to be passed before the new Act has been in force for any length of time. The ramifications of the Act will call for much tolerance on the part of those administering it during, at least, the first months of its life.

Nationalisation

Since the end of the year there has been a further major operation on the part of the Government which cannot but cause uneasiness. I refer to the nationalisation of life insurance business throughout the country on the 19th of January. It is not to our credit that this nationalisation should have been effected by the undemocratic method of an ordinance. The worst aspect of nationalisation is the unfair method of compensating shareholders for the value of their shares. This is being done under the amendments made in the Constitution on the 27th of April, 1955, by the Constitution (Fourth Amendment) Act, 1955. I know of an instance where the shares of a life insurance company have been valued by actuarial calculation at a certain amount and it is now well known that on the basis of the compensation indicated in the Bill which has followed the Ordinance, the Government intend to pay less than half that value. I do not intend to say that this is a country governed under democratic principles that the Government should take advantage of the amendment of the Constitution to deprive shareholders of their legitimate dues, especially to such an extent as I have just mentioned.

Banks continue to suffer from having to pay higher rates of interest on deposits without being able to charge correspondingly higher rates of interest on advances. The establishment and over-head expenses of banks, which call for a large margin between lent cost of money lodged and the yield on money lent, continue to expand. The bank-rate, which has been 3½% since the 15th of November, 1951, is out of gear with the current interest rates in this country. To obtain and keep deposits, banks must pay interest to depositors at market rates of interest which are governed by the supply and demand of money. On the other hand, banks usually grant advances at rates of interest related to the bank-rate. The rates of interest charged to borrowers consequently do not rise if the bank-rate remains stationary and lags behind current upward movements in the market rates of interest. In such conditions banks are paying increasing interest on deposits and getting very little more interest from advances.

Profits

The Bank's profits for 1955 are nearly Rs. 85 lakhs against Rs. 77 lakhs for 1954. Before the profit figure has been struck, usual appropriate and prudent provisions have been made and shareholders will, I feel sure, consider the increase of nearly Rs. 8 lakhs in the profits as eminently satisfactory.

The provision for taxation absorbs Rs. 25 lakhs against Rs. 29 lakhs last year. By reason of the revised taxation proposals in this year's Central Budget introduced last week on the 29th of February, the Bank's liability for tax will now be about Rs. 5 lakhs more than the provision, but that will be met in the current year's accounts.

Your Directors propose to place to the Bank's Landed Property Account the sum of Rs. 3,00,000 to pay an increased final dividend of 10 per cent, free of income-tax, absorbing Rs. 25 lakhs, and making, with the interim dividend of 6 per cent, paid last August, a total of 16 per cent, per annum, or Rs. 40 lakhs for the year, free of income-tax. The amount carried forward is increased at something over Rs. 13 lakhs against Rs. 9 lakhs a year ago.

I should like to refer to the Central Budget introduced in the Lok Sabha a week ago on the 29th of February. I must confess to a pessimistic view of the proposals. I might describe the Budget as one to make the poor poorer and the rich richer. Leaving aside China, about which we know little, India is one of the poorest countries in the world and, taking into consideration the size of its population, it has fewer rich men than any other country. We hear a great deal about the equalisation of wealth. Since the landed classes have already been more or less wiped out, I presume that this can only refer to the industrialists. Does the Government mean that these industrialists are of no service to the country and that they do not give employment to hundreds of thousands and serve the country in many other directions of which the Government are well aware? There is now an impression that the intention of the Government is to wipe out the private sector. Every obstruction is be-

compel such companies to pay a very high dividend and then tax them for doing so.

Few outside India realise that India can claim to be one of the highest taxed countries in the world. The Government have included all sections in the orbit of taxation by increased excise duties. Formerly, deficit financing was unheard-of by financiers and economists. India has put into operation very big schemes by deficit financing. The success of these schemes will depend upon good administration and no corruption. It appears to me that the success of deficit financing mainly depends on getting value for money. Maladministration and corruption may frustrate the very foundation of deficit financing. I am only speaking aloud what I know thousands are saying in ordinary conversations.

Later in the year, the Bank will complete fifty years of its existence and shareholders may like to know the intentions of the Directors regarding commemoration of such an event.

The Directors consider that the completion of fifty years of the Bank's life should be marked by the issue to shareholders of one bonus share of Rs. 50 fully-paid for each 5 shares of the Bank. The Directors therefore propose to apply to the Controller of Capital Issues, Government of India, for the necessary sanction.

The sum of Rs. 50 lakhs would be transferred to Capital from the Reserve Fund, making the paid-up Capital Rupees three crores and the Reserve Fund Rupees three crores and two lakhs. The Bank's Capital would thereafter consist of two classes of shares, namely, the present partly-paid shares and the new fully-paid shares.

Shareholders will appreciate that with the 2½ extra dividend already recommended and the further proposed increase in capital, if sanctioned by the Government, the future dividends will depend not only upon the profits of the Bank but also upon the Government's taxation policy.

You are never alone. In each of the 84 lands PAA serves, there's always a warm welcome ready. Pan American is big enough to serve the world—but never too big to be personally interested in serving you.

"We were expecting you..."

Anywhere you fly in the world, one of Pan American's 411 offices is at your service

Wherever you fly by Clipper*, friendly, capable PAA people stand ready to help you. They speak your language, will assist you through customs, with baggage, hotel reservations, directions, introductions—and offer the same smiling courtesy and understanding service you get in your local Pan American World Airways office.

On any flight you take, by Clipper, you get the priceless advantage of Round-the-World experience. Only Pan American circles the globe...has made over 50,000 Atlantic crossings...and has 1200 pilots who have flown over a million miles each! A record of unmatched experience—ready to serve you.

Let your Travel Agent arrange your trip—his services are free. Or call Pan American in:

Calcutta: 42, Chowringhee, Tel. 44-2651, 2652

BANKING AND INSURANCE UNDER SOCIALISM

CHANGING DUTIES OF THE STATE

By R. M. Mitra

THE "narrow doctrinaire thinking which has hardly any relation to the reality of the present-day India" has been denounced by the Prime Minister while moving a resolution on economic policy at the open session of the Congress at Shaheednagar. It follows logically that India's objective of a socialist or socialistic pattern of economy is not born of a doctrinaire pursuit, but that it represents an ideological expression of the goal of optimum production and equitable distribution. It is, therefore, encouraging to note that the President's address to the present session of Parliament has also emphasised that "the basic criterion for determining our lines of advance must always be social gain and the progressive removal of inequalities."

Yet it seems unfortunate that the method employed in translating the objective into economic reality, has served, perhaps unwittingly, to develop doctrinaire thinking on new lines. The increasing emphasis on the elimination of the business man and the installation of official administration as the right and proper "lines of advance", is leading to a new pattern of social growth in which official management of business may come to be a synonym for "social gain", and it may cease to be remembered that stability and ordered growth, which help remove inequalities, constitute the real social gains. There are disquieting signs that in the process of development of the new doctrinaire conception of social gain, considerations relating to stability and growth are being lost sight of. The conversion of the Imperial Bank into the State Bank and the promulgation of the Life Insurance (Emergency Provisions) Ordinance are clear landmarks in the development of the new doctrine.

The Pattern of Socialism

The incongruity of a doctrinaire method taking form in a non-doctrinaire approach seems to be the result of the attempt to formulate the objective in terms of a nebulous philosophy rather than in terms of practical necessities. The principle of official management seems to be creeping in as a ready solution of the unresolved principles which constitute the fluid theory of socialism. A socialist pattern necessarily involves some form of collective or communal ownership of wealth. The idea of communal ownership of the means of production and/or distribution can be historically traced to Plato. But the fact remains that centuries of deliberations have not succeeded in evolving commonly accepted principles of socialism, its justification or *modus operandi*. It is not yet generally agreed whether equitable distribution, or efficient management or the security of the State provides a justification for socialism. Again it is not yet beyond controversy whether collective ownership, or State ownership, or State control without ownership, constitutes socialism. Lastly, there is no clear comprehension of the rôle of market mechanism. It is not known whether it is to be retained in a scheme of socialistic economy, and if so, whether the mechanism can work with the necessary vigour usually associated with conditions of individual initiative and competitive growth. Also, it is interesting to note that there are propounders of socialism who visualise extinction of the State in their concept of socialism. Fourier would extinguish the State; though Saint-Simon reconciles himself to the existence of the State, he is bitterly critical of the rôle of politicians.

The authoritative declarations so far made about the shape of the socialistic pattern which is being woven in India, seem to reflect the influence of the vagueness and uncertainties which obscure the picture of socialism. Elimination of the private sector is not regarded as essential for the fulfilment of the socialistic objective. But it is considered impracticable to draw a dependable line of division between the public sector and the private sector. It is, again, not considered necessary that all the business units in an industry should be taken over by the public sector in order to nationalise the industry. If it is found expedient or otherwise considered sufficient, some units may be taken over and others may be left in the private sector.

The Safety of Credit-Money

The Planning Commission has rightly emphasised the importance of an efficient and purposive credit system in the implementation of national economic plans. But the view that nationalisation of the system will create the desired measure of efficiency and vigour smacks of a doctrine which remains unproven. Furthermore, it has been noted that there are no clear principles governing nationalisation or the full extent of its applicability. The result is an uncertain approach; while the State Bank of India has taken over the Imperial Bank and steps have been taken to prevent its losses being borne by its depositors, depositors in the rest of the banking system are denied similar protection. It has not been felt necessary to consider whether such ill-planned protective measure will help in maintaining stability of the banking system when involved in a real economic crisis.

The Finance Minister in his broadcast on the

rationale of nationalisation of insurance has stated that one of the reasons justifying his action is the resulting safety of the policy purchased by the insured. The question arises, therefore, if nationalisation is necessary to ensure the safety of credit-money, why the entire banking organisation has not been nationalised and why a section of the banking system is allowed to receive deposits if depositors' interests are thereby rendered comparatively less safe. It is submitted, however, that the reason why private organisations may fail "but the State cannot fail" as claimed by the Finance Minister, is not better administration, less dishonesty or more farsighted vision. The uninterrupted continuity of a State organisation is accounted for by the fact that losses arising from official mistakes or wrongs are distributed over the whole community, and do not impinge on a limited sector. It is undeniable that when the impact of loss is borne by a limited section of the community the processes of production and distribution are interrupted and cause multiplying loss to the whole community. But this does not explain why it is considered moral to expect the taxpayer to shoulder the consequences of failures and lapses of an organisation if it is conducted by or under Government officials and not if conducted by business men. If safety of credit-money is a major responsibility of the State, it is puzzling why it is not considered prudent for the State even to suggest the introduction of a system of deposit-insurance regarded as an imperative measure of democratic control in the American system of banking and specifically recommended by the Shroff Committee for the consideration of Indian banking authorities. It seems an uncomfortable conclusion that the concept of nationalisation which dominates official thought is embodied in a growing—if undefined—theory of identification of official administration with people's interests.

The Creative Force of Incentive

It is to be hoped, therefore, that before the Indian socialistic endeavour acquires the characteristic rigidity of a doctrine, it may yet be realised that official administration is as much liable to mistakes and corrupt or corruptive practices as is a private business organisation. It may yet be appreciated that collective absorption of loss which provides safety for an official organisation, is a measure which may equally be used in private organisations, as in the case of deposit-insurance in the U.S.A. And it may yet be recognised that absorption of loss is only one (though important) aspect of the processes of production of wealth. Absorption prevents disruption, but does not help in initiating production or stimulating progress. It is here that the question of incentive acquires an overwhelming importance.

Professor Schumpeter, in his book *Capitalism, Socialism and Democracy*, has tried to prove that economic progress has now become an automatic process, that "technological progress is increasingly becoming the business of teams of trained specialists who turn out what is required and make it work in predictable ways". The Professor concludes that further economic progress does not require the push of incentive. It is also argued that in modern conditions there is no scope for the operation of incentive, that the entrepreneurs themselves have lost incentive. It is suggested that with the increasing size of individual units, an element of impersonality is growing even in private business; the old urges of ownership, family continuity and accumulation have been steadily weakening with a consequent loss of incentive. John Jewkes subjects these arguments to detailed analysis in his book *Ordeal by Planning*. He shows that the very thrill of risk-taking and a sense of comradeship are no less powerful sources of incentive than the elements detected by the Professor; that this thrill and sense are psychological products of entrepreneurship and not of bureaucratic administration, that left to themselves, the technicians will have no particular reason for taking risks. As regards the necessity for incentives, John Jewkes maintains that "teams of technicians will almost invariably bog themselves down without direction or purpose" which incentive alone can provide.

Spreading Losses

It is hoped that the authorities in India will not ignore the practical necessities of the situation and allow themselves to be guided by theoretical abstractions. The necessity of the situation as it appears in India, is that entrepreneurial activities and forces of competitive growth still require to play a useful part in the process of economic development. On the other hand, it is also, perhaps, equally necessary that losses or failures in strategic sectors of the economy should not be allowed to result in the disintegration of vital productive and distributive activities. It may be readily agreed that the businesses of insurance and banking occupy strategic sectors in the economy. The reorganisation of their structures should, therefore, be based on a recognition of the importance, and harmonisation, of competitive growth and collective absorption of losses. The functions of the State in enforcing the rules of competition and in regulating collective absorption can be defended

rightly as a modern version of the time-worn concept of "the maintenance of law and order".

The legislative preparation for the new shape of the economy seems to show that the principle of control and regulation by the State, devised to maintain "law and order" in business, has reached a fairly advanced stage of formulation. But the purpose of such control and regulation remains an ill-explored field. If control is intended to prevent misuse or abuse of economic power, if regulation is designed so as to secure fair distribution of gains between labour, management and the State, and also to promote economic stability, it is not clear what further purpose State-management or State-ownership is calculated to achieve. It also seems odd that while it is considered the legitimate right and appropriate function of the State to regulate the distribution of gains of privately owned enterprises, there is still a lingering sense that the losses of State-owned ventures only can be distributed over the community (through levy of taxes and other statutory charges) and that losses of privately owned ventures should be borne wholly by the persons directly concerned, even if the impact of such loss may produce widespread repercussions and threaten the stability of the economy.

State Control of Life Insurance

The preliminary steps towards State control of the life insurance business were taken with unmistakable determination and the necessary Bill has been introduced in Parliament to give full effect to its nationalisation. But it may yet not be found impossible to provide an atmosphere in which the forces of competition may have an opportunity to operate. The Bill contemplates a monolithic corporation. The Select Committee to whom the Bill will be referred may consider whether the Bill will be referred may consider whether in several corporations could not be set up in order to foster a wholesome sense of group-feeling or comradeship, on the one hand, and a spirit of fruitful competition, on the other. These corporations need not necessarily be organised on a geographical basis like State financial corporations. Insurance companies situated in different States but possessing comparable features could be taken over by individual corporations, subject, of course, to the requirements relating to economic size. Each corporation could have freedom to operate in any part of India.

As the private sector is still expected to play an important part in the economic development of the country, it seems also important that the shareholders and managements of the insurance companies should receive such compensation as will not discourage future incentive for private enterprise. Section 6 of the Ordinance provides for compensation for the management. It appears that this Section penalises a management that has earned sufficient profits but has utilised a major portion of such profits for the benefit of the policyholders, whereas a management that has earned no profit seems to obtain more favourable treatment. It is hoped that the provisions contained in the Bill will be revised by the Select Committee if necessary, to ensure that a more rational basis is provided for the compensation of share-holders.

It is also necessary to point out that as a result of the nationalisation of insurance, the ownership of shares and debentures in many industrial concerns will pass on to the State. The total value of the shares is likely to be about Rs. 35 crores and that of debentures Rs. 25 crores. If there is a hasty unloading of these industrial securities, the stock markets may be thrown into chaos with a grave loss of investors' confidence. It is suggested, therefore, that the recommendations of the Shroff Committee be implemented in setting up a system of rural banking. Thus a broad basis could be created for industrial investment by the increasing groups into whose hands will pass the increasing flow of money induced during the execution of the second five year plan. The State could continue to hold the securities till suitable opportunities for re-sale are provided through the organisations suggested above.

Stability of the Banking System

Lastly, it may not be out of place to express the hope that adequate steps will be taken to ensure stability and strengthen confidence in the banking system. In this connection, appropriate measures for dealing with banks found unsuitable for licence should receive prior consideration. It must be considered also whether, after all, the statements that have been made about the comparative safety of official organisations, it is not necessary to give suitable effect to the recommendations of the Shroff Committee relating to the insurance of bank-deposits.

The Indian banking system now appears to present a picture of strength and soundness. But this appearance should not engender a sense of complacency. The system will face a crucial test when the State Bank carries out its obligation to open 400 branches in rural and semi-urban areas and the State-sponsored co-operative banks expand their activities. New income-groups, and out any banking tradition, will then find themselves called upon to choose between the well-understood safety of a much-advertised State-owned or State-sponsored institution and ill-understood services of a much-criticised private institution. The situation may become further confused if the unlicensed banks still receiving deposits are ultimately wound up in a process of liquidation resulting in a loss to the depositors with a deleterious effect on the revived confidence in the private banking system.

Finance in India and Abroad

THE CALCUTTA MONEY MARKET

BIG DROP IN BILLS

Wednesday, 14th March.

STRINGENT conditions have continued to prevail in the money market during the past week. There is excellent demand for funds and the pressure on bank overdraft rates has not abated. The requirements of the sugar industry are unchanged and those on account of raw jute purchases are now running at record levels. Money is slightly easier in the interbank market, but demand remains good and the call rate is unchanged at 3½ percent, with transactions reported up to 4 percent. There has been a sudden drop in the supply of export documents in the past week. Those bills which have come to hand have been chiefly on account of tea. It is reported that there are some prospects of an improvement in the supply of bills in the near future. Remittance has been moderate. Sterling has strengthened against the dollar and the dollar rate now quotes Rs. 477½.

Bullion was steady on good support. Silver advanced from the previous week's level of Rs. 174 to Rs. 175-8, quoted today. The rate for ready delivery was quoted at Rs. 175-3. The London price was unchanged at 79d. The price of foreign silver in New York remained the same at 91½ cents.

Gold ruled steady in sympathy with silver and the price rose from Rs. 101 to Rs. 102-15. The sovereign at Rs. 63-4 was 9 annas higher.

Tenders for Rs. 1 crore of 91-day Government of India Treasury Bills, which were opened on 13th March, totalled Rs. 1,06,00,000. The average rate of acceptance rose from Rs. 2-8-5 to Rs. 2-8-6 per cent per annum. Tenders at Rs. 99-6 were accepted in full and those at Rs. 99-5-9 were allotted approximately 39 percent. Tenders for Rs. 1 crore of 91-day Treasury Bills will be received up to Monday, 19th March. During the week ended 9th March, Treasury Bills for Rs. 44,17,25,000 were sold in favour of the Reserve Bank of India.

Further rises of Rs. 23.58 crores and Rs. 25.43 crores in the total note issue and notes in circulation to Rs. 1,452.96 crores and Rs. 1,444.09 crores, respectively, were outstanding features of the return of the Reserve Bank of India for the week ended 9th March, 1956. The expansion in currency was covered by increasing foreign and rupee securities by Rs. 15 crores and Rs. 10 crores to Rs. 697.16 crores and Rs. 613.23 crores. This was done by transfers from the Banking Department in which balances held abroad and investments declined by Rs. 13.31 crores and Rs. 9.79 crores to Rs. 40.61 crores and Rs. 37.62 crores. Deposits of the Government of India and other Government accounts dropped by Rs. 5.25 crores and Rs. 7.47 crores to Rs. 54.31 crores and Rs. 10.55 crores. Balances of commercial banks at Rs. 47.40 crores were Rs. 1.95 crores lower. Other loans and advances rose from Rs. 63.29 crores to Rs. 68.25 crores, of which advances to scheduled banks against usance bills amounted to Rs. 23.46 crores (Rs. 25.31 crores). These advances totalled Rs. 23.26 crores since 1st January, 1956. Ways and means advances stood at Rs. 4.37 crores against Rs. 2.89 crores.

The return of the State Bank of India for the week ended 2nd March, 1956, shows a drop of Rs. 3.59 crores in total deposits to Rs. 233.34 crores. Investments in Government securities and other authorised investments are up by Rs. 34 lakhs and Rs. 4 lakhs to Rs. 105.46 crores and Rs. 9.79 crores, respectively. Advances, including loans, cash credits and overdrafts, and bills discounted and purchased have advanced by Rs. 5.74 crores to Rs. 126.16 crores. Cash and balances aggregate, in consequence, shown at Rs. 18.11 crores or Rs. 5.67 crores less.

The statement of the position of scheduled banks for the week ended 2nd March, 1956, discloses Demand and Time liabilities at Rs. 623.12 crores (Rs. 5.07 crores on account of borrowings from banks) and Rs. 418.70 crores (Rs. 3.97 crores) compared with Rs. 631.06 crores (Rs. 4.41 crores) and Rs. 418.08 crores (Rs. 3.27 crores), respectively, in the previous week. Cash has declined by Rs. 4 lakhs to aggregate Rs. 34.78 crores, while Rs. 1.21 crores to stand at Rs. 54.47 crores. There is a drop of Rs. 1.72 crores in investments to Rs. 373.54 crores. Advances and bills discounted at Rs. 711.88 crores reveal an increase of Rs. 4.87 crores. The ratios to total liabilities of cash and balances and of advances and discounts are, in consequence, shown at 8.6 percent and 68.3 percent against 8.4 percent and 66.4 percent.

At the annual general meeting of stockholders to be held on 4th April, the Directors of the CHARTERED BANK OF INDIA, AUSTRALIA & CHINA will recommend a final dividend of 7½ percent actual, subject to income tax, making 15 percent for the year 1955 after providing £125,000 for the Pension Fund; £20,000 for Widows and Orphans Fund; £200,000 for bank premises; £100,000 for contingencies and with £405,375 carried forward.

The following is a statement of the cash balances of the Central Government on the last day of December, 1955:—

	Rs.
(1) At the Reserve Bank of India in India	49,44,56,000
(2) At treasuries in India	2,03,15,000
(3) In England (Sterling converted at 18d. the Rupee)	2,19,75,000
Total	53,67,46,000

ZAGREB SPRING FAIR

MARCH 30th to APRIL 8th, 1956.

This year's Fair will be even bigger than the 1955 Spring Fair at which over 1,000 enterprises displayed more than 3,000 exhibits and 126,000 visitors attended. The rapidly expanding economy in Yugoslavia makes it possible to offer a wide range of products, including mining, timber and wood products, textiles, engineering and electrical equipment, handicrafts, tobacco and medicines, glassware, foodstuffs and wines. A special section of the Fair will be devoted to featuring Yugoslav craftsmanship. There are exceptional facilities for buyers and visitors with Fair Certificates, including 25% reduction in fares on Yugoslav Federal Railways, Yugoslav Airways and Adriatic Shipping Line, and visas issued at a reduced price.

Further information and Fair Certificates can be obtained from Yugoslav commercial and diplomatic representatives or direct from

ZAGREBACKI VELESJAM, Savska Cesta 25, Zagreb, Yugoslavia.

TENDER FOR SUPPLY OF PAINT BLACK
READY-MIXED FOR WAGONS

Tender No. GM3/56/68CS (56) is invited by the General Manager, Garden Reach, Calcutta-23 for supply of 50,000 Gallons of Paint Black ready-mixed quick hard-drying for wagons to C.M.E.'s Specification. Tender form is obtainable from the office of the Controller of Stores Garden Reach, Calcutta-23, (IB Section) on remittance of Rs. 5/- by Money Order (not refundable) in case of Mofussil firms and on production of Cash Receipt from the Chief Cashier, Garden Reach, Calcutta-23 by local firms. Earnest Money is Rs. 2,500/- in cash. Valid Income Tax Clearance certificate must accompany the tender.

Closing date is April 6, 1956 at 12 noon.

Two people
... but the same tune

IN OTTAWA or in Delhi, in Montreal or in Calcutta,
the pipers play the same tune.

This particular tune is of a ballad which says that, some twenty years ago, Canadian enterprise helped to initiate the development of the aluminium industry in India. Today, Canadian technical and financial resources are again helping the industry to install a new smelter, which will be India's biggest, at Hirakud, Orissa.

The ballad ends with the rejoicing that Canadians and Indians are partners in India's progress towards industrialisation.

Indian Aluminium Company Limited

Stocks and Shares

PRICES AND TURNOVER IMPROVE IN STOCK MARKET

SUBSTANTIAL RISE IN TEA SHARES: JUTES AND COALS DULL

Wednesday Evening.

INCREASED activity is reported from the stock market this week and the trend of prices has been distinctly upwards. A number of engineering scrip were seriously affected by rumours and interested manipulation before the week-end and speculatives were easier in sympathy, but values have since recovered. The slight recession in speculative counters which has taken place this evening is chiefly due to profit-taking and a renewal of rumours in Bombay that bank rate is about to be increased. The undertone is fairly steady, but operators are reluctant to take too long a view and there is no doubt that the high level of carry-over charges at present prevailing is inhibiting a good deal of business.

There has been a renewal of investor support in the past few days and first class engineering, miscellaneous and paper shares have all benefitted. Today's feature has been increased interest in tea shares largely due to the improvement in auction prices. There has been a number of quite sensational price rises in this section. Shares in the jute, coal and cotton sections have all been dull. Securities have shown some improvement.

Details of the week's trading follow.

There was a marked improvement in the bonds market and prices were marked up over a broad front. Three percent Conversion Loan 1986 improved from Rs. 77 sellers to Rs. 77.7 buyers but the enquiry was mainly due to the approach of the half-yearly interest payment date (15-3-56). In short dated loans, 3% 1957 had buyers over at the higher rate of Rs. 99-10 while 3% 1958 was also better at Rs. 99-9. In the medium dated group, 3% 1959-61 was marked at Rs. 98-1 and both 3% 1963-65 and 3% 1964 had buyers over at Rs. 93-6 2½% 1961 continued in strong demand at Rs. 93-12 and 2½% 1962 was taken around Rs. 93-12. In National Paper issues, 3½% 1961 was traded at around Rs. 99-6 while both 3½% 1964 and 1965 were taken higher to Rs. 98-8 and Rs. 98-7 respectively. The enquiry for long-dated loans continued unabated and there was a further substantial improvement in prices with little business passing. Three percent 1968-68 was asked for up to Rs. 92-10 and 3% 1970-75 up to Rs. 89-6. Provincial Loans continued dull and there were inclined to be sellers rather than buyers.

Very little business was reported in preference shares during the period under review. Bengal Nagpur Cotton were done at Rs. 100 and a small lot of Burrakur Coal second at Rs. 7-8. Calcutta Electric changed hands twice at Rs. 11-6 and Carew were marked at Rs. 106. Duncan Brothers were placed at Rs. 67 and F. & C. Osler at Rs. 64. Indian Iron & Steel came to hand at Rs. 108-8 and a small lot of Martin Burn at Rs. 107. Rohtas Industries "B" were crossed at Rs. 64 and Jardine Henderson changed hands at Rs. 77. In jute, Fort Gloster were taken at Rs. 115 and Kelvin at Rs. 115-8. Northbrook were quoted at Rs. 93 and Rameshwara at Rs. 9-13.

In the banking section, Hind Bank met with small enquiry at around Rs. 35 x.d. Punjab National Bank improved from Rs. 45-8 to Rs. 46-8 and United Commercial rose by Rs. 3 to Rs. 49. United Bank of India "D" shares were quoted at Rs. 4-15.

The only share dealt in in the railway section was Delhi Rohtas at Rs. 12-8.

Cotton shares were featureless and prices showed little variation. Bowreah were better at Rs. 308, Cawnpore Textiles were unchanged at Rs. 9 and Elgin Mills at Rs. 27-4. Muir Mills were marked back from Rs. 112 to Rs. 108 while New Victoria were 1 anna better at Rs. 2-1. Kesoram had ready buyers at Rs. 16-12.

Little interest was shown in coal shares, and prices moved narrowly. Bengal were marked at Rs. 526 ex-dividend while Burrakur fluctuated between Rs. 14-2 and Rs. 13-12 to close at Rs. 14. Central India and Western Bengal were done at Rs. 7-2 and Rs. 7-1 while East Indian were shaded at Rs. 31-14. A small lot of Karanpura Collieries were changed hands at Rs. 139. Pench Valley were placed at Rs. 22-10 and Talcher at Rs. 3-8. Standard improved today from Rs. 21-12 to Rs. 22-8.

Little business was reported in jute shares and quiet conditions prevailed. Agarpara were marked at Rs. 12-2 and a small lot of Alliance at Rs. 138. Birla were quoted at Rs. 16-2 and Empire at Rs. 20-12. Ganges were offered at Rs. 69. Howrah at one time recorded Rs. 23-4 but recovered at the close to Rs. 23-8 ex-dividend. Kinnison were transacted at Rs. 179 and National fluctuated between Rs. 25-8 and Rs. 26-4 to close at Rs. 25-10. New Central were quoted at Rs. 15-4 while Nuddea were slightly lower at Rs. 41. Reliance receded from Rs. 10-12 to Rs. 10-5.

The Electric Supply section experienced one of its dullest sessions in recent months and the only share mentioned was Calcutta Electric at around Rs. 13-10.

In the sugar section, Belsund were placed at Rs. 11-9 and Shree Krishna Cyanoday new at Rs. 11-8. U.P. were quoted at Rs. 23-12 and Carew, on publication of a disappointing report, at one time receded to Rs. 9-14 to recover at the close to Rs. 9-14 x.d.

In the engineering section, Indian Iron & Steel fluctuated between Rs. 33-6 and Rs. 32 to close at Rs. 33-1. Braithwaite were crossed at Rs. 26-6 ex-dividend and a small parcel of Indian Malleable Castings deferred changed hands at Rs. 4. Jessop & Co., at one time receded to Rs. 31-4 but recovered smartly to Rs. 33-14. Similarly, Richardson & Cruddas recovered from Rs. 22-8 to Rs. 24-12. Indian Standard Wagon were steady at Rs. 172 and Burn & Co., were better at Rs. 322. Textile Machinery were steady at Rs. 21-2. Kumardhubi Engineering changed ownership at Rs. 11 while Marshalls, on expectations of a higher dividend, rose from Rs. 6-12 to Rs. 7-3.

In Paper, India Paper Pulp were steady at Rs. 24-8 ex-dividend and Bengal Paper improved further to Rs. 130. Orient Paper recovered from Rs. 34 to Rs. 34-12 while Titagur met with investment enquiry at around Rs. 44-4. In cement, Ashoka were placed at Rs. 9-12 and Assam Bengal Cement Deferred were crossed at Rs. 1-8. Sone Valley were quiet at Rs. 7-5. Dalmia Cement were fairly steady at Rs. 14-6. In insurance, Concord were offered at Rs. 11 and Triton were crossed at Rs. 170-12. A small parcel of Standard General Insurance was placed at Rs. 4-8.

In shipping, India General Navigation were unchanged at Rs. 113 while India Steamship improved from Rs. 8-6 to Rs. 8-8. Port Shipping were better at Rs. 16-10 and Calcutta Landing were marked at Rs. 14-12.

Among miscellaneous industrials, Aluminium Corporation were steady at Rs. 10-6 as were Indian

Indian Railways buy annually railway equipment worth Rs. 25 crores from abroad. The Railway Equipment Committee is now examining this problem and will suggest measures for India to become self-sufficient in railway equipment. The Show-room in Calcutta displays samples of railway equipment and stores which are not manufactured or inadequately manufactured in India and which are of particular use to Eastern Railway, South Eastern Railway and Chittaranjan Locomotive Works. It affords the industrialists an opportunity to examine these stores readily and it will help them make proposals for manufacturing these items indigenously.

PUBLIC RELATIONS OFFICER, CALCUTTA RAILWAYS

Aluminium at Rs. 21. Alkali & Chemical met with enquiry at the higher rate of Rs. 21.2 and Angelo Brothers were shaded at Rs. 22. British India Corporation, after being sold down to Rs. 9.12, recovered at the close to Rs. 10.11. Birds Investments were marked at Rs. 17 and Britannia Biscuits at Rs. 14.6. Calcutta Tramways were unchanged at Rs. 11.12 while Clive Row Investments improved to Rs. 16.8. Dunlop Rubber were crossed at Rs. 31.4. Eastern Investments eased from Rs. 137 to Rs. 154. British Burma Petroleum were a feature and improved from Rs. 4.3 to Rs. 4.6. Bengal Flour were marked back from Rs. 30.4 to Rs. 29.12. Jardine Henderson were freely offered at Rs. 100. F. & C. Osler, after being sold down to Rs. 12, recovered at the close to Rs. 13. Imperial Tobacco came in for good enquiry and improved to Rs. 14.12, while Indian Cables were quotably unchanged at Rs. 31.10. Indo-Burma Petroleum were in good demand and improved from Rs. 41.2 to Rs. 42.4. Indian Wood Products were better at Rs. 38.12 as were Metal Box at Rs. 26.6 and National Tobacco at Rs. 12. Martin Burn were steady at Rs. 27.8 as were National Insulated Cables at Rs. 25 and Rohtas Industries at Rs. 20.4. Tide Water Oil were done at Rs. 16 ex-dividend. Walford Transport Ordinary at Rs. 2.5 and the Preferred-Ordinary at Rs. 1.12.

In the mining section, Burma Mines were active at Rs. 2.3 and Karanpura Development rose smartly from Rs. 20.14 to Rs. 23. Metal Corporation were steady at Rs. 12.12 as were Indian Copper at Rs. 6.8. Orissa Minerals were marked at the higher rate of Rs. 24 ex-dividend.

Once again enquiry was centered on scrips of Tea Companies with gardens in Pakistan. Today there was also a good enquiry for Assam scrips. Dauracherra had strong buyers with few sellers and the price improved to Rs. 15.2. Lacktoorah continued to meet with selective enquiry and after being crossed at Rs. 25.8, the price closed at Rs. 27. New Samanbagh were strong at Rs. 21 and Patrakola advanced further to Rs. 250. Telipara had strong buyers and spurred to Rs. 246 against last week's price of Rs. 180. Among Assam shares Baghmari were asked for at Rs. 24.8 and Brahmaputra, after being sold down to Rs. 8.8, recovered to Rs. 9. Brooke Bond came to business at Rs. 20.14 and East India were taken up to Rs. 23. Kotamullai declined to Rs. 29 but Naga Hills were Rs. 1 better at Rs. 49. Sapoi were fractionally easier at Rs. 36.4 as were Teipore at Rs. 21.10. Of the Doora shares Birpara were marked back to Rs. 26 and Choonabhatti changed hands at the higher rate of Rs. 307.8. Hasimara found buyers at Rs. 34.8 and New Doora were marked up further to Rs. 300, without finding any sellers. Rajabhat were easier at Rs. 21.6. Of the remaining shares Gungaram were called at the substantially higher rate of Rs. 290 and Hansqua advanced from Rs. 18.8 to Rs. 19.8.

CAREW & COMPANY earned a profit of Rs. 2.63 lakhs for the year ended last June, compared with Rs. 9.73 lakhs. Bringing in Rs. 61,723 there is a balance of Rs. 3,25,271 of which taxation absorbs Rs. 1,31 lakhs (Rs. 4.36 lakhs). Debenture redemption reserve gets Rs. 50,000 (Rs. 2 lakhs). The ordinary dividend has been reduced from 12 annas to 4 annas per share, leaving Rs. 12,445 to be carried forward.

The distilleries made a profit of Rs. 8,01,944-5-9 compared with Rs. 3,79,187. One of the major factors which contributed to the increase was the ability to import into West Bengal substantial quantities of industrial spirit from the Rosa distillery. There is, however, now a ban upon the importation of spirit into West Bengal from any outside State and this is having an effect upon the present-day sales.

The Darsana crush amounted to 16,08,158 maunds against 24,31,817 maunds. The recovery, however, fell from 8.98% to 8.46%. The company, along with other sugar mills in East Pakistan, is claiming compensation from Government for the difference between the actual rate at which molasses was sold and the rate which Government assumed would be the selling price when fixing the ex-factory sugar price. If the claim is admitted and paid, the loss shown by Darsana will be wiped out and a profit will be recorded.

Rosa had a crush of 26,65,315.75 maunds at recovery of 9.41%. This compared with 15,50,367 maunds (recovery of 9.66%).

The profit of the JAY SHREE TEA GARDENS was Rs. 24.45 lakhs lower at Rs. 13.75 lakhs for the year ended last December. General reserve is allocated Rs. 21 lakhs (Rs. 15.52 lakhs). The dividend is the same at Re. 1 per share, leaving a carry-forward of Rs. 72,556.

During the year under review, the following important steps were taken by the company: The Tokvok tea estate with an annual crop of 16,000 maunds was acquired; shares of Rs. 1 lakh of Messrs. Woodcraft (Assam) Ltd., for production of plywood and manufacture of tea chests were acquired; the Lohagarh tea estate was sold; the Invercauld estate has been sold; and it has been decided to amalgamate the Rishchehat Tea Co. Ltd., with the company.

THE BELVEDERE JUTE MILLS COMPANY made a loss of Rs. 3.82 lakhs for the half-year ended last December against a profit of Rs. 2.18 lakhs. Transferring Rs. 3.95 lakhs from reserves, adding other

receipts and bringing in Rs. 63,428 there is Rs. 95,505. The ordinary dividend is halved to Rs. 2-8 per share, leaving a carry-forward of Rs. 1,005.

The HOWRAH MILLS COMPANY showed a loss of Rs. 5.21 lakhs for the half-year ended last September, against a profit of Rs. 7.29 lakhs. Transferring Rs. 6 lakhs from reserves and bringing in Rs. 92,110 there is Rs. 2,67,401, of which ordinary dividends at 4 annas (10 annas per share) per share absorb Rs. 1.64 lakhs. The carry-forward is Rs. 11,463.

The modernisation programme of the mills is making progress.

The loss of the RELIANCE JUTE MILLS COMPANY amounted to Rs. 4.78 lakhs for the half-year ended last September, against a profit of Rs. 1.51 lakhs. Dividends have been passed. There was also no ordinary dividend in the previous half-year. A debit balance of Rs. 5,09,680 is carried forward.

In order to replace some of the obsolete machinery the company has applied for a loan of Rs. 25 lakhs to the National Industrial Development Corporation.

The directors of Howrah and Reliance comment that "the free movement of our purchased supplies (of raw jute) was impeded and consequently the mills' jute stocks fell to dangerously low levels, preventing economical use being made of whatever raw material was left available. Such replacement of supplies as could be effected from very limited local sources were generally of inferior quality. As a result, the productive efficiency of the mills was seriously affected. Coinciding with this period of acute embarrassment in the procurement of supplies, values of all grades of finished goods fell to the lowest levels reached during the year and these conditions combined to bring about the disappointing results for the half-year."

The profit of the SWADESHI COTTON MILLS COMPANY rose by Rs. 13.97 lakhs to Rs. 43.72 lakhs for the year ended last December. Providing Rs. 16 lakhs (nil) for taxation and bringing in Rs. 5,89,691 there is Rs. 33,61,529. The ordinary dividend is the same at 12 annas per share. General reserve gets Rs. 5 lakhs (same), leaving a carry-forward of Rs. 7,09,029.

BETTER FEELING IN BOMBAY

ALL-ROUND IMPROVEMENT IN PRICES

Wednesday Evening.

NEAR-BOOM conditions prevailed on the Bombay stock exchange this week. Equity prices recovered sharply on nervous short-covering and hectic fresh support. The main inspiration came from excellent reports of cotton mills. The fact that several mills raised their distribution dividend tax, as proposed in the Central Budget, encouraged operators to take a bullish view of the future prospect. The Tata Iron chairman's indication that the rights issue would be made soon aided sentiment.

Among other factors contributing to the improvement were relatively small Budia charges for the new account which opened this week. Some support from insurance fundholders encouraged the hope that life insurance funds would be available for private enterprise. There was a general belief that there are good prospects for "growth stocks" following economic development in the second five year plan.

Tata Steels were concerned in brisk activity and the price shot up from Rs. 228 to Rs. 234.4. After remaining subdued on Calcutta pressure Indian Iron rallied from Rs. 31.11 to Rs. 33.2. Tata Locomotive were steady at Rs. 149, but Alcock Ashdown reacted to Rs. 356.4 on pressure.

There were a number of smart rises in the mill group. Bombay Dyeing improved from Rs. 557.8 to Rs. 577.8 on short-covering. Finlay rose to Rs. 356 on higher distribution. Century advanced sharply to Rs. 504 on reports of good working. Kohinoor were higher at Rs. 343, as were India United Ordinary at Rs. 13.3. Dawn shot up to Rs. 146 on paying a higher dividend of Rs. 15 against Rs. 6.

Miscellaneous industries showed an all-round increase. Associated Cement improved to Rs. 213.8 on investment support. Belapur Sugar were bought at the higher rate of Rs. 228. Shipping shares registered gains. Scindia rising to Rs. 17.36 on bear-covering. Bombay-Burmah jumped to Rs. 597.8 on short-covering, but Indian Copper were idle around Rs. 6.9 on Calcutta pressure. Larsen and Toubro rallied to Rs. 15.10, as did Tata Chemical to Rs. 18.15 on rumours of a dividend. British India Corporation were improved to Rs. 45.8 on favourable prospects. National Rayon increased to Rs. 232 on bear-covering.

In the banking group, Bank of India improved to Rs. 153.4 on the news of a golden jubilee bonus issue of Rs. 50 paid-up for every five shares held. Insurance shares were fractionally higher in sympathy with the general trend, excepting Oriental which fell to Rs. 3,800.

Electricity undertakings recovered on replacement buying. Ahmedabad Electric made Rs. 103.2 and Amalgamated Electric Rs. 11.10.

THE WEEK'S TRANSACTIONS

(In the following list of stocks and shares in which transactions have taken place during the past week the figures indicate: Opening Quotations—Highest for the week—Lowest for the week—Closing Quotations—Quotations for the Corresponding Closing Date Year Ending the last named being shown in parentheses and will not be given where such a quotation is not available).

INDUSTRIAL TRENDS IN THE UNITED KINGDOM

UNCERTAINTY ABOUT FURTHER STEPS TO CURB INFLATION

(FROM A SPECIAL CORRESPONDENT)

CHEERFULNESS was evident for a few days after the new Chancellor of the Exchequer, Mr. Macmillan, made his first appearance in the rôle of a financial and economic purist. The industrialists' organisations welcomed it in conventional fashion, the steps which were to be taken, although leading individual industrialists expressed doubts whether, in the cold war on hire-purchasers and bank-borrowers, the large-scale causes of inflation were being dealt with. But when the Chancellor made it plain that these steps were to only a mild overture to the drama which was to follow, and that the play might be of long duration, then uneasiness became manifest, even among those who wanted stronger courses to be taken. There is, in fact, a marked disinclination to look far ahead, financial positions are being safeguarded, and the taking of business risks is being severely limited. The early doubts of some industrialists have assumed more definite form. A number of them have openly declared that inflation cannot be sufficiently checked unless Government expenditures are more drastically reduced than at present indicated and unless also wage rates bear a close relation to the output of goods per worker. The Government seems to be meeting this criticism in part, for in its latest pronouncement it declares that "the cost of defence is overstraining our resources." If this means that a substantial reduction of expenditure on armaments is to be made, then it will be possible to take a more confident view of the outlook.

Wages and Output

What can and will be done about relating wages to output is not evident. Almost as pervasive of the whole economic structure is the problem of the transport and distributive trades and the nationalised industries, where no sound standard exists for the measurement of wage rates. The old idea that if an industry makes a loss, then the wages of its workers must fall, has almost entirely disappeared. We have in its place the dictum that the community can be relied upon to make up any deficit. It is difficult to foresee the arrival of the day when this fallacy will collapse, since the amount of "squeezeability" in tax-payers seems to be inexhaustible. Certainly, *The Times* has had yet another leading article on the extinguishing of the middle class; but it has no great hope of the process being arrested. That the class is having to forgo its old source of propriety in an endeavour to survive can be seen from the fact that headmasters and lay choristers of cathedrals have joined engineers, builders and printers in demanding higher remuneration—all this since the Chancellor made his announcement.

Ironically, the Chancellor's attempt to reduce consumption of goods has been largely defeated so far by the abnormal weather. No householder, however alarming his bills, cuts down his consumption of gas, electricity and fuel when the coldest day for 60 years comes suddenly upon him, to be followed by three weeks' freezing of his water supplies and the piling up of other inconveniences. He does not keep bribing when ominous drips reappear from the ceiling. Nor does he hesitate, under such circumstances, to add to his family's stock of warm clothing, and he most certainly does not stint their food supplies. The one thing he will not do, if he can avoid it, is to travel by trains, with their poor heating and the notorious station waiting room "fires" to chill him to the marrow. So the result is that while railway traffic receipts have fallen, many firms selling goods chiefly in the home market have unexpectedly reported full maintenance of turnover.

Restricting Capital Expenditure

From the industrial point of view, the Government's decision to restrict capital expenditure by companies is of doubtful wisdom. Indeed, it is so obviously dangerous with a rising population that a modification can hardly be more than a matter of a few months. The Government probably has in mind the necessity of reducing the consumption of certain classes of goods where spending excesses have been plain. Nevertheless, with the need to reduce spending in some directions runs parallel a falling off in demand (which may, indeed, cause prices to rise), but through an increase of output.

The Government has given an assurance that two lines of expenditure will not be touched, namely those which have as their object the promotion of atomic development, and those which are for the purpose of increasing research work in general. Therefore, the entry of companies into this field remains unchecked and we have also had the formation of the sixth group of atomic companies. The members of these groups, while continuing separately their long-established engineering or chemical activities, have united for the purpose of carrying out atomic projects. The reasons why combinations of capital required for financing contracts are beyond the ability of the specialisation needed to provide at relatively one over-riding concern to provide at relatively one notice. Drawing upon sub-contractors, in the manner so often done in ordinary industrial or building contracts, is not practicable. Specialisation for atomic purposes must be of a continuous

kind, involving continuous research by departments of all the participating firms—it cannot be a matter of improvisation or of sporadic application.

Clothing and Climate

"Clothing and Climate" is the subject of a lengthy study in the English textile journal, *Texture*. The subject assumed vital importance during World War II when the fighting forces, by the help of scientific research, were able to withstand extremes of climate better than in any previous large-scale campaign. The researches have been extended since the war. The author of the article, Mr. K. W. L. Kenchington, A.T.I., F.C.S., makes an historical approach from the days of the famous Greek physician Hippocrates onwards. He is, however, mostly concerned with the 20th century, when the tempo of work on clothing problems has been constantly accentuated, research of this nature being simultaneously pursued by university departments, Government laboratories and textile organisations. The problems to be solved in connection with the provision of ideal clothing for every situation are complex and lead not only into climatic fields, but into those also of psychology, biology and mechanics. Indeed, much of the present research consists of indicating the scope of the subject and obtaining the knowledge necessary as a prerequisite to the application of inventive skill. The author observes that for the greater part of the world's surface we have little more than a vague idea of what nature can create for man's discomfort. "Large areas are completely without climatic maps. Elsewhere, although data on temperature and rainfall are available, their validity is sometimes open to doubt, due to poor measuring techniques. Information on wind, solar and terrestrial radiation and vapour pressure is very limited. There is a great need for maps expressing frequencies, persistencies and variations, both diurnal and seasonal, of all the more important climatic factors." When this information is gained, the textile industry will be able to take on a more vital aspect, to the great advantage of the health and energy of mankind.

Developing Glass Fibres

An expansion of interest in glass fibres is promised as an outcome of the purchase a little while ago of Glass Fibres Ltd. by Turner and Newall Ltd., a Northern Ireland company. The latter's interest hitherto has been mainly in asbestos products and it would naturally be attracted to the insulating properties of glass. It has been stated, however, that Turner and Newall are planning the utilisation of glass fibres in a variety of directions and that particular attention is to be given to the weaving of glass fabrics. There exists in the British textile industry a belief that the development of glass fabrics has been unnecessarily delayed and the complaint is made that glass fibres for experimental purposes have been difficult to obtain. Whether Turner and Newall will be willing to supply glass fibres to any would-be user has not yet been disclosed, but the company has made known its own intention of undertaking weaving and other forms of glass fibre manufactures. The time is ripe for an advance in these directions, for, after a long spell wherein little fresh technical progress was achieved, several important problems of glass fibre and fabric technique have been carried nearer to solution. United States patents claim successes in the coating of the fibres and in the printing of glass fabrics. Russian researches are said to have thrown light upon the strength and fatigue of glass fibres under various conditions. Advances have also been made in the use of glass fibres for filtration purposes, enabling the separation of much smaller particles.

WIDESPREAD LOSSES IN STOCK MARKETS

GILT-EDGED FALL DUE TO WEAKNESS OF STERLING

London, 14th March. **STEADIER** conditions developed in the stock markets immediately before and after the week-end, but previous to this an all-round fall was recorded. Compared with the former levels, prices showed widespread losses. The political situation in the Middle East and the consequent sharp fall in sterling in the foreign exchange market precipitated a fresh fall in prices. Further evidence of the effects of the disinflationary measures on industry emphasised the uncertainty of the economic outlook. Talk of a tough Budget next month contributed to the depression. The sustained advance on Wall Street, which reached a new peak almost every day, failed to offset numerous adverse factors. Business was small throughout and selling was very limited, but the markets were devoid of support in view of the complete lack of incentives in present conditions. The steadier conditions which developed immediately before the week-end were in part due to bear-covering in anticipation of the end of the last account of the Stock Exchange year on Tuesday. Sentiment was helped by the February trade figures. The gilt-edged market failed to maintain its recent firm trend due to the weakness of sterling and widespread falls ranging up to about a point were recorded.

The Money Market

Conditions in the money market last week were less comfortable. This was not unexpected in view

of the Government's offer of £300 million of 5 per cent Exchequer stock on Thursday, preparations for which made credit tighter. The market was not pushed to its fullest extent because when the situation appeared dire and penal borrowing seemed inevitable, the authorities stepped in and provided sufficient funds daily to cover needs. Higher rates had to be paid, ranging from 4½ to 5 per cent, but on Friday there was a return to more comfortable conditions and an easing of rates to the level of 3½ per cent to 4½ per cent. The money market made no change in its tender for the offer for Treasury Bills, but the average rate was a shade higher at 10½ 2/3d per cent as a result of outside bidders tendering more in line with the market's ideas. Applications for £240 million worth of 91-day Bills totalled £404,660,000 and the former amount was allocated at an average rate of 10½ 2/3d as against 10½ 0/8d in the previous week. Offerings this week will consist of £240 million of 91-day bills. The Bank of England return for week ended 7th March showed notes in circulation £13 million higher at £1,801 million, while bankers' deposits were £32 million lower at £226 million.

Stock Market Prospects

The *Investor's Chronicle* market newsletter writes: The setback on the London Stock Exchange may typify what must be expected at least until the Budget, with movements keeping within narrow limits. Significantly, bears are willing to operate on any rally and for the moment it might be wise to leave the market to the professionals. But there are always selective buying opportunities. The tougher attitude of the Capital Issues Committees means that the state of new issues is dwindling. New shares resulting from recent rights issues may thus attract more attention.

Rolls Royce Rights Issue

Rolls Royce Ltd. announces that it is raising over £4,500,000 by the issue of 1,100,000 new ordinary shares of £1 each at 7½s a share. The issue will be made on a one-for-six basis to holders of the existing £6 million of Ordinary stock and to holders of workers' shares. Top priority for the use of the new money will be for equipment in the aero-engine division. The directors of the company have informed stockholders that they propose recommending a final dividend of 12½ percent, making 17½ percent for the year 1955. It is hoped that earnings will be sufficient to maintain that rate of dividend on the new capital.

Vegetable Oil Market

Linseed oil lacked attention last week, and with re-sellers talking prices down, it presented a weak feature in an otherwise firm vegetable oil market. Re-sellers of Indian bulk oil asked for £137 c.i.f., compared with £139 in the previous week. Groundnut oil was still in limited offering, with small parcels of Indian bulk around £130 c.i.f. Afloat parcels of Nigerian oil were offered at the same price. Coconut oil ruled firmer, largely on the improvement in prices at the origin, although more speculative interest was noted. Sellers of Straits bulk oil were scarce around £91½, while Ceylon was marked up to £93½ c.i.f. Palm oil met better demand, with £88 c.i.f. wanted for Malayan June-July, after business had been done in May at £88 and in June at £87 c.i.f. There were more offers of British East African groundnuts ranging from April-May to July-August shipment at £74½ c.i.f. Re-sellers of Nigerian in the early position were quite prominent at £75½ c.i.f., but the Board was now seeking £79 for July-September. Palm kernels were in sustained demand, with buyers of Nigerian up to £51½ c.i.f. and the Board wanting £52 for May-July shipment.

Rubber Fully Maintained

A few covering orders early last week kept the rubber market steady. With sellers reserved, further orders from shorts put values on the upgrade. The advance was helped by anxiety over the Jordan developments, but as Singapore did not respond fully to the advance, values sagged temporarily. Further covering orders caused another rally, but Singapore values eased sharply under selling and cheaper offers were made. These were well absorbed and towards the close a steadier trend ensued despite the smallness of consumer demand. Dealers were not inclined to operate extensively in view of the continued tension in the Middle East. Values finally were 3½d higher on the week. The sole crepe market remained very quiet but holders for the most part kept to the recent quotations based on 38½d a lb. for 1½th inch smooth No. 1 on the spot.

IRON ORE DEPOSITS LOCATED

The Geological Survey of India located several rich iron-ore bearing areas in Cuttack, Ganjam, Koraput, Puri, Sambalpur, Bonai, Keonjhar, Mayurbhanj, Balasore and Dhenkanal districts of Orissa State, according to Mr. K. D. Malaviya, the Union Minister for Natural Resources. The deposits of high grade iron ore in Keonjhar and Mayurbhanj can be cheaply mined. The reserves in the Singhbhum-Keonjhar-Bonai area are estimated to be about 8,000 million tons of good quality with nearly 64 per cent iron content. Deposits of nearly 10 million tons of high grade ore, added the Minister, have also been found at Hirapur hill some five to six miles west of Umerkot in Koraput district. The ores contain on an average 60 per cent iron. Scattered lower grade ore deposits with an average of 55 per cent to 60 per cent iron content have also been found in the Sambalpur district of the State. Iron ore has been located also in Lakhipur and the Sibsagar districts and in Khasi and Jaintia hills of Assam. Though the ores are widely distributed, the reserves were poor in quality and hence were of no industrial importance.

New Delhi

ACUTE SCARCITY OF STEEL AND CEMENT

SERIOUS HANDICAPS FOR SECOND PLAN

(FROM OUR NEW DELHI CORRESPONDENT)

THE second five year plan is being launched on 1st April against a background of serious steel and cement scarcity. On the basis of demands made so far on allocations of iron and steel for the second quarter, requirements have already reached 3.5 million tons. The current home output is only 1.2 million tons a year. In other words, at least two million tons of steel will have to be imported to meet the demand which development plans will further step up. According to rough estimates, there will be an unsatisfied gap of nearly six million tons of steel in the third year of the plan. The Government of India has so far placed orders for 650,000 tons of steel, including 300,000 tons from Russia, 55,000 tons from Western Germany, 31,000 tons from Belgium and 20,000 tons from China.

The Steel Allocations Committee, at its recent two-day meeting, took two important decisions: first, that allocations of steel in future should be on an annual instead of on a quarterly basis; and, second, the allocations should be based on the availability of steel and not on the probability of procurement. An important development is that 200,000 tons of steel have been imported into India by non-government sources and on a non-subsidy basis. The raising of steel prices, and the abolition of import duty and of internal price control on non-subsidised steel are largely responsible for this development. The Government proposes to continue the present policy under which there is no price control over non-subsidised steel. Allocations for 1956-57 made by the Committee amounted to nearly 1.8 million tons, against 1.2 million tons of home production, leaving 600,000 tons to be met from imports. As already reported, the Government's 1956-57 import target is one million tons. The Central Ministries have been asked to work out, on an annual basis, their steel requirements for the second plan period.

The Commerce and Industry Minister, Mr. T. Krishnamachari, suggested at the last meeting of the National Development Council that the 1961 target for cement be fixed at 16 million tons, as against the 12 million tons laid down in the draft second five year plan. He pointed out that cement production in 1951 was three million tons. In March 1955 he estimated the annual output at five million tons; and in March 1956 at six million tons. It was forecast that in March 1957 it would be 7.3 million tons. The Planning Commission, it is learned, has no objection to raising the 1961 target to 14 or even 16 million tons, provided the railways are willing to provide additional transport facilities. Meanwhile a licence for the start of a cement factory with an installed capacity of 66,000 tons in addition to the new A.C.C. factory of 165,000-ton capacity in the Garo Hills. The Associated Cement Company have also been permitted to set up another factory of 100,000 tons capacity at Sindri. The Government of India has decided to import 400,000 tons of cement to meet urgent demands. It will be imported from East European countries, including Russia and Rumania.

Price Terms

The price at which offers have been accepted varies between 17½s and 17s 6d Indian ports (on liner terms with comprehensive insurance). It will be imported mainly through Calcutta and Bombay, and will be handled and distributed by the Cement Marketing Company of India Ltd., which has undertaken to do the job on a no-profit-no-loss basis. The official announcement states: "For some time past, the demand for cement has outstripped indigenous production. The present capacity of the cement industry is about 4.9 million tons a year, whereas the demand, which was 580,000 tons in the third quarter of 1955, has registered a sharp increase to 830,000 tons a month in the first quarter of 1956. The acute shortage is likely to continue till the beginning of 1957, when the indigenous capacity, according to present estimates, is expected to reach 7.6 million tons a year."

The Government is anxious that the progress of development works should not be impeded by the shortage of essential commodities such as cement.

Heavy Electrical Plant

The Government of India, according to lobby reports, has selected Bhopal as the site for the new heavy electrical equipment plant. Associated Electrical Industries are consultants for the project and Rs. 36½ lakhs has been provided in the 1956-57 Budget for payment to them for the acquisition of land and the training scheme. Bhopal is also the probable capital of the new Madhya Pradesh State.

Indo-East European Trade

Talks on a shipping service between India and Poland and Russia were held here last week. They covered various subjects such as the purchase of ships by India, and the training of Indian personnel to man the ships, if necessary. The question of the agency through which the service will be operated is now being examined. India's

trade with these two countries has been rising rapidly. Russia, for example, has purchased a quantity of hides, skins, pepper and tea, while negotiations for the purchase of woollen fabrics and jute goods are under way. A Yugoslav trade delegation is expected here on 19th March. That the new service will have a guaranteed traffic is one advantage under consideration here.

State Trading Corporation

The Government of India has appointed an I.C.S. officer, Mr. Satish Chandra, to work out the scheme for the State Trading Corporation which is being set up to facilitate the development of trade with countries where trade is a Government monopoly, and to assist the Government in undertaking tasks for which private trading channels are considered inadequate. A sum of Rs. 10 lakhs has been provided in the 1956-57 Budget for the Corporation.

Pharmaceuticals and Dyestuffs

A survey of India's pharmaceutical and dyestuff industry to examine the scope for further development and expansion has been undertaken jointly by Indian and Russian experts. On the conclusion of the survey, which is likely to last about three months, the experts will prepare a report indicating the lines on which further development should proceed. Six Russian experts, who arrived in New Delhi recently, are collaborating with Indian experts in the survey. The two teams have already visited factories in and around Delhi, and are at present engaged in examining the state of the industry. They are expected to leave on a tour of Ahmedabad, Bombay, Baroda and Bhopal on 9th March, and will later visit other centres in eastern and southern India.

New Lines of Manufacture

The National Industrial Development Corporation is engaged in a study of the following schemes: (i) the establishment of steel foundries, forges and fabrication of steel structural, (ii) the manufacture of wood pulp, (iii) the manufacture of carbon black, (iv) the manufacture of printing machinery, (v) the manufacture of air compressors and related equipment, (vi) the manufacture of refractories, (vii) the manufacture of sulphur from pyrites. Where the preliminary studies have been completed, steps are being taken to prepare project reports.

Promotion of Small Industries

A programme of regional investigation to discover what types of small industries can be promoted in different regions of the country was considered at the two-day meeting of the Small-Scale Industries Board held at Indore last week. Four investigation teams, attached to the Regional Service Institutes for Small Industries at Bombay, Calcutta, Madras and Delhi, are now studying the scope for development of small-scale industries in these regions. As already reported, the teams consist of economists and technical officers, and the investigation covers not only the existing industries, but also the new ones which can be established. The Small-Scale Industries Board considered which industries should be encouraged pending the reports of the investigation teams.

Programme for 1956-57

It is intended to open in 1956-57 five more institutes in Hyderabad, Patna, Trivandrum, Rajkot and Ludhiana. More branch units are likely to be started. The marketing service and the hire-purchase system of machinery will also be expanded considerably. In order to handle these commercial items adequately, it is proposed to start corporations subsidiary to the small industries Corporations in Bombay, Calcutta, Madras and Delhi. These corporations can also stock and supply iron and steel and other raw materials, where required, for particular types of small industries which the Government is anxious to promote, as ancillaries to larger units and those which can meet Government orders in pilot projects and industrial colonies. It is suggested that the subsidiary corporations should confine their activities, in the first place, to the State concerned (Punjab or U.P. in the case of Delhi) and should be under the chairmanship of the local Director of Industries. The Central Government's assistance amounting to Rs. 5 crores has been provided in the Budget for 1956-57. Out of this, Rs. 1 crore is especially earmarked for industrial estates. The remaining Rs. 4 crores is for financial assistance to State Governments on the pattern already laid down. Roughly speaking, 75 per cent will be given as a loan and 25 per cent as a grant. A tentative allocation of the amount that will be available to each State Government out of this Rs. 4 crores has been communicated to them. This allocation was determined in consultation with the Planning Commission on the basis of the programmes for the second five year plan submitted by State Governments.

Idle and Uneconomic Sugar Factories

The Development Council for the Sugar Industry, at its recent meeting, adopted the report of its expert committee appointed to prepare a plan for the rehabilitation of unsuitably located and idle sugar factories. The committee has recommended the shifting of only two plants. The other 14 factories, it is felt, could be rehabilitated at their existing sites if measures were taken for the development of sugarcane and of communications in their areas of operation. The Committee did not consider it worthwhile taking any special mea-

sures for rehabilitating another 13 factories as the plants were of an uneconomic size. It also did not recommend the grant of any special help to individual factories considered unsuitably located.

Machinery Manufacture

The following statement shows India's progress in the manufacture of various items of machinery:

Items of machinery and millwork manufactured during 1955.	Estimated value in rupees of production in 1955
Industrial Machinery:	
1. Cotton textile machinery ...	3,65,60,000
2. Jute machinery ...	11,52,000
3. Cement machinery ...	33,58,980
4. Sugar machinery ...	19,03,500
5. Paper machinery ...	1,20,000
6. Printing machinery ...	10,000
7. Oil mill machinery ...	6,28,500
8. Rice, dal and flour machinery ...	12,44,800
9. Air conditioners ...	40,90,000
10. Weighing machines ...	8,26,000
11. Chemical and ceramic industry ...	2,35,000
12. Tea machinery ...	67,46,390
Electrical Machinery:	
1. Electric motors ...	3,00,00,000
2. Power transformers ...	3,50,00,000
3. Controlgear and switchgear ...	40,00,000
4. Train lighting dynamos ...	15,00,000
Machine Tools:	
1. Machine tools complete ...	75 lakhs
2. Machine tools accessories ...	64 lakhs

Protection for Cottage Goods

The following steps have so far been taken to guarantee the exclusive area of operation or the exclusive production of certain items to cottage industries for ensuring their development on a sound footing:

i. **Textiles:** In April 1950, the Government of India issued a notification prohibiting the cotton mill industry from producing certain varieties of cloth, such as dhoties of a certain width and with borders; sarees, lungies and other goods, their production being reserved for the handloom industry. Later, the Government also restricted production of all dhoties by mills to 60 per cent of their output from April 1951 to March 1952, and enforced this by a penal excise duty on mill production over this limit. The installation of new looms in the mill industry was also prohibited. The Textile Enquiry Committee recommended in 1953-54 that the existing reservations might continue, but need not be widened. The Karve Committee on Village and Small-Scale Industries has recommended the reservation of production of more cloth for the decentralised sector. These recommendations are now under consideration.

ii. **Printing of cloth and garment-making:** No permission is being given for the expansion of these activities in the organised industry.

iii. **Leather industry:** Every request for opening a new factory or for expanding an existing unit by the large-scale sector is being considered after assessing its effect on the cottage sector. Since the beginning of the first five year plan, no application for expansion or the establishment of a large-scale unit has been approved.

iv. **Furniture-making, slates and pencils, writing inks, chalks and crayons, candle-making and sports goods.** No expansion or the establishment of new large-scale undertakings is being allowed in these industries.

vi. **Agricultural implements:** Licenses are not being granted for the establishment of large-scale units or for expansion of existing units for manufacturing certain agricultural implements.

Two committees were set up by the Government to examine the question of reservation in the rice-processing and oilseeds crushing industries. The Rice Milling Committee has submitted its report which is under consideration. The Committee on the oil crushing industry has not yet finished its enquiry.

Russian Steel Plant

The acceptance by the Government of India of the detailed project report for the Bhilai steel works, furnished by the Russian authorities in December 1955, was officially announced last week. The agreement concluded with Russia in February last year contemplated a steel works with two blast furnaces. As a result of the discussions with the Indian Steel Mission which visited that country in August-September last year and the later discussions in New Delhi, the plant proposed in the detailed project report and now accepted by the Government of India will consist of three blast furnaces for producing iron. By the use of high top pressure in these blast furnaces and the sintering of iron ore, the output of the blast furnaces will be increased significantly. Steel will be produced by the straight basic open-hearth process in six open-hearth furnaces. The ingots will be six to seven tons in weight. But the large 1,150 m.m. blooming mill will also be capable of handling 10-ton ingots. The rolling mills are of modern design and lay-out, and incorporate technological improvements made in Russia. The capacity of the plant will be 300,000 tons of saleable pig iron, and one million tons of steel ingots yielding about 770,000 tons of rails, heavy and medium structurals, light structurals, sleeper bars and billets. With slight additions to the plant, such as an additional open hearth and a group of soaking pits, the capacity of the plant can be raised to 1.3 million tons of ingots. No further addition to the rolling mills will be required to finish the extra ingots. Apart from this, the plant has been so laid out that it can be expanded later to produce up to 2.5 million tons of ingots.

An attempt to combine economy with efficiency is often like chasing shadows. Planned Lighting, however, is a sure road to success. Planned Lighting means greater output, fewer accidents, less absenteeism. It's Fluorescent Lighting—by Philips—which will help you reduce overheads by giving you three times as much light for the same amount of electricity consumed.

PLANNED LIGHTING BY PHILIPS

Philips are fully prepared to provide you, without any obligation on your part, advice for a planned lighting system. Call them in and discuss it. Philips Electrical Co. (India) Ltd.

UNEMPLOYMENT INCREASES IN THE U.K.

THE DISINFLATION POLICY AT WORK

(FROM OUR LONDON CORRESPONDENT)

THE unemployment figures as at 13th February made their appearance this week. These disclosed an increase of 11,718 at 275,628 over the previous month. It compares with a total of 281,632 a year ago, which, however, was 16,215 lower than the month before. The effect of the anti-inflationary measures announced on 17th February has yet to be reflected in these returns. On the other hand, there were still 368,416 vacancies to be filled at employment exchanges on 9th February this year, against 351,720 at the same time in the previous year. The important gap to which last week's despatch invited attention is still far from being bridged, though the gradual expansion of short-time working, particularly in the motor and accessory industries, is receiving increasing attention in Labour and trade union circles. More questions are being asked in Parliament as a prelude to a debate on the subject of the employment situation in the near future, and statements by union leaders are also more frequent. So far the Government has refused to accept the suggestions that present conditions represent any real danger to full employment—and the facts bear this out—but the "problems" in this respect are not quite the same as those of the highly-paid workers who are disinclined to switch to less-well-paid vacancies in other industries or of the employers who do not want to see their labour forces reduced in case there should be a revival. At all events, the whole subject is at last attracting the attention which it is due.

This week both T.U.C. leaders and industrial employers have had discussions on the economic situation with Sir Anthony Eden and other ministers. Mr. Macmillan outlined the Government's intentions to both gatherings, but whereas the T.U.C. listened, sought some clarification of certain points and agreed to a further meeting at "a later date," the employers, led by Sir Colin Anderson, made quite a substantial contribution to the discussions. Their main theme was that there should be no more wage increases except when related to higher output, but the nationalised industries were also criticised for forcing the wage pace by granting excessive increases, and the Government was told that it must cut its expenditure as well. Employers would hold prices if restraint was exercised all round, and would reduce them if more efficiency and output could be secured. The Prime Minister said "the Government would play its part in creating the necessary climate in which stability of prices could be maintained as part of a united national effort." In the coming week Sir Anthony is meeting the Chairmen of the nationalised industries to seek their co-operation. The most encouraging development, however, was an indication after the recent negotiations between engineering employers and the unions in that industry that the practice of making yearly wage

claims in the major industries is to be the subject of informal talks between both sides with the object of avoiding what is becoming a habit.

Funding Issue Result

The Government's rather tentative attempt at a funding operation by the issue of £300 million of 5 percent Exchequer Stock, maturing in June, 1957, at par, opened and closed on Wednesday. The fact that the lists remained opened for two hours suggests that although it was technically over-subscribed with applications for up to £2 million being allotted in full and those for larger amounts receiving 87 percent, the bulk of the issue was taken up by Government departments. The Treasury's need to pull down the liquidity ratios of the banks, arising from their large holdings of Treasury Bills, has been apparent for some time, but it is unlikely that this operation will have contributed much, even though dealings opened on Thursday at a small premium. A bigger problem is that of dealing before 15th August with the £284 million of 2½ percent National War Bonds which mature on that date. The bulk of this is believed to be held by business houses and private investors, so it looks as though the Government will be having a second bite at these cherries in the near future—perhaps when the market climate is less unsettled than it is to-day.

The new funding issue is a belated step in the right direction. But it will have to be followed by more and larger issues before orthodox financial opinion is persuaded that the Government's financing arrangements are sound. In connection with the latter, the Chancellor of the Exchequer has agreed to meet an all-party deputation of Members of Parliament and industrialists who will ask him to set up an inquiry into the working of the financial system. The inquiry would cover the whole field of internal, Commonwealth and international finance and would be on the lines of the Macmillan Committee of 1930. In the course of a letter to Mr. Macmillan the deputation says: "There is a widespread belief that the statistical information at present available to the Government is inadequate, and that the existing financial machinery is no longer an effective instrument for carrying out the national economic policy. We should be grateful if you would be good enough to receive a small deputation from our committee." Similar criticism has been voiced in many quarters recently. The failure of the Treasury's intelligence service to provide any warning of the rapid upsurge in spending on new plant and equipment early last year has shaken confidence in the Government's ability to predict economic trends. There have also been growing doubts, reflected in the annual statements of the Chairmen of the "Big Five" banks, about the sufficiency of monetary policy as a means of guiding the economy under present conditions.

Restrictive Practices

Parliamentary opposition to the Government's Restrictive Trade Practices Bill was made clear this week when Labour attempted to deny it a second reading and failed by 67 votes. Peter Thorneycroft, President of the Board of Trade, made a reasoned speech supporting the proposed measures and indicating that many of the criticisms about delay and ineffectiveness would not be realised in practice. The Opposition was not willing to accept this view and condemned the Bill altogether, but it is interesting to find that the employers' organisations, working together, have circularised all M.P.s pointing out what they call many "injustices," such as prejudging the issue which trade agreements are in the public interest and which are not, requiring an industry to prove that its trading agreements do not "harm others," the obscurity of the constitutional position of the Registrar, the grave disadvantage to small firms where collective resale price maintenance is not enforceable.

The most interesting feature of the debate was probably Mr. Thorneycroft's oblique reference to trade union practices. Explaining that restrictive practices by workers were inappropriate to the Bill, he added: "I do not say that nothing can or should be done about them. But the passing of an effective measure in the field we are now considering is an essential pre-requisite to any advances on the other front." Later, he remarked, "This Bill deals with employers" and added a comment on the dividing line between a ring among traders, limiting entry into the field of manufacture and supply, and a closed shop limiting entry into a trade. "While the dividing line may not be so glaringly obvious to the public as to every member of this House—at any rate—it would be hard to say that those who stand on one side of the line are criminals, while those on the other side are not," he went on. "The principles that the Opposition may seek to enunciate here may in time apply over a much wider field than they yet imagine."

Raw Cotton Commission's Stocks

The Raw Cotton Commission announced this week that it no longer held any stocks. The liquidation of the remaining holdings—almost entirely of the longer-stapled varieties—has proceeded rapidly in the last few weeks. At the turn of the year there were some 16,000 bales on hand, and a year ago there were some 60,000 bales. Whether the Commission must now be regarded as being out of business remains to be seen. Under a bulk purchase agreement with Aden, the United Kingdom has undertaken to buy 35,000 bales of the next Abyan crop, and at the moment there is some uncertainty as to how the cotton will be handled. The Commission successfully disposed of 25,000 bales of the last crop and a further 20,000 bales from previous crops produced in this new source of supplies of long-stapled types.

Bombay

BRITAIN EAGER TO HELP IN DEVELOPING INDIA

MR. MACDONALD REVIEWS U.K. POLICY

(FROM OUR BOMBAY CORRESPONDENT)

IT was indeed a rare compliment that Mr. Malcolm Macdonald, High Commissioner for the United Kingdom in India paid to the Indian Merchants' Chamber when he made an important political policy speech before it during his visit here last week. Mr. Macdonald's address to the Chamber, though it contained several references to matters relating to industry and commerce, was, on the whole of a political nature, designed to remove certain popular misconceptions in the mind of the community at large in Western India. In a short speech of welcome the Chairman, Mr. Vaidya, confined himself to a few observations regarding trade between Britain and India which, he observed, had been on the increase during the last three years. There had been in the past, he said, a great measure of British and Indian co-operation in the building up of the country's industrial structure. Mr. Vaidya also referred to the projected steel plant at Durgapur and pointed out that there was great scope for many more Indo-British ventures on a joint and co-operative basis to be established in the realm of private enterprise. In his reply, Mr. Macdonald reviewed at some length Britain's economic connection with India which had gone on uninterruptedly for over three centuries. This necessarily been confined largely to the field of private enterprise according to the concepts of those times; but in addition to this, it had also started an era of great public undertakings.

Mr. Macdonald testified to the quickening pace of economic development and the rapid change in some of the principles on which it was based as a result of the Indian Government's commitment to create "a socialistic pattern of society." While he admitted that some people expressed qualms about this, he categorically stated that "so far as we are concerned, the policies which you choose for your national development are your own business." Claiming that the British were amongst the pioneers of the modern welfare State, Mr. Macdonald commented that such radical policies were a common experience in many regions in the world of today. What the British people wanted was that India should make a great success of her economic and welfare programmes, because such a success was a matter of importance to many besides India's own population. Mr. Macdonald said that the creation of a strong and happy India was in the interest of the whole world and his country would, therefore, willingly help in any and every way it could. Discussing the various methods of achieving economic development, Mr. Macdonald said that India's five year plans were divided between the efforts of the private sector and shifting the State but that the emphasis was on the private sector. He said "the private sector is allotted many extremely important tasks. However, certain extra limitations and controls are now placed upon it. Our British firms here recognise these new conditions, and they are ready to adjust themselves to modern requirements. They are supporting the development of India in all sorts of ways, not only by the production of goods, but also by new capital investment, by technical aid and by providing training facilities both in India and in the United Kingdom in an ever widening range of industries. In the public sector, too, we in Britain are eager to lend every support. There, too, we are ready to suit the Indian Government's ideas." The U.K. High Commissioner then referred to the Indo-British agreement on the new steel plant which he characterised as a great act of co-operation between private and public (Indian and British) interests for the purpose of investing the Indian nation with a vital industrial element in its economic advance.

Need for Social and Economic Security

In the course of the political part of his speech, Mr. Macdonald defended British participation in military pacts, emphasising the need for reducing areas of disagreement between peoples and he hoped that all nations would ultimately accept in all sincerity India's gift of the Panchsila to the world. He was at some pains to convince his audience that the military pacts were for defensive purposes only, in order to increase the security of certain areas against possible military aggression, the positive results from those measures being constructive, economic and social developments in the regions concerned for the betterment of the lives of their peoples. In a world not yet wholly free from the danger of war, military defence measures had to be regarded as prudent; but he admitted that by themselves they would constitute only a barren policy for improving the prospects of peace and the conditions of humanity and added that the most effective way of ensuring security and contentment amongst peoples was to create economic and social conditions in which they could live happily. Speaking with great fervour, Mr. Macdonald said: "We British believe strongly in the part in achieving a steady improvement in the standards of material well-being, the social security, the opportunities for intellectual advance and the political freedom of populations round the

earth. We agree that more emphasis should be placed on that part of men's contemporary efforts, that the maximum possible drive should be put into it. This is one of the fields where India and Britain are working as close, cordial partners together. No more impressive example of that exists than in the Colombo Plan which was initiated by the Governments of the Commonwealth and in which nearly a score of different nations now co-operate to promote the economic and social progress of more than 600 million people in South-east Asia."

Foreign Aid

Discussing foreign aid, Mr. Macdonald observed that in the gigantic task India had undertaken in her first and second five year plans which initiated something like a revolution in the whole Indian economic system by aiming at reducing poverty, disease and ignorance amongst its hundreds of millions of citizens and giving them a more healthy, abundant and joyous life, "you need help from the more technically experienced industrial West. You are accepting it from many quarters. You are right in taking it from every country where you can advantageously get it. We British have no quarrel with that, and are only glad that we can help you in many ways. So far as we are concerned, the more the better." During the course of his address, Mr. Macdonald also referred to the somewhat controversial question of Indianisation in British firms. In this connection, he said that for many years Indianisation had proceeded apace. Still in many cases, experienced British members of the management and technical staff could be of service to India in realising her ambitious economic plans. So long as they are needed and the conditions were fair to them, they would like to stay here to render this assistance. The obvious sincerity and the transparent goodwill that was visible in all that he said created a tremendous impression on the leaders of the business community in Bombay.

Budget Reactions

At the annual meeting of the Bank of India last week its Chairman, Sir Cowasjee Jehangir, took advantage of the occasion to make a few shrewd observations on the rapid economic changes that have overtaken the country. Speaking of the Budget, Sir Cowasjee confessed to a pessimistic view of the proposals. He even went further and described it as one designed to make the poor poorer and the rich richer. Sir Cowasjee believed that, apart from China about which little was known, India was one of the poorest countries in the world and taking into consideration the size of its population, it had fewer rich men than in other countries. As the landed class had more or less been wiped out, Sir Cowasjee took it that all this talk about the equalisation of wealth referred to the industrialists. He asked pointedly whether the Government meant that the industrialists were of no service to the country when in point of fact they gave employment to hundreds of thousands and served the country in various other directions of which the Government must be well aware. Sir Cowasjee said that there was now an impression that the intention of the Government was to wipe out the private sector and that with this in view every obstruction was being placed in its way so that when it was unable to fulfil the targets assigned to it in the successive five year plans the Government would have an excuse for nationalising all industries.

Taxation of Companies

Sir Cowasjee believed that the Budget had introduced the principle of double taxation. Dividends paid by companies above six percent per annum on their paid-up capital were to be taxed. No distinction was made between companies recently brought into existence and companies of long standing which had been managed with efficiency and honesty and which had conserved their resources, enabling them to pay high dividends. All companies had already paid tax on their profits from which dividends were paid. This undoubtedly was double taxation, but worse still, companies which intended to capitalise some of their accumulated profits on which they have already paid tax were required to pay a further tax and companies which had already issued bonus shares from reserves which had been taken would be taxed again on the dissolution of the companies. Again, the withdrawal of the rebate of one anna in the rupee on undistributed profit was bound to cause a further drain on the resources of companies. The penal tax of As. 8 in the rupee on undistributed profits of investment companies which came under Section 23A of the Income-tax Act would go to preclude any ploughing back of their profits for financing the further development of the country and it was obvious that all companies which came under Section 23A would be within reach of the new dividend tax. Sir Cowasjee felt that this was grossly unfair as it meant that the Government compelled such companies to pay a very high dividend and then taxed them for doing so. He also pointed out that few outside India realised that it could claim to be one of the highest taxed countries in the world and that the Government had included all sections in the orbit of taxation by increased excise duties. There was a time when deficit financing was unheard of by financiers and economists; but India had ventured to put into operation large schemes, undertaken with the aid of deficit financing, the success of which would depend wholly on good administration and the absence of corruption. Sir Cowasjee drew the attention of the Government to the fact that the success of deficit financing mainly depended on getting value for money, while maladministration and corruption might well frustrate the very foundations of these schemes.

Sir Cowasjee claimed that he was speaking aloud what he knew thousands of others were saying in the country in private conversations.

The Progress of State Control

Of the year 1955 he observed: "The year saw far-reaching events take place in the direction of State ownership and the progress towards a socialist state in India. Such events included the passing of the Finance Act, 1955, with drastic, and almost penal, increases in the taxes on salaries and incomes, the nationalisation of the Imperial Bank of India and the submission of the Companies Bill which has now become an Act." This Act was a gigantic and voluminous piece of legislation which he described as going further in a number of respects than corresponding legislation in any other country and appeared to have been drafted to a certain extent with regard to considerations other than those relating to the needs of trade and industry and the interests of shareholders and investors. Sir Cowasjee warned his listeners that the comprehensive and far-reaching character of the Companies Act would give rise to many difficulties; that inconsistencies and incongruities discovered as it came to be administered would necessitate substantial amendments before it had been in force for any length of time. Further, the Government's nationalisation of life insurance early in the year could not but cause uneasiness. Sir Cowasjee observed in this connection that it was not to our credit that this nationalisation should have been effected by the undemocratic methods of an ordinance. He also pointed out that the worst aspect of this essay in nationalisation was the unfair method of compensating shareholders for the value of their shares under the amendments made in the Constitution last year. Without directly referring to the Oriental Government Security Life Insurance Co. of which he happens to be chairman, Sir Cowasjee observed that he knew of an instance where the shares of a life insurance company had been valued by actuarial calculations at a certain amount, while on the basis of compensation indicated in the Bill which had followed the Ordinance, the Government intended to pay less than half that value. He did not think that it was ever intended in a country governed under democratic principles, that the Government should take advantage of the amendment to the Constitution to deprive shareholders of their legitimate dues to such an extent. All this led him to observe that the actions of the Government tended to dominate business to an increasing degree and the commitments of traders were more and more becoming dependent upon their assessment of the probable future policies of the Government, instead of on purely economic forces.

Problems of the Banks

Speaking specifically on banking problems, Sir Cowasjee stated that banks continued to suffer from having to pay higher rates of interest on deposits without being able to charge correspondingly higher rates of interest on advances. The establishment and overhead expenses of banks which called for a larger margin between the cost of money lodged and the yield on money lent, continued to expand. The bank rate which had been 3½ percent since 15th November, 1951, was out of gear with the current interest rates in the country. To obtain and keep deposits, banks had to pay interest to depositors at market rates of interest which were governed by monetary supply and demand. On the other hand, banks generally had to grant advances at rates of interest related to the bank rate. The rates of interest charged to borrowers consequently did not rise if the bank rate remained stationary and lagged behind current upward movements in the market rates of interest. In such conditions, banks were paying increasing interest on deposits and getting very little more interest on advances.

As the annual general meeting was taking place on the eve of the bank's 50th anniversary Sir Cowasjee informed the shareholders that the Directors desired to commemorate the occasion by the issue of one bonus share of Rs. 50 fully paid, for each five shares of the bank, by applying to the Controller of Capital Issues for the necessary sanction for transferring Rs. 50 lakhs to capital from the Reserve Fund and raising the paid-up capital to Rs. 3 crores. He also indicated that the bank's capital would thereafter consist of two classes of shares, the present partly paid ones and the new fully paid shares. In addition to this, the bank declared an extra dividend of two percent; but Sir Cowasjee warned the shareholders that future dividends would depend not only upon the profits of the bank but upon the Government's taxation policy.

Insurance Companies' Memorandum

In addition to this protest by the Chairman of one of the largest life insurance companies regarding the inadequacy of the basis of compensation to be paid to shareholders of such companies, the Chairman of the Indian Insurance Companies' Association here also sent a memorandum to the Union Finance Minister protesting that the compensation to insurance shareholders as visualised by the Insurance Corporation Bill, 1956 was not only inadequate but unfair and pointed out that as a result of such a step the future investments in development schemes in the private sector would be greatly hampered. In the course of this memorandum, making a number of suggestions about the compensation issue, the Association suggested that in order to arrive at the correct position of insurance companies necessary to form the basis of a fair and equitable compensation to shareholders, actuarial investigations should be made into the assets and liabilities as they stood in January 1956.

Uttar Pradesh

STATE ENTERPRISE IN UTTAR PRADESH

STRONG CRITICISM DURING BUDGET DEBATE

(FROM OUR LUCKNOW CORRESPONDENT.)

A SEARCHING enquiry into the conduct of State enterprises in Uttar Pradesh was called for by several members during the general budget debate in the State Legislature. Almost all these enterprises have been showing progressive deficits in recent years, furnishing a powerful argument for the private sector against further State incursion into commerce and industry. The State tube-wells project showed in 1953-54 an actual loss of 4.35 percent of the capital outlay. In 1954-55 the loss was 3.7 percent, while in 1955-56 a profit of 3.38 percent was anticipated but the revised estimates-revealed a loss of 4.14 percent. The budget year 1956-57 shows a loss of 6.65 percent. The profits of the Kanpur Electric Supply Administration fell from 4 percent in 1954-55 to 1.98 percent in 1955-56 and the budget year takes credit for a profit of 2.1 percent only. The profit made by the State Transport in 1953-54 was 8.4 percent but fell to 4.12 percent in 1954-55. In the Ganga Hydrel scheme the profits are expected to fall to 0.38 percent in the current year from 2.2 percent in the previous year. Obviously, it was contended, there is something radically wrong either with the management or with the administration as a whole. The opposition also made a charge of deliberate under-estimation of revenue and an exaggeration of the deficit and seemed confident that the Rs. 9½ crores of additional taxation proposed by the Finance Minister would not materialise this year, owing to the proximity of the general elections.

It was freely stated that the sole object of the proposal was to induce the Centre to believe that the State Government is trying to do its best to raise the maximum funds for the implementation of the plan.

Early Report Expected on Industries

The Government has announced the composition of the Industrial Fact-Finding Committee to which reference was made in the Governor's address to the Legislature early last month. The Committee which has as its chairman, Mr. B. M. Birla, includes among its members Mr. L. P. Misra, General Manager, Hindustan Motors Ltd., Calcutta, Prof. B. N. Das Gupta of Lucknow University, Mr. Padampat Singhania, Mr. J. K. Srivastava, Mr. M. R. Jaipuria, Mr. R. P. Nevalia, Mr. K. K. Birla and Col. B. H. Zaidi. The headquarters of the Committee will be at Kanpur, and it is free to form sub-committees for any particular purpose or industry. The Government has requested the Committee to submit its report within two months.

Measures to Stimulate Lac Cultivation

The setting up of a Lac Development and Control Board, the institution of a development levy, the elimination of middlemen, the creation of four brood lac farms and the founding of lac industries, are among the important recommendations made by the State Lac Inquiry Committee presided over by Mr. Phool Singh, Deputy Minister for Planning. The Committee was appointed in 1954 to inquire into the problem of developing the dwindling lac cultivation in the Government Dudhi Estates and the lac industry in Mirzapur. The Committee is of the opinion that lac cultivation can be easily extended to the Tarai and Bundelkhand areas which abound in lac hosts—trees and shrubs providing sap for the insects which yield the resinous protective secretion called lac. Lac is an important raw material in various industries and 90 percent of the world's requirements are supplied by India,

the export of lac bringing in nearly Rs. 80 crores annually. Uttar Pradesh, where Mirzapur was at one time the centre of the lac and shellac industry, used to contribute a large percentage of the Indian output. The decline of the Mirzapur lac industry started with a fall in production of raw materials. The Government of India proposes to subsidise the lac development scheme on a fifty-fifty basis. The Committee also desires that the State Government foregoes all royalties from lac cultivation and refrains from the imposition of any sales tax on the products of lac industries.

Tribunal Award Upheld

The Allahabad High Court this week upheld an award given by the State Industrial Tribunal directing the Swadeshi Cotton Mills, Kanpur to pay about Rs. 2 lakhs to its workmen who were retrenched in 1952. The case for the petitioning company was that from August 1952 the stock of cotton cloth manufactured by it began to accumulate and the sale of cloth fell, due to adverse market conditions. It was subsequently forced to take the decision to lay off its workmen. During the period of the lay-off, various labour organisations representing the workers approached the Government which referred the matter to the State Industrial Tribunal. The Tribunal gave an award holding that the lay-offs specified in the issue were unjustified to the extent of six days per shift and that the management should pay 50 percent of the total average earnings which the workers of each shift might have made during the whole period of the lay-offs. The management appealed against this award to the Labour Appellate Tribunal of India praying that the implementation of the award be stayed. The Labour Appellate Tribunal issued an order directing the company to pay half the amount within three weeks. The company could not pay the amount within the period and moved a writ petition in the High Court which was dismissed.

