COAL COMPANIES

O. P. F. and Dd. indicate Ordinary, Preferred Ordinary, Founders' and Deferred shares respectively. P. next to the name of the company indicates that the company also has Preference Shares. Figures in "accounts closed" column indicate the months of the calendar year in which accounts are closed. For Managing Agents refer to the Key (last page) under the numbers indicated.

BOMBAY COTTON MILLS

O. P. C. and Dd

TEA COMPANIES

O. Po and Dd indicate Ordinary, Preferred Ordinary and Deferred Shares, respectively. P next to the name of the company indicates that the company also has Preference Shares. Figures in "accounts closed" column indicate the months of the calendar year in which accounts are closed. For Managing Agents refer to the Key (last page) under the numbers indicated.

THE NEW PATTERN OF INDIA'S INDUSTRIAL ORGANISATION

THE POLICY STATEMENT AS A SIGNPOST TO THE FUTURE: FATE OF THE 1948 RESOLUTION

SINCE the Government of India vetoed the Birla group's proposals for a new steel plant less than 1½ years ago, a feverish search has been going on for a precise definition of its new industrial policy. For a time, official spokesmen seemed to imply that there was nothing very new to define—that the 1948 policy resolution was still in force, apart from a few minor changes here and there. But inspired reports on the new Statement of Industrial Policy drafted by the Committee of Economic Secretaries, which have been emanating from New Delhi over the past fortnight, suggest that radical changes are now being considered which may alter the entire structure and prospects of private enterprise in this country. Much idealistic praise is still bestowed on the concept of a "mixed economy" in official circles; but the phrase has today come to cover such a multitudinous variety of economic mixtures that it may fairly be said almost to have lost its meaning. The draft of the new Policy Statement, if it is accepted, promises to take the economy a firm long step forward in the direction of State interventionism—to an extent that was not expected even perhaps at the Congress sessions which voted in favour of a socialist pattern of society. The type of industrial structure that is now visualised, it seems, will be "mixed" largely only in appearance; the tentacles of State control and interference threaten to reach down to the sources of individual initiative and enterprise, upon which private industry is founded. As such, the Policy Statement must receive the serious attention of those who are today framing ambitious plans to fulfil the tasks expected of them under the second five year plan.

The first thing to note about the new Policy Statement is that it will continue the "lurch to the left" in official policy that has now been in progress for many years. This movement is taking place mostly on doctrinaire considerations, and has very little to do with the social or economic needs of a country which intends to develop rapidly. It is taking place largely in response to ideological pressures which, although they are not uncommon in countries recently under colonial rule, may nevertheless lead to fundamental distortions in democratic aims and methods. The danger is not adequately recognised, although it is the responsibility of the established political leadership to point to its existence. Instead, it appears the responsibility is being exercised in the reverse direction, and the compromise with pressures from irrational sources threatens to go so far as to strike at the entire basis of the country's industrial prosperity.

Among the most disturbing of these pressures comes from a group which believes that State ownership of basic industries is an essential precondition of future expansion. The experience of the industrial revolution in the West, and of its remarkable present-day prosperity, is denied in favour of vague notions about the achievements of tight-lipped extremists in authoritarian countries. It is forgotten that fundamentally there are two reasons why organisms, including economic organisms, move—the incentive of the carrot and the threat of the stick. Since India has wisely differed from some of her northern neighbours in abjuring the latter, she is obliged to offer the will to work represented by the former. The general trend of economic policy in recent years has gone counter to this need, and in fact responsible Ministers have been repeatedly heard to decry the profit motive in terms suggesting that it is a grave moral failing—as if anybody had ever done any work or taken any risks without expecting at least some sort of a return. The proposal now to put all basic industries in State hands may be regarded as a logical extension of the woolly ideas

on social policy prevailing in certain quarters. But the Statement of Industrial Policy shows no signs of awareness of its effects on general economic enterprise. As a declaration of intentions, it affects not merely the industries that are specified, but the whole range of economic activity. It affects it because it strikes at the roots of individual confidence and incentives, especially when the definition of "basic industries" is stretched forcibly over a variety of non-basic ones, and is liable to be revised from time to time for reasons which are related more to political expediency than to economic necessity. As an example of what is meant, it is worth recalling that the Industrial Policy Resolution of 1948 made no mention of the need to nationalise the railways, a major banking institution or life insurance. Yet today all three are under State ownership. The vigour with which the 1948 Resolution was upheld and quoted 16 months ago, when private interests asked if they might start making steel in Durgapur, contrasts strangely with the forgetfulness with which it was treated a few months later when the Government swooped down on the Imperial Bank and on life insurers. When the railways were nationalised, the Resolution was hardly mentioned.

The uncertainty which survives official proposals, pronouncements, policies and plans is a major factor which detracts from their worth. The latest Statement of Industrial Policy would be almost unique if it escaped that fate. From the point of view of business confidence, therein perhaps lies at once its merit and its fault. The merit, on a somewhat perverse interpretation, is that it contains features that are so wholly impracticable that their early implementation seems doubtful. They are impracticable because the Government lacks the money to undertake some of the activities which are nominally reserved for the public sector. Furthermore, it lacks the personnel and the technical experience, without which these particular industries would be reduced to a shambles. Most of all, it is aware of these shortcomings, though not as fully as might be wished. The fault of the Policy Statement is that in its general tenor, and because of the impracticability of certain proposals, it is likely to leave a trail of doubt and anxiety among those who are expected to make a vital contribution to the

INSTRUMENTS OF MONETARY

be decreed and should be variable according to circumstances.

A direct cause of Britain's inflation last year was the increase in the supply of Treasury bills—a form of finance which one leading banker, Sir Oliver Franks, has described as "the modern equivalent of the printing press". It is argued that the inflationary effect of some hundreds of millions of pounds' worth of these Treasury bills would be neutralised if the banks' liquidity ratio were raised from the conventional minimum of 30 percent to a compulsory minimum of say, 35 percent, because to fulfil their obligation the banks would have to buy and hold more bills. The effect of such a change would be similar to the effect of funding a similar quantity of bills into longer-term debt, but the rate of interest on this longer-term debt would normally be higher. The structure of interest rates in London has been so distorted in the past year that the cost of the debt would be little changed by funding—indeed, the discount on bills with a life of a few months is appreciably more than the yield on irredeemable stocks; but it must be assumed that this anomaly is temporary. Saving interest on the national debt is important when the cost of the debt has grown so large, but this is still a secondary consideration. A more serious argument for adjustable liquidity ratios is that they can supplement and accelerate the working of other monetary instruments. Neither Mr. King nor Mr. Dacey believes that compulsory changes in liquidity ratios can perform tasks of which other methods are incapable: they can only produce quickly results which would otherwise appear a few months later. Yet Britain's experience since the war suggests, surely, that those few months can be very important. If Bank rate policy could have been made effective immediately the rate was raised early in 1955, instead of six months later, the course of events in 1955 might have been quite different. It might, indeed, have been unnecessary to raise Bank rate as high as 5½ percent in 1956.

Readjustment of short-term rates after their abnormal rise will not be easy. Yet such readjustment is necessary to restore a normal relation between short- and long-term rates; for values of Government securities could not be forced much lower without damage to the nation's credit. It would have been preferable if the rise in short-term rates had been more moderate, as it might have been if the authorities could have manipulated the liquidity ratio last year. A wide differential between short- and long-term rates is needed now to induce investors to convert from short- to long-term holdings. The transfer (especially strong in the first months of the new policy last year) from deposits to Treasury bills was a move in the right direction; but it is now necessary, for the purpose of monetary stability, to induce holders of Treasury bills to transfer into more permanent investments. The excessive liquidity of the monetary situation is a disturbing factor in British finance at present. By the end of last year the banks' liquidity ratios were almost 37½ percent and even in the subsequent period of seasonal stringency they remained well above 30 percent. Pressure on credit cannot be applied consistently while the banks have so liquid a base for their lending policies. To neutralise surplus liquidity by enforcing a higher ratio would evidently help the working of monetary policy.

ENERGY CONSUMPTION IN INDIA

AN important measure of a nation's standard of living is the amount of energy it consumes. Judged by this test, India has one of the lowest living standards in the world, as in fact, it has. According to an interesting pamphlet recently published by the Economics Department of Messrs. Burmah-Shell, *per capita* consumption of power in India, including non-commercial energy, is 36 long tons of coal equivalent. Compared with the consumption figures for the U.S.A., the U.K., Germany and Russia at 10, 6, 3½ and 3 tons respectively, India's consumption level is woefully inadequate and as the pamphlet also points out, this country is among the lowest consumers of energy a head in the world. But India cannot afford to remain in this position for long. Considering the massive additions to population every year, India must step up the process of her social and economic development, which requires considerable exploitation of power resources. It is this point which the Burmah-Shell pamphlet essentially stresses, and which fact the planners realise fully. The emphasis on the power production in five year plans and the Prime Minister's repeated references to India's growing need for power, are proof of this.

The total annual consumption of energy, commercial, non-commercial and live, in India at present, as worked out in the pamphlet in terms of long tons of coal equivalent, is 213.73 million tons, consisting of 76.1 million tons of live energy (human and animal effort and bullock carts), 99.7 million tons of non-commercial energy (comprising wood, charcoal, animal and farm wastes, wind

power, solar cookers, etc.) and 37.93 million tons of commercial energy (electricity, oil products and coal). The country depends massively on animal dung for its supply of domestic energy, which is definitely against all principles of good agricultural husbandry, as much valuable manure is being wasted through this practice. It also indicates a pattern of energy consumption that goes with the under-developed character of the economy, but a pattern that will gradually change as the country advances industrially. The current five year plan, which has set high targets for power production, can be said to have set the pace, as it envisages a substantial increase in the proportion of commercial energy demand to the total consumption of power. The pamphlet presumes that during the plan, extra demand will step up the current annual rate of increase of 5.6 percent in commercial energy consumption to 10 percent, which is also what the planners estimate.

The other interesting point which the pamphlet stresses is the relatively greater importance of oil, compared with other means of commercial energy such as thermal and hydro-electricity and coal, to the future course of India's industrial growth. The latter, of course, has been the main source of commercial energy in this country, accounting for nearly 75 percent of the total consumption. But as the pamphlet points out, coal and electricity are relatively inflexible sources of energy, and as such, are likely to fall short of requirements some time or the other, primarily because of the high costs of hydro-electricity generation and the relatively low reserves of economically extractable high grade coal in the country. The gap cannot be filled by atomic energy in any foreseeable future, despite India's programme of research and development. Oil is therefore the only alternative. As a matter of fact, the oil needs of India have been steadily expanding, and the present consumption demand of seven million tons is 14 times the current indigenous production. This figure is quoted on the authority of the Parliamentary statement of India's Minister of Natural Resources, who has also said that the country's demand is likely to increase by a further five million tons during the current plan period. This indicates the immense scope for expansion for the oil industry, in which the total visible investment since 1948 so far amounts to Rs. 75 crores.

CURRENT COIN

Index of Industrial Activity.—Corrected for seasonal fluctuations, *Capital's* Index of Indian Industrial Activity shows a rise of 4.2 points during September 1955. Contributing to this were increases in cotton consumption, jute manufactures, paper, coal and electricity. Cheque clearances also rose.

N. I. D. C.'s Industrial Programmes.—The report of the National Industrial Development Corporation Ltd. for the period ended 31st December, 1955, offers a commendably detailed review of its activities, and mentions some important industries in which expansion is to be promoted. The officially-sponsored Corporation is expected to give financial assistance to the jute and cotton textile industries for rehabilitation and modernisation; two committees have been set up to scrutinise applications for loans from units in these industries. A major activity of the N.I.D.C. will apparently be to set up foundries, forges and structural shops to meet the demand for heavy castings, heavy forgings and heavy structural. The future demand for these products, which are at present imported, is being assessed. Discussions have been held with important firms and organisations in Britain, Germany, Czechoslovakia and Japan. A detailed project report will be prepared by one of these organisations for a combined undertaking to produce grey castings, steel castings and steel forgings. After the report is ready, competitive quotations for the supply of plant and equipment will be considered. It is intended to set up a structural-cum-machine shop at Bhilai and a structural shop at Durgapur. Refractory manufacture is being expanded to meet the needs of a bigger steel industry. This is being done partly by private enterprise, but the Government considers it necessary to establish one more factory for making refractories, particularly basic refractories. An Austrian firm has been asked to prepare a skeleton project report for the latter. Plans are afoot to expand the output of intermediates used in the manufacture of dyestuffs and drugs. An Italian firm has been surveying requirements and is expected to report by the middle of this year. An expert team from Russia is making a similar study of intermediates for the drug industry. Possibilities for the production of rayon grade pulp are being explored. Two foreign firms—one from Germany and the other from Italy—have made comprehensive surveys. When their final reports are received, a programme for the manufacture of wood pulp will be drawn up. The N.I.D.C. is negotiating with foreign firms

to seek their collaboration in a scheme for the manufacture of 8,000 tons of carbon black a year. Other proposals in which an interest is being taken concern sulphur from pyrites, printing machinery, air compressors and fractional horsepower motors.

Expansion of Banking.—Dr. N. N. Law's address from the chair at the recent annual general meeting of the United Bank of India (reported more fully last week) contained a strong plea that private banks should draw up plans to extend facilities somewhat on the lines that the State Bank proposes to do. He felt that the latter's obligation to open 400 new branches during the first five years of its existence is likely to have a serious effect on the activities of other joint-stock banks. "It is my belief that private sector banks can redesign their activities to fit in with the revolutionary changes which are taking place, that they can attract additional resources from unexplored areas, and can invest these funds profitably for themselves and for the good of the country and its people, and that unless some kind of concerted effort is made in the national interests, the effect of Government-sponsored banking expansion on a large scale could quite easily overwhelm the private sector banking." The point Dr. Law makes is a useful one, but what is not certain is whether private banks can really afford to open new branches in the smaller centres. Establishment costs are rising, and as long as the trend is not reversed no bank can look with equanimity upon the prospect of losing money by extending its activities to unremunerative centres. This is a point that bank tribunals and the Government often choose to ignore. A rise in staff salaries that is not matched by a corresponding increase in efficiency tends to restrict a bank's capacity for, and interest in, expanding the area of its business. Even the State Bank is getting special facilities in the opening of new branches. Any losses beyond an agreed figure that it incurs for this purpose are to be met from an Integration and Development Fund into which are paid the dividends due to the Reserve Bank on its holding of 55 percent of the total issued capital in the State Bank. Shareholders of private banks cannot fairly be expected to support expansion plans which only bring them loss; the expansion should be encouraged, but on the basis of reduced costs.

Targets for Paper.—Mr. V. Mehta, chairman, told the annual general meeting of the Indian Paper Makers Association in Calcutta last Thursday that the targets of production and installed capacity set for the industry under the first five year plan seemed to have been nearly achieved. (A fuller version of the speech appears on a later page). Almost the entire increase is accounted for by the expansion schemes of units which existed at the beginning of the plan. A significant feature, he said, was that very little new capital had to be raised for increasing capacity and production. "This speaks volumes for the very healthy and commendable policy of the industry of ploughing back the earnings into expansion schemes. It remains to be seen how the new tax proposals relating to undistributed profits react on this policy, which is certainly not worth rejection." The targets fixed under the second plan are for a rated capacity of 450,000 tons and a production of 350,000 tons. The existing licences already cover 350,000 tons, so a capacity of only 100,000 tons remains to be licensed or planned for. Mr. Mehta expressed anxiety over the shortage of transport. "I am not aware of any large-sized industry which may not be complaining against transport bottlenecks. The trouble has been of a chronic nature in so far as the paper industry is concerned, and hardly a year can be spotted when a pointed mention of transport difficulties may not have been made either in the annual report or in the presidential address." Criticising the excise duty on paper, Mr. Mehta declared that in applying the levy to actual items of production, a certain amount of rationalisation and uniformity is badly needed. He hoped that a conference would be held between the Central Board of Revenue and representatives of the industry to solve this problem.

U.S. Business Prospects.—The business reports during March have been impressively strong, says the First National City Bank in its monthly letter on U.S. business and economic conditions. Rising prices in stocks and commodities, heavy demand for money, and pressure on the bond markets, together with indications from well-regarded surveys that business spending will expand further and that consumers are confident, all reflect heightened optimism and extension of the boom. Industrial activity and employment, in the aggregate and with allowance for seasonal fluctuations, hold about the same as in other recent months, for automobile output is curtailed and there are other instances of moderate slackening to offset moderate advances. With the spring selling season, automobile operations are expected to hold steady during the next

two or three months. In home building, the other main soft spot, evidence is accumulating that the decline has largely spent itself and that the trend is now sideways or slightly rising. Industrial activity has been nearly stable, at record or near-record levels, during the past six months. In that period some industries including steel and many kinds of heavy goods, have lifted output further. Their orders have run steadily ahead of shipments and their unfilled orders have increased. In some other lines, including, in addition to automobiles, farm implements and synthetic textiles, the trend has been downward. Thus adjustments have been going forward, reflecting shifts of business and consumer demand from one area to another. This is a healthy condition. After a long rise a point was reached where expansion could no longer be general, and where inventory accumulation or shifts of demand required adjustment. Business trends therefore are more diverse. The significant matter is that the adjustments are not falling concurrently, and that they are not causing any substantial slackening in overall levels of activity. Offsetting movements have dovetailed so smoothly that overall production is off less than 1 percent from its high, and non-durable goods manufacturing is at a new record. The steel industry has made the shift from a consumer goods boom to a producer goods boom without a hitch. Its best customer, automobiles, which in 1955 took nearly one-fourth of finished steel shipments, cut weekly passenger car production by 30 percent between mid-December and the end of February. Yet steel mills continued near-capacity operations and in March set a new weekly output record.

Concentration of Economic Power.—The rapid growth of the public sector in India is not without its dangers—the dangers arising from an excessive concentration of economic power in the hands of officialdom which might strike at the roots of democracy. This is a misgiving to which many have given expression in recent months. The President of the All-India Manufacturers' Organisation, Mr. Murarji J. Vaidya, drew attention to it in his address at the Organisation's sixteenth annual general meeting recently. The Prime Minister, Mr. Nehru, was present at the meeting. Mr. Vaidya did not disagree with the basic objectives of India's socio-economic planning, but he was concerned about the methods which were being chosen to achieve them. In experimenting with total planning, he said, there was a supreme need to preserve the democratic character of society. If the aim was to spread economic power more widely and evenly, care had to be taken that the power was not merely transferred to, and concentrated in, an expanding public sector. As the recent experience of some Western countries had shown, the concentration of economic and political power in the same hands, "however benignly administered, led to the suppression of democracy and liberty by authoritarianism." An effective safeguard against this danger, Mr. Vaidya suggested, was the public corporation system of managing State concerns. He was not necessarily suggesting a policy of *laissez-faire* towards the private sector in pleading for democratic freedom and individual liberty. But there was a tendency to confuse "the tall poppies which appear to sway in a breeze" with the millions of small entrepreneurs, including the entire peasantry, who formed the core of the private sector. The ideological dislike of private business as a whole was the result of this confusion. He quoted statistics, which previously Mr. Milne had done in his presidential speech to the Bombay Chamber of Commerce and Industry, to show that the private sector included 2½ million industrial shareholders, mostly small investors, and, as the Planning Commission had pointed out, "millions of small producers scattered all over the country."

Idle Capacity in Press-Houses.—Mr. M. S. Chunder, chairman, told the annual general meeting of the Calcutta Hydraulic Press Association last week that conditions in the press-house industry had deteriorated further during the past year. The industry's main problem, apparently, is that it can use very little of its capacity. Mr. Chunder mentioned that of the 26 press-houses in the Association's membership, only 11 were working at present, and these at only a fraction of their capacity. Government aid, he declared, was necessary if the industry was to survive. The main form in which Government aid is wanted, it seems, is a change in the official raw jute export policy. Mr. Chunder said that exports had been banned since 1949 but "some export of pucca baled jute from India" should now be allowed. It is hard to agree with him on this point. The primary need is to ensure that enough jute is available at fair prices for India's own mills, especially now that they have taken bold steps to increase production. Mr. Chunder produced statistics to suggest that the total "surplus" in India and Pakistan at the end of the current season will be 27 lakh bales, as against 17 lakh bales at the end of last season. This does not necessarily mean that India is now in a position to export raw jute. On the contrary, the high prices mills have had to

pay for fibre in relation to what they have got for manufactured goods suggests that a relaxation in the export policy for the former would be an enquiry conducted by the Indian Institute of Economics, Hyderabad-Deccan, into the insurance and provident fund problems of the low-income employees in the shops and establishments in the Hyderabad-Secunderabad city area, reveal the distressing economic conditions of the class of people dealt with. The enquiry covered 4,302 samples in the income range of Rs. 1-500, (22.13 percent of all employees in shops and establishments). The average income of those sampled worked out to Rs. 71.13, the range of variation being from Rs. 35.57 to Rs. 339.53 among different income groups. But this statistical average typically conceals the deeper facts of the case. Professor Iyengar, the Director of the Institute, who has worked out separate figures relating to incomes in different brackets, shows that as many as 1927 or 48.70 percent belonged to the income group of Rs. 1-54, which is much below the minimum granted to labour in organised industry. Consequently, a very high proportion had no margin for savings and those who had, formed only a small percentage of the sample. Only 407 persons had insured their lives, and a mere 344 contributed to provident funds. On the occupational structure of these employees, 1,317 were menials and 970 worked in hotels. As many as 3,230 were illiterate or had little formal education, and 4,224 had one occupation only. A considerable degree of under-employment would thus seem to be implied. A large number (1,255) were also indebted, and

Problems of Social Welfare.—The results of the enquiry conducted by the Indian Institute of Economics, Hyderabad-Deccan, into the insurance and provident fund problems of the low-income employees in the shops and establishments in the Hyderabad-Secunderabad city area, reveal the distressing economic conditions of the class of people dealt with. The enquiry covered 4,302 samples in the income range of Rs. 1-500, (22.13 percent of all employees in shops and establishments). The average income of those sampled worked out to Rs. 71.13, the range of variation being from Rs. 35.57 to Rs. 339.53 among different income groups. But this statistical average typically conceals the deeper facts of the case. Professor Iyengar, the Director of the Institute, who has worked out separate figures relating to incomes in different brackets, shows that as many as 1927 or 48.70 percent belonged to the income group of Rs. 1-54, which is much below the minimum granted to labour in organised industry. Consequently, a very high proportion had no margin for savings and those who had, formed only a small percentage of the sample. Only 407 persons had insured their lives, and a mere 344 contributed to provident funds. On the occupational structure of these employees, 1,317 were menials and 970 worked in hotels. As many as 3,230 were illiterate or had little formal education, and 4,224 had one occupation only. A considerable degree of under-employment would thus seem to be implied. their average liabilities worked out to Rs. 555.16. Professor Iyengar suggests that the nationalisation of life insurance, such as it is now, holds out little benefit to the vast majority of this class of employees due to obvious reasons, and makes the plea that a system of subsidised insurance premiums and provident fund contributions (with the implication that provident funds should also be nationalised) should be instituted to protect these people from the economic hazards of life. It has not been suggested how the Government can do this, but for indicating in some way the magnitude of the problems involved in promoting social welfare in this country, Professor Iyengar's work should claim attention from the quarters concerned.

BRITISH CAPITAL FOR INDIA

WHAT we want in India is more capital and more skilled labour, and at first sight it appears to us that the suggestions tentatively put forward by Mr. Chamberlain favour a considerable extension of Indian trade and prosperity. There is an immense field yet open in India for capitalists who can command both skill and capital. British capitalists have, for the last fifty years or so, been finding so much outlet for investment in ready-made business and finance that the spirit of enterprise has become slack. But the stereotyped means of investment in England are now becoming annually more and more overcrowded, and a skilful enterprise in such a country as India must soon become more attractive. Mining enterprise in India, for instance, is still in its infancy. It is possible that a large expenditure in this direction would be necessary before any result was obtained, but there seems good reason to believe that very large sums of deposits are undeveloped, and practical mineral effort has ever been made only to develop them. In this particular respect we think the Government of India might have done more than they have done. The Geological Survey Department do not get a fair chance. They are undermanned and very poorly paid. There is nothing in the service to attract good men, and what should be one of the useful departments in India is starved into apathy by parsimony and neglect.

TAXING SUMS OBTAINED AS DAMAGES

DISTINCTION BETWEEN REVENUE AND CAPITAL RECEIPTS
(FROM OUR LEGAL CORRESPONDENT)

WHERE compensation is paid for breach or cancellation of contract, or for injury caused to an assessee's business, difficulties frequently arise as to whether the amount received by the assessee as damages is a revenue receipt or a capital receipt. What we are concerned with in this note is to elucidate the principle upon which these difficulties are to be met and solved. These were, briefly, the facts in the latest case on the subject, just reported.

The assessee in the accounting year shipped 236 bales of cloth to a consignee in Mauritius. The consignment was made contrary to the directions of the Government of India that export to Durban was prohibited, at which port the bales were landed, and the result of this action on the part of the assessee was that his licence for exporting goods was suspended. The assessee contended that he was not to blame for this contravention and that it was due to the negligence of the consignee that the goods were illegally taken to Durban and unload-

ed there; therefore the assessee claimed damages from the consignee. It was a sound claim. The matter was referred to arbitration and the assessee received Rs. 39,292-4-3 as damages. The taxing department claimed that this was a revenue receipt, liable to be taxed, and in due course the matter came before the Bombay High Court for decision.

At this point, the writer stopped his reading of the report and consulted a leading authority in his search for the principle involved—to wit, *Kanga and Palkhivala on Income-tax*. He found it stated with the learned authors' accustomed clarity and precision at page 274. These are the guiding principles: "Where damages are recovered for an injury inflicted on a man's trading, making, so to speak, a hole in his profits, the amount of damages would go to fill that hole and would be a trading receipt. For instance, where assessee who carried on business as shipowners received from a firm of shipbuilders damages for the shipbuilders' failure to complete within the agreed time repairs to a ship belonging to the assessee, the damages were held to be a trading receipt, because they were for loss of trading profits, and not for any loss in the capital value of the vessel. (*Burmah Steam Ship Co. v. C.I.T.* We will refer again to this case later on). But, on the other hand, where the injury is inflicted on the capital assets of the trade, making, so to speak, a hole in them, the damages recovered are meant to be used to fill that hole and are a capital receipt. Thus, where a vessel is negligently run down and sunk, the amount of damages

recovered would be the value of the sunken vessel and must be regarded as capital."

Their lordships referred to a previous decision of their own Bench in 1954. *C.I.T. v. Shamsheer Printing Works*. This was a case of compensation paid on requisition by the Government of business premises for loss of profits occasioned by the requisition. It was held that the compensation was a capital and not a revenue receipt. In that case, it was held that the real question that has to be decided in cases such as these is the quality of the payment, irrespective of what measure might be adopted in order to ascertain the loss occasioned to the assessee. The mere fact that the measure adopted is the loss of profit does not make the payment a trading receipt and not a capital receipt.

Returning to our particular case, and considering it in the light of the above principles, the licence which alone enabled the assessee to carry on the business was undoubtedly a capital asset and that capital asset was either destroyed or sterilised and what was paid to the assessee was compensation for the destruction or sterilisation of that capital asset. To adopt Messrs. Kanga and Palkhivala's analogy, a hole had been made in the capital assets of the trade. "It was not possible," said Chagla C.J., "for the assessee to trade or earn any profits, and therefore it is futile to suggest that what was paid to the assessee was damages for not being in a position to earn profits with the assistance of the licence. If the licence was not in existence and if the assessee was incapacitated from earning profits, then the damages paid could only be for the destruction or sterilisation of the capital asset and not as a solatium for the profits which the assessee might have earned."

The Advocate-General, appearing for the Commissioner of Income-tax, Bombay city, relied on what was termed "a very relevant and important decision," which had not been brought to the Court's attention when it decided *Shamsheer's* case, which case it now held was indistinguishable in principle from the present one. The Advocate-General was referring to the *Burmah Steamship Co.* briefly alluded to above. In that case, the assessee had bought a motor vessel second-hand and had placed it immediately in the hands of repairers for overhaul. The contract stipulated a particular time by which the ship was to be overhauled. That time was exceeded and the assessee claimed damages from the repairers. The damages were calculated by reference to the estimated profit which would have been earned by the vessel had she been trading during the excess time taken for overhaul. The assessee received a certain sum from the repairers by way of damages, and the question that arose was whether this was a trading receipt or a capital receipt. The English Court held that it was a trading receipt.

"But," said the learned Chief Justice, "it will be apparent that the facts of the case on which the Advocate-General relies are entirely different from the facts we are called upon to consider. The capital asset there was the ship which would have enabled the assessee to earn profits. That capital asset was never destroyed or sterilised. The capital asset existed and the assessee was deprived of the opportunity of earning profits through that capital asset and, because he was deprived of those profits, he claimed damages, and the damages were given to him on the basis of the profits which he would have earned. But in the case before us, the capital asset which would have enabled the assessee to earn profits did not exist and therefore no question can arise of the assessee being deprived of the opportunity of earning profits, when in law he could not have carried on the business which would have given him the profits. The Lord President in his judgment points out the distinction between an injury on trading, a hole made in the profits of the assessee, and a hole made in the capital assets, and he says that in the case which he was considering it was an injury on the trading of the assessee and there was a hole in the profits of the assessee. In the case before us, it would be impossible to suggest that there was any injury on the trading of the assessee. Injury on the trading assumes that it is possible to carry on the trade and that some injury is caused to the trade. But when an event takes place which incapacitates the trader from carrying on his trade at all, it is not an injury on trading but it is the destruction or sterilisation of the trade. Nor can it be said that what happened to the assessee was a hole in his profits. It was really a hole in his capital asset and not merely in a capital asset but the capital asset, the only capital asset which would have enabled him to earn profits."

His lordship then quoted the principle deduced by the Lord President on which cases of this kind have to be decided: "It is very relevant to enquire whether the thing in respect of which the taxpayer has recovered damages or compensation is deprivation of one of the capital assets of his trading enterprise or, short of that, a mere restriction of his trading opportunities."

Applying this principle, the court found in favour of the assessee. "Can it possibly be said that the damages recovered by the assessee were in respect of a mere restriction on his trading opportunities? He had no trading opportunities at all because he could not carry on any trade."

APRIL 19, 1956.

AFTER a little preliminary hesitation, Calcutta's hot weather has asserted itself with a sudden jump of the mercury to round about the 107 mark. The sun can now be expected to have a field-day until the monsoon chooses to break and, in the meanwhile, all that will be left to us outside, of course, of earning our bread with the sweat of our brows, is to pray for its early onset upon a world of sticky collars, lost tempers and unprintable imprecations. Calcutta was once described by somebody, quite fittingly, as a city where "ten months are dam' hot and two months not so dam' hot." And I have never thought that the official summer which is scheduled to begin on 15th March has any relevance for this city, because summer here shows no more deference to official circulars than the sea did to King Canute's prohibitive fiat. As we all know, it is quite possible here to sweat in one's bath-tub even before mid-March. I sometimes think that the coiner of the phrase "mad as a March hare" picked up the poor rodent simply because he did not see some rash-afflicted humans in summer-stricken Calcutta. I do not have the bulk of Sidney Smith, the 19th century clergyman, who differed from most of his co-professionals in being witty, but even I frequently feel in Calcutta's hot weather and, I think, with more reason than he had in England, that I could "take off my flesh and sit in my bones." I think it was with a good degree of plausibility that a recent advertisement released in the Calcutta press by an air-conditioning firm spoke of a thief who, having broken into a room fitted with an air-conditioning unit, felt cool comfort creeping upon him with soporific effect so that he forgot about his real business and went to sleep, and the next morning, to jail. I am now beginning to feel that an air-conditioner has more uses than are dreamt of in Lallbazar.

I have the utmost sympathy for those who must fight fires while standing in one, and that, I feel, is the inevitable fate of firemen in Calcutta. But it must be even worse when there is no water available to fight them with. I read with amusement the recent complaints about people who feel they know the firemen's job better than they do themselves, although I am sure the men concerned and those whose property is going up in smoke, rarely see the joke. Such meddling busybodies are nuisance enough, and it is not only firemen who are plagued with them. But the frustration must be a great deal worse when it is discovered there is no water in the hose—rather, I should imagine, like facing a charging enemy with no bullets in your gun. The incident I have in mind is, of course, the blaze which destroyed the godown belonging to the Ganges Rope Factory at Sibpore last week. The newspaper photographs of firemen directing a trickle of water on heaps of burnt-out rubble were enough to bring tears to the eyes, and a strong feeling that it was time something was done about it. I wonder how long it will be before the fact is faced that Calcutta is a growing city and that the means of fighting fires must be increased in proportion to the chances for industrial establishments to provide against all emergencies however serious, and no matter at what season of the year they occur. And insurance companies must long since have given up the struggle and resorted simply to putting up the premiums. But the fire hazard increases as buildings get larger and more concentrated and if all-year-round water supplies cannot keep pace with urban development, the loss is likely to be

A DITCHER'S DIARY

heavy at a time when the community can afford it least. If that were the whole story it would be bad enough, but what was more remarkable about the Sibpore fire than the shortage of water in April was the fact that nobody seemed to have much idea where to find what little was available. It must be equally true of fires as of wars that the battle can be won on the plotting table the night before it takes place. Until there is some established plan for the location and availability of an area's water supplies in relation to the type and concentration of its building, these fiascos will continue. Perhaps I should have said some efficient, well-thought-out plan, because, although I doubt it, there may be one of sorts in existence already.

The railways have just finished their celebrations commemorating the date, one hundred and three years ago, on which the first train ran in India. They have overshoot the centenary mark by three years, but the second five year plan is about to start and there is probably no better time for a light-hearted birthday party than when the weight of future responsibilities seems heaviest. The task ahead will not be an easy one, but in an economy-mad and cost-conscious world, it is very pleasant to see that courtesy has been afforded a prominent place in the programme. I noticed that the railwaymen are to be imbued with three quite commendable precepts. They are devotion to duty, courtesy to passengers and service to society. Travellers have been invited to suggest improvements in the service and for the purpose, are to be supplied with pre-paid post-cards bearing the slogan "How can we help you?" The gesture is certainly on the right lines, but it is unfortunate that it should have coincided with a spate of hooliganism which might make the travelling public more cynical than co-operative. During the past week or so, the railways have been the setting for several killings, a number of stabbings and two assaults. The last-mentioned was at Ballygunge Station, and were made on a travelling inspector who objected to a number of passengers travelling a comfortable "first" on their third-class tickets, and on another railway official who went to help him. It seems that "courtesy to passengers" might have to be left to the railwaymen's discretion if the two remaining principles are not to be defiled. It is scarcely possible to extend discretion to include murder, attempted murder and assault. Perhaps it is fortunate that Calcutta had the foresight to include an ambulance competition as part of the week's activities. In the absence of more serious disasters it is perhaps a wise precaution to have an efficient first-aid staff on hand to render service to society, whether society consists of innocent travellers, passengers with less than honest motives, or railwaymen themselves.

The news that history examinations in the Soviet Union have been postponed because the books are being rewritten need not have come as a surprise to those who have read their George Orwell. It is obviously the first of a long series of text-book revisions which the world will now be witness to; the next victims, of course, will be those on biology. I suspect there will be few tears shed over the eclipse of Professor Lysenko,

whose name will always be remembered because it belongs to the prototype of the scientific opportunists rather than because it is associated with a theory which attempts to debunk Darwin. It is good that such a well-deserved fate should have caught up with Lysenko at last, but those who think this change means that Soviet science will now revert to the impartial and disinterested are being simple-minded. It is more likely he will be replaced by yet another opportunist, if only because there must be few, if any, true scientists left in the Soviet Union. The best that can be hoped is that this will be a lesson to scientists the world over to stick to the discipline of their profession and accept only such rewards and fame as come through its successful and honest pursuit. Lysenko was not the first, nor will he be the last academician to turn to his own personal advantage the reliance which governments must place on expert opinion, and the partiality they have for listening only to what pleases their ears. Those who use their scientific knowledge to secure positions as court favourites are not only traitors to their profession, but are a peril to the government whose boots they lick. Nowhere does Gresham's law apply more rigidly than in the currency of scientific ideas. It will be a long time before the principles of true science come to be recognised in the Soviet Union. Let alone adopted throughout the country to the complete exclusion of the fraudulent. I feel there is much to be learned from the Lysenko episode, not only by scientists themselves, who are human beings after all, but by those governments which enlist the support of dishonest and self-seeking experts to give an air of scientific sanctity to their own preconceived ideas.

To be an ordinary son of an extraordinary father is a burden not always borne with ease or dignity. Manilal Gandhi, it appears to me, bore it with both. It would seem that he knew from his early youth that his fulfilment lay not in being a second-rate Mahatma, but in being himself; although this programme included a good deal of courage, determination and idealism derived from his great father's example. When Mahatma Gandhi left South Africa, his laboratory for testing the validity of non-violence, he charged Manilal with the task of carrying on the experiment. He did this well and to the last, after his own fashion. He hardly ever appeared in the rôle of a mass leader; yet he worked on the mass mind through the newspaper *Indian Opinion* which he edited with such conspicuous ability and courage. This newspaper has been the vocal protest of the entire persecuted population of South Africa, Indian as well as African, against the odious apartheid; and it has contributed not a little to the growing world opinion against racial segregation. It is not given to many to rise to the spiritual altitude of a Mahatma, but they also serve who walk the earth spreading the humanitarian message of one. Manilal Gandhi will long live in people's memory for having done just this.

The guide was showing the tourist the sights of Italy. He said, "Now here is the Leaning Tower of Pisa." The tourist said, "I didn't get the name." The guide repeated, "This is the Leaning Tower of Pisa." The tourist answered, "I still don't recognise the name, but it looks like the work of the contractor who built my garage."

Company Meeting

THE HONGKONG AND SHANGHAI BANKING CORPORATION

CHAIRMAN THE HON. C. BLAKER'S REVIEW

The One Hundred and Thirty-ninth Ordinary Yearly General Meeting of Shareholders of the Hongkong and Shanghai Banking Corporation was held on 16th March, 1956, at the Head Office of the Corporation, No. 1, Queen's Road Central, Hongkong.

The following is an extract from the statement by the Chairman, The Hon. C. Blaker, M.C., E.D.:

In my statement last year I was able to record that an improvement in the cold war had been noticeable. I am now able to say that this trend continued during the summer of 1955 when the climate in international relations became distinctly milder with the meeting of the heads of governments and the feeling that a new spirit had been generated. The spirit of Geneva. Unfortunately the meeting of the Foreign Ministers in the autumn, with the deadlock over Germany, brought a lowering of the temperature which recent events in the Middle East have done nothing to improve.

Looking at the year as a whole, however, there seems to be ground for hope that the danger of war has been lessened, both as a result of the various discussions that have taken place and the growing feeling that the power of modern weapons has produced a form of stalemate. In the Far East there has been a period of quiet—as Mr. Macmillan put it in a speech in Parliament in December—"A sort of de facto stabilization had been secured in the Far East at the expense of varying degrees of partition." Thus, although there remain a number of difficult international questions on which agreement has not been reached, these have not developed to such an extent as to give rise to any fresh disturbances.

Agreement was reached on the introduction of sixteen new members to the United Nations in December, thus ending a deadlock which had existed for many years. We particularly welcome the membership of Ceylon, whose influence in world affairs continued to increase, and the two new states of Cambodia and Laos. It is, however, most regrettable that Japan was not elected at the same time and I hope that during the next session some settlement will enable this important country to be represented.

Amongst the many conferences that were held during the year, the one at Bandung last April of Asian and African powers was of particular significance to this area. As has frequently been the case recently, it was not the decisions reached which gave nine nations, many of whose sovereignty is of comparatively recent date and with different political forms of government, were able to discuss their common problems in a spirit of compromise. To quote from a leading British weekly periodical, "Nothing new was created; but the emancipation of the greater part of southern Asia was solemnly placed on record, and the lines along which this vast area of the world hopes to advance were made a little clearer."

In the economic sphere considerable industrial expansion continued and in many of the more highly developed countries there were indications that the economy was becoming over-strengthened. A growing industrial demand for materials and labour, coupled with a high level of employment, resulted in active or threatened domestic inflation which, in some countries, was having an adverse effect on the balance of payments.

In the Asian countries in which most of our branches are situated progress continued to be made in the carrying out of the various development plans, the targets and the speed at which they could be reached. The restrictive factors here were, however, mainly lack of capital and shortage of trained technicians. These continued to limit the improvement in agriculture and industrial development which expanding populations make so necessary. Although in urban economies such as Hong Kong's, it was not in these countries that the real answer to the problem. This was not to restrict demand in an over-expanded economy, but to improve the productive resources quickly enough to provide work for the growing population and at the same time to increase the supply of food and consumer goods to meet the requirements arising as a result of industrialisation.

Aid for Under-developed Countries

The Colombo Plan has been referred to from this Chair on numerous occasions and the importance of it has been stressed not only because of the continuing need for economic assistance in South East Asia, but also for the reason that this Plan has generally found favour with the countries in the area. The report by the Council for Technical Co-operation in South and South East Asia for 1954/5 shows that continued progress has been made in providing assistance in training technicians and supplying experts to aid development schemes. It was encouraging to see that while much of the assistance came from outside the area considerable progress was made in mutual aid. The report lays particular stress on the need for "a steady and ever-increasing supply of skilled administrators and technicians" who should be given "full opportunities to use their newly acquired skill at home." It recommends that counterparts or understudies should be assigned to the expert on continuing projects so as to ensure continuity, and that new projects are "allotted the right priority". The shortage of trained personnel is probably the most serious limiting factor in the plans of these countries for greater industrialisation and the recommendations in this report deserve serious consideration. The meeting of the Consultative Committee was held in Singapore in October and made the welcome decision that the Colombo Plan would be extended from July 1957 to 30th June, 1961, and that the future of the Plan would be considered in 1959. Considerable increases in aid were promised and although certain of the members felt that larger amounts of external capital were required the meeting appeared

generally satisfied with the progress made. In addition to the Colombo Plan, assistance continues to be granted by the U.S. International Co-operation Administration, various United Nations agencies and the International Bank for Reconstruction and Development. A new corporation, an affiliate of the International Bank, the "International Finance Corporation," to which I referred last year, is in process of formation. This organisation will have power to invest in productive private enterprises without the necessity of a government guarantee, which is a prerequisite of all International Bank loans. The total capital proposed is \$5,500 millions, but the Corporation cannot be brought into existence until at least thirty countries, with subscriptions amounting to U.S.\$75 millions, have given their formal acceptance. Several countries have already taken this step including the United States and the United Kingdom, and it seems likely that there will be no difficulties in the establishment of this new organisation, which should be of considerable benefit to under-developed areas.

China

Shareholders of the Bank who knew China in the days prior to the establishment of the Government of the People's Republic of China, will surely find it difficult to adapt their minds to the real meaning of the official Chinese policy on present day rural, industrial and sociological matters in that country. There are many pessimists just as there are many optimists in regard to the future of China but lack of information other than official pronouncements, here in Hong Kong, close to the Chinese scene, we find it hard to keep pace with and to evaluate the day to day economic and industrial changes and developments which are so rapidly being evolved. Nor do we know, neither can we judge, how the Chinese people as a whole—and particularly the agricultural population—are reacting to the kaleidoscopic events which have affected their lives and livelihood so closely in the last few years.

Collectivization is certainly proceeding with ruthless vigour: at the same time almost the whole range of agricultural production is being directed and controlled from above in a way which has had no previous parallel in Asia. This line of policy is, of course, tied up with the current Five Year Plan and with industrialization. The whole picture reveals remarkable speed of development. There is special concentration on heavy industries with extensive Russian help. Railway and road communications are being opened up at an astonishing pace, even if allowances are made for some work of a rough and temporary nature.

The key point in the economic policy of China has been summarized as follows: to build a socialist society, which cannot be raised on the foundations of a small peasant economy: its foundations must be based on large-scale industry and large-scale collective farming.

Such being the fixed policy of the Chinese Government, if British merchants are to retain a share in the China trade and take advantage of the situation, it is important that British policy should be re-examined in collaboration with other friendly governments. No action of the kind we have in mind can however be taken until there is a considerable reduction of the embargo on the Chinese list. The question of the embargo has raised so much controversy in recent years that it has not been easy to discuss it objectively and there are still no signs of any narrowing of the gap between the two points of view. Although we have done our best to carry out not only the letter but the spirit of this embargo we make no secret of the fact that the vast majority of British merchants and bankers interested in the China trade, we will welcome the day it is abolished, but as total abolition can not be quickly brought about, linked as it is with numerous other problems, we are contenting ourselves for the time being with advocating the reduction of the Chinese embargo list to make it similar to the Russian list. This would seem to be the logical solution as it is idle to suppose that China is not able to obtain goods shipped from the West to Russia. Instances have in fact occurred where China has exported to Hong Kong under the embargo. We had hoped that at the recent talks in Washington some form of agreement of this nature would have been reached but it appears that all that was decided was that a review of the control of trade with China would be made.

Both Hong Kong and Malaya have suffered greatly as a result of this embargo and there is the danger, for Malaya, that no substantial relaxation comes soon, the trade lost may never be regained. China is already leaning heavily on supplies from Eastern European countries and this trend is likely to increase so long as the emphasis on all arrangements for exchange of goods with China is on bilateral agreement. With the overall control of the economy which the Chinese Government now exercises, bilateral and barter agreements are difficult to avoid but under freer conditions the advantages of dealing with Hong Kong merchants, experienced as they are in supplying the China market, would no doubt be appreciated. The Sino-British Trade Committee have recently been informed by the Chinese Government that they see no object in their further visits until there is a considerable relaxation of the embargo. This I am sure that a great deal of good would result if it China to discuss their own particular business problems.

Negotiations regarding the winding up of our affairs in China have made considerable progress during the year and we have been able to reach a settlement of our local currency position but there have been no further developments in respect of our foreign currency liabilities. This settlement has not

been made without cost to the Bank but under the circumstances no course was open to us. Mr. Macmillan, our Manager in Shanghai, who bore the brunt of the negotiations, finally obtained permission to leave and has now retired.

Hong Kong

The development of local industries, which has been such an important feature of recent years, continued and 372 new factories were registered during the year while the production of electricity developed by 15%. Energetic efforts were made to develop new markets and there are welcome signs that the importance of maintaining uniform standards of quality is being more readily understood. The formation of the Hong Kong Exporters Association, with a committee composed of many of our leading merchant houses, should greatly assist the marketing of the products of our industries. An invisible export is provided by the large numbers of tourists, both service and civilian, who visit Hong Kong each year. It has been proposed that a Hong Kong Tourist Association should be formed to develop our tourist trade and a working committee of representatives of the interests concerned was appointed in August to look into the question.

Trade of Hong Kong

Hong Kong's trade in 1955 increased by 7% in value while volume rose by 14%. It is encouraging that the rise has been steady over the last few months of the year and that exports of Hong Kong products continue to increase. Exports to the United Kingdom increased by H.K.\$89 millions. This will not cause any surprise to shareholders, who will no doubt have seen many references to this subject in the press, but imports from that country also rose by H.K.\$72 millions which is given considerably less publicity. Even now our exports to the United Kingdom are still only 57% of our imports from there. Trade with China in total was about the same in 1954 but the drop of just over H.K.\$200 millions in amount. This decrease in exports was caused by a considerable reduction in each of the three largest groups of commodities—namely dyestuffs, fertilizers and pharmaceuticals—which we have recently been shipping to China. Trade with other East Asian countries showed an overall increase and it was encouraging to see the steady rise in exports to Indonesia, Indo-China and Thailand in the closing months of the year.

Finances of Hong Kong

The Financial Secretary, Mr. A. G. Clarke, in his speech in the Legislative Council at the end of last month, when he presented the Budget, was able to show that the Colony's finances are in a very healthy state. A surplus of over H.K.\$16 millions was expected for the current year, which was brought about by both higher revenue and lower expenditure than was estimated. Salaries and Profits tax showed a fall but this was more than made up by rises to the other headings, a large part of which was due to active conditions in the property market and deficit of H.K.\$431 millions for the financial year 1956/57 as compared with H.K.\$343 millions for 1955/56. This includes expenditure of H.K.\$30 millions for the Tai Lam Chung scheme and H.K.\$32 millions for the air-port. Both these items are public works of a capital nature which are essential to the future of the Colony and for this reason the size of the deficit should not give cause for alarm.

At the conclusion of his address Mr. Clarke took stock of the Colony's financial position ten years after the re-establishment of civil government. He showed that in spite of the heavy programme of rehabilitation, the cost of housing the large number of refugees and general post-war development, Hong Kong has built up a reserve of a year's revenue. When a public debt of less than two months' income, which is remembered that the Colony started with no surplus funds after the war this happy state of affairs I think reflects great credit on Mr. Clarke and his predecessor as well as on the industrious people of Hong Kong whose energy and adaptability have made it possible.

Japan

Japan's population is likely to pass the ninety million mark during 1956 and any analysis of economic and political developments in the country cannot ignore the steadily increasing pressure which a rising population makes on available resources. Economically 1955 was a good year and the visible balance of trade was reduced by U.S.\$300 million while foreign exchange receipts, which include invisibles, exceeded payments by nearly U.S.\$500 million. This improvement has been achieved in the face of a gradual but nevertheless steady decrease in the foreign currency obtained from the U.S. Forces. The inflationary policy which we mentioned last year in connection with the Japanese Government, which has been in force since 1946, but helped by a lively export demand, no serious restriction in business activity was apparent although unemployment figures gave cause for concern. Good crops of rice and cereals contributed to the improved balance of payments position. The draft budget, which is at present before the Budget Committee in the Diet, shows little change from last year and although the note issue rose by 8% this is considered to be a reasonable reflection of the general expansion in production, including the bumper rice crop. The Anglo-Japanese Sterling Payments Agreement of January 1954 was extended until 30th September, 1956 with Japan agreeing to remove certain restrictions on Japanese sterling area. This agreement will be reviewed again this year. During the year Japan became a full member of GATT but her satisfaction was tempered by the fact that a number of nations invoked Article 35 against her.

Three agreements have been made with the United States Government covering the sale to Japan of agricultural produce against payment in Yen while part of the Yen proceeds is available as a long term loan for capital development. Considerable assistance is also being given by the United States Government in providing technical training and the International Bank for Reconstruction and Development has recently agreed to grant a loan of U.S.\$8 millions for the modernization of heavy industry. All these arrangements should greatly benefit Japan's productive resources.

Unfortunately labour relations have not been too happy and there are ominous signs of further troubles on a nation-wide scale. All our Japan offices were involved in a strike which lasted for seven weeks but in spite of the difficulties encountered I am glad

April 19, 1956.

to say that we managed for the most part to meet the requirements of our constituents.

As a result of the merger of the two wings of the Socialist party on the one hand and the Liberal and the Democrats on the other a two party system has been created. Provided each party can continue to maintain a reasonable degree of unity this development should strengthen the parliamentary system. Between the two parties themselves considerable differences exist over both foreign policy and defence. Mr. Hatoyama, the Prime Minister, in December made it clear that his government—composed of the Liberal-Democratic party—intend to revise the Constitution, reform the administration and revise the system of taxation. This programme is generally regarded as designed to enable Japan to rebuild her armed forces. Mr. Shigemitsu, the Foreign Minister, at the same time gave a review of foreign policy but was unable to report much progress in the Japanese-Soviet negotiations taking place in London which had founded on the two issues of repatriation of Japanese prisoners and the settlement of territorial questions. He promised to strive for a speedy solution of the outstanding reparations agreements and to promote "a positive expansion of our trade with all countries." The Socialists on the other hand are opposed to rebuilding the armed forces and to the government's policy with regard to China.

On the whole Japan has recently made much progress but the rising population makes a continuing expansion of the export trade essential which is likely in the long run to influence political decisions.

Indonesia

The political situation in Indonesia is extremely complex and it is often difficult for foreign merchants and bankers, occupied as they are with their day-to-day tasks, to follow the trend of events. The rivalry of political and military leaders has been a deciding factor in the composition and policies of recent governments and the elections have on that account been repeatedly postponed. It is therefore a matter of considerable importance that these elections were finally held towards the end of the year and that polling day passed off without major incident. Provisional results show that no one of the four major parties obtained sufficient seats to form a government on its own and some form of coalition seems probable. The government which has been in office since August, under the leadership of Mr. Burhanuddin Harahap, appears to have tackled the many problems which faced it with vigour and, aided by the rise in the price of rubber, it has greatly improved the economic position of the country. We have more than once quoted from the Bank Indonesia Report, as it always gives an objective view of conditions in the country, and in the Report for 1955/56 published last year the Governor gave warning of the dangers of the continuing increase in the supply of money and went on to show the necessity of weakening the effect of inflation "which should primarily be brought about by reducing the cash deficit of the government." A study of the current advance to the end of the year shows that this action is made apparent by the Bank Indonesia. This rose from Rupiah 1433 millions at the end of 1953 to Rupiah 4477 millions at the end of 1954 and Rupiah 5959 millions in June 1955. During the second half of the year a generally tighter money policy was adopted and an overhaul of the systems of import and export control was carried out. These measures have resulted in a saving of millions in the advance to the government. The 4074 millions at the end of 1955. Gold and foreign exchange reserves have increased and the estimate for the 1956 budget shows a deficit of Rupiah 1,000 millions—a considerable reduction. The improvement in the free market rates for gold and foreign currencies shows that there is increased confidence in the economy.

Relations with Holland have unfortunately deteriorated in recent years and discussions over a number of outstanding matters were held recently at Geneva. Although at one time there seemed to be hope of some form of agreement being reached subsequently, the conference ended in failure and Indonesia subsequently abrogated the Netherlands-Indonesian Union and the financial and economic agreements entered into in 1949.

Thailand

Reports from Bangkok indicate that the political and economic fields since my statement was issued last year. For this a great deal of the credit is due to the Prime Minister, Field-Marshal Pibul Songgram who, on his return from a successful overseas tour, introduced measures aimed at stamping out corruption in the administration and permitting freedom of speech both at public meetings and in the press. It is too early to judge how permanent these reforms will be, as personalities play a large part in politics in Thailand, and already there are signs of restriction in public discussion, but the immediate outlook is encouraging. So also is the economic position, as exports were well maintained and in particular the tonnage of rice exported was greater than in 1954 although prices were lower. During the year all the regulations which necessitated surrender of part of the foreign exchange proceeds of exports at the official rate were withdrawn but rates of duty were raised to compensate. Import licence requirements were abolished in September for the majority of goods and customs duties were raised at the same time which should have a beneficial effect on the revenue.

Exchange rates during the first half of the year showed wide fluctuations but in July a Stabilization Fund was set up which is operated by the Bank of Thailand. This Fund seems to have been successfully managed and since its formation the market has been much more stable. Ordinary expenditure in the budget was balanced by revenue but appropriations for improving transport and irrigation resulted in an overall deficit which will be financed by loans and from treasury balances.

The above are a few of the many developments that have taken place in Thailand in 1955, and while last year I opened this paragraph with a reference to "cautious pessimism" I think it would be reasonable to close it this year with the words "cautious optimism".

Cambodia

Our Office in Phnom-penh got off to a satisfactory start and will I think prove to have been worth while.

The port itself is, however, far from satisfactory due to the shallowness of the river but the scheme for the deep water port of Kompong Som is being pushed forward. Prince Sihanouk, the Prime Minister, had a sweeping success in the elections in September and the political situation appears stable.

Malaya

Singapore is our largest office in the East after Hong Kong and in the Federation of Malaya we have a greater number of offices than in any other territory. The recent constitutional developments are therefore of great interest to us and although it is always difficult to assess the importance of contemporary events, until the passing of time enables a more detached view to be taken, it appears probable that 1955 will be considered a most significant year. Elections were held in both territories and a great part of the responsibility for the day-to-day government passed to the ministers whose parties held majorities in the newly elected legislatures. As the ministers moved on however, it became clear that the desire for a more rapid transfer to these ministers of such powers as had been reserved was becoming more insistent and that to a considerable extent this desire would be satisfied. Shareholders have no doubt been following the progress of events in these territories, as this press, and they will therefore be aware of the way matters have developed. I sincerely hope so as it is not possible here to do more than touch on one or two of the more important items.

Arrangements were made during the summer for delegations from both territories to visit London during 1956 to discuss future political developments and the visit of Tengku Abdul Rahman and his ministers took place in January. At this meeting it was decided that every effort would be made for the Federation to have full self-government and independence within the Commonwealth by August 1957 and a Constitutional Commission would be appointed immediately to draw up a constitution. Britain would continue until that date to be responsible for foreign affairs and external defence but there would be changes in the administration of internal defence arrangements and the Chief Minister has recently taken over the portfolio of Internal Defence and Security. Responsibility for all financial matters, at present discharged by the Financial Secretary, would be transferred at once to an elected minister and Colonel H. S. Lee has taken over this portfolio. The Federation recognised "the important part which overseas capital must continue to play in the economic and social development of Malaya" and that membership of the Federation and the other members' advantage of the Sterling Area was to the common benefit. The talks with the Singapore Government will take place in April but Mr. Marshall, the Chief Minister, with two of his colleagues, visited the United Kingdom in December when the agenda was agreed.

The discussions in London set the course for constitutional developments in these countries and I should like to wish them every success in the days ahead, and to hope that their approach to the many difficult problems, both political and economic, with which they are likely to be faced will be of advantage to them both and to the Commonwealth as a whole. One of the relationships between the two territories will be the relationship between the two territories, as a measure of agreement, on many matters of policy will be to their mutual benefit.

Economically, both have had a good year due to the rise in the prices of rubber and tin. The price of the rubber was fairly steady during the first half of the year but there was a considerable rise during August and September and the average for the year increased by over one shilling per pound. Exports from Malaya were 994,000 tons compared with 915,000 tons in the year before. The challenge by the synthetic industry, however, is always present and it is encouraging that a scheme to replant, both for esoteric and small-holders, was finally put into operation. This scheme has been drawn up after consideration of the recommendations of the Mudie Report and the Rubber Producers' Council and is in the nature of a compromise aimed at assisting replanting where it is most needed.

The price of tin rose slowly during the major part of the year but there was a jump in December due to a shortage of stocks for spot delivery. Indonesia's recent decision to ratify the International Tin Council to be inaugurated but the building up of the buffer pool may take some time so long as prices remain at present levels. Tin production in Malaya was a post-war record while exports were 71,150 tons compared with 70,333 tons in 1954. Production of iron ore has been increasing in recent years and the total for 1955 was 1,466,184 tons as compared with 1,212,780 tons in 1954.

The Malayan trade figures show a favourable balance of M.\$335 millions with imports at M.\$3,821 millions and exports at M.\$4,156 millions.

The budgets of both territories showed few changes in taxation but this was mainly due to the fact that the Federation Government, having been in office for only a few months, decided to carry over a "standstill" budget for the time being and Singapore decided not to act on their own. From a study of the speeches however, it would seem that some increases in duties were expected. Due to the rise in the price of rubber the Federation expected to turn an estimated deficit of M.\$148 millions into a surplus of M.\$42 millions. For the forthcoming year estimated expenditure shows an increase of M.\$80 million including a grant of M.\$23 million to the rubber industry for replanting, leaving a deficit of M.\$52 millions. Singapore estimated a surplus of M.\$52 millions for 1955 with a deficit of M.\$15 millions for 1956.

The report of the International Bank Mission, which visited Malaya early in 1954, was published in September 1955 and gave a comprehensive survey of economic conditions in the Federation and Singapore and made numerous recommendations for increasing and making more productive resources. This useful report is, I understand, being studied by the two governments and no doubt action on some of its recommendations will be taken shortly.

Although considerable successes have been achieved in the eight year old war against the terrorists, incidents continue to occur at frequent intervals and

the terrorist organisation is still a very active force. In the hope of hastening the end of the fighting the Federation Government declared an amnesty in September offering freedom from prosecution to those who surrendered, but the response to this offer was disappointing. Arrangements were, however, made for a meeting between the two Chief Ministers and the Communist leader, Chin Peng, which was held at the end of December. This meeting proved a failure and the amnesty terms were withdrawn on the 8th February and in broadcasts to the people of Malaya, Tengku Abdul Rahman has made it clear that action will continue against the terrorist until they surrender. Disappointing as it is that no tangible results have been achieved as a result of the amnesty, it has been clearly shown that the intention of the terrorists is to overthrow the elected government of the Federation and this has strengthened the government's hand. Tengku Abdul Rahman has been resolute in his approach to this problem and Mr. Marshall showed considerable political courage in his successful effort to place certain of the emergency regulations on the statute book.

I should like to pay tribute to the Commonwealth Forces who have served in Malaya since the Emergency began. To their courage and devotion to duty the progress so far made is due. Never knowing where or when the enemy would strike their task has not been an enviable one and many have lost their lives.

In Singapore there have been considerable labour disputes and unrest resulting in a wave of strikes which has had a disturbing effect on the economy. According to statistics issued by the Labour Department, nearly 950,000 man days were lost during the year. The danger of labour disputes to free port, dependent to such a large extent on its entrepot trade, is so evident that the finding of an early solution to this problem would appear to be one of the most urgent questions which faces the Singapore Government.

Before I leave Malaya I would like to mention the new air-port at Paya Lebar in Singapore which was opened by Mr. Lennox-Boyd in August. This is one of the largest in the East and will maintain Singapore's position as an important junction on the international air routes.

India

India has made no secret of the fact that she is moving towards a socialist pattern of society and this goal has been generally accepted by the public. Until recently the movement in this direction has been gradual under the first five year plan, but the pace is likely to be increased with the introduction of the second five year plan, a much more ambitious programme. Evidence of this can already be seen in the revision of Article 31 of the Constitution, to which reference was made last year, the Companies Act 1956, with its restriction on the activities of Managing Agents, and the recent decision to nationalise life insurance. Foreign merchants are not alone in their fears of the cumulative effect on the private sector that the increasing power of the state will have.

The first five year plan with its emphasis on rural planning and communications, with the consolidation of existing rather than the construction of new industries, did not impose a great strain on the economy. Helped by three favourable monsoons and the national programme of industrialisation and the economy has been able to take in its stride the budgetary deficits while prices have remained stable. While final details of the second five year plan are not yet available, considerable emphasis is being laid on the expansion of heavy industry, and the total outlay in the public sector is expected to be in the nature of £3,600 million, nearly double the figure for the first plan. A considerable part of the finance will be obtained again by deficit budgeting, even though a rise in taxation is expected. Whether the targets for this immense undertaking are likely to be achieved is a question on which I, from this distance, do not feel qualified to express an opinion. The President of the Associated Chambers of Commerce in India, however, in his annual address in Calcutta in December, after some very cogent remarks on the necessity of the fullest co-operation between the public and the private sectors and the danger of unhealthy competition between the two sectors, suggested that they were attainable provided "the necessary transport—partly public and partly private—was made available". India so far has made considerable progress—much greater than I think was expected—and at this stage we can look forward with some confidence.

The Report of the States Reorganisation Commission was published in October and many of the recommendations proved generally acceptable. The proposal made regarding Bombay, however, raised considerable objections and the announcement of the decision of the government to administer Bombay from the Centre had unhappy results. Further difficulties may be encountered before a final settlement is reached.

The role of foreign capital in present-day India is difficult to forecast. A survey published recently by the Reserve Bank of India showed that nearly 85% of all foreign investments in India at the end of 1953 came from the United Kingdom, and during the period 1948-53 the percentage of the United Kingdom's share of new business investment was not much less. These figures show to what extent British capital is involved. While speeches of individual ministers promise fair treatment to foreign capital they have recently made it clear that India is not likely to change her internal policies to attract foreign investment. It seems probable that in the future the role of foreign private investment in India will be smaller than in the past and that the emphasis on foreign investment as a whole is more likely to be on a government to government basis. The large sums required are probably beyond the means of all but the largest concerns but there is, I am sure, a marginal role in which private capital can play its part if given its chance.

The introduction of a decimal coinage is promised on 1st April, 1957 with the rupee being divided into one hundred naya paise. This will result in the disappearance of the anna. Another break with the past was the nationalisation of the Imperial Bank of India. This bank was formed in 1921 as the result of the amalgamation of the three Presidency Banks

and before the setting up of the Reserve Bank of India it acted as the government banker.

Space precludes mention of a number of other important developments in India but I should like to touch briefly on the visit of the Russian leaders, Marshal Bulganin and Mr. Khrushchev, with their attacks made, in both India and Burma, on the West and the United Kingdom in particular. There seems no doubt that this visit was a considerable personal success for the Russians but their comments on the United Kingdom must have been embarrassing to their hosts. On the economic side this visit may very likely result in increased trade between Russia and India, with greater competition for British firms, but the effect of such biased speeches on informed opinion in India should not, I think, be overrated and it may be that the Russians overplayed their hand.

Burma

From India we now turn to Burma whose connection with her large neighbour has always been very close. Both countries have adopted a policy of neutrality and the Prime Minister, U Nu, paid a number of visits to countries on both sides of the Iron Curtain. Burma too is endeavouring to raise the standards of living of the country by means of a planned development scheme; but unfortunately the fears I expressed last year, that she might be trying to do too much too quickly, have only been too well founded as the difficulty experienced in disposing of her rice has resulted in a steady fall in the foreign currency reserves.

In March a severe cut was made in the import programme which had the inevitable effect of reducing customs revenue and making the balancing of the budget more difficult. As a result it was found necessary to prune rigorously the estimates for capital

expenditure. A loan has been promised by India and other forms of aid are being sought. Barter deals have been arranged with several countries and while these should result in the disposal of a part of the export surplus there remains the danger inherent in such transactions, that Burma may have difficulty in obtaining the goods she requires. Yet in view of the prevailing buyers' market for rice it is understandable that such transactions should be found attractive to Burma. Meanwhile efforts are being made to improve the quality of the paddy, and production of other agricultural commodities such as vegetable oils, cotton and jute are being increased, which it is hoped will result in a saving of foreign exchange. Fears are expressed that the increase in the number of barter deals, coupled with the Reparations Agreement between Burma and Japan, may have a serious effect on Commonwealth trade. It is, however, encouraging that a Hong Kong firm last year obtained a contract for the construction of barges against strong foreign competition.

Burma also had a visit from the Russian leaders which was followed shortly after by the visit of Sir Hubert Rance—the last Governor of Burma—accompanied by Lady Rance. The spontaneous welcome Sir Hubert and Lady Rance received during their stay was evidence that old friendships had not been forgotten.

Ceylon

The improvement in Ceylon's balance of payments, which took place in 1954, continued with increasing momentum in 1955 and resulted in a trade surplus of Rs. 479 millions against Rs. 412 millions for 1954.

Tea prices, which at the beginning of the year were Rs. 3.29 per pound, fell considerably in the early months, reaching a monthly average of Rs. 1.34 for May, but rallied to Rs. 2.15 by December. The average for the year was Rs. 2.24 against Rs. 2.56 for 1954.

The increase in the price of rubber not only benefited the general balance of payments, but enabled a higher return to be obtained from 1st June for the rubber shipped to China, which was originally arranged as a barter deal against rice. Due to the drop in Ceylon's purchases of Chinese rice, China's debt to Ceylon under this arrangement is considerable and so far no decision seems to have been taken as to the method by which this will be settled.

Ceylon, like many other countries, has drawn up a new development programme, for a period of six years, but this only covers government expenditure and "does not constitute an overall plan for the economy as a whole". The programme provides for an expenditure of Rs. 2,500 millions over the period with the main emphasis on agriculture and public utilities. The targets set out are able to finance them, modest and it is hoped to be able to finance them out of the annual budget, but the authors of the plan appreciate that the prosperity of the country dependent to such a large extent on the prices obtained from tea, rubber and copra that they have allowed for an adjustment in the targets if it is found that a continuing deficit in the budget shows that they were too high.

Legislation was passed during the year for the formation of the Development Finance Corporation of Ceylon to assist private industrial and agricultural enterprises and "to encourage and promote the participation of private capital, both internal and external, in such enterprises".

San Francisco

On the 15th August a subsidiary of the Bank of Hongkong and Shanghai Banking Corporation of California, was opened in San Francisco. The Bank since its foundation in 1865, has had a very long connection with San Francisco as, in that year, it appointed the Bank of California as our Agent. Ten years later in November 1875 our own office was opened. From that time this office has contributed greatly to the business of our Far Eastern offices with the West Coast of America but it has not been permitted to carry on domestic banking in the State of California. The new subsidiary, however, is able to offer a full range of domestic banking services maintaining current and savings accounts, receiving money on deposit and granting approved loans, as well as providing the facilities for financing foreign trade which has been our main function in the past.

In January of this year a move was made into handsome new premises which have a modern layout and are quite up to the standard of our main offices elsewhere. I am told that they compare favourably with other banks in San Francisco and the move will give greater scope for the extension of business which we hope to see.

Once again I come to the end of our annual survey of the Eastern scene in which I have tried to give a brief review of political and economic conditions and to pick out a few of the more important events of the year. Shareholders will, I think, agree that this has been a satisfactory year: political differences have not been too acute and economic developments have made progress. The countries in Asia are moving along paths of their own choosing and foreign merchants and bankers must adapt themselves to these changing conditions. This we are trying to do as indeed we should, as indeed we must. But what of new foreign investment? That is another question altogether. Many other avenues are open and the most attractive will be chosen. Much lip service is paid by certain countries to the desire to attract foreign capital but stable conditions and prospects of an adequate reward will do much more than any number of exhortations. This is a question each country must decide for itself and the response will surely depend on the decisions made.