Sugar Mill Workers' Federation

A two-day session of the Indian National Sugar Mill Workers Federation was held near Moradabad last week. The conference expressed the view that various anomalies have crept into the Standing Orders governing workmen of the sugar industry in U.P. and Bihar and that these must be removed forthwith. The Conference also passed a resolution to the effect that the Workmen's Compensation Act was "antiquated and outmoded" and that suitable amendments should be made immediately. The workers were congratulated on surpassing the 1,500,000 tons fixed for the sugar industry in the first plan, while another resolution expressed concern that no specific welfare schemes have been included for the sugar mill workers in the second plan.

Scarcity of Technicians

The acute scarcity of technical personnel in the State was commented upon by Mr. J. K. Srivastava, President of the U.P. Chamber of Commerce, in the course of his address to the 42nd annual general meeting of the Chamber. He urged the State Government to institute a Board of Technical Education and appoint a full time Director. The matter was also taken up in the State Legislature where the general consensus of opinion was that unless the salaries of technical personnel were upgraded it would be difficult to attract the right type of men. The State Public Service Commission, in its annual report, has pointed out that there have been cases in which not a single candidate applied in response to an advertisement for technicians. Even a re-insertion of the advertisement failed to provoke response. For 26 technical posts 93 applicants offered themselves but none was found suitable. For 314 other posts only 288 properly qualified candidates could be found. As a temporary measure, the State Government can see no other alternative than the one pointed out by the Planning Commission, namely, "tolerating in the initial stages an insufficiency of experience and skill in persons who have the potentialities of being built up."

Coal Scarcity in Cotton Mills

One cotton mill in Kanpur closed down and several others are faced with the prospect of closure owing to an acute scarcity of coal. As a result of urgent representations from the State Government the Central Ministry of Production has now released 60 extra wagons of coal for the Kanpur factories. The Northern Railway administration has also decided to allot 101 loco coal wagons to Kanpur and the recipients have been asked to pay the price of Rs. 800 each in advance. According to the State's Planning Minister, the Central Ministry of Production has agreed to call a conference shortly of railway officials and other interested parties, including mill owners to ensure a normal flow of coal to Kanpur and other industrial centres of U.P.

Jute Mills' Silver Jubilee

The J. K. Jute Mills, Kanpur, celebrated its silver jubilee on 9th March. The mill was started in 1929 with 74 looms. It has now 520 looms and employs 4,000 people. Two more mills have been established in its wake, raising the total jute loomage in the State to 877 and 18,200 spindles. The Chief Minister of Uttar Pradesh, Dr. Sampurnanand, who inaugurated the celebrations observed that "there is no reason why U.P. should not lead in jute manufacturing when Dundee can do it so far away in England." He characterised the existence of jute factories in foreign lands as a shamsha. The Chief Minister also laid the foundation stone of a Rs. 1½ lakh air-conditioned rest house for the workers.

Jute

JUTE PRICES EASE ON REPORTS OF RAIN IN GROWING AREAS

GUNNIES SOFTEN IN SYMPATHY: OVERSEAS ENQUIRIES REMAIN POOR

THE jute goods and fibre markets reacted swiftly to reports of rain in the jute-growing areas of India and Pakistan. Prices fell immediately and sellers, who at the beginning of the week were inclined to be reserved, changed their ideas and became keen for business. The early rains have allowed cultivators in many areas to prepare the land for sowing. In the lowlands of Narayanganj, Chandpur and Charnmugria districts, it is reported that work has commenced and anything from 2 to 4 annas has already been planted. Reports from Indian agencies follow a similar pattern, but here the work is not so far ahead. The prospect of an early crop is disturbing stockists and speculators, as it is understood that although there is not a great deal of jute left in the interior, all the main operators are holding large quantities in the hope of creating an artificial shortage and gaining from price increases such as were witnessed a week ago. Recent events have caused a certain amount of nervousness, and many sellers are now offering jute freely. But Calcutta mills, after their buying spree of the past few weeks, have completely withdrawn from the market and cannot even be tempted by offers below the quoted rates. This has added to the discomfort of stockists, as the average price of their holdings is now, in many cases, above the current rates. New Crop has already been indicated at a discount of Rs. 2 to Rs. 3 on the present market, so it seems unlikely that Old Crop prices will enjoy stability at the higher levels.

A major consideration is how long the mills can hold out. In spite of recent purchases, their present stocks in many cases will not last beyond the middle of May, so a fair amount of jute has still to be purchased, much of it from Pakistan. Buyers have large quantities of undelivered jute on their books, again a large proportion of it from Pakistan, but there is an element of doubt as to when this will be delivered. The major portion is cheap jute, and with the markets in their present state, sellers have found it impossible to cover. The delivery of this jute would appear to be the key to the whole problem, and market trends over the next few weeks will be analysed assiduously by buyers and sellers alike.

The gunny markets have shown very little activity and the main price movements have depended on the fibre markets. Overseas interest has, on the whole, been at a very low ebb, and although various rumours have been advanced about orders, they have not come to fruition. Operators have come to regard these rumours of late with a great deal of caution, especially that those about Russia, with the result that the market is in a constant state of uncertainty. Prices have fluctuated rapidly, the main trend being downwards in sympathy with raw jute, although new high levels were recorded at the beginning of the period. There was also heavy selling pressure from mills at the higher levels which caused prices to react.

THE JUTE MARKETS

Manufactured Goods: The steadier conditions reported at the end of the previous week continued into the week under review. At the opening last Thursday, sacking prices showed an advance of 6 annas for B Twills to record Rs. 117-2 a 100 bags for March shipment. This was a new high for 1956, and indeed was the highest level reached since November last year. Calcutta mills took advantage of the rise to sell fair quantities up to the end of the year, but most of the business was absorbed by bazaar parties, as overseas buyers appeared to be completely indifferent. The rise was short-lived, as mills' selling pressure, coupled with the news of a large increase in their stocks of jute goods had an adverse effect, and prices declined rapidly on Friday. During this period hessian was neglected but ruled steady in sympathy with heavy goods and opened 2½-3 annas up for 40in. 100z. to be quoted at Rs. 41-2 for March shipment. Along with the fall of Rs. 1-4 in sacking on Friday, hessians lost 8 annas, but towards the week-end interest revived on shipper covering at the lower levels and on rumours of overseas orders. B Twills regained about 10 annas of the previous day's losses, and hessians 2 annas, but these were completely nullified over the week-end. On Monday morning March B Twills reverted to Rs. 115-14 a 100 bags, with July-September shipment at Rs. 115. This is the first time since the middle of January that forward goods have been at a discount compared to near deliveries. Hessian 40in. 100z. opened quietly on Monday morning at Rs. 40-12 a 100 yards for both the near and forward positions, but lost a further 8 annas by Tuesday morning. The largest fluctuations for some time were recorded in the sacking section at this stage when B Twills dropped Rs. 1-2 in the near positions to Rs. 114-12, and Rs. 1-12 for July-September shipment to Rs. 113-4 a 100 bags. Lack of interest in the market caused very easy conditions to prevail and prices continued to fall. At the opening on Wednesday morning rates recovered slightly but were well below the

previous day's opening prices. Market quotations on Wednesday morning were as follows:

	March	April	Apr.-June	July-Sept.
	Rs.	Rs.	Rs.	Rs.
40in. 80z.	33-8	35-2	32-12	32-6
40in. 100z.	40-4	40-7	40-9	40-2
B. Twills	114-2	114	113-14	112-8
Heavy Cees	112	113-4	113-8	112-8
(Plain)	138	138	138	137
A Twills	129-12	130	129-8	128
Liverpools	115-12	116	116	114-4
Cornsecs				

Raw Jute: Raw jute suffered mixed fortunes over the week and after a steady opening, prices gradually declined. Business at the beginning tended to create a steadier influence, and this, coupled with the advancing upcountry markets, caused sellers to adopt a reserved attitude. Towards the week-end, reports of rain in most of the upcountry agencies caused markets to ease, and sellers, visualising easier conditions, began to offer freely. Mills withdrew from the market completely, and this move had the desired effect, prices showing a marked downward tendency. Sellers reduced their rates in an attempt to induce mills to buy but up to the close they had no success.

Raw jute rates at the opening on Thursday were unchanged from last week's closing prices, and Upper Assam Bottoms were quoted at Rs. 31 a maund for March-April shipment. Fairly good business at this level caused prices to harden, but the advance was shortlived as rain in the upcountry areas was reported, bringing with it a reversal of

sellers' ideas. More offers of jute came and prices dropped 8 annas a maund, with sellers willing to operate below that level. Calcutta mills stayed completely out of the market, and after the week-end a further drop of 8 annas occurred. On Tuesday, offers were given out at about Rs. 29-8 a maund, but this brought no response from buyers and an easier tendency developed.

Business during the week was more or less confined to the opening days. During that time mills paid Rs. 31 a maund basis Bottoms for Northern jute, and Rs. 31-8 for Bottoms only. Local Northern jute was also done at Rs. 31 a maund, but with Rs. 2-8 difference between Middles and Bottoms. Small lots of Daissee were also reported at this price, but jetties purchases continued at well above this level. Daissee Mesta prices varied between Rs. 27 and Rs. 28-4 a maund basis Bottoms, but the quantities involved were not large. A small lot of Bimbi F.A.Q. was done at Rs. 28-8 a maund. In nearly all cases the delivery periods were March-April.

At the close, prices were again marked down. 8 annas a maund, and opening quotations on Wednesday morning were as follows:

Indian Jute:	Landed at Mills	Shipment
	Rs. a md. basis	
	Bottoms	
Lower Assam	29-8	March-April
Upper Assam	29-8	"
Northern	29-8	"
Murshidabad White	28-8	"
Daissee ex Agency	30	"
Daissee ex Cossipore	29-8	"
Daissee Mesta	27-8	"
Local Packing	29-8	"
(Northern)	29-8	"
Bimbi	27-8 for F.A.Q.	"

Tossa is quoted at Rs. 1 a maund above the price of white jute.

Pakistan Jute:	Rs. a md. basis	Shipment
	Bottoms	
Jat	33	March-April
District	32-8	"
Northern	32	"
Jat Cuttings	130 a bale	"

The Cossipore markets closely followed the upcountry markets. After a firm opening, prices gradually declined and sellers became keen for business. Mill interest waned and there was only

Manufacture of Polythene in India

Imperial Chemical Industries Limited have received the approval of the Government of India to a project to manufacture polythene in India. The manufacture will be undertaken by the I.C.I. associate, The Alkali & Chemical Corporation of India Limited in which the Indian public has a substantial shareholding. The project will involve a total investment of about Rs. 3 crores.

Polythene was first discovered in the research laboratories of I.C.I. Ltd. in the U.K. The process to be used in India will be that developed by I.C.I. and used in the manufacture of their well-known 'ALKATHENE'. The use of this product in India has been developed by I.C.I. (India) Ltd. who have operated a plant at Calcutta for the manufacture of film from imported granules since 1953. Polythene is a tough, flexible, thermoplastic material with outstanding electrical insulating properties. Many thousands of tons are used every year throughout the world in the manufacture of packaging film, flexible pipes, submarine telephone cables, radar equipment and moulded domestic articles, to mention only some of the major uses. As elsewhere, the largest single use of polythene in India will probably continue to be for packaging purposes, both as film and as coating on paper and jute.

IMPERIAL CHEMICAL INDUSTRIES (INDIA) LIMITED

NEW TRUCK & BUS TYRE

- 1 STURDY TREAD

TESTED AND PROVED ACROSS THE WORLD

small demand for imports which were slightly lower. During the week, a total of 540 wagons arrived at the Coimbatore sidings, to give an average of about 77 a day. At the close, quotations were based on Kishanganj jute at Rs. 29 a maund for garsat quality. The Daissee markets eased although individual sellers continued to hold reserved ideas. Imports were small, but good enough to satisfy the limited demand. At the close, quotations in Sheoraphuli were based on Daissee at Rs. 27-8 a maund for garsat quality.

Mofussil: Heavy rain in most of the jute-growing areas brought about a rapid decline in agency prices. Very little business was reported as most operators were waiting for a further drop to enable them to cover their cheap contracts. Farmers in most districts had gone well ahead with preparing the land for sowing, and some areas were reporting that sowing had commenced. Holders of Old Crop jute were keen to dispose of their stocks but there were no buyers. At the close, quotations in Dhurbi were based on Rs. 27 a maund for bottom quality.

Similar conditions existed in the Pakistan markets. Sowings in the lowland areas were well ahead, and other lands were being prepared for the crop. Favourable weather conditions with rain almost daily brought about a vast change in sellers' attitude and also in that of the buyers. The position was reversed—there were no buyers but many sellers. Imports into Narayanganj dropped slightly, and over last week averaged about 8,000 maunds a day which was normal for the time of the year. Latest quotations in Narayanganj were based on Jat Bottoms at Rs.(P) 34-8 a maund, B Bottoms at Rs.(P) 31, C Bottoms at Rs. 28-8 and X Bottoms at Rs.(P) 26-8 a maund.

Raw Jute Consumption

The consumption of raw jute by mills reporting to the L.J.M.A. during February 1956 was 541,000 bales, which was 22,700 bales more than in the previous month. Although February was a short working month, the increase was partly due to the increase in goods production dating from 20th February. The total consumption from July 1955 to February 1956 is now 40,86,300 bales. In February 1955, the consumption was 476,900 bales, and the total for the corresponding period of the last season was 38,54,900 bales. Thus, in the current season raw jute consumption is now 231,400 bales ahead of the last season.

L.J.M.A. STOCK FIGURES FOR FEBRUARY

The Indian Jute Mills Association reports the stock of jute goods at the end of February, 1956, as follows:

Description	29th February, 1956 Lakh Yds. 000 Tons	31st January, 1956 Lakh Yds. 000 Tons	Increase over () or decrease from () last month		28th February, 1955 Lakh Yds. 000 Tons
			Lakh Yds. 000 Tons	Lakh Yds. 000 Tons	
Hessian Cloth and Bag	10.45	28.2	9.41	25.6	10.09
Standard Hessian (included in above)	6.98	18.9	6.80	18.9	7.72
Sacking Cloth and Bag	12.46	52.5	16.65	45.3	12.47
Standard Sacking (included in above)	10.39	42.7	8.82	36.1	11.00
Others		9.0	7.5	4.15	1.3
Grand Total (000 Tons only)		99.7	78.4	411.3	82.9

N.B.—These figures are based on replies received and represent all members of the Association and Gagalbhat with estimates for three non-member mills.

L.J.M.A. PRODUCTION FIGURES FOR FEBRUARY

The Indian Jute Mills Association reports the total production of jute goods during February, 1956, as follows:

Description	Quantity
1. Twist and Yarn	2,829 tons
(a) For Sale	1,192 tons
(b) All other including that used in sewing bags	353 tons
2. Canvas	8.2 lakh yds.
3. Gunny Bags (Tonnage exclude sewing twist)	2,238 tons
(a) Hessian	87.8 lakh yds.
(b) Sacking	62.6 lakh Nos.
4. Gunny Cloth	52,321 tons
(a) Hessian	12,81.8 lakh yds.
(b) Sacking	5,52.8 lakh Nos.
5. Other manufactures (including ropes)	2,951 tons
6. Total production (above figures combined)	92,760 tons
(a) All kinds	12,17.1 lakh yds.
(b) Hessian (both bags and cloth)	13,38.7 lakh yds.
(c) Sacking (both bags and cloth)	8.2 lakh yds.
(d) Canvas (both bags and cloth)	8.2 lakh yds.

Summary

	(00,000 Yds.)	(000 Tons)
Feb. '56	56	56
Jan. '56	55	55
Feb. '55	56	56
Jan. '55	55	55
Hessian	12.25	11.43
Feb. '56	12.91	32.0
Jan. '56	12.91	30.3
Sacking	13.39	12.81
Feb. '56	10.91	54.7
Jan. '56	52.6	46.4
Others	6.1	6.0
Feb. '56	3.1	
Grand Total	92.8	88.9

N.B.—These statistics are based on replies received and represent all members of the Association and Gagalbhat with estimates for three non-member mills.

GUNNY SHIPMENT STATISTICS

The following figures include coastal shipment relating to manufactured jute goods for shipment from the port of Calcutta. These are gross figures based on shipping bills presented.

	Hessian Bags (Tons)	Cloth (Tons)	Total (Tons)
1st to 5th March, 1956	679.3	9,825.9	10,505.2
1st to 5th February, 1956	663.8	10,251.0	10,914.8
1st to 5th January, 1956	618.7	9,760.4	19,379.1
1st to 5th March, 1956	5,766.5	564.3	6,330.8
1st to 5th February, 1956	7,444.2	303.4	7,747.6
1st to 5th January, 1956	7,815.6	411.7	8,227.3

THE FOREIGN JUTE MARKETS

CONCERN OVER RISING PRICES

(FROM OUR DUNDEE CORRESPONDENT)

THE recent rising tendency in raw jute prices in Pakistan has been giving members of the jute industry in Dundee and district some cause for concern. It is well-known that consumers of jute goods consider prices for these already too dear and, undoubtedly, they would be very annoyed if they advanced further. It would simply stop all business and send buyers in search of substitutes of which there are a number to choose from. The authorities have been putting off the evil day, and considerable relief is felt in the market to find the position of raw jute on the easy side. At the same time, there are reports of very firm markets and a probable scarcity of the fibre for this season's requirements. When this is mentioned to the oldest members of the jute trade here, they simply say that, in all their long years' connection with the industry, they have never seen a scarcity of raw jute yet. If prices are advanced for jute goods, there may be a reduction in the consumption of the raw material through short time working, not only on the Continent, from whence come reports that some places are closing down in several countries, but also in this country. Some spinners are displaying anxiety to secure business in single yarns as well as twists. The latter are very quiet, probably as the result of the dull trade continuing in the carpet industry. Many carpet works are now working only four days a week, and this means a considerable drop in the consumption of jute yarns, while the furniture trade is also curtailing output. Most motor car manufacturers are on four days a week and this industry is a large consumer of jute cloth.

Raw jute rates are generally down 20s a ton at £108 for Mill Firsts, £97 for Mill Lightnings and £91 for Mill Hearts, while crack marks of Daissee 2/3 are at £94 and grade is very firm at £89, after £88 10s done for shipment, with grade Tossa 2/3 from £104 and fours from £94, all cif. U.K.

Calcutta goods were lower last week-end at 62s 0d for 10oz. 40in. and 48s 0d for 12oz. March, 62s 3d and 47s 9d April, 62s 6d and 47s 6d May and 62s 9d and 47s 3d June, with B twills 178s 0d March and 3d more April-June, all fob. Calcutta.

Jute yarns and cloth are very firm, but buyers are displaying little inclination to do further business. The finer yarns, the Rio grades, have been advanced, and also sacking twills. Rio 8 lb. "JC2R" is up from 19.38d to 19.97d a lb., and 8 lb. "JC3R" from 17.66d to 18.23d a lb. Sacking 24 lb. twill is raised from 11.76d to 12.35d a lb., and the cloth automatically comes up to 22.50d a yard for 10 por. 27 in. 20 oz. twill sacking a yard, effective from Monday, 5th March.

POLYTHENE PLANT FOR INDIA

Imperial Chemical Industries Limited have received the approval of the Government of India to a project to manufacture polythene in India. The manufacture will be undertaken by the I.C.I. associate, The Alkali & Chemical Corporation of India, Limited in which the Indian public has a substantial shareholding. Technical assistance in the design, construction and operation of this plant will be provided under agreement by Imperial Chemical Industries Limited. The project will involve a total investment of about Rs. 3 crores. Polythene was first discovered in the research laboratories of I.C.I. Ltd. in the U.K. The process to be used in India will be that developed by I.C.I. and used in the manufacture of their "Alkathene". Polythene is a tough flexible, thermoplastic material with outstanding electrical insulating properties. Many thousands of tons are used every year throughout the world in the manufacture of packaging film, flexible pipes, submarine telephone cables, radar equipment and moulded domestic articles, to mention only some of the major uses. As elsewhere, the largest single use of polythene in India will probably continue to be for packaging purposes, both as film and as moulded containers.

Plantation Topics

CALCUTTA TEA SALES IN FEBRUARY

READY SUPPORT FOR GOOD TEAS

THE offerings at tea auctions in February averaged about 62,200 packages a week. The strong U.K. buying which was in evidence during the last three sales in January continued throughout the month. The limited quantity of good medium and good teas met with ready support, but the bulk of the offerings which consisted of medium, low medium and poorer sorts met with only a fair demand at steadily declining prices. Buyers were quick to notice any seasonal improvement in quality and Darjeelings on offer which were keenly competed for, say Messrs. Carritt Moran & Co. Ltd., in their monthly tea market review. Best liquoring C. T. C. Fannings were by far the strongest feature and in the last sale of the month were several annas dearer. Other types of Fannings, except the poorest kinds, also met with a good demand and sold at dearer rates. Whole leaf grades were neglected during the first two sales but the more stylish kinds received good support in Sale Nos. 36 and 37. About 8,000 chests catalogued in Sale No. 37, a considerable proportion of which were good liquoring Assams, were withdrawn before the sale for direct shipment to the U.K.

Darjeeling leaf appearance for the most part was of a satisfactory standard. The bulk of the offerings again consisted of late rains manufacture but a few invoices carried a little pre-autumnal character. Although the majority of the Assam offerings showed a further decline in quality both as regards leaf and liquor, a few teas in quality both as regards leaf and liquor, a few teas showed a seasonal improvement in character, but no teas with true autumnal flavour have yet been catalogued. Doars leaf appearance showed little change from the teas seen in January and the bulk of the offerings consisted of ordinary rains manufacture with stalk and fibre continuing prominent. A few brighter liquoring invoices were available and these, although not of outstanding character, showed a welcome improvement in cup over the majority of the offerings. Cachar leaf appearance was fairly satisfactory but most of the teas catalogued were soft and plain in cup.

Quotations

	1955-56 Rs. as p.	1954-55 Rs. as p.
Sale No. 34 Plain B.P.	1 7 0	Not quoted

Sale No. 36 "	1 5 0	"
Sale No. 37 "	1 4 3	"

Internal Market

A total of approximately 16,300 chests of leaf was offered in the four sales held during the month. There was a fair demand for the few lines of clean leaf tea on offer but prices generally declined. The majority of the offerings were however of a stinky residual description and these usually sold in buyers' favour. Dust offerings amounted to approximately 80,000 chests. There was a fair general demand and prices for all kinds were generally firm or dearer, with the exception of the black leaf fannings types and the poorer liquoring residual sorts, which were slightly easier. The best CTC Assams were a particularly strong feature and prices for these sometimes rose by as much as 5 annas; the poorer sorts of this category met better support in the later sales. The showing a slight decline in the first two. The few lines of black leaf dusts continued to receive good support but generally at slightly lower rates.

Quotations

	1955-56 Rs. as p.	1954-55 Rs. as p.
Sale No. 34 Clean Common Dust	1 7 3	2 11 6
Sale No. 35 "	1 7 6	2 11 3
Sale No. 36 "	1 8 0	2 8 9
Sale No. 37 "	1 7 3	2 7 6

Export sales up to No. 37 totalled 1,706,339 chests at an average price of Rs. 2-2-1 compared with 1,524,723 at an average price of Rs. 3-1-11 a year ago. Internal sales at 85,146 chests of Leaf and 527,865 chests of Dust (Rs. 1-4-5 and Rs. 2-0-0) and go against 368,737 and 575,615 (Rs. 2-4-3 and Rs. 2-7-3) in the corresponding period of last year.

During the first week the price of Export Quota continued to decline as a result of the announcement by the Government that the total export allotment for the financial year 1955-56 would be 480 million lb., as we already mentioned in last month's issue. This represented a further release of 9.3 percent to all estates and it is understood that all north Indian gardens had received this final allocation by the end of the month. The first eight days of the month saw the price decline from 15 to 7 pias a lb., thereafter the majority of the transactions were negotiated at between 7 and 9 pias a lb. During this later period, some sellers were fortunate in obtaining prices around 14 pias but the qualities were generally negligible.

Unusually favourable growing weather has been reported from most tea districts of north-east India and an early start to the season is anticipated. As against this, drought conditions and very cold weather are reported from up-country districts in Ceylon and although the quality of the tea has been excellent, the crop

COLOMBO RUBBER PRICES

The following prices have been issued by the Rubber Board of India from the weekly market report published by the Colombo Brokers' Association:

	Closing prices on 2-3-1956 (Rupees a lb.)	Average for the period (Rupees a lb.)
Sheet:		
No. 1	1.51	1.51
No. 2	1.48	1.48
No. 3	1.45	1.45
No. 4	1.21	1.21
No. 5	1.16	1.16
Sheet Cuttings 1		.88
Sheet Cuttings 2		.83
Crepe:		
Water White	—	—
R.M.A. No. 1X	1.20/21	1.15½
R.M.A. No. 1	1.19/20	1.14½

Sc. Crepe No. 2	.94/99	.93
Sc. Crepe No. 3	.85/92	.86
Flat Bark	.80/85	.78½
Sc. Crepe 3X		.89½

To arrive at f.o.b. Colombo prices add 53.4 cents a lb. in respect of rubber other than scrap crepe and 31.4 cents in respect of scrap crepe to the above market prices.

NORTH INDIAN TEA CROP REPORTS

The following is a summary of the crop and weather reports received from different districts for the month of February, 1956:—

Upper Assam: Weather generally seasonable but dry in Panitola, Doom Dooma and Naharkatya. Rain-fall has been deficient.

Central Assam: Weather abnormally dry with drought conditions existing in Jorhat. Unless rain occurs the opening of the season will be delayed.

Lower Assam: Weather dry. Rain badly wanted. Immediate prospects fair.

North Cachar: Weather seasonable but dry. Crop prospects generally unfavourable.

South Cachar: Weather seasonable but dry in Chargoia. Blister blight prevalent in Hailakandi.

Eastern Doars: Weather very dry with no rain. Prospects fairly good.

Western Doars: Weather dry. Rain badly wanted.

Darjeeling: Weather seasonable.

Teral: Weather dry. Rain badly wanted.

Where do you begin to spell prosperity?

We talk about Progress and Prosperity. Yet, how many of our countrymen could even read these words? Four out of five are illiterate. They must be educated, made to understand the country's problems, and so help to solve them.

Mass education needs more paper. Our Paper Industry is ready to meet this challenge. Thirty-two paper mills in India produce 158,000 tons of paper annually. The target for 1956 is 287,000 tons involving an

expenditure of Rs. 50 million. In our developing economy steel is essential. That is why the Tata Iron & Steel Company has launched an expansion programme which will raise its capacity.

Ingot Production	
1955	1,050,000 tons
1959	2,000,000 tons

BRITISH TEXTILE REVIEW
PROGRESS OF U. S. COTTON
POLICY

THE announcement of the American Secretary of Agriculture that more surplus cotton would be offered on the world market from the beginning of August caused some weakening of prices in Liverpool, but on the whole the progress of American policy is watched with more relief than apprehension. The process of disposing of the stock may be painful, but if that cloud hanging over the whole trade can be dispersed it will be possible to resume normal business. In the meantime, however, the disorganisation of prices has some awkward implications. Just as cotton has been artificially dear for years past, now it may become artificially cheap; for the unloading of stocks, however carefully managed, must tend to take prices lower than they would have been if those stocks had not existed. Moreover, current non-American supplies must be larger than they would have been if not stimulated by artificial prices.

Cotton has regained its place as a material of fashion, and if it has an additional advantage on the score of price it may encroach on the trade of competing textiles—especially rayon but also wool. Such encroachment would not, presumably, be permanent, but it could last long enough to be felt. But at present Lancashire—characteristically, it must be said—is concerned more with the immediate losses on stocks than with the possibilities of expanding trade by reducing prices.

Strong Criticism of the Cotton Trade

The retiring president of the Manchester Chamber of Commerce, Mr. H. E. Pardoe, startled the cotton industry last month by a scathing criticism of its behaviour. He spared no section of the industry—neither employers nor employed, neither spinners nor manufacturers, nor the Cotton Board itself. He accused them all of restrictionism and lack of enterprise, and poured scorn on their "chorus of gloom" that had steadily undermined confidence in the trade. Mr. Pardoe was not the first to comment on the inconsistency of companies that bewail their troubles at the same time as they pay out some of the highest dividends in decades, but he made his point particularly convincing with figures. An analysis of the results of 60 spinning mills showed an average profit of £27,745 in 1955, compared with an average of £31,226 for 67 companies in 1954 and with an average of £27,546 for 79 companies in 1953. Dividends paid by 62 spinning firms averaged 23.42 percent last year, com-

pared with an average of 24.31 percent for 72 firms in 1954—when dividends were the highest for more than 30 years. As Mr. Pardoe remarked, "some slump!"

The critic was not, however, concerned only with the industry's gloomy demeanour. His main point was that high profits were being earned on a restricted turnover; for the spinning section operated at only 65 percent of capacity during 1955. "It really is time," he said, "a little competition was introduced into the official policy of the industry, and competitive efficiency encouraged where at present only a system of price management obtains." A few days after Mr. Pardoe spoke a delegation visited the President of the Board of Trade in a further endeavour to convince him that imports of cloth from India and Hong Kong must be restricted. It appears that the President, while promising nothing, was sympathetic. The industry, thus encouraged, is planning a big publicity campaign to put more pressure on the Government. It is not the kind of enterprise that Mr. Pardoe approves. And Mr. Pardoe, it should be mentioned, is chairman of a textile firm that is uncommonly successful in the export trade.

Prospects for Nylon

If demand for cotton goods expands as some people foresee (restrictive policies permitting) manmade fibres will, perhaps, find progress harder in the coming years than it has been since the war. At present, however, they continue their advance: figures published this month show that monthly output reached a new peak, 43.4 million lb. in January—against the previous peak of 42.2 million lb. in March last year. A new event occurred in London last month—the first all-nylon trade fair. About 60 companies exhibited, representing weaving, knitting, hosiery and garment firms. Such an exhibition was naturally concerned mainly with clothing, but household textiles were included.

The Arrival of Silicone

New finishes are no longer a novelty, but some are of real importance. Silicone is establishing itself with more than usual speed. It attracted publicity some months ago when, at a fashion parade, a glass of red wine was poured over a silicone-treated cocktail dress to demonstrate that material so treated would not absorb liquid or show stain. Soon, it seems, silicone will be familiar to the ordinary public. As the basic ingredient is common sand, there is no shortage of the raw material, and efforts are being made to bring prices of the finish down to moderate levels. Essentially, the process of treating fabric is not complex. The silicone solution makes a very fine coating round the fibres, not over the whole surface like a glaze. The silicone can thus completely permeate the fabric, leaving it feeling soft and "natural", as well as resistant to wet and stain.

WHOLESALE PRICE INDEX RISES

THE official wholesale price index (base: year ended August 1939=100) advanced further by 0.6 percent to 380.9 during the week ended 25th February, 1956 as compared with 378.7 for the previous week. Relative to the corresponding weeks of the last month and a year ago, the index was higher by 1.1 and 6.2 percent respectively. The average for February, 1956 worked out to 378.3 as compared with 376.0 (revised) for January 1956 and 361.4 for February 1955. The index for Food Articles advanced by 1.4 percent to 343.0 as a result of an increase in the prices of jowar (+10%), tea for internal consumption (+7%), rice in Calcutta (+4%) and at Vijayawada (+3%), wheat at Hapur (+3%) and at Amritsar (+1%), dal arhar (+2%) and gram at Hapur (+1%) despite a decline in the prices of gram at Patna, bajra, tea for export and coffee (—4% each), wheat at Jabalpur (—3%) and gur (—2%). Higher prices of manganese ore (average export price) (+18%), gingellyseed in Bombay (+6%), linseed in Calcutta, castorseed in Madras and copra (+3% each), raw wool (+2%) and raw cotton, raw silk and lac (+1% each) raised the index for Industrial Raw Materials by 0.5 percent to 462.4 as compared with 460.2 (revised) for the previous week, although the prices of wet salted cowhides at Kanpur (—6%), linseed in Bombay and gingellyseed at Jhansi (—4% each), castorseed in Bombay and rapeseed (—2% each) and groundnuts (—1%) showed declines. The index for Semi-Manufactures also moved up by 0.5 percent to 357.2. Items which exhibited significant variations were kerosene oil (+6%), cowhides (+5%), copra cake (+3%) goatskins (+2%) and linseed oil in Bombay, mustard oil and gingelly-cake (—2% each). The index for Manufactures fell from 375.5 to 375.3 due to a fall in the prices of woollen manufactures (—1%) and a nominal decline in the price of jute manufactures. Lower prices of black pepper in Calcutta (—4%) and turmeric (—2%) brought down the index for the Miscellaneous group by 0.2 percent to 527.4 as compared with 528.2 (revised) for the previous week; the price of black pepper at Cochin, however, moved up by 3 percent.

Calcutta Markets

VERY STRONG AND GENERAL
DEMAND AT TEA SALES

SUBSTANTIAL RISE IN PRICES

AT Sale No. 39, held on 12th and 13th March, offerings in the Export auction consisted of about 52,000 packages, for which there was a very strong and general demand. Whole Leaf grades, Brown Doosars and fibrous C.T.C. grades remained about steady but all other sorts were 2 to 4 annas dearer. Teas with bright and autumnal liquors were keenly competed for and sold well above valuations, while stylish BPS grades were also a strong feature. Darjeelings were irregular but any flavoury teas shared in the general rise.

Quotations	Rs.
Clean Black Pekoe	1 14 6
Plain B.P.	1 8 0
Medium Assam B.P.	1 9 6
Best CTC Assam B.P.	Not quotable.

At the Internal Sale offerings of Dusts consisted of 18,700 packages, for which there was a very strong and general demand. Teas with improved cup quality were a very strong feature and were 2 to 3 annas dearer, while Black Leaf teas suitable for the Middle East again received very good support. The very best CTC Assams with good liquors were fully firm to dearer, while the remaining types in this category were generally several annas up. Poor quality teas with plain liquors advanced by 1 to 2 annas but residual offerings were very irregular and sometimes easier.

Quotations	1956	1955
Medium Doosars Dust	1 10 0 to 1 10 6	2 6 6 to 2 7 0
Medium Assam Grainy	1 10 6 to 1 11 6	2 8 0
Dust	2 14 0 to 3 0 0	3 4 0 to 3 5 0
Best Assam CTC Dust	2 14 0 to 3 0 0	3 4 0 to 3 5 0

The Leaf offerings consisted of 3,000 packages, for which there was an improved general demand at dearer rates.

COAL FIXTURES DOMINATE
FREIGHT BUSINESS

TIME CHARTERING FIRM

THE feature of the market last week was the payment of 72s 3d by French charterers for coal from the U.S.A.-Continent which is the highest figure recorded in this trade. Another item of interest was the fixture of American flag vessels for rice from the U.S. Gulf to East Pakistan at \$ (U.S.) 31.50 and other flag vessels at rates from \$ (U.S.) 27 to 28.50. Heavy bookings of coal were made on French account at 72s 3d for March loading, and consecutive voyages to December at 64s to 66s according to position. More enquiries circulated for Indian coal and tonnage is sought to late for Indian coal and tonnage. The Indian Karachi, Chittagong and Hamburg. The Indian ore trade was active with three fixtures for June loading at \$ (U.S.) 19 and \$ (U.S.) 18.75 while Mormugao-Japan paid 110s f.o. The time charter section remained very firm with \$ (U.S.) 4.55 being paid for a Liberty for 11 to 12 months' trading.

The new Calcutta Dock Workers Scheme just published by the Government will be studied with interest and the practical application of the provisions relating to piece work will need careful thought and much co-operation from all parties.

SUGAR MARKET

During the week ended 14th March, sugar sales in the Calcutta market averaged 4,500 bags daily. Arrivals a day were 5,500 bags and stocks totalled 175,000 bags. Rates for ready sugar, ex-Kanapur delivery, were Rs. 30-12 for ordinary grain and Rs. 32-8 for big grain. Ex-mill delivery rates varied between Rs. 27-10 and Rs. 28-2.

LINSEED

The continued firmness of the market last week have been caused chiefly by scarcity of ready supplies. Following the clarification in the levy of excise duty that this duty does not apply for export, more settled conditions have been in evidence in the market. Trading has, however, been small. The oil section has displayed little change, although shippers have been rather reserved owing to weaker advices from overseas. Latest quotations were as follows: March Rs. 25 a maund; April-May Rs. 22-12 a maund.

HIDES AND SKINS

The market ruled easy and prices showed a downward tendency. Stocks were higher than in the previous week.

Bazaar Sales

(Between 6th March and 12th March, 1956)

Cowhides: Wet salted (Slaughtered) 18,600 pcs. on the basis of Rs. 12 to Rs. 20-8.

Goatskins:—Wet salted (Daisce, Killed) 64,000 pcs. on the basis of Rs. 225 to Rs. 335, Rs. 275 to Rs. 320 and Rs. 337-8 to Rs. 375; Assam-Maldia-Dinajpur-Jalpaiguri 26,100 pcs. on the basis of

Rs. 270 to Rs. 335; Muzaffarpore-Patna 75,000 pcs. on the basis of Rs. 255 to Rs. 312-8.

Bazaar Stocks

(12th March, 1956)

Cowhides: Wet salted 280,000 pcs.

Goatskins: Wet salted (Daisce, Killed) 46,000 pcs.; Assam-Dinajpur-Murshidabad 1,65,000 pcs.; Muzaffarpore - Patna - Pakur - Purneah - Kissen-ganj 5,15,500 pcs.

SHELLAC MARKET DULL

During the week ended 13th March, the market was dull. The range of quotations was as follows:

Pure Buttonlac	Rs. 148 value, 146 buyers, 140 value.
Lemon No. 1 Shellac	Rs. 148 to 140 buyers.
Lemon No. 2 Shellac	Rs. 142-8 to 138 buyers, 135 done and buyers.
F. O. Std. 1 Shellac	Rs. 138 to 134-8 buyers, 133 done.
Pure TN Shellac	Rs. 134 to 129-8 basis done and buyers, 126 buyers.
4% I.T.N. Shellac	Rs. 126 done and buyers, 124-8 to 117-8 buyers.
No. 1 Kusmi Seedlac	Rs. 133 buyers, 142-8 to 137-8 value.
No. 2 Kusmi Seedlac	Rs. 135 buyers, 133-8 to 128-8 value.
Fine Bysaky Seedlac (Manbhumi)	Rs. 130/128 buyers, 126-8 to 123-8 value.
Fine Bysaky Seedlac (C.P.)	Rs. 124 to 115 buyers.
Ordinary Bysaky (C.P.) under 5%	Rs. 109 buyers, 108 to 105-8 value, 100 buyers.
Ordinary Bysaky (C.P.)	Rs. 100 buyers, 101-8 to 98-8 value, 95 buyers.
Kireelac	Rs. 50/49 buyers, 48 value.

Shipments during March until the 9th were 11,548 packages comprising shellac 6,855 packages, seedlac 3,338 packages, buttonlac 150 packages, others 1,205 packages.

AUSTRALIA'S WOOL PRODUCTION

According to the Secretary of the Australian Woolgrowers' Council the 1955-56 wool clip is expected to be an all-time record. Production is estimated at 4.21 million bales which is 300,000 bales more than the record production of 1954-55. The value of this season's clip is estimated at £A 307.98 million at the October price level of 56.98d a pound as against £A 345 million in 1954-55. The total value of the clip is likely thus to be about £A 37 million less than the previous highest.

JOINT STOCK COMPANIES' PREFERENCE SHARES

Dividends are cumulative and shares carry a preferential claim on the property for the payment of capital and on the profits for dividend except in case of companies marked otherwise. Months against names of companies indicate approximately times of payment of dividends.

COAL COMPANIES

O. Po. F. and Dd. indicate Ordinary Preferred Ordinary Founders' and Deferred Shares respectively. P. next to the name of the company indicates that the company also has Preference Shares. Figures in "accounts closed" column indicate the months of the calendar year in which accounts are closed. For Managing Agents refer to the Key (last page) under the numbers indicated.

TEA COMPANIES

O. Po and Dd indicate Ordinary, Preferred Ordinary and Deferred Shares respectively. P next to the name of the company indicates that the Company also has Preference Shares. Figures in "accounts closed" column indicate the months of the calendar year in which accounts are closed. For Managing Agents refer to the Key (last page) under the numbers indicated.

Paid-up Capital Ordinary	Net stock Account	Reserve & other Funds	Accrue under Tax	Output and Average Price per lb. realised for crop		Estimate	NAMES	Accounts closed	Managing Agents	Net Profit including taxation	Dividends per cent	Paid-up Shares	Latest Market Quotations as available until

THE PARADOX OF THE INDIAN
JUTE GOODS INDUSTRYRAW MATERIAL COSTS ROB MILLS OF BENEFIT
FROM HIGHER DEMAND

THE jute mill industry is in an unenviable position. Sales have increased and output has expanded, but individual mills have, according to Mr. M. P. Birla, just completed a year of "serious financial difficulties." The main reason for this is the high cost of the raw material. Speaking at the annual general meeting of the Indian Jute Mills Association in Calcutta last week, Mr. Birla, who is the retiring chairman, pointed out that the price of raw jute rose by 15 percent during 1955, while the value of the goods into which it goes remained constant, or even declined a little. This means that the industry has gained little immediate benefit from the many favourable features which developed during that time. It also means, now that capacity has been increased, that it is particularly vulnerable to an adverse change in world demand such as might come from a general recession among the larger consumers. In fact, the decision to increase capacity when many units are not covering costs may have served merely to multiply their losses. Apart from the long-term advantages which the industry has gained over some of its competitors during the year, and over the main substitutes for jute goods, the mills appear to have obtained little but financial embarrassment from the improvement in its demand conditions.

The situation is a curious one. It calls for a fierce concentration on the cost problem, especially where it concerns raw jute. The Government showed an appreciation of this need when it removed the export duty last August. This move does not seem to have helped the trading position of individual mills at a time when some assistance is now seen to have been needed. But, to quote Mr. Birla, it has enabled them "to compete on level terms with foreign jute industries." When added to Pakistan's decision to maintain minimum export prices for raw jute, it has played a major part in India's achievement in gaining a disproportionately large share of the world increase in demand for packaging materials. These are benefits which should make a permanent contribution to the industry's prosperity, and which must on no account be underrated. But whatever its level of demand, no industry can go on working for any length of time with costs higher than average prices. This was the warning which stood out from the report Mr. Birla made. From all indications, there has been little change up to now in the position as revealed by the results of the 37 companies considered. If there has, it is most likely to have been in the wrong direction because market prices for raw jute remained conspicuously high up to a few days ago.

A rapid improvement in the raw jute position would amount to little more than good luck with the weather. A permanent one must wait on improvements in cultivation. There is no doubt that growers have done well out of the high level of demand for the industry's products and the Pakistani Government's decision to maintain minimum export prices—their holding power during the last few months has shown that. But more jute for the industry need not necessarily mean less money in farmers' pockets. If the aim is eventually to eliminate imports from Pakistan completely, there is plenty of scope for increases in output without any loss to the grower. Mr. Birla's request that action be taken on the recommendations of the Expert Committee on the quality of jute, which was accepted by the Government two years ago, was timely. These covered provision for better retting facilities, and practical instruction in retting techniques. But most important of all, as Mr. Birla pointed out, was the provision for the establishment of seed multiplication farms. At the moment, some of the progress in this direction appears to be hampered by little more than a simple administrative obstruction, although the industry's results during the past year show how badly it is now

needed. Why the Government's views about self-sufficiency in jute should appear to differ so widely from those it holds about the same condition in other commodities, is difficult to understand. Until the raw material problem is solved satisfactorily, the industry is likely to go on losing markets due to sharp price fluctuations and the Government will continue to forfeit revenues in years when the mills might be expected to make a substantial contribution to the public coffers.

The price of raw jute may constitute two-thirds of the industry's cost problem, but that of labour takes up the greater proportion of the remainder. It was unfortunate that this item should have been increased at such a difficult time. The matter is still the subject of an appeal before the Tribunal. But Mr. Birla's figure of Rs. 11 crores a year for the amount which the latest wage award will add to the industry's costs, contrasted strikingly with the Rs. 5 lakhs which, he revealed, was the total net profit of the 37 jute mills whose results had come to hand for the half-year ended 30th September 1955—before the award was announced. If there were prospects of the industry getting more value for its increased outlay, the picture might be a more cheerful one. But the

New Delhi,
Dated 17th March, 1956.

Without Prejudice

THE TREND OF INDUSTRIAL LABOUR LEGISLATION

DISMISSING A WORKER FOR MISCONDUCT

(FROM OUR LEGAL CORRESPONDENT)

FROM that stage of human history in which the employed person got little or no personal protection, the pendulum has now swung wholly the other way: the effect of modern industrial legislation being to give the workman every sort of advantage and to leave the employer very few rights which are capable of practical enforcement. That is the sort of general statement which, appearing in what has become a standard authority on the law of master and servant, makes gloomy reading. It is, one believes, an overstatement, particularly as to the last part of the sentence. True it is that in so far as the object of modern industrial legislation was to secure and maintain industrial peace, that object has signally failed. It has brought not peace but a sword. Nevertheless, as one who has had the privilege of following the reports of the Industrial and Appellate Tribunals from their very beginning, the writer submits that in the new Code of Industrial Equity, the principles of which the Tribunals have been patiently and with great ability laying down during the last seven years, employers' rights have not been forgotten but are now recorded and enforced with increasing strictness and even sternness.

The fact is that things simply could not go on as they were going, and one perceived, running through the whole of last year's reports, an altogether severer and more realistic attitude towards extravagant and arbitrary claims. It is no longer a case, with one of the disputants, of "heads I win and tails you lose." There are fewer and fewer decisions based on improvisation and expediency designed to work out rough and ready justice to fit in with the particular facts of a particular case, but not made to conform with any fixed general guiding principles. What at least one reader believes he is witnessing with great relief is a perceptible return to the age-old doctrines of the common law of Master and Servant, ameliorated

and where necessary varied where those doctrines are, as is still often the case, harsh and cruel in their operation, by new equitable standards. The aim of industrial legislation is ideal justice in accordance with legal principles, but not ruthlessly controlled by and sometimes even contrary to them. In short, the tribunals in India have been trying to establish in their more limited sphere and in a matter of a few years a system which it took Sir Thomas More and successive Chancellors nearly as many centuries to bring about, and that only partially, in the old courts of equity in England. An Herculean task, and for undertaking it the tribunals all over the country have received precious little credit from any quarter.

But the above are generalities and you will expect chapter and verse to illustrate this return to basic principles. Here is the latest case. First our two texts. Each is so time-worn that you may regard it as a cliché and a platitude. But, together they give you the whole reason for the judgment.

1. Per Lord Esher M.R. (1886): "Where a person has entered into the position of servant, if he does anything incompatible with the due or faithful discharge of his duty to his master the latter has a right to dismiss him...."

2. "The servant is bound to obey a lawful command; he must exercise the same care in the performance of tasks allotted to him as a reasonable man would employ in the conduct of the same tasks if they were his own and to be carried out exclusively for his own purposes." (Turner v. Mason.)

The above is the basic common law of Master and Servant.

Bearing it in mind, and also remembering that by modern industrial legislation where the various Acts apply, the tribunals are not rigidly bound within its framework but are given wide discretion, let us now examine the new tendency in the light of one of the recent cases.

It was an appeal against an order of the judge, first labour court, Bombay, dismissing an application filed by the appellant praying for a decision that the dismissal order passed against him by the manager of the respondent mill concern was illegal and improper and asking for reinstatement with compensation. The facts of the case were that the

appellant was charged with gross negligence in that on 22nd December, 1954, he worked less picks on his loom No. 11, and also with having reduced the picks with the intention of cheating the mill by showing more production and gaining more wages. An enquiry was held by the manager who, finding the workman guilty of changing the wheel and reducing picks, held him guilty of serious misconduct and ordered his summary dismissal. The Labour Court was of the view that the manager had not given the appellant at the enquiry an opportunity to cross-examine the principal witness against him, one Basir Khan Kallukhan. This, the judge held, was a material illegality, and therefore the dismissal order was illegal. So what? The man, having been illegally dismissed, is he entitled to be put back in the same position as that in which he was before the illegal dismissal, and, if so, with or without compensation? The judge had found that, though illegally dismissed, the man was guilty of the misconduct alleged. A very interesting point. The man had not been given by the manager a fair "trial", so to say. He had not been able to cross-examine the principal witness against him. But the judge was satisfied that he was, in fact, guilty, and confirmed the dismissal. The workman appealed.

Mr. Nargolkar, counsel for the appellant, laid great stress on the finding of the labour judge that the dismissal by the management was illegal on account of the failure by the manager to give any opportunity to the man to test the truth of the hostile witness's evidence by cross-examination. He argued that, in view of this finding, it was not open to the Labour Court to go into the merits of the case and determine whether the appellant was guilty of misconduct, that the order of the manager was void and inoperative, and that the only proper order that could have been passed by the labour judge was that of reinstatement with back wages. This argument was strengthened by the fact that Model Standing Order 24(4) of the State Government's Model Standing Orders expressly provides that the worker concerned shall be permitted to cross-examine the witnesses on whose evidence the charge against him rests; and it was urged that the standing orders being operative under a provision of law, the omission to give the workman an opportunity to cross-examine vitiated the whole order.

Now, though this case was one under the Bombay Industrial Relations Act and not under the Industrial Disputes Act, the principles involved would be the same under both enactments. And the writer, expressing his own opinion only, inclines to the view that in the early days of the latter Act the argument might well have found favour with the then infant tribunals. The maxim favour with the then infant tribunals. The maxim "natural justice", to the effect that "not only must justice be done but it must manifestly be seen to be done", would have been piously invoked, and this workman might have been back at loom No. 11 again, saluted too with back pay.

The Appellate Industrial Court refused to accept the contention that, because the dismissal order was illegal, the workman must be reinstated; and it justified its refusal by reference back to the basic principles of the common law of Master and Servant. The learned President, in the course of an illuminating judgment, said: ".....In a proceeding instituted by a servant in a civil court for damages for a wrongful or illegal dismissal, the civil court is not precluded from determining whether the servant was in fact guilty of the misconduct, and if it finds that the person concerned was guilty, it can refuse any relief to the plaintiff. It would, therefore, be strange if the jurisdiction of a civil Labour Court, which is wider than that of a civil court and which can order the reinstatement of an employee, is fettered in the manner suggested by Sri Nargolkar." After quoting venerable English common law authorities, the President proceeded: ".....Now, in India, industrial law has made departures from the general law applicable to Master and Servant in the interests of maintaining industrial peace, but it would be astounding if the legislature in enacting the Bombay Industrial Relations Act had intended to enact that a Labour Court, before which a proceeding is allowed to be instituted for relief against an order dismissing an employee for misconduct, has no jurisdiction to go into the question whether in fact the employee was guilty of the misconduct with which he was charged, if the employer had not complied with the procedure set out in the standing orders.....The order of the Labour judge upholding the dismissal of the appellant and declining to give any relief to the appellant is justified. The appeal is dismissed." (Chokshi Silk Mills. I.L.L.J. 1956 (February). 137.)

* Barwell and Kar on Master and Servant. Vol. I. p.xli.

ELECTRICITY OUTPUT

During November, 1955, 721 public electricity undertakings in India produced 725.5 million kilowatt hours (kWh) of power, of which 597.0 million kWh were sold to ultimate consumers. As compared to October, power generation during the month increased by 6.2 million kWh. Two diesel generating undertakings at Kareli and Buldana in Madhya Pradesh, one hydro-station at Machkund in Andhra, and two purchasing undertakings at Adra in Bihar and Kelod in Madhya Pradesh were the new additions during the month. The city for ponding figures of output and sale of electricity for November, 1954, are 856.4 million kWh and 534.6 million kWh and for November, 1955, 216.6 million kWh and 181.5 million kWh respectively.

A DITCHER'S DIARY

the affairs of British business in India. Essentially of the Clive Street scene, he has been content to exercise his influence almost entirely from his office desk in the Royal Exchange, although there can be few ministries in New Delhi which are not familiar with his signature and his precise analyses of the contemporary problems of trade and industry. All these things apart, he has been a good citizen, a good friend, a wise counsellor and a faithful servant of the business public over these many years. No man can wish to leave a post of high responsibility with a better reputation than that.

I remarked a few weeks ago that the Soviet revolution was obviously thickening at the waist. But now it seems I should have gone further and diagnosed senility. There is no doubting the importance of what is going on at present in Russia, the only question now appears to be—where is it all going to end? With Stalin toppled from his pedestal, and with him the cult of personality he represented, the chances of some sort of representative government eventually emerging are much improved. But that is something only the future will decide. What can exercise the imagination now is what is going to happen to the world's communist parties when Russian leadership drops the "Big Brother" aspect. These parties have never owed their strength to the soundness of their political ideas, only to an ability to appeal to simple-minded idealism and a willingness to stir up any sort of trouble which might embarrass the established order. But if communism is going to be divided at the top it does not seem likely that individual and isolated revolutionary parties will be able to maintain their singleness of purpose. The trend has already become apparent in India. Soon it might begin to take effect in France and Italy and perhaps, dare one hope, in the satellites themselves. It is certainly too early to look for a gradual improvement throughout the world in labour relations and political stability. But there is little doubt that communist parties, always ready to replace an elected government with one on totalitarian lines, have been responsible for most of the trouble in these fields since the first world war. Modern communistic faith can scarcely survive a complete burning of its idols any more than it can retain solidarity when its aims are no longer centred in the personality of one man. And the issues at stake in modern international politics will inevitably mean differences of opinion in future Russian Governments about the risks which the country dare run by fostering revolutionary parties. It all adds up to a most interesting surmise, as most of these long-term problems do. But in the meantime, there is plenty of room for conjecture about what sort of reception the Soviet leaders are going to get when they go to London. It is probably troubling them too because their advance guard, Mr. Malenkov, appears to have had it rather mixed. I feel sure that if Mr. Khrushchev were to do his dance, his popularity would be guaranteed.

India is a secular State. Or, is it? Doubts tend to assail the mind when one reads reports or sees pictures of the ceremonial launching of ships or the inauguration of one of the new projects. These, one notices, are frequently accompanied by frankly Hindu rites—the breaking of green coconuts, the ornamental display of *alpans* and mango sprays, and the blowing of conch-shells. I was reminded of this by a picture which appeared on the back page of the local edition of a Calcutta

daily newspaper last Friday. It showed the Congress President, Mr. Dhebar, laying the foundation stone of the Jamnagar Water Scheme to the accompaniment of elaborate Hindu rites, and with the members of the Saurashtra Government in attendance. Personally these rites have a strong aesthetic appeal for me and the painting over of a courtyard with *alpans* I have always considered to be one of the most fascinating of folk arts seen anywhere in the world. Nevertheless, I cannot help feeling that among the large non-Hindu population of this country there must be many whose religious susceptibilities might be hurt by these observances. India has a Constitution which provides for universal freedom of worship, and an administrative system which cuts across the frontiers of faith and caste. I note with special approval that Buddhism, which probably counts but few adherents in this country, claims a good deal of attention from the Central and the State Governments which, between them, have allocated a considerable sum of money to the forthcoming Buddha Jayanti celebrations. Recently, honour was shown here to the memory of Al Biruni, a Muslim savant and, at the moment, the millenary of another, Avicenna, is being observed with commendable zeal. These examples of religious liberalism are, to my mind, all the more reason why the exclusively Hindu character of the rites I have mentioned are out of place in modern India. One way out might be so to recast them as to include the main features of all the principal faiths in the country.

"Fenference", "Slanshack", "Bem". Soun's like gibberish perhaps? But I can assure you that these are nothing more than examples of "cosmilingo"—the language spoken by the heroes and heroines of American science-fiction. My acquaintance with this literary genre is, I confess, pitifully limited, and until I read the essay entitled "The Fantasy of Boredom" in Arthur Koestler's recently published book *The Trail of the Dinosaur*, I did not have the slightest suspicion that the ideas of H. G. Wells and Jules Verne had suffered such a sea-change in travelling across the Atlantic. Mr. Koestler tells us that modern American science-fiction is a characteristic product of the atomic age, of flying saucers and space travel. In a science-fiction novel, he says, the characters keep luncheon appointments on Jupiter or maybe Pluto, and swear by "the seven rings of Saturn" or by "the gas-pits of Venus". This type of fiction has now achieved fifty percent more popularity than thrillers in the United States. Each item sells on an average six thousand copies, and there are no fewer than six science-fiction novels being published every month. Three large publishing houses specialise in their production and they are rumoured to have enlisted the services of a number of famous scientists who write under pen-names. This is certainly typical of the American way of doing things—on a vast scale and with deadly efficiency. It is scarcely surprising to learn that this curious, though well-sponsored literary phenomenon is now invading Britain, where an organisation calling itself The British Science-Fiction Club, has apparently been founded to foster its growth. What fills me with apprehension is that if the British club succeeds in its mission, the process of English becoming a dialect of American may be accelerated. Now, having kept the reader waiting to know what the words quoted in the first line mean, I shall decode them. "Fenference" is a conference of science-fiction fans; "Slanshack" is their club and "Bem" is a kind of bug-eyed monster, presumably something we are expected to believe exists on other planets.

AUDITORS' REPORT TO THE SHAREHOLDERS.

We have audited the foregoing Balance Sheet of the Central Bank of India Ltd. as at the 31st day of December, 1955 and also the foregoing Profit and Loss Account of the Bank for the year ended upon that date, in which are incorporated the audited Returns of 70 Branches and the authenticated Returns of the Pay Offices and other Branches, and report that:—

- We have obtained all the information and explanations we have required and have found them to be satisfactory;
- The transactions of the Bank which have come to our notice have been within the powers of the Bank;
- The Returns received from Branch Offices of the Bank have been found adequate for the purpose of the audit;
- In our opinion the foregoing Balance Sheet and Profit and Loss Account are drawn up in conformity with the law;
- Such Profit and Loss Account shows a true balance of profit for the year;
- Such Balance Sheet exhibits a true and correct view of the state of the affairs of the Bank according to the best of our information and explanations given to us and as shown by the books of the Bank; and
- In our opinion, books of account have been kept by the Bank as required by Section 139 of the Indian Companies Act 1913.

Company Meeting:—

THE ALKALI & CHEMICAL CORPORATION
OF INDIA LIMITED

CHAIRMAN MR. N. D. HARRIS'S REVIEW

The Nineteenth Ordinary General Meeting of the members of The Alkali & Chemical Corporation of India, Limited was held at the Registered Office of the Company, 34, Chowringhee, Calcutta, on Wednesday, the 7th March, 1956, at 3-30 p.m.

Mr. N. D. Harris the Chairman, presided.

Gentlemen,

The Audited Accounts and Directors' Report for the year ended 30th September, 1955, have been in your hands for some time and with your permission I propose to take them as read.

Your Company has had another successful year in which production and sales of all its products have been considerably greater than in previous years.

Production of Chlorine and Caustic Soda was higher than during the previous year. Caustic Soda sales improved but there was very severe competition in Liquid Chlorine. We were able to sell the entire amount produced but only at a considerably reduced price. An interesting factor and one of deliberate policy has been the growth in the quantity of Chlorine consumed internally for the manufacture of other profitable products. Investigations in this direction continue with vigour.

Sales of Hydrochloric Acid and of Zinc Chloride, the latter a relative newcomer to our range, showed similar gratifying increases. In spite of very great competition from other manufacturers' products the

demand for our well known range of "Gammexane" B.H.C. formulations has been difficult to satisfy. To meet this your Company installed greater formulating capacity during the year and sanctioned extensions, now being constructed, to the plant making Benzene Hexachloride (B.H.C.), the basic product.

Our "Dulux" and "Duco" range of paints and allied products continue to be very popular indeed and we have been unable to meet the full demand for them. Your Directors have great confidence that the need for these high quality products will continue to grow as India develops industrially, and because of this they decided last year to double the factory's capacity. These considerable extensions are now well in hand. An important new introduction is the range of metal-pretreatment products which, under the name "A. C. P.", have already proved popular.

I wish to mention here the introduction after the last Budget of an excise duty on Paints. This sudden imposition on a range of manufacturers very different from previously excisable products caused great dislocation to ourselves and to all others in the paint trade.

Labour Relations

Relations between the Company and its employees continued to be most cordial and the Works Committee set up at Rishra five years ago again proved its value by acting as a friendly and effective link between the management and the workers. I wish to express the thanks of the Company to all our staff and workers whose loyalty and hard work helped so much in achieving the year's good results.

I have talked primarily about what we have produced. Products do not of course sell themselves and I would like to pay a tribute to the Technical and Sales Staff of our Selling Agents, Imperial Chemical Industries (India) Ltd. They have made a remarkably fine effort in finding new markets and uses for our products. This applies in particular to our paints and "Gammexane" products. I ascribe our successes in this direction during the last year very largely to their careful planning and hard work.

The net profit for the year, after providing for depreciation, amounts to Rs. 19,39,345/-. This is more than twice that of the previous year. The sum available for distribution is Rs. 22,63,168/- which includes a balance of Rs. 1,13,627/- brought forward, and a reserve for exchange losses previously held but now no longer required.

Once again there is no liability to taxation for the year due to initial allowances on the new plant installed, but a sum of Rs. 12,50,000/- has been transferred to Reserve for Deferred Income Tax Liabilities. This brings this Reserve to Rs. 23,21,000/- which equals the total tax payment of which has been deferred by the operation of initial allowances. A sum of Rs. 2,73,000/- has been transferred to Dividend Equalisation Reserve. The dividends on the Preference Shares for the year absorbed Rs. 1,53,000/- and your Directors recommend the payment of a dividend of 8% on the Ordinary Shares, 2% higher than that for last year. If you agree to this, a balance of Rs. 1,19,168/- will be left to carry forward.

Polythene

You will be pleased to hear that we hope shortly to receive Government's approval to a project to manufacture polythene in India. Imperial Chemical Industries Limited, your technical advisers, have agreed to supply their process and continuing "know-how" on very favourable terms. Polythene was discovered by I. C. I. Ltd., who now manufacture large quantities in the U.K. and have licensed its manufacture in several other countries. The production, actual and projected, and consumption of polythene throughout the world have during recent years increased to a remarkable extent, and give every indication of continuing to do so.

The process will be that used by I. C. I. in the manufacture of the well-known "Alkathene" brand of polythene. The use of "Alkathene" in India has been developed by I. C. I. (India) Ltd., who have operated a plant at Calcutta for the manufacture of film from imported granules since 1953. Polythene is a tough, flexible, thermoplastic material with outstanding electrical insulating properties. Many thousands of tons are used every year throughout the world in the manufacture of packaging film, flexible pipes, submarine telephone cables, radar equipment and moulded domestic articles, to mention only some of the major uses. The largest single use for polythene in India will probably continue to be for packaging purposes, both as film and as coating on paper and jute.

Investment

The project will involve a total investment of about Rs. 3 crores for which additional capital will have to be found. Methods of raising this are being studied by your Board at the moment, but I wish to take this opportunity of telling you that it will take two to three years at least to bring the plant into economic production. Although the project should ultimately prove profitable, capital invested during the construction period will earn no return and it may, therefore, be difficult for your Company to maintain the higher rate of dividend declared on the Ordinary Shares this year.

The Directors retiring by rotation are Mr. B. R. Goodfellow, Mr. K. W. Young and Dr. E. C. Fairhead and my colleagues and I have pleasure in recommending their re-election.

The Auditors, Messrs. Lovelock & Lewes, also retire and you are requested to re-appoint them for the current year. They have however asked for an increased fee of Rs. 7,500/- as against Rs. 6,000/- sanctioned for the previous year. As you are aware the new Companies Act, which will come into force on the 1st April this year, imposes certain additional duties on Auditors for which we must necessarily pay. In my opinion the increased fee is justified and I recommend its acceptance.

Company Meeting.

THE KOHINOOR MILLS COMPANY, LIMITED

CHAIRMAN MR. E. D. SHEPPARD'S REPORT

At the Sixty-first Ordinary General Meeting of the Kohinoor Mills Company Limited, held in Bombay on 20th March, 1956, the Chairman, Mr. E. D. Sheppard, said:—

Gentlemen,

I am happy to address you again at the close of another year of your Company's working. The year has been an eventful one and I would like to mention to you some of the more important events.

First of all, it is gratifying that there have been no major flare-ups in international affairs. Peace has been maintained throughout the year with the exception of an occasional foray in China, and periodic skirmishes on the Israel-Arab State borders. As far as the latter is concerned, although the fighting has been confined, the atmosphere in the Middle East has in recent months become explosive and might, if it is not brought under control, lead at some future date to a conflagration which might engulf the whole world. The United Nations are sparing no effort to bring about a peaceful solution of the problems that confront the differing parties. India, as usual, is in the forefront.

One feature which is most encouraging is the increasing number of visits that are being paid by the Heads of all countries to others. Here in India, during the course of the year, we had visits from Marshal Tito of Yugoslavia, the Egyptian Prime Minister, the Head of the People's Government of China, Marshal Bulganin and Mr. Krushchev from Russia, H. M. King Saud of Saudi Arabia, and since the beginning of the year, Their Majesties the Shah and Queen of Iran. Before long we hope we may have with us the President of the United States. Our Prime Minister has himself paid visits to China, Egypt, Russia, Poland, Great Britain and Yugoslavia, and has been invited to go to the United States as the guest of President Eisenhower. In my opinion there is nothing which can be more conducive to bringing about peace and harmony in the world than such visits of leaders of nations to each other, during which they can see for themselves and understand the problems which confront each one of them and which, to some extent, govern the policy that they follow in international affairs. As in the affairs of individuals so with nations, a sympathetic understanding is an essential for the fulfilment of our aspirations for world peace and the advancement of humanity.

Very serious efforts are also being made by all the major powers to bring about the limitation of armaments and the complete banning of atomic and other weapons which, if ever utilized again, can only mean the complete destruction of man.

It is most unfortunate that it has not yet been possible for us to arrive at an understanding on outstanding differences with our closest neighbour—Pakistan. Let us hope that this will be brought about in the near future.

Power Position

The power position, so far as we are concerned, continued to be satisfactory during the year. Tata thermal station should be in operation about the end of this year and then there should be no danger of a further shortage of power at any rate for two or three years, or even for considerably longer if the Kovva dam scheme is completed according to schedule. The Second Five-Year Plan has now been formulated and, although very much larger than the First in its scope, it is to be hoped that it will be as successful as its predecessor. It is unfortunate that the sponsors of the Plan have "frozen" the mill industry at its present capacity and have decided to rely on the cottage and handloom industries to produce the additional cloth which the country will require. I feel that they could, without in any way prejudicing the position of the latter, have permitted reasonable expansion of your industry to enable it to supply the potential demand for mill-made textiles in India and, at the same time, retain its markets overseas.

The Mill industry has had a reasonably good year. The demand for cloth has been steady throughout the year. Earlier in the year prices of cloth, though steady, were not quite at the levels they should have reached to permit of a reasonable profit, but as the year progressed they improved somewhat. Yarn prices I am sorry to say remained very low throughout the year making this part of your Mills' business much less remunerative. This is the reason why your Mills have not shown the improvement in the profits one would have expected because of the good off-take and higher prices of cloth. It must be borne in mind always that, although your Mill has 1,20,000 spindles, half this number is working continuously on the making of yarns and sewing threads for which a special plant has been installed. In view of this "dual personality" of your Mill, there may be times when as compared to balanced spinning and weaving mills the profits may not seem very large, but there have been times in the past and they will surely come again in the future when with a rise in the prices of yarn and sewing thread your Mill will be in a position to show better progress than others.

The Budget proposals as announced on the 29th of last month provide for the enhancement of the Excise Duty by 6 paise per square yard on all categories of cloth. This will mean that your Company will have to pay Rs. 9 lacs more to Government under this head. It remains to be seen how much of this it will be possible to pass on to the consumer. The proposed penal tax on Dividends declared at a rate of more than 6% on the paid-up capital will cost your Company Rs. 2 lacs per annum if it reaches the Statute Book in its present form—assuming that the present rate of Dividend distribution remains unaltered. This proposed tax operates most unfairly against companies such as yours which have prudently accumulated substantial reserves from the taxed profits of past years. Just as disturbing to my mind, as the actual tax itself is the manifestation of the fact that the "6% mentality" persists in New Delhi. In conditions as they exist to-day—for example the Bank Rate in the U.K. is now 5½%—it does not seem reasonable that Risk Capital should only be allowed a return of 6% without a heavy penal tax, and parti-

cularly at a time when it is hoped to attract such capital to enter this country.

As regards the Government's policy on personal taxation, I gave you my views on this last year and also reviewed the matter at some length in my address to the shareholders of your Agency Company. I do not propose to indulge in repetition and would only say that my views are unchanged. There is a saying in England that "all work and no play makes Jack a dull boy." It remains to be seen what effect the Government's present policy of "all work and no play" will have in this country.

Taxation

Trading in Indian cotton remained free of all restrictions during the whole year as, on account of ample availability, there was no reason for Government to reimpose the quota system. Prices of cotton remained steady throughout the year but weakened with the approach of the new season because of reports that the crop would be 55 lacs of bales. This position was, however, short-lived as unseasonal rains caused damage to several of the growths and prices started to rise. Towards the close of the year there had been a very large appreciation and the forward market which had been moving around the 600 mark went up to 740. At this point Government decided to step in and take a hand. The contract was frozen at 700 and futures trading came to a stop. However, in the spot market prices continued to rise and some of the growths very nearly reached the ceilings fixed by Government. The position remains the same to the present time and it would seem that because of the statistical position there is little chance of any appreciable recession.

Foreign cotton prices remained reasonably steady for most of the year but during the last quarter there was a definite upward tendency. Alexandria particularly recorded a steep rise. African and American growths remained fairly steady, but because of a recent announcement by America of the impending release of further large quantities of loan cotton at competitive prices, these have tended to weaken.

I will now turn to the report and accounts. The amount of Rs. 8.30 lacs provided for taxation is made up of Rs. 5.01 lacs for income-tax, Rs. 2.97 lacs for Corporation tax and Rs. 0.32 lacs extra for contingencies.

To meet the statutory depreciation of Rs. 17,62,477 and to set off the initial depreciation of Rs. 3,70,175 allowed in previous years, your Directors have set aside a sum of Rs. 6.33 lacs from the profits of the year and have appropriated a sum of Rs. 15 lacs from the Machinery Reserve Account. A sum of Rs. 3 lacs has been appropriated from the profits of the year to the Development Reserve, being the amount of benefit derived from the Development Rebate. A sum of Rs. 1.50 lacs has been put to the Employees' Pension and Gratuity Fund bringing this to Rs. 12.50 lacs which represents a full provision for present liabilities under this head.

In view of the Millowners' Association's Bonus Plan with the Rastriya Mill Mills, Ltd. and the Ahmedabad Mill Mills, Ltd. agreement, it is calculated that your Company will be required to pay 3 months' basic pay as bonus for all the three years 1953, 1954 and 1955. It became, therefore, necessary to provide in the accounts of the year 1955, Rs. 4.43 lacs in respect of 1954 in addition to Rs. 16.57 lacs for the current year.

The insurance value of your Mills' property and stocks on the basis of the reinstatement value now stands at Rs. 10.51 crores which is higher by Rs. 36 lacs. This is due to an increase in machinery valuation by about Rs. 25 lacs and to higher stocks of cotton.

Strong Position

The Balance Sheet figures show that your Company continues to be in a strong position as the current assets at Rs. 2.88 crores exceed the current liabilities and provisions by Rs. 1.45 crores. Secured loan of Rs. 38.84 lacs is lower by Rs. 2.52 lacs. The liability for arrears of D.A. was necessary this year. The liability for Other Finance is up by Rs. 11.27 lacs due to the carry-over to the current year of the bonus unpaid for the previous year.

On the assets side of the Balance Sheet the value of stocks of cotton and staple fibre is higher by Rs. 15.66 lacs mainly due to the increase in the stock of cotton. Art silk and other yarns are up by Rs. 2.40 lacs due to increase in the stock of art silk yarn. The stock of cloth, yarn and waste, is lower by Rs. 3.66 lacs due to good deliveries during the concluding period of the year. The stocks of stores, fuel and grain are lower by Rs. 2.36 lacs. Book debts at Rs. 3.88 lacs are up by Rs. 2.46 lacs due to bills for cloth, yarn and cotton being outstanding at the close of the year. Advances due to cotton advances being by Rs. 10.66 lacs mainly due to cotton advances being down. Taxation under Advances is down by Rs. 1.39 lacs due to adjustments in the advance tax payments.

Now I will give you some salient features of the Profit & Loss Account.

Cotton and fibre consumption is down by Rs. 13.37 lacs due to the consumption of larger proportion of cheaper cotton. Muccadumage is up by Rs. 0.80 lacs due to the increase in the muccadumage rate and also in the quantity of cotton received. Yarn and cloth commissions are slightly down due to the lower yarn and cloth values. The stores consumption, etc., is practically the same. Electric power is higher by Rs. 0.32 lacs due to increased consumption of energy. Salaries and wages are up by Rs. 9.99 lacs due to the adjustment in the quantum of bonus as already explained. Dearness allowance is down by Rs. 11.89 lacs compared to the previous year when Rs. 13.98 lacs including arrears were paid according to the Court Award. Rents and taxes are up by Rs. 0.47 lacs due to the increase in water rates by 2 annas per 1000 gallons. Although stocks were higher, insurance is down on balance by Rs. 1.18 lacs as the Company's contribution to the Employees' State Insurance amounting to Rs. 1.89 lacs has been debited to Salaries and Wages this year as this item has been

considered as a part of wages being the compulsory contribution to the Government Fund. Interest is higher by Rs. 0.68 lacs due to larger purchases of cotton. General charges are up by Rs. 0.59 lacs on account of the Indian Industries Fair, Delhi, where your Company's products were exhibited. Trade subscriptions are down by Rs. 1.98 lacs, as a sum of Rs. 2 lacs was paid as the Company's contribution to the Bombay Textile Research Association Fund in the previous year. Donations are up by Rs. 0.15 lacs due to a contribution to the Prime Minister's Relief Fund for flood-stricken areas in Bihar, Orissa and the Punjab.

On the credit side of the Profit and Loss Account, the sales of cloth, yarn and waste show a decrease of Rs. 9.89 lacs mainly due to the production of a large proportion of the cheaper qualities. Yarn and cloth expenses are lower by Rs. 0.39 lacs in consequence. Miscellaneous receipts are up by Rs. 0.22 lacs due to a refund of excise duty.

Agents

You will have seen from the notice that we have for confirmation by you at this meeting the renewal of the agreements of both our cloth and yarn selling agents, Messrs. V. S. Apple & Son and Messrs. Nahalchand Laloochand Ltd., have been your selling agents for 44 and 29 years respectively, and I can say without any hesitation that they have served your Company exceedingly well throughout this period. In keeping with the times they have agreed to reduce their commissions and from the 1st of April they will both be receiving about 25% less than hitherto. Our association with them has always been a very pleasant one, and I am confident that it will continue for many years to come.

You will expect me to say something about the future. As far as your Company is concerned, it has practically completed a comprehensive programme of expansion and rehabilitation in the last ten years and a pause must now be made to consolidate the position it has attained. The outlook for cloth continues to be good and the yarn market is showing signs of improvement. We are now up-to-date with our bonus provision and the current year's accounts will not have to bear any additional burden in this regard as was the case in 1954 and 1955. Further your selling agents have agreed to a substantial reduction in their commissions. Against this, the year has not off to a bad start due to the disturbances in the city in the latter part of January, when several Index figure have been lost and the Bombay Cost of Living Index figure has not come down as much as was hoped. I must leave you to draw your own conclusions.

PROTECTION OF METALS

A water displacing composition has been developed at the Technical Development Establishment Laboratories, Kanpur. The process of manufacture involves the preparation of nitriles of higher fatty acids, followed by their dissolution along with organic soaps of higher fatty acids and an oil in a suitable solvent. The ingredients, excepting triethanolamine, which is used in very small quantities, are all indigenous. The preparation possesses all the essential and desirable features of a good water displacing composition. Such compositions find manifold industrial applications such as the drying of metal parts particularly where conventional methods of drying, viz., drying at elevated temperatures or compressed air are inconvenient, unsatisfactory or definitely harmful. It affords the temporary protection of metal components awaiting further processing and of freshly manufactured stores awaiting normal packaging. It can be used for drying and preserving articles salvaged from water. Small quantities of such water displacing compositions are at present imported and used in ordnance factories and for other defence requirements; these requirements are likely to increase appreciably in the near future. Due to their essential utility in removing both loose and absorbed water from metallic surfaces, these materials are likely to find increased use in industrial engineering establishments.

SOUTH EASTERN RAILWAY

SALE OF
125 CONDEMNED WAGONS
WITH WHEEL SETS

The General Manager invites Tenders for the sale of 125 condemned wagons with wheel sets stabled at ex-Military siding, Salma, South Eastern Railway, Kharagpur.

Tender No. 51/S/3/1 in this connection is obtainable from the office of the Controller of Stores, South Eastern Railway, Garden Reach, Calcutta-23 on production of Cash Receipt for Rs. 5/- from the Chief Cashier, South Eastern Railway, Garden Reach, Calcutta-23, by local firms and on remittance of Rs. 5/- by Money Order to the Controller of Stores, South Eastern Railway, Garden Reach, Calcutta-23, by outside firms. The cost of the Tender is not refundable.

The wagons may be inspected on any working day before the closing date of the tender. The closing date and time of the tenders is 12 Noon on 17th April, 1956.

GENERAL MANAGER,

THE CALCUTTA MONEY MARKET HIGHER INTERBANK CALL RATE

Wednesday, 21st March.

TIGHT conditions have continued in the money market throughout the past week. Demand from the sugar industry and against raw jute purchases continues high. Money is very tight in the interbank market and the call rate has increased to 4 percent, with business reported at 4 1/2 percent. There has been very little recovery in the supply of export documents and turnover in the market has been poor. Those bills coming to hand have been chiefly for tea. Remittance has been fair. Sterling is unchanged and the dollar rate quotes Rs. 47 1/4.

A steady tone characterised the bullion market last week on increased demand coupled with lack of arrivals. Silver soared to Rs. 182.4, quoted today. The rate for ready delivery was quoted at Rs. 182. The London price was unchanged at 79d. The price of foreign silver in New York was the same at 91 1/4 cents.

Gold ruled steady in sympathy with silver and the price advanced from Rs. 102.15 to Rs. 105.14. The sovereign at Rs. 65.8 showed a rise of Rs. 2.4.

Tenders for Rs. 1 crore of 91-day Government of India Treasury Bills, which were opened on 20th March, totalled Rs. 1,02,25,000. The average rate of acceptance was unchanged at Rs. 2-8-6 percent per annum. Tenders at Rs. 99-5-9 were accepted in full and those at Rs. 99-5-9 were allotted approximately 96 percent. Tenders for Rs. 1 crore of 91-day Treasury Bills will be received up to Tuesday, 27th March. During the week ended 18th March, Government of India Treasury Bills for Rs. 38,41,75,000 were sold in favour of the Reserve Bank.

The statement of the position of scheduled banks for the week ended 9th March, 1956, discloses Demand and Time liabilities at Rs. 612.28 crores (Rs. 3.93 crores on account of borrowings from banks) and Rs. 416.77 crores (Rs. 3.14 crores) compared with Rs. 623.12 crores (Rs. 5.07 crores) and Rs. 418.70 crores (Rs. 3.97 crores), respectively in the previous week. Cash and balances with the Reserve Bank have declined by Rs. 83 lakhs and Rs. 6.38 crores to aggregate Rs. 33.91 crores and Rs. 48.09 crores, respectively. There is a drop of Rs. 8.80 crores in investments to Rs. 364.74 crores. Advances and bills discounted at Rs. 721.14 crores reveal an increase of Rs. 9.28 crores. The ratios to total liabilities of cash and balances and of advances and discounts are, in consequence, shown at 8.0 percent and 70.1 percent against 8.6 percent and 68.3 percent.

The return of the State Bank of India for the week ended 9th March, 1956, shows a drop of Rs. 4.16 crores in investments to Rs. 229.18 crores. Investments in Government securities are down by Rs. 7.59 crores to Rs. 97.87 crores, while other authorised investments remain unchanged at Rs. 97.90 crores. Advances, including loans, cash credits and overdrafts and bills discounted and purchased have increased by Rs. 4.07 crores to aggregate Rs. 130.23 crores. Cash and balances are, in consequence, shown at Rs. 15.85 crores or Rs. 2.26 crores less.

The CENTRAL BANK OF INDIA made a profit of Rs. 77.76 lakhs for the year ended last December, compared with Rs. 77.88 lakhs. Bringing in Rs. 17,88,899 there is Rs. 95,64,869. Interim dividends at Rs. 1-8 per share absorbed Rs. 18.87 lakhs. Bank's investments get Rs. 15 lakhs and taxation Rs. 5 1/2 lakhs. The final dividend has been declared at Rs. 1-8 per share, making 12% (same) for the year, leaving a carry-forward of Rs. 18,40,359.

Deposits rose by Rs. 4.69 crores to Rs. 128.66 crores. Cash and investments fell by Rs. 1.69 crores and Rs. 61 lakhs to Rs. 15.59 crores and Rs. 56.72 crores while advances rose by Rs. 12.14 crores to Rs. 72.21 crores.

The COOCHBEHAR STATE BANK, LTD. earned a profit of Rs. 31,645, including Rs. 315 brought in, for the year ended last December. The dividend is 2 annas per share. Reserve fund gets Rs. 10,000 and taxation provision Rs. 6,000. The carry-forward is Rs. 1,540.

The directors say that negotiations are going on in regard to the merging of the bank with the State Bank of India as recommended by the West Bengal Government.

According to the returns received in the Department of Commercial Intelligence and Statistics, the total gross sea and land customs revenue collected in the Indian Union during January 1956, amounted to Rs. 1,423 lakhs as compared with Rs. 2,759 lakhs in the corresponding month of the previous year. The following comparison figures are taken to refer to that of the current figures with those of the corresponding period of the preceding year. Of the total customs revenue collected, import duties accounted for Rs. 1,135 lakhs, land customs and miscellaneous for Rs. 263 lakhs as against Rs. 2,268 lakhs; export duties for Rs. 24 lakhs. The total gross collection of Union customs duties amounted to Rs. 1,351 lakhs as compared with Rs. 961 lakhs. During the 10 months, April 1955 to January 1956, the grand total of gross

Customs and Union Excise Revenue realised was Rs. 26,022 lakhs as compared with Rs. 23,902 lakhs during the corresponding period of the preceding year. Of this amount, import duties accounted for Rs. 10,448 lakhs as against Rs. 11,860 lakhs; export duties for Rs. 3,093 lakhs as against Rs. 3,257 lakhs; land customs and miscellaneous for Rs. 174 lakhs as against Rs. 248 lakhs and Union Excise duties for Rs. 12,307 lakhs as against Rs. 8,537 lakhs.

The Reserve Bank of India has served a notice on the Derajat Bank Limited, Amritsar, informing the Bank that in the terms of the first proviso to Sub-Section (2) of Section 22 of the Banking Act, 1949, a licence to carry on banking business in India cannot be granted to it. The issue of this notice makes it obligatory on the part of the Bank to cease transacting the business of banking as defined in Section 5(1)(B) of the Act, and it would not, therefore, be in order for it, among other things, to accept deposits of money from the public.

TREASURY BILL MATURITIES

Details of 91 days bills outstanding with the public on 23-3-56.

Issue Date	Maturity Date	Amount (000's of Rs.)	Average Acceptance Rate

LONDON FINANCIAL LETTER THE EBB TIDE

THE signs of deflation that have been apparent since Mr. Harold Macmillan announced his restraints in mid-February cannot properly be attributed to those measures. They were not, generally, of a different character from those imposed by Mr. R. A. Butler previously, and the most obvious change in the economy, the curtailment of production of durable consumer-goods, had already begun before Mr. Macmillan took command of the Treasury. The overseas trade figures for February show a sharp improvement, with the visible deficit reduced from nearly £75 million in January to less than £50 million but it is unlikely that in the period of half a month the new restraints could significantly affect February's trade. On the assumption that deflation had already begun before mid-February it may be deduced that there is at last a real possibility that the task will be completed. Even this month, in the interval before the Budget on 17th April, the Chancellor has not been idle: notably, he has tightened the control of capital issues by reducing from £50,000 to £10,000 the limit at which new issues require approval by the Capital Issues Committee—thereby, incidentally, arousing again the suspicion that he is more inclined

than his predecessor was to use direct controls. If the Chancellor's resolve to do all that appears to him necessary to defeat inflation, is further implemented in the Budget, the transformation in the coming months may be rapid.

Time is vital. There are not many months before the seasonal pressure on sterling begins, and many critics feel that the weapons chosen to defeat inflation are too clumsy to be effective so quickly. Why, it has been asked, should we go through the cumbersome process of reducing total demand by £400 million in order to reduce imports by £100 million? Why should those firms which fortuitously rely on credit be compelled to restrict their activities while those with funds in hand can proceed unhindered? Why should a few industries—those making durable consumer-goods—bear the brunt of restrictions that are intended as a general corrective? The real test is whether resources will be transferred rapidly and smoothly from the receding industries into those which can still usefully expand. Not much can be gained in the long run by curtailing production and keeping some workers wholly or partly idle. What is needed is to divert production to export; which seems to be impossible—at least, at reasonable prices—in the motor industry. Because the motor industry is a big consumer of imported steel, it is reasonable to reduce its output and to move some of its labour into export industries which need it. So far, however, such labour has been conspicuously immobile.

Policy for Sterling

At home it is necessary to change the mood from confidence to caution—it is doubtful if the financial restraints alone will be enough to modify the capital plans of industry, though a serious criticism of the present Chancellor is that his policy is largely directed against capital development. Abroad it is necessary to change the mood from scepticism to faith—sterling cannot be quickly stabilised unless foreign interests are willing to restore normal positions in sterling. Both changes require deflation. The 'improvement in the trade position had only a moderate effect on sterling, as foreign operators are not so easily convinced that the tide has turned. However, further evidence of improvement in the balance of payments might have a much more positive effect on the exchanges, for the Continent, especially, has gone short of sterling and will presumably correct this position hastily if it believes that the rate is rising. If Britain's own payments account with Europe, one of the weakest elements in the whole position of sterling, could be brought into approximate balance the immediate problem would be already half-solved.

Quite as important as Britain's payments are the payments of the other sterling countries. The British authorities are not altogether happy about the policies adopted in the Dominions—nor, for that matter, do the Dominions always find Britain's policies accommodating. When South Africa imposed restrictions on the movement of short-term funds to London it was said frankly here that a rise in Bank rate to keep the funds at home would have been preferable. Australia's new deflationary measures looked like a serious attempt to solve the country's chronic problem, thus shoring up a very weak corner of the sterling structure. But the reluctance of the Australian authorities to raise the Bank rate for that purpose was likewise criticised in London. This question of concerted monetary action is certainly difficult. Since conditions are different in each sterling country, it is natural that policies should differ. But many people feel that the task could be tackled more effectively if policies were harmonised as far as practicable: for instance, by agreeing to the virtues—or the defects—of central monetary control for a common problem of inflation. Yet Britain is in a weak position to criticise

she is failing to provide for the sterling area the finance which it requires for its development—finance for which the sterling countries are accustomed to turn to London.

Relaxing the Gold Market

Japhet and Company, the London bullion house, has made an interesting suggestion in its annual review, of 1955. It is that restrictions on dealing in gold in the London market are unnecessarily severe and should be relaxed. Though gold is not precisely comparable with other metals, there is no clear case for denying to the gold market facilities which are permitted, without harm, to the London Metal Exchange. Two facilities, especially, the bullion house suggests could be allowed: forward dealing, and transactions with non-sterling countries against payment in transferable sterling. It seems irrational that when gold and dollars are regarded as virtually interchangeable forward dealing should be allowed in dollars but not in gold. The question of dealing in gold against transferable sterling is not so simple, as transferable sterling is always at a slight discount, so that a single price for gold would not apply to all transactions. Such problems will solve themselves, of course, when there is only one rate for sterling. Meantime, against the alleged advantage of recognising in the gold market only the official rate must be set the considerable loss of turnover, and of "invisible" earnings, that the gold market suffers at present.

THE WORLD SILVER MARKET IN 1955 PERIOD OF PRICE STABILITY ENDS

The following are extracts from The Silver Market in 1955, the 40th annual review compiled by Handy & Harman of New York. Rigid price stability, which after more than two years had come to be considered as characteristic of silver, ended early in 1955. Demand for silver throughout the world increased substantially over 1954, and as a result the average price level was higher. The first price change in the New York market in 26 months took place on 15th March. The withdrawal of the Bank of Mexico from the market ended the long period of stable prices. Increasing world demand brought about a moderately higher price level, but fluctuations took place within a fairly narrow range.

Demand for silver in the United States increased in 1955. We estimate that the arts and industries in the United States consumed 100 million ounces of silver during the year under review. This was an increase of about 18 percent over 1954 and compared with an average of 99 million ounces for the past five years. The improvement over 1954 was felt in all lines, and was particularly marked in electrical and electronic uses. Demand remained relatively steady throughout the year with less than the usual seasonal variations, and the increased consumption of silver, both in this country and abroad, led to added activity in the market compared with previous years. Altogether there were 25 changes in the New York published price during 1955.

At the opening of the year there was no indication of any early price change. Supply and demand were in balance, and the Bank of Mexico maintained this balance by buying or selling to offset other variations. In February demand for industrial use and coinage began to show improvement, and of particular significance at this time were reports that Saudi Arabia was negotiating a coinage order with Mexico. This order was actually completed by the end of February and amounted to 17,200,000 ounces. Furthermore, Western Germany, to which Mexico had made substantial sales in 1954, made new commitments to buy at the rate of about 1,500,000 ounces a month. In addition, the Bank of Mexico received increasing orders from New York to augment the more regular sources of supply. Trade demand in the United States was improving, and at the same time sellers here were receiving orders from the London market.

On the afternoon of Friday, 11th March, the Bank of Mexico announced that it did not have any more silver for sale. With the Bank of Mexico out of the market as a seller, buyers in Western Germany and in London turned to New York for their requirements. At the same time sellers were faced with an increasing local demand, and a sharp price rise was the result, the first price change in the New York market in 26 months. A period of price uncertainty followed. After such a long time without change buyers and sellers had some difficulty in adjusting to the new situation. A seasonal drop in demand during June resulted in somewhat lower prices; but the decline was temporary, because strikes created an unexpected reduction in supplies. In a short time regular sellers were unable to supply the market with more than token amounts of silver, and the domestic trade had to turn to the Government for its requirements.

For the next four months the Treasury Department was the dominant factor in the market. During this period the trade purchased some 10,300,000 ounces of government silver, which was a substantial part of its requirements. Demand held at high levels, and producer supplies were limited. Even though the strikes were settled and operations were resumed in early August, the effects of the disruption delayed for some time a return to full production schedules. Meanwhile a steady demand from Europe continued, and increasing quantities of silver of foreign origin were sold to better advantage in Europe than in New

York. Treasury silver is not eligible for export, but is available only to fill the needs of domestic industry, because of this the New York market for a time became partially isolated and was not directly influenced by occasional higher prices abroad.

During August and September increasingly large purchases were made at the New York Assay Office. And on October 11th it again became necessary to buy from the New York Assay Office, and on that day the published price proved to be the highest recorded price in New York for 35 years.

During the latter part of November there was a marked decline in trade demand. With producer supplies increasing, the price became weaker and dropped rather sharply, ending that phase of the market's history which was dominated by the United States Treasury selling price, and again brought about a period of moderate fluctuations. Prices became quite sensitive to daily changes in the relationship between the market's needs and the producers' supplies. For the most part foreign silver alone was inadequate, and the need to bring varying amounts of domestic silver into the market resulted in rather frequent price changes. Legislative developments were of particular significance to silver in 1955. On March 14th, during the first session of the 84th Congress, a bill, S. 1427, was introduced, which provides for the repeal of existing silver legislation. The final decision of Congress on S. 1427 will be of major importance to the silver market in the coming year.

United States imports continue to decline although the Netherlands continued to make returns of silver against their lend-lease account. We have already noted that 11 million ounces were shipped in 1954 and an estimated 18,200,000 ounces in 1955. This leaves about 27,500,000 ounces still to be shipped of the original debt of 56,700,000 ounces. It appears probable that regular arrivals from the Netherlands will continue until their account has been cleared. Under the terms of the lend-lease agreements, all of the silver from major debtors is due for repayment by April of 1957; except that in the cases of Ethiopia, Saudi Arabia and 100 million ounces of India's obligation, an extension of two years is permitted by mutual agreement. Such extension, therefore, could apply to 127,700,000 ounces in all, or nearly one-third of the total still open.

Developments in Mexico

The basic change in the silver policies of the Bank of Mexico which took place early in 1955 has tended to divert attention from that country. Nevertheless developments in Mexico are important, and the transactions of the central bank represent a fundamental part of this review. Aside from the transactions handled through the Bank of Mexico, an increasing quantity of silver was sold to European countries directly by the producers in Mexico. Most of Mexico's output continues to be shipped to the United States, but sales were made during the year to London and the Continent, as well as countries in South and Central America, because of the economies realised by direct shipment from Mexican ports rather than from New York. Statistics are still incomplete, but based on such information as is available, we estimate that in addition to the transactions of the Bank of Mexico about 3 million ounces were exported to countries other than the United States.

Turning now to Mexico's silver coinage programme it will be recalled that the devaluation of the peso in 1954 increased the value of the silver content of the coins then being minted to more than their face value, and further distribution of such coins was discontinued at that time. A new issue of silver coins was authorised in September, 1955, consisting of two denominations, one of five pesos and one of ten pesos. The Mexican Mint consumed 2,300,000 ounces of silver in 1955 in the minting of these coins. According to our information, this programme will be intensified and is expected to consume about 18 million ounces in 1956. If so, then it is apparent that the Bank of Mexico's present stocks, together with expected receipts of demonetised coin, will be fully committed.

London Demand Higher

Consumption in the arts and industries in Great Britain amounted to about 14 million ounces in 1955, of which about 1 million ounces were exported in partly or fully manufactured form. This was about 15 percent more than in 1954. Demand in the so-called "exportable" market also increased. The term "exportable" refers to silver originating in Commonwealth or other "soft currency" countries, which may be exported without restriction. In contrast, silver purchased from the "dollar area" may be used only for approved purposes.

Imports into Great Britain amounted to about 26,900,000 ounces for the first 11 months of 1955, the latest date for which figures are available. This does not include imports of silver coin for which statistics are not published. Exports totalled about 10 million ounces during the first 11 months of 1955. During the year the price of silver for prompt delivery in London varied. In general, quotations paralleled those in New York, but fluctuated independently to some extent depending on local conditions. An element of stability was introduced by the policy of the Bank of England of lending silver to the market to relieve temporary shortages of spot supplies.

As regards lend-lease, official information is still lacking. The Bank of England received an estimated 10 million ounces in 1955 through withdrawals of demonetised silver coin, and reports indicate

that in addition some 6 million ounces were purchased in the market, largely during the early part of the year when most of the Russian sales were negotiated. It is probable that Great Britain now has on hand all or nearly all of the entire amount necessary to repay its full obligation of 88,100,000 ounces. This being so, it seems reasonable to expect that purchases by the Bank of England will be of much less significance in the market during the coming year.

Indian Demand Remains Low

Consumption of silver in India remained below normal and once again amounted to only about 3 million ounces in 1955. In this regard the following quotation from a recent letter from Bombay is of interest. "One of the major factors for this low consumption of the white metal would appear to be the land reform legislation in the country. The actual tiller of the soil has been given the option to buy the land he tills and in order to exercise this option he is obliged to pay a certain percentage of the cost of the land in cash. It is a well-known fact that the Indian farmer's first choice for investing his surplus cash is land and the second choice is bullion. When land is available it is but natural that he invests as much as he can in it and one can reasonably expect that unless there is a further sharp increase in the amount of surplus cash in the hands of farmers, they will continue to pay greater attention to land than to bullion."

In spite of the shift of demand to land rather than silver, it is still highly probable that consumption was further restricted by the continuing official prohibition on imports, as evidenced by the fact that at times prices were considerably higher than in other centres. Quotations in the Bombay market ranged from a low of Rs. 153-2 per 100 tolas on 6th January to a high of Rs. 176-9 on 28th November. These rates are equivalent, with the Rupee valued at 21 cents, to about 85½ cents and 98½ cents an ounce respectively. At the close of the year the price was Rs. 171-8, equivalent to about 96 cents an ounce.

Concerning lend-lease, it will be recalled that a new Government refinery in Calcutta is under construction and will be used to refine the demonetised coin of which sufficient is now on hand to repay India's entire obligation. We are told that this refinery is expected to be completed by the end of 1956, but until actual operations are under way there is no way of estimating how fast the refined silver will become available for return to the United States.

World Production and Consumption

We estimate that production of silver throughout the world in 1955 totalled about 203,700,000 ounces. This was slightly less than was produced in 1954. In the Western Hemisphere, Mexico recovered somewhat from the relatively low figure in the previous year, and at 45 million ounces showed an increase of nearly 13 percent. The United States and Canada both produced somewhat less than in the previous year, which offset the gain for Mexico.

World consumption in the arts and industries increased nearly 18 percent over 1954. The amount used in coinage, on the other hand, dropped substantially so that total consumption of silver throughout the world decreased slightly. However, the biggest decline was in the amount used by the United States for coinage, which had no effect on the market. Coinage requirements of other countries, which for the most part were supplied from the market, increased by about 16,800,000 ounces.

Prospects for 1956

Events of the year just ended have emphasised the degree to which governmental policies determine the price of silver. In past years the Bank of Mexico was the dominant influence. During 1955 attention shifted to the United States Treasury Department. Mexico no longer provides the key to immediate market prospects; rather we are now primarily concerned with the future policies of the United States, for these policies will have a vital influence on silver in the coming months.

We expect that world demand will continue at or near present relatively high levels, and there is no indication of any important change in the supplies available from new production. If, on the other hand, S. 1427 becomes law and existing silver legislation is repealed, the United States Treasury will no longer be obliged to buy silver produced in the United States and will have no authority to sell silver to industry, except at the monetary rate of \$1.29 an ounce. The transfer tax on profits made in trading in silver, which has discouraged speculation, will be eliminated. Under these circumstances the price of silver would be determined by economic rather than political factors, and would probably fluctuate more frequently and more widely than it has in the past.

TRANSATLANTIC CARGO RECORD

An all-time high in the flying of freight between the United States and Europe was achieved by Pan American World Airways in 1955 when it carried almost 7 million pounds over the Atlantic. According to Willis G. Lipcomb, Vice President Traffic and Sales, the airline set the freight record by making available the largest cargo-carrying capacity of any air carrier between the two continents. In addition to the freight carried in 98 weekly passenger-cargo planes, Pan American offers a schedule of six all-cargo planes a week between New York City and six industrial centres of Western Europe. Contributing to the increased tonnage was the incentive of the low rates instituted by Pan American on 15th August. The transatlantic cargo rates were cut an average of 20 percent with some commodities being reduced as much as 57 percent.

Stocks and Shares

STOCK MARKET IN A CHEERFUL MOOD

IMPROVEMENT IN ALL SECTIONS EXCEPT JUTE

Wednesday Evening.

THERE has been an all-round improvement in equity prices during the past week with the exception of jute shares. The speculative leader, Indian Irons, has improved from Rs. 33 to Rs. 35-4, quoted after hours this evening. Feeling in the market is better and worries that carry-forward charges for this clearing would be on the high side were dispelled today. All speculative shares have benefited and operators appear to have forgotten altogether the settlement anxieties of the past few weeks. The undertone in the market is now very steady.

There has been a good deal of investment enquiry and many of the sound scrip which had been left at low prices following the recent slackness, have now found good demand. Engineering and miscellaneous counters have been especially favoured. The feature of the week's activity has been the revival of tea shares where those of Assam gardens show substantial price increases on the period. The gilt-edged section has also been strong.

Details of the week's trading follow.

The gilt-edged market ruled steady and there was a further improvement in prices. A fair volume of business was put through, but trading was hampered by a scrip shortage. This was particularly noticeable in the case of long-dated loans. Three percent Conversion Loan 1986 after being marked up to Rs. 77-4 cum-voucher turned sellers following the payment of the half-yearly interest on 15th instant and was marked down to Rs. 76-14 ex-voucher. In short-dated Loans, 3 percents 1957 and 1958 were asked for at the higher levels of Rs. 99-11 and Rs. 99-10. In medium-dated loans, both 3%, 1963-65 and 1964 were also in demand up to Rs. 94-12 with few declared sellers; 2½% loan 1961 was supported at Rs. 93-6 and 2½% 1962 was taken at about Rs. 93-12. Among National Plan loans, 3½% 1961 turned sellers at Rs. 99-6, but both 3½% 1964 and 1965 were unchanged at Rs. 98-8 and Rs. 98-7 respectively with business passing at around these prices. Long-dated loans continued their upward trend with 3½% 1966-68 improving to Rs. 92-12 and 3½% 1970-75 to Rs. 89-12. Sellers, however, appeared at the close and their prices eased by one anna in each case. In contrast to the firm trend of Central Government loans, Provincials had sellers rather than buyers and prices were easier.

Selected preference shares continued in demand, but there were insufficient sellers to meet the market. In the miscellaneous group, Aluminium Corporation were marked at Rs. 72-8 and Associated Hotels at Rs. 62. Bengal Paper Preference were taken at Rs. 66 and the "A" Preference at Rs. 138. Brooke Bond Tea were crossed at Rs. 85, Calcutta Electric changed hands freely at around Rs. 11-6 and Dalmia Cement Rs. 100 paid-up were crossed at Rs. 99 as were Duncan Brothers at Rs. 67-8 and Dunlop Rubber 1st at Rs. 129. Humayun Properties changed hands at Rs. 10-8 and a small lot of Indian Aluminium at Rs. 75-8. Indian Iron & Steel were placed at Rs. 110 and Jardine Henderson at Rs. 77. Karanpura Collieries were crossed at Rs. 67 and New Victoria met with enquiry at around Rs. 4. Shaw Wallace were crossed at Rs. 34 and Rohtas Industries "B" Preference were done at Rs. 63-12. Very few transactions were reported in jute preference shares. A small lot of Anglo-India was marked at Rs. 117. Lawrence were quoted at Rs. 95 and Northbrook were done at Rs. 95.

In the banking section, there was a small enquiry for Hind Bank at around Rs. 35 ex-dividend. Punjab National rose from Rs. 46-6 to Rs. 49-8 and United Commercial were steady at Rs. 49-8. United Bank of India "D" shares changed hands at Rs. 4-15 and the "C" shares at Rs. 8-4.

In the railway section, Baraset-Basirhat changed hands at Rs. 11 and Dehri Rohtas at Rs. 12-8.

Cotton shares were better, particularly Bowreah which improved from Rs. 305 to Rs. 325. Dunbar from Rs. 280 to Rs. 300, Kesoram from Rs. 16-12 to Rs. 18-2 and New Victoria from Rs. 2-1 to Rs. 2-5. Elgin Mills and Cawnpore Textiles were unchanged at Rs. 27-8 and Rs. 9. Jaysree were dealt in freely at around Rs. 6-2.

Coal shares improved in sympathy with the rest of the market and closing quotations were higher than those prevailing at the beginning of the period under review, as will be seen from the following table.

	Opening	Closing
	15-3-56	21-3-56
	Rs.	Rs.
Amalgamated	23	24
Bengal	523 x.d.	534
East Indian	32 2	34
Burakur	14 2	14 8

Jute shares were in most cases unsaleable and prices stagnated at around last week's levels. Anglo-India were unchanged at Rs. 185, Auckland at Rs. 120 and Kinnison at Rs. 170. Megna were offered at Rs. 84 and Ganges at Rs. 67-8. National

opened at Rs. 25-4 and closed slightly better at Rs. 25-6. Howrah were neglected at Rs. 23.

In the electric supply section, Calcutta were dealt in freely at around Rs. 13-10. Benares were crossed at Rs. 19 and Sijua Jherriah were marked on one occasion at Rs. 12.

In the sugar section, Belsund were unchanged at Rs. 11-8, Cawnpore at Rs. 21-4, Champaran at Rs. 31 and Carew were very quiet and had sellers at the lower rate of Rs. 9-10. Shree Krishna Gyanodaya New were quoted at Rs. 11-12. Dyer Meakin Breweries were crossed at Rs. 6.

Engineering shares were strong under the leadership of Indian Iron & Steel which improved steadily from Rs. 33 to Rs. 34-14. Burn & Co. met with strong investment enquiry and moved up further from Rs. 328 to Rs. 355, as did Braithwaite from Rs. 26-8 to Rs. 28. Jessops were taken at Rs. 34-8 and Kumardhubi Engineering were marked at Rs. 10-4 ex-rights. Richardson & Cruddas were steady at Rs. 25-2 and there was a good enquiry for Textile Machinery which improved to Rs. 22 from an opening price of Rs. 21-2. Indian Standard Wagon had buyers at the higher rate of Rs. 177.

In paper, interested buying of Bengal Paper took the price up further to Rs. 141. India Paper Pulp were well supported at the higher rate of Rs. 25-2, Orient were better at Rs. 35 as were Shree Gopal at Rs. 19-2 and Titagur at Rs. 44-8. In cement, Ashoka were marked frequently at around Rs. 9-10 and there was a small enquiry for Assam Bengal at Rs. 6-14. Dalmia were a shade better at Rs. 14-4 while Sone Valley were quiet at Rs. 7-5.

In insurance, Hercules were crossed at Rs. 28 and Concord were marked at Rs. 11-2. In shipping, Calcutta Landing were better at Rs. 15-8 while India Steamship were dull at Rs. 8-6. Port Shipping met with investment enquiry at Rs. 16-12 and India General Navigation were unchanged at Rs. 113.

Among miscellaneous industrial, Alkali & Chemical came in for good enquiry and rose from Rs. 21-8 to Rs. 23. Balmer Lawrie eased from Rs. 185 to Rs. 180 while Bengal Flour were unchanged at

Paint Problems

are solved at Rishra

Here at Rishra, W. Bengal, I.C.I. have established a unique Paints Technical Service Station. At this Station various problems concerning the uses of paint are examined. Here, paint users are given instructions on their particular painting problems and techniques; new developments in paints are tried and established; answers are found to questions involving the application of paint to a variety of products and surfaces; I.C.I. and customers' personnel undergo intensive training in paint and its application. This Station at Rishra is unique in India—another contribution by I.C.I. to India's progress and prosperity.

INDUSTRIALS LEAD RISE IN STOCK MARKETS

OVERSEAS TRADE FIGURES TEND TO LIFT PRICES

THERE was a sustained recovery in the stock markets during the past week and widespread gains were scored, particularly in industrial equities. Most of the interest and business was in this section. The recovery was touched off by the February overseas trade figures which showed a sharp contraction in the trade gap during the month. The market was also encouraged by the strength of Wall Street and the generally more hopeful view of the economic outlook. While business remained small before the weekend, there was a marked expansion later with small buyers well in the majority. Industrials recorded appreciable gains which extended to two shiftings of more. The Financial Times Industrial Ordinary index was around seven points higher on the week. Gilt-edged gave an erratic performance but generally lacked interest, so prices drifted. The sharp fall around mid-week was recovered later when selling dried up, and on balance prices recorded small mixed changes. The news and subsequent success of the £2½ million Edinburgh 5 percent issue had little effect on Corporation stocks, which were firm. Baltic and Russian bonds were firm in the foreign market, which otherwise attracted very little interest. Rails were subdued but dollar stocks went ahead in response to the sustained advance to a new peak on Wall Street. Gold shares were quiet throughout and little affected by the modest tax concessions in the South African Budget. A better tendency developed after earlier dullness

and prices occasionally were higher on balance. Diamonds were dull but coppers advanced, helped by the strength of Wall Street. Other base metals inclined higher. Oils attracted good demand after the previous week's setback, with the biggest gains in lesser known issues, notably Trinidad Petroleum Developments. Rubbers and teas attracted little attention, but the former were slightly firmer where changed.

The Money Market

The credit situation on the money market was tight for most of the last week, although the allotment of Bills to it remained small. Loanable credits were affected by the credit squeeze, and bankers' deposits were reduced after the withdrawal of money by industrial and financial concerns for the purchase of Treasury Bills. The cost of money remained high, ranging from 4½ to 5 percent, and Bill rates tended to harden. Towards the end of the week, rather better conditions set in, helped by the disbursement of Government departmental money, and rates returned to more remunerative levels. No change was made in the market's Treasury Bill tender bid and there was little variation in the average rate for the Bills. Applications for £240 million worth of 91-day Bills totalled £380,365,000, of which the former amount was allocated at an average rate of 10½ 3/8, as against 10½ 2/8 in the previous week. Offerings this week consist of £270 million of 91-day Bills. The Bank of England return for the week ended 14th March showed that notes in circulation were £7 million higher at £1,808 million, while bankers' deposits were £16 million higher at £242 million.

Activity on Wall Street

Convertible scrip advanced well in active dealings last week. Buying interest was stimulated by the renewed strength of the stock market. Rails were generally mixed, most of the trading being in Missouri Pacific. U.S. Government obli-

gations and investment quality corporates were shaded in small turnover. In the foreign section, Italians were a firm spot in fairly active dealings. Germans also tended higher in slow trading. Australians showed only minor changes. Among South Americans, Chileans advanced while Uruguayans also gained ground in increased volume.

Hongkong Gold Quiet

Hongkong gold prices moved narrowly during the past week. Demand was better but was counteracted by good arrivals. There was no special incentive to shift the market either way. The official offtake was 5,090 taels and the unofficial offtake 13,700 taels. Carryover charges were 280 cents in buyers' favour. Arrivals from Macao totalled 25,000 ounces. Forward contracts were done at \$(U.S.) 30.89.

Anaconda Copper Price

Anaconda's move in basing the price of its Chilean-mined copper sold both in the United States and abroad on the copper price ruling at the London Metal Exchange has stirred a deep study of the pricing problems among leading copper producers both in the United States and Canada. Both Kennecott and Phelps Dodge have not yet commented but they have said that they are studying the question. The International Nickel Company, Canada's leading copper producer, also says that it is studying the matter. A salient factor which has emerged is that producers' copper price and the customs smelter price will narrow considerably; the new Anaconda price and the customs smelter price are about one cent apart for the nearby position. Some trade sources believe that the latest move will mean that more of Anaconda's Chilean-mined copper will go to the United States and less to Europe, with a possible additional upward pressure on the London Metal Exchange price.

Eire's Tea Import

The news that Eire proposes to control the importation and wholesale distribution of tea is not expected materially to affect the general market position, according to trade sources in London. It is understood that for some time now all Eire's requirements have been bought by Tea Importers Ltd., a Government-sponsored concern. The latest proposals, these sources say, seem to shatter any hopes that might have been entertained of Eire resuming buying through the London auctions. All Eire's tea requirements are bought direct from Calcutta and Colombo. Consumption is around 26 million lbs. annually.

Vegetable Oil Market

An accurate assessment of the values of linseed oil was difficult last week with sellers' ideas varying considerably and no serious buying interest to test the market. Near shipment Indian bulk oil was generally dearer, with around £148 c.i.f. wanted for March-April, but April-May offers ranged from £143 to £145, c.i.f. There was a lively trade in groundnut oil to Rotterdam, including afloat Indian bulk oil at £131 and Nigerian at £132 with further re-sellers wanting £133 in both cases. Castor oil was dearer, reflecting the forcing move by sellers at the origin, with B.S.S. in the region of £122 and commercial grade at £115, c. and f. in drums. Other Indian oils were also dearer, with £132 wanted for forward shipments of bulk cottonseed, nigerseed and kar-diseed oils. Coconut oil was featureless. There were cheaper offers of Philippines copra, with re-sellers a shade lower. Nigerian groundnuts were only nominally quoted at £80 by the Board. Offers of British East African groundnuts for October-November shipment were withdrawn, but July-August parcels were available, with sellers prepared to consider bids down to £74 c.i.f.

Freight Rates from N. America

Freight rates from the United States and Canada to India are to be increased by slightly less than 10 percent for all cargoes from 1st May. The rates are being increased because of higher costs, it is stated, and the main classes of cargoes affected will be newsprint, motor cars, tractors, cotton sulphur, fertilisers, and iron and steel goods. They cover steamship lines in the United States East-Bond Conference, which are principally the Ellerman and Bucknell Steamship Company, the American Export Line, the Isthmian Steamship Company and the Hoegh-Line, as well as those in the Canada East-Bond Conference, consisting primarily of Ellerman and Bucknell. A spokesman of the Ellerman Line said that freight rates of \$30 would be increased by \$2.5 and rates from \$30 to \$40 by \$3.

PRIVATE LIMITED COMPANIES

Section 24 of the Companies Act, 1956, which will come into force on 1st April, 1956, requires that the Registrars of Companies shall make an alteration in the certificate of incorporation issued to an existing private limited company by the insertion of the word "private" before the word "limited" in the name of the company. All such companies will, as from that date, be under an obligation to use the word "private" before the word "limited" as part of their names. All existing private limited companies, should, therefore, present their original certificates of incorporation, to the Registrars of Companies concerned, for having the necessary alteration carried out, as soon as possible. No fee will be charged and no other formalities are required to be observed. Where, for any valid reason, the original certificate of incorporation cannot be produced by a company, the Registrar concerned will, on an application by the company and on payment of the prescribed fee, issue a duplicate of the certificate of incorporation, making where necessary, the alterations required by the new Act.

New Delhi

MR. DESHMUKH DEFENDS TAXATION PROPOSALS

TARGETS FOR COAL STILL UNDEFINED

(FROM OUR NEW DELHI CORRESPONDENT)

SIR EDWARD BRIDGES, in the course of the 1950 Stamp Memorial Lecture traced the history of Treasury control from the Gladstonian doctrine of "saving the candle-ends" to the ushering in of the welfare State with full employment as its sheet anchor. In Parliament, the summing up of the Budget discussions by the Finance Minister showed that the era of "candle-ends" has been replaced by that of full employment even though it may be brought about simply through digging holes and filling them up. "So far as what is called administrative economy is concerned," said Mr. Deshmukh, "even after going through the matter the whole day, I doubt whether one will discover that any massive savings are found to be available. The idea that we have put forward aims at a different thing, that is, avoidance of waste and extravagance in the implementation of our plan. The proper field for it is not only the affairs of the Central Government but also the affairs of the State Governments." The Finance Minister ably defended his taxation proposals, adding that "the successful implementation of the second five year plan cannot be assured without the levy of additional taxation and the proposals that I have made in this respect should be judged in the light of the plan and not in the light of the basis of the annual budget surpluses."

Speaking at the last meeting of the National Development Council on 20th January, Mr. Deshmukh it will be recalled, explained more fully how he proposed to finance the second five year plan. He indicated that the additional taxation of Rs. 450 crores to be raised to finance the plan was to be in the ratio of fifty-fifty between the States and the Centre. "If you want anything more, you must pay for it, which is a principle which almost everybody without exception has recognised. That is to say, development expenditure can be what you want it to be, provided you are prepared to tax yourself for it. Now, I am assuming that the States will not be able to go beyond Rs. 225 crores. It follows, therefore that any further additions to the development expenditure will mean fresh taxation."

The Planning Commission, it may be added, has lately been endeavouring to pacify the Central Ministries and State Governments with a new formula; namely, the Commission would reconsider the allocations later on in the light of developments and economic and financial conditions prevailing in the country. In the course of the Finance Minister's speech of 20th January he allocated Rs. 4,000 crores "on the ways and means side" and Rs. 800 crores "on the revenue side", so far as the outlay in the public sector of the plan was concerned. The Planning Commission, it will be recalled, left an unbridged gap of Rs. 400 crores in the "ways and means" side of the plan. This gap has already been increased by Rs. 400 crores to Rs. 800 crores.

Coal Production Programme

The explanatory memorandum circulated with the Budget papers makes the following pronouncement on coal production based on a Cabinet decision: "There are at present 11 State owned collieries managed by the Ministry of Production. The annual output of coal at these collieries is about three million tons. The target of coal production by the end of the second five year plan has been fixed at 60 million tons per annum as against the present output of about 37 million tons per annum. Out of the additional output of 23 million tons, it is contemplated to raise 15 million tons in the public sector (namely, a five-fold increase over the present output of three million tons in the existing State collieries) as follows: 13 million tons by development of new coalfields in Korba, Karanpura, Raniganj, Jharia, etc.; 1.5 million tons by raising the present output of Singareni Coalfield; 0.5 million tons by raising the present output of State collieries (Bokaro colliery)."

A programme for the development of the new mines has been drawn up, which will be finalised and implemented as soon as detailed drilling and prospecting of the areas proposed to be developed in the public sector is completed. The drilling and prospecting of Korba coalfields is already in progress. The drilling and prospecting of other new coalfields will also be undertaken shortly. The five-fold increase of coal in the public sector will involve a large capital outlay during the second five year plan. The capital at charge of the State collieries up to the close of the existing 1954-55 Government collieries during the year 1954-55 revealed an overall profit of Rs. 29.94 lakhs. A provision of Rs. 12.54 crores has been made in the Budget estimates 1955-57.

At the same time, the Planning Commission, presumably in order to justify its cut in the allocations it had originally made for the railways, issued a directive that they would not be expected to carry more than 48 million tons of coal by 1961, or seven million tons less than the target of coal production fixed by the Cabinet. The Finance Minister indirectly gave his support to this revised plan by telling Parliament that the additional production of coal had been divided into three parts

of seven million tons each; with the private sector and public sector producing another seven million tons each. "As we go along, we shall be able to decide, in the light of the progress made by both the sectors whether we should allot the whole or part of it to the public or the private sector." It may also mean placing the additional production at 14 million tons.

At this stage, the Irrigation Minister, Mr. Gulzarilal Nanda joined the lists. In an interview published on 11th March, he said that the target for coal was subject to further consideration. "At present the target is for the production of an additional 15 million tons of coal during the plan period. Increased provision for coal mining in the public sector might be made." Presumably, Mr. Nanda was thinking of the trifurcation of the coal production target and an additional production by the two sectors of seven million tons each. The position reduces itself to something like the following:—

1. The Ministry of Production, on the basis of the Cabinet decision, should be going ahead with its plans to produce 15 million tons of additional coal by 1961.
2. The Ministry of Railways, on the basis of the Planning Commission's directive should be planning to provide transport facilities for 48 million tons of coal by 1961.
3. The private sector, on the basis of the Finance Minister's assurance should be planning to raise its coal production over and above the original target of seven million tons.
4. The Production Ministry, on the basis of Mr. Nanda's statement should be hoping to raise its target of production still further than that already set for it.

The viewpoint of Mr. K. C. Neogy, the Member of the Planning Commission in charge of coal is still unknown. It is time that some authentic statement was made clearly defining the target of coal production and its allocation between the two sectors.

Indo-British Steel Plant

The Iron and Steel Minister, Mr. T. T. Krishnamachari, explaining the Indo-British one million ton steel plant deal in Parliament during the week said:—"The broad agreement has been reached between the Government of India and the Indian Steel Works Construction Company Limited, London—a consortium of British manufacturers—for the setting up of a steel works at Durgapur. The Durgapur Steel Works will produce about 300,000 tons of foundry grade pig iron and 790,000 tons of medium structural, blooms and billets for forging billets and for re-rollers, wheels, tyres, axles and sleepers.

The steel melting and rolling capacity can be increased by 25 percent with relatively minor additions to the plant. Steel will be made by the well known straight open-hearth process. There will be a wheel tyre and axle plant, which is a separate and costly unit, to meet the requirements of the railways for those products. It is proposed to set up a coal washery at the site of the steel works to wash Jharia coal, which will be blended with unwashed Barakar coal, which in itself will not be fit for metallurgical purposes. Plant, machinery and equipment and a considerable part of the steel structures, refractories and other materials required for the works will be supplied by the Indian Steel Works Construction Company. It will also carry out the entire work of construction and

civil engineering at site under the supervision of consulting engineers to the Government of India. The foreign exchange cost of the plant, equipment and materials is expected to be about £50 million. The cost in India of erection, civil engineering work, constructional material, etc. is expected to be about Rs. 39 crores. A syndicate of British banks has agreed to give credit to the extent of £11½ million towards financing a part of the foreign exchange cost of the plant. The rate of interest will be one percent over the prevailing United Kingdom Bank rate. The United Kingdom Government has agreed to give the Government of India a loan of £15 million. The rate of interest will be the rate at which the U.K. Government can borrow in the market plus a small element to cover administrative charges. Both these credits will be used for making payments to suppliers during the latter half of the second five year plan. Payments during the first two years or so of construction will be made out of India's own resources.

Meeting the Steel Gap

The Indian Steel Works Construction Company will submit by the middle of May 1956 final specifications and tenders. Final prices to be submitted then will not, so far as the f.o.b. element is concerned, vary by more than plus or minus five percent from prices now agreed upon between the Company and the Government of India. These variations shall be only in respect of errors and omissions from the original proposals and will have to be explained to the satisfaction of the consulting engineers to the Government of India. For both erection and civil engineering work to be done in India, the Company shall submit either lump sum quotations where applicable or unit costs for materials and labour with bills of quantities estimated as closely as possible."

The Minister said that, pending the increase in home production by 4.5 million tons to 5.7 million tons by 1960 the Government has decided to import five to six million tons of steel. Shortage of steel is a major obstacle in India's economic development. The present indigenous production is about 1.24 million tons a year while the estimated annual demand is approximately three million tons. The gap between the production and demand is proposed to be met partly by importing about 250,345 tons of those categories of which the country is in short supply, under the Indo-American Economic Aid Programme. Two agreements have already been entered into with the Government of the United States of America which provide that the U.S. Government will make available for the purpose \$18,640,885 representing the total estimated cost of 136,345 tons, to be imported against these two agreements, and the Government of India will contribute Rs. 90 lakhs representing the customs duty, handling and clearing charges, etc. to be incurred in importing and distributing the steel in India. A quantity of 55,145 tons is expected to arrive in 1956-57. It is also anticipated that another \$20 million will be made available by the United States in 1956-57. Accordingly, provision has been made in the Budget for the estimated expenditure on the distribution of steel proposed to be imported, which includes the estimated cost based on current prices in the world markets and the expenditure in India on customs duty, etc. The expenditure will be recouped partly by the sale proceeds of the steel and partly by credits from the funds made available by the United States Government and partly from the Iron and Steel Equalisation Funds. A quantity of 229,495 tons valued at about Rs. 13 crores is expected to arrive by the end of the financial year 1955-56 and another 214,622 tons valued at about Rs. 17 crores is expected to arrive by the end of the financial year 1956-57. Provision has accordingly been made in the revised estimates for 1955-56 and in the Budget estimates for 1956-57.

Cement Machinery from Czechoslovakia

Replying to a question, the Minister, Mr. T. T. Krishnamachari told Parliament that Assam Cement Limited, whose scheme for the establishment of a cement factory at Cherrapunji had been approved, has entered into a purchase contract with a trade corporation in Czechoslovakia for the pur-

opening of cement-making machinery and for assistance in its erection at the estimated cost of Rs. 1 crore.

Navigational Aid Schemes

Schemes estimated to cost about Rs. 1 crore for lighthouse development and navigational aids, were approved by the Central Lighthouses Advisory Committee, which met here during the week. Mr. N. M. Ayyar, Secretary, Union Ministry of Transport, presided. The Union Lighthouse Department will take over the lighthouse on Minicoy Island on or about 1st April, 1956. Seven years ago, the Committee approved the proposal for the transfer of the lighthouse on Minicoy Island from the U.K. Government to the Government of India. Negotiations with the U.K. Government for the actual transfer and subsequent arrangements for the collection of light dues and the transfer of assets had however occupied a considerable time.

It has now been finally agreed by the U.K. Government to transfer the lighthouse to the Government of India. The Union Lighthouse Department is, therefore, making arrangements for manning the lighthouse with Indian personnel from the date of taking over. The U.K. Government has agreed to give the Government of India a proportionate share from the General Reserve Fund maintained by the U.K. Government on account of Minicoy Island lighthouse and similar lights, and to continue collecting light dues in the U.K. on behalf of the Government of India. The Government of India will, however, be required to negotiate separate deals with other countries, such as Ceylon and Pakistan, for the collection of special Minicoy Island lighthouse dues from ships visiting those countries.

Schemes approved by the Committee include the installation of Decca navigator chains on the East and West coast of India (Rs. 80 lakhs); installation of a light near Samiyani Island (Rs. 25,000); improvement of Samiyani lighthouse—purchase and installation of new optical equipment (Rs. 50,000); installation of a light and bell buoy off Veraval (Rs. 3,35,500); purchase of a tender for Khandari Island beacon and buoyed channel in Bombay harbour (Rs. 5 lakhs); replacement of the motor-launch "Jamvijay" by a new launch (Rs. 50,000) and six wreck-marking buoys for Indian waters (Rs. 9 lakhs).

The services of Mr. M. Dyminski and Mr. H. V. Hansen, have been obtained from France and Denmark, respectively, under the auspices of the United Nations Technical Assistance Board. These two experts will assist the Union Lighthouse Department in the installation of the costly and complicated equipment with which the new light-houses have to be equipped. Besides functioning as technicians for the installation, testing and working of various complete units, optical equipment and fog signalling apparatus, their services will be utilised for training technical personnel of the Lighthouse Department who could ultimately take over the charge of such installations and carry out the work.

Considering the isolated nature of lighthouses and the arduous conditions of service, it was felt that the extra expenditure of approximately Rs. 6,300 a year involved in granting the additional allowances now proposed for the lower paid staff, was not excessive. At present, the total expenditure involved in continuing existing allowances is Rs. 3,000 a year. About 54 members of the staff would benefit by the extra allowances now proposed. Compared with the Russians, whose "out of pocket expenses" were detailed in an earlier letter, the terms and conditions under which the two experts working on the lighthouses have been engaged are as follows:

1. The experts will get Rs. 25 per diem each if lodging in kind has not been provided, otherwise Rs. 5 per diem if lodging in kind has been provided.
2. They will be assisted in finding living quarters on request.
3. They will be provided with office accommodation, equipment and supplies except those provided from abroad by the programme under the T.A.B. policies.
4. They will be provided, while on official duty, with internal transportation whether by public carriers or motor vehicles.
5. When travelling by rail, they will be treated as Grade I officers in receipt of a pay of Rs. 1,600 a month and above.
6. They will be provided with posts and telecommunication and other means of communications.
7. They will be provided with such technical and secretarial help and translator, interpreter services as they may need.
8. Such medical services and facilities as are available to the Government's own civil servants.

Government Export Drive

Three more Export Promotion Councils are to be set up shortly. The council for hides and skins will be registered in Madras while the other two councils for mica and shellac are expected to be registered in Calcutta. In 1955 India exported hides and skins worth Rs. 22.57 crores, mica worth Rs. 8.05 crores and shellac Rs. 12.56 crores. These councils consist of representatives of manufacturers, traders, growers and others interested in the export of the commodities concerned as well as a few Government representatives. Financial assistance is being given by the Government to the councils which carry out market surveys in foreign countries, send delegations to survey export prospects, provide information to exporters regarding market conditions and help in establishing trade contacts.

As part of the export promotion programme, the Cotton Textiles Export Promotion Council is now

opening three offices, at Baghdad, Jakarta and in British West Africa. The two offices who will be in charge of the Baghdad and Jakarta offices, have already left. The Baghdad office will cover, besides Iraq, the area comprising the Persian Gulf ports, Syria, the Lebanon, Jordan, Israel, Turkey, Cyprus, Iran and Afghanistan. The Jakarta office will look after the markets in Indonesia, Singapore, the Malayan Federation and Thailand. The office to be in charge of the office in British West Africa is expected to leave shortly. The Cotton Textiles Export Promotion Council recently sent a delegation to Burma, Thailand, Singapore, Malaya, Indonesia and Ceylon, to make an on-the-spot study of the market conditions in those countries. The results of this study are being made available to the interests concerned. Similarly the Silk and Rayon Textiles Council obtains market reports and samples of silk and rayon piece-goods from foreign countries and circulates them among the trade and industry. The two Councils also propose to sponsor jointly a small exhibition in the Persian Gulf area this year. The Engineering Export Promotion Council has sent out a team of experts to Burma to study that market to find out scope for Indian engineering goods.

Drawback of Customs Duties

The creation of Export Promotion Councils is only one of the important measures adopted by the Government to help the export drive. Among other measures is the scheme for the grant of drawback of customs duties on imported goods used in the manufacture of export commodities. During 1955, the scheme was extended to plastic goods, crown corks, cigarettes, electric fans, bicycles, nitrous oxides, wire netting and dextrose. Commodities which were covered earlier by the scheme were art silk fabrics, embroidery goods, linoleum, automobiles, radios and radio batteries. The Government has decided to encourage the use of arbitration clauses in overseas contracts entered into by Indian exporters to secure speedy settlement of trade disputes. The Government is also co-operating with the U.N. Economic and Social Council for creating a new convention to replace the Geneva Convention of 1927 on International Trade Disputes.

Trade Fairs and Exhibitions

Extensive participation in important trade fairs and exhibitions abroad is another item in the export promotion programme. Last year India took part in the Milan International Trade Fair, the Vienna International Trade Fair, Trade Fairs in New York, Toronto, Dallas (USA), Stockholm, Addis Ababa, Jakarta, Karachi and Phnom Penh. The participation in the Asian African exhibitions was on a comprehensive scale and exhibits included items of heavy machinery. Show-rooms have been opened in Ceylon, Thailand, Philippines, U.K. the British West Indies, Burma, Indonesia, Switzerland and the United States for the display of Indian products suitable for export. The show-rooms at New York and Geneva have been re-organised as trade centres. An Export Credit Guarantee Scheme is now being drawn up by a committee of experts.

Government Controlled Companies

According to the information received from the Registrar of Companies of Delhi State, there are at present ten companies working in the State in which the Government hold 51 percent or more shares. Excepting one, all the companies are registered as private companies. Only one of these was incorporated before Independence in 1940 whereas the other nine companies were formed during the first five year plan period. The detailed list of Government companies for Delhi State is given below:

Government Companies Registered in Delhi.					
Name of Company	Date of Registration.	Share capital (in '000)	Authorised	Subscribed.	Share value with the Central Government.
1. Hindustan Shipyard Limited	21-1-52	10,00,00	4,22.75	4,22.75	(in '000) 3,18.48
2. Government Telephones Limited	11-11-40	10,00,00	4,75.00	4,75.00	4,75.00
3. National Industrial Development Corporation Limited	20-10-54	1,00,00	10.00	10.00	10.00
4. Hindustan Insecticides Limited	11-3-54	1,00,00	27.00	27.00	27.00
5. National Small Industries Corporation Limited	4-2-55	10.00	2.00	—	2.00
6. Hindustan Housing Factory Limited	27-1-53	5.00	1.00	50	50
7. Rehabilitation Housing Corporation Limited	19-9-51	50.00	25.00	6.25	19.95
8. Hindustan Steel Ltd.	19-1-54	1,00,00,00	5.00	5.00	3.98
9. National Research Development Corporation of India Ltd.	31-12-53	1,00,00	10.00	5.00	9.98
10. Ashoka Hotels Ltd.	17-10-55	1,00,00	32.91	28.32	25.98

New Capital Issues				
Name of Company	Amount consented.	Class of Capital	Initial or further	Object.
1. Jessop and Co. Ltd.	Rs. lakhs 61	Tax-free, irredeemable preference shares	10	For manufacture of electric coaches for railways.
		Ordinary shares	51	
2. Poly Chem Ltd.	70	Taxable, redeemable cumulative Pref. shares	30	For manufacture of poly styrene in collaboration with Dow Chemicals Co. of U.S.A.
		Ordinary shares (25 percent Ord. capital will be subscribed by Dow Chemicals Co. of U.S.A. who will also be entitled to a further adjustment of Rs. 6 lakhs).	40	
3. Tata Iron and Steel Company, Limited.	963.75	Ordinary shares	963.75	Further for expansion programme.

Capital issue consents granted to non-residents during 1951-55 are as follows:

Year	No. of consents	Amount allowed for issue to non-residents	(Rs. crores) Share of U.K.	Share of U.S.A.
1951	83	15.0	12.5	1.0
1952	64	7.7	2.8	4.7
1953	101	17.7	16.3	0.1
1954	108	28.8	25.7	0.9
1955	123	22.5	6.9	5.2

The table at the foot of the page indicates important capital issues to which consent was given during January 1956.

Tubewell Projects

Under the Technical Co-operation Mission Project 1952 and 1953, 2,650 production tubewells and 350 exploratory tubewells are scheduled to be constructed by June, 1956 and June, 1958, respectively in various parts of the country. The tubewells when completed are expected to irrigate about 13,40,000 acres of land and increase production by about 1,81,000 tons annually. The exploratory tubewells will be sunk in 16 States of India with a view to obtaining suitable hydrological and geological data for the sound development of ground water resources in hitherto unexplored regions. Up to November, 1955, 18 exploratory bores were drilled out of which five proved successful. All the successful wells will be converted into production tubewells and transferred to the State Governments concerned.

The total expenditure to be incurred on the construction of production tubewells will be advanced as loans to the State Governments concerned subject to the monetary ceiling fixed for each project for individual States. So far as the exploratory project is concerned all the tubewells which prove successful will be developed, equipped and transferred to the State Governments concerned. The cost of developed and equipped wells will be treated as loans to the States on the basis of the normal cost of construction of such wells and the economic aspect of the project. The expenditure incurred up to the end of 1954-55 on these projects was Rs. 9.91 crores. A provision of Rs. 3.5 crores for loans to State Governments has been included in the Budget Estimates, 1956-57.

Plans for Thorium-Uranium Plant

The Atomic Energy Commission has been instrumental in setting up a limited liability company called Indian Rare Earths Limited, owned jointly by the Government of India and the Government of Travancore-Cochin, for processing the monazite sands of Travancore-Cochin. The company has a subscribed capital of Rs. 80 lakhs, 55 percent of the share capital being held by the Government of India and 45 percent by the Government of Travancore-Cochin. Work on the construction of the plant at Alwaye was started in March 1951 and the plant went into production in July 1952. The Société de Produits Chimiques des Terres Rares are the technical consultants to the company in this enterprise. The plant is designed to treat 1,500 tons of monazite a year and to produce some 1,500 tons of rare earths, chlorides, carbonates, and some 1,500 to 1,800 tons of trisodium phosphate as a by-product. The plant has been in regular production during the year and has produced rare earth chlorides and carbonates at well below the market rates. A market for trisodium phosphate has been created and the entire production of this detergent material has been sold out.

London

BUDGET DAY FIXED FOR 17TH APRIL

FINANCE BILL MAY BE SHORT AND SIMPLE

(FROM OUR LONDON CORRESPONDENT)

BUDGET Day has been fixed for 17th April, which is a little later than usual seeing that Parliament reassembles after Easter recess a week earlier. It suggests that the Government feels the debates on the Budget and the Finance Bill will not be unduly protracted. It could mean, of course, that the Finance Bill will be relatively short and simple, for there were two Budgets last year and Mr. Macmillan has already announced a programme of economy measures which under different circumstances would undoubtedly have been held up for inclusion in his Budget speech. On the other hand, he would surely like to make a splash on his first Budget day. From the revenue point of view the weekly Exchequer Returns continue to make a good showing, but an overall Budget deficit of well over £100 million seems unavoidable when the financial year closes in a fortnight's time, mainly because local authority borrowing was not really brought under adequate control until the autumn Budget. Since then advances from the Local Loans Fund have been reduced by over 40 percent, but prior to that, unfortunately, they had risen by as much as 50 percent over the previous year's figures.

What Mr. Macmillan intends to do in his Budget is still anyone's guess. The National Union of Manufacturers, a deputation from which he met the other day, holds that a "real reduction in taxation was called for, which in its turn demanded a substantial cut in Government spending." The only effective approach to such a cut was by an independent committee of inquiry, and they strongly urged that such a committee should be set up. It was all-important, it was also contended, that the Government should again give the maximum encouragement to productive investment at the earliest practicable moment. In the view of the Union the starting point at which surtax became payable should be raised in the next Budget.

Progress of the Squeeze

The latest quarterly analysis of bank advances reveals that the credit squeeze continues to make steady, but not too speedy progress. The drop in the total from £1,980.6 million last November to £1,961.1 million in February is comparatively small, but it brings down the total cuts since the squeeze really started last August by a total of £254 million, though the bulk of this arose from the repayment of loans to public utilities (other than transport). The latest drop of about £20 million represents one of only one percent, compared with a 10 percent fall in the previous quarter; nevertheless there are some interesting changes in the various borrowing groups. Bank advances labelled personal and professional have contracted by nearly £16 million to £347.8 million. They are now £6.5 million below the level of February 1955. There is also a sharp fall from £81.4 million to £58.2 million in loans to public utilities, but here allowance must be made for the £75 million calls on Gas and Electricity stocks which fell due last December. Loans to hire-purchase finance companies, rather surprisingly, are down on the quarter by only £1.5 million to £35.4 million. The expanding requirements of engineering are reflected in a jump in bank loans from £167.1 million last November to £180.1 million in February. Demand for loans at this season of the year is usually at its height, so the smallness of the drop is not unexpected. On the other hand, it is also clear that the credit squeeze has not yet interfered unduly with the needs of the export industries.

There were two announcements last week that the credit squeeze is to be intensified so as to block up some loopholes. The first cuts the limits for borrowings under the control of the Capital Issues Committee from £50,000 to £10,000. This move comes as no real surprise. By availing themselves of the £50,000 exemption limit year by year many smaller industrial concerns have been able to indulge themselves fairly freely with financial facilities. These borrowings and a host of other small-scale operations, which are no longer within the scope of the credit squeeze, are now ruled out. Mr. Macmillan's second announcement took the form of an injunction to financial institutions to examine with special care transactions involving the purchase of freeholds and the subsequent leasing of properties back to the vendors. This is also a logical step. In present conditions it is no longer a question of preventing such transactions from being used in speculative take-over deals, but of closing a channel through which companies might raise money for non-essential purposes. One cannot avoid feeling that the Government, having secured the assistance of the banks in giving effect to the squeeze, is now bringing the insurance companies and other City institutions into the process.

Trade Gap Narrows

The provisional trade figures for February issued by the Board of Trade help to reinforce the better showing of the gold reserves and the decline in activity in some consumer goods industries to show that the Government's monetary policy is beginning to work along traditional lines, if somewhat belatedly. Allowing for the shorter month (one working day less this year) and the closure

of certain Canadian and North European ports by ice, the adverse trade gap was down to £49.5 million, the lowest figure since May, 1955, and £24.7 million less than the January gap of £74.2 million. Exports amounted to £246.1 million, with re-exports at £13.5 million, or £11.9 million more than in January. Imports, on the other hand, were no less than £372.2 million less at £309.1 million. One month's figures are an uncertain guide, but it is interesting to compare the January-February averages for this and last year. Whereas the average monthly value of imports was two percent more, the comparable figure for exports was up by 4½ percent. Another encouraging feature was that dollar exports showed a substantial increase. At £29 million exports to North America were £2.9 million more than in January, with those to the United States £1.6 million up at £17.6 million. The early part of the year is usually a slack time for dollar earnings, but so far this year exports to the U.S.A. are 30 percent above those in the corresponding months of 1955 and exports to Canada 15½ percent higher.

Whether the import position can be held will depend to quite a large extent on our demands for foreign steel and coal. In the case of the former the situation is brighter. The Iron and Steel Board has announced a new record output figure of 417,000 tons as the weekly rate achieved in February (408,000 tons was the previous best) with 263,300 tons for pig iron against 241,700 tons a year ago. A revised estimate of 1956 production has been made at 21.3 million tons, or an increase of 1½ million tons on 1955. At the same time consumer stocks are rising, mainly no doubt because of the easing off in demand from the motor car industry. The coal outlook is less cheerful, even though imports for the first nine months are slightly less than for the same period of 1955. In the first ten weeks of this year production of deep-mined coal has fallen by 637,300 tons compared with the same period of 1st year, and the fall has only been partially offset by an increase in open-cast output of 399,900 tons. It is to be hoped the efficiency drive will begin to produce results in the not too distant future.

Economic Survey by T.U.C.

The Economic Committee of the General Council of the T.U.C. has decided to recommend the preparation of a general survey of economic trends in Britain. If the General Council accepts the suggestion, the survey will be carried out as quickly as possible. A new statement of T.U.C. policy may be issued in June. Something of the kind was suggested at last year's Trades Union Congress by Mr. C. J. Geddes, the President. The suggestion had a mixed reception, but may now have been accepted. Mr. Geddes's purpose was to insure that an independent assessment of the economic situation should be available to trade unions.

The T.U.C. has also decided to consult the Amalgamated Engineering Union and the National Union of Vehicle Builders about short-time working in the motor trade in the Midlands. Both unions have expressed their anxiety about short-time working in Coventry and Birmingham. This may or may not precede next Tuesday's debate in the House of Commons on the employment situation. The Opposition's purpose appears to be to find out how carefully the Government has estimated the effects of the credit squeeze. Labour's inclination is not to object to a change in the pattern of employment as such, but to argue that changes should not be made blindly, and that outlets for different production should be opened or widened. The Government has given no sign yet that it regards the credit squeeze as having gone far enough to hurt, and the likelihood is that Mr. Macleod will claim this week that the country should wait a little longer to see if the redundancies and short-time working that have already occurred will last in the industries so far affected, and if alternative employment is created in other industries.

Farm Policy

The Government has departed from precedence in deciding on its farming "budget" and sticking to it despite the fact that it has not been agreed to in detail by the National Farmers' Union. Farmers are to get an extra £25 million a year, either from the taxpayer or the housewife. In return, the Government wants them to concentrate on saving imports. The extra £25 million will comprise £5 million more in production grants; £20 million on value of guarantees. The Government wants farmers to save imports by growing more feed crops and high quality grass; raising more beef, mutton and lamb; producing more milk from home feeding stuffs and cutting the cost of producing eggs and pigs, both fed largely from imports.

To encourage farmers, the Government is raising fertiliser and calf subsidies and marginal farm production grants, and starting a new silage grant scheme. The farmers' unions accept the total of £25 million for Government help, but object to the plan for distributing it, and also to scrapping individual price guarantees for livestock. The Government is considering planning guarantees further ahead than 12 months, and says in future years the industry should be able to keep sound while making smaller calls on the taxpayer. The Government's ideas seem sound enough, and it is to be hoped Mr. Heathcote Amory's policy will be given a chance to prove its worth.

P. & O. Earn More

Improved profits, but an unchanged dividend, are announced by the Peninsular and Oriental Steam Navigation Company a month earlier than expected. A final dividend of five percent makes

eight percent as before, after allowing for a 100 percent scrip issue. The preliminary statement shows a surplus of £10,819,280, against £10,200,043 before tax but after charging £9,615,069, against £8,210,556, for depreciation and £1,010,014 (£1,861,008) provision for surveys. If these and other charges are added back, the gross result appears to have improved by about £1.9 million. The tax charge is relatively steady at £5,216,209, against £5,005,348, tax credits amount to £266,859, against £250,793, and a balance remains of £5,869,929, compared with £6,205,488. This is subject to £1,113,498 (£919,072) for minority interests.

Brevities

Drilling equipment from the Hunt International Petroleum Co. of Texas, the first non-British firm to seek oil in Pakistan, is due in Karachi on 1st April.

A British firm, Costain-John Brown Ltd., has been engaged by the Indian Atomic Energy Department to report on heavy-water production at the proposed fertiliser factory at Nangal and other places.

Burma Mines, which was formed in 1951 to take a half share in Burma Corporation, announces a maiden dividend of 2½d. tax-free, on the 3s. 6d. shares. Last year's profit was up sharply from £35,380 to £198,591.

Equity & Law Life Assurance Society has also lowered its rates of premium for without-profit policies. For example, the premium for a £1,000 whole-life assurance on a life aged 35 is now £18 10s. against £20 19s. 2d. An endowment assurance for £1,000 on a life aged 40, maturing after 25 years, now costs £34 3s. 4d. per annum, instead of £36 5s.

Plans are in hand for the setting up of an association for the smaller companies carrying on hire-purchase financing. Under the title of Industrial Bankers Association, members will be asked to conform to certain standards with regard to borrowings, liquidity and general conduct. This new development will have the effect of separating the good from the bad.

Mr. H. T. Parekh, B.Sc. (Econ.) (Lond.), of the firm of Harkissondass Lakhmidass, Stock Brokers, Bombay, has been appointed Deputy General Manager of the Industrial Credit and Investment Corporation of India, Limited and will join the Corporation on 29th March, 1956.

TATA'S FRESH SHARE CAPITAL ISSUE ADVANTAGES OF STEEL EXPANSION SCHEME

(FROM OUR BOMBAY CORRESPONDENT)

AFTER a very critical debate, the extraordinary general meeting of the shareholders of the Tata Iron & Steel Co. passed the scheme for increasing the capital of the Company. This had formed the subject of a bitter and long-drawn out controversy since it was known that the Government intended sanctioning the issue of new ordinary shares at a certain premium. But for the fact with which Mr. J. R. D. Tata, the Chairman of the Company, handled the meeting and the various desperate suggestions voiced by some of the embittered shareholders, it is doubtful whether the consent of the shareholders to a large increase in the capital of the Company would have been obtained without a prolonged struggle. The temper of a section of the shareholders could be judged from the fact that some of them even questioned the value of undertaking this expansion programme in view of the threat of future nationalisation.

It was but natural that a number of shareholders should criticise the Government's decision requiring the Company to raise fresh capital by issuing shares at a premium, and regard the premium of Rs. 30 a share as unjustifiable. Mr. Tata agreed that there was a legitimate and strong objection to the issue of shares at a premium, and that it was perhaps not well advised on the basis of the investment market. But he assured the critics that the Government had not taken this measure with a view to robbing the shareholders. In fact, Mr. Tata asserted, the authorities had not made it a principle that every capital issue must be made at a premium. He pointed out that the Government had itself stood in the way of certain companies wishing to issue shares at a high premium. He also explained that the issue of shares at a premium was not unprecedented. Several well established concerns had done so in the past and even their own company had issued shares at a substantial premium. Mr. Tata said that in his opinion, the situation was not as bad as it had appeared at one time, because the premium had been scaled down from Rs. 75 a share to Rs. 30 after negotiations with the authorities. As a consolation to the shareholders, Mr. Tata also promised that as soon as the Company had sufficient resources it might either capitalise certain reserves and issue bonus shares or increase the paid-up value of the present shares. He then suggested that if this could be achieved in a year or two, the premium of Rs. 30 for the present issue would, in a way, be repaid. To those who had suggested that the expansion scheme be abandoned, Mr. Tata replied that the Company had an opportunity to put through the new expansion scheme without increasing the labour force, although slightly higher rates of wages were involved. Thus with new machinery and plant, there would be lower labour costs and efficiency would increase. The scheme for producing two million ingot tons of steel annually was a sound one and the company would benefit by the scheme as soon as the plant was built. Judged by the likely improvement in the prospects for earnings, the premium should not be considered excessive. He also pointed out that the extra benefits produced from a price increase of Rs. 62 a ton, would amount to about Rs. 20 crores after taxation during the next five years.

Coming Dividends

Mr. Tata argued further that if the Company depended mainly on borrowings, the World Bank would not have been impressed by it. He announced that the loan would be for 15 years and would carry 4.75 percent interest including the statutory commission of one percent. There would be no repayment of the loan during the period of construction. The Chairman also revealed that the Company had made representations to the Government for the modification of the present ruling that the premium paid on these shares would not be considered for calculating the basic return of six percent while assessing the additional super-tax on dividends. Another important announcement made by Mr. Tata was on the dividend policy of the Company. He repeated that the yield basis would be maintained both on the old and new shares. He hinted at a yield of five percent which would take into account the premium paid.

Unemployment in Bombay

During the debate on demands for various grants in the State Assembly, increasing unemployment in both the State and the city claimed a good deal of the members' attention. In replying during the debate over a demand of Rs. 57.76 lakhs for the Labour Department, Mr. Shantilal Shah, the State Minister for Labour, in a somewhat outspoken speech, admitted that the State Government alone would not be able to solve the problem. While he assured the House that both the Government of Bombay and the Central Government were very much alive to the need for tackling this problem and were doing their best to solve it, Mr. Shah pointed out that a large number of people from all over India came to Bombay in search of employment, and it was not possible for his Government to provide employment for all of them. If the problem was restricted to that of giving employment only to the people of this State, it would have been not so difficult, but the Constitution guaranteed freedom of movement to

citizens of India irrespective of the State to which they belonged. It was therefore not possible for the Government to solve this problem alone. He, therefore, suggested that industries should be equally and properly dispersed and employment should be provided to the people nearer their homes so that the migration to towns and cities could be checked.

Cost of Living Indices

Referring to the prevailing difference in the cost of living index figures, Mr. Shah revealed that the Government of India was considering a proposal to conduct a family budget enquiry simultaneously in all the States as far as possible. Only after the results of this enquiry were available, would it be possible to compare the cost of living index figures obtaining in Bombay and in other industrial centres. So far as the Government of Bombay was concerned, Mr. Shah said, it was anxious to conduct such an enquiry so that the cost of living index figures could be based on the latest information and data, instead of these figures being worked out, as at present, on the basis of an enquiry conducted as long ago as 1934.

Textile Bonus Pact

When the five-year pact between the Rashtriya Mill Mazdoor Sangh as the representative union of the textile workers in the city and the Bombay Millowners' Association was announced, it was expected that there might be some trouble from rival unions on the occasion when the bonus actually came to be paid. Under this pact, the textile workers in the city stood to get about Rs. 6 crores by the end of the year as bonus for the three years, 1953, 1954 and 1955. The first instalment amounting to about Rs. 2 crores was due last week. About 1,50,000 workers received the bonus for 1953 last Thursday; about 30,000 to 40,000 are believed to have refused to accept this payment in protest against the pact. In addition to this, about 15,000 workers of four textile mills went on strike in protest against the pact. Mr. G. D. Ambekar, General Secretary of the Rashtriya Mill Mazdoor Sangh and President of the Indian National Trade Union Congress, however, expressed confidence that the pact had the support of a substantial majority of textile workers.

State Import of Raw Materials

The Committee of the Indian Merchants' Chamber met the Chief Controller of Imports and Exports of the Government of India here last week. A memorandum was presented reviewing the present import and export trade policies and making certain suggestions and protesting against the policy of import of some raw materials through Government channels. The memorandum asked for the restoration of such imports through normal trade channels. Mr. Muralji J. Vaidya, President of the Chamber, urged that instead of this policy having been given up, it had been extended to certain additional raw materials during the current half year. Mr. Vaidya also pleaded for a greater co-ordination between trade control authorities and the Customs officials. The Chief Controller, Mr. S. N. Bilgrami, defending the policy observed that it had to be enforced for building up adequate stocks of raw materials for industries to enable the Government to maintain prices at reasonable levels in the interest of industrial progress. While disclosing that the Government was considering the utilisation of the services of the existing trade channels for internal distribution of such materials, Mr. Bilgrami pointed out that the Government had to confine this work to three or four parties. An enlargement of the field would create practical difficulties. During the course of the interview, the Chief Controller also hinted at an important change in the present policy of progressive liberalisation of import trade control, which might have to be reversed sooner or later in order to conserve foreign exchange resources to meet development requirements under the second plan. Speaking of the need for greater co-ordination between the Import Trade Control and the Customs authorities, Mr. Bilgrami gave an assurance that the Government was doing everything possible to minimise trade difficulties.

Forward Trading in Bullion

At the annual general meeting of the Bombay Bullion Association held early last week, it was revealed that the Forward Markets Commission had given notice that the question of forward trading in bullion would be examined by the Commission from the point of view of its utility to the general economy of the country. The interests concerned have been asked to submit their cases to show why forward trading in bullion is necessary. Mr. Jwalaprasad Tiwari, the retiring President, also said that several enquiries had been received by the Association from upcountry organisations, and the All-India Bullion Traders Convention was taking up the matter. Mr. Tiwari also asked the bullion traders to note that this question of utility had only been raised in the case of bullion, and he therefore called for certain rules to be laid down on the accepted canons for its determination. Mr. Tiwari observed that once such rules were framed, the presentation of the case would be easy and gave an assurance that the Association would devote all its energy and intelligence to justify the need for forward trading in bullion in the larger interest of the country's economy. Sir Chimanlal B. Mehta was unanimously elected President and Mr. Basudev Somani Vice-President by the newly elected Board of the Association.

Statistics and Industry

There was a welcome move here on the part of the All-India Manufacturers' Organisation to inform its members of the significance of statistics

to the country's economic development. The organisation invited Dr. N. S. R. Shastri, Director of Statistics of the Reserve Bank of India, to speak on "Short-Term Business Indicators" at its last week's meeting. Dr. Shastri began with the observation that while statistics had been slowly gaining in importance in India great strides had to be made to bring the subject to the level of progress already achieved by smaller countries in western Europe in the practical application of statistics to industrial organisation. Dr. Shastri observed that the subject had an added significance for this country which was launching big new projects for expanding production and trade. Dr. Shastri believed that the collection of statistics had improved both in extent and intensity, especially in the post-war period. However, there were still many deficiencies and gaps in important fields, which rendered policy decisions in public administration, industry and commerce difficult. One of the main drawbacks even where data was available, as pointed out by Dr. Shastri, was that the existing statistics generally revealed only aggregates and averages. He pointed out that these bare figures did not give an insight into the business men's reactions to the existing situation and future programmes which were necessary for diagnostic and prognostic purposes. Dr. Shastri considered it essential that a link should be established between the published statistics and qualitative judgments, and said that this was exactly the field in which new short-term business activity tests had been making rapid progress in western European countries. The main object of these new methods, which he described at some length, was to provide information on strategic items in economic analysis at short intervals. This could be done provided the emphasis was shifted from numerical data to indicators of trends which could best be given by individual managers, based on their personal acquaintance with the market.

Modern Textile Machinery

At the annual meeting of the Association of Merchants and Manufacturers of Textiles Stores and Machinery last Friday, Mr. V. N. Nanjappa, Textile Commissioner of the Government of India, stated that the Government of India was not opposed to the installation by the industry of automatic looms in cotton textile mills, provided this did not result in the displacement of labour. In fact, he pointed out, some textile mills had already been allowed to instal such looms. The Textile Commissioner believed that the bright and announced that a separate department was being created to collect statistics on the requirements, imports and indigenous production of textile stores and machinery so as to provide the indigenous manufacturers with some guidance.

Workers and Management

Mr. M. R. Masani, who is intimately associated with the House of Tata in Bombay, spoke on his recent impressions of the systems of workers' participation in management, gathered during his visits to West Germany and Yugoslavia in an address to the Bombay Management Association, last week. He said that while workers' association with the management of industrial enterprises was a worthy ideal and one that was infinitely more acceptable as an expression of the urge to social justice than centralised State capitalism, the experience of co-determination in Western Germany and of workers' control in Yugoslavia indicated the need for care and caution on India's part in the methods adopted and the steps taken towards that objective. Mr. Masani disclosed that the universal advice given by those concerned in these countries was that care should be taken in attempts at transplanting to other countries systems which had grown as a product of the unique circumstances prevailing there. Mr. Masani came to the conclusion that workers' control of factories in Yugoslavia was undoubtedly an experiment by the Communist leaders who had abjured the Soviet pattern of State Capitalism which they described as a distortion of Marxism. But the value of the theory was limited in its practical application by the lack of trained workers, on the one hand, as the workers were unable to control the management effectively, and on the other, by the reality of the dictatorship. The present stage there, according to Mr. Masani, could, therefore, be best described as one of joint consultation applied in a manner that was psychologically more satisfying to the workers and more educative than in other countries.

In West Germany where Mr. Masani paid special attention to the system of co-determination which was in force in the coal, iron and steel industries, and to the more diluted system that was applicable over the rest of the industrial field, he formed the opinion that it was too early to say whether or not the system of co-determination had succeeded. There had undoubtedly been increased productivity and a happy absence of labour disputes or absenteeism; industrial relations were reasonably good and harmonious. At the same time, the last few years had been prosperous ones for Western German industry, and when everything was going well, it was easy for a system of this kind to work smoothly. The real test would come if German industry were at any stage to face a recession and wage cuts and measures of retrenchment became necessary. Mr. Masani believed that one lesson that industrial management in this country could learn from the West German experiment was that a board or council which was made up of two equal halves representing management and workers tended to be in a state of continual deadlock and that the presence of a "third force" was desirable.

Madras

DEFICIT BUDGETING IN TWO SOUTH INDIAN STATES MYSORE'S AMBITIOUS PROGRAMME

(FROM OUR MADRAS CORRESPONDENT)

TWO more south Indian States—Mysore and Travancore-Cochin—have budgeted for fairly big deficits in the coming year. The Mysore Budget is the last one for the State as it now exists, for it is scheduled to be enlarged by the addition of the Karnataka districts of Bombay, Hyderabad, Madras and Coorg. The Mysore Government's revised estimates for 1956-57 show the revenue at Rs. 24.0 crores and the expenditure at Rs. 26.7 crores with a revenue deficit of Rs. 2.7 crores. There is a short-fall in the financial outlay in the last year of the first plan which accounts for about 13 percent of the original five-year outlay of Rs. 48 crores. The State Government was able to raise only Rs. 4 crores against the assumed Rs. 9 crores by way of additional taxation during the entire first plan period. Without the big increase in Central assistance (Rs. 20 crores against Rs. 8 crores assumed), the State's performance in terms of financial targets would have been even more disappointing.

The first Budget of the second plan period estimates revenue at Rs. 25.8 crores and expenditure on revenue account at Rs. 29.7 crores, leaving a deficit of Rs. 3.9 crores. Two of the factors that contribute to an increase in revenue in the budget year are the adoption of the revised electrical rate structure and the extension of estate duty to agricultural properties in the State. The revised electrical rates are expected in due course to raise the net revenue to seven percent on the capital invested. Apart from these, no new taxes or increased rates of existing taxes are contemplated in what has been called the "no new tax" Budget. The Chief Minister of Mysore (who is himself the Finance Minister) has given an explanation for the large deficit of about Rs. 4 crores. The forecast of the State's resources for the second plan shows that at the level of revenue and expenditure reached in the current year, there will be a deficit on revenue account of Rs. 11.3 crores in the next five years as a whole. The factors contributing to the deficit are the increasing and recurrent expenses arising out of development schemes taken up under the first plan and the obligations in respect of loans raised for development so far. Deficits at an annual rate of over Rs. 2 crores are, therefore, to be expected in the next five years. The excess of the estimated deficit for 1956-57 over the forecast deficit of Rs. 2 crores or so is, however, due to various new development schemes to be taken up in the budget year on revenue account and to projects undertaken during the first plan which have yet to be completed. According to Mr. Hanumanthaiya, in the absence of resources the deficit has necessarily, to be left uncovered.

Capital Expenditure

The capital programme of the Mysore Budget provides for the continuation of work on major irrigation, power and industrial projects now in progress and for new schemes to be started under the second plan. The provision is as follows: Irrigation—Rs. 4.3 crores; power—Rs. 4.0 crores; Bhadravati Steel Works—Rs. 94 lakhs; other Government industrial concerns—Rs. 61 lakhs. Loans and advances to local bodies, co-operative societies and others will account for Rs. 2.7 crores (net), while further capital works will require Rs. 4.7 crores. Repayment of Central Government loans falling due next year will absorb Rs. 1.2 crores. If to these items is added the revenue deficit of Rs. 3.9 crores, the total ways and means requirement will be Rs. 22.3 crores, towards which credit has been taken for Rs. 5 crores by way of public borrowings and Rs. 12 crores by way of Central assistance. The assumed Central assistance is only provisional since a firm indication of assistance has been received so far to the extent of only about Rs. 3 crores. Incidentally, it should be noted that the draft second five year plan has fixed the size of the Mysore plan at Rs. 78 crores. This, however, does not include the Central outlay on the Bhadravati Iron and Steel Works, urban water supply and sanitation, and national highways.

Mysore's Second Plan

During his Budget speech the Finance Minister drew attention to several points of immediate interest to the State. He remarked that although Prohibition is now in force in six districts and four taluks of the State, State-wide Prohibition would involve a serious depletion of resources. Unless there is an assurance that the loss of revenue will be reimbursed to the State, there could be no extension of India's nationalisation of life insurance would materially affect the existing set-up of the Mysore Government Insurance Department. If the Public Branch of this Insurance Department is brought under the proposed Corporation, it will be deprived of two-thirds of its existing business. Not the least of the advantages of the Mysore State insurance is the convenience afforded to the public in every part of the State for paying premia and drawing money at all Government treasuries. According to Mr. Hanumanthaiya it would be unfortunate if these conveniences to which the people in the State are accustomed are either diminished or lost under an over-centralised agency for the whole of India, for such an agency might not be able to work with speed and efficiency. Further announcements include a statement to the effect that as from the Budget year the rate of interest

on the capital invested in all Government industrial concerns, including the Mysore Iron and Steel Works and the electricity department will be raised from 4 percent to 5 percent; that a corporation will be set up for managing the Bhadravati Iron and Steel Works and also a State Finance Corporation for which a provision of Rs. 30 lakhs is made in the Budget; that during the second plan steel production will be stepped up to 100,000 tons, and high-tension and suspension tube insulations will reach the full production level of 2,500 tons. Government factories will produce 200 transformers and 1,500 tons of soap per annum and two new sugar factories will be started. Mr. Hanumanthaiya also pointed out during his speech that the rationalisation of power rates for industries would involve higher rates for discontinuous and inefficient modes of utilisation and lower rates for the continuous and efficient use of allotted energy.

The redeeming feature of the Mysore Government's finances is that the outstanding public debt is only Rs. 46 crores, while the Sinking Fund now carries Rs. 7.5 crores which is fully covered by investments. The annual contribution to the Sinking Fund is now Rs. 62 lakhs. All public loans, including those obtained from the Government of India, are being repaid punctually on the due dates. The Finance Minister proudly recalled the observation of the last Finance Commission that the cost of administration in Mysore is the lowest possible in relation to its resources. But even this cautious and progressive State, he noted, may be attempting to do too much in the second plan period with its limited resources.

Travancore-Cochin Budget

The Travancore-Cochin Budget for 1956-57, was presented to the State Assembly a few days before the resignation of the Congress Ministry. It is unlikely that it will be discussed by that Assembly in view of its probable dissolution. According to the revised estimates for the current year, the revenue stands at Rs. 18.1 crores and expenditure at Rs. 19.5 crores, leaving a revenue deficit of Rs. 1.4 crores. The outlay on capital schemes in the current year, according to the revised estimates is only Rs. 4.3 crores against Rs. 6.2 crores originally budgeted for. The Budget for the coming year estimates revenues at Rs. 18.9 crores and expenditure on revenue account at Rs. 22.0 crores, with a deficit of Rs. 3.1 crores. The revenue estimates do not take credit for any new measures of taxation except the betterment levy in respect of areas benefited by irrigation.

The capital Budget of the T.C. Government for the coming year provides for an outlay of Rs. 9.4 crores on the second five year plan projects. This

amount does not include loans and advances to local bodies, co-operative societies, etc. Irrigation and power projects are to absorb the greater part of the capital outlay, while an industrial estate in the Quilon district, the organisation of more co-operative societies, industrial development, including both village industries and some large industries—will make their own demands on the remainder. In the matter of large-scale industries in particular, the Government proposes to invest Rs. 30 lakhs in the shares of commercial concerns and advance Rs. 20 lakhs as loans to Government-sponsored industrial concerns. The total ways and means requirements including the amount necessary to meet the revenue deficit will be Rs. 14.4 crores, of which Rs. 2 crores is expected by way of a public loan and Rs. 7 crores by way of loan assistance from the Centre.

The size of the T.C. State's second plan has been fixed at Rs. 75.6 crores, subject to an economy cut of five percent. This does not include the Central outlay on urban water supply, inland navigation and ports. The power programme of the plan alone will cost Rs. 23 crores while industries will account for nearly Rs. 7 crores. Social services will absorb about Rs. 25 crores while agriculture, community development and irrigation will involve an outlay of Rs. 18 crores. It has been decided that nearly Rs. 30 crores should be raised by the State during the plan period; this will consist of Rs. 11 crores under public loans, Rs. 12 crores from revenues at existing levels of taxation and Rs. 5 crores from additional taxation. The Centre is expected to provide about Rs. 45 crores by way of grants and loans at an annual rate of Rs. 8 crores to Rs. 10 crores.

Large Deficit in Coorg

The 1956-57 Budget of Coorg estimates revenue at Rs. 1.71 crores and expenditure at Rs. 2.04 crores, leaving a deficit of Rs. 33 lakhs. As agricultural income-tax will bring in Rs. 20 lakhs (much more than the original estimate), the loss of about Rs. 10 lakhs on account of total Prohibition will be made good. When Coorg becomes a part of Mysore in the course of the Budget year, the present Mysore State's revenue deficit will be further increased.

Madras Corporation's Revenue

In the newly presented Budget of Madras Corporation the current year's revised estimate shows a revenue of Rs. 2.6 crores and an expenditure of Rs. 2.6 crores. The 1956-57 Budget estimates both revenue and expenditure at Rs. 2.7 crores each. As property tax alone accounts for 50 percent of the Corporation's revenue, it is stated that there is no possibility of augmenting its income unless the recommendations of the Taxation Enquiry Commission are implemented.

ACC cement gives concrete shape to India's major projects

Over 25,000 tons of ACC cement were used in the construction of the Tilaiya Dam (Bihar). Cement means better living for everyone; and the ACC is making more and more quality cement.

"CAPITAL" INDEX OF INDIAN INDUSTRIAL ACTIVITY **

The Capital Index of Indian Industrial Activity (Base: 1935) has now been brought up to August, 1955. Compared with the preceding month there were increases in steel ingots 5.7 points, cement 23.3 points, paper 2.1 points, coal 8.9 points and

wagons loaded 1.4 points, while decreases occurred in cotton consumption 5.1 points, jute manufactures 2.3 points, pig iron 1.1 points, and electricity 1.6 points.

The index for cheque clearances rose by 2.1

points, while that for notes in circulation dropped by 1.4 points.

Correlating all the factors the Capital index of Indian Industrial Activity advanced by 0.4 points during August, 1955.

"CAPITAL" INDEX OF INDIAN INDUSTRIAL ACTIVITY (1935)

Jute

GROWERS' PREPARATIONS FOR NEW JUTE CROP MAKING GOOD PROGRESS

GUNNY AND FIBRE PRICES FALL FURTHER: LITTLE BUYING INTEREST

THE heavy goods market has experienced wide price fluctuations during the past week. At one stage, B Twills fell to Rs. 109.8 a 100 bags, recording a new low for this year, and incidentally the lowest level since the end of October 1955. Calcutta mills are not keen for business, as there is still a big disparity between fibre and gunny prices. The last time the mills had to operate at these prices for goods they enjoyed the advantage of being able to procure raw material at about Rs. 80 a ton below today's rates. On that basis, they rarely broke even, so now it is nearly impossible to do simultaneous business at a profit. It is natural, therefore, for mills to adopt the present policy, as it is only by a refusal to accept these conditions that they have any hope of bringing the price of jute within workable limits.

There seems to be little hope of any sharp increase in the price of jute goods, as even at the present seemingly attractive levels overseas buyers have shown only limited interest. Foreign consumers appear to be taking the view that with favourable weather conditions in the jute fields giving rise to the possibility of an early crop, raw jute rates will fall, taking gunnies down with them. They are content, therefore, to sit out and wait developments, as, with few exceptions, they are fairly well stocked. America, for instance, has recorded a fall in burlap consumption of about 5 million yards, and at the present rate of consumption she has a full two months' supply in transit. Add to this a possible six weeks' consumption already purchased but not shipped, and the result clearly demonstrates why she is not buying. Of all the overseas buyers, Australia appears to be the only one taking any interest at present, and during the week she is reported to have purchased about 25,000 bales of cornsacks. This represents about 74 million bags, and is not enough to maintain prices to any great extent, but it is rumoured that she may have to enter the market again in the near future.

Where, then, does this leave the mills? The outlook is not too bright. After nearly three weeks of attempting to force down raw jute prices by staying completely out of the market, rates have only fallen by about Rs. 40 a ton, but this has been exceeded by the rapid decline in gunny rates. Thus the experiment so far has not come up to expectations, and the mills are nearing the stage when they will once more have to replenish their stocks. Indeed, one or two buyers have already entered the market for local jute for fairly quick delivery. As a result, sellers have revised their ideas and towards the end of the period, prices again show a tendency to rise.

The jute-growing areas in both India and Pakistan have reported favourable weather conditions, and preparations for the new crop are well in hand. Rainfall in most areas has been sufficient to allow a limited amount of sowing on the lowlands, and all agencies are reporting that work is about three weeks ahead of last year. Contracts for New Crop jute have already been entered into at a discount of about Rs. 2 to Rs. 2.8 a maund on Old Crop rates, but general quotations so far are only nominal.

Manufactured Goods: The market was very unstable at the opening last Thursday, and heavy goods prices slumped by Rs. 1-6 in the near and Rs. 2-4 in the forward positions. B Twills for these two periods were quoted at Rs. 112-12 and Rs. 110-4 respectively, the discount on forward shipment having widened considerably. Hessian also showed an easier tendency and 40in. 10oz. prices dropped 6 annas in all deliveries to rule at Rs. 30-14 for March shipment and Rs. 39-12 for July-September. Overseas buyers showed a complete lack of interest but heavy selling pressure from speculators, and the weaker fibre markets, caused further price falls of Re. 1 to Rs. 1-4 in sacking and 2 to 4 annas in hessian. On Saturday, B Twills opened slightly better on reports of business with Australia, and rates moved up by 4 to 8 annas. But hessian was completely neglected, and prices in this section continued to fall. Reports of a drop in American burlap consumption during February caused easier conditions to prevail over the week-end and at one stage B Twills dropped to a new low of Rs. 109-8 a 100 bags. These prices slowly recovered towards a 100 bags. The market was again quoted at Rs. 112 for March B Twills were again quoted at Rs. 112 for March shipment and Rs. 109-8 for July-September. Hessian was unchanged at Rs. 39-6 for both the near and forward positions and remained at this level for the rest of the period. Heavy goods showed slight variations at the opening, and after tending to steady, rates again dropped to Rs. 109-8 in the late afternoon, with the market featureless. At the close, the market is quiet with small enquiries from overseas, but with production at its present level

they are having no effect. Opening quotations on Wednesday morning were as follows:

	March	April	April-June	July-Sept.
Rs.	Rs.	Rs.	Rs.	Rs.
40in. 8oz.	32-12	32-6	32-2	31-14
40in. 10oz.	39	39-3	39-8	39-2
B Twills	110-2	110-10	110-10	106-8
Heavy Cees	109-8	110	110	108-8
(Plain)	135	135	135	133-8
A Twills	128	127-8	127	125
Liverpools	112	112-8	112-8	110-8
Cornsacks				

Raw Jute: There was very little to report from the jute markets this week due to the complete lack of interest shown by mills. In the absence of business, fibre rates showed a gradual decline with sellers anxious to liquidate their holdings, most of which now showed a loss. Upcountry markets were inactive as imports were very small, and prices tended to lead Calcutta rates by about Rs. 2 a maund. Favourable weather conditions in the jute growing areas kept agency prices down whereas under normal circumstances they would have increased. Mills were aided in their present policy by fairly good arrivals at the jetties, and also in the local markets, but towards the end of the period one or two buyers began to show interest and some business was done. Several mills continued to buy fair quantities of Daissee and mesta over the jetties at varying rates, normally above those quoted. This caused agency prices to firm up, and imports to drop.

Raw jute prices at the opening on Tuesday last showed a drop of 8 annas a maund to Rs. 29 a maund for Upper Assam jute for March-April shipment, but mills had completely withdrawn from the market and in the absence of business rates declined further. Sellers were offering freely at this level but no business was reported, and by Friday morning

Calcutta goods have weakened to 60s for 10 oz. 40 in. and 46s 9d for 7½ oz., March, 60s 6d, and 46s 3d, April, 60s 9d and 46s May and 61s and 45s 6d June, with "B" twills 170s, 169s 6d, 168s 6d, and 168s 6d for the respective positions of shipment, all f.o.b. Calcutta.

THE PAKISTAN JUTE MARKET

The jute market, in Pakistan as well as abroad, continued to be steady and firm. The prices on the whole did not show any further rise. Buyers were few but the turnover was considerable. Thin trading in the Calcutta market, limited in local markets and a low overseas demand were the main factors responsible for the arrest in the further rise of prices. Foreign buyers have resisted the rising tendency of the market and spinners made only absolutely necessary purchases. The main buyer has been China, reported to have purchased 60,000 bales for March shipment. Poland is also said to have purchased 20,000 bales for shipment in March. The export c.i.f. U.K./Continent prices remained above the minimum fixed and Export Firsts ranged from £85 to £95 a ton (nominal), while in the local market the prices of Export Firsts were from Rs. 155 to Rs. 175 a bale. Arrivals in the local market have continued to fall and remained at between 12,000 and 15,000 maunds. The stock position at Narayanganj was extremely tight and reports from agencies revealed similar conditions. The total shipment of raw jute abroad during this season up to the end of February amounts to 30,95,350 bales. The total export to India up to the end of December 1955 was 7,66,322 bales.

Plantation Topics

THE PAKISTAN TEA INDUSTRY

FALL IN PRICES

The final production figure for the year 1955 has now been given by the Pakistan Tea Licensing Committee as 51,633,001 lbs. Shipments to the United Kingdom for the month of February, 1956, totalled 320,804 lbs. and those to Karachi 2,955,907 lbs. The figures for February, 1955, were 2,507,459 lbs. and 2,347,132 lbs. respectively. To lower consumption in the U.K. combined with heavy stocks in Calcutta, has now been added the increase in the bank rate which has resulted in discouraging the holding of stocks. In London, sale Nos. 225, 226, 227 and 228, were held during the month and Pakistan's offerings at these were as follows:—

Sale No.	No. of Chests offered.	Average Price obtained.
		Sh. d.
225	2,188	3-7.90
226	2,076	3-4.82
227	2,034	3-3.97
228	1,320	3-2.32

The total sales during 1956 including sale No. 228, were 17,177 chests at an average price of 3s. 7.56d. The corresponding figures for 1955 were 22,466 chests at 6s. 6.63d.

At Chittagong auction sales Nos. 17, 18 and 19 held during February, offerings and average prices were as follows:—

Sale No.	Chests	Average Price Rs. As. P.
17	14,945	1 15 5.7
18	14,534	1 13 4
19	11,601	1 11 6

From the above it will be seen that there was a fall of approximately As. 4/- between sale No. 17 and sale No. 19, this being largely in sympathy with the fall in prices in the Calcutta and London Markets.

COCHIN TEA SALES

At Dust Sale F, 350,000 lbs of tea were on offer. There was a very strong general demand in the market which was 2 to 3 annas higher all round.

NEW CARGO SHIP LAUNCHED

The newest ship of the British India (B.I.) Steam Navigation Company—the 10,000 tons-deadweight, turbine-driven cargo steamer *Nyanza*—was launched at Greenock, Scotland, on 13th March. The *Nyanza* is similar to the *Nowshera*, which was handed over to B.I. by the Greenock builders just over a year ago, and the latest vessel is the second of its type ordered by the company. Another vessel of the B.I. fleet—the 20,800 tons-gross troopship *Nevada*—is at present being fitted out on the River Clyde. It is learnt that two British India oil tankers, each of 18,000 tons deadweight, have been ordered from a Clydeside firm of shipbuilders under the contract announced last year by the P. & O. group of companies.

LONDON INSURANCE LETTER

REVISED ACTUARIAL BASIS

THE Institute of Actuaries has revised the mortality tables on which the life assurance offices assess their risks and, therefore, their premiums. The revision shows that the risks were considerably over-estimated on the basis of the old tables. Those were compiled between 1924 and 1929: the new ones relate to the postwar period. The expectation of life of (for example) a man of 25 has increased as much as 10 to 15 years between the two periods. The change is a new reminder that almost any social development bears directly or indirectly on insurance. The relevant development in this case is the improvement in diet and hygiene and even housing, and the advance of medical knowledge, raising the whole standard of health. Full employment and relatively high incomes may have been criticised recently, but they have this improvement in health largely to their credit. Meantime the offices' premium rates have become obsolete, and the process of reducing them has begun. To the National Provident Institution for Mutual Life Assurance falls the honour of leading the decline: at the beginning of March it announced some substantial reductions, at the same time raising its rates of interim bonus. Other offices had already raised their bonuses—thereby, as it were, distributing some of the excess profits arising from unrealistic premium rates.

These moves are particularly opportune just now. The delay of the Chancellor of the Exchequer in formulating a policy to promote personal saving has disappointed many people. Even before the rise in rates of bonus and the fall in rates of premium life assurance had become the largest single medium of personal saving, and on the revised basis it will surely attract more savings.

The use of these savings, too, has become more adaptable. The chairman of the United Kingdom Provident Institution, Sir John Bonn, says that investment policy must constantly reflect "the changing needs of policyholders and the public", and clarifies the point with the remark, "we are investing in firms concerned with atomic power". In the stock market, ordinary shares have turned downward this year, and one or two insurance companies have evidently been exchanging ordinary shares for Government stocks. But the chairman of the Scottish Widows' Fund, Mr. Alastair Blair, remarking that the society's policy since the war has been to increase the proportion of assets invested in ordinary stocks—both British and American—and that the policy has yielded considerable benefit not only in the form of increased income but also on the capital side, expects that "part at least of this appreciation is likely to be permanent". The policy has enabled the society to declare uncommonly liberal bonuses this year.