In conclusion I feel I cannot do better than quote an extract from a speech made at a Conference on Financing the Economic Development of Underdeveloped Countries organised by the United Nations Association in London recently. "If... the underdeveloped areas generally, are to attract private capital, they have to create conditions in which it appears to people who are trustees for other people's money that this is the best investment in the world which is open to them at the moment. This means to say that conditions have to be such that the risk of loss of income or loss of capital is at a minimum, and secondly, that the yield is likely to be sufficient to offset any such danger as remains."

Chairman's Speech

INDIAN PAPER MAKERS ASSOCIATION

CHAIRMAN MR. V. MEHTA'S REVIEW

Speech delivered by the Chairman, Mr. V. Mehta, at the Annual General Meeting held on 12th April, 1956 at 11 a.m. in the Bengal Chamber of Commerce & Industry.

Gentlemen:

On behalf of the Committee I welcome you to this Annual General Meeting of the Indian Paper Makers Association. The deliberations of the Committee during the past year are summed up in the Report of the Committee already circulated to the members and I trust the members noticed that the office of the Association and the Committee carried out their duties with traditional faithfulness and promptitude.

Almost four years ago speaking here in this very capacity I had the pleasure of welcoming the inauguration of the First Five Year Plan. By a coincidence my second term of office marks the conclusion of the First Five Year Plan and inauguration of the Second Five Year Plan. This naturally gives me an occasion to record with satisfaction that the Paper Industry played very well the part assigned to it during the First Five Year Plan and hopes to repeat its performance with credit during the Second Five Year Plan. Against actual installed capacity of about 1,36,000 tons and production of 1,14,000 tons the 1st Plan fixed targets of 2,11,000 tons installed capacity and 2,00,000 tons of production. Authentic figures for the year ending March 1955 are not yet available but from production reports it would appear that the targets set for production and installed capacity have been nearly achieved.

On analysis it is revealed that almost the entire increase in installed capacity or actual production has come about on account of completion or part completion of expansion schemes of the units existing at the beginning of the plan. A significant fact which emerges from this analysis is that very little new capital had to be raised for bringing into being the increased capacity and production. This speaks volumes of the very healthy and commendable policy of the industry of ploughing back the earnings into Expansion Schemes. It remains to be seen how the new Tax proposals relating to undistributed profits react on this policy which is certainly not worth rejection.

During the period of the Plan a number of new licences were granted but I am not aware of any new project having actually gone into production. In fact, I would not be surprised if some of the schemes covered by new licences may remain fated to be still-born.

Progress

It will not be out of place here to make a mention of progress, or shall I say the lack of it, on two important recommendations made by the Planning Commission in respect of Paper Industry. The one related to the formation of a Development Council for Paper Industry and the other related to survey of raw materials vis-a-vis the requirements of the industry so as to ensure harmonious development both of the existing units as also new units.

Although as far back as October, 1952, the Government announced their intention and the Associations were asked to submit the names of their nominees on the Council, no Council was actually constituted. Your Association highlighted this omission in its memorandum submitted to the Planning Commission in June, 1955 and emphasised the importance of setting up the Council without further delay. Probably as a result of the representation a Paper Panel was constituted and although the names originally mentioned included some eminent persons connected with the industry neither of the Associations were consulted and asked to nominate their representatives and in fact no members of our Association appeared to be included in the list at all. On a further representation the Government extended an invitation to Mr. P. H. Sykes to serve on the Panel and because this excellent choice was fully acceptable to the Association he has since been adopted as the Association's representative. Though belated, I still welcome the formation of this Panel but I fully share the feelings of my colleagues that the Government should recognise the representative character of the two Associations and accept their nominations on the Panel in a normal way. Ignoring both the Associations in a matter like this is a poor and thoroughly undeserved compliment to the spirit of utmost co-operation that has always existed between the Government and the industry. It is also felt that representatives of the industry guided by mandates from the Associations will ensure correct and dispassionate view on many ticklish problems on which this Panel will have to deliberate.

Raw Materials

With regard to the survey of raw material again, I welcome on behalf of the industry the formation of an Ad hoc Committee with exactly the same objects which were outlined by the Association in its letter to the Planning Commission in June last. Here again, I am sure that the Government are unable to appreciate the necessity of associating with this Committee representatives of the industry. While we admit that the Committee consists essentially of technical experts, it is to be realised that on the findings of this Committee will depend a good deal the question of licensing new projects or expansion schemes of the existing units.

It cannot be doubted that people in the industry are bound to have a thorough familiarity with all the important raw material sources of the country and their practical experience and commercial knowledge as also their understanding of the problems of the industry should be immensely useful in compilation of the survey report intended by the Ad hoc Committee. Instances are not wanting in the past when over-enthusiasm for forest revenues or parochial outlook tended to disregard practical views on

of transport is an essential pre-requisite to development planned in other sectors and a serious note should be taken of it by the Government.

Excise Duty

Another retarding factor which might be in achieving the new target is the levy of Excise Duty. To me it appears irreconcilable in principle that any attempt should be made by the Government to enhance the customers' cost of any commodity, the use and production of which are sought to be increased twice over by the Planning Commission. What-ever attempts were made by the industry to keep their selling prices low in order to encourage greater consumption of paper, have suffered as a result of back by the levy of Excise Duty. People in the industry did pass through anxious days on account of pre-budget rumours that all Excise Duties were going to be enhanced. Many of us heaved a sigh of relief when the final budget proposals of the Finance Minister showed that there was no enhancement of Excise Duty on Paper. I would like to state that the Excise Duty already levied has not been without repercussions on trade and industry and any further enhancement is likely to have serious adverse effects on any attempts made to achieve either the target of consumption or of production in respect of paper. While on the subject I would like to state that in applying the present levy to actual items of production a certain amount of rationalisation and uniformity is badly needed. The Association are continuing to make attempts in this direction, but perhaps a satisfactory solution will not be available without a conference between the Central Board of Revenue and the representatives of the industry.

Members will have already received new contracts from the Government and I would like to record that negotiations took place in a very pleasant atmosphere of mutual goodwill and trust. There has been no serious change in the market trend because the low selling prices maintained throughout served as a substantial cushion to the impact of Excise Duty. A notable feature, however, has been the sale of Indian newspaper commenced by NEPA a short while ago. I congratulate the Management of NEPA on their success in their initial bout with difficulties. It is a new experiment and it has a great importance from the national point of view. I am sure the Management will continue to fight the difficulties and succeed ultimately in producing good newspaper at a reasonable cost.

Committee for the year 1956-57

Mr. P. H. Sykes, Chairman—The Bengal Paper Mill Co. Ltd.
Mr. J. F. Brierley, Vice-Chairman—The India Paper Pulp Co. Ltd.
Mr. D. S. Birkbeck—Tribeni Tissues Ltd.
Mr. C. J. E. Keene—The Titaghar Paper Mills Co. Ltd.
Mr. V. Mehta—Shree Gopal Paper Mills Ltd.

A MEETING OF MINDS

AT HIRAKUD

CANADIAN KNOW-HOW will help Indian industry at Hirakud, Orissa, to build a new 10,000 ton aluminium smelter—India's biggest.

Canadian technicians will guide Indian engineers in the design and construction of the smelter.

Canadian and Indian capital will share equally in a proposed issue of new capital by Indian Aluminium Company to help finance the cost of the project.

At Hirakud, Canadians and Indians will work together to promote India's progress in a vital industry.

Indian Aluminium
Company Limited

A Canadian-Indian Enterprise

Every day Clippers must pass the world's toughest fitness test

Before and after each flight, a rigorous inspection is made of all operating parts. Even in flight, the state of a Clipper's* health is under constant scrutiny—through the electronic eyes of Pan Am's Engine Analyzer.

Every 11 weeks engines are taken down with critical interest. Instruments probe vital parts. From nose to tail each square inch is thoroughly inspected, every part replaced at the slightest drop from peak efficiency.

Exacting care like this is why experienced travellers will tell you, "Pan American knows how to run an airline!"

Let your Travel Agent arrange your trip—his services are free. Or call Pan American in:

REPORT OF THE AUDITORS TO THE MEMBERS OF LLOYDS BANK LIMITED

In our opinion and to the best of our information and according to the explanations given to us, the foregoing accounts of the Bank, with the annexed statements relating to the Bank's subsidiaries, The National Bank of Scotland Limited and Lloyds Bank (Foreign) Limited, give in the prescribed manner the information required of banking companies by the Companies Act, 1948 and on the basis therein authorised give subject to Note I and to the corresponding note on the accounts of The National Bank of Scotland Limited, a true and fair view of (a) the state of the Bank's affairs as at 31st December, 1955 and of its profit, ascertained as indicated in the accounts, for the year ended on that date and (b) the state of affairs and the profit, ascertained as indicated in the accounts and annexed statements, of the Bank and its subsidiaries so far as concerns members of the Bank.

We have obtained all the information and explanations which to the best of our knowledge and belief were necessary for our audit. In our opinion the Bank has kept proper books of account and obtained proper and adequate returns from the branches and the above accounts, of the Bank and its subsidiaries are in agreement therewith. The accounts of the Eastern branches are included therein as at 31st October, 1955 and the accounts of the subsidiaries are made up to 1st November and 30th September, 1955 respectively.

S. Frederick's Place, London, E.C.2. 17th January, 1956.

AUDITORS' REPORT ON THE INDIAN BRANCHES OF LLOYDS BANK LIMITED UNDER SECTION 30 OF THE BANKING COMPANIES ACT, 1949.

We report that we have audited the Balance Sheet of the Indian Branches of Lloyds Bank Limited dated 31st December, 1955 and above set forth and the annexed Profit and Loss Account for the year ended 31st October, 1955 with the books and accounts as kept at the General Manager's (Eastern Branches) Office, Calcutta, in which are incorporated certified returns from the Indian Branches and have obtained all the information and explanations we have required. In our opinion such Balance Sheet and Profit and Loss Account are drawn up in conformity with the law and the Balance Sheet exhibits a true and correct view of the state of the Bank's Indian Branches' affairs according to the best of our information and the explanations given to us and as shown by the books at Calcutta and the certified returns from the Branches. In our opinion books of account have been kept as required by law.

THE PUNJAB NATIONAL BANK LIMITED

Established in 1895.

Head Office: "SHREE NIWAS", 8, UNDERHILL ROAD, DELHI.

Directors' 109th Report to the Shareholders for the year ended 31st December, 1955.

The General Board of Directors begs to submit to the Shareholders the audited Balance Sheet and Profit and Loss Account for the year ended 31st December, 1955.

The transactions for the year under report have resulted in a profit of Rs. 69,40,108-2-3 (including Rs. 4,99,039-13-6 brought forward from the previous year's account). The following amounts have been appropriated for the undermentioned purposes:-

	Rs.	A. P.
1. Transferred to Income-tax Provision	11,00,000	0 0
2. Transferred to Contingency Reserve	24,00,000	0 0
3. Transferred to Reserve Fund	5,00,000	0 0
4. Transferred to Bonus to Staff Account	13,50,000	0 0
5. Transferred to Charity Account	80,000	0 0
6. Transferred to Gratuity to Staff Account	50,000	0 0
7. Ad-interim Dividend at Rs. 1/8 - per share free of income-tax paid	5,25,000	0 0
Total	60,05,000	0 0

The Directors recommend that the balance of Rs. 9,35,108-2-3 be disposed of as follows:-

	Rs.	A. P.
(a) Dividend at Rs. 2/- per share free of income-tax making the total at 14 per cent. per annum	7,00,000	0 0
(b) Carry forward to the next year's account	2,35,108	2 3

The Bank rate remained unchanged at 3 1/2% p.a. A sum of Rs. 37,50,000, being the aggregate amount of premium received on shares issued in the past, has been transferred to an account called 'Share Premium Account'. The Directors consider that the working of the Bank has been satisfactory.

By Order of the General Board of Directors.

S. P. JAIN,
Chairman.

Delhi, 15th March, 1956.

AUDITORS' REPORT TO THE SHAREHOLDERS, THE PUNJAB NATIONAL BANK LIMITED, DELHI.

We have audited the annexed Balance Sheet of the Punjab National Bank Ltd., Delhi as at 31st December 1955 and the annexed Profit and Loss Account for the year ended on that date, with the books and accounts kept at the Head Office in Delhi, in which are incorporated the Returns of the Bank's Branches in Indian Union, Pakistan and Burma certified by the respective Branch Managers. We report that:

(a) We have obtained all the information and explanations we have required and have found them to be satisfactory.

(b) The transactions of the Bank, which have come to our notice, have been within the powers of the Bank.

(c) The Returns received from the Branch Offices of the Bank have been found adequate for the purposes of the audit.

(d) In our opinion the said Balance Sheet and Profit and Loss Account are drawn up in conformity with Law.

(e) The Balance Sheet exhibits a true and correct view of the state of the Bank's affairs and the Profit and Loss Account shows a true balance of profit for the year, according to the best of our information and explanations given to us and as shown by the books and records of the Bank kept at its Head Office; and

(f) In our opinion, books of account have been kept by the Bank as required by Section 139 of the Indian Companies Act, 1913.

REPORT OF THE AUDITORS.

M. ARIYOSHI,
Manager.

We have audited the above Balance Sheet of THE BANK OF TOKYO LTD., as at 31st December, 1955 and the annexed Profit & Loss Account for the year ending on the same date with the books of account as kept in the Head Office (Calcutta) in which have been incorporated the certified returns of the Bombay Branch and report that:—

(a) We have obtained all the information and explanations we have required and have found them to be satisfactory;

(b) The transactions of the Bank which have come to our notice have been within the powers of the Bank;

(c) The returns received from the Bombay Branch have been found adequate for the purpose of the audit;

(d) The Balance Sheet and the Profit & Loss Account are drawn up in conformity with the law;

(e) Such Profit and Loss Account shows a true balance of profit for the year;

(f) Such Balance Sheet exhibits a true and correct view of the State of affairs of the Bank according to the best of our information and explanations as given to us and as shown by the Books of the Bank; and

(g) In our opinion the Books of Account have been kept by the Bank as required by Section 130 of the Indian Companies Act, 1913.

AUDITORS' REPORT:

T. M. TAGG,
Manager, Bombay Office.

We have audited the foregoing Balance Sheet of the Indian Branches of The British Bank of the Middle East, as at 31st December, 1955, and also the foregoing Profit and Loss Account for the year ended on that date in which are incorporated the authenticated returns of the Calcutta Branch and report that:—

- (a) We have obtained all the information and explanations which we have required in conformity with the law;
- (b) In our opinion, the foregoing Balance Sheet and Profit & Loss Account are drawn up according to the best of our information and the explanations given to us and as shown by the books of the Branches;
- (c) such Balance Sheet exhibits a true and correct view of the state of the Branches' affairs according to the best of our information and the explanations as given to us and as shown by the books of the Branches; and
- (d) in our opinion, books of account have been kept by the Branches as required by Section 130 of the Indian Companies Act, 1913.

THE CALCUTTA MONEY MARKET

CALL RATE FALLS

Wednesday, 18th April.

CONDITIONS in the money market have altered very little over the past week. Jute advances have shown a minor increase, while credit for the storage of foodgrains remains at a fairly high level. An easier trend has been noted in the interbank market, and the call rate has decreased to 3½ per cent.

The export bill market is still dull, and the few bills passing have been mainly on account of gunny and tea shipments. Remittance has been on a smaller scale. Sterling is steady, and the dollar quotes Rs. 47½.

Silver was steady following Ramnavami demand. The price advanced to Rs. 179-8, quoted today for forward delivery, and the rate for ready was Rs. 180-4. The London silver market was steady with the rate unchanged at 78½. The price of foreign silver in New York increased to 91 cents.

In sympathy with silver, gold soared to Rs. 106-12. The sovereign was quoted at Rs. 67-8.

During the week ended 13th April, Government of India Treasury Bills for Rs. 59,95,00,000 were sold in favour of the Reserve Bank.

Further increases of Rs. 4.55 crores and Rs. 9.29 crores in the total note issue and notes in circulation to Rs. 1,526.02 crores and Rs. 1,515.97 crores, respectively were outstanding features of the return of the Reserve Bank of India for the week ended 13th April, 1956. The expansion in currency was adjusted by raising rupee securities by Rs. 9.94 crores to Rs. 696.69 crores and reducing foreign securities by Rs. 4.97 crores to Rs. 686.41 crores. Deposits in the Banking Department fell all round. Deposits of the Government of India and other Government accounts declined by Rs. 3.83 crores and Rs. 3.33 crores to Rs. 53.27 crores and Rs. 32.36 crores. Balances of commercial banks at Rs. 50.95 crores were Rs. 2.46 crores lower. Foreign balances diminished by Rs. 3.36 crores to Rs. 58.23 crores, as did investments by Rs. 26 lakhs to Rs. 46.56 crores. Other loans and advances dropped from Rs. 64.82 crores to Rs. 63.07 crores, of which advances to scheduled banks against usage bills totalled Rs. 28.95 crores (Rs. 25.44 crores). These advances amounted to Rs. 56.30 crores since 1st January, 1956. Other changes were minor.

The return of the State Bank of India for the week ended 6th April, 1956, shows a rise of Rs. 3.37 crores in total deposits to Rs. 241.43 crores. Investments in Government Securities and other authorised investments are up by Rs. 75 lakhs and Rs. 4 lakhs to Rs. 97.10 crores and Rs. 10.35 crores, respectively. Advances, including loans, cash credits and overdrafts, and bills discounted and purchased have decreased by Rs. 3.92 crores to aggregate Rs. 137.22 crores. Cash and balances are, in consequence, shown at Rs. 20.43 crores or Rs. 4.86 crores higher.

The statement of the position of scheduled banks for the week ended 6th April, 1956, discloses Demand and Time liabilities at Rs. 651.20 crores (Rs. 6.17 crores on account of borrowings from banks) and Rs. 418.56 crores (Rs. 2.92 crores) compared with Rs. 635.99 crores (Rs. 4.89 crores) and Rs. 414.32 crores (Rs. 3.01 crores), respectively in the previous week. Cash and balances with the Reserve Bank have increased by Rs. 2.72 crores and Rs. 5.65 crores to aggregate Rs. 38.29 crores and Rs. 54.77 crores, respectively. There is a drop of Rs. 52 lakhs in investments to Rs. 359.55 crores. Advances and bills discounted at Rs. 756.80 crores reveal a decline of Rs. 4 crores. The ratios to total liabilities of cash and balances, and of advances and discounts are, in consequence, shown at 8.7 percent and 70.7 percent against 8.1 percent and 72.4 percent.

The Indian branches of the BRITISH BANK OF THE MIDDLE EAST made a profit of Rs. 9.63 lakhs for the year ended last December. Deposits amounted to Rs. 2.44 crores. Cash was shown at Rs. 74.04 lakhs. Investments totalled Rs. 30.91 lakhs and advances Rs. 5.57 crores.

The profit of the BANK OF TOKYO amounted to Rs. 2.81 lakhs for the year ended last December. Deposits amounted to Rs. 43.27 lakhs. Investments aggregated Rs. 23.74 lakhs and advances Rs. 2.38 crores. Cash stood at Rs. 25.95 lakhs.

The profit of the Indian branches of LLOYDS BANK totalled Rs. 21.42 lakhs for the year ended last December. Deposits stood at Rs. 41.69 crores and investments amounted to Rs. 19.75 crores and advances to Rs. 20.04 crores. Cash was shown at Rs. 5.02 crores.

The profit of the PUNJAB NATIONAL BANK increased by Rs. 10.65 lakhs to Rs. 64.41 lakhs for the year ended last December. Taxation absorbs Rs. 11 lakhs (Rs. 16 lakhs), contingency reserve Rs. 24 lakhs (Rs. 121 lakhs), reserve fund Rs. 5 lakhs (Rs. 247 lakhs) and interim dividends Rs. 5.25 lakhs (Rs. 31 lakhs). The final dividend has been declared at Rs. 2 a share, making 14½ per cent, against 12½. The carry-forward is Rs. 2,35,106, against Rs. 4,99,040 brought in. Deposits rose by Rs. 14.48 crores to Rs. 90.12 crores. Investments

were Rs. 10.27 crores higher at Rs. 45.64 crores, and advances improved by Rs. 9.62 crores to Rs. 42.02 crores. Cash was Rs. 1.98 crores lower at Rs. 9.27 crores.

According to the returns received in the Department of Commercial Intelligence and Statistics, the total gross sea and land customs revenue collected in the Indian Union during February 1956 amounted to Rs. 1,471 lakhs as compared with Rs. 1,720 lakhs in the corresponding month of the previous year. The comparison in the following should be taken to refer to that of the current figures with those of the corresponding period of the preceding year. Of the total customs revenue collections, import duties accounted for Rs. 1,194 lakhs as against Rs. 1,276 lakhs, export duties for Rs. 263 lakhs as against Rs. 423 lakhs and land customs and miscellaneous for Rs. 14 lakhs as against Rs. 21 lakhs. The total gross collection of Union excise duties amounted to Rs. 1,413 lakhs as compared with Rs. 960 lakhs. During the 11 months, April 1955 to February 1956, the grand total of gross customs and Union excise revenue realised was Rs. 28,906 lakhs as compared with Rs. 26,582 lakhs during the corresponding period of the preceding year. Of this amount, import duties accounted for Rs. 11,643 lakhs as against Rs. 13,136 lakhs, export duties for Rs. 3,385 lakhs as against Rs. 3,706 lakhs, land customs and miscellaneous for Rs. 188 lakhs as against Rs. 270 lakhs and Union excise duties for Rs. 13,690 lakhs as against Rs. 9,470 lakhs.

TREASURY BILL MATURITIES

Details of 91 days bills outstanding with the public on 6-4-56.

Issue Date	Maturity Date	Amount (000's of Rs.)	Average Acceptance Rate
6-4-56	7-7-56	1,00.00	Rs. 2-8-0%
29-3-56	30-6-56	1,00.00	Rs. 2-8-6%
23-3-56	24-6-56	1,00.00	Rs. 2-8-6%
16-3-56	17-6-56	1,00.00	Rs. 2-8-6%
9-3-56	10-6-56	1,00.00	Rs. 2-8-5%
2-3-56	3-6-56	1,00.00	Rs. 2-8-6%
24-2-56	25-5-56	1,00.00	Rs. 2-8-6%
17-2-56	18-5-56	1,00.00	Rs. 2-8-3%
10-2-56	11-5-56	1,00.00	Rs. 2-8-3%
3-2-56	4-5-56	1,00.00	Rs. 2-8-3%

SHARE VALUES MOVE UP
ON WIDE FRONT

SUSTAINED RISE IN GILT-EDGED

London, 18th April.

THE stock markets gave a satisfactory performance during the past week. While business was small and selective, persistent demand on a market poorly supplied with stocks was responsible for a widespread advance in prices under the lead of gilt-edged. Minings did not participate in the improvement. The approach of the Budget restricted activity, but the Chancellor's statement was awaited with a fair degree of confidence that no further disinflationary measures would be needed. The overseas trade figures for March were taken to be moderately encouraging, while other signs of the firmness of sterling indicated that the economic situation was yielding to the measures already taken. The main feature was a sustained rise in gilt-edged before the Budget. It was widely expected that the Chancellor would announce measures to stimulate savings and this was largely responsible for the rise. Further, there was a growing view that gilt-edged had reached the bottom in recent weeks. All sections moved up, including the short-dated issues, on reported buying by surtax payers in view of the attractive redemption yields. Gains extended well over one point compared with the previous levels. In foreign bonds, Japanese and Germans attracted small demand, while occasional gains were recorded elsewhere. Rails provided little of interest, while dollar stocks moved irregularly under Wall Street's influence. Selective buying of industrial equities brought an all-round advance in prices although the rise was usually not very large. The *Financial Times* Industrial Ordinary Index was over two points higher on the week. Atomic power shares, particularly electricals, were prominent. Kaffirs lacked interest and generally drifted lower, although steadier conditions developed later. Coppers and other base metals moved irregularly. Oils went ahead, with Shell and Royal Dutch advancing strongly following their dividend statements. Royal Dutch, however, reacted subsequently. Ceylon tea shares recovered part of their recent heavy losses which followed the election results. Rubbers were neglected.

The Money Market

During the first half of last week, credit conditions on the money market were very comfortable. With the disbursement of health money and the reflux of holiday currency, plentiful supplies of credit were available for market needs, and borrowers secured accommodation at rates ranging from 4½ percent down to 3½ percent. On Thursday, there was a sharp change in conditions due to the combination of many small factors, and money for the rest of the week was tight. The charges for day-to-day accommodation rose to 5 percent. During the easy period, discount houses encountered a good demand for bills, with June and July dates changing hands at 5 1/32 percent and 5 1/16 percent respectively. There was an exceptionally strong demand for 30th June bills at 5 percent. Because of a rise in short-dated bonds, and because there

World Rubber Statistics

The advance statistics issued by the International Rubber Study Group show that world production of natural rubber in February totalled 132,500 long tons. Consumption amounted to 160,000 tons, including estimated imports into Russia of 12,825 tons and into China of 6,250 tons. Stocks at the end of the period totalled 837,500 tons, of which 247,500 tons were in producing areas, 407,500 tons were in consuming areas, and 182,500 tons were afloat. The stock figures exclude those not available for the industries in Britain, the United States and France. Synthetic rubber production was 100,000 tons and consumption was 95,000 tons, while stocks held at the end of the month were 200,000 tons. The Group estimates that exports from Indonesia were 42,927 tons. Fewer Treasury Bills on offer at last week's auction, the money market adjusted its tender bid and this resulted in a lower Treasury Bill average. Applications for £240 million of 91-day Bills totalled £381,310,000, and the former amount was allocated at an average rate of 102s 5 7/8d, as against 105s 5 5/8d in the previous week. Offerings this week will consist of £230 million of 91-day Bills. The Bank of England return for the week ended 11th April showed that notes in circulation were £2 million lower at £1,850 million, while bankers' deposits were £6 million higher at £231 million. Fine trade bills were unchanged.

W. German Currency Challenge

The *Financial Times* said last Wednesday that the "West German mark's challenge to sterling for the position of the world's most widely used currency is growing steadily stronger." An article by Lombard, the newspaper's commentator on banking and finance, declared that the West German Government was providing wider facilities for the use of the mark in international payments transactions. "In the first place, the area in which the 'mark of limited convertibility' can be used as a means of settlement has been widened by the German authorities to take in almost the whole of the world outside the dollar area itself. In the second place, there have been indications that arrangements are going forward for removing restrictions on capital exports by German residents. In other words, West Germany is planning to allow the D-mark to be used as the basis for interna-

tional capital transactions—on what may be eventually proved to be an appreciable scale.

Russia Selling Gold

Russia has been selling gold in London and Paris recently, according to usually well informed sources. Sales have been made partly against transferable sterling and partly against dollars, and it is thought that they have been prompted by Russian foreign currency requirements. It is understood that there has been no evidence that Russia is under any pressure to sell, and she seems to be acting on her own behalf and not on behalf of any Eastern European country. No figures of the amounts of gold involved have been given out. It is thought that sales so far have been rather less than they were during the heavy Russian gold selling season around June last year.

Quicksilver Market

The rise in the U.S. domestic quicksilver price over the past week has had no effect on market sentiment in London. The London ex-warehouse price remains at not more than £86 a flask, and probably less for an order for around 25 flasks. The advance in the U.S. price is ascribed by trade circles in London to some covering against reported late arrivals. It is felt, however, that the situation will shortly ease as Spain is said to be catching up on her arrears after experiencing some production difficulties. Some Spanish metal is expected to arrive in the U.K. in the near future.

Vegetable Oil Market

Both coconut oil and copra provided firm features last week with prices continuing the marked upward trend, aided by strong buying interest. Straits bulk coconut oil made £97½ c.i.f., with further sellers looking for £98½, compared with £97½ prior to the week-end. Forward shipments of Ceylon oil reportedly fetched £100½ c.i.f., with buyers over and sellers wanting £101, against the week-end level of £98½. A few sellers of Philippines copra were prepared to go below \$194 c.i.f. at the close, while buyers' ideas were in the region of \$191. A fairly big dealer was a buyer in the market for Straits copra and sellers were seeking up to £70½ c.i.f. Quieter trading was noted for groundnuts, but the Nigerian Board was reserved and was reportedly refusing bids of £84 c.i.f. August-October. Groundnut oil was fully steady, with offerings limited, while other vegetable oils were firmly held. Chinese semi-refined cotton oil made £132½ c.i.f. Indian bulk linseed oil was still rather confused with business including May-June shipments at £152 c.i.f. Castor oil was raised to 40s a ton, with sellers reserved.

London Rubber Market

The Israeli-Egyptian disturbance reversed an easier trend at the beginning of last week in the rubber market as it stimulated shorts to cover their open positions. Orders found offers scarce, but later sellers predominated and profit-taking pared gains. As the week progressed, buyers and sellers alike were reluctant to extend their trading positions. In the very thin market that resulted, small dealings had an excessive influence on prices. Traders reported occasional demand in the shipment market with moderate interest shown in near and afloat parcels, but the volume of business with factories remained disappointingly small. Although there was still very little demand for sole crepe only light offers came on the market and holders withdrew after small, early concessions. No. 1 smooth 1/8th inch. on spot was quoted at 37d a lb. after earlier offers at 36½d.

Marketing of Shellac

The chairman of the London Shellac Trading Association has issued the following statement for the information of members: "The Board of Trade has consulted the Association about the liquidation of its shellac stocks and negotiations are in progress between the Board and the Committee of the Association to work out a procedure for the orderly marketing of stocks over a prolonged period, say, if necessary, a year, in order to cause as little dislocation of the market as possible." He adds that members will be advised as soon as final arrangements have been agreed on. In the meantime, it is understood, the quantity involved is small.

Engineering and Transport

NEW DIESEL-ELECTRIC
LOCOMOTIVE LINEG. E. PRODUCT SUITS WIDE RANGE
OF RAILWAY USES

A NEW Universal diesel-electric locomotive line has been developed to meet international demand by the General Electric Company's Locomotive and Car Equipment Department. It has been standardised for world-wide usage, and features greater horse-power and tractive power than many comparable locomotives in its class today. In view of the varying railway conditions all over the world, the locomotives are designed to operate at wide ranges of altitudes and climatic conditions, from blazing deserts to frozen northlands.

The line is the product of 75 years' experience in the manufacture of locomotives and railway equipment. In 1924, the first U.S. diesel-electric locomotive was placed in operation on the Central Railroad of New Jersey. This original G.E.-equipped unit is still in service today.

Nine Different Models

The new line consists of nine different models, ranging from 330 h.p. to 1,800 h.p. The standardisa-

tion of parts has brought substantial economies in their manufacture—as well as assurances that spare parts are available and that repairs may be made with a minimum of delay. Three of the models have six traction motors in two three-axle trucks for application where light weight per axle and maximum tractive effort is essential. The six-wheel trucks provide greater weight distribution or lighter weight per axle loading than a four-wheel truck. Four or six-wheel trucks are optional, depending on local road conditions. Two other models are ideal for applications where extremely light weight per axle is essential and where high horse-power is not required. These locomotives are excellent for industrial and estate work. In addition, they are designed for main and branch line operations.

The universal line is also designed for four traction motors in two two-axle trucks for Railways where heavier axle loadings are permitted and high horse-power is needed. Dynamic braking and train-heating equipment may be installed at moderate additional cost. The traditional, tested, four-cycle type of engine is employed throughout the line. These engines have demonstrated outstanding dependability in heavy railway service under a variety of climatic conditions throughout the world, and have undergone a 200,000-mile test in main-line freight service on the Erie Railroad.

The outstanding advantages of the new line are: (1) Greater horse-power and tractive effort than many comparable locomotives; (2) maximum versatility. Locomotives may be used for switching, freight or passenger service. Visibility is excellent in both directions. No turning is necessary; (3) High fuel economy and low lubricating oil consumption. The rugged, efficient design of the four-cycle diesel engine insures both fuel and lubricating oil economy; (4) Great adaptability. Universal locomotives may be used on tracks from 9¼ mm to 1,676 mm, with various braking systems and coupler heights.

The high speed truck design on this Universal General Electric locomotive is characterised by simplicity and strength. A "floating bolster" suspension system is also highlighted. Fully equalised and floating on rubber, this type of suspension increases flexibility and eliminates the numerous, complicated and often inaccessible support members of the conventional lateral motion truck. Maintenance costs are thus lowered, while minimum stress on truck and structures is achieved and longer truck life enhanced.

CAPITAL EQUIPMENT FOR THE
DURGAPUR STEEL WORKS

THE £7 million contract for a rolling mill and railway wheel and axle plant for the new steelworks the Indian Government is to build at Durgapur, West Bengal, will occupy one-third of the capacity of the Davy and United Engineering Company, of Sheffield, over a period of three years. This contract follows the announcement of an agreement between the Government of India and the Indian Steelworks Construction Company to undertake the construction of the new plant at Durgapur at a total cost of £80 million. The £7 million order represents the biggest single enterprise ever undertaken by Davy United. It includes a 42-inch blooming mill, a 32-inch intermediate mill, a 24-inch medium section mill, and continuous billet and merchant mills, together with a 6,000-ton wheel forging press, a 2,000-ton dishing press, wheel and type roughing and finishing mills, and a host of auxiliary equipment. To spread the work, and thereby assist delivery, the Brightside Foundry and Engineering Company, of Sheffield, is collaborating with Davy United and will build the 32-inch mill. Delivery of the plant will begin in about two years' time.

In addition to the rolling mill and wheel production machinery, Davy United has also undertaken to act as the main contractors for all the buildings, cranes, furnaces, soaking pits, electrical equipment, and foundry and maintenance shops. All this work, totalling another £18 million will be shared out among the other companies in the I.S.C.O.N. group and elsewhere, but Davy United will be responsible for co-ordinating engineering and manufacture and for progressing the whole scheme.

NEW ATOM POWER STATION BEING
DESIGNED IN U.K.

A new atomic power station based on sodium graphite is now being designed by the British Atomic Energy Authority at Risley, Lancashire, and is one of several types being considered for future use. The station will cost less than those now being built, the fuel used being uranium, in which the proportion of fissile isotopes has been slightly increased. The generating capacity will be about 100,000 kW. Sodium graphite reactors are similar in principle to those which have been built at Calder Hall, Cumberland, but they use liquid metallic sodium instead of gaseous carbon dioxide to transfer heat from the uranium fuel. Liquid sodium is a highly efficient heat transfer medium, and it will be possible to produce heat from each ton of fuel at a much higher rate than is now possible. This will make it possible to reduce the size of the reactors and to burn up their fuel much more quickly. At the same time, the operating temperature of the reactor may be increased above that fixed for the Calder Hall plant, so that more efficient conversion of reactor heat into electricity will become possible. A spokesman of the Atomic Energy Authority made it clear that the design work was not yet complete. This meant that, should a decision be taken to build a reactor of this kind, it could not be completed and put into operation before the middle or end of 1959.

Stocks and Shares

SHARE PRICES EASE ON SETTLEMENT
CONSIDERATIONSLITTLE IMMEDIATE REACTION TO CHANGES IN BUDGET
TAXATION PROPOSALS: TEAS SELECTIVELY BETTER

Wednesday Evening.

HIGH budia charges at today's settlement reduced the prices of speculative shares in the Calcutta market after a week of quieter trading. There was a mild recovery after hours, which indicated that the general undertone is fairly steady. Operators appear to be still calculating what the Finance Minister's latest amendments to the original 1956-57 Budget proposals will mean in terms of rupees, annas and paise when these calculations are completed, the results are expected to be encouraging. Meanwhile, the mood is subdued as details of the Government of India's industrial policy statement are being finalised. The proposed nationalisation of the Kolar gold mines, which has caused considerable anxiety during the past few days, is leaving room for some optimism now over the terms of compensation. The inflationary possibilities of currency expansion have not been ignored.

Tea shares have enjoyed selective rises, partly because they are expected to be among the main beneficiaries of Mr. Deshmukh's move to amend his recent taxation proposals. Jutes and coals are neglected. Among miscellaneous industrials, it is reported that National Carbons, a new entrant to the official Stock Exchange list, have been on offer in Calcutta and in demand in Bombay.

Details of the week's trading follow.

The gilt-edged market continued steady and prices were marked up. Business was on a fair scale but trading was restricted to some extent by the shortage of scrip. Three percent Conversion Loan improved by 3 as. to Rs. 76-14, while 3½ Non-terminable Paper was asked for at around Rs. 77-8. Short-dated loans were strong, with buyers over for 3½ 1957 at Rs. 99-13 and for 3½ 1958 at Rs. 99-10. In the medium-dated group, 3½ 1959-61 was fairly steady at Rs. 98-1. Both 3½ 1963-65 and 1964 had buyers at Rs. 94-13 and Rs. 94-11 respectively; 2½ 1961 was asked for at Rs. 93-5-6 and 2½ 1962 was taken at around Rs. 93-13. In National Plan Loans, 3½ 1961 firmed up to Rs. 99-7, as did 3½ 1964 to Rs. 98-12, while 3½ 1965 was marked at Rs. 98-9. In long-dated loans, 3½ 1966-68 met with enquiry at Rs. 92-11 and 3½ 1970-75, after being marked at Rs. 89-10 ex-voucher, closed one anna higher. There was a revival of interest in State loans and prices have recovered slightly from the lowest levels touched; 4½ U.P. Loan 1967 was better at Rs. 99-7 while 4½ Madras 1967 was taken at the same rate. Four percent Bihar 1963 met with enquiry up to Rs. 100 as did the 4½ 1967 issue at Rs. 99-4. Four percent West Bengal 1967 was taken at around par and 4½ Bombay 1967 was traded at around Rs. 100.

In contrast to the trend in recent months, during the past week there were more sellers than buyers of preference shares, particularly those of jute mill companies. The reason for this is possibly that with the nationalisation of life insurance companies, Custodians have not yet made any large-scale purchases of selected preference shares in the Calcutta market as used to be the case when life insurance was in the private sector. In Jutes Anglo-India were crossed at the lower rate of Rs. 114-8 and Birla were offered at Rs. 103. A small lot of Khardah was placed at Rs. 70, Lansdowne were crossed at Rs. 112 and Lawrence at Rs. 114. Business was reported in Northbrook at Rs. 91. Among miscellaneous issues, Associated Hotels were placed at around Rs. 63-8 and there was a small enquiry for British India Corporation at Rs. 121. Gwalior Sugar non-redeemable were done at Rs. 66-8 and Dalmia Cement Rs. 100 paid-up at Rs. 97 ex-Dunlop Rubber Second were marked at Rs. 97 ex-dividend and New Victoria changed hands on several occasions at around Rs. 4-8. Kumardhubi Engineering were taken at Rs. 106 and Rohtas Industries "B" at Rs. 64-8.

In the banking section, Allahabad Bank fully-paid were crossed at Rs. 366 and Bank of Bikaner were marked between Rs. 16 and Rs. 17-4. Hind Bank met with small enquiry at around Rs. 32 and United Commercial were done at Rs. 50. United Bank of India "D" shares were sold at Rs. 4-8.

A solitary transaction was reported in the railway section in Delhi-Rohtas at Rs. 13.

Cotton shares were listless and little business was reported. Basanti were marked at Rs. 5-14 but Elgin Mills improved today from Rs. 26-8 to Rs. 27-2. Kesoram were fairly steady at Rs. 17-11 while New Victoria were shaded at Rs. 2-6. Muir Mills were marked down today from Rs. 106 to Rs. 100.

There were few price changes in the coal section and business was of a retail nature. Bengal came to hand at Rs. 533 and Burrakur were depressed at Rs. 13-14. Central India and Western Bengal were easier at Rs. 6-14 and Rs. 6-13 while Union were crossed at Rs. 11. East Indian met with small enquiry at Rs. 32-8 while Equitable were shaded at Rs. 30. South Karanpura reacted to Rs. 10 but there was a small enquiry for Standard at Rs. 25-8.

Jute shares were difficult to sell though prices showed little variation as will be seen from the following table:

	Opening 12th April Rs. As.	Closing 18th April Rs. As.
Agarpara	11 12	11 10
Anglo-India	177 0	173 0
Belvedere	165 0	160 0
Birla	16 15	16 13
Delta	208 0	208 0
Howrah	22 7	22 4
Naihati	99 0	95 0
National	24 12	23 12
Reliance	10 2	10 2

Electric supply shares spent another dull week and only one share was dealt in, namely, Calcutta Electric at around Rs. 13-11.

Sugar shares were neglected with the exception of Ramnugger and Belsund which met with some enquiry at Rs. 10-10 ex-dividend and Rs. 23-12 ex-dividend. Champarun eased from Rs. 29-8 to Rs. 28 and Cawnpore from Rs. 20-8 to Rs. 20. Shree Krishna Gyanoday were offered at Rs. 12. Balram-pur were marked down from Rs. 9 to Rs. 8.

In the engineering section, Indian Iron and Steel fluctuated between Rs. 35-7 and Rs. 34-14 to close at the latter rate. Braithwaite were steady at Rs. 28 and Bhartia Electric Steel improved from Rs. 15-8 to Rs. 17-6. Burn were taken at Rs. 360 and Richardson and Cruddas, after being done up to Rs. 28-8, closed easier at Rs. 27-12. Textile Machinery were at one time taken to Rs. 24-4 but reacted later to Rs. 23-10. Kumardhubi Engineering changed hands freely at around Rs. 10-6 and Marshalls were depressed at Rs. 6-6.

In papers, Bengal were unchanged at Rs. 143 while India Paper Pulp were slightly easier at Rs. 24-8. Orient Paper were marked down from Rs. 35-11 to Rs. 35-1. Titagur were steady at Rs. 44-8. Shree Gopal were crossed at Rs. 19. In cements, Assam-Bengal were crossed at Rs. 6-10. Ashoka were marked at Rs. 10-4 and Sone Valley were fairly steady at Rs. 7-14. Dalmia were unchanged at Rs. 14-12. In insurances, Concord of India were crossed at Rs. 11-5 and Hercules were marked at Rs. 27-10. New Asiatic were offered at Rs. 3-14. In shippings, India General Navigation eased from Rs. 110 to Rs. 108 as did India Steamship from Rs. 8-9 to Rs. 8-6.

Among miscellaneous industrials, Alkali and Chemical continued to be depressed at Rs. 18-10, while Angelo Brothers were unchanged at Rs. 21-14. Balmer Lawrie eased from Rs. 175 to Rs. 172, and British-Burmah Petroleum from Rs. 4-3 to Rs. 4. British India Corporation were quiet at Rs. 10-10. Dunlop Rubber were fairly steady at Rs. 30-12 ex-dividend. Godfrey Phillips met with some enquiry at around Rs. 21-8 and Hindustan Motors, on the news that the Company proposes to issue fresh preference capital, reacted from Rs. 9-15 to Rs. 9-1. Imperial Tobacco were steady at Rs. 43. The ordinary Burma Petroleum were lower at Rs. 43. The ordinary shares of National Carbon (India) Ltd. were granted an official quotation in the Calcutta Stock Exchange on Monday and were dealt in at around Rs. 26-8. Indian Wood Products improved from Rs. 39 to Rs. 39-8. Metal Box were a shade lower at Rs. 28 and F. and C. Osler receded from Rs. 13 to Rs. 12-6. Rallis met with small enquiry at Rs. 15-8. Shaw Wallace met with small enquiry at Rs. 11-4. Clive Row Investment were crossed at Rs. 31-4 and Martin Indian Cables were crossed at Rs. 24-12. National Insulated Burn were shaded at Rs. 22-8 while Rohtas Industries were marked down from Rs. 22-11 to Rs. 22-2.

In the mining section, Karanpura Development eased from Rs. 26 to Rs. 25-12, as did Metal Corporation from Rs. 12 to Rs. 11-8. Burma Mines were steady at Rs. 3-3, as were Western Stockholders Investment at Re. 1. Indian Copper fluctuated between Rs. 6-10 and Rs. 6-4 to close at the latter rate.

Tea shares responded to selective enquiry and prices recovered. Of the Assam shares, Baghmari were marked up to Rs. 29-4 and Basmatia improved to Rs. 38-12. Bishnauth Old recovered to Rs. 26-4 and Bormah Jan were done at Rs. 23-4. Brahmapootra, after being taken up to Rs. 10-1, later had sellers at Rs. 9-8. Brooke Bond hovered around Rs. 25 and a small lot of Dessai and Parbutia changed hands at Rs. 406-8. Dhelakhath recovered to Rs. 22-6 and Dufflagher were crossed at Rs. 38. East India were fairly steady around Rs. 27, as were Grob "A" at Rs. 40-4 and Grob "B" at Rs. 21-2. Naga Hills were fractionally easier at Rs. 53-12 but Telojian met with good enquiry and the price advanced from Rs. 30-12 to Rs. 33-8. Tez-pore changed hands lower at Rs. 27-2 and later had sellers at Rs. 26-14. Among Doonars shares, Banarhat were marked back to Rs. 373 and Baradighi were fractionally easier at Rs. 49-6. Bhatkawa improved to Rs. 40-4 and small lots of Choonabhatti were wanted at Rs. 362. Hantapara met with renewed enquiry and the price advanced to Rs. 339 on keen buying. Hasimara were called at Rs. 41-2 and

but every one of them has some spare capacity. In Bhilai and Durgapur, we can produce 300,000 tons more by adding a few coke oven batteries and two more open-hearth furnaces. In Rourkela, we can produce 250,000 tons more. Maybe the decision will be taken by the time these plants start working to increase the capacity from 1 million tons to 1.3 million tons in the case of Durgapur and Bhilai and 1.25 million tons in the case of Rourkela. As for the training of personnel, we shall need about 1,200 engineers of high calibre for all the three plants and the training of these people is now being planned. Skilled technicians will be needed to the extent of 9,000 to 10,000 for the three plants. We propose to send before long to Russia about 500 people, partly trained engineers and partly technicians, who have had some familiarity with the iron and steel factories in this country. Arrangements are also being made for training people in Germany. I.S.C.O.N., the British consortium, is also undertaking the training of technicians for the purpose of their plant. In fact, they have already advertised for Indian engineers to be associated with them in the erection of this plant.

"On the question of power supply, the Bhilai plant will get its power through the help of the Madhya Pradesh Government which will establish a power plant in Korba. In Rourkela, we shall need a lot of more power than anywhere else, because the Rourkela plant will not merely be producing steel but also fertilisers, a point which I failed to mention at the outset. The L.D. process makes available to us a very large quantity of nitrogen which has to be turned into use and we will probably be able to produce what you call nitro-chalk or ammonium nitrate to the extent of 440,000 tons by spending a few crores on the plant and other requirements for the additional amount of power. So we shall have a fairly big standby power plant at Rourkela, while drawing upon the Hirakud grid of power supply. In the case of Durgapur, we are dependent on the Damodar Valley Corporation power plant for power".

The Government has now indicated the sources of four principal raw materials—iron ore, coal, limestone and dolomite—for each of the steel plants. Iron ore for the Rourkela steel works will be obtained from Talidih, 60 miles away. Investigations are now going on at the site to determine the exact location of the deposits which will be worked. The mining of iron ore at Talidih will be undertaken by the Government directly. An American firm of engineers has been appointed as

consultants to advise on the technical problems. Similarly, the Government will undertake directly the mining of iron ore at Delhi Rajahra. At its request, the Russian organisations have submitted a preliminary project report. The mines will be designed and worked with the technical assistance of the Russian Government. Equipment for these mines will also be supplied by that country on ordinary commercial terms. The steel works at Durgapur will obtain iron ore either from the existing mines or from mines to be developed in extension of those existing in Gua, which are the most accessible deposits from this place.

Requirements of Coal

The three steel plants together will require about 5.2 million tons of coking coal a year. A number of expert committees have gone into the question of coal reserves and their utilisation. Some have said that while reserves of non-metallurgical coal are large, the same is not true of metallurgical coal. The immediate problem is to make the most economical use of the known reserves of metallurgical coal. Measures have been taken to conserve it by ensuring that the non-essential consumers take gradually to alternative fuels. At the same time, it has been recommended that metallurgical coal should be washed so that its ash content is reduced. Thereby it will be possible to blend it with coals which otherwise cannot be used directly for metallurgical purposes.

The major sources of coking coal are in Kargali, Bokaro and Jharia. A Government washery is being installed at Kargali to wash the coking coals which will be raised by the Government in that area. Some 1.6 million tons of washed coal from Kargali will be used in the steel works at Rourkela and Bhilai. To augment these supplies, coal from Jharia will also be required. The Ministry of Iron and Steel is now exploring the best method of washing coking coals from Jharia. The steel works at Durgapur will be so designed that the coals in that area, which are otherwise unsuitable for metallurgical purposes, can be used after blending. The Durgapur works will use Jharia coal which will be washed at the site of the steel works, blended with coal from Burrakar which by itself cannot be used for steel-making. The steel works at Bhilai will use a blend of metallurgical coals from Kargali and Jharia with coal from Korba, which by itself is not fit for metallurgical purposes.

Other Requirements

Limestone and dolomite for the Rourkela and Bhilai works will be quarried directly by the Gov-

ernment. For the Durgapur steel works, the proposal is to obtain limestone, at least in the initial stages, from the existing sources at Birmiritrapur in Orissa. Mention was made of the utilisation of the by-products at the Rourkela steel works for the manufacture of fertilisers and other chemicals. In the carbonisation of coal which will be carried out at each of the steel works for the production of coke, a number of valuable by-products like coal tar, ammonia liquor and benzole will be available. It is proposed to set up, at each of these works, facilities for the distillation of the by-products and thereby to obtain valuable chemicals for a number of industries such as dyestuffs, paints, varnishes, medicines, scents and antiseptics.

Project Report for Electrical Equipment Plant

A seven-man high-power mission, which is leaving India on 19th April, will be associated with Associated Electrical Industries Ltd., Britain, in the preparation of a project report for the heavy electrical equipment plant which it is proposed to locate at Bhopal. The mission will include Mr. D. R. J. Naidu, Private Secretary to the Production Minister; Mr. S. A. Gadkary, Power Consultant, Planning Commission; Mr. M. Hayath, Member, Central Water and Power Commission; Mr. P. B. Prabhu, Deputy Director, Central Water and Power Commission; the Chief Engineers of Punjab and Rajasthan, Messrs. Murti and Bhatia; and the Planning Officer, Mr. Mitter.

Study of Communist Planning

Mr. Pitambar Pant, Private Secretary to the Chairman of the Planning Commission, Mr. Nehru, and two other statisticians, one from Delhi and the other from Calcutta, will accompany Professor P. C. Mahalanobis on his tour of China, Russia and certain parts of Europe. The Professor, who has already left India, will study Communist planning in these countries.

Enquiry into Automobile Industry

The Government of India has asked the Tariff Commission to enquire into the cost structure of the automobile industry before deciding whether the increase in prices of motor vehicles demanded by manufacturers is justified. Simultaneously, the Commission will report on the progress the industry has made since it was granted protection.

Bigger Rice Output Expected

Accordingly to the Directorate of Economics and Statistics, Union Ministry of Food and Agriculture, the all-India final estimate of rice for 1955-56 puts the current year's area and production of the crop at 76,253,000 acres and 25,474,000 tons, as against the partially revised estimate of 75,949,000 acres and 24,531,000 tons respectively for 1954-55. This shows an increase of 304,000 acres or 0.4 per cent in area and 943,000 tons or 3.8 per cent in production during the current year. The increase in area under the crop has been shared mainly by West Bengal, Bihar and Hyderabad, and is due to favourable weather conditions at the time of sowing. It has, however, been offset to a considerable extent by decreases in Uttar Pradesh, Orissa, Saurashtra and Andhra due generally to the prevalence of unfavourable weather at the time of sowing.

The increase in production has been shared mainly by Madhya Pradesh, West Bengal, Uttar Pradesh, Bihar, Mysore and Vindhya Pradesh, and is mostly due to the comparatively better climatic conditions during the growing period in the current year. It has been offset to some extent by decreases in Andhra, Madhya Pradesh, Orissa and Hyderabad due to unfavourable weather conditions, such as heavy rain at some places and inadequate rain at others during the growing period. The production estimates for Andhra, Assam, Bombay, Madhya Pradesh, Punjab, Uttar Pradesh, West Bengal, Hyderabad (autumn), Mysore, Bhopal, Coorg, Himachal Pradesh and Vindhya Pradesh are based on the results of random sample crop-cutting surveys. Estimates of the Bihar crop were, until last year, based on random sample surveys. Though these surveys were continued in the State during the current year, the results are not available yet. Figures for this State included in the estimates for 1954-55 and 1955-56 are based on the traditional method of estimation (i.e. method of direct estimation).

Besides Bihar, crop-cutting surveys during 1955-56 were in progress in Madras, Hyderabad (summer crop), Madhya Bharat and Travancore-Cochin. The results are not available yet, so the production estimates for these States utilised in the all-India estimate are based on the traditional method. The estimates may, therefore, be revised later. The latest estimate includes information on "non-reporting areas", that is, areas for which forecasts are not prepared. The "non-reporting areas" for this estimate include pockets in Madhya Pradesh, Mysore and Coorg, Jammu and Kashmir and Manipur. Such areas cover 899,000 acres and have a production of 424,000 tons.

Employment Situation during February

The total number of unemployed in India registered at the Employment Exchanges during February 1956 was 7,24,443. The figure represented an increase of more than 7,000 over the previous month. The number of vacancies notified by the private sector during the period was 7,652—the largest since May 1953. Of the vacancies notified by the public sector, 18,354 were by Central and State Government Departments. Placements effected during the period were 15,465, as against 14,753 during January 1956.

Bombay

THE DANGERS OF PEGGING MILL CLOTH OUTPUT

MR. A. D. SHROFF WARNS AGAINST INFLATION

(FROM OUR BOMBAY CORRESPONDENT)

RESTRICTING the output of India's textile mills to the present level of about 5,000 million yards will encourage inflation. This was the warning Mr. A. D. Shroff gave in his address at the annual general meeting of shareholders of the Svadeshi Mills Company Ltd., on 12th April. Meanwhile, it is reported that the Government of India is contemplating an important shift in its cotton textile policy so to allow more scope for mills to increase their production above the pegged level. Mr. Shroff said that it was incomprehensible that, at a time when the country's most pressing need was increased production, the Government should decide deliberately not to use the capacity of the textile industry to that end. With the huge new expenditure being incurred by the Government, the two main things for which there would be greater consumer demand were foodstuffs and cloth. Although he agreed with the Government that cottage and small-scale industries should be encouraged in order to provide additional employment, Mr. Shroff felt that the Government should not pursue a policy which might well result in an acute cloth shortage.

Modernisation of the Mill

Dealing with the financial results of the company, the chairman said that the improvement in profits had permitted an increase in the ordinary dividend from Rs. 8 to Rs. 12 a share. So far, the rehabilitation programme had cost the Svadeshi Mills Rs. 148 crores. Of the total, Rs. 13 crores had been spent on the renovation of plant and equipment, and approximately Rs. 16 lakhs on buildings, floorings, etc. It was originally intended to replace the 2,120 old looms by 1,750 automatic ones. But due to the Government policy on rationalisation, the company had been able to purchase and install only 560 automatic looms. A number of improvements had been made in the bleaching, dyeing and finishing departments.

Fresh Levies on Oils

The Board of the Oil Merchants' Chamber, Bombay, has protested against the sudden imposition of heavy export duties on linseed oil, kardiseed oil and nigerseed oil, as well as against the increase in the export duty on castor oil, since 10th April. These have come at a time when large shipment commitments remain to be fulfilled. The Board, in a telegram addressed to the Union Ministries of Commerce and Industry and Finance, has stated that changes in the export policy and in export duties should not come in the middle of the year or of the policy period. Changes in export duty should be announced along with the export policy for the period so that shippers can adjust their terms accordingly. The Board doubts whether the new export duties will check an increase in prices, as export commitments will anyhow have to be fulfilled. They will adversely affect the contracts already made because the bulk of the business done by the shippers has been on the basis that any export duty will be on sellers' account. The Board has requested the Government to reconsider the question and has urged that sales already effected should be exempt from the export duties.

The initial reaction to the Government's announcement raising the export duties on oil was bearish, but the market recovered partially later. As the variation in the export duty on oils is generally on sellers' account, it is estimated that shippers will suffer an aggregate loss of about Rs. 75

lakhs to Rs. 1 crore. The export duty of Rs. 250 a ton on linseed oil is considered too heavy in trade circles as it amounts to about Rs. 4 a cwt. of linseed.

By-Laws of E. I. C. A.

Major changes in the by-laws of the East India Cotton Association have been proposed by the Forward Markets Commission, it is learnt. The Commission, in a communication to the Association, has stressed that future business in the current crop will not be allowed, while permission for the next season's crop will be granted after the proposed changes in the by-laws have been made. It is understood that the Commission has suggested alterations in the by-laws relating to maximum and minimum prices, delivery contracts, marginal system, survey set-up, election procedure, tenure of office of the president and vice-president, and submission of returns on open business by members. Several other miscellaneous topics, it is said, are also mentioned in the letter. The Commission, it is understood, has stressed the need to prohibit entirely options and business transactions after official hours. A sub-committee is likely to be appointed to negotiate and complete the proposed changes in consultation with the Commission. The Board of the East India Cotton Association considered the recommendations at its meeting on 13th April. A copy of the proposed changes in the terms of the forward contract was placed before it and it was decided to give about a week's time for proper consideration of the suggestions.

Section 314 of Company Law

Sir Purshottamdas Thakurdas, president of the East India Cotton Association, has emphasised the need to exempt the Association from Section 314 of the Indian Companies Act. In a letter to the Department of Company Law Administration, he points out that the Association is a non-profit-making body and the question of payment of dividends does not arise in its case. Explaining the peculiar consequences that may result from the application of Section 314 to it, he states that to regulate the cotton trade, which requires the application of expert knowledge, it has always been necessary to appoint a number of committees. For this reason, there is the possibility of a director becoming the chairman or a member of a committee. There are committees of which the personnel varies from time to time, and it may well be that partners or relatives of directors may find a place on one or the other of the committees, which the application of the Section concerned will make impossible to the detriment of the Association's business.

Bombay's Second Plan

Bombay has the largest second five year plan of any State in India. The proposed output is Rs. 264 crores, against Rs. 146 crores in the first plan. The State Government originally formulated a plan costing Rs. 507 crores, but it was reduced to its present size after the Planning Commission's scrutiny. The Union Government is expected to spend in the State a total of Rs. 248 crores, on such requirements as national and other highways, rehabilitation of displaced persons, local development works, social welfare works and assistance to the State Village Industries Fund. The Reserve Bank of India is also expected to contribute to the share capital of co-operative institutions to the extent of Rs. 4 crores.

The State's achievements during the first five year plan were spectacular. A number of new industries were started, and the cotton textile industry achieved a high level of output. A number of additional schemes such as the community development projects, national extension service blocks, local development works and the Koyana hydro-electric-irrigation project, involving a total expenditure of Rs. 47 crores were initiated. Although the schemes are being financed by the Union Government, a portion of the expenditure,

estimated at more than Rs. 6 crores has had to be borne by the State Government.

Polychem Share Issue

The lists for preference and ordinary shares of Polychem Ltd., which opened on 31st March, have been closed with the issue fully subscribed.

Bombay Port Trust's Finances

An increase in the oil traffic surcharge has been urged by the chairman of the Bombay Port Trust, Mr. L. T. Chhap. In his introductory note to the Budget estimates for 1956-57, he has suggested that the present surcharge of 33½ per cent on oil traffic should be enhanced, as it does not cover the expenditure incurred by the Port Trust, directly and indirectly, in handling it. "We have a big development programme," he says "for which money has to be found. When it is remembered that our basic wharfage rates were framed in 1932, a surcharge thereon of 33½ per cent is low and we would be fully justified in raising it considerably higher for financing capital works, especially non-recurring ones." After negotiations with the Government of India to finance the Marine Oil Terminal Project, he had accepted the terms of the loans proposed by the Centre, and a loan of Rs. 1 crore was asked for early next year. On the basis of revised estimates of revenue and expenditure, Mr. Chhap expects a surplus of Rs. 11,700,000 this year. Unlike imports, exports through the Bombay docks had shown an upward trend, he pointed out, the majority of commodities having recorded an increase. Exports up to the end of December 1955 aggregated 1,584,861 tons, against 1,019,320 tons handled during the corresponding period of the previous year. Imports totalled 5,630,695 tons. For the year 1956-57, estimated figures of revenue and expenditure based on the volume and pattern of trade were not available, but, according to various trade associations, the quantum of overseas trade would be "about the same as in the current year," he said. There would, however, be a decrease in the import of certain commodities, especially foodgrains and sugar.

POLISH STEEL AND CEMENT IN EXCHANGE FOR INDIAN IRON ORE

Under the trade agreement concluded between Poland and India on 3rd April in New Delhi, negotiations for the sale and purchase of specified commodities were carried on between the representatives of the two Governments. As a result an agreement has been signed under which Poland will sell to India 50,000 tons of iron and steel products between 1st April and 31st December, 1956. Efforts will also be made for the supply of an additional 50,000 tons of steel products before 31st December, 1956. A quantity of 100,000 tons of iron and steel products, it has been agreed, will be sold to India in each of the calendar years 1957 and 1958. Negotiations to settle the terms and conditions for the sale in the current year will commence in Calcutta soon. Those for sales in subsequent years will be settled later. "Mimex," a Polish State enterprise, has agreed to sell cement to the projected State Trading Corporation of India. It will supply 100,000 tons between 1st August, 1956, and 31st March, 1957. Additional quantities will be supplied in subsequent years on a basis to be agreed on between the parties. The terms and conditions of supply for the current year have been agreed on and have already come into force. India will sell 100,000 tons of iron ore through the State Trading Corporation to Poland between 1st September, 1956 and 31st March, 1957. A quantity of 100,000 tons of iron ore will be sold in each of the calendar years 1957 and 1958. The terms and conditions of supply for the current year have been agreed on and signed. Those for supply in subsequent years will be settled between the parties in due course. The State Trading Corporation is likely to come into being shortly. Until it does, its rights and obligations will devolve on the Indian Ministry of Commerce and Industry.

The Indian Tube Company's works at Jamshedpur bid fair to supply India's growing requirements of steel tubes to the full.

Dunlop anti-corrosion linings have been applied to essential equipment: pipe work lined at Dunlop Sahaganj and Sulphuric acid storage and pickling tanks lined by Dunlop personnel on the site of this modern plant, the largest of its kind in India.

London

DETERIORATION IN U.K.'S
PAYMENTS BALANCE

COLONIES EARN MORE DOLLARS

(FROM OUR LONDON CORRESPONDENT)

THE details of the Balance of Payments White Paper issued recently are worth careful consideration—and not only by the United Kingdom. The comparison of the 1954 and 1955 figures, some of which we already knew about or were able to guess reasonably accurately, shows not only the extent of the deterioration which has taken place but what the sterling area as a whole—and again particularly this country—must do to restore the trading equilibrium. It is seen to be a pretty substantial task and one at which we have so far, despite the healthier climate of the first three months of this year, barely nibbled. It had previously been disclosed by Mr. Macmillan that the £205 million surplus of 1954 worked out at a deficit of £103 million in 1955. As far as Britain is concerned, however, the total is most misleading, for with the sterling area countries we were actually in surplus (of £272 million in 1954 and £215 million in 1955). In point of fact, therefore, the U.K. was really in deficit with the rest of the world to the extent of £67 million in 1954 and, in the following year, of as much as £318 million. In 1954 our net dollar earnings were £67 million. In 1955 we showed a net loss of £229 million—and since then have recovered no more than £56 million. It is a move in the right direction, but a small one in view of the size of the leeway to be made up.

The Colonies acquitted themselves well, for without the £101 million worth of dollars they earned in 1954, which increased to £120 million in 1955, we would have been much worse off. The sterling area Dominions were much less successful with deficits of £75 million and £108 million respectively. The U.K., however, did worst of all with deficits of £87 million in 1954 rising to as much as £207 million in 1955, which only goes to show how spending and prices, mainly in relation to U.S. coal and steel imports, upset the situation. The running down of the sterling balances by £39 million was virtually offset by the additional Empire-produced gold we acquired, but another major factor in the situation was undoubtedly the sterling area's adverse balance of no less than £203 million in trade with Western Europe, against a deficit of only £65 million in 1954.

Savings Drop

Lord Mackintosh of Halifax, chairman of the National Savings Committee, reviewing the

National Savings totals for the financial year ended 31st March, says that the year opened with even better results than its predecessor, but that the measures taken last summer to deal with our economic difficulties began to affect National Savings adversely. In the circumstances, he holds, National Savers have done well to set up the record new savings figure of £1,362 million. Unfortunately, repayments of £1,318 million out of savings accumulated over many years were also up, resulting in net savings of £44 million, against £146 million in the previous year. When Defence Bonds paid off on maturity are taken into account, the amount remaining invested is £6,119 million, a decrease of £6 million on the year. Lord Mackintosh contends that the credit squeeze has been the main cause of withdrawals, but that view is not shared by everyone. He also says he is sure that all this money has not been spent; but no doubt some of it has. Some of it undoubtedly has gone into other forms of saving. No one is likely to disagree with Lord Mackintosh when he points out that in the present economic situation a high level of personal saving is essential. "More savings would not only give the country a secure basis for future prosperity, but would also be the best and quickest antidote to inflation."

The Revenue Returns

The financial year ended with a surplus of ordinary revenue of £397,102,092. This compares with a surplus for the previous financial year of £433,166,594. The revised Budget estimate provided for a surplus of £68,717,000. The year therefore ended with a surplus which exceeds the estimate by £328,385,092. Ordinary revenue, including self-balancing, for the year was £5,160,407,564, compared with £4,986,678,404 for the previous year. The revenue exceeds the revised estimate of £4,990,750,000 by £169,657,564. Ordinary expenditure, including self-balancing and sinking funds, for the year amounted to £4,763,308,472, compared with £4,583,511,810 last year. The estimated expenditure, after allowing for supplementary estimates and excess votes amounting to £94,558,000, was £4,922,033,000. Expenditure thus fell below the estimate by £158,727,528.

"Below the line," where outgoings are mainly of a capital nature and consist largely of loans to local authorities and government bodies, outgoings exceeded repayments by £535,604,860 against £493,192,578 a year ago. The overall deficit, reached by deducting the ordinary surplus from the "below the line" deficit, is thus £138,502,768, against £60,025,984 a year ago. The estimated "below the line" deficit was £584,000,000. In a more favourable economic environment, the "above the line" revenue surplus would have stirred great hopes of tax concessions. As things are, with

the need to use the fiscal weapon to reinforce the credit squeeze and Mr. Macmillan's other measures, the buoyancy of the revenue merely suggests that any net additions to the burden of taxes may be avoided.

B.O.A.C. Profit in 1955-56

A rough assessment of unaudited figures shows that the British Overseas Airways Corporation made a gross profit of about £1,750,000 in the financial year 1955-56, and a net surplus of about £500,000. Sir Miles Thomas, the out-going Chairman, gives this news in a letter to the staff, and says that the net surplus is almost double last year's. This has been accomplished in the face of "massive difficulties." The Corporation, Sir Miles adds, has successfully challenged the aggressive enterprise of the biggest world air operators, most of whom could buy the latest types of American aircraft. "Nevertheless, there is nothing that need give us an inferiority complex in this matter." Referring to the prospects of the Comet IV, he says that there is a danger of getting too enthusiastic about the distant future and forgetting to earn "daily bread" by current operations. "That such bread has to be earned by greater business than that which has been secured in the past is vividly instanced by the Corporation's increased costs."

Rubber From Oil to Save Dollars

A scheme to produce rubber from oil at the rate of 50,000 tons a year has been announced. The new industry will save 30 million dollars a year on synthetic rubber imports from the United States. The rubber will be produced at a £5 million factory to be built by the International Synthetic Rubber Company alongside the Esso refinery at Fawley, Hants. A new plant at the refinery will make butadiene, a petroleum gas, which will be fed into the rubber factory. In 1958 the factory will begin turning out as much synthetic rubber as we now import. The rubber will be GR-S—Government Rubber-Styrene—which was produced at Government plants in America during the war. The International Synthetic Rubber Company was launched last November by four tyre companies together—Dunlop, Goodyear, Firestone and Michelin. Dunlop's have pioneered with an experimental plant being built at Fort Dunlop. It is here that the lessons of the big new venture are likely to be learnt before Fawley starts production. It is estimated that one vehicle in three in Britain could be fitted with synthetic tyres when the 50,000 tons are produced.

Radio Exports and Imports

Radio component imports are causing some concern to the industry here. In 1955 imported foreign radio and electronic products rose to over £13 million. This compares with £8 million in 1954 and £5 million in 1953, says the annual report of the Radio and Electronic Component Manufacturers' Federation. Most were from West Germany, Holland and the United States. A figure of £75,000 in imports from Bermuda is puzzling the industry there, cause there is no component manufacture there. Efforts are being made to discover the source of origin. In the first 11 months of last year 19 countries bought from Britain. The total value of exports of components and sound reproduction products was about £13.4 million, a 23 percent increase over the previous year. Exports to the dollar area continue to rise. The United States is now Britain's chief customer for high-fidelity sound reproduction products, with Canada the second largest purchaser of components. Falls were recorded only in exports to Sweden, down by 9 percent, and Denmark, down by 10 percent. The trend in the past three years has been upward, particularly for Commonwealth countries and the United States, which during the first 11 months of 1955 raised its purchases by 60 percent. There were also substantial increases in sales to Mexico, 137 percent; Iraq, 95 percent; West Germany, 80 percent; New Zealand, 70 percent; and South Africa, 43 percent. Total exports of radio and electronic products during 1955 were valued at £33.5 million, 13 percent more than in 1954 and an increase of over 30 percent in the past two years. Exports have doubled in the last five years and quadrupled since the war.