Wider Cover for Exports

In the tougher conditions of export trade, demands for wider cover of export risks are being renewed. Most specifically, Mr. S. E. Phillips, deputy manager of the Trade Indemnity Company, addressing the Institute of Export last month, urged that all export risks that could not be controlled—or, indeed, assessed—by individual exporters should be covered by the Government. The Export Credits Guarantee Department is an offshoot of the Board of Trade, and its policy, though based on commercial principles, has become increasingly venturesome. It does not, however, cover political and exchange risks independently of ordinary commercial risks. The Trade Indemnity Company, a private body, confines its cover to commercial risks.

The Governments and private companies work more closely together in these matters on the Continent, and Mr. Phillips envisages a closer association also in the U.K. While putting forward no specific plan, he implied that the Government (doubtless, the E.C.G.D. itself) should cover the political and exchange risks of business whose commercial risks were covered privately. The idea that the Government should provide this wider insurance has been, not unnaturally, well received in trading circles—on the assumption that no substantial premiums would be involved. It is accepted now that risks on a national, or international, scale, such as political and monetary changes, are a national responsibility, too big for any individual or group. And it is argued that at this stage of the export drive no abnormal risks should be allowed to deter exporters.

Worldwide Marine Agreement

It was for the sake of underwriters, not of the assured, that Mr. H. F. Thorburn, chairman of the Liverpool Underwriters Association, at the annual meeting last month, advocated co-operation "as a market, not only nationally but internationally". He added: "Misguided competition—be it from this side or the other—can only add to our present difficulties and serves nobody's interests but those of the assured, who is ever ready to play off one market against another." These are bold opinions in the midst of a campaign against restrictive practices and in favour of free competition. The truth is, as Mr. Thorburn admitted, that Britain has lost the commanding position in this market that she occupied before the war, and that underwriters are disturbed by the rebating and other practices which stimulate business abroad. Mr. Thorburn asserted that "colleagues overseas" continued to look to this country for a lead, "particularly in the technical aspects of our business". Whether that implies that they would be willing to enter into an agreement to regulate the whole market—for the benefit, it might seem, of their British competitors—is another question.

Engineering and Transport

CONSERVATION AND STORAGE OF WATER

NEW MATERIAL PREVENTS SEEPAGE

A RECENT approach to the conservation of water in irrigation schemes, the seepage from unlined canals and the construction of water storage tanks, is being watched with interest by engineers and estate managers. The material employed, known as FAM, consists of a thick sheet of bitumen, one of the oldest and best tried of all waterproofing materials known to man. Bitumen alone, however, has a number of weaknesses and to be used effectively for waterproofing a roof, a canal, pond or other structure, needs to have a reinforcement. Ideally this should be of non-vegetable fibres as otherwise moisture and termites are likely to cause deterioration of the reinforcement so that in time the bitumen is no longer able to do its job of waterproofing. That is where the secret of this new material lies, since it is based on a thin mat of glass fibres bonded together with special resins.

The finished product at first glance looks rather like a very thick roofing felt made up in the usual roll form. Because of its thickness however and the special methods used to treat the bitumen and the Fibreglass base, it is capable of doing much more than ordinary roofing felt could ever hope to do. This apparently flimsy product can on occasion replace cement or bricks. If handled in air it is not very difficult to tear FAM but, like a piece of paper which has been stuck to a hard board, once it has been stuck down it is extremely difficult to do any damage to it. If an earth canal is

built and then, while there is still just a little moisture present in the soil, the banks are compressed by rolling and stamping, a very hard and smooth surface can result. A new technique is to follow up this consolidation of the earth by laying over it widths of FAM, which are given an overlap so that one sheet is bonded to the next. At each side of the canal the ends of rolls are tucked into a ditch and buried to anchor them. The method of joining the edge of one FAM sheet to the next can vary but usually consists of "fluxing" by brushing on kerosene or diesel oil, which softens the surface of the bitumen on the two rolls. When on roll is lapped over another and the two pressed lightly together this fluxing gives an efficient and watertight seal between layers and, providing it is left for a few days, water can then be run over the joints without risk.

Controlling Seepage

Obviously when an engineer designs and builds a canal system for irrigation purposes the aim must be to get as much water from the gathering area to the point of distribution where the land needs to be irrigated and any loss of water caused by seepage through porous earth banks on the way is so much lost which might otherwise be used by the farmer.

Seepage through canal banks frequently raises the water table on both sides of the canal and also allows soil salts to collect. The result is a salty marsh in which nothing can grow, so that the construction of a canal may actually mean a gradual loss of good agricultural land through seepage. The solution usually resorted to is that of sinking tube-wells, which are then pumped to keep down the water level. This, however, is an expensive business and a constant drain on electric power which is needless if the canal is lined. Good results are, of course, obtained using concrete or

brick linings but these are frequently expensive and moreover the joint areas in the case of brick give every chance for weed growths after the canal has been in use for some time. Concrete linings are very costly and susceptible to cracking when exposed to the hot sun over a long period of time. Where this has happened the cheapest method of repair is to stick FAM sheets over the deteriorated concrete surface.

Wide Field for Research

Apart from canals, from experimental work so far carried out it has been seen that this new material can be used for the construction of water storage tanks or to waterproof the earth banks of reservoirs. A cheaply constructed tank can also be employed to store water to supply cattle in dry areas or for industry where the alternatives would be to construct a costly steel or concrete tank. An interesting possibility which has not yet been fully explored is that of constructing underground pits lined with FAM, which can later be sealed over the top and used for grain storage purposes. It has been found through experience in South America that a concrete-lined pit filled with pest-infested grain allows the storage of the grain for an indefinite period without further deterioration, providing the whole pit is sealed and made water and airtight. This sealing raises the carbon-dioxide content inside the pit and in a short time kills off all the grain pests which would otherwise destroy the grain during storage.

It has to be emphasised that this new product is so far only in its infancy and much remains to be found out about its characteristics. Nonetheless, it is obvious from the work so far done that it has considerable possibilities for water storage purposes and should be able to play an important part in the development of irrigation schemes for the future.

WHAT'S NEW IN PRODUCTION METHODS?

What's better, faster-working, more economical, more accurate? What's the shape of things to come in production engineering? For all the answers, come to the ...

INTERNATIONAL MACHINE TOOL EXHIBITION 1956

Olympia · London · England June 22—July 6
(Sundays excepted)

Here, under one vast roof, for close study and comparison at first-hand, the Machine Tool Trades Association (of Great Britain) will present an extensive show of the most modern machine tools and allied equipment from the world's leading makers — British, European, American.

This show will surpass in information value a whole library of catalogues, a mile of correspondence. You can see the machines themselves at work in actual production. You can discuss with the world's best informed experts your own production problems and plans.

The huge range of exhibits includes machine tools, engineers' small tools, gauges and measuring equipment, testing equipment, presses and power hammers, heat-treatment plant, woodworking machinery.

This will be Europe's outstanding engineering display of 1956. Be there! Be sure to be there! Note the dates and make your plans now!

Organized by The Machine Tool Trades Association (of Great Britain), Victoria House, Southampton Row, London, W.C.1, England.

WHOLESALE PRICE INDEX RISES

THE official wholesale price index (base: year ended August, 1939=100) advanced by 0.3 percent to 381.9 during the week ended 3rd March, 1956 as compared with 380.9 for the previous week. Relative to the corresponding weeks of last month and a year ago, the index was higher by 1.2 and 6.6 percent respectively. Prices of wheat (+5%), bajra, gram and tea for internal consumption (+4% each), rice in Calcutta (+3%) and gur at Ahmednagar (+2%) moved up while those of jowar (-9%), rice at Patna and tea for exports (-3% each) and gur at Muzaffarnagar (-2%) were marked down and the index for Food Articles stood at 343.3 as compared with 343.0 for the previous week. The effect of increases in the prices of castorseed and raw silk (+4% each), linseed and manganese ore (average export price) (+3% each), groundnuts (+2%) and rapeseed (+1%) was almost neutralised by declines in raw jute (-2%) and cottonseed (-1%), and the index for Industrial Raw Materials worked out to 462.6 as compared with 462.4 for the previous week. The index for Semi-Manufactures advanced by 1.1 percent to 361.3. Items which showed noticeable changes were linseed oil (+9%), groundnut oil (+5%), buff hides and gingelly cake (+4% each), brass and copper (+3% each), castor oil in Calcutta, mustard oil and cotton yarn (+2% each) and cowhides, goatskins and copra cake (-3% each). The index for Manufactures stood almost unchanged at 375.4. Higher prices of chillies at Patna (+2%), black pepper in Calcutta and cashewnuts (+1% each) raised the index for the Miscellaneous group from 527.4 to 527.7; prices of chillies in Calcutta (-2%) and black pepper at Cochin (-1%) showed declines.

INDEX NUMBERS BY GROUPS AND SUB-GROUPS
(Base: Year ended August 1939=100)

COPPER PRODUCTION IN 1955

Despite a series of major strikes in the three largest producing countries in 1955, world smelter output of primary copper increased substantially above the previous record of 1954. According to figures published by the British Bureau of Non-

Ferrous Metal Statistics, world production rose by 9 percent to 2,969,000 long tons, compared with 2,720,000 tons in the previous year. This includes an estimated production of 355,000 tons in the U.S.S.R., Eastern Germany and other Soviet-controlled territories. Production in the rest of the world totalled 2,614,000 tons, compared with 2,371,000 tons in 1954. With the exception of Northern Rhodesia, output was increased in most of the leading producing countries. In the U.S.A., which accounted for one-third of the world's total, output rose 17 percent to 988,000 tons after having fallen substantially in 1954. Approximately 90 percent of this was smelted from domestic ores, the remainder being obtained from imported ores and concentrates.

There was a marked increase in production in Chile during 1955 and provisional statistics indicate an output of approximately 409,000 tons, making it once again the second largest producing country. In recent years output had gradually fallen to approximately 350,000 tons per annum. In Northern Rhodesia, 1955 production fell by 30,000 tons to 316,000 tons, but in Canada and the Belgian Congo there were increases of 25,000 tons and 9,000 tons respectively. These five countries account for nearly 85 percent of world production excluding the Soviet sphere. Full details for all countries are shown each month in the Bulletin published by the Bureau at 132 Hagley Road, Birmingham. A summary of world production in the last three years is given in the following table:

Thousands of long tons	1953	1954	1955
U.S.A.	935	845	988
Chile	322	335	409
N. Rhodesia	340	346	316
Canada	192	234	259
Belgian Congo	206	216	225
Japan	63	68	79
Soviet Sphere	331	349	355
Other Countries	315	328	338
Total:	2,714	2,720	2,969

The figures cover total smelter production of primary copper in the form of blister and anodes, and do not include the considerable quantities of secondary copper recovered by refineries.

SHELLAC MARKET EASY

During the week ended 20th March, the market was quiet at the beginning and easy at the end. The range of quotations was as follows:

Pure Buttonlac	Rs. 140 to 130 value.
Lemon No. 1 Shellac	Rs. 138 to 133 done and buyers, 132-8 buyers.
Lemon No. 2 Shellac	Rs. 133 buyers, 134, 128 done and buyers, 128 buyers.
F. O. Std. 1 Shellac	Rs. 130 to 128 buyers.
Pure TN Shellac	Rs. 126 to 120 basis done and buyers.
4% I.T.N. Shellac	Rs. 118 done and buyers, 113/112 buyers.
No. 1 Kusmi Seedlac	Rs. 137 to 131 value, 130 buyers.
No. 2 Kusmi Seedlac	Rs. 128 to 122-8 value, 122-8 buyers.
Fine Bysaky Seedlac (Manbhum)	Rs. 123 value, 120/118 buyers.
Fine Bysaky Seedlac (C.P.)	Rs. 115 to 109 buyers.
Ordinary Bysaky Seedlac (C.P.) under 5%	Rs. 100 done, 97 to 94-8 buyers.
Ordinary Bysaky Seedlac (C.P.)	Rs. 99 to 90 buyers, 89 done.
Kirelac	Rs. 58 to 46 value, 40 done and buyers.

Shipments during March until the 15th were 15,787 packages, comprising shellac 10,354, seedlac 3,738, buttonlac 150, others 1,545.

MIDDLE CLASS COST OF LIVING INDEX NUMBER FOR CALCUTTA

(Base: August, 1939)

THE Middle Class Cost of Living Indices, by groups, have now been brought up to February, 1956. As compared with January, the February Index for Food reveals a drop of 4 points, while that for Clothing, Miscellaneous and Fuel and Lighting remain unchanged at 507, 282 and 239

points, respectively.

Correlating all the factors, the Middle Class Cost of Living Index for Calcutta shows that the cost of living declined by 2 points during February, 1956.

Calcutta Markets

STRONG GENERAL DEMAND IN TEA EXPORT AUCTION

SUBSTANTIAL RISE IN PRICES AT INTERNAL SALE

AT Sale No. 40, held on 19th and 20th March, offerings in the Export auction consisted of 47,700 packages, for which there was again a very strong and general demand. Most kinds were an irregular 1 to 3 annas a lb. dearer. Bright liquoring teas were a particularly strong feature. Whole leaf grades, stylish B.P.S. and the plainest kinds received strong support. Darjeelings were irregular, and except for a few selected lines with autumnal flavour, tended to be easier.

Quotations	Rs.
Clean Black Pekoe	2 0 0
Plain B.P.	1 8 0 to 1 10 0
Medium A-ann B.P.	1 11
Best CTC Assam B.P.	Not quotable.

The offerings of Dust, consisted of 19,200 packages, for which there was a very strong and general demand. All descriptions were dearer, especially black leaf dusts suitable for the Middle East. All grainy types were a very strong feature and were 4 to 6 annas dear. Teas of other descriptions with improved cup quality were irregularly 3 to 4 annas above last rates. The very best C.T.C. Assams with good liquors received good support while the remaining types in this category were very irregular but generally several annas dearer.

Quotations	1955	1956
Medium Dusters Dust	1 13 0 to 1 14 0	2 4 0 to 2 4 6
Medium Assam Grainy	1 14 0 to 2 0 0	2 6 6
Dust	3 0 0 to 3 2 0	3 3 0

The Leaf offerings consisted of 2,200 packages, for which there was a good demand at 2 to 4 annas above last rates.

FREIGHT MARKET FIRM

COAL AND GRAIN LEADING FIXTURES

COAL and grain movements again dominated the market last week and owners show no inclination to fix ahead in view of the general firmness. The unchanged rate of 72s 3d was repeated for March coal loaders from the U.S.A. on French account and 72s for April-May, while \$ (U.S.) 9.15 was paid by Swiss buyers for 110,000 tons with May-September shipment. Russian charterers were forced to put in their own vessels to make a start on the movement of their Canadian wheat purchases and seven vessels including two tankers will load 128,000 tons to Vladivostok and Nakhodka. Subsequently, two British vessels were fixed, one at \$ (U.S.) 18 for April-May and the other at \$ (U.S.) 17.50 for June loading. The Indian ore market featured a fixture at 140s f.o. Vizagapatam-Poland for April shipment and 130s f.o. to Constantia for a 3,000 tonner while a 2,400 ton vessel secured 148s 6d to a small French port. Some good rates were paid in the time charter section with a 14,000 ton motorship obtaining \$ (U.S.) 6.65 for six months' trading, an 8,000 ton motorship 44s for 12 months' and a Liberty 48s 3d for the trip to Japan via Dungen with delivery Indonesia.

LINSEED

Very steady conditions continued and although prices did not actually register any advance, a strong bullish sentiment prevailed with the old crop virtually exhausted, and new crop seeds not expected until a month hence. Supplies were very scarce; prices for new crop delivery advanced and sellers were very reserved. Crushers, on the whole, have been keen buyers, but the actual volume of business was small. The oil section was very steady. Little fresh business has been reported for export, with prices unchanged; with heavy commitments in hand, both buyers and sellers were pausing. Latest quotations were as follows: March Rs. 25 a maund; April-May Rs. 23-8 a maund.

HIDES AND SKINS

The market was dull. Stocks were less than in the previous week.

Bazaar Sales
(Between 13th March and 19th March, 1956)
Cowhides: Wet salted (Slaughtered) 17,600 pcs. on the basis of Rs. 10-8 to Rs. 20.
Goatskins: Wet salted (Dressed, Killed) 54,200 pcs. on the basis of Rs. 225 to Rs. 235. Rs. 275 to Rs. 310 and Rs. 300 to Rs. 350. Assam-Dinajpur-Murshidabad 10,600 pcs. on the basis of Rs. 275 to Rs. 300. Purneah-Kisanganj 5,500 pcs. on the basis of Rs. 297-8 to Rs. 300. Muzaffarpore-Patna 2,500 pcs. on the basis of Rs. 287-8 to Rs. 315.

Bazaar Stocks
(19th March, 1956)
Cowhides: Wet salted 2,74,500 pcs.
Goatskins: Wet salted (Dressed, Killed) 26,000 pcs.; Assam-Dinajpur-Murshidabad 1,45,000 pcs.; Muzaffarpore - Patna - Pakur - Purneah - Kisen-ganj 5,77,000 pcs.

COMPANY AND PUBLIC NOTICES

INDIAN ALUMINIUM COMPANY, LTD.

NOTICE is hereby given that the Eighteenth Annual General Meeting of Indian Aluminium Company, Limited, will be held at the registered office, 31, Chowringhee Road, Calcutta-18, on Friday, April 27th, 1956 at 11 a.m. for the following purposes:

- To receive and adopt the balance sheet at December 31st, 1955, and profit and loss account for the year ended December 1955, together with the reports of the auditors and directors.
- To declare dividends.
- To elect directors.
- To appoint auditors and to fix their remuneration.
- To transact the following special business, namely, to consider and, if thought fit, to pass the subjoined resolution as a special resolution:

"That the Regulations contained in the typewritten document submitted to this Meeting and for the purpose of identification subscribed by the Chairman thereof be and are hereby adopted as the Articles of Association of the Company in substitution for and to the exclusion of all existing Articles thereof."

The share transfer register of the Company will be closed from April 13th to 27th, 1956, both days inclusive.

Payment of any dividend declared will be made only to those members whose names are registered in the books of the Company on April 27th, 1956, or to their mandates. No application for warrants will be necessary. Claims on behalf of holders of shares held on blank transfer will not be entertained.

By Order of the Board,
JAMES HARDWICK,
Secretary.

March 14th, 1956.

Note: (i) The typewritten document referred to above consisting of a draft of the proposed new Articles of Association of the Company can be inspected at any time during usual office hours at the registered office of the Company.

(ii) Any member of the Company who is entitled to attend and vote at the Meeting convened by this Notice is also entitled to appoint a proxy to attend and vote instead of himself and such proxy need not be a member of the Company.

THE COMMISSIONERS FOR THE PORT OF CALCUTTA.

NOTICE.

Repayment on the 4th October, 1956 of the 5% Calcutta Port Trust Debenture loan 1926-56-56 issued on the 4th October, 1926.

The Commissioners for the Port of Calcutta, in pursuance of the right reserved by them at the time of issue to repay the 5% Calcutta Port Trust Debenture Loan 1926-56-56 for Rs. 1,00,00,000/- issued on the 4th October, 1926 at any time after the expiration of thirty years from the date of issue, on six months' previous notice, hereby give notice of their intention to repay the said loan on the 4th October, 1956.

The holders of debentures of this loan should tender their debentures at the Local Authorities Loan Section, State Bank of India, Calcutta, at least three weeks before the due date of repayment with the following endorsement on the back of each debenture:—

"Received payment in full of all demand for Principal and interest thereon."

(Signature of holder)

Interest on the Loan will cease from the 4th October, 1956.

P. C. MITTER,
Secretary.

15, Strand Road,
Calcutta-1.
The 15th March, 1956.

DUNCAN BROTHERS & COMPANY, LIMITED.

DIVIDEND ON ORDINARY SHARES.

NOTICE is hereby given that the Board of Directors has sanctioned payment on 27th March, 1956 of an interim dividend on Ordinary shares for the year ended 31st December, 1955 of 5 per cent. without any deduction for income-tax paid by the Company.

The Ordinary share register will be closed from 23rd to 27th March, 1956, both days inclusive.

Warrants will be issued to shareholders whose names appear on the Company's register on 27th March, 1956 or in accordance with their registered mandate instructions.

DUNCAN BROTHERS & CO., LD.

31, Netaji Subhas Road,
Calcutta, 15th March, 1956.

THE SAMNUGUR JUTE FACTORY COMPANY, LIMITED

THE Directors of this Company regret that they are unable to recommend payment of any further dividend on the ordinary shares for the year ended 31st December, 1955.

The Directors have declared on the preference shares the dividend at the rate of 6% per annum for the half-year ended 31st December, 1955. This dividend will be paid on 29th March, 1956, less Income Tax at 8/6d per £, and the Transfer Books will be closed from 22nd March to 29th March, 1956, both days inclusive.

It is not yet possible to make a reliable estimate of the results for the past year as the amount of certain debits has not yet been finally agreed. It is, however, known that on the most unfavourable outcome the adverse balance for the past year after providing for the full dividend on preference shares and the interim dividend already paid on the ordinary shares will be amply covered by the amount carried forward at the credit of Profit and Loss Account from the previous year.

P. WILLIAMS,
Secretary.

Dundee, 20th March, 1956.

THE TITAGHUR JUTE FACTORY COMPANY, LIMITED

THE Directors of this Company regret that they are unable to recommend payment of any further dividend on the ordinary shares for the year ended 31st December, 1955.

The Directors have declared on the preference shares the dividend at the rate of 6% per annum for the half-year ended 31st December, 1955. This dividend will be paid on 29th March, 1956, less Income Tax at 8/6d per £, and the Transfer Books will be closed from 22nd March to 29th March, 1956, both days inclusive.

It is not yet possible to make a reliable estimate of the results for the past year as the amount of certain debits has not yet been finally agreed. It is, however, known that on the most unfavourable outcome the adverse balance for the past year after providing for the full dividend on preference shares and the interim dividend already paid on the ordinary shares will be amply covered by the amount carried forward at the credit of Profit and Loss Account from the previous year.

P. WILLIAMS,
Secretary.

Dundee, 20th March, 1956.

THE VICTORIA JUTE COMPANY, LIMITED

THE Directors of this Company regret that they are unable to recommend payment of any further dividend on the ordinary shares for the year ended 31st December, 1955.

The Directors have declared on the preference shares the dividend at the rate of 6% per annum for the half-year ended 31st December, 1955. This dividend will be paid on 29th March, 1956, less Income Tax at 8/6d per £, and the Transfer Books will be closed from 22nd March to 29th March, 1956, both days inclusive.

It is not yet possible to make a reliable estimate of the results for the past year as the amount of certain debits has not yet been finally agreed. It is, however, known that on the most unfavourable outcome the adverse balance for the past year after providing for the full dividend on preference shares and the interim dividend already paid on the ordinary shares will be amply covered by the amount carried forward at the credit of Profit and Loss Account from the previous year.

P. WILLIAMS,
Secretary.

Dundee, 20th March, 1956.

THE BENGAL PAPER MILL CO. LTD.

NOTICE is hereby given that the One Hundred and Thirty-second Ordinary General Meeting of the Shareholders will be held at the Registered Office of the Company, 21, Netaji Subhas Road, on Friday the 20th April, 1956 at 12 noon to receive the Directors and Auditors Reports, to adopt the Statement of Accounts for the half-year ended 31st December, 1955, to declare dividends, and to transact the ordinary general business of the Company.

Notice is hereby also given that the Transfer Books and Register of Members of the Company will be closed from 16th to 20th April, 1956, both days inclusive.

By Order of the Board,
BALMER LAWRIE & CO. LTD.,
Managing Agents.

21, Netaji Subhas Road,
Calcutta.

THE TITAGHUR PAPER MILLS COMPANY LIMITED.

AT a Meeting of the Board of Directors held on the 15th March, 1956, the following Dividends were recommended to be paid for the half-year ended 30th September, 1955, without any deduction for Income Tax paid by the Company:—

On 1st Preference Shares	8 %	per annum
On 2nd -do- -do-	4 1/2 %	"
On Preferred Ordinary Shares	10 %	"
On "A" and "B" Ordinary Shares	Annas -12/- per share plus As. -4/- Bonus per Share.	"

By Order of the Board,
F. W. HEILGERS & CO. LD.,
Managing Agents.

THE BENGAL PAPER MILL CO. LTD.

THE Directors have decided to recommend to the forthcoming General Meeting of the Shareholders dividends for the half-year ended 31st December, 1955, as follows:—

- Dividend on Cumulative Preference Shares at 7 per cent per annum, free of Income-tax.
- Dividend on "A" Cumulative Preference Shares at 7 per cent per annum, free of Income-tax.
- Dividend on "B" Cumulative Redeemable Preference Shares at 6 per cent per annum (subject to deduction of Income-tax).
- Dividend on Ordinary Shares at 20 per cent per annum, free of Income-tax.

By Order of the Board,
BALMER LAWRIE & CO. LTD.,
Managing Agents.

21, Netaji Subhas Road,
Calcutta.

TEA COMPANIES

O. Po. and Dd. indicate Ordinary, Preferred Ordinary and Deferred Shares, respectively. P. next to the name of the company indicates that the Company also has Preference Shares. Figures in "accounts closed" column indicate the months of the calendar year in which accounts are closed. For Managing Agents refer to the Key (last page) under the numbers indicated.

Paid-up Capital Ordinary	Net Block Account	Reserve & other Funds	Acreage under Tea	Output and Average Price per lb. realised for crop				Estimate	NAMES	Accounts closed	Managing Agents	Net Profit including taxation	Dividends per cent				Paid-up Capital	Latest Market Quotations as available until

INDIAN ECONOMY ON THE EVE OF THE SECOND PLAN

INFLATION THE CHIEF DANGER: NO PLACE FOR DOCTRINAIRE DISTRACTIONS

THERE is a good deal of evidence to suggest that the second plan will be off to a good start. It is just as well, because in its final form, the project threatens to be even larger than the draft outline provided. The condition of the economy is fair. The food situation gives little cause for anxiety at the moment. The first plan, although not completely fulfilled, has stimulated rather than satisfied the country's appetite for further progress. In every sense it is true to say that if there must be a plan of such dimensions it would be difficult to find circumstances more propitious for its successful beginning. That does not mean there are no important points which will have to be watched if the new plan is to progress as favourably as it is starting. There are signs, for instance, that a measure of inflation might be developing under the impact of the recent heavy doses of deficit financing, although, with seasonal demand for money at its peak, this is perhaps the wrong time to pass a judgment of this kind. Prices are rising gradually, but they are not yet appreciably higher than they were at this time last year. There is no reason for relaxing the vigilance which is being maintained on India's economic affairs, but there is equally no cause for undue anxiety about them.

The most notable feature of the coming plan, even greater than its size, is its difference in emphasis. There is no question of the present trends being continued; there is going to be a fundamental change in direction. This may prove the main danger to stability because it is likely to produce various supply bottlenecks and small pockets of inflation throughout the economy which might not always respond satisfactorily to the stimulus of development financing. At present, for instance, steel and cement are scarce. Later it is possible that a coal shortage may hamper the general expansion, not only because the plan relies excessively on the State-owned collieries for output increases, but also due to inadequate transport. The coming five years are likely to be marked by a series of small supply crises which may result in sudden and damaging price rises. This is perfectly normal for a swiftly-growing economy, but all instances will have to be watched closely if major troubles are to be avoided. The tendency is likely to be accentuated by the plan's emphasis on the two extremes among industrial units, the large and the small. Development in either of these fields will be slow, perhaps very slow. The Government's large industrial projects are liable to absorb a good deal of expenditure before any appreciable output is forthcoming. The products of cottage and small-scale industries may take time to appear on the market in quantity and of saleable quality especially if there is no rapid improvement in present systems of marketing. The deciding factor in the inflationary situation may yet prove to be the capacity for expansion which is shown by medium industry, and that means the private industrial sector.

The condition of this portion of the economy gives little ground for complacency. Its morale could scarcely be lower. After the many disturbing events of the past year, it would be surprising if it were otherwise. Such moves as the nationalisation of insurance do immeasurable harm to the confidence of honest and progressive business, which not even the attractions of increased deficit financing can completely offset. Even now it is unlikely that the private sector has seen the worst. The Government's attitude is tempered by a good deal of sound economic common sense, although it is all too rare that it is heard in public. It is the large unenlightened mass of half-baked socialist prejudice which is most to be feared and it is this that the Government must take a large share of the blame for encouraging. It is one thing to agree with Mr. Nehru that India should move with the rest of the world towards a welfare state,

but it is quite another to believe that it is only necessary for the Government to expropriate the private industrialist and divide all wealth equally for prosperity to be established. It is not that sort of thinking which will see the country through the economic difficulties which lie ahead, but it is precisely that which is forcing every sound honest business man to think twice before he commits himself to further expansion. The next few years will inevitably see quick money made by somebody, the main thing is that the country should have something to show for it afterwards. It is most unlikely to have that if the Government's efforts are concentrated on regulating and discouraging all enterprise in order to curb the excessive profits of a few.

It is one of the most unfortunate features of the recent moves towards greater control over and interference with the private sector that the soundest business has tended to suffer most. The restrictions on the managing agency system in the new Companies Act, which are already beginning to influence the economy, have contributed to this fact. Soundness in private business is likely to be at a premium for the next few years. If the Government responds to this by intensifying the policy which has brought it about, a grievous mistake will be made. The most important insurance against inflation in the first few years of the second plan is likely to be the flexibility of medium-scale private industry in response to the many changes in the pattern of demand. Under its present burden of taxation and in face of the many existing uncertainties, it would be surprising if this were great. The main thing now is that it should be given every encouragement to develop. The economy could pay with chronic instability for the many mistakes which have been made in official handling of the private sector during the past year and a half. The price in any case will be a high one, and all the more difficult to bear because it would have been unnecessary if more attention had been paid to economic reality and less to out-of-date, half-understood theories.

TOWARDS STABILITY IN SUGAR

has been recorded. As Mr. Charat Ram points out, large sums are spent each year on improving cultivation and many research stations are working exclusively on cane development. Yet the all-India average of recovery, which between 1942 and 1946 was over 10 percent, has now declined to a figure generally below 10 percent. The improvement in such areas as Bombay has been more than offset by the deterioration in Uttar Pradesh and Bihar, which two States produce about 70 percent of the country's sugar.

Mr. Charat Ram makes an important point when he suggests that there is something fundamentally wrong in the approach to cane improvement. It is primarily a matter for the cultivators' efforts, but responsibility is being placed more and more on the industry, research institutions and the Government. Certainly, these can all do much the assist, but unless the cultivator is made to realise that growing better cane is mainly his business, no real improvement is likely to take place. An important reason why this realisation is lacking is that proper incentives are not offered. At present, cane is paid for on the basis of its weight, instead of on the basis of its sugar content. Some efforts are being made to remedy this by evolving a system of paying for it on the basis of quality, but progress in northern India at least has been poor. As Mr. Charat Ram points out, any system of this sort devised for this country will have to be as simple and fool-proof as possible. Since it is not possible to mill separately the cane of each farmer every day, he suggests that a group incentive system be adopted. "In this first step of 'group incentive' system, the total average recovery of the factory will be taken for the cane of all the farmers together, supplied in the period of a week, a month or the whole season, and payment made on the period recoveries." The system is not perfect, but is well worth considering to the extent that it provides an incentive to move away from the prevailing stagnation.

In no other State perhaps is it more necessary to introduce new methods for encouraging cultivators to grow better cane than in Uttar Pradesh and Bihar. The former produces about half the country's total output, but Mr. Charat Ram is frankly and justifiably anxious about the prospects for mills there. He points out that U. P. mills depend heavily on markets in other States, but as more factories are set up in the latter, deficit areas will turn into surplus areas. Since the costs of the former are high, they "will undoubtedly be faced with a crisis." It is necessary for the State Government to show political courage in dealing with the problem of reducing production costs. Mr. Charat Ram says that in U. P. sugar recovery is lower and labour costs are higher than in Bombay and other areas. As a result, "the realisation on sugar sales by the U. P. sugar industry is lower by at least Rs. 5 per maund as against its counterpart in Bombay." Vigorous measures are necessary to help the industry improve its working; many factories have too many workers, the quality of cane needs to be improved, and the shifting of badly sited factories in east U. P. has to be facilitated. Some of these measures are likely to prove inconvenient, politically and otherwise, but the justification for them lies in the necessity of ensuring a healthy future for U. P.'s major industry.

A slightly disturbing feature of Mr. Charat Ram's speech is his apparent acceptance of the fact that "in the sugar industry there will always be considerable variations in production from year to year, whereas consumption will follow a steadily rising pattern." Much greater efforts are necessary to ensure that production does not vary as much as it has done in the last few years; to some extent, the variations are unavoidable in an industry which depends heavily on agriculture, but there is reason to believe that they would be less if the Government were to do away with its policy of fixing the minimum price mills have to pay for their cane. With the sugar economy now largely decontrolled, there is no reason why control should be retained over this significant, but not determining, factor in sugar output. Depending on the level of the cane price fixed by the Government, and its relationship to the prices available from other competing uses such as gur manufacture, the sugar mills sometimes get too much cane and sometimes too little. That is the fundamental reason why their output varies sharply from year to year. It is therefore necessary for them to impress on the Government the need to decontrol this aspect of their activity; and if they succeed, later in proving by their actions that a steadier growth in sugar output is possible if they are allowed to choose the right price to be paid for cane—the price justified by general market conditions. If they fail in this purpose, the Government could always use imports to protect the consumer, as it has wisely done in recent years. The past record of many producers has admittedly not been particularly reassuring in this respect; but now that supplies are plentiful and some sort of a lesson has been taught to blackmarketeers by the sugar import policies of recent years, perhaps the time has come to make a further move along

the road to complete decontrol. It would have been good if Mr. Charat Ram had chosen to discuss this problem more fully.

OPPORTUNITIES FOR PLANNERS

ONE subject of constant discussion at the gatherings of business men these days is the place private enterprise is going to take, or will be given, in the socialism which the Government is pledged to build. There has been a feeling of uncertainty in the minds of business men for some time now, and particularly since the socialist Budget of 1955, that the scope for private industry and business will diminish progressively as the public sector continually expands and socialistic principles are increasingly establishing themselves in the behaviour of the State. Consequently, despair has taken the place of that go-ahead spirit which makes for economic expansion in a democratic country, and regrettably, at a time when India needs that spirit most. Mr. K. G. Milne's presidential speech to the annual general meeting of the Bombay Chamber of Commerce and Industry explained in clear and forceful terms the conditions which have produced this feeling in the private sector, and analysed its effects on the economic development of the country.

In spite of all the hard things that are being said about private business in India, Mr. Milne pointed out, it has performed its rôle magnificently during the first five year plan. It has more than fulfilled the targets allotted to it, whereas the public sector has not. Yet the second plan target figures for organised private industry are just 40 percent higher than what they were for the first. Conversely, the second plan targets for the public sector are some 900 percent bigger than what this sector was able to achieve in the first plan. This, Mr. Milne was right to imply, represents a denial of opportunities to the private sector to perform its duties to the country more fully. He attributed this to the present tendency to think of economic activity in narrowly defined and water-tight terms, as the public and private sectors. The sectors were not conflicting parts of the economic whole, and even to say that they were complementary was misleading. "The two are inextricably connected." In spite of the discrimination practised deliberately against the private sector, the second plan would throw up "a wealth of opportunity for private business expansion," in "progressively wider measure and over expansive fields," and Mr. Milne asserted that the private sector was fully equipped to "develop these opportunities," if only the Government recognised the facts. "Private enterprise asks only to be allowed the chance to respond, hand in hand, never in conflict, with the Government and its complementary public sector."

The Prime Minister's recent clarification that the goal of "the socialist pattern of society" was to be reached along the middle course, and also the announcement that the Government had no intention of nationalising industries merely for the sake of doing so, are relieving features. They are even reassuring. But they still fall short of a positive encouragement of those factors which sustain individual initiative, drive and the incentive for taking calculated risks. Mr. Milne pointed out that the rates of personal taxation in India, which are among the highest in the world, and the proposed levies on dividends and bonus shares, were not exactly the measures that promoted these qualities in enterprising individuals, and he explained at length how taxation affected foreigners in this country most severely. Quoting the Prime Minister again on the nature of the proposed socialist goal, which was going to be free from all dogmas, Mr. Milne went on to analyse the anatomy of the much maligned private sector. The picture that emerged was not one of bloated and pet-bellied individuals recklessly grabbing the "surplus value", in any way they could, but one of thousands of shareholders who outnumbered industrial workers in the ratio of nine to seven, on an average. The policy of fuller employment must be re-considered in the light of these facts as most of these shareholders came from the middle class already extremely hard-pressed.

There is another aspect to this question—that is the skill of promoting and running a business—which received little recognition in the prevailing socialist temper. Mr. J. F. Sinclair, who succeeds Mr. Milne as the Chamber President, supplemented his predecessor on this point. He also claimed that the private sector could secure foreign aid "to a far more substantial extent" than the mere Rs. 100 crores expected from this source during the second plan, if only a proper place, with a minimum of encouragement, could be assured to it. This seems to be typical of the spirit of private enterprise in India at the moment. Business leaders have offered their co-operation to the Government from more than one platform. If the Government fails to avail itself of these offers of co-operation, it will be throwing away its most valuable opportunity of developing the economy rapidly, an opportunity which is now readily available, but may not always be so.

CURRENT COIN

Transport for Coal.—The shortage of transport facilities to carry coal has been a recurring theme of most producers' speeches in recent years. But a tone of added anxiety is discernible in those made since the railways' five year plan was cut by the Planning Commission, and since Mr. Lal-bahadur Shastri explained the disturbing implications of this decision in his Railway Budget speech last month. Mr. G. D. Dega's address as chairman at the annual general meeting of the Indian Mining Federation in Calcutta last Friday (which appears on a later page) is no exception. He points out that large sums have to be invested if more coal is to be produced, so there should be some assurance that the extra output can be moved. The advantages of mechanisation are lost unless there is a regular supply of wagons, but the prospect is disturbing. It is estimated that the daily requirement of wagons for the West Bengal and Bihar coalfields alone during 1956-57 will be 3,675 wagons. Mr. Dega comments: "One wonders whether there is any chance of achieving this target when the wagon supply in the current month is no more than 3,075, which is less than the minimum daily target of 3,250 wagons guaranteed by the railways. Such a state of affairs, when the plan is due to come into operation in a few days, is very depressing." He goes on to suggest that coal is receiving lower priority in traffic movements since the increase in the movement of goods was 7.8 percent in 1955 but for coal alone the increase was only 3.5 percent. "In the months of February and March this year the railways have given preference to other goods solely with a view to increasing the earnings from traffic in more freight-paying commodities. These months are therefore likely to record a further increase in goods traffic and decrease in coal traffic." Mr. Dega urges that coastal shipping should be used to a larger extent to carry coal, but says that "the prohibitive coastal freight rates constitute the greatest obstacle to such an arrangement being made." The Durgapur canal, when opened, will enable some coal from the Raniganj fields to be taken in a downward direction. But, as Mr. Dega rightly points out, while the possibilities of both coastal and inland water transport should be fully exploited, "the railways will remain for as long as we can see into the future the lifeline of the coal industry."

Encouragement from Kohinoor.—The rising demand for cloth has improved the working of cotton textile mills, and the fact has been reflected in the strength of textile shares on the Bombay stock market recently. Notable among them have been the scrip of the Kohinoor Mills Company, whose chairman, Mr. E. D. Sheppard, presented shareholders with a commendably detailed review at the ordinary general meeting last week. Mr. Sheppard brings out the fact that the company's working would have been even better if yarn prices had not been so disappointing. Half the mills' 120,000 spindles are used continuously for the manufacture of yarn and sewing threads, for which a special plant has been installed. That is why the company has not been able to benefit fully to the extent which might have been expected from the rise in cloth prices and demand. But, as Mr. Sheppard points out, "there have been times in the past and they will surely come again when, with a rise in the prices of yarn and sewing thread, your mill will be in a position to show better progress than others." The yarn market is already showing signs of improvement, and the outlook for cloth continues to be good. These alone would be important factors in the company's prosperity, but Mr. Sheppard has a number of other encouraging features to report. A comprehensive programme of expansion and rehabilitation has been "practically completed" over the past ten years, and a pause will now be made to consolidate the position which has been attained. The bonus provisions for previous years have already been made, and the current year's accounts therefore will not have to bear any additional burden for this reason, as was the case in 1954 and 1955. The commissions of the company's selling agents have been reduced substantially. Against this, it is to be borne in mind that raw cotton might be more expensive this year. Kohinoor will have to pay about Rs. 9 lakhs more to the Government as a result of the Budget proposal to increase the excise duty on cloth by six pices a square yard. If the present rate of ordinary distribution (18 percent) is maintained, it will have to pay Rs. 2 lakhs under the new dividend tax, which, Mr. Sheppard justly points out, "operates most unfairly against companies such as yours which have prudently accumulated substantial reserves from the taxed profits of past years." Finally, the year got off to a bad start because several working days were lost during the disturbances in Bombay in January after the States' reorganisation plans were announced. Mr. Sheppard asks shareholders to put the plus and minus signs together and "draw your own conclusions." The trend in the stock market suggests that they

have done so, optimistically, and they might well be right.

A Banker's Survey of Events.—Sir Kenneth W. Mealing's address from the chair to the shareholders' annual general meeting of the Mercantile Bank of India, Ltd., in London provided an enlightening survey of the political and economic conditions in the countries in which the Bank does its business. They included India, Pakistan, Ceylon, Burma, Mauritius, the Federation of Malaya and Singapore, Thailand and Japan. Sir Kenneth's comments on economic planning in India were favourable and he was of the opinion that deficit financing in the country has produced a higher rate of development expenditure without causing inflation—an opinion with which all experts agree. The second plan is a massive project and he hoped that it would attain at least the same measure of success as the first one has done. The progressive nationalisation of the existing private institutions was a subject on which he made some pertinent comments. He was largely non-committal, but he felt that the complete taking over of life insurance business by the State would be regretted by many, as indeed it must inevitably cause some speculation as to "how far the nationalisation of existing business and industry is to be carried in India."

Troubles of the Sweets Industry.—According to Mr. P. Mohanlal, president of the Indian Confectionery Manufacturers Association, the industry's rate of production has been steadily declining during the last four years. Speaking at the 10th annual meeting of the Association, Mr. Mohanlal cited the termination of sugar control as the turning point in the fortunes of the industry. Hundreds of small producers sprang up overnight and "flooded the market with low-priced sweets of doubtful quality, manufactured under doubtful hygienic conditions." The established industry, he pointed out, in spite of its technical skill, its modern machinery for production, wrapping and packing, has been compelled to curtail output to such an extent that it is only producing 550 tons a month against a rated capacity of 4,000 tons. Neither is the industry, in order to offset the lack of internal demand, able to quote competitive prices in the export market owing to the high cost of raw materials as compared with that of other producing countries. Sweet-making being almost wholly dependent on sugar as its basic ingredient, the price of Indian sugar, which as Mr. Mohanlal emphasised, is far above world parity, directly affects the cost of production of confectionery. The sugar industry itself, according to a recent publication, finds that of the cost of a maund of cane, 23 percent is paid in Government taxes alone. It seems reasonable therefore that the confectionery industry, after another year of rising costs, should again request the Government to refund the excise duty of Rs. 4-2 a maund on sugar consumed by sweet factories. The industry also asks for a refund of cane cess wherever charged and a drawback of customs duty on imported materials according to the actual sugar content of the various types of confectionery. In addition Mr. Mohanlal stressed the need for quicker and more efficient rail transport, a matter of prime importance where commodities of limited storage life are concerned. His demand, however, that "a total ban on the import of confectionery should be enforced without delay" would inevitably deal a psychological blow at the necessity for maintaining the high standards already in force among members of the Confectionery Association. The policy of allowing even a minimum import, and Mr. Mohanlal agrees himself that "the quantities involved are small" in this case, has always been found to have a salutary effect on products of indigenous manufacture, for with the best will in the world, take away competition and the incentive to produce the best is gone. A move in the right direction and one which is stoutly supported by the Association, is the enforcement of the rulings of the Indian Standards Institution and the efforts of the Health Ministry in implementing the Prevention of Food Adulteration Act of 1954. A strong line in pursuance of both policies would go a long way to remove the competition from low-priced sweets of inferior quality, which with their flamboyant pinks and bluish greens are irresistible to flies and children alike.

Warning to General Insurance.—The nationalisation of its life department should put the rest of the insurance industry on its guard so that the Government may not find excuses for taking over the whole of it. This was the advice Mr. J. P. Bhargava gave to the members of the Indian Insurance Companies' Association at the twentieth annual general meeting over which he presided last week. In the interest of its own survival, he said, the general insurance industry must conduct a process of "self search", and rid itself of all its malpractices. He did not mention many specific cases, but some of them, he said, were too well known for him to relate in his address. He then went on to explain why it was necessary to watch

the steps carefully, and particularly recalled the warning given by the Union Finance Minister, Mr. Deshmukh, that if the general insurance industry did not behave as the Government wanted it to, then the present policy of leaving it out of the orbit of the public sector might have to be reversed. Mr. Bhargava urged the industry to take Mr. Deshmukh's warning seriously, and build its business on the basis of a co-operative relationship, by pooling knowledge and exchanging views, ideas and business. He also stressed the necessity for introducing better techniques. Mr. Bhargava's assessment of the future prospects of the industry was optimistic. Even the immediate outlook was bright, with the proposed expansion of heavy industries during the second five year plan. That, he rightly thought, should widen the basis and enlarge the volume of general insurance business. General insurance was so interlinked with private enterprise in the country that if a genuine private sector was to exist, the Government must leave it alone, and he was happy to note that Mr. Deshmukh recognised the facts of the inter-relationship. But what worried the industry was the proposal by the Madras Government for taking over the third party insurance of motor vehicles, which would, in effect, mean that whatever was profitable in the insurance business would be gradually swallowed up by the public sector. His is a legitimate fear.

Plea for Realistic Approach.—A salutary warning against the dangers of over-optimism and complacency was given by Mr. G. D. Birla, speaking from the chair at the annual meeting of the United Commercial Bank. After reviewing the bank's business during the year, Mr. Birla enumerated the problems confronting the country on the eve of its second five year plan and expressed the gravest concern at the apparent lack of awareness displayed by the authorities of the immense difficulties which would have to be faced and overcome before the plan could be successfully implemented. The main obstacles, said Mr. Birla, were the inadequacy of internal resources, foreign exchange and technical personnel; the inability of the transport system to keep pace with developments in other fields; and the rigidity of Government machinery. Of the suggested measures for raising money to be invested in the public sector, Mr. Birla said: "I wonder whether it is fully realised that additional taxation, savings and loans come into play only after production and wealth have increased, and cannot precede them." From the way that the Budget had been planned, Mr. Birla felt that the reverse must have been believed to be the case. While he feared that the seriousness of the lack of foreign exchange was not fully realised, he did believe that with the proper effort, it should be available. The dearth of technical personnel however, he said, is admitted all round and is one of the main reasons for the country's inability to make spectacular headway. State-owned steel plants alone, he pointed out, require 5,000 engineers and 10,000 skilled personnel. Although he conceded that the private sector had built up at least a nucleus of expert administrators in comparison with the public sector which must now start training all its staff from scratch, he felt that without adequate incentives neither sector would have enough technical knowledge at its disposal. The ability of the railways to bear the additional strain that it is proposed they should carry, is undoubtedly open to question. Their failure to do so, as Mr. Birla confessed, would mean the collapse of the whole edifice of the plan. Mr. Birla concluded his address with a strong criticism of Government machinery, which he described as "dilatory, hidebound by rules and unaccustomed to take quick decisions...eminently qualified to deal with long range questions of policy, it can hardly meet the needs of day to day industrial expansion when rapid decisions are necessary." Mr. Birla has thrown down a formidable challenge, the implications of which are inescapable. To ignore its importance would be to deny Mr. Birla's own faith in the ultimate success of the plan if to be "forewarned is forearmed."

Tinplate Supplies.—World tinplate production reached new high levels in 1955. The United States alone produced over 5,500,000 tons last year and the United Kingdom's output was over 800,000 tons. The two largest producers together were responsible for over 6,300,000 tons, which was the total world output for 1954. France, Canada and West Germany all produced about a quarter of a million tons each and production was well maintained in Belgium and India. There is a distinct trend among European nations, according to the Tin-Printer and Box Maker, towards self-sufficiency in tinplate supplies. Austria, whose domestic requirements total only 7,000 tons, is building a new tinning plant with a capacity of 10,000 tons. This is a small example, but a significant one. The United Kingdom exported last year 314,000 tons—nearly 40 percent of the total production. As usual the lion's share went to Australia, and other large quantities went to Spain, Iraq and Argentina. World production is increasing, but almost certainly not as fast as demand.

CLAIMING COMPENSATION
FOR MURDERWIFE AND CHILDREN WIN
NAGPUR CASE

(FROM OUR LEGAL CORRESPONDENT)

"THERE will hardly be a parallel to this case". Thus R. K. Rao and Choudhuri, J.J. in the Nagpur High Court, in disposing in appeal of one of the most remarkable civil claims it has been the lot of the writer to come across. But one respectfully doubts the accuracy of the prophecy. The remark was made before the passing of the recent resolution in the House of Commons with a view to the abolition in England of the death penalty for murder and the idea behind this Nagpur case is quite likely, virtually certain in fact, to be transferred to the United Kingdom if and when convicted murderers, with life sentences commuted after from 12 to 20 years in jail, are walking the country again on their more or less lawful occasions. This is the theory behind abolition. Police Constable Gutteridge is a village policeman living in his little rustic cottage with his young wife and children. He is on duty patrolling his country beat. A car approaches. The policeman pulls it up for some trifling traffic infringement. The car is occupied by Messrs. Kennedy and Brown. Note the fact that these two gentlemen are the owners of a prosperous garage; that is the whole point of the present observations. They are also car thieves on an extensive scale and have been interrogated for suspected murder; and the car in which they now are is one stolen by them. While the young policeman is examining their licence in a friendly way, one of them shoots him, and while he is lying wounded on the ground, the other gets out of the car, strolls over to him and taking methodical aim puts a bullet through each one of his eyes, and this P. C. Gutteridge is later borne home to his wife and children. These two gentlemen were hanged, mutually accusing one another. They should not have been hanged. Because human life—not P. C. Gutteridge's, of course, but theirs—is sacred.

Kennedy and Brown were young men. Under the care of skilled psychiatrists, reinforced by the pious admonitions of prison chaplains and after some 15 years of the generally reforming influence

of British jails, they would have been released to become a credit to their country in the motor industry. All one wants the reader to remember about them is that when they were arrested they had substantial funds; and, if released, would have earned more. So had that dapper young company director, John Haigh, living in an aristocratic South Kensington Hotel, and augmenting his legitimate earnings by the proceeds of some half a dozen murders of his personal friends. He should not have been hanged. Human life is sacred. "George Joseph Smith, Esq.", whose photograph so designated in frock coat and top hat adorns the Famous Trial Series and who murdered five or six elderly "brides" in their baths, would, under the new dispensation, have been discharged for good conduct a few years ago in robust middle age, and apart from the satisfactory competence he had already acquired from his victims' lost wills and testaments could have made a modest fortune by a becomingly repentant autobiography. Major Herbert Rowse Armstrong, M.A. (Cantab), solicitor, clerk to the County Justices and brightest legal luminary of the little town of Hay, Breconshire, who murdered his wife, attempted to murder a young rival lawyer and was suspected of murdering his partner, another rival just across the street and an auctioneer, actually refused a huge offer made by the late Edgar Wallace on behalf of one of the London weeklies for a candid account of his exploits. But the gallant Major's number was then up. He was in the condemned cell and was, notwithstanding the sanctity of human life, to be ruthlessly hanged in a week or two. So the money would have been of no use to him. How different with the death penalty abolished and the prospect of release in due time.

These cases have been selected at random not so much to demonstrate how incomprehensible it is to some of us that such fiends should not in future suffer the due reward of their sins as to illustrate one point. Every one of these assassins possessed substantial assets. So do a great many other murderers. Moreover, if the death penalty is abolished, there will be, in course of time, scattered across Britain quite a number of ladies and gentlemen, ex-lifers, who, having secured remission and release by good conduct, will be earning a substantial living and putting by money, perhaps the proceeds of another murder or two. For, remember, Sanctity Street is for one-way traffic only. The murderer's life is sacred, not that of the murdered. As one young M.P., Mr. Anthony Fell, put it in justifying his vote for the

retention of the extreme penalty: "Can I be quite certain, if the death penalty is abolished, no old man or woman, young child or young girl, will be foully murdered as a result of my action (in voting for abolition)?" One can imagine the shades of Messrs. Brown, Kennedy, Armstrong, Haigh, Smith (G.J.), Charles Peace and a host of others giving an authoritative reply. The moral certainty is that the dog will return to his vomit. He will do it again, certainly if he is already an habitual murderer and quite possibly if he has, so far, experimented only once; for the simple reason that he is a murderous blackguard at heart and knows he won't be hanged anyway.

And that brings us by rather a roundabout route to our Nagpur case. First, one would like to pay a tribute to the plaintiffs' lawyer in the case, Mr. Imdad Ali; for to him occurred an idea which all down the centuries has never occurred to or, at any rate, never been put into practice by any lawyer in the whole Commonwealth, or for that matter in the United States either. A real brainwave, a suit rightly described by the judges as without parallel. A civil suit for damages by the widow and children of a murdered man against his murderer.

The husband, one Natwarlal, was alleged to have been murdered by his father, Gowardhandas. Gowardhandas was tried and convicted under Section 302 of the Penal Code; he was not sentenced to death but to the lesser penalty, optional in the judge's judicial discretion in India, of transportation for life. Gowardhandas was a substantial business man, a mining contractor; his son was assisting him in the working of a labour contract in a manganese mining business and was being trained by the latter for learning the mining work. His prospects therefore were bright and the needs of his wife and children, maintenance, education, janneva, marriage ceremonies, etc., as the years passed and his competence and emolument increased, could reasonably be expected to be fully met had they not been brought to a sudden full stop through his brutal murder by his own father.

The general rule of law is that a purely personal right of action dies with the person. The maxim is "Actio personalis moritur cum persona". That is why you may with legal immunity publish the grossest and most untruthful libel or slander on your neighbour provided he is dead. It is why the late Lytton Strachey was able, to his own great pecuniary profit, to brand the murdered hero of Khartoum, General Gordon, with the false and wicked label that he was a secret drunkard, that General Booth of the Salvation Army was a self-advertising humbug, with lesser waspish stings on eminent Victorians of the stature of Florence Nightingale and the great Queen herself. The victims in such cases are dead, and neither widow, children nor executors have any remedy in law by way of legal action for damages. But there is an exception to the general rule in regard to actions on account of personal injuries resulting in the death of the person injured. There the dependants of the injured person may sue for damages. This remedy is provided in India by the Fatal Accidents Act, 1855, duplicating the like English Act of 1846, which has also been re-enacted throughout the Commonwealth. One writes these notes without a copy of the Fatal Accidents Act available for reference, and will therefore offer no comment on how deliberate wilful murder can by any stretch of imagination be construed as an accident, and can only presume that the definition of accident in the Act is wide enough to include murder. At any rate the Fatal Accidents Act was Mr. Imdad Ali's brainwave; he advised his clients, the dependants of the murdered man, to sue for damages under it and they did. The murderer defended the suit. But it was successful. The trial judge found that the defendant was liable to pay compensation under the Fatal Accidents Act and fixed the amount at Rs. 9,360. The widow and dependants appealed, considering the amount too low, and it was increased by the High Court to Rs. 25,750.

With the abolition of the death penalty, quite a lot of murderers, including habitual ones and, no doubt, with names lawfully changed by deed poll, will be settling down, in about 15 years' time, to various real or nominal avocations throughout Britain. The average citizen unknowingly may be living with one of them, and certainly with the female members of his family and his children will be cheek by jowl with the brethren of the fraternity in the community. It may be some consolation for him to know that if he is murdered by one of these released thugs, his widow will have a lawful claim for damages.

(43 A.I.R. 1956 (Nagpur) 86).

INDIAN ORDER FOR U.K. FIRM

A British firm (the Stanton Ironworks Co., Ltd., of Nottingham) has been awarded a large Indian contract. The contract, placed by the India Supply Mission in Washington, is for the supply of 3-inch to 18-inch Stanton socket and spigot spun iron pipes to a total value of over \$500,000 (approximately £200,000). The material will be supplied for shipment to the Indian Ministry of Health, and its ultimate destinations are Calcutta, Madras, and Bombay.

THIS diary is not the place for me to pass weekly judgment on my elders and betters. But it is the scroll upon which I record the comings and goings of our business leaders, and alas there have been too many goings in recent weeks. Of these, the latest is the departure of Mr. G.A.S. ("Sandy") Sim, who has just retired from the position of chairman and managing director of Andrew Yule & Company. In the past year he has been known to a wider public as president of the Bengal Chamber of Commerce and Industry, only one of many public offices which he has filled in the course of his long association with that famous business house in Clive Row. Over the years, Andrew Yule has provided the Bengal Chamber with many presidents; but none, I venture to say, has had a more difficult term of office than Sandy Sim. Character, it has been said, is destiny. We say that but for such-and-such circumstances, so-and-so would not have done this-and-that. No, but he would have done something else equally important. The qualities which made him successful here would have made him successful there. By tradition, training and temperament G.A.S. Sim was both destined and equipped for the Indian scene. His father was a distinguished member of the Indian Civil Service. He qualified as a chartered accountant and as a young man joined an organisation which has for long played a significant rôle in the affairs of the British commercial community. To a skilled knowledge of tax and other fiscal problems he has added, during his term of office, a gift of clear exposition which has distinguished his presidential pronouncements on the many problems with which business is now beset. Protracted discussions with the Government have made heavy demands upon his leisure, and behind a cheerful and modest demeanour he has shown an infinite capacity for patient negotiation. We are all in his debt, and he goes hence with all our good wishes.

The past week or so has seen the life insurance companies make a welcome return to the equity market. This is, of course, in line with the promise Mr. Deshmukh made when he announced nationalisation. He is to be congratulated on implementing it so quickly because the beginning of the second plan is certainly not a good time for unnecessary slackness in the stock markets. But up to now, all the buying seems to have been done in Bombay and it is beginning to look as if it is not altogether a coincidence. In fact the suspicion is growing that this might be yet another step towards establishing that city as the commercial capital of India. After what I have said in the past about such a tendency it is not difficult to appreciate my misgivings when there appears to be a further development of it. I fail completely to understand why there should be any drift towards separating India's financial from her industrial centre. Deliberately to create such an unreal situation would be to hamper the working of both, and could prove extremely costly for the economy. If there was any justification for making Bombay the permanent home of the State Bank, a possibility which I must deny with my last breath, there is certainly none for meting out the same treatment to nationalised life insurance. I do not know the figures, but I suspect that this side of the country accounts for at least as much of the life companies' funds as the other. It is certainly neither just nor economically expedient that companies undertaking development in eastern India should find their capital needs restricted at this crucial time unless they happen to have access to the Bombay stock market. A possible solution might be found in the suggestion

A DITCHER'S DIARY

put forward by the Committee of the Indian Chamber of Commerce—that the Head Office of the proposed Life Insurance Corporation be located in Calcutta. This would, at least partly, help to redress the present balance and could prevent undue favouritism towards the Bombay stock exchange. It would be pointless to pretend that the Calcutta market has behaved itself recently, but the primary considerations in a matter of this kind must be economic, not moral. It is time that more attention was given to the realities of the situation which are, briefly, that Calcutta and its hinterland are developing into the largest industrial and commercial concentration in India, perhaps eventually in Asia, and that a little more appreciation of that fact would certainly benefit the progress.

I could not agree more with the demand Professor Nirmal Bhattacharya made in the West Bengal Assembly last week for some reforms in the uniform of the Calcutta Police. He concentrated his criticism on the turban and reinforced it with a vivid description of how he once saw a policeman running with one hand stretched forward to catch a thief and holding on to his headgear with the other. I do not believe for a minute that any effort should be spared in making Calcutta's policemen as efficient thief-catchers as they unfortunately need to be, but I do feel that when there are so many other things obviously wrong with the uniform that it is a pity to pick on this particular one. There is, I suppose, a political point involved but this should not prevent a good word being said for the turban. I have always considered it most picturesque and certainly characteristically Indian, without having any idea of whether it is comfortable to wear. But there is another reason, which I think is far more important and which the worthy constables of Delhi, who have also been objecting to the turban, might profitably ponder too. One of the main things about an ordinary policeman, especially in India with its admirable practice of maintaining an unarmed force, is that he should look like a policeman and not a soldier. I suspect those who condemn the turban have a hankering for the peaked cap, but to introduce that would be a grave mistake. A policeman should above all be a civilian and any attire which serves to associate him in the public mind with the military is damaging to his true status and prestige. There ought to be no need to labour this point in a country where, for historical reasons, the police are already too closely identified in the public mind with the ruling power. I recall that a controversy on these lines arose in Britain some time ago when the advantages of that archaic object the policeman's helmet were successfully argued against the attractions of the peaked cap. And this defence of tradition was carried on by people whose respect for the helmet went somewhat beyond its obvious attractions after late parties. If Calcutta's reformers want to be let loose I recommend they start with those ridiculously tight trousers and narrow puttees, because if there is one principle of uniform design which can claim to be good as well as modern, it is comfort. Then they could get on to the boots. These are now as distinctive as Charlie Chaplin's famous footwear, though fortunately not for the same reasons. Far from being ragged, they look as if they have been constructed with the strength and durability of battleships. I am told they have to be dipped in water for a month or two before they

become flexible enough to wear. If there really is a wish to improve the thief-arresting power of Calcutta's police I think one of the best ways would be to increase the efficiency of the implements they have to use for the job—their feet.

This question of dress has a good deal of psychological significance and I was interested to read a news agency report a few days ago which quoted a Peking newspaper as calling for more beautiful clothes for the Chinese people, not only on festive occasions but for everyday use as well. For those who have always contended that Chinese communism would not follow the Russian model, this may be proof indeed. In a world where beautiful clothes are all too often regarded as shameful ostentation it is heartening to find a communist newspaper not suggesting that everybody should be in some kind of uniform. If the feeling can also reach to a revolt against uniform categories such as worker, peasant, intellectual and so on, then so much the better. I suspect the character of the Chinese themselves has something to do with it, so I have consulted that fine writer and wistful exponent of the Chinese philosophical outlook on life, Lin Yutang. Early in that exquisite little book of his *The Importance of Living* he makes this assessment of the Chinese character R, D, H, S, where R = reality, D = dreams, H = humour and S = sensibility. The figures denote the marks given for each attribute, with a maximum of four. The ratio of dreams to reality is obviously the outstanding feature of the Chinese as a people, at least to this distinguished countryman of theirs. This preponderance of the R attribute means that the Chinese will have no illusions about identifying a man with the clothes he wears; and so there is no longer any purpose in his dressing to suggest that he is, say, "a true son of the proletariat". The low rating given to dreams suggests that greater importance is attached to the good things available now, and not those which politicians are always saying will only come after hard work and sacrifice. And the significance of the sensibility element means that dowdiness cannot be accepted simply because it is the sartorial path of least resistance. This is all rather algebraic and is obviously a way of assessing human character which would have least appeal for a people who themselves have such a high reality and sensibility rating. But those who do not like it are at liberty to make assessments of their own in their own way. Before I leave the subject I would like to draw one more conclusion from this formula and that is the lack of real appeal which theoretical communism on the central European model must have for a people so well endowed with an appreciation of reality.

It is reported that in Maywood, a suburb of Chicago, two episcopal congregations, one negro and the other white, have agreed to worship together at the same church. This reminds me of a very old story about a not-too-conscientious minister who turned away a negro boy when he tried to worship at a "white" church. His advice to the boy was to pray that night to Jesus Christ and report the next morning if Jesus approved his desire. The boy returned next morning and the minister asked him if Jesus had given his approval. "No, father", said the boy. "Jesus advised me not to try to enter your church. For, He said, He Himself had tried for many years and failed."

for the

TATA

IRON & STEEL CO LTD

At the Tata steelworks at Jamshedpur Simon-Carves Ltd are to reconstruct the No. 2 and No. 3 coke oven batteries built by them twenty years ago, and are also to build an extension of 18 new ovens. This important new contract covers a total of 124 ovens.

All four of the existing batteries at Jamshedpur, comprising 216 ovens, have been built by Simon-Carves Ltd, who completed the new No. 4 battery in 1953 and are at present reconstructing (under a separate contract) the original No. 1 battery of 54 ovens which they built in 1934.

Chairman's Speech

INDIAN SUGAR MILLS ASSOCIATION

MR. CHARAT RAM'S REVIEW

Addressing the Twenty-third Annual General Meeting of the Indian Sugar Mills Association, held at New Delhi on the 24th March, 1956, the President, Mr. Charat Ram, said:—

Hon'ble Shri Ajit Prasad Jain, friends and fellow delegates,

I have great pleasure in extending to you all, a cordial welcome to the inauguration of the 23rd Annual General Meeting of our Association. I am particularly grateful to you, Sir, for once again having spared time for us amidst your so many other pressing engagements. The inauguration of the Annual Session of our Association by the Minister for Food and Agriculture, year after year, is to us an indication of the important place which the Sugar Industry occupies in the economy of the country, and of the confidence which the Indian Sugar Mills Association continues to enjoy with your Ministry.

General Review

The year under review has been eventful in many ways. In exactly a week from today, the country will be launching on its Second Plan. The activity all round is at an unprecedented pitch, born out of satisfaction at having exceeded almost all the targets of production set out in the First Plan. The index of agricultural production which stood at 96 in 1951 is expected to be 115 in 1956. The index of industrial production similarly has moved up from 100 in 1951 to 126 in 1955. The over-all satisfactory results in all the spheres of the country's activities, is a tribute to the planning and execution of the plans by the Government and to the willing co-operation of the people. This is not to say that no more problems exist for us now; only that we are now of a different colour and character. After food has been provided to a hungry being, his body and brain begin to get into motion, and his demands increase. He begins to want clothing, education, housing, social rights and status and so on. The country is somewhat in the same phase today. It is a sign of awakening and vigour, but we have to be on guard against the possible destructive effects of some of the new slogans, such as have been raised in the name of linguistic States. A firm and patient handling of the situation is vital for restoring confidence amongst the people; it is all the more necessary as a basic requirement for maintaining conditions, which are essential for a developing economy like ours.

Public and Private Enterprise

A great deal is heard these days, Sir, of the controversy regarding the so-called private and the public sector, as if the two sectors were in great conflict with each other in their objectives. We have to guard ourselves against a doctrinaire approach in this matter, as much as in any other, e.g. that of linguistic States. I am clear that the only criterion in this matter is, as to which agency will stimulate more rapidly and so on, the productive activity in the country, so that increasing employment and a high standard of living can be made available to more and more people in the country. If the private sector can play no part in this, then it may claim no place in the country's economy, and if it is agreed, that the public sector by itself is unlikely to be able to achieve all the desired objectives, with the rapidity and the efficiency which is necessary now, then it would be anti-national to give no opportunity to private enterprise to make its due contribution to national welfare, on purely doctrinaire grounds. I do not wish to enter into any controversy, but I feel that the private sector has played a useful role till now, and with suitable adjustments is still capable of delivering the goods in the fields allotted to it. I feel that the emphasis on rapid industrialisation increasing employment in the Second Five Year Plan, makes it imperative, that the private sector be considered as a useful limb of the national body.

Sugar Industry's Performance in 1st Plan and Tasks Ahead

It is a matter of gratification to us all, that the Sugar Industry has given an outstanding account of itself. From an average annual production of about 11 lac tons at the beginning of the First Plan period, the production at the end of the period is over 16 lac tons, registering approximately a 40% rise. But none of us can be content with this performance. Sugar is an essential energy food, and considering the low level of its consumption in India as compared to the more advanced countries of the world, we should be aware of the stupendous task ahead of us all. The current sugar consumption in India is 11 lbs. per head; this is planned to be raised by 1961 to 14 lbs. Compare our 1961 targets of per capita consumption, with the actuals of some of the other countries of the world in 1951:

U.S.A.	...	102 lbs.
Denmark	...	100 lbs.
Switzerland	...	93 lbs.
U.K.	...	90 lbs.
Germany	...	71 lbs.
Austria	...	61 lbs.
France	...	60 lbs.
Poland	...	43 lbs.
Egypt	...	31 lbs.
India	...	11 lbs.

To raise our consumption to the level of Egypt the lowest country in this list, we would need to increase our sugar production to 45 lac tons; to come up to the standards of the U.K. we would need to produce 140 lac tons of sugar, which would require more than 1,000 sugar factories. The Indian Sugar Industry has thus to think of its future in a bold way. It is an opportunity, when every factory could plan to raise its crushing to economic capacities of about 3,000 tons a day, and many more new plants could be set up.

Need of Reducing Price of Sugar

While envisaging these prospects for the sugar industry, it has to be realised that the problem of sugar consumption, is the problem of sugar prices. Purchasing power in India is still low, and efforts have to be made allround to reduce the price of sugar for the consumer. In India 60 to 65% of the cost of sugar is accounted for by sugarcane, as against 50 to 55% in other countries; Union and State Govern-

ment taxes at various levels, increase the cost of sugar to the consumer by another about Rs. 6/4/- per maund. Thus, between high Government taxes and low cane yields, the Indian consumer is denied the adequate consumption of a valuable energy food. It is gratifying to note, that the Sugar Industry has been spared additional tax burdens at the hands of the Finance Minister this year. We hope, that this sparing of the Sugar Industry, comes from the realisation, that cheaper sugar will mean its greater consumption, and better health of the people of the country. Sugar, Sir, is no longer considered an article of luxury, but an item of essential food. Luxuries may be taxed, but penal taxation on items of food is difficult to understand. We hope that the Food Ministry will use its influence with the farmer, the manufacturer and with the State and Union Governments, for lowering the cost of sugar to the consumer, so that the consumer could get sugar at a price of about Rs. 2/2/- per maund. This figure, Sir, is not at all difficult of achievement.

Need for Improving Cane Cultivation Practices

A reference has been made above, to the excessive cost of sugarcane in the total cost of sugar. Year after year, large amounts are spent on the improvement of sugarcane cultivation; there exists a Central Sugarcane Committee, and many research stations are exclusively working on cane development. Judged by the results achieved so far however, the picture must be considered unsatisfactory. The all India average of recovery, which between 1942 to 1946 was over 10%, has since declined to a figure of generally below 10%, instead of registering a rise. There is certainly some improvement in areas like Bombay, but this is more than offset, by the set-back in the U.P. and Bihar, which produce between them, 70% of the total sugar in the country. The figures of cane and sugar yields per acre, which have been below average, more prominently, our backwardness in cane cultivation as compared to other sugar producing countries of the world:

Country	Yield per acre	Recovery %	Sugar per acre
	Tons.		Tons.
Hawaii	62.0	10.5	6.5
Java	56.2	11.5	6.4
Peru	41.1	12.3	5.0
Puerto Rico	24.2	12.2	2.9
Mauritius	19.0	12.1	2.3
India	14.6	10.0	1.4

A study of the above figures will re-emphasize the truth of the statement accepted all over the world, but somewhat contested in this country that, "sugar is produced in the fields". We can disregard this accepted world fact, only at the cost of endangering our own development. If, in spite of all the governmental efforts and expenditure over so many years, the results in the field of cane cultivation continue to be disappointing, an objective reappraisal of the problem is certainly called. I am one of those Sir, who believes that much too much reliance and responsibility has been placed on the sugar factories in the scheme of sugarcane development. The cotton grower does not look to the textile mills, nor the jute grower to the jute mills, in the way that the cane farmer has to look to the sugar mills. This misplaced reliance has reduced the initiative of the farmer, who now thinks, that the responsibility for improvement of his land and agricultural practices is that of either the factories or of the Government. This attitude needs to be changed. This is not to say, that the sugar industry should dissociate itself completely from all schemes of cane cultivation. The primary responsibility in the matter however, must remain of the farmer, helped by the resources of the State and the experience of the industry.

Payment of Cane on Quality Basis

Another reason, which continues to militate against the farmer's understanding and efforts towards improving his cane quality, is undoubtedly the system of payment for cane in this country. For some reasons, which at best could be termed "historical", the payment for cane in this country continues to be made on the weight of cane, instead of on its sugar content, as is the practice, in the advanced sugar producing countries of the world. The textile mills do not pay the same price for Bengal and Punjab cottons. The same applies to jute or minerals; the cane purchaser however in this country pays Rs. 1/7/- per maund of sugarcane, irrespective of the sugar that is extractable from it. The Government sponsored Sugar Delegation has observed in this connection:

"The system of payment based on recoverable sugar content, provides incentive to both growers and manufacturers to effect improvements in their respective spheres. A large number of leading sugar producing countries have adopted this system, and in fact much of the progress made in Australia is attributed to it. In India the need for introducing such a system has been felt for a long time. The existing system of quality payment has great possibilities for raising the standard of efficiency, of which there is great need in India particularly on the farms. We are therefore of the opinion that the system should be introduced without delay."

It is a matter of congratulation to your Ministry Sir, that this need has been appreciated by it nearly two years ago, as an inevitable step if any improvement in sugarcane farming practices was to be achieved. Unfortunately, our steps in this direction have been faltering, and continue to be bogged by some unknown fears. There is no doubt that the conditions in this country are different to those prevailing in other countries; of course they are different in every country; and for this reason, we will require a different system to be adopted. There could however be no question of going back on what is right. Any system fool-proof as possible. It is certainly not practical to My suggestion in this matter is, that "group incentive" system should be the first step which should be taken;

this will, though not ideal, be in any case far better than the present system. In this first step of "group incentive" system, the total average recovery of the factory will be taken for the cane of all the farmers together, supplied in the period of a week, a month, or the whole season, and payment made on the period recoveries. Safeguards and facilities must be provided to ensure full satisfaction to the farmer. To say however, that this system lends itself to corruption any more than the present system of payment by weight, is incorrect; and the solution of corruption is to track down the corrupt without mercy, than to give up a system that is fundamentally in the interest of the country. I must emphasise again, that the Government must pursue this matter speedily, as this is very important for the improvement of cane cultivation practices in the country.

Periodicity of Sugar Releases

It is a matter of gratification, that since the last few years, a fairly satisfactory balance between supply of and demand for sugar has been maintained in the country. Last year, however, an unbalance was created when supplies became far in excess of demand; this led to a steep decline in prices, and we have not recovered from this state yet; for over a year now, the position has been full of anxiety to a number of factories. We are aware of the Government's responsibilities to the consumers in this connection; we are sure, however, that the Government does not wish the industry to operate in a state of lesser for length of time, and thus to cut at the root of its financial stability in the sugar industry, unlike the textile, engineering and other industries, there are considerable fluctuations in the production of sugar from year to year. Looking to the inherent nature of the sugar industry, a very careful balance will have to be maintained between production, port and exports; and the position of stocks will have to be so controlled, that at the beginning of the season there should be approximately two months consumption stocks. Whether the stocks are composed of Indian or imported sugar, and whether they are carried by the Government or the industry, to me is a matter of unnecessary controversy. The policy of controlling releases, Sir, in my opinion is going to be a permanent feature of this industry. With a control on stocks and releases, it should be possible for the Government to safeguard the interests of the consumers, the farmers, and the factories. In have to recommend some modification however, in the periodicity of releases. At present releases are made generally once a month. I have to suggest that the Government should not be wedded to the policy of making releases on any fixed intervals. The Government should first arrive at a figure of a "fair price" for sugar, taking all elements into account, and then use the machinery of releases to maintain this price. If the prices tend to go above this "fair price" line, the Government should make releases often than once a month; if the prices tend to rule below this "fair price", the Government should be prepared to withhold releases for as long as is necessary, may be even two months or more. The fact is, that large groups of factories, such as those in the East U.P. have been undergoing great hardship owing to a very low level of sugar prices, which have gone below what would be the controlled price, if a price control was in force to-day. We feel that if a change in the periodicity of releases as suggested above is made, there need be no recurrence of any hardships in any quarter.

Need of Plan for exports

Mention has been made earlier of the fact that in the sugar industry, there will always be considerable variations in production from year to year, whereas consumption will follow a steady rising pattern. There are bound to be shortages or excesses of sugar from year to year. The country will therefore have to be prepared, to either import sugar now and then, or to export its production, but there is a surplus which would be exported annually. It will be unfortunate if imports are necessitated at any time; at the same time a load of excess supply of sugar in the market, must inevitably seriously affect the farmer, inasmuch as his cane may remain standing in the fields uncrushed, and production and profits in the industry will also be affected. We feel that the approach to this problem should be one of increased production and inevitably of exports too. We have got to use a habit of thinking, that our sugar is too expensive to permit of any export. The findings of the Sugar Delegation in this matter are rather revealing. According to them, the domestic price of sugar in the sugar exporting countries is higher than that prevailing in India, and the surplus production is exported through organised channels by subsidy in one form or the other. There is no reason, why India could not do the same. I have to suggest, that the Government should begin now to draw up a blue-print of a scheme for exporting sugar, which will be brought into operation whenever sugar quality improves, instead of waiting for the problem to erupt, and then rush up into action. Export of sugar, now appears quite feasible to us; this will on the one hand help the country in earning foreign exchange, and on the other protect the country's farmer as well as its industry.

Labour-Management relations

Increasing prosperity and production in the industry will mean little, if it does not bring prosperity to those who work in it, the operatives. I must admit, Sir, that although there is a change in our outlook, yet our approach, to many of the labour problems, continues to be somewhat static and conservative. It is also unfortunate that by and large, there is the same outmoded approach in these matters, at the labour end, and there continues to be an agitational approach for the solution of all its troubles. I feel that an approach of joint and of all its troubles, a much wider basis is called for, instead of continuous mutual harassment by employers and employees. In this matter, the suggestion recently made by Shri V. V. Giri for improving industrial relations is worth exploring by the labour and management both. The suggestion is that there should be single union for each industry on a country-wide basis. There would be according to this proposal, one union for the entire sugar industry of the country, instead of there being something like 150 factory-wise unions. Instead of management and labour of each factory, being continuously at logger-heads, the representatives of labour and management of the entire industry could sit together once a year or so, and arrive at long term agreements, applicable to all the units in the industry. It is the duty of organised industry and labour both, to evolve new methods which will enable a more

harmonious working, and assure a continuously high output within the industry.

While on the subject of labour management relations, I should make a reference to the Industrial Disputes (Amendment and Miscellaneous Provisions) Bill, 1955. I am afraid, Sir, certain provisions of the Bill, as they now stand, are not conducive to promoting industrial peace, and might, in fact, lead to an intensification of industrial unrest, defeating thereby the very objective of the bill. The Bill seeks to abolish the existing Labour Appellate Tribunal of India and set up instead a three-tier system of tribunals. In the proposed set-up there is no right of appeal against the awards of the tribunals. The Labour Appellate Tribunal I may point out was set up with a view to promote uniformity in the judgments of the various tribunals all over the country, and to prevent anomalies in awards made by different adjudicating authorities. Now if this is abolished, diversity and anomalies in awards by tribunals would increase. As there is not a sufficient measure of case-law, to serve as a guide for future awards, it is necessary that an appellate body in some form should be allowed to function. I need hardly emphasize the need for a provision for appeal against the awards of tribunals in the interests of the management and the labour alike.

A disturbing feature of the Bill is the enlarged definition of "workman" which will now include supervisory and technical staff drawing a salary of upto Rs. 500/- per month. I am afraid this provision in the Bill would render the task of management very difficult. For the smooth working of industrial undertakings, it is necessary that all supervisory and technical staff, irrespective of the salary, be excluded from the purview of the definition of "workman". I hope before the Bill is enacted into law, Government would see their way to accept such modifications in the proposed legislation which will be helpful to a peaceful and disciplined operation of industry.

Land Reforms

Government's land reform measures in the Second Plan, envisage a policy of land ceilings under which the State would acquire land in excess of the ceiling, on payment of the necessary compensation. In this connection, the Planning Commission has already recognised that efficiently managed farms consisting of compact blocs on which heavy investment has been made and whose break-up would lead to a fall in production should be exempted from the policy of land ceilings. The Commission is still examining the question of exempting organised sugar factory farms. I think the policy adopted of not disturbing the well organised and efficient units is sound. A majority of the sugar factory farms have been built up with considerable investment, and the production techniques followed, give considerably higher yields than the adjacent small units. Besides, these farms have grown into centres of development in the area, where continuous experiments are carried on cane varieties, agricultural practices, pest and diseases, etc. and the results achieved benefit the entire community of growers in the area. They also serve as seed distribution centres, and generally as a model in all respects. I am sure that the Government would convince the Planning Commission of the necessity of maintaining these farms in the interest of larger production and development on sounder lines.

U. P. Sugar Industry's Health

It would be a truism if it was said that, "to find the state of health of the sugar industry, one should feel the pulse of the industry in the U. P." U. P. produces more than 50% of the country's sugar and is the cradle of the sugar industry in the country. The state of health of the sugar industry in the U. P. must cause anxiety to everyone. Sir, Apart from the difficulties, which the industry has been facing till now, more difficulties are yet to come. With the licensing of new sugar factories in other States, the deficit areas will gradually turn into surplus areas. The high cost of sugar industry of U. P. is living on its exports to other States, will undoubtedly be faced with a crisis. The U. P. Government should take all possible measures, even though unpopular, which will help the industry to reduce its costs. In the sugar industry of U. P., the recovery is less, and the labour costs are higher, as compared to Bombay and other areas. Due to these and other factors, the realization on sugar sales by the U. P. sugar industry, is lower by at least Rs. 5/- per maund, as against its counterpart in Bombay. The U. P. Government should draw up a programme of improving the economy of this industry by all possible means. In a great many factories in the State, the labour strength is enormous from any work-load standards; the normal work-load need to be drawn up to highly efficient standards. There should be full facilities for reducing labour costs, provided no retrenchment is effected. The Government of U. P. could help its industry greatly by improving the sugar content of the cane grown in the State too. Shifting of badly situated factories in East U. P. to better sites should be facilitated. In short, I would urge the U. P. Government to go all out with a determination to rehabilitate its sugar industry, from which it derives large revenues, and on which are dependent a great many of its farmers.

Transport

I would now like to refer to the difficulties experienced by the factories in U. P. and Bihar in the procurement of wagons for sugar movement. Disadvantageously placed as the factories in these areas inherently are, the troubles are multiplied in the case of sugar being available, released when in hand, and demand existing wagons are not available in time, in spite of sugar being a Government sponsored movement. Besides, a number of routes remain restricted for long periods. Due to unsatisfactory transport position, the factories in the U. P. and Bihar are reluctant to carry larger stocks than other areas, despite Government's policy to maintain uniformity in the matter of releases and despatches. At the end of the last season these factories were carrying stocks to the extent of 30% of their production, when the factories in other States carried considerably fewer stocks. In the interest of the U. P. and Bihar industry, Sir, I suggest that the wagon allotment to these States needs to be made more liberal, and so organised that as far as possible the stocks of sugar in any producing area, are approximately uniform in relation to its production.

Requirements for Rehabilitating the Plant and Machinery

Having made a mention of some of our problems, I would last of all make a pointed reference to the condition of the machinery and equipment in the sugar industry which is very old and outmoded. Development in the field of machinery for sugar industry in

the last few years has been rapid, as was high-lighted at the 9th Congress of the International Society of Sugarcane Technologists held in Delhi. In every operation, starting from the handling of cane at the cane-carrier, through mills, clarification, pan station, centrifugals, bagging, etc., the advance in machinery development has been phenomenal. One basic change contributing to economy in the cost of production has been the shift from steam to electrical drives. Unfortunately on account of the very rigid cost structure, and a very low margin of profit available in this industry, it is now not possible to so modernise its plant and equipment, that the Indian Industry could keep pace with its counter-part in other countries. During the last 15 years, the prices of machinery have shot up, and taxes have risen, but the Srivastava Scale on which our notions of a fair margin to the industry are based, remains where it is. While there would be some justification for the meagre margin allowed under the Srivastava Scale during the pre-war years, there can be no justification for this basis of margin for the industry, when the replacement costs of equipment are five times higher, taxation much more, and net retention of profits much less. It is necessary Sir, for the Government to so maintain the fair price of sugar that the industry is able to cover the back-log of replacements, and to effect modernisation, at the prevailing high prices of plant and machinery.

Closing

I have referred to some length to a few of the problems facing the sugar industry. These have been

mentioned not in the nature of complaints, but as suggestions, which if considered and implemented would further strengthen the base of this industry. The sugar industry is the second largest in the country and its contribution to the economy of the country over the last 22 years in the shape of savings of foreign exchange and contribution to internal revenues has been significant. With increasing demand for sugar in the country, there is great scope for its further development which would enable it to play its rightful part in the development of the country's economy. The Annual Meeting of our Association is an occasion for us to express our views on the various problems facing this industry. At the same time I would like to convey to you our hope and faith in the great economic endeavour on which we will be launching, and assure you of our whole-hearted co-operation in the building up of the economic sinews of the country.

Finally I wish to express my deep sense of gratitude to the members of the Association, my colleagues on the Committee, and the Secretary of the Association and his staff, but for whose valued co-operation and assistance, it would not have been possible for me to discharge my duties as President of the Association.

Gentlemen I thank you for not only responding to our invitation but also for giving me a patient hearing.

I thank you Sir again most heartily, and request you to inaugurate the Twenty-third Annual General Meeting of our Association.

it's a **BIG** job...
prospecting for oil

Crude oil is not found everywhere in the world. Here and there it may occur in rocks that were once at the bottom of ancient seas and lagoons. But finding an old sea-bed is no guarantee that oil will be discovered there; that can be decided only by drilling a test well.

In some areas, likely clues to buried rock conditions may be found on the surface of the earth, but where surface features are absent as in the Assam Valley, the search for oil possibilities is aided by geophysical surveys.

Three different methods of geophysical surveying for oil are being employed by the Assam Oil Company to "feel" for suitable

rock conditions under the Brahmaputra's thick blanket of Alluvium.

By aeromagnetic, gravity and seismic surveys, scientists can form a picture of the type, depth and attitude of buried rock layers.

But none of these can point to oil—even if it is there. The scientists, after studying the results, can only say—there may be oil there. The only absolute way of finding out is to drill a test well. Frequently the answer then is—no oil. The prospector must try again elsewhere... and so the search goes on, in the hope that India's petroleum requirements may be supplied to an ever increasing extent from her own resources.

ASSAM OIL COMPANY
does it all

PROSPECTING • DRILLING • PRODUCING • REFINING

THE HIND BANK LIMITED

DIRECTORS' REPORT

To The Shareholders of
THE HIND BANK LTD.
Gentlemen,

The Directors have pleasure in presenting herewith the Audited Accounts of the Bank for the year ended 31st December, 1955. The Profit and Loss Account after deduction of all working expenses shows a profit of Rs. 10,86,457 9 1 to which must be added the amount brought forward from previous account Rs. 11,99,277 15 9

which the Directors have disposed of as follows:—

Provision made for taxation	Rs. 4,00,000 0 0
Amount Transferred to Reserve Fund	Rs. 2,50,000 0 0
Bonus to Staff	Rs. 83,000 0 0
Balance	Rs. 4,06,277 15 9
Total	Rs. 11,99,277 15 9

Out of the balance of Rs. 4,06,277-15-9 the Directors recommend to the shareholders payment of Dividend at Rs. 5/- per share free of Income Tax which absorbs Rs. 3,00,000-0-0 leaving Rs. 1,06,277-15-9 to be carried forward to the next year's account.

The business of the Bank during the year under review and the results achieved have shown an all-round progress. Banks in general have had a good year in 1955 and your Directors are glad to report that your Bank also had its full share in the general improvement. The deposits show an increase of about 25% over last year and the profits have been marked up from Rs. 6.56 lacs in 1954 to Rs. 10.96 lacs in 1955. About 15% of the Bank's investments are held in Government of India and State Government Bonds of which 87% mature within the next 9 years. The Bank's investments in the Balance Sheet stand at below market value as at 31st December, 1955. Due to general increase in business, the Head Office of your Bank was shifted on 4th July, 1955 to more spacious premises at 4, Brabourne Road, and we are glad to report that your Bank is now in an improved position to offer better service to its clientele.

During the year under review Mr. Surottam P. Huthcesing of Ahmedabad, at the request of your Board, joined the Board of Directors. You are requested to confirm his appointment on the Board as a Director.

Under the provisions of the Articles of Association of the Company Mr. B. L. Jalan, Mr. N. D. Bangur and Mr. N. L. Kanoria retire from the Board of Directors and being eligible offer themselves for re-election.

The Auditors appointed by the shareholders at the last General Meeting, Messrs. K. N. Gutgutia & Co. and Messrs. Dalal & Shah retire, but offer themselves for re-appointment. The Directors express their gratitude to the shareholders and the constituents for their support in the growth of the institution and also to the members of the Local Advisory Boards at Ahmedabad and Bombay for their valuable advice. They also record their appreciation of the loyal and efficient services rendered by the staff at Head Office and branches.