Tea Enquiry Starts

Last week saw the opening of an official investigation of Britain's tea industry. The Monopolies Commission has named six men who will make the enquiry, under the chairmanship of Sir David Cairns. They are Sir Thomas Barnes, the legal expert; economist Sir Arnold Plant; accountant Sir Richard Yeabsley; Mr. I. C. Hill, a Yorkshire industrialist; Mr. Alan Birch of the Shopworkers' Union, and Mr. Wilfred Haywood of the Textile Workers. Evidence is now being taken from tea producers, blenders and dealers in an effort to answer the question: Is there a buyers' ring? The investigators may also decide whether it is in the national interest that only a few firms should handle so much of the marketing. More immediate interest in tea market circles attaches to the outcome of the Ceylon general election and the possible repercussions of Mr. Bandaranaike's victory on the future of the many British tea and rubber companies in the island, for nationalisation is one of the planks in his Party's programme. Share prices moved downwards as a precautionary measure, and some dividend announcements have been held up pending clarification of the situation, but second thoughts suggest that earlier fears may not be realised for the new Prime Minister is a realist.

Employment Statistics

The March unemployment figures show a total of 266,000, a fall of 10,000 as compared with February and 4,000 less than for March last year. On the other hand, the total working population is now 22,950,000, or 35,000 fewer than in January.

Madras

MR. J. STRACHEY'S VIEWS ON
PLANNINGPROF. J. K. GALBRAITH AGREES WITH
GOVERNMENT'S BASIC APPROACH

(FROM OUR MADRAS CORRESPONDENT)

MR. John Strachey, the former British Labour Minister for War, said in a Press interview here that India's second five year plan was by no means too big as some persons thought. In his view, the risks of doing too little were greater than the risks of doing too much. No doubt India would have to struggle with a certain amount of inflation, but that was a lesser danger than economic stagnation. On the question of fixing a ceiling on landholdings which appeared inevitable in the evolution of a socialist structure of society, Mr. Strachey said that as long as land was under personal cultivation there should be large holdings. While he favoured heavy taxation and a relatively low ceiling on unearned incomes, he felt that it would be short-sighted to fix a low ceiling on earned incomes. As for unemployment among the educated, he said that there was no solution to it except rapid industrialisation. That was one of the reasons why he thought that the risks of rapid industrialisation, on the whole, were smaller than the risks of going slow and stagnating. Mr. Strachey said that India would have a very hard time to industrialise without foreign aid. Fortunately, it would be competing to assist her, as they were doing in the case of steel works. Foreign aid, though indispensable, would however always be a small part of the capital which was needed for industrialisation. In the nature of things, he said, a vastly greater part of the new capital would have to be found by India herself. Professor J. K. Galbraith of Harvard University, who was with Mr. Strachey, said that the Indian Government had adopted a basically correct approach in its five year plans. About the Government's efforts to build a socialist society in India, he thought that it should adopt flexible methods though the goal itself might be inflexible.

Discussion of Madras Plan

The Madras Assembly discussed the draft second plan in a general way and resolved that "the provision of Rs. 170 crores for Madras State was totally inadequate to meet the developmental needs of the State." The Finance Minister, winding up the debate, said that provision had been made for rationalising the textile industry, not with the object of helping the private sector to make bigger profits, but only with a view to making the export prices of textile goods competitive in foreign markets. The Finance Minister agreed that there had been some rise in the prices of essential commodities, but it was not known whether it was due to the printing of more currency notes to meet budgetary deficits or due to the manipulation of "interested persons" who wanted to obstruct the working of the plan. In reply to the Communist criticism that the deficit financing would give a handle to the private sector to create inflationary tendencies, the Finance Minister said that he did not deny such a possibility. A ceiling on dividends was being considered. However, the assistance of the private sector for economic development had to be taken.

Bhoodan Tour

Acharya Vinobha Bhave is to begin his Bhoodan tour of Tamil Nad on 12th May. According to the sponsors of the tour, the ultimate aim of the movement is to vest ownership of land in the village community. Together with the movements of *Sampattidan* and *Sramadan*, it is expected "to bring about a silent revolution, mentally and psychologically conducive to an integrated, contented and peaceful community life." As for *sampattidan*, the gift deeds will contain the promises of people to contribute a certain percentage of their income for five years. The gift may be a day's or a month's earnings or a certain percentage of the annual profits. Every six months the donors will be reminded of the amount accruing to the credit of each and asked to make purchases like bullocks and ploughs and deliver them to the stipulated Bhoodan village. The Bhoodan target for Tamil Nad is 2.5 million acres, and the *Sampattidan* target is Rs. 25 crores at the rate of Rs. 100 an acre. In the last three or four years of the movement here, only 47,000 acres of land have been received from 13,000 donors, and out of this only 5,000 acres have so far been distributed to the landless poor. It is expected that Vinobha's projected walking tour, which will take him over 1,600 miles in six or seven months, will give a fresh impetus to the movement. The Congress in Tamil Nad, particularly the Chief Minister, Mr. Kamaraj, is relying on Vinobha's tour to show some "concrete" proof of the Party's good intentions to satisfy the aspirations of the landless.

Madras Claim for Industries

The Southern India Chamber of Commerce held its annual general meeting recently. Mr. M. A. Chidambaram, president of the Chamber, regretted that in the second plan, the private sector was given a less important place, the investment increase envisaged being only of the order of 40 percent over the actual investment under the first plan, while the allocation for the public sector was about nine times that made in the first plan. He,

therefore, urged that the cumulative experience, wisdom and enterprise of the private sector should be fully utilised in the scheme of development and a more honoured place allotted to it. At the same time, he appealed to the chambers of commerce and trade associations to move with the spirit of the times and play a useful part in shaping the decisions, affecting not only their interest, but also that of the country. Mr. Chidambaram, in a reference to the industrial backwardness of Madras, pleaded that industrial development in the State should not be made to depend on the "fortunes of the light operations only." He suggested that the Madras Government should press its claims for locating a shipbuilding industry here. Mr. Chidambaram was not in favour of the proposed State Trading Corporation which, he said, might displace long-established exporters who had done such a lot of pioneering work in developing foreign markets. Referring to the anxiety of the mercantile community over the multi-point sales tax, he appealed to the Government to make it a single-point levy.

Aluminium Plant in Salem

Mr. K. C. Reddy, Union Minister for Production, revealed that an aluminium plant with a capacity of 10,000 tons a year would be set up in Salem in the near future. He added that the establishment of an iron and steel industry in Madras was under the active consideration of the Union Government, but the lignite in South Arcot should be developed first. Large-scale pumping operations are going on at Neiveli to reduce the upward pressure of artesian water below the lignite seams in the pilot mine. The final outcome of the experiment may take some time to be known. If 20 giant pumps are required for the small pilot mine itself, the question arises whether lignite mining on a large scale can be an economic proposition.

A NEW INDO-BRITISH ENTERPRISE FOR
WEST BENGAL

At Kalyani, West Bengal, will be established shortly a factory for the manufacture of Cellulose Acetate Moulding Powders and P.V.C. compounds. These plastic compounds have never been manufactured previously in India. The Government of West Bengal has allocated 23 bighas of land for this purpose. The manufacture of these moulding compounds will be in collaboration with the East Anglia Plastics Ltd., of London, under a scheme approved and sanctioned by the Ministry of Commerce and Industries, Government of India. The company, which has been registered, will be known as the East Anglia Plastics (India) Ltd. The factory is expected to have a rated production capacity of over 3,360,000 lbs annually, though initially about 1,680,000 lbs will be manufactured. India's annual requirement of Cellulose Acetate Moulding Powders and P.V.C. compounds in the immediate future has been estimated at 1,792,000 lbs. and 3,584,000 lbs respectively. The factory will provide employment to refugees settled in the neighbourhood of Kalyani and will also feed a number of small moulding factories run as cottage industries in the locality.

THE
SALE IS
IN THE
BASKET...

Trayophane packaging does something for your product—something no customer can resist! It's gloss and shine instantly attracts attention... and the freshness of your goods convinces the customer that he is getting full value for his money.

... when it is wrapped in

TRAYOPHANE*

Trayophane protects—no dirt, dust or shop-soiling can damage your product. Write for our free samples folder today.

AND SEE HOW CHEAP IT IS!

A sheet of Trayophane, 20" x 30" costs no more than 6 pice! Trayophane is available in rolls and sheets. You can get it soon in four eye-appealing colours!

"CAPITAL" INDEX OF INDIAN INDUSTRIAL ACTIVITY **

The Capital Index of Indian Industrial Activity (Base: 1935) has now been brought up to September, 1955. Compared with the preceding month there were increases in cotton consumption 9.6 points, jute manufactures 13.9 points, paper 7.5

points, coal 6.4 points and electricity 5.8 points, while decreases occurred in steel ingots 4.2 points, pig iron 3.7 points, cement 25.3 points, and wagons loaded 1.5 points.

The index for cheque clearances rose by 7.2

points, while that for notes in circulation remained unchanged at 177.1 points.

Combining all the factors the Capital index of Indian Industrial Activity advanced by 4.2 points during September, 1955.

"CAPITAL" INDEX OF INDIAN INDUSTRIAL ACTIVITY (1935)

Jute

RESTRICTED ACTIVITY IN JUTE AND GUNNY MARKETS

SELECTIVE PURCHASES OF FIBRE: PROSPECTS FOR THE NEW CROP

ACTIVITY during the past week was on a restricted scale in both the jute and gunny goods markets, and the business transacted was much less than previously. Mills showed very little interest in the goods market, except towards the close, as the steady jute section prevented simultaneous business at a reasonable profit. Overseas buyers did almost negligible business except in special constructions, and prices were maintained mostly by speculation. Local shippers were active, mainly in covering against Australian sacking sales, which gave rise to the rumour that an Australian order had been placed. Most of the business was taken up by bazaar operators, as mills were not attracted by the rates offered.

In raw jute, buyers showed considerable discretion in making purchases. This was prompted by the fact that although mills' stocks of raw jute were adequate in bulk, the quality distribution in many cases was uneven. The curious situation resulted where one buyer wanted middle quality jute, while another concentrated on purchasing bottoms only, and a third bought cuttings. As most of the price indications in enquiries were well below those sellers were willing to consider for what they termed special business, only limited quantities were transacted. Sellers were willing to accept counter-bids in ordinary business, and a although they were supposed to be reserved, a greater part of the business done over the week took place at 8 annas a maund below the quoted rates. With the advent of the Bengali New Year, a change came over the markets, and very steady conditions prevailed in both sections, with jute sellers passing over business below the quoted rates.

Conditions in the jute-growing areas in India were hot and dry, and although this was favourable to a certain extent, more rain was required to enable sowing to take place and to promote germination of the standing crop. Sowings were well ahead of last year and crop prospects were bright. In Pakistan, only a few districts reported rain, but the total rainfall was very favourable, year. Conditions generally were favourable, especially for weeding, but more rain was required to help the standing crop. River levels in both India and Pakistan were normal for the time of the year.

THE JUTE MARKETS

Manufactured Goods: Although gunny quotations showed a rise at the opening last Thursday, the market was listless, with very little interest being shown. B Twills rose by 8 annas to be quoted in the near positions at Rs. 108-4 a 100 bags, and at Rs. 107-12 for July-September shipment. The intermediate positions showed a premium over all other deliveries, and it was in these periods that most of the activity took place. Hessian was again completely neglected but rose 2 annas in sympathy following a week of unchanged prices. Local covering in heavy goods for shipment to Australia produced a temporarily steadier tendency, but as mills were not sellers of any consignment at these rates, the business was entirely absorbed by the bazaar, which brought about fresh speculative covering. Prices continued to advance as the day progressed, but fluctuated towards evening and only showed a rise of 2 to 4 annas by Friday morning. Operators began to lose interest at this stage in view of the Bengali New Year holiday the following day, and after a brisk opening the market closed on a quiet note. On Monday morning, prices hardened all round as operators vied with each other to get new transactions on their books. Opening quotations were Re. 1 higher than before the holiday, with B Twills at Rs. 109-6 for April shipment and Rs. 109 for July-September shipment, these rates being the highest for about three weeks. Once again, hessian followed in sympathy, and 40in. 10oz. rose by 3 annas to Rs. 38-11, with forward shipment at a premium of about 8 annas. Heavy speculative activity and shipper covering combined with the steady fibre markets to force up prices. Tuesday's opening quotations brought another 8-anna rise in sacking and 4 annas in hessian.

At the close, the market is a little easier and opening quotations on Wednesday morning were as follows:

	April	May	June	July-Sept.
40in. 8oz.	32-6	32-2	32	31-10
40in. 10oz.	38-13	39-2	39-2	39-6
B Twills	109-4	109-12	109-12	108-14
Heavy Cees (Plain)	108-4	109	109-4	108-14
A Twills	135	134-8	134	133
Liverpools	124-12	124-8	124	123
Cornsacks	109-12	110-12	111	110-12

Raw Jute: Raw jute has ruled very steady throughout the week, with prices showing a tendency to rise. Mill interest was on a smaller scale than in the previous week, and was confined to levelling out uneven stock distributions. Sellers tried to look reserved, but at the beginning all the

business was invariably below the market rate. This was not the case after the week-end, when both the goods and fibre markets showed a marked rise. Buyers found great difficulty in obtaining their requirements, and sellers held out against the lower prices in view of the steady upcountry markets and the correspondingly steady gunny rates. Very firm conditions prevailed at this stage and operators in general held the opinion that prices were on the rise. Prices during the early part of the week were unchanged at Rs. 27-8 a maund for Upper Assam Bottoms, but these rates were nominal as business was done at 8 annas less. After the week-end, conditions changed, and Upper Assam quotations rose to Rs. 28 a maund basis Bottoms, with sellers showing no interest below those indications. Steady conditions in the upcountry markets were the main reason for the change in attitude as sellers still had a fair amount of covering to do against previous sales, and were not willing to enter into fresh contracts until this was done. On the prevailing rates, it was impossible to do this at a profit, so business upcountry was at a standstill.

During the week, business was spread over many agencies, but the bulk of the transactions were in Dhubri-Northern jute at prices ranging between Rs. 27-8 and Rs. 28 a maund basis Bottoms, and in Upper Assam jute at Rs. 27 to Rs. 27-8. In each case the higher price was paid for ready bills of lading, other deliveries being for April-June. A fair amount of Local Northern jute was done at Rs. 27 to Rs. 27-8 a maund basis Bottoms for April-May shipment, and also local packing (free from jungli agencies) at Rs. 26-8 a maund for one month's delivery. Small lots of Murshidabad Tossa were done at Rs. 27-8 a maund for April-May shipment. No business was reported in Daissee, but buyers paid Rs. 25 to Rs. 25-8 for Daissee Mesta. In the pucca bale section, the only business reported was in Pakistan Cuttings at prices ranging between Rs. 120 and Rs. 124 a bale for April-May shipment.

At the close, the market is firm with prices advancing. Opening quotations on Wednesday morning were as follows:

Indian Jute (Kutch) :	Landed at Mills Rs. a md. basis	Shipment
	Bottoms	
Lower Assam	28-8	April-May
Upper Assam	28-8	"
Northern	28-8	"

Northern	30-8	"
Jat Cuttings	127	"

Commodity Markets

DEVELOPMENT OF ALCOHOL INDUSTRY

HIGH PRIORITY IN SECOND FIVE YEAR PLAN

THE Union Minister for Commerce, Mr. D. P. Karmarkar, said recently that high priority had been given in the second five year plan to the development of the alcohol industry. The Government of India, he said, had examined the question of the utilisation of alcohol. There was a feeling that, being available in India at the lowest prices in the world, it should be used as a raw material in the manufacture of chemicals and chemical products. While the use of alcohol as a motor spirit might be justified in times of emergency, it was not felt to be in the best interests of the country normally. The Minister made this statement while inaugurating the twelfth annual general meeting of the All-India Distillers Association.

The Minister referred to the inadequate off-take of power alcohol from some distilleries, and said: "The position at present is that we have extended the Indian Power Alcohol Act to the entire U.P., Delhi, Punjab, P.E.P.S.U. and Himachal Pradesh areas and expect to ensure the utilisation of about 800,000 gallons of power alcohol a month by admixture with petrol in this area. There are certain difficulties in extending the Indian Power Alcohol Act to other parts of the country and thus provide a larger off-take for power alcohol. However, the question of extending the area under power alcohol is likely to be dealt with by the Alcohol Committee which has been appointed by the Government and which is already looking into the various issues. If it is necessary to extend the area under the Power Alcohol Act to provide more off-take on a temporary basis for the production from power alcohol distilleries, the Government will examine it in due course after the conclusions of the Committee are available. Meanwhile, the off-take of power alcohol from U.P. distilleries may have to be confined to about 800,000 gallons a month and every effort is being made to distribute this demand equitably between producing distilleries in the different areas of U.P. While the off-take of 800,000 gallons a month is more or less an average figure, there may be variations from time to time depending upon the actual demand for petrol. We shall, however, be glad to consider any suggestion from members of your Association in regard to the distribution of power alcohol in the existing area, so that every distillery is enabled to work to the maximum extent possible.

Utilisation of Alcohol

"The Government of India has examined the question of the utilisation of alcohol and there is a feeling that the alcohol, which is available in India at the lowest prices in the world, should be made use of as a raw material in the manufacture of chemicals and chemical products. While the use of alcohol as a motor spirit may be quite valuable in times of emergency, continued use of alcohol in motor spirit is not felt to be in the best interests of the country. In view of the fact that a number of new petroleum refineries have already been established in the country and in view of the larger quantities of crude oil which is being obtained from indigenous sources, it is desirable that all available alcohol be diverted to different chemical uses. At the same time, the Government will see that existing producers are not left in the lurch in the process for want of an assured market for their production. These aspects will no doubt be kept in mind by the Alcohol Committee in framing its final recommendations, and any valuable suggestions which your members might make will no doubt receive full consideration by the Committee.

"It is true that the Government has under consideration a scheme for the manufacture of synthetic rubber in India using alcohol as the basic raw material. Other projects are also under consideration for using alcohol as a raw material, mainly in the private sector. Two schemes for the manufacture of polyethylene have already been sanctioned and are expected to utilise considerable quantities of alcohol. Other schemes for the manufacture of D.D.T., ethylenedichloride, etc. are also under way. I would however, suggest that a certain amount of initiative should come from the alcohol producing industry itself in the establishment of such industries.

"You refer to the price fixed for power alcohol and state that it is not remunerative. You have said that the cost of production has increased since 1949 and, as such, the present price which was fixed on the basis of an analysis of the cost of production in 1949 is untenable. However, I am informed that in fixing the price in 1949, the Government allowed a wide margin to enable the distilleries to tide over their initial difficulties. It was expected that the working efficiency of the units would improve considerably and thus reduce the cost of production appreciably. It is expected that this process might also have taken place side by side with the increase in the cost of certain specified items.

Reducing Coal Consumption

"Even now it is felt that there is considerable scope for reducing the consumption of coal at some distilleries and also to improve the recovery of alcohol from the molasses used. However, this is only my personal point of view. I would suggest that your representatives might discuss this

question with the Alcohol Committee and furnish it with a memorandum on the subject. I would like to point out in this connection that the handling and mixing charges which are paid to the oil companies for marketing power alcohol and motor spirit are entirely of a different category and the fixing of handling charges has no relation whatever to the cost of production of power alcohol. The handling charges are fixed on an approved basis and revised from time to time in the light of the operational costs of the oil companies. The Government is convinced that the charges now paid are reasonable, particularly when we take into consideration that 3 annas out of the 7 annas 3 pies a gallon is paid by the oil companies as dealer's commission to their distributing agents.

Control on Molasses

"Questions relating to the control over the price and distribution of molasses and the handicaps due to the Excise Rules at present in force over distilleries are included in the terms of reference of the Alcohol Committee. Any representation which you would like to make on these issues will no doubt receive adequate consideration by this Committee before it makes final recommendations to the Government. The duty on transit wastages of alcohol should also come under the purview of this Committee.

"Before concluding, I would like to make one or two suggestions to your Association. It is desirable that your Association includes all the producers of industrial alcohol and that any bifurcation of interests as between power alcohol and industrial alcohol should be done away with. As I have already mentioned, the use of alcohol as power alcohol is only a passing phase and ultimately the interests of all the producers of power alcohol and industrial alcohol are identical.

Research Schemes

"It also appears desirable that your Association should actively sponsor schemes for research into problems connected with the industry. Improvements in the steam economy and in the recovery of alcohol from molasses, disposal of the spent liquor after recovery of alcohol, recovery of yeast as a by-product for cattle-feed etc., are some of the problems the solution of which will be of considerable benefit to your own members. Some assistance might no doubt be forthcoming from the National Laboratories in the solution of these problems but considerable initiative may have to come from your own members. I have also noticed that there is an increasing tendency to import alcohol distillation plants, in spite of the fact that a large number of factories were established with plants of indigenous fabrication during wartime. I entirely agree that the improvements achieved in European countries in the production techniques for alcohol should be taken advantage of by Indian units, but I would suggest that your members actively consider the possibility of securing patent rights or other "know-how" from abroad and arrange for fabrication in India of the equipment which after all is not a complicated item. It might not be difficult for you to establish a designs and fabrication department which could be taken advantage of by every member distillery and which in turn could exploit the patents and designs developed abroad."

WHOLESALE PRICE INDEX FALLS

THE official wholesale price index (base: year ended August 1930=100) declined by 0.6 percent to 390.2 during the week ended 31st March, 1956, as compared with 392.5 (revised) for the previous week. The index was 2.1 percent higher than a month previously and 11.1 percent more than in the corresponding week of last year. The average for March 1956, worked out to 397.3 as compared with 378.4 (revised) for February, 1956, and 354.2 for March 1955. The financial year average for 1955-56 stood at 360.3 as compared with 377.5 (revised) for 1954-55. Lower prices of *dal arhar* (-10%), gram (-8%), wheat at Hapur (-7%) and at Jabalpur (-1%) and gur at Ahmednagar (-4%) brought down the index for Food Articles by 1.0 percent to 358.8 as compared with 362.5 (revised) for the previous week, although prices of coffee (+3%), gur at Muzaffarnagar (+2%) and rice in Calcutta and wheat at Amritsar (+1% each) showed advances. The index for Industrial Raw Materials also fell by 1.4 percent to 477.8 as compared with 484.6 (revised) for the previous week as a result of a lower index for raw cotton (-2%) caused by the re-introduction in the Index of Karungani cotton, which reappeared at the Tirupur Market after a lapse of several weeks and declines in manganese ore (average export price) (-24%), linseed (-5%), groundnuts at Cuddalore (-4%), and rapeseed in Calcutta and shellac (-1% each). The prices of rapeseed in Bombay and castorseed (+3% each), raw silk (+2%) and groundnuts in Bombay, raw wool and pure buttonlac (1% each) recorded increases. The effect of higher prices of mustard oil in Calcutta (+5%) and at Patna (+4%), castor oil (+5%), linseed oil in Bombay and coconut oil (+3% each) and groundnut oil in Bombay (+1%) was almost neutralised by a decline in the prices of groundnut oil in Madras and mustard oil at Kanpur (-5% each), gingelly cake (-3%), brass in Calcutta, copper in Bombay and gingelly oil (-2% each) and linseed oil in Calcutta, copra cake and coir yarn (-1% each) so the index for Semi-Manufactures stood at 375.0 as compared with 374.8 the previous week. The index for the Manufactures group declined by 0.1 percent to 373.4 as week because of a decrease in the price of jute manufactures (-1%). Prices of cashewnuts at Mangalore (-4%) and black pepper at Cochin

(-3%) moved down while those of chillies at Patna (+3%) and betelnuts (+1%) were marked up, so the index for the Miscellaneous group worked out to 494.1 (estimated) as compared with 494.3 for the earlier week.

NO CEILING ON COTTON IMPORTS YET

A PRESS NOTE issued by the Textile Commissioner in Bombay says that no ceiling has so far been fixed by the Government for the import of cotton from dollar and non-dollar areas. In fact, due to the somewhat indifferent quality of the Indian crop in the current season, the import of cotton of the permissible staple length will be allowed in adequate quantities to meet the requirements of the mill industry.

It is reported, says another Press Note from the same source, that there is a tendency for the sale and purchase or there have been offers for the sale and purchase of Indian cotton at prices above the basic maximum permissible under the Cotton Control Order. The Textile Commissioner wishes to make it clear that the purchase or sale of any variety of Indian cotton above the prescribed basic ceiling price requires prior certification by the East India Cotton Association, Bombay, of its quality. Without the certificate, such transactions amount to a contravention of the Cotton Control Order, and are punishable by law. Mills and dealers are, therefore, warned that no cotton may be purchased or sold or offered to be purchased or sold at a price higher than the basic ceiling prescribed for the variety unless its staple and class have been certified by the East India Cotton Association to be such as to entitle it to a higher price. Serious notice will be taken of contraventions, whether by purchasers or sellers.

FURTHER RAW WOOL EXPORT QUOTA

The Government of India has reviewed the policy for export of raw wool and has decided to release a further quantity for export during the period April-September 1956. Details of the licensing procedure are being notified by the Export Trade Controllers at the ports concerned.

Calcutta Markets

HEAVY WITHDRAWALS IN TEA EXPORT SALE

BETTER GENERAL DEMAND FOR DUSTS

AT Sale No. 43, held on 16th, 17th and 18th April, offerings in the Export auction consisted of 59,000 chests. There was only a fair demand and prices were easier for all sorts except for Fannings and a few bright liquoring autumnals, which were again a very strong feature. Most other kinds opened $\frac{1}{2}$ to $\frac{1}{4}$ annas lower, but eased further towards the close and poor stalky kinds were neglected. Whole leaf grades shared in the general decline, and except for the most stylish kinds, were 1 to 2 annas easier. Withdrawals were heavy.

Quotations

	Rs.	Rs.
Clean Black Pekoe	2 0 0	
Plain B.P.	1 7 6	
Medium Assam B.P.	1 9 0 to 1 9 6	
Best CTC Assam B.P.	Not quotable	

At the Internal Sale, Dust offerings consisted of 19,500 chests. They met with a better general demand. The few bright liquoring autumnals from all districts were about firm, but the remaining offerings were an irregular $\frac{1}{2}$ to 2 annas easier.

Quotations

	1956 Rs.	1955 Rs.
Medium Donors Dust	1 8 0 to 1 9 0	2 1 6
Medium Assam Grains Dust	1 10 0	2 5 0
Best Assam CTC Dust	2 10 0 to 2 12 0	2 13 0

Other grades offered were 6,000 chests which met with only a fair demand, and sold generally at 2 annas below last rates and sometimes more. There was however a fair support for C.T.C. Fannings, which were about firm.

FREIGHT MARKETS REMAIN FIRM

THE firm tone of the market is still maintained. Two vessels have been secured for coal from Hampton Roads to the Continent for six consecutive voyages at 72s 6d, mid-1956 commencement. There was also a flurry in the grain trades. A fixture was reported for wheat in bulk from Victoria or New South Wales to the U.K. at 190s, option Antwerp-Hamburg range at 185s German grain charterers are said to have conceded 130s a ton to a Scandinavian vessel for grain from the U.S. Gulf. It is rumoured that a ship has been fixed on time charter for a trip to Japan from the West Coast India with ore at about 47s. In the Time Charter market, rates were still well maintained with a Liberty obtaining 49s 3d delivery Miyako, re-delivery Bordeaux-Hamburg range.

Stevedoring pool labour including winchmen are on strike since 16th April. Coal dock labourers have also stopped work since 17th April.

SUGAR MARKET

During the week ended 18th April, sugar sales in the Calcutta market averaged 3,000 bags daily. Arrivals a day were 1,000 bags and stocks totalled 125,000 bags. Rates for ready sugar ex-Kantapur kur delivery were Rs. 31 for ordinary grain and Rs. 32-8 for big grain. Ex-mill delivery rates varied from Rs. 28-4 to Rs. 29-4 depending on the quality and grade of sugar.

SHELLAC MARKET QUIET

During the week ended 17th April, the market was quiet. The range of quotations was as follows:

Pure Buttonlac	Rs. 128-8 buyers, 126 value, 120 buyers.
Lemon No. 1 Shellac	Rs. 130-8 to 125-8 buyers, 122 done and buyers, 119-8 buyers.
Lemon No. 2 Shellac	Rs. 125-8 to 121-8 buyers, 120-8 done.
F.O. Std. 1 Shellac	Rs. 122-8 to 118-8 buyers, 114, 110-8 done and buyers.
Pure TN Shellac	Rs. 117, 115 buyers, 113 done and buyers, 110 buyers, 105 basis done.
4% I.T.N. Shellac	Rs. 110 to 104-8 buyers, 102-8, 98 value.
No. 1 Kusmi Seedlac	Rs. 128, 126 value, 125 buyers, 121-8, 117-8 value.
No. 2 Kusmi Seedlac	Rs. 120 buyers, 118-8 value, 118 buyers, 113, 108-8 value.
Fine Bysaky Seedlac (Manbhumi)	Rs. 115-8 to 108 buyers, 103 done.
Fine Bysaky Seedlac (C.P.)	Rs. 110 to 105-8 buyers, 104 done, 100 buyers.
Ordinary Bysaky Seedlac (C.P.) Under 5%	Rs. 96-8 to 36-8 buyers.
Ordinary Bysaky Seedlac (C.P.)	Rs. 89-8 to 80 buyers.
Kireelac	Rs. 39-8 done, 38-8 buyers, 38 value, 35 buyers.

Shipments during April until the 13th were 9,606 packages comprising shellac 7,075, seedlac 2,247, buttonlac 104, and others 180 packages.

LINSEED

With the imposition of an export duty of Rs. 250 a ton on linseed oil, the trade in general and shippers in particular have been hard hit and unsettled conditions have prevailed in the market. An initial downward reaction in prices was short-lived and recovery was rapid with values gradually rising towards the level at which they stood before the duty was announced. The two main reasons

COMPANY AND PUBLIC NOTICES

MACNEILL & BARRY LTD.

NOTICE is hereby given that the Board of Directors of this Company has sanctioned payment of the Dividend on the Preference Share Capital of the Company at the rate of 5½ per cent per annum for the half-year ended 31st March, 1956.

Payment will be made on 1st May, 1956 to those Preference Shareholders whose names appear on the Company's Register on that date, or in accordance with their instructions.

By Order of the Board,

A. H. FORSTER,
Secretary.

2, Fairlie Place,
Calcutta, 12th April, 1956.

MECHANICAL

Seamless and Electric Resistance Weld Tubes for Rollers, Conveyors and other mechanical purposes.

STEEL STRIP

High Tensile Steel Box Strapping and Cold Rolled Steel Strip for manufacturing purposes

Enquiries and Orders for Screwed and Socketed tubes and fittings ex-stock may be addressed direct to our Warehouses.

Head Offices

41, Chowringhee Road, P.O. Box 270, Calcutta.
Telephone: 44-5224-5228 (5 Lines).

Branch Office and Warehouse

18, Fosberry Road, Sewree, Bombay-15.

Warehouse and Works

39, Hide Road, Kidderpore, Calcutta.
Telephone: 45-4561.

for this are: (a) continued enquiries from local shippers who are heavily committed; (b) an appreciable rise in the London price to £153. The immediate problem for shippers is how to meet the heavy losses involved against their overseas contracts which stipulated that the export duty would be on sellers' account. No fresh business has been possible recently as prices are now out of parity. Fairly large arrivals of new crop seeds continue to enter the market, and crushers have been very active with good prices obtainable locally for ready oil. Latest quotations were as follows: Ready Rs. 22-4 a maund and April-May Rs. 22-4 a maund.

HIDES AND SKINS DULL

The market in skins was dull and prices showed a downward tendency. Stocks were higher than in the previous week.

Bazaar Sales

(Between 10th April and 16th April, 1956)
Cowhides: Wet salted (Ord) 26,500 pcs. on the basis of Rs. 6-14 to Rs. 8-4; Wet salted (Slaughtered) 14,600 pcs. on the basis of Rs. 12-4 to Rs. 18.
Goatskins: Wet salted (Daissee Killed) 51,600 pcs. on the basis of Rs. 135 to Rs. 180, Rs. 255 to Rs. 290 and Rs. 300 to Rs. 350; Assam-Dinaipur 6,600 pcs. on the basis of Rs. 260 to Rs. 300.

Wednesday 18th April, 1956.

ate Ordinary Contributory and Deferred Shares respectively P. next to the name of the company
accounts closed" column indicate the months of the calendar year in which accounts are closed
indicated.

H indicates that Share capital is half paid. O, C and Dd. indicate Ordinary Contributory and Deferred Shares respectively. P. next to the name of the company indicates that the company also has Preference Shares. Figures in "accounts closed" column indicate the months of the calendar year in which accounts are closed. For. Managing Agents refer to the Key (last page) under the numbers indicated.

THE CHANGING FACE OF IMPERIALISM

BREAK-UP OF FRENCH AFRICAN EMPIRE
LEADS TO NEW CO-OPERATION

THE crumbling of European power along the Mediterranean shores of Africa, and the extension of that process down the Atlantic coast, have gathered momentum in the last two years to a degree that must astonish even the prophets of the "inevitable disappearance of imperialism." Many of those who laid their sufferings before the Banding powers last year are today free men and busy re-establishing their own independent diplomatic relations with those whose moral support they asked for. And a year from now there will be even more independent nations in Africa to join them. There might be some philosophical satisfaction to be gained from regarding these events as part of one mighty, almost automatic historical process, "the twilight of imperialism." In fact, such a view of the matter only obscures essential differences between the various parts, and hides its many causes.

Among the mundane reasons for the decay of the old order is the simple fact of arms—the transmission of military skills and terrorist techniques. This aspect is commonly overlooked in India where independence was attained under the twin auspices of Gandhianism and British liberalism. But it has played and is still playing a major rôle in the shrinking of French overseas power. It is well known that many of the rebels now operating with such success in Algeria are men who learned about weapons and tactics while fighting for France in Indo-China. The lesson does not appear to have been learned, because among the troops in Algeria are negro soldiers from Equatorial Africa. It does not require an exponent of inevitability to realise that it will not be long before the skill these men are acquiring is put to use against the French elsewhere. The part the Communist Party is playing must not be overlooked. It is already in the thick of the Algerian struggle and is fast extending its activities in tropical Africa as well.

So there are separate causes at work in almost every instance of the disappearance of colonialism. Violence is important in one place and not at all in another. Economic "exploitation" (usually grossly exaggerated) is a prominent grievance in one country, but negligible elsewhere. And so on. But enough European powers have by now withdrawn from enough colonial possessions for some sort of general pattern to be discerned in the relationships between the old ruler and the successor government after independence is achieved. Regardless of the sort of imperialist power exercised in each case, and of the means by which freedom was achieved, it appears to be the general rule that once a new and independent government is established, it seeks to restore or maintain some of the important links that existed between the two parties under imperialism. It is as though during the freedom movement the colony said to the metropolitan power: "We do not want to have anything to do with you"—but once its right to have nothing to do with its former ruler is recognised, then it says, "We want to have a great deal to do with you, but of course on different terms."

This is one of the paradoxes of the decline of imperialism, a paradox that mystifies such people as, say, the Americans, who have no experience of modern imperialism, and the left and violent nationalist wing of the freedom movement itself. The first, the Americans, are puzzled that the enemies of yesterday so readily become the friends and co-workers of today. Apart from that, it is no secret that Americans have hoped (and are in some places still hoping) that the dissolution of European imperialism will bring them substantial economic benefits. They are often disappointed to find that this is far from being the case. As for the extreme wing of the nationalists, their dismay at the same fact is usually expressed in more violent language. They see the new and close relations set up with the old ruler after independence as a betrayal of freedom's cause. Freedom for them

appears to mean literally isolation, a complete turning inwards of the national genius, a severance of all the old connections. This is frankly impossible, and when their own freely-elected governments say so, they cry treason. The truth is that the collection of realities that we loosely lump under the name "imperialism" is neither wholly good nor wholly bad. It may have been fundamentally bad, being based on a notion of racial or national superiority which then falsified and soured all the good that was in it. But the good was there. It made possible a fruitful and living exchange of ideas and commodities between men separated by great distances. The aim of the former colonialist and imperialist powers today seems to be to work with their former subjects in a free partnership to preserve and extend that good. This effort is probably the dominating theme of Twentieth Century history. It underlies all present attempts to plan international investment, which of necessity flows mainly to former colonies; it underlies most attempts at international co-operation in the United Nations, which is essentially a new way of bringing together Europe and America with their former dependencies; and it is the very substance of the conception of the Commonwealth and the French Union.

The case of the Commonwealth is familiar enough to us in India. But a more recent and striking illustration of these truths is to be seen in the negotiations between France and her North African colonies. The struggle there reached an intensity and horror that India was fortunately spared. It produced a bitterness on both sides of the Mediterranean that was never known in India or Britain. Yet the first free action of the Governments of Morocco and Tunisia was to agree with France to devise some form of "interdependence" that would bind them together scarcely less closely, though on quite different terms from the old "protectorate." The North Africans naturally insisted that independence be granted first and quite unconditionally—the question of "interdependence" to be taken up later. When a Socialist Government in Paris wisely agreed to this, there were confident prophecies that once the North Africans had secured their independence, France would hear no more of them. Such prophets evidently had no conception that imperialism contained and partly depended upon economic and cultural bonds which could just as well—in fact, very much better—exist between free and equal partners. There is still a wild and uninstructed opposition in Morocco and Tunisia which thinks, along with the French Right, that imperialism means only force. But the Sultan, in Morocco, and Habib Bourguiba, in Tunisia, think otherwise. They have realised, that the renaissance of Asia and the rebellion of Africa are not leading to the disappearance of old connections, but to the transfer of what was best in those connections to new and more equal forms of friendship.

THE CHANCELLOR'S LITTLE FLUTTER

A NOVEL SCHEME TO PROMOTE SAVING

WHEN Mr. Harold Macmillan introduced a form of lottery into Britain's financial system the moralists were shocked and the bankers were sceptical. It should be explained that the Chancellor himself rejects that description of his "premium bonds." Their issue will not be a lottery, he says, because the purchaser is not staking his capital—at the worst, he will receive no interest. But the bonds are meant to touch the gambling instinct of the public. If the public does not respond to the chance of winning up to £1,000 for a £1 bond the scheme will have failed—the public will not have been induced to save in this unorthodox manner. It is for that reason, not on moral grounds, that bankers view the scheme with reserve. A Budget designed primarily to promote saving seemed to rely on a device whose effects were quite incalculable. True, there were other inducements to save—notably the tax-concessions to various classes of persons interested in life-assurance. But the effort to entice "loose" spending money into the Government's coffers is focused on these "premium bonds." There is another curious feature of the scheme: it has no relevance whatever to 1956. That the Government is willing to spend a large part of a year preparing the organisation for handling the bonds is evidence that its intentions are serious but not that it feels any sense of urgency in getting results from the scheme.

The essential requirement is an immensely-elaborate filing system. The card-index system already in being for handling National Savings Certificates is reputed to be the largest in the world, including cards for approximately 19 million holders. A comparable organisation, with a separate staff of perhaps 1,000, is planned for handling the bonds; for the Government is unwilling to rely on bearer bonds and insists that each bond must be registered. What benefit can be expected from this big and expensive organisation when it is eventually in being? Estimates of annual savings of the order of £50 million are, of course, mere guesswork. Some such result, as net gain, would certainly be worth the effort and, most people would agree, the sacrifice of principle. But it will never be possible to ascertain how much money that would have been invested in other forms of saving (or is, indeed, already invested there) has been diverted to this more speculative form. The intention, undoubtedly, is to attract money that is at present gambled in football pools—roughly £75 million annually. But nobody knows how much inflationary spending results from these pools without knowing how much of their prize-money is saved. Bankers of the older generation are appalled at the idea that a country of Britain's financial standing must appeal to its people's gambling instinct to stabilise an economy that hovers periodically on the brink of crisis. They must admit, however, that other countries—as respectable as those of North-Europe, as firmly managed as the Soviet Union—have applied the principle with advantage, some of them over most of a century. Britain can no longer afford to be fastidious. Unorthodox solvency is better than insolvent orthodoxy. The scheme may be a big success, or a big failure. As the prospective bondholder has nothing to lose but his interest, so Mr. Macmillan has nothing to lose but his prestige. It is worth trying.

However, a Budget that gambled on the success of a new idea would be, in this present situation, irresponsible. Mr. Macmillan's Budget was, in fact, more firmly based than was immediately apparent. The few changes in taxes were economically insignificant (though of considerable social importance); but merely by refusing to "give anything away," in a period when revenue was buoyant and expenditure had at last been stabilised, the Chancellor could exert a deflationary effect on the economy. On the normal basis of accounting, he covered not only current but also capital expenditure by current revenue—thereby (if the estimates are realised) compelling the community to save for some of its capital projects. There are still some public projects that must be separately financed, and those for electricity and gas, for which the Treasury has now taken direct responsibility, account for the apparent overall deficit of some hundreds of millions of pounds.

It is not, in fact, the gamble so much as the calm assurance of the Budget that has left its impression on opinion. None of its actions will have any appreciable effect on the public's spending or on the Government's revenue within, say, the next half-year; the increase in the tax on profits will have virtually no effect until next year. Yet the Chancellor found time to consider such problems (admittedly, long-needing attention) as provision by self-employed persons for their retirement. He is also making time to consider, with his colleagues, the basic problem (which is urgent now, as it has been for years past) of excessive spending by the Government. Even the new

method of financing the national industries' expenditure suggests a leisurely approach; for inflation could be stimulated for a time by further increases in the floating debt—by the procedure, as someone said, of issuing a three months' bill to build a power-station. One can only hope that this confidence is justified. The public believes that the dreary succession of tax-increases is at its end. But what of the dreary succession of price-increases due to other factors? A Budget that is much more austere than Mr. R. A. Butler's pre-election Budget a year earlier gives no stimulant to inflation (other than the risky increase in the tobacco duty and in the price of bread, which add force to wage demands), but it does little at present to restrain inflation. The spontaneous reaction of the business community that "the worst was over" was not altogether reassuring. What is needed still is a feeling of doubt that will restrain unnecessary ventures. So those "premium bonds" may well be needed—when, eventually, they appear. The Chancellor was not only inviting others to gamble, he was indulging in a little gambling himself.

ECONOMICS OF THE D.V.C.

A SEEMINGLY unending rise in the cost estimates of the D.V.C. project has been the main point of criticism of this gigantic undertaking in recent years. Much of the criticism is harsh and ill-informed. Often it betrays a lack of understanding of the nature of the job in hand. But it has not been without its good aspect either. It has at least forced the authorities to pay more careful attention to the economics of the project. A serious effort is now being made to see that costs and returns are properly related to each other, not only from the point of view of the net social marginal product of the undertaking, but also from the more orthodox consideration of adequate financial returns.

The Chairman, Mr. P. P. Verma, at a recent Press Conference in Patna, made precisely this point. His answer to the criticism of rising cost estimates was that they were due to a number of factors which could not have been foreseen at the time the first estimate (Rs. 77 crores) was drawn up, and the subsequent series of upward revisions which have led to the present estimate (Rs. 102.8 crores excluding Rs. 35 crores for the Konar hydro-electric power station), was largely due to the same reason. With this view of Mr. Verma, there is very little reason to disagree. It is doubtless true that for a gigantic project of the nature of the D.V.C. this country had no experience of any kind and had more or less to grope its way through to the stage it has now reached. It is also true that a T.V.A. engineer of the experience and calibre of Mr. W. L. Voorduin had prepared the blue-print and had himself been associated with the work in its initial phases. But that is no respectable argument against the rises in costs that have occurred due to price changes subsequently. There has also been a detailed review of the project which has necessarily involved some additions and improvements on Mr. Voorduin's original blue-print. Corruption and administrative inefficiency are the political busybody's usual airy charges and the D.V.C. has not escaped them. They probably do exist in this undertaking as in all State-run organisations. But talking about them has probably been overdone. Besides, Mr. P. S. Rau, during his time as Chairman, did much to streamline the administration and raise its level of efficiency and honesty.

When all is said and done, the only justification for the cost is the return it is likely to yield, financial and social. Mr. Verma maintains that this investment of Rs. 100 crores or so, is capable of creating new wealth of Rs. 25 crores and of yielding an annual return of 8 percent eventually in financial terms, and if the investment on flood control and compound interests paid by the D.V.C. on capital are excluded, not less than 3 percent will be the annual rate of yield. Even the latter is considered good. This, he points out, excludes other benefits such as soil conservation and other allied advantages. Mr. Verma's estimates may not be correct to the last pie, but it is difficult to contradict him on this point. Power generation from this source is proving itself commercially profitable already. The D.V.C. has sold Rs. 3 crores worth of power so far, and the West Bengal Government has contracted to buy irrigation water soon. It has been estimated not only by Mr. Verma but by other equally competent quarters that the demand for power within the next five years in the region the D.V.C. is designed to serve will be much more than the D.V.C.'s present installed capacity can provide.

The D.V.C. system, it is feared, even when completed, is not likely to control completely the major floods of the Damodar and its turbulent tributaries, and this, after all, is the major reason behind the scheme. Until the Panchet and Maithon dams have been completed and the efficiency of the project tested under all conditions this will remain a debatable point. The authorities hold that other small works are still required to complete the system. If this is so, and the estimates for the work are reasonably accurate, it

would be a pity not to spend the extra money when so much has been laid out already. The test must be the efficiency of the system for the job it has to do; it is no use spoiling the ship for a ha'porth of tar.

The D.V.C. work, on the whole, has so far made satisfactory progress, and a considerable part of the first phase has been completed with the opening of the Tilaya and Konar dams, the first unit of the Bokaro Thermal plant and the Durgapur barrage. It promises to transform the valley into one of the most prosperous regions, industrially and agriculturally, in the country. Some have even seen the visions of an Indian Ruhr rising out of an area which was the scene of regular devastations by natural calamities even in recent years. Considering its environs, this is probably not an extravagant hope.

SOCIALISM'S ADDLED EGGS

THE move towards what is hopefully conceived as a more egalitarian society may be said to have taken further definite shape this month as discussion has proceeded on the second five year plan, the Statement of Industrial Policy, and the nature of future taxation proposals. A country where the structure of direct taxation on individuals is already among the heaviest in the world has been told by its Finance Minister, Mr. C. D. Deshmukh, that he proposes to raise Rs 50 crores each year in new levies. The cheerfulness temporarily encouraged by the 1956-57 Budget not being as bad as had been feared has almost vanished; though some of the braver newspapers are busy offering their readers the solace that heavier taxes will fall on stronger shoulders as the economy progresses in future years, so there is not much to worry about. A spark of realism in the whole doleful discussion was seen in the Finance Minister's speech on Saturday when, replying to the debate on the Finance Bill, he pointed to the practical limitations governing the proposal to fix a ceiling on incomes. On the basis of Press reports, it seems that his remarks related to incomes from total property, and were to the general effect that to restrict incomes by putting a ceiling on all property would not be feasible at the moment since it would involve heavy compensation. The main aim of a ceiling on land holdings, he declared, was not to limit incomes but to ensure that the limited scope for agricultural production was not monopolised by a few. The remarks have given rise to hopes that the impracticability of imposing ceilings on many types of incomes will be better appreciated when questions of actual implementation arise.

It is perhaps regrettable that Mr. Deshmukh did not emphasise at some length the strong disincentive to work, initiative and enterprise that such proposals constitute. But this may have seemed like flogging a dead horse before the high-minded determination of the politicians. Probably, in his position, he also could not have mentioned the dishonesty and evasion which spongy taxation measures breed, but the point was nonetheless one worth making. On a later page today, our New Delhi correspondent explains Mr. Nicholas Kaldor's reasons for believing why an annual tax on total wealth, as a supplement to income-tax, should help check evasion. But it seems that Mr. Kaldor has a flatteringly high opinion of the administrative machinery; as Professor Mahalanobis once seemed also to have but now denies vigorously he ever did. The fact is that as newer and heavier taxes—whether on income, expenditure or total wealth—continue to be piled on an infinitesimal proportion of the people, more and more will be encouraged to evade them, and only the honest will suffer. Unless the administrative loopholes which permit evasion can be closed, the levies will fall inequitably; and if past experience is any guide, the ceiling on incomes will end up as not much more than a ceiling on salaries incomes. It is for the hens who are trying to hatch the eggs of egalitarianism to judge whether these are the sort of chicks they want.

CURRENT COIN

Bigger Demand for Rubber Products.—There are three main points of interest in Mr. Cecil Stack's address as Managing Director to shareholders of the Dunlop Rubber Co. (India) Ltd. in Calcutta yesterday (the speech appears in full on a later page). Firstly, the company has made very satisfactory progress during the past year. Secondly, despite a cut in tyre prices enforced by the Government, profits and dividends have been maintained. Thirdly, the prospects of an expanding market seem very good. The company's factory worked at full capacity throughout 1955. Rubber usings rose by 10 percent above the previous record of 1954, but "we had difficulty in meeting the demand for our products." Among the tyres Mr. Stack singles out for special mention are the Trakmaster Giant, the Roadster Giant and the tubless, as well as cycle, tractor, off-the-road and aero tyres. Sales of other products have shown substantial increases. The remarkable success of

Dunlopillo latex foam cushioning is perhaps to be ascribed partly to a high-pressure sales and publicity campaign, combined with the fact that it has become more economical. A larger amount of belting has been sold, and the output of braided hoses is being diversified. The company has further expanded its activities during 1955 to cover the highly-specialised field of anti-corrosive and abrasive linings. The general trend of Mr. Stack's speech suggests that substantial expansion is in prospect, as indeed may be expected of a company which is among the most progressive of rubber manufacturing concerns in the country today. In an address as chairman of the Association of Rubber Manufacturers of India on Tuesday, Mr. Stacker spoke broadly on the outlook for the industry as a whole. "I am convinced," he said, "that we have ample reason to be optimistic about the scope and expansion of our industry during the period of the second five year plan." Over the next five years, motor vehicle production is expected to rise from 3,000 units to 57,000 units, and bicycle output from 60,000 to one million; this will mean that more tyres and rubber accessories will be needed. General industrial expansion will increase the demand for conveyor and transmission belting, industrial and domestic output of raw rubber, and official investigations into the possibility of setting up a synthetic rubber plant are being followed with close interest.

Hemp Consumption Rising.—Mr. B. L. Jalan, president, told the annual general meeting of the Indian Hemp Association last Saturday that more and more hemp was being used by domestic manufacturers of paper, cordage and rope. The time might soon come when production in this country would not be adequate for domestic and export requirements. No systematic effort had yet been made to increase the acreage under hemp, or to improve methods of cultivation. If proper attention was given to this problem, it would be possible to have regular plantations for sann hemp and for Indian sisal. Mr. Jalan claimed that price variations in the case of Indian hemp had been smaller than those for other fibres. This would be a strong point in its favour during the present phase of increasing competition. There had been a sustained rise in world fibre production and consumption. Russian hemp had become available in certain markets, which indicated that the supply of fibre was fast increasing. Mr. Jalan commended the Government of India for permitting freely the export of old hemp rope cuttings. He claimed that the paper industry's fear that such exports would affect its interests by making raw materials dearer for it, had been proved wrong. Collections of the cuttings amounted to 6,000 to 8,000 tons a year when demand was good, while the requirements of paper manufacturers could not be more than 3,000 tons. Mr. Jalan suggested that, on the basis of past experience, the export of old hemp rope cuttings should be allowed on a free and permanent basis in years to come. The paper industry could secure its supplies by a well-considered policy of maintaining adequate reserve stocks. The enforcement of grade specifications, he said, had improved the reputation of Indian hemp in world markets. He felt that specifications under the Agmark should refer only to length, colour, refraction content and the broad area where the product had been grown.

Joint Stock Business.—The presidential speech of Mr. Madanmohan Mangaldas to the annual general meeting of the Ahmedabad Mill-owners' Association voiced some of the common grievances of the business community against some recent steps taken by the Government—the new Company Law and the 1956-57 Budget. Mr. Mangaldas was right in describing the former as the most significant event in 1955 from the business man's point of view. Being one of the "most complicated, cumbersome and voluminous pieces of legislation," with 658 sections and 12 schedules, the new law, as he put it, leaves "considerable room for administrative discretion." While not wishing to predict the effect it will have on the growth of joint stock enterprise in the country, he hoped that the new Act would only prove "the hedges and not fetters" on private enterprise, as the Finance Minister had assured. It can, however, be said, he maintained, that the new law will not particularly encourage the growth of joint stock companies, which is what the Government is supposed to desire. Taxation of bonus shares and of dividends above 6 percent of the paid-up capital is also unlikely to help the expansion of the joint stock system of business. Mr. Mangaldas meant the same thing when he said that these taxes would not only prove to be a disincentive to the ploughing back of profits within the industry, but will have "the effect of undermining confidence on which investments are made in the private sector."

Growing World Prosperity.—Mr. Eugene R. Black, president of the International Bank for Reconstruction and Development, last week presented to the U. N. Economic and Social Council what must be one of the most encouraging assessments of world economic prospects heard in recent

years. Although forecasting future economic growth is always a chancy business, he declared, in the absence of a major war, that "the prospect appears to be that we may go on enjoying a high rate of increase in production, income and trade." Substantial increases in productivity and high demand are expected to continue in the United States and western Europe; "it is still difficult to foresee an overall rate of growth of less than 3 percent to 3½ percent a year, and it may well be higher." The prospects in Asia and the Middle East are more difficult to assess, Mr. Black declared. Past experience gives reason to believe, however, that those countries whose governments are pushing development in an orderly fashion and with continuity of purpose are likely to maintain a rapid rate of growth. India and Japan are cases in point. Even if India is not able to reach the target of a 4½ percent to 5 percent annual increase in total production set in the second five year plan, there is little doubt that it will at least realise an expansion of national income at a higher rate than previously and substantially greater than the rise in population. Many of the other Asian countries have taken important steps to organise themselves for a systematic and sustained development effort, the effects of which should be considerable in the next decade or two. The oil-producing countries of the Middle East, in Mr. Black's opinion, are in a good financial position to advance their development programmes at a faster pace than during the past ten years, and in the other countries of the Middle East too, there appears to be a greater and more vigorous push than before to expand productive output. The prospects for different countries vary greatly—important producers of wheat and cotton, for example, may suffer more in the future than they have up to now—but the overall impression is that the economies of Asia and the Middle East will grow more rapidly than in the past, although as a group they are not likely soon to reach the rate of growth of the industrial world. The important thing, according to Mr. Black, is that the under-developed countries, as a group, in planning their development activities, should be able to look forward with confidence to the support which an expanding world economy and an expanding world trade can supply. This expansion should provide a favourable environment for the introduction of new techniques into under-developed countries which are willing and able to take the necessary steps to encourage productive investment. It should mean, in those same countries, greater scope for World Bank investment as the tempo of their economic activity increases and with it their need for basic capital facilities.

Coal Statistics for February.—The output of coal in Indian collieries increased from 3,206,558 tons in January 1956 to 3,357,546 tons in February, according to the statistics released by the Chief Inspector of Mines. But despatches fell to 2,697,020 tons from 2,794,074 tons. Coal stocks at pitheads amounted to 3,812,570 tons at the end of February. About 837 collieries were reported to be working with an average daily employment of 350,559 workers. Output per man-shift was estimated at 1.08 tons for put per man-shift was estimated at 1.08 tons for miners and loaders, 0.58 ton for all workers underground and in open workings, and 0.38 ton for all persons employed, including surface workers. The percentage of absenteeism was 12.96. Nine coke plants at collieries and elsewhere produced 353,204 tons of hard, soft and other kinds of coke during the month and despatched 170,602 tons.

CALL TO INDIAN ENTERPRISE

WE have received a copy of the prospectus of this Company (the Asiatic Fire Insurance), and hail it as a healthy and hopeful sign of the times. It is the creation of a number of wealthy native merchants and others of Bombay. The subscribed capital is Rs. 20,00,000. Mr. David Sassoon is the Chairman, and the names of Sir Jamsetji Jeejeebhoy and Mr. Fazulbhai Visram are among the Directors. The only Europeans on the Board are Dr. Sidney Smith and Mr. W. R. Rae, the latter ex-officio as general manager. Here is a good, sound, wholesome enterprise started by men of large means and high respectability, which with ordinary and good management contains every element of success. It supplies a want which is felt throughout India. In the above prospectus the first reason given for promoting this Company is that "the capital is held in the country, and is under control, and it affords a means of retaining the profits on local industry and enterprise in this country." It is intelligent native capitalists who would only consider this country annually to money already levered up capital which they pay for interest on indolent or apathetic to supply, have been too understand what we mean by a want which is felt throughout India. There is any amount of room in India for more enterprise of a similar nature.

"The well-known trade name 'Sirocco' has been synonymous with tea machinery for the proverbial three-score years and ten, and with fan engineering for over half a century. Coupled with the name of Davidson & Co., Ltd., Sirocco Engineering Works, Belfast, 'Sirocco' has become a hall-mark of quality throughout the world for the wide range of products manufactured by this old-established and progressive firm. There is a 'Sirocco' machine for every stage in the preparation of the tea leaf."

Without Prejudice

DIRECTORS' LIABILITY FOR COMPANY'S OFFENCE

SENDING A FIRM TO PRISON
(FROM OUR LEGAL CORRESPONDENT)

THE principle involved in this case is of considerable importance to company directors. It concerns the question of the personal and criminal liability, if any, of directors for statutory offences committed by the management. This particular case related to the alleged unauthorised, and therefore criminal, use of a boiler in contravention of the Indian Boilers Act. The judicial observations arising from it on the position of directors are very instructive. As it is the object of these periodical notes to enable the commercial reader to solve legal problems for himself before he reads the judicial conclusion, it may be helpful if we say a preliminary word or two about limited companies and directors.

It is not easy to define a company. "Company" is one of those nebulous and vague words like "union," "guild," "society" and "corporation" denoting—each with its special shade of meaning—the association of individuals in pursuit of some common object. A "limited company," we may say, is an association of persons incorporated to promote, by joint but limited contributions to a common stock, the carrying on of some commercial enterprise for the acquisition of gain. The carrying on of this enterprise may result in the commission by some subordinate of a crime, some breach of the innumerable statutory regulations which govern industry, and non-compliance with which may be visited with the penalty of the fine or even jail. On whom is this penalty to be inflicted? Of course, the penalising statute may itself specifically prescribe who shall be deemed the offender and take the rap, as is the case, for instance, in some of the offences under the Industrial Disputes Act. But more often than not, the Act is silent or, worse still, vague on this point. Who, or what, is to be prosecuted? Not the shareholders, surely. Some-

where in an English village rectory there may be an old and revered gentleman owning a few shares in a limited company operating factories in India. A serious breach of the Factories Act is committed. A prosecution is ordered. This old gentleman and a host of other individuals constitute the company. They are in fact the company, which at shareholders' meetings they hear politely described by the chairman as "your company"; and the factory, the subject of the offence, as "your factory." Are they, then, the malefactors and punishable as such? Of course not. We have only to ask ourselves the question to see at once the absurdity of it, though from a logical point of view the absurdity is, perhaps, after all not so plain. Who, or what, comes next as our potential law-breaker?

"The company," you may reply. Well, a sour old judge observed years ago, in reluctantly dismissing a charge against "X" Ltd., that "a limited company has neither a body to be kicked nor a soul to be damned." But many waters have passed under the bridges since then. A company, though still a mere legal abstraction without mind or will, may be made liable in civil suits for damages for malicious prosecution, nuisance, fraud, negligence, trespass and other civil wrongs. The common-sense of the thing is that "the company" is the *nomen collectivum* for the shareholders. It is the shareholders who have put the directors there to carry on their business and they, the shareholders, must be answerable collectively for civil wrongs done negligently, fraudulently or maliciously by their agents. Collectively, not individually, and in civil suits. But can an abstract entity such as a company commit a crime? We will discuss that point later.

And that brings us to the directors of the company. They may seem to you the natural prey as the accused in a prosecution for a statutory offence committed in the course of the company's business by the company's management. Let us look at the position of the directors. Subject to the articles of association, they have full authority and power to carry on the ordinary day-to-day business of the company and the general power of management. They are not trustees for the shareholders. They are "commercial men managing a trading concern for the benefit of themselves and the other

shareholders." They have to carry on the company's business. To do this, they must have a free hand, and subject to the memorandum and articles, full discretion to deal with the exigencies of any emergency; discretion, however, which must be exercised with a single eye to the benefit of the company. With these general observations, we will now consider the case itself.

The four petitioners were the directors of Messrs. Bharat Woollen Mills Ltd. of Belgharia, 24 Parganas. On 22nd March, 1954, the Chief Inspector of Boilers, West Bengal, wrote a letter of complaint asking for the prosecution of the directors of the company, a public limited company registered under the Indian Companies Act. The letter alleged that as a result of inspection of the company's Mill No. 2 on 24th December, 1953, it was discovered that a particular boiler located in the mill was actually steaming without a certificate having been taken out authorising its use. In these circumstances, it was prayed that a prosecution might be started against the petitioners for infringement of the Indian Boilers Act. On receiving the complaint, the letter was forwarded by the District Magistrate to the S.D.O. Barrackpore, for disposal according to law. That officer made an order on 9th April, 1954, in which it was stated that he had taken cognisance of the alleged offence under section 23 of the Indian Boilers Act against the petitioners and summoned them to take their trial. The petitioners thereupon obtained a rule in the Calcutta High Court against the State to show cause why the proceedings against them should not be quashed.

The offence alleged was a serious one. The relevant clause of the Boilers Act says that "...no owner of a boiler shall use the boiler or permit it to be used" without a certificate or provisional permit order. Infringement is punishable by fine up to Rs. 500, with an additional fine up to Rs. 100 a day in the case of a continuing offence. The word "owner" is defined in the Act as including "any person using a boiler as agent of the owner thereof....."

The four directors, by their counsel, Mr. A. K. Dutta, contended that the prosecution against them could not be maintained in law: that a company registered under the Indian Companies Act is a "person"; and that, being so, the person affected by the contravention would be not the four directors, but the company itself. The Indian General Clauses Act defines "person" as including "any company or association or body of individuals whether incorporated or not." Surely, it was argued, a director or all the directors do not constitute the company. A company is a legal entity which can very well be prosecuted if it is alleged that it is guilty of acts which make it punishable under the provisions of a penal statute. Could it be said that because these four gentlemen happened to be directors of the company, and though their presence and participation in the actual use of the boiler was not even remotely suggested, the prosecution could be permitted to proceed against them?

"No," said the High Court. "In order that these petitioners can be said to be the 'owners' within the special meaning of the word as used in the Act, there must be something said or suggested which will connect them with the actual use of the boiler. There is no such allegation or suggestion made against these petitioners.....The real offender in every case should be prosecuted. According to the allegations, it is the company which was, in fact, steaming the boiler without having a current certificate on the date of the alleged occurrence."

The proceedings against the four directors were quashed. "It is left," said the Court, "to the authorities concerned to consider if they should prosecute the company." This is instructive and seems plain commonsense. But it leaves us in the dark on one point. What is to happen when the prescribed penalty is imprisonment? You can't send a company to jail. Who is to suffer then? No one, apparently.

[43.A.I.R. (Calcutta) 1956 (April) 137.]

PAN AMERICAN DECLARES DIVIDEND

At a meeting held recently, the directors of Pan American World Airways declared a dividend of 20 cents a share. This is the forty-fifth dividend paid by Pan American. Four dividends of 20 cents a share each were paid in 1955. Dividend payments have been made each year since 1941.

Pan American World Airways announced recently that it flew 687,202,000 passenger-miles and 22,137,883 plane-miles in the fourth quarter of 1955. This compares with 899,165,000 passenger-miles and 23,046,028 plane-miles flown in the third quarter of 1955 and 568,249,000 passenger-miles and 18,289,444 plane-miles flown in the fourth quarter of 1954.

The stockholders of Warner-Lambert Pharmaceutical Company and the Emerson Drug Company of Baltimore city have respectively approved and adopted an agreement of merger. It was announced on 28th March, 1956, by Mr. Alfred E. Driscoll, Warner-Lambert President and Mr. Francis H. McAdoo, Jr., Emerson President.

THE United Kingdom's "Monte Carlo" Budget has caused a good deal of fluttering in the theological dove-cotes, as well as amusement among the less tight-lipped both in Britain and abroad. I do not agree with Mr. Macmillan that his new premium-bond proposal does not constitute a lottery because, at worst, the purchaser has nothing to lose. In fact, it seems he is to be parted from the interest he would get if his money were invested elsewhere, plus any deterioration in the value of his bond holding caused by rising prices. These two factors together could account for a loss of anything up to ten percent per annum, judged on the movement of prices in the past few years. But the spade is none the less useful for having to be called by another name. If it involves something less than honest terminology, it does represent a welcome breath of political realism. People will gamble whoever disapproves, just as they will continue drinking no matter how strongly Prohibition might be enforced. Why, then, should not good use be made of the fact? There could be even further beneficial effects—perhaps a little realism could be introduced into political thinking; and not only in Britain either. I remember reading one of the occasional humorous leaders in the London Economist setting out an election manifesto for a new political party whose policy was obviously going to be to deal with people as they are and not as we would like them to be. It proposed the reform of electoral procedure to accommodate the estimated ninety percent of the electorate which never votes for a candidate it likes, but always against one it does not like; to pay M.P.s small salaries in office and large pensions out of it, on the principle that the best men to have in politics are those who know they will gain financially by losing their seats; to return nationalised industries to private ownership so that better public control can be exercised over them; and to promote a "Pro-Dumping Bill" to encourage foreign countries to dump their goods in Britain and so bring prices down. I suspect all this might be carrying realism a bit too far. But there is much to be gained from a little more of it, and I think Mr. Macmillan stands to make that gain.

If the gamblers have reason to thank Mr. Macmillan, the devotees of the "fragrant weed" have not, unless they happen to be one and the same person. A three-shillings-a-pound jump in the tobacco tax means cigarettes will now cost 3s 10d a package of twenty. This may make Britain's smokers look with envy at their Indian counterparts who are so much better off, even though here, too, the tobacco tax shows a steady upward tendency. I know of people who, certain in their own minds as this year's Budget day approached that there would be an increased levy on their favourite means of relaxation, started looking bleakly for cheaper brands. When they discovered Mr. Deshmukh's unexpected but deliberate omission to mulct them, they knew not how to praise sufficiently his profound knowledge of economics and finance. I am afraid I am taking a long time to come to my point. It is this. Although the U.K. Budget provisions were public property on 17th April, dealers and retailers are still selling current stocks of tobacco and cigarettes at pre-Budget rates, which seems to be in striking contrast with the usual practices in this country. Here, most retailers' stocks begin to disappear well before Budget day and there is invariably a temporary famine. Afterwards, these reappear with amazing suddenness to be sold at a high profit. While this may indicate a comparative laxity in the business morality of the offending retailers, I imagine that the Enforcement Branch of the police is not as alert as it might be. Take for example the current domestic coal crisis in this city or the frequent variations in the prices of

A DITCHER'S DIARY

medicines and books. Many of the coal dealers are reported to have taken advantage of a temporary shortage arbitrarily to put prices up. As for imported books and medicines, their quotations are hardly ever the same in two different shops; rather like the time on two different public clocks in Calcutta.

If Mr. Krushchev was able to get away with outrageous lies about the western allies' pre-war policy here in India he should have known better than try the same ones in London. Memories of the events which led up to the second world war are sharper there, if only because there are many still in politics today who had a hand in them. It is odd that when so much is being done to besmear Stalin's policies, Mr. Krushchev should have taken the risk of ruining the whole visit by supporting them against those of Britain and France. It is an outright lie to say that the two allies urged Hitler to attack Russia before the war; what is nearer the mark is that Britain planned to go to the aid of beleaguered Finland early in 1940 (which was of course before the war so far as Russia was concerned) and was frustrated in her plans by the German attack on Norway. Had Mr. Krushchev relied on this little-known piece of history to prove the anti-Russian sentiments of Britain and France he would have been on firmer ground, although he would still have difficulty in damning the spirit behind the intention when Russia was waging open aggression against a gallant small nation completely cut off from powerful allies, and had entered into a non-aggression pact with Hitler to secure her western frontiers while she did so. World history was spared this Quixote-like action of the Chamberlain Government—one of its last—because the troops, already loaded, were diverted to Norway. After that, there was no question of whom Britain should fight, Mr. Churchill settled it for the duration. But it is doubtful if Mr. Krushchev is really interested in the facts of history; he is one of those fortunately rare people who attain the status of statesmen without ever out-growing a tub-thumping past. It is good to see that Britain, unlike India, has not let the visit pass without putting in a word for the millions of people under Soviet domination, especially those at present in prison for no greater crime (let it be carefully noted) than professing socialism. Mr. Krushchev's refusal to entertain any pleas on their behalf will have done his country's policies much harm in the eyes of those who, on principle, are chronically unable to believe anything bad of the Russians. The British visit should have convinced Messrs Bulganin and Krushchev that expansive speeches and such gestures as the disclosure of the Cominform are no substitute for civilised action on the part of the Soviet Union itself.