For and on behalf of the Board of Directors,
K. P. GOENKA,
Chairman.

Dated, Calcutta, the 7th March, 1956.

BALANCE SHEET AS AT 31ST DECEMBER, 1955.

Company Meeting

THE MERCANTILE BANK OF INDIA LIMITED

GENERAL BUSINESS EXPANSION CONTINUES

YEAR OF STEADY PROGRESS FOR INDIAN ECONOMY

The Sixty-third Annual General Meeting of The Mercantile Bank of India Limited will be held on April 17, in London.

The following is an extract from the statement by the Chairman, Sir Kenneth W. Mealing, which has been circulated with the report and accounts:—

The expansion recorded last year in the Bank's general business continued during 1955. The balance-sheet total is £72,065,153, against £68,594,152 on December 31, 1954. Deposits are higher by nearly £4 million, whilst on the assets side there are increases of over £2 million in loans and advances, nearly £1 million in bills receivable whilst the holding of Government securities is £4 million higher.

There has been a considerable fall in the value of our holding of Government securities, for which full provision has been made. Of those quoted in Great Britain, 77 per cent. are due to mature within the next five years, whilst the remainder mature on fixed dates beyond that period. Similarly with securities quoted on overseas Stock Exchanges 50 per cent. mature within the next five years.

The net profit at £235,423 is higher by £41,099. The two dividends declared total 14 per cent. payable on the increased capital and cost £118,335 compared with £97,020 for 1954. From the balance the usual allocations have been made to the officers' pension fund, premises account, and contingencies reserve account, leaving the balance carried forward at £219,372, against £200,284.

In England the freedom from all economic physical controls, the very full employment and increased internal consumption reflected in a rising spiral of living for the majority, set up a rising spiral of wages and costs. As a result, the country was importing and consuming more than it was exporting, and this economic imbalance resulted in a weakening of sterling in the world's markets. The initial remedial steps were to raise the Bank rate to 4½ per cent. and to place certain restrictions on hire purchase terms. In October an autumn Budget increased purchase tax on most consumer goods, whilst further steps were taken to restrict credit. It is to be hoped that these steps and those subsequently taken including a 5½ per cent. Bank rate with further restrictions on hire purchase, together with restraint by all sections of the community, will remedy the situation without necessitating the reimposition of economic physical controls, such as limitation of imports, price fixation and rationing.

In the United States of America industrial activity continued under boom conditions. President Eisenhower suffered a severe illness and politically thoughts are turning towards the Presidential election to be held towards the end of 1956.

India

1955 was a year of steady and satisfactory progress for India. Agricultural and industrial output continued to rise and the standard of living of the people has also risen. The average monthly earnings of workers is calculated to have risen by nearly 50 per cent. since 1947. Although the first Five Year Plan which is due to be completed by March, 1956, has not in all respects achieved its targets, it has been a success as far as the economic life of the country is concerned and it appears that deficit financing has produced a higher rate of development expenditure without causing inflation.

By constitutional amendments, by a drastic revision of the Indian Companies Act, and by the Finance Act, 1955, as well as in numerous pronouncements, some of the proposed steps towards a "socialistic pattern of society" were promulgated during the year. With the third successive good monsoon there was no food problem, notwithstanding the normal increase in population; and this again resulted in a large saving in foreign exchange expenditure on imported food. During the year the Imperial Bank of India was nationalised and became the State Bank of India, thus terminating a long and honourable chapter of banking history. The State Bank has been created largely in order to extend banking facilities widely throughout rural India to an extent which it would be impossible for other than a State Bank to undertake.

In January, 1956, an Ordinance took the first step for the nationalization of all life assurance business in India, both Indian and foreign. The disappearance of some of the fine old Indian life companies and the prohibition of this field of business to private enterprise in the future will be regretted by many and must inevitably cause some speculation as to how far the nationalization of existing business and industry is to be carried in India.

The second Five Year Plan is now under consideration. It is a massive project and bearing in mind its great objective of raising the standard of living of the people and providing for the rapidly increasing population, it must be hoped that it will meet with at least the same measure of success as the first Five Year Plan. Whether or not, however, this can best be accomplished by Government concentrating its energies on creation of the new, rather than acquisition of the old and well-tried is a matter of opinion.

In July the first reading was given to a Bill to decimalize the coinage and it is understood that at a later date it is Government's intention to bring in a metric system of weights and measures.

A disturbing feature of 1955 has been the numerous strikes of various kinds by the clerical staff of banks in the principal cities of India owing to the discontent of the banking trade unions with some of the provisions of the Industrial Disputes (Banking Companies) Decision Act of 1953. In Calcutta especially they were of such magnitude that the clearances had to be suspended for 22 days and it became almost impossible for banks to fulfil their legal obligations.

The good relations that have existed in our branches have always been a source of satisfaction to us and we regret that in some of our offices in India these should have been disturbed, we trust only temporarily. Our thanks are due to those who by carrying on during this very difficult period helped to enable our Indian branches to carry out at least some of their functions.

Pakistan

Mr. Gulam Mahomed, the Governor-General of Pakistan, retired through ill-health in the month of September, 1955, and General Iskander Mirza (the then Acting Governor-General) became Governor-General in his place. Mr. Mohammed Ali was replaced as Premier by Mr. Chaudri Mahomed Ali, the Finance member, and the new Government proceeded to enact the One-Unit Bill which has amalgamated all the provinces and states of West Pakistan into a single province, from which only the Federal capital, Karachi, has been excluded. Thus the way is clear for a new Federal Constitution with equality between the two states of East and West Pakistan.

The framing of the new Constitution is making progress, but problems in regard to the allocation of powers between the centre and the provinces and on the question of joint electorates still present some difficulty.

Pakistan has decided to become a Republic, and it is good to learn that it is her intention to remain in association with the Commonwealth.

The second event of major importance was the devaluation of the Pakistan rupee to its old level of 1s. 6d. One effect was to assist Pakistan's exports, but another was an immediate rise in the internal price of imported goods.

The country's shortage of foreign exchange remains a problem, although there has been some improvement during the year. As a result, the control of imports has been somewhat relaxed and the internal finances of the country are considered to be reasonably sound and the budgetary position satisfactory.

Pakistan's industrialization programme has made great strides. In the textile industry the number of spindles increased from 923,875 in June, 1954, to 1,365,552 in June, 1955, whilst the number of looms increased from 14,484 to 22,633 in the same period. The country is now self-sufficient in coarse and medium varieties of textiles. In the jute mill industry the target for 1957 of 6,250 looms is expected to be achieved shortly. Two new cement factories, a sugar mill, and mills for the manufacture of paper and paperboards are in or nearing the production stage.

The completion of the 330-mile pipeline from the gas field at Sui to Karachi via Hyderabad, Sind, and the gradual replacement of imported coal and oil by gas and gas-generated electricity opens a new era in West Pakistan's industrial economy.

Ceylon

With a record tea output for 1955 of 380 million pounds the industry generally has not done badly, but has understandably been hampered in that overseas buyers especially have been handicapped by the frequent administrative changes in the export duty.

The rubber industry has had a reasonably successful year, but the generally higher external prices for the commodity have resulted in the Ceylon Trade Agreement not being so beneficial to Ceylon as in 1954.

Coconut oil and the copra industries have also had a reasonably successful year, while the cost of food imports fell substantially. It is therefore not surprising that the Ceylon Government had a net cash operating surplus of Rs. 128.7 million, which compared favourably with the figure of Rs. 33.7 million at the close of the previous financial year and is one of the biggest surpluses ever recorded in Ceylon.

Burma

There has been some improvement in the internal security situation of Burma during 1955. The insurrection still continues but successful operations by the army and security forces have reduced its effectiveness to hit-and-run raids carried out by gangs of bandits supported by the Communist Party. Nevertheless, the Government is optimistic of achieving internal peace before the General Elections, which are due to be held in April, 1956. At these elections the Anti-Fascist People's Freedom League, the party which controls the present Government, expects to be re-elected with a large majority. Their political creed is the socialist state and the complete nationalization of Burmese trade, and in furtherance of this policy the Civil Supplies Management Board which has hitherto imported 12½ per cent. of the country's consumer requirements, will in future import 50 per cent. The department will have the sole monopoly for the import of most forms of textiles, cement, and a number of other necessities. All this and much other business has to be channelled through the Government owned State Bank. Nevertheless, there is much goodwill towards the British and there may well be mutual advantage in a new growth of industrial and trading relations with Burma.

During the year the Government realized that the country was running into financial difficulties. These were caused by heavy overseas capital expenditure, combined with a sharp fall in foreign exchange earnings from the export of rice. In 1954 Burma sold rice forward in quantity with a "fall clause" whereby should they make subsequent sales at lower prices, then these contracts would also have to be fulfilled at such lower prices. In order to dispose of the large surplus of rice on hand without the "fall clause" operating, Burma has entered into "barter" agreements with the Communist bloc of countries. Barter agreements are, of course, never satisfactory, and there is little doubt that Burma will return to normal trading practice as soon as possible, particularly if the western Powers are prepared to assist.

THE HIND BANK LIMITED—Cont'd.

PROFIT AND LOSS ACCOUNT FOR THE YEAR ENDED 31ST DECEMBER, 1955.

K. P. GOENKA, Chairman.

B. L. JALAN, B. KUMAR BIRLA, N. D. BANGUR, N. L. KANORIA, B. V. JACOB, S. P. HUTHCESING

S. D. PARDIWALLA, General Manager.

T. N. GANGULI, Chief Accountant.

Calcutta, the 7th March, 1956.

THE UNITED COMMERCIAL BANK LIMITED

(Incorporated on 6th January, 1943).

AUTHORISED CAPITAL ...	Rs. 8,00,00,000	PAID UP CAPITAL ...	Rs. 2,00,00,000
SUBSCRIBED CAPITAL ...	Rs. 4,00,00,000	RESERVE FUND ...	Rs. 95,00,000

THIRTEENTH REPORT OF THE BOARD OF DIRECTORS

The Directors submit to the shareholders the Audited Balance Sheet of the Bank as on and the Profit & Loss Account for the year ended 31st December 1955.

The net profit for the year after providing for all known and anticipated charges and including Rs. 1,06,724-8-9 brought forward from the previous account, amounts to

The Directors have made the following appropriations out of the net profit:	Rs. a. p.
1. Transfer to Reserve Fund ...	8,50,000 0 0
2. Provision for Taxes ...	14,00,000 0 0
3. Provision for Bonus to Staff ...	4,00,000 0 0
4. Balance ...	11,27,761 2 0
	37,77,761 2 0

Out of the balance of Rs. 11,27,761-2-0 the Directors recommend to the shareholders payment of Dividend at Rs. 2-12-0 per share, free of income-tax, which will absorb Rs. 11,00,000/- leaving Rs. 27,77,761-2-0 to be carried forward to the next year's account.

The Bank's business has shown a gratifying expansion during the year. The profit for the year 1955 is higher than that of the preceding year due largely to the fact that the deposits of the Bank had shown a substantial increase during the year. Four Directors consider the working of the Bank and the profits for the year as satisfactory. The Bank's investments appear in the balance sheet at below market value.

During the year your Bank took over the business of the Pondicherry branch of the Banque de l'Indochine.

On his appointment as a Director of the State Bank of India, Mr. R. G. Saraiya resigned his seat on the Bank's Board. The Directors wish to place on record their appreciation of the valuable services rendered by him as Director since the inception of the Bank.

The Directors have to report with great sorrow the death in August, 1955 of Mr. Navinchandra Mafatlal who was a Director of the Bank since its inception and had contributed greatly to the building up of the Bank. He was held in high esteem and respect by his colleagues and the Directors desire to place on record their high appreciation of the great service rendered by Mr. Navinchandra Mafatlal during his long period of office.

In the vacancies caused by the resignation of Mr. R. G. Saraiya and the death of Mr. B. N. Jalan and Mr. Navinchandra Mafatlal the Directors have appointed Mr. Yogendra N. Mafatlal, Mr. G. D. Kohari and Mr. T. S. Rajam respectively as Directors of the Bank.

The Directors have also to report to you changes in the general management of the Bank. Mr. B. T. Thakur, who was the General Manager since the inception of the Bank, resigned on grounds of health, from the chief executive charge of the Bank in April, 1955 and requested that he be allowed to go on long leave preparatory to retirement. In view of the medical advice received by Mr. Thakur the Directors accepted his resignation with reluctance and regret. The Directors place on record their high appreciation of his service in building up the Bank to its present position, size and strength within a comparatively short period and with him happiness and restoration to normal health.

The Directors have appointed Mr. S. T. Sadasivan as General Manager in succession to Mr. B. T. Thakur and promoted Mr. R. B. Shah and Mr. O. H. Ghewala as Deputy General Managers of the Bank.

The Directors place on record their appreciation of the services of the General Manager and the officers and staff of the Bank during the year.

Under Article 95 of the Bank's Articles of Association four of your Directors,

Shri M. L. Shah
Shri G. L. Bangur
Shri P. D. Himatsingka
Shri M. L. Dahanukar

retire by rotation, and, being eligible, offer themselves for re-election.

The Shareholders are requested to appoint auditors for the current year and to fix their remuneration.

By Order of the Board,

I. P. GOENKA,
Vice-Chairman.

Calcutta, 15th February, 1956.

BALANCE SHEET AS AT 31ST DECEMBER, 1955.

Company Meeting

THE UNITED COMMERCIAL BANK LIMITED

CHAIRMAN MR. G. D. BIRLA'S REVIEW

Speech delivered by Mr. G. D. Birla, Chairman of The United Commercial Bank Ltd., at the Thirteenth Ordinary General Meeting of the Bank held on 28th March, 1956.

Gentlemen,

Before I proceed with the ordinary business of this Thirteenth Annual General Meeting of the bank, I should like to refer with great sorrow to the loss sustained by the bank in the premature death, in August 1955, of Mr. Navinchandra Mafatlal, who was a Director since its inception and had contributed greatly to its growth. He was a staunch friend of the bank and was held in the highest personal esteem by us all who miss his genial presence and wise guidance. The sorrow is tempered by the fact that his son has joined our Board and the connection of the bank with the House of Mafatlal will continue unbroken.

I have also to report to you the resignation from the Board, on his appointment as a Director of the State Bank of India, of Mr. R. G. Saraiya, who as a Vice-Chairman guided the affairs of the bank, particularly in Bombay, since its inception.

In the vacancies which had arisen in the Board the Directors have appointed Mr. Yogendra N. Mafatlal, Mr. G. D. Kohari and Mr. T. S. Rajam. I am glad to welcome them on your behalf and I am confident that the bank will benefit greatly by their wide experience in their respective spheres of industry and trade.

Reference has been made in the Directors' Report to the changes which took place last year in the general management of the bank. Mr. B. T. Thakur who was the General Manager of the bank since its inception resigned, on grounds of health, from the chief executive charge of the bank in April 1955 and has gone on leave preparatory to retirement. I take advantage of this occasion to pay a tribute, on your behalf, to the ability and zeal with which he had served the bank during his period of office and built it up to its present position as one of the leading banks of

the country, and to place on record our high appreciation of his valuable services.

Mr. S. T. Sadasivan has been appointed to succeed Mr. B. T. Thakur, as General Manager and I extend to him our good wishes for success during his period of office. Mr. Sadasivan was the Dy. General Manager of the bank since 1945 and has also acted as General Manager. I have every confidence that the progress of the bank will continue with great vigour under his zealous care and able guidance.

I also take this opportunity to thank the members of the staff in India and abroad for their devoted service to the bank and for their valuable contribution to the satisfactory results achieved during the past year.

I now turn to the ordinary business of the meeting. The Balance Sheet and the Profit & Loss Account have been in your hands for some time and they bear testimony to the continued improvement of the bank's business in the past year.

BANK'S BUSINESS

Deposits

You will notice that the total of the current, savings and fixed deposits and other accounts at the end of 1955 stood at Rs. 47.69 crores as compared with Rs. 40.42 crores at the end of 1954. The increase in deposits of Rs. 7.27 crores represents a rise of 17.9% which is a much higher rate of increase than 7.1% recorded in 1954 and is higher than the rise of 9.7% in the deposits of scheduled banks as a whole. The rise in deposits, which is common to all banks, should be attributed to higher production and an expanding economy which are the results of successful implementation of the First Five-Year Plan.

Cash

Cash on hand, balances with banks and money at call and short notice accounted for Rs. 6.21 crores and represented 13.02% of our total deposit liabilities.

Investments

The investments of the bank in Government and other approved securities stood at Rs. 22.17 crores showing a rise of Rs. 5 crores as compared with the figure at the end of 1954. The bulk of the increase in deposits has thus gone into Government Securities. During the year, as a result of the nationalisation of the Imperial Bank of India, we received compensation for our holding of shares in the Imperial Bank of India in the form of Government Securities. We have, however, made a fresh investment of Rs. 23,93,200 in the shares of the Industrial Credit and Investment Corporation of India Ltd., which was incorporated in the beginning of last year with the assistance of the Government of India by way of interest free advance, for the purpose of carrying on the business of assisting industrial enterprises in the private sector of industry in India by providing finance in the form of long and medium term loans or equity participation and for sponsoring and underwriting new issues of shares and securities. The ratio of our investments to our deposits, after deducting the amounts borrowed thereagainst is 37.60% as compared with 33.6% at the end of 1954. Cash resources and unencumbered investments together amount in the aggregate to Rs. 24.14 crores, giving a liquidity ratio of 50.62% to total deposits. The bank's investments are shown in the balance sheet, in accordance with our usual practice, at below the prevailing market rates.

Bills

The amount of bills discounted and purchased has increased during the year from Rs. 8.57 crores to Rs. 9.74 crores. You will be gratified to note that this self-liquidating asset forms 20.42% of the deposits of the bank.

Liquidity Ratio

The total of our most liquid assets—cash on hand and with banks, money at call and short notice, unencumbered investments and bills—represents 71.01% of our deposit liabilities. This is a very high liquidity ratio and enables us comfortably to expand credit during the busy season.

Foreign Exchange Business

Our foreign exchange business continues to improve. It forms an important part of our banking operations and the turnover in this department has increased during the past year as a result of the rise in the value of the foreign trade of India and the neighbouring countries. We are constantly expanding the network of our foreign correspondents and

Calcutta, 28th February, 1956.

overseas connections in order always to be ready to handle any business that might be offered to us.

Advances

Our advances showed a moderate increase from Rs. 16.07 crores to Rs. 17.85 crores. This gives a ratio of 37.43% to our deposits against 50.58% for the banking system as a whole.

Bank's Property Account

The additions to the bank's property account during the year were Rs. 10.03 lacs. This is due to the purchase of the premises of the Banque de L'Indochine at Pondicherry in connection with the acquisition of their business and to the construction of our own premises at Parliament Street, New Delhi. We hope shortly to commence the construction of the Head Office building at Calcutta at the site which we have acquired for this purpose at the corner of Brabourne Road and Royal Exchange Place Extension.

Profit & Loss Account

Turning to the Profit and Loss Account you will notice with satisfaction that the profit for the year 1955 is Rs. 36.69 lacs as compared with Rs. 31.06 lacs for the year 1954. This satisfactory result has been achieved in spite of heavy increase in expenses and in interest paid on deposits. As stated in the Directors' Report, the total profit including the surplus Rs. 1,08,724 brought forward from 1954 accounts is Rs. 37,77,761-2-0. Out of this amount the Directors have already transferred Rs. 8.50 lacs to the Reserve Fund which now stands at Rs. 95 lacs and have made a provision of Rs. 14 lacs for taxation and Rs. 4 lacs for bonus to staff leaving a balance of Rs. 11,27,761-2-0. In view of the improved working results the Directors feel justified in recommending a slight increase in the dividend from 5% paid last year to 5½% per annum, free of income-tax.

The Bank Award

Since we met last, the Bank Award Commission which was appointed by the Government of India to go further into the dispute between banks and their employees in the matter of salaries, dearness allowances, etc., gave its decision which the Government of India accepted in toto. By its decision, the Commission restored with slight alterations the Award of the Labour Appellate Tribunal which the Government had previously modified. It also decided that no employee should be asked to refund any excess paid to him under the then existing scheme over what he would be entitled to under its Award. In order to lighten the burden on banks imposed by the higher salaries and allowances recommended, the Award permitted banks to pay the employees any arrears that may be due to them in three instalments. Favourable to the employees as such recommendations were, the banks went further and waived their right to pay the arrears in three instalments and paid the entire amount due to each employee in one lump sum. The banks also waived their right to recover the excess dearness allowance paid during the period July to November 1955. Notwithstanding such generous concessions the employees were not satisfied, instead they carried on an agitation culminating in the refusal to work overtime for the purpose of the annual closing of accounts which was consequently delayed and also finally resorted to a two days' strike in January this year. It is extremely regrettable that they should adopt such an attitude and go on a strike which was clearly illegal. It is to be hoped that the employees will take the provisions of the Industrial Disputes (Banking Companies) Decision Act as final and devote themselves to strenuous and harmonious work in close co-operation with the management. Needless to say, such co-operation will naturally produce better working results for the bank which, in turn, will enable the management further to improve the conditions of service of the employees.

Bank Rate

The Bank Rate in India remained unchanged at 3½% throughout the year 1955 though the Bank of England rate was raised from 3 to 3½% on the 27th January, 1955 and again to 4½% on the 24th February, 1955. Notwithstanding the fact that the year 1955 saw an upward revision of bank rates in varying degrees in different parts of the world, it is a matter of gratification that the bank rate in India remained unchanged and adequate finance could be secured by commerce and industry on the basis of 3½% official bank rate. The increase in the Bank of England rate on the 18th February, 1956 from 4½% to 5½% has raised the question whether it will be necessary or desirable to effect any change in the Indian Bank rate.

On a superficial assessment of the situation it would appear that the Indian Bank rate is unrealistic in the light of the competition for deposits which has carried the deposit rate almost to the level of the official bank rate, but there has never been any interaction with the official rate of the various interest rates quoted in the market and the money rates prevailing in the bazar have never had any relation to the official bank rate. The impact of the rise in the rate in the deposit rate and a sporadic increase in the rate of interest charged by some banks on certain classes of advances but has had no significant influence otherwise.

The problems facing India are wholly different from those of the United Kingdom and the prevalence of unemployment and the existence of steady level of prices which have characterised the Indian economy are in sharp variance with overemployment and inflation which are the features of British economy. We are now engaged in bringing into fruition a planned economy which has for its objects increased production, increased national income, the provision of employment on a large scale and the maintenance of stable economic conditions. In the financial sphere the operation of the first five-year plan has resulted in increased bank deposits, a larger note circulation and enhanced bank advances without any appreciable increase in commodity prices or the cost of living. This was because increased money supply has been matched by increased production.

One result, however, of the rise in the Bank of England rate is that more and more of the foreign trade of India will have to be financed out of Indian resources. But these resources are expanding and the stage has not yet been reached when they may be said to be inadequate. The bill market scheme inaugurated by the Reserve Bank in 1952 is a sufficient guarantee that seasonal expansion of credit could be effected without a change in the bank rate, and the recent announcement of the Reserve Bank of India that advances under the scheme will be made

at 3½% interest instead of at 3% as hitherto is not to be interpreted as a measure of dearer money. Moreover, the export trade is financed on the basis of the higher money rates prevailing in London through an adjustment of the exchange rates applicable to us on bills and in an amount which could be rediscounted in the London market. It is only in the case of imports that the pressure for finance will be squarely transferred to the Indian money market but the expansion of resources resulting from the operation of the second five-year plan appear to be adequate to take care of any increased responsibility as might devolve on the Indian money market.

It is necessary for the success of the borrowing programmes associated with the second five-year plan that stable and healthy conditions should be maintained in the money and gilt-edged markets and the continuance of the Indian bank rate unchanged at its present level is a necessary condition for the fulfilment of our development plans. From this point of view it is regrettable that the authorities have allowed the price of 3½% Conversion Loan to go below Rs. 80. A little support to this loan will inspire confidence in the stability of the gilt-edged market.

The question of an upward revision of the bank rate will arise in the event of the spectre of inflation raising its head or the scramble for deposits developing to the extent of a run-away rise in deposit rates to levels higher than the bank rate. The authorities will, no doubt, keep a close watch on the situation and act without hesitation when the contingency arises.

Before proceeding to review the economic conditions in India, I shall briefly comment on the conditions prevailing in the countries where we have branches.

Burma

At the beginning of the year, Burma was faced with the problem of rapidly dwindling balance in Foreign Exchange. As a corrective measure the Government imposed a 50% moratorium on all outward standing import licences in March 1955 and this action was followed by the complete suspension of the Open General Licence. This had the inevitable repercussions on business and commerce. The prices of imported consumer goods such as textiles, toilet requisites, tinned provisions, etc. shot up to a very great extent. As a result of these measures the position improved somewhat in the latter part of the year and since then the Government has been issuing a few licences for import, mostly from countries like China, Hungary, Yugoslavia and U.S.S.R. with whom agreements for payment on barter basis have been concluded. As a result of these and of severe restriction on private remittances, the shrinkage of foreign holdings of the Union Bank has been arrested and a moderate improvement has set in. The Government's policy in recent months has shown a tendency towards the scaling down of capital expenditure which is not considered as wholly essential or immediately productive.

During the year the Government of India granted a loan of Rs. 20 crores to Burma to assist her in financing her development plans. The loan is repayable in half-yearly instalments of Rs. 2.5 crores beginning from March 1959. The rate of interest on the loan is 4 per cent.

The prospects of Burma's most important export crop—rice—seem to be bright this year. It is reported that out of an exportable surplus of about 1.5 million tons, agreements have been practically concluded for disposal of very nearly the entire quantity.

Malaya

The total value of Malayan trade last year was ST\$ 7,977.1 million—a rise of 27.61% over 1954. With imports at ST\$3,819.4 million and exports at ST\$ 4,157.7 million, the adverse balance of trade of 1954 was turned into a favourable balance of ST\$ 338.3 million. This improvement was largely due to better prices of tin and rubber. The exports of these commodities registered a rise of 8% and 1% respectively. Rubber production was highest since 1950 at 637,463 tons and the average price during the year was \$1.14 per lb. as against the average of 67 cents during the previous year. Tin production at 61,244 tons was in fact a post-war record and the average price during the year was ST\$365.50 per picul compared to the average of \$353.59 in the previous year. As a result of improved trade with Indonesia, the conditions in the textile market showed signs of improvement. On the whole the year 1955 can be considered as the second best year, the best so far being 1952.

The Colony of Singapore and the Federated States of Malaya had their first measure of self-government when the General Elections were held. The general conditions in Malaya were still disturbed and the "Amnesty" proposals made by the Government were unsuccessful. There were also signs of industrial unrest resulting from a number of strikes in industrial organisations, rubber mills, transport, etc.

The prospects for 1956 would be bright if the prices of Rubber and Tin are sustained even at their present levels.

Hong Kong

The industrial production of the Colony continued to rise and the number of registered factories as well as the number of workers employed showed an appreciable improvement over the previous year. This has enabled Hong Kong to stabilise her economic position and to a certain extent has made up for the loss in her trade with China after the embargo. The Colony was able to compete with certain countries of success with the industrialised countries in finding markets for its industrial products in South East Asia, U.K., and other British Colonies. The export of industrial products registered an increase of HK\$ 48 million—an increase of nearly 7% over the last year's exports.

A significant feature of last year was the continued influx of a very large amount of Chinese capital into the Colony from countries in South East Asia. As a result of this boom conditions were prevalent on the Stock Exchange and in Real Estate markets.

Pakistan

Our next door neighbour, Pakistan, continued during the year to show resilience and progress. The important development on the economic side was the devaluation of Pakistan Rupee. The Pakistan Rupee which had a higher value than its Indian counterpart since September 1949 was brought on a par in July 1955. The need for obtaining capital goods from abroad and the peculiarly monopolistic nature of the country's export goods combined to stave off devaluation. These two factors, however, could no longer continue to support the artificially inflated Rupee.

The economic progress as a whole was maintained. The trade position also showed an improvement. Ex-

ports rose from 190.5 million Rupees to 371.1 million Rupees during the three months August/October 1955 and instead of trade deficit on private account of 53.5 million Rupees there was a surplus of 131.5 million Rupees. During the year an Agreement was also signed between the United States of America and Pakistan providing the use of 20 million dollars of U.S. Assistance Fund for the improvement of Pakistan ports, highways, airbases, etc. Industrial output also continues to rise and it is hoped that she could look forward with confidence to a year of good development.

On the political side a Constitution for the country has been drawn up and Pakistan has been proclaimed as an Islamic Republic within the Commonwealth.

ECONOMIC CONDITIONS IN INDIA

The Capital Market

During the year under review the Government of India floated a 3½ per cent 10 Year Loan at an issue price of Rs. 98.8 and secured Rs. 103.7 crores. Collections from Small Savings, to which more attention is now being devoted, yielded Rs. 65 crores. The previous year's experiment of floating a combined loan for the requirements both of the Central Government and the State Governments was scrapped and the States came out with their own loan issues—all 4½ loans maturing in 1967 but at different issue prices—and gathered in all Rs. 47.50 crores. The expansion of treasury bills—the measure of deficit financing—is expected to be Rs. 240 crores.

The Industrial Credit & Investment Corporation of India Ltd. issued its share capital of Rs. 5 crores of which Rs. 3½ crores were privately placed and Rs. 1½ crores were successfully offered for public subscription. Two big debenture issues and quite a number of preference and ordinary shares floatations met with satisfactory response. Altogether the capital market had an active and successful year.

During the year State Financial Corporations were floated in Madhya Bharat, Andhra, Uttar Pradesh and Rajasthan.

Foreign Trade and Balance of Payments

The foreign trade of India during 1955 registered a significant growth both in exports and imports and the visible trade deficit has been reduced. The relative figures are as follows:—

FOREIGN TRADE—JANUARY-NOVEMBER

	(in crores Rs.)	1955
Exports	477.84	499.90
Imports	530.13	559.29
Balance	-52.29	-59.39

Import policy is now designed to allow an increase in import of industrial raw materials and capital goods while extending further the principle of protection to Indian industry. The large internal demand for steel has necessitated its import from wherever it is available but the loss of foreign exchange has been offset by the cessation of imports of foodgrains and sugar and the saving of exchange arising from the import of crude mineral oil in place of refined petroleum products. Imports of chemicals, drugs, electrical goods, newsprint and rayon have remained steady, while import of iron and steel, non-ferrous metals, vehicles and wagons have begun to show a rising trend. The growth of Indian industry is making itself felt in the pattern of our import trade.

In exports most of the major commodities with the significant exception of tea have been doing well. Exports of jute manufactures showed expansion.

The Jute Industry's success last year is attributed partly to the Government's prompt abolition of the export duty on jute goods in the wake of the devaluation of the Pakistan Rupee. The prices of Indian jute goods, thus lowered, enabled the industry to compete on better terms with Pakistan and other jute manufacturing countries. Exports of cotton textiles in 1955 were slightly lower than in 1954 and may again decline in 1956 due to the growth in domestic demand. The decline in export earnings on this account has been more than made good by the large increase in exports of raw cotton so that the total value of raw cotton and textiles amounted to Rs. 67 crores in the eight months April-November 1955 as against Rs. 55 crores in the corresponding period of 1954.

The continued weakness of the tea market is an adverse factor likely to offset the increased export earnings in 1956 from other commodities.

With reference to our export trade the emphasis has shifted in recent years from sending raw materials to sending manufactured goods abroad. The rapid pace of industrialisation has enabled some of our industries to produce manufactured goods which can find an outlet into the world market on a competitive basis both as regards quality and price. On the export side all restrictions which were necessary in earlier years have been removed as a result of the improvement in the internal supply position. In fact, except for a few isolated commodities, exports of most major items are being allowed without any export licence. About 80 to 85 per cent of the country's export is today free from control.

In order to secure adequate foreign exchange resources for the Second Five-Year Plan efforts have been made to stimulate exports and the recent announcement of the Commerce Ministry on this subject gives hopes of considerable development in this field in the near future. The Ministry is thus anxious to canalise all measures of rationalisation so that foreign trade can be regulated properly. Similarly the Government of India is taking all possible steps through Export Promotion Councils to promote exports of cotton textiles, silk piecegoods, engineering goods, plastic manufactures, cashew and pepper. With adequate financial assistance these bodies would be able not only to help the normal flow of export trade but will also conduct research, propaganda and publicity in foreign markets. Export Credit Guarantee Scheme is sure to give added confidence.

During the first nine months of 1955 trade with the Dollar area resulted in a surplus of Rs. 31 crores against a deficit of Rs. 3 crores in the corresponding period of 1954. By reason of this satisfactory position, the outstanding loan from the International Monetary Fund was repaid to the extent of Rs. 12.3 crores, leaving only a small balance of Rs. 6 crores still due to the Fund at the end of 1955. The country's net balance of payments on current account for the same period showed a surplus of Rs. 25 crores and the year as a whole is expected to show a surplus of about

Rs. 35 crores as compared with a deficit of Rs. 4 crores in the previous year.

Agricultural Production

Progress in the field of agricultural production was satisfactory. The output of foodgrains during the year amounted to 68.8 million tons, which, though a little lower than the previous year, was yet in excess of the Plan target by just over four million tons as a result of implementation of irrigation and power projects in the First Five-Year Plan, now drawing to a close. By the end of 1954-55, fresh irrigation facilities and increased water supplies were provided to over four million acres of virgin and irrigated soil. The easy supply position of foodgrains enabled the Government to remove the last remnant of control on foodgrains.

The production of commercial crops showed further improvement during the current year. Oilseeds output at 5.9 million tons and raw cotton at 4.3 million bales have exceeded their targets under the First Five-Year Plan by four lacs tons and about one lac bales respectively. The production of sugar touched the record level of 15.9 lac tons as compared to 10.01 lacs tons in 1953-54, while that of jute which remained depressed during the last two years has shown a significant increase of about 12 lacs bales during the 1955-56 season as compared to the last.

The general crop prospects for 1955-56 are considered to be satisfactory. They would have been better still but for the calamitous floods in the North and the devastating cyclones in the South that occurred during the year.

Industrial Production

Industrial production has made commendable progress during the year under review. The upward revised index of industrial production is now available. According to this series the index of industrial production (Base: 1951-100) for the first ten months of 1955 works out at 125.7 as against 122.9 for the whole of 1954. This represents an increase of over 11 per cent over the preceding year. This increase in production was shared by almost all the major industries. The output of finished steel at 1.26 million tons was higher than the record achieved in 1954. The production of mill made cloth at 5,067 million yards in 1955 was 89 million yards higher than the production of 1954. The output of cement exceeded the target fixed under the First Five-Year Plan by 387 million yards. Cement production during the year reached 4.5 million tons. In jute, chemicals and paper too the performance was very high. Considerable strides have also been made by the engineering industry. Licences for manufacturing jute mill machinery have been given. Progress in the modernization of jute mills has already been made.

Further in terms of expenditure, the position in respect of the centrally financed multi-purpose projects—The Damodar Valley Corporation, Bhakra Nangal, Hirakud and Harike—is that, against a provision of Rs. 224 crores, about Rs. 238 crores will be spent by the end of the year. In regard to State projects, the outlay will be Rs. 352 crores against the Plan figure of Rs. 378 crores. Against a provision of Rs. 30 crores, a total of Rs. 20.8 crores has so far been spent on the new projects undertaken during the last two years of the Plan—Kosi, Koyna, Chambal, Rihand and Nagarjunasagar.

SECOND FIVE-YEAR PLAN

It is some time now since the draft outline of the Second Five-Year Plan has been published; the total amount of expenditure envisaged the departmental allocations, the State-wise distributions, the various targets aimed at, etc., have now been so widely publicised that it is hardly necessary to repeat them here. But the lapse of time has also enabled us to get over our first emotional enthusiasm and to take an objective and dispassionate view of the Plan.

The Plan has been variously criticised as either too optimistic or too ambitious. There is nothing wrong about being too ambitious. In the present condition of India to aspire to progress at as quick a pace as possible cannot but be a laudable objective. But to be too optimistic is certainly a danger in that mood we ignore realities and base our hopes on mistaken calculations and emotional approaches. Failure to reach the goal would mean disaster of the severest kind and therefore, to shut our eyes to the realities and create difficulties by our own actions would be, to put it at the mildest, a first-rate blunder.

In the first place I wish to emphasise that higher employment, though a very desirable objective, cannot be as important as creation of greater wealth. It may sound a little unorthodox, but I wish it to be realised that increased employment cannot in all cases result in greater prosperity. Only such employment as is highly productive can create prosperity. On the other hand prosperity can definitely be a precursor to greater employment. A highly productive employment alone can create prosperity, and once we have the effective means, we can create all kinds of employment. The main problem, therefore, is not so much to create any kind of employment as to create such employment as would yield higher production and greater wealth. With wealth a large number of tertiary employment would grow automatically. Higher production is thus the objective which really matters.

Judging from this angle, Ambar Charkha is not the answer to the problem. It has a place, no doubt, provided it is proved that the most efficient methods of production within our resources are being fully utilised and that the only resources potential or otherwise, left for us is the utilisation of Ambar Charkha in which case it functions in a supplementary capacity. Since this is not the position, Ambar Charkha is likely to obstruct rather than pave the path to progress, if by progress we mean higher standard of living. This stark reality, if fully realised, should stop us from toying with ideas likely to take us on a backward march. If Ambar Charkha could have solved our problems it would have done so centuries before.

Again, the relative treatment accorded to cottage industries vis-à-vis the factories seems to be based on fallacious grounds. There would be no conflict between the two if they could be supplementary to each other. Cottage industries can only follow the large scale industries and not vice versa. If one plans that the large-scale industry shall follow the cottage industry, then one might as well plan that Railways shall progress only through the bullock cart. The fact of the matter is that more and more carts will be in the streets to feed Railways if the latter expand. Paradoxical as it may sound, Railways alone can support more bullock carts. In more economically advanced countries cottage industries play a much

bigger role than in India because there is such a great task for them for feeding the large-scale units.

Real Difficulties

The real difficulties that must be faced and solved if the Plan is to be successfully implemented are:

1. Inadequacy of internal resources;
2. Inadequacy of foreign exchange;
3. Inadequacy of technical personnel;
4. Inability of transport systems to keep pace with the development in other fields; and,
5. Rigidity of Government machinery.

Availability of Internal Resources

How is the money to be invested in the public sector to be raised? The means suggested are: additional taxation, loans, small savings and deficit financing. I wonder whether it is fully realised that additional taxation, savings and loans come into play only after production and wealth have increased and cannot precede them. We have to begin with deficit finance. The criterion of its success would be that by raising the purchasing power of the people we create greater demand for goods which stimulates higher production. If higher production of goods is suppressed then what follows is inflation and failure. In other words, we should rely on much larger production of essential goods to absorb the newly created purchasing power that would come into being through deficit financing. This is one aspect of the question. The other aspect is that if we begin with additional taxation and compulsory savings, then we fail to create the new purchasing power which is expected to create increased demand for goods. The resultant decrease in consumption would lead to lower production and to decrease of employment and of wealth. These two aspects must be kept in mind.

From the way in which the Budget is planned, it looks as if it is believed that taxes and savings could precede increased wealth and that savings could take place before earnings materialise. If a house is taxed before it is built, the result would be that no house would be built to pay the tax. To appreciate this sequence is very important. In a car the brake start the car with a brake. The brake is useful only after the car is started. If you tax a person and compel him to save before increasing his earnings you, in reality, restrict his consumption and give a set-back to production, which is obviously not the goal in view.

Availability of Foreign Exchange

Whatever may be the method of estimating our requirements of foreign exchange, I personally feel we shall need anything like Rs. 1,600 to Rs. 2,000 crores.

Even accepting the figure of Rs. 1,600 crores as correct, it might be difficult to get all this amount. Sterling balances Rs. 350 crores, trade surplus Rs. 300 crores on the basis of Rs. 60 crores per year (this assumption is justified by cessation of food imports) and invisible exports of Rs. 150 crores make up Rs. 800 crores leaving Rs. 800 crores still to be found.

Of this amount, Government expect to raise Rs. 400 crores by way of foreign aid; but total Ame-

rican aid to India from July 1955 to June 1956 is \$50 million, i.e. Rs. 25 crores. On this scale foreign aid will amount only to Rs. 125 crores in five years.

I fear the seriousness of the paucity of foreign exchange is not fully realised. With proper efforts foreign exchange should be available. And we have to work for it. But the Planning Commission seems to have under-estimated its importance and has abruptly ended the chapter after pointing out that there is a gap of Rs. 800 crores. I fear the gap would be much more, but even if we accept the figure of Rs. 800 crores, its direct effect would be on the productive industries and transport leading again to less wealth and less employment.

Availability of Technical Personnel

The dearth of technical personnel is admitted on all hands. It is one of the main reasons for the country's inability to make spectacular headway. State-owned steel plants alone require 5,000 engineers and 10,000 skilled personnel. This shortage of technical personnel will be a serious handicap in the working of the Plan.

The private sector today can command a large number of technically qualified experts. In its search for technical talent, it has gone far and wide and has, with great difficulty, built up at least a nucleus of expert administrators. The public sector has nothing like this and has to start the training of its staff right from A.B.C. But if we talk in terms of austerity for the technicians, then neither the public nor the private sector will have enough technical knowledge at its disposal. We should not restrict the incentive that go to stimulate technical education and knowledge.

Availability of Transport

Under transport, specially with reference to railways, the allotment in the Second Five-Year Plan has been cut down very substantially. If the railways do not bear the strain that is proposed to be put on them, the whole edifice of the plan will collapse.

Rigidity in Government Machinery

Experience has shown us again and again that Government machinery is dilatory, hide-bound by rules and unaccustomed to take quick decisions. While this machinery is eminently qualified to deal with long-range questions of policy, it can hardly make up of day to day industrial expansion where rapid decisions are necessary. A thorough overhaul is needed.

I have mentioned all these difficulties not that they cannot be solved—but that they must be solved. I fail to see any sign of awareness on the part of the authorities of these hurdles and, therefore, I give expression to my misgivings. What I have said is not by way of criticism. We need to make the Plan a success. But we cannot do so by minimising or underestimating the difficulties and by starting in a complacent mood. Fore-warned is fore-armed and what I have suggested is a constructive note of caution in order that we may meet the difficulties squarely in the face and solve them and not create more difficulties by our own actions. We have enough troubles on our hand to engage our thoughts and energies, and it would be unwise to create avoidable problems.

CANADIAN KNOW-HOW - serving a vital Indian industry

INDIA'S fast-growing aluminium industry owes much to the know-how and experience of Canadian experts.

Indian Aluminium Company's Canadian consultants are helping to erect a new smelter at Hirakud in Orissa which will more than double the country's total production and embody techniques and advances resulting from continuous world-wide research.

A lot of money, too, will be required to construct this smelter, and part of the funds will be raised by a proposed issue of new capital by the Company.

Indian Aluminium Company Limited

A Canadian-Indian Enterprise

(This is not a Prospectus but only an Announcement of Prospectus. The Prospectus dated 17th March, 1956 has been filed with the Registrar of Companies, Bombay, and a copy thereof can be inspected at the Registered Office of the Company on any working day during business hours. Copies of the Prospectus may be obtained from the Head Office and branch offices of the Bank of Baroda Limited mentioned below.)

(Consent of the Central Government has been obtained to this issue by an order of which a complete copy is open to public inspection at the Head Office of the Company. It must be distinctly understood that in giving this consent the Government of India do not take any responsibility for the financial soundness of any schemes or for the correctness of any of the statements made or opinions expressed with regard to them.)

An application will be made to the Native Share and Stock Brokers' Association, Bombay, in due course for a quotation of the shares. The subscription list will open on Saturday the 31st day of March, 1956 and will close on Thursday the 12th day of April, 1956, both days inclusive, or earlier as may be decided by the Directors, but not before the 6th day of April, 1956.

POLYCHEM LIMITED

(Incorporated under the Indian Companies Act, 1913.)

SHARE CAPITAL

AUTHORISED CAPITAL

80,000 Redeemable 7½% (taxable) Cumulative First Preference Shares of Rs. 50/- each.
80,000 Ordinary Shares of Rs. 50/- each.
1,40,000 Unclassified shares of Rs. 50/- each.

ISSUED CAPITAL

80,000 Redeemable 7½% (taxable) Cumulative First Preference Shares of Rs. 50/- each. Rs. 40,00,000
80,000 Ordinary Shares of Rs. 50/- each. Rs. 40,00,000
Rs. 80,00,000

There are no Founders' or Deferred shares nor any Debentures or Mortgages. Out of the above issue the promoters Kilachand Devchand & Co. Ltd., the Directors of the Company and their friends including Dow Chemical Company of Midland in the State of Michigan, U.S.A. have agreed to subscribe for: Ordinary Shares of the nominal value of Rs. 20,00,000-0-0 which will be allotted to them.

ISSUED TO THE PUBLIC

Preference Shares of the nominal value of Rs. 40,00,000-0-0
and
Ordinary Shares of the nominal value of Rs. 20,00,000-0-0

The whole of the issue to the public has been underwritten.

TERMS OF ISSUE

PREFERENCE SHARES

The Redeemable 7½% (taxable) Cumulative First Preference Shares (hereinafter called the "Preference Shares") shall entitle the holders thereof to a fixed cumulative preferential dividend at the rate of 7½ per cent per annum (taxable) on the capital for the time being paid up thereon, and the right in the winding up to the payment of capital and arrears of dividend (if any), whether declared or not, up to the commencement of the winding up in priority to all other shares in the capital of the Company, but shall not confer any further right to participate in the profits or assets of the Company, nor confer any right to the offer or allotment of further shares whether issued by the Company or by the Directors.

The Company shall have the right after 15 years from the date of issue of the Preference Shares to redeem at par all the said Preference Shares or such of them, by drawing lots, as the Directors may from time to time decide, after giving six months' previous notice in writing in that behalf addressed to the holders of the Preference Shares so to be redeemed. All outstanding Preference Shares will be redeemed within 20 years from the date of issue.

The Preference Shares shall confer no right of voting at any General Meeting of the Company except

- (i) When resolutions are placed before the Company which directly affect the rights attached to preference shares (and for this purpose any resolution for winding up the Company, or for the reduction of its share capital shall be deemed directly to affect the rights attached to preference shares); or
- (ii) When the dividend due on such capital or any part of such dividend has remained unpaid in respect of an aggregate period of not less than two years preceding the date of the commencement of the meeting and for the purpose of this clause dividends shall be deemed to be due on preference shares on the last date specified for the payment of such dividend in the Articles or other instrument executed by the Company even though no dividend has been declared by the Company on such capital.

ORDINARY SHARES

Every holder of an ordinary share shall be entitled to be present and to speak and vote at any General Meeting and when present in person shall have one vote in respect of every ordinary share held by him. Under the Articles of Association of the Company, no member shall be entitled to be present or to vote at any General Meeting either personally or by proxy or as proxy for any other member or be reckoned in a quorum whilst any call or other sum shall be due and payable to the Company in respect of the shares of such member.

No person as the bearer of a Share Warrant in respect of the shares mentioned therein shall be entitled to attend or vote at any General Meeting of the Company.

BOARD OF DIRECTORS

Designation	Address
1. Shri Ramdas Kilachand (Chairman)	85 Nepean Sea Road, Bombay 6
2. Shri Krishnaraj M. D. Thackersey	2 Warden Road, Bombay 26.
3. Shri Gulabchand Hirachand	Construction House, Bombay 1.
4. Shri Ramnivas Ramnarain Raja	State Bank Building, Bank Street, Bombay.
5. Shri Clayton S. Shoemaker, President, Dow Chemical International Limited.	Midland, Michigan, U.S.A.
6. Shri William H. Schettler, General Manager of the Midland Division of Dow Chemical Company.	Midland, Michigan, U.S.A.
7. Shri Ambalal Kilachand, Merchant.	85 Nepean Sea Road, Bombay 6.

REGISTERED OFFICE
45-47 Apollo Street, Fort, Bombay-1.

LEGAL ADVISERS
Messrs. Nanubhai and Co. 51 Mahatma Gandhi Road, Bombay-1.

BROKERS
Messrs. Daphary Ferreira & Divala, 12-13 Meadows Street, Fort, Bombay-1.

BANKERS
The Bank of Baroda Limited, 10-12 Apollo Street Bombay-1.

BUSINESS OF THE COMPANY

The Company has not yet obtained Certificate to commence business.

The Company has been formed for carrying on all or any of the objects mentioned in its Memorandum of Association. One such object is to carry on the business of manufacturers of and dealers in styrene, polystyrene, vinyl chloride, polyvinyl chloride, polyethylene, cellulose plastics and other thermosetting and thermoplastic materials (synthetic and natural origin), oxygen, nitrogen, hydrogen, hydrocarbon gases including ethylene and acetylene, reagents, agricultural chemicals, insecticides, fumigants, wood preservatives, pesticides, colouring materials, pigments and lakes, paints, varnishes, lacquers, finishes, dyes, toners, perfume and flavouring chemicals, rubber chemicals, plastic and resinous materials, elastomers, gums, glues and adhesive composites, plasticizers, surface active agents, tanning agents, coating resins, drugs and pharmaceutical chemicals, solvents, marine chemicals, synthetic fibres, fertilisers and all types of industrial chemicals, acids, alkalis, hormones, trace elements.

The promoters of the Company have entered into an agreement with Dow Chemical Co. of U.S.A., one of the foremost chemical concerns in the world and a leader in the world production of polystyrene for

the exclusive grant to the Company of the formulae for the manufacture in India of polystyrene moulding powders by the continuous technique of polymerisation and for other technical assistance.

The principal raw material required is styrene monomer, the supply of which has been provided for over a period of five years by an Agreement entered into with Dow Chemical International Ltd. of U.S.A. and the Promoters.

This is the only unit sanctioned by the Government of India for the manufacture of polystyrene in India.

Polystyrene is at present used in India by the plastic moulding industry for the manufacture of numerous articles of industrial and domestic consumption. Polystyrene has many other uses which have hardly been touched upon in India.

Polystyrene has been consumed in India so far for manufacturing articles of domestic use such as toys, combs and toilet articles and articles of personal use. The importance of polystyrene in the industrial field is now being recognised. The consumption of polystyrene in India has grown from below 2,000,000 lbs. in 1948 to about 5,000,000 lbs. in 1954, almost all in the consumer items alone, some of which are finding export markets at present. Its

future potentialities can be judged from the fact that the Indian Plastic Manufacturers' Association has estimated a consumption of 10,000,000 lbs. annually during the period of the Second Five-Year Plan and has requested the Planning Commission to plan accordingly.

The Company's plant has been designed to a rated capacity of 6,000,000 lbs. of moulding powder per year with a margin for expansion which will meet the requirements of the moulding industry. Further provision will be made for the manufacture of 12,000,000 lbs. of modified polymer. The unit will be expanded with appropriate additions to take care of increased consumption by the plastic moulding industry. There is also a very wide scope for development of many other products of considerable commercial value such as Styrofoam (insulating material), Styroflex (Electrical insulating film and sheet), Synthetic resins (Co-polymers, synthetic rubbers), Paints (Styrenated alkyl resins), Films and sheets based on Styrene as well as other important chemicals and plastics.

Negotiations are in progress for obtaining suitable site for the Company's factory at Goregaon in the Bombay Suburban District.

CAPITAL OUTLAY

Import licence for the greater part of the plant has already been obtained, the designing of machinery has also made much progress and orders will be placed for equipment without delay. The capital outlay for the plant will be about Rs. 39,30,000/- made up as under:-

Land and buildings	7,00,000-0-0
Machinery and Equipment	20,00,000-0-0
Utilities and other expenses	3,00,000-0-0
Issue of stock to Dow Chemical Co.	6,00,000-0-0
For exclusive grant of formulae	1,80,000-0-0
Brokerage & underwriting	1,30,000-0-0
Preliminary expenses	39,30,000-0-0

Working capital required per year is expected to be approximately as follows:
Technical fee to Dow Chemical Co.

\$25,000 for each of 5 instalments.	Rs. 1,25,000-0-0
Raw materials (about 3 months' stock)	22,00,000-0-0
Finished goods (about 3 months' stock)	25,00,000-0-0
	48,20,000-0-0

The capital outlay and the working capital will be provided for the greater part from the present issue of capital totalling to Rs. 80,00,000/-. Any balance will be provided by borrowings.

(Continued on page 447)

Finance in India and Abroad

THE CALCUTTA MONEY MARKET

DEMAND CONTINUES HIGH

Wednesday 28th March.

THERE has been no slackening in the demand for funds. The requirements of the sugar industry are still the largest in volume and are unchanged on the week. Call for accommodation on account of the buying of raw jute remains at a high level and there has been a slight increase in finance for grain movements in upcountry areas. Conditions in the inter-bank market have, if anything, grown tighter in the past few days. The call rate is unchanged at 4 percent, but there are borrowers over at this figure and it is reported that business has been done up to 4½ percent.

There has been only a poor showing of bills in the market this week and those which have come to hand have been chiefly on account of gunny shipments. Demand for remittance has been moderate. Sterling is unchanged and the dollar rate is quoting Rs. 477½.

Silver was firm and the price advanced from the previous week's level of Rs. 182-14 to Rs. 183-2, quoted today. The rate for ready delivery was quoted at Rs. 182-14. The price was unchanged at 79d. in London and at 91½ cents in New York.

In spite of a rise in silver, gold was a shade easier and the price declined from Rs. 105-14 to Rs. 105. The sovereign at Rs. 65-8 showed a loss of 2 annas.

Tenders for Rs. 1 crore of 91-day Government of India Treasury Bills, which were opened on Tuesday, 27th March, totalled Rs. 1 crore. The average rate of acceptance was unchanged at Rs. 2-4-6 percent per annum. Tenders for Rs. 99-5-9 and above were accepted in full. Tenders for Rs. 1 crore of 91-day Treasury Bills will be received up to Monday, 2nd April. During the week ended 23rd March, Treasury Bills for Rs. 10,43,00,000 were sold in favour of the Reserve Bank.

An increase of Rs. 4.92 crores to Rs. 1,453.78 crores in notes in circulation was the outstanding feature of the return of the Reserve Bank of India for the week ended 23rd March, 1956. The total note issue was Rs. 35 lakhs higher at Rs. 1,463.62 crores. A rise of Rs. 3.97 crores to Rs. 676.29 crores in foreign securities was offset by an equivalent increase in rupee securities to Rs. 644.03 crores. Deposits of the Government of India fell by Rs. 2.96 crores to Rs. 52.68 crores while other Government accounts were Rs. 1.57 crores higher at Rs. 48.52 crores. Balances of commercial banks increased by Rs. 3.18 crores to Rs. 49.72 crores. Investments in Rs. 37.42 crores were Rs. 12 lakhs lower. Other loans and advances rose from Rs. 76.26 crores to Rs. 81.67 crores, of which advances to scheduled banks against usance bills totalled Rs. 32.46 crores (Rs. 24.62 crores). These advances amounted to Rs. 42.35 crores since 1st January, 1956. Ways and means advances stood at Rs. 20 lakhs (Rs. 34 lakhs).

The return of the State Bank of India for the week ended 16th March, 1956, shows a rise of Rs. 4.02 crores in total deposits to Rs. 233.20 crores. Investments in Government securities and other authorised investments are up by Rs. 6 lakhs and Rs. 7 lakhs to Rs. 97.93 crores and Rs. 9.86 crores, respectively. Advances, including loans, cash credits and overdrafts, and bills discounted, and purchased have increased by Rs. 5.36 crores to aggregate Rs. 135.59 crores. Cash and balances are, in consequence, shown at Rs. 15.09 crores or Rs. 76 lakhs less.

The statement of the scheduled banks for the week ended 16th March, 1956, discloses Demand and Time liabilities at Rs. 615.60 crores (Rs. 4.93 crores on account of borrowings from banks) and Rs. 413.73 crores (Rs. 3.02 crores) compared with Rs. 612.28 crores (Rs. 3.93 crores) and Rs. 416.77 crores (Rs. 3.14 crores), respectively in the previous week. Cash has increased by Rs. 1.35 crores to aggregate Rs. 35.26 crores, while balances with the Reserve Bank have decreased by Rs. 1.06 crores to stand at Rs. 47.03 crores. There is a drop of Rs. 90 lakhs in investments to Rs. 363.84 crores. Advances and bills discounted at Rs. 735.01 crores reveal an increase of Rs. 13.87 crores. The ratios to total liabilities of cash and balances, and of advances and discounts are, in consequence, shown at 8.0 percent and 71.4 percent against 8.0 percent and 70.1 percent.

The net profit of the UNITED COMMERCIAL BANK amounted to Rs. 37,77,761 for the year ended last December, including Rs. 1,08,725 brought in, against Rs. 32,58,724. The dividend has been increased from Rs. 2-8 to Rs. 2-12 per share. Reserve fund is allocated Rs. 84 lakhs (Rs. 81 lakhs) and taxation Rs. 14 lakhs (Rs. 12 lakhs), leaving a carry-forward of Rs. 27,761.

Deposits were Rs. 7.27 crores higher at Rs. 47.69 crores, of which advances absorbed Rs. 27.59 crores (Rs. 24.64 crores) and investments Rs. 22.16 crores (Rs. 17.15 crores). Cash was Rs. 14 lakhs better at Rs. 6.21 crores.

The profit of the HIND BANK increased from Rs. 6.56 lakhs to Rs. 10.86 lakhs for the year ended last December. The dividend has been declared at Rs.

3 per share to absorb Rs. 3 lakhs. Taxation gets Rs. 4 lakhs and reserve fund Rs. 24 lakhs. The carry-forward is Rs. 1,66,278 against Rs. 1,12,920 brought in. Deposits showed an increase of 25%, to Rs. 5.12 crores. Investments totalled Rs. 1.26 crores, and advances Rs. 3.90 crores. Cash stood at Rs. 90.05 lakhs.

POLYCHEM LIMITED—Cont'd.

(Continued from page 446)

On the basis of existing prices and after allowing for all costs, overheads, depreciation and a margin for contingencies, the Directors are confident that the Company will be able to pay an attractive dividend on the Ordinary Shares after meeting interest on loans and Preference Shares.

UNDERWRITING AND BROKERAGE

The issue of 40,000 Ordinary Shares and the 80,000 Preference Shares has been fully underwritten by the Industrial Credit and Investment Corporation of India Ltd. and the Bank of Baroda Ltd. In the opinion of the Directors the resources of the said underwriters are sufficient to discharge the underwriting obligations.

The Company will pay brokerage at the rate of one per cent to recognised brokers or banks on allotments made in respect of applications bearing the stamp of such brokers or banks.

DOCUMENTS OPEN FOR INSPECTION

The copy of the Prospectus, Memorandum and Articles of Association of the Company, Consent of the Government of India for issue of capital, permission to allot shares to Dow Chemical Company, agreements between the Promoters and the Dow Chemical Company and Dow Chemical International Limited, Promoters agreement and the underwriting agreements contained in correspondence are available for inspection during office hours at the

Transferring Rs. 9.31 lakhs from capital reserve, bringing in Rs. 13,644 and making other adjustments there is a balance of Rs. 6,92,433. The ordinary dividend is the same at 10 annas per share. Contingency reserve gets Rs. 2½ lakhs

against nil, leaving a balance of Rs. 27,433 to be carried forward.

Raisings rose from 547,725 tons to 560,579 tons, and despatches from 534,424 tons to 573,680 tons.

BOMBAY MARKET RULES FIRM

DOUBTS ABOUT SETTLEMENT LOOM AGAIN

Wednesday Evening.

THIS week's trading on the Bombay stock market was interspersed with holidays. Equities opened strong and prices forged ahead on sustained support, followed by hectic bear-covering. Good reports from the textile mills, firmer advices from the commodity markets and cheerful trading on Lyons Range encouraged operators to take a constructive view. Despite money stringency and increased interest rates, optimism prevailed about the prospects of currency expansion.

Towards the close there was profit-taking, and top levels were erased. Offerings were, however, absorbed though there was an inclination to be cautious on the fear that budia changes in the coming settlement will probably be higher.

Tata Steels closed at Rs. 249-8 and Indian Iron reacted to Rs. 35-7 after Rs. 35-12. Tata Locomotive were steady at Rs. 152, and Alcock Ashdown were taken at Rs. 376-4. Larsen and Toubro rose from Rs. 15-10 to Rs. 15-13.

The mill group improved all round, though closing levels were shaded on realising. Bombay Dyeing came to hand at Rs. 622-8; Century met with demand at Rs. 520; Kohinoor were bought at Rs. 365-8; and Simplex realised Rs. 215. India United Ordinary were firm at Rs. 14-0-6, as were Apollo at Rs. 2-15. Swadeshi were quoted at Rs. 240-12 and Swan improved to Rs. 457-8. New Great closed at Rs. 230 x.d. against Rs. 240 c.d. Central India were maintained at Rs. 147.

Miscellaneous industrials scored some notable gains. National Rayon jumped to Rs. 244-8 to close at Rs. 241 on the expectation of a higher distribution. Associated Cement improved to Rs. 215-4 on the rumour that the Government had sanctioned the rights issue at Rs. 120 a share against Rs. 125 a share as feared some time ago. Belapur Sugar rose to Rs. 236 on reports of increased output. Tata Chemical were firm, and the price rose to Rs. 19-4 on the prospect of a maiden dividend. Bombay Burma (Old) improved to

Rs. 625 on improved tea prices while British Burmah Petrol declined to Rs. 4-2 on selling pressure. Indian Copper fell to Rs. 7-4 from Rs. 7-8½ on profit-taking. Walchandnagar rose sharply to Rs. 273-2. Shipping shares showed some recovery, Scindia having gained at Rs. 18-4-6. Hindustan Motors were higher at Rs. 10-4, as were Shivrajpur at Rs. 112-8.

Banking shares attracted scattered investment support. Bank of India gained at Rs. 154 and Central Bank realised Rs. 50. United Commercial were in demand at Rs. 53-8. Insurance shares were listless. New India eased to Rs. 40-4 and Oriental were on offer at Rs. 3,900.

Electricity undertakings were marked lower on pressure. Ahmedabad Electric changed hands at Rs. 101-14, and Tata Hydro were bought at Rs. 132-8.

Commodity Markets

RECENT TRENDS IN COTTON
TEXTILE INDUSTRY
SPINDLEAGE AND CONSUMPTION

ANY discussion of the future of the cotton textile industry on a global basis is complicated by the varied conditions existing in different producing countries. Whereas internationally it is possible to visualise scope for expansion on the basis that increased development and rising standards of living in large areas of Asia, the Middle East and Africa, must in due course lead to a much larger demand, it is nevertheless unpleasantly true that many of the principal suppliers of world markets, and more particularly those in Europe, are facing up to such a fall in exports as to make the talk of a slump, if not entirely accurate, too near the mark for comfort. A new approach to the consideration of this subject, and one which is all too often overlooked, is provided in the statistics recently released by the International Federation of Cotton and Allied Textile Industries for the season ended 31st July 1955. These provide an opportunity of studying movements in the world's spindleage and its consumption of raw material. It comes as something of a surprise therefore to find that the cotton textile industry's productive equipment today is smaller than it was before the war of 1939-45, and even smaller than it was before the war of 1914-18.

The International Federation's returns estimate the world's cotton spindleage at the end of 1954-55 as 129,838,000 or 317,000 more than one year previously, and 516,000 more than two years previously. They show, however, that at the end of 1937-38 there were 147,153,000 cotton spindles installed and that at the end of 1912-13 there were 143,453,900. Though the spindleage has not recovered to its pre-war high record, however, the world's consumption of cotton established a new high record last season. The figure is put at 35,707,000 bales, compared with 26,093,000 bales in 1937-38, and 23,122,000 bales in 1912-13. The rate of the growth of consumption is perhaps shown more strikingly by another comparison. The consumption of cotton per 1,000 spindles installed was 161.18 bales in 1912-13. In 1937-38 it showed a fall compared with the previous season, but at 177.38 bales it was higher than before the war of 1914-18. In 1954-55, however, the average rate was 275.01 bales per 1,000 spindles.

World Spindleage

The apparent anomaly is simple enough to explain. Although several factors have contributed to this sharp increase in average consumption per spindle, the increase in the average spindle-hours worked and the average count of the yarns spun are of the greatest significance in explaining the differing results applicable to different countries. It certainly explains the unfavourable position in which the United Kingdom now finds herself to learn that in most countries spindles are now operated on either two or three shifts, and in by no means all countries is the working week restricted to five days. In Asia and Africa, especially, spinning machinery is worked very much harder. The returns show that during 1954-55 spindles in Hongkong worked 7,470 hours (144 hours a week), while those in the Belgian Congo worked 7,200 hours, and those in Syria 7,132 hours. Spindles operating at this rate and producing coarse yarns must inevitably reach very high figures in their total consumption. The average hours worked per spindle last season in the United States were 5,498, compared with 1,676 in the United Kingdom.

While the world's total spindleage increased during 1954-55 there were decreases of 570,000 spindles in Europe, 388,000 in North America, and 18,000 in South America. Against this there were increases of 2,266,000 spindles in Asia and 27,000 in Africa. For the United Kingdom a decrease from 15,756,000 to 14,294,000 in mule spindles and an increase from 10,807,000 to 10,889,000 in ring spindles are shown, reducing the total for both types by 1380,000 to 25,183,000. The returns for Asia include estimates for China (5,400,000 at the end of 1954-55 against 4,150,000 a year earlier) and Manchuria (260,000 at each date). Pakistan, however, is shown with 1,356,000 spindles against 710,000 a year previously, India with 11,88,000, against 11,721,000, and Japan with 7,961,000, against 7,833,000. Korea's spindleage increased by 96,000 to 364,000 during the season.

Japan's Experience

In their own interests there would seem to be a need for the textile industries in Asia to keep a close eye on their expansion to keep it within the limits of the increased demand and related to it. That is the attitude which is suggested by Japanese experience over the last few years. The latest reports from Tokyo take a less pessimistic view of the cotton industry's outlook, where cotton spinners are operating at just over 85 percent capacity and rayon staple spinners are working at full capacity with exports running at rates of 1,150 million yards and 530 million yards a year, respectively. It is significant, however, that Japanese experience has left Japanese officials as well as the more far-seeing industrialists with doubts as to whether Japan can continue to find employment for its existing 8 million spindles, and there are fears that over-production may arise in the rayon staple section. Attention is still being given, therefore, to estimate that only some 6,600,000 spindles are needed and to suggestions that the other 1,200,000

spindles should be withdrawn from production. The outlook in the home market is considered to be fairly encouraging for the next few years. Domestic consumption of all textiles is believed to have reached a level of something over 13 pounds a head in 1955. By 1957 it is expected to rise above 14 pounds a head for all types (including cotton, wool and spun rayon), and by 1960 to reach a figure in excess of 15 pounds a head. It is considered, however, that the recovery in export trade is unlikely to proceed any farther and that, indeed, the yardage exported may fall off from now onwards.

Rationalising Expansion

The Ministry of International Trade and Industry has issued a memorandum explaining its view of the position and what that position demands. It is Japan's "hope and wish" to place its textile industry on a stabilised basis, thus dissipating any possible fears abroad, the memorandum says, that has convinced the Japanese Government of the need to take legislative action. The memorandum proposes that the time limit of the law shall be five years, subject to possible extension within that time and that "in order to prevent increase of production installations, measures to restrict and register them in designated categories shall be enforced." The designation shall not, in principle, produce items other than those designated. Unregistered installations shall not produce manufactures reserved for registration. If the Minister finds that a situation exists where in registered categories installations are excessive and disposals are necessary, he may decide the number of installations to be disposed of and instruct business interests in the category concerned to dispose of them jointly "by sealing, storing, converting, sale, or other means."

WHOLESALE PRICE INDEX RISES

THE official wholesale price index (base: year ended August, 1939=100) advanced by 2 percent to 382.7 during the week ended 10th March, 1956 as compared with 381.8 (revised) for the previous week. Relative to the corresponding weeks of the last month and a year ago, the index was higher by 1.7 and 7.6 percent respectively. The index for Food Articles advanced by 1.0 percent to 339.8 as compared with 343.1 (revised) for the previous week as a result of an increase in the prices of bajra (+8%), rice at Patna and wheat at Hapur (+3% each) and gram and tea for export (+1% each) despite a decline in the prices of rice in Calcutta and gur (-5% each), wheat at Amritsar (-4%) and at Jabalpur (-3%), and tea for internal consumption (-1%). Higher prices of rapeseed (+14%), raw jute and groundnuts (+5% each) cottonseed, and castorseed in Bombay (+4% each) and linseed, gingelly seed, and raw hides (+1% each) raised the index for Industrial Raw Materials by 2.3 percent to 473.3 as compared with 462.7 (revised) for the previous week, although the prices of manganese ore (average export price) (-15%), raw silk (-3%), and copra (-1%) showed a fall. The index for Semi-Manufactures moved up by 1.2 percent to 365.8. Items which witnessed significant variations were: mustard oil (+14%), castor oil and copra cake (+5% each), groundnut oil and gingelly oil (+4% each), buff hides (+3%) and coconut oil in Calcutta and brass in Bombay (+2% each). The index for Manufactures rose by 0.2 percent to 376.2 due to an increase in the price of jute manufactures (+2%). A fall of 3.3 percent to 511.1 as compared with 528.5 (revised) for the previous week in the index for the Miscellaneous group was brought about by a decline in the prices of tobacco leaf (-8%), turmeric (-2%) and black pepper (-1%); the prices of chillies and cashewnuts (+2% each) were, however, marked up.

INDEX NUMBERS BY GROUPS AND SUB-GROUPS
(Base: Year ended August 1939=100)

Our City Cable

SELECTIVE BUYING IN
STOCK MARKETS
INDUSTRIALS DULL BUT
GILT-EDGED BETTER

London, 28th March.

NO decisive trend developed in the stock markets as a whole during the past week, but the general undertone was satisfactory on selective buying. Business was at a very low level before the Easter holidays, and industrials in particular were considerably less active than in the previous week. Favourable influences were provided by the advance to a new peak on Wall Street, the Government's reiterated determination to fight inflation and the Chancellor of the Exchequer's statement that he would never introduce dividend limitation. On the other hand, the markets were subdued by the news that there was to be no relaxation in the present economic policy and in the forthcoming Budget, now less than three weeks ahead. Helped by the news that the Government's firm economic policy is to continue, gilt-edged developed a better tendency, but interest and activity remained at a low level. Sentiment was assisted by the success of a small Edinburgh issue, which established a substantial premium in first dealings, and by the general firmness of Corporation stocks. Activity in industrials contracted and was back to the level of a fortnight ago. Compared with previous levels, the general run of prices recorded little change and the Financial Times Industrial Ordinary index showed no appreciable alteration on the week. A feature was the demand for recent new issues, notably Associated Electrical and Rolls Royce new, the former's advance being stimulated by the success of the issue. Foreign bonds and rails attracted little attention, although there was small speculative buying of Russian and Baltic bonds. Dollar stocks advanced in response to the rise in New York. Idle conditions prevailed in the gold share market and prices inclined easier, while diamonds also were dull. Coppers went ahead but lost some of their gains following week-end profit-taking. Other base metals were fully maintained in most cases. Oils receded under the lead of British Petroleum but rallied after the week-end. Rubbers held steady. Tea shares recorded an all-round but modest advance on a more optimistic outlook.

The Money Market

Conditions in the money market during the past week were mixed. Credit was in short supply at the beginning, and then became more plentiful, with the mid-monthly make-up of balance-sheets creating a disturbance. Towards the end of the week, there was a return to more difficult conditions. The course of rates during the week ranged from a high of 5 percent to a low of 3½ percent, with the bulk of the money down around the latter level. The highlight of the Bill tender was a drop of over 3/32 percent in the average rate at which the Bills were sold. This came about as a result of the money market raising its price by 7d to secure as big an allotment as possible under the keen competition at present prevailing for Treasury Bills. These Bills mature at the end of June, and are very popular in view of the disturbance of credit usually experienced at that time due to preparations of half-yearly balance-sheets. Applications for £270 million of 91-day Bills totalled £398,580,000, of which the former amount was allotted at an average rate of 1028 2/16d against 104s 3/81d in the previous week. Offerings this week will consist of £280 million of 91-day Bills. The Bank of England return for the week ended 21st March showed that notes in circulation were £8 million higher at £1,816 million, while bankers' deposits were £8 million higher at £250 million. Fine trade bills were unchanged.

Vegetable Oil Market

The market was slow last week but maintained a firm appearance with the Indian holidays handicapping developments in that direction. Linseed oil was about unchanged to a shade easier, reflecting slower enquiry. Groundnut oil was fully firm with re-sellers of Indian and Nigerian bulk oil wanting around £136l c.i.f. for afloat and April-May respectively. Coconut oil advanced on the week-end rise at the origin with business in Ceylon bulk to European ports reported up to £94 c.i.f. and sellers seeking £94½. Straits oil was less keenly sought but sellers were wanting in the region of £92½ c.i.f. American cotton oil was a shade easier, but Chinese semi-refined was marked to £126 c.i.f., and firm sellers of Indian washed were rarely encountered under the £140 mark. American soyabean oil also was off from the recent best, but Canadian advanced sharply with April-May extracted crude in bulk offered at \$340 c.i.f. Most offers of rapeseed oil were withdrawn, while Malayan palm oil was not mentioned prior to July-August shipment at £89. Nigerian groundnuts were meeting better demand and the Board was seeking up to £81½ for July-September and August-October shipments.

Hongkong Gold Erratic

Hongkong gold moved erratically last week. Values tended to improve after a steady opening, but towards the end the movement was downward. Carryover charges were \$5 in buyers' favour, which induced some covering. Official offtake was 4,670 taels and unofficial 14,700 taels. Arrivals at Macao totalled 50,000 ozs. Forward contract business was done at \$(U.S.)37.89.

New Delhi

MACHINERY MANUFACTURE IN
INDIA
NEW TASKS RECOMMENDED
FOR N.I.D.C.

(FROM OUR NEW DELHI CORRESPONDENT)

THE National Industrial Development Corporation will undertake the investigation of four more projects, if the recommendations made to the Government at its fourth Board meeting are accepted. The new projects relate to the manufacture of industrial machinery and plant, aluminium, elemental phosphorus and synthetic rubber. The Corporation will examine the technical and economic aspects of the manufacture of the machinery and the manner in which it can be dovetailed with the existing capacity in the private and public sectors. Although capacity already exists or has been recently licensed for the production of machinery required by industries such as cotton textiles, jute, sugar and tea and some others, a large number of other industries are still entirely dependent on imports for their main requirements of plant and machinery. With further expansion of industries in the country, the demand for machinery will grow. The project for heavy castings, forgings and structural alloys already under investigation by the N. I. D. C. should be able to supply the major components for the fabrication of the plant and machinery needed by most industries.

Demand for Aluminium

The demand for aluminium is expected to rise to between 30,000 tons and 40,000 tons a year by 1960-61. The present capacity is only 7,000 tons and even with the implementation of all the schemes approved for increasing the capacity, the total production will be about 20,000 tons. There is room, therefore, for the setting up of one or two additional plants of the minimum economic size. It is felt that there is good scope for a factory for the manufacture of phosphorus with a capacity of 25 tons a day to meet the needs of the match industry, for the production of phosphatic fertilisers, the development of intermediates for dye-stuffs and drugs and defence needs. The production of synthetic rubber is considered desirable because the consumption of natural rubber has been rising and cannot be met by expanding the indigenous industry. Synthetic rubber is also considered to have certain valuable properties which natural rubber does not possess.

The Board considered that for the projects already under investigation, the stage for concrete action had now been reached. The project for setting up foundries and forges will await the outcome of negotiations now going on with firms in the U.K., Germany, Czechoslovakia and Japan. A firm will be engaged eventually to prepare a detailed project report specifying the plant and machinery to be procured. After the report has been prepared, quotations will be invited for the supply of the equipment. It has also been decided that a structural-cum-machine shop will be set up at Bhilai and a structural shop at Durgapur which will meet the requirements of structural of the steel plant in the later stages of construction and also cater for other future needs.

Loans to Jute and Cotton Industries

The Board also considered the question of financial assistance to the jute and cotton textile industries for their rehabilitation and modernisation. A Committee was appointed by the Board at its last meeting to recommend the procedure for granting loans to cotton textile mills. The procedure suggested by the Committee is on the same lines as that approved by the Board for the grant of loans to the jute industry. The applications for loans will be examined by a survey team of the Textile Commissioner's office, and the report made by the survey team will be considered by the Sub-Committee of the National Industrial Development Corporation which will make its recommendations to the Board. The Sub-Committee consists of Mr. V. Nanjappa, Textile Commissioner (Chairman), Mr. Krishnaraj M. D. Thackersey, Mr. A. N. Mafatlal, Mr. Madanmohan Mangaldas and the Joint Secretary, Ministry of Finance (Industry and Commerce Division) Members and Mr. N. Majumdar, Industrial Adviser (Textile Production) Member-Secretary. This body will co-opt members from different zones while considering the applications for loans from the zones concerned. The Board accepted the recommendations of the Sub-Committee for the jute industry and granted loans to two jute mills.

Technical Personnel for Steel Plants

An assessment has been made, in consultation with the Russian and German technical consultants, of the technical personnel required for the three steel plants. It is estimated that below the foreman category, about 15,000 technicians will be required for all the three plants together. The requirements of supervisory staff from foremen upwards have been put at about 2,100. About 120 of the supervisory staff will have to be highly qualified and experienced engineers capable of giving higher technical direction. The task of finding such a large number of qualified technicians in India is in itself stupendous; it has been made all the more difficult by the fact that engineers with similar qualifications are also needed not only in the private sector of the iron and steel industry, which has also undertaken several schemes of expansion, but also in other heavy engineering industries and development works

like transport, irrigation, electrical installations, mining and so on.

One way to solve this problem, it is suggested, is to recruit engineering graduates with little or no experience and to have them suitably trained. In order to co-ordinate the demands of the three steel plants for qualified personnel of all grades, the recruitment has been centralised, and is being carried out in consultation with the Union Public Service Commission. The bulk of the officers above the foreman category will have to be trained abroad. Steps are being taken to secure training facilities for them in different parts of the world where there are large steel works. A provision for the training of key personnel in the design, maintenance and operation of the Rourkela plant exists in the agreement with the German combine. Accordingly about 50 engineers, have already been recruited and sent for training to Germany. A similar provision also exists in the agreement with the Russians on the Bhilai plant. For the training of skilled workers below the foreman category, efforts are being made to develop training facilities in the country. A technical committee has been set up to survey and assess the existing facilities and to recommend suitable steps for organising training of the right kind and quality. Meanwhile, about 100 trade apprentices for the Rourkela plant are being trained at Tata's works in Jamshedpur. In addition, arrangements for the training of about 300 apprentices at the Chittaranjan locomotive works, Sindri fertiliser factory and Jay engineering works have been finalised. A technical institute is also being set up at Rourkela for the training of about 300 apprentices. This institute is expected to start functioning next year. It is hoped that by the time the plants go into operation, a sufficient number of training skilled workers will be available to man them, although it will undoubtedly be necessary to have a few foreign technicians in key positions, at least for the initial period.

The Budget Leakage

The Lok Sabha had a brief discussion on the Budget leakage, during which suggestions for modernising Budget discussions were made. In fact, with the exception of "voting on account" and the appropriation bill, the pre-independence pattern of Budget discussion is still maintained. Time is allotted for the disposal of each Ministry's demands for grants. The Members, on the pre-independence model, still table large numbers of cut motions, resulting in a considerable waste of time, labour and money. A few of these cut motions are selected, moved, and in due course rejected. The discussion often is not confined to issues raised by these motions. The Minister in-charge of the Ministry makes an attempt to reply to as many issues raised as he can humanly manage during the time allotted to him. All the while, the Minister and the Opposition are fully aware of the fact that the Government has an overwhelming majority in the House and the passage of demands for grants is not affected by cut motions or the arguments advanced in support of them. The Ministry of Defence, for example, is allocated almost half of India's revenues, Rs. 203.97 crores out of Rs. 545.43 crores. And yet the time allotted for the discussion of demands from this Ministry was just six hours, as compared with eight hours allotted to the Foreign Office or for Home Office and seven hours for the Rehabilitation Ministry. Debates on the demands for grants show no desire for economy. The emphasis is generally on the inadequacy of the provision for certain items in which the Members happen to be interested. In some ways, the method introduced by the late Pandit Motilal Nehru was superior to that followed at present. He, as leader of the Opposition, was able to persuade the Government to allot time for the discussion of important topics in which the various parties were interested. The Swaraj Party, as the Congress Party was then called, usually selected the issue of constitutional advance, while the Independents, led by Mr. M. A. Jinnah, used to select the Indianisation of defence forces. A similar procedure would be more beneficial for everybody concerned.

Communications Ministry

The dangers of one-party rule, even under the facade of democracy, could be seen in the Lok Sabha during the discussion of demands for grants in respect of Communications. Miss Maniben, the daughter of the late Sardar Patel, pointed out some of the shortcomings of the Postal Department. The Minister replied up to the Members by promising them free telephones and free air passages, after which, he coolly admitted that the performance of the Heron aircraft was not up to expectation. The aircraft was giving trouble. This can hardly make feeder services, on which Herons operate, popular.

The Minister also explained away the losses of the Indian Airlines Corporation by stating that the Corporation paid Rs. 84.83 lakhs as petrol duty as against the total loss of Rs. 98.96 lakhs. Similar arguments were often advanced by all many Radio. It may, however, be added that the activities of not be enough money to finance the activities of the Ministry of Communications, if import and excise duties earned on specific commodities were allocated to the organisation making use of those commodities. The Ministry of Defence, for example, could claim all the money realised as import duties on defence goods. On this subject, says: "The losses of the Corporation during the year 1955-56 show an increased trend mainly due to the liberalisation of the terms and conditions of service of the employees of the Corporation and to the increase in their number consequent on the expansion of the activities of the Corporation."

By one stroke of a pen, the pay bill was increased by Rs. 52 lakhs a year. It would be worth while to recall the report of the Air Transport Committee and the speeches of the Communication Minister piloting the Air Corporation legislation in Parliament, both of which depicted an alluring picture of profits to come from nationalisation.

Transport Ministry's Progress

In contrast to this uninspiring picture, the Transport Minister, Mr. Lal Bahadur Shastri gave a good account of his charge. He informed the House that an Indo-Soviet shipping agreement was expected to be signed some time next week. The service would come into operation as soon as the agreement was signed. The proposal envisaged regular operations between Indian ports and the Black Sea ports of Russia by a fleet of 10 or 12 Indian and Soviet vessels on a parity basis. "The intention," he said, "is to expand the service by the addition of more vessels to keep pace with the development of trade between the two countries." The Minister also informed the House that talks were in progress with a Yugoslav trade delegation for the establishment of a shipping service between India and Yugoslavia and for the utilisation of the spare capacity in Yugoslav shipping yards to build ships for India during the second five year plan.

Mr. Shastri said that the tonnage of two million suggested for the country by the Shipping Policy Committee could be reached only slowly. He estimated the tonnage at the end of March at 418,000 tons. A further 120,000 tons were under various stages of construction in yards both in India and abroad, and these were expected to be ready for delivery before the middle of 1957. The second plan provided for a tonnage target of 900,000. If this target was reached within the three years, it might be possible to find funds for expanding it still further. If private enterprise did not utilise the loans that the Government was ready to grant, he promised that the Government would itself come forward and expand the tonnage. We said that a decision had now been taken that India should have at least three tankers to begin with. "We expect that one of these, which would be owned in the private sector, will be registered in India before the end of this month. The two others are expected to be acquired for the public sector by the Eastern Shipping Corporation, and these too should be in commission before long." He expected the report of the Rail-Sea Co-ordination Committee to be submitted by the end of June next. He hoped that as a result of its recommendations, a greater volume of cargo would be moved by coastal shipping.

Transport Co-ordination

Mr. Shastri announced that to bring about co-ordination among various forms of transport, he had decided that a Central Board of Transport should be formed under the chairmanship of the Secretary of the Transport Ministry. It would have several sub-committees dealing with subjects such as inland water transport, shipping and other means of transport, and these sub-committees would function in close co-ordination with the Central Board of Transport. Mr. Shastri added that no one was more sorry than himself that it had not been possible to provide for the full target of over one million tons of shipping recommended by the Study Group of the Consultative Committee of shipowners. The House must realise that the limitations imposed by the lack of finance could not be overcome. The Minister expected that the Indian shipping companies who had already been approached by his Ministry for working out their individual plans would come forward and utilise the provision for loans actually made in the second plan within the first three years of the plan period. Upon that would depend the

The Finance Minister has made it clear that any addition to the plan would be either at the cost of some other scheme already included in the plan or of additional taxation. The price and durability of *khadi* will also have to be taken into consideration. Despite the subsidy, *khadi* is not much in evidence. The Ministry of Production, which is in charge of *Khadi* and, therefore, the *Ambar Charkha* has set up a committee with its Secretary, Mr. S. S. Khera, as chairman to make a report on the workability of the *Ambar Charkha*. The Commerce Ministry, on the other hand, contends that the installation of mills will take years for which a great deal of planning is needed. Logically the ministry demands an early decision with the assurance that it will be able to use all the yarn produced by the *Ambar Charkha*, provided it is of the requisite quality.

We still have a long way to go, of course, and much will depend on the achievements of Mr.

The cotton industry's campaign to win public support in its appeal for some measure of protection against cheap foreign imports ostensibly begins next week with the publication of the fully documented case examining the present recession. But the campaign has, in fact, already begun. This is the season of annual reports, and each day brings fresh reviews of last year's trade from the spokesmen of the various sections of the industry. Curiously enough, though not all are similarly affected, there is remarkable unanimity on this

Mr. Fred Wood, President of the Federation of Master Cotton Spinners' Associations, blames the recession on the same cause and meets recent criticisms by pointing out that the industry was not seeking protection for the inefficient. Since the war its capital expenditure had been proportionately higher than that in any other major country in Western Europe and it could still make a contribution to the export value of £20 million. Nonetheless, 24,000 operatives had left the spinning mills and much short-time was being worked. The reasons for this decline were to be found in the industry's documented case. There was first the most serious fall in exports from 904 million square yards in 1949 to 637 million square yards five years later. Of this, 104 million square yards was lost in exports to India and Pakistan, partly because of Indian import duties and restrictions and partly because of Japanese competition, largely based on special trade arrangements in Pakistan. Cheaper Indian and Japanese goods had caused a further loss of 142 million square yards to British exporters in colonial and dominion markets and certain Eastern markets. Mr. Wood summed up his argument for protection with what is clearly the main thesis of the industry's case. It is the duty of a Government to preserve basic industries and basic skills. Basic skills which are dissipated are not easily recovered and the country ought not to become dependent for textiles on far-distant countries which might not remain within the Commonwealth and whose costs might increase greatly. In the event of war the strategic value of the home textile industry will be of great importance. In other words, a healthy textile industry is the sign of a well-balanced economy.

Under the Companies Act, 1956, (which is being brought into force on 1st April), it is necessary for companies to continue to apply to the Central Government for approval in respect of various matters in which such approval was necessary under the provisions of the Indian Companies (Amendment) Act, 1951, relating to the appointment or re-appointment of managing directors or managing agents, increase in the remuneration of directors or managing directors, appointment of directors who are not liable to retire by rotation, changes in the constitution of managing agents, etc.

The companies (Central Government's) General Rules and Forms, 1956, which have been published in a Gazette of India Extraordinary dated 18th February, 1956, and copies of which are now on sale with the Manager of Government of India Publications, specify the forms in which such applications are to be submitted to the Central Government. The procedure and the forms do not materially differ from those hitherto prescribed. Companies will also have to continue to address their applications to the Secretary to the Government of India, Ministry of Finance, Department of Company Law Administration, New Delhi, in the prescribed forms, along with certified copies of notices published in newspapers in accordance with section 412(2) of the new Act and the required number of copies of all other relevant documents such as the Memorandum and Articles of Association, Directors' Reports and Audited Accounts, Managing Agency Agreements, etc. It will expedite consideration of the applications relating to increase in the remuneration of managing agents, directors, etc., or to the appointment or reappointment of managing agents, directors, etc., if the companies would submit, along with the above documents, brief statements showing the financial effect of their proposals in terms of the provisions of Section 198 of the new Companies Act i.e., whether the overall managerial remuneration of the Companies concerned exceeds the percentage mentioned in this Section.