Last week Dr. J. F. McClendon, an American scientist, announced that tea contains a high proportion of fluorine, a chemical supposed to prevent tooth decay. I hope that despite the occasional boredom noticeable in current tea advertisements, this will not hustle the Tea Board or any of the tea blenders into launching a new campaign featuring the catchy slogan "Tea for Teeth". The reason is not that it may produce an agitation by the country's toothless who might conceivably feel entitled to a discount, or by the dentists who fear their occupation might go if all the human teeth are firmly in their places. It is simply that, so far as I can see, tea must continue to recommend itself as what it primarily is—a cheering beverage that helps make life in general so much more worthwhile. If, in addition, it promotes dental health, it does so only incidentally and the point

hardly calls for any stressing. I have never considered that even the most incandescent patriot drinks one drop of tea more just because it happens to be India's second largest foreign exchange earner. An advertising appeal not based on tea's goodness as a beverage may serve other admirable purposes, but it can hardly expect to win tea fresh converts. It is, therefore, interesting to note that the Tea Board has just released a campaign in favour of iced tea, although I am a little puzzled that it should have waited so long to do so. What surprises me even more, however, is that this campaign seems to have been launched without making any visible arrangements for iced tea being served anywhere, in hotels or restaurants. I have always been served a cup of cold coffee or Ovaltine whenever I have asked for it, but never—not even after the Tea Board's campaign started—a tumbler of iced tea. May I suggest that "conspicuous consumption" is not only a recognised economic motive; it is also a powerful ally of publicity. I remember that some years ago when Mr. Gervas Huxley, then Organising Secretary of the International Tea Market Expansion Board, made a report on tea's progress in the U.S.A., he specifically pointed out that it was not gaining ground fast enough because it was not as easily available as any other competitive beverage. He even suggested the dime-in-the-slot system of liquid tea sales. Iced tea will be brought into homes, it seems to me, only by those who have acquired the habit in restaurants. Might I suggest that the Tea Board persuade as many of these as possible to introduce such a cooling beverage before the monsoon starts?

I should like to believe President Eisenhower when he says that "war in our time has become an anachronism." But I do not feel that I can, hydrogen bombs notwithstanding. I think it was Alfred Nobel, the inventor of dynamite, who first had the idea that war would end when quarrelling nations had it in their power to exterminate each other. He used it as a moral justification for what he gave the world and the huge fortune he made by doing so. In his limited way, he no doubt sincerely believed he had found the truth. But he was proved wrong about the power of high explosives and I suspect the President is going to be just as wrong about that of the hydrogen bomb. What did happen, of course, was that war changed and that. I consider, is what will take place again. The last few years should have taught us how simple it is to carry on limited conflicts. We have lately had a fine series of them and they have proved both cheaper and more effective than the larger world-wide variety. In most cases, of course, one or other of the big powers has been actively promoting the whole thing and has been able to do so without committing its own considerable forces. War is, after all, only the ultimate expression of power, and there is no sign that nations will ever be willing to settle their grievances on any other basis than that. President Eisenhower's further assertion that war can serve no useful purpose is also one I must challenge. A war in the Middle East now would be very useful for the Soviet Union just as the recent war in Indo-China was. It would weaken British patronage in the area, it would shake the established order and it would inevitably lead the way to a greater measure of Russian influence. And all this without a single Russian soldier being forced to fire a shot in anger. The hydrogen bomb, or any subsequent annihilation weapon, will not make war unlikely nor less useful as an instrument of policy. The major powers may hesitate a little more before doing their own dirty work, but they will be correspondingly more willing to arm others to do it for them.

THE DITCHER.

COKE OVENS

for the

TATA

IRON & STEEL CO LTD

At the Tata steelworks at Jamshedpur Simon-Carves Ltd are to reconstruct the No. 2 and No. 3 coke oven batteries built by them twenty years ago, and are also to build an extension of 18 new ovens. This important new contract covers a total of 124 ovens.

All four of the existing batteries at Jamshedpur, comprising 216 ovens, have been built by Simon-Carves Ltd, who completed the new No. 4 battery in 1953 and are at present reconstructing (under a separate contract) the original No. 1 battery of 54 ovens which they built in 1934.

ed, for the outlays themselves are not being appreciably reduced; but the method of financing them will strengthen the authorities' control of the monetary system by consolidating the national debt. Hitherto the electricity and the gas boards (though not the coal board or the atomic energy authority or the railway executive) have financed their capital plans by large-scale advances from the banks, which are later repaid by issues of long-term stock. In future, the Treasury will provide what they need. So, when these items have run off, the banks' advances will be considerably reduced, and neither the authorities nor the stock market will suffer the embarrassment of arranging permanent loans in difficult conditions.

The new arrangement will work better than the old, provided that the Chancellor recognises its more technical implications and reacts to them; otherwise it can be dangerously inflationary. The Treasury's method of financing current deficiencies—whether revenue or capital—is to issue Treasury bills, which tend to make the banking system very liquid—especially when advances are reduced; and a liquid banking system tends to seek outlets for new lending. The Chancellor referred, obliquely, to recent discussion on prescribed liquidity ratios when he reminded the banks that the Bank of England Act, 1946, empowered the Treasury, through the medium of the Bank, to compel them to maintain a specified minimum ratio of liquid assets to deposits. Some people regret that he does not, at present, intend to use that power. He must obviously apply himself very soon to the task of funding a part of the existing floating debt, and he will evidently need to fund it more regularly when it is fulfilling the function of the banks' loans to the nationalised bodies.

The Final Step

It is slightly ominous that no one has stressed this Budget as a stage on the way to convertibility

of sterling. A couple of years ago, the natural question would have been whether it prepared the ground adequately for the final step, but the troubles on the way have made the objective seem remote. In the world at large, however, events have not stood still. Gradually, but not imperceptibly, the German mark has been extending its range until it is an international currency comparable with sterling. The mark "of limited convertibility", which can be used almost anywhere outside of the dollar area, has established a zone of transferability which is very similar to sterling's transferable account area. Some observers believe that the Germans may "jump the gun" and make the mark fully convertible in advance of sterling.

Stocks and Shares

PRICES LOWER IN MOST SECTIONS OF STOCK MARKET

UNDERTONE CONTINUES UNCERTAIN: VOLUME OF BUSINESS MUCH REDUCED

Wednesday Evening.

SPECULATIVE prices have sunk lower in today's limited stock market dealings. The undertone of the market is one of uncertainty, mixed with a good deal of apathy. The feeling among operators seems to be that it is little use taking an interest in the market at the present time when the expected Government announcement on industrial policy is almost bound to send prices against them within a day or two at the most. The news from New Delhi about the States Reorganisation Bill is not reassuring, especially the possibility of Mr. Deshmukh once more tendering his resignation and this time, perhaps, having it accepted. The prevailing level of carry-forward charges, which has been the cause of one operator's holdings of Irons being put up for auction, is also helping to depress sentiment.

Other equity scrip has been largely maintained although the volume of business has been small. The jute and coal sections have been neglected, but engineering and miscellaneous shares continue to attract attention. Tea scrip has also tended to be neglected, but prices have shown little sign of following the quantity of business downwards. Government securities have continued firm in response to official support.

Details of the week's trading follow.

The Government securities market continued firm and once again prices were marked up on a broad front. Inquiry was of a general nature and despite a fair volume of business, trading was hampered by shortage of scrip. Three percent Conversion Loan 1988 was taken higher to Rs. 77 while 3% Non-terminable Loan was asked for at Rs. 77-8 without attracting sellers. Short-dated loans continued in strong demand with 3% 1957 quoted at the higher rate of Rs. 99-13 and 3% 1958 at Rs. 99-11. In medium-dated loans, 3% 1959-61 improved to Rs. 98-2 as did 3% 1963-65 to Rs. 94-14 and 3% 1964 to Rs. 94-12; 2½% 1961 and 2½% 1962 were on offer at Rs. 93-6 and Rs. 96-4 respectively. In contrast, 2½% 1962 was taken at around Rs. 93-13. In National Plan loans, 3½% 1961 met with strong support up to Rs. 99-8 while 3½% 1964 was initially marked at Rs. 98-10 ex-voucher but improved later to Rs. 98-11; 3½% 1955 was traded at Rs. 96-8. Long-dated loans improved further with buyers of 3% 1966-68 at Rs. 92-13 and 3% 1970-75 at Rs. 89-13.

Rather more business was reported in Provincial loans but enquiry was centred on 4% 1967 issues which were quoted below par. Four percent U.P. 1967 hardened to Rs. 99-8 while 4% Madras 1967 was taken at the same price. Four percent Mysore 1967 had buyers at Rs. 99-6 while 4% Bihar 1967 was asked for at Rs. 99-4.

Once again it was difficult to find ready buyers of selected preference shares particularly those of jute companies. In jute, Alliance were offered at Rs. 94 and Anglo-India at Rs. 114. A small odd lot of Birla Jute Old Preference shares was crossed at Rs. 101-8. Caledonian were placed at Rs. 116 and Hastings at Rs. 104-8. Hooghly Mills were crossed at Rs. 14-6, Lansdowne were marked at Rs. 113-8 and Rameshwara at Rs. 10. In the miscellaneous group, a small lot of Burn & Co. 6% was taken at Rs. 124 and Bharat Collieries were done at Rs. 53. There were buyers of Brooke Bond at Rs. 86, but British India Corporation were offered at Rs. 121. Calcutta Electric changed hands at Rs. 11-5 and Calcutta Tramways at Rs. 8-4. Indian Aluminium were enquired for at Rs. 73 and there were buyers of Indian Iron & Steel at Rs. 106-8. New Victoria were done at Rs. 4-3 and Purtabpore at Rs. 15-2. Rohtas Industries "B" met with small enquiry at the lower rate of Rs. 63-12.

In the banking section, Bank of Bikaner were marked at Rs. 16 and Punjab National were quoted at Rs. 46. United Bank of India "D" shares were done at Rs. 4-6 while United Commercial were a shade easier at Rs. 49-12.

In the railway section, Arrah-Sasaram were crossed at Rs. 73, Bankura-Damodar at Rs. 58-6 and Katakhal-Lala Bazar at Rs. 74-6. Dehri Rohtas were marked at Rs. 12-15.

Cotton shares were dull and very little business was reported. Quotations, however, showed little variation. Basanti were marked at Rs. 6 and Elgin at the lower rate of Rs. 27-2. Cawnpore Textiles were lower at Rs. 8-5 but New Victoria were unchanged at Rs. 2-5. There was a small enquiry for Dunbar which improved from Rs. 302 ex-dividend to Rs. 306 ex-dividend. Kesoram were unchanged at Rs. 17-8 while Jayshree Textiles were placed at Rs. 6-6.

Coal shares were neglected and a minimum amount of business was put through. Among the few shares that changed hands were Bengal at around Rs. 533, Burrakur around Rs. 14, East Indian at Rs. 32 and South Karanpura at Rs. 10-2. Central India and Western Bengal were unchanged at Rs. 6-13 in each case while there was a small enquiry for Union at around Rs. 12-8. Standard changed hands at around Rs. 25-8.

For yet another week no interest was shown in the jute section and prices continued their downward trend, as will be seen from the following table:

	Opening 19-4-56	Closing 24-4-56
	Rs.	Rs.
Anglo-India	173	169
Belvedere	160	159
Birla	16 13	16 9
Chandpary	154	150
Ganges	69	67
Kelvin	245	234
Megna	81	77 8
National	23 14	23 8

Little business was reported in electric supply shares. A small odd lot of Agra was done at Rs. 151-8 and Benares Electric were crossed at Rs. 18-4. Calcutta changed hands freely around Rs. 13-9.

In the absence of support, prices of sugar shares continued to drift. Balrampur were marked down from Rs. 8 to Rs. 7-8, Champaran from Rs. 28 to Rs. 27-6 and U.P. from Rs. 21 to Rs. 20-4. Carew were neglected at Rs. 8-8 as were Shree Krishna Gyanodaya at Rs. 12. In contrast, Ramnugger Cane came in for small enquiry at around Rs. 23-14.

In the engineering section, Bhartia Steel were steady at Rs. 17-4 as were Braithwaite at Rs. 28. Burn & Co., were shaded at Rs. 35-6 and Indian Standard Wagon were marked down from Rs. 190 to Rs. 181. Interested buyers took the price of Jessop up from Rs. 34-8 to Rs. 35-10. Richardson & Cruddas were steady at around Rs. 28 and there

INDUSTRIAL TRENDS IN THE UNITED KINGDOM

KEENER COMPETITION IN OVERSEAS TRADE (FROM A SPECIAL CORRESPONDENT)

THE U.K. is moving out from a mood of acute anxiety mixed with bewilderment at the strange contrasts which the inflationary crisis affords, into one of critical self-examination. This may be regarded as an encouraging transition, assuming that the mental change is a preliminary to the undertaking of radical economic and financial reforms. Whether the latter are approaching and will be intelligently devised, and thoroughly carried out if they come, is still somewhat a matter of conjecture. But meanwhile, industrialists construe the situation with a mild optimism and are less hesitant than they were a few months ago. They have been heartened by other things besides the more positive note which is now being struck in economic affairs, notably, the receipt of a number of overseas contracts, including the substantial one in connection with the Indian iron and steel industry.

Nevertheless, competition in overseas trade is more keenly felt. An official analysis just published shows that Britain's share of world trade in manufactures fell another 1 percent in the first nine months of 1955 compared with that in the corresponding period of 1954. Every group was lower, excepting chemicals. This represents a fall, in monetary values, at the rate of £120 million a year. An attempt has been made to bring about a reversal of this tendency by the British Treasury granting improved credit facilities to British exporters. But this provision, while useful, does not touch the question of lower costs for British goods. Unless reductions can be brought about, a further fall in Britain's proportion of world trade seems inevitable. It is notable that one of the biggest declines in exports was to Sweden, where German manufacturers had a strong hold in pre-war days. A report on econo-

mic and commercial conditions in Germany by the U.K. High Commission in Bonn (the first to be issued since the war) gives an impressive picture of German industrial recovery during the past ten years. During this period, Western Germany, it is stated, has emerged from complete collapse and chaos to a position of stability and expansion, with the standard of living rapidly improving and employment high. Western Germany is described as "sound, prosperous and influential." Competition between British and German firms in South America and the Middle East is said to be "hot." The hope is expressed that Germany and the U.K. will find the largest possible measure of common ground in general trading policies.

German Industry

An outstanding feature of Western German industry today is the large amount spent on scientific research, especially in the fields of electron microscopy, engineering, building and chemistry. The fact that each of the member concerns of the former I. G. Farbenindustrie is spending on research almost as much as is the U.K.'s Department of Industrial and Scientific Research has brought to the fore the question of the extent to which it is wise for Government Departments to conduct this form of activity. No query is raised where strategic and industrial considerations are inseparable, as is the case with the development of atomic energy. The contention is that purely industrial research could, with advantage, be left to the great industrial companies themselves, for there is no danger with them of dynamic factors being overwhelmed by a deadweight of routine. The rightness of what has often been alleged in this respect now seems to be confirmed in a White Paper containing the report of a Committee on the Department of Industrial and Scientific Research, where the need for reform of that body is stated in strong terms. One of the criticisms made is that once the Department initiates research it seems unable to stop investigations, even when their uselessness should be palpable.

The Committee regards as essential that the Department's Advisory Committee should have not merely nominal powers and duties, but that it

should be—what it is not at present—a vigilant body able to ensure that the Department's activities remain vital. The Department, in addition to its own activities, is concerned with co-ordinating 42 research or similar bodies in receipt of money grants. The research associations' reports are naturally not indifferent to the desirability of presenting a number of items sufficient to show that they deserved the amounts they received. Many of these reports could, and should, be more informative than they are at present. A live Advisory Council ought to be able to improve matters in this respect; but it will have to be differently constituted from what it is today, with its 21 "assessors" and three committees. Nothing is said in the White Paper about the shockingly unwieldy composition of the Department of Industrial and Scientific Research. This boasts of 13 boards and committees, on which sit 200 members and 140 "assessors".

Research in Industry

The National Research Development Corporation differs from the Department of Industrial and Scientific Research, in that it is simply conceived and that it sets out to make a profit on its operations by means of the receipt of royalties etc., on the patent rights it holds. Its latest report shows a loss for the year of £26,000—a relatively small matter. The Corporation has not so far been prominent in industrial matters, but it is becoming so by reason of its interest in computing machines and their possible use for controlling machine tools.

The belief has been expressed by Lord Chandos, chairman of Associated Electrical Industries, that industries such as the chemical and the electrical must be among the leaders in the last half of the twentieth century. He referred to the fact that in a nuclear power station, 40 percent of the equipment would be electrical, and he called attention to the increasing demand for diesel electric and electric traction throughout the world and the continually widening applications of electronics. Semi-conductors, he added, would make it practicable to manufacture such radio and radar apparatus in miniature. Furthermore, in the field of power rectification the use of germanium and its less rare successors opened up far-reaching possibilities. He stressed that very large amounts of capital would be required to finance the great developments thus indicated, and, for this reason, he was a severe critic of any legal or other artificial restriction of dividends. It was only by investors being confident that dividends on their investments would increase as the company's profits expanded that they could hope to attract amounts of capital sufficient for their industrial needs. His remarks in this connection are on similar lines to those recently uttered by chairmen of other important companies, including that of the Shell Petroleum.

Preference for Exhibitions

The attempt by private interests to keep the London section of the British Industries Fair going has failed. The British Government withdrew responsibility for this section two years ago, although it continued to give certain guarantees, which it has now withdrawn. The Birmingham section of the Fair, which has concentrated on the engineering and other heavy industries, and is the responsibility of the Birmingham Chamber of Commerce, is to continue. It is not known what alterations those who have conducted the London section for the past two years hoped to bring about eventually, but it can be said that in the past what has been shown has been too ill-assorted and too miscellaneous. Salesmen in charge of the stalls often could talk only in general terms, largely because they had no technical knowledge concerning the goods they offered. Although a number of merchants with limited resources were attracted, large-scale buyers with adequate means were few. These were serious weaknesses.

It is probable, however, that most trade fairs in highly industrialised countries will have to become specialised in character. Certainly, British manufacturers are virtually unanimous in declaring that specialised displays yield them much better returns. This being their experience to criticise them for not buying expensive space in overseas trade fairs is beside the mark. Indeed, the word "fair" has fallen rather into ill favour with the business mind, as suggesting something popular and lacking the specific aim and the word exhibition is preferred. Specialisation of goods shown has become an established practice of British selling policy. This is partly due to the fact that with the development of synthetic fibres, catering so much as they do for industrial as well as for clothing needs, classification has become essential to avoid not only confusion but also incongruity. Corsets and ropes, lingerie and tyre cords, even if kept at respectable distances, are hardly at home in the same building. So it has eventuated that the British textile industry makes its first exclusive display of industrial textiles at the Albert Hall, London from 23rd to 27th April.

EXPORT CREDIT GUARANTEE SCHEME COMMITTEE

As the Expert Committee appointed to examine the feasibility of introducing a scheme of export credit guarantees for India, has yet to consider a number of important items of work, the Government of India has decided to extend the term of the Committee up to 30th June, 1956. The Committee was originally required to submit its recommendations to the Government by 6th May.

New Delhi

PLANNING COMMISSION DISCUSSES INDUSTRIAL POLICY DRAFT

LARGE GROWTH OF THE PUBLIC SECTOR

(FROM OUR NEW DELHI CORRESPONDENT)

THE Planning Commission, at its full meeting, discussed the Prime Minister's draft of the Industrial Policy Statement. The draft is inspired largely by the Constitution, and particularly by the Directive Principles, to make it clear that industrialisation is a means to better living conditions for the masses and that the rôle of the private sector will be to supplement industrial development in the public sector. The State, it is pointed out, can and will enter any field of development, and it will be in the interests of the private sector to fit itself into the framework designed for it by the Government.

The latest draft retains the division of industries into three categories: (i) the State list, containing industries, the development of which will be the sole responsibility of the State; (ii) the concurrent list, containing industries which can be developed by the State and by private enterprise; and (iii) the remaining industries, the development of which will be left to private enterprise. The Prime Minister has not made any material changes in the original allocation of industries among the three lists as made by the P. C. Bhattacharyya Committee of Secretaries. The discussion on the revised draft was inconclusive. Another meeting is likely to be held this week so as to enable the Prime Minister to announce the new industrial policy in Parliament before the end of the month.

World Bank Mission Arrives

Four members of a mission from the International Bank for Reconstruction and Development arrived from Washington last week to study the development of India's economy in order to determine the extent to which the Bank can advance loans for financing the second five year plan. The leader of the delegation, Mr. Thomas H. McKittick, will arrive on 2nd May. Those who arrived last Thursday were Mr. J. C. De Wilde, deputy leader of the Mission, Mr. Peter Wright, Mr. Jean-Claude Antoine and Mr. G. H. Bacon. On more member, Mr. M. Vander Mel, is expected to join them later. Mr. De Wilde said that the mission, during its stay of six or eight weeks, would first visit Calcutta, Bombay, Madras, Bangalore and other big industrial centres. Later, it might go to other areas also. It would hold discussions "fairly soon" with high officials of the Finance Ministry and the Planning Commission. "We have not come here to see specific projects to be financed by the Bank. The fundamental thing to be seen is the rate of growth of India's economy and its future economic prospects. We have come here to assess the economic situation with a view to determining the Bank's long-term policy for giving financial assistance to India."

Negotiations are going on separately for some projects such as the Tata steel expansion plans, he added. Asked if the Government of India had given the Bank an idea of the financial aid required for the plan, Mr. De Wilde said that there had been no such indication. The mission's task would be to assess the "overall magnitude" of the problem of financing India's second plan. "The purpose of the mission is to find out what sort of loans would be required by India in the course of a number of years." Asked about the growing rôle of the public sector in India's economy and the political objective of achieving a socialist pattern of society, Mr. De Wilde said: "We are interested basically in a country's economy. There may be occasions where we may have to study certain political things which influence a country's economic picture. But we have no interest in politics."

Commercial Mission to N. Europe

The Commerce Secretary, Mr. H. V. R. Iengar, will lead a goodwill-cum-commercial mission to north European countries, particularly Sweden. The mission will leave New Delhi by the middle of May, and will include half a dozen Indian industrialists. The two-year Indo-Swedish trade agreement, signed just under a year ago, provides for the export of Indian cotton textiles, silk, rayon, fabrics, jute goods, leather goods, spices, coffee, tobacco, manganese ore and coal. Sweden can export newsprint, stainless steel, milling machinery, machine tools, agricultural machinery, cranes, turbines, tubewell equipment, motor generators and electrical equipment. The following figures, covering the nine months ended December, show India's trade with north European countries:

		(Figures in Rupees)	
		Imports	Exports
Sweden	1954	1,12,12,798	4,59,20,527
	1955	1,08,45,633	5,48,96,993
Norway	1954	41,93,580	1,83,15,887
	1955	83,06,037	2,18,37,139
Denmark	1954	94,26,569	1,63,20,253
	1955	1,61,40,812	3,07,78,729

State Ore Mining Corporation

An inter-Ministerial conference, held here last week between the Government of India and the Chief Minister of Orissa, reached an agreement to set up a State ore mining corporation in which the two Governments will be shareholders. The cor-

tary to the Minister for Iron and Steel, Mr. N. K. Roy, Director of Civil Engineering, Railway Board, and Mr. R. G. Bhatnagar, from the Chittaranjan Locomotive Works. It will visit the U.K., France, Belgium and Germany. It will report to the Commerce Secretary, Mr. H. V. R. Iengar, who will also be in Europe by then, to enable him to negotiate for the purchase of steel if, in the opinion of the mission, it is of the right standard.

New Aerodromes

It has been decided to construct new aerodromes at the following places during the second five year plan: Tulihal, Raaxaul, Jogbani, Malda, Haldwani, Hubli, Kanga or Kulu Valley, Nowgong, Behala (Calcutta), Shillong, Ratnagiri and Bhagalpur. It is roughly estimated that an expenditure of Rs. 112 lakhs is likely to be incurred.

Teleprinter Factory to be Started

A decision on the establishment of a teleprinter factory has been taken, but not on its location. The capital outlay will be Rs. 80 lakhs. Annual production in the initial stages will be about 500 machines.

Company Law

Supporters of the private sector here are disappointed at the manner in which manipulations, it is alleged, are going on to take advantage of certain lacunae intentionally left in the new company law to facilitate the uninterrupted functioning of companies. Under the law, a provision was made to permit relations of managing agents to continue for a period of two years. According to reports so far received, over 500 new agreements were made before 1st April, 1956, when the new law came into force, to take advantage of this provision. This restriction is not applicable to companies functioning under directors and without managing agents. Cases have been reported where managing agents have become directors to take advantage of the provision. Other similar manipulations are reported, a list of which is being prepared and may be sent to Parliament.

Second Plan Criticised

The debate on the second five year plan was resumed here last week. The Finance Minister, Mr. Chintaman Deshmukh, was apparently not very happy with it. Speaking at the Universities' Planning Forum, he confirmed earlier reports that the size of the public sector would be expanded by another Rs. 300 crores or Rs. 400 crores. He then warned that as against the credit for Rs. 800 crores of foreign assistance taken in the draft outline of the plan, "we are really entitled to take about Rs. 400 crores as probable in the form of foreign

Quality machines
in the making.

Q. What is this man doing?

A. Balancing.

Yes, every BRUSH KIRLOSKAR motor rotor is dynetrically (both statically and dynamically) balanced thus eliminating vibrations completely and ensuring smoother running and long life to bearings.

Representative: G.M.S.

assistance". Mr. Deshmukh said that increased expenditure might have to be incurred on the defence forces, the development of atomic power, the subsidy for the *Ambar Charkha* and oil exploration, so it was not possible to justify the effects of deficit financing on the present scale. He expected that the difficulties would be very acute, particularly in the second and third years of the plan.

The Commerce Minister, Mr. T. T. Krishnamachari, amplified the observations of his colleague, the Finance Minister. He was direct and unequivocal in telling the Lok Sabha that "I would not commit this country, if I have any say about it, to a type of planning, which, while it may seem to meet our immediate needs and aspirations would in actual fact be impossible of achievement. It does no good to flatter ourselves that we can do something more than what is actually possible. It would, in my view, be equally undesirable to undertake expansion for which we may have to pay a price that is too high in terms of social and, may I also say, spiritual costs. It is important to assess our physical needs correctly. We may naturally aspire to satisfy them. But, if planning has any meaning, we must measure our aspirations against two yardsticks, namely, our financial resources, both present and those likely to come into being during the plan period, and secondly, our physical resources, especially in terms of personnel."

Proceeding, Mr. Krishnamachari said: "The main risk that is inherent in any planning for rapid industrialisation is primarily that of inflation. This risk is somewhat accentuated in our plan because of a large amount of deficit financing that must necessarily be resorted to in order to make the plan a success. Closely allied to this problem is another risk, namely, lack of adequate foreign exchange resources. Even as it is, we have envisaged a big gap of nearly Rs. 1,000 crores in our foreign exchange commitments during the second plan period. In arriving at this figure, we have not made any large allowance for the import of consumer goods, which we normally assume would be manufactured in the country. It would, therefore, be a sad state of affairs if, in order to counter inflation, we had to draw heavily on our foreign exchange resources by way of import of consumer goods."

Scrutiny of the Plan

It is regrettable that Professor P. C. Mahalanobis, whose ideas influenced the drafting of the plan in a manner now objected to by two prominent Ministers of the Union Cabinet, should have left on a tour of Communist countries just when the plan is being finalised. The difficulties pointed out by the Commerce and Finance Ministers do not seem to be realised by some members of the Cabinet and of the Planning Commission. As had been anticipated, the Education Minister, Maulana Azad, has succeeded in securing a provision of over Rs. 30 crores to subsidise teachers' salaries. The country needs education, but he is providing for a museum and a theatre in New Delhi during the second plan period. He is also in charge of the Ministry of Natural Resources, and has nearly succeeded in securing a provision of Rs. 100 crores for oil—Rs. 35 crores for oil exploration and the balance for contribution as share capital to a company which will work the oil concessions of the Assam Oil Company.

As a result of discussions which the Planning Commission had with representatives of State Governments, a small reduction was made in the total allocation for States. Regardless of the financial consequences of expanding the plan, the Commission has demanded the inclusion of some new schemes to make the plan a really spectacular one. It may be added that Ministers, in spite of the constitutional theory of joint responsibility, are not interested in the overall financial aspects of the plan. Their sole interest lies in making the plan for their particular ministries as impressive as possible. Looking at it from this angle, the warnings sounded by the Finance and Commerce Ministers are timely. Some Ministers are sure to disagree with particular aspects of the plan.

Annual Tax on Wealth

Winding up the discussion in Lok Sabha on the Finance Bill, the Finance Minister, Mr. Chintaman Deshmukh, referred to the "tax on wealth" and said that "this is one of the taxes which are under consideration." The problem was recently examined by Mr. Nicholas Kaldor, Reader in Economics at the University of Cambridge, whose views are reproduced below.

"An annual tax on capital, though it is levied on the value of the principal, is really a tax on accrual and not a tax on the principal itself—as for example, estate duties or a capital levy are. If all property yielded the same percentage of income, an income-tax and a property tax would amount to the same thing. The two differ precisely because some property yields a large money income, and other property a small income (or no money income at all) in relation to its current market value.

"The tax, similarly to income-tax, should be conceived as a progressive one, and levied at rates (i) which are well within the total accrual from property—whether in the form of money income, expected appreciation, or psychic income; (ii) which take into account the other taxes on accruals, in particular, the income-tax. In the light of this, it would seem reasonable to levy a tax at the rate of 0.3 percent a year on the lowest slab (namely, from Rs. 1 lakh to Rs. 4 lakhs) rising to 1.5 percent a year on the highest slab (say, on the value of property in excess of Rs. 15 lakhs). The exemption limit of Rs. 1 lakh is recommended solely for administrative considerations—namely, until more

experience is gained with the administration of the tax. Ultimately, there is something to be said for a rather low exemption limit on this particular tax—an exemption limit low enough for encompassing those sections of the community which are not touched by the existing tax on income. For in a country like India, a tax based on capital ownership should prove administratively far easier to assess and collect in the lower reaches of the income scales than a tax based on current earnings.

"For the sake of equity as well as administrative efficiency, it is essential that the tax should be comprehensive—namely, extending to all forms of property. The inclusion of agricultural property in this connection may require a constitutional amendment (unless the procedure adopted in the case of estate duties of the States delegating the powers to the Centre could be repeated here). Property in the form of bank balances, jewels and valuables above a certain exemption limit of, say, Rs. 5,000 as well as real estate of all kinds, assignable rights with a market value, the ownership of stocks and shares, etc., should all be comprised in it. Personal effects like household furniture and clothing should be exempted up to a certain limit for each family member. (In Sweden, motor cars and motor boats are exempted, as well as personal effects, work of art and art collections, and ornaments only if their total value is below Rs. 1,000.)"

The Case for the Tax

The arguments for an annual tax on net wealth can be grouped under three heads, equity, economic effects and administrative efficiency.

"(a) The main argument in equity for the tax is that income taken by itself is an inadequate yardstick of taxable capacity as between incomes from work and incomes from property, and also as between the ownership of property in the form of disposable assets endows the property-owner with a taxable capacity as such, quite apart from the money income which that property yields. This is best shown if you compare the position of a beggar who has neither income nor property with the position of a man who keeps the whole of his wealth of, say, Rs. 10 lakhs in the form of jewellery and gold. Judging their capacities by the test of income alone, the taxable capacity of both is nil. Quite apart from such an 'extreme' case, it should be evident that as between people who possess property and income in different proportions, income alone is not an adequate test of capacity to pay; nor can that capacity be adequately assessed by a tax based on property alone. Suppose two individuals, A and B, have the same income of, say, Rs. 50,000, but one of them derives it from the property worth Rs. 2 lakhs and the other derives it from the property worth Rs. 5 lakhs. It would clearly be wrong to suggest that the taxable capacity of the two men are identical and they should be called upon to pay the same amount of tax (which is what happens if only income is used as the tax base).

"It would be equally wrong to regard the taxable capacity of B as being two and a half times as great as that of A—which would be the case if these were assessed on the basis of the property of Rs. 5 lakhs. He is clearly better off than a man who derives Rs. 50,000 a year from property of only Rs. 2 lakhs, but he is evidently not as well off as a third man who possesses the same capital of Rs. 5 lakhs and has an income of Rs. 1.25 lakhs. Hence only a combination of income and property taxes can give an approximation to taxation in accordance with the ability to pay. (The existing earned income relief is intended to give some recognition to the higher taxable capacity of incomes derived from property as against similar incomes derived from work, but precisely because the relation between income and property value varies so much as between one individual and another, the problem could never be adequately dealt with by the technique of earned income relief, even if that relief were extended to all income ranges and made far more substantial than at present.)

Economic Effects

"(b). From the point of view of economic effects, the great advantage of taxes assessed on property value as against taxes assessed on income is that a property tax does not discriminate against the risky employments of capital in the same way as an income-tax. If a man can get a 'safe' return by putting his money in Government bonds yielding 3 percent, whereas he could expect 10 percent of his money if he employed it in productive business, the difference of 7 percent may be taken to measure the investor's subjective estimate of the risks associated with the productive employment of capital. An income-tax, by taxing the additional income obtained through risk-bearing in the same way as if it were 'safe' income, discriminates against risk-bearing. Under the property tax, the same property value would bear the same tax, whether it is invested in Government bonds yielding 3 percent, or in productive employments yielding 10 percent, or held in cash or in jewellery, etc., yielding no money income at all.

"It is true that under the present system of income-tax which exempts capital gains or capital profits from taxation, altogether a great part of the additional reward of risk-bearing does not, in effect, bear any tax, since it takes the form of capital gains rather than of taxable income. A property tax on the other hand, would automatically bring into charge the increase in value resulting from capital appreciation. Even so, an annual capital tax appears to me a smaller disincentive on the productive employment of capital than even the present restricted income-tax, for while the latter exempts capital gains it also provides complete tax exemption for the socially unproductive hoarding of wealth in the form of gold and jewel-

lery, etc., whereas the property tax would make these a less attractive form of holding wealth.

"(c). From the point of view of administrative efficiency, it must be borne in mind that while the property value is something distinct from annual profit or income, the two in fact are closely related in the sense that profits and property incomes of all kinds (other than the profits associated with professional and vocational activities) have always some tangible assets behind it; and similarly, most forms of property (though not all) yield money income or profit of some kind. Hence, if taxes were assessed both on income and on property, by the same taxing authority, the administrative efficiency of the system is bound to be improved in consequence. For the examination of a man's property ownership is bound to lead to the discovery of his concealed income, and similarly the examination of his income receipts is bound to lead to the discovery of concealed property. A tax on both, therefore, should provide a better check on evasion and concealment than a tax on either."

The Case Against

The arguments against an annual tax on capital wealth are as follows:

"Despite its great advantages, a progressive annual tax on capital wealth has so far only been adopted in a few countries. Its exclusion from the scope of taxation in others has been defended on numerous grounds, few of which stand up to serious examination. The arguments against the tax can again be grouped under the heads of equity, economic effects and administrative efficiency.

"(a) It has been suggested (occasionally by no less an economist than Professor Pigou) that an annual tax on property is inequitable, because not all property yields an income, and a tax on property may force a man to make payments 'even if he has no income to pay it with.' These arguments wholly beg the question of what is meant by 'income'. All property which has a positive market value (which can be bought and sold currently or exchanged for other forms of property) must yield a benefit to the owner at least comparable to the benefit obtained from other forms of property which he could buy—otherwise he would sell it and exchange it for something else (the only exception to this is the case of entailed property which the owner cannot alienate). If a property does not yield money income, it must either yield an equivalent psychic income to the owner or it must be held in the expectation of a certain appreciation in value which makes it at least as attractive to the holder as other property on which a current money return is obtained. So far, therefore, from this constituting an argument against the property tax, it shows the inherent defect of income-tax which concentrates on one particular form of accrual from property, namely, money income, to the exclusion of other forms.

"(b) The economic arguments against the tax sometimes refer to the alleged discouraging effect of the tax on productive enterprise and sometimes to the possibility of its incidence being shifted from the taxpayer to the ultimate consumer. As far as the discouraging effects on enterprise are concerned, it is true, of course, that a tax on capital has a discouraging effect as compared with no taxation at all. But as we have shown, it has a lesser discouraging effect than an equivalent amount of tax collected from the taxpayer in the form of an income-tax. (The argument that capitalists can now evade income-tax through the conversion of income into capital gains, while there are no equivalent evasion possibilities in the case of a property tax, could hardly be construed as a respectable reason against the property tax and in favour of the income-tax.)

Incidence of Property Tax

"The idea that the incidence of a property tax can be shifted in an analogous manner to commodity taxes is mistaken. Precisely because the tax is on the value of capital irrespective of the use to which the capital is put, the tax lacks the discriminatory effect by which alone a shifting of the incidence could take place. In fact, the possibility of shifting the incidence of an annual tax on property is far smaller than that of an equivalent tax on income.

"(c) From the administrative point of view, it is often suggested that the annual property tax is difficult to assess on account of the difficulties of 'discovering' the true owners of property; on account of the difficulties of valuation. As regards the problem of under-statement and concealment, it should, of course, be borne in mind that the 'discovery' of a man's property is intimately linked with the 'discovery' of his income. If property is concealed, so is the income; if the income is known, the property behind the income can be traced. Introducing an annual property tax does not, therefore, really raise formidable additional problems, from the point of view of discovery, to those that already have to be faced on account of the income-tax. On the contrary, the obligation on a taxpayer to return annually his total net wealth as well as his income should help considerably in checking the evasion of income-tax, just as the existence of income-tax should help in checking the evasion of an annual property tax. If the individual taxpayer is asked to supply a comprehensive account of his personal affairs—his asset position at the beginning and at the end of the year, his total accruals and their application as between personal expenses and investments—concealment of any one item becomes far more difficult, since it requires a consistent falsification of the accounts. The essential requirement is that the assessment and administration of the two taxes should be closely linked

one another, the work of assessment being done on the basis of a single comprehensive return, and by the same tax officials.

Suggested Reforms

"This is not meant to suggest that an annual property tax (any more than the income-tax) could be administered efficiently (namely, with only a limited amount of fraudulent evasion) without a considerable tightening up in the present methods of registration and control over the ownership of property. The most important reforms in this connection may be described as follows:

"(a) **Urban property**—As the present municipal records are admittedly defective and incomplete, it would be advisable to set up a Central Records Office for the listing and valuation of urban property on an all-India basis as recommended by the Local Finance Enquiry Committee.

"(b) Ultimately something analogous would also be advisable in the case of rural and agricultural property. This, however, will undoubtedly take far more time, and in the meantime, reliance must be placed on village records which are fairly detailed, at least in the non-zamindari areas, and do make a distinction between land used for cultivation and land used for building. (It should also be remembered that the great bulk of rural property is probably held by owners whose total property is well under the exemption limits possibly suggested for the tax.)

"(c) With regard to investments in the stock and shares of companies, there is a strong case for the abolition of the existing Indian practice of buying and selling shares by means of 'blank transfer' certificates. This system does not exist either in the U.K. or the U.S.A. and it would be difficult to maintain that its preservation in India is an important pre-requisite of economic development. If the system of Taxation Code Numbers were introduced, the share registers of companies could be made to include the code numbers of beneficial owners as well as nominal holders in whose names the shares are registered.

"(d) In the case of Government securities, it would be advisable to adopt the same system as in the U.K. by which the owners of all Government securities are registered at the central bank, and changes in ownership have to be registered in the same way as changes in other property. In India, interest on Government securities is payable by means of coupons, and transfers take place by mere endorsement on the back of securities. It would be perfectly simple to exchange the present securities against securities of a registered type when the coupons are presented for encashment.

"(e) With regard to stock-in-trade, machinery and plant, the problems involved are not different from those already faced in the administration of income-tax.

"(f) For property of all types, the compulsory disclosure of beneficial ownership in the case of benami holdings or holdings in the names of trustees or nominees is essential for the efficient administration of both income-tax and property tax. This could best be ensured by the nominal holder being asked to sign a declaration to the effect that he is the beneficial owner, or only a *benamidar*, etc., such declarations having full legal force from the point of view of any subsequent civil action concerning the property.

The Problem of Valuation

"Apart from quoted securities of all kinds and of assets which the Revenue Department agrees to value at actual cost less accrued depreciation (like machinery and plant, and stock-in-trade), the valuation of the property by the revenue authorities requires a staff of expert valuers. The establishment of a Central Valuation Department under the C.B.R. with regional and sub-regional valuation officers seems to be an essential long-run requirement both for the administration of the annual property tax and of all other taxes (estate duty, stamp duties or the proposed gift tax) which require the valuation of property. Until the requisite staff of expert valuers can be trained (which undoubtedly requires an appreciable time) it is suggested that the Revenue Department relies on the taxpayers' own valuation for the purpose of assessment. The taxpayer would in effect be asked to return the selling value of each individual item of property, and there should be a provision that if the taxpayers' own valuation of any particular item is disputed by the Revenue Department, and the taxpayer is not prepared, upon due notice, to revise his own valuation, the State should have the right to buy the property at the taxpayers' own valuation. This provision, though it may appear rather a drastic one, would effectively prevent any serious undervaluation of property by taxpayers.

Probable Yield of Tax

"In the absence of any direct statistics bearing on the value of various forms of property in India, and its distribution according to size-groups, any estimate of the yield of the property tax can only be undertaken by the rough method of 'working backwards' from income. By capitalising the profits of firms, partnerships and individual businesses and the dividend income of companies, a rough estimate of the total value of wealth and its size distribution (excluding agricultural property) can be obtained. Assuming an average yield of 5 percent from shares and 10 percent from other property, the total of privately owned wealth in India, the total of over one lakh comes out at Rs. 3,350 crores; while assuming an average of 4 percent on shares and 8 percent on other property, the total comes out at Rs. 4,200 crores. A minimum addition of 10 percent may be made to these figures for cash, bank balances and all other forms of property which do not yield a money income. In the

scale of the tax rates suggested, the estimated yield of the tax comes out at Rs. 17-25 crores.

"Since these estimates are based on disclosed income, they are almost certainly too low, both as a measure of the true value of non-agricultural property and of the probable yield of the tax, once the administration is made more watertight through the system of comprehensive returns and the institution of an automatic reporting system.

"An annual tax on net wealth is recommended both on account of its merits taken by itself and because it is an essential element in the institution of a comprehensive and evasion-proof system of taxation. Although its operation cannot be expected to become fully efficient until existing rules concerning the registration of property are tightened up, and an efficient staff of valuers is evolved within the Revenue Department, these are not to be regarded as adequate reasons for postponing the introduction of the tax. There is no reason why the obligation to submit comprehensive income and capital returns should not be introduced immediately, and, on the lines suggested above, the Central Board of Revenue could initially assess the tax on the basis of the taxpayer's own declared values."

£1 PREMIUM BONDS CAUSE SURPRISE

In conclusion, Mr. Master underlined what he termed "some of the fundamental shifts and changes in the shipping policy of the country." According to him, these were the abandonment of the mixed economy policy, the denial to private enterprise of the routes covered by the State Corporations, the reservation of the carriage of crude oil and refined products to State tankers, the carriage of Government cargoes at unremunerative rates, the refusal to carry out the assurances given for financial aid and the proposal to turn the loans to be given for the acquisition of additional tonnage into equity capital. Incidentally, earlier views expressed by Mr. Master on the nationalisation of shipping at Rajkot caused a controversy until the Union Transport Minister assured Parliament that shipping would not be nationalised.

SALES TAX BECOMES A
POLITICAL ISSUEMORE CONGRESS DEFEATS IN
BY-ELECTIONS

(FROM OUR LUCKNOW CORRESPONDENT)

THE agitation against the U.P. Sales Tax Ordinance, which began early this month, is getting strong support from the Opposition parties. Congressmen are seriously concerned over the political repercussions. The results of the two latest by-elections, taken with the three Congress defeats in February this year, show a definite electoral trend against the ruling party. Both the seats lost were previously held by the Congress. Though the opposition victory was by a narrow margin, it is significant that all the contests were straight fights. It is possible that at the coming general elections, opposition parties will make an effort to offer a united front, as they are doing now over the Sales Tax Ordinance. The parties which have combined for the agitation are the Hindu Mahasabha, the Socialist Party, the Praja Socialist Party, the Jan Sangh, the Communist Party, the Bolshevik Party and the Revolutionary Socialist Party.

Although the Chief Minister, Dr. Sampurnanand, has declared that the Government will not be cowed by threats, he has assured the public and the business community that changes will be made in the Bill on the basis of criticisms and suggestions. The hope is expressed that the tax on salt and kerosene may be reduced, if not withdrawn. As for the multi-point levy on foodgrains, the Finance Minister, Hafiz Muhammad Ibrahim, has stated that it is purely a temporary measure, and that it will be replaced by the single-point system as soon as the registration of dealers and traders is completed. According to the Sales Tax Department, six months is the minimum period required to complete registrations. Mr. Deshmukh's statement that the President's assent to the Ordinance was given conditionally embarrassed the State Government for a couple of days until the Union Finance Minister corrected himself. But even as matters stand, the Bill replacing the Ordinance may have to be revised in order to conform to the conditions actually imposed in the Presidential assent, namely, that the tax on six specified commodities such as coal, cotton, hides and skins, iron and steel, jute and oilseeds, will not militate against the recommendations of the Taxation Enquiry Commission. Incidentally, the Ordinance is being challenged in the Lucknow and Allahabad benches of the U.P. High Court on constitutional grounds.

On the merits of the new rates, it may be stated that they compare favourably with those in force in some other States. For example, the sales tax on cloth here is fixed at 12 pices in the rupee; it varies from 6 pices to 21 pices in Bombay. Crockery, cutlery, watches, fountain pens, etc., are charged in U.P. at the rate of 12 pices in the rupee, compared with 18 pices in Bombay. Cigars and cigarettes are charged here at 12 pices in the rupee, as against 18 pices in Bombay. Foodgrains are, of course, exempt in Bombay. Before the Ordinance, 50 commodities were exempt from the tax in U.P., as against 25 in Assam, 20 in Bihar, 35 in West Bengal and two in Madras. The present list of exemptions run to 35 only. Even if no change is made in the Ordinance and the full rates are made to apply to the whole range of commodities, the expected yield is only Rs. 5.5 crores against the Budget deficit of over Rs. 9.5 crores. The size of U.P.'s second plan is Rs. 362 crores, out of which the Planning Commission has asked the State to find Rs. 100 crores from its own resources—Rs. 44 crores through taxes and Rs. 56 crores through loans. Addressing a representative gathering of the various chambers of commerce in Kanpur, the Finance Minister drew attention to this fact and said: "The people must be grateful that with only

an expenditure of Rs. 100 crores, they would get the benefit of a development outlay of Rs. 362 crores."

Source of New Revenue

He also gave the warning that since sales tax is the only elastic source of income open to the States, the people must be prepared to shoulder the additional burden. Before the latest revision of rates, the percentage of revenue from sales tax to the total revenue of the State was only 6.3 compared with 10 in Bihar, 12 in West Bengal, 19.1 in Madras and 22.8 in Bombay. The low incidence of taxation in U.P., noted by the Taxation Enquiry Commission, is a point in favour of the State Government. But the Opposition feels that it is not a sufficient answer to the comment of Mr. K. M. Panikkar in his dissenting minute to the S.R.C. report that the level of administrative expenditure in this State is much too high.

U. P. Wants More Areas

The U.P. Legislature has unanimously passed a resolution that the Baghelkand tracts of Vindhya Pradesh, if not the whole of Vindhya Pradesh, should be merged with Uttar Pradesh. Though the Vindhya Pradesh Assembly has itself turned down a demand for merger with Uttar Pradesh, the Chief Minister, Dr. Sampurnanand, has claimed that a majority of members representing Baghelkand voted for the merger and that their wishes must be respected. According to him, no claim to Baghelkand was raised before, for the simple reason that it was considered inopportune in the context of alleged grievances against U.P.'s large size. The main reason for U.P. raising the demand at this late stage is that it is impossible for the State to be industrialised without the mineral resources located in Baghelkand.

Synthetic Rubber Plant

The Government of India, it is understood, has given its approval to the State Government's proposal for setting up a synthetic rubber plant at an estimated cost of Rs. 12 crores. An expert committee deputed by the Centre to examine the scheme has conceded the State's claim based on the availability here of the principal raw material for the manufacture of synthetic rubber, namely, power alcohol. Some private firms have offered to open a factory for the production of chemical pulp from fir and spruce wood available in U.P., but their offers are being held in abeyance pending a decision by the Central Government on its own proposals for starting a nationalised pulp industry and locating it in this State. Mechanical pulp, which goes into the manufacture of rayon, is at present imported from outside. The U.P. Government's bid to make the Centre agree to the location of a plant for the manufacture of heavy electrical equipment in the State has failed. It is believed that the Centre has chosen Bhopal as the site for this factory. The Chief Minister declared recently that "though U.P. is not suited for a ship building industry," her claims to other industries should not be lightly brushed aside. He said that new industries should not be diverted away from the State on the ground that enough electricity is not available. He was prepared to give them all the electricity they needed even by discontinuing supply to others.

Loans for New Industries

The U.P. Government last week authorised the grant of loans amounting to a little over Rs. 3 crores to private industrialists for starting new industries. The biggest single loan (Rs. 1.45 crores) goes to the New Central Jute Mills Co., Ltd., of Calcutta for starting a factory in U.P. for the manufacture of soda ash and ammonium chloride. Other notable beneficiaries are the Lakshmiattar Engineering Works, Bombay, for the manufacture of textile machinery parts, J. K. Cotton Spinning and Weaving Mills, Kanpur, for establishing a rayon yarn filament industry, and the Bibhuti Glass Works, Banarases, for working capital and the purchase of certain essential equipment. The boards of directors of the firms which get Government assistance will include Government nominees whose function it will be to see that the firms fulfil the purposes of the aid.

Jute

RAW JUTE SUPPLIES ADEQUATE FOR
MILLS' REQUIREMENTSARRIVALS CONTINUE AT ENCOURAGING RATE: GOOD
PROSPECTS FOR THE NEW CROPS

THE latest figures on imports of raw jute into Calcutta and mill stations have given rise to a feeling of quiet satisfaction. Already total imports are more than 500,000 bales ahead of last season, and at the present rate the total estimated consumption of raw jute by Calcutta mills will be easily met. Some time ago, it was not expected that arrivals from Pakistan would be maintained at the present high level. However, not only have they been maintained, but arrivals in March this year have been the highest for over five years, the total to date being 36,000 bales more than in the whole of the last season. The following figures give an interesting comparison covering the past five years.

Season	1951-52	1952-53	1953-54	1954-55	1955-56
Pakistan Arrivals:					
July-March	16.77	11.54	11.94	9.54	12.77
(Lakhs of bales)					
July-June	18.30	13.24	14.82	12.41	—
Indian Arrivals:					
July-March	25.03	31.87	30.33	37.43	39.44
(Lakhs of bales)					
July-June	32.12	41.45	37.30	44.27	—
Total Arrivals					
in India and					
Pakistan,					
July-June	50.42	54.69	52.12	56.68	52.21
				(July-March)	

It will also be noted that arrivals to date from Pakistan are the highest since the bumper crop of 1951-52, after which the Pakistan Government adopted a policy of crop restriction. This scheme appears to have receded into the background lately, and one wonders whether the authorities have had second thoughts on the subject, or whether they are showing political wisdom in the light of the coming elections. During the past four seasons, total imports from India have improved by over 12 lakh bales; when the current month's arrivals are taken into consideration, they should equal last year's total arrivals with two months still to go. Imports in the last two months of the year invariably fall off, and although the final total will be the highest ever for Indian jute, it is not likely to come up to the Indian Government's forecast.

Conditions in the jute-growing areas over the past few days have also strengthened the trade's bearish outlook. Reports from both India and Pakistan indicate that all areas experienced heavy rainfall over the week-end. In Pakistan, this enabled sowings on the highlands to be completed, and the majority of agencies are now ahead of last season in this respect. In India, widespread rain enabled farmers to complete their preparation of the land and also permitted sowing on a much larger scale to take place. Weather conditions have been very beneficial for the standing crop, with hot dry weather at the beginning of the week and heavy rainfall at the week-end. Here also it is estimated that the crop is well ahead of last year, and this has given rise to the hope that the jute in the coming season will be sufficiently far advanced to withstand any damage it may be subjected to by floods which often take their toll about the end of July.

Raw Jute and Gunnies Quiet

Although a fair amount of business was transacted in the raw jute markets over the week, it was not prompted or encouraged by the trend of finished goods. Overseas buyers stayed out of the heavy goods market, and price movements were mainly the result of speculative activity. Rates fluctuated narrowly, but towards the close took on a definitely downward tendency as a result of heavy selling pressure. In contrast, considerable interest was shown in hessian, and overseas enquiries coupled with speculative covering in anticipation of business caused prices to rule steady. But quieter conditions prevailed towards the close, when business failed to materialise.

In spite of the lack of support from gunnies, raw jute recorded a fair amount of activity. Calcutta mills in general made small but steady purchases throughout the week at declining rates, although sellers still attempted to hold out for higher prices. The steady upcountry markets helped sellers to adopt this attitude, but as mills' stocks in most cases appeared to be adequate, buyers were in no great hurry to do business unless offers were attractive. Thus, sellers invariably met the mills' prices but with reduced quantities. Several buyers were interested in selected lots, and transactions in middles only and bottoms were reported. Only small interest was shown in New Crop jute, and limited purchases at odd prices were reported on the occasion of the Marwari new year.

THE JUTE MARKETS

Manufactured Goods: Small enquiries from overseas for hessian caused prices in this section to record an advance at the opening last Thursday, when 40in. 10oz. reached Rs. 39 a 100 bags for April shipment, which was the highest recorded for this delivery for nearly a month. Forward shipment quotations continued to rule at a premium of 4 or

Corn sacks				

Raw Jute: Calcutta mills gave fair support to the raw jute market last week, and at the opening on Thursday conditions were stable with sellers inclined to be reserved. Business was recorded practically every day, but invariably buyers' ideas were below the quoted rates. Although in most cases sellers met their counter-bids, the quantities put forward were greatly reduced. The very steady upcountry markets prevented sellers from operating in any other way. Covering was extremely difficult because most of the jute is now in the hands of stockists who are not financially pressed to sell, and are content to release only small quantities at a time. As opposed to this, buyers are holding very bearish views, based on the favourable New Crop reports, the continued improvement in raw jute arrivals and their own stock position. They are confident that prices will drop in the near future, so purchases have been confined to immediate requirements.

Quotations at the opening last Thursday were maintained at Rs. 28-8 a maund for Upper Assam Bottoms, but in the absence of any large business, and because of the weaker goods market, prices dropped by 8 annas a maund by Friday morning. Mills took limited interest at this level and over the next two days rates showed very little alteration. On Tuesday, quotations were again reduced, and Upper Assam jute dropped to Rs. 27-8 a maund basis Bottoms. Sellers were inclined to resist these rates, but with the goods market showing signs of weakness, prices were established by small business late in the afternoon.

Business was done almost daily throughout the week. The main transactions were for Dhurib-Northern at Rs. 27 to Rs. 28 a maund basis Bottoms for April-May shipment, and also for Local Northern at Rs. 27-4 to Rs. 27-12 a maund for the same

At the close, both sacking and hessian were weak, and opening quotations on Wednesday morning were as follows:

	April	May	June	July-Sept.
Rs.	Rs.	Rs.	Rs.	Rs.
40in. 8oz.	32-6	32	31-14	31-10
40in. 10oz.	38-13	39	39-2	39-4

shipment. Other business was done in Murshidabad Tossa and Karimpore-Bongaon Tossa at prices ranging between Rs. 27-8 and Rs. 28 a maund. Small lots of Cuttack Tossa Middles only were also done at Rs. 29-12 a maund, and Bottoms only of the same fibre passed at Rs. 27 a maund. Purchases of Murshidabad white jute were reported at Rs. 26-4 a maund. Business in the Daissee section was very restricted. Small lots of agency Daissee were done at Rs. 28 to Rs. 28-8 a maund, and Daissee Mesta at Rs. 25 to Rs. 26 a maund. Bimli was also done at these last prices for F.A.Q. quality.

Some "lucky day" purchases of New Crop jute were reported in Upper Assam jute at Rs. 26-9-3 a maund for August-September shipment, and also New Crop Pakistan Weedings on the basis of Rs. 30 a maund for low weedings for June-July shipment.

At the close, prices are unchanged, and opening quotations on Wednesday morning were as follows:

Indian Jute (Kutch):	Landed at Mills Rs. a md. basis	Shipment
	Bottoms	May-June
Lower Assam	27-8	"

Jat Cuttings	124	"

Imports into the Cossipore markets showed a slight improvement last week, and a total of 530 wagons arrived at the sidings. All arrivals found ready buyers as mill representatives continued to take up large quantities at top rates. Stocks in Cossipore are reported to be about 800,000 maunds, mainly western jute, which is high for the time of the year. At the close, quotations of Kishenganj jute are based on Rs. 27-8 a maund for garsat quality. The Sheoraphuli markets are at a complete standstill. Imports are negligible, but a fair quantity is being held by operators and is available at a price. Preparation of land for New Crop sowings has been held up recently through lack of rain, but in many districts the Daissee white crop, which was sown earlier, was reported to be progressing favourably. At the close, quotations in Sheoraphuli were based on Rs. 27-8 a maund for garsat quality.

Mofussil: Upcountry markets in India continue to rule steady, and there is no parity with Calcutta prices. There are no imports from cultivators and the only business reported is of a speculative nature. Operators and stockists are in no immediate need of finance and are confident that they can retain their holdings and force up prices. New Crop prospects have been improved by the recent rains and more land has been put under seed. Latest quotations in Dhubri are based on Rs. 24 a maund basis Bottoms.

FINAL ESTIMATE OF MESTA

According to the Directorate of Economics and Statistics, Union Ministry of Food and Agriculture, the all-India final estimate of mesta for 1955-56 puts the current year's area and production at 618,000 acres and 1,201,000 bales (of 400 lbs. each), as against the partially revised estimates of 528,000 acres and 1,018,000 bales respectively for 1954-55. This shows an increase of 90,000 acres or 17 percent in area and 183,000 bales or 18 percent in production over last year. The increase in acreage and production of mesta during the current year has been shared mainly by West Bengal, Bihar and Andhra and has been attributed to better climatic conditions as compared with those of last year. Despite an increase in acreage, the production of mesta in Hyderabad State has declined due to the damage done to the crop by heavy rain during the growing period.

THE FOREIGN JUTE MARKETS

PRICES UP AGAIN

(FROM OUR DUNDEE CORRESPONDENT)

FOR some unaccountable reason, prices of raw jute have gone dearer again, just when everyone felt sure that they would continue to decline until they came back to the fixed minimum levels for white jute. Dark jute has been at minima or at 10s less in most cases for some time past, but in terms of shipment by 30s to £2 a ton. This is said to be due to a scarcity in Pakistan of old crop material, either good or indifferent jute, but many believe that it is just another attempt to arrest the Dundee raw jute market, many of whom have here or secured agencies for themselves, say that this is a time of religious ceremony and that when this is over there will probably be heavier arrivals.

of raw jute into the markets. This looks more like the reason for the dearer terms than the story of a scarcity of the fibre. Those sellers who were quoting new crop jute at £91 for Mill Firsts, £82 for Mill Lightnings and £77 for Mill Hearts for August-September shipment have withdrawn these and they have in some cases substituted other prices which involve the supply of new crop with old, with shipment July-August. Spinners, however, are not taking up any of these fantastic offers. Dundee spinners will soon have allocated to them the "emergency" stocks held by the Jute Control. These are generally turned over every quarter, any sales being replaced by fresh purchases. Now, however, the Controller will not replace the jute, as it is thought there is no necessity for having emergency stocks held in this country. One bomb is all that is needed to wipe out everything. Stocks of goods are also to be reduced and not replaced from Calcutta or elsewhere. Spinners can purchase their allocations of raw jute at any time, at the current price ruling for the grade they buy, plus 10s a ton for expenses. A time limit may be put on for the 60,000 bales which the Controller has in hand at the moment. Local agents for Pakistani firms are not likely to do much business until the stocks are cleared out. Old crop jute is offered at £99 for Mill Firsts, £90 for Mill Lightnings and £88 for Mill Hearts, with Daissee and Tossa at minima, c.i.f. U.K.

Calcutta goods have ruled firmer at 58s 9d for 40in. 10oz. and 46s for 71 oz. April, and 59s and 45s 9d May, with B Twills at 166s and 166s 6d respectively, f.o.b. Calcutta. Yarns are so quiet that spinners are working short time in some cases, and there is only a small trade passing in jute cloth and bags.

U.S. BURLAP CONSUMPTION AND STOCKS

U.S. burlap consumption during March was quite satisfactory, being three million yards more than February and just equalling the estimated consumption for March last year. U.S. burlap stocks continued to increase. At the end of March, these were reported as eight million yards above the previous month, but were one million yards below March last year. The 253 million yards included 141 million yards spots and 112 million yards floats. Appearing below are two tables which include the March figures—(1) based on member reports to the Textile Bag Manufacturers Association and the Burlap and Jute Association, and (2) projected to represent the estimated consumption and stocks for the entire industry:

TIN SURPLUS DISAPPEARING

Tin interests have always claimed that their products, although in surplus for many years, would in the long run become scarce. The moment at which surplus changes to balance now seems to be close. In 1953 world production exceeded consumption by 39,000 tons. In 1954 the surplus was 31,000 tons, and in 1955 it was 19,000 tons. World consumption of tin metal is still increasing. The Tin Research Institute recently estimated that United States consumption would increase this year by 5 percent. Major producers of tin-plate in Britain, Canada, France and Western Germany are continuing to increase their output. It seems likely, Messrs. A. Strauss and Co. suggest in their latest review, that the surplus this year will not be more than 15,000 tons. It might well be as low as 12,000 tons. Meanwhile the course of the tin market depends largely on the new contracts which the Texas smelter is believed to be negotiating.

Engineering and Transport

AIRWAYS FLY MORE MILES, CARRY MORE FREIGHT

REVIEW OF OPERATIONS DURING SECOND HALF OF 1955

DURING the second half of 1955, the mileage flown and the freight and mails carried by Indian air services increased over the preceding half-year according to an official report on civil aviation in India. The total miles flown on scheduled and non-scheduled air services increased from 12.7 million in the first half of 1955 to an estimated 13.9 million in the second half. Freight and mails carried increased from 90,320,218 lbs and 4,967,154 lbs to 96,678,400 lbs and 6,629,253 lbs respectively in the corresponding period.

The total number of passengers carried by Air India International during the period was estimated at 29,149, as against 21,975 in the earlier half-year. The Indian Airlines Corporation carried on its scheduled services 193,635 passengers, as against 213,353 passengers in the first half of 1955. In spite of the decrease in the number of passengers carried by the I.A.C. on scheduled services and an increase of 823,165 in the capacity-ton-miles operated, the overall load factor rose from 71 percent to 74.2 percent in the second half. Similarly, Air India International increased its capacity-ton-miles by 4,122,071 and its overall load factor from 56 percent to 59.5 percent.

The Indian Airlines Corporation acquired three Skymasters, increasing its fleet of this type of aircraft to six. Orders were placed for five four-engine Viscount turboprop airliners. The Dakotas on the night air services of the I.A.C. were replaced by four-engine Skymasters, offering additional passenger facilities without any increase in fares. In view of the large volume of mails that had to be carried, the Corporation was hitherto not able to offer many seats to passengers on its night services, but with the introduction of Skymasters it has been able to offer a greater number of seats, besides carrying a bigger load of mails and freight in each aircraft. A number of extra services were operated in the Assam area during the floods. Additional services were also operated between Amritsar and Kabul and between Amritsar and Kandahar to meet the demand of increased traffic.

Scheduled Services

Air India International on its scheduled services flew an estimated 2,455,388 miles, carrying 29,149 passengers, 1,192,842 lbs of freight, 45,520 lbs of newspapers and 488,271 lbs of mails, during the period as against 1,908,606 miles flown and 21,975 passengers, 920,529 lbs of freight, 45,118 lbs of newspapers and 374,795 lbs of mails carried in the preceding half-year. The capacity-ton-miles operated were estimated at 17,570,665, as against 13,446,594 during the previous half-year.

The Indian Airlines Corporation, it is estimated, flew 8,896,358 miles and carried 193,635 passengers, 49,435,091 lbs of freight, 3,904,228 lbs of newspapers and 6,140,982 lbs of mails on its scheduled services, as against 8,091,574 miles flown and 213,353 passengers, 39,624,608 lbs of freight, 3,387,091 lbs of newspapers and 4,612,359 lbs of mails carried in the preceding half-year. The capacity-ton-miles operated were estimated at 21,693,697 during the period under review as against 20,870,532 in the first half of 1955. The night air mail services of the Indian Airlines Corporation carried 13,524 passengers, 761,282 lbs of freight and 1,878,543 lbs of mails, as against 10,195 passengers, 563,968 lbs of freight and 1,722,705 lbs of mails. The nightly average on night air mail services rose from 56 passengers, 3,116 lbs of freight and 9,518 lbs of mails in the first half of 1955 to an estimated 74 passengers, 4,137 lbs of freight and 10,209 lbs of mails in the second half.

Non-Scheduled Services

Non-scheduled services operated by Indian air carriers flew an estimated 2,564,981 miles, carrying

47,371 passengers and 42,100,710 lbs of freight in the second half of 1955, as against 2,693,181 miles flown and 61,074 passengers and 46,342,872 lbs of freight carried during the preceding half-year.

The total number of aerodromes maintained by the Civil Aviation Department at the end of December, 1955 was 81. The construction of an aerodrome at Chandigarh was completed. The number of aircraft holding current certificates of registration at the end of December, 1955 was 547, of which 210 held current certificates of airworthiness.

The number of aircraft maintenance engineers holding Indian licences increased from 748 in June, 1955 to 785 in December, 1955. The number of A and B pilots holding current licences at the end of 1955 was 434 and 514 respectively. At the end of December, 1955, there were 12 subsidised flying clubs in India. During the period under review, a new club at Indore was brought into the subsidy scheme. These flying clubs trained 56 trainees for A and seven for B licences, and logged a total flying time of 8,755 hours during the second half of 1955. Some 102 pilots were flight checked.

Aeronautical Telecommunications

Twenty-seven additional aeronautical radio facilities were brought into operation, thus bringing the total number of facilities at the end of December, 1955 to 530. The provision of radio teletype installations for two external circuits, Calcutta-Bangkok and Bombay-Cairo, was completed and work on the installation of a standard instrument landing system and an airfield control radar at Calcutta was taken up.

Three intermediary gliders, Model IT-G3, serial Nos. TC-6, 7 and 8, constructed at the Technical Centre of the Civil Aviation Department, were test flown. The performance and handling of the models were found satisfactory.

During the period under review, 13 major accidents occurred to Indian registered aircraft, of which 11 occurred in India and two outside India. Three of the accidents related to aircraft on scheduled passenger services and three to aircraft on non-scheduled operations.

India became the 27th country to sign the Rome Convention of 1952 at a ceremony at the International Civil Aviation Organisation headquarters in Montreal. The Convention specifies the rules and the limits of liability of the operator to third parties where death or personal injury or damage to property on the ground is caused by aircraft in flight.

BLAST FURNACES FOR DURGAPUR STEEL WORKS

Three blast furnaces to be installed at the new steel works at Durgapur, West Bengal, will each be capable of producing upwards of 1,000 tons of iron a day. These furnaces are among the equipment to be supplied by Head, Wrightson and Company—one of the members of the consortium of British firms, called the Indian Steelworks Construction Company, which is to build the £80 million plant for the Indian Government. Head, Wrightson has been entrusted with the design and manufacture of three blast furnaces, together with a gas-cleaning plant and a complete ore preparation plant, to a total value of about £11 million. The charging equipment for the furnaces comprises a stock house-bin system approximately 1,200 feet long, 4,500 cu ft twin-hopper scale-cars, coke screening and weighing equipment, and twin skip hoists. To convey the hot metal from the furnaces, 30 70-ton capacity metal ladles and carriages will be provided, and for the casting of pig iron two double-strand casting machines with a total capacity of 240 tons an hour will be supplied. For the preparation of the ores and ore unloading, a blending and handling plant will also be provided by Head, Wrightson and Company.

U. K. Tea Stocks

U.K. tea stocks in London and provincial warehouses on 13th April amounted to 97,309,410 lbs against 95,927,040 lbs in the previous week. The total amount to be landed on 13th April was 16,055,600 lbs. Deliveries during the week totalled 10,113,730 lbs and landings in the same period 11,496,100 lbs. The total float on the same date was 38,680,942 lbs including 31,978,880 lbs from Calcutta, 496,000 lbs from Chittagong, 1,960,562 lbs from Cochin and 4,245,500 lbs from Colombo.

COCHIN TEA SALES

At Sale No. 9, 1,250,000 lbs. of tea were on offer. There was a strong and general demand in the market, which was fully met for everything. All Fannings met with keen enquiry and Whole Leaf types were steady.

INDIAN RUBBER PRODUCTION AND CONSUMPTION IN MARCH

Indian rubber output in March was 1,279 tons, according to the Rubber Board of India. Imports were 340 tons and exports were 12 tons 1,010 lbs. Consumption by manufacturers was 2,341 tons, including 312 tons imported. Stocks with manufacturers at the end of the month were 2,670 tons. Stocks with estates and dealers on the last day of the month amounted to 2,384 tons including 693 tons in transit. Manufacturers used 259 tons of reclaimed rubber, the month-end stock being 589 tons, and consumed 184 tons of synthetic rubber, of which their stock at the end of the month was 693 tons.

TEA COMPANIES

O. Po. and Dd indicate Ordinary, Preferred Ordinary and Deferred Shares, respectively. P. next to the name of the company indicates that the company also has Preference Shares. Figures in "accounts closed" column indicate the months of the calendar year in which accounts are closed. For Managing Agents refer to the Key (last page) under the numbers indicated.

CHARTER OF EXPANSION FOR THE PUBLIC SECTOR

THE ECONOMIC PRICE OF SOCIALISM

THE new industrial policy has been duly announced, so everybody should now know where he stands. There was nothing in the Prime Minister's statement to the Lok Sabha which could not have been deduced from the events of the past eighteen months. But it is no doubt reassuring to have it all on paper; or so at least the country's stock markets seem to think. If they can now be persuaded to develop some of the buoyancy which might have been expected of them when a period of rapid development lies just ahead, then the statement will have served some useful purpose. For those industries which have now been brought within the scope of the public sector (and there are few left out) there is the consolation that no immediate interference with their operations is planned. For those which have been excluded, there is the knowledge that their continued prosperity is essential to the Government's expansion plans, and the lingering suspicion that their field of activity can be invaded at any time should it be thought necessary in the public interest. The new policy is most useful as an indication of official thinking against the background of industrial expansion and the rapidly evolving "socialistic pattern". The lines it draws are no more conclusive than those of the 1948 resolution have turned out to be; it would be simple-minded to attach any sanctity to them.

The fact which does emerge is that the public sector is to be expanded and private industry will be forced to adapt itself as best it may at any point where friction arises. When the justification for this attitude is the admitted inadequacy of the private sector to undertake some of the larger development schemes, the policy is a sound one. This is equally true when the reason is the inefficiency or corruption of existing industrial units; although if the Government considers public enterprise will invariably do better under similar circumstances, it is in for a big disappointment. It is where the excuse for the intrusion and expansion of State activity is ideological and not one of pure economic expediency, that it is not so good. On these grounds, this policy resolution leaves much to be desired. When flexibility might be counted an asset in a statement of intentions of this sort, here it can only be regarded as an attempt to leave open a whole field of opportunity for the Government to manoeuvre before the promptings of political pressures. This is the statement's chief weakness as an assurance to the private sector. Much of its future working will undoubtedly be dictated by economic reality, but when political expediency demands interference with the dictates of commonsense, this policy is certainly not going to stand in the way. Judged on whether it will increase production and so help to meet the country's greatest need, the new statement can be dismissed altogether. As an encouragement to the private business man to increase his commitments, it is of no greater importance. Where it will serve its purpose is in the opportunities it gives the State to regulate and control private industry without having to go to the trouble of looking for any tiresome economic reasons for doing so.

</

the demand, and is now reported to be thinking of allowing about half the sum. It is still not quite clear whether, with the allocation that is finally made, the public sector will be able to achieve the target which is being set for it. As long as coal remains the country's biggest and most dependable source of energy, its development is likely to be vital for economic expansion generally; that is why the doubtful nature of the targets for its production and transport gives cause for serious worry.

The debate on the targets for private and State coal mines has already had an unsettling effect on individual and company proprietors. Revision on the lines now contemplated might be useful in helping restore a measure of confidence. The debate has in the past produced periodic threats of nationalisation of the whole industry; but the evidence now suggests that the Government has barely enough money to produce an extra 12 million tons, so it can hardly afford to undertake the production of the entire 60-million ton target set for 1961. The unfortunate feature, however, is that the plain admission is being shirked, with results that bring no good either to the Government or to the private owners. The general trend of official statements on nationalising coal, coming after the brave assertion of earlier months, is that no guarantees against nationalisation will be given, although the money for it is simply not there. It is difficult to see what there is to be gained from the decision to maintain a paper axe over the industry's head. Its chief result so far has been seriously to hamper the flow of investment into the industry.

This flow has been hampered for other reasons also, and it seems that serious attention will have to be given to these problems as private producers finalise their expansion plans. A major reason why coal has been among the duller sections of the investment market in recent years is that the returns it has offered have been very slender. Costs have steadily risen, but selling prices have been pegged at wholly uneconomic levels; profit margins as a result have narrowed, where they have not disappeared altogether. It is encouraging that the question of an increase in coal prices is now to be reviewed by a special committee. Presumably, this review will be completed after the effects of the Industrial Tribunal's award concerning the benefits and earnings of colliery workers have been assessed. The expansion and healthier working of the private coal industry is important enough for general economic progress to make it necessary that a decision on prices be quick and rational.

MORE MOUTHS TO FEED

WORLD population reached 2,652 million by the middle of 1954, according to estimates published this week in the United Nations *Demographic Yearbook 1955*. An analysis of the statistical data indicates that the population of all the major regions is increasing faster than ever before. Of the 2,652 million persons living in mid-1954, 1,451 million, or about 55 percent, were in Asia (excluding Russia), 404 million in Europe, 357 million in the Americas, 214 million in Russia, 210 million in Africa, and 144 million in Oceania. The most populated countries in the world were the Chinese mainland with 583 million; India 377 million; Russia 214 million; the United States 162 million; Japan 88 million; Indonesia 81 million; and Pakistan 80 million. The regions having the fastest population growth during 1950-54 were Oceania with 2.6 percent per annum and Latin America with 2.4 percent. The continent having the slowest population growth was Europe. North America grew at the rate of 1.6 percent, and Russia at 1.5 percent. The growth observed during this period was faster than in previous periods. The tendency toward a decreasing rate of population growth in Europe and North America during 1920-40 was reversed after 1945. The rate of population growth has increased during the last five years. The acceleration is related primarily to changes in the levels of fertility and mortality, since migration among the large regions of the world is now playing a minor rôle in comparison with the natural increase.

The *Demographic Yearbook* shows that the least developed countries have relatively high birth rates and also high mortality, the differential balance being small. The most advanced countries have relatively low birth rates and low mortality, the balance between the two also being small. On the other hand, the under-developed countries which are going through a period of rapid progress in reducing the levels of mortality have maintained, or even increased, their birth rates, with the net result of rapid population increase. There are more women than men in American and European cities, while in the Arab countries and Asia the opposite seems to be true. For example, in India and Ceylon there are 127 and 173 men, respectively, to 100 women in cities of 100,000 or more. In Denmark, Sweden, and England and Wales, there are about 89 men to 100 women, and in the Americas the ratio varies between 73 in Haiti and 97 in Argentina. In general, countries with a higher proportion of rural population have larger families and households. In

Latin America, India and Japan, the average size of the private household ranges from 4.5 to 5.9, while in central and northern European countries the average household size varies between 2.9 in Sweden and 4.2 in Ireland.

The economic activities of the population vary a great deal from country to country. Men constitute the bulk of the labour force nearly everywhere, the average of the economically active in the countries listed being about 59 out of 100 males, as compared with 22 out of 100 females. The proportion of inhabitants able to read and write also varies widely. The percentage of illiteracy among persons aged ten and over varied, around 1950, in 51 countries from about 3 percent in Bermuda, Belgium and France, to 94 percent among the Algerian Muslims and 99.7 percent among the indigenous population of Portuguese Guinea. Among the self-governing territories, India with 82.1 percent illiteracy and Haiti with 89.4 percent are the countries where this problem is most acute. Considerable improvement is shown in the figures for many Latin American countries. In general, persons under 30 now know how to read and write in larger proportions than their elders, indicating the differences in educational opportunities in modern times. By and large, there are more illiterate women than men. The mean length of life, as measured by the average number of years that a group of new-born babies would live if subject to the mortality conditions of the area during a certain period, has varied in recent years between 32.5 years for males and 31.7 years for females in India in 1941-50, and 70.6 years and 72.9 years for males and females, respectively, in the Netherlands in 1950-52.

In general, the most advanced countries have a higher proportion of married populations than the less developed ones. The exceptions are the Arab countries, in which the proportion of married persons is extremely high. In Latin America, individuals marry young but the proportion of the married is rather low, while in India and the Arab countries the proportion of those marrying is very high but the number changing this status through divorce or widowhood is also very high. Thus, in India, for instance, at the age of 25 to 34, 89 percent of the women are married, and at the age of 55 to 64, 60 percent are widowed. The large proportion of widowed women in India, it is pointed out, may be the result of higher mortality of males in higher age groups and may be related to the fact that for an important sector of the population, remarriage of widows is considered not to be socially acceptable. The countries having the lowest marriage rates are the ones having the highest birth rates. This may be explained by the higher fertility of married couples and the large number of illegitimate births in these countries. Throughout the period 1920-54, the countries of Latin America, Egypt and India have consistently had the highest birth rates recorded in the world, with a record high of 61 registered births to every 1,000 of the population in Guatemala during 1920-24. Central and northern European countries show the lowest rates, the smallest having been 14.4 in Sweden during 1930-34. A study of the trends and characteristics of birth rates is considered of extreme importance by demographers since population growth depends to a large extent on birth rates, with mortality following a uniform downward trend and with migration in large regions of the world no longer a major factor in population growth.

CURRENT COIN

Producing More Aluminium.—The main point of interest in Mr. K. C. Mahindra's address from the chair to shareholders of the Indian Aluminium Co. Ltd. last Friday was his indication about how the Hirakud smelter project is to be financed. (A fuller version of the address appears on a later page.) The requirements of the project are estimated at nearly Rs. 9 crores at present; it is intended to establish a smelter with an initial ingot capacity of 10,000 tons a year, which can later be doubled or more than doubled. Mr. Mahindra said that since such a large sum is involved, only a portion of it should be invited from shareholders and the public, the rest being covered by medium-term loans and funds generated within the company. Details of the new capital issue are still being considered, but it has been decided that it will be in the form of convertible loan stock, which will carry a fixed rate of interest and confer on holders the right to convert it into ordinary shares of the company. "Since this type of stock combines the attraction of a secure rate of return over a number of years, with the option of conversion for possibly greater returns or capital appreciation which is expected from the equity of a growing and expanding enterprise, I hope that it will prove to be an attractive form of investment." Mr. Mahindra said that the plan for the Hirakud smelter is based on an expansion of the existing facilities for bauxite and alumina production, and thus requires less capital than would be

necessary if entirely separate integrated facilities were to be created. The smelter is expected to come into operation by the end of 1958, and most of the bauxite-alumina expansion will be undertaken immediately after that, so that the entire integrated plant is in operation before the end of 1961. Reviewing the company's working results for 1955, Mr. Mahindra stated that the improvement over previous years resulted from an expansion of production facilities and better market conditions. Sales increased by more than 50 percent over the 1954 level, but "the advantages of capacity operation of balanced plant facilities, which the expansion had made possible, were not fully realised in 1955, as output and production costs of metal were adversely affected by inadequate power supply to our Alupuram works during the earlier part of the year." The company's operations during the current year are expected to show a further improvement.

Importers' Difficulties.—In his address from the chair to the annual general meeting of the Calcutta Import Trade Association, Mr. F. C. Kidd voiced some complaints which are of long standing, but which he was forced to repeat because they have persisted in spite of the trade's hard efforts to get them removed. The reason, of course, is the slowness with which officialdom is accustomed to move. In this case, it happens to be the Customs department, which, he maintained, cannot be persuaded to follow a consistent set of rules for levying duties on imported products. Mr. Kidd gave a few remarkable examples. Referring to the way "the real value" is determined for assessment purposes, he pointed out that the Sea Customs Act laid down, wherever possible, that "assessments should be carried out under Section 30(a) on the basis of wholesale prices". The Customs authorities had admitted that it was not always possible for them to administer in strict accordance with the law, particularly as Section 30(a) involved comprehensive statistics which were not available. Consequently, the majority of assessments were carried out under Section 30(b) where the invoice value was used as the basis. But the Customs authorities now have less faith in the integrity of importers than they have had, and therefore, they use their own arbitrary method of assessing, rejecting outright the invoice value that importers submit. Consequently, the figure varies from appraiser to appraiser and from port to port on identical goods. This means the importer has no means of knowing what the actual duty is finally going to be, and is thus unable to quote forward delivery, particularly where Government contracts are concerned. Besides, the method of assessment involves discrimination. Goods with well-known brand names are taxed under Section 30(a) and the same goods without that advantage, are treated under Section 30(b). The second question concerned that of agency commissions and discounts. In one case, a commission has been allowed for the purpose of fixing duty, in another, it has been totally disallowed. Even the classification of the Member (Customs) of the Board of Revenue, that such commissions should be permissible in cases where the bulk of the goods are imported through a sole agent, has not been serving as a standard rule. The Customs authorities are unable to interpret what the term "bulk of imports" means. Consequently, further efforts are being made to get a clear-cut definition of this from the Member concerned. The problem of classification for the purpose of levying duty constitutes another trouble for importers who have been subjected to continual harassment. Mr. Kidd suggested that the trouble arose because the Customs authorities were out "to secure maximum revenue, consequently their system is so rigid that appraisers are not permitted to use any commonsense." He felt that a forum was wanting where these complaints could be discussed between Customs officials and the import trade, and matters sorted out. This surely is not too much to ask.

Guaranteeing Export Credit.—The proposed export credit guarantee scheme has received unanimous support from business men, subject to certain qualifications. It is a scheme the value of which—in the context of the large foreign exchange requirements of the second five year plan—is doubtful. In fact, it is probably essential for a country wishing to participate in international trade on any appreciable scale. But to be able to serve its intended purpose well, the scheme must be based on sound considerations about the needs of business men and also on a realistic understanding of the risks of international commerce. The Federation of Indian Chambers of Commerce and Industry, in its reply to an official questionnaire designed to sound public opinion on this scheme, has made a number of practical suggestions which merit fullest consideration. In the first place, the Federation suggests that the scheme should be of a limited nature covering a few selected items, rather than a comprehensive one covering all goods; the reason being that not all export goods are likely to respond to the stimulus of credit guarantee. It mentions a few items which

would benefit from the scheme's support. They are largely of the semi-capital or durable kind. But it is against widening the scope to cover cases where Indian exporters fail to fulfil their contracts. The Federation suggests that two kinds of policies—short-term and medium-term—should be introduced under the scheme, the latter to cover the export of capital goods of which India is a potential exporter to south east and west Asian countries. It also proposes two types of policies—a "contracts policy" and a "shipments policy" such as exist under the U.K. system. The former type should, as in the U.K., relate to the "cancellation or non-renewal of export licences or the imposition of restrictions on the export of goods not previously subject to licence." In addition to this, the Indian scheme should also cover, under the contracts policy, risks due to non-fulfilment of contracts for reasons beyond the control of the exporter, including the non-availability of transport and the risks arising as a result of enhancement of export duties subsequent to entering into a contract. On the nature of risks to be covered, the Federation recommends guarantees up to 80 percent of the goods shipped or contracted for, so that the exporter is obliged to retain a "reasonable interest in the transaction" and exercise his "normal business prudence". In this matter, the U.K. practice is recommended as far as practicable, as also in fixing the premium rates of export insurance. In the U.K., the rates of premium are moderate and flexible according to the nature and risks of the business. The Federation attaches considerable importance to "low rates of premium", as otherwise the scheme will lose most of its incentive. On the organisational structure, it suggests a State-run body, if the Indian insurance companies do not come forward to form a company of their own. In several countries, such as France, Italy, Germany, Holland, Austria, Spain and Ireland, private export credit guarantee schemes are managed by private organisations. The countries where the State runs the scheme include the U.K., Canada, Belgium, Denmark, Norway and Sweden. But in either case, the organisation in India should have the basic features of a private concern to ensure the efficiency and speed characteristic of such organisations. There should also be a central advisory council consisting of business men and bankers and advisory committees at major ports to handle local difficulties. The proposed company should become a member of the International Association known as *Union D'Assureurs Pour Le Control Des Credits Internationaux* with its central office in Paris run under the auspices of the International Chambers of Commerce. The advantage of the membership is that information about the "credit status" of foreign buyers can be more easily collected.

Employment in March.—The number of employment seekers registered at the employment exchanges all over India declined to 704,638 in March, 1956, from 724,448 at the end of February. The number of employed persons who were in need of further employment assistance, was 6,652 at the end of the month. Fresh registrations at the exchanges marked a fall of 6,552 in March, 1956. The number registered was 121,399 against 127,951 in February, 1956. The decrease in registrations was comparatively large in the States of Uttar Pradesh, 5,716, Bihar, 1,978; Delhi, 955; Rajasthan, 942; and Travancore-Cochin, 691. On the other hand, increases in registrations were recorded in the States of Madras 1,479; West Bengal, 861 and the States of Madhya Pradesh, 690. Although there was a decline in the number of registered unemployed, the employment situation in general remained steady, with only some improvements in a few years. One of the reasons for the decline in registrations was, however, the decrease in the number of working days during the month. The number of employers who utilised the services of the exchanges during the month was 5,126 against 5,125 in the preceding month. Employers notified 24,293 vacancies during the month under review compared with 26,006 in the month under review compared with the number recorded a fall of 1,713. The decrease in the number of vacancies was marked in the States of Punjab, 776; Bihar, 376; West Bengal, 302; Bombay, 297; Ajmer, 293; and Rajasthan, 279. A comparatively large increase in the number of vacancies notified, however, occurred in the States of Madhya Pradesh, 349; Assam, 320; and Madhya Bharat, 272. Of the vacancies notified, 18,749 were by Central and State Government establishments, and 5,544 by non-Government establishments. There was an increase of 395 in the public sector and a fall of 2,108 in the private sector.

Lancashire Opens a Campaign.—The "campaign" which Lancashire cotton interests have been planning for some time to secure Parliamentary support for Government help against the serious effects of the unemployment and under-employment in the industry was launched recently by an 80-strong delegation covering the whole Lancashire area, which presented its case to a meeting of M.P.s from textile constituencies at the House of Commons. Three main points were advanced. Protection for the cotton industry was being sought not simply to provide the people with jobs but because the

textile trade was in a state of emergency. "We say," said Mr. Whitlock, Mayor of Nelson, and one of the delegation spokesmen, "that it is foolish to allow ourselves to be placed in a position where our industry is destroyed and put at the mercy of far-distant employers." His second point was the growth in the rate of textile imports which were being retained in Britain—textiles supplied from India, Hongkong and Japan. In 1955, he said, more than half of these imports from India and Hongkong were retained in the home market and the percentage retained was 12 percent of the total of the home market trade. But at the rate of growth the total of imports retained might become a quarter or a half of the total home market trade, "and we say there should be something to stop it." The third point was that the Ottawa Agreements, which were made in 1932, dealt with a situation in which there was no textile industry in Hongkong and no serious competition from India. "We say that circumstances have changed and that the time has come for a revision of the Ottawa Agreement."

Yarn Imports a New Danger.—Although so far attention has been given mainly to cotton cloth imports, Lancashire is now beginning to be concerned also about Far Eastern competition in yarn, for apparently lace manufacturers in Nottingham and elsewhere are buying a large proportion of their yarn requirements from abroad, especially from Hongkong at prices anything up to 1s. 1d. below those quoted for yarn spun and doubled in Lancashire. Total exports of cotton yarn from Hongkong last year were 32 million lbs. against 30,800,000 lbs. in 1954, and those from India rose sharply again after falling by one-half between 1953 and 1954. Japanese exports in 1955 were 26,200,000 lbs., compared with 29,500,000 lbs. in 1954, but with 21,200,000 lbs. in 1953. The nature of Japan's export trade in yarns has changed greatly in the last two or three years though Pakistan, Burma, Indonesia and Hongkong between them still take about three-quarters of the total. Whereas, however, folded yarns represented only 27.7

percent of the total exports in 1953, by 1955 the proportion had risen to 42.3 percent. Similarly counts from 40's upwards formed 46.8 percent of the exports in 1953, but their proportion of the total was 69.7 percent last year.

INJUSTICE TO INDIA

THE article on "Indian Affairs" which we have extracted from *The Times* this week is worthy of the careful attention of every well-wisher of India and all connected with this country. Prompted by the injustice under which British Indian subjects are labouring in South Africa, the writer takes occasion to dilate generally on the injustice which India suffers at the hands of England in the appointment of home charges. Allusion is made to two glaring instances of over-charges: one for the cost of a State Ball given at the India House, and the other for the cost of troops requisitioned from India to defend British interests in Egypt. These instances are sufficiently disgraceful but they are only two out of many. If the opinion of the European classes alone, including officials in European classes, allowed the common courtesy of a fair hearing, we feel sure that the good sense of the English people would not have allowed such iniquitous charges to be made. But on some subjects India never is allowed a fair hearing, no matter whether opinions are put forward by the Government in India, by the European community in India, or by the natives of India. community in India. These subjects are the fair and just and one of the most important of home charges. A Royal Commission was some months ago appointed to consider and report on Indian expenditure. Its deliberations have been carried on within closed doors, and at present what the enquiry is being as to the lines on which the enquiry is being conducted. It is remarkable, and we may add suspicious, that for the purpose of gaining information and probing the opinion of those most concerned in the payment of home charges, it has not been thought necessary to invite a single expression of opinion from the non-official classes of India.

THE BANK SUB-AGENT AS A "WORKMAN"

CLASSIFICATION DEPENDS ON NATURE OF DUTIES

(FROM OUR LEGAL CORRESPONDENT)

CAN the sub-agent of a bank be a "workman" within the meaning of the Industrial Disputes Act? The answer, in the light of the latest reported decision on the point appears to be that he can, but whether he is in fact a "workman" or not depends on the circumstances of each particular case. We have to consider the question, bearing in mind the statutory definition of the word and also the elastic and flexible nature of the judicial interpretations which have been placed upon it; and also the tendency in recent years to extend and enlarge the colloquial meaning of the word "workman" rather than to limit it. A few years ago Mr. Justice Bind Basini Prasad seems to have been in no doubt at all, and in a conciliation award gave the following categorical answer: "A sub-branch is almost a separate unit and the sub-agent or the sub-manager is at the helm of affairs. If he too is classed as a workman then it would be without an officer. I am unable to agree that a sub-branch can be without any officer. I hold that a sub-agent or a sub-manager is an officer and does not come within the definition of a 'workman'."

But within a year or two, without being, as far as one remembers, expressly dissented from, the above observations began to be explained and distinguished. In 1952 we find their lordships saying in another case: "According to the test laid down by Mr. Justice Bind Basini Prasad, the nature of the work done by a sub-agent and the degree of responsibility would bring him under the category of an officer. We do not think it would be possible to decide with regard to every sub-branch as to whether the sub-agent of that office is an officer or not. It may be that one branch may not have much business and the sub-agent there may not have to exercise his powers of supervisory or directional nature in full. This fact alone would not be sufficient to lead to the conclusion that he ceased to be an officer. It must be held as a rule of general application that a sub-agent is an officer unless it is shown that the employee was given a

colourable designation and that there was no intention to invest him with the powers and responsibilities ordinarily incidental to the office."

The reader will note too that B. B. Prasad J. had in mind presumably a branch of a bank in some small or smallest out-station where the sub-agent was in sole supervisory charge. But the bank will have, e.g., in the head office and in branches in large cities, an agent or manager, in which event the sub-agent would not be "at the helm of affairs" at all.

The fact is that a large proportion of present-day litigation is caused by the loose use of words, both in Acts of Parliament and colloquially. If you take your local English paper, you will not for the past 20 years have seen therein the word "tradesman". He is always pointedly termed "trader". Nor are there any chambers of trade; they have been renamed chambers of commerce. It is the same with this word "officer". In the writer's submission, the word "officer" has no proper place in the commercial or professional world. More than 60 years ago, old Day J., roundly holding that a so-called "officer" is a "workman", said: "This is an age of exaggerations and humbug; we do not now, even in Acts of Parliament, use the same language as we did a hundred years ago. No doubt in those days these plaintiffs would have been called 'servants' and not 'officer'; and very properly so, too. I must, however, read this Act in the sense of our time; and I think it clearly means to compensate any of the servants who by its operation have suffered any pecuniary loss." "Where everyone is somebody, then no one's anybody," said W. S. Gilbert's Grand Inquisitor in the very year Day J. made the above observations. Not so many years earlier satirising the snobbish attempt to extend the meaning of the word, Charles Dickens made the village beadle Mr. Bumble describe himself as a "Parochial Officer", while Mr. Dennis, the public hangman, cryptically alludes to himself as a "Constitutional Officer".

He was a curious character, Mr. Justice Day, with a peculiar sense of humour. He was one of the judges in the famous libel suit of *Parnell v The Times*. At the very climax of the case, when Pigott, the perjured Irish journalist, had admitted that he had forged the murderous letter of which Parnell had been alleged to be the author, there was a loud grating sound in the court. The Lord Chief Justice angrily called for silence but the

sound continued. No one connected it with the graven expressionless face of old Day. But it was the judge convulsed with uncontrollable laughter. It was a tragic moment. The Times was sunk. Parnell's honour restored and Pigott blew his brains out the next day. What there was in this grim episode to amuse the judge, no one ever knew; he never vouchsafed a word of explanation.

One is grateful to have come across the commonsense observations of the shrewd old gentleman made so many years ago which illustrate the spirit in which we should approach the Indian Industrial Disputes Act today. "I must however read this Act in the sense of our time; and I think it clearly means to compensate any of the servants who by its operation have suffered any pecuniary loss."

We will return to our bank sub-agent. The case was an appeal from an award dated 16th May, 1953, of the Central Government Industrial Tribunal, Calcutta. Mr. Gopal Kapoor was working as an employee under the designation of sub-agent in the main office branch of the Hindustan Commercial Bank Ltd. at Kanpur. He was discharged from service on 4th November, 1949, and it was in relation to this discharge that the dispute arose. Mr. Campbell-Puri, chairman, Central Government Industrial Tribunal, rejected the claim of Mr. Kapoor for reinstatement, holding that the case was not triable for want of jurisdiction, as, being a sub-agent, he was an officer and not a workman. Mr. Kapoor appealed, and in that appeal the Labour Appellate Tribunal held that "there was no harm in mere designation" and that what really mattered in such cases was the nature of the duties and responsibilities of the individuals. The award was set aside and the case was sent back to the original Tribunal to make an award after considering the issue as to whether Mr. Kapoor was, upon his discharge, a workman or an officer upon such materials as were already on the record and on such further evidence as might be adduced by the parties. In the light of this direction Mr. Campbell-Puri again considered the matter and arrived at the same conclusion, namely, that Mr. Kapoor was an officer at the time of his discharge and not a workman. Accordingly, he again rejected the claim, and Mr. Kapoor again appealed. His appeal was successful.

The Appellate Tribunal did not lay down any general rule as to whether a bank sub-agent is or is not a workman. The effect of its decision was that he may or may not be and that in this particular case he was. Quoting an earlier decision of its own, the Appellate Tribunal held that "the relevant question is not whether the employee is an officer but whether the employee performs clerical work so as to place him in the category of 'workman' under the Act. (Note: The definition of workman in the Act is 'any person employed in any industry to do any skilled or unskilled manual or clerical work for hire or reward.') The approach therefore should be not from the angle of testing whether the employee is an officer but from that of examining the duties to be performed by the employee and deciding whether they are in the main clerical or not. But in each case it will be essential to examine the facts and to determine what is the nature of the work. The question is essentially one of fact and no general answer to cover all cases is possible." On this view of the matter, the facts that Mr. Kapoor was admittedly an "officer", that he was designated a sub-agent, and that he was drawing the same scale of pay and allowances as the agent of his branch were not of much consequence. Examining the duties of Mr. Kapoor in detail, the Appellate Tribunal came to the conclusion that they were essentially of a clerical nature, that he was therefore a workman within the definition at the time of his discharge, and that as such the Tribunal had jurisdiction to adjudicate. And, so adjudicating, the Appellate Tribunal found on the facts that the workman (sub-agent) had been arbitrarily discharged and ordered his reinstatement.

INTRODUCTION OF TURBO-JET SERVICE THROUGH INDIA

The introduction of B.O.A.C.'s propeller-jet service through India will be commemorated by the issue of *Britannia* first flight covers. The turbo-jet service is due to commence in September over the London-Sydney route, with stops at Zurich, Beirut, Karachi, Calcutta, Singapore, Jakarta and Darwin. The souvenir covers will be priced at Rs. 2 each and will be flown between any two points on the routes except to and from Zurich and Jakarta. On this occasion, arrangements will also be made for these attractively designed covers to be air-mailed to private individuals provided their place of residence is situated in the United Kingdom, Lebanon, Pakistan, India, Malaya and Australia. Philatelists and collectors of first flight covers will find this a splendid opportunity of adding to their collections and they can intimate their requirements to the nearest B.O.A.C. office not later than 12th June.

A DITCHER'S DIARY

biggest advertisers in the country are being prevented from establishing a tradition of extensive nation-wide coverage for the laggards to follow. The other important point Mr. Khatau made concerns the proposed price-page schedule for newspapers. This, he suggested, would restrict the circulations of the larger and better-established papers. It is easy to see that the smaller ones stand to gain an advantage while at the same time being unable to provide the services that are traditional to their bigger rivals. The result will be that, in order to maintain these services, the latter will be compelled to increase their advertising rates. And in that direction danger lies. It is perhaps a grudging appreciation of this fact that has made the Government put the scheme on ice. Everybody interested in the welfare of the press in this country hopes that it may be frozen dead.

It was gratifying to learn recently that the sale of all forms of serious literature is on the increase in Europe; even economics books are in good demand these days. People's reading habits have steadily improved since the early post-war "escapist" days. But that is probably not the only reason. Good books have become easier and less expensive to get hold of in the last few years, thanks to the enterprise of a number of publishing firms specialising in cheap, paper-backed editions. Now I see from an American news report that the same is true in the United States. There the trend started six years ago when the British firm of Penguin opened a branch in Baltimore. Today, so the report says, Penguin books are selling at the rate of one and a half million copies a year. Among the best-sellers are such titles as *The Odyssey*, *The Canterbury Tales*, and Dante's *Inferno*. Penguin have not been without their imitators. The New York publishing firm of Doubleday and Company has come out with its "Anchor" series and Alfred Knopf with their "Vintage" books, which are featuring such meaty propositions as *Democracy in America* by De Tocqueville and *Moses and Monotheism* by Freud. These are not the only ones to follow suit, and it is not necessarily the satisfaction of encouraging the wider appreciation of good literature which is encouraging the trend—for once, culture seems to be synonymous with big money. With science fiction enjoying a boom—even developing a vocabulary of its own as I remarked a week or two ago—and technical books in excellent demand, the only loser appears to be the trashy novelette, which is probably in too-direct competition with television, radio and cinema for the provision of morose entertainment. All this is most encouraging at a time when the various forms of cheap, cunningly-devised, mass-produced diversions were threatening to make a mockery of the benefits of compulsory education in western countries. It may even lead to serious writing becoming a profitable occupation once again, as it ought to be. At the moment it seems that the writers who are chiefly benefiting are those who are dead as well as distinguished. But perhaps the future prosperity of the serious author depends not so much on the public's taste or the enterprise of publishers, but on the rapacity of the tax collector. At the moment, I am sorry to say, there is no sign of an improvement there.

When Professor Galbraith recommends that railway passenger travel should be organised on more economic lines, I am inclined to agree with him. But when I read of the methods he suggests for discouraging travelling, I am not so sure. The Professor seems to have a better respect for the

price system than he is usually given credit for; increases in passenger fares would certainly economise the railways' resources, although I suspect the amount of saving would be small and the cost in terms of unpopularity for a nationalised industry quite prohibitive. I cannot see this proposal for higher fares, or the similar one for fewer amenities, finding much favour with the Railway Board—Professor Galbraith must bear in mind that there are votes at stake. And when he advises the running of trains at unscheduled hours, one begins to suspect his economic as well as his political judgment. Irregularity in schedules must be considerably more expensive to organise than its opposite, as well as its being an excellent step towards increasing the accident rate. The waste which would be involved in missed appointments, and non-delivery of goods would easily outweigh any advantages from discouraging travel. Besides, where is the room for such arrangements except on the main lines—are not the local ones already irregular enough? It seems to me that Professor Galbraith's experience of travelling by Indian railways is limited. Apart from a few mainline services, conditions could scarcely be more inconvenient or uncomfortable in a country where the vast majority of the population is not easily discouraged by such things. The idea that people in India spend their meagre incomes in unnecessary cavortings about the country in railway trains, is obviously absurd. There have been instances where normal traffic has been interfered with by special arrangements for transport to festival sites, but they have fortunately been few. Professor Galbraith's suggestions contain a fair amount of economic sense, but I wonder how much of it would survive a journey from here, say, to Delhi, third class, round about the middle of May. Professor Galbraith might try it. If, at the end of the journey, he were to be asked to cast his vote in a general election, I am sure he would have no difficulty at all in appreciating the Railway Board's point of view.

Prime Minister Nehru is nothing if not refreshing when he touches on the subject of letters. Opening the Radio Literary Forum in Delhi last Sunday, he struck a wistful chord by harking back to the days of his own authorship. He had fallen, he regretted, from the high eminence of that status to the lower one of Prime Minister, being now "entangled in other matters". I see that Sir Winston Churchill, that retired "war horse", has just launched upon the world the first volume of his ample *History of the English-speaking Peoples*. It seems hardly likely that Mr. Nehru, "entangled" as he is and will probably remain, might return at any time, like Sir Winston, to the pleasures of the pen. Nevertheless, his advice can be followed with profit by all who would call themselves authors. To Indian writers he has suggested that they try to strike a balance between the needs of material progress and those of the mind and spirit. This everyone worth his pen has always done, but perhaps it is just as well to drive the fact home in an age when the emphasis is so much on "the flesh-pots of Egypt". A no less important point discussed by him was the historic rôle of the English language in India. He stressed how, by acting as a common channel of communication between the different parts of the country, it has helped foster the sense of nationhood, and has put India in vital contact with the mind of the West. It is good that these views were expressed by as important a person as Mr. Nehru. Perhaps it will serve to abate to some degree at least the bigotry of the champions of Hindi.

THE DITCHER.

"Where now the city stands,
there was once naught but the city's site." OVID

Bombay

February 18, 1665. Only a small island of mud-flats and fishing villages, was what Humphry Cooke took over from the Portugese, as part of the marriage portion of the Infanta Catherine of Portugal for her husband, King Charles II of England. During the centuries that have passed there has risen in that place a modern city of steel and concrete—a mighty industrial centre. Thousands of tons of STEEL have gone into the making of this city.

Company Meeting

INDIAN ALUMINIUM COMPANY, LIMITED

CHAIRMAN MR. K. C. MAHINDRA'S REVIEW

Addressing the Annual General Meeting of Indian Aluminium Company, Ltd., held at Calcutta on 27th April, 1956, the Chairman, Mr. K. C. Mahindra said:

"Last year I expressed my view of the immediate future for your Company as one of restrained optimism. You will have observed from the audited accounts of the Company sent to you, that net profits for the year 1955 amounted to over Rs. 26 lakhs, which is almost double that attained in any previous year. I think we can regard this result, which reflects the benefits of expanded production facilities and improved market conditions for the Company's products, with satisfaction and pride. Although sales increased by more than 50% compared to 1954 the advantages of capacity operation of balanced plant facilities, which the expansion had made possible, were not fully realised in 1955, as output and production costs of metal were adversely affected by inadequate power supply to our Alupuram Works during the earlier part of the year. It would, therefore, not be unreasonable to expect some further improvement in the results of the current year's operations."

Referring to the development of the Company's activities in the fabricating field, the Chairman stated: "Apart from continued progress in the production of medium- and high-strength alloy rolled products at Belur Works, an extrusion plant was brought into operation at Alupuram in March 1955 and an expansion of the Kalwa plant was initiated which will increase the capacity for paste production by 50% during the current year. To sustain this expansion of fabricating activities, the Company continues to supplement its metal production by increased purchases of imported and indigenous scrap and ingot. However, the increasing cost of metal purchases under prevailing conditions of general world shortage is fast resulting in a situation which would compel us to increase prices correspondingly."

"The Directors have been alert to the need for expanding smelting facilities with a view to satisfying the Company's own increasing requirements of metal as well as those of other fabricators, and, in my earlier addresses, I have referred to the project which has been under consideration for some time for the establishment by the Company of another smelter near the Hirakud Development in Orissa. Your Directors have now decided to proceed with the scheme which envisages a smelter at Hirakud with an initial annual ingot capacity of 10,000 tons, but capable of easy expansion to 20,000 tons or even more, as soon as circumstances both warrant and permit it."

"The expansion of ingot production poses financial and organisational problems more serious than those of increasing fabricating capacity. Even though the plan for the proposed Hirakud smelter is based upon expansion of the existing facilities for bauxite and alumina production, thus requiring less capital compared to that which would be necessary if entirely separate integrated facilities were to be created, the requirements of the project are estimated at nearly Rs. 9 crores for the first stage of 10,000 tons annual production."

Expansion

"You will, I am sure, readily appreciate the difficulties in financing an expansion of this magnitude which will more than treble the Company's existing fixed assets. Organisationally, technicians and experienced operators in this industry are scarce all over the world and even for engineering and design work we have to stand in a queue. Thus, a programme has been devised giving priority to the smelter, which is expected to come into operation by the end of 1958, and undertaking the major part of the subsequent bauxite-alumina expansion immediately after the completion of the smelter, so that the entire integrated plant is in operation before the end of 1961."

"The dominating feature in the economics of the aluminium industry is the large investment required in fixed capital assets and the heavy charges that it involves in the form of depreciation and the cost of obtaining money. In recognition of this, smelter projects are almost everywhere financed by the issue of fixed-interest debt to cover the greater portion of the total capital cost, the balance of the necessary capital being raised by a combination of share-financing and the accumulation of funds from depreciation and retained earnings. Accordingly it is proposed to finance only a part of our requirements for the expansion project by a new issue of capital, the remainder of the funds being obtained by means of medium-term loans from banks and the cash flow from depreciation and earnings."

"I believe that the importance given to the ploughing back of earnings will not only serve the long-term interests of the Company and its shareholders, but that it is also in keeping with the needs of the country during a period of intensive industrial development as foreseen in the second Five-Year Plan."

"I welcome the co-ordinates on which the Plan is based, the adventure which it excites and the aspirations it hopes to fulfil." Mr. Mahindra declared, and while he also accepted without reservation the ideal of a socialist co-operative commonwealth, he wondered whether there had not been "a great confusion in targets and objectives in the scheme of planning." He drew attention to the apparent inconsistency between the emphasis placed on development of basic industries and the desire to find resources "for fashionable fads like an aircraft carrier or the Amber Charkha."

and the incongruity of allocations for development of communications which will provide only 30% extra carrying capacity as against the anticipated rise in industrial and agricultural output of about 50%, superimposed on an existing shortfall of 10-15% in transport facilities."

"I will not comment on the reasonableness or otherwise of the approach to technological progress in the context of the various programmes." Mr. Mahindra continued, "but taking another example, decentralisation and village self-sufficiency within limits may become the ideal basis for building a socialist co-operative country, but little or no attention has yet been paid to the organisational efforts needed to undertake such a mighty task. Some very radical institutional changes are required of the bureaucracy, if the various state-sponsored industrial and social ventures are to succeed. We have, no doubt, a cadre of bureaucrats—perhaps as efficient, hardworking and patriotic as are to be found in non-governmental services. Nevertheless, the climate of service in bureaucracy is such that regimentation in thinking becomes a matter of course, and it has been the experience of almost every country in the world that the dead hand of bureaucratic control has not succeeded in inciting the requisite effort, zeal and inspiration, without which this great adventure in nation-building cannot succeed."

Management

"The scarcity of managerial talent is already acutely felt with the rapid growth of the so-called public sector. We will succeed or fail with the build-up or lack thereof of the organisational capabilities of state ventures. The supreme and exacting task of management is a task which cannot be learned from textbooks or over a brief period of apprenticeship. While we proceed to do the learning, there is a grave danger of an oligarchic stranglehold by the army of bureaucrats. Perhaps it is not widely recognised that nationalisation, public ownership, sarvodaya are not the passports which purchase immunity from inexorable laws of industrial economics. One may honestly hold the view that classic theories of supply and demand do not apply to an under-developed economy. One may hold the view that private enterprise in India has been guilty of sins of omission and commission which it cannot be forgiven. One may also come to believe that profit motive is at the root of all evil. And yet, one should not ignore the vast lack in experience and in management knowledge which is required to run an industrial undertaking or a chain of co-operative marketing societies or perhaps even the village industrial panchayats on whom such high hopes are set."

Adverting to the role of deficit financing in the second Plan, Mr. Mahindra said: "The Finance Minister has repeatedly expressed his awareness of the inflationary tendencies which would become more and more oppressive with the repeatedly large doses of deficit finance contemplated in the second Five-Year Plan. He may have devised some built-in restraints or he may be thinking of imposing more detailed physical controls. I hope he is aware of the limitations of the technique of controls which can only shift the pressure of excessive demands, but do not diminish the same."

The Chairman then reverted to the Company's own financing problems in connection with the expansion at Hirakud and said "The Directors consider that in view of the large sum involved the Company should invite from the shareholders and the public only a portion of the capital, the rest being covered by medium-term loans and funds generated within the Company."

New Capital Issue

"The Directors are examining the most appropriate way in which this new capital issue might be made by the Company. While the details of the issue are still under consideration, it has been decided that the issue will be in the form of convertible loan stock, which would carry a fixed rate of interest and confer upon the holders the right to convert the loan stock into Ordinary shares of the Company. Since this type of stock combines the attraction of a secure rate of return over a number of years with the option of conversion for possible greater returns or capital appreciation which is expected from the equity of a growing and expanding enterprise, I hope that it will prove to be an attractive form of investment."

"In accordance with the statutory obligations, the stock would be offered, in the first instance, to the holders of Ordinary shares in the Company in proportion to their respective holdings. Aluminium Limited, the Canadian majority shareholder of the Company, has agreed to take up half of the new issue, and to relinquish the remainder of its pre-emptive rights so as to permit increased Indian participation in the Company. This would provide an opportunity to holders of Preference shares also to subscribe to the proposed new capital issue."

"The Company is now on the threshold of a new period of expansion and we hope to play our full part in the vast development that is taking place in the country's economy. I trust that we will continue to receive the active support and encouragement of the Government in this effort and I should here like to express our gratitude for the understanding attitude of the Government and the Tariff Commission towards the needs of the aluminium industry evidenced by the extension of the protective tariff for a period of three years."

"Before I conclude, I am sure all of you would like to join me in expressing our high appreciation of the services rendered to the Company by Mr. J. W. Cameron, who retired from the position of Managing Director towards the end of last year. The contribution he made towards the progress of the Company during fifteen years of service in positions of increasing responsibility deserves our sincere gratitude, and to him and the other employees of the Company is due in large measure the credit for the successful results of the past year."

Finance in India and Abroad

THE CALCUTTA MONEY MARKET

DEMAND CONTINUES TO SLACKEN

Wednesday, 2nd May.

THE signs that an end to the busy season is approaching have strengthened slightly during the past week. It is not possible yet to trace any major slackening in demand from any particular industrial source, but there is no doubt that overall credit needs are easier. Demand from the sugar industry is still firm and in some instances even increasing. Requirements of the jute industry are largely unchanged, but those on account of grains and seeds may be a little easier. The slacker conditions which appeared in the inter-bank market last week have once again given way to tightness. The call rate is unchanged at 3½ percent, and there are reported to be buyers over at this rate.

A few more export documents have come to hand this week, but on the whole the market has remained quiet. There have been a few tea bills in evidence. Remittance has been good. Sterling continued to weaken on the world's markets, and the dollar rate is now quoting Rs. 480½.

Bullion eased on lack of support at higher levels and in consequence the price of silver declined from the previous week's level of Rs. 181½ to Rs. 181½, quoted today. The rate for ready delivery was Rs. 181½. The London price was unchanged at 78½d. The price of foreign silver in New York remained the same at 90½ cents.

Gold was quiet in sympathy with silver and the price declined from Rs. 107-6 to Rs. 106-15. The sovereign at Rs. 67-6 showed a fall of 1 anna.

During the week ended 27th April, Government of India Treasury Bills for Rs. 24,62,00,000 were sold in favour of the Reserve Bank.

There was a further decline of Rs. 4.64 crores to Rs. 1,509.65 crores in notes in circulation while the total note issue was Rs. 1.04 crores higher at Rs. 1,527.36 crores, in the return of the Reserve Bank of India for the week ended 27th April, 1956. Deposits of the Government of India and other Government accounts rose by Rs. 2.73 crores and Rs. 1.48 crores to Rs. 58.59 crores and Rs. 27.01 crores, respectively. Balances of commercial banks at Rs. 50.84 crores were Rs. 2.49 crores lower. Balances held abroad declined by Rs. 8.51 crores to Rs. 44.20 crores, as did investments by Rs. 46 lakhs to Rs. 44.18 crores. Other loans and advances increased from Rs. 64.57 crores to Rs. 69.71 crores, of which advances to scheduled banks totalled Rs. 37.51 crores (Rs. 32.82 crores). These advances amounted to Rs. 75.91 crores since 1st January, 1956. Ways and means advances to Governments were shown at Rs. 1.79 crores (Rs. 1 crore).

The statement of the position of scheduled banks for the week ended 20th April, 1956, discloses Demand and Time liabilities at Rs. 648.31 crores (Rs. 7.01 crores on account of borrowings from banks) and Rs. 427.77 crores (Rs. 2.96 crores) compared with Rs. 650.87 crores (Rs. 7.31 crores) and Rs. 423.56 crores (Rs. 2.93 crores), respectively in the previous week. Cash and balances with the Reserve Bank have advanced by Rs. 69 lakhs and Rs. 1.34 crores to aggregate Rs. 37.89 crores and Rs. 50.87 crores, respectively. There is a drop of Rs. 79 lakhs in investments to Rs. 752.65 crores. Advances and bills discounted at Rs. 752.65 crores reveal a fall of Rs. 2.15 crores. The ratios to total liabilities of cash and balances, and of advances and discounts are, in consequence, shown at 8.2 percent and 69.9 percent against 8.1 percent and 70.3 percent.

The return of the State Bank of India for the week ended 20th April, 1956, shows a drop of Rs. 1.35 crores in total deposits to Rs. 234.69 crores. Investments in Government securities are down by Rs. 9 lakhs to Rs. 94.89 crores, while other authorised investments are up by Rs. 10 lakhs to Rs. 10.45 crores. Advances, including loans, cash credits and overdrafts, and bills discounted and purchased have decreased by Rs. 92 lakhs to aggregate Rs. 134.57 crores. Cash and balances are, in consequence, shown at Rs. 18.72 crores or Rs. 1.83 crores higher.

The Indian branches of the HONGKONG AND SHANGHAI BANKING CORPORATION made a profit of Rs. 6.38 lakhs for the year ended last December. Deposits amounted to Rs. 8.30 crores. Cash aggregated Rs. 82.30 lakhs. Advances and investments were shown at Rs. 11.26 crores and Rs. 1.65 crores.

A new State bank called the DEUTSCHE HANDELSBANK AKTIENGESELLSCHAFT has been established in eastern Germany. Its headquarters are in Berlin. The bank will do banking business for the export, import and transit trade of eastern Germany, including the discounting, re-discounting and accepting of bills of exchange.

By a notification issued on 28th April in the Gazette of India, the Government of India has announced that all currency notes of the Government of India and bank notes other than those bearing the Asoka Pillar emblem in the design and in the water-mark shall, on the expiry of six months from the date of issue of the notification (28th April, 1956), cease to be legal tender save at the branches of the Issue Department of the

Reserve Bank of India and Government treasuries including sub-treasuries and such branches of the State Bank of India, the Hyderabad State Bank and the Bank of Mysore, Ltd., as are acting as agents of the Reserve Bank of India. The issue of these notes has been discontinued since 1950 and the number of notes now left in circulation is very small. In view of this and also of the changed political conditions, it is considered desirable that notes of this description still in circulation should be replaced as early as possible by notes of the Asoka Pillar design. Accordingly, the legal tender character of notes of earlier designs is being terminated. They will, however, continue to be exchanged at the offices and agencies of the Reserve Bank even after the above date.

According to the land-borne trade returns received in the Department of Commercial Intelligence and Statistics, the provisional figures of total value of foreign trade of India by land with Pakistan, Afghanistan, Iran and Burma during March 1956 were as follows (in lakhs of rupees):

	Exports to	Imports from
East Pakistan	16	255
West Pakistan	20	14
Other Countries	3	12
Total	39	281

Total trade amounted to Rs. 321 lakhs. Re-exports were Rs. 1 lakh. Trade in treasure was negligible. There was thus an adverse balance of trade amounting to Rs. 240 lakhs.

BANKS UNDER THE COMPANIES ACT

NEW PROBLEMS FOR THE MANAGERMENTS

By R. M. Mitra

IT has been said that the Companies Act, 1956, which came into force on 1st April, is intended to further the social and economic changes necessary for creating a democratically-managed, co-operative commonwealth. The maximum disclosure of facts about the affairs of a company before and after its formation, increasing participation by shareholders in policy decisions, and restrictions on the powers and remuneration of the management, seem to be among the main aims. Much has already been said about the soundness, rationality and equity of the provisions. It has been argued that suspicion underlies the whole legislation, and that this will affect the enthusiasm and efficiency of company managers. Fears have been expressed that undue publicity about the affairs of a company, as required under several provisions of the Act might damage its business. It is also questioned whether the emphasis on the rights of minority shareholders might not introduce an element of instability in business and administration.

No practical purpose is likely to be served, however, by criticising the basic principles of the legislation now. These, as well as the procedures, are largely based on the company law in Britain, and in many cases the Indian Act reproduces the language of the U.K. Act. There is, therefore, no lack of a precedent. Yet, the quiet acceptance of principles coded in the U.K. Act of 1948 or the Indian Act of 1956 does not solve the difficulties of a management which faces the practical question of implementing the law, especially as it affects a banking company.

Loans and Deposits

The directors of a public company, or of a private company which is the subsidiary of a public company, are not permitted, except with the consent of the company in general meeting, to borrow moneys after the commencement of the Act, if "the moneys to be borrowed, together with the moneys already borrowed," exceed "the aggregate of the paid-up capital of the company and its free reserves." Moneys lent to a company in excess of this limit will not constitute a valid debt unless there is prior sanction at its general meeting, or unless the lender can prove that the loan was made in good faith and without the knowledge that the limit had been exceeded. The legislators took into consideration the special nature of the relationship between a banker and his constituent. It was appreciated that a constituent may have occasion to borrow moneys from his banker in the ordinary course of business in circumstances which may not, on the one hand, allow a borrowing company sufficient time to seek the consent of its general meeting; and, on the other hand, afford the banker adequate opportunity to be satisfied that the limit of borrowing is not exceeded, especially because the limit relates to the total borrowings of the company and not simply to the amount of the loan advanced by the banker.

Phone: 22 5571/2.

B. BANERJEE
Manager.

But the provision made to meet the special requirements seems to have been embodied in language which may be a fruitful source of misunderstanding. Section 293(1) (d) provides that the restriction imposed on the directors' power of borrowing does not include "temporary loans obtained from the company's bankers in the ordinary course of business." It is unfortunate that the word "temporary" has been left undefined. It is also not known if there is any authoritative judicial decision to offer guidance. The cautious banker will wonder whether "temporary" is a matter of duration, and, if so, what length of time makes a temporary period. Again, considering the importance of realisability in his business, the banker will wonder whether "temporary" relates to the quick realisability of a loan, or is intended to be a feature of what is known as a self-liquidating asset. Even so, the banker's problems will not be over. He will have to think whether the intention, or the fact, of a loan being temporary will exclude it from the restrictive limit.

Delegation of Power

Section 292 of the Act requires that when directors delegate their power to make loans, the terms of delegation should "specify the total amount up to which loans may be made," "the purposes for which the loans may be made, and the maximum amount of loans which may be made for each purpose in individual cases." It has not been explained whether "purpose" will be considered from the point of view of the borrower or of the lender. It is also not clear how an infinite variety of purposes can be reduced into a general category, and what happens if the officer making a loan is misled and the borrower uses the loan for a purpose which is not covered by the terms of authority conferred on the officer. Then, does the word "total" mean the gross total or the maximum amount outstanding at any time? If it means "gross total," quick turnover of loans at a branch may necessitate the "total" to be fixed at an astronomical figure, or to be subjected to daily or even hourly review.

Section 292 presents the banker with yet another problem. It prohibits branch managers from borrowing moneys beyond the limit of a total amount specified in a resolution passed at a meeting of the board of directors. It has been judicially pronounced that to accept deposits is to borrow money, and that the legal principles governing the borrowing of money will apply to the acceptance of deposits, except where a particular enactment provides otherwise. Section 293 of the Act expressly provides that the limit imposed on the borrowing of money in excess of the paid-up capital and free reserves of a company will not apply to the accepting of deposits by a banking company. But section 292 does not make a similar provision. It logically follows that this section extends to the accepting of deposits. The banker may well wonder whether a specified limit up to which a branch manager is authorised to receive deposits will contribute to the smooth running of a branch. Here, again, it is not clear if the "total" means gross total or the maximum amount outstanding at any time. There is a similar absence of distinction between deposits and loans within the meaning of section 295. The effect seems to be that a company whose directors control 25 per cent of the shares of a banking company, or a company whose board, or any of whose directors, may in any way guide the policy of a banking company, will not be permitted to have a deposit with the banking company in question.

Filing Particulars of Charges

Section 125 of the Act introduces several new classes of charges or mortgages, particulars of which have to be filed with the Registrar of Joint-Stock Companies. As in the previous Act, failure to file particulars within 21 days of the creation of the charge will cause the latter to become void. Section 145 provides further that for a charge created before the commencement of the new Act and not required to be filed under section 109 of the previous Act, it will be sufficient if the relevant particulars are filed within 21 days of the commencement of the new law. But it is not made clear whether such filing is also required where a document contains certain charges, particulars of which were required to be filed and were filed under the old Act, and in addition, certain charges which did not so require to be filed; whether the filing of the document or a verified copy thereof under the old Act will be regarded as having satisfied the requirement of filing the particulars relating to the charges not included in the old Act.

The provisions of the Articles of Association of a company materially guide the relations of a banker with the company in the course of their transactions. Section 561 seems to imply that where a company adopted Table A in the First Schedule to the Act of 1913, the Table in Schedule I to the new Act will apply. But section 657 read with section 28(1) seems to imply that Table A in the old Act will continue to apply until the new Table is formally adopted.

Presentation of Accounts

Section 211 of the Act seems to have improved the position relating to the form in which the balance-sheet and profit and loss account of a banking company are to be prepared. Section 29(3) of

the Banking Companies Act says that although special forms have been prescribed under the Banking Companies Act, the requirements of the Indian Companies Act will apply in so far as they are not inconsistent with the provisions of the Banking Companies Act. It was not clear whether these requirements extended to the forms of accounts, and there was therefore a doubt if some of the particulars of the forms prescribed under the Companies Act were not also to be incorporated in the accounts of a banking company. But section 211 of the new Companies Act specifically provides that the forms prescribed under this Act need not be adopted by a banking company. Section 218 however introduces a new complication. It requires that when a copy of a balance-sheet is published, copies of the profit and loss account, the auditors' report and the board's report should be annexed. Now, section 31 of the Banking Companies Act requires every banking company to publish the balance-sheet, profit and loss account and the auditors' report, but not the board's report. It may be observed that publication is not compulsory under the Companies Act, but if a company voluntarily publishes its accounts, the requirements laid down in section 218 of the Act must be complied with. In the case of a banking company, however, publication is compulsory under the Banking Companies Act. It seems that though the different provisions complicate matters, there is no inconsistency and a banking company cannot, therefore, invoke section 616 of the Companies Act for exemption from publication of the board's report. But such publication will tend to increase expenses unnecessarily, especially in a medium-sized bank.

Other Practical Difficulties

The Act contains several more provisions which seem to create problems of interpretation for banking and other companies. Section 147 requires a company to display its name in front of each of its offices in a language in general use in the locality of the office. It may be possible to ascertain what language is in general use in a town or village, but will it be possible so to ascertain if "locality" means the immediate neighbourhood of the office, especially when the office is situated in a large city like Calcutta? Section 166 requires that the annual general meeting of a company will be called on a day other than a public holiday and held during business hours. It is not known if the period of business hours is intended to be the same as the period of working hours. A bank maintains a clear distinction between business hours and working hours. Does Section 166 recognise this distinction? Section 174 provides that, unless the Articles otherwise require, a general meeting (except a meeting called on the requisition of members) failing for want of quorum will stand adjourned to the same day in the following week unless the board of directors determines otherwise. It is obvious that the board cannot determine this before it formally meets. But it is not stated how the decision will be announced to shareholders and whether a fresh notice will have to be issued to all shareholders, or even to shareholders attending the infructuous meeting. It is further possible that while an annual general meeting cannot be called for a public holiday, the adjourned meeting may take place on a public holiday.

But it does not seem clear what happens to the meeting when the day for which it is called is not a public holiday at the time of issue of notice, but is subsequently declared a public holiday. Section 288 states that a meeting of the board of directors failing for want of quorum will, unless the Articles provide otherwise, stand adjourned to the same day in the next week, or if that day is a public holiday, to the succeeding day. Does it imply that no meetings of directors are to be held on public holidays? Section 206 requires that dividends on shares will not be paid to any person other than the registered holder or his order or to his bankers. It has not been provided as to how the "order" of the registered holder is to be expressed. Will merely writing on an unstamped paper, indicating the intention of the registered holder, be sufficient? Again, does the language of the section prevent paying the dividend to an executor or succession-certificate holder until a mutation in his name is effected? Section 49 seems to prevent a banking company from lodging securities with the Reserve Bank for safe custody!

Encouraging Amalgamation

It seems surprising that the power of the Central Government to amalgamate two or more companies, as provided in section 396 of the Act, will not apply to banking companies. Section 44A of the Banking Companies Act, read with section 616 of the Companies Act, excludes banking companies from the operation of section 396 of the Companies Act. The growth and stability of the banking system depends to some extent on the amalgamation or absorption of a large number of banks. It appears, therefore, that the procedure laid down in section 396 of the Companies Act should be more useful in reorganising banking than in other companies.

Many provisions of the Act besides those discussed will perhaps make managements wonder what the true intentions of the legislators are. It seems that the Act needs to be revised soon in these aspects, and also in others relating to notices, meetings, accounts, payment of retiring benefits to a managing director or whole-time director who has served his full term of office, etc. But what is of greater importance is that the provisions affecting banking companies should receive immediate attention, and, if possible, a separate consolidating law passed for them.

Stocks and Shares

STOCK MARKET WELCOMES THE INDUSTRIAL POLICY STATEMENT

BUSINESS NOW QUIET, BUT UNDERTONE STEADY

Wednesday Evening.

THE dominant factor in stock market feeling during the past week has been the industrial policy statement. When this was outlined by Mr. Nehru in the Lok Sabha last Monday, operators immediately became bullish on the view that it was not as bad as expected and that considerable scope has in fact been left for the private sector for profitable operation and expansion. Speculative prices have receded since the wave of bear covering which followed the announcement, due to the approach of the clearing. Operators have once again been embarrassed by high carry-forward charges. With last week's threat of trouble in Bombay passed for the time being and the industrial policy statement out of the way there would seem to be more opportunity for the market to regain a little vigour, but just at the moment there is no sign of any such thing.

What activity there has been during the week has been chiefly in engineering and miscellaneous scrip. Coal, jute and tea shares are quiet. Government securities have once again enjoyed good support. The firmness of this section suggests the appearance of a new loan as early as June this year.

Details of the week's trading follow.

The Government securities market continued firm and prices improved further. During the week the Reserve Bank of India increased its selling prices of 2½% 1962, 2½% 1976 and 3½% 1965. During the earlier part of the week, buying orders were difficult to complete owing to shortage of scrip, but sellers were attracted by the higher prices at the close and as a result, business was easier to negotiate. Three percent Conversion Loan 1986 met with good enquiry and the price improved from Rs. 77 to Rs. 77-3, while 3% Non-terminable was steadier at Rs. 77-8. In short-dated loans, 3% 1957 improved to Rs. 99-13-6 to close slightly easier at Rs. 99-13, while 3% 1958 was asked for at Rs. 99-11. In the medium-dated group, 3% 1959-61 was in demand up to Rs. 98-2-6. Both 3% 1963-65 and 3% 1964 were a few annas better in each case at Rs. 95-1 and Rs. 94-14 respectively. 2½% 1961 was asked for at Rs. 93-6, 2½% 1962 was quoted higher at Rs. 93-15, but 2½% 1963 was slightly easier at Rs. 96-3. Among National Plan issues, 3½% 1961 was taken higher to Rs. 99-9 and both 3½% 1964 and 3½% 1965 were one anna better at Rs. 98-12 and Rs. 98-10 respectively. Long-dated loans were firm with 3% 1966-68 recording a sharp rise to Rs. 93-1 and 3% 1970-75 was taken higher to Rs. 89-15. Provincial loans were steady but once again enquiry was centred on 4% loans quoted at a discount. Four percent Madras 1967 was taken 3 annas higher to Rs. 99-14 and 4% U.P. 1967 was better at Rs. 99-9. Four percent Mysore 1967 was asked for up to Rs. 99-7 as was 4% Bihar 1967 at Rs. 99-5.

Preference shares of managing agency companies and jute companies were rather difficult to sell, but selected miscellaneous issues could be placed without much difficulty. Alkali & Chemical were crossed at Rs. 105-12 and British India Corporation were offered at Rs. 121. Calcutta Electric changed hands freely at around Rs. 11-5 and Dalmia Cements Rs. 100 paid-up were marked at Rs. 99. Duncan Brothers were crossed at Rs. 65-12 and a small odd lot of Dunlop Rubber second was done at Rs. 96. Indian Iron & Steel were marked at Rs. 107 and Martin Burn came to hand at Rs. 104. In jute, Anglo-India were taken at Rs. 114 and Dalhousie were quoted at Rs. 111. Hooghly were marked at Rs. 13-8 and New Central met with some enquiry at Rs. 113. A solitary transaction was reported in Rameshwara at Rs. 10.

In the banking section, a small lot of Allahabad Bank fully-paid was crossed at Rs. 357. Bank of Bikaner changed hands at Rs. 16-8 and Punjab National were dealt in freely at around Rs. 46-12. United Bank of India "D" shares were placed at Rs. 4-4.

In the railway section, Dehri Rohtas were quoted at Rs. 13-4 and a small odd lot of Kalighat-Falta changed hands at Rs. 53.

Cotton shares were dull and a minimum amount of business was reported. Elgins were done at Rs. 27-2 while Kesoram were shaded at Rs. 17-6 and Muir Mills at Rs. 94. New Victoria were lower at Rs. 2-4 while Dunbar were unchanged at Rs. 303 and Cawnpore Textiles at Rs. 8-4.

Coal shares were neglected though prices showed little variation. Here is a chart showing representative price movements:—

	Opening 26-4-56	Closing 2-5-56
Bengal	529	529
Burrakur	14	13 13
Central India	6 13	6 14
East Indian	31 8	31 10
Equitable	29 8	28 14
Karanpura Collieries	124	120
New Beerbhoom	19 12	19 12
South Karanpura	9 12	9 12

In an otherwise dull jute section, there was some enquiry for Standard at around Rs. 25-4 and Union around Rs. 12-8. Apart from New Central Jute which met with strong enquiry and improved from Rs. 15-3 to Rs. 16-12, other shares in this section were neglected with sellers rather than buyers. Anglo-India were unchanged at Rs. 169 as were Barnagore at Rs. 133 and Belvedere at Rs. 159. Howrah were a shade better at Rs. 22-8 and Kankarrah were offered at Rs. 95. Kinnison eased from Rs. 168 to Rs. 162. National fluctuated narrowly about Rs. 23-6.

The only share dealt in in the electric supply section during the period under review was Calcutta Electric around Rs. 13-7.

A few selected sugar shares met with enquiry, including Carew at the higher rate of Rs. 8-14. Champaran at Rs. 23-4 and Ramnugger at Rs. 23-14. In contrast, Cawnpore were asked at Rs. 19-7 while United Provinces were unchanged at Rs. 20-4. Shree Krishna Gyanoddy were marked at Rs. 12-4.

In the engineering section, Bhartia Steel were steady at Rs. 17-4 with the approach of dividend time, while Braithwaite were marked back from Rs. 28 to Rs. 27-8. Burn & Co., reacted from Rs. 356 to Rs. 349 while Indian Standard Wagon were unchanged at Rs. 181. Jessop, after being done up to Rs. 35-10 closed slightly lower at Rs. 35. Richardson & Cruddas were also marked up at one time to Rs. 28, but closed easier at Rs. 27-2. Indian Iron & Steel recovered from Rs. 34-2 to Rs. 34-14; tonight's closing quotation is Rs. 34-9. Textile Machinery closed quiet at Rs. 23-8.

In paper, India Paper Pulp recovered from Rs. 23-5 to Rs. 25 and Orient from Rs. 34-14 to Rs. 35. Titaghar Paper were fairly steady at Rs. 43-10 while Shree Gopal were marked back from Rs. 18-10 to Rs. 17-14. In Cement, Ashoka changed hands at Rs. 10-6 and Assam Bengal at Rs. 6-5. Dalmia Cement fully-paid Ordinary were crossed at Rs. 14-10 and the Deferred shares were done at Rs. 3-3. Sone Valley were fairly steady at around Rs. 7-14.

BOOKING OF
'EXCEPTED ARTICLES'
and the Railways' Responsibility

★

The Railway shall not accept responsibility for the loss, destruction or deterioration of any package containing articles which are enumerated as "Excepted Articles" in the Second Schedule under Section 75 of the Indian Railways Act, when the total value of such articles contained in the package exceeds Rs. 300/-, unless the contents of the package and their value are declared and the authorised percentage charge (compensation for increased risk) paid at the time the package is booked for carriage by the Railway.

Where the value of such articles in any parcel or package exceeds Rs. 300/-, the sender or his authorised agent must record in the Forwarding Note whether he engages to pay the percentage charge prescribed. Should he elect not to pay prescribed percentage charge on value, the package will be accepted for carriage but the Railway shall not be responsible for the loss, destruction or deterioration of the same. The percentage charge on value must in all cases be pre-paid.

Commodities like Watches, Clocks and Timepieces of any description, Maps, Art Pottery and all articles made of Glass, China or Marble, Silk, Shawls, Lace and Furs, Radio (Wireless) apparatus, Photographic apparatus, Statuary, Scents are a few examples of the "Excepted Articles."

★ Rules and conditions regarding the booking of "Excepted Articles" and the full list of these articles appear in the Goods and Coaching Tariff published by the Indian Railways Conference Association and in placards displayed at stations. Detailed information may also be obtained from the Station Masters.

CONSTRUCTION OF CALTEX OIL REFINERY

COMPLETION OF WORK EXPECTED ACCORDING TO PLAN

THE Caltex oil refinery at Visakhapatnam is gradually taking shape and it is expected that construction work will be completed in time for it to come on stream early next year. The preliminary phase of shifting several thousand tons of earth, draining the 400-acre site and felling superfluous trees is now over. The emphasis so far has been on preparing the site. But it has now shifted to the construction of the actual refinery buildings. A large storehouse, which will provide protected storage for the many delicate parts which form an oil refinery, is now more than half complete. Also at an advanced stage of completion are the storage tanks varying in height from 40 to 48 feet. These are built with pre-formed sections of plate steel eight feet wide, the largest of which weighs four tons. When complete, over 6,000 tons of steel will have been used in the construction of these tanks. The horizontal welding machines specifically designed for large steel tanks, while the vertical welding has been done by hand. Welded joints are subjected to inspection by X-rays in order to test the quality of each weld. For the final test, the tanks are filled with water, which has a density greater than crude oil.

Strengthening Tank Foundations

A construction problem arose when it was found that the moist, clay loam soil where the crude oil storage tanks are to be located would not give a stable foundation for a heavy load. This problem was overcome by drilling 125 holes with a 16-inch diameter 15 feet deep and spaced under each tank. The holes were then filled with dry sand and the top of ground level layered with sand and gravel several feet thick. Each tank is 160 feet in diameter and will contain six million Imperial gallons of crude oil which, when filled, will exert a full load of 24,000 tons. This weight will squeeze the water out of the soil and up through the sand piles to be drained off through the sand and gravel tank pad. As a result the soil, after loading, will become firm and support the heavy tank without tilting.

In addition, the many foundations required for the processing units are nearing completion. A 50-foot high concrete batch plant has had to be built to produce the large quantities of concrete required. The batch plant has large hoppers for the cement, sand and aggregate. From these hoppers, controlled quantities of material are dropped into a large mixer and after mixing the concrete is dropped into specially fitted dump trucks for delivery around the site. The large batch plant not only mixes concrete faster but provides for much closer control over the quality of the concrete, an essential factor where heavy loadings and durability are concerned.