SHARP RISE IN CEREAL PRICES

STRICT MEASURES CALLED FOR TO CURB INFLATION

(FROM OUR BOMBAY CORRESPONDENT)

ALL markets are again experiencing a boom. This is not confined to speculative markets alone, though speculators have also been collecting contracts. The Stock Exchange here is about to regain the levels it attained during September-October 1955. The same Budget which precipitated a slump less than a month ago is now being looked upon as highly bullish. This trend is more significant in the case of bullion, for during the last few weeks the price of gold has risen by as much as Rs. 10 a tola. Even the spot market which was inclined to lag behind displayed hectic conditions during last week. It is the same with oilseeds and oils where prices have recorded a rise of about 25 percent during the last two weeks. Foodgrain prices have also been rising, although at this time of year they should be approaching their lowest level. It is reported from Gujarat that rice and pulses have recorded an increase of about 40 percent to 45 percent while cereals are still rising. The State Government is believed to have received representations from the rural areas that steps should be taken to check these runaway prices. This tendency has been even more noticeable in the case of cotton and the authorities have been taken by surprise. At one time it was believed that the initial modest rise was due to speculative manipulations and measures were taken which ultimately led to the closing of forward trading in this commodity. But conditions in the spot market have since become more bullish than those previously displayed in the futures market. The cotton textile mills have been persistent buyers, while investors have also turned their attention to cotton, with the result that several of the popular varieties have almost touched the ceilings and at the present rate it looks as if all varieties will reach this mark very soon.

This has now confirmed the trade's long-standing plea that there has been a real shortage of Indian cotton during the current season, in spite of mill output in cloth having been pegged. The Government of India is now concerned about augmenting the supply of medium-staple cotton and apart from restricting exports there is now talk about liberal imports from abroad of 1" staple cotton, especially the U.S.A. Imported cotton, however, is bound to prove more costly. For years Indian prices have been artificially maintained very much below world parity. This has led to a virtual scramble for the available supplies of home-grown cotton and it is now feared that distribution control, which was done away with two years ago, will have to be brought in again. This has been confirmed by the fact that last week the Textile Commissioner asked all the mills to send in statements within a week of their purchases of cotton up to the end of February. Rationing of cotton by reviving distribution control may enable the authorities to keep prices in check; but unless arrangements are made for the import of cotton of equivalent or smaller staple, the production of cloth during the year is bound to suffer, while a uniform ceiling price on cotton would also affect the price of cloth of all varieties. With the rising prices of foodgrains, oils and cloth, the stage for inflationary pressures might well be set, however much the Finance Minister may disclaim the fact.

Warnings of Inflationary Trends

This feeling was voiced last week by Sir Chunilal B. Mehta, newly-elected President of the Bombay Bullion Association at an impromptu meeting called mainly to warn the operators against unbridled speculative manipulations in the market. Sir Chunilal also advised them to refrain from carrying on any option business and to call a halt to after-hours trading. This warning was accompanied by what amounted to almost a threat that, in the event of their persisting in unhealthy activities, the Board would be compelled to take strict measures to stop them. Sir Chunilal admitted that the market was subject to manipulation in view of the limited supplies and the ban on imports of bullion, but if they persisted in such tactics the Government was bound to come down with a heavy hand, as it was determined to prevent a rise in the prices of commodities. At the same time, Sir Chunilal felt that the Government of India was taking measure after measure which provided an incentive to speculative activity. Sir Chunilal believed that the country and its economy were already facing the danger of inflation and pointed out in support of this contention that notes in circulation in the country had increased by Rs. 62 crores to Rs. 1,444 crores during the seven weeks ended 9th March. In spite of this increase, bank deposits had declined by Rs. 27 crores and during the same period advances had risen by about Rs. 60 crores. This big expansion of currency could not fail to increase speculative activities both in forward as well as ready markets and bring about a heavy advance in prices. Sir Chunilal pointed out that if the situation was not remedied, conditions in the money market would become still more stringent and the tendency to hoard commodities would be further increased. Reminding the Finance Minister of the danger of an inflationary spiral, which in turn might affect the successful implementation of the second plan, he asked that effective and immediate steps be taken to ward off the impending disaster of a runaway boom. At the same time,

he made it clear that the application of physical controls was not likely to help the situation, but would only result in re-creating black markets and all the consequential ills that followed them. He also maintained that merely blaming the speculative activity of the commercial community for the rise in prices could neither be justified nor could it help in averting the impending crisis, especially when the Government's own measures encouraged such activities without counter steps being taken to check them. As a remedy, Sir Chunilal suggested that the Government should adopt monetary measures of control as soon as possible, raising the Bank rate and creating a credit squeeze on the lines adopted in the U.K., with certain modifications to suit local conditions.

Bombay State's Objectives

Last week, the Bombay Legislative Council began the discussion on the draft outline of the second five year plan in general and that for Bombay State in particular. Initiating this debate, Mr. Morarji Desai, the Chief Minister, explained that the second plan was not merely a programme of production but was also designed to bring about basic social changes which would lead ultimately to the attainment of the goal of a socialistic pattern of society. At the same time, he pointed out that this goal could not be reached by one or two plans, it required a series of plans to solve the economic and social problems of the people. Detailing the objectives of the second plan, he said the accent was on a sizeable increase in the national income, large-scale industrialisation, greater opportunities for employment and the reduction of inequalities in wealth. The priorities in the second plan were derived from these objectives. It was to be expected that the Mr. Desai should draw a comparison between the first and the second plans. In doing this he observed that, when the first plan was launched the country had several serious handicaps such as a war-torn economy, grave food scarcity, and the problem of refugees. At that time, the Government had not enough statistics to enable it to frame the plan. On the other hand, the second five year plan, was prepared under very different circumstances. The problem of food scarcity, for instance, did not now exist, with the result that more emphasis in the second plan was being laid on industry than on agriculture. As a result of these changed conditions, the second plan was much larger and bolder in scope. The original plan framed by the Bombay Government involved an outlay of Rs. 500 crores, and although it was reduced to Rs. 264 crores by the Planning Commission, it was twice as large as the first one. Mr. Desai told the House that the planners did not adopt a dogmatic approach to controversies between small-scale and large-scale industries and the private sector and the public sector, but aimed at a comprehensive development in all directions, taking a very practical view of things.

Mr. Desai next dwelt at length on the highlights of the State's second five year plan and said that the whole State would be covered by the National Extension Services during the plan period, while 50 percent of the area would be covered by community projects. He listed irrigation and hydel schemes as other striking features of the second plan and assured the House that enough importance was given in the plan to the development of cottage industries. He expressed the view that irrigation schemes were essential for Bombay State because it was an agricultural area. The power produced by the hydro-electric projects would be mainly used for the benefit of the rural areas. He hoped that this would give an impetus to cottage and small-scale industries. Discussing the financial resources of the plan, Mr. Desai said that it was not right to say that the plan was very optimistic. The outlay of Rs. 146 crores in the first plan was considered enormous by many people, but in reality, the Government had even exceeded this target of expenditure. He expressed the opinion that resources would increase as a result of economic development, that the State's revenue was rising, its borrowing capacity was good and it had evolved an administrative machinery for the execution of the plan. In addition there had been a good response from the people. He also pointed out that the proposals in the draft plan were not final and could be revised after studying the views of the House and the public.

Higher Standards Needed in Banking

Addressing the annual general meeting of the Indian Banks' Association, its Chairman, Mr. C. H. Bhabha, apart from outlining the difficulties with which the joint stock banks are faced today, reviewed at some length the role of the banking system in the economic development of the country. Speaking of the joint stock banks, Mr. Bhabha suggested that they would have to raise the standard of efficiency and increase the working hours, reduce the number of holidays and gradually introduce mechanisation and rationalisation if they were to meet the higher wage bills required of them today. Mr. Bhabha pointed out in support of this suggestion of his that the employees of British banks handled seven to eight times more business than the bank employees in India even though they numbered only 20,000 more than their counterparts in this country. On the other hand, with only five times the number of bank employees in this country, the U.S. banks handled 50 times the quantum of business. Mr. Bhabha said that while in other foreign countries, wages to employees were hardly 30 percent of the gross earnings, in India they amounted to as much as 40 percent. Mr. Bhabha added that the total assets of banks in India, inclusive of the assets of the

Banking Department of the Reserve Bank, were in the vicinity of Rs. 1,500 crores against those of British banks at Rs. 12,000 crores and of American banks at Rs. 80,000 crores. The total assets of all Indian banks were thus no more than those of a single big British or American bank, yet the number of bank employees in India was 65,000 against 85,000 in the U.K. and 375,000 in the U.S.A. It was also interesting to note that the number of public holidays in India was 22, against eight in the U.S.A., six in the U.K. and five in Russia. The total working hours in Bombay were about 120 less in the year when compared with those in other countries. In other words, full pay was given for 15 workless days plus the earned holidays. Analysing the present statistical position of the banks, Mr. Bhabha stated that the establishment costs of Indian scheduled banks rose by 50 percent from Rs. 9.5 crores in 1948 to Rs. 14 crores in 1954. Against this heavy increase in their establishment charges, the total volume of business, as measured through gross earnings of scheduled banks, showed an increase of only 25 percent. The total working funds were Rs. 937.89 crores at the end of 1948 and only Rs. 876.56 crores at the end of 1954. Their net profits on the other hand steadily dwindled from Rs. 8.7 crores in 1948 to Rs. 7 crores in 1954.

Mr. Bhabha attributed the loss in banking efficiency with all its evil consequences to the continuance of unhappy relations between the banks and their employees. He felt that in order to put an end to these controversies the Industrial Disputes Act should be suitably amended so as to simplify the procedure for taking disciplinary action. It was also necessary to vest management of banks with certain special discretionary powers other than suspension. He pointed out that banks found it very difficult at present to take disciplinary action against their employees because the present procedure provided under the Act was slow and cumbersome. Mr. Bhabha further suggested that pen-down strikes, go-slow tactics, tampering with books and neglect of work, if corroborated by two officers, should be treated by the banks as serious offences and that managements should be permitted to take action against employees found guilty of these practices. Mr. Bhabha had expected a more cordial atmosphere between the bank managements and their employees after the passing of the Industrial Disputes (Banking Companies) Decision Act, 1955, but unfortunately some mischievous and unwise forces appeared to be at work creating a bad atmosphere and preventing the desirable result. Mr. Bhabha also feared that the risks attached to banking business though well known were not fully realised by all the parties concerned and added that in addition to the normal provisions that were absolutely necessary with regard to all commercial concerns, it was the general canon of sound banking that sufficient reserves should be built up for distribution and security for extraordinary hazards and for sudden and violent fluctuations in values and prices.

While accepting the nationalisation of the Imperial Bank as necessary in the larger interest of the nation, Mr. Bhabha pointed out that the security of several trusts, local authorities and other similar organisations or associations and individuals had obviously been shaken by the decision. The action of taking over the shares of the Imperial Bank at a certain rate not co-related to their intrinsic value created distrust in the public mind regarding the future of sound and solid institutions with large resources. It also led to a feeling of uncertainty for investors in general. While appreciating the co-operation given by the State Bank to commercial banks, Mr. Bhabha also complained that the former did not fully appreciate the difficulties and hardships of the latter, particularly in the matter of interest rates charged on certain types of advances. He criticised the unduly favourable position created in the case of this special banking institution "which was enjoying almost extra-territorial jurisdiction and functioning as the super body vis-a-vis the other organisations in the country." He also questioned the justice of the reported move to canalise all foreign exchange business of Government, semi-Government and public corporations exclusively to the State Bank of India, to the detriment of all other Indian commercial banks. Mr. Bhabha and Mr. D. R. Thom of the Bank of India were re-elected chairman and deputy chairman respectively for the coming year and Mr. S. L. Kothari of the Bank of Jaipur was elected honorary secretary of the Association.

Extension of Agricultural Credit

The Bombay Government has proposed an expansion in agricultural credit to the extent of 336 percent over the present level of Rs. 12.50 crores during the State's second five year plan. The present outstandings on account of agricultural finance are about Rs. 12.50 crores and the figure is expected to reach Rs. 42 crores at the end of the second plan. The expanded agricultural credit will include an outstanding of Rs. 35 crores in short-term finance and Rs. 7 crores in medium-term finance. The State Government intends to expand agricultural credit facilities through the extension of the co-operative movement, covering about 75 percent of the population engaged in cultivation in the State. As recommended in the Rural Credit Survey Report, machinery is being set up with a view to providing short and medium term loans to agriculturists through the apex bank, the central banks and the primary societies. A second scheme has been drawn up to build up an efficient network for agricultural financing, which envisages an expenditure amounting to Rs. 7.42 crores exclusive of Rs. 4 crores to be received from the Reserve Bank of India for participating in the share capital of credit institutions.

Uttar Pradesh

U. P. TO INCREASE RURAL CREDIT

FACTORIES STILL AWAIT CUT IN SUGAR EXCISE

(FROM OUR LUCKNOW CORRESPONDENT)

THE Reserve Bank of India has offered to advance to U.P. a sum of Rs. 40 crores to enable the State to extend rural credit through co-operative societies during the period of the second five year plan. Of this sum, Rs. 25 crores will be lent on a short term basis, Rs. 10 crores on medium term and Rs. 5 crores on long term. To fulfil the obligations of the offer, the Government will raise its investments with the co-operative banks by Rs. 3 crores and reduce the interest rates payable by cultivators from 15 percent to 8½ percent. It is hoped to reduce the rate further to 6½ percent in the next year or so. Land mortgage banks will be opened to enable cultivators to raise loans not only on their crops but also on their land. The interest payable by co-operative banks on Government loans will be 3½ percent.

Proposals for Excise Reductions

Mr. A. C. Guha, Union Minister for Revenue and Defence Expenditure, told a joint meeting of the Employers' Association of Northern India and the Oil Millers' Association, that they had made out a good case for the exemption from excise duties of cloth used in the manufacture of tents and tentage for export. Trade representatives had pointed out that since cloth intended for export was exempted from excise duties, there was no reason why duties should be levied on tent cloth intended for export. Mr. Guha assured the industry that the Central Board of Revenue is considering the administrative aspects of the proposal and that a favourable decision will be taken in the matter shortly. Mr. Guha was also sympathetic towards the industry's demand that Sunday working should not be penalised, especially if such working was found necessary in order to coincide with rail transport and other facilities. He promised to look into the matter and also to take up the question of the clearance of excisable goods on Sundays. Referring to the excise duty on vegetable oils, dhoties, etc., Mr. Guha said that no one could point to even a single instance since 1950 onwards when industry was crippled merely because an excise duty had been imposed.

Almost immediately after Mr. Guha's statement in Kanpur, U.P.'s Planning Minister, Mr. C. B. Gupta, voiced a grievance against the Union Finance Ministry for not agreeing to the proposal for a reduction in the excise duty levied on sugar. He pointed out that this had been promised to the sugar factories in return for their agreement to start earlier crushing from 15th October, 1955. The managements of the factories, Mr. Gupta said, had been persuaded with great difficulty to start earlier crushing and an undertaking was given that an effort would be made to secure a reduction in sugar excise as well as in cane cess. The Union Minister for Agriculture and Food, Mr. A. P. Jain, was also present at the meeting of the Sugar Control Board which gave the assurance to the mill management, and Mr. Jain had agreed to the suggestion in principle. But it appeared that the Finance Ministry turned down the proposal and the State Government had been left to face the charge of breach of faith now levelled by the sugar factories.

Criticism of Fact-Finding Committee

There has been some rather severe criticism by the Socialist Opposition of the Industrial Fact-Finding Committee appointed by the Government under the chairmanship of Mr. B. M. Birla. It was pointed out in the first place that the Committee would have served a more useful purpose had it been appointed before the second five year plan was finalised. The Socialists, however, were in agreement with the Planning Minister in deploring the Centre's stand on U.P.'s demand for the allocation of some heavy industries to the State. According to the Planning Minister, without these industries the State will find it impossible to achieve the proposed 25 percent increase in the national income during the second plan period.

Plans for Newsprint Factory

The shape of industries to come is yet to be finalised but considerable interest has been aroused by the proposals to start a newsprint factory in Dehra Dun. A preliminary survey conducted by the Chief Conservator of Forests, U.P. makes out a good case for the location of the industry in or near Dehra Dun. The yield of fir trees in the Tehri, Yamuna, Uttarakashi, Tons, Chakrata and Garhwal regions of the State is estimated at 56,000 tons a year. A rough estimate of the area required for the project is about 25,000 acres planted annually. At present the price of a single fir tree is about Rs. 50, but it is expected that if a larger number of trees were to be placed on the market the price would be lower. The newsprint industry will accept trees irrespective of their shape and form, that is to say even trees which would be normally unfit to be sawn into timber. It would be necessary to levy a royalty at two-thirds of the market price of the trees, the proceeds to be devoted to re-afforestation as it is essential to ensure continuous supplies to the industry. The total cost of the timber, including transport, would be about Rs. 100 a ton.

It has been suggested that in the first instance it would be advisable to start with a 50 ton plant,

N. D. JOSHI,
MANAGER

gested that Pakistan might again consider seriously the possibility of lowering minimum prices during the coming season and explore the feasibility of introducing some scheme to control maximum prices and so remove one of the greatest threats to jute. Mr. Mill paid tribute to the home-producing trade for the sacrifice made to protect consumers of jute goods in this country from the effects of rising costs and from increased raw material prices in a year of creeping inflation. On the raw jute position, Mr. Mill said that Pakistan had lost a golden opportunity to put jute on a lower and more realistic price basis in relation to other competitive materials when the Pakistan Government did not pass on a price reduction to raw jute consumers following devaluation of the rupee on 31st July last year.

U. S. BURLAP CONSUMPTION AND STOCKS

U.S. burlap consumption during February, although 4 million yards down from January, was 3 million yards more than February a year ago. Estimated consumption for the first two months of this year is 10 percent better than for the same period last year. U.S. burlap stocks, at the end of February, again showed little change, having increased 2 million yards over January. The 245 million yards included 138 million yards spots and 107 million yards floats. Appearing below are two tables which include the February figures—(1) based on member reports to the Textile Bag Manufacturers Association and the Burlap and Jute Association and (2) projected to represent the estimated consumption and stocks for the entire industry:

NO CHANGE IN U.S. BURLAP TRADING

United States business in burlap failed to pick up during February in a market characterised by a seasonal lull, reports the Jute Bulletin of the Indian Central Jute Committee. The let-up in demand was natural for this time of the year, more so because stocks of burlap with consumers at all levels were more than adequate to cover all foreseeable near requirements. The trade seemed to be in no hurry to enter into fresh commitments as abundant supplies stemming from increased Calcutta production and a possible easing of prices were round the corner. The implications of a sizeable advance in Calcutta stocks of jute manufactures at the end of January were also noted. Even though the overall position with regard to supply and demand was not statistically unsound, 40in. 10oz. construction became quite scarce in New Orleans with only moderate quantities available in the New York area. On the other hand, 40in. 7½ oz. was on offer in quantity at New Orleans at prices no higher than for early shipment from Calcutta. There was, however, little actual business reported. Offers of Japanese burlap were believed to have dried up. After the sharp advance that had taken place in Pakistani prices for raw jute, Japan was obviously finding it difficult to compete with Calcutta. Another view put down Japan's withdrawal from the U.S. market to the fact that production of the Japanese mills for the next few months totalling from 8 million to 9 million yards had already been sold to Turkey and Uruguay at better prices than could be obtained in the U.S.A.

Calcutta Markets

FREIGHT MARKETS VERY FIRM

THE freight markets continued very firm last week, and the American coal trade showed yet another rise at 72s 6d to the Continent for April loading. Queensland sugar charterers opened their 1956 account with the payment of 205s a ton to the U.K. for July-August loading which compares with 180s paid in November 1955. Local markets featured the fixture of consecutive voyages Calcutta-Chittagong at 47s and more time charter trips were arranged for Japanese account at rates ranging from 45s to 47s according to port of delivery. Grain was arranged from North Pacific to Bombay at \$(U.S.) 22.50 and \$(U.S.) 22.25 according to loading positions.

SUGAR MARKET DULL

During the week ended 28th March, sugar sales in the Calcutta market averaged 3,500 bags a day. Arrivals were 1,800 bags daily, and stocks totalled 175,000 bags. Rates for ready sugar ex-Kantapur delivery were Rs. 30-12 for ordinary grain, and Rs. 32-8 for big grain. Ex-mill delivery rates for different grades of sugar varied from Rs. 28-4 to Rs. 29-2. The market was dull.

LINSEED

There has been a reaction in seed prices during the past week and ready supplies which had commanded a premium have fallen into line with forward delivery. New crop seeds have commenced moving in certain sectors, and sellers have been more in evidence, crushers have shown keen interest, and trading was reported on a fair scale daily. The oil market was more or less unchanged: a recent demand for ready goods for shipment against former commitments helped improve prices somewhat; no fresh export business was reported with buyers pausing. Latest quotations were as follows: March-April-May Rs. 23 a maund.

HIDES AND SKINS

The market ruled easy. Stocks were higher than in the previous week.

Bazaar Sales

(Between 20th March and 26th March, 1956)
Cowhides: Wet salted (Ord.) 58,000 pcs. on the basis of Rs. 6-12 to Rs. 8; Wet salted (Slaughtered) 18,700 pcs. on the basis of Rs. 11-8 to Rs. 20-8.
Goatskins: Wet salted (Daissee, Killed) 60,460 pcs. on the basis of Rs. 225 to Rs. 235. Rs. 27-2 to Rs. 300 and Rs. 300 to Rs. 350; Assam-Dinajpur-Malda 7,300 pcs. on the basis of Rs. 265 to Rs. 310; Purneah-Kissenganj 5,230 pcs. on the basis of Rs. 285 to Rs. 300.

Bazaar Stocks

(26th March, 1956)
Cowhides: Wet salted 22,800 pcs.
Goatskins: Wet salted (Daissee, Killed) 18,000 pcs.; Assam-Dinajpur-Murshidabad 1,29,000 pcs.; Muzafferpore - Patna - Pakur - Purneah - Kissenganj 5,81,000 pcs.

SHELLAC MARKET QUIET

During the week ended 27th March, the market remained quiet. The range of quotations was as follows:

Pure Buttonlac	Rs. 138 to 128 value.
Lemon No. 1 Shellac	Rs. 133 to 128 buyers.
Lemon No. 2 Shellac	Rs. 128 to 124 buyers.
F. O. Std. 1 Shellac	Rs. 124, 122-8 buyers, 122 done, 120 buyers.
Pure TN Shellac	Rs. 120 to 116 basis done and buyers, 116 buyers.
4% I.T.N. Shellac	Rs. 112, 109, 110 buyers.
No. 1 Kusmi Seedlac	Rs. 130, 128 buyers, 128 value.
No. 2 Kusmi Seedlac	Rs. 120, 118 buyers, 118 value.
Fine Bysaky Seedlac (Manbhum)	Rs. 118 to 112 buyers.
Fine Bysaky Seedlac (C.P.)	Rs. 109/107 buyers, 102 done and buyers, 102 buyers.
Ordinary Bysaky Seedlac (C.P.) Under 5%	Rs. 95 to 88 buyers.
Ordinary Bysaky Seedlac (C.P.)	Rs. 88 buyers, 85 done and buyers, 82 buyers.
Kireelac	Rs. 40 to 38 buyers, 40 value.

Shipments during March until the 21st were 19,709 packages, comprising shellac 12,360, seedlac 5,203, buttonlac 150 and others 1,996.

SUGAR PRODUCTION AND STOCKS

According to the Indian Sugar Mills Association, sugar production in India during the month of February, 1956, was 3,56,795 tons bringing the total production during the first four months of the current sugar season to 10,73,049 tons against 9,82,600 tons during the corresponding period last season. During the current season, 142 factories had already started crushing by the end of February against 136 factories which worked last season. The off-take of sugar from the factories during the month of February was about 2,34,000 tons against only 98,400 tons during the corresponding period of last year. The total off-take during the first four months of the current season was about 6,15,000 tons against 2,75,400 tons of the previous season. The closing stock of indigenous sugar with the factories on 29th February was 8,82,059 tons against 7,75,400 tons during the corresponding period last season.

OIL AND THE MIDDLE EAST CRISIS

POLITICAL STABILITY VITAL

(FROM A CORRESPONDENT)

IT is not a bad thing that in the debate on Britain's policy in the Middle East both sides have abandoned the pretence that the nation's main concern is with political stability for its own sake. All the world knows that Britain is obsessed by the need to assure the flow of oil, and no harm can be done by saying so. That sterling weakened and continental holders of British Government stocks and oil shares became nervous when the dismissal of General Glubb touched off the Middle East crisis shows that the outside world is aware of the significance of Britain's position in the area. And in respect of oil Britain's interest is shared by continental Europe: all of West-Europe's economy has expanded with the aid of the Middle East's oil, and the precarious balance of its power-supplies would be upset disastrously if the flow of that oil were stopped.

The figures speak for themselves. This premier oil-exporting area of the world supplies all but a few percent of West-Europe's imports of crude oil and nearly four-fifths of its total supplies. The oil itself is far more important than the £2,000 million or so of British-Dutch investment in it or the £200 million at which the British-Dutch companies' Middle East oil is valued in a year. There are no alternative sources of supply that could be developed quickly enough—if at all—to avert an economic crisis if supplies from the Middle East were interrupted. As it is, economic policies in western Europe are based on the assumption that much more of this oil will be forthcoming in future years.

Location of Reserves

The geographical position and the social condition of the Middle East are unfortunate from Europe's point of view. It is disturbing to think that one of the most developed regions of the world is dependent on an area bordering the Soviet Union and peculiarly susceptible to Soviet ideas because its own social systems are archaic, dependent, that is, on an unstable area. The western powers cannot change geography but they can, perhaps, do more than they have done in the past to influence beneficially the social development of the oil-producing countries. In general—Kuwait is a conspicuous exception—the vast wealth of the Middle East's oil has done little to benefit the ordinary people of the region. The revenues are now being devoted—notably in Iraq—more to capital projects that will ultimately raise the whole status of the region. But such developments need years; whereas political changes can express themselves in months.

From the western viewpoint the situation is further complicated by the location of the oil reserves in the area itself. If they were on the European side of the territory the western powers could focus their attention on that side; but as they are more on the Asian side political stability is important both in the producing countries and in the countries through which the pipelines must pass. Moving the oil is, of course, as important as producing it. Pipelines and tankers involve huge capital outlays. Refining and marketing require further investment on a massive scale. For Britain, the *Esso Magazine* suggested recently that the oil companies would have to spend about £1,000 million between this year and 1964 to satisfy fuel-oil requirements estimated at the equivalent of 70 million tons of coal a year, that total including more than £200 million for tankers and some £340 million for refining and marketing.

Governments and oil companies alike have, of course, given serious thought to the risks, but they have decided that the risks must be taken, that the development plans must proceed. Britain's Ministry of Fuel and Power has confirmed since the Middle East crisis broke out that production of fuel-oils must increase by nearly one-quarter annually over the next five years to make good the prospective deficiency of coal. The Shell-Mex-BP group has estimated that on the present basis the deficiency would be equivalent to some 50 million tons of coal by 1960 and that consumption of fuel-oils must be nearly trebled—from 7½ million tons in 1955 to 21½ million tons in 1960—to fill most of the gap. Such an expansion involves large-scale conversion from coal-firing to oil-firing in factories, power-stations, and railways.

Western Europe, by contrast with the United States and the Soviet Union, is troubled enough anyway by shortage of energy. It must evidently develop its nuclear power with more sense of urgency than it has shown hitherto. But over at least the next decade it cannot escape the necessity to use more oil—oil mostly from the Middle East. No solution of the Middle East problem that has yet been proposed offers any certainty that the Middle East will be politically stable for so long. There is, however, one important reason for confidence—albeit a qualified confidence. The reason is the more solid for being not political but economic. It is that, just as Europe depends on the Middle East as a source of oil, so the Middle East depends on Europe as a market for oil. Not even the "Sovietisation" of the area would fundamentally change this fact. Certainly, the Soviet bloc would feel much stronger with the Middle East's oil at its disposal, but new oil strikes and big oil-producing projects in the U.S.S.R. indicate that the bloc's own oil-shortage will be overcome internally. In any foreseeable circumstances the Middle East must continue to supply oil to Europe unless its riches are to be largely wasted.

COMPANY AND PUBLIC NOTICES

BHARTIA ELECTRIC STEEL CO. LTD.

NOTICE.

NOTICE is hereby given that a General Meeting of the Shareholders of Bhartia Electric Steel Co. Ltd., will be held at the registered office of the Company at 42, Shibtolla Street, Calcutta on Friday, the 20th April, 1956 at 3 P.M. to consider, and if thought fit, to pass with or without modification some or all of the following resolutions each to be proposed as a special resolution:

(1) "Resolved that the Company approves of several contracts being entered into between the Company and each of the following firms or companies namely:

1. Bagri Iron & Steel Co. of 40/1, Shibtolla Street, Calcutta.

(3) "Resolved that the Company consents to Sri R. L. Bhartia and Sri P. R. Bagri, Directors of the Company who are also Directors of the Managing Agents, M/s. Bhartia Co. Ltd. holding and continuing to hold office or place of profit under the Company."

(4) "Resolved that all payments of interest at the rate of 6½ p.a. to the Managing Agents on loans advanced by them to the Company on and after 1.1.1952 be and the same are hereby ratified and confirmed. Further resolved that the Directors of the Company shall be at liberty to pay to the Managing Agents interest at such rate or rates as has or have already been agreed upon or may hereafter be agreed upon irrespective of any provisions to the contrary in the Managing Agency Agreement."

By Order of the Board,

BHARTIA COMPANY LTD.,

Managing Agents.

42, Shibtolla Street,
Calcutta, 22nd March, 1956.

To the shareholders of the Company and in particular to:—

Mr. Andre Caetano Lobo; Mr. Frank William Goodhand; Mr. Ikram Hasan Khan; Mrs. Maria Virginia De L. C. Lobo; Mr. M. Bashirul Haque Haqqi; Mr. Md. Ibrahim Khan; Mr. Santi Prasad Sen Gupta; Mr. Sajjad Husain; Begam Zubaida Khatun; Khan Bahadur Dr. Ghulam Mohammad; Mrs. Sita Bai.

MACKINNON, MACKENZIE & CO. LTD.

It has been decided that Mackinnon, Mackenzie & Co. Ltd., will, in future, confine its activities to shipping. That Company has, therefore, with effect from 31st March, 1956, resigned its Managing Agencies of the India Jute Co. Ltd., the Megna Mills Co. Ltd., the Saloonah Tea Co. Ltd., and other Agencies unconnected with shipping, but will continue its connection with the British India Steam Navigation Co. Ltd. and other Shipping Companies as Managing or Port Agents.

The intention is that the India Jute Co. Ltd. and the Megna Mills Co. Ltd. will, as from 1st April, 1956, be Director-controlled, while the Saloonah Tea Co. Ltd., which is a Sterling Company, will be transferred to the Agency of Messrs. Macneill & Barry Ltd.

THE PREMCHAND JUTE MILLS LTD.

NOTICE is hereby given that an Extraordinary General Meeting of the Company will be held at the Registered Office of the Company at No. 81, Sovabazar Street, Calcutta, on Friday, the 27th day of April, 1956 at 11-30 a.m. to consider, and if thought fit, to pass the following Resolutions, namely:—

1. (As an Ordinary Resolution): "That, subject to the approval of the Central Government, the terms and conditions upon which Raja Janokinath Roy & Brother Ltd., (a Private Company) shall continue to hold office as the Managing Agents of the Company for ten years as from the 1st April, 1956 shall be as set forth in the draft Agreement produced to this Meeting and for the purpose of identification signed by the Chairman thereof and that, accordingly, the Directors be and they are hereby authorised to enter into an Agreement with Raja Janokinath Roy & Brother Ltd., in terms of the said draft subject only to any modifications thereof that may be agreed between the Directors and the Managing Agents for the purpose of complying with any conditions imposed by the Central Government.

2. (As a Special Resolution): "That the Articles of the Company be amended in the manner following:—

(a) By deleting Article 110 and substituting the following therefor:—

"110—Raja Janokinath Roy & Brother Ltd. are the Managing Agents of the Company and shall hold office as such upon such terms and conditions as to the remuneration and otherwise as may from time to time be agreed between them and the Company."

3. (As a Special Resolution): Resolved that the Members of the Company consent to Mr. Gopendra Lal Pal Chowdhury, Superintending Engineer of the Company who is a relative of Mr. Romendra Nath Roy, Director of the Company for continuance of his employment from 1st April, 1956.

A copy of the draft Agreement referred to in Resolution 1 above, is available for inspection at the Registered Office of the Company during usual business hours.

A Member who is entitled to attend and vote at the Meeting is entitled to appoint a proxy to attend and vote instead of himself and that the proxy need not be a Member.

By Order of the Board,

THE PREMCHAND JUTE MILLS LTD.,

ROMENDRANATH ROY,

Director.

61, Sovabazar Street,
Calcutta,
The 24th March, 1956.

TEA COMPANIES

O Po and Dd indicate Ordinary Preferred Ordinary and Deferred Shares, respectively. P next to the name of the company indicates that the Company also has Preference Shares. Figures in "accounts closed" column indicate the months of the calendar year in which accounts are closed. For Managing Agents refer to the Key (last page) under the numbers indicated.

EXPANDING INDIAN ENGINEERING

I.E.A. CHAIRMAN NAMES STEEL AND TRANSPORT AS LIKELY BOTTLENECKS

NOT many industries in India today can claim to have a more promising future than engineering. The mood of despondency which prevailed four years ago seems virtually to have disappeared—at least in the organised sector of the industry. Production has increased steadily, order-books are bulging in many cases, big new expansion plans are being framed, and investors are offering support on a scale that is a reassuring testimony to their confidence in the future. The working of engineering concerns is in many ways an index of the rate of general expansion in an economy which is industrialising rapidly. In the past two or three years, this has clearly been the case. Wagon orders from the railways, hydro-electric projects, expansion in a host of industries such as iron and steel, the establishment of oil refineries—all these have brought major benefits, direct and indirect, to such concerns. As Mr. K. Chatterton, chairman of the Indian Engineering Association, made clear in his address to the annual meeting of that body in Calcutta last week, considerable sums have been spent on the modernisation of equipment and the effects of this are now beginning to show. Productivity has increased rapidly, and in such an important sector as wagon construction the expansion has been of the order of 67 percent over the past two years. With many other important engineering products impressive increases have also been recorded. Mr. Chatterton mentioned that between 1948 and 1954, output of diesel engines rose by 750 percent; bicycles by 570 percent; transformers by 390 percent; sewing machines by 300 percent; pumps by 250 percent; electric motors by 203 percent; and electric fans by 32 percent.

It is fairly clear that the engineering industries will provide the foundations upon which the expansion contemplated in the second five year plan will take place. A feature of the plan, in comparison with the one just ended, is that it lays greater emphasis on the development of transport and manufacturing activities. Since both these depend in the final analysis on the products of the engineering industries, the progress of the latter may be fairly described as crucial to the success of the plan. Mr. Chatterton, in his address, discussed the technical aspects of the plan as they are likely to affect

in progress this year. Britain's rates are still comparatively high, but credit at lower rates is not always freely obtainable in other countries, whereas—rather surprisingly, in view of the Government's restrictive policy—the British monetary system is still liquid and tending to become more so. Moreover, many international traders seem willing to maintain their connections with London, as a precaution against difficulties that might arise if they transferred their allegiance to another centre and, conditions there becoming tighter, were unable to resume their connections with London. While the British authorities are doubtless relieved to see the lower money rates abroad coming more or less into line, it seems that the threat that these lower rates represented to the financial business of London was exaggerated. That disparity is short-term. There are, however, long-term factors tending to diminish the importance of London as a financial centre, and the rise in London's interest-rates has accelerated them.

The recent initiation in Canada of what is in effect a free gold market is a reminder that Canada has for some time past been developing her own money market. That development is not directly relevant to Britain, as Canada had, naturally, used the nearby facilities of New York. But many other countries are planning similar developments, which must tend to reduce London's business. Some of these countries, such as Belgium, are already well developed; others, such as India, the Middle Eastern and the Latin American countries, have only recently begun large-scale economic development; others, again, such as Greece and Eire, are too small and sparsely-populated to aspire to large-scale development. The movement is as strong in the sterling area as outside of it—in Australia, New Zealand, South Africa, as well as India. This development of local money markets may, over the years, profoundly change the form of international finance. It is not a rapid process: even where efficient local facilities have been established, the change-over from established centres has been, from the viewpoint of the sponsors of the new ones, disappointingly slow. But it is part of a broader process, whereby central monetary authorities are gaining a firmer hold on economic trends; and as such it will inevitably be pressed further. Belgium is a conspicuous case where monetary control has been relatively ineffective in the absence of a well-developed money market. Other countries have perceived that the delicate mechanism of credit-control cannot be operated with full effect when important parts of the financial system are geared to a money market abroad, where trends may be not only different but conflicting. Also, foreign exchange comes more readily into official hands when there are facilities for investing liquid funds at home; and an increase in official reserves promotes confidence, even though it is counterbalanced by a decrease in the commercial banks' reserves abroad.

A more questionable, but not necessarily false, motive for developing local financial services is to retain at home the proceeds of such services. Freedom of trade and exchange has often been thwarted for a similar reason. But if the facilities established locally are reliable, efficient, and cheap, they can be genuinely useful to traders and at the same time reduce the debit side of the country's invisible payments account. To the extent that this movement develops, Britain, especially, will suffer a reduction of the credit side of her account—at least, relatively to the total of international trade. She lost her industrial predominance generations ago, and she could not hope to retain her financial predominance for ever.

DR. ROY'S OWN PROFIT MOTIVE

IN stressing the need for a properly co-ordinated and complementary relationship between small and large industries in India, Dr. B. C. Roy lent his influential support to a matter which has already been accepted in principle—by the Government and private industry alike. He did so while addressing the recent annual general meeting of the Bharat Chamber of Commerce. He made several other important points besides. But this was one issue on which he appears to have strong personal views, and it is a good thing that a practical administrator of his standing should have. His speech, however, gave the clear impression that Dr. Roy considers the big industries to be neglecting the part they must play. He quoted the examples of a few jute mills which were themselves manufacturing small items such as nuts and bolts rather than ordering them from the small engineering works in Howrah. He even appeared to believe that the excuse given by the jute mills, that the requisite quality of the goods could be ensured only if they were produced under the mills' own supervision and control, was not "good enough." He may be taking too hard a view of the matter. Quality is an important question for the buyer, and the jute mills, belonging as they do to a highly competitive industry, may be justified in manufacturing for themselves the small items Dr. Roy referred to. The obvious conclusion is that the big industries in this coun-

try have little confidence in the productive efficiency of small ones, or the quality of their goods.

It might be rewarding to work out measures which could ensure the quality standards of the products of small industries. It would be an uphill task, as it seems almost impossible to enforce standards of production for the millions of units that belong to what is called the small-scale industries sector. Yet it is a task to be attempted. In Japan, the basis of active co-existence between large and small producers in its developed economy, is the efficiency with which the latter perform their complementary rôle, and the quality of goods they produce. In that country, there is little external compulsion in the matter, while no shot-in-the-arm measures have yet been applied to keep small enterprise alive. That would seem to be a sound principle for re-ordering the relationship between the "dwarfs" and the "giants" in India.

Dr. Roy certainly knows this well, but when he spoke on this issue, the question that was perhaps uppermost in his mind was that of fuller employment. His humorous description of himself as "a fellow-traveller in industry" whose profit-motive it was to develop "the human material at the disposal of the State and turn it into human wealth," represented a noble sentiment. No sensible person quarrels with these ends in the twentieth century, but differences can arise over the means that are being chosen.

Dr. Roy expressed his dislike of the Union Government's action in nationalising life insurance on the specious plea that the industry under private ownership suffered from a multitude of malpractices. He rightly pointed out that malpractice was not a vice peculiar to the private sector alone. There is an unfortunate tendency in high quarters today to look upon public enterprise as an end in itself, even though that may mean merely a bureaucratic control of industry with all its attendant evils, and as such far removed from the goal of social justice and individual liberty that are fundamental objectives of the Constitution. Private enterprise is distrusted and maligned. While the second plan gives it a vital place for the fulfilment of all the statistical targets, Union Budgets take away year after year those essential tools which private industry needs to do its job. Mr. R. N. Banerjee, the outgoing President of the Chamber, made many pertinent comments on these issues in the survey of economic events that he provided in his speech. Judging from the tone of his address, as also from those of many other leaders of industry and commerce, the private sector in this country labours under the feeling that the Government has shown no particular eagerness to accept its co-operation in the economic reconstruction of the country, even though it has offered to co-operate out of motives which are not just those of profit.

CURRENT COIN

Polychem Share Offer.—The subscription list opened last Saturday for Polychem Ltd's offer of 80,000 preference shares and 40,000 ordinary shares. Both classes of shares are being offered at the par value of Rs. 50 each. The preference shares, carrying interest at 7½ percent, taxable, will be redeemed within 20 years of the date of issue. The whole of the public issue has been underwritten by the Industrial Credit and Investment Corporation of India and by the Bank of Baroda. The promoters and their friends are taking up 40,000 ordinary shares. One of the main activities of the company will be to manufacture polystyrene in collaboration with the Dow Chemical Co of the United States. This material is at present used in India by the plastic moulding industry for making a variety of industrial and consumer goods; the demand for it has shown an impressive increase since 1948 and is expected to rise further. The plant which Polychem Ltd proposes to set up will have a rated capacity of 6 million lbs. of moulding powder a year, and it will have a margin for expansion to meet the requirements of the moulding industry. The directors say that, on the basis of existing prices and after allowing for all costs, overheads, depreciation and a margin for contingencies, they are confident that the company will be able to pay an attractive dividend on the ordinary shares.

Eisenhower's Decision Boosts U.S. Business.—The news that President Eisenhower will run for a second term has removed one of the major uncertainties surrounding the business outlook in recent months, says the First National City Bank of New York in its monthly letter on U.S. business and economic conditions. This announcement will bolster optimism in view of the confidence with which the business and investment community has regarded the present Administration. There is no way of knowing precisely how much political uncertainties weigh in business decisions, and there has been much reason to believe that the forward plans of business men, involving record expenditures for plant and equipment, were

firmly grounded on faith in expanding markets and the need to keep up with competition in introducing new products, cutting costs, and building for the future. Nevertheless, the political climate is always to be reckoned with. The new year appears to be carrying on where the old one left off, with little change in the high rate of business activity. The long rise in overall production and trade has evidently come to a halt, but there are few indications of decline. Industrial production, retail sales and construction work in January, on a seasonally adjusted basis, were about the same as in December, and the highest for any January in history. Preliminary data indicate that business in February has followed much the same level course. Compared with the first two months of 1955 substantial gains, in the neighbourhood of 5 percent to 9 percent for various measures of production and trade, have been realised. The forecasters who have so generally predicted that 1956 in the aggregate will show increases over 1955 can show that so far the figures are running their way, and that gains are being accumulated against the time when comparisons may be less favourable. The industrial production index, seasonally adjusted, has held at 143 or 144 (1947-49=100) since last October. This is a record high level. Retail sales, after seasonal correction, have moved sideways for the same length of time. The stability of these and other comprehensive measures, however, does not signify a standstill in business. It conceals adjustments of output in individual lines, shifts in markets, and changes in inventory and other positions. The principal curtailment has been in passenger car output; automobile sales, seasonally adjusted, have also declined somewhat. But during the same period the soft goods industries and mining have advanced to new highs, and despite the automobile slackening durable goods production has been maintained close to its peak by increased output of machinery and equipment, trucks, building materials and steel. Retail sales of other goods have expanded to offset the easing in automobile sales. Thus adjustments are being made without marked effect on aggregate activity. It is possible that the reduction of passenger automobile output has now gone about as far as necessary. Since mid-November, when output of 1956 models reached its peak, the cutback has been more than 30 percent. Original assembly schedules were over-optimistic and inventories mounted rapidly. By the end of January dealers were holding record-breaking stocks of 830,000 new cars, according to Ward's Automotive Reports, and a further increase occurred in February. However, latest figures on output—124,500 in the week ended 25th February—are roughly in line with estimated current sales and exports. From this point on the spring upturn in new-car sales should be under way, and if it is as marked as usual it will cut away excess dealers' stocks during the spring months without further curtailment. The decline in sales has been more moderate than the production cutback. In fact, only since mid-January have sales of the 1956 models fallen behind the phenomenal pace of 1955. There are also signs that the decline in home-building is reaching the bottom, for despite severe weather, the seasonally adjusted annual rate of new homes started in January remained close to the November-December rate of 1.2 million. Contract awards for residential construction during the first seven weeks of 1956, as compiled by F. W. Dodge Corporation, were higher than a year ago, and Federal Housing Administration officials report that "mortgage money was more readily available in early 1956 than in other recent months". The discounts at which outstanding insured and guaranteed mortgages have been selling have narrowed a little and appraisals requested from the Veterans Administration have turned upward again. In conjunction with earlier steps to ease the mortgage tightness, these are fairly convincing indications that the decline in housing construction is flattening out. As an influence on general business, its weakness is behind rather than ahead.

Eastern Bank Report.—Sir Evan Jenkins, chairman, tells shareholders of the Eastern Bank Ltd. of a "good" trading year in his statement circulated with the report and accounts for 1955 (an extract from it appears on a later page). The published profit has risen to £132,536 from £129,011 in 1954, and the dividend has been maintained at a total of eight shillings for the year. The balance-sheet total has increased to £47.56 million from £37.35 million at the end of 1954. But Sir Evan declares that "since the end of the year certain assets held by one of our branches have given us concern." Some provision has already been made in the accounts for the diminution in the value of these assets, and, if necessary, further provision will be made in 1956. Sir Evan goes on to say that the further increase in the Bank's resources has been useful and profitable, but "it may not be permanent." Competition is increasing almost everywhere, and in countries which enjoy a revenue from oil, large fluctuations in balances are not unusual. Discussing the economic situation in India, he declares that the objectives of the first five year plan have in general been achieved. But there will evidently be a wide gap during the second plan between the resources available and those

required, and this is likely to be filled with external aid and new taxation. "It is clear," he states, "that income-tax and surtax are likely to be increased still further. This is an important matter for foreign concerns established in India whose imported staff are now increasingly anxious about the future." Discussing the commodity markets in India, Sir Evan says that they were on the whole fairly steady and business was good. Tea, however, lost ground at the end of the year after recovering from the slump of the spring. Import policy has been liberalised further, the emphasis being on the needs of Indian industry rather than on consumer goods. Turning to Pakistan, Sir Evan says that there is no reason to doubt its long-term economic position, though "the immediate economic difficulties are due to over-rapid industrial development, which has strained foreign exchange reserves to breaking point."

Labour Policy and Problems.—Mr. E. F. G. Hunter's comments on the Indian Government's labour policy for the second five year plan can by no means be dismissed lightly as one-sided or parochial, even though he represents employers' interests and is the President of the Employers' Federation of South India. Mr. Hunter's views are essentially those of a man versed in the practical affairs of industrial management and relations; indeed his views could have been those of any independent critic with no political axe to grind. His first criticism against the proposed policy is that it leaves little initiative to workers and managements to settle their disputes or adjust their relations entirely by themselves without intervention. The presence of a third party, as a rule, complicates rather than simplifies matters, and this is to be made worse by guaranteeing labour certain rights and amenities without there being corresponding obligations of duties, discipline and output. Labour legislation in recent years, Mr. Hunter rightly felt, is one-sided. People with vested interests in labour are already taking advantage of this legislation, being quick to grasp its spirit, and in the first ten months of 1955, some 4,800,000 man-days were lost due to various reasons. Mr. Hunter, therefore, held the "outsiders" in trade unions responsible for the indiscipline of labour and the stoppage of work on trivial grounds. It was understandable, he said, that outsiders could be allowed to represent workers who were mostly unlettered. But what justification is there for allowing these elements to represent employees in banking, insurance and other commercial establishments where they are educated enough to look after their own interests? Since one of the proposals of the second plan labour policy is to restrict the entry of outsiders to trade unions, Mr. Hunter suggested that an experiment be made in the latter fields by prohibiting "outsiders" from gaining a hold over the unions. The need of the hour, he suggested, was to provide trade unions with educated leadership, and a comprehensive course of education should be prescribed, preferably forming part of university education. This indeed is a long-felt need. Relevant to this suggestion was Mr. Hunter's opposition to the revolutionary proposal to associate labour with management. In principle, it was unexceptionable. But the conditions being what they are, the present time, he said, was most inopportune for introducing such a scheme. Industrial management is a highly skilled business of which workers have but little knowledge. Under present conditions, such a system can only lead to friction and disharmony with ultimate harm to industry. Mr. Hunter wondered, with many other thinking people in this country, how it was possible to reconcile the argument behind this proposal with that for permitting outsiders to lead on the ground that "the workers are not yet ready completely to eliminate outsiders" from their unions.

The Outlook for Copper.—World consumption of copper in 1955 was over 3,000,000 tons, compared with an average consumption during the immediate prewar years of 1,780,000 tons. Despite the use of aluminium and plastics as substitutes, the expansion has been maintained and is expected to continue doing so as electrical power supplies increase, for electrical engineering accounts for half the total consumption. New copper production is expected to provide a further 600,000 tons a year by 1959, but this may not be sufficient to meet the demand. An analysis of potential demand for copper by a firm of London stockbrokers points out that the increase in world supplies of electricity has been at the rate of 7 to 10 percent a year in industrial countries and more in the backward areas; it suggests that the rise in copper consumption should not be proportionately much less. The importance of Russia, which is now second to the United States in electricity production as a consumer, has probably been underrated. The Russians have more than trebled their prewar copper production, but are still looking for imports. The analysis also shows that copper is losing much less ground to other materials than seemed likely five years ago. A slump in the United States, which effectively dominates the copper market, could alter the picture. The United

States accounts for 30 percent of all production and 40 percent of consumption. The impact of a slump there might be softened, however, by large new hydro-electric projects such as those now in hand at Niagara Falls, the St. Lawrence Seaway and the Columbia River. The Paley Committee, which was set up by the U.S. Government to report on the availability of copper supplies, among other commodities, estimated that U.S. industrial production would double between 1950 and 1975. From this it drew the conclusion that U.S. copper consumption would increase by 45 percent. Outside the United States it considered that consumption would go up by 50 percent, or 2 percent a year, over the same period. So far events have shown that the Paley Committee underestimated the rate of expanding demand. The analysis makes a further interesting point on the inelasticity of the demand for copper. The advent of substitutes is not substantially accelerated by the present high price. "In a house or a motor car, the amount of copper consumed . . . is relatively small. Variations in the price of copper thus have little effect on the price of the finished product and for this reason the demand for copper is, in economic terms, inelastic." It concludes that, although the current price of about £400 a ton was caused by the severe stringency which followed last year's strikes, a fall below £300 is not likely in the visible future. Over a longer term it foresees an even greater stringency and a widening gap between production and demand.

New Processes for Fabrics.—Indian manufacturers display considerable interest in references to new developments in the textile world, whether to plant or processes. A new example of what is being done to increase the attractiveness or serviceability of cotton goods to enable them to hold

their own against the man-made fibres has come to notice. A. Cover and Co. Ltd., which specialises in household textiles and particularly table-cloths, has recently demonstrated in Manchester a new product which is a yarn-dyed woven cotton cloth specially processed on one or both sides, with or without a damask effect, which is to be sold either in the piece or in table-cloths ready for use. The process applied makes the cloth impervious to heat from plates or other utensils which are likely to be placed on a table. Ordinary stains from ink, milk, tea and coffee, or fruit juice, can be removed from the processed surface by wiping it with a damp cloth, while stains caused by ball-point pens or printing ink can be removed by the immediate application of 90 percent alcohol. The colours are guaranteed fast and the cloth—unlike oilcloth or American cloth—does not peel or crack. The table-cloths are reversible so that one side may be suitable for the breakfast table and the other for lunch or dinner, or they may be used as decorative covers. If they are processed on both sides they need no laundering as all stains can be removed with a damp cloth. If only one side is processed they can be washed, when they will dry quickly after excess moisture has been wiped off. It is thought that a similar process may be used for curtain materials and other domestic textiles. In quite another sphere falls a second development of more than passing interest. The printing of knitted fabrics has been both simplified and cheapened by a new process evolved by Knittella Ltd. of Manchester. The design is carried on thermoplastic material and is applied by heat to the cloth by means of a series of rollers. The machine, which is to be patented, is extremely simple in both design and operation, and could be worked easily by one person. Its great advantage is that circular knitted materials can now be printed without first being cut or tented. The materials can be of any width and can be printed in a wide variety of colours and designs. While it is intended mainly for knitted fabrics, it can also print woven textiles and can accommodate two bolts of cloth simultaneously. The rate of output is approximately two yards a minute of any width of cloth. The cost of the machine is around £200 and its production costs are a small fraction of the present costs of printing machines. There are no costly engraving, cutting, drying or replacement charges, and the process and machine appear to be well suited for the lower quality range of knitted and woven fabrics.

CHANGES IN TAXES ON COMPANIES

THE BUDGET LEVIES ON BONUS ISSUES AND DIVIDENDS

By a Statistician

THE Finance Minister has made a major departure from accepted policy by withdrawing the rebate on income-tax which was allowed on the profits that were ploughed back. The rebate was introduced in 1948 in order to encourage the retention of earnings and was found very useful by the majority of companies. The withdrawal abolishes the distinction between distributed and undistributed profits.

The proposal for a tax on bonus issues has come as rather unexpected since the Taxation Enquiry Commission unanimously opposed it. The Finance Minister himself said just before the Budget that the issue was very complicated so detailed and careful study was necessary before a decision could be taken. The proposal is unsound as it involves an element of double taxation. The capitalisation of reserves for issuing bonus shares does not involve any transfer of assets to shareholders. Reserves are built from profits and represent shareholders' money which has not been distributed but is allowed to remain in the business for expanding the company's activities. They would not be accumulated if the net profits were to be freely distributed as dividends. The proposed tax of two annas on the face value of bonus issues is very heavy. If the Government wanted to take a part of the small increases in share prices that often result from bonus issues, a nominal tax of, say, 2 percent or 3 percent would have seemed less unreasonable.

Tax on Dividends

Another proposal is to impose a tax on dividends in excess of 6 percent of the paid-up capital. The idea is not new, as such a tax was in force in 1946 and 1947. Rowland's Budget introduced this tax, but on a different basis. A tax was imposed on the amount distributed as dividends in excess of a certain percentage of the net profits, subject to an exemption of the amount equal to 5 percent on "capital". The term "capital" referred to capital employed in the business and this took care of the free reserves employed by the company as working capital. The present levy, on the other hand, is a tax on dividends in excess of 6 percent on paid-up capital (excluding preference capital). It penalises a company which has large reserves in relation to the paid-up capital, but works in favour of those which have already capitalised part of their reserves and declare relatively low dividends on paid-up capital. The latter might escape both the bonus tax and the dividend tax.

To cite a few examples, it is well known that a large number of jute companies capitalised part of their reserves and issued bonus shares in 1948-49. Some companies such as National, Champdany, Chevot, Empire and Orient have not so far capitalised their reserves so their present percentage dividends are relatively more than those of others. Such companies will be hit by this measure. In the interests of justice, the Finance Minister would therefore be well advised to amend the definition of "capital" to include free reserves as well.

When the dividend tax was proposed for the first time, the corporation tax was only one anna in the rupee and the rate of income-tax applicable to companies was five annas making a total of six annas in the rupee. The Liaquat Ali Khan Budget increased the rate of tax on excess dividends and this was abolished in 1948 by Mr. R. K. Shanmukham Chetty. It is gratifying to note that the rates proposed now are not heavy. The graph shows the percentage of tax payable on specified dividend percentages. On a distribution of 20 percent, the additional tax works out to only 2.4 percent, which means that the company which wants to declare a 20 percent dividend will now have to provide for 22.4 percent, the extra 2.4 percent being the tax payable to the Government. In the case of companies paying lower dividends, the tax is less. It seems, therefore, that the dividend taxation proposed might not have any very great effect on distributions. Only plantation companies which are in a position to declare big dividends which may cause a little anxiety. It is, however, well known that the record dividends paid for the year 1954 by tea companies are very unlikely to be repeated now. But the financial position of some of them is very sound as a result of the 1954 boom and they may be able to pay good dividends in 1955 also. It is not clear how the dividend tax will be worked out in the case of these companies as, according to the present Income-tax Act only 80 percent of the net profits are assessed to Indian income-tax. It is reported that the proposed dividend tax will not apply to coffee and rubber companies.

Estimate of Extra Revenue

The Finance Minister has not indicated the additional revenue expected from each of the changes he has proposed. He has only said that the total additional revenue as a result of the proposed changes in corporation taxes will be about Rs. 8 crores. An attempt will be made here to get an estimate of the additional taxes under different heads and also industry-wise. A sample of 90 companies in the jute, cotton and other indus-

tries has been chosen. The main intention is to get an estimate of the dividend tax so the sample selected consists of companies which declare dividends in excess of 6 percent. It cannot, therefore, be regarded as strictly a random sample but certain conclusions can nevertheless be drawn. Table 1 summarises the position of profits, dividends, etc., for this sample. The tax payable has been theoretically calculated as it is intended to portray the actual position.

It will be seen that the 90 companies selected earned a profit of Rs. 39.11 crores. Taxes at 6.95 annas accounted for Rs. 16.99 crores; deducting the rebate of one anna available till now on undistributed profits, the net taxes payable amounted to Rs. 16.32 crores, leaving a net profit of Rs. 22.78 crores. Dividend distributions amounted to Rs. 11.52 crores, leaving a balance of Rs. 11.26 crores undistributed. The withdrawal of the rebate will cost the 90 companies Rs. 66.13 lakhs as additional tax. The dividend tax at the proposed rates (which has been worked out for each of the companies and added) amounts to another Rs. 84.46 lakhs, making a total of Rs. 150.59 lakhs as additional tax.

Liberal Distribution

A few points may be noted. The additional burden due to the imposition of the dividend tax is more pronounced in the case of industries where the distribution is liberal. The cotton textile industry is a typical example. On the other hand, companies with a less liberal dividend distribution and more of retained profits will find the withdrawal of the rebate more burdensome. The iron and steel industry is an example. For the purpose of the dividend tax, the sample selected, as explained before, is purposive rather than random. On the basis of paid-up capital, it represents about 20 percent of the industrial corporate sector. But as it is not random it cannot be simply multiplied by five to get the picture of the whole industrial sector. As a number of good dividend-yielders have been left out because of lack of data, it would appear that the sample may represent 40 percent of the industrial corporate sector for purposes of dividend tax. The total dividend tax can, therefore, be estimated to be of the order of Rs. 2 crores. Plantation companies have been left out as the method of taxing them is not clear. For purposes of profit, etc., the sample can be taken to represent 25 percent of the industrial corporate sector, so that the with-

drawal of the rebate might be said to have brought an additional revenue of Rs. 2.5 crores.

Bonus Issues and Low Profits

There are, however, certain notable features in these proposals. For instance, it is specifically stated that the dividend tax and the tax on bonus issues together will not be more than four annas in the rupee of taxable income. This gives a company the option to capitalise reserves when its profits are lean; it thus can avoid at least a portion of the bonus tax. In certain companies, reserves are very large in relation to their paid-up capital but their current working is showing losses. These companies can probably take advantage of this position and issue bonus shares, thus completely avoiding the tax on bonus issues. The only snag, however, is that Government might not permit bonus issues in such cases.

There is also another possibility. A company can issue bonus shares specifying that the new shares will rank for dividends from the next accounting year only. They can then declare very high dividends on the existing shares and as the dividend tax and the bonus tax would not exceed four annas in the rupee of taxable incomes, there will be a considerable saving in tax.

From the stock market point of view, it may be of interest to examine how the proposed changes will affect selected market leaders. Table 2 at the end has been compiled for this purpose.

TABLE 1

Statement showing the impact of the proposed changes in corporate taxes.

INDUSTRY.	No. of Companies	Paid-up Ordinary Capital	Profit	Tax*	Net Profit	DIVIDENDS			Undistributed profits.	Rebate at 1 anna.	Dividend Tax.	Total additional tax.	PERCENTAGES

A DITCHER'S DIARY

sure, the modern business executive will scarcely agree. He is more likely to approve the fact that considerable research is at present being devoted to devising an office chair so that he can cerebrate quickly in a state of comfortable relaxation. To return to the medical profession. While I am afraid, its advice must be heeded, it certainly does not follow that we should turn our backs on the good things of life, because that too has its dangers. I read somewhere of a doctor who asked a patient suffering from bad headaches "Do you smoke?" "No" was the reply. "Do you drink?" "No". "Do you associate with loose women?" "No". "Ah" said the doctor "I know what is wrong with you—your halo is too tight."

Company managements should be able to relax a little now the new Companies Act is law and the frantic reorganising of the past few months is over. There has not been much time to comply with the Act's many provisions and the requests from chambers of commerce and other bodies representing private industry that accidental contravention be treated leniently, seem only reasonable. I cannot see how such cases can be avoided, because, whatever else it is, the new Act is a formidably large document. The problem of making such an unwieldy mass of legislation work along the lines intended will occupy much attention from now on, and that is going to be the concern of the Government rather than company managements. One of the main troubles with the Act is that it gives a single administrative department too many opportunities for obstructing companies' smooth running. The Government has done all in its power, within the limits of its own policy for managing the new body of law, to ensure that it is implemented efficiently and intelligently. But it has not satisfied all its critics on this point yet, and it is to be hoped it will have the courage to admit any mistake and do something about it should they be proved right. As it is now, the Act is reasonably free from doctrinaire provisions, but there is a great deal of scope for politics to affect the way it is administered. If this temptation is not resisted, not only will the prestige of the law suffer, but the efficiency of the economy as well. This is a serious risk for the future and it is one against which the excellent intentions of the present Government may not be an adequate safeguard. The point at which the Act may have the most detrimental results for the economy's working is where it affects the managing agency system. There is no doubting the value to investors' confidence of the provisions which safeguard shareholders' interests. But to limit as well the functions of an institution which is responsible for most of this country's existing economic progress, smacks of throwing out the baby with the bath water. One other way in which the Act will affect the economy is the additions it will make to costs. Anything which is difficult to work means extra expense for companies and taxpayers. This factor will, of course, largely depend on the hard work and imagination of those whose unenviable job it will be to implement the Act.

I believe it was Walras who first introduced the student of economics to the intricacies of production coefficients. In those days, the three principal factors of production were still the relatively simple ones of land, labour and capital. Even so, the variations which any given combination of these factors could produce were numerous enough to force the theorist into treating a hard and fast conclusion with the greatest respect. Astute business men have, of course, always been reliably flexible in substituting one factor for another so

as to maximise profits. Now it seems that an additional one will have to be taken into the calculations of both the theorist and the business man. Sir Miles Thomas, in a recent letter to the staff of B.O.A.C., revealed a trend which has probably been suspected for some time. I refer to the growing importance of "glamour" as a coefficient of production. Sir Miles says that some of the Corporation's competitors are engaging glamorous British girls as stewardesses to rival its own efforts in that direction. Although he seems happy that this coefficient will have no substantial bearing on the overall financial position, other entrepreneurs are not apparently of the same opinion. Glamour might, in some respects, be accepted as an integral part of productivity, and to find it effective in civil aviation, is a development with far-reaching possibilities. If it progresses, some means may have to be found of measuring it. At the moment, this does not seem likely to fall into the province of either the cost or the financial accountant. The task is formidable and I can see may even require field research to decide whether, in fact, gentlemen do prefer blondes. If the productivity of civil aviation, measured in hard cash, should prove to be higher for those concerns employing glamorous stewardesses than for those employing their less artistic or naturally well-endowed sisters, then there would appear to be a great future for the world's beauties. In the short-run, the supply position of glamorous young women is not likely to be very elastic. The natural-born beauties, or the plastic surgeons, can look forward to great profits in the next few years.

Raja Baldevdas Birla, who died last Sunday in his ninety-second year, strikes me as having embodied in his person the Hindu ideal of life. From his chronology I see that he gave his prime years of manhood to the normal pursuits of worldly existence, doing business, earning money and founding a family. When he was over fifty he renounced it all and, in accordance with the Hindu scriptural injunction "To the forest after fifty", retired from life to practise meditation and charities. These, as is well known, were extensive and earned him the title of Raja from the Government of the day. It is good to see that his eminent sons are carrying on their father's noble humanitarian tradition as well as the vast industrial empire he founded. I am inclined to hold that there is much good sense in the Hindu view that when a man dies full of years and honours, it is not an occasion to be mourned. Raja Baldevdas died replete with both, and yet I feel that such a man's death must inevitably leave behind a sense of loss.

I see from the Budget debates in Parliament as well as the State legislatures that the Central Government and some of the State Governments are initiating the scheme of separating audit from accounts. This, it is claimed, will mean a better control over Government finances. In the past, of course, the audit section has been a cause of many heart-breaks in various places, not all of them inside the Government. I do not know if the same will be true in future, but I imagine there will still be plenty of people who will enjoy a fling at auditors. So here goes.

Auditors have a quarrelsome bent
And jib at every penny spent
The only time they're not a pest
Is when at last they're laid to rest

For I haven't yet heard of one so lost
Who burst his box to ask the cost
Of the grave where he takes his ease
Or the price of his widow's weeds.

Company Meeting

THE AHMEDABAD ELECTRICITY COMPANY LTD.

CHAIRMAN MR. K. G. MILNE'S REVIEW

Addressing the 43rd Ordinary General Meeting of The Ahmedabad Electricity Company Limited, held in Bombay on 29th March, 1956, the Chairman, Mr. K. G. Milne, said:—

Gentlemen, The year under review has been one of continued growth and consolidation, culminating in the peak demand on your Power plant reaching 100,000 k.W. Your Directors have always adopted a progressive policy coupled with a spirit of initiative and as a result the expansion of your Company's power facilities is ahead of the demand, which affords the City of Ahmedabad an enviable position when compared to many other places in India.

Unfortunately the fortunes of few industries today are conditioned solely by their own efforts, however astute. External factors intervene to nullify the most careful planning, and the Electricity Supply Industry has come in for more than its share of such intervention. It is solely on account of this that your Directors have thought fit to propose to you a cut in the year's dividend from 6½% to 5%, and as you may well be very disappointed at this, your Directors are also, I will discuss at some length the factors which have influenced your Directors to come to this decision and about which I gave you warning at this time last year.

In 1946-47 your Company's plant capacity was of the order of 37.5 MW. This rose to 97.5 MW. In 1950-51, and in 1954-55 the plant capacity had reached 142.5 MW, when the combined subscribed Share Capital and Debentures stood at Rs. 10,75,00,000. A further 15 MW. Turbo-Alternator Set has recently been placed on order to meet the ever-increasing demand, a demand which in your Company's area of supply is increasing by an average of more than twice the accepted world average of 7%. It is this very magnitude and pace of expansion in recent years, which, paradoxical though it may seem, has reacted to penalise the investor.

High Capital Cost

During these years of rapid investment and expansion with high-cost plant and attendant high annual capital charges, and with rising expense levels generally, even the very modest return permitted under the Electricity (Supply) Act has not been achieved for several years past. For the year under review we are short of it by the calamitous figure of Rs. 27 lacs. We have been caught by the continued necessity to expand even within the by no means adequate level of return prescribed under the Electricity (Supply) Act what time our charges for Electricity have been conditioned by policies and by the contradictions inherent in diverse provisions of the Electricity (Supply) Act versus the Indian Income Tax Act, as repeatedly stressed from this Chair at former Annual General Meetings. Hence it has only been possible to keep up our moderate dividend level at all by drawing subsistence from the tax relief siphoned out of accelerated Depreciation Allowances given under the provisions of the Income Tax Act, but which properly should have been made additionally available for us to place in Reserve to meet the corresponding future tax liability which must arise when the Allowances decelerate in their turn.

The proposal of the Company in April 1954 to put its house in order by a 15% increase in its rates, was overtaken by the imposition by Government of a Rating Committee whose Report is common knowledge to you all. This was followed by the freezing of the Company's old rates where they stood, and until circumstances changed. In the meantime the Company referred for arbitration by the Central Electricity Authority the long-standing dispute with the State Government over the admissibility of interest on Loan and Debenture Capital as an item of operating expenditure for purposes of determining the Clear Profit. The Award of the Central Electricity Authority in the Company's favour was not announced until April 1955, but when it proved to be a fundamental change in the circumstances as viewed by the Rating Committee, and there followed at once a resumption of negotiations with the State Authorities for an upward revision of rates. Unfortunately even then these negotiations were prolonged, and it was only at the beginning of the current year that an 8½% surcharge on supplies to Industrial and Commercial H. T. Consumers could be effected. No benefit to the Company's finances could therefore accrue during the year ended 30th September, 1955. The delays and curtailments inherent in these developments, which have been entirely beyond the Company's control, have culminated in the diminution in the Company's disposable surplus to the point we have reached in the proposal for a lower dividend.

It might be asked whether we could not have availed of the Dividends Equalisation Reserve to a greater extent than Rs. 6 lacs to maintain the Dividend level, in the hope that earnings hereafter would equal the return permitted under the Electricity (Supply) Act. I may say that your Directors have given most careful consideration to this point, but a number of factors have influenced them to come down on the side of austerity. Our liability for payment of Tax at present deferred is gathering momentum. The final verdict on the liability of the Company for Additional Income Tax in respect of past years, and to which I will refer later, is still unresolved. The margin of profit allowed by the law makes it likely that, even in the best years, subsequent replenishment of free Reserves will be possible only in meagre amount, if at all. In the circumstances it has been thought best to conserve our resources, already drawn down to a level incommensurate with the size and position of the Company, so that we may be better able to meet contingencies which might arise. I feel confident that in the light of the circumstances you will be in agreement with this policy.

The Amendment Bill

The Electricity (Supply) Amendment Bill introduced in the Lok Sabha in September 1955 still awaits reference to a Joint Select Committee of both the Houses of Parliament. If this materialises during the current Budget Session of Parliament, the Bill might find its place in the Statute Book before the close of the Company's current financial year. From the financial point of view the principal changes sought

to be made to the Electricity (Supply) Act are three. First, the proposal to link the Standard Rate for the Bank Rate with the difference of 2% (instead of the present fixed overall level of 5%). Second, to provide for the Electricity Supply Industry to "avail of the benefits of the Development Rebate permitted under the Finance Act, 1955". Third, to disallow Debenture and Loan Interest as an expense in the computation of permissible Clear Profit, on the ground that Debentures and Loans find their places in the Capital Base, upon which the Standard Rate of return is already allowed.

Much has already been said about the need for greater incentive to sustain and promote investment in the Electricity Supply Industry, and it is most unfortunate therefore that the proposal regarding the Standard Rate as outlined in the Bill will not positively ease the Industry's difficulty in raising finance for expansion. The situation calls for a differential over the Bank Rate of 2½%, at least. Even with that, there will be no scope for providing that measure of internal finance which the extensive Capital development programme for the Industry in the Country's Second Five-Year Plan could absorb. With the disappointment prevalent regarding "Electricity" amongst the investing public, approaches to other agencies, e.g. Banks and Investment Corporations, for the necessary finance will become imperative more often than not. What the fate of such approaches will be, and on what terms of interest and security such agencies might lend, if at all, gives much food for thought, especially when viewed in contrast with the very low rate of statutory return delimited for equity capital itself in this Industry. In this connection I should like to say how grateful we are as a Company to the Bank of India Limited for the confidence they have always shown in us, and for the great volume of assistance they have rendered to us on most fair terms over the past few years.

Unwelcome Measures

While the proposed revision of the Standard Rate does not entitle the Industry, the provision in the Bill with regard to a Development Reserve is extremely unwelcome as it stands. Any compulsory appropriation to Development Reserve ranking as a prior charge in the calculation of the Clear Profit would create a perilous position indeed, for who could be sure of being able to earn enough Clear Profit in every year both to meet this prior charge and the full Reasonable Return? An appropriation based, not on revenue surpluses of any year, but on 25% of capital expenditure during that year, must give rise to fluctuations with which the tariff structures of a tightly regulated and capital intensive industry, such as ours, could not multiply itself. The Development Reserve creation as proposed of the Development Reserve visualises no benefit to shareholders, since the Reserve would have to be deducted from the Capital Base and ultimately passed on to any purchasing Authority. The authorities have been specially apprised of the dangers, and the suggestion has been made that at least appropriations to a Development Reserve should be made optional within a limit, so that the virulent threat of such a Reserve encroaching upon the Reasonable Return would be removed.

The proposal to negative the allowance of Debenture and Loan Interest as a charge before arriving at permissible profit, will remove an advantage which played its part in helping us to maintain a level of return sufficient to attract new capital during the years of heavy capital expenditure since 1948—the year the controlling Act was passed. During these years we raised and invested in Electric service Rs. 51 crores of equity capital and Rs. 1½ crores of debentures. Now in fact your Company stands to lose more from disallowance of interest than it stands to gain from the proposed upward revision of the Standard Rate of return. Thus when we asked for bread in the shape of greater incentives to attract more Capital, we are in fact likely to be offered a stone, as the proposals before Parliament are framed at present.

The draft outline of the Second Five-Year Plan refers to the need for a re-statement of the Industrial Policy Resolution formulated by Government in April, 1948, so as to indicate "fresh fields to be reserved for public enterprise, the fields in which public enterprise is to take on larger responsibility and the fields in which private enterprise is to function subject to overall regulation and control". Until this re-statement has taken place it is difficult to foresee what the future of the Electricity Supply Industry will be, but considering that the Industry is subject to rigorous financial control by the Electricity (Supply) Act there is no reason why the place at present occupied by the private enterprise of the Industry in the country's power development should not be maintained. There have recently been discordant notes about the respective roles of the Public and Private Sectors, but the Planning Commission has stated that the "two sectors have to function in unison and are to be viewed as part of a single mechanism. The Plan as a whole can go through only on the basis of a simultaneous and integrated development in both sectors". I am entirely in agreement with this view.

Nationalisation

To those who repeatedly advocate nationalisation of Electricity Undertakings, the unfortunate position of consumers in Madras State should stand as a warning. For several years, this State has been repeatedly hit by droughts which seriously curtailed Hydro-Electric Supplies, and yet after all these years, the State Authorities, which control 98% of the Generation, have not been able to put their house in order by firming up the Hydro-Electric Plant by suitable additions to the Thermal capacity of their interconnected system. Once again, this year, consumers are being subjected to drastic rationing in their electric supplies.

The first Budget of the Second Five-Year Plan, if nothing much else can be said in its favour, promises to diminish some of the difficulties arising out of the contradictions between the Electricity (Supply) Act and the Income Tax Act in respect of depreciation. The withdrawal of the Initial Depreciation Allowance will assuage the problem of Deferred Taxation to a certain extent; but only to a certain extent, and that in respect of the future. The abolition of Additional

Income-Tax in its past form relative to Dividend will mean that in future this vexed question will no more plague the Electricity Supply Industry. The Sword of Damocles, however, in the shape of the contingent liability for this Additional Income-Tax in respect of the past years still hangs over you and you will see from one of the footnotes to the Balance Sheet. High hopes were entertained recently that this note would no longer be required, with the Company's freedom from the Tax definitely established when the High Court pronounced its decision in favour of a Company whose position was similar to ours. Since then, however, the Income Tax Department has gone in appeal to the Supreme Court, with the inevitable delay and uncertainty which this entails. Linked closely with the ultimate ruling by the Supreme Court will be the right or otherwise to "gross up" your dividend from your holdings in this Company; so you will still have to wait sometime yet to have the long overdue answer to this question. I have told you previously that the Agency Company itself is also involved in this complicated matter and will contest its case at the appropriate time.

In November, 1955, the Government of Bombay in the Public Works Department issued a directive to assesses in the State that "the consent of the State Government is necessary to declare dividends in excess of 3%, until all arrears of depreciation are cleared off". The Central Electricity Authority has since ruled that so long as the depreciation for the year and any instalments in respect of arrears are appropriated there can be no bar to payment of dividends above 3%. This Company never admitted to having any arrears in any year, but the general result was satisfactory and solacing to investors, who had been much worried. This ruling settles one more controversy between the State Governments and the Undertakings in favour of the Industry. Another matter recently settled in the Industry's favour is the right of an Undertaking to increase its rates to enable it to reach the Reasonable Return under the Electricity (Supply) Act although the rates will thereby be brought into excess of the maxima laid down in the Company's Licence.

Improved Efficiency

We have through constant and successful effort so increased the efficiency of the Company's operations as to have been able to counteract a number of those increases in cost which are beyond our control. With coal in particular, a substantial saving, counted in lakhs of rupees, has been effected during the year under review by reason of an average coal consumption of 1.5 lbs./KWh being attained, and this despite deterioration in quality of the coal received. There is a limit, however, to our ability to absorb rising costs, and nowadays much of the increased cost arises from burdensome levies of the State or of Government monopolies, the latest being the Surcharge to be imposed by the Railway Ministry from the first of next month.

No one can cavil at Government's policy of intervening to shield its citizens at large, whether industrialist, businessman or householder against obviously undue burdens being placed on them by monopolists or others. It is, however, exasperating in the extreme for us to see so much time and energy being given by Rating Committees to the examination of the affairs of Electricity Supply Undertakings whose books show they need to increase their rates, and where the necessary actions by and large will have a very small effect on a manufacturer's production cost or on a householder's budget, while the monopolies literally by a stroke of the pen impose much more far-reaching economic burdens on us all, without the public knowing anything about any investigation into their affairs. At least one feels entitled to ask that Rating Committees should not reject the swift and accurate results which may be had from the study of the audited accounts, that normally satisfy themselves, in favour of bringing in much more delayed findings derived only after pondering a labyrinth of complex calculations in which all but the specialist will certainly be misled.

Compliments to Staff

To the Resident General Manager and his Staff I must express my high appreciation of their service and the standard of efficiency maintained during the year. A competent staff is one of a Company's biggest assets, and we are very fortunate in that. The Company's welfare facilities at Sabarmati Power Darwaz, at Shahpur Road, and at the Office at Lal situation. As the great need of the day is more and more emphasis on education at all levels, I would like to make special reference to the opening in June, 1955, of a Kindergarten School at Sabarmati, which we supplement the other educational arrangements already assisted by the Company in the locality.

Having commented earlier on the circumstances leading up to the recommendation of a lower dividend for the year under review, and on other aspects of the situation affecting or likely to affect your Company, there is I think nothing of particular interest for you to add in respect of the Accounts which are before you, and which, together with the notes appended to them, are sufficiently informative.

To conclude—in spite of the set-back reflected in the proposal for a lower dividend for the year under review, I feel that the future can be viewed with a modest degree of confidence, and certainly so far as those difficulties are concerned which are within our control. The recent additions to the plant have given the Company an instrument of high technical efficiency which should enable it to earn the statutory Standard Rate prescribed under the Electricity (Supply) Act, given no undue reapplication of external pressures. The question of dividend which should thereby result will of course also be dependent upon the terms of the controlling legislation from time to time, and possibly therefore upon the Bank Rate. Given no change in the latter, however, and other factors being equal, I would hope to be able to aim for about 6% for future years.

The creation of Maha Gujerat, with possibly Ahmedabad as the Capital, should open up to this Company still further opportunities of growth and service; and I can only hope that before long the law will be so amended as to afford the future investor in our Industry sufficient incentive to remove the least doubt about its ability to fulfil its great task throughout the country. But we must be afforded incentive and not increasing restrictions, if we are to maintain that balance between the consumer and the investor and the worker which is the ideal. Above all we must be given the freedom to adjust our rates to the economic level necessary to produce a steady commercial yield commensurate with the cost of the development capital we need for ourselves and, through us, for the service of so many others.

Company Meeting

THE EASTERN BANK LIMITED

SIR EVAN MEREDITH JENKINS'S REVIEW

The Forty-sixth Annual General Meeting of The Eastern Bank Limited, will be held in London on 18th April, 1956. The following is an extract from the Statement by the Chairman, Sir Evan Meredith Jenkins, G.C.I.E., K.C.S.I., which has been circulated with the Report and Accounts:—

The Balance Sheet for 1955 shows an increase of £5,397,291 in Current, Deposit and other accounts, and of £548,316 in Bills Payable. On the assets side there is an increase of £1,482,400 in Cash on Hand, at Call and at Bankers, of £1,968,783 in Bills Receivable, and of £2,862,454 in Advances and other accounts. With these and other less important changes the Balance Sheet total stands at £43,558,711, as against £37,352,355 at the end of 1954. These figures are satisfactory, but since the end of the year certain assets held by one of our Branches have given us concern. Provision has been made in the accounts for the diminution in the value of these assets as at 31st December last, and if necessary further provision will be made in 1956. The further increase in our resources has been useful and profitable, but, as I said last year, it may not be permanent. Competition is increasing almost everywhere, and in the countries which enjoy a revenue from oil large fluctuations in balances are not unusual.

Bank Premises, Furniture and Equipment now stand (after the appropriation of £35,000 referred to below) at £720,953, against £538,474 at the end of 1954. Our Baghdad building is at long last nearing completion. The main new premises at 1955 arising from the acquisition of the John Little Building in Kuala Lumpur, which we are converting for use as Bank premises and business offices.

The published profit is £132,536 against £129,011 for 1954. The appropriations from profit are £50,000 to Contingencies, £35,000 to Premises, and £28,750 to the final dividend of 8s. per share, which with the interim dividend already paid of 3s. per share, makes the total dividend of 8s. per share for the year as before. The carry forward is increased from £111,120 to £112,856.

The year has from the trading point of view been a good one. Branch working is as usual discussed briefly in the paragraphs which follow.

During the year we opened a Branch at Mukalla in the Hadhramaut, 280 miles east of Aden, and a Sub-Branch in Rashid Street (Southgate) at Baghdad. Arrangements were also made to open a Branch at Beirut; we entered into occupation of premises there early in the New Year, and it is expected that the new Branch will be ready for business within a few weeks.

The attention of Shareholders is invited to the Resolution concerning the number of Directors to be moved at the General Meeting. The present maximum number under Article 81 of the Bank's Articles of Association is seven (reduced from twelve during the War). Your Directors are satisfied that this maximum of seven may not in all circumstances be sufficient for the Bank's purposes, and it is proposed to increase it to nine. The two new Directorships will not be filled immediately, but will be available when required.

There is also for consideration by the General Meeting a Resolution proposed by a Shareholder concerning the Bank's Auditors.

Iraq

The Government of H.E. Sayid Nuri-as-Said remained in office throughout the year, with a rearrangement of Cabinet portfolios in December. A new agreement between the United Kingdom and Iraq to replace the Anglo-Iraqi treaty of 1930 was signed in April, and the R.A.F. bases in Iraq were handed over to Iraqi Command in May.

Oil Royalties were fully up to expectations, and in his budget speech the Finance Minister announced that owing to increased revenue from this source the foreign currency assets of Iraq had risen from ID.94½ million in September, 1954, to ID.131½ million at the end of October, 1955. A surplus of ID.11 million on the 1955 budget is to be carried forward to the new fiscal year. The Development Board has published a five-year programme of expenditure amounting in all to ID.303 million. The programme includes about ID.107 million for irrigation, ID.54 million for roads and bridges, ID.15 million for railways and ID.43 million for industrial projects. Several important tenders for development works, and in particular for roads and irrigation projects, were accepted during the year, American contractors being specially prominent.

The grain harvests were much below average. It was necessary to import wheat and rice, and there was little barley for export. Distress was averted by the activities of the Development Board; a great deal of work is now available in Iraq. The yield of dates was normal, but with a considerable carry-over from 1954 marketing has not been easy.

Business conditions were on the whole good, but the poor harvests have had some effect, and markets for imported goods tend to be overstocked. Iraq is, however, progressing fast and given stability in the Middle East her economic prospects are excellent.

The Bank's new building in Baghdad, work upon which was delayed by the floods of 1954, is expected to be ready for occupation by the late spring or early summer of this year. Our new Sub-Branch in Rashid Street (Southgate) was opened on 1st December and has made a satisfactory start.

Bahrain

The improvements at Muharraq Airport have been completed, and the facilities there are now regarded as first-class. Other Government projects are progressing. The use of natural gas to provide electric power was delayed slightly by difficulties encountered in the second half of the year, but it is expected that the plant will be taken over by the Bahrain Government shortly. The dredging of the channel to serve the proposed deep water pier is proceeding. Among building projects is a large new Women's Hospital south-west of Manama which is under construction.

The production of oil in 1955 was higher than in 1954, and efforts to find new sources of supply continue.

Business conditions were on the whole rather better than in 1954, but markets are still well stocked and merchants are cautious in giving credit.

For some time a group of Bahrain merchants have

the Soviet Leaders. Both were fully dealt with by the Press in this country, and need not be further discussed here.

On the economic side, the objectives of the first five-year plan have, in general, been achieved. The second five-year plan, which is now taking final shape, is understood to require an expenditure of between Rs. 4000 and Rs. 5000 crores in the public sector, and of over Rs. 2000 crores by private enterprise. The "gap" between the resources now available and the finance required will evidently be wide, and must be filled largely by external aid and new taxation. The Indian Budget for 1955-56 adopted some of the recommendations of the Taxation Enquiry Commission, which reported about a year ago, and income tax and surtax on the higher levels of income (in which, it must be remembered, nearly all perquisites and amenities are included) are now more onerous than they have ever been. The Commission advocated an absolute maximum for net incomes, and whatever the ultimate fate of this proposal may be, it is clear that income tax and surtax are likely to be increased still further. This is an important matter for foreign concerns established in India, whose important staff are now increasingly anxious about the future.

The Companies Bill, which makes important changes in the Managing Agency system, was passed into law in November.

India is shortly to have a decimal coinage instead of the traditional rupees, annas and pies. The change may take effect from 1st April, 1957.

There were serious floods in the autumn in the Punjab and Orissa, but the damage to crops was rather less than was originally expected.

Except for tea, which after recovering from the slump of the spring lost ground again at the end of the year, commodity markets were on the whole fairly steady, and business was good. There was some further liberalisation of import policy, with the emphasis on the needs of Indian industry rather than on consumer goods. The continued shortage of steel will ultimately be covered by the expansion of existing plants, and the establishment of new plants, of which two are being set up with Russian and German co-operation, and a third may be set up with British co-operation.

There was a good deal of labour unrest during the year, especially in Calcutta. The Bank's Staffs (including our own) throughout India have been restless over the long-drawn-out enquiries arising from the original award of the Bank Disputes Tribunal. The Government of India's final decision on the Report of a Special Commission appointed to advise on the Award of the Labour Appellate Tribunal was not acceptable to the Bank Staffs, and there has been a long period of unsatisfactory working including some one-day strikes. The situation is still far from normal.

Pakistan

In August Mr. Ghulam Mohammed relinquished the office of Governor-General and was succeeded by Major-General Iskander Mirza. Pakistan owes much to the devotion of Mr. Ghulam Mohammed,

How banking serves the PLYWOOD INDUSTRY

TIMBER suitable for plywood and tea chests is plentiful on the south-western coast, and the plywood industry in India is expanding every year. Production capacity has doubled since 1948, rating over 150 million square feet per annum now. Out of India's 53 plywood factories, more than half are in Malabar, Cochin, Travancore and Bangalore.

Banking has greatly helped in the rapid growth of the plywood industry. The facilities and guidance of a good bank, such as the availability of ready funds when needed, and the collection of dues in any part of the country, are an essential part of good organisation in the plywood industry.

We at Palai are proud that so many leading plywood manufacturers of South India employ the complete banking service we offer.

Current Accounts—Demand Drafts—
Telegraphic Transfers—Investments—
Letters of Credit—Bill Collection—
Deposits—Loans & Overdrafts—
Confidential Credit Reports, etc.

If you have business interests in the South, it will pay you to open an account with us. Our 24 branches are strategically located, 22 in important South Indian business centres and two in Delhi and New Delhi; and we have correspondents in all important Indian cities. We offer a fully comprehensive banking service at our office.

Our clients can make deposits at any of our correspondent banks, situated in all important Indian towns, and have the amounts credited to their accounts at any of our branches.

PALAI CENTRAL BANK LTD.
(Incorporated in Travancore-Cochin with Limited Liability)

Head Office: PALAI, TRAVANCORE-COCHIN.

Branches at: Madras, Cochin, Quilon, Trivandrum, Alleppey, Mangalore, Bangalore, etc. Also at: Delhi & New Delhi.

A LEADING BANK IN SOUTH INDIA

INDIA'S RAYON YARN INDUSTRY

INCREASING DEMAND FOR
SYNTHETIC FIBRES

(FROM A CORRESPONDENT)

THE immediate establishment of a rayon yarn industry was recommended by the Panel Report on the silk and art silk industry published in 1947. The Panel estimated the total annual demand for rayon yarn at 55 million pounds and declared that seven factories, each with an annual capacity of about eight million pounds should be established at once. Rayon yarn, the principal raw material for the manufacture of rayon fabrics is produced as continuous filament or as cut yarn of uniform lengths from two to six inches, known as staple fibre. Staple fibre can also be described as "artificial cotton". It is then handled by suitable textile mills for preparing spun rayon yarn. Spun rayon yarn has a soft and woolly feel. Staple fibre can, to some extent, replace long staple cotton. India is short of long staple cotton and is, therefore, encouraging the use of staple fibre by exempting from excise duty fabrics containing 40 percent or more staple fibre yarn.