Much Equipment Arriving

Masses of equipment continue to arrive at the refinery site. The maximum use is made of the Caltex "pool" of equipment. About 50 pieces of heavy construction equipment have been transferred to Visakhapatnam from other Caltex construction projects in various parts of the world. Such equipment includes large cranes, special trucks, air compressors, welding machines and grading equipment. This in turn will be passed on to another Caltex installation in some other part of the world as and when needed. Such procedure saves on capital costs and ensures maximum economy.

Many items of equipment have been purchased in India or rented from contractors. The largest piece on the site is a guy derrick about 190 feet high, with a lifting capacity of 100 tons. This will be used for the construction of the fluid catalytic cracking unit, the largest processing unit in the refinery.

BRITISH "CONVERSION ENGINES" FOR PISTON AIRCRAFT

The prospect of considerable savings to airline operators by converting existing piston-engined airliners to turbo-prop motive power—with consequent increased range and speed—is offered by British aero-engine designers. Many aircraft which have proved their worth in service with piston engines have been used as flying test-beds for turbo-prop engines and work has begun on extending the potential markets for British gas-turbines by offering turbo-prop power plants as "conversion engines" for established types of civil aircraft. Experience in Britain has shown that a good aeroplane can be made a much better one simply by switching the power plants from piston to turbo-prop propulsion. The switch, in fact, gives the aircraft a new lease of life.

The Napier Company, which is the first to propose these conversions, has measured the improvement obtained in the American Convair 340, which was converted to take the British Napier Eland turbo-prop and first flew in this form in February. The figures show an improvement in range of 930 miles when carrying the maximum payload. At the same time the speed was increased by 50 m.p.h. It is considered that these results indicate that large monetary gains are to be expected from the improvements obtained by engine

conversion. Napier is now proposing a similar conversion for the American Douglas DC-6 and the Martin 404, both well-proved aircraft popular with airline operators.

FRENCH AIRCRAFT ATTRACTS WIDE INTEREST

The test flights of the Caravelle, a French aircraft, are attracting wide interest in the aeronautical world. British, American, Japanese and French firms are interested, it is said, and so is Russia. The Caravelle is manufactured by the Societe Nationale de Construction Aeronautique du Sud-Est in Toulouse. It is a twin jet medium-distance aircraft, capable of flying 1,925 miles at a cruising speed of 450 miles an hour at a height of 32,800 feet, carrying 70 passengers. It operates very silently, it is claimed, because the jet engines are placed at the back of the fuselage. It had its first flight on 27th May, 1955, and has since covered more than 500 hours of test flying.

REVISED STANDARD FOR STRUCTURAL STEEL

The Indian Standards Institution has revised the Indian standard specification for structural steel. The specification for structural steel was first issued in 1950 following the representations made by steel manufacturers to the Steel Advisory Committee of the Government of India that the practice of ordering steel to rigid specifications was often not justifiable on the basis of service requirements. Two important modifications have now been made. Structural steel has been classified into three categories according to its chemical composition and the purposes for which it is intended. Yield stress figures have been raised by 0.25 ton a square inch (0.39 kg/sq mm). This specification covers material to be supplied as bars, angles, channels, beams and other similar sections normally used in structural engineering, together with rivet bars. A separate standard is being prepared for material required for forging purposes. Because of difficulties in obtaining proper raw materials, rigid adherence to specifications, in which phosphorus in steel was limited to 0.060 percent, was found difficult. The maximum phosphorus content in the specification, when issued in 1950, was raised to 0.065 percent, with the proviso that when steel was required for structures subject to dynamic loading, such as bridges, railway rolling stock parts, etc., or for special application, phosphorus should not exceed 0.060 percent. In certain locations where structural steel is exposed to excessive atmospheric corrosion, copper-bearing steel may be used. This specification provides that the copper present in such steels shall be 0.20 percent to 0.35 percent, which has proved beneficial. Copies of the specification can be obtained from the Indian Standards Institution, 19 University Road, Civil Lines, Delhi 8, or its branch office, 40/40A Cowasji Patel Street, Fort, Bombay.

TRAINING OF INDIAN STEEL TECHNICIANS IN U.K.

Active consideration is being given to the training of Indian personnel to manage and operate the £80 million iron and steel works at Durgapur, West Bengal, according to an announcement made recently in London. Site work will probably start in July, and arrangements are now being made in Britain to assist in the training of Indian technicians and operatives. Technical co-ordination of the principal sections and ancillary departments of the works, engineering services for gas, water, steam and air supplies, and planning of road and rail facilities have, it is announced, been carried out by the engineering department of the Metallurgical Equipment Export Company. For all electrical work, this company and the consortium of firms with which the agreement for the building of the steel plant has been signed have as their consultants McLellan and Partners, of London.

MECHANICAL HANDLING EXHIBITION IN LONDON

Britain's manufacturers of mechanical handling equipment making an increasingly important contribution to the country's economy, not only by way of direct exports, but by providing other exporting industries with the means to increase efficiency. Last year's production was about 8,000 units, two-thirds of which was sold to home industry. From 9th to 19th May, at Earls Court, London, the latest in labour-saving and ancillary equipment will be on show, on a scale never before equalled, at the Mechanical Handling Exhibition and Convention. With 400,000 square feet of floor space, the exhibition is described as the world's greatest display of labour-aiding equipment. A working model of a bi-cable aerial ropeway; a crane that can be driven on the road at the speed of normal traffic and can work in congested areas; an overloader with a loading rate of up to 150 tons an hour; an automatic carrier and terminal for the collection and delivery of isotopes, untouched by hand, to a distant point; a full-size wagon-tipper; and a new overhead chain conveyor are a few examples of the numerous exhibits which will be on show.

"Mechanical Handling is Vital to International Commerce" will be the theme of the Convention which is to be held concurrently with the exhibition. Speakers from Britain, from the Commonwealth and foreign countries will present papers describing their particular handling problems the way they have been solved.

PROFIT-TAKING FOLLOWS
POST-BUDGET BOOMLETINDUSTRIALS EASIER BUT OILS
STRONG

London, 2nd May. THE substantial post-Budget rise in the stock markets quietened down considerably during the past week, and prices generally moved irregularly. Profit-taking developed after the rise and this brought some reaction, while the buying released by the Budget soon spent its force. Losses generally were small while there were good features, particularly in oil shares. The tone of the market as a whole remained satisfactory, despite the contraction in business from the high level reached after the Budget. The main feature of the week was the performance of gilt-edged. Prices receded under the influence of the £250 million Treasury 3½ percent stock issue, but once this was out of the way on Wednesday, the market went ahead and ended the week on quite a strong note. Profit-taking developed after the week-end and this reduced the gains, but even so, appreciable rises were recorded on balance. The new Treasury 3½ percent stock established a small premium on the issue price of £81 on the first day, and this was maintained in subsequent dealings. The failure

of the smaller issues had little effect, although it did not help sentiment. Foreign bonds and rails were generally subdued, and prices moved irregularly and within narrow limits. Uncertainty on Wall Street contributed to the hesitancy in London earlier in the week, but later a sustained recovery in New York favourably influenced sentiment. Dollar stocks moved up after losing ground earlier and were higher on balance. Profit-taking and the contraction of buying after the post-Budget boomlet brought reaction in industrials, and prices moved somewhat irregularly, but generally to slightly lower levels. The *Financial Times* Industrial Ordinary Index was around three points down on the week. Most of the gains reflected good company news. Imperial Chemicals fluctuated following their results, but were little changed on balance. Gold shares fluctuated within wide limits, following rumours of rich developments in Free State Geduld. Prices went sharply ahead, came back equally sharply, then moved up again, but only to turn easier later. On balance, there was not a great deal of change. Coppers lost ground in sympathy with the fall in the metal price. Leading oils were in strong demand and were at or very near their peak levels. Teas were inclined to ease in quiet conditions, while rubbers turned dull following President Eisenhower's message to Congress on synthetic rubber.

The Money Market

Credit conditions in Lombard Street during the past week were very comfortable. This was due partly to a smaller intake of bills and partly to an inflation of bankers' cash balances due to Government and other disbursements. On Wednesday in particular, the credit supply was considerably in excess of requirements and the authorities sold short-dated bills to keep the market on an even keel for the rest of the week. The easy cash position resulted in a large turnover of bills with July maturities sold at 5-1/32 percent and 5 percent. Money was invariably taken at the basic level of 3½ percent, while the end-of-the-day balances were as cheap as 3 percent. In view of the continued keen competition and in line with the firmness of short-dated bonds, the discount market raised its bid for the week's offer of Treasury bills with the result that the average rate dropped by over 2s percent to about £5 percent. Applications for £240 million worth of 91-day Treasury bills totalled £395,345,000 and were allotted at an average rate of 140s 1.95d percent against 102s 4.55d percent in the previous week. Offerings this week consist of £250 million worth of 91-day bills. The Bank of England return for the week ended 25th April showed bankers' deposits were £12 million higher at £225 million, while notes in circulation £1 million lower at £1,841 million.

Anaconda Copper Prices

The Anaconda Company has announced that, with effect from 1st May, the price of the Chilean copper it sells in the U.S. market will, as previously, be based on the average of the bid and asked quotation at the opening call on the London Metal Exchange for the week prior to the week of shipment from the refinery. If the average falls below the Company's domestic price, then the Chilean copper will be brought up to the domestic level. This means that there will be a floor below which the Chilean price cannot fall as far as Anaconda is concerned. The present domestic price is 46 cents a lb. Kennecott has not changed its pricing policy yet, but it is expected to follow Anaconda's move soon.

Hongkong Gold Moves Narrowly

Hongkong gold moved narrowly during the past week. The undertone was steady, although sentiment was bearish. Selling on a forward basis by importers checked rises, but sellers were not inclined to offer spot metal. The lower U.S. dollar rate also had a bearish effect on the market. Carryover charges for the period was only 1 cent in buyers' favour. The official offtake was 1,490 taels. The unofficial figure was not available. Arrivals at Macao totalled 60,000 ounces and a forward contract was done at \$(U.S.)37.91.

Vegetable Oil Market

Cottonseed oil tended dearer last week with Chinese semi-refined marked up to about £137 c.i.f., as against £133½ in the previous week. This largely reflected reports that high prices were paid at the recent Sudan cottonseed auctions—around £42½ for black and £35 for white seed. Linseed oil was a shade steadier, although both buyers and sellers were cautious about forward trading. Indian castor oil was easier, with only isolated enquiries handled. Swedish rapeseed oil was firm after week-end business at £134½ c.i.f. Although English coconut oil was lowered by £1 a ton, both Straits and Ceylon oils were steadier, reflecting the recovery in Philippine copra, for which sellers were rarely asking under \$(U.S.)198 c.i.f. while buyers were talking of \$(U.S.)196.

Russian Contract for U.K. Firm

Textile Machinery Makers Ltd. announces that its subsidiary, Platt Brothers Sales Ltd. has recently received a contract from Russia for carpet looms and ancillary equipment. The contract is worth over £2 million. Delivery is to commence by the end of this year.

U. K. Not Joining Wheat Pact

Britain will not be a member of the new International Wheat Agreement to come into force on 1st August with a new maximum price of \$2 (against \$2.05). Britain explained its abstention from the U.N. Wheat Conference here by saying that she believes in free markets and does not think the agreement will help exporting countries to get rid of their big surpluses.

New Delhi

SECOND PLAN COAL TARGETS FOR PRIVATE
AND PUBLIC SECTORS REVISEDSTATE COLLIERIES TO EXPAND OUTPUT
BY 12 MILLION TONS ONLY

(FROM OUR NEW DELHI CORRESPONDENT)

A REALLOCATION of the targets for coal production during the second plan has been agreed upon, it is learned. The total target for 1961 is still 60 million tons. On the basis of the 1954 output of 37 million tons, the additional production necessary would have been 23 million tons, of which 15 million tons were allotted to the public sector and the remainder to the private sector. The 1955 output is 1 million tons higher at 38 million tons. It has now been decided to revise the targets to 12 million tons for the public sector and 10 million tons for the private sector. The Production Ministry still wants Rs. 60 crores to raise the extra coal. The sum includes the cost of housing for coal miners, which alone will be Rs. 12 crores.

Cabinet Discusses Second Plan

The Union Cabinet started to consider the final draft of the second plan last week. For reasons which have not been disclosed and despite the public announcement made by the Finance Minister, Mr. Chintaman Deshmukh, that the outlay would be increased by Rs. 300 crores or Rs. 400 crores, the Planning Commission has not altered the original figure of Rs. 4,800 crores as the total outlay of the public sector. Mr. K. C. Neogy, member of the Planning Commission, has circulated a note indicating in what ways the plan is unrealistic and needs modification. The plan, as approved by the Chief Ministers of States and the Union Cabinet, will be presented to Parliament for final approval by the middle of May.

The Planning Commission will shortly publish three other documents on: (1) Development schemes in the second five year plan; (2) the plan in its first year and (3) progress report on the five year plan. In the words of the Commission, "the second five year plan has been conceived as a broad framework within which annual plans will be made. A plan covering a five year period has to be regarded as flexible. The second five year plan, as presented in this document, indicates the magnitude and significance of the tasks to be undertaken, the order of benefits resulting from the development proposed, and the means and techniques by which resources have to be mobilised and harnessed for the task to be taken in hand. The policy implications of the plan have also been brought out in broad terms. But, planning is not a once-for-all exercise for a five year period; it requires a continual watch on current or incipient trends, systematic observation of technical, economic and social data and adjustment of programmes in the light of new requirements. There are, naturally, uncertainties attached to the various estimates that can be made for a five year period. Some of the programmes set forth in the plan may take a little more time for completion. In a plan of the dimensions envisaged, experience may indicate fields where implementation can with advantage proceed ahead of schedule and others where progress may have to be inevitably slower. Moreover, India is not planning within a closed economy. Developments abroad, economic or political, may necessitate adjustments in the plan. It is in view of these considerations that the plan has to be regarded as a framework within which programmes for each year have to be worked out in detail and implemented.

Regional Development

"Finally, we should like to refer here to an aspect of long-range planning to which, we feel, increasing attention will be necessary in the coming years. This relates to the developmental problems of the entire under-developed region of Asia and Africa. For various political and social reasons, this region has so far remained largely under-developed, and the economies of some of these countries have either remained isolated or have developed affiliations with certain countries in Europe with which they had political ties. As a result, the volume of trade within this region itself has not developed sufficiently and the scope for complementary effort and mutual assistance as between countries in the region has remained largely unexplored. It is evident that as developmental planning proceeds in this region, problems of mutual adjustments in the matter of specialisation in certain lines of production and of mutually advantageous trade and exchange of know-how and experience will assume increasing importance. Planning in the different countries in this region is at different stages, and it is only to be expected that the prime consideration for each country will be the fullest development of its own resources in the light of its needs and along lines it finds economically and socially most promising. Nevertheless, it is essential that the programmes of development are so framed as to give scope for the mutually advantageous exchange of products and technical know-how. Even countries which are on the whole short of tech-

nical know-how and personnel can still render assistance to others in a limited way. This is the basis on which co-operation within the Colombo Plan has been organised. It would be desirable to think along similar lines in respect of interchange of ideas and of technical personnel. Planning in India has thus to be viewed in its wider regional perspective, and it has to be borne in mind that poverty, low standards of living and economic backwardness are problems of common interest, and the efforts and experiences in each country are bound to be of value to the others in the area faced with similar problems."

The total developmental outlay of the Central and State Governments over the period of the plan works out at Rs. 4,800 crores. The distribution of this outlay by major heads of development is as under:

	First Five Year Plan Total per- provision cent (Rs. crores)	Second Five Year Plan Total per- provision cent (Rs. crores)
1. Agriculture and Community Development	357	569
(a) Agriculture	267	369
(b) National Extension and Community Development	90	200
2. Irrigation and Power	661	912
(a) Irrigation and flood control	395	482
(b) Power (including small town and rural electrification programme)	266	430

3. Industries and Minerals	179	7	887	18
(a) Large-scale industries, scientific research and minerals	149	6	687	14
(b) Village and small-scale industries	30	1	200	4
4. Transport and Communications	557	24	1383	29
(a) Railways	268	12	900	19
(b) Roads and road transport schemes	142	6	263	6
(c) Shipping, ports and harbours and inland water transport	63	2	101	2
(d) Post and telegraphs, civil aviation, broadcasting and other communications	84	4	119	2
5. Social Services, Housing and Rehabilitation	533	23	946	20
(a) Education	169	7	307	6
(b) Health (including water supply and sanitation programmes)	140	6	274	6
(c) Labour and labour welfare, of backward classes and scheduled tribes, and social welfare	39	2	155	3
(d) Housing	49	2	120	3
(e) Rehabilitation	136	6	90	2
6. Miscellaneous	69	3	103	2
	2,356	100	4,800	100

The total outlay mentioned here does not include all expenditures by local bodies on development schemes; only such expenditure on these schemes as is financed by State Governments is included in the allocation shown in the plan. The total outlay as presented here also does not include contributions in cash or in kind made by the local populations participating in developmental work within their localities. These contributions are likely to be of considerable significance in terms of investment in the areas concerned even though they might not make any marked difference to the national totals.

Central and State Outlays

Of the total developmental outlay of Rs. 4,800 crores, Rs. 2,560 crores represents expenditure

Sell by the clock—
not by the calendar

Delivery in hours, instead of days or even weeks. And often it costs you less to get your samples, orders, replacements and spares there first. You save on warehouse costs, cheaper packing, lower insurance and less danger of damage by handling. It will pay you, too, to get your representatives there first!

ACROSS THE WORLD

which will be incurred by the Centre and Rs. 2,240 crores is the total of plan expenditures by all State Governments taken together. The classification of outlay between the Centre and the States in the second five year plan is a little different from that followed in the first five year plan. In the first plan, in addition to the schemes implemented by Central Ministries, a number of programmes which were sponsored and assisted by the Central Government through various Ministries were shown as the Centre's. Expenditure found on a matching basis by States for these schemes was, however, intended to form part of the States' plans. This led to certain difficulties in the presentation of plans. In the second five year plan, the general principle followed is that the plans of States should include as far as possible all programmes to be implemented by them or by public authorities or local boards or special boards set up by them. The fact that for any particular programme carried out in the State, either the whole or part of the resources come from the Central Government or from agencies set up by it does not, as a rule, affect the principle that the programme should be included in the State plan. While this principle has been generally applied, at this stage there are a few items which belong to States' plans but some part of the expenditure is still shown as the Centre's. For instance, in housing, welfare of backward classes and village and small industries, part of the amounts shown as the Centre's share is likely to be allocated between States when certain proposals or other details which are being considered have been agreed upon.

The distribution of the outlay of the Centre and of the States separately under major heads of development is shown in the table below:

	(Rs. crores)			
	Centre	Part A	Part B	Total
Agriculture and Community Development	66	361	111	569
Irrigation and Power	105	567	216	912
Industry and Transport	747	96	37	887
Communications and Social Services, including Rehabilitation	1,202	120	40	1,383
Miscellaneous	396	393	118	946
	44	43	13	104
	2,560	1,580	535	4,800

	(Rs. crores)	
	First Plan after adjustments	Second Plan
Andhra	70.6	119.0
Assam	21.3	57.9
Bihar	66.1	194.2
Bombay	159.9	266.5
Madhya Pradesh	48.2	123.7
Madras	92.8	173.1
Orissa	21.2	99.9
Punjab	34.4	126.3
Uttar Pradesh	129.8	253.2
West Bengal	76.5	153.7
Total of Part A States	720.8	1,567.5
Hyderabad	47.0	100.2
Madhya Bharat	22.6	67.3

Manipur	1.5	6.2
Tripura	2.3	8.5
Vidhyha Pradesh	7.4	24.9
Total of Part C States	35.5	105.2
Andaman and Nicobar Islands	—	5.9
North-East Frontier Agency	—	9.5
Pondicherry	0.8	4.8
Total	0.8	20.2
Centre's share of D.V.C.	—	12.2
Grant Total	982.4	2,240.4

The scheme of financing envisaged for the developmental programmes of the Central and State Governments aggregating Rs. 4,800 crores is as follows:

	(Rs. crores)
1. Surplus from current revenues (a) at existing (1955-56) rates of taxation	800
(b) additional taxation	350
2. Borrowings from the public (a) market loans	1,200
(b) small savings	700
3. Other budgetary sources (a) Railways' contribution to the development programme	400
(b) Provident funds and other deposit heads	150
4. External assistance	250
5. Deficit financing	800
6. Uncovered gap	1,200
	4,800

The budgetary resources that can be raised by the Central and State Governments through taxation, borrowing and other receipts amount to Rs. 2,400 crores. A further Rs. 1,200 crores, it is suggested, can be raised by deficit financing. Adding to this Rs. 800 crores by way of resources from abroad, the total resources for the implementation of the programmes in the public sector work out to Rs. 4,400 crores. This leaves a gap of Rs. 400 crores, means for raising which will have to be decided later. It is said to be difficult to cut down a plan which has already been pruned at successive stages. In a democratic federal structure, this would involve a protracted process of readjustments and reallocations. It is recognised, however, that the gap has ultimately to be filled by raising additional domestic resources, and given the limits to deficit financing, as also the fact that the scheme of financing outlined here already relies heavily on borrowing, the only possible source that can be drawn upon for meeting the gap is taxation.

Additional Taxation

The target for additional taxation of Rs. 450 crores mentioned above represents the minimum that has to be attempted. In arriving at this figure, the recommendations of the Taxation Enquiry Commission have been taken into account, and it has been assumed that steps will be taken to implement these as early as possible after the commencement of the plan. State Governments are expected to raise between them a total of Rs. 225 crores, and the Centre is to raise a similar amount. On this basis, the contribution of tax resources to the plan amounts to Rs. 800 crores, which is only one-sixth of the total resources required.

The following table presents in summary form the contribution Part A and Part B States are expected to make towards the financing of their plans:

	(Rs. crores)	
	Part A States	Part B States
Size of the plan	1,567.5	535.3
Resources on revenue account	312.3	24.4
Balance from the revenue account at existing rates of taxation	115.3	(-) 17.5
Additional taxation	172.0	44.0
Share of additional taxation by the Centre	49.1	8.1
Interest charges on loans from the public	(-) 24.1	(-) 10.2
Resources on capital account	392.3	125.1
Contribution from capital account	7.8	(-) 4.2
Loans from the public (gross)	210.0	90.0
Share of small savings	158.5	21.5
Liquidation of securities held in reserve	15.0	16.3
Other miscellaneous sources	1.0	1.5
Total resources on revenue and capital accounts	704.6	149.5
Gap in resources	862.9	385.8

The balance which these States can make available from their resources at existing rates of taxation is below Rs. 100 crores. Their share of additional taxation against the total of Rs. 225 crores for all States works out to Rs. 216 crores. The States should get about Rs. 57 crores as their share of the additional taxation raised by the Centre. The target for new loans to be raised by State Governments in the second plan period has been placed at Rs. 300 crores, as against the total borrowing programme of Rs. 700 crores for the Centre and States together. State Governments expect to receive as their share of small savings about Rs. 180 crores. Liquidation of securities held in reserves may bring in another Rs. 31 crores. Taking into account other contributions from capital account, the total of States' resources on capital account works out at Rs. 517 crores. Taking the revenue and capital accounts together Part A and Part B States are thus expected to find about Rs. 854 crores, as against their total plan of over Rs. 2,100 crores.

Plans of Part C States

The plans of Part C States are estimated to cost Rs. 125 crores. Their resources are so small that the Centre has to finance even gaps on revenue account in a few of them. Measures for additional taxation amounting to Rs. 9 crores over the five year period have been suggested for Part C States, but the overall position is that the Centre has to finance the entire plans of these States.

It is thus apparent that the resources of all the States taken together fall far short of their requirements—by as much as 60 percent. In the circumstances, large transfers of resources from the Centre to the States are inevitable. It has to be remembered at the same time that the Centre's own resources are limited and if a plan of the dimensions envisaged has to be implemented in full, it will be necessary for State Governments to contribute their utmost by way of resources.

The target of Rs. 225 crores of additional taxation to be raised by State Governments has been determined on the basis of detailed discussions with them and an assessment of the likely yield of the various measures recommended by the Taxation Enquiry Commission. The measures in view include land revenue surcharges, increases

in rates and extension of the territorial coverage of agricultural income-tax, more extensive adoption of property taxes and taxes on transfer of property by local bodies, a widening of the coverage and in due course an increase in rates of sales tax, etc. As far as the Centre is concerned, some of the recommendations of the Taxation Enquiry Commission were implemented in the Budget for 1955-56. The yield from these measures has been taken into account in estimating the resources available for the plan at existing rates of taxation. The Central Budget for 1956-57 contains proposals which are expected to yield an additional annual revenue of approximately Rs. 35 crores. A substantial step has thus been taken towards realising the present target of Rs. 225 crores of new taxation by the Centre over the five year period. That target, it is thought, needs to be raised. But the importance of early action on the part of States to obtain the additional tax resources of Rs. 225 crores which they are expected to find cannot be overlooked. Details have been worked out with State Governments for raising Rs. 166 crores or so of this total of Rs. 225 crores, and discussions are proceeding. A tentative breakdown of the measures to be adopted for raising Rs. 225 crores of additional taxation by States is as follows:

	(Rs. in crores)
Land revenue	37
Agricultural income-tax	12
Betterment levy	16
Irrigation rates	11
Sales tax	112
Electricity duty	6
Motor vehicles tax	14
Stamp duties and court fees etc.	17
Others (mainly local property taxes)	225

Thus, what is envisaged is a slightly greater effort along existing lines rather than any far-reaching innovations in the sphere of State taxation.

Investment in Private Sector

In addition to the investment programme of Rs. 3,800 crores in the public sector, the requirements for investment in the private sector are estimated at Rs. 2,400 crores. The question arises whether the resources available for the private sector will be adequate to finance an investment of this order, after making allowance for the resources claimed by the State. In one sense, the answer to this question is already implied in the assumption that aggregate savings on the scale required to finance the total investment in the economy will be forthcoming. The problem, as stated earlier, is to see that domestic savings rise from about 7 percent of the national income at the beginning of the second plan period to some 10 percent by the end. This rate of domestic saving will be adequate, and if external resources of the order of Rs. 1,100 crores become available over the five years envisaged in the plan, it is by no means excessive. It implies a marginal rate of saving of a little over 20 percent. In a sense, therefore, the answer to the question is in the affirmative.

It is important, however, to stress the point that this overall equality between projected investment and postulated savings is not a complete answer. Operationally, the problem is to ensure that the investments undertaken can be seen through without an excessive strain on the economy through price rises and similar distortions, and the issue is essentially one of the adequacy of instruments or policies for getting the desired result. It is virtually impossible to know in advance whether the necessary savings will be forthcoming, nor is it easy to predict where any shortage of savings will impinge. It can be argued that since the investment programmes in the public sector depend to a large extent on borrowings from the private sector, the impact of any shortage in savings will probably fall mainly on the public rather than on the private sector. On the other hand, the public sector has certain advantages in the matter of getting access to scarce resources. It is also not true that the savings of the private sector emerge at precisely the points at which private investment is to take place. Very much, therefore, depends upon the relative efficiency of the two sectors in getting at the savings where they emerge. This fact highlights the need for suitable fiscal and other policies to ensure an overall sufficiency of savings and for safeguarding the priority programmes of investment in the private sector, should the need arise, through special measures of assistance.

Sources of Savings

It is difficult to indicate for the private sector the sources of savings in any detail, as only a small part of the total savings utilised in that sector passes through institutional agencies. A large part of the investment in agriculture, trade, construction and small-scale industries is financed by direct savings, that is, the savings of self-employed persons or their friends and relatives. In this part of the private sector, any shortage of resources is reflected directly in a failure to invest. Financial or credit assistance through institutional agencies for investment in these fields is still in its very early stages, and can be stepped up progressively only as co-operative organisations develop. Estimates of the sources of funds for investment in the organised sector of private industry can be made, though inevitably on certain broad assumptions. The State can assist in the fulfilment of the programmes in this sector by cutting out undesirable investment partly by capital issues control, control over exports and

imports, and licensing; partly by tax adjustments and concessions; and partly by selective financial assistance through the various corporations which have been set up for the purpose. The progress of investment in the private sector has to be constantly watched and adjustments in policy have to be made from time to time. Broadly speaking, it appears that, considering the fairly high rates of investment already achieved in organised industries and the buoyant conditions in the capital market, it should not be difficult for them to raise the resources needed for fixed investment. As for working capital, there should be even less difficulty in view of the deficit financing proposed in the plan, as a consequence of which banks will be in a position to extend short-term credit sufficiently. The problem, in fact, might well be to check an excessive expansion of bank credit. Nevertheless, the accent of credit policy will have to be to prevent too much credit being used for speculative purposes to the detriment, consequently, of genuine investment.

Foreign Exchange Deficit

The foreign exchange deficit over the five years is likely to amount to Rs. 1,100 crores. On capital account, amortisation payments on the U.S. wheat loan and World Bank loans will amount to Rs. 4 crores or Rs. 5 crores a year. Some of the new loans contracted or credits obtained during the plan will also entail repayments. As against these, the repayment of loans made to other Governments by India and the payments on account of sterling pensions by the U.K. Government will bring in some Rs. 42 crores. On balance, these transactions are expected to have little effect on the payments position. It follows, then, that the current account deficit must be balanced by external assistance in the form of loans or grants, net inflow of private foreign capital and withdrawals from the accumulated sterling balances.

The extent to which sterling balances can be safely drawn must be judged in relation to the fluctuations to which the balance of payments is normally subject. Foreign exchange reserves are required essentially to enable the country to tide over temporary balance of payments difficulties. If the reasonable level of such reserves be taken as some six or seven months' imports, Rs. 200 crores or so of the sterling balances to India's credit could safely be utilised to meet part of the foreign exchange requirements of the plan. It will be recalled that the first plan report envisaged a withdrawal of Rs. 250 crores from sterling balances over the first plan period. It was then felt that a reduction in sterling assets of that order would bring foreign exchange reserves to a normal level. The sterling balances of the country have declined by about Rs. 140 crores over the first plan period. In recommending a further draft of Rs. 200 crores over the second plan period, it is in fact suggested that the normal level of reserves can be taken lower than what was envisaged in the first plan report. India has repurchased its currency from the International Monetary Fund in the last two years, and is again in a position to draw upon the Fund which is a supplementary line of reserve in case of need.

Inflow of Private Capital

Credit may also be taken for a net inflow of private capital of about Rs. 100 crores over the plan period. During the 5½ years ended December 1953, private foreign investment in the country increased by Rs. 132 crores, of which some Rs. 60 crores or Rs. 70 crores represented the reinvestment of profits earned within the country. The net inflow of private capital during the period thus works out to about Rs. 70 crores. For the second plan period, we may assume a net inflow of private foreign capital of the order of Rs. 100 crores.

After taking credit for the withdrawals from the sterling balances and the inflow of private foreign capital as indicated above, there remains a gap in foreign exchange resources to the extent of Rs. 800 crores. This gap can only be filled by external agencies and on a Government-to-Government basis.

India is receiving assistance at present from a number of countries and from the World Bank. Over the period of the first plan, a total of Rs. 298 crores of external assistance was made available. Of this, about Rs. 204 crores, it is estimated, was utilised. The details of the aid authorised and utilised during the first plan period and the balance available for utilisation in the second plan from the aid already authorised are indicated in the following table:

	Authorisations	Loan or Grant	Amount expected to be utilised up to the end of the second plan	Balance available for utilisation in the second plan
U.S.A.				
Wheat Loan	90.3	Loan	90.3	—
Indo-U.S.A. air programme	102.5	Grant	70.5	32.0
	39.5	Loan	7.0	32.3
I.B.R.D.	12.0	Loan	8.5	3.5
Colombo Plan				
Australia	10.5	Grant	5.3	5.2
Canada	25.6	Grant	19.5	16.2
New Zealand	1.2	Grant	0.3	0.9
U.K.	0.5	Grant	0.3	0.2
Ford Foundation	5.4	Grant	2.0	3.4
Norway	0.3	Grant	0.2	0.1
	297.6		203.9	93.8

External assistance of the order of Rs. 94 crores will be available in the second plan period as carry-over of the assistance so far authorised. In addition, trade credits totalling Rs. 75 crores have been secured for the Bhilai and Durgapur steel plants. The availability in the aggregate of exter-

nal assistance on the scale required cannot be taken for granted. All that can be said is that assistance of this order will be required if the plan, as envisaged now, is to go through smoothly. It is being recognised more and more that the economic development of under-developed countries is a problem of worldwide interest. The International Bank has been assisting actively and on a large scale in the financing of development. Recently a new agency, the International Finance Corporation, has been set up to promote a freer flow of private investment between countries. Under-developed countries need, as an addition to loans for productive projects, assistance—mainly by way of grants—for expenditure on various economic and social overheads. The Special United Nations Fund for Economic Development, which has been under consideration for this purpose, will, it is hoped, be established early. There is scope, considering the large needs of development, for assistance from international agencies and institutions as well as for assistance organised on a bilateral basis, or on a country-to-country basis.

Committee on Development Projects

As indicated by the Finance Minister in his Budget speech, it is proposed shortly to constitute a Committee on Development Projects under the auspices of the National Development Council. The Committee will include Ministers from the Centre and also Chief Ministers or Ministers from States. Tentatively, it is proposed that its special functions should be:

1. To organise investigations, including inspection in the field, of important projects, both at the Centre and in the States, through specially selected teams.
2. To initiate studies with the object of evolving suitable forms of organisation, methods, standards and techniques for achieving economy, avoiding waste and ensuring the efficient execution of projects.
3. To promote the development of suitable machinery for continuous efficiency audit in individual projects and in agencies responsible for their execution.
4. To secure the implementation of suggestions made in reports submitted to the Committee on Development Projects and to make the results of studies and investigations generally available.
5. To undertake such other tasks as the National Development Council may propose for the promotion of economy and efficiency in the execution of the second five year plan.

Bigger Expansion in Cement

The Commerce and Industry Minister, Mr. T. T. Krishnamachari, has proposed a bigger expansion of cement output during the second plan period. Originally, the Planning Commission agreed to increase production by 4.93 million tons to 12.13 million tons in 1961. This target, it is now proposed, will be raised to 16 million tons, if enough transport is available. The Government is meanwhile examining a pool price scheme. The price of imported cement is between Rs. 113 and Rs. 118 a ton, c.i.f. Indian ports. The cost of Indian cement is Rs. 71 to Rs. 79 a ton, including freight but excluding packing and handling charges. The Government of India has selected Messrs. Cement Marketing Company of India (Private) Limited as sole importers and distributors for foreign cement obtained under the present import programme. They will enter into a purchase contract with suppliers selected by the Government, on terms and conditions approved by the latter. They will finance the transaction and will be responsible for all the incidental charges, risks and liabilities, for all the incidental charges, risks and liabilities, for the Government's general direction on a "no-loss, no-profit" basis. The sale price and other actual charges to be allowed will be decided by the Government. The duration of this arrangement is from March 1956 to March 1957.

Decimal Coinage Act

The Decimal Coinage Act, enacted by the Union Parliament last year, will come into force on 1st

April, 1957. Legislation is being framed to introduce the metric system of weights and measures at an early date.

Finance Ministry's Bills

The Finance Ministry proposes to sponsor two Bills during the current session of Parliament. One will implement the recommendations of the Taxation Enquiry Commission on sales tax. This will require an amendment of the Constitution. The other will amend the Reserve Bank of India Act in order to reduce the ratio of the paper currency reserve. This amendment is needed for deficit financing.

Expanding Companies' Capital

Certain proposals which will enable companies to have a larger quantum of capital in the future are in an advanced stage. As it is, the share capital can be increased to cover the depreciated fixed assets plus 30 percent of the value of stores held by a company. It is now proposed to permit a further increase equal to 25 percent of the value of raw materials. Pending a decision, some applications for bonus shares, including one from the Indian Copper Corporation, are still awaiting the approval of the Government.

Boats from U.S.A.

Negotiations are in progress with the U.S. Government to obtain harbour craft, fishing trawlers and coastal shipping craft for the second plan period. An announcement is expected soon.

Indo-Japanese Trade

The Government of India has given six months' extension to Japan during which the "most favoured nation" treatment granted to it under the Indo-Japanese treaty will continue. This provision was to have terminated recently. Meanwhile the Japanese Government, it is hoped, will communicate its suggestions for an Indo-Japanese trade agreement and on certain matters relating to the prewar property of Indian nationals.

Orissa Mining Corporation

The Joint Secretary of the Ministry of Commerce, Mr. K. B. Lall, will fly to Cuttack on 4th May to register the Indian National Mining Corporation, which seeks to exploit iron ore resources in Orissa, primarily for the export market. The authorised capital of the Corporation will be Rs. 50 lakhs. The subscribed capital of Rs. 30 lakhs will be contributed jointly by the Government of India and the Government of Orissa. It will be a purely State Corporation, but it will be registered as a private limited liability company. The State Trading Corporation, which will undertake the export of iron ore mined by the Mining Corporation, will be registered in Delhi in the next few days.

Manganese Ore Output Higher

India produced 15,20,316 tons of manganese ore during 1955. Mr. K. D. Malaviya, Union Minister for Natural Resources, stated in the Lok Sabha recently. He added that the figures were provisional as final returns for all mines had not been received. The total output of manganese ore during 1954 was 14,13,068 tons.

E.I.C.A. CHAIRMAN EXPLAINS
RESIGNATION"REGIMENTATION" BY OFFICIAL
INTERESTS CRITICISED

(FROM OUR BOMBAY CORRESPONDENT)

FOLLOWING his resignation as chairman and director of the East India Cotton Association, Sir Purshotamdas Thakurdas, has issued a statement reiterating his contention that the drastic changes made in the association's by-laws and procedures might in the near future cause the whole structure to collapse. Meanwhile, the Board of the E.I.C.A., meeting on last Friday, decided to request Sir Purshotamdas and Mr. C. B. Parikh to reconsider their resignations submitted in protest against what they consider "increasing powers of regimentation" exercised by the Government. At the meeting, the Board appointed a committee to ascertain the views of members on the Forward Markets Commission's letters suggesting alterations in the rules of operations of the E.I.C.A. Mr. Madan Mohan Ruia was in the chair.

In his statement, Sir Purshotamdas has denied the Forward Markets Commission's charge made in reply to his resignation. He says: "It is strange that the Commission should complain of being overawed when they reportedly did not hesitate to draw attention to their powers to (a) withdraw the recognition of the Association, and (b) supersede the Board of Directors. These drastic powers are meant to be used as a last resort and to counteract gross mismanagement and misconduct. If there can be any overawing by anybody, it can only be on the part of the party having wide powers.

"The recent bunch of 11 letters of 10th April, was the last straw that broke the camel's back and indicated in no uncertain terms what the Commission's policy would be on the management of the Association's affairs. I carried on well with the Commission till I was told overnight to set up ceilings for cotton at Rs. 700, i.e. Rs. 140 below the official ceiling prices announced by the Central Government as their policy for this season. In the face of rising prices of other commodities such as foodgrains and oilseeds, it was incomprehensible that the Association should be so willing a party to the lowering of the ceiling prices to the detriment of growers and which I know would not work, as indeed in practice it has not.

"Witness, for instance, the debacle in cotton in the U.S.A. despite the financial might of the U.S.A. It was easy for me to have taken the path of least resistance, on finding the Government bent on a certain line of action, and remained silent till the Government woke up to their mistake. Instead, I took the courage of doing my duty and telling them frankly what I thought. This is now sought to be interpreted as a challenge to their authority and of trying to overawe them. Instead of realising the fact that since the attempt to enforce the price level of Rs. 700 by taking the drastic step of closing the futures market, economic forces have led to prices in the spot market increasing by about Rs. 100, with mills keenly seeking cotton at advancing prices.

Cotton Growers' Interests

"The mention of the cotton grower has not unexpectedly so hurt the Commission that they accuse me of claiming a monopoly for speaking on their behalf—a claim which I am not aware of ever having made. It is strange that the Commission should in one breath say that they permitted futures trading for the protection of the cotton grower without explaining whether it was in the interest of the grower that they closed the futures market, and again whether it was to benefit the grower that the Government's official ceiling price of cotton was sought to be lowered from Rs. 840 to Rs. 700 during the middle of the marketing season. I wonder whether the consent of the Ministry of Agriculture was obtained on this.

"The hackneyed charge that it was only the speculators who rigged up the prices has naturally now not been revived in the Commission's statement for obvious reasons. Economic forces have asserted themselves and more than vindicated my opposition to attempt an arbitrary lowering of the ceilings for futures trading in the prevailing circumstances. The spot price position has now proved that the rise in the prices of cotton that took place from October to December was not as a result of speculative manipulations. Indeed, those of the operators who foresaw the shape of events to come proved right. But no set of speculators could have rigged up the prices last season despite Government sympathy and none could have held them down this season.

"I tried in vain to seek an explanation of the Government policy, but I was told that it was an order from the Minister himself and was not subject to discussion. The attempt at regimentation of the futures market led to the unexpected result of the spot market asserting itself under the play of economic forces. In conclusion, I would repeat

that the radical alterations in the by-laws and procedures of the East India Cotton Association suggested or sought to be imposed in the series of letters of 10th April, will so change the complexion of the cotton trade that before long the edifice so laboriously built during the past 35 years may come down. The forward market will be reduced to the wishes of the Forward Markets Commission and may be divorced from realities," Sir Purshotamdas said.

Earlier, the Forward Markets Commission, commenting on his resignation, stated that although it shared the view that the detailed day-to-day working of the E.I.C.A. should ordinarily be with the trade, it had to be in conformity with "certain general principles which the supervising authority has to lay down in the interest of the trade and in the public interest." It held the view that the safeguards, procedures and rules which the Association had devised had also continually to improve in the light of current requirements and be implemented in actual practice. The Commission had the duty to see that the by-laws of the Association did not become a dead letter.

"The Association could not have been unaware of the implications of the Forward Contracts (Regulation) Act when it sought recognition under it, and recognition has been granted to it on the express condition that it shall comply with such directions as may from time to time be given by the Commission. The Commission has, however, always believed that the regulation of forward markets was a business in which the recognised associations and the Commission had to work hand in hand. The initiative rested with either and the final decision had to be taken after full discussion of the issues involved. The Commission has dealt with all requests from the Association with speed and consideration and has always preferred to put forward proposals for the consideration of the Association rather than to issue them as directions. The Commission has, likewise, shown the greatest courtesy to Sir Purshotamdas Thakurdas personally. It is sad to record, however, that any proposal from the Commission has been looked upon with resentment and the Commission has had difficulty, on occasions, even in arranging for representatives of the Association to meet it for discussion.

"It is curious that trading interests should claim to be the sole custodian of the interests of the growers. It is because the Commission has the growers in mind and believes that forward markets will eventually be in their interests that it has recommended the opening of a number of markets in the mofussil areas so as to be within their easy access. The question of prices, however, is not one which could be determined merely by forces of supply and demand in the interest of one section of the community. It has to be decided in the context of various factors such as the national income of the country and the requirements of planned development. The closure of the cotton market in December 1955 was necessary in order to prevent a squeeze on the February 1956 contract. The interests of the growers, however, were not prejudiced as they were able to sell their stocks in the ready market."

Little possibility is seen of an early resumption of the cotton futures market in Bombay. In fact, the resignation of the chairman is generally considered to have created a new problem for the trade as well as the Government. The four-month-old deadlock between the F.M.C. and the E.I.C.A. is likely to continue for some time. Traders are unanimously critical of the Commission's action. They appear to think that the "Government's undue interference with the day-to-day working of the market" cannot be tolerated for long.

Vishnu Cotton Mills

Mr. R. L. Coghlan, chairman of the Vishnu Cotton Mills Ltd., presiding at the annual general meeting of the company, gave the warning that restricting mill output would lead to a shortage of cloth, and to black markets. Referring to the Prime Minister's assurance that the Ambar Charkha would not be permitted to stand in the way of the progress and development of the mill industry, either now or in the future, he said that this should set doubts in the industry at rest. He observed that with the increased tempo of economic development the textile and most other industries should benefit. Such prosperity was entirely healthy, but prosperity derived from restrictions on the productive capacity of the industry was less healthy, and could lead to shortages, profiteering and black markets. The Ambar Charkha, Mr. Coghlan pointed out, took 55 times as many man-hours to produce a given quantity of yarn as was taken by ordinary power-spinning methods. It seemed to be carrying this principle too far if several lakhs of workers were to be employed in the production of goods which could be produced by less than 2 percent of their number.

Management of Bombay Dyeing

The chairman of the Bombay Dyeing Mills Ltd., Mr. Neville N. Wadia denied categorically rumours about a change in the managing agency of the company. Replying to a shareholder's question at the annual general meeting of the company, he stated that he had no wish to relinquish the managing agency at present, and no negotiations had taken place. He did not favour the capitalisation of reserves as the tax burden on bonus shares was heavy. To issue one bonus share for every existing share, almost Rs. 3.1 lakhs would have to be paid by way of taxation. Instead of paying such a big sum to the Government, he preferred to retain it for the expansion and modernisation of the mill.

London

DULL BUDGET DEBATE
IN COMMONSPOWER TO CONTROL INFLATION
ADMITTED

(FROM OUR LONDON CORRESPONDENT)

THE Budget debate in the House of Commons proceeded last week as uninspiringly as it started, save that Mr. Macmillan's final reply did much to rally any doubters on his own back benches. He met Opposition criticisms with vigour, emphasised that he intended to give the fullest possible effect to his basic proposals, and expressed personal confidence in the success of premium bonds. Generally speaking, however, interest in the Budget has waned quickly, more especially in the City, which is surprising in view of the fact that it is still held by some economists that inflation could be countered by Mr. Macmillan's policy if it is given a chance to operate. Professor E. V. Morgan of a well-known stockbroking firm: "There are still many inflationary symptoms in the economy and one cannot be sure that the worst is over. There seems to be a good prospect, however, that the Budget will reinforce existing policies by enough to ease the strain on the labour market and permit a substantial improvement in the balance of payments. It is clear, however, that the credit squeeze has still a lot of work to do and there is no prospect of an early reduction in Bank rate. Moreover, there is still the long-run problem of how to reconcile full employment with stable prices. There is little sign yet of any change in the fundamental attitudes of trade unions towards wage claims and, so long as this is so, the chronic danger of cost inflation remains." He is not alone in holding these views. The latest bank returns, however, indicate that the credit squeeze, outside the public sector, is showing signs of easing off, and although the latest offer of £250 million Treasury Stock 1979-81 was oversubscribed within half an hour, it has been taken up mainly by Government departments and no real "funding" will evolve until it is re-sold.

The real uncertainty in the economic outlook is represented by cost inflation arising from fresh wage claims, and the decision of the Amalgamated Engineering Union to make a further demand of an unspecified amount, within seven weeks of an earlier claim having been settled, is by no means a good augury. The T.U.C. also, it would appear, cannot be expected to influence any restraint. Neither the wage-price spiral nor co-operation in fighting inflation finds mention in a short sharp statement giving its views on the Chancellor's Budget. This deplores the fact that its advice was disregarded. "The Government have chosen to ignore the opportunity of using the Budget as a positive instrument of economic policy," it says. Instead, "the 1956 Budget emphasises the Government's reliance on monetary policy...and the lack of conscious direction of the nation's economic affairs." It should have been used, says the statement, to help lower prices of necessities. But apart from small increases in family allowances, the concessions will benefit the better-off, rather than the poorer sections of the community.

Warning on Imports

The suggestion last week that the big improvement in the balance of visible trade during February and March should be treated with caution as being influenced largely by special factors is confirmed by the Board of Trade with the issue of the detailed trade returns for the first quarter. The special factors—the dock strikes in Australia, Denmark and Finland and the freezing of the Baltic—caused a fall in imports that is likely to be temporary only. Arrivals of wool from Australia, for example, were in March £7 million to £8 million below normal. Imports from Finland in the same month were some £2½ million less than might have been expected. The Board of Trade commentator says that if allowance is made for these special factors, imports in the first quarter are shown to be stable around the high level reached in the first quarter of 1955 and regained in the fourth quarter after a small drop in the middle of the year.

The March record export total given as £269.6 million in the preliminary figures has now been revised upward to £271.3 million, and the rise is shown to have been shared fairly evenly among most classes of export goods, but shipment of aircraft and aircraft parts were particularly high at nearly £11 million. The effect of the export total revision is to reduce the visible trade gap for March to £45½ million, which compares with £49½ million in February and £74 million in January. For the first quarter of the year the average monthly deficit works out at £56 million, or £21 million less than in the corresponding period of 1955 and £16 million less than the monthly average for the whole of last year. It was still about £6 million above the average for 1954. In value first-quarter exports were up 4½ percent on a year earlier. The increase was entirely due to higher prices, but figures for the first quarter of 1955 were inflated by the 1954 dock strike. Allowing for this, the increase in the volume of export shipments was close on 5 percent, that is, about the same as the general underlying rate of increase which prevailed throughout 1954 and 1955. When one looks at the direction of trade, however, a hopeful sign appears. Between January and March, exports to dollar markets were 25 percent higher than a year earlier. The trade gap with the non-sterling world as a whole was £7 million

less at £50 million a month. Exports to the sterling area, on the other hand, were unchanged over the two years.

March Terms of Trade

After moving slightly in our favour in February, the terms of trade, as measured by the ratio of import to export prices, moved slightly against us in March. At 105 (average 1954 = 100) the index of export prices was unchanged, whereas the import price index moved up one point to 106. In consequence, the terms of trade rose from 100 to 101. This is the level at which they held steady between November, 1955, and January this year. In the slight rise in import prices, the main contributory factors were dearer copper and higher quotations for imported crude petroleum. These were only partially offset by lower prices for tea, cocoa and butter.

Credit Squeeze and the Sterling Area

It was probably inevitable that the prolongation of the credit squeeze in this country would ultimately arouse both doubts and criticisms in other countries of the sterling area—and these become all the more valid as the end is still not in sight, for London cannot hope to remain an international payments centre with a Bank rate of 5½ percent and strict credit limitation, but, equally, cannot abandon either until the sterling area balance of payments is restored to normal, or near-normal. The National Bank of India has done well to draw attention to these repercussions in its latest quarterly review. Half the world's trade is transacted in sterling and much of it depends on discounting bills on the London market or raising similar types of credit. The high cost of credit drives borrowers elsewhere and thus helps to straighten our own position, but it makes things very difficult for the other parts of the sterling area. Even more important, the bank argues, is the effect of the squeeze on British long-term investment in the sterling area. The capital-hungry countries of the Commonwealth continue to look to London as their chief source of capital. In short, it is impossible to separate the effects of the monetary policy on Britain's internal economy from the effects on her position as international lender and sterling area banker. The bank does not go so far as to visualise review of projects for which financial commitments have been accepted—though it could happen—and, of course, some compensation for higher rates on current transactions will be given by the higher interest rates earned by funds left on deposit here, but it comments that overseas commitments have "for the moment tended to stretch available United Kingdom resources to the limit."

One of the purposes of the credit squeeze is to divert resources from domestic consumption to profitable employment overseas. "This may take some little time to accomplish," writes the bank, "and in the period of transition it is probably inevitable that the credit for operations overseas will suffer some of the consequences of the squeeze." No doubt the sterling countries have a vital interest in keeping the pound sterling stable but if the squeeze does not succeed reasonably soon in restoring a lendable surplus to the balance of payments, its effects on the sterling area may be almost as damaging as an open failure.

Why Steel Supply Lags

British steel-makers were faced in 1955 with a home and overseas demand for steel which sur-

passed every forecast, and restricted their exports to a little more than the 1954 level in order to ensure the highest possible deliveries to the home market. This is disclosed in the annual report of the British Iron and Steel Federation: it adds that the same policy will be followed in 1956. The report says that steel production in 1955 of 19,800,000 tons compared with an estimate at the beginning of the year of up to 19,500,000 tons, but the cost of production rose considerably. This year's output is estimated at 21,300,000 tons. The increase in home deliveries, compared with 1954, was about three times the increase in 1954 over 1953.

It continues: "The dramatic rise in demand surpassed every forecast: a number of factors combined to stimulate a greater rate of expansion in the steel-using industries than could be matched, in the short term, by the industry itself, and the consequent shortage of steel had to be made good by imports. The increase in output, compared with 1954, of 1,250,000 tons, was greater than in any previous year since the war, apart from 1948, in spite of the loss of about 150,000 ingot tons through the railway and dock strikes in the early summer. Even so, home production was not enough to meet the total demand, and the equivalent of 1,850,000 ingot tons had to be imported—over a million tons more than in 1954." The Federation thinks that the Government's economic policy might, in due course, restrain the home demand for steel, but little effect on producers' books was apparent by the end of the year.

Textiles in Industry

The first National Industrial Textiles Trade Fair opened last week in the Royal Albert Hall. More than 50 individual firms are exhibiting, including 18 from Lancashire, and a further 250 are represented by the Cotton Board, the Man-made Fibres Federation, and the Flax Spinners' and Manufacturers' Association. The stands show how varied and wide are the uses to which textiles are put in industry, and the great advances that have been made in textile technology, which through the infusion of new fibres and finishes has enabled the textile industry to meet the specialised needs of today. Industrial and protective clothing made of the synthetic fibres resistant to flash, heat, water, acid or alkali are paraded, as well as more decorative overalls and uniforms for women.

Although nylon, "Terylene," rayon and other fibres are being found suitable for an increasing number of industrial uses, including driving-belts, tyres, fishing-nets, filter cloths and insulation coverings, cotton retains its position as the most important fibre in industry. Seventy percent of all industrial textiles embody cotton, and the strong Lancashire contingent at the fair indicates that the industry recognises the importance of this trade. One manufacturer from Manchester said at the fair that his firm had increased the proportion of industrial cloths from 20 percent to 50 percent of its total output during the last three years. He was of the opinion that Lancashire had taken too passive a view of the possibilities of developing the industrial trade and had not been active enough in research and the exploration of new avenues. This was now being rectified, and he hoped that it would do much to offset the recession in the household and clothing textile trades.

CAPITAL

Founded in 1888, is India's oldest and most widely read financial newspaper. It gives its readers in all parts of the world the most up-to-date service in Indian economic intelligence and information of any newspaper in the daily or weekly field, and includes a complete list of all shares and securities dealt in on the Calcutta Stock Exchange, together with full details of latest balance sheets.

The Research & Statistical Department undertakes research into industrial and financial problems and numbers among its clients, Government departments, railway administrations, chambers of commerce and industrial associations.

Published every Thursday.

"CAPITAL" STOCKS AND SHARES INDEX*

The Capital Stocks and Shares Index (Base: 1939) has now been brought up to March, 1956. Compared with February, the March indices for preference shares and government securities show gains of 0.2 points and 0.4 points, respectively.

There were increases in banks 1.3 points, cottons 30.5 points, coals 1.0 point, minings and oils 12.0 points, cements 3.5 points, engineering 23.9 points, teas 45.4 points and papers 67.6 points, while decreases occurred in jutes 13.1 points,

Combining all the factors the *Capital variable* yield securities index shows that the index for stock prices in the above classes of shares advanced by 13.0 points during March, 1956.

Jute

SUBSTANTIAL FALL IN RAW JUTE PRICES

UNDERTONE REMAINS WEAK: GUNNY RATES
ALSO LOWER

APRIL latka settlement considerations dominated activity in the Calcutta jute and jute goods markets during the early part of the week, and speculative trading was depressed rates. As prices in the goods market fell when a large bulb syndicate failed to take up its commitments of B Twills on the due date, holders of raw jute stocks began to get nervous. Already current rates were well below their average holding price, and with the prospect of further losses in the goods market—due, firstly, to the general lack of interest from overseas buyers, and secondly, to the possibility of another increase in mills' stocks of jute goods at the end of April—raw jute began to weaken. It was offered freely at the lower rates. Panic selling by several small holders, who were further influenced by the very favourable market for Crop reports from both India and Pakistan, caused a slump after the week-end. Mills continued to reduce their price offers, and in nearly all cases these were met by sellers. In most transactions, the bargaining centred on the assortment. It appeared that both buyers and sellers had too much middle quality jute, and business usually went to those who offered more of the lower grades.

In view of reports about the lack of overseas interest, it is surprising that U.S. burlap consumption and stocks have remained at a consistently high level. Consumption during March increased by 3 million yards, bringing the monthly average up to 70 million yards, as compared with 66 million yards in the first three months of last year. This in itself is a healthy sign, but the stock figures make it less encouraging. U.S. burlap stocks rose by 8 million yards to 253 million yards, 141 million yards being on hand and 112 million yards afloat. Thus, the American industry has over $\frac{3}{4}$ months' requirements, of which two months' needs are immediately available.

THE JUTE MARKETS

Manufactured Goods: The gunny markets have shown more price movement during the past week than for some time, but mostly in a downward direction. At the opening last Thursday, depressed conditions prevailed in the absence of any real goods enquiries. B Twills rates dropped by Rs. 1-4 in the near positions to Rs. 106-14 a 100 bags and Rs. 1-8 for forward shipment to Rs. 106-4. Hessian reacted in sympathy, and 40in. 10oz. lost 4 annas for all shipment periods to be quoted at Rs. 38-9 for April and Rs. 39 for July-September shipment. Small interest was shown at the lower levels by shippers and speculators. But their activities tended to push up prices, and they withdrew with very little business transacted. It was reported at this stage that minor overseas enquiries had come in. They did not affect the market much, and were taken up almost entirely by shippers. Interests with bearish ideas who hoped to enter at a profit later. As a result, opening rates on Friday were virtually unchanged. Actual business was most pronounced in B Twills due to local speculative covering in anticipation of a steady tendency, but this was only temporary as there was very little holding power left. Saturday morning's quotations were again marked down, with only passing interest from mills and outside buyers. The business was little movement over the week-end, but quotations were slightly steadier. Monday's opening showed no alteration in the quoted rates. As the day progressed, the weaker tendency in raw jute influenced gunny rates, which declined rapidly. Tuesday's opening rates for B Twills dropped by Rs. 1 to Rs. 105-12 a 100 bags, while hessian lost 4 annas for 40in. 10oz. to rule at Rs. 38-8 a 100 yards. Heavy goods rates were then the lowest since the beginning of October 1955.

At the close the market is quiet and opening quotations on Wednesday morning were as follows:

Quotations on	Ready	May	June	July-Sept.
	Rs.	Rs.	Rs.	Rs.
40in. 8oz.	32-8	32-4	31-12	31-6
40in. 10oz.	38	38-2	38-4	38-8
E Twills	104-4	104-10	104-2	104
Heavy Ceese				
(Plain)	103-12	104-4	104-2	104
A Twills	130	129-8	129	128-8
Liverpools	119-8	119-8	119-8	119
Cornspunks	104-8	105-4	105-12	106

Raw Jute: There was very little activity in the fibre markets at the beginning of the week, and buyers showed no interest due to the declining goods market. Prices were easier and sellers appeared to be anxious for business. Towards the week-end, small business was done, and mills' counterbids were met, resulting in buyers reducing rates. Business was again transacted at the lower levels, as stockists became nervous about their large holdings, and large quantities were put on offer. Very weak conditions prevailed and sellers continued to offer at the lower prices. Upcountry markets followed the collapse in Calcutta, and although prices eased, they were well above the parity of rates quoted to mills. Quotations meant little at this stage, as most of the business was put through below the prices indicated by sellers.

Opening quotations last Thursday were 8 annas a maund below last week's closing rates, and

Upper Assam jute stood at Rs. 27 a maund basis Bottoms for May-June shipment. A large quantity of business was transacted at this stage at a Rs. 2-8 difference between Middles and Bottoms. Sellers were so nervous that they made no protest provided they were able to reduce their large holdings of middle quality jute. Quotations were unaltered up to the week-end, but could be considered nominal as business passed duty below these rates. After the week-end Upper Assam jute dropped to Rs. 26-8 a maund basis Bottoms, but the tendency was weak as buyers indicated even lower rates.

The main business during the week was in Dhurbir-Northern and Assam jute at the same rates of Rs. 26 to Rs. 27 a maund basis Bottoms for 15th May and May-June shipment. Small lots of Indian Northern Tops were done at Rs. 31-8 to Rs. 32 a maund for May shipment. Interest was shown in Forbesganj (Sripuria quality) jute, and business passed at rates varying between Rs. 25-8 and Rs. 26-4 basis Bottoms. A fair quantity of good quality Daissee and Tossa was done, prices ranging between Rs. 27 and Rs. 27-8 a maund basis Bottoms. Daissee Mesta came in for a great deal of interest and business was concluded at Rs. 24-8 to Rs. 24-12 a maund basis Bottoms. The difference in price between Middles and Bottoms in all transactions varied between Rs. 2-8 and Rs. 3 a maund

The only business reported in New Crop jute was in Jat Weedings on the basis of Rs. 29 for Low Weedings, with a Rs. 3 difference between the three grades of Low, Medium and Selected Weedings. The delivery period was given as June-July.

At the close, the market is easier and quotations are nominal, as the majority of sellers are willing to sell below these rates. Opening prices on Wednesday morning were as follows:

Indian Jute (Kutchaj):	Landed at Mills Rs. a md. basis	Bottoms	Shipment
Lower Assam	26-4		May-June
Upper Assam	26-4		"
Northern	26 4		"
Marshidabad White	23-4		"
Daissee ex Agency	26-8		"
Daissee ex Cossipore	26		"
Daissee Mesta	24		"
Local Packing (Northern)	26-4		"
Bimbi	24	for F.A.Q.	"
Indian Jute (Pucca):	Rs. a bale.		Shipment.
Mill Firsts $\frac{3}{4}$	175		May-June
Mill Lightnings $\frac{3}{4}$	160		"
Mill Hearts $\frac{3}{4}$	145		"
Pakistan Jute (Kutchaj):	Landed at Mills Rs. a md. basis	Bottoms	Shipment.
Jat	30		May-June
District	29-8		"
Northern	29		"
Pakistan Jute (Pucca):	Rs. a bale		Shipment.
Mill Firsts $\frac{3}{4}$	200		May-June
Export Firsts $\frac{3}{4}$	180		"
Export Lightnings $\frac{3}{4}$	165		"
Jat Cuttings	122		"

The Cossipore markets are easier and sellers are keen for business. Holders are releasing large stocks and price cutting by various operators has caused a slump. Imports have fallen off rapidly over the week, and a total of only 355 wagons arrived at the Cossipore sidings. At the close, quotations were based on Kishengani jute at Rs. 26 a maund for garسات quality. There is nothing to report from the Daissee markets as business is slack. Stockists have released small quantities with the recent drop in prices, but their ideas are still above mills' indications. New Crop preparations have been speeded up over the past week following good rainfall in most of the Daissee areas, and large portions of land have now been put under seed. At the close, quotations for Old Crop jute in Sheoraphuli were based on Rs. 27-4 a maund for garسات quality.

from the port of Calcutta. These are gross figures based on shipping bills presented.

THE FOREIGN JUTE MARKETS

PRICES WELL HELD

(FROM OUR DUNDEE CORRESPONDENT)

RAW jute shippers in Pakistan are maintaining their prices very well, in spite of reports that there only small business is being done. There may be something in the tales of scarcity of old crop jute of decent quality, but it is suspected that the speculative holders of the balance of the crop are holding out for the comparatively high rates now quoted. Reports of the new crop are quite satisfactory and the trade understands that there will be a larger area sown, even up to 25 percent more, it is estimated. Offers are none too freely made of white jute to this centre, where Mill Firsts are available at from £100 to £104 for old crop, with Mill Lightnings from £91 to £94 and Mill Hearts are not under £88, c.i.f. U.K., May-June shipment. New crop prices are very irregular, ranging from £91 for Mill Firsts, £82 for Mill Lightnings and £77 for Mill Hearts, August-September, c.i.f. U.K. Some sellers are asking up to £95 for Mill Firsts and £85 for Lightnings. Mill Hearts are out of all proportion to other grades this season because of the demand for that type of jute. Daissee and Tossa are quite freely offered at the minimum prices for most grades—£91 for good marks of Daissee-2/3 £100 for grade Tossa-2/3 and £90 for fours, but grade Daissee-2/3 is lowest at £87, c.i.f. U.K. Spinners here are buying very little. They are able to pick up an occasional parcel afloat near at hand or ex-quay at a few pounds under shipment quotations. No doubt they will wait until prices come down before they purchase the emergency stocks which the Control has allocated to them, totalling about 60,000 bales.

Calcutta goods have developed weakness and 40s. 100s. Russians are down to 38s. 3s. and 16oz. to 45s. 6d. May and June, with B Twills at 163s, same shipments. L.ob. Calcutta. Consumers in this country are showing no interest in imported goods. Imports of jute fabrics for the three months ended 31st March this year were 54,429,000 square yards, valued at £1,633,654, compared with 76,233,000 square yards (£2,614,079) in same quarter of last year. Imports of jute sacks and bags were 96,446 cwt. (£528,545) and 85,990 cwt. (£528,514) respectively. Some increase is noted in enquiries for jute cloth and bags but there is still not much fresh business taking place.

W. GERMAN JUTE GOODS PRODUCTION AND EXPORTS

Jute goods production in Western Germany started well with the new year. The January output was placed at 8,500 tons of yarns and 6,500 tons of woven fabrics against 8,100 tons and 6,200 tons in December 1955, reports the *Jute Bulletin* of the Indian Central Jute Committee. Members of the Manufacturers' Association imported about 12,400 tons of raw jute during January, compared with 6,500 tons a month ago. Western German exports of jute goods to the U.S.A. during the first 11 months of 1955 showed a sharp drop to about 1,137 tons from 2,140 tons in 1954 and 7,873 tons in 1953.

NEW JUTE FACTORY IN INDONESIA

Internal manufacture will satisfy about 18 percent of Indonesia's jute bag requirements, estimated at 9 million for the current year. There is already a jute mill in production at Delanggu, Surakarta, giving an annual output of 900,000 bags. Another, estimated to produce 2.5 million bags a year when in full operation, has been officially opened in Sourabaya. It may be possible to obtain an output of 750,000 bags from the new factory this year.

PROTECTION FOR S. RHODESIAN BAG INDUSTRY

In order to protect the grain bag industry in Southern Rhodesia from cheaper Indian and Pakistani imports, a Government-appointed committee has recommended a subsidy of 8½d a bag to the local product, over and above a protective tariff on imported hessian. The Committee has reported in favour of giving the proposed subsidy for a period of two years. The bag industry in Southern Rhodesia has a installed capacity for producing 2.86 million sacks against an annual requirement of 6 million sacks.

GUNNY SHIPMENT STATISTICS

The following figures include coastal shipment relating to manufactured jute goods for shipment

Commodity Markets

EXPORT DUTIES ON VEGETABLE OILS

TRADE FEARS LOSS OF U.K. MARKET

IN a letter to the Union Minister for Commerce and Industry criticising the export duties on linseed, kerdiseed and nigerseed oils, Rai Bahadur G. V. Swaika, chairman of the Calcutta Grain, Oilseed and Rice Association, explains the effect which the duties, together with the increased imposition on castor oil, will have on the foreign demand for these commodities. He says that in the interests of India's export trade in oils, a sound case exists for the removal of the duties at least for the contracts entered into with overseas buyers before the date on which the duties first became payable.

"It would not be irrelevant", he continues, "at this juncture to review the conditions under which Indian exporters of oils, with the encouragement of the Government of India, have striven to establish their position on the international market. For all practical purposes, the export of Indian linseed oil was, for many years, strictly limited to those countries which, mainly by distance, and therefore increased freightage costs, were outside the sphere of the export trade of the Argentine and Uruguay. Thus Indian exports, in small quantities, were directed to Burma, the Straits Settlements, Hongkong, and to a lesser extent to Australia. Due, however, to political difficulties in South America, and more particularly, to the preferential U.K. tariff duties on Indian oils, Indian linseed oil has in recent years made very substantial gains in the U.K. It is to be observed, however, that the South American trade has retained a firm hold on Continental markets, thus clearly indicating the inability of Indian exporters to compete in that region without the benefit of the preferential tariff arrangements existing with the U.K. presently to the extent of 15 percent *ad valorem*. This advantage will be positively nullified by the imposition of an export duty on linseed oil of Rs. 250 a ton, i.e., £19 on the f.o.b. price of £142 a ton, or 13.5 percent *ad valorem*. The only conclusion to be drawn from this is clear—the swift loss of the hard-won U.K. market to Indian exporters.

"Similarly, it has only been possible during recent years for Indian exporters to capture foreign markets for niger and kerdiseed oils largely through the Government of India's action in allowing exports freely without the imposition of export duties. But while these international markets have largely been won by virtue of the Government's liberal export policies, a strong additional factor has been evident in the keen competition which has existed between individual exporters. Indeed, it would not be incorrect to regard this competition as having been a vital and necessary factor, as essential as the Government's encouragement and assistance through the non-imposition of export duties. While this minimum margin of profit will naturally vary —on which factual information is naturally somewhat difficult to collate at short notice—it is clear from the experience of members of this Association, that the profits which otherwise would have been gained will, without exception, become clear losses in the hands of Indian exporters on their payment of the export duties now imposed. As a consequence, exporters will in many cases default on their contractual commitments 'to save what can be saved'. The effect of such action on India's goodwill overseas will be disastrous, and I am confident that the Government is no less anxious to avoid this result as are those shippers primarily concerned with the maintenance of their reputation and business abroad."

It is on these grounds that the Rai Bahadur has requested the Minister to reconsider the Association's request that the imposition of the export duties on all contracts effected before the date on which the duties became effective, might be waived. There are recognised precedents for such action on the Government's part and executive measures to ensure its correct application are not unduly difficult, he says.

WORLD OUTPUT OF NICKEL LIKELY TO RISE

QUICK GROWTH IN CANADIAN PRODUCTION

AT the recent annual general meeting of the International Nickel Company of Canada Ltd., Dr. John F. Thompson, Chairman, reported high deliveries of the company's two principal products—nickel and copper—and increased output of most of the other elements obtained from the ores. "The facts that free world nickel production will probably increase and that purchasing for stockpile may be moderated suggest that there should be more nickel available for industry in 1956 and even more in 1957." Non-Communist world nickel output for 1956 was estimated by Dr. Thompson at about 445 million lbs., a gain of some 15 million lbs. over 1955.

The combined total deliveries by all Canadian producers, said Dr. Thompson, had reached a record level estimated at 357 million lbs., or "some-what over 80 percent of the free world supplies." Deliveries by International Nickel alone last year were 290 million lbs., a new high, which represented over 65 percent of the free world's supply. Since the end of the Second World War, he added, Canadian nickel producers had increased their annual rate of production by some 95 million lbs., of which International Nickel accounted for 55 million lbs. The gain in Canadian output had been the greatest factor in the total increase in the free world's supply. During this period, the increase from other sources, such as New Caledonia, Cuba and the United States, had also been considerable. The indicated overall effect of new nickel expansion programmes under way or contemplated was likely to be a further increase in the proportion of the free world's nickel produced outside of Canada.

Price of Nickel

"The belief that nickel prices should not be dominated by short-term considerations to the detriment of the necessarily long-term planning by nickel consumers," Dr. Thompson stressed, "has been an important factor in the progress of the nickel industry." In making the necessary price adjustments from time to time, International Nickel he said, had made every effort to follow rising cost trends as conservatively as possible, always bearing in mind that nickel-containing products were competitive with many that were made of other metals and materials and must be priced competitively if the position of consumers of nickel was not to be jeopardised. The company, therefore, was continuing its long-established policy of selling at prices which encouraged the development and expansion of uses for nickel.

The Chairman stated that the consumption of nickel by uses in the free world in 1955 was approximately as follows: stainless steels 30 percent; engineering alloy steels 17 percent; high-nickel alloys 16 percent; electroplating 15 percent; copper-base alloys 6 percent; jet engine alloys 5 percent; cast irons 5 percent; and industrial chemicals and miscellaneous 6 percent. This consumption was fundamentally affected by the abnormal conditions arising through defence and stockpile requirements and inadequate supply.

"Copper is International Nickel's second most important product," he continued. "Deliveries of refined copper in 1955 amounted to 263 million lbs., a postwar high, and an increase of almost 10 million lbs. over 1954. Canada consumed the bulk of the company's production—nearly 60 percent—the balance going principally to the United Kingdom, the second largest market, and the United States."

INTERNATIONAL RICE COMMISSION'S COMING SESSION IN CALCUTTA

Recent developments relating to nutritional problems concerning rice and the use of rice fields for fish culture will come up for discussion at the fifth session of the International Rice Commission which will meet in Calcutta from 12th to 17th November, 1956. According to the provisional agenda, the Commission will consider the reports of its working groups on rice-breeding, better fertilising practices, soil, water and plant relationships in rice production, the mechanisation of rice cultivation and the reduction of losses through improved operational methods. It will also have before it the progress report of the Executive Secretary on the working of the Commission since its last session held in Tokyo in October, 1954. The Commission is at present composed of 26 member countries—is at present composed of 26 member countries—Australia, Burma, Cambodia, Ceylon, Cuba, the Dominican Republic, Ecuador, Egypt, France, India, Indonesia, Iran, Italy, Japan, Korea, Laos, Mexico, the Netherlands, Pakistan, Paraguay, the Philippines, Portugal, Thailand, the U.K., the U.S.A. and Viet-Nam. The National Rice Commission, appointed by the Government of India with Dr. Panjabrao Deshmukh, Union Minister for Agriculture, as chairman, met recently to make arrangements for the session of the International Commission.

sion. It also drew up a programme for organising excursions, holding an exhibition and collecting data on technological research.

WHOLESALE PRICE INDEX FALLS

THE official wholesale price index (base: year ended August 1939=100) declined by 0.4 percent to 390.6 during the week ended 14th April 1956 as compared with 392.0 (revised) for the previous week. Relative to the corresponding weeks of the last month and a year ago, the index was higher by 0.6 and 13.4 percent, respectively. Lower prices of wheat and gram (6% each), tea (3%) and coffee—plantation P.B. and gur (2% each) brought down the index for Food Articles by 1.1 percent to 360.9 as compared with 364.9 (revised) for the previous week despite an advance in the prices of jowar (+9%), and rice and salt (+1% each). Prices of wet salted cowhides (8%), manganese ore (average export price) (-7%), lac (4%), groundnuts and raw silk (3% each) and raw wool, linseed and cottonseed (-1% each) were marked down while those of gingellyseed (+7%), castorseed (+6%), rapeseed (+3%) and copra (+1%) showed advances, the index for Industrial Raw Materials fell by 0.4 percent to 471.0. The index for Semi-Manufactures advanced by 0.3 percent to 375.0. Items which showed noticeable changes were: castor oil (+5%), groundnut cake and gingelly cake (+3% each), mustard oil in Calcutta and linseed oil in Bombay (+2% each), cutta and linseed oil in Patna (6%), coconut oil in Bombay, mustard oil in Calcutta and copra cake (-3% each). The index for the Manufactures group stood at 375.9 as compared with 375.8 for the previous week, the price of glass (+1%) showed an increase. Higher prices of chillies (+7%) raised the Miscellaneous group index by 0.1 percent to 496.0, although prices of turmeric and cashewnuts (-2% each) and black pepper (-1%) exhibited declines.

INDEX NUMBERS BY GROUPS AND SUB-GROUPS. (Base: Year ended August, 1939=100)

R = Revised * = Estimated.

FOURTH ESTIMATE OF COTTON CROP IN 1955-56

According to the Directorate of Economics and Statistics, Union Ministry of Food and Agriculture, the all-India fourth estimate of cotton for 1955-56 puts the current year's acreage and production at 19,525,000 acres and 3,705,000 bales (of 392 lbs. of cotton lint), as against the adjusted fourth estimate of 17,506,000 acres and 4,072,000 bales respectively for 1954-55. Both the area and production of cotton at the fourth estimate stage registered record figures during 1954-55. The current year's figures show a further increase of 2,019,000 acres or 11.5 percent in area, but a decrease of 367,000 bales or 9 percent in production. The production of cottonseed is estimated at 1,297,000 tons during 1955-56, as against the corresponding adjusted estimate of 1,425,000 tons, thus showing a decline of 128,000 tons or 9.0 percent.

The details according to staple lengths of the current and previous years' estimates are given below:

Staple	Area (Thousand Acres)		Production of cotton lint (Thousand bales of 392 lbs each)	
	1955-56 (Fourth Estimate)	1954-55 (Adjusted Fourth Estimate)	1955-56 (Fourth Estimate)	1954-55 (Adjusted Fourth Estimate)
Long Staple	6,492	5,636	1,344	1,149
Medium Staple	9,148	8,087	1,702	1,792
Short Staple	3,885	3,783	659	831
Total	19,525	17,506	3,705	4,072

The increase in acreage during the current year has been reported by almost all cotton-grow-

ing States, particularly Bombay, Hyderabad, Madhya Bharat and Madhya Pradesh, and has been attributed to favourable weather conditions at sowing times. The decrease in production is mostly shared by Madhya Pradesh, P.E.P.S.U., Punjab and Hyderabad, and is attributed to the damage caused by heavy and incessant rains and floods at the growing period. The decrease in production in these States has been offset to some extent by increases in production in Madhya Bharat and Rajasthan. As regards the different varieties of cotton, the decrease in production has occurred mostly in Oomras, Jarilla (including Virnar), Americans, Hyderabad Gaorani and Dholleras. Malvi and Broach-Vijay registered some increases. In staple lengths, the decrease in production has been largely shared by short and long staple cotton.

The information given in this estimate relates generally to the period up to the end of January 1956. In parts of Madhya Pradesh, Punjab and P.E.P.S.U., the standing crop was adversely affected by floods and excessive rains. The crop was also damaged to some extent in parts of Madhya Pradesh and Bombay by aphids, "powdery mildew" and other crop diseases. This estimate does not cover the entire area sown to this crop during 1955-56. Experience shows that the area at the fourth estimate stage forms roughly 95 percent of the area finally reported. Trade estimates of cotton are generally higher than the official estimates. At this stage, the latest available trade estimates put the size of the current year's crop at 46.52 to 47.8 lakh bales, as against the corresponding estimates of 48.31 to 48.27 lakh bales for the 1954-55 crop.

TEN-YEAR PLAN FOR U.K. COAL INDUSTRY

The U.K. National Coal Board (N.C.B.) proposes to spend nearly £1,000 million during the next 10 years on the reconstruction of the coal industry in the United Kingdom. This was announced in the

report *Investing in Coal*, published on 23rd April by the Board. Required investment will represent something of the order of 4 percent, or 10d out of every pound invested within the British economy. Explaining the increase in required investment over that set out in the Board's original Plan for Coal, published in 1950, the report points out that, apart from the rise in prices sending up costs, a number of major projects have been added to the original plans. The revised plan provides for an output of 240 million tons a year in 1965, of which 228 million tons will come from Coal Board mines, 10 million tons from open-cast workings, and 2 million tons from private mines. Output last year totalled 221 million tons.

To achieve the 1965 target, it will be necessary by the end of the period not only to complete the vast majority of the major reconstruction schemes now in progress, but also to start and complete more than another 100. Then, the report concludes, "the country can look forward to a coal industry that will move ahead at a steadily increasing pace over the years to come. And the industry's employees can look forward to far-reaching changes and improvements wherever opportunities exist for them." The Board estimates that the industry in 1960 will require 682,000 mine workers with an output a man-year of 319 tons, and 672,000 in 1965 with an output a man-year of 342 tons. This compares with a manpower in 1955 of 704,000 and an output a man-year of 298 tons.

Some 20 colliery reconstruction schemes were completed at the end of 1955, while at the same time there were 147 in various stages of completion. The Minister of Fuel and Power, Mr. Aubrey Jones, in a memorandum issued on 23rd April said that he had given his approval to the general lines of development now proposed by the N.C.B. Mr. James Bowman, chairman of the N.C.B. said at a Press conference in London that the plan should not in itself result in higher coal prices. "We are determined that the mining industry shall not lose any chance, now or in the future, of exploiting to the full any technical advance that clearly can help us."

Build your own Equipment with

DEXION

SLOTTED ANGLE

HERE is a revolutionary material that builds and grows. Available in rust protected cold rolled Steel and in Aluminium Alloy, Dexion Slotted Angle can be used to build all types of industrial equipment ranging from work benches, racks or trolleys, to light buildings, godowns and garages.

Dexion Slotted Angle is supplied in packets of 100 ft. made up of 10 ft. lengths. 75 Nuts and Bolts are included in each packet.

The scientific pattern of slots and holes ensures that rigid structures, either permanent or temporary, can be erected by unskilled labour. No welding. No riveting. No measuring. No painting. All the work has been put into Dexion before you get it. Simply cut and bolt, that is all.

REACTIONS TO SYNTHETIC RUBBER PROJECT

PROSPECTS FOR TEA AND COFFEE IN SOUTH INDIA

(FROM A SOUTH INDIAN CORRESPONDENT)

IT is reported that the Central Government has tentatively accepted the U.P. Government's proposal to set up a synthetic rubber plant at a cost of about Rs. 12 crores during the second five year plan somewhere in Uttar Pradesh. U.P.'s claim for a synthetic rubber factory is based on its position as the leading producer of power alcohol, which is an important raw material for the manufacture of artificial rubber. Tapica, which is plentiful in Kerala, is also suitable for producing power alcohol, according to some experts. Since tapioca growers on the west coast suffered last year because prices were too low, it is widely felt in South India that if the Government is seriously thinking of setting up a synthetic rubber factory, it would be better to locate it in Kerala. The project would reduce unemployment and help tapioca growers. Rubber growers do not favour the idea of producing synthetic rubber in India as they fear that it will compete with their product. Competition from synthetic rubber has created difficulties for rubber plantations even in Malaya, Indonesia and Ceylon, where cultivation is more scientific and yields are much higher. Growers claim that the gap between production and consumption in India can be bridged in course of time by extending and improving cultivation, for which conditions are ideal on the west coast.

Production of rubber in south India during the first quarter of 1956 amounted to 4,338 tons, compared with 3,464 tons during the corresponding period of last year. As February and March are a resting period for most estates, the rubber crop in these two months is lower than the normal production in other months; this year, the actual figures for these months are 976 tons and 1,279 tons, compared with 2,083 tons in January. Tapping has commenced in almost all estates with the recent showers. According to official estimates, the shortage of rubber in 1956 will amount to over 8,000 tons, and will have to be met from imports. The Rubber Board has recommended the purchase of 4,600 tons from abroad for the first half of the current year; the position will be reviewed later and more imports will then be recommended. In the world market, natural rubber is now selling at about Rs. 140 a 100 lbs, as against the statutory price of Rs. 155-12 in India. Until recently, the world rate was at a much higher level and the difference between the two prices was about Rs. 75 a 100 lbs at one time.

Record Output of Coffee

South Indian coffee production during the current season will touch a new high of about 32,000 tons. Returns received so far total 30,000 tons, with the final figures for the robusta crop yet to come. The target fixed in the second five year plan is only about 36,000 tons and it seems that production will exceed this figure by 1961. The prospects for the next season are said to be brighter. The Coffee Board has so far allowed the export of 3,000 tons from the current season's crop and its recommendation for the export of another 2,000 tons is being considered by the Central Government. Since domestic requirements this year are officially estimated at 23,000 or 24,000 tons, it seems that more than 5,000 tons can be exported. The Coffee Board is considering a scheme to open coffee houses in more north Indian cities and also in important centres abroad, such as London and Colombo, in order to popularise Indian coffee.

South Indian Tea Crop Down

South Indian tea production has suffered from drought and leaf diseases during the first quarter of this year. Actual figures for January and February are 6.9 million lbs and 6.6 million lbs, compared with 8.3 million lbs and 7.8 million lbs for January and February 1955. March production is unofficially estimated at 8.6 million lbs, compared with 9.2 lbs. in the same month of last year. Production in the first three months of the current year is therefore likely to fall short of the 1955 level by 3 million lbs. Plantation districts in the south have had some useful showers recently and it is hoped that the crop will shortly begin to recover.

Pepper for Russia

Russia's interest in pepper and other plantation products is receiving a lot of attention. She took about 2,000 tons of pepper in March and there are rumours that she is likely to buy another 3,000 tons in May. The steamer which took pepper from Cochin to Russia has also taken some 30 tons of cardamom to Russia. Russia is expected to buy a fairly large quantity of Indian tea and some cashew kernels. The markets for these commodities are improving as a result. Pepper prices have fallen considerably because foreign demand has been poor. American buyers are demanding substantial discounts, being encouraged by lower advices from Singapore, where selling pressure in the case of the old Sarawak black pepper crop is heavy as the new season is approaching. In India, floating stocks on the west coast are rising. Growers are getting nervous in view of the approaching monsoon and the large stocks in terminal markets, so much so that they are prepared to liquidate their holdings even at the current low price of Rs. 725 a candy of 6 cwt. The Central Food and Agriculture Ministry has estimated the 1955-56 pepper crop at 27,200 tons, as against the

trade's estimate of 24,000 tons. Exports during the first three months of the current season, November 1955 to January 1956, amounted to just over 4,000 tons. Shipments in February and March should be higher in view of substantial purchases by Russia. However, if the United States and Russia do not buy large quantities, Indian pepper is likely to face a difficult market in coming months.

Drought Cuts Cashew Production

The current season's cashew crop has been seriously affected by drought and the output so far amounts to roughly 20,000 tons, as against the original estimate of 60,000 to 70,000 tons. Recent showers are expected to improve the second crop's prospects to a certain extent but that alone will not cover the heavy drop in the first crop. Receipts of raw nuts from Africa are considered insufficient to meet the heavy demand from the processing industry. Factories are now working in full swing but most of them may have to close down by August or September if raw nuts are not available.

Lemongrass Oil

The price of lemongrass oil is fairly steady at around Rs. 127-8 a dozen bottles in Cochin and arrivals are limited. The new season will start very soon. The current season's crop is estimated at about 1,000 tons, the highest ever recorded.

BUYERS DISCRIMINATING AT LONDON TEA SALES

THERE has been no relaxation in demand at the Mincing Lane tea auctions, according to trade quarters. Buyers have been discriminating as far as quality is concerned, and where this occurs high prices have been realised. The very best liquoring Upper Assam C.T.C. types, it is reported, realised over 9s a lb. Any parcels possessing autumnal characteristics were also dearer. In contrast, Low Medium broken plain kinds and commonest sorts were less well supported, and were 1d a lb. down, bringing plain broken pekoes to 40d a lb. nominal. The spread between the bottom and top qualities has widened enormously. Meanwhile, the general level of tea prices is not expected to show much easing within the foreseeable future. The trade says that world supply and demand at the moment is finely balanced.

At last week's London tea sales the 67,234 packages on offer realised an average price of 4s 11.95d a lb against 4s 10.62d in the previous week. Plain broken pekoe was quoted at 3s 4 1/2d nominal; in the previous week 3s 5 1/2d. Prices obtained by some of the companies are given below:

	No. of packages	Average per lb
Amalgamated	270	4/9 1/2
Assam Frontier	1,019	6/8 1/2
Balijan	126	6/8 1/2
Borhat	360	4/11
Chubwa	672	5/10
Deamoolie	263	6/7
Dekhari	354	6/6
Jetinga	60	3/8 1/2
Jhazie	354	5/1
Jorehaut	1,451	8/
Kanan Devan	402	4/5 1/2
Longai	126	3/24
Lungla	390	3/3
Moabund	432	7/11 1/2
Nedem	634	4/2
New Dimbula	210	6/7 1/2
Rupai	318	5/11 1/2
Scottish Assam	300	4/7 1/2
Standard	409	6/11
Tara	270	6/1

NO CHANGE IN TEA EXPORT DUTY

The Government of India has issued a notification fixing the price of tea, for the purpose of determining the export duty, at Rs. 3-4-3 a lb. against Rs. 2-13-4 a lb. fixed on 1st April, 1956. There is no change in the existing rate of duty of 6 annas a lb.

Calcutta Markets

BETTER DEMAND AT TEA EXPORT SALE

HIGHER PRICES FOR GOOD QUALITY DUSTS

AT Sale No. 45, held on 30th April and 1st May, offerings at the Export auction consisted of 52,000 chests. There was a much better general demand and most descriptions sold at higher rates, although there was an easier tendency towards the close. Clean Black B.O.P.s and O.F.s. were a very strong feature of the Sale and were 2 to 4 annas dearer, and if they had useful liquors, were often higher. Black clean common teas were from 2 to 3 annas dearer, but the poorest kinds, at times a little easier. The very poorest kinds, however, were fully firm. C.T.C. teas on offer were a very strong feature and some very high prices were realised for the few really good teas. Local grades were in fair demand, but the poorer sorts were easier.

Quotations

	Rs.
Clean Black Pekoe	Not quotable
Plain B.P.	1 8 0
Medium Assam B.P.	1 10 0
Best CTC Assam B.P.	Not quotable

At the Internal Sale, Dust offerings consisted of 20,400 packages for which there was a fairly good and general demand. All teas with clean leaf appearance and fair liquors were 1 anna dearer but the poorer types were irregular. The very best autumnal C.T.C. teas were well supported and were 2 to 3 annas dearer, but the poorer descriptions in this category were easier and sometimes difficult of sale. Black leaf teas suitable for the Middle East were a very strong feature of the Sale and were 2 to 3 annas above last rates.

Quotations

	1956 Rs.	1955 Rs.
Medium Docras	1 8 0 to 1 9 0	2 0 0 to 2 1 0
Dust	1 8 0 to 1 9 0	2 0 0 to 2 1 0
Medium Assam	1 8 0 to 1 9 0	2 0 0 to 2 1 0
Grainy Dust	1 8 0 to 1 9 0	2 0 0 to 2 1 0
Best Assam	2 12 0 to 2 14 0 (Nominal)	2 10 0

Offerings of other grades consisted of 4,450 packages. There was a fair demand and prices were irregularly 1 to 1 1/2 annas above last rates.

FREIGHT MARKET FIXTURES

THE feature of the market during the past week was the payment of 100s for St. Lawrence U.K. grain, May shipment. A fixture in the American coal trade was reported for four years' consecutive voyages from Hampton Roads to the Continent at 55s, commencement December-January 1957. Two cargoes of grain from the North Pacific to Indian Ports, June-July shipment have been fixed at \$/U.S.122.50. Another fixture of Indian iron ore Vizagapatam-Japan has been reported at 120s f.i.o. Time Charter rates were maintained at recent levels, 43s 6d being paid to a 9,970 ton diesel ship for 12 months' trading. The stevedoring pool gangs' strike ended on 29th April and now the labourers are accepting bookings.

SUGAR MARKET QUIET

During the week ended 2nd May, sales in the Calcutta market averaged 4,000 bags daily. Arrivals a day were 2,000 bags and stocks totalled 80,000 bags. Rates for ready sugar ex-Kantapukur delivery were Rs. 31-4 for ordinary grain and Rs. 32-12 for big grain. Ex-mill prices for the two

COMPANY AND PUBLIC NOTICES

MAHINDRA AND MAHINDRA LIMITED NOTICE

THE 10th Annual General Meeting of the Shareholders of Mahindra & Mahindra Ltd. will be held at the Registered Office of the Company, Gateway Building, Apollo Bunder, Bombay-1 on Monday, the 14th May, 1956, at 4-30 p.m., to transact the following business :-

1. To receive and adopt the Directors' Report, the audited balance sheet and profit and loss account for the year ended 31st October, 1955.

2. To declare dividend on Preference and Ordinary Shares.

3. To appoint a Director in place of Mr. K. C. Mahindra who retires by rotation under Article 110 of the Articles of Association but is eligible for re-election.

4. To appoint a Director in place of Mr. H. C. Mahindra who retires by rotation under Article 110 of the Articles of Association but is eligible for re-election.

5. To appoint a Director in place of Mr. Jal H. Mehta who ceases to hold office by virtue of Article 116 of the Articles of Association but is eligible for re-election.

6. To appoint a Director in place of Raja Maharaj Singh who ceases to hold office under Article 116 of the Articles of Association of the Company, but is eligible for reappointment.

And to consider and if thought fit to pass the following resolution of which special notice as required by Section 281 of the Companies Act 1956, has been received by the Company and the relative explanatory statement concerning which as required by Section 173 of the said act is annexed hereto.

Ordinary Resolution—

"Resolved that the age limit prescribed under Section 280 of the Companies Act 1956 shall not apply to Raja Maharaj Singh who has attained the age of 77 years and who retires under Article 116 of the Articles of Association of the Company and that he be reappointed a Director of the Company."

7. To appoint a Director in place of Sir D. N. Mitra who ceases to hold office under Article 116 of the Articles of Association of the Company, but is eligible for reappointment.

And to consider and if thought fit to pass the following resolution of which special notice as required by Section 281 of the Companies Act 1956, has been received by the Company and the relative explanatory statement concerning which as required by Section 173 of the said Act is annexed hereto.

Ordinary Resolution—

"Resolved that the age limit prescribed under Section 280 of the Companies Act 1956 shall not apply to Sir D. N. Mitra who has attained the age of 65 years and who retires under Article 116 of the Articles of Association of the Company and that he be reappointed a Director of the Company."

8. To appoint a Director in place of Rai Bahadur Isher Das Sawhney who ceases to hold office under Article 116 of the Articles of Association of the Company, but is eligible for reappointment.

And to consider and if thought fit to pass the following resolution of which special notice as required by Section 281 of the Companies Act 1956, has been received by the Company and the relative explanatory statement concerning which as required by Section 173 of the said Act is annexed hereto.

Ordinary Resolution—

"Resolved that the age limit prescribed under Section 280 of the Companies Act 1956 shall not apply to Rai Bahadur Isher Das Sawhney who has attained the age of 73 years and who retires under Article 116 of the Articles of Association of the Company and that he be reappointed a Director of the Company."

9. To appoint Auditors for the current year and to fix their remuneration.

10. Section 293, sub-section (1) (d) restricts the total borrowing powers of the Board of Directors to the paid-up capital of the Company and its free reserves which amount to Rs. 80 lacs. The Company's borrowings from the various banks amounted to Rs. 9,26,49,989 on 31-3-1956. It is therefore necessary to approach the shareholders for approval of these borrowings by the Company.

And to consider and if thought fit to pass the following resolution as required by Section 293 (1) of the Companies Act, 1956 and the relative explanatory note as required by Section 173 of the said Act is annexed hereto.

"Resolved that the consent of this Company be and it is hereby accorded to the Board of Directors borrowing monies in excess of the aggregate of the paid-up capital of the Company and its free reserves, that is to say, reserves not set apart for any specific purpose and that such borrowing shall be exclusive of the temporary loans obtained or to be obtained by the Company from the Company's Bankers in the ordinary course of business. Resolved further that the Company doth hereby ratify and confirm, all borrowings by the Directors after 2nd April, 1956 which are in excess of the aggregate of the paid-up capital and free reserves of the Company."

A member entitled to attend and vote at a Meeting is entitled to appoint a proxy to attend

and vote instead of himself and the proxy need not be a member.

By Order of the Board,
KESHUB MAHINDRA,
Director.

28th March, 1956.

The transfer books of the Company will close from 30th of April, 1956 to 14th of May, 1956, both days inclusive.

The dividend when sanctioned will be made payable to those shareholders whose names stand on the Register of the Company on 14th May, 1956, and the dividend warrants will be duly posted to them on or after the 25th May, 1956.

The shareholders are requested to immediately notify any change of address.

EXPLANATORY STATEMENTS AS REQUIRED BY SECTION 173 OF THE COMPANIES ACT, 1956.

In respect of Item No. 6 of the above notice of the 10th Annual General Meeting of the Company it is notified that Raja Maharaj Singh who retires under Article 116 of the Company's Articles of Association but is eligible for re-election is 77 years of age and accordingly the ordinary resolution set out in the said Item is necessary under Sections 280 and 281 of the Companies Act, 1956, to be passed, for his reappointment as a Director and special notice under the Provision of Section 281 has been received by the Company from a member of his intention to move the said resolution at the said Annual General Meeting.

In respect of Item No. 7 of the accompanying notice of the 10th Annual General Meeting of the Company it is notified that Sir D. N. Mitra who retires under Article 116 of the Company's Articles of Association but is eligible for re-election is 65 years of age and accordingly the ordinary resolution set out in the said Item is necessary under Sections 280 and 281 of the Companies Act, 1956, to be passed, for his reappointment as a Director and special notice under the Provision of Section 281 has been received by the Company from a member of his intention to move the said resolution at the said Annual General Meeting.

In respect of Item No. 8 of the accompanying notice of the 10th Annual General Meeting of the Company it is notified that Rai Bahadur Isher Das Sawhney who retires under Article 116 of the Company's Articles of Association but is eligible for re-election is 73 years of age and accordingly the ordinary resolution set out in the said Item is necessary under Sections 280 and 281 of the Companies Act, 1956, to be passed, for his reappointment as a Director and special notice under the Provision of Section 281 has been received by the Company from a member of his intention to move the said resolution at the said Annual General Meeting.

In respect of Item No. 10 of the accompanying notice of the 10th Annual General Meeting of the Company it is notified that the major portion of the borrowings from the Banks is on account of the financing of import of Steel which the Company has been doing on behalf of the Iron and Steel Controller as well as on its own account as a recognised stockist. In the calendar year 1955 out of the total imports of 520,000 tons of Steel in India by the Iron & Steel Controller the Company imported over 187,000 tons which represents about 36% of the total imports. Each ton of Steel costs on the average between Rs. 500 and Rs. 700. Financing of such large imports needs strong banking credits. The Company has been fortunate in securing such assistance from the following Banks: Lloyds Bank Ltd., Bank of India Ltd., Bank of Tokyo Ltd., Mitsui Bank Ltd., National Bank of India Ltd., Bank of China.

The Government of India has entered into several contracts with Governments of Russia, Belgium, Germany and China for the import of Steel and the Iron and Steel Controller has allotted to the various importers of Steel the commercial handling of such business and the Company is receiving its share of such allotments.

With the advance planning to import three million tons of Steel in the next 3 years, the tempo of purchase will continue to increase and consequently the share of your Company in such imports will also increase. This will require provision of additional credit facilities.

The anticipated increased turnover in Jeeps, Spare Parts, and in manufacturing operations will also require additional finance provisions. Trading for the first five months of the current year is well above the average of the past year in all the divisions. In order therefore to maintain and develop its business it is necessary for the Company to have recourse to large credit facilities from Banks and other institutions.

THE SENDRA COAL COMPANY LIMITED.

AT a meeting of the Board of Directors held on the 26th April, 1956, a Dividend of 21% per annum was recommended to be paid for the half-year ended 31st December, 1955, without any deduction for income tax paid by the Company.

By Order of the Board,

F. W. HEILGERS & CO. (PRIVATE) LIMITED,
Managing Agents.

Chartered Bank Buildings,
Calcutta.

Calcutta, 26th April, 1956.

NOTE: A member entitled to attend and vote at this meeting is entitled to appoint a proxy to attend and vote in his stead. Such proxy need not be a member of the Company.

THE RAMESHWARA JUTE MILLS LTD.

NOTICE is hereby given that an Extraordinary General Meeting of the members of the above Company will be held at 8, Royal Exchange Place, Calcutta, on Wednesday, the 13th June, 1956, at 3 p.m. to consider and if thought fit to pass with or without modification the following resolutions:

Special Resolutions:

- (1) "RESOLVED that the existing Article 109 of the Articles of Association of the Company be deleted and the following be substituted therefor:

"109—The number of the Directors shall not be less than three nor more than six. The Managing Agents shall be at liberty to appoint not more than two Directors where the total number of Directors exceeds five and one where the total number does not exceed five and further shall be at liberty to remove from office any person so appointed and whenever any person so appointed shall cease to be a Director to appoint another in his place. Such Directors appointed by the Managing Agents shall be ex-officio Directors within the meaning of these presents and such one of them as from time to time shall be named by the Managing Agents or if there be only one Director appointed by the Managing Agents such one shall be Chairman of the Board."

- (2) "RESOLVED that the existing Article 114 of the Articles of Association of the Company be deleted and the following be substituted therefor:

"114—Each Director shall with effect from 1st April, '56 be paid out of the funds of the Company the following remuneration for his services: (a) the sum of Rs. 50/- per Board meeting attended by him, (b) such commission, if any, (not exceeding one per cent for all the Directors) on the net profits of the Company as computed under the provisions of the Companies Act, '56 as vision of the Company in General Meeting may determine. The Directors may allow and pay to any Director who for the time being is resident out of the place at which any meeting of the Directors may be held and who shall come to that place for the purpose of attending such meeting such sum as the Directors may consider fair and reasonable for his expenses and loss of time in connection with his attending the meeting in addition to his remuneration as above specified."

Ordinary Resolution:

- (3) "RESOLVED that consent of this Company be and is hereby accorded to the Board of Directors borrowing moneys in excess of the aggregate of the paid-up capital of the Company and its free reserves, that is to say, reserves not set apart for any specific purpose and that such borrowing shall be exclusive of the temporary loans obtained or to be obtained by the Company from the Company's Bankers in the ordinary course of business."

By Order of the Board,

BIRLA BROTHERS PRIVATE LTD.,
Managing Agents.

Muktapur, P.O. Samastipur,

(Darbhanga)

Dated, 28th April, 1956.

N.B. (1) A member entitled to vote at the above meeting is entitled to appoint a proxy to attend and vote instead of himself and a proxy need not be a member.

- (2) Explanatory statement in regard to the business mentioned above to be transacted at the meeting.

(a) Under Sec. 255 of the Companies Act, 1956, not less than two-thirds of the total number of Directors shall be appointed in General Meeting.

Further, according to Sec. 377 of the said Act, the Managing Agents can appoint two Directors when the total number of Directors exceeds five and one Director when the total number of Directors does not exceed five. Under the existing Article 109 of the Articles of Association of the Company the Managing Agents could appoint one-third of the total number of Directors and the Maharaja of Darbhanga could appoint two Directors as their nominees on the Board. The above Article therefore requires alteration.

(b) Sec. 309 of the Act provides that remuneration to Directors may be paid either by way of a monthly payment or by way of a fee for each meeting attended. In addition, a commission, not exceeding one per cent on the net profits for all the Directors may also be paid to them, if they do not receive any monthly payment. The existing Article 114 of the Articles of Association of the Company stipulates that a Director shall receive the sum of Rs. 50/- per meeting and a com-

mission, if any, as may be decided by the General meeting, on net profits before setting apart certain sums. The above article, therefore, requires alteration.

- (c) Under Sec. 293 of the Act, the Directors without the consent of the shareholders in General Meeting cannot borrow moneys in excess of the aggregate of the paid-up capital of the Company and its free reserves. An authority is, therefore, required for the Directors to borrow for the purposes of the Company in excess of the above limits.

- (3) The Articles of Association of the Company may be inspected at the Registered Office of the Company at Muktapur, P.O. Samastipur, (Darbhanga) during business hours.

THE BOMBAY BURMAH TRADING CORPORATION LTD.

Notice to Shareholders.

NOTICE is hereby given in compliance with Section 412(2) of the Indian Companies Act 1956 that the Company intends to apply to the Government of India Finance Department, under Sections 269, 326 and 379 for approval of the following appointments with effect from 1st June, 1956:—

- (1) Appointment of a Managing Director, at a remuneration to be fixed by the Directors;
- (2) Appointment of Messrs. Wallace & Company, of 9, Wallace Street, Fort, Bombay, as Secretaries and Treasurers, at a remuneration of 7½% of the net annual profits of the Company.

EXPLANATORY NOTE:

The Board of Directors have secured the agreement of Messrs. Wallace & Co., subject to the approval of the Central Government, to resign from the position of Secretaries, Treasurers and Managers of the Company and to assume the position of Secretaries and Treasurers at a reduced remuneration as provided in the Companies Act 1956. In order to secure the continued efficient management of the Company the Board of Directors propose in addition to appoint a full-time or Managing Director to conduct the day-to-day affairs of the Company. A special General Meeting of the Company will be called shortly to consider and if thought fit to pass the necessary resolutions giving effect to the Board's proposals.

By Order of the Board of Directors,

J. F. PARRY,
Chairman.

Bombay, 30th April, 1956.

THE NEED FOR MORE REALISM IN PLANNING

MANY BOTTLENECKS THREATENED: FOOD PRODUCTION FEARS

A Lively controversy was expected at last week's meeting of the National Development Council. It is some consolation that the various resignations which were rumoured, some time ago, to be on the way, have not yet materialised. More distressing than a plan which cannot be fulfilled would be one turned over exclusively to those who are blindly clinging to the illusion that statistics and dreams are adequate substitutes for practical economic possibilities. That tendency has been strong enough in the past few years, and it is a matter for concern that the last has by no means been seen of it yet. But the current differences of opinion on the plan are a sign that experience is beginning to modify some of the more unrealistic ideas and that a school of planners may be growing up which prefers to keep its feet on the ground and deal with facts as they are, not as we would all like them to be.

The view that the plan is too large is one which has been expressed in these columns on more than one occasion. It is no answer to such criticism that the country needs development on this scale; in fact it could do with much more. The limits are set not by needs and desires, but by the relentless logic of economic and social reality. Planning has come to be looked on in this country as a short and easy road to unlimited prosperity, which can be trod lightly and swiftly with any amount of impedimenta. In only a few circles is it realised that the many responsibilities—some without any economic relevance at all—which the plan is being forced to shoulder will seriously jeopardise the chances of its success. It is inevitable that a project of this kind should have its political significance, and the Government would not be doing its duty if it ignored the threat to democracy which any slackening in the pace of development would involve. But there is no doubt that Ministers themselves have inspired much of the day-dreaming which has led to the present plan figures becoming entirely unrealistic considering the country's available resources. Too great a fascination for statistical totals and too prompt a readiness to make every political hobby-horse an immediate charge on the limited means at the disposal of an undeveloped economy, are what is the trouble with this project. Now the country is facing the disappointment and frustration of having to cut down some of the targets, or the serious political risks of the plan failing altogether. The first is not a pleasant alternative for any Government to deal with so close to a general election, while the second could mean the end of democracy in India. There is obviously an over-riding need for a more realistic attitude towards economic progress generally; the pattern of thinking on development problems is still hopelessly confused by too much aspiration and even more sentimentality. Hard thinking and a determination to face facts will help even at this late stage. But the main need now is that the realism which is beginning to creep into current thinking about the plan should be allowed to develop; any attempt to dodge facts by, for example, turning on those who draw attention to them, would be disastrous for planning in the future.

*

It is now becoming clear where the plan's bottlenecks are going to occur. One of the more obvious—and the one which is giving rise to most concern—is the inadequacy of the rail transport provision. The danger is, of course, likely to be great only if the plan comes within reach of being completely achieved. If targets are scaled down, or more likely, quietly left unfulfilled, there will be no need for a larger allocation for the railways. But this does not alter the fact that the initial mistake looks like finding its way into the final plan. The publication of the new industrial policy has given a fair indication of the reliance which is intended to place on State enterprise for developing industry. This is completely justified in cases where the private sector is unable or unwilling to undertake the development required; when it fully understands what its limitations are, it is

but the intentions go much further than that. The public sector has neither the business experience nor the technical talent to initiate the number and variety of the projects planned for. Any attempt to acquire them by squeezing private industry in a manner similar to that already being used to obtain financial resources for public enterprise, may result in stagnation in both sectors. Perhaps the greatest strain on reality has come

what the community projects scheme can do. Exhortatory speeches are a poor substitute for ocular evidence, and the community projects administration is perhaps justified in doing things— with the co-operation of the people whenever possible and without it when necessary—instead of working vaguely for a psychological revolution which would, on a sudden, rouse every Indian villager to corporate activity. A community project hospital or school may look like any other Government effort in this direction; it would certainly have been better if the people themselves had taken a hand in building these things for their own good; but, whatever the authorship, the schools and hospitals will remain, and a demand for them will be created in due course, and in the fulness of time the villagers may not wait for funds and guidance from the State when they want a second school or a second hospital. It is also arguable that a country-wide psychological revolution is not necessarily brought nearer by a determined attack on the minds of the people. The change may come about as a by-product of doing such simple things as digging a well or building a road—if the people have been persuaded to co-operate in the effort.

The community project administration appears satisfied that popular response is encouraging. It is easier to evaluate the number and quality of schools or hospitals than to measure popular enthusiasm, and the possibility of a certain amount of wishful thinking on the part of some people is not to be ruled out. But here is one sphere in which wishful thinking may not be a wholly bad thing. In the final analysis, community projects and all similar schemes are a matter of faith, faith in the Indian people that, given the necessary lead, even they are capable of self-help, that even they can be cured of the centuries-old habit of expecting the Government to do everything for them. There are good reasons to think that the faith is justified; better ones to remember that faith alone may not be enough. The warning is occasioned by Mr. Sampurnanand's reference on Saturday to India's "noble traditions and ancient culture." Culture is outside the scope of this discussion, but it has to be recognised more widely than at present that it is to correct certain deficiencies in India's "noble traditions" that the community projects were conceived. Leaders will have to say so often and more courageously before any real change can be expected.

This somewhat excessive emphasis on the "psychological revolution" apart, the report makes several useful recommendations on the recruitment of project workers, administration and certain other technical details. It is all to the good that the community project administration should be reminded of the psychological aspects of its venture, but there is no reason to play down what are called "physical accomplishments." As has been said earlier, they are a better and more dependable yardstick of work done than vague and invisible changes brought about in the minds of men and women in the villages. Thus the programme evaluation organisation's attention would perhaps be better directed to administrative problems, and here there seems to be a good deal to be done. Something has apparently gone wrong with the definition of the rôle of the village-level worker, who is now being used more or less as an odd-job man. Again, there is a multiplicity of agencies from which villagers can borrow money, and there is inadequate co-ordination, which is leading to a significant increase in the Indian villager's proverbial indebtedness. Nor is easy money the best spur to voluntary effort. It may still be proved that the success of community projects and national extension blocks will depend less on frothy idealism—spirit of service, love of rural areas and rural people and all that—than on efficient administration and businesslike execution of well-defined physical objectives. These achieved, the psychological revolution will be irresistible—even without social education officers working specifically to that end.

EXPANDING CURRENCY AND CONTROLLING CREDIT THE AMENDMENT TO THE RESERVE BANK BILL

THE Reserve Bank Amendment Bill, which was introduced in the Lok Sabha last week, has two main aims. One is to free a large amount of the Government's monetary resources for use in the second five year plan, instead of keeping them tied up as reserves to back the paper currency. The second is to regulate the scope which commercial banks have for creating credit; the idea being to give the country's central banking institution extensive powers to suppress a potential source of inflation. The Bill is thus, in its wider perspective, intended as an antidote against two major weaknesses of the second plan: resources are short, so reserves are to be expended; and inflation is to be curbed, not by reducing overtime operations at the Government's currency printing presses, but by corks down monetary supplies normally available to the private sector. Only time will show

how the powers are likely to be used; meanwhile, it would be idle to deny the possibility that the Bill might turn out to be a shrewdly-conceived instrument which allows the Government to expand the monetary resources available for its own use while putting those normally available for private business and industry into a straitjacket. As such it is of far-reaching significance for the latter.

Under the law, as it stands, the Government is obliged to hold gold and foreign securities equivalent to 40 percent of the total note issue. This has hitherto been considered an effective safeguard to ensure that the currency will not be debased by being expanded freely at will; it is also intended as an assurance to the public that there is something solid to back the currency notes it holds, apart from the wordy assurances it finds written on these notes. The Amendment Bill which has just been introduced implies that a backing of the present proportions is now thought to be unnecessarily high. It says that the Reserve Bank need in the future keep only Rs. 400 crores worth of foreign securities and Rs. 115 crores worth of gold as a reserve against the paper notes it issues. Thus, with a note issue of around Rs. 1,527.36 crores during the week ended 27th April, the Reserve Bank kept foreign securities worth Rs. 681.44 crores. With the Amendment Bill, it could bring these securities down to Rs. 400 crores; in other words, it could sell off Rs. 281.44 crores of securities, and simply pocket the money, to be used later for imports or for the Government's other expenditure. With gold, an even simpler adjustment is proposed. The amount of the metal the Reserve Bank at present holds is valued at Rs. 40.01 crores, on the pre-war basis. Revalued at the present-day International Monetary Fund parity of \$35 an ounce, it will be worth Rs. 118.02 crores. As, under the Amendment Bill, it will be obliged to hold gold worth only Rs. 115 crores, the remaining Rs. 3.02 crores can, the Government thinks, be safely disposed of.

What makes the whole idea of running down the foreign security and gold backing for the currency particularly attractive from the official point of view is that it will release so much foreign exchange; with the planners estimating a foreign exchange deficit of Rs. 800 crores during the second plan period, the temptations offered by the move are obvious. The drawing down of the reserves which back the paper currency, in itself, is no sin—assuming, of course, that domestic and international confidence in the currency is not impaired. But the move would have been more reassuring had it not been so obviously related to the dictates of expediency set by an over-ambitious five year plan. The real danger lies in the fact that it may allow the brave monetary authorities of the future to expand the paper currency without any effective statutory check; and the whole conception of the second plan shows that monetary bravery cannot quietly be ruled out as a purely illusory danger. The basic implication of the Amendment Bill—that the gold and foreign security backing of Rs. 515 crores is adequate for the present note issue of less than Rs. 1,600 crores, and will also be adequate when the Government has printed at least another Rs. 1,200 crores of notes by 1961—is not one which can be accepted too lightly.

While the Amendment Bill thus allows the Reserve Bank to draw down the paper currency reserves, it gives it extensive powers over the size of commercial banks' funds. At present, the law requires that the scheduled banks keep at least 5 percent of their demand deposits, and 2 percent of their time deposits, with the Reserve Bank. The new Bill allows the Reserve Bank to raise these ratios to 20 percent and 8 percent respectively. What is more, the central banking institution might even ask scheduled banks to increase their reserves by an amount exactly equivalent to the increase in their deposits after a certain date. In other words, if the deposits of scheduled banks increase beyond a certain limit, the Reserve Bank could say that not a single pie out of the increase is to be used to create credit; the entire addition would be immobilised by being compulsorily transferred to a special account with the Reserve Bank. To the extent that banks' earnings depend very largely on credit creation, a restriction of this nature could have an important effect on their working; the effect would, however, be mitigated if the interest paid on these reserves were about what the scheduled banks could earn by investing in gilt-edged securities.

The benefits or otherwise of the Bill are not such as can be assessed merely from its form: they depend not on the quality of the powers it confers on the monetary authorities, but on the manner in which those powers are likely to be used. Neither of the two proposals to control the creation of commercial bank credit are new; the system of variable reserves is used in the United States by the Federal Reserve Board there, and the special account requirement is a feature of the Australian banking structure. It is clear that in India the Government is genuinely afraid that if

deficit financing is undertaken on the scale proposed in the second five year plan, the inflationary dangers will be considerable. It knows that as more currency notes are printed, many of them must inevitably find their way into commercial banks, and they may then be used in the normal manner as a basis for manifold expansion of credit. The need for measures to discourage credit creation in certain circumstances is not denied; but it would be unfortunate if the need for measures to control the note issue were meanwhile ignored. To go on issuing more and more currency notes, and then to seek to neutralise the effects by clamping down on the expansion of bank credit, is not a possibility which trade and industry can look upon with equanimity.

STEEL SUPPLIES FOR ENGINEERS

THE shortage of major raw materials seems likely to be the biggest difficulty before the engineering industries over the next few years, and in some quarters it is feared that it might persist even after the present steel expansion plans have been completed. It is estimated that India's domestic steel output will total 4.5 million tons annually by 1959, and 6 million tons by 1961. Meanwhile, the Government proposes to import 3 million tons over the next three years—apparently at prices rather higher than India's own. The prospects for the supply of pig iron are hardly more reassuring. Production of foundry grade material is expected to reach 750,000 tons annually over the next five years; but Mr. A. Rajagopalan, president, told the Engineering Association of India at its annual general meeting in Calcutta last Friday that "the shortage of pig iron for the foundry industry is likely to continue, as far as we can see at present, up to the end of 1958". In this case, an additional difficulty is that India is not likely to be able to import much. Mr. Rajagopalan therefore urged that resources of pig iron and cast iron scrap should be carefully husbanded. Tatas' pig iron and broken ingot mould arisings have already been controlled by the Government. Suggesting that the same be done elsewhere, he said that these materials could then be distributed to the foundry industry. Sardar Swaran Singh, Central Minister for Works, Housing and Supply, had little to say on the subject apart from hoping that "with the import of adequate quantities of steel, the engineering industry will be able to maintain its optimum output and fulfil the demands that have to be made in connection with the second five year plan.... The Government would be prepared to consider private imports of basic raw materials at present in short supply if such imports are essential to maintain industry's output and if the terms of such import are not in conflict with the foreign exchange policy of the Government."

Referring to transport difficulties, Sardar Swaran Singh made the curious remark that "it is expected that with the implementation of the second five year plan, these difficulties will be gradually surmounted." The expectations of the Railway Minister, Mr. Lal Bahadur Shastri, as reflected in his Railway Budget speech, were precisely to the contrary. There he indicated that the railways' carrying capacity is now short of requirements by about 5 million tons a year, and the shortage is likely to be multiplied many times as the second plan proceeds if the railways are not allocated more money. There is no definite evidence yet that they have been given the money, despite the very forceful and plausible note submitted recently by a Planning Commission member, Mr. K. C. Neogy (reported on a later page by our New Delhi correspondent). Sardar Swaran Singh's assertion therefore suggested a complacency shared by few even in Government circles.

CURRENT COIN

Banker on Inflation.—Mr. S. P. Jain's address as chairman of the Punjab National Bank, at the latter page, was a strange attempt to play down the dangers of deficit financing. Part of it was devoted to showing how the increase in scheduled banks' deposits during recent years had been proportionately smaller than the increase in note circulation. On the basis, Mr. Jain seemed to arrive at the rather odd conclusion that the velocity of circulation of money had decreased, and "with this low velocity of money the inflationary pressure of deficit financing will be much less." Most people, perhaps, would be inclined to make a precisely opposite deduction: that if currency notes have not arrived at the bank's vaults, they are presumably circulating, and perhaps circulating quite fast. Mr. Jain went on to say that "in the context of larger doses of deficit financing, fears are expressed about inflationary trends showing themselves. But the price trends as they are do not lend any strength to such fears." He claimed that the rise in the prices of some commodities "is to an extent attributable to the increase in taxes, especially sales tax." That may be true, but it is not the whole story; the prices of many commodities have risen much more than the size of new taxes would

have justified, and for reasons that have more to do with trade manipulation than with the basic facts of supply and demand.

Dividend Outlook for P. & O.—Sir William Currie, chairman, told the annual general meeting of the Peninsular and Oriental Steam Navigation Co., Ltd. in London yesterday that costs had continued to increase at the rate of 6 percent to 7 percent a year, but it was "extremely difficult" to match this by an increase in revenue. (His speech is reported more fully on a later page). Tramp earnings were remarkably good, and the group was fortunate in having a substantial tonnage of tramp shipping. Conditions were likely to improve for liner companies in the East. The Australian trade, however, lacked stability, and could decline seriously if economic conditions deteriorated. So much of the company's business, said Sir William, was affected by the current economic stringency that it would be very unwise not to expect a few jolts in the months ahead. Recently, he added, there had been two increases in the price of oil, and the basic wage rates for sea-going staff had been raised; these changes would cost the P. & O. Company alone, quite apart from the rest of the group, £425,000 in a full year. Under the circumstances, Sir William said, the directors could not recommend a higher dividend for 1955, although they had increased the distribution in each of the other years since 1949. It was hoped that this decision would be taken "as a mark of caution and certainly not as a sign of pessimism." It was necessary to build reserves, according to Sir William, the more so now that depreciation was charged strictly on a 20-year life on first cost, which was not in itself sufficient to provide for replacement. The chairman criticised ships using the flags of countries "which had no maritime reality but which offered to shipowners virtual freedom from national taxation and national controls of any kind." When the next slump occurred, he said, shipping companies which bore their national responsibilities fully would find it hard to compete on a price basis with those who could always undercut them by the whole cost of taxation, social services and the like. The British Government and industry were giving close attention to the matter.

Wheat for the Flour Mills.—Mr. K. L. Jatia, president, told the first annual general meeting of the West Bengal Flour Mills Association in Calcutta on Monday that the Government should release wheat for the flour mills more evenly. They had faced considerable difficulties in getting regular supplies from the Regional Directorate of Food; as a result, they often have to work short time while large stocks of wheat lay in Government godowns. Irregular releases, he added, had often caused the retail prices of wheat, atta and flour to rise to very high levels. Mr. Jatia complained that the 500 tons of wheat, which flour mills in Calcutta were being allotted daily at present, was not enough for them to work at normal capacity. After August this year, he thought, there might be some difficulty in getting Indian wheat, unless alternative arrangements were made by the Government to provide more of foreign wheat. He felt that mills should be allowed to import wheat directly from foreign countries, as was done in 1954. Initial negotiations with the Government on this question had been satisfactory, and it was hoped that a scheme would be drawn up soon. Mr. Jatia criticised the decision to give biscuit manufacturers licences for importing flour obtained from hard wheat. Exports of wheat bran, he suggested, should again be allowed.

Better Industrial Relations.—Two recent agreements in Bombay and Ahmedabad between workers and employers have set an example for others to follow in settling disputes that usually mar industrial peace. Admittedly, these agreements cover only a section of industrial labour and there was some give and take on both sides before coming to an agreement. But the spirit of it is important. It is this spirit which Mr. G. D. Somani commended highly in his recent presidential address to the twenty-third annual session of the All-India Organisation of Industrial Employers, as something the influence of which "in paving the way generally for better industrial relations in the country cannot be under-rated." From this point of view, he also stressed the importance of the Joint Consultative Board of Industry and Labour, that is, "the joint consultation machinery at the national level, which has been reconstituted as a purely bi-partite and private body." This body, in his opinion, has made a significant contribution to the cause of harmonious industrial relations, and that is definitely true. But it may not be able to continue doing so, if the mischief started at the recent I.N.T.U.C. conference begins to get hold of the labour movement. It was pointed out there that labour's share in the national product has not risen proportionately with dividends—a highly controversial fact in itself, but quite capable of provoking a round of wage demands in these days of rising prices. What will be the position of dividend-earners after the Exchequer has taken its taxes was conveniently omitted. Mr. Somani did not refer to this, but he referred to some of the provisions of the draft Bill on new labour laws which will not particularly make for better industrial relations. Demand has

RIVALS OF INDIGO

FOR many reasons, the trade in indigo is always to be regarded as uncertain and precarious, and it is satisfactory to notice that, during the first eleven months of the last official year, exports had already exceeded those of the whole of the preceding year, both in quantity and value, the relative figures being 8,969 tons=5 crores and 17 thousand rupees, and 8,315 tons=43 crores rupees. The year 1894-95 itself was a good one for the cultivators of the plant in Bengal, northern and southern India, ship-ment to foreign countries being the largest recorded for a considerable period; and although an abundant yield is commonly accompanied by a fall in price, just as a deficient harvest brings about a rise, the demand being limited, in this case the bumper crops more than compensated for the lower market rates. The area under cultivation of the plant increased from 1,155,808 acres in 1891-92 to 1,535,643 acres in 1893-94. The enhanced production, however, had no appreciable effect apparently in checking the import trade in aniline and alizarine dyes; for, although in quantity these fell from 2,808 tons in 1893-94 to 2,689 tons in 1894-95, values increased from Rs. 53,31,040 to Rs. 55,23,440, while last year's imports to the end of February were on a more extensive scale both as regards bulk and value than during the whole preceding twelve months. It is observable that both last year and in 1894-95 the expansion has been much greater in the case of aniline than alizarine dyes, although the former are so much more expensive.

THE TERMS OF COMPROMISE IN AN INDUSTRIAL DISPUTE

LABOUR TRIBUNAL'S "SERMON" ON SOCIALISM CRITICISED
(FROM OUR LEGAL CORRESPONDENT)

THIS case is rather a remarkable one. Remarkable for an extraordinary decision in a perfectly simple case by the Industrial Tribunal concerned in it, and for some unusually forthright and pungent observations of the Labour Appellate Tribunal in reversing the decision on appeal. An industrial dispute between the management of the Balarama Varma Textiles Ltd., Shencottah, and their workmen had been referred to the Industrial Tribunal, Trivandrum, for adjudication. The dispute related to the following question: "Is the dismissal of Chudalayandi, worker, from the service of Balarama Varma Textiles Ltd., Shencottah, justifiable? If not, to what relief is he entitled?" In the course of the hearing before the Industrial Tribunal, the parties got together in a friendly way; and the result was that the workman, represented by his Union and advised by it, and the employers themselves settled their differences on what to an outsider would appear to be eminently commonsense terms. Thereafter a compromise petition signed by the representatives of the parties as well as by the workman himself was presented to the industrial tribunal (Mr. K. N. Kunjkrishna Pillai) and it contained the following terms:

"(1) The workman concerned in the dispute, namely, Chudalayandi, having expressed his regret for his misconduct and having promised to be of good conduct in the future, the management have agreed to give him a chance to make good and to re-employ him in the mills.

"(2) The president of the union and worker concerned hereby pray that there be no order on the merit on the reference by the Government in I.D. No. 64 of 1955.

"(3) It is therefore prayed that this Tribunal may kindly be pleased to pass an award in terms of this compromise."

It was not suggested at any time by anyone that any undue influence or unfair pressure was brought to bear upon the workman. His cause had been taken up by the Shencottah Textile Mill Workers' Union and he had the benefit throughout of their advice as well as the expert guidance of the presi-

dent of the Union. Moreover, the workman later in writing, before the Appellate Tribunal, expressed himself as perfectly satisfied with the compromise and declined to back out of it. In short, the workman had admitted that he had misbehaved, had apologised for it, had promised not to do it again, his employers had taken him back, the parties had, so to say, shaken hands and the trouble was over. Or, putting it more plainly, the object for which the Industrial Disputes Act had been enacted, namely, the securing by its operation of industrial peace and harmony had been secured.

You may read the compromise terms carefully again; and you may be able to discover therein what the writer certainly cannot, namely, some grounds upon which the Industrial Tribunal could reasonably object to accepting the compromise as drawn.

Nevertheless, the Tribunal did object to it and, if one is not reading the English language incorrectly, even seemed to feel personally affronted by some of its terms. In its remarks, referred to later by the Appellate Tribunal as "a sermon", when asked to record the compromise, it not only lectured the manager on his duty of co-operating in "the socialistic pattern of society which is the consummation to be devoutly wished for," but also implicitly criticised the workers' Union for lack of zeal in looking after the interests of a workman who was himself perfectly satisfied with the way in which he had been treated by both and who took the trouble to write to the Appellate Tribunal to say so. The Industrial Tribunal deleted a certain portion of the first clause of the compromise, namely, "having promised to be of good conduct in the future, the management have agreed to give him a chance to make good" and then, with this exception, made the award in terms of the compromise, with the following remarks:

"It need not be assumed by the parties that I have to accept anything in the way of compromise. The Tribunal will accept any compromise only if it is reasonable and conducive to industrial peace and harmony. I accept the compromise deleting the portion under 'inverted commas' in the first term of the petition. I do not know whether (the) parties have acted on the terms or not. The relationship of the management and workers are determined by certain conditions and any imposition on these conditions by either party will be construed as a restriction in the already established conditions of service, ordinarily. It passes my comprehension how the manager would demand 'good conduct' of a worker while the relationship of the parties is governed by standing orders and other

similar rules. The manager, who is a party to the compromise, should not misunderstand his function as a manager and it will be only in the interests of better relationship of the parties if he does not exercise power which is not vested in him over the workmen. I take strong exception to the demand of 'good conduct' by the manager. From the evidence in I.D. No. 92 of 1955 and I.D. No. 111 of 1955 between the parties (petitions filed under Section 33A) and in this case, I am of the opinion that the manager of the concern should take a more democratic and human view towards workmen, as both capital and labour are expected to be partners in the common enterprise which has to fit in with the socialistic pattern of society which is the consummation to be devoutly wished for. The union also should be zealous to protect the interest of the workmen at the cost of any sacrifice. With the above modification, I accept the compromise and pass this award."

On appeal, the Labour Appellate Tribunal at Madras reversed this decision, and held that the compromise ought to have been accepted in full as it stood. In doing so, it indulged in some pretty plain speaking. "The appellant's representative," said the chairman, "urged before us... that instead of accepting the terms in toto and passing an award in terms of the compromise, the Industrial Tribunal chose to modify the said terms without notice to the parties and made an award as per terms so modified. He further urged that the Industrial Tribunal has imported extraneous matter in following the said unauthorised procedure, by referring to the evidence in some other proceedings, and has also made unwarranted and uncalled for remarks based on his personal views. He (the appellant's representative) pointed out that there is nothing wrong on the part of the management to require a guarantee of good conduct in future with a view to arriving at an amicable settlement, and the Industrial Tribunal has exceeded his jurisdiction in deleting this part of the compromise terms. In our opinion, there is great force in the contentions urged before us and the Industrial Tribunal has undoubtedly exceeded his powers in deleting the above said portion and making an award in terms as modified by him. There was nothing wrong if the management took an undertaking for future good conduct on the part of the workman concerned with a view to arriving at an amicable settlement for the purpose of re-employing him in the mills. The worker himself has intimated to us in writing that he signed the compromise petition after understanding its contents and the undertaking to be of good behaviour was voluntarily given by him, and that on the strength of this understanding he had been re-employed in the mills. He is not prepared or willing to go back on this undertaking and he has no objection to the appeal being allowed by suitably amending the lower Tribunal's award as prayed for by the management."

This case gives us some useful reminders about compromises in industrial disputes. Of course, it does not follow as a matter of course that once a compromise petition is presented for recording by both parties, the Industrial Tribunal must automatically accept it and make its award accordingly, though it should have pretty strong reasons for rejecting or amending it, if it does so. But, ordinarily, unless there is something inherently and on the face of it illegal in any of the terms, provided that the parties are at arm's length, separately represented and advised and that there is no suggestion of force majeure, undue influence, pressure or victimisation, it seems to be the duty of the Tribunal, though it might not have come to the same conclusion itself, and may even think the compromise unfair, to assume that the parties know what is best in their own interests and accept the compromise in toto and make its award accordingly.

The Appellate Tribunal decision proceeded: "Instead of following the right procedure, the Industrial Tribunal made the remarks against the manager which should never have been made and has also gone out of the way in advising the Union to be zealous, as he puts it, 'to protect the interests of the workmen at the cost of any sacrifice.' So far as the circumstances of the present case are concerned, there was no necessity or occasion to give any sermon either to the Union or to the manager in the manner the Industrial Tribunal has done, and we are of the opinion that there was nothing objectionable in the original compromise promise in toto in the circumstances of the present case would be more reasonable and conducive to industrial peace and harmony rather than any such undue interference with it on the lines adopted by the Industrial Tribunal."

The appeal was allowed, and the full terms of the original compromise as filed restored.

[Balarama Varma Textiles Ltd. L.L.J. (1) 1956 (April), 451.]

The office-bearers and general committee of the Bombay Chamber of Commerce for the year 1956-57 are as follows: Mr. J. F. Sinclair—President. Mr. N. Dandekar, G. Dutt, H. E. Forrester, A. H. Hume, F. H. Kemple, K. G. Milne, E. Parker, K. B. Sethna, R. S. Talyarkhan, N. M. Wagle—Members of the Committee. Mr. B. Barker succeeded Mr. L. A. M. Adviser in charge of the Chamber's Labour Department is Mr. L. C. Joshi.

A DITCHER'S DIARY

tive with the Wine and Food Society: its aim appears to be solely to substitute liquid meals for solid.

I do not remember if rats figure prominently in Aesop. The reason may well be that the old fable-writer was so pestered by these mischievous rodents that he decided to revenge himself by excluding them from his stories altogether. Others, however, have found them worthy of a tale or two and have portrayed their depredations in various places from *The Pied Piper of Hamelin* to Walt Disney's cartoons. But the report from Nawadah in Bihar that the local rat population held a drunken orgy on May Day night beats anything I have ever read, heard, or imagined possible. The P.T.I. says that on this memorable day rodent dipsomaniacs "consumed like connoisseurs 20 bottles of wine that were seized in an excise raid and kept in a Government store house." I cannot say for certain whether this coup was organised to protest about encroaching Prohibition or against the excise regulations. But, for obvious reasons, I am inclined to the view that it was not "wine" that the rats drank; it must have been country liquor. In stating this conclusion, however, I have no pejorative intentions, for I have been assured by experts that in inebriating properties country liquor, better known by the homelier name of toddy, yields to nothing that is bottled in Scotland, Holland, Bordeaux or even the Soviet Union. And although the P.T.I. does not say so, I am quite prepared to believe that the rats, well primed with this drink, went reeling home, mouthing defiant profanities at astonished cats. This is the sort of situation which might have occurred to T. S. Eliot when he composed his *Old Possum's Book of Practical Cats*. He could still include a poem on it in the next edition. As for the rats' choice of May Day night for this Bacchanalia, I think it would be nothing less than reasonable to conclude that perhaps trade unionism has begun to infect their rank and file. Rats have given us the plague; in return we have given them trade unionism. It is tit for tat.

Even before the film "I'll Cry Tomorrow" came to Calcutta I was told it is one of the best advertisements for Prohibition that has ever appeared on the cinema screen. After I had seen it I was almost inclined to agree—that is until my critical faculties recovered from the fright they got. Unless one accepts that drunkenness is a symptom of mental illness, which psychiatrists say it is, and that Prohibition does not stop the determined drinker but only makes it more difficult and more expensive for him, which we know to be true from the experience of places where it has been tried, then there never has been a particularly weighty argument against the legal banning of liquor sales except, of course, that a man should be able to please himself how he spends his time and money—but that is such an old-fashioned idea nowadays. But if one recognises that diseases, mental or otherwise, should be cured by finding their causes, not by treating only their external manifestations, and that ascetic puritanism and the desire for excessive indulgence are merely two aspects of the same psychological make-up (and history has shown us that its Calvins and Cromwells are infinitely more dangerous than its Casanovas and Marquis de Sades) then Prohibition can never be accepted as the answer to drunkenness. When one also considers the other social vices to which it gives rise, it is true

to say that although drunkenness is a cancer on society, Prohibition is an infinitely worse one. I do not expect reasoned arguments of this kind to make much impression on Prohibitionists though, because it is so often emotion and prejudice which dictate their opinions rather than logic.

The ghosts of the Luddites have never been properly laid, even now, in this year of grace. In fact, "automation" seems to be giving them a new lease of life, if the Standard Motor strike in Britain is anything to judge from. While India is struggling with the first phase of Ludditism, the one where machines replace the hand-worker, the industrially-advanced countries will soon be in the middle of what might well be the final stage, where machines do all the work. The issue is not as simple as all that. Automation is only another stage in the process of putting more mechanical equipment into man's hands. Being a stage, it is apt to attract more attention than the gradual process of which it forms a part, but really it is nothing more ominous for the worker's livelihood than the gradual accumulation of increasingly complicated and productive mechanical instruments which has been going on since the industrial revolution started. I suspect that workers' resistance to automation will vary inversely as the general level of prosperity and the demand for labour. It is true enough that in Britain at present there are more vacancies registered with employment exchanges than there are workers to fill them, but what is more significant is that resistance has shown itself to be strongest at just the point where disinflation is being most felt. The same holds true for the United States, where again the industries which have been most hit by the present reduced demand are precisely those in which automation has most immediate possibilities. The remedy is clear enough—general prosperity has to be maintained at as high a level as possible consistent with stability. And that, I fancy, holds true in India's case also. There seems to be another reason why trade unions are only reluctantly accepting automation, which is only just becoming apparent—it may mean an end to their power and influence. The operative has always been their backbone. If he is going to be changed by automation into the technologist, technician or maintenance engineer and spread out thinly over a large number of automatic machines, he will be as difficult to lead as circumstances will make it impossible for him to be organised.

The death last week of Satyendra Kumar Basu, West Bengal's Judicial and Land Revenue Minister, should once again bring home to us all the hazards of motoring in this country. It is true he met with his fatal accident far out of Calcutta, but this only shows that the reason for caution does not disappear or grow any the less urgent when one drives on open country roads. A motor-car is an extremely sensitive and temperamental contraption, composed of innumerable parts and gadgets, and any weakness anywhere—a loose screw, an ill-fitted tyre or a defective door—may cause a tragedy. Mr. Basu's death will be widely felt, not only because he was far from old, but also because he was recognised as one of the ablest Ministers in Dr. Roy's Cabinet. He recently rendered the State signal service by piloting through the legislature the Estates Acquisition Bill and the Land Reforms Bill, which have since become law and will set the pattern of landholding in this State for many a long year to come.

BUSINESS SELECTIVE IN STOCK MARKETS

SUSTAINED ACTIVITY IN OILS: GOLD SHARES LOSE

London, 9th May.

THE general tone of most sections in the Stock Exchange was satisfactory during the past week, although business was selective. Gold shares were the chief exception, recording widespread losses. The most active sections were industrials and oils, particularly the latter, where the leaders reached new all-time peaks under the lead of Shell and British Petroleum. Apart from the April gold reserve figures, there was little new to influence the markets one way or the other. In gilt-edged, a small demand brought a modest improvement in prices. The feature was the firmness of short-dated issues. Dollar stocks were mostly higher in response to Wall Street. The industrial market as a whole was subdued, but the general tone was satisfactory and gains predominated. Most of the more noteworthy movements followed dividend statements, the majority of which were up to expectations. Dunlop, however, lost ground following the dividend statement and Guest Keen also eased, although most of the fall was recovered later. The *Financial Times* Industrial Ordinary Index is about three points higher compared with the previous week. Gold shares were depressed and sustained widespread falls, while coppers, although rallying from time to time, were lower in sympathy with the fall in the metal price. Other base metals were generally steady to firm. Diamonds were dull. Oils were active and strong throughout, and many issues reached new all-time highs. The British Petroleum results and the Royal Dutch-Shell report stimulated buying in this market. Rubber shares tended lower following President Eisenhower's Message to Congress on synthetic rubber. Teas moved irregularly and generally within narrow limits.