Rayon filament yarn can be manufactured either by the viscose or the acetate process. The viscose process is cheaper than the acetate process and about four-fifths of the world production of rayon filament yarn is produced by this process. An important advantage of this process is that the yarn produced by it easily takes dyes used for cotton yarn and is eminently suited for handlooms. Though the acetate process is a little costlier, its finished product—cellulose acetate—can be used for many purposes such as rayon yarn, plastics and lacquers. New impetus has been given to the manufacture of cellulose acetate due to the increasing demand for fabrics, containing a proportion of synthetic fibre. Staple fibre is made exclusively by the viscose process. Its manufacture is almost the same as the manufacture of filament rayon yarn up to the spinning operation and is helping India to replace long staple cotton.

Rayon Yarn Factories Established

The first rayon yarn factory went into production in July, 1950 and the second one in February, 1951, both using the viscose process. The production of staple fibre in the country commenced in February, 1954 and that of acetate rayon yarn in September, of the same year. Between 1950 and 1955 the annual capacity for rayon filament yarn, both viscose and acetate, increased from four to 19 million pounds. The annual capacity of the staple fibre plant is nearly 11 million pounds. The actual production of filament yarn in 1955 came to about 13½ million pounds and that of staple fibre to about 11 million pounds. In the case of staple fibre the actual production has exceeded in some months the rated capacity.

The production of rayon filament yarn, during the current year, is expected to rise to the installed capacity, as the expansion programme of one of the units which hindered production last year, is already completed. Here it may be mentioned that the target for rayon filament yarn production for the first five year plan was fixed at 22 million pounds. The capacity of the existing three units is 19 million pounds and a fourth unit with a capacity of nearly five million pounds is expected to go into production shortly. This will increase the existing capacity to 24 million pounds. For the second five year plan the target for rayon filament yarn has been fixed at 55 million pounds and that for staple fibre at 25 million pounds.

The rapid growth of this industry is ascribed "to correct government policy." Prior to the second world war India imported about 35 million pounds of rayon yarn, about half-a-million pounds of staple fibre and nearly 10 million pounds spun rayon yarn. As all the important producers of rayon were involved in the war, imports of rayon filament yarn fell to the low level of 200,000 pounds and that of staple fibre and spun rayon yarn completely disappeared. With the return of peace imports of rayon yarn rapidly increased and touched the high level of 40 million pounds, while staple fibre rose to 36½ million pounds and spun rayon yarn exceeded four million pounds.

The Rayon Fabrics Industry

At this stage it is necessary to consider the growth of the rayon fabrics industry—the sole consumer of rayon yarn. From 100 power looms

engaged in this industry in 1937, the number had increased to 3,300 by 1941. The war period was one of stagnation because rayon yarn was not available. After the war rayon yarn became freely available and so the rayon fabrics industry began to expand. The number of power looms increased to 9,500 by 1949. Important consuming areas however like the Punjab and Sind went to Pakistan as a result of Partition. At first Pakistan allowed imports freely but later withdrew the preference granted to Indian fabrics and in 1953 banned entirely the import of rayon fabrics.

Meanwhile the expansion of the rayon fabrics industry was further encouraged by an acute scarcity of cloth and cotton yarn in the country and a good demand from West Asian countries. By 1951, the number of power looms had risen to about 22,600 and more than 3,000 looms were diverted to rayon fabrics manufacture by the cotton mills. In addition about 75,000 handlooms had turned to weaving rayon fabrics. At that time the Korean war changed the U.S.A. from being the largest producer of rayon yarn into an aggressive buyer and prices jumped from Rs. 3 to nearly Rs. 12 a pound. Indian importers could obtain only about two-fifths of the licensed quantity. After the armistice, piled-up stocks were released and prices toppled down almost to the original level. This was accompanied by the short-lived but sharp recession in the early part of 1952. Actual users, who had obtained substantial import licences by putting up exaggerated claims for the import of rayon yarn to the tune of Rs. 9 crores did not utilise their licences in the latter half of that year.

Protective Measures for Rayon Yarn

Meanwhile, domestic production of rayon yarn was increasing. Rayon yarn of 120 and 150 deniers constitutes more than half the total imports of rayon yarn for almost the entire output of Indian rayon yarn consists of these two popular varieties. Rayon yarn bears an import duty of 20 percent ad valorem or As. 5 a pound whichever is higher plus 45 percent of the total duty. More than three-quarters of the import of rayon yarn comes to Bombay and the duty there is charged on the basis of the market price. This practice raises the incidence of import duty to a figure somewhat higher than 36½ percent.

The rayon yarn industry, which has been assisted all along by import duty and import control was further encouraged by restrictions on the import of 120 and 150 deniers imposed for the first time during the period Jan-June 1953. Later imports of staple fibre, staple fibre yarn, acetate yarn, double and twisted yarn, etc., were banned. Actual users are allowed to import staple fibre under licence. The rayon fabrics industry is continually opposing these restrictions but so far with little effect.

In spite of the short recession experienced in the early part of 1952 the expansion of the rayon fabrics industry continued. By 1954 the number of power looms had increased to about 37,800 and nearly 4,100 looms were utilised by cotton mills for the manufacture of rayon fabrics. The number of handlooms engaged in this industry doubled and stood at 150,000. But at present the industry is producing only about 250 million yards a year as against its capacity of 500 million yards.

Even at the current rate of fabrics production the country has to import about two-thirds of its rayon yarn requirements. The rayon yarn industry sheltered by the import duty and import control policy has a bright future provided it is also given due protection against the practices adopted by foreign producers. The world production of rayon yarn has touched an all-time peak of 5,000 million pounds and foreign producers have started selling at different rates in different markets, their export prices being 40 percent to 60 percent lower than their domestic prices. In this way almost the whole burden of the import duty is set aside. Rayon yarn is selling in India at the rate of about 45d. as against 55d. over 75d. in its home markets. In addition foreign producers are charging the same price for both 120 and 150 deniers. In actual fact 120 denier costs at least 6d. a lb. more than 150 denier. The Indian rayon yarn industry however continues to make good profits and is in a position to dispose of its output months ahead.

Finance in India and Abroad

THE CALCUTTA MONEY MARKET

FUNDS TIGHT ALL ROUND

Wednesday 4th April.

STRINGENCY has continued to be the most prominent feature of the money market during the past week. Demand remains at a high level and is still represented chiefly by the requirements of the sugar and jute industries and on account of grain storage. The general scramble for funds to meet the demand for advances is still exerting pressure on banks' deposit rates. Conditions in the inter-bank market are slightly easier but the call rate is unchanged at 4 percent and there are reported to be borrowers over at this level.

It has been another quiet week in the market for export documents partly, no doubt, due to the smaller number of working days. A few gunny bills have come to hand, but tea bills have been scarce. Remittance has been moderate. The chief exchange rates are unchanged and the dollar is quoting Rs. 47½.

Bull liquidation and pressure of sales reduced silver sharply from Rs. 183.2 to Rs. 179.15, quoted today. The rate for ready metal was quoted at Rs. 180.2. The London price was unchanged at 79d. The price of foreign silver in New York declined from 91½ to 90½ cents.

In sympathy with silver gold ruled quiet and the price fell from Rs. 105 to Rs. 104.8. The sovereign at Rs. 65-6 was 2 annas lower.

Tenders for Rs. 1 crore of 91-day Government of India Treasury Bills, which were opened on Tuesday, 3rd April, totalled Rs. 1,03,25,000. The average rate of acceptance was unchanged at Rs. 2-6 percent per annum. Tenders at Rs. 99-6 percent were accepted in full and those at Rs. 99-5-9 percent allotted approximately 94 percent. During the week ended 30th March, Treasury Bills for Rs. 59,25,00,000 were sold in favour of the Reserve Bank.

Rises of Rs. 14.79 crores and Rs. 12.87 crores to Rs. 1,478.41 crores and Rs. 1,466.64 crores in the total note issue and notes in circulation, respectively, were the features of the return of the Reserve Bank of India for the week ended 30th March. The currency expansion was covered by raising rupee securities by Rs. 34.78 crores to Rs. 678.81 crores. Foreign securities were cut by Rs. 19.88 crores to Rs. 656.41 crores probably through a transfer to the Banking department in which balances held abroad rose by Rs. 18.17 crores to Rs. 89.71 crores. Deposits of the Government of India and other Government accounts increased by Rs. 14.66 crores and Rs. 13.61 crores to Rs. 67.34 crores and Rs. 62.03 crores. Balances of commercial banks at Rs. 53.24 crores were Rs. 3.52 crores higher. Investments rose by Rs. 9.77 crores to Rs. 47.19 crores. Other loans and advances fell from Rs. 81.67 crores to Rs. 79.94 crores, of which advances to scheduled banks against usance bills amounted to Rs. 27.42 crores (Rs. 32.46 crores). These advances totalled Rs. 48.44 crores since 1st January, 1956. Ways and means advances were nil against Rs. 20 lakhs.

The return of the State Bank of India for the week ended 23rd March, 1956, shows a rise of Rs. 4.30 crores in total deposits to Rs. 237.50 crores. Investments in Government securities are down by Rs. 56 lakhs to Rs. 97.37 crores, while other authorised investments are up by Rs. 10 lakhs to Rs. 9.96 crores. Loans, cash credit and overdrafts, and bills discounted and purchased have increased by Rs. 5.56 crores to aggregate Rs. 141.15 crores. Cash and balances are, in consequence, shown at Rs. 17.00 crores or Rs. 1.91 crores higher.

The statement of the position of scheduled banks for the week ended 23rd March, 1956, discloses Demand and Time liabilities at Rs. 625.20 crores (Rs. 3.86 crores on account of borrowings from banks) and Rs. 412.92 crores (Rs. 2.87 crores), compared with Rs. 615.60 crores (Rs. 4.93 crores) and Rs. 413.73 crores (Rs. 3.02 crores) respectively in the previous week. Cash and balances with the Reserve Bank have decreased by Rs. 63 lakhs and Rs. 61 lakhs to Rs. 34.63 crores and Rs. 46.42 crores. There is a drop of Rs. 1.71 crores in investments to Rs. 362.13 crores. Advances and bills discounted at Rs. 749.73 crores show an increase of Rs. 14.72 crores. The ratios to total liabilities of cash and balances and of advances and discounts are, in consequence, shown at 7.8 percent and 72.2 percent against 8.0 percent and 71.4 percent.

According to the land-borne trade returns received in the Department of Commercial Intelligence and Statistics, the provisional figures of the total value of foreign trade of India by land with Pakistan, Afghanistan, Iran and Burma during February 1956 are as follows (in lakhs of rupees):

	Exports to	Imports from
Eastern Pakistan	18	307
Western Pakistan	13	6
Other countries	7	29
Total	38	342

Total trade amounted to Rs. 380 lakhs. Trade in treasure and re-exports was nil. There was an adverse balance of trade amounting to Rs. 304 lakhs.

The provisional figures of foreign sea and air-borne trade of India on private and Government accounts during February 1956, according to data so far available in the Department of Commercial Intelligence and Statistics, Calcutta, are as follows: Merchandise: excluding transit trade of Pakistan but including that of other land frontier countries: Exports Rs. 5,012 lakhs, re-exports Rs. 74 lakhs transit trade—nil; imports Rs. 6,464 lakhs (transit trade Rs. 2 lakhs); total trade Rs. 11,550 lakhs. Treasure: Exports of currency notes Rs. 14 lakhs, others—negligible; imports of currency notes Rs. 161 lakhs, others—negligible. Balance of trade: The merchandise import figures are exclusive of the value of certain consignments of Government stores awaiting adjustment. Subject to this deficiency in import figures and to the exclusion of figures for transit trade, the total value of exports (including re-exports) of merchandise, gold and silver fell short of imports by Rs. 1,376 lakhs.

The profit of the INDIAN OVERSEAS BANK, LTD. rose from Rs. 13.35 lakhs to Rs. 16.55 lakhs for the year ended last December. Bringing in Rs. 2,15,839 there is Rs. 18,71,564. Taxation absorbs Rs. 7½ lakhs (Rs. 7 lakhs) and reserve fund Rs. 4 lakhs (Rs. 3½ lakhs). The dividend has been increased from 6% to 7½%, leaving a carry-forward of Rs. 2,28,299.

Deposits were Rs. 3.13 crores better at Rs. 14.42 crores. Cash at Rs. 2.77 crores showed little change. Advances improved by Rs. 3.57 crores to Rs. 9.05 crores, as did investments by Rs. 75 lakhs to Rs. 4.84 crores.

"CAPITAL" STOCKS AND SHARES INDEX *

The Capital Stocks and Shares Index (Base: 1939) has now been brought up to January, 1956. Compared with December, 1955, the January index for preference shares shows a rise of 1.3 points, while that for government securities remains unchanged at 98.3 points.

There were decreases in banks 2.0 points, cottons 15.7 points, jutes 4.0 points, minings and oils 8.3 points, cements 6.7 points, engineering 22.2 points, papers 42.4 points, sugars 20.3 points and miscellaneous 20.1 points, while coals and teas increased

by 1.6 points and 1.7 points, respectively.

Correlating all the factors, the Capital variable yield securities index shows that the index for stock prices in the above classes of shares declined by 13.9 points during January, 1956.

Stocks and Shares

PRICES EASE BEFORE CLEARING

TEAS REMAIN ACTIVE: BIG RISE IN BURMA MINES

Wednesday Evening.

THE share market has been fairly steady during the past short trading week. The rapid advance of the previous period was not continued and prices have generally enjoyed a respite from bull pressure culminating in a slight recession as today's clearing approached. Apart from the interruptions caused by the market being closed for two days, anxieties about the international situation have helped to keep values from rising and today's renewed rumours about a change in the bank rate have made their contribution. The carry-forward charges at the clearing today were expected to be high and operators were cautious for this reason also. With the clearing out of the way, there is no obvious reason why prices should not recover their former buoyancy during the next few days. Operators are optimistic and a good deal of investment support is being felt in the market.

Activity during the past week has been most noticeable in the miscellaneous and tea sections. One share in the mining group, Burma Mines, has been a featured of the week's trading with a swift rise in price following strong buying in London. Government securities have remained buoyant.

Details of the week's trading follow.

There was a further improvement in the Government Securities market during the week and the volume of business was on a fair scale. Three percent Conversion Loan 1986 was fractionally easier at Rs. 76-11. In short-dated loans, 3% 1957 improved further to Rs. 99-12 and 3% 1958 was asked for at Rs. 99-10. Among medium-dated issues, 3% 1959-61 was unchanged at Rs. 98-1 sellers, but 3% 1963-65 continued to meet with sustained support to improve further to Rs. 94-14. Three percent 1964 was on offer at Rs. 94-11 and 2% 1961 turned sellers at Rs. 93-6. National Plan loans recorded a further rise with 3% 1961 quoted at Rs. 99-7, 3% 1964 at Rs. 98-10 and 3% 1965 at Rs. 98-9. There was a revival of interest in long-dated loans and prices improved. Three percent 1966-68 was initially marked at Rs. 92-9 ex-voucher, but was taken later at Rs. 92-10 with further buyers at this price. Three percent 1970-75 hardened to Rs. 89-12. Little or no interest was shown in provincial loans and sellers continued to predominate with the result that prices were trimmed down.

There was a good demand for selected miscellaneous preference shares at around the last quotations, but sellers were rather scarce. Jute preferences, however, neglected. In the miscellaneuous group, small lots of Associated Hotels changed hands at Rs. 62 and Birds Investments were crossed at Rs. 78. Business was reported in British India Corporation at Rs. 121-8 and Burn 7% at Rs. 140-8. Calcutta Electric changed hands freely at around Rs. 11-6 and Duncan Brothers were crossed at Rs. 67. Indian Iron & Steel were marked at around Rs. 109 and Indian Standard Wagon were crossed at Rs. 141. Martin Burn were done at Rs. 106 and National Tobacco 2nd at Rs. 69. New Victoria were marked at Rs. 4-8 and Rohtas Industries "B" at Rs. 64. Shaw Wallace were taken at Rs. 84 and Shree Gopal Paper were taken at Rs. 125. Textile Machinery 2nd Preference came to hand at Rs. 65 and Titagur Paper 1st at Rs. 151. In jute, a small lot of Anglo-India was offered at Rs. 114 and Clive Mills "A" were done at Rs. 101. Hooghly Mills were transacted at Rs. 14-10, a small lot of Reliance changed hands at Rs. 111-8 and Naitali 4 1/2% at Rs. 77-8.

In the banking section, there was a small enquiry for Hind Bank at around Rs. 35. Punjab National were quoted at Rs. 47-12 and United Commercial were unchanged at Rs. 50. United Bank of India "D" shares were slightly easier at Rs. 4-10. In the railway section, a small odd lot of Bankura-Damodar was placed at Rs. 55-12 ex-dividend and Dehri Rohtas changed hands at Rs. 13.

Cotton shares were listless and prices showed little variation. Kesoram were a shade easier at Rs. 17-14 as were Elgin Mills at 26-14 and Cawnpore Textiles at Rs. 9. New Victoria were steady at Rs. 2-8 and Jayshree Textiles met with small enquiry at Rs. 6-6.

Less interest was shown in coal shares during the week. Bengal were marked down from Rs. 545 to Rs. 540 and Burrakur from Rs. 15 to Rs. 14-10. Borra were done at Rs. 26-12 and there were a few sellers of East Indian at around Rs. 34-4. Equitable were marked back from Rs. 32-4 to Rs. 31-12 and New Beerbhoom from Rs. 20-12 to Rs. 20-2. Central India and West Bengal were unchanged at Rs. 7-6 and Rs. 7-4. After a long interval Ondal were marked at Rs. 15. South Karanpura were neglected at Rs. 9-8 while there were buyers of Standard at Rs. 25-4.

A little more business was reported in jute shares during the period under review, but there were few price changes. Agartara were quoted at Rs. 12 and Anglo-India were unchanged at Rs. 180. Bally eased from Rs. 138 to Rs. 135 while Birla met with small enquiry at Rs. 17. Caledonian were crossed at Rs. 218 and Champdany were marked at the previous quotation of Rs. 154. Empire changed hands at Rs. 20-4 and Ganges at Rs. 68-8. Howrah were neglected at Rs. 23. Kankarrah "B" were

offered at Rs. 94-8. Megna were done at Rs. 81. Northbrook were crossed at Rs. 23. Nuddea were quiet at Rs. 40-8 as were Presidency at Rs. 5-8. Standard met with small enquiry at Rs. 104 while Union were marked down from Rs. 160 to Rs. 155. National were quiet at around Rs. 25-2. India dropped today from Rs. 142 to Rs. 137.

Electric shares had a dull week and only two transactions were reported in this section, namely, in Calcutta at Rs. 13-14 and Jubbulpore at Rs. 14-12. Little interest was shown in sugar shares except in the case of Belsund and Ramnugger which were fairly steady at Rs. 11-8 and Rs. 24-6. Carew were freely offered at Rs. 9. Cawnpore were unchanged at Rs. 21 and Champarun at Rs. 31. Darbhanga were quoted at Rs. 20-12 and Shree Krishna Gyanoday Old at Rs. 12-12. Dyer Meakin Breweries were marked at Rs. 5-15.

Engineering shares were a shade easier, particularly Burn which dropped from Rs. 370 to Rs. 361. Textile Machinery, after receding from Rs. 23-8 to Rs. 23-2 quickly recovered today to Rs. 23-15. Jessop were a shade easier at Rs. 33-8 as were Richardson & Cruddas at Rs. 25-12. Indian Standard Wagon were steady at Rs. 188 as were Braithwaite at Rs. 28. Kumardhubi Engineering changed hands on several occasions at around Rs. 10-14. Indian Iron & Steel fluctuated between Rs. 36-4 and Rs. 35-3 to close at Rs. 35-7.

In paper, India Paper Pulp were lower at around Rs. 24-12 while Orient Paper, after receding from Rs. 35-12 to Rs. 35-4, recovered today to Rs. 35-13. Shree Gopal were crossed at Rs. 19-8 and Star Paper were marked at Rs. 11-8. Titagur were better at Rs. 45-8. In cement, Assam Bengal were placed at Rs. 6-11 and there were buyers of Ashoka at Rs. 10-6. Dalmia Cement were unchanged at Rs. 14-4 while Sone Valley were steady at Rs. 7-14.

In insurance, Great Pyramid were offered at Rs. 3-6 as were Concord at Rs. 11-2. Ruby General were done at Rs. 6-8 and Standard General at Rs. 4. In shipping, Calcutta Landing were slightly

RESTRICTED DEALINGS IN STOCK MARKETS

SELECTIVE SUPPORT FOR INDUSTRIALS

London, 4th April.

PRICES moved within narrow limits in most sections in the stock markets last week. Apart from oil shares, which advanced sharply after the long week-end, rates recorded little material change from their previous levels. Business was restricted by the economic situation, the influence of the Easter holidays and the forthcoming Budget, now less than a fortnight ahead. Conditions generally were very quiet with interest selective, but a satisfactory tone prevailed in most markets. The statement that the Government's disinflationary policy will be maintained for the rest of the year, and reinforced if necessary, made for a cautious approach, while a number of disappointing dividend and profit statements had their effect on the industrials market. Gilt-edged were quiet and prices moved within narrow limits to record little change on balance. The recently issued Edinburgh stock failed to hold at the high premium established in initial dealings, while the new Surrey County 5 percent stock opened at a discount, but moved above par later. Foreign bonds attracted the minimum of attention and there was less activity in Baltic and Russian issues. A feature was the start of dealings in Peruvian Transport and Corporation stocks, a Canadian company formed to take over the shares and debentures of an old Peruvian corporation. Prices of new stocks went ahead from their opening levels. Rails attracted little interest. Dollar stocks, although fluctuating with Wall Street, were higher following a new all-time peak reached in New York. Industrial equities attracted selective buying and a number of firm spots developed, but generally the trend was undecided and movements for most part were small and mixed. Tobaccos generally lost ground in anticipation of the Government statement on cigarette smoking and health. By contrast, tramp shipping shares recorded an all-round advance. Gold shares drifted, but rallied immediately before the holiday. Coppers reacted to the fall in the metal price, but resumed their advance later. Other base metals were generally inclined easier where changed. Oils went strongly ahead following the advance on Wall Street and favourable comment. Tea shares continued the recent improvement on

a more optimistic assessment of the outlook for the commodity. Rubbers were quiet and easier.

The Money Market

The money market last week experienced conditions of acute credit shortage. While no definite reason could be found for the dearth of funds, the reasons put forward were the end-of-quarter factors, a large outflow of holiday currency and a large flow of funds into the revenue department which usually at this time of the year are on a much reduced scale. Considerable funds were injected into the market by the authorities although this did not prevent some borrowing from the central bank. Day-to-day money commanded 4½ percent to 5 percent, with no easing of the situation at any time. Difficulties in the money situation caused discount houses to raise their charge by ¼th percent for financing the purchase of Treasury Bills, thus in part reducing the fall which occurred in the Treasury Bill rate last week.

Applications for £280 million worth of 91-day bills totalled £410,020,000 and were allotted at an average rate of 103s 3.66d against 102s 2.16d in the previous week. Offerings this week comprise £280 million worth of 91-day bills. The Bank of England return for the week ended 28th March showed that notes in circulation were about £25 million higher at about £1,841 million, while bankers' deposits were about £7 million lower at about £243 million.

Activity on Wall Street

Convertible bonds were mostly lower on Wall Street last week, reflecting the recent setback in security values coupled with a hardening in money rates. Oils, however, were firm, while rails were generally lower. U. S. Government obligations and top quality corporates were also shaded. In the foreign section, Union of South Africa 4½ percent advanced at first but reacted later. Japanese issues were firm and Australians mixed. Germans showed little change.

Easiness in Rubber

Prices sagged at the beginning of last week following a sharp decline at Singapore with up-country liquidation in Malaya influenced by expectations of increased shipments from Indonesia as a result of the reduced export tax. Occasional covering demand rallied values temporarily, but offers were in excess of requirements. Later, moderate interest was shown in c.i.f. parcels in early positions. Towards the close, the market took on a pre-holiday appearance with prices steady, but finally professional selling brought prices down to close about 1½d a lb. lower on balance. Not much demand was noted for sole crepe and dealers' offers at reduced limits remained unattractive. The quotations were on the basis

of 38d a lb. for 1 inch. smooth No. 1 on the spot.

Vegetable Oil Market

The report that freer selling of linseed had resulted in a downtrend in linseed oil prices in the Indian domestic market caused a slight easing in shipment prices with April-May bulk oil more readily available at £145½, while May-June was mentioned down to £144. Groundnut oil was generally firmer, with £138 wanted for the allot of Indian bulk. Coconut oil was featureless with a holiday market prevailing. Nigerian groundnuts were featured by a further rise, with the Board latterly seeking £83 c.i.f. July-September, after refusing bids from the Continent at £82½. British East African new crop was sympathetically raised to £78 July-August, but old crop May-June was available at £75½. Re-sellers of Sudanese rapeseed also were talking of cheap rates with April-May parcels around £60, and even less to certain Continental ports. Ethiopian rapeseed was available at the lower level of £52 a metric ton, c.i.f. April-May, but in contrast, first-hand sellers of Indian rapeseed oil were talking of a level in the region of £170 c.i.f. April-May.

Dearer Canadian Aluminium

The price of Canadian aluminium ingots of minimum 99.5 percent purity in the United Kingdom has been raised by £10 a ton to £189, delivered consumers' works, with effect from 2nd April, it was learned from reliable trade quarters. The price was last changed at the beginning of this year, when it was raised by £8. The rate has been rising steadily since the middle of 1953 when it stood at £150 a ton. The latest increase reflects higher prices at the origin.

Industrial Production

The index of industrial production (1948-100) for February is expected to be 142-143, according to a statement issued by the Central Statistical Office. The index in the previous month was 141, and in February last year 140. The highest index of 146 was reached last November.

P. & O. Dividend Policy

The dividend policy of the Peninsular and Oriental Steam Navigation Company is discussed in a circular issued by the Stockholders' Association. Replying to the "many inquiries" which have been received, the circular states that it is not opposed to a conservative dividend policy provided that retained earnings are put to "good and profitable use." But in view of the low rate of the disclosed earnings in relation to the capital employed at present-day values, the circular questions whether retained profits are in fact being employed profitably. In these circumstances "retained profits might well be invested by the stockholders themselves to their better advantage." A statement summarising negotiations with the board is promised.

New Delhi

EXPANDING INDO-RUSSIAN TRADE

KRISHNAMACHARI AND MIKOYAN OUTLINE AIMS

(FROM OUR NEW DELHI CORRESPONDENT)

THE First Deputy Premier of Russia, Mr. A. I. Mikoyan, paid a brief visit to New Delhi last week and had important discussions with the Commerce and Industries Minister, Mr. T. T. Krishnamachari, and top-ranking officers of the Ministry. Proposing the toast at a dinner given in Mr. Mikoyan's honour, Mr. Krishnamachari said: "During the second plan period we are expecting an increase in India's foreign trade of anything between 30 and 40 percent. While we have no intention of changing the pattern of the existing volume of trade and diverting it into new channels, we feel that Soviet Russia could take up as big a slice as it wants of the increased trading opportunities that the second five year plan will provide. During the last four years, we have been exercising a great deal of control over our imports and exports, partly for the sake of achieving an equilibrium in the balance of payments position and partly for the purpose of developing our industries.

"With the second five year plan commencing, we feel we have to take Government activity a step further and obtain further control over the strategic points of foreign trade. We have really no intention of entering in a serious manner the distributive trade within India, but we find that for the purpose of playing a more positive rôle in the development and expansion of our foreign trade, it is necessary to start a State Trading Corporation. The Corporation is not intended primarily to deal with Indo-Soviet trade; the Corporation has been conceived as part of our basic economic policy and we hope that it will succeed in developing and extending our trade with friendly nations. In our talks, Mr. Mikoyan had offered to help us wherever we wanted help, and he assured us that the Soviet Union had no intention of forcing its goods on India or asking India to supply to the Soviets goods of which she is in short supply. These assurances are significant."

Mr. Mikoyan's Reply

In his reply, Mr. Mikoyan observed: "Trading with India, the Soviet Union is trying hard to avoid laying a burden on India's trade and payments balance. That is why we are ready to use our receipts for selling Soviet goods to India to buy Indian raw materials and manufactured goods. The Soviet Union does not mean to sell to India in such goods which she manufactures herself in sufficient quantities, since we do not want to compete with her own industry or agriculture. On the contrary, we offer to India such goods which will promote the development of the Indian economy. The Soviet Union, on its part, wants to buy in India such raw materials and manufactured goods which India wishes to export. The agreement, signed in February 1955, on the construction, with the help of the Soviet Union, of a big steel plant in Bhilai, is an important step in the development of closer economic relations between India and the U.S.S.R. The Soviet project for the Bhilai steel plant consider the fulfilment of the agreement on supplying the equipment for the construction of this plant as an example of peaceful economic competition with the Western countries in this field. Let our Indian friends be judges in this competition."

"The all-round development of economic co-operation in other fields may be also of a great importance to India and the U.S.S.R., particularly in the fields of utilisation of natural resources, exchanging scientific and technical information, as well as all-round development of cultural ties. India desires to create her own oil, coal and other branches of mining industry. We understand her desire. Having, for example, her own great deposits of oil which could be successfully utilised, India depends on other countries as far as this kind of strategic raw material is concerned. Should the Government of India desire, we are ready to share our experience in creating India's own oil industry. If necessary, we are also ready to co-operate in supplying oil equipment, training personnel etc. Trade as well as economic and cultural ties which are developing between India and the U.S.S.R. have a firm base. They are convincing proof of the possibility for the establishment of friendly co-operation between countries with different social and economic systems and may serve as an example of the mutual benefit of such co-operation."

Enquiries show that, on the lines of the steel plant, Russia has offered plant, equipment and technical aid for some other industrial projects that India may desire to set up during the second plan period.

Finalising Second Plan

It is expected to finalise the second five year plan soon. A three-day meeting of the Central Cabinet has been fixed for the middle of April to discuss the draft outline and the opinions expressed on it. The National Development Council will meet here on 1st and 2nd May to consider the plan as approved by the Cabinet. Parliament will hold a seven-day discussion in the middle of May, after which the plan will be published in its final form.

The opinion of State Chief Ministers, as expressed at the last meeting of the National Develop-

ment Council, was against any reduction in the size, targets or objectives. Since then, there has been pressure to increase the allocations for certain important undertakings. The Prime Minister, for example, recently said that he was in favour of increasing the allocation for the railways, which is Rs. 355 crores less than what they need. The problem of coal is still being discussed; the provision will have to be increased from Rs. 40 crores to Rs. 95 crores if production in the public sector is to be raised by 15 million tons to 18 million tons. An increase of Rs. 24 crores to Rs. 35 crores in the provision for oil exploration is being urged. There is a demand for an additional Rs. 55 crores for heavy industries, and Rs. 60 crores for atomic energy. The increased demands for these items total Rs. 549 crores. As reported, the Government has already accepted the demand of the Defence Ministry for Rs. 400 crores to develop defence industries during the second plan period.

The proposal to introduce prohibition in Delhi may be an indicator of the shape of things to come. It will reduce resources. The Gandhian ideologists meanwhile are strengthening their agitation for Ambar Charkha plans, which are estimated to cost Rs. 200 crores. Lastly, the demand for a subsidy for teachers' salaries, costing Rs. 65 crores, is still being pressed. The sum total of unsatisfied and new demands would thus be Rs. 1,555 crores, or Rs. 1,600 crores if Rs. 45 crores is provided for unforeseen eventualities. The Planning Commission's estimate of outlay in the public sector is Rs. 4,800 crores. The uncovered gap of Rs. 400 crores would increase to Rs. 2,000 crores if the extra demands are met.

Foreign Experts' Views

Professor P. C. Mahalanobis has meanwhile been doing some hard thinking on the subject. During the last two years, he has been able to get leading foreign economists to visit India and address the Planning Commission and the Government on some of the vital problems they face. The past year's batch included Professor J. K. Galbraith from Harvard University, Professor Oskar Lange from Poland, and Dr. Nicholas Kaldor from Cambridge University. They have made some significant suggestions to raise additional resources for the plan.

Dr. Kaldor on Taxes

Dr. Kaldor has recommended a levy on capital gains, an annual tax on wealth, a tax on expenditure and enhanced rates of estate duty. He says: "The more progressive the structure of income-

tax, the more harshly it operates on salaried public servants, scientists and intellectuals. But it leaves free the business man or capitalist, who can decide how much he shall take as taxable income and how much in the form of capital accumulation which is not taxable." This is claimed to explain why concentration of wealth and economic inequalities co-exist with steep rates of more than 90 percent on the highest ranges of income. A rate of income-tax above 50 percent, according to Dr. Kaldor, is bound to encourage evasion. In contrast to the recent estimate of the Finance Minister, Mr. C. D. Deshmukh, that tax evasion totals between Rs. 10 crores and Rs. 20 crores a year, Dr. Kaldor is of the opinion that, judging from the gap between profits and costs, perhaps only 50 percent of the taxes due on business income are in fact being collected in India.

Income-tax, according to him, should be limited to a realistic maximum rate of about 50 percent, but should be supplemented by an expenditure tax which would in effect act as a super-tax not only on incomes, but on all wealth that is spent. If, as a result, spending is curtailed and investment is encouraged, that would be all to the good. Dr. Kaldor is understood to have criticised the withdrawal of the capital gains tax, which was introduced in India in 1946 but was scrapped two years later; it yielded Rs. 6 crores despite the low rate of the tax. Without a tax on capital gains, he suggests no amount of increase in income-tax rates would really affect the business man. As for death duties, the suggestion for increasing the rates now in force in India is coupled with another for plugging loopholes by imposing a universal gifts tax. Dr. Kaldor remains unconvinced by the argument that there would be administrative difficulties in imposing an annual tax on wealth. He thinks that such a tax would be not only feasible, but would actually facilitate the proper assessment and collection of income-tax. Such a multi-pronged attack on privilege, the British expert believes, will be both more effective and equitable than the adoption of a single and inadequate criterion of taxable capacity such as income.

Polish Economist's Proposals

According to Professor Oskar Lange, "the causes which have prevented the utilisation of the surplus for capital accumulation" are basically the following:

"One cause is the feudal mode of production and the corresponding way of life of the feudal

1000 000 SKF AXLEBOXES

With SKF axleboxes nothing is left to chance—and it is not by chance that SKF is the first to have supplied 1,000,000 roller bearing axleboxes to the railways of the world. Designers and railway engineers have long known that there is always an SKF axlebox that is exactly right for their particular requirement. Standard axleboxes, special axleboxes, single and double bearing axleboxes for mounting inside or outside the wheels—all are included in SKF's first million. All these types—and more special types too if the need arises—will make their contribution towards SKF's second million.

ruling classes. The feudal mode of production is characterised by low productivity, and, corresponding to it, a low economic surplus is produced. The feudal ruling class used the small surplus produced for conspicuous consumption, or, in other words, for unproductive purposes. In this connection, the distinction of the classical English economists, particularly Smith and Ricardo, between productive and unproductive labour may be recalled. The landed aristocracy was accused by Smith and Ricardo of squandering the nation's resources for conspicuous consumption and unproductive employment of labour services, instead of utilising their incomes for capital accumulation and consequent productive employment of labour. As a major part of the under-developed countries became subject to colonial rule, this drain of the small economic surplus was increased by a very expensive colonial administration. When an under-developed country remained independent, the same drain was usually performed by the domestic monarchy and its officials.

"In the period of monopoly capitalism which started towards the end of nineteenth century, the unproductive drain of the economic surplus of the under-developed countries has been reinforced through profit-taking by foreign capital. Foreign capital comes to the under-developed countries under colonial or semi-colonial conditions, treating these countries as sheltered reserves for monopolistic exploitation. The monopoly profits made in this way are, on the whole, not reinvested in a way conducive to the economic progress of the under-developed countries. A major part of the profits of foreign capital is taken away from the under-developed countries and used for the economic development of the metropolitan countries (this manifested itself, among others, in such forms as the continuous excess of imports over exports in the leading capitalist countries of Western Europe); or are invested in such ways as do not create competition for the basic industries owned by the same monopolistic groups in the metropolitan countries. Since these are heavy industries, as a rule, such capital as is reinvested in the under-developed countries is invested in consumers' goods industries and in the production of raw materials and staple food products. This leads to the well-known lopsided character of the economies of under-developed countries: capital intensive techniques of production yielding low incomes on one side; and large-scale unemployment and under-employment of small producers ruined by the competition of capitalist factory production and by the import of manufactured articles from the capitalist industrial countries on the other side. At the same time, there is insufficient capital accumulation.

Removal of Obstacles

"From what has been said, it follows that an intensification of the degree of capital accumulation, which is the only solution for under-developed economies, requires the removal of the following obstacles:

"1. Abolition of all remnants of the feudal mode of production and feudal ways of life, which produce a low economic surplus and divert the surplus produced to non-productive uses.

"2. Liberation from colonial rule or domestic monarchies and their officialdom which use for unproductive purposes part of the economic surplus.

"3. Liberation from dependence on foreign monopoly capital which deprives the under-developed countries of a part of the surplus by taking out profits and preventing balanced economic development.

"These are the essential prerequisites for a rate of capital accumulation sufficient to raise the degree of employment, the productivity of labour and consequently the national income. The conditions stated serve to limit the diversion of the major part of the economic surplus for consumption or for utilisation outside the under-developed countries. In addition to these measures to remove the obstacles to rapid capital accumulation, positive measures must be taken in order to assure the capital accumulation desired.

"Under the present historical circumstances—in the epoch of monopoly capitalism and imperialism—rapid capital accumulation cannot be assured or secured in the under-developed countries by private capital. A characteristic feature of the under-developed countries is the lack of sufficiently broad and wealthy class of domestic industrial capitalists who would command the resources for substantial investment in industrial development. It is impossible to follow the course taken in the beginning of the nineteenth century by the countries of Western Europe where capital accumulation was carried out with the private resources of the industrial middle class. In Western Europe, this process was also supplemented by resources derived from colonial exploitation. Even under these favourable circumstances, the process of the industrial development was relatively slow, too slow to satisfy the social needs of modern times.

"Neither is industrialisation and economic development possible through the influx of foreign capital. Foreign capital, on the whole, is ready to come to under-developed countries only as monopoly capital under colonial or semi-colonial conditions. This would only provide a new drain on the economic surplus of the under-developed countries and handicap their economic development in the way described above. This does not mean that, under certain favourable conditions, in the case of a large and strong country such as India, with strong rivalries among different groups of foreign monopoly capital and with economic aid

from non-capitalist countries, foreign capital may not be utilised to a certain extent for economic development. The very conditions for an advantageous utilisation of foreign capital imply development of the internal resources of the country which make it sufficiently independent and strong to accept foreign capital on her own terms.

Public Investment Necessary

"Under the circumstances stated, economic development can take place only on the basis of public investment, namely of capital accumulation performed by the State and other public institutions (municipalities, co-operatives, etc.). Public investment thus becomes the strategic lever of economic development in under-developed countries. The physical resources for public investment exist in the form of unemployed or under-employed labour power and of under-developed natural resources. The problems of capital accumulation is essentially that of putting these resources to work in a way which will create capital goods, or means of production. This implies the utilisation of the resources available for the development of producer goods industries. The development of producers' goods industries is the basic instrument of economic progress in under-developed countries.

"It may prove, as in the case of India, that even a rapid development of producers' goods industries is not sufficient to absorb the whole of the unemployed and under-employed labour force. The remainder must be absorbed in the following two ways. A part can be absorbed by means of land reform which distributes land to landless peasants and to peasants who do not have enough land to absorb all their labour power as well as by settlement on new land reclaimed by irrigation projects. Another part can be absorbed by the development of labour-intensive handicraft and small industries. The increased demand for the products of these industries caused by the employment created in consequence of the public investments in the heavy industries and by the rise of the peasants' incomes resulting from land reform provides the market for an increased output of craft and small-scale industries.

"The methods of financing the public investment necessary for rapid industrial development will vary according to circumstances. Since the physical resources for such public investment are available, the financing problem can be solved in principle. In Russia and in the other Communist countries of Europe and Asia, the financial resources have been raised in two ways. One is from the profits (including turn-over tax) of the nationalised industries; the other is by contributions from peasants in the form of delivery to the State of part of their products at reduced prices. The nationalisation of the large industries (largely foreign-owned) and of the banking system provided the initial financial resources for public investment. The land reform enabled the peasants to contribute a certain part of their product to the industrialisation of the country. These means of financing were supplemented by taxation and by State loans subscribed by the population.

Profits from Nationalised Industries

"If in India no major nationalisation of industries is going to be undertaken in the near future, the financial resources for public investments will have to be derived largely from taxation, State loans and a certain amount of deficit financing. However, when a major nationalised sector is created by means of public investment, its profits will have to become an important source of further public investment, and, consequently, of further growth of the nationalised sector. Industrialisation and economic development by means of public investment imply the development of a nationalised sector in the economy. This sector becomes the driving force of development of the whole national economy. It is in the nationalised sector that the major part of the new investment is taking place. It is the nationalised sector which initiates the process of creating new employment and generating new incomes. It is the development of the nationalised sector which—either directly through its own purchases or indirectly through the personal incomes generated in it—creates additional demand and an expanding market for consumer goods produced by the private sector of the national economy. The development of the private sector which takes place is initiated by the development of the nationalised sector resulting from the public investments made.

"If, as is the case in most underdeveloped countries (it seems to be the case in India), there is considerable unutilised capacity in the private capitalist sector, profits in the private capitalist sector increase considerably because production expands without need of much additional investment. These profits can be partly utilised by means of taxation, borrowing or in other forms, for investment in the nationalised sector. Industrialisation of an underdeveloped country by means of public investment implies that the output and the capital invested in the nationalised sector increases faster than the output and the capital invested in the private sectors. Thus the weight of the nationalised sector in the economy increases. The development of a nationalised sector and its more rapid growth than that of the private sector of the national economy is, under present historical circumstances, a necessary condition of industrialisation of underdeveloped countries. Where the political and social conditions for the establishment by means of public investment of a nationalised sector and of its more rapid growth are non-existent, the economic progress of the under-developed country is impos-

sible. The country must remain backward until the political and economic conditions mature."

New Industrial Policy Statement

The Economic Secretaries Committee has submitted a draft of the new industrial policy, which is now being discussed here. The 1948 Industrial Policy Resolution divided the industrial field into three sections. The first consisted of six industries: coal, iron and steel, manufacture of aircraft, as also of telephone and wireless apparatus, shipbuilding and mineral oils. The second section, consisting of 18 industries, including non-ferrous metals, fertilisers, and air and sea transport, was subject to Central regulation and control. The remaining industries, in the third section, were left to private enterprise.

Since then, the exploitation of mineral oils, including the building of refineries, has been entrusted to the private sector, while air transport and fertilisers have become a State monopoly. The State has also entered the shipping trade and machine tool manufacture, and is planning to start the manufacture of heavy machinery. The Industries Regulation Act empowers the Government to select industries for regulation and control. The Secretaries Committee, according to reports, has also divided industries into three sections. One is reserved exclusively for the State. The second is "concurrent", and includes industries such as sea transport, which can be developed both by the State and by private enterprise. The third section lists industries which remain entirely for the private sector.

Consultant on Hydraulic Turbines

The Government of India has decided to appoint the English Electric Co. Ltd. as a subsidiary consultant for the manufacture of hydraulic turbines and associated equipment as part of the heavy electrical equipment project. The main consultants for the project, Associated Electrical Industries Ltd., of the U.K., will now be in a position to proceed with the designing and lay-out of the complete heavy electrical equipment factory, including hydraulic turbines. Under the technical collaboration agreement between the Indian Government and A.E.I., which was concluded in November 1955, it was provided that a subsidiary consultant would be appointed in consultation with A.E.I. for the manufacture of hydraulic turbines and associated equipment, as the latter does not manufacture this type of equipment. Several leading turbine manufacturers were invited to put forward offers of collaboration in the manufacture of hydraulic turbines through A.E.I. Seven offers were received from firms in the U.K. (two of them in conjunction with American and Swedish firms), Switzerland, France and West Germany. Detailed negotiations were held with the representatives of these firms. On the basis of technical, financial and other merits, the Government has selected the English Electric Co. for subsidiary technical assistance. Arrangements are in hand for a formal agreement to be concluded between it and the main consultants. Initially, it is proposed to manufacture turbines and generators up to 50,000 k.W. but to meet the growing demand for larger units it will be possible later to take up the manufacture of very large single units as required. The heavy electrical equipment factory is expected to go into production by 1961.

Indo-Yugoslav Trade Agreement

Mr. K. B. Lal, Joint Secretary to the Ministry of Commerce and Industry, signed the Indo-Yugoslav trade agreement on behalf of the Government of India last week. During the talks on the agreement, the possibilities of expanding trade between the two countries in specific commodities were reviewed. It was found that Yugoslavia could export immediately substantial quantities of rolled steel products and cement, and India could export iron ore. It was agreed by a separate exchange of letters, that the two Governments would assist the trading organisations on both sides to do this.

The Indian Government has for some time been discussing with the Yugoslav authorities the purchase of ships from that country. By the exchange of another set of letters, the two Governments have agreed to speed up the clearance of preliminary technical questions which are outstanding in order to expedite the conclusion of contracts for the sale and purchase of ships. Following is the text of the letter Mr. K. B. Lal has received from the leader of the Yugoslav trade delegation:

"1. The Government of the Federal People's Republic of Yugoslavia expresses its satisfaction with the Government of India's intention to purchase ships from Yugoslavia. The Yugoslav Government will use its influence with the Yugoslav shipbuilding yards for necessary priorities in respect of delivery times, etc.

"2. The Yugoslav delegation have received the specifications of the types of ships in which the Government of India and Indian shipowners are interested. The Yugoslav shipyards will shortly furnish to the Government of India firm information regarding (a) dates of delivery, and (b) estimated cost of construction.

"3. Taking into consideration the fact that the actual facilities of the Yugoslav shipyards are already booked up to a considerable extent, and in order to secure adequate delivery time, the two Governments agree to speed up the clearance of preliminary technical questions which are still outstanding and to arrange meetings of technical experts with a view to expediting the conclusion of contracts for the sale and purchase of ships. Similar talks are in progress with a Polish trade delegation, which has also offered to sell ships to India.

London

LITTLE HOPE OF TAX CUTS IN NEXT BUDGET

EMPHASIS LIKELY ON SAVING TO HOLD INFLATION

(FROM OUR LONDON CORRESPONDENT)

THE conscientious scribe who spends much of his Easter holiday studying such literature as "Economic Survey, 1956" and the "National Income White Paper" for the edification of his readers overseas has one small compensation. The Chancellor of the Exchequer, at his home near Haywards Heath, is at least similarly employed but to much greater purpose—that of producing the general framework of his Budget. The March trade figures and the progress of the recent credit restriction measures will have a major influence in deciding the specific details—which probably explains the postponement of the presentation date to 17th April—but the available evidence certainly does not justify much hope of tax remissions that would add appreciably to disposable incomes. Mr. Macmillan is expected to concentrate on incentives for saving while using the fiscal weapon to reinforce monetary policy in a holding operation against inflation. The revenue position is encouraging, for the Treasury returns show an "above the line" surplus of over £418 million, against the revised estimate in the Autumn Budget of £69 million. The "below the line" deficit, on the other hand, stands at over £554 million, so that the overall cumulative deficit is £136,247,418. Moreover, most recent estimates of expenditure by various departments in the current year show substantial increases.

The Economic Survey, 1956 in point of fact, bears a misleading title, for in the main it is concerned with looking back at 1955 rather than looking forward to 1956. In view of the considerable inaccuracies disclosed by earlier attempts at forecasting this is not an undesirable development. So far as it looks ahead the Survey anticipates that the effects of the Government's disinflationary measures will be increasingly felt, but warns that if they are slow in producing results they will be reinforced. As a result of work already put in hand, the rate of expenditure on fixed investment is likely to be appreciably higher this year than last, and to make room for this as well as to improve the balance of payments other demands on our resources must be restrained, particularly the growth of consumers' spending. The outlook for British exporters is thought to be "fairly favourable."

The Background

In looking back at 1955 the Survey shows just why the aim of the Government's economic policy in 1956 must be "to limit home demand so that more production could be exported and the growth of imports moderated." The strain on the economy has arisen from a faster growth in national income and expenditure than in production. Money income at home rose by about twice as much as the real national output in 1955. Wages and salaries rose by 8½ percent, gross trading profits by about the same percentage, and the total national income by 5½ percent. Prices of goods and services of all kinds were 3 percent higher than in 1954. The index of retail prices was 4½ percent higher and the retail price of food went up by 7½ percent. Personal consumption went up by 3 percent, or slightly less than in the previous two years, but there were surprising variations within this total, with private motoring expenditure showing a rise of as much as 26 percent. Personal savings, however, remained at about 7 percent or 8 percent of disposable income. Consumers' expenditure was estimated to have risen by £200 million. In terms of energy value, fat content, and animal protein, food consumption in 1955 was the highest yet recorded.

The balance of payments deficit was £103 million, against a surplus of £205 million in 1954, with net invisible earnings showing a fall of £142 million owing to lower earnings from shipping and from oil. The world economic situation, however, was favourable, but home demand overstrained productive capacity. Expenditure on imports rose by £404 million but export earnings went up by only £244 million. Industrial production rose by only 5 percent, compared with 7 percent in 1954. The main expansionary force was the increase in fixed investment in industry, and this, added to a rapid increase in stock-building, imposed a strain on the economy and claimed too large a share of the industrial production most in demand in foreign markets. In the first nine months, British exports of manufactures, about four-fifths of the total, were 7 percent higher in value. Corresponding increases for America, Western Germany and Japan were about 9, 18 and 27 percent, respectively.

National Income White Paper

The National Income White Paper is perhaps a less rewarding study from the point of view of economic policy or the forthcoming Budget but provides an interesting commentary on changing trends. Government expenditure as a proportion of the total national income has been falling in recent years, from 35 percent in 1952 to only 31 percent last year, but this was still slightly higher than in 1950, the year before the rearmament programme was launched. The country's total investment at home and abroad amounted to 18 percent of the gross national product, much the same as in the previous two years but greater than in the earlier post-war years and in 1938. The gross

national product at £16,634 million was 5½ percent more than in 1954, against an increase of 7 percent the year before. Personal incomes rose last year by 7½ percent compared with 6 percent in 1954. Wages and salaries accounted for 70 percent of the increase. About a fifth of the addition to incomes went in income tax and national insurance contributions and nearly three-quarters was spent. Over a half of the increase in consumers' spending was offset by higher prices. In real terms, consumers' expenditure rose by only 3 percent compared with nearly 4½ percent in 1954.

Gross trading profits of companies before tax increased by 11 percent last year, while gross trading surpluses of public corporations fell by 15 percent. These changes are partly accounted for by the transfer of some iron and steel companies from public to private ownership. Taking companies and public corporations together, gross trading profits and surpluses increased by £231 million or 8 percent between 1954 and 1955, and dividend and interest payments (before tax) rose by £123 million, or 12 percent. Personal savings in 1955 are estimated at £926 million, compared with £892 million in the previous year. They contributed nearly a third to the total of the nation's savings. Savings by the central Government were also an important item at 13 percent of the total. This was the largest contribution by the Government since 1952.

Last B.I.F. in London

The London section of the British Industries Fair, which will be held at Olympia from 23rd April to 4th May will be last of the series. The Birmingham section which will be held at Castle Bromwich between the same dates, is to continue as an annual event. The money spent on advertising the London section of the fair will in future be used by the Board of Trade mainly in support of overseas fairs and exhibitions at which British goods are shown and the prestige of British products is upheld. Giving this news to the House of Commons, the President of the Board of Trade, Mr. Thorneycroft, explained that the Board of Trade had decided, in agreement with the British Industries Fair, Ltd., which runs the London section, to give the news now to put a stop to any advance booking plans for the next annual fair. The Board thought it would have been unwise to save the announcement until the fair had closed.

The British Industries Fair, Ltd. took over responsibility for the London section from the Board of Trade in 1954, when the Treasury guaranteed £100,000 to the company. In addition, the Board of Trade has made an annual grant for publicity. Mr. Thorneycroft told the House that the London section in its traditional form no longer met a general need, since most traders preferred to take

part in specialised shows in which attention could be focussed on the products of a particular industry. Interest in the London section had declined among buyers and exhibitors, and the results of the fairs of last year and this year would exhaust the Treasury guarantee. The Government would meet the extra liabilities by a Supplementary Estimate, but there are more exhibitors in this year's fair, and the B.I.F. Ltd. hoped that it would be self-supporting by next year, business interests agree that specialised exhibitions are preferable to general ones and accept the Government's decision as being realistic.

Lancashire's Case Against Imports

The Cotton Board has released this week the long-awaited statement outlining the basis for its repeated requests to the Government for some form of protection against cheap cloth imports. It is a lengthy document which goes into considerable detail, but mainly reiterates the arguments which have already been referred to in earlier dispatches. It certainly makes it clear that unlimited imports of yarn and cloth have already had severe consequences on the British cotton industry and suggests that the effects are likely to become even more severe if no limitation is adopted. The Government, for its part, has made it abundantly clear that it is unwilling to impose duties against imports from Commonwealth countries, and generally speaking this attitude finds support outside those sections of industry particularly affected. The argument advanced that this attitude might be changed if industries, other than the cotton industry, were involved is questionable, so the contention that the cotton situation provides an opportunity for reaching decisions on what should be done in case there is any extension, and perhaps also an opportunity for testing the reactions which restrictions might produce is unlikely to find support.

"Where now the city stands,
there was once naught but the city's site." OVID

Calcutta

On August 24

1690, when Job Charnock stood on the banks of the Hooghly, he saw before him a depressing landscape of mud hovels, swamps, and paddy fields. On that very site has risen in the course of the years a pulsating city with heavy industry, modern transport and busy docks—a metropolis which could have made little progress but for STEEL—thousands of tons of it.

MEASURES TO INCREASE POWER OUTPUT

ELECTRICITY BOARD'S PLAN FOR SELF-SUFFICIENCY

(FROM OUR BOMBAY CORRESPONDENT)

BOMBAY State, particularly the Bombay-Poona area, which has been experiencing a shortage of electric power since 1949, is expected to have enough for industrial as well as domestic purposes in another three or four years. This forecast was part of an up-to-date review presented at a Press conference a few days ago by Mr. M. H. Hasham Premji, chairman of the Bombay State Electricity Board. The Board was established in November 1954 to expedite the execution of power projects and to improve their management. Important steps to increase the power load available to the Bombay-Poona region, it is hoped, will be completed by 1959, when 50 percent more electricity will be available with the extension of the Tata Grid to the Bhira Power House.

In addition, 90,000 kW of power will be supplied to the State under the second five year plan, with an outlay of about Rs. 14 crores for the generation, transmission, and distribution of electricity, including purchased power. This amount, Mr. Premji said, did not include what the Government would be spending through the P.W.D. and what would be spent on the various schemes in Bombay State which did not come under the Board.

In order that there may be enough power for all the important areas of the State it is proposed to start four extension and nursery power projects in the second five year plan at a total cost of Rs. 8.75 crores. Another aim is to develop the principal sources of hydro-electric power and to provide an adequate thermal reserve to meet the needs of an integrated system. A few rural electrification

schemes, taken up in the first plan with the help of loans sanctioned by the Government of India, are still incomplete. A provision of Rs. 1.5 crores is being made in the second plan for completing the schemes and for advancing fresh loans to local bodies and other institutions for taking up new rural electrification schemes.

The Koyna Project

The important Koyna Project, which was begun in January 1954, under the first five year plan, is not under the jurisdiction of the Bombay State Electricity Board. The project was originally taken up for generating power only, but will now be enlarged into a multi-purpose project. Fortunately, Bombay State is rich in its hydro-electric potential. A number of rivers, including the Narbada, Tapi, Godavari, Krishna and Kalinadi, bring huge quantities of water during the monsoon season which generally flow wastefully into the sea. By tapping the new resources in the State and thus increasing power supply, it is expected that heavy industries such as chemicals, aluminium and paper manufacture—which need power on a large scale—will be provided with a strong impetus for expansion in this area. The Bhira project which Mr. Premji described as economical, will produce 200,000 units, which, with the additional power generated from Trombay and the Chola Steam power station, will meet "the peak capacity of the Bombay system". The expansion of the Chola project will also help meet the needs of the Bombay-Poona area. Furthermore, this project will facilitate the speedy electrification of the Central Railway up to Bhusawal, in the East Khandesh district of Bombay State.

The Board sanctioned the extension scheme relating to Bhira by Tatas at a total cost of Rs. 5.95 crores of which Rs. 1.5 crores will be spent on a new tunnel to replace the present dilapidated Bhira tunnel. Extension of the Bhira Power House alone will cost almost Rs. 4 crores. The project will be undertaken by the installation of one turbo generator of 60,000 kW capacity at the power house. The height of the Mulshi Dam will also be raised in order to retain water which overflows from the Mulshi Lake each year. About Rs. 50 lakhs will be spent on strengthening the transmission system from Bhira to Bombay which needs renovation. This, the chairman added, was apart from the cost involved in transmitting the additional power.

The scheme will supply an extra 60,000 kW of power to the Bombay-Poona region by 1960 to meet the increasing needs of new industrial ventures in the suburbs of the city. By the same year, the total supply of electricity in the State, excluding Bombay city, is scheduled to rise to 210,000 kW. The thermal plant at Trombay, due for completion by 1956-57, will be able to supply 100,000 kW to Bombay city and its suburbs. Greater Bombay currently receives 336,000 kW of power from the Tata Hydro-Electric Grid.

Rural Electrification

Mr. Premji said that 500 new villages would be electrified during the second plan period. He emphasised, however, that this figure did not represent a correct picture because it showed only those villages in the State that would be directly electrified. He added that once load-points were established, many adjacent villages would also be brought into the scheme. From this point of view, it was not possible now to give the exact figure of the number of villages that would be covered by rural electrification at the conclusion of the second plan. The Board chairman said: "Tatas have assured us that the (Bhira) project can be completed early in 1959, a year and a half before Koyna, and as such it will not only meet the growing needs of the Bombay area but provide a cheaper and permanent source of power to the system, as the loads are expected to rise very fast, and enable the diversion of Koyna power partly to Maharashtra". Of the 90,000 kW proposed to be generated in the second plan period, Mr. Premji declared 40,000 kW would be obtained from the Koyna Project, while 45,000 kW would be generated by the new thermal plant to be established at Utran, near Surat. In referring to the schemes of extension of the grid systems in the State, he opined that with the acquisition of 40,000 kW from Koyna, the Board would be able to meet the needs of the Satara regions in Maharashtra. The Board has placed an order with the Czech firm of Skoda for the extension of the Utran Power House by establishing three thermo generators there which will result in the supply of power to the entire region of south Gujarat, from Vapi in the south to the Cambay-Petlad belt to the north.

Projects Delayed and Shelved

The Board's plans for power development in Karnataka, including Belgaum and the adjoining areas, had, however, Mr. Premji continued, been delayed as the Mysore Government had turned down the Board's request for negotiation for an additional allocation of 5,000 kW from the Jog Power House. This, he added, would hinder industrialisation in the Hubli and Dandeli areas, but three major schemes were already sanctioned for construction. A considerable part of the Board's projects had to be shelved completely, he added, including schemes for extension of the grid systems in the Khandesh and Bijapur regions, because the Planning Commission had turned down its original request for Rs. 4.3 crores and sanctioned only Rs. 1.4 crores.

The Board had arranged with the Ahmedabad Electric Company for the supply of 22,000 kW to meet the north Gujarat load, which is expected to be doubled in the second five year period. Mr. Premji amplified: "The firm capacity at Utran at 52,500 kW will enable the Board to meet the load requirements both in north and south Gujarat. On the basis of estimates prepared for generation of power it may be possible substantially to reduce

the rate in south Gujarat or at least bring them in line with the rates now sanctioned for north Gujarat". He expressed the view that unless the revenues were used for subsidising village electrification, which did not pay, and which was really the responsibility of the Government to subsidise these areas would suffer. "Rural electrification is a major problem which will have to be faced as the load conditions are poor, and proportionate transmission and distribution cost is high. The State must subsidise such loads if they are to develop.

Board Incurs Loss

The Board chairman gave the assurance that the surcharge imposed by Tatas on their power supplied to the Board would be absorbed by the Board and not passed on to the consumer. He said that the additional power available under the second five year plan, when 500 villages were electrified, would be divided equally between the industrial and domestic consumer of power.

The chairman stated that the Board has not been able to cover expenses and is actually running into a loss of about Rs. 22 lakhs. He attributed the deficit to unremunerative schemes like rural electrification, diesel nurseries and making power available for small rural areas on an uneconomical basis.

Electricity Industry's Plea

A strong plea to give the electricity industry the right to adjust rates was addressed to the Government by Mr. K. G. Milne, chairman of the Ahmedabad Electricity Company Ltd., while addressing the Company's forty-third ordinary general meeting on 29th March. He called on the Government to provide incentives, and not to increase restrictions on electricity supply undertakings. "Above all, we must be given the freedom to adjust our rates to the economic level necessary to produce a steady commercial yield." Referring to the Electricity (Supply) Amendment Bill, Mr. Milne said that the proposal regarding the Standard Rate, as outlined in the Bill, would not ease the industry's difficulty in raising finance for expansion. He suggested that the proposed differential of 2 percent over the Bank rate should be raised to 21 percent. There was no need in his opinion, for nationalisation of the electricity industry, in view of the fact that it already operated under numerous restrictions. "To those who repeatedly advocate nationalisation of electricity undertakings, the unfortunate position of consumers in Madras State should stand as a warning. For several years, this State has been repeatedly hit by drought which seriously curtailed hydro-electric supplies, and yet after all these years, the State authorities, which control 98 percent of the generation, have not been able to put their house in order by firming up the hydro-electric plant by suitable additions to the thermal capacity of their inter-connected system. Once again, this year, consumers are being subjected to drastic rationing in their electric supplies." Mr. Milne said he was happy about the Central Electricity Authority's ruling on the State Government's directive on the payment of a dividend above 3 percent until the arrears of depreciation were cleared. The company, he said, had been able to meet rising costs by increasing efficiency in operations. However, he told the shareholders that the cut in the proposed dividend was due to reasons beyond the company's control, but assured them that the future could be viewed with a modest degree of confidence. Emphasising that the dividend would also depend upon the terms of the controlling legislation from time to time and possibly on the Bank rate, he said he hoped, given no change in the latter and other things being equal, to be able to aim at about 6 percent for future years. He stressed the "calamitous" shortfall of Rs. 27 lakhs in relation to the modest return permitted under the Electricity (Supply) Act, which had culminated in the cutting of the dividend from 61 percent to 5 percent.

Quick Progress

Of special interest, is the pace of expansion of the Ahmedabad Electricity Co. Ltd., as outlined by Mr. Milne. He stated that in 1946-47 the company's plant capacity was of the order of 37.5 MW. In 1950-51, this rose to 97.5 MW and by 1954-55, he added, the plant capacity had reached 142.5 MW—when the combined subscribed share capital and debentures stood at Rs. 107,500,000. Recently, another 15 MW turbo-alternator set had been ordered to meet the ever-rising demand. He pointed out that the demand in the company's area of supply is advancing by an average of more than twice the accepted world average of 7 percent. "It is this very magnitude and pace of expansion in recent years, which, paradoxical though it may seem, has reacted to penalise the investor," he declared.

"The first budget of the second five year plan," Mr. Milne said, "if nothing much else can be said in its favour, promises to diminish some of the difficulties arising out of the contradictions between the Electricity (Supply) Act and the Income-Tax Act in respect of depreciation. The creation of Maha-Gujarat, with possibly Ahmedabad as the capital, should open up to this Company still further opportunities of growth and service; and I can only hope that before long, the law will be so amended as to afford the future investor in our industry sufficient incentive to remove the least doubt about its ability to fulfil its great task throughout the country. But we must be afforded incentive, and not increasing restrictions, if we are to maintain that balance between the consumer and the investor and the worker which would be ideal. Above all, we must be given the freedom to adjust our rates to the economic level necessary to produce a steady commercial yield commensurate with the cost of the development capital we need for ourselves and, through us, for the service of so many others."

Madras

ESTABLISHMENT OF NEW TEXTILE MILLS

PROSPECTS FOR STAPLE FIBRE AND RAYON FACTORY

(FROM OUR MADRAS CORRESPONDENT)

AT the annual general meeting of the Southern India Millowners' Association, Mr. R. Venkataswami Naidu, chairman, said that several new textile mills were being established mostly in the cotton-growing areas and yarn-consuming centres of Madras State. A large percentage of profits had been ploughed back for the modernisation of worn-out plants and for expansion. The concessions given by the Central Government had promoted the development of the industry, and the provision for a special initial depreciation allowance and development rebate in the Union Budget had been particularly helpful. But, Mr. Naidu continued, the nationalisation of life insurance had created the apprehension in the minds of industrialists that banking institutions would not be able to provide finance for industry to the same extent as life insurance companies did. If rapid industrialisation was to be achieved, the surplus funds of the insurance companies must continue to flow into the private sector of industry. The various finance and development corporations should also grant liberal loans to new industries, and banks should continue to advance loans on block capital as they had been doing.

The S.I.M.A. chairman stated that the successful working of the United Bleachers had encouraged the Millowners' Association to explore the possibility of setting up a staple fibre and rayon factory in the South. This would go a long way towards providing the raw material required by the spinning industry. While the staple fibre produced in South India, after allowing for a liberal depreciation on plants and a reasonable return on investment, would cost only about Rs. 1-4 a lb. The imported rate at present was Rs. 1-8. The industry, he said, was consuming nearly 30 million lbs. of staple fibre every year. Referring to power supply for factories, the chairman pointed out that the present 50 percent surcharge on power in Madras would retard industrialisation. Industries like aluminium required an abundant supply at low rates. The power supply in the State was very often dislocated during the summer months. The long-hoped-for stand-by thermal units had not been set up by the Government. Yet, this year, the industry would suffer a 25 percent cut in power supply. Excepting the Pykara system, the function of power generation in all other projects was subsidiary, the main function being irrigation. Mr. Naidu stated that due to the lack of power, many industrial units had to install diesel sets. Over Rs. 1 crore had been sunk in these toy-generators which were neither efficient nor economic. If, for any reason, the surcharge was to be continued, he urged, the returns should be utilised solely for the installation of thermal plants in strategic areas.

Labour Relations

The chairman of the Employers' Federation of South India, Mr. E. F. G. Hunter, told the annual general meeting that the Government intended, under the second plan, to tighten its control over labour relations and industrial development, leaving little initiative to the employer or the worker. He expressed the view that while workers were to be guaranteed certain rights and amenities, nothing was laid down regarding their obligations, discipline and output. The draft plan mentioned the training of trade union workers. In western countries, certain standards of education were laid down for those aspiring to trade union posts. It would be possible to lay down such standards in India only when provision was made for training the workers themselves in trade union leadership. The Government, he said, should also pay attention to the training of conciliation officers and adjudicators. Mr. Hunter felt that the proposal to associate labour with management was somewhat revolutionary. He doubted whether the time was ripe for such a joint enterprise. In his view, the partnership was unlikely to lead to a healthy atmosphere and was bound to result in constant friction instead of promoting harmony and improving industrial relations. It was advisable, he said, to determine the living wage in all industrial centres and then to lay down a policy indicating the lines on which the living wage standard should be obtained, by linking all increases in wages with output. He emphasised the need for a uniform wage policy as the large majority of industrial disputes were for higher wages in one form or another. In a highly competitive market, he observed, the necessity for fixing wages, dearness allowance and bonus on well-established principles could not be over-emphasised. The implementation of the Employees' State Insurance Scheme had resulted in a considerable increase in sick leave and absenteeism. Mr. Hunter criticised the tendency to view all fresh legislation with suspicion and said the members of the Federation did not support such an attitude. They accepted the decisions once they were taken by the Government and did their best to implement them.

Complaint Against Excise Duties

The Madurai-Ramanathapuram Chamber of Commerce, in a memorandum to the Union Finance Minister, has urged that the levy of excise duties should not be allowed to cripple the industry or retard its development. The excise duties on non-essential oils and soap were cited as

examples of such levies. Complete elimination of the exemption limit and bringing all power units within the scope of the excise duty would meet the circumstances of the case and would help realise the expected revenue. The cost of production by *ghanis* was 50 percent more than that of power units. Already the competition from the latter was slowly but surely squeezing out *ghanis* from the field. Small power units which operated in rural areas in competition with *ghanis*, enjoying the benefits of the exemption limit, would bring disaster to the latter. The memorandum also pointed out that non-power soap units were being brought for the first time under excise duty. The manufacture of soap by non-power units, big and small, was a cottage industry, and it was necessary to exempt the manufacture of soap by non-power units from the excise duty. If this was not possible, the memorandum suggested, a reduction in the duty would be a gracious gesture as it would remove the apprehension felt by other cottage industries that at one time or another, they might also be brought under excise duty to suit the needs of the Budget.

Manufacture of Farm Implements

The Madras Government will soon set up a factory for the manufacture and servicing of farm and agricultural implements. An automobile factory to manufacture motor cycles and diesel trucks is about to be set up in Madras city as an Indo-East German enterprise. Three East German experts were recently in the city to finalise proposals with the local parties concerned.

Demarcating Public and Private Sectors

It is the view of Dr. A. Ramaswami Mudaliar, who has just been elected to the Council of States, that the demarcation of the public and private sectors is not necessary. No harm would result, he said here recently, even if the Government opened a few textile mills and controlled them, for private industrialists could always produce the best and compete with the Government. He pointed out that all sorts of theoretical objections were being put forward by Chambers of Commerce. He would like them to take an interest not merely in commerce but also in setting up new industries for which ample opportunities existed. Dr. Mudaliar, incidentally, urged the postponement of the States reorganisation scheme for ten years so that economic progress could be more rapid and easier. He pleaded for a further diversification of industries.

Although he recognised the acute nature of the problem of unemployment, he could not understand the wisdom of trying to solve it by giving some work or other to men just for keeping body and soul together. Criticising attempts to revive outmoded cottage industries merely for the purpose of giving work, he said that the reintroduction of the old method of hand-pounding rice, for instance, should not be thought of now, firstly, because it was not adequately remunerative and secondly, because the modern village girl would not condescend to do that kind of thing.

Briefities

In a symposium on the chemical and allied industries in South India and their prospects, it was stated that South Arcot lignite contained the maximum percentage of humic acid and that the plants grown on ammonium humates compared favourably with those grown with other fertilisers. Strontium ore, which is found in plenty in Trichy district, has been successfully utilised on a pilot-plant scale in the A. C. College of Technology for the production of strontium carbonate.

Pondicherry, the former French possession, will have in the near future a sugar factory, a spinning mill, a wooden toy factory and two leather manufacturing units.

The Carborundum Universal Ltd., in Madras proposes to increase the production of coated abrasives from 37,000 tons to 70,000 tons a year. More than 80 percent of the glue used in the manufacture of coated abrasives is made in India.

42 COUNTRIES IMPORT INDIAN SEWING MACHINES

Forty-two territories including Aden, Australia, Afghanistan, Burma, Ceylon, Egypt, Greece, Gold Coast, New Zealand and Guatemala, imported Indian sewing machines. This was stated by Mr. T. T. Krishnamachari, Minister for Commerce and Industry, in a written reply to a question in the Lok Sabha lately. The Minister said that the Tariff Commission had estimated in 1954 that the production of sewing machines had exceeded the demand. In recent years, both demand and production were increasing and a precise indication of the one outrunning the other was not available.

STEWARTS AND LLOYDS OF INDIA, LTD.

PUBLIC SERVICES

Air, Gas, Water and Sewage Mains.

POWER

Steam Mains and Pipework Installations.

OIL COUNTRY GOODS

Casing, Line Pipe and Tubing.

TUBEWELLS

Casing, Drive Pipes, Liners and Housing Pipes.

MINING

Compressed Air, Fire Fighting and Rising Mains.

SHIP'S EQUIPMENT

Derricks, Davits and Masts.

POLES

Tramway, Transmission, Lighting.

SPECIAL USES

Ammonia Tubes, Coils, Hydraulic Tubes.

STRUCTURAL

Light Structures of Tubular Construction.

MECHANICAL HANDLING

Pallets, Stillages and Trolleys of Tubular Construction.

TATA/S. & L. SALES LIMITED.

GENERAL SERVICES

Screwed and Socketed Tubes, Class "A" "B" and "C" (Galvanised and Black) to B.S. 1387, up to 6" n.b., and Pipe Fittings.

POWER

Cold Drawn, Hot Finished and Electric Resistance Weld Boiler Tubes.

MECHANICAL

Seamless and Electric Resistance Weld Tubes for Rollers, Conveyors and other mechanical purposes.

STEEL STRIP

High Tensile Steel Box Strapping and Cold Rolled Steel Strip for manufacturing purposes

Enquiries and Orders for Screwed and Socketed tubes and fittings ex-stock may be addressed direct to our Warehouses.

Head Offices

41, Chowringhee Road, P.O. Box 270, Calcutta. Telephone: 44-5224—5228 (5 Lines).

Branch Office and Warehouse

18, Fosberry Road, Sewree, Bombay-15.

Warehouse and Works

39, Hide Road, Kidderpore, Calcutta. Telephone: 45-4561.

CURRENT AFFAIRS up to date

Electricity bills are a problem, and not only to the recipient. It is not surprising, therefore, that Electricity Supply Companies turn to mechanisation in their Billing Departments, in order that their bills may be promptly and accurately despatched. Mechanisation, of course, means Hollerith, and the Electricity Undertaking in Bombay despatches 170,000 bills per month prepared in this way. In Calcutta the figure is 190,000, in Madras 42,000 and in Kanpur 40,000. May we talk Hollerith with you?

* Publications of greatest interest to key executives are THE TABULATOR, issued periodically, and IN BUSINESS TOO, describing Hollerith methods. Copies can be obtained by applying to any of the offices below — on your business note-heading, please.

GOOD DEMAND AT TEA EXPORT SALE

EASY TREND IN DUSTS

AT Sale No. 41, held on 2nd and 3rd April, offerings in the Export auction consisted of 60,000 chests. Although demand was good, it was not quite as general as in the last sale. Whole leaf grades and stylish B.P.S. were the strongest feature, selling from 3 to 4 annas above last rates, while any teas with autumnal character were also a strong feature and were much dearer. Fannings grades, particularly those suitable for the Middle East, were in good demand. Plain and medium broken opened fully but at the close were occasionally slightly easier. There was a slightly better demand for Darjeelings.

Quotations	Rs.
Clean Black Pekoe	2 2 0
Plain B.P.	1 9 6 to 1 10 0
Medium Assam B.P.	1 1 0
Best CTC Assam B.P.	Not quotable.

At the Internal Sale, offerings of Dusts amounted to 21,700 chests, which met with only a fair general demand. Except for a few selected lines, prices opened generally at an irregular 1 to 1 anna below last rates, but declined as the sale progressed and were 1½ to 2 annas easier at the close. Brown leaf Doors were the strongest feature and were generally firm at about last rates. C.T.C. teas followed the general trend.

Quotations	Rs.
Medium Doors Dust	1 1 0 to 1 12 0 2 2 0
Medium Assam Grainy	1 12 0 to 1 14 0 2 5 0 to 2 5 6
Dust	2 14 0 to 3 0 0 2 15 0 to 3 0 0
Best Assam CTC Dust	2 14 0 to 3 0 0 2 15 0 to 3 0 0

The Leaf offerings were 2,600 chests, which met with a fair demand, but at very irregular rates. The market was generally slightly easier.

FIRM TREND IN FREIGHT RATES

THE feature of the market last week was that owners discounted 7½s a ton for single voyage with coal from the U.S.A., and certain owners indicated 7½s 6d—is in excess of the best reported rate of this year. The demand for consecutive and period business continues. The Indian ore market featured a fixture, July, Vizagapatam-Northern Range at \$(U.S.) 18.50. Ore Marmugao-Japan was fixed at 115s f.i.o. The Time Charter market has been active again, with delivery the U.K. and re-delivery Japan fixed at 42s 6d.

SUGAR QUIET

During the week ended 4th April, sugar sales in the Calcutta market averaged 3,000 bags daily. Arrivals were 2,000 bags a day and stocks totalled 150,000 bags. Rates for ready sugar, ex-Kantapur delivery, were Rs. 30-11 for ordinary grain and Rs. 32-8 for big grain. Ex-mill delivery rates for the two varieties were Rs. 28-8 and Rs. 29-2 respectively. There was little change to report since the previous week. The market remained quiet.

LINSEED

The greatly improved movement of supplies from the centres with new crop seeds entering the market more freely and a healthier supply and demand position have been the main features of the past week. Arrivals have averaged about eight to ten wagons daily and trading has been brisk; crushers are consuming all available quantities, encouraged by the existing parity in the prices of seeds and oil. If, as is expected, arrivals are maintained at the present rate for the next few weeks, prices should show a reversal of the rising trend which set in directly after the Budget. In the oil market, there has been good demand from shippers for ready delivery in order to fulfil earlier commitments; buyers for forward delivery, however, are a bit cautious, with support from foreign markets lacking and values nominally placed at around £142 for prompt shipment. Latest quotations are as follows: Ready Rs. 21-8 a maund; April-May Rs. 21-4 a maund.

HIDES AND SKINS

The market was easy. Stocks were higher than in the previous week.

Bazaar Sales

(Between 27th March and 2nd April, 1956)

Cowhides: Wet salted (ord) 15,000 pcs on the basis of Rs. 6-14 to Rs. 9-8; Wet salted (slaughtered) 14,600 pcs on the basis of Rs. 12-8 to Rs. 21.

Goatskins: Wet salted (Daissee, killed) 41,100 pcs on the basis of Rs. 220 to Rs. 230; Rs. 270 to Rs. 285 and Rs. 300 to Rs. 350; Assam-Dinajpur-Murshidabad 19,900 pcs on the basis of Rs. 235 to Rs. 290; Pakur-Patna 1,800 pcs on the basis of Rs. 230.

Bazaar Stocks

(2nd April, 1956)

Cowhides: Wet salted 2,54,500 pcs.

Goatskins: Wet salted (Daissee, killed) 8,000 pcs; Assam-Dinajpur-Murshidabad 1,46,500 pcs; Muzaffarpore-Patna-Pakur-Purneah-Kissanganj 6,00,000 pcs.

MIDDLE EAST OIL DEVELOPMENTS IN 1955

THE CHANGING PATTERN OF PRODUCTION

By V. S. Swaminathan

IN 1955, while the United States accounted for approximately 45 percent of the world's oil production, the most outstanding developments took place in other countries, particularly the Middle East, Venezuela, the Far East and Russia. The growth of the petroleum output in these four countries during the past three decades is indicated below:—

	1925	1935	1945	1955
Middle East	4,700	11,700	26,900	161,700
Venezuela	2,800	22,000	47,300	111,000
Far East	5,000	8,300	2,900	17,700
U.S.S.R.	7,200	20,500	25,200	70,000

The general political and economic situation in the Middle East was one of the subjects recently discussed by the British Prime Minister and the President of the United States. Last year also marked the first full year of operation in Iran by the international consortium of oil companies. Moreover, the Bahraini dispute between Saudi Arabia and Britain defied solution. Lastly, the dispute over pipeline royalties between Lebanon and the Iraq Petroleum Company and its affiliates, was not settled. For these reasons a survey of oil activities in countries comprising this strategic region assumes special importance.

Crude oil production at Bahrain Island has been stabilised since 1948 at 30,000 b.d. (barrels a day). High-pressure gas from a lower formation is employed for pressure maintenance. A 10-well programme in fourth pay "D" zone was launched in 1955 when a major part of the refinery expansion project was completed. A new vacuum distillation unit with a capacity of 23,000 b.d. went into production while further additions to go into commission this year include a 10,000 b.d. platformer and a 10,000 b.d. naphtha plant.

Development in Iran

The law declaring the nationalisation of the Iranian oil industry was passed early in 1951. During the following three years and more this major enterprise went from bad to worse. Under the oil agreement which received Royal assent in October, 1954, the National Iranian Oil Company (N.I.O.C.), together with the Iranian Government, entered into a pact with an international group of oil companies to resume operations on a substantial scale. Under this arrangement crude oil production is being stepped up to reach a minimum of 19 million cubic metres in 1955, 29 million cubic metres this year and 37 million cubic metres in 1957 or the peak figure attained in 1950 before the industry was nationalised. About half of these totals will be refined in Abadan and the balance exported as crude petroleum. At the same time the industry is being stream-lined and modernised to keep abreast of the latest technical developments abroad so as to remain competitive in quality and price. This basic Iranian venture is rapidly being equipped to play its part as a leading supplier of the international market especially in the Eastern hemisphere.

During the first full year of rehabilitation, the exploration and producing company, in addition to the general overhaul and maintenance of equipment, carried out development work in all the oilfields, especially in the big new Agha Jari field and enlarged the loading terminal at Bandar Mashur. The refining company undertook the systematic overhaul of the mammoth processing plant at Abadan and raised its throughput capacity according to plan. The supporting services were managed by these twin operating concerns in conjunction with the N.I.O.C. The total crude oil production last August exceeded 350,000 b.d. and it came from the sub-jointed major fields:—

Masjid-i-Sulaiman	34,000 b.d.
Haft Kel	33,000 "
Naft Safid	12,000 "
Lali	5,600 "
Agha Jari	269,000 "
Total	353,600 "

In 1955 Iran's petroleum production totalled 15,772,000 long tons and its refinery throughput, 7,276,000 tons.

Early this year Iran made overtures to the consortium managing her nationalised oil industry for a revision of the 1954 agreement to permit higher output levels in the current and succeeding years. The resulting increase in oil revenues, which are split equally between the Government and the consortium, would enable Iran to meet or at least reduce her budget deficit estimated at between £10 million and £20 million. The consortium is meeting at The Hague in mid-February and is expected to send its final reply before the end of the month. Sterling oil interests would obviously have everything to gain from a further increase of Iranian oil production beyond the eight million tons rise already planned for 1956. But the two big American concerns who are major partners in Aramco have only a joint minority shareholding of 14 percent in the Iranian oil con-

sortium. They are therefore unlikely to be as enthusiastic as the sterling companies regarding stopping up Persian oil output, if that were to be achieved at the expense of Saudi Arabian production.

Recently, Iranian officials made public a secret clause in the 1954 oil agreement which envisages a reduction in Persia's oil royalties a ton of crude petroleum in case the consortium agrees to increase production beyond the quantities laid down for the years 1955 to 1957. These were 15 million, 23 million and 30 million tons respectively, income from these totals being reckoned at £32 million, £48 million and £68 million. As an incentive to increased sales Iran would allow discounts on the posted price of oil to the consortium companies of 5 percent on the first 10 million cubic metres, 7½ percent on the second 10 millions and 10 percent on the third 10 millions, sold above the levels adumbrated in the 1954 agreement. If the consortium agrees to these proposals Iran reckons that her oil income this year and in 1957 would reach £68 million and £90 million respectively. Incidentally an increase in production would help to spread the heavy overheads on operations and thus reduce costs a barrel of output.

New Pipelines for Iraq

In Iraq the Kirkuk oilfield produced a record of 534,300 b.d. of petroleum last August. Development work was carried out during the year in two other fields in the region—Jambur and Bai Hassan. The former is located some 25 miles South-East of Kirkuk. A pipeline from Jambur to Kirkuk is planned and two additional wells were drilled to bring the field into commercial production. The Bai Hassan field, discovered in 1953, lies approximately 20 miles North-West of Kirkuk. The Basrah Petroleum Company operates the Zubair, and the newer Rumaila oilfields. Field facilities to bring the latter into production include a gathering system, a separator station to handle 80,000 b.d. and a 20 mile, 14 in. pipeline North-East to Zubair. The Mosul Petroleum Company works two small oilfields—Ain Zahal and Butmah—North-West of Kirkuk. There, crude oil is conveyed through a 12 in., 13½ mile long pipeline to the main Iraq Petroleum Company's system, linking up at station K2 on the Tigris River.

To handle the anticipated throughput increase in the Iraq Petroleum Company's pipe system carrying Kirkuk crude oil to the Eastern Mediterranean, it is planned to build a 24 in., 75 mile long pipeline from Homs, Syria to Tripoli in Lebanon. It is estimated to carry approximately 180,000 b.d. of oil, aided by two extra pumping stations to the existing 30 in. trunk line. Lines now operating consist of twin 12 in. and 16 in. pipes together with an older one of 30–32 in. diameter. One set of 12 in. and 16 in. lines carry crude petroleum to Tripoli. The other set and an unfinished 16 in. line lead to the Haifa refinery in Israel.

Existing payments made by the I.P.C. for using the pipelines it has built across Lebanese territory are based upon agreements reached in 1952, but which the Lebanese Parliament failed to ratify. The amounts paid are computed by permitting this State a fixed sum for every ton of oil loaded from a local pipeline in a Lebanese port, and do not depend at all upon the mileage covered by the pipeline. When this pact was put into operation last year the I.P.C. agreed to a revision should its then current negotiations with the Syrian authorities provide more favourable terms than it enjoyed before. When the Syrian talks were concluded at the end of 1955 it was found necessary to re-open discussions with Lebanon. The principle, which the Syrian Government accepted, was that the payment made by the oil company should be closely related to the cost of transporting oil by tanker and should vary with the distance covered by the pipeline. Though it suited Syria with 263 miles of I.P.C.'s pipelines in its territory, it does not satisfy Lebanon with only 20 miles. It was the company's stand that this principle should also be applicable to Lebanon which led to a breakdown in the talks. The proposals made will increase Lebanon's oil revenue from £400,000 to £600,000 a year; while the Syrian pact stepped up Syria's from £1,500,000 to £6,500,000. The I.P.C. has plans to build a third pipeline from Homs to Tripoli and to divert the disused Mafrak-Haifa line to Sidon. This will treble the revenue accruing to Lebanon in a few years' time. In short, the latter State would gain greatly from the envisaged extension, and the issue is best settled by co-operation on both sides. It was recently announced that the Lebanese Government has accepted offers from Iraq and France to mediate in the present dispute over oil transit dues between the Lebanon and I.P.C. and its associates. The committee set up to consider possible action against the I.P.C. in the dispute over pipeline royalties has gone into the matter of imposing income tax and other levies from which the latter was exempted under the 1931 agreement signed when Lebanon was under French Mandate.

Last summer, a new 25,000 b.d. State-owned refinery was commissioned at Dora near Baghdad.

It operates on royalty crude received from the Kirkuk field through a 12 in. line. Its facilities include a combined processing unit, integrating crude distillation, cracking, reforming and vacuum flashing. A lubricating oil plant of 25,000 tons a year capacity is under way. The Iraq Government's revenue from oil in 1955 is reckoned to reach £72 million, or an increase of £4 million on the previous year. The fifty-fifty profit-sharing agreement of 1953 was amended last year to give Iraq a larger margin of profit on crude oil. Nearly 70 percent of the oil revenue is earmarked for economic development—irrigation, drainage, public health, etc.

Israel's Oil Prospects

The first oil well in Israel (Heletz 1) was drilled by a partnership venture of Lapidoth Israel Oil Co. Ltd., and Israel Oil Prospects Ltd. in 1955. Its production potential is placed at 375 b.d. Arrangements have been made to transport this oil to the Haifa refinery. There are 13 licences in Israel's petroleum district 2, and the oil legislation provides that other operators holding licences must start drilling within six months following a discovery in any district. Exploration licences granted cover 2½ million acres, approximately half the country's total land area.

The tiny sheikhdom of Kuwait was the world's largest oil producer last year after the United States, Venezuela and Russia. By the end of June 1955 the wells completed totalled 181; 137 in the Burgan field and 44 in the Magwa-Ahmad region. Producing wells then numbered 176, and the average daily production of each well was 6,200 barrels. Kuwait oil is found in three sandstone formations belonging to the Cretaceous age, thus differing from most other major Middle East fields which derive their petroleum from areas mainly composed of limestone deposits. One well was recently completed at Raudhat, 70 miles North of Kuwait town and a second one is now being drilled. The extent of this new field is not yet known. Around 50 percent of the crude oil feeding the U.K. refineries comes from this Persian Gulf sheikhdom under British protection. A revised income tax decree issued last year enabled the British Petroleum Company to take credit for Kuwait taxes when paying U.K. taxes. This tax relief permitted the B.P.C. to increase its consolidated net profits by £10 million.

Production of crude oil at Kuwait (where B.P. has a 50 percent interest) was 53,894,068 tons last year against 46,969,415 tons in 1954. Indications of an important oil discovery were disclosed by the Gulf Oil Corporation in February (1956). This was made in a prospectus issued in connection with a previously announced scheme to acquire the shares of the Warren Petroleum Corporation. The exploratory well recently completed in the Northern part of the sheikhdom indicates the discovery of an important new field officially designated as "unquestionably a major discovery."

Meanwhile, the Kuwait Oil Company has made public an important extension project to its refinery at Mina at Ahmadi which will increase the capacity of the existing installation from 1,400,000 tons to 8,500,000 tons a year. It is expected to produce greater quantities of middle distillates, marine diesel and furnace fuel oils, including bunkers for tankers loading at Kuwait. The refinery expansion programme includes the provision of two atmospheric crude distillation units, oil storage tanks for crude feed and products, equipment for increasing the power, steam and water supply facilities, oil and water separating plant and distribution lines, and extensions to the existing oil loading system to the jetty and submarine berths. Work will start on a site adjoining the existing processing plant in the second half of 1956 and it is expected that the entire scheme will be completed before the end of 1957.

The Kuwait-Saudi Arabia Neutral Zone is one of the latest Middle East oil producers. It is a small wedge-shaped area on the Persian Gulf between Kuwait and Saudi Arabia. The oil comes from the Burgan sands in the Wafra field and last year the yield averaged 25,000 b.d., an increase of 8,500 b.d. on 1954. The initial discovery was made in 1953 following an expenditure of over £10½ million by Aminol. The latter transports its crude oil through a 34 mile, 8 in. and 10 in. pipeline running north-east to Mena Abdulla in Kuwait. Aminol's partner, Pacific Western, pipes its petroleum East to Mena Sand Terminal in the neutral zone. It has a 10 in. pipeline and a 20 in. submarine line, commissioned last year. The American Independent company is completing a new test well to develop either a new field or extend the present East Wafra field. It is 11 miles East of the nearest well in the East Wafra field. This Kuwait-Saudi Arabia Neutral Zone has 29 producing wells.

The sheikhdom of Qatar's petroleum production comes from a single field Dukhan discovered in 1940. Its 1955 output averaged 110,000 b.d. A 600 b.d. capacity topping plant, commissioned last spring, meets local needs at the terminal for the 65 mile long 14 in. pipeline carrying Dukhan crude oil to the East coast of Qatar. The Royal Dutch-Shell Group holds a concession on areas outside the sheikhdom's territorial waters, and is using a 1,900 ton movable platform for its oil search. The well Matbakh 1 was located following 18 months of geophysical work.

Early in 1955 Saudi Arabia produced its second billion barrels of petroleum and at the end of the year was well on its way towards the third billion barrel mark despite decreased output. Aramco, the operating concern, added a 12,500 b.d. hydrofiner to the Ras Tanura refinery. Five productive areas form a single unit, the giant Ghawar field, stretching from Ain Dar approximately 130 miles South to the Haradh area. Just over two-thirds of Saudi Arabia's average daily production last year came from this region, from only 65 wells. At the end of 1955 Aramco was engaged in the major construction programme of opening up a new producing area. It is building a 150 mile, 21 in. pipeline from the offshore Safaniya field to carry 150,000 b.d. of petroleum. This field has 16 completed wells, all but two of which were drilled in the Persian Gulf from a large diesel electric barge.

A major issue awaiting satisfactory solution relates to doing away with the concession holder's off-take discount on crude oil produced in the country. The company now has only a two percent discount on the posted price of Saudi Arabian petroleum, instead of the much larger discount it previously had. The difference is enriching the State Treasury. Local crude oil of 35° gravity is priced at \$1.95 a barrel. A two percent discount would bring this down to \$1.91 for Aramco's parent companies against the \$1.62 they paid under the customary discount. California Standard which made the original discovery in 1938 holds 30 percent of Aramco shares with the Texas Company and Jersey Standard owning similar proportions. The remaining 10 percent is owned by Socony Mobil Oil Co. Inc.

Another important matter is straining the normally cordial relations between Britain and Saudi Arabia as well as Anglo-American accord. This concerns the Bahraini crisis on the border between Saudi Arabia, Muscat and Trucial Oman, the sovereignty of which is disputed by Jeddah and London. The inter-relation between the modern stream-lined Aramco and the feudal Saudi Arabian kingdom poses a real threat to Anglo-American co-operation in the Middle East. It is the complaint of Britain that this great American oil corporation is unwittingly used to promote policies directly hostile to the U.K. In particular, these pertain to potential petroleum resources in the sheikhdoms

and petty states under British hegemony bordering the Persian Gulf. Sir Anthony Eden made it plain on 6th February at Ottawa that Britain and America disagreed over the means of settling the U.K.'s Bahraini Oasis dispute with Saudi Arabia. He affirmed that Britain was not prepared to return to arbitration, but ready to enter into direct discussions. At present Aramco is distinctly "one down" in relation to the Saudi Arabian Government for several understandable reasons. Both the United Kingdom and the British Commonwealth urgently need the oil it is hoped to find in this disputed region and the economic health and prosperity of the vast sterling area are vital to the whole free world.

Turning to south Arabian territories, an I.P.C. subsidiary is drilling at Gezira in Abu Dhabi following completion of a well at Murban, some 100 miles to the East. The latter location yielded a show of oil but not in commercial quantities. This company is preparing to drill at Jebel Fahud in the heart of Oman, and wells are expected to be spudded in early this year. To complete the Middle East oil saga it is relevant to recall recent developments both in Egypt and Turkey. Egyptian oilfields accounted for an average of 35,000 b.d. in 1955, and those of Turkey, 4,500 b.d. The refinery throughput of the former was 53,000 b.d., and of the latter 6,900 b.d.

Today, the Islamic countries in the Middle East are providing more petroleum than did the entire world in 1925. Without the growing contribution from this strategic region, ably seconded by Venezuela, the oil industry might well have found it difficult to meet the mounting demand of the post-war world, entailing the doubling of supplies within a decade, at a time when coal production was static and the harnessing of nuclear energy on a significant scale still a long way off. Following his recent visit to the Middle East countries Mr. A. R. W. Low, U.K. Minister of State affirmed in London early in February that revenues accruing from oil to Iraq, Iran and Kuwait alone for 1955 were computed at £225 million and this is estimated to reach £350 million by 1960. In the light of India's traditional friendship and commercial relations with countries adjoining the Persian Gulf she is well placed to meet their mounting demands for commodities and services.

THE MIDDLE EAST AND WORLD OIL OUTPUT

Country	Proved Reserves (1,000 barrels)	Total Production for 1955 to Sept. 1955	Drilling in progress Sept. 1955	Average Cumulative Production for 1955 to Sept. 1955	No. of Operating Refineries	Refining Capacity (1,000 b/d)	Catalytic Thermal Cracking

WORLD COTTON PIECEGOODS
TRADE DECLINES IN 1955

JAPAN'S INCREASING IMPORTANCE

THE Cotton Board's latest *Quarterly Statistical Review* covers the final quarter of 1955 and shows that cotton yarn production in that year in countries for which figures are available, including all the principal non-Communist exporting nations, was about 14 percent greater than in 1954. The level of output was probably the highest ever, certainly since the war. It is clear, however, that the upward trend in output which began after the 1952 recession came to a halt in the early part of 1955. In the fourth quarter, yarn production was barely 4 percent greater than in the corresponding period of 1954. This state of affairs has arisen as a result of contrasting movements in different countries. Output in the U.S.A., Canada, West Germany, the Netherlands, Spain, India, Pakistan, Hongkong, Egypt and one or two of the smaller producing countries expanded during the course of the year. In contrast, production declined in the United Kingdom, Japan, France, Italy and Belgium.

World trade in cotton piecegoods expanded fairly sharply in the fourth quarter of 1955. To some extent this may have been a seasonal increase, however, and the volume of trade remained far below the level reached in the final quarter of 1954. The main feature of the quarter's figures is the great increase in exports from Japan. Exports from the U.S.A. and most of the Western European countries were also greater than in the preceding quarter, but shipments from the U.K., India, Hongkong and Italy declined. For 1955 as a whole, world trade was about 11 percent less than in 1954, and was back to the very low 1952 and 1953 levels. The four main supplying countries all lost ground during 1955 but their relative positions were unchanged. Japan remained the largest exporter with a total of 1,139 million square yards. Next came India with about 750 million yards, the U.K. with 555 million square yards, and the U.S.A. with about 550 million square yards. Exports from France, Belgium and Portugal were all considerably below the previous year's level, but West Germany, the Netherlands, Switzerland and Hongkong managed to increase their trade somewhat.

A further massive increase in exports from Japan carried total world trade in fabrics of rayon and synthetic fibres to a new record level in the final quarter of last year. Japan now accounts for about half of the total free world trade in these fabrics. For the year as a whole, total trade in rayon and synthetic fibre fabrics was about 84 percent greater than in 1954. Apart from Japan, only the Netherlands and Belgium succeeded in expanding their exports appreciably. The United Kingdom, France, West Germany, Italy and Austria all lost a lot of ground.

U.K. Production Stagnant

Last autumn's modest recovery in the activity of the U.K. cotton industry carried the rate of output a working day from a low point of 194 percent below the October 1954 peak in August to a level of 14 percent below the peak in the case of spinning (in November) and 15 percent below in the case of weaving (in October). This level of activity was not maintained, however. A number of mills made extended stoppages over the Christmas and New Year holidays, and the latest figures show a rate of output about 16 percent below the peak. It should be noted, however, that sickness among the operatives normally tends to depress output in the early months of the year. The stagnation of production is most noticeable in the cotton section of the industry. Output of fabrics of man-made fibres, particularly spun rayon fabrics, synthetic fibre fabrics and mixtures, has been increasing, and on the spinning side output of spun rayon yarns and mixture yarns is well ahead of what it was a year ago.

Although the volume of orders received in recent months has been greater than during most of last year, it has not been sufficient to permit any substantial general lengthening of order books. The cause of the moderate improvement in business is a seasonal increase in home market demand, coupled with an end for the time being of the tendency for merchants to place fewer orders with weavers than they receive. There is no sign of any improvement in export demand. The increase in business has been very patchy; apart from the rayon section, spinners of Egyptian-type yarns have fared much better than spinners of American types, and it is reported that there has been some falling off in orders for certain industrial cloths as a result of the setback in the motor-car industry. As a consequence certain sections of the industry are suffering from a labour shortage, while others are still working short-time.

After the moderate increase in export shipments during the third quarter of 1955, a temporary consequence of the June dock strike, exports declined once more to 129 million square yards in the fourth quarter. In January, 1956 they totalled only 41 million square yards. A comparison of exports in the fourth quarter of 1955 with those in the same period of 1954 reveals a considerable decline in trade with British West Africa, Australia and South Africa. The Australian trade has been hit by import restrictions, and the prospects in the South African market are not too bright in view of the tariff applications pending. New Zealand, Norway, Denmark and Burma also took

less cloth than a year earlier. British East Africa is one of the few markets exports to which in the final quarter of last year were greater than in the final quarter of 1954. Shipments to India also continued to increase, and there was a considerable trade with Pakistan in the final quarter of the year as a consequence of the American aid agreement. Exports of rayon and mixture fabrics declined even more sharply during 1955 than did those of cotton fabrics. Compared with a year earlier, shipments in the fourth quarter to British West and East Africa, Australia, the Irish Republic and the British West Indies showed severe falls. Exports to South Africa were well maintained, however, and the Federation of Rhodesia and Nyasaland has provided an expanding market.

Imports of cotton piecegoods declined from 70 million square yards in the third quarter of 1955 to 59 million square yards in the fourth quarter. There is evidence that the downward trend will be reversed in the first quarter of this year, and in fact January imports totalled almost 25 million square yards. Imports of certain made-up goods, including towels and shirts, have also increased.

Mild Boom in U.S.A.

The U.S. cotton industry continues to enjoy a mild boom. Stocks of finished goods have been declining and order books lengthening for some considerable time, and in December the average margin between the price of 17 grey cloth constructions and the price of the cotton required to manufacture them was the widest since October, 1953. Output and activity figures tell a similar story. Cotton consumption in the fourth quarter was 5 percent greater than a year earlier, and the rate of cotton consumption increased further in January. The latest available weaving activity figures relate to the third quarter, when cotton cloth output was about 5 percent greater than in the third quarter of 1954. Rayon cloth output was about 17 percent greater and output of fabrics of synthetic fibres was about 27 percent greater. More recent reports speak of a sharp decline in the activity of the rayon weaving sector. Exports of cotton piecegoods increased in the final quarter of 1955, though this may have been in part a seasonal movement. Shipments to the Philippines and Cuba recovered from the low third quarter level. Exports to Canada also increased, but the trade with Indonesia declined sharply. Exports of rayon and synthetic fibre piecegoods were also at a slightly greater rate in the final quarter of last year. The trade in synthetic fibre piecegoods with Hongkong has fallen off, but shipments to Switzerland have expanded, and that country, Canada and South Africa are now the U.S.A.'s chief markets for these fabrics. Imports of cotton piecegoods into the United States, mainly from Japan, increased rapidly throughout 1955. The industry's case for import quotas has not so far met with success, except in the voluntary limitation of exports by Japan at a level which is fairly high by historical standards, though not in comparison with U.S. production.

Japan's All-round Improvement

The enforced curtailment of cotton yarn output in Japan was relaxed from 16 percent of average 1954 production to 12 percent in February and March. It appears to have succeeded in its object of reducing excessive stocks of cotton goods; indeed, there has been some tightness in supplies in the last month or two, and prices have risen since the middle of January. It is understood that a Bill to reduce cotton spinning capacity is now ready which would take 1,200,000 cotton spindles out of operation. A considerable proportion of these would be diverted to spinning staple fibre. Production of spun rayon and mixture yarns and of rayon fabrics has been forging ahead, and it is reported that plans for increasing rayon staple capacity exceed even the Government's estimate of the likely market.

Japanese exports of cotton piecegoods increased from 279 million square yards in the third quarter to 362 million in the fourth quarter, the highest quarterly total since the war. By far the greater part of the increase in trade was with South-East Asia, in particular Indonesia, Hongkong, Singapore, Siam and, to a lesser extent, the Philippines and Indo-China. Shipments to Pakistan increased from virtually nothing in the third quarter of 1955 to 25 million square yards in the fourth quarter as a result of the American aid agreement. Exports to the U.S.A. expanded again to reach a total of almost 50 million square yards in the final quarter of last year. On the other side of the account, shipments to Iran virtually ceased, and there were moderate reductions in exports to the U.K., British West Africa and Australia. In an attempt to prevent the imposition of import quotas into the U.S.A., the Japanese Government has enforced an export quota of 150 million square yards of cotton cloth to that market in 1956; this compares with actual shipments of 140 million square yards in 1955. Exports of cotton blouses to the U.S.A. have also been brought under quota control, as have cloth exports to Canada and Western Europe.

The rapid rate of expansion of Japanese exports of rayon piecegoods continues, bringing total shipments in the fourth quarter of last year to the new record level of 270 million square yards. The expansion may not yet have come to an end, as it is reported that the Japanese Government is planning an increase of about one-quarter over the 1955 level of shipments. Exports to British West Africa continue to expand steadily, and this remains easily the most important market. Other markets taking increased quantities in the fourth quarter include Ceylon, Siam, Indonesia, the Philippines, Indo-China and, to a lesser extent, the U.K. In contrast, exports to Iran were sharply reduced, and shipments to Pakistan and Germany continued to decline.

Figures of Indian mill production of cotton yarn and cloth for the fourth quarter of 1955 are not yet complete, but it is believed that they will continue to show an increase compared with the figures for the corresponding period of 1954. The increase is more pronounced in the case of yarn than of cloth. There is a good deal of controversy in India as to whether the considerable expansion of cloth production that is envisaged, both for the home market and for export, should be provided entirely by the handloom weavers, or whether the mill industry should share in it apart from merely supplying the yarn. During the third quarter the volume of sea-borne exports of cotton piecegoods from India was maintained at the level of the two preceding quarters, but it is understood that there was a drop of about 20 million yards in the fourth quarter. There were big increases in shipments to Indonesia, Ethiopia and British West Africa in the third quarter, but exports to the U.K., the Sudan and Pakistan were sharply reduced. The Cotton Textile Export Promotion Council is to establish overseas offices in Baghdad, Djakarta and either Lagos or Accra to assist the sale of Indian cotton goods in the Middle East, South-East Asia and West Africa. Later on it is intended to establish more offices in Aden, Burma, Ceylon and East Africa.

Western European Expansion

There are signs that the rate of activity in the Western European cotton industries has improved since the summer. Cotton yarn output in most of the countries for which figures are available seems to have expanded more than seasonally in the fourth quarter, although in total it remained about 34 percent less than in the corresponding quarter of 1954. The pattern remains much as before: output in West Germany, the Netherlands and Spain has expanded in comparison with a year ago, whereas French, Italian and Belgian production has declined. The recession in France and Italy appears to have affected spun rayon as well as cotton.

WHOLESALE PRICE INDEX RISES

THE official wholesale price index (base: year ended August 1939-100) advanced further by 1.3 percent to 387.8 during the week ended 17th March as compared with 382.7 for the previous week. Relative to the corresponding weeks of the last month and a year ago, the index was higher by 2.4 and 9.9 percent respectively. Higher prices of tea (+11%), jowar (+10%), gur (+6%), rice and dal arhar (+4% each), gram (+3%), and wheat at Amritsar (+1%) raised the index for Food Articles by 4.2 percent to 354.0; the prices of wheat at Hapur and coffee (-1% each), however, showed a decline. The index for Industrial Raw Materials fell by 0.4 percent to 471.3 as a result of lower prices of raw silk at Malda (-7%), raw jute and lac (-5% each), rapeseed at Kanpur (-4%) and in Bombay (-2%), and raw hides (-2%), although the prices of gingellyseed (+7%), manganese ore (average export price) (+6%), copra (+5%), rapeseed in Calcutta, raw silk at Bangalore and groundnuts (+4% each), castorseed in Bombay (+3%) and linseed (+1%) exhibited an upward trend. The index for Semi-Manufactures moved up by 1.0 percent to 369.5. Items which showed noticeable changes were gingelly cake (+14%), groundnut cake (+12%), mustard oil in Calcutta (+8%) and at Patna (+9%), groundnut oil (+6%), coconut oil (+3%), gingelly oil (+2%) and mustard oil at Kanpur and copra cake (-2% each). The index for Manufactures was marked down by 0.2 percent to 375.3 as compared with 376.1 (revised) for the previous week due to a fall in the price of jute manufactures (-3%) despite an advance in the price of soaps (+4%). Prices of Dalda vanaspathi (+7%) and chillies at Patna (+6%) showed an advance while those of chillies in Calcutta (-2%) and turmeric and cummin (-1% each) moved down. On the whole, the index for the Miscellaneous group rose by 0.4 percent to 512.9.

INDEX NUMBERS BY GROUPS AND SUB-GROUPS
(Base: Year ended August, 1939=100)

Groups and Sub-Groups	17-3-56	Week Ended 10-2-56	15-2-56	18-3-55

COMPANY AND PUBLIC NOTICES

RESERVE BANK OF INDIA

APPLICATIONS are invited for the following posts in the various departments of the Reserve Bank of India:

(A) POSTS AND SCALES OF PAY:

- Research Officers. Department of Research & Statistics. Rs. 375-55-815 E.B. 55-925-60-1045.

The appointments to the above posts will be made on a temporary basis in the first instance but are likely to be made permanent.

Note: Candidates possessing exceptionally good qualifications and experience may be given a higher starting salary in the prescribed scale.

- Probationary Assistants. Rs. 250-25-456 E.B. 25-650

Note: Promising Probationary Assistants will be eligible for promotion as officers in the scale of Rs. 375-55-815 E.B. 55-925-60-1045.

(B) ADDITIONS TO PAY

- Local pay: 10% of pay with a minimum of Rs. 10/- per mensem rounded up to next higher complete rupee to the staff working at Bombay, Calcutta, Madras, Delhi, Kanpur and Ahmedabad.

- House rent allowance. Research Officers: 15% of pay with a minimum of Rs. 60/- and a maximum of Rs. 300/- per mensem.

- Probationary Assistants: 10% of pay with a maximum of Rs. 50/- per mensem.

- Dearness Allowance: At prescribed rates. Research Officers: The present rate is 16 2/3% of pay with a maximum of Rs. 125/- per mensem.

- Probationary Assistants: Rs. 65/- per mensem for pay (including local pay) upto Rs. 300/- per mensem.

(The rate of Dearness Allowance is subject to revision from time to time).

(C) AGE LIMIT AS ON 1st MAY 1956

- Research Officers: Candidates should not ordinarily be over 30 years of age. The age limit may be extended upto 35 years in the cases of candidates with exceptional qualifications and/or research experience of value to the Bank.

- Probationary Assistant: Candidates should not ordinarily be over 24 years of age.

Age limit may be extended but not beyond 30 years in the case of candidates possessing special qualifications and experience of value to the Bank and also in the case of

- candidates with approved war service,
- ex-employees of Banking Institutions whose services have had to be terminated for reasons of economy or as consequence of the closure of unremunerative branches or as a result of the Banks going into liquidation,
- personnel retrenched from Government offices after at least one year's service, applying through the Employment Exchange, and
- candidates belonging to the Scheduled Castes or Scheduled Tribes.

(D) QUALIFICATIONS

- Research Officers, Department of Research & Statistics:

First or high second class Master's degree in Economics, or Commerce or Statistics/Mathematics of an Indian or foreign University or a Doctorate degree in Economics or Statistics of an Indian or foreign University and a period of research work in one or more of the subjects, viz. (a) monetary economics, (b) banking theory and practice, (c) international finance, and (d) sampling theory and econometrics etc.; a period of practical banking training will be an additional qualification in respect of applicants with specialisation in (a) and (b).

2. Probationary Assistants:

Applicants should have had a brilliant academic record and must possess a first or very high second class Master's degree or a first class Bachelor's degree of a recognised Indian or foreign University in Economics, Commerce, Banking, Accountancy, or Law as a special subject of study.

THE BOARD WILL INSIST ON A VERY HIGH STANDARD OF SUITABILITY IN MAKING SELECTIONS FOR THE ABOVE POSTS. ONLY CANDIDATES WHO POSSESS GOOD ACADEMIC QUALIFICATIONS AND ADEQUATE EXPERIENCE OF THE TYPE SPECIFIED ARE ADVISED TO APPLY. Candidates who wish to apply for more than one category of posts must submit separate applications accompanied by separate application fees.

The selected candidates for the posts of Research Officers will ordinarily be on probation for a period of 3 years which may be reduced or extended at the Bank's discretion. Candidates tendered at the Bank's discretion. Candidates selected for the Probationary Assistants' posts will also be on probation for a period of 3 years during which they will be liable to be discharged at one month's notice or pay in lieu thereof. Candidates

selected for the Research Officers' posts will ordinarily be stationed in Bombay but those selected for the Probationary Assistants' posts must be prepared to serve in any office of the Bank in India.

Applications should be in a special form to be obtained from any office of the Reserve Bank. All the applications should be accompanied by copies of two testimonials (originals should not be sent; the Bank does NOT accept responsibility for returning the originals if sent through oversight) and forwarded to the Secretary, Central Recruitment Board, Reserve Bank of India, Central Office, Post Box No. 406, Bombay No. 1 so as to reach him on or before 1st May 1956. Candidates already in service must submit their applications through their employers. Candidates belonging to Scheduled Castes or Scheduled Tribes should mention this fact prominently on their applications.

Applicants for the above posts must remit application fees of Rs. 7-8-0 per application by Postal Order, Cheque or Bank Draft on a SCHEDULED BANK PAYABLE AT BOMBAY along with the application. The application fee is in no case refundable. Bona fide refugee candidates who are NOT IN EMPLOYMENT applying through any of the Government Employment Exchanges are exempted from payment of application fees while in the case of Scheduled Castes/Scheduled Tribes candidates the fee will be reduced to 1/4th.

Appointments will be subject to candidates being found medically fit for service in the Bank. If any candidate desires to have his application acknowledged he should enclose a stamped self-addressed envelope or a post-card. Apart from those who may be specially called, interviews will not be granted to candidates nor will the Bank enter into any correspondence with them.

Canvassing in any form will be regarded a disqualification.

CALCUTTA JUTE MFG. CO. LTD.

NOTICE is hereby given that Forty-ninth Ordinary General Meeting of the Shareholders will be held at the Registered Office of the Company, "Stephen House", Fourth Floor, No. 4, Dalhousie Square East, Calcutta, at 3 p.m. on Monday, the 30th April, 1956, for the purpose of receiving and passing the Report of the Directors and the Managing Agents for the half-year ended 30th June, 1955, declaring a dividend on Preference Shares and transacting such other business as may be brought forward.

The Transfer Register will be closed from 20th to 30th April, 1956, both days inclusive and it is notified that Dividend Warrants will be issued and posted to the registered shareholders only on application. Persons holding shares under blank transfer are advised to effect registration of scrip to their names as soon as possible but not later than 20th April, 1956.

By Order of the Board,
DAYARAM & SONS,
Managing Agents.

"Stephen House", fourth floor,
4, Dalhousie Square East,
Calcutta.
The 29th March, 1956.

NEW CENTRAL JUTE MILLS COMPANY LTD.

NOTICE is hereby given that the Annual General Meeting of the shareholders of the Company will be held on Monday, the 14th May, 1956 at 4.30 P.M. at the Company's Registered office, 11, Clive Row, Calcutta, to receive and adopt the Directors' Report and the Audited Statement of Accounts for the year ended December 1955, to declare final dividends, to elect a Director in place of the retiring one and to appoint Auditors for the current year and fix their remuneration.

The Share Transfer Books of the Company will be closed from 5th May, 1956 to 14th May, 1956, both days inclusive.

By Order of the Board,
SAHU JAIN LTD.,
Managing Agents.

Calcutta, 29th March, 1956.

N.B. A member entitled to attend and vote at the General Meeting is entitled to appoint another person as his proxy to attend and vote instead of himself and the proxy need not be a member.

THE INDIAN IRON & STEEL CO. LTD.

NOTICE is hereby given that the Board of Directors have sanctioned payment of dividend on the Preference Share Capital of the Company at the rate of 5% per annum for the half-year ended 31st March, 1956.

The Preference Share Registers will be closed from the 16th to the 21st April, 1956, both days inclusive. Payment will be made on or after the 1st May, 1956, to those Preference Shareholders whose names are on the Company's Register on the 21st April, 1956, or in accordance with their instructions.

By Order of the Board,
MARTIN BURN LTD.,
T. LESLIE MARTIN,
Governing Director,
Managing Agents.

12, Mission Row,
Calcutta, 2nd April, 1956.

THE VISHNU COTTON MILL LIMITED

NOTICE is hereby given that the Forty-ninth Ordinary General Meeting of the Shareholders of the above Company will be held at the Registered Office of the Company, No. 9, Wallace Street, Fort, on Wednesday the 25th April, 1956, at 4-30 p.m. (Standard Time) for the purpose of transacting the following business:-

- (1) To adopt the Directors' Report and the Audited Accounts for the year ended 31st December, 1955.
- (2) To sanction the declaration of a dividend.
- (3) To confirm the appointment of Mr. M. G. R. Aitken and Mr. J. F. Parry as Directors.
- (4) To elect Directors in place of Mr. C. M. Khatau & Mr. J. F. Parry, who retire by rotation but being eligible offer themselves for re-election.
- (5) To appoint Auditors for the current year and to fix their remuneration.
- (6) To transact the following special business, namely, to consider and if thought fit, to pass the following as ordinary resolutions:-

(a) "Resolved that the appointment of Messrs. Jwalaprasad Radhakrishna, as the sole selling agents of the Cloth & Yarn produced by the Company, in the market of Uttar Pradesh be approved, upto 31st March, 1957."

(b) "Resolved that the appointment of Messrs. Dwarka Prasad Chitranejee Lal, as the sole selling agents of the Cloth & Yarn produced by the Company, in the market of Bihar, be approved, upto 1st March, 1961."

(c) "Resolved that the appointment of Messrs. K. D. Continental Traders, as the sole selling agents of the Cloth & Yarn produced by the Company, in the market of the State of Kashmir, be approved, upto 2nd July, 1959."

(d) "Resolved that the appointment of Messrs. Jannadas Bhunji Patel, as the sole selling agents of the Cloth & Yarn produced by the Company, in the markets of Saurashtra & Cutch, be approved, upto 1st January, 1958."

By Order of the Board of Directors
of THE VISHNU COTTON MILL LIMITED.
For THE BOMBAY COMPANY (PRIVATE) LIMITED.

R. L. COGHLAN,
Managing Director.

Secretaries, Treasurers & Agents.

Bombay, 23rd March, 1956.

NOTE: Warrants for the above dividend, if declared, will be posted to shareholders on 28th April, 1956, and payments will be made on or after 30th April, 1956. Shareholders are requested to notify to the Company immediately any change of address, failing which their dividend warrants will be posted to the addresses as registered with the Company.

A member entitled to attend and vote is entitled to appoint a proxy to attend and vote instead of himself, and a proxy need not be a member of the Company.

EXPLANATORY STATEMENT

The Company's policy has, for many years, been to establish direct connections with consuming markets upcountry, and for this purpose it has appointed sole selling agents in various upcountry centres. The draft resolutions under item 6 have been necessitated by the fact that under Section 294 of the Companies Act 1956, the appointment of existing sole selling agents requires the approval of the shareholders in general meeting. The agents mentioned above are all well connected in the textile trade in their respective territories, and have been active in the promotion of the sale of the Company's Cloth and Yarn.

JENSON & NICHOLSON (INDIA) LIMITED

NOTICE

NOTICE is hereby given that the 39th Ordinary General Meeting of Shareholders of the above Company will be held at the Registered Office of the Company, No. 2, Fairlie Place, Calcutta, on Friday, 27th April, 1956, at 11-00 A.M. for the following purposes:-

1. To receive and consider the Directors' Report and the Accounts for the year ended 31st December, 1955.
2. To declare Dividends.
3. To elect Directors.
4. To appoint Auditors and fix their remuneration.
5. To transact any other competent business.

The Share Transfer Books of the Company will be closed from the 17th to 27th April, 1956, both days inclusive.

By Order of the Board,
H. S. CHALLIS,
Secretary.

2 Fairlie Place,
Calcutta, 29th March, 1956.

NOTE: A member entitled to attend and vote at the above Meeting is entitled to appoint a proxy to attend and vote instead of him. A proxy need not also be a Member of the Company.

JOINT STOCK COMPANIES' PREFERENCE SHARES

Dividends are cumulative and shares carry a preferential claim on the property for the payment of capital and on the profits for dividend except in case of companies marked otherwise. Months against names of companies indicate approximately times of payment of dividends.

TEA COMPANIES

O. Po and Dd indicate Ordinary, Preferred Ordinary and Deferred Shares, respectively. P next to the name of the company indicates that the Company also has Preference Shares. Figures in "accounts closed" column indicate the months of the calendar year in which accounts are closed. For Managing Agents refer to the Key (last page) under the numbers indicated.

THE PROGRESS OF ASIA'S ECONOMY

EXCHANGE BANK CHAIRMEN REPORT ON YEAR OF IMPROVED WORKING

NO better guide exists to the year's economic events in near and far eastern Asia than the annual speeches of the Exchange Banks' chairmen. Those dealing with the happenings of 1955 are now all available and the picture they give of a high level of activity and steadily improving prospects for the future, is a good one. The main source of anxiety for the current twelve months appears to come from the possible effect of tight monetary conditions in western countries on the level of international trade and capital movement, rather than from any doubts about the growing economic strength of Asian countries themselves. The increased self-confidence of the newly-independent nations has been stressed, and the Bandung Conference was referred to by more than one chairman as a symbol of the new spirit of compromise which Asian statesmen hope to bring to world politics. The relaxation of political tension in the area was commented on with approval and equal regret was expressed for the deterioration which became evident in western Asia as the year drew to a close. Aid for the region's under-developed countries came in for a good deal of attention and there was no doubting the importance which is being given to this subject in Exchange Banking circles. Commenting with satisfaction on the various programmes and projects for economic advance, the chairmen clearly felt foreign aid to be the key to their future success. Anxiety about the present trend towards socialism in India and the prevailing state of labour relations here was noted by almost all.

The possible effect of monetary stringency in western countries on development in Asia has been a topic of interest since it put Britain's offer of a steel plant for India into the balance. The ultimate success of that proposal, in spite of the difficulties, may not always be shared by other projects of a similar kind. The chairman of the National Bank of India, Mr. J. K. Michie, underlined the importance of maintaining the flow of assistance under the Colombo Plan and the export of British capital on private account. If this is not continued, said Mr. Michie, "we shall lose our place in the markets and in the regard of the countries concerned." This seems a fair warning on the effects of a policy which has been so minutely criticised by Sir Oliver Franks, chairman of Lloyds Bank, in his report to shareholders. The changes of outlook for which he called would seem the only way to prevent purely short-term monetary measures, if these are to become an increasingly important feature of economic management in western countries, from having long-term detrimental effects. The impact of the "credit squeeze" on borrowers on the periphery of the sterling area, was also mentioned by Mr. Michie. It is clear from the words of all the chairmen that tight money presented a most difficult problem for the Exchange Banks last year and, from the recent trend of events, can be expected to do the same this year as well.

The chairmen's reflections on the progress of events in India are of special interest in a year which is to see the introduction of the second plan. Satisfaction on the success of the first was general, but so were the doubts about the possibility of deficit financing on the scale planned for and the compatibility of rapid progress with socialism. The chairman of the Chartered Bank of India, Australia and China, Mr. V. A. Grantham, seemed to express the general feeling. He agreed that deficit financing was necessary when "scope for substantially increasing the revenue from taxation is limited." But, he went on, "public ownership and heavy personal taxation do not march hand-in-hand with either individual effort or personal saving." Doubts about policies which, from outside, must frequently appear to be dictated by an urge towards an Owen-type socialism which has little relevance for modern conditions of economic growth, were evident from the speeches of

most of the chairmen. The move to limit incomes was generally recognised as being a blow to incentives and a drag on progress. The effect on foreign nationals was particularly noted. When spokesmen of the standing of Mr. Morarji Desai appear to have committed the Central Government to a policy opposed to special treatment for foreign business personnel, the problem may become an acute one in the near future. The fact that present levels of income after taxation are inadequate to attract the best technical brains has already been acknowledged. It remains to apply a similar order of priorities to the foreign business community to decide whether it too, and the capital it represents, is worth retaining for the country's development.

It is clear from the chairmen's words that the nationalisation of the life insurance companies has done even more than the amending of the Constitution and the restrictions on the working of the managing agencies to damage confidence abroad. Among men to whom deeds mean more than words, it is quite obvious why this should be so. And the recent rumours that the same fate is in store for private banking will not have gone unnoticed. The chairman of the Hongkong and Shanghai Banking Corporation, Mr. C. Blaker, went so far as to declare that "in future the rôle of foreign private investment in India will be smaller than in the past and the emphasis on foreign investment as a whole is more likely to be on a government-to-government basis." Mr. Grantham points out that even present sources of foreign investment are likely to depend increasingly on the confidence of those firms already established in India. This cautionary attitude is doubly significant when the supply of foreign exchange has become one of the more important indeterminates of the second plan. Even the increased contacts with the Soviet Union, which Mr. Blaker thought would follow the "personal success" which the Russian leaders had in this country, is unlikely completely to compensate for any weakening of the traditional trade and investment links.

Doubts about future nationalisation in India were expressed by Sir Kenneth Mealing, chairman of the Mercantile Bank, who regretted the disappearance of "some of the fine old Indian life companies." He hoped that the second five year plan would meet with the same success which had attended the first, but, he went on: "Whether or not this can best be accomplished by Government concentrating its energies on creation of the new, rather than acquisition of the old and well-tried, is a matter of opinion." General concern was expressed about the future of labour relations in many of the speeches. Sir Evan M. Jenkins of the Eastern Bank remarked that, up to the time his speech was published, the situation was still far from normal. The banks have been badly affected by recent labour troubles, and the prominence

which the chairmen have given to this factor in their reports is not disproportionate when it is realised what damage was done to normal business activity, at least in Calcutta, during the strike of bank employees early this year. Other doubts about the second five year plan centred on the probable inadequacy of railway transport to meet the demands which will be placed upon it and the curbs which are being imposed on the expansion of large-scale concerns to provide a protected market for the smaller hand or cottage industries. The disturbances caused by States' reorganisation also received their share of attention.

SNIPPING INFLATION IN THE BUD

OFFICIAL CREDIT CHECKS MAY HAMPER INDUSTRY'S LEGITIMATE NEEDS

It is clear that the Indian monetary authorities are becoming worried by the mildly inflationary trends which have been developing in the Indian economy over the past six months. Mr. Bhaliram Bhagat, Deputy Minister for Finance, seemed almost shy in his attempt to deny this in reply to a question in Parliament on Monday when he declared that "there was practically no inflation yet", "the Government is watching the situation," and it "has all the weapons ready in its armoury to deal with inflation when it becomes necessary." The Reserve Bank meanwhile has drawn a sword and begun to sharpen it by asking commercial banks to tell it more frequently and in greater detail about how their money is advanced. Hitherto the latter have been submitting only monthly returns of their advances. The Reserve Bank has now asked them to submit these every fortnight, and to give particulars about loans against commodities, bullion, and the shares and debentures of joint-stock companies.

The main reason for the move, it is reported, is the idea that bank credit is being used on a large scale for unhealthy speculation. Official circles apparently think that the recent big increases in the prices of such commodities as bullion, raw cotton, foodgrains and oilseeds are to a substantial extent due to widespread gambling. No definite evidence on the point exists, and the pity of it is that none is likely to be available despite the Reserve Bank's efforts. It is probably correct to assume broadly that at least some of the money borrowed from the banks is going into speculation, as it has always done. But in what manner it is proposed to distinguish between the genuine needs of trade and industry, on the one hand, and speculation, especially overtrading, on the other, is far from clear. Some corrective result may initially be achieved for psychological reasons—the belief that the authorities propose stricter scrutiny over the use of bank credit. But if this is followed through with actual restraints on the quality and amounts of advances, the needs of the genuine borrowers cannot fail to be affected along with those of the less genuine ones. It is even possible that the former will be affected relatively more than the latter, and that is where the danger of imposing selective monetary restraints lies. To assume that such selectivity is possible is to assume too much from a relatively under-developed banking system. Even in Britain, where the banking organisation is more complex, sensitive and informed, selective credit restraint of the sort urged last year by Mr. R. A. Butler, then Chancellor of the Exchequer, proved highly embarrassing to individual bankers. There the fields for restraint were fairly clear-cut; here they are much less so.

Indeed, in present circumstances, India seems to offer only one such field where firm action may be necessary. This is in bullion. The strident advance in prices which has taken gold from Rs. 96 to Rs. 106, and silver from Rs. 168 to Rs. 179, over the past six months springs in no small degree from hoarding and speculation. The growing prosperity of India's rural areas—described once as the bottomless pit of bullion hoards—may well have something to do with it; so may the increasing impact of the introduction of estate duty and the Planning Commission's still unburied proposal for an annual tax on total wealth. But it is precisely on factors such as these that bull speculation and hoarding are based, and the regrettable feature is that in the case of gold and silver such activity has served no useful economic purpose at all. The trends in the bullion markets over the past few months suggest that much more vigorous efforts are necessary to mobilise rural savings for economic development. The success of these efforts, in turn, will depend to a large extent on how far the villager can be persuaded that the yield he gets on, say, small savings certificates is greater than the capital appreciation in bullion values.

Outside of bullion, it is hard to gauge the scope for selective or general credit restraint, or to see how it can be beneficially applied. With the impressive expansion in economic activity over recent years, the requirements of trade and industry have substantially increased, so past experience may not always be an accurate yardstick with which to assess today's needs. If sentiment over a wide variety of commodity markets has become steadily bullish, the Government itself cannot escape a measure of responsibility. The psychology of inflation has been steadily spreading in recent months. Since September last year, when the wholesale price index (base: year ended August 1939=100) was around 351, it has risen with very few interruptions to about 393. Currency expansion over this period has not been on a minor scale. At the end of September 1955, notes in

circulation amounted to Rs. 1,280.22 crores, and six months later they were Rs. 1,466.64 crores.

The particularly rapid increase in circulating currency in recent weeks has clearly played no small part in encouraging the belief that prices are likely to go on rising. It is towards combatting the spread of this belief that the Government's efforts could now most usefully be directed. Credit restrictions or stricter measures can hardly do much good, for they are liable to create distortions in the economy which will have far more damaging effects in the longer run. It is essential to see that trade and industry are not starved of the funds they need if they are to make their contribution to the country's economic progress. Their needs, it is true, are liable to be magnified if the psychology is inflationary. The cotton mill-owner who buys double the amount of cotton he normally would because he thinks that its price will rise sharply is not likely to be restrained very much if he has to pay a little more on the bank advance with which he buys the cotton. On the other hand, if he is given reason to believe that cotton will cost just as much three months hence as it does today, he will take only his customary requirements, rather than press banks to lend him more money or dealers to sell him more cotton. The example might offer a hint of one of the major difficulties the monetary authorities are likely to come up against if they launch a scheme for the rationing of credit. If trade and industry build up inventories in anticipation of higher prices, can the Reserve Bank or anybody else honestly say that they are merely speculating and hoarding? The fact that neither the information nor the experience is available—nor will be available—explains fears that the Government and the central bank might slide into a series of unfortunate errors.

RECOVERY OF THE U.K. GOLD AND DOLLAR RESERVES MEASURES TO STRENGTHEN STERLING

THE further recovery of the U.K.'s gold and dollar reserves in March left no reasonable doubt that there were permanent factors behind the improvement that began late last year. The international value of sterling responded to the evidence that the British authorities, struggling to restore the nation's solvency, had success within their grasp. Yet the authorities themselves are wisely cautious about the prospect for the latter part of this year. In commercial terms, the recovery of the reserves began last December, though the statistical decline continued until the year-end, because the annual payments of capital and interest on the North American loans fell due in that month. Apart from that special factor, the last quarter of 1955 was a period of stability, and the recovery in the first quarter of 1956 is indisputable. Between the middle of 1954 and the end of 1955, the reserves declined from approximately \$3,000 million to approximately \$2,100 million. A full-scale crisis would have been unavoidable if the loss had continued for even a few more months. In fact, the reserves increased to nearly \$2,280 million by the end of March. Unfortunately, however, the extent of the decline in 1954-55 has altered the character of the problem. Stopping, even reversing, the decline is not enough; it is necessary to recover a substantial part of the loss in a short time. This year's improvement of a few hundred million dollars leaves the reserves still far below the minimum that is required for safety.

The first quarter was crucial. It fell in a seasonally favourable period, when the sterling area is normally earning well, when there is an opportunity to accumulate gold and dollars against the losses which occur in summer and autumn, when outgoing tourists and incoming commodities make heavy demands. There will be no similar opportunity for most of the remainder of this year. Has the opportunity been seized and the position been assured? Obviously, the position could not be assured in so short a time, after it had become so precarious. Yet the achievement is not discouraging; especially when compared with the reserves period of last year, when the decline in the reserves continued, despite seasonal influences. Even the current deficit with the European Payments Union has almost disappeared—admittedly, at a time of year when there should be a surplus. Though the position has not been consolidated, there is now an adequate basis for consolidation. The authorities' task from now on is to frustrate the normal seasonal deterioration. The Treasury's White Paper on the balance of payments in 1955,

issued at the same time as the reserve figures for end-March, was a useful commentary on those figures. It showed where the real weakness lay: not in movements of capital—important though they may be—but in the balance of the outside sterling area—though, indeed, it needs strengthening—but in the balance of the U.K.'s visible trade. The simple fact is, as the White Paper pointed out, that the U.K.'s imports increased much more than her exports last year. It is to that fundamental weakness that the authorities have now turned their attention.

This problem is directly relevant to the Budget. Some people have argued that the stresses have already been relaxed, that the external payments account is improving, and that, therefore, a stern Budget is unnecessary. Mr. Harold Macmillan cannot listen with any sympathy to such advice for what he and Mr. R. A. Butler before him have achieved so far is only the potentiality, not the reality, of recovery. In one sense, the relatively good achievement of the past half-year makes the task of recovery in the coming months more difficult. The White Paper did not support the idea that movements of capital and variations of commercial credit had been adverse to sterling in 1955. It can now be seen that last year's developments—particularly the raising of Bank rate and the assurances of the Chancellor of the Exchequer at Istanbul—restored confidence in sterling in the outside sterling area and in the dollar area, though they failed to convince many operators in continental Europe. Essentially, that is a satisfactory achievement. It implies, however, that sales of sterling were not hastened, nor purchases of sterling delayed, to the extent that had been generally imagined. Therefore, the support for sterling that might be forthcoming from a change of mood will not necessarily be substantial.

Confidence is, however, an essential prerequisite of further recovery, and every measure that the Government undertakes must be calculated to impress international opinion. It is still necessary to convince holders of sterling balances in London that the value of these balances will be firmly maintained, and it is necessary to stimulate, within reason, the flow of short-term capital to London. These deposits require not only a stable currency but also an attractive rate of interest. The present relatively high rate of interest is needed not only as a deflationary force whereby it helps to stabilise the currency but also as an attraction to foreign money. If the authorities are resolute, deflation to the required degree may be accomplished relatively soon—within a few months, perhaps. But, unless the deflation is so severe, last year's debit balance of payments is converted into a big surplus, the need for foreign money as a reinforcement for sterling and the reserves will remain—probably for years. It is generally assumed that as soon as current payments are properly in credit and the reserves are increasing, Bank rate will be lowered. But on a broader view, it seems that high interest rates may have been established in Britain for a long time to come. These rates, intended to support sterling and the reserves, could do serious harm internationally. The Chancellor will be forced to recognise that such problems can be solved only by earning an adequate current surplus.

CURRENT COIN

Controls Over Coal.—Mr. B. L. Agarwalla, president, told the Indian Colliery Owners Association in Dhanbad recently that there was no such thing as a private sector in the coal industry. The point has some validity considering the extensive controls the Government exercises over the activities of producers. The Coal Board's permission is necessary if it is intended to open a mine, and its permission is necessary if it is intended then to develop it. The height, length and width of galleries, in fact all mining operations, are controlled by the Mines Act, according to Mr. Agarwalla. When the coal is brought to the surface, it can be sold only to a person who holds a permit, and only at a price fixed by the Government. There is a variety of other controls, such as on wages, labour amenities and safety measures. Mr. Agarwalla is surprised that some people should talk of nationalising coal. "In view of the fact that the coal industry is being run as directed by the Government, at every step and in every stage, what remains to be nationalised?" he asks. For nationalising coal, the Government can hardly use the sort of arguments it used to defend the nationalisation of life insurance; in the former case it would be purely, as in the latter case it was partly, a question of yielding to political pressure.

Confidence and Verbosity.—Between the reporters and the politicians, India's investment market is liable often to find itself battered and perplexed. Monday's episode which led to a sharp drop from Rs. 6-14 to Rs. 5-3 in the shares of a Indian Copper Corporation is perhaps only a slightly exaggerated example of what has been happening far too frequently during the past

months. Politicians, sometimes of uncertain standing, decide to air newly-acquired concepts. Reporters, presumably of equally uncertain standing, listen to half of what is said. Agencies splash the news. The stock markets go off into a panic. Denials and clarifications follow. There is a sluggish recovery in investment confidence. A few speculators discover that they have made a lot of money for no reason at all. And they then proceed to patronise the bullion markets, in preparation for the time when Mr. Nicholas Kaldor and the Planning Commission will have thought out some method of collecting an annual tax on total wealth from everybody except the evaders. It is a matter of some significance that Sir Ramaswami Mudaliar should have chosen to say sober but forceful words on this subject in his address from the chair at the first annual general meeting of the Industrial Credit and Investment Corporation of India Ltd. in Bombay last week. He declared that since the Corporation came into being, there have been a series of measures which have produced a feeling of uncertainty. But even more serious than these measures, he said, are the constant suggestions, proposals and recommendations made by persons holding leading positions, but not directly responsible for the enactment of fiscal measures, about how the private sector should be altered, modified or even abolished. "The unsettling effect on the public mind, particularly on the mind of the investing public, does not seem to be adequately appreciated by persons in leading positions who forecast the nature of possible fiscal measures but are only remotely connected, if at all, with actual decisions on such measures, and who continuously threaten the private sector with expropriatory or near-expropriatory proposals. I hope that conditions will soon be brought about, both by the Government and by other spokesmen whose views may influence the Government, which will maintain a reasonable certainty of stability over a period, so that private industries, backed by the savings of both corporate and private investors, may be enabled to fulfil the substantial rôle which they have been allotted in the second five year plan." Sir Ramaswami was justified in speaking in the terms he did, because the point has a direct bearing on the activities of the Corporation. For example, in recent months the Corporation carried to an advanced stage negotiations for underwriting a number of public issues of shares, but was unable to bring these to fruition because of the unfavourable and unsettled conditions in the stock markets. The reason, as he explained, is that it is not sound business for any underwriter, whatever his resources, to undertake to subscribe such part of a public issue as is not subscribed by the investing public at a time when the condition of the stock markets indicates that the public response is likely to be poor. In this limited sense, the past year may have been disappointing for the Corporation; the fact is regrettable, for this body is among the most unique and promising ventures which join foreign and domestic effort for the promotion of private industry in this country.

Quality of Paints.—Mr. A. E. Faizullahaboy, president, told the annual general meeting of the Indian Paint Manufacturers Association in Calcutta on Monday that the industry was in a "dismal position." Those who read the recent report and accounts of the Alkali and Chemical Corporation of India—a major manufacturer—would not have thought so. There Mr. N. D. Harris, chairman of A.C.C.I., made the point that although the markets for paints were highly competitive, the production and sales of his company at least were expanding at an impressive pace. But Mr. Faizullahaboy said this week that the Government Test House, which tests paints, rejects samples rather more freely than it should, and as a result "there has been a large accumulation of stores in many factories." He claimed that consumers would easily accept these paints, and those who test them lack technical experience. Complaints were also made by Mr. Faizullahaboy along familiar lines on other aspects of official policy. The Government's purchase policy, he said, is unhelpful to the industry. Exports of oils, especially linseed oil, should in his view be carefully regulated so that paint and other factories can get their requirements more easily and cheaply. The administration of excise rules, he feels, is too rigid and hampers the working of factories. Criticising the excise duty on vegetable oils, Mr. Faizullahaboy declares that excise duty "is being paid twice by the paint manufacturers. In order to avoid double duty, movement of oils should be allowed in bond."

Prospects for Jute Fabrics.—Mr. N. L. Kanoria, chairman, told the annual general meeting of the Calcutta Jute Fabrics Shippers Association on Monday that the past year has been "one of the most encouraging years that the Indian jute industry and trade has had for some considerable time." There has been an increase in the mills' output. With the recent loom unsealing moves, only 5 percent of the loomage is now closed and it is significant that it is the first time since 1949 that so many looms have been in operation. The

complete withdrawal of the export duties on jute goods is a measure which the trade has consistently advocated for years and which is especially welcome. Assisted by this move, the industry has been able to increase its sales of jute manufactures and keep stocks at a workable level. As a combined effect of these developments, there has been a strengthening of the Indian jute trade's competitive position in world markets and a corresponding weakening of that of foreign jute manufacturing industries. Against these gains, however, Mr. Kanoria pointed to the uneconomic trading position of the mills, and to the failure of the Indian jute trade to keep pace with the expansion in the world economy. But he said that the mills are making good progress, with Government co-operation, in the modernisation of their plant and equipment. Modern methods of cultivation, fuller utilisation of scientific and agricultural research and the establishment of a proper hedge market are other important requirements for making Indian jute manufactures cheaper than those of similar industries in other parts of the world. As these conditions are fulfilled, a great future lies before the jute industry, he said. Fortunately, there are signs that some progress is being made in all these directions, though much still remains to be done. The problem of violent fluctuations in the jute market has engaged the attention of the trade and industry for some time. In Mr. Kanoria's view, the answer to the problem of unstable prices lies in the establishment of a properly regulated futures market and "it is gratifying to note that very good progress has been made in the past year towards that goal. The sooner the present scheme is implemented, the better it will be for the trade, and I trust that we will see the official inauguration of the new futures exchange in the very near future."

Shrinking Currency Black Markets.—Economic progress in western Europe and recent monetary events in Argentina and Chile have resulted in an easing of foreign exchange regulations and have restored considerable currency confidence. These events also reduced or eliminated formerly flourishing black markets of hard currency banknotes or illegal transfers abroad. According to a survey published in the April issue of *Pick's World Currency Report*, the following countries were free from monetary black market transactions as from 31st March, 1956: Argentina, Austria, Belgium, Canada, Chile, Costa Rica, Cuba, Dominican Republic, Western Germany, Haiti, Holland, Hongkong, Kuwait, Lebanon, Mexico, Nicaragua, Panama, Peru, Portugal, Switzerland, Syria, United States, Uruguay, Venezuela. Small black markets continued to exist in Curacao, Colombia, Denmark, Dutch West Indies, Ecuador, Greece, Iran, Italy, Norway, Saudi Arabia and Sweden. In 50 other countries, including the sterling area, medium-sized to large black markets continued their existence in this eleventh post-war year. The monthly volume of these unlicensed transactions still exceeds a quarter of a billion U.S. dollars.

LANCASHIRE'S AGITATION

IT will be seen from the extract which we publish out of the *Textile Mercury* that Lancashire manufacturers are determined to keep alive the spirit of discontent, and are extremely indignant at the suggestion put forward in Council, when the late amendment of the Act was passed, that the Cotton Duties Act should be regarded as final. It remains to be seen how the revised duties and repeal of duties will eventuate. There seems to be an opinion extensively held that the extent of the handloom weaving industry has been very much underrated, and it is remarkable that one of the effects produced already has been a larger increase in the demand for yarns of higher counts. There is one argument which Manchester folk never fail to overlook, and that is that, with the exception of granting loans, the benefit of England's connection with India is all on the side of England. In order to extend railways and Manchester trade, India has in the past incurred considerable debts. To pay the interest on these debts import duties have lately been necessary. These duties will permit, but repealed as soon as the finances permit, when adverse they will be again reimposed. We quite agree that there is no present prospect of an act of finality, but if our Manchester friends desire to see finality in an act of total abolition of import duties on cotton, the shortest way is for port duties on cotton to the Secretary of State to reduce them to petition the India Office, especially in the expenditure of the Store Department, to take over some share of pensions spent in England, to make a smaller charge against India for a sinking fund for troops and to contribute to a sinking fund for the gradual extinction of India's sterling debt.

Our City Cable

MORE CHEERFUL TONE IN STOCK MARKETS

INDUSTRIALS AND OILS
LEAD RISE

London, 11th April.

THE general tone of the stock markets during the past week was very satisfactory. Apart from gold shares and Ceylon tea shares, prices moved higher under the lead of industrial equities and oils. Persistent buying on a market poorly supplied with stocks brought many appreciable gains. The advance to a new peak on Wall Street encouraged buyers, while the sterling area's gold reserve figures for March, which showed a further appreciable rise, contributed to the more cheerful atmosphere. The forthcoming Budget restricted business, but this was not a particularly adverse factor; it was widely thought that the Chancellor would not consider it necessary to strengthen his disinflationary policy as it appeared to be having the desired effect. The flare-up in the Middle East caused some hesitation in the markets immediately prior to the week-end, but this was soon overcome. Gilt-edged had a very quiet week, and prices, after tending higher, turned easier to record very little change on balance. Foreign bonds were also subdued, but Japanese issues attracted a little support at one time. Peruvian transport issues went further ahead before reacting on the withdrawal of recent buyers. Rails provided little of interest, but dollar stocks followed Wall Street to higher levels. The strength of industrial equities and oils were the outstanding features. A modest reaction followed the Middle East news, but the advance was resumed later. Leading issues and atomic power shares, notably electrical equipment issues, were the chief beneficiaries. The Financial Times Industrial Ordinary Index was around four points higher on the week. Insurance shares were in demand following good dividend statements. Idle and dull conditions prevailed in the gold share market, and prices were lower. Base metals, in contrast, were firmer where changed. The almost certain victory in the Ceylon general elections of Mr. Bandaranaike, Socialist Opposition leader, sent prices of tea plantation shares sharply down on Monday. The possibility that the new Government might nationalise the large British-owned plantations caused losses of up to 5s a share. But most tea dealers were adopting a "wait and see" attitude about nationalisation. One said that Mr. Bandaranaike appeared to be taking a "more moderate" line now that he seemed to be about to head the Government. But he was concerned that the new Government might take measures to sell Ceylon tea in Colombo rather than in London.

The Money Market

Credit conditions remained difficult in the money market last week. With one day short, discount houses again had to finance a large number of Treasury Bills daily. The supply position for the first three working days was no better than in the

previous week. On Friday, the position took a turn for the better with several factors combining to produce a better outflow of funds to the market. For the major portion of the short working week, day-to-day loans ruled on the basis of 4½ percent and 5 percent, and a small amount was borrowed from the Bank of England at 5½ percent for the week. On the change in conditions, rates eased with balances for over the week-end arranged at 4 percent. The money market made no change in its bid at last week's Treasury Bill auction, although there was a slight upward trend in the average rate for Bills. Applications for £280 million worth of 91-day Bills totalled £408,250,000 and the former amount was allotted at an average rate of 105s 5.55d against 103s 3.66d. Offerings this week consist of £240 million worth of 91-day Bills. The Bank of England return for the week ended 4th April showed that notes in circulation were £11 million higher at £1,852 million, while bankers' deposits were £18 million lower at £225 million.

Hongkong Gold Easier

Hongkong gold tended lower due to heavy stocks together with carryover charges favouring sellers. Prices improved initially in sympathy with the steadiness of U.S. dollars, but towards the end of the period eased to \$(HK)253½. The carryover charges were 105 cents in favour of sellers. The official offshore was 6,500 taels and unofficial 28,100 taels. Arrivals at Macao totalled 50,000 ounces. In forward contracts business was done at \$(U.S.)37.96.

Quicksilver Market

The downward drift in the London ex-warehouse price of quicksilver persists. Dealers now quote the metal on that basis for immediate delivery at not more than £86 a flask, compared with £86½ previously. Competition remains keen for the limited demand. Some assert that an order for 25 to 50 flasks could probably be placed at about £2 below the quoted level. Meanwhile, offers of Yugoslav and the Mexican metal for shipment to Britain are indicated around £80 to £81 a flask, c.i.f. New York quicksilver is firmer, being quoted at \$262 to \$264 a flask against the previous range of \$258 to \$260. The market has been building up slowly in the past few weeks. More enquiries are said to be coming from foreign and domestic consumers.

Vegetable Oil Market

Edible oils retained a firm background last week while technical oils ruled steadier on revival of interest. More active conditions prevailed for linseed oil afloat, with Indian bulk sold to Hull at £146, £141 bid for April-May, £104 c.i.f. for May-June and re-sellers wanting about £2 a ton more. Ex-tank oil in Rotterdam was traded at \$350 a metric ton. Isolated afloat parcels of Indian crude groundnut-oil were reportedly traded from £140 to £143 c.i.f., while Nigerian was valued around £141 c.i.f. April-May. Cotton oil was generally dealer with up to \$370 c.i.f. wanted for American crude. Caster oil was steady, with good mark B.S.S. holding for £130 c. and f. in drums, but after re-sale business late on Friday it was down to £127½. April-May shipments of commercial grade were made at £123 c. and f. in drums. American soyabean oil was firmer, but Canadian was not materially changed. Groundnuts ruled fully steady, while copra and coconut oil were a shade steadier without European buyers following.

Sterling Quotation for Sugar

British sugar traders were given a daily world sugar price in sterling for the first time on Monday when a special committee of the United Terminal Sugar Market Association published the first of a series of daily quotations giving the sterling price of raw sugar available from the world market on a c.i.f. U.K. basis. The price was 33½s a cwt. for May-July shipment. It was based on reports of transactions on a world-wide basis, including Commonwealth sugar, with adjustments made for preferential duties. A spokesman for the United Terminal Sugar Market Association said that there had been a considerable number of requests for the price. The London sugar futures market is expected to reopen this summer.

Pepper Futures Market

Futures trading in pepper is starting in Rotterdam on 10th April, it was announced. This follows the recent announcement of the start of pepper futures trading in Amsterdam on the same date. Meanwhile, the Netherlands Bank has released general permits for pepper trading under the rules of the pepper futures market established in accordance with the Netherlands National Association for Spices Trading. These permits, the Bank points out, aim at imposing the fewest possible currency restrictions on the pepper futures markets, notably if non-residents want to operate. For residents, the permits signify that they can operate on behalf of non-residents. The permits provide the opportunity for an effective supply of pepper contracted on the futures market, but for each supply a permit will have to be applied for in order to prevent undesirable currency switches, the Bank says.

Hamburg Coffee Futures

Hamburg coffee futures market was operating on 6th April for the first time in almost 20 years. The 150 operators present at the opening—all Hamburg dealers—were somewhat cautious while getting the feel of the market and business in general was quiet. As one dealer pointed out, the only other futures market in Western Germany was in sugar, and to many of those present, futures trading was still something of a novelty. May position was opened at 270 buyers, 275 sellers and closed at 275½ sellers, while September opened and closed at 261 buyers, 270 sellers, all Deutschmarks, per 50 kilos.

THE CALCUTTA MONEY MARKET

INTERBANK FUNDS EASIER

Wednesday, 11th April.

THERE has been little change in general demand conditions on the money market this week. The requirements of the jute and sugar industries, and for storage of foodgrains, still dominate the market. There is no sign yet of any easing in the pressure of banks' deposit rates. The inter-bank market is showing a slightly easier tendency. The call rate is unchanged at 4 percent but business has been reported at lower levels.

Quietness in the export bill market has continued, with only a few gunny bills coming to hand. Remittance has been moderate. Sterling is slightly stronger on the world's markets and the dollar is quoting Rs. 476½.

Bullion was firm on good support, and lack of arrivals. Gold improved to Rs. 106-10, as did silver to Rs. 179-6.

During the week ended 6th April, Government of India Treasury Bills for Rs. 68,49,75,000 were sold in favour of the Reserve Bank.

Further sharp rises of Rs. 43.06 crores and Rs. 40.04 crores in the total note issue and notes in circulation to Rs. 1,521,47 crores and Rs. 1,506.68 crores were outstanding features of the return of the Reserve Bank of India for the week ended 6th April, 1956. The currency expansion was covered by raising foreign securities by Rs. 30 crores to Rs. 686.41 crores and rupee securities by Rs. 9.94 crores to Rs. 688.75 crores. This was presumably done by a transfer from the banking department in which balances held abroad declined by Rs. 27.62 crores to Rs. 62.09 crores. Deposits of the Government of India and other Government accounts fell by Rs. 10.24 crores and Rs. 26.34 crores to Rs. 57.10 crores and Rs. 35.19 crores. Balances of commercial banks at Rs. 53.41 crores were Rs. 17 lakhs higher. Investments declined by Rs. 37 lakhs to Rs. 46.82 crores. Other loans and advances dropped from Rs. 79.94 crores to Rs. 62.09 crores of which advances to scheduled banks against usance bills totalled Rs. 25.44 crores against Rs. 27.42 crores. These advances amounted to Rs. 51.28 crores since 1st January, 1956. Ways and means advances were shown at Rs. 1.35 crores (nil).

The return of the State Bank of India for the week ended 30th March, 1956, shows a rise of Rs. 56 lakhs in total deposits to Rs. 238.06 crores. Investments in Government Securities are down by Rs. 1.02 crores to Rs. 96.35 crores, while other authorised investments are up by Rs. 35 lakhs to Rs. 10.31 crores. Loans, cash credits and overdrafts, and bills discounted and purchased have decreased by Rs. 1 lakh to aggregate Rs. 141.14 crores. Cash and balances are, in consequence, shown at Rs. 15.57 crores or Rs. 1.43 crores less.

The statement of the Scheduled Banks for the week ended 30th March, 1956, discloses Demand and Time liabilities at Rs. 635.99 crores (Rs. 4.89 crores on account of borrowings from banks) and Rs. 414.32 crores (Rs. 3.01 crores), compared with Rs. 625.20 crores (Rs. 3.86 crores) and Rs. 412.92 crores (Rs. 2.87 crores), respectively, in the previous week. Cash and balances with the Reserve Bank have increased by Rs. 94 lakhs and Rs. 2.70 lakhs to aggregate Rs. 35.57 crores and Rs. 49.12 crores, respectively. There is a drop of Rs. 2.06 crores in investments to Rs. 360.07 crores. Advances and bills discounted at Rs. 760.80 crores show an increase of Rs. 11.07 crores. The ratios to total liabilities of cash and balances and of advances and discounts are, in consequence, shown at 8.1 percent and 72.4 percent, against 7.8 percent and 72.2 percent.

THE BANK OF CHINA made a profit of Rs. 2,71,527 for the year ended last December. Deposits totalled Rs. 2,70 crores. Cash was shown at Rs. 1,79 crores. Investments were Rs. 26.83 lakhs and advances Rs. 3.49 crores.

THE HINDUSTAN MERCHANTS BANK earned a profit of Rs. 71,191 for the year ended last December.

Quite a large section of bank employees have now realised that it pays more to rely on conciliation, adjudication and negotiation than to resort to strike and go-slow tactics. They seem to have

(FROM OUR LUCKNOW CORRESPONDENT)

Popular Grievance

Excepting foodgrains, including *ata*, *maida* and *suji*, the tax on all other commodities is at 1 anna in the rupee on a single turnover basis. The number of exempted goods has shrunk from 50 to 23. Among the exemptions are newspapers, water and milk, but since newsprint is not exempted it is feared that the smaller newspapers which get their supplies from local agents will be affected adversely. In this matter also, the State Government has gone against the recommendations of the Taxation Enquiry Commission. For importers, there will be no minimum limit for taxation and they will be liable to tax on whatever they import, regardless of the turnover. At present, the assessment for a particular year becomes time-barred after three years. In future, it will be after four years. Whereas at present an assessee is free to be assessed for a particular year either on the basis of his turnover in the previous year or on the basis of the assessment year, he is now to be assessed only on the turnover of the assessment year. Under the existing Act, the goods which are liable to be taxed at every point of sale are taxable at the maximum rate of 3 pies in the rupee. The Ordinance empowers the Government to raise it to 6 pies in the rupee where it is considered necessary to do so.

Jute Production

The State jute production programme has drawn up a large-scale jute production programme and has appointed a special officer, Mr. H. D. Nathani, to direct it. The Government is also utilising the skill of East Bengal refugees to see the programme through. The jute production target set in the second five year plan for the State is 556,500 maunds. Present production is estimated at about 5 lakh maunds. The requirements of the three jute factories in the State are estimated at nearly 7.5 lakh maunds a year.

MARKETS STEADY ON HOPES OF RUSSIAN ORDERS

THE news of an increase of 5,200 tons in mills' stock of jute goods during March came as a welcome surprise to a market which had expected a rise of at least twice that amount. This caused a bullish tendency to develop, and the trade in general regarded the outcome of the first complete month of working with the increased loomage with satisfaction. The increase in stocks was only slightly less than the tonnage produced by the unsealed looms. In many quarters this has been construed as a sign that the increase in production was justified by world demand. This would appear at first glance to be correct if current stocks are compared with those of a year ago. In March 1955, with 12½ percent looms sealed, mills' stocks were exactly the same as in March 1956, when only 5 percent looms were sealed; but a year ago, stocks were just about at their peak, and showed a rapid decline over the next few months. Unless drastic changes take place in the very near future it is doubtful if world consumption can be boosted so as to absorb the increase in production and bring about similar conditions. A further comparison of the ratio of stocks between sacking and hessian brings to light several interesting features. In March 1956, heavy goods stocks amounted to 58 percent of the total, or 4 percent lower than they were a year ago. Hessian stocks amounted to 32 percent, which was also 4 percent lower than at this time last year. But "other goods" have shown a big increase, and in March, at 9,500 tons, constituted about 10 percent of the entire stocks; a year ago, at 1,600 tons, they were only a little over 1 percent of the total.

Activity in the jute goods market during the past week has been very restricted. Reports of the long-awaited Russian order had a steadying effect at the beginning, but this was counteracted around midweek by talk of a trade pact between Burma and Pakistan. Bulls and bears dominated the market in turn, and at the close quotations showed very little chance from the opening.

Fibre attracted a little more interest. In the early session, Indian mills made small day-to-day purchases in the open market, and also increased their demand for local delivery jute through their agents in the Cossipore markets. This tended to keep prices steady in spite of the fact that imports into Cossipore were again maintained at a very high level. Sellers are holding a fair amount of stocks both in the upcountry agencies and locally, and do not appear to be in any great hurry to liquidate their holdings. Towards the week-end, several mill groups began to take an interest, and fair quantities changed hands at keen prices. At the close, mill interest waned, but the market was fully maintained by inter-sealer covering.

THE JUTE MARKETS

Manufactured Goods: Jute goods prices showed an upward tendency at the opening last Thursday due to rumours that an order from Russia was imminent. There was heavy bear-covering and quotations for heavy goods advanced by 12 annas or Re. 1 for B Twills, to be quoted at Rs. 108-4 for ready shipment and Rs. 108 for April-May shipment. Although most of the activity was concentrated in heavy goods, hessian moved in sympathy, and a small rise of 2 annas brought 40in. 100z. to Rs. 38-6 for ready and Rs. 38-10 a 100 yards for forward shipment. At the higher levels, selling pressure from both mills and speculators caused rates to recede rapidly, and by Friday morning the previous day's gains had been almost wiped out. As the day progressed, lack of interest from overseas buyers and continued selling pressure from weak holders forced down prices still further, and the confidence of the market received a jolt on rumours of a trade pact between Burma and Pakistan. Fatka rates again reached last week's lowest level of Rs. 105-12, but recovered slightly by Saturday morning, although opening quotations at Rs. 107-6 were still 4 annas lower than on the previous day. During this period, hessian remained remarkably steady, and over the two days prices remained constant. Publication of the I.J.M.A. stock figures brought about a revival just before the closure for the week-end. With the news that was increase in stocks was only about half of what was expected, confidence returned and prices gradually recovered. On Monday morning, B Twill quotations were back to Rs. 108 a 100 bags for ready shipment, or only 4 annas below the week's opening rates, while hessian was steady at Rs. 38-8 for ready 40in. 100z. Prices fluctuated within narrow limits during the day, but the general tendency was in an upward direction in spite of the limited business. Towards the close, a steady tendency developed.

At the close, sacking is a little easier, but hesian is unchanged. Opening quotations on Wednesday morning were as follows:

	April	May	June	July-Sept.
	Rs.	Rs.	Rs.	Rs.
40in. 8oz.	32-2	32	31-10	31-8
40in. 10oz.	38-7	38-12	38-12	38-12
B Twills	107-12	108	108-2	107-4
Heavy Cees				
(Plain)	107-12	108	108	107-4
A Twills	134-8	134	133	132
Liverpools	124-8	124-8	123-8	122-8
Cornacksa	108-6	108-8	109-8	109-12

Raw Jute: Mills showed a considerable amount of interest in the fibre markets, and more business was conducted than of late. Indian mills bought steadily early in the period, and also increased their activities in the local Cossipore markets, which had a steady influence there. The improvement in gunny prices allowed them to pay the current jute rates, and towards the week-end some of the larger groups entered the market. Competition was keen, and most of the business was done at cut rates, with the result that sellers holding large stocks were only willing to release a few thousand maunds at a time. Upcountry markets continued to lead Calcutta rates because imports were very small, but there was ample jute available from stockists for those who were willing to pay the price. Stocks in Cossipore were very high for the time of year, and wagon arrivals continued to maintain supplies in spite of heavy buying by mill representatives.

Opening quotations last Thursday were based on Rs. 28 a maund for Upper Assam Bottoms, but in the absence of business at the opening these rates were nominal, and only found their true level 8 annas lower when mills began to take an interest. Prices remained at Rs. 27-8 a maund for the rest of the week, although in most cases transactions were put through below this level.

The main business was in Dhubri-Assam assortments on the basis of Rs. 27 a maund for Bottoms for April-May shipment. Northern agency and a fair quantity of local Northern jute was also done at the same price and 4 annas higher. Karimpore-Bongaon Tossa and also Assam agency tossa came in for a good deal of interest and prices paid ranged between Rs. 27-8 and Rs. 28 a maund basis Bottoms for April-May shipment. Daisee, both ex Calcutta and agency, was done at same price and Daisee Metcalfe at Rs. 25 to Rs. 25-4 a maund basis Bottoms. A small lot of Bimbi was done at Rs. 25 a maund for F.A.Q.

At the close, the market is unchanged, with sellers reserved. Opening quotations on Wednesday morning were as follows:

Indian Jute:	Landed at Mills Rs. a md. basis	Shipment
	Bottoms	
Lower Assam	27-8	April-May
Upper Assam	27-8	"
Northern	27-8	"
Murshidabad White	26-8	"
Daissee ex Agency	28	"
Daissee ex Cossipore	27-8	"
Daissee Mesta	25-8	"
Local Packing (Northern)	26-8	"
Bimli	25-8	"

Tossa is quoted at Re. 1 a maund above the price of white jute.

Pakistan Jute :	Rs. a md. basis Bottoms	Shipment
Jat	31	April-May
District	30-8	"
Northern	30	"
Jat Cuttings	124 a bale	"

There has been an increase in business in the local Cossipore markets over the past week, and

Slumberettes on our Tokyo service! Still more comfort for you—at no extra cost

SLEEP, gentle passenger, as our Constellation wings wait you to Tokyo — on business or pleasure. You'll enjoy the speedy service, the courteous attention of our air hostesses. And now, from the 5th of April, every First-Class Passenger has a Slumberette — at no extra charge! So fly with us to Tokyo — on a Thursday or a Sunday — and enjoy the dreamy, comfort-at-the-touch-of-a-button luxury of our Slumberette service.

COMPANY AND PUBLIC NOTICES

THE LAKSHMI COTTON MANUFACTURING COMPANY LIMITED

NOTICE is hereby given that the Sixty-first Ordinary General Meeting of the Shareholders of the above Company will be held at the Registered Office of the Company, No. 9, Wallace Street, Fort, on Thursday, the 26th April, 1956, at 4.30 p.m. (Standard Time) for the purpose of transacting the following business:—

- (1) To adopt the Directors' Report and the Audited Accounts for the year ended 31st December, 1955.
- (2) To sanction the declaration of a dividend.
- (3) To appoint Auditors for the current year and to fix their remuneration.
- (4) To elect a Director in place of Mr. Pratapsinh Mathuradas who retires by rotation but being eligible offers himself for re-election. Mr. Pratapsinh Mathuradas is interested as a Director of Vissanji Khimji & Co. (Private) Ltd., the Cotton Buying Agents of the Company, and his re-election will therefore be proposed as a Special resolution.

- (5) To elect a Director in place of Sir Vithal N. Chandavarkar who also retires by rotation. Sir Vithal N. Chandavarkar, although attained the age of 68 years is not eligible for re-appointment, unless his appointment is made or approved by the Shareholders in general meeting in terms of Section 281 of the Companies Act 1956.

Special Notice is hereby given that it will be proposed as an Ordinary resolution that Sir Vithal N. Chandavarkar be and is hereby appointed a Director of the Company and that it is hereby specifically declared that the age limit of 65 shall not apply to him.

- (6) To transact the following further special business, namely to consider and if thought fit, to pass the undermentioned resolutions as Ordinary resolutions:—

(a) "Resolved that the appointment of Messrs. Jwalaprasad Radhakrishna, as the sole selling agents of the Cloth & Yarn produced by the Company, in the market of Uttar Pradesh, be approved, up to 31st March, 1957."

(b) "Resolved that the appointment of Messrs. Dwarka Prasad Chiranjee Lal, as the sole selling agents of the Cloth & Yarn produced by the

Company, in the market of Bihar, be approved, up to 1st March, 1961."

(c) "Resolved that the appointment of Messrs. K. D. Continental Traders, as the sole selling agents of the Cloth & Yarn produced by the Company, in the market of the State of Kashmir, be approved, up to 2nd July, 1959."

(d) "Resolved that the appointment of Messrs. Jamnadas Bhunji Patel, as the sole selling agents of the Cloth & Yarn produced by the Company in the markets of Saurashtra & Cutch, be approved, up to 1st January, 1958."

By Order of the Board of Directors
of THE LAKSHMI COTTON MFG. CO. LTD.,
FOR THE BOMBAY COMPANY (PRIVATE)
LIMITED,

R. L. COGHLAN,
Managing Director,

Secretaries, Treasurers & Agents.

Bombay: 24th March, 1956.

NOTE: Warrants for the above dividend, if declared, will be posted to Shareholders on 30th April, 1956, and payments will be made on or after 1st May, 1956. Shareholders are requested to notify to the Company immediately any change of address, failing which their dividend warrants will be posted to the addresses as registered with the Company.

A member entitled to attend and vote is entitled to appoint a proxy to attend and vote instead of himself, and a proxy need not be a member of the Company.

EXPLANATORY STATEMENT

The resolution in connection with the re-election of Mr. Pratapsinh Mathuradas, which will be proposed as a Special resolution, under item (4) is as under:—

"Resolved that Mr. Pratapsinh Mathuradas, who retires from the Board by rotation, be re-elected a Director of the Company."

The reasons which make this resolution necessary have already been given in the Explanatory Note accompanying the Notice of the Extraordinary General Meeting to be held on 13th April, 1956, which has been posted to shareholders.

The resolution in connection with the re-election of Sir Vithal N. Chandavarkar, which will be

proposed as an Ordinary resolution, under item (5) is as under:—

"Resolved that Sir Vithal N. Chandavarkar be and is hereby appointed a Director of the Company and that it is hereby specifically declared that the age limit of 65 shall not apply to him."

Sir Vithal needs no introduction, as for many years, one of the leading figures in the textile mill industry of India, and since his appointment as a Director of the Company in December, 1949, has always given the Company the benefit of his wide experience. The Company is indeed fortunate to have him on the Board.

The Company's policy has for many years been to establish direct connections with consuming markets upcountry, and for this purpose it has appointed sole selling agents in various upcountry centres. The draft resolutions under item (6) have been necessitated by the fact that under Section 294 of the Companies Act 1956, the appointment of existing sole selling agents requires the approval of the shareholders in general meeting. The agents mentioned above are all well connected in the textile trade in their respective territories, and have been active in the promotion of the sale of the Company's Cloth and Yarn.

THE WESTERN INDIA MATCH COMPANY, LIMITED.

NOTICE.

NOTICE is hereby given that the Thirty-third Annual General Meeting of the Shareholders of the above-named Company will be held at the Registered Office of the Company at Indian Mercantile Chambers, Nicol Road, Ballard Estate, Bombay at 4 p.m. on Monday the 7th day of May, 1956 to transact the following business:—

1. To receive and adopt the Directors' Report and the Audited Accounts for the year ended 31st December, 1955.

2. To declare a dividend and a bonus.

3. To elect a Director in the place of Sir Chunilal V. Mehta, K.C.S.I., who retires by rotation. Sir Chunilal V. Mehta, having attained the age of 75 years and though otherwise eligible for re-election, is not eligible for re-appointment, unless his appointment is made or approved by the shareholders in general meeting in terms of section 281 of the Companies Act, 1956.

Special Notice is hereby given that it will be proposed as an ordinary resolution that Sir Chunilal V. Mehta, K.C.S.I. be and he is hereby appointed a Director of the Company and that it is hereby specifically declared that the age limit of 65 years shall not apply to him.

4. To elect a Director in the place of Mr. M. G. R. Aitken, who retires by rotation, but is eligible for re-election and offers himself accordingly.

5. To appoint Auditors for the ensuing year and to fix their remuneration.

The Transfer Books of the Company will be closed from the 16th day of April, 1956 to the 9th day of May, 1956, both days inclusive.

By Order of the Board,

A. HYDARI,
Deputy Managing Director.

23rd March, 1956.

Indian Mercantile Chambers,
Nicol Road, Ballard Estate,
BOMBAY.

The dividend and bonus when sanctioned will be payable at the Central Bank of India Ltd., Bombay and Calcutta on and after the 14th day of May, 1956 to those shareholders whose names stand on the Register on the 9th day of May, 1956 and warrants will be posted in due course to each shareholder at his registered address.

A member entitled to attend and vote is entitled to appoint a proxy to attend and vote instead of himself and the proxy need not be a member of the Company.

Extraordinary statement under section 173(2) of the Companies Act 1956 regarding resolution to be passed at the Annual General Meeting for re-appointment of Sir Chunilal V. Mehta, K.C.S.I. as a Director of the Company.

Sir Chunilal V. Mehta, K.C.S.I. has been a Director of the Company since 14th January, 1937 and the Chairman of the Board of Directors since 8th December, 1938. He is 75 years old. He retires by rotation at the next Annual General Meeting of the Company. There is no bar other than the age limit to his re-election as a Director of the Company. His re-appointment requires a resolution to be passed by the shareholders specifically declaring that the age limit of 65 years shall not apply to him.

Sir Chunilal V. Mehta is a businessman of wide and varied experience, and during the 19 years he has been associated with your Board he has rendered very valuable services to the Company.

A. HYDARI,

Deputy Managing Director.

Bombay, 23rd March, 1956.

THE SOORAH JUTE MILLS CO., LIMITED.

NOTICE is hereby given that the 119th Ordinary General Meeting of the Shareholders of the Company will be held at 8, Royal Exchange Place, Calcutta at 2.30 P.M. on Wednesday the 9th May, 1956 for the following purposes:—

- (1) To receive and consider the report of the Directors and to pass the audited accounts for the year ended 31st December, 1955.

- (2) To declare dividends on Ordinary and Preference Shares.

- (3) To elect Directors in place of those retiring by rotation. Sri G. P. Birla, an associate of the Managing Agents under the Companies Act 1956, retires by rotation but being eligible offers himself for re-election. As he has been acting as a Director of the Company since 1945, it is desirable to avail of his valuable advice by retaining him as a Director of the Company. Hence special notice is hereby given to pass with or without modification the following special resolution:—

"RESOLVED that Sri G. P. Birla, an associate of the Managing Agents under the Companies Act 1956 be appointed as a Director of the Company who is liable to retire by rotation under the provisions of the Articles of Association of the Company."

- (4) To appoint Auditors and fix their remuneration. Messrs. Lovelock & Lewes have intimated their intention not to be reappointed as Auditors of the Company in view of the fact that the Account books of the Company are now being maintained in Hindi. A shareholder of the Company has given notice of his intention to propose the name of Messrs. Singhi & Co., Chartered Accountants of 1-B, Old Post Office Street Calcutta, for appointment as Auditors of the Company. A copy of such notice has been sent to the retiring Auditors. A special notice is hereby given to this effect.

- (5) As special business to pass with or without modification the following resolution which will be proposed as special resolution:—

"RESOLVED that Article 112 of the Articles of Association of the Company be deleted and the following be substituted therefor:—
"112—The Directors will not be required to hold any qualification shares."

- (6) To transact any other business which may be brought before the meeting with the permission of the Chairman.

The Share Transfer Books of the Company will remain closed from 30th April, 1956 to 9th May, 1956, (both days inclusive).

By Order of the Board,

HINDUSTHAN INVESTMENT CORPORATION
LTD.,
Managing Agents.
Calcutta,
Dated 29th March, 1956.

In particular to Mr. Kamalmani A. Dikshit, Pandit Kedarmani A. Dikshit & Mrs. Bidya Devi A. Dikshit, Mr. Kasam Ahmed Vaiz, Mr. Narendra Shumshere J. B. Rana and Mr. Prakashmani A. Dikshit.

NOTE:—(1) The Directors have recommended dividends on Preference shares @ 7% (free of income-tax) and on Ordinary Shares @ Rs. 1/8/- per share (free of income-tax).

If dividends on shares as recommended by the Directors are declared at the meeting, THE DIVIDENDS WILL BE PAYABLE ONLY TO THE REGISTERED SHAREHOLDERS, whose names are on the Company's Register on 9th May, 1956. No application need be sent for dividends, as relative Dividend Warrants will be posted to such shareholders within 3 months from the date of declaration.

The Shareholders are advised to notify any change of address.

- (2) A member entitled to attend and vote at the above meeting is entitled to appoint a proxy to attend and vote instead of himself and a proxy need not be a member.

- (3) Explanatory statement in regard to special business to be transacted at the meeting.

It is desired to amend the Articles of Association of the Company by deleting the existing Article 112 requiring the Directors (other than ex-officio Directors) to hold 100 Ordinary Shares in the Company as qualification shares and by substituting a new Article providing that the Directors will not be required to hold any qualification shares. The Articles of Association of the Company may be inspected at the Company's office at 8, Royal Exchange Place, Calcutta during business

THE MODERN MILLS, LIMITED.

NOTICE.

NOTICE is hereby given that the Twenty-second Annual General Meeting of the Shareholders of the above Company will be held at the Registered Office of the Company, Temple Bar Building, 70, Forbes Street, Fort, Bombay, on Friday, the 27th day of April, 1956 at 3.54 P.M. N.B.—The dividend and bonus, when declared, will be made payable at the Registered Office of the Company on and after Wednesday, the 9th May, 1956, between 12 noon and 3 P.M. on week days, other than Saturdays, and between 12 noon and 1.30 P.M. on Saturdays, to Shareholders whose names stand on the Register of Members on the 2nd April, 1956.

THE ASSAM MATCH COMPANY, LIMITED.

NOTICE.

NOTICE is hereby given that the Thirty-first Annual General Meeting of the Shareholders of the above-named Company will be held at the Registered Office of the Company at Indian Mercantile Chambers, Nicol Road, Ballard Estate, Bombay at 12.30 p.m. on Monday the 14th day of May, 1956 to transact the following business:—

1. To receive and adopt the Directors' Report and the Audited Accounts for the year ended 31st December, 1955.

2. To declare a dividend and a bonus.

3. To elect a Director in the place of Mr. Tulsidas Kitchand, who retires by rotation, but is eligible for re-election and offers himself accordingly.

4. To appoint Auditors for the ensuing year and to fix their remuneration.

The Transfer Books of the Company will be closed from the 4th day of May, 1956 to the 17th day of May, 1956, both days inclusive.

By Order of the Board,

A. HYDARI,
Deputy Managing Director.

29th March, 1956.

Indian Mercantile Chambers,
Nicol Road, Ballard Estate,
BOMBAY.

The dividend and bonus when sanctioned will be payable at the Central Bank of India Ltd., Bombay and Calcutta on and after the 19th day of May, 1956 to those shareholders whose names stand on the Register on the 17th day of May, 1956 and warrants will be posted in due course to each shareholder at his registered address.

A member entitled to attend and vote is entitled to appoint a proxy to attend and vote instead of himself and the proxy need not be a member of the Company.

THE PREMCHAND JUTE MILLS LTD.

NOTICE.

THE Forty-seventh General Meeting of the Shareholders will be held at the Registered Office of the Company at 81, Sovabazar Street, Calcutta, on Monday, the 14th May, 1956, at 11 a.m. for the purpose of receiving the Directors' Report and passing the Audited Accounts and Balance Sheet for the Half-year ended 13th October, 1955, and for transacting any other business that may be brought forward.

The Share Transfer Books of the Company will remain closed from 7th May, 1956 to 14th May, 1956, both days inclusive.

A Member, who is entitled to attend and vote at the Meeting, is entitled to appoint a proxy to attend and vote instead of himself and that the proxy need not be a Member.

By Order of the Directors,
PRIYA NATH ROY,
Chairman.

81, Sovabazar Street,
Calcutta, Dated the
6th April 1956.

THE CALCUTTA STEAM NAVIGATION COMPANY LIMITED.

NOTICE is hereby given that the 147th Annual General Meeting of the Shareholders will be held at the Registered Office of the Company at 5, Fairlie Place, Calcutta, on Tuesday, the 15th May, 1956, at 11.30 A.M. to transact the following business:—

- (1) To receive and pass the Directors' Report.
- (2) To pass the accounts for the half-year ended 31st December, 1955.

- (3) To Declare a Dividend. (The Directors recommend the payment of a dividend of Rs. 6/4/- per share.)

- (4) To elect Directors in place of those retiring by rotation.

- (5) To pass a special resolution for the re-election of Mr. J. B. Braid who is a Director of the Managing Agents and who retires by rotation and is otherwise eligible for re-election. (see resolution below)

- (6) To appoint auditors for the year 1956 and fix their remuneration.

Notice is further given that the Share Transfer Books of the Company will be closed from the 2nd May to 15th May, 1956, both days inclusive.

RESOLUTION.

Resolved that Mr. J. B. Braid who is a Director of Messrs. Hoare Miller & Co., Ltd., the Managing Agents, be and is hereby re-elected a Director of the Company.

This resolution is in accordance with section 261 (1) (f) of the Companies Act, since Mr. J. B. Braid is a Director and as such an associate of the Managing Agents, and it will be necessary for the Shareholders to pass a special Resolution with or without modification, if they decide to re-elect Mr. Braid a Director.

By Order of the Board,

HOARE MILLER & CO., LTD.,
Managing Agents.

Calcutta, 10th April, 1956.

N.B. A member entitled to attend and vote at the above meeting is entitled to appoint a proxy to attend and vote instead of himself, which proxy need not be a member of the Company.

To the Shareholders of the Calcutta Steam Navigation Co., Ltd. and in particular—Lt. General Sir George D. Barrow Kt., Mr. R. S. Partridge, Messdames V. H. Hole & Margaret Jupp.

BANKS

H indicates that Share capital is half paid. O, C and Dd indicate Ordinary Contributory and Deferred Shares respectively. P next to the name of the company indicates that the company also has Preference Shares. Figures in "accounts closed" column indicate the months of the calendar year in which accounts are closed. For Managing Agents refer to the Key (last page) under the numbers indicated.