The Money Market

Comfortable credit conditions continued to prevail during the past week in the money market. The day-to-day flow of funds, however, was rather uneven. The supply of credit on Monday was difficult because of end-of-month factors, and a considerable amount of help was given by the authorities. The turn of the month saw a change and money was very easy, but towards the end of the week, credit was less plentiful, although still ample for market needs. The bulk of the week's business

in Loans was arranged at 3½ percent to 4 percent, while business in July bills was mainly at the level of 4½ percent. A further fall was registered in the Treasury bill rate following the week's tender. Applications for £250 million worth of 91-day Treasury bills totalled a little over £397 million, of which £240 million were allotted at an average rate of 99s 0.55d against 100s 1.95d in the previous week. Offerings this week consist of £250 million worth of 91-day bills. The Bank of England return for the week ended 2nd May showed that bankers' deposits were £6 million higher at around £231 million, while notes in circulation were about £7 million higher at around £1,848 million.

U.S. Federal Reserve Return

The U.S. Federal Reserve return for the week ended 2nd May shows that the gold stock rose by \$1 million to \$21,743 million. Foreign deposits fell \$2 million to \$335 million, while foreign investments declined by \$68 million to \$3,727 million. The Federal Reserve bought \$130 million worth of bills under repurchase agreements. The total discounts and advances rose by \$44 million to \$901 million, while the aggregate excess reserves of member banks rose by \$63 million to \$290 million. The daily average of excess reserves of member banks fell by \$134 million to \$464 million, while their daily average borrowings rose by \$29 million to \$1,089 million. Business loans of the New York city banks rose by \$122 million to \$9,680 million, compared with the rise of \$727 million to \$7,639 million in the same period of last year.

Rubber Market Quiet

With no important new influence last week, only minor fluctuations occurred in a quiet rubber market. After moderate covering against recent sales to Russia buying interest became spasmodic. Despite dealers' reluctance to co-operate, offers were not pressed. Traders attributed the quietness largely to dealers' difficulties in assessing the trend of the market. President Eisenhower's statement on the future of the synthetic rubber industry tended to foster a bearish sentiment, but it had no immediate effect on prices. On balance, the quotations were unchanged to a farthing lower on the week.

Man-Made Diamonds

The General Electric Company's man-made diamonds, revealed last year as a laboratory achievement, are now being produced successfully in a pilot plant. Such diamonds may have an important impact on U.S. industry and defence, according to a company official. If the cost of the artificial diamonds could be brought down to below those now being mined, then industrial diamonds could become a \$200 million business annually in the next decade, he added.

Finance in India and Abroad

RESERVE BANK AMENDMENT BILL

MEASURES TO ALLOW BIGGER INCREASE IN NOTE ISSUE

AMENDING legislation to the Reserve Bank of India Act, seeking to reduce the backing for India's paper currency, was introduced in Parliament last week. A statement of the objects of the Bill says that "existing provisions in the Reserve Bank of India Act in regard to reserve requirements place a serious limitation on the ability of the Reserve Bank to regulate the expansion of the currency to meet the requirements of the second five year plan. The process of planned economic development necessarily implies a certain amount of credit creation, and a consequent increase in the note issue. At the same time, as a result of the same process of investment and development, foreign exchange reserves are likely to decrease. It is therefore necessary to vary the existing minimum currency reserve requirements. Moreover, deficit financing in the plan may also result in a large addition to bank reserves, with the consequent increase in the capacity of the banks to create credit. In order to control such creation of credit by the banks, it is necessary to grant additional powers to the Reserve Bank to regulate credit extension and to check any inflationary trend from developing."

The statement adds that it is considered necessary to amend the Reserve Bank of India Act to achieve these objects. The Bill includes the following principal amendments:

1. Section (33) (2) is being amended to provide for a minimum holding of Rs. 400 crores in foreign securities and Rs. 115 crores in gold in the issue department of the Reserve Bank.

2. Section (33) (4) is being amended to revalue gold at a rate agreed to by the International Monetary Fund.

3. Section 37 is being amended to provide for a temporary suspension of assets requirements of foreign security without payment of any tax to the Government.

4. Section 42 is being amended so that the machinery of Reserve Bank credit control may be strengthened.

The opportunity is also being utilised to carry out certain other amendments of minor importance.

THE CALCUTTA MONEY MARKET

INTERBANK CONDITIONS TIGHTER

Wednesday, 9th May.

THE approaching slack season in the money market is taking its time to develop. Although there are signs of an all-round easing in demand for funds, most of the chief sources are still running at a high level. The only exception appears to be the requirements on account of grain and seed storage in upcountry areas where the past week has seen considerable slackening. Demand for credit from the sugar industry is as high as ever, and at a time of year when it usually tails off. Total credit outstanding for sugar is higher than last year. Call for funds from the jute industry has increased slightly in the past week. Conditions are once again tight in the interbank market and although the call rate is unchanged at 3½ percent, it is reported there are borrowers over at this level.

The market for export documents has once again been quiet, with only a few gunny bills coming to hand. Remittance has been moderate. Sterling is a little stronger on the world's markets, and the dollar rate has been reduced fractionally to Rs. 479½.

Silver eased on selling pressure following the Government's decision to license freely the import of Tibetan silver coins. The price dropped from the previous week's level of Rs. 181-2 to Rs. 175-4, quoted today. The price for ready was quoted at Rs. 178-4. The London price was unchanged at 78½d. The price of foreign silver in New York remained the same at 90½ cents.

Gold was quiet in sympathy with silver and the price declined from Rs. 106-15 to Rs. 105-1. The sovereign at Rs. 67-4 was 3 annas lower.

During the week ended 4th May, Government of India Treasury Bills for Rs. 41,98,50,000 were sold in favour of the Reserve Bank.

A rise of Rs. 13.50 crores in notes in circulation to Rs. 1,518.51 crores was the outstanding feature of the return of the Reserve Bank of India for the week ended 4th May, 1956, while the total note issue declined by Rs. 1.68 crores to Rs. 1,525.68 crores. Deposits showed an all round fall. Deposits of the Government of India and other Government accounts declined by Rs. 2.75 crores and Rs. 8.80 crores to Rs. 55.84 crores and Rs. 18.11 crores, respectively. Balances of commercial banks at Rs. 49.40 crores were Rs. 1.44 crores lower. Balances held abroad and investments drop-

ped by Rs. 4.15 crores and Rs. 31 lakhs to Rs. 40.05 crores and Rs. 43.87 crores, respectively. Other loans and advances increased by Rs. 7.18 crores to Rs. 76.89 crores, of which advances to scheduled banks against usance bills amounted to Rs. 42.64 crores (Rs. 37.51 crores). These advances totalled Rs. 89.97 crores since 1st January, 1956. Ways and means advances were shown at Rs. 1.83 crores against Rs. 1.79 crores.

The statement of the position of scheduled banks for the week ended 27th April, 1956, discloses Demand and Time liabilities at Rs. 645.72 crores (Rs. 6.89 crores on account of borrowings from banks) and Rs. 427.29 crores (Rs. 2.96 crores), compared with Rs. 648.31 crores (Rs. 7.01 crores) and Rs. 427.77 crores (Rs. 2.96 crores) respectively in the previous week. Cash and balances with the Reserve Bank have declined by Rs. 33 lakhs and Rs. 2.07 crores to Rs. 37.56 crores and Rs. 48.80 crores respectively. There is a drop of Rs. 49 lakhs in investments to Rs. 355.09 crores. Advances and bills discounted at Rs. 757.76 crores reveal a rise of Rs. 5.11 crores. The ratios to total liabilities of cash and balances and of advances and discounts are, in consequence, shown at 8.0 percent and 70.6 percent against 8.2 percent and 69.9 percent.

The return of the State Bank of India for the week ended 27th April, 1956, shows a drop of Rs. 5.16 crores in total deposits to Rs. 229.53 crores. Investments in Government securities are down by Rs. 7 lakhs to Rs. 94.82 crores, while other authorised investments remain unchanged at Rs. 10.45 crores. Advances, including loans, cash credits and overdrafts, and bills discounted and purchased have increased by Rs. 51 lakhs to Rs. 135.08 crores. Cash and balances are, in consequence, shown at Rs. 16.17 crores or Rs. 2.55 crores less.

The following is a statement of the cash balances of the Central Government on the last day of February, 1956.

	Rs.
(1) At the Reserve Bank of India in India	63,17,18,000
(2) At treasuries in India	1,97,52,000
(3) In England (Sterling converted at 18d. the Rupee)	1,69,86,000

THE DISADVANTAGES OF STATE TRADING

LESSONS OF EXPERIMENTS IN INDIA AND ABROAD

By B. G. Balakrishnan

IT has often been suggested that to achieve the socialistic pattern of society envisaged at the Avadi Congress session, the Government should start trading in a larger measure. The advocates of this policy point out that an extension of State trading will enable it to secure additional resources for implementing the second plan. An examination of the experiments in State trading carried out in the past as well as at present in some commodities will be of much help in considering this question in its correct perspective.

The idea of creating a State-sponsored agency to handle foreign trade was first mooted during the second world war. The idea was not pursued until 1949, when the Government of India appointed a Committee on State Trading with the following terms of reference: "Whether, having regard to present-day conditions and future trends of international trade it would be of advantage to set up a State-owned or State-sponsored organisation for handling any sector of the foreign trade of the country....If so, what the structure of the organisation should be and what the field and scope of the activities of the organisation should be."

Committee's Report

The Committee, in its report, recommended that the then trading activities of the Government covering foodgrains, fertilisers, steel and coal should be taken over from Government departments by a statutory State Trading Corporation. The Corporation, it added, should take up the export of short-staple cotton and cottage industry products. Subsequently, in October, 1952, the Government felt that the recommendations made by the State Trading Committee should be reviewed in the light of later developments, particularly the falling markets and the uncertain trends in international trade. It, therefore, appointed a small Committee to examine the problem again. The Committee was also asked to study whether, and to what extent, the export of yarn for certain categories of handloom products and of cottage industry products should be undertaken by the State. It submitted its report in 1954.

The commercial community, has often pointed out that State trading is likely to prove wasteful, costly and detrimental to the best interests of the country. The centralisation of buying and selling operations in the hands of a single agency is unsound, because it replaces the many stabilis-

ing forces of the market by the single opinion of a State trading authority. A Government agency bound by rules and regulations cannot adjust itself to changing market conditions which call for quick decisions. Lack of experience in handling trade might lead to huge losses. The advantages, therefore, of entrusting trading activities to the State in certain commodities depend on how far elimination of the forces of competition would be profitable.

The State Trading Committee appointed in 1949 recommended that the export of short-staple cotton should be entrusted to the proposed State Trading Corporation because it believed that the sellers' market for short-staple cotton would continue and the Government might absorb the profits from exports. But the position has changed completely now, with the result that exporters are facing competition from regular sources, particularly Pakistan. Moreover, the present system of licensing has worked smoothly. Similarly, for imports of East African cotton the State Trading Committee suggested bulk purchasing in view of the tight supply position. But the position today has changed and a buyers' market for East African cotton has emerged. It, therefore, appears that the trends in international trade do not require any further experiment in State trading.

Experience of U.K.

Countries like the U.K. have taken steps by restoring to private traders the activities which were taken over by the Government during the war years. For instance, in the U.K., bulk purchase of tin by the Government was stopped in 1949, while private traders were allowed to import lead in October 1952. Similarly, bulk buying of cocoa was ended in 1950. In the circumstances, it is advisable for the Government to allow the normal trade channels to function. It is well-known that the import of foodgrains, fertilisers and steel, and the export of coal, etc., came to be controlled or handled by the State in view of their short supply during the war and postwar years. For foodgrains, departmental imports were a legacy of the war. But the system of purchase of goodgrains in foreign countries, and their import and distribution in India by the Government, has not been very efficient, and has been subjected to considerable criticism in and outside Parliament.

The Imported Foodgrains Clearance Committee in 1949 indicated the drawbacks in the system of departmental imports and mentioned that complaints about the cost of administration and the quality of grain supplied etc "are perhaps to some extent inherent in all systems of State trading". For instance, in the case of purchases of wheat under the American loan, it was reported that the deliveries were not of the required type and that the quality was much inferior. Besides, purchases made by the U.S. Government agency on

behalf of the Indian Government were made indiscriminately. Similarly, on the occasion of the renewal of the International Wheat Agreement in 1953, while Britain was resisting the increase in the American price, the Indian Government was hasty and committed itself to the import of one million tons of wheat each year despite the increase in internal supplies. A minimum import of one million tons a year could now adversely affect the price support policy of the various State Governments. It is also understood that considerable expenditure has been incurred on freight in the movement of foodgrains. As a result, the cost of importing foodgrains has been inflated by about 15 to 20 percent.

Inefficient Handling

The handling and distribution of foodgrains within the country has not been efficient. Distribution charges have been inflated as a result of payment of commission to purchasing agents, export and procurement bonuses, huge freights due to haulage, and losses in transit or storage. It is estimated that as a result of State trading in foodgrains, the consumer had to pay about Rs. 25 crores extra to the Exchequer over four years, while the loss to the Exchequer by way of subsidies was about Rs. 70 crores. If the entire job had been left to the private trade, the net cost would not have been more than 12½ percent. World supplies of foodgrains are much easier than what they were ten years ago and domestic production has increased. It is essential therefore that private traders should be allowed to import foodgrains under the international agreements, as they will be able to do so much more cheaply than Government departments and purchasing agencies.

State imports of fertilisers are also a hangover from the last war, when requirements increased on account of the need to grow more food. But now supplies have increased because of the increase in indigenous production. Further, the world supply outlook is bright. With the expected increase in indigenous production due to the installation of more factories, imports of fertilisers from abroad are likely to be lower in the coming years. In the circumstances, it will not be advisable to leave them to Government departments since private agencies can procure supplies at competitive prices.

Steel Imports

Steel is another commodity for which State purchases were necessary, partly to meet the situation arising out of the last war. Even though the present system of State trading in steel has yielded certain advantages, some of the varieties imported by the Government were found unsalable in the country. The prices paid were too high and this was partly due to the fact that premature publicity was given to the quantities which it was proposed to import. Such mistakes are most likely to occur when commercial transactions of this kind are entrusted to Government departments, the organisations and methods of work of which are entirely unsuitable. However, with increased production in France, Belgium, the United States and Germany, the supplies have improved. Efforts are being made to increase domestic production. In the circumstances, it is essential that the importing of steel should be allowed to private agencies which can obtain requirements at competitive prices because of their experience and knowledge in trade matters.

Recently, the Government canalised imports of certain essential raw materials through the agencies approved by it with a view to ensuring regular supplies to industry at a fair price. This has been applied to caustic soda, soda ash and sodium bicarbonate. The canalisation of imports has in some cases not brought the desired result, and the prices of caustic soda and soda ash have risen. The entry of the Government into the chemicals import trade has deprived a large number of importers and dealers, long established in this line, of their regular income. The sugar industry is one of those which are now destined for a prolonged period of control by the State. Even though the Government has gained certain experience in selling sugar by reserving the imports to itself, the industry has suffered enough because of the inefficient handling of controls.

At present, the Government fixes export quotas for coal on the basis of trade agreements with various countries. Shippers, with the permission of the local Commissioner, entertain enquiries from parties in those countries and secure orders within the limits set. Thereafter, export licences are issued. The present system of licensing coal for export is working satisfactorily, and should be continued. It would be hardly more advantageous to hand over the export of coal to a State Trading Corporation, or any other body set up by the Government. The existing Coal Board is in a better position to handle the supervision of coal exports.

Apart from the basic objections to State trading, the present buyers' market does not warrant any experiment in State trading. The problem today is one of competitive trade; as such the its revenue. The Taxation Enquiry Commission was of the same view when it stated: "State trading requires personnel with specialised experience of business and raises the question of the for the task. Furthermore, the best time to extend State trading would be when prices are generally on the upgrade: the present, therefore, does not seem to be an opportune time for a wider incursion in this field. Altogether, the immediate State activity in the sphere of foreign trade seems to be limited."

Stocks and Shares

HEAVY SPECULATION IN INDIAN IRONS

BULLS IN FULL CONTROL: OTHER SECTIONS INACTIVE

Wednesday Evening.

THE past few days have seen a slightly better feeling in the share market. This has been partly due to better advices from Bombay and the bull support which one prominent operator has been giving to Indian Irons. The greater optimism which can now be felt has been helped by the fact that deficit financing promises to increase sharply in the near future. Other sections of the market have not enjoyed the same buoyancy as Irons. One share among the speculators has even weakened—Indian Copper, which is still troubled by rumours that the bonus issue will be delayed and that the dividend will be lower. What activity there has been appears largely to have been concentrated on the engineering and miscellaneous sections.

This week's rise in Irons has helped to lift the market from the stagnation which has existed for the past few weeks, but while there is so little true investment support, it would perhaps be rash to consider this to be the start of the long-awaited bull market, in spite of the fact that operators are once again talking in terms of Rs. 40 for Irons.

Details of the week's trading follow.

* * * * *

The Government securities market continued firm and prices were marked up once again. Three percent Conversion Loan 1986 improved further on strong buying enquiry from Rs. 77-3 to Rs. 77-6 while 3½ Non-terminable was unchanged at Rs. 77-8. In short-dated issues, 3½ 1957 turned slightly easier at Rs. 99-13, but 3½ 1958 continued in demand at Rs. 99-11. In the medium-dated group, 3½ 1959-61 was traded at around Rs. 98-3 while 3½ 1963-65 hardened to Rs. 95-2 and 3½ 1964 was two annas better at Rs. 95-2½. 1961 was taken at Rs. 93-6 and 2½ 1960 was asked for at Rs. 96-3. In National Plan Issues, 3½ 1961 was one anna better at Rs. 99-10, but 3½ 1964 and 1965 were unchanged with business passing at Rs. 98-11 and Rs. 98-10. Long-dated loans continued their upward climb with 3½ 1966-68 at Rs. 93-3 and 3½ 1970-75 at Rs. 90. Provincials were once again steady and interest was centred on discount issues. Four percent Madras 1967 improved further to Rs. 99-13, but closed with sellers, while 4½ U.P. 1967 was better at Rs. 99-11. Four percent Bihar 1967 was in demand at Rs. 99-5 as was 4½ Bihar 1963 at Rs. 100-2 without attracting sellers. Four percent West Bengal 1967 was offered at par.

High quality preference shares met with limited enquiry, but shares of managing agency companies and those of jute companies were not popular, and sellers predominated. In jute, a small lot of Birla was marked at Rs. 103 and Dalhousie were done at Rs. 105. National were crossed at Rs. 119-12. Reliance were placed at Rs. 101 and a small lot of Union at Rs. 113. In the miscellaneous group, Alkali & Chemical were taken at Rs. 105-8 and Bengal Chemical 4½ were crossed at Rs. 86. British India Corporation were better at Rs. 123-8 while Calcutta Electric changed hands at Rs. 11-5. Duncan Brothers were offered at Rs. 63-8 while Indian Iron & Steel were enquired for at around Rs. 107. Martin Burn came to hand at Rs. 105 and Richardson & Cruddas were crossed at Rs. 86. Rohtas Industries "B" were offered at Rs. 64.

Punjab National Bank improved smartly from Rs. 46-8 to Rs. 50-4 while United Commercial were unchanged at Rs. 50. Bank of Bikaner were crossed at Rs. 16-8 cum-dividend and there was an enquiry for Hind Bank at around Rs. 31-8.

In the railway section, Dehri Rohtas were placed at Rs. 13 and a small odd lot of Howrah-Amta at Rs. 59-8.

With the exception of Elgin Mills and New Victoria, which improved to Rs. 27-5 and Rs. 2-10, the rest of the shares in the cotton mill section were neglected. Bowreah were unchanged at Rs. 160 as were Cawnpore Textiles at Rs. 8-5 and Dunbar at Rs. 308. Kesoram were fairly steady at Rs. 17-15.

Coal shares were a little more cheerful this week, and there were buyers of selected issues. Bengal were better at Rs. 530 as were Central India at Rs. 7-3 and Western Bengal at Rs. 7. East Indian improved from Rs. 31-12 to Rs. 32-8 and Equitable from Rs. 28-14 to Rs. 29-8. Burrakur rose from Rs. 14 to Rs. 14-12, but closed easier at Rs. 14-3. There was an enquiry for Rancegunge on rumours of a higher dividend and the shares improved from Rs. 11-2 to Rs. 11-10.

The sharp increase in jute goods stocks disclosed by the latest figures released by I.J.M.A. were received with disappointment although prices of jute shares showed little variation, as will be seen from the following table:

	Opening	Closing
	3-5-56	9-5-56
	Rs.	Rs.
Anglo-India	169	169
Bally	140	140
Dalhousie	104	104
Howrah	22 4	22 12
India	138	138
Megna	77 8	80
National	23 10	24 8
Reliance	10	10

Contrary to the general trend, there was some enquiry for Birla at the higher rate of Rs. 17-14 and Agarpara at Rs. 11-12.

Electric supply shares were extremely dull and the only scrip that was mentioned was Calcutta Electric at around the lower rate of Rs. 13-5.

Sugar shares too were lethargic and a mere handful of transactions were reported. Belsund were quoted at Rs. 10, Gwallior at Rs. 50 and Shree Krishna Gyanodaya at Rs. 11-12. There was some enquiry today for Cawnpore at Rs. 19-12 and Champaran at Rs. 29.

In the engineering section, there was a large turnover in Indian Iron & Steel with the price improving smartly to Rs. 37-1 (the highest touched in the past three months) against an opening quotation of Rs. 34-12. Burn & Co., improved from Rs. 350 to Rs. 354 while Indian Standard Wagon were unchanged at Rs. 181. Braithwaite were marked at Rs. 27-10, and Bhartia Electric Steel were better at Rs. 17-8. Richardson & Cruddas were steady at Rs. 27 as were Jessop & Co., at Rs. 35, despite the lock-out recently declared at the company's works. Textile Machinery recovered from Rs. 23-12 to Rs. 24-6.

In the paper section, Orient provided the outstanding feature improving from Rs. 35-4 to Rs. 36-11. Shree Gopal recovered from Rs. 18-2 to Rs. 18-10 while Titagur were unchanged at Rs. 43-8. India Paper Pulp were better at Rs. 25-6.

Cement shares were active, particularly Sone Valley which improved from Rs. 8-1 to Rs. 8-8 and Dalmia from Rs. 14-10 to Rs. 15-10. Ashoka were better at Rs. 11 as were Assam Bengal Cement at Rs. 6-8.

In insurance, there was some enquiry for Hercules at Rs. 27-4 while Concord were shaded at

Partners in Progress

ONE of the most important developments in Indian industry is the new aluminium smelter going up at Hirakud, Orissa. Designed and constructed by the Canadian consultants of Indian Aluminium Company, this 10,000 ton smelter will embody the latest advances and techniques developed in their

world-wide research activities. Canadian money, too, will share the costs of this project, to finance a part of which Indian Aluminium Company proposes to issue new capital. The Hirakud smelter will be yet another milestone in the history of this Canadian-Indian partnership of progress.

STATE BANK OF INDIA

Successors to the Imperial Bank

Bank with the State Bank

OUR country is planning for prosperity. This cannot be achieved unless the interests of the small depositor, the small trader and the small producer alike in towns and in the countryside receive the same consideration that is bestowed on the more affluent constituents and the larger industrial units.

You are not perhaps aware that the clientele served by the State Bank of India consist predominantly of persons of modest means and modest requirements. It is on the broad and secure foundation of their patronage that the Bank's structure has been built and will continue to rest.

The State Bank's services are many-sided and it would interest you to know that your varied plans and activities—no matter how small they be—can be made to run more smoothly with the help the Bank can offer.

Why not talk things over with your nearest bank agent, or write for information?

The State Bank's local head office at Calcutta, one of more than four hundred offices waiting to serve you throughout India

STATE BANK OF INDIA

Largest of the Indian Joint Stock Banks

Rs. 11.2 and Great Pyramid at Rs. 3.8. In shipping, India Steamship, on rumours of an impending interim dividend, were fully steady at Rs. 8.12 while India General Navigation were unchanged at Rs. 107 and Port Shipping at Rs. 16.6.

Among miscellaneous industrials, Alkali & Chemical were better at Rs. 20.6 and Aluminium Corporation recovered from Rs. 9.14 to Rs. 10.1. Angelo Brothers were unchanged at Rs. 21.4 while Assam Saws were depressed at Rs. 4.12. Bengal Flour, on rumours that the dividend might be reduced, were marked back from Rs. 28.8 to Rs. 28. Dunlop Rubber were slightly better at Rs. 30.5 while Birds Investments and Eastern Investments were unchanged at Rs. 16.14 and Rs. 15.4 respectively. Hindustan Motors recovered to Rs. 10 as did Imperial Tobacco from Rs. 14.7 to Rs. 14.12. Indian Aluminium met with some enquiry at the lower rate of Rs. 20.14. Indo-Burma Petroleum were unchanged at Rs. 43 as were Indian Wood Products at Rs. 39.6 and Jardine Henderson at Rs. 100. National Carbon improved slightly to Rs. 26.9. Martin Burn were marked at Rs. 25.2 and Metal Box at Rs. 27. National Insulated Cables were steady at Rs. 22.11 while Rohtas Industries were unchanged at Rs. 22.12. Shaw Wallace receded from Rs. 15.10 to Rs. 15.6 and a fair amount of business was put through in Clive Row Investments at around Rs. 11.

In the mining section, Burma Mines again provided the outstanding feature improving from Rs. 4.2 to Rs. 4.9. Tavoy Tin rose from Rs. 13 to Rs. 1 and Western Stockholders Investment were steady at Rs. 1.2. Karanpura Development were better at Rs. 26.4. Conflicting rumours about the final dividend and the fate of the Company's application for bonus shares had a subdued effect on Indian Copper Corporation shares and the price was marked down at the close to Rs. 6.9.

Tea shares were again neglected but prices were inclined to be firmer. Baghmari had buyers at Rs. 29.4 as did Bateli at Rs. 23.4 and Brooke Bond at Rs. 24.12. Brahmapootra fluctuated between Rs. 9.6 and Rs. 9.8 and Dibrugah were slightly better at Rs. 27.6 as also were Dinelakhat at Rs. 21.10. Hattikhira changed hands at Rs. 22.4 and Belgachi were marked up from Rs. 46 to Rs. 47.4. Gungaram were in demand the price improving to Rs. 35.1. Baradighi were crossed at Rs. 50.8 and Hantapara were fully steady at Rs. 34.2 c.b. Huldibari were called at Rs. 36.10 but Jaybirpara were easier at Rs. 26.8. Ranicherra changed hands at Rs. 23.6.

The profit of the SUTNA STONE AND LIME COMPANY was Rs. 7,179 higher at Rs. 69,598 for the half-year ended last December. Providing Rs. 30,000 (Rs. 18,000) for taxation, Rs. 30,679 (nil) for depreciation on investment and bringing in Rs. 11,893, there is Rs. 20,812. The dividend is 1 anna higher at 10 annas a share, leaving a carry-forward of Rs. 652.

EASTERN INVESTMENTS, LTD., increased its profit by Rs. 1.59 lakhs to Rs. 12.83 lakhs. Allowing Rs. 7.3 lakhs (Rs. 4.94 lakhs) for taxation, including dividend super-tax, bringing in Rs. 3,13,308 and making other adjustments, there remains a balance of Rs. 8,13,572. The ordinary dividend has been maintained at 9%, leaving Rs. 3,06,138 to be carried forward.

The profit of the INDO-BURMA PETROLEUM COMPANY improved by Rs. 9.03 lakhs to Rs. 57.86 lakhs during the year ended last December. The ordinary dividend has been increased by 10% to 40%, including a dividend bonus of 10%. The

taxation provision is Rs. 4.90 lakhs higher at Rs. 28.90 lakhs. Investment depreciation reserve is given Rs. 2 lakhs (nil). The carry-forward is Rs. 7,112, as against Rs. 63,650 brought in. The company has lately acquired a substantial interest in Balmer Lawrie & Co. Ltd. by buying 20,000 equity shares.

The working of GODFREY PHILLIPS, INDIA LTD. for the year ended last December has produced good results. The profit was Rs. 11.74 lakhs higher at Rs. 18.47 lakhs. Providing Rs. 9.1 lakhs (Rs. 3.1 lakhs) for taxation, Rs. 4.46 lakhs for depreciation, bringing in Rs. 13,30,075 and making other adjustments, there is a balance of Rs. 21,18,499. The ordinary dividend has been doubled to 20%, leaving a carry-forward of Rs. 11,96,811. Sales rose by Rs. 66 lakhs to Rs. 24 crores.

Messrs. Tata Industries Private Limited, managing agents for the TATA IRON AND STEEL CO. LTD., report that the total approximate production of iron and steel at the steel works in Jamshedpur during April 1956 was: pig iron 100,000 tons; steel ingots 87,200 tons; semi-finished steel for sale 19,100 tons; and finished steel 45,200 tons.

STRONG SUPPORT IN BOMBAY MARKET

OPERATORS EXPECT MORE DEFICIT FINANCING

Wednesday Evening.

CHEERFUL conditions prevailed on the Bombay Stock Exchange last week and equity prices gained substantially on a broad front after intermittent profit-taking. Operators have taken a constructive view of the industrial policy statement. It is believed that private industries will be allowed to expand under the second five year plan. The proposed Reserve Bank Amendment Bill seeking to reduce the gold and foreign exchange reserves of the paper currency has been bullishly interpreted as a prelude to increased deficit financing. The market does not seem to have realised the significance of the extensive powers which the Bill proposes to confer on the Reserve Bank to curb credit in the private sector. The official acceptance of the second five year plan by the National Development Council has also been regarded as an additional stimulant.

Fresh bull support, coupled with nervous short-covering, lifted Tata Steels to Rs. 253.4. Indian Iron also improved to Rs. 36.14 in the wake of strong support from Lyons Range. Alcock Ash-down were steady at Rs. 362.8 and Premier Construction realised Rs. 170.8. Larsen and Toubro gained at Rs. 15.14 and Mahindra and Mahindra were better at Rs. 14.13.

Excellent off-take of cloth within the country encouraged strong buying in the mill group. Bombay Dyeing rose to Rs. 657.8 and Century were higher at Rs. 551. Simplex gained at Rs. 218 and Svadeshi came to hand at Rs. 229.8. India United Ordinary met with demand around Rs. 13.5.

Miscellaneous industrials moved higher in sympathy with the general trend. Associated Cement touched Rs. 221.8. Sugar shares were remarkably firm, with Belapur rising to Rs. 234 and Walchandnagar to Rs. 253.12. Shipping shares were initially steady, though the increase of 5 percent in coastal freight has fallen below market expectations. India Steamship closed higher at Rs. 8.10 and Scindia Steam at Rs. 18.7. Automobile shares were better, with Hindustan Motor changing hands at Rs. 9.15. Among mining shares, Indian Copper were subdued around Rs. 6.9 following uncertainty about the bonus issue. Tata Locomotive shot up to Rs. 156 in the expectation of a maiden dividend. Bombay Burmah improved to Rs. 652.8 on a better tea outlook. National Rayon were higher at Rs. 245.8 on hectic support and National Carbon rose to Rs. 26.12 on investment account. Tata Chemicals were taken at Rs. 18.10.

Banking shares were firm on the view that the Government has no intention of nationalising banks for the time being. Central realised Rs. 52 and Bank of India Rs. 158. Insurance shares rose because the Select Committee has recommended improved compensation for insurance companies. New India were higher at Rs. 41.

THE WEEK'S TRANSACTIONS

SHORTAGE OF TRANSPORT FACILITIES FOR THE STEEL EXPANSION PROGRAMMES

SCHEDULES AND DIVISION OF WORK FOR THE DURGAPUR PROJECT

(FROM OUR NEW DELHI CORRESPONDENT)

THE impression is gaining ground here that the steel industry alone will create a transport problem of its own. A steel plant of one million tons ingot capacity requires the following materials before it is erected and commissioned: building bricks 45 million pieces; stone blocks 1,000,000 sq. m.; fireclay bricks and fireclay products 90,000 tons; silica bricks and silica products 40,000 tons; magnesite bricks and magnesite products 3,000 tons; chrome-magnesite bricks and chrome-magnesite products 13,500 tons; asbestos cement sheets 700,000 sq. m.; concrete for structures 500,000 cu. m.; prefabricated reinforced concrete structures, pipes, etc. 120,000 cu. m.; asphalt concrete 40,000 tons; rails 10,000 tons; railway sleepers 10,000 tons; structural steelwork 100,000 tons; castings 6,000 tons; pipe work 10,000 tons; locomotives 24; specialised rolling stock 175; electric motors about 8,500; electric transformers about 100; cranes of various types and sizes about 50 or 60; machine tools of various types and size about 100; and many instruments of various types. For the Rourkela plant, 120,000 tons of machinery, 60,000 tons of steelwork and 30,000 tons of other materials will have to be handled at Calcutta port and by the railways between June 1956 and July 1958. Roughly the same quantity of materials will have to be moved through Calcutta port and by the railways over the same period for Tata's expansion programme at Jamshedpur. For the Durgapur plant, 100,000 tons of equipment and 65,000 tons of structural steel will have to be handled by Calcutta port and the railways between December 1956 and January 1957. For the Bhilai plant, Visakhapatnam port and the connecting railways will be called upon to move 100,000 tons of equipment, 60,000 tons of structural steelwork and 30,000 tons of other materials.

Lifting Capacity at Ports

The question which has now arisen is whether, for the commission of these four projects, one in the private sector and three in the public sector, the two ports are adequately equipped and whether the railways have the wagon capacity to transport equipment and material. As far as the ports are concerned, their lifting capacity is inadequate to deal with the incoming traffic for the steel plants. Crane capacity for the equipment is lacking. It has been suggested that the two ports, particularly Calcutta, should have a special berth to handle steel traffic. Unloading facilities will have to be created at the sites of the steel plants also. In all the places, a number of special heavy cranes for lifting loads of 40 to 100 tons will be needed.

As far as the railways are concerned, they have only a couple of "well wagons" to carry equipment weighing more than 100 tons. They will have to create a regular fleet of such wagons. There are only a few hundred medium size wagons of 40 tons carrying capacity. Over 1,000 of them will be needed. The Government has bought one 247-ton crane from Russia. It is 200 feet in height and can lift over 100 tons at a time. It looks like a monster, the like of which has never been seen in India.

Traffic at Tata Steel Works

So much for the installation of the steel plants. As for the traffic generated by one steel plant alone, some idea may be gained from what the South-Eastern Railway carried for the steel plant at Tatanagar during 1955. On an average, 550 wagons containing iron ore, limestone, dolomite, manganese ore and coal were taken every day into Tatanagar. The outward traffic booked from that place,

which consisted of iron and steel in various shapes and forms, was about 150 wagons a day. These figures are in terms of four-wheeled wagons. The average load of a wagon may be taken as between 20 and 22 tons. The figures for the year amounted to over 95,000 wagons of iron ore, over 88,000 wagons of coal, about 28,000 wagons of limestone and dolomite, and about 1,800 wagons of manganese ore. Other miscellaneous commodities amounted to 3,000 or 4,000 wagons over the year. All this meant that about 11 or 12 trains were taken into Tatanagar and from there to the works site. An equivalent number of wagons of which about three train lengths were loaded and the remainder were empties, had to be drawn out from the works site and taken away from Tatanagar station. The limestone and dolomite came mainly from the Rourkela-Birmittapur section, which meant a haulage of 118 miles. Coal came mainly from the Bengal and Bihar coalfields, the average distance being 93 miles. Iron ore and manganese ore were drawn from the Barajamda and Badampahar branches, which involved a lead of approximately 75 miles.

The movement of this traffic calls for detailed planning by the iron and steel works and by the railways. Ordinary as well as special types of wagons are used. The special wagons are mainly hopper trucks, which have the advantage that the load can be discharged either from the bottom or from the sides. There are over 1,300 hopper trucks in use for iron ore and limestone, and about 150 for coal. For moving the finished products, eight-wheeled open trucks are used and the total number owned by the South-Eastern Railway is approximately 1,000. Then there are tank wagons for various by-products such as coal tar, benzol, sulphuric acid, etc. Bogey rail trucks are also used for the movement of machinery, etc., into the works site. In addition, each steel plant has a town of its own where people have to be supplied all their usual requirements.

The Durgapur Project

The British plant is to be constructed at Durgapur, which is about 110 miles north-west of Calcutta on the Damodar river and on the railway from Calcutta to Delhi. Coal and iron ore hauls will be some 50 to 70 miles for normal supplies. Production of pig iron will commence in June 1959, when the first coke oven battery and blast furnaces will be installed. The entire plant will be completed in March 1961. It has been planned and designed for an annual output of one million tons of steel ingots, and up to 350,000 tons of foundry pig iron for sale. The capacities of the coke oven, the blast furnace and the steel-making sections and the primary rolling mills are adequate for 1½ million tons of ingots. The general lay-out and plant units have been so planned that production can be conveniently doubled later. The works may be considered as having four main sections (coke ovens, iron-making unit, steel-making unit and rolling mill) and various ancillary departments (which include the power house, maintenance shops and foundries). The work undertaken by the member companies of the British consortium is outlined below. It is stressed that their responsibilities are not limited to the supply of plant; they are also responsible for the engineering of the sections for which they provide the plant.

The technical co-ordination of the principal sections and ancillary departments, the engineering of the services for gas, water, steam and air supplies, and the planning of road and rail facilities, will be carried out by the engineering department of M.E.E.C.O. For all electrical work, M.E.E.C.O. and I.S.C.O.N. have Messrs. McLellan and Partners as their consultants.

Simon-Carves Ltd. will be responsible for the construction of the coke ovens, the coal washery, the coal handling and blending plants, and the by-product recovery plant. Three batteries of 78 ovens each will carbonise 5,200 tons of dry coal a day, which will be a blend of Barakar and washed Jharia coal. The coke handling and screening plant will deal with 3,900 tons a day of run-of-oven coke. The by-product plant will cater for the recovery of crude tar, benzol and sulphate of ammonia, and a contact sulphuric acid plant is included.

Blast Furnaces

Head, Wrightson and Company Ltd. will construct the three 27-foot-hearth-diameter blast furnaces (approximately 1,250 tons a day each), all ancillary plant, the ore handling, stocking and bedding plant, and two double-strand pig casting machines. The gas cleaning plant will be built in accordance with the designs of the Head Wrightson Research Corporation. Of the three blast furnaces, one will normally produce foundry pig for sale. The ore unloading, handling and bedding plant (Robins Messiter system) will deal with 45,000 tons of ore a week. The average iron con-

tent of the ore fed into the furnaces will be about 55 percent. Provision has been made for the installation of a sinter plant later.

The construction of the entire steel-making plant and ancillary equipment will be undertaken by the Wellman Smith Owen Engineering Corporation Ltd. It will include two 300-ton inactive mixers, as well as eight fixed 200-ton and one fixed 80-ton basic open hearth furnaces. Oxygen from two units with a capacity of 50 tons a day will be provided for de-silicising hot metal in transfer ladles after the mixers and for lancing in the open hearth furnaces. The furnace charging system for cold charges will be by ground charging machines with a high-stage charge holding bay and a yard-level scrap loading gantry. Two vertical shaft lime kilns and one horizontal rotary dolomite kiln will be built, and their products will be delivered by conveyor belt to bunkers in the charge holding bay. Mould preparation and stripping will be carried out in separate buildings. Provision has been made for a separate shop for the uncasting of ingots for the wheel, tyre and axle plant.

Wheel, Tyre and Axle Plant

The Davy and United Engineering Co. Ltd. will build the rolling mills and the wheel, tyre and axle plant. The provisional production programme is as follows:

Forging Blooms (Medium and Heavy)	40,000 tons
Forging Billets	60,000 "
Billets for Re-rolling	150,000 "
Merchant Bar Sections	240,000 "
Light and Medium Sections	200,000 "
Sleepers	60,000 "
Axles	12,000 "
Wheels and Tyres	26,000 "
	790,000 "

The primary rolling mill plant will include ten bottom-fired recuperative soaking pits, each capable of holding 12 standard seven-ton ingots, a 42-inch blooming mill and a 32-inch intermediate mill. The finishing mills will include a 24-inch medium section mill, a Morgan continuous billet and sleeper bar mill and a Morgan merchant mill.

The 32-inch intermediate mill will be manufactured by the Brightside Foundry and Engineering Co. Ltd., whose collaboration in this project has been sought by Davy and United Engineering Co. Ltd. Equipment for the wheel, tyre and axle plant will include a 6,000-ton wheel forging press and a 2,000-ton dish press, as well as a complete machine shop.

The central power station, which will be engineered and built by Simon-Carves Ltd. and the four electrical companies, will include four gas-fired boilers, each rated at 150,000 lbs. an hour, of which two are equipped for alternative solid fuel firing, three 5,000 kW. turbo-alternators and four large turbo-blowers.

The engineering workshops will provide for all normal maintenance of plant and works rolling stock. A foundry for ingot moulds as well as a general foundry for ferrous and non-ferrous work are included in the plans. Responsibility for the engineering of these departments has been undertaken by Davy and United Engineering Co. Ltd.

The electrical plant and equipment will be provided by the British Thomson-Houston Co. Ltd., the English Electric Co. Ltd., the General Electric Co. Ltd., and the Metropolitan-Vickers Electrical Export Co. Ltd. It will include about 2,500 motors of sizes up to 7,000 h.p. for the rolling mill drives. In addition, the companies will be responsible for the general distribution system consisting of nearly 100 transformers and rectifiers, 700 switches and circuit breakers for currents of up to 30,000 volts, the lighting and telecommunications systems, and a vast quantity of cables.

Structural Steel Buildings

Responsibility for the supply of all structural steel buildings will rest with Joseph Parks and Son Ltd., Dorman Long (Bridge and Engineering) Ltd., Cleveland Bridge and Engineering Co. Ltd., and Sir William Arrol and Co. Ltd. About 60,000 tons of steel buildings will be fabricated.

The Cementation Co. Ltd., with the Patel Engineering Co. Ltd. of Bombay, will undertake all civil engineering work. The cost of this will be about £15 million and will cover all concrete work, the laying of railway tracks, roads, water service mains, drainage systems etc., and the construction of buildings for offices, laboratories, canteens and other amenities.

According to the tentative construction programme, the major plant units will be installed as follows:

Stage I: The first coke battery, first blast furnace and pig casting machines, with services and transport to suit, and part of the workshop, in June 1959.

Stage II: The second coke battery, second blast furnace, part of the steel plant and the rolling mill up to the billet mill stage, in December 1959.

Stage III: The third coke battery, the third blast furnace, the remainder of the workshops, steel plant and rolling mills, in December 1960; and the wheel, tyre and axle plant in March 1961.

New Delhi

NATIONAL DEVELOPMENT COUNCIL APPROVES SECOND FIVE YEAR PLAN

MR. K. C. NEOGY CRITICISES ESTIMATE OF RESOURCES AND ALLOCATIONS FOR TRANSPORT

(FROM OUR NEW DELHI CORRESPONDENT)

WITH an eye on the coming general elections, the National Development Council at a two-day meeting last week placed "on record its general approval and acceptance of the objectives, priorities and programmes" embodied in the second five year plan. The West Bengal Chief Minister, Dr. B. C. Roy, who a year ago criticised the impracticability of the plan-frame, offered his "heartfelt thanks" to the Prime Minister for conducting the Council meeting, and said he was sure that "his leadership would help them all in facing the tasks ahead." The hand-outs released by the Government's Press Information Bureau did not say whether the full picture of the expanded plan, indicating an outlay bigger than in the draft outline, was put before the Council. The attitude of the Deputy Chairman of the Planning Commission, Mr. V. T. Krishnamachari, also created some surprise in New Delhi.

A member of the Commission, Mr. K. C. Neogy, has criticised some of the assumptions made in the plan and the allocations for various items of development, particularly transport. He says: "The calculation of the financial resources for the public sector of the plan, at Rs. 4,800 crores, seems to be characterised by wishful thinking rather than reasonable expectations. Even then, there is an uncovered gap; and large as the gap is, it may well prove to be an under-estimate. There are indications that the revenue surplus may prove disappointing. The assumed foreign aid figure is a measure of our need, but that does not make it easily attainable. It will perhaps be idle to expect State Governments as a whole to fulfil their targets of additional taxation. Tax efforts even at the Centre will have to recognise the limitations at some points. If the plan is seriously attempted to be maintained at its present size, and the visible domestic resources cannot be stretched to provide more than half the outlay in the public sector, deficit financing of the order of Rs. 1,200 crores may no longer be the upper limit, as urged by the experts, but the inevitable minimum. Once inflationary conditions supervene as a concomitant of this order of deficit financing, all monetary calculations of the plan expenditure will be upset, the cost of projects will be increased and the plan fulfilment reduced in real terms. And, in that process, those to be hardest hit would be people in the fixed income groups, who number over five million and include Government servants at all levels, teachers and other non-Government employees. These classes would thus be called upon to bear the brunt of capital formation through deficit financing after they have patiently borne the wartime and post-war decline in their standards of life."

Inflation, Taxation and Controls

"Inflation, progressively heavy taxation and rigid controls that appear to be inevitable may well set in motion forces of reaction and demoralisation at different levels of society. And if demoralisation overtakes the people in general, it will in all conscience be too dear a price to pay for economic progress, even if real progress be possible under such conditions."

"Apart from financial imponderables, there are undoubted uncertainties in the physical and organisational spheres which should not be minimised. The problem of finding managerial personnel for all the projects is no small one; and, until much more is done for technical training, a shortage of skilled personnel may limit practical achievement. The answer to all these uncertainties is sought to be found in the idea of detailed annual plans which will be drawn up in the light of practical experience and are expected to meet the requirements of the situation as it unfolds itself year after year. But the annual plans are not likely to add up to the five year picture as given in the plan. Their sum total will be smaller, because to finance the entire plan and fulfil its physical targets in the five year period is beyond our capacity; and it will also be different because the individual projects and programmes constituting the five year plan are not equally elastic and cannot all be reduced in the same proportion. The ultimate picture that is, therefore, likely to emerge after the operation of the five annual plans may turn out to be materially different in dimensions and content from the five year plan that is now being put forward. The question that arises in these circumstances is whether a less ambitious five year plan should not have been drawn up, such as would be capable of fulfilment in practice and to which the country could pledge itself as a clear and definite programme that would be not merely desirable but also possible to achieve. Such a realistic plan would still be open to some degree of annual adjustment found to be necessary and possible, and be capable of being improved upon by the utilisation of any favourable turn of events from year to year."

Relative Priorities

"In an economy like ours there is a good deal of leeway to be made up in every sphere of national activity, and many are the matters that, directly or indirectly, touch the life of the individual and call for suitable ameliorative action as an unavoidable obligation of an enlightened State. As a matter of abstract reasoning, sufficient progress deserves to be made at the same time on all fronts; but the inexorable logic of circumstances unfortunately sets a limit to any such all-embracing effort. Relative priorities should, therefore, be fixed in a planned programme of development, so that the programme for any five year period allows for discrimination between one project and another for the purpose of determining the degrees of attention to be paid to them, in that period of time. Such a policy would, in due course, work out a satisfactory result in all the desired directions. It is often urged that the nature and size of the plan have been influenced largely by the pressing need of creating employment on a large scale. Such an argument seems to imply that the desired volume of employment can be created by the simple process of enumerating targets, whether or not such targets are attainable in financial and physical terms. In our attempt, however, to cover as wide a field as possible all at once on theoretical grounds of desirability, we have, in my view, failed to recognise the necessary priorities and packed the plan with too many proposals that make it spectacular but are in excess of our financial and physical capacity. In an attempt to reconcile ever-increasing financial demands for various projects with an overall total of Rs. 4,800 crores, the cost of some of them at least appears to have been underestimated. In reality, the plan, as put forward, requires financial resources substantially in excess of the figure of Rs. 4,800 crores. Vague assurances of a somewhat uniform character have been given to the Ministries, that suitable upward revisions would be made in the financial allocations in the course of the operation of the plan. Thus, the authorities concerned will be kept on tenterhooks of expectation of improved financial provision as a result of the annual revisions of the plan. Having regard, however, to the overall shortage of funds, such an assurance, given impartially to different Ministries at the same time, can only lead to ultimate disappointment and confusion, apart from throwing doubts upon the proposals and targets themselves."

Lack of Balance

"It is not surprising that a plan of this character lacks balance; and this defect is best illustrated by the want of correlation between production and transport; and nowhere is that imbalance more glaring than in the case of the obligation of the railways to carry the traffic resulting from industrial and other targets of development. It is being demonstrated today how the failure to provide for the transport capacity of the railways, in spite of the best efforts of the railways, resulted in continued restrictions on the movement of important commodities. It is apprehended that the contemplated development under the second five year plan may also prove seriously unmatched by the transport capacity of the railways. A shortage of railway capacity will surely react unfavourably upon the supply of raw materials and other basic commodities, as also of industry and other basic commodities, as also upon the movement of export articles and distribution of foodstuffs and consumer goods, on the regular supply of which the country can rely for the purpose of countering the forces of inflation. In this view of the matter, all the traffic generated, which may belong to any of the above categories, should be capable of prompt movement. The large foreign exchange content and heavy steel requirements of the railway programme are sometimes pointed out as its inherent difficulties. But even if these uncertainties are a valid argument against a proper railway plan, the effect that inadequacy of transport would produce on the rest of the plan is self-evident. Indeed, no production should be undertaken unless it can be transported; or, in other words, the extent of available transport facilities should set the limit to production."

More Attention to Shipping

"Another form of transport which has not secured adequate attention, due principally to lack of finance, is shipping, whose importance to the Indian economy is difficult to exaggerate. Coastal shipping, which has been reserved for the railways of their burden as much as possible. But overseas shipping is in a sense even more important, particularly from the point of view of earning foreign exchange. Unless an adequate provision is made for the expansion of overseas shipping, every day that passes makes it difficult for us to occupy our rightful position in this trade because of the steady expansion that is taking place in the shipping of various other countries. Apart from this factor, one should not ignore that the merchant marine forms the second line

of defence in any maritime country—an aspect which India could ill afford to overlook. It is an irony, however, that expert advisers are still advocating a further reduction in the allocation for transport, mainly on the strength of abstract formulae borrowed from other lands."

"In my humble judgment, basic schemes of overriding importance should have been carefully selected and given top priority in the second plan, and the rest arranged in a descending order of lower priorities, to be taken up for implementation as and when possible in the five year period. Thus, the second plan should have been primarily treated as marking a momentous transition to a fuller and more comprehensive plan in the third quinquennium, for which the foundations would have been well and truly laid in the second plan period. The plan, as it stands, is however open to the criticism that, as a five year programme, it lacks definiteness, is unrealistic and over-ambitious, and its massive superstructure has been raised on precarious foundations."

Mr. V. T. Krishnamachari's Comments

As a counter-blast to Mr. Neogy's note, the Deputy Chairman of the Commission circulated the following comments to the National Development Council: "I do not think it is possible to reduce the size of the plan at this stage. The plan for Rs. 4,800 crores has been before the country for a long time with the approval of the Cabinet and the National Development Council. As the plan seeks to initiate large-scale industrial development with the emphasis on heavy industries the country should be prepared to find investment of at least 10 to 12 percent of the national income. With the issues placed before the country clearly, the necessary national effort should be forthcoming. In implementing the plan, we have to take all steps needed to see that there is no inflation."

"The most important thing from this point of view is agricultural production. Early in 1955, the Planning Commission addressed a letter to States suggesting that the aim should be to double agricultural production over a period of about ten years. What was envisaged was the doubling of the value of production in agriculture, including foodgrains, raw materials, fruit and vegetables, animal husbandry and dairying and milk supply, poultry, etc. In the second plan, some effort is being made to diversify agricultural production. But, on the whole, the agricultural targets stated in the plan are conservative, even insufficient. With the resources provided in the plan, it should be possible to achieve higher targets. Increased agricultural production is an important 'resource' for development. If an all-out effort is made in National Extension and community project areas and elsewhere, and the agricultural programmes are organised efficiently at the village level, it should be possible to step up production in the third year of the plan to a level at which our agricultural exports can be increased. What I have in mind is an increase of about 40 percent in agricultural production by the end of the plan and a price level of, say, Rs. 10 to Rs. 11 a maund for wheat. The agriculturist stands to gain if production increases by 40 percent and prices decline by 20 percent. His terms of trade should of course be safeguarded, so that his net return is not allowed to diminish. For this, adequate amounts of short-term finance should be assured. Short-term loans are over and above the allocations in the plan. It has been suggested in the draft plan that each district and, in particular, each National Extension and Community project should have a carefully worked out agricultural plan. Within this framework, it is necessary to bring every family into the movement for increased production and to get every village to make its own plan and set up for itself certain standards of performance. Larger quantities of fertiliser should be imported till our new factories come into production. The Food and Agriculture Ministry and the Planning Commission should arrange for discussions with individual States formulating programmes with this end in view."

Industry, Minerals and Transport

"The second aspect to be stressed concerns the related fields of industry, mineral development and transport. In fields other than these, the allocations in the second five year plan are only slightly in excess of the level reached in 1956. In these three fields, however, the public sector is to be expanded and the expenditure is to be stepped up to several times the amount in the first plan. There are large administrative tasks involved; personnel have to be trained and efficient organisations set up. Planning in these fields must take account of uncertainties in the supply of steel and equipment from abroad and in the amounts of foreign exchange available. Within each field in this sector—industry, minerals, railways, etc.—there should be careful priorities, so that adjustments can be made readily. Secondly, programmes in this sector should be worked in a co-ordinated manner. Connected projects—in industry, minerals and transport—should be implemented in an inter-related manner so as to ensure that the expenditure incurred on each group of projects yields the maximum return."

"At one of its meetings, the Planning Commission considered that special machinery would be needed for bringing about co-ordination and integrated planning in these fields. This might take the form of a standing committee consisting of a member of the Planning Commission with Secretaries of the Ministries concerned and the Chairman of the Railway Board. The standing committee should draw up priorities and propose allocations of all resources, including foreign exchange, materials and certain categories of technical personnel. The proposals of the standing

BUSINESS REACTION TO NEW INDUSTRIAL POLICY

PRIVATE ENTERPRISE IN A PLANNED ECONOMY

(FROM OUR BOMBAY CORRESPONDENT)

THE new industrial policy resolution is generally considered to be a realistic document by commercial and industrial interests in Bombay. Sir H. P. Mody in a statement says: "It is recognised that in a planned economy the rôle of the State must become increasingly more important, particularly in a country with inadequate capital resources. It is also inherent in such a scheme of things that the private sector of industry has to function in consonance with the defined objectives and under certain regulations. What is of fundamental importance in that connection is that from the point of view of both democracy and economic progress the controls should not be too restrictive and vexatious in character and thus defeat the purpose in view. It is heartening, therefore, to be assured that the Government concedes the necessity of giving 'as much freedom as possible consistent with the targets and objectives of the national plan,' and it is to be hoped that the spirit underlying this declaration will animate the actual application of the various provisions which are to be found in our statute book for the regulation of industrial undertakings. I feel that with the policy now enunciated, industrialists will find it

possible to go ahead with increased confidence and make the fullest contribution possible to the development of the country and the general well-being of the people."

At Poona, Mr. A. R. Bhat, Honorary Secretary of the Mahratta Chamber of Commerce and Industries, and a member of the Bombay State Industries Advisory Board, has said: "The resolution modifies the basis already adopted for the formulation of the second five year plan, which has laid special emphasis on the rapid development of basic and heavy industries, and on the growth of cottage and small-scale industries, for increasing the employment potential and satisfying the additional demand for some of the consumer goods. The resolution leaves a vast field open to the private sector which would again have to fit in with the overall plan." Mr. Bhat also observed that the industrial policy resolution "makes no fundamental departure from the policy outlined in the Resolution of April 1948." After tracing the development of industrial policy since Independence, he says that the foundation of the industrial system should be strengthened through the development of basic and key industries. A huge capital outlay is needed while the return on investment was not quick. That logically meant that the public sector should be widened. As capital resources are limited, he adds, regulation of the use of capital is inevitable.

Assurance to Foreign Capital

The chairman of the Bombay Stock Exchange, Mr. K. R. P. Shroff, has declared that where the Resolution assures that there will be no nationalisation of existing private industries, it is welcome. However, "there is nothing new in the policy."

Mr. S. N. Haji, chairman of the All-India Manufacturers' Organisation, describes the statement as "a timely document," sizing up the situation in the India of today and re-stating the earlier policy in the light of the events that have occurred since its first enunciation eight years ago. He says it is gratifying to note that the private sector will now be given a bigger rôle in economic development. He welcomes the decision to establish industrial co-operatives, and says that discrimination between large-scale and small-scale industries should be of "as short a duration as possible."

Broadly speaking, he adds, the principles on which the various industries have been grouped in the public and private sectors are inevitable under the existing economic circumstances. "As is essential in the economic field, the divisions will not be rigid, and in addition to the 'concurrent' list, the private and public sectors can co-mingle as and when required. The country will thus have a mixed economy at all levels and both the public and private sectors will be kept adequately employed. Private enterprise has been definitely recognised as an agency for planned national development with the opportunity to expand. The stress laid in the statement on giving a fair and non-discriminatory treatment to both privately and publicly owned units meets the repeated opinion expressed by us in the All-India Manufacturers' Organisation on the discrimination that has so far prevailed, especially in the application of labour enactments."

Mr. J. F. Sinclair, president of the Bombay Chamber of Commerce, has declared that the re-affirmation of the Government's attitude to foreign capital should "particularly be welcomed by the foreign business community." In his view, some aspects of the new industrial policy resolution offer reassurance to private enterprise. "After eight years of conditioning, private enterprise will have anticipated the provisions of the new industrial policy resolution. It seems, in fact, to present in a consolidated form the trend in detail of many different policy statements made and followed in the interval since April 1948. It is a document of clarification and to that extent is to be welcomed."

Mr. Babubhai Chinal, vice-president of the Federation of Indian Chambers of Commerce and Industry, has expressed the opinion that the spread of State trading will displace normal trade outlets. State trading, he says, is not essential for a country such as India, because she has a mixed economy. Mr. M. R. Ruia, a leading cotton merchant, believes that the new policy will not encourage the private sector and will hinder capital formation.

Labour Point of View

As a spokesman of labour interests, Mr. G. D. Ambekar, president of the Indian National Trade Union Congress, has declared that there is nothing in the resolution to encourage workers. Although he welcomes the idea of workers' participation in the management of industries, he complains that nothing has been said about a fair wage for workers. However, he considers the latest policy statement an improvement over the 1948 resolution. He also thinks that it reflects a defeat for the private sector—which has been unable to secure sufficient risk capital for industrial development.

E.I.C.A. Resignations

Sir Purshottamdas Thakurdas declined to withdraw his resignation at the meeting of the Board of the East India Cotton Association, held on 4th May. Mr. Chimanlal B. Parikh who resigned from the vice-presidency did the same.

Indore Malwa United Mills

Mr. Kudilal G. Seksaria, chairman, addressing the annual meeting of the Indore Malwa United Mills, held in Bombay on 4th May referred to the useful rôle which the managing agency system can still play in the economy of the country; "I may be permitted to say that it is to this much-criticised managing agency system that we owe the initiative and growth of almost all the great industries of India and the building up of the industrial life of the country in the last century. Though the system is still necessary for some time more under the present conditions, I do not however mean that with the advance of time and the growth of experience we should not welcome the necessary change." He went on: "In deference to the wishes of our Prime Minister, Mr. Nehru, that labour should be given an honourable place in the management of undertakings, the directors have recently announced their proposal to take a representative of labour on the board of directors of your company. For this purpose, as you are aware, the articles of association of the company have been amended. Now that a great responsibility has devolved on the workers with their share in the management, I hope they will give their fullest and ready co-operation towards obtaining the maximum production of the concern in their own interests as well as in the interests of the whole country."

"As regards the current year, the prospects of cotton crop, to start with, were very good, but unfortunately, due to heavy rains later, the position the result that the price of cotton has suddenly the prospects for the company. The increase in effect us. The increase in excise duty of half an is the main production of the company's mills, is to be seen what proportion of it will be borne by the consumers. In spite of all these handicaps, satisfactory, and is progressively improving. I hope, therefore, that, if not like last year, the result at the end of this year will prove satisfactory to all of you."

Uttar Pradesh

FINANCIAL AID TO PRIVATE INDUSTRIES

GOVERNMENT WORRIED ABOUT STEEL AND CEMENT SCARCITY

(FROM OUR LUCKNOW CORRESPONDENT)

LOANS totalling a little over Rs. 3 crores, which were sanctioned by the State Government for private industries, have been criticised by the Opposition in the Legislative Assembly and by the left-wing elements of the U.P. Congress Committee. An adjournment motion to stop further disbursement was moved, but it failed because the money provided in last year's supplementary Budget had all been paid. Denying charges of favouritism, the Chief Minister, Dr. Sampurnanand, pointed out that each loan was decided on its merits and that every pie was secure because the advances had been made against repayment guarantees given by the State Bank of India and the Chartered Bank of India, Australia and China. The loans carry 5 percent interest and are repayable in ten equal instalments commencing from 1958. The amounts represent only 66 percent of the capital cost of the industries it is proposed to start, and the rest will have to be found by the industrialists themselves. Uttar Pradesh has no money market of its own and the State Industrial Finance Corporation is primarily concerned with giving assistance to medium and small-scale industries. The various industrial advisory committees, the Chief Minister declared, had also been consulted before the loans were sanctioned.

Steel and Cement Shortage

A setback to the progress of the State's second plan is apprehended due to insufficient allotments of steel and cement by the Centre. The supply of cement during the current year is expected to be less than half the demand, and that of steel less than one-third. U.P.'s demand for steel in the current year is estimated at about 5,55,000 tons, but the allotment by the Centre is only about 400,000 tons. In the case of iron and steel, the demand is for over 91,000 tons while the allotment amounts only to 28,500 tons. Until March 1956, iron and steel allotments were made on a quarterly basis, but since then the Government of India has switched over to annual allotments. The State Planning Minister, Mr. C. B. Gupta, is worried that the Centre should take, as the basis for present allotments, the average of the past few years when free quotas were given to States according to demand. "To determine present allotments on the basis of past quotas," he says, "is unreasonable."

Allotment of Coal Wagons

The Centre is giving the States 25 percent of its pool of 1.8 million tons of steel, made up of one million tons of indigenous production, 200,000 tons of additional indigenous output and 600,000 tons of imported steel. Imported steel, according to Mr. Gupta, costs Rs. 200 a ton more than indigenous steel. The price of imported cement is also about Rs. 60 a ton more than that of the local product. Increased use of imported steel and cement will thus push up the cost of many plan projects. The State Government, however, has made a request to the Centre that separate quotas of steel and cement should be given to the Rihand dam and other irrigation projects. Coal is another commodity in scarce supply, but, according to the State Government, the scarcity is entirely due to discrimination in wagon allotments. U.P. is getting at the moment barely 28,000 railway wagons for carrying brick-burning coal, as against a minimum requirement of 50,000 wagons a year. As against an estimated requirement of 20,000 wagons for soft coke for domestic purposes, U.P. gets at present only 6,000 wagons. The Government has demanded that the State should be bracketed with West Bengal and Bihar for wagon allotments. As the latter two are coal-producing areas, a wagon is able to make the trip from the collieries to consuming centres in those States and back in a short time, and hence, it is stated, no restrictions are placed in the allotment of wagons. U.P. claims to be nearer the coal-producing areas than the other States, so the same treatment as is given to West Bengal and Bihar, it is argued, should be given to it also.

Sales Tax Bill

A Bill to replace the Sales Tax (Amendment) Ordinance issued on 1st April has been introduced in the Legislative Assembly. Salt, which was subjected to sales tax by the Ordinance, has been exempted in the Bill. Otherwise, there is no change either in the rates of tax or in the list of commodities. But one or two small concessions have been made to traders. The minimum taxable turnover, which was reduced by the Ordinance from Rs. 15,000 to Rs. 10,000, has been raised by the Bill to Rs. 12,000. The Bill also provides that a dealer whose turnover does not exceed Rs. 15,000 may have the option of paying a "composition" fee, to be fixed by the assessing authority in place of the annual tax payable by him, so that he may save himself the trouble of keeping elaborate accounts. At the moment, there is only one revising authority for sales tax. In future, there will be one more such authority to cope with the extra work which an increase in the number of tax-paying traders will create.

New Law on Cane Cess

By another Bill introduced in the Assembly last week, the State Government proposes to regularise the levy of the sugarcane cess which has been in operation for over 17 years now. Doubts about the present law relating to the imposition of the

cess having been raised, it is considered desirable to substitute it by new legislation. The Bill provides that the State Government may impose a cess not exceeding 4 annas a maund on the entry of sugarcane into the premises of a sugar factory. The cess imposed on cane used by a factory is payable by the owner. Power is taken to recover the dues from a defaulting factory owner together with 6 percent interest on arrears. Defaulting owners are liable to a fine of Rs. 5,000 or imprisonment of six months, or both. In case of "continuing contravention," the offender is liable to a further fine of Rs. 1,000 for each day during which the contravention continues. The yield from sugarcane cess amounts to Rs. 5.5 crores annually, but the chief criticism against it has been that the money is not spent as it should be on the improvement of sugarcane cultivation in the State. If the cess revenue had actually been devoted in full to the purpose for which it was collected, the sugar industry would have been in a healthier state. The U.P. Sugarcane (Regulation of Supply and Purchase Act, 1953) allocating sugarcane supply zones to the various factories, which was challenged in the Supreme Court some time ago, was declared *intra vires* by the Court last week. The petition was filed by members of the Ganna Utpadak Sangh, a body opposed to the co-operative development units established and recognised under the Act.

Hydro-Electric Power Station

The Khatima hydro-electric power station on the Sarda canal, completed at a cost of a little over Rs. 12 crores, was formally opened by the Chief Minister last week. The station will serve the needs of the area north of the Ganges in the central region of the State between Moradabad and Lucknow. It is equipped with three machines of 13,800 k.W. each. The biggest hydro-electric power station to be erected so far in the State, Khatima will generate about 112.4 million units of electricity

every year. The anticipated revenue is Rs. 73.3 lakhs annually.

Locomotive Component Works

The President, Dr. Rajendra Prasad, laid the foundation stone of the Indian locomotive component works at Manduadih, four miles from Banaras, last week. The factory will be erected on a 300-acre plot, at an estimated cost of Rs. 45 crores. It will give employment to over 3,000 men. The Railway Minister, Mr. Lal Bahadur Shastri, announced that local labour would be given preference and that a school to train workers would also be set up.

Closure of Textile Mills

The Minister for Labour and Social Welfare, Acharya Jugal Kishore, said in the Legislature that five textile mills in U.P. were closed at present. The John Mills of Agra had been closed due to litigation among the shareholders. The Lalla Mall Hardeo Das Cotton Spinning and Weaving Mills of Hathras had been closed because of continuous losses. The Banaras Cotton and Silk Mills had been closed for a similar reason. The Kanpur Cotton Mills, Juhi branch, was closed due to a fall in the price of yarn.

Rising Food Prices

A two-day meeting of Regional Food Controllers held in Lucknow towards the end of April discussed the question of rising food prices in the State. These are said to be 40 percent higher than they were at the corresponding period of last year. Wheat prices are about Rs. 13 a maund, as against Rs. 9 last year. Gram is quoted at Rs. 10 a maund, compared with Rs. 5-8 last year. The barley price of Rs. 7-8 a maund compares with Rs. 4-8 of last year. Crops this year have not been normal, and there is no tendency for prices to fall even after the arrival of new crops in the market.

Jute

RAW JUTE PRICES STEADIER ON DOUBTS
ABOUT SUPPLIES FROM PAKISTAN

BIG INCREASE IN INDIAN MILLS' GUNNY STOCKS

THE raw jute markets came under varying influences during the past week, most of them calculated to create firmer conditions. Reports from Pakistan, although not yet confirmed officially, gave the impression that the export of jute to India would become more difficult for the rest of the season; the prices at which E.P.C. forms would be passed would make it virtually impossible for the Indian mills to purchase Pakistani jute, and they would therefore have to rely on indigenous fibre to see them through. This caused most sellers to change their minds, and stockists who a week ago were keen for business now started to talk of a possible squeeze. But the mills pointed out that with stocks in Cossipore standing at the exceptionally high figure of 10,00,000 maunds, there would be ample jute. What they did not point out, however, was that the greater proportion of the stocks held by operators was middle quality jute, in which they have no further interest, or jute from the jungli districts.

Weather conditions in the jute-growing areas also tended to steady the markets. Rainfall in the north was very heavy, causing a rapid rise in river levels and flooding in several Assam districts. Although the floods were by no means serious, and in many instances did not affect the jute fields, reports of this sort, as always, had an immediate effect on the Calcutta markets. Prices became firm just when they appeared to be on the slide, and sellers adopted a reserved attitude, although in most cases they were quite willing to sell at the full quoted rates. Conditions in other parts of India, especially in the Daissee districts, continued to be favourable, and recent rains allowed Daissee farmers to put their land under seed. New Crop reports from Pakistan were very favourable, but they had little effect on prices due to the uncertainty about the export of jute to India in the new season. Sowings in nearly all districts had been completed, and germination in many cases was almost double that of last year at the same time. It was estimated that the crop would be about 12½ percent larger. In both India and Pakistan, work was about one month ahead of last year at this time.

A feature of trading in jute over the past few weeks has been the almost complete lack of interest in New Crop. At this stage last year, practically all mills had fairly large quantities of New Crop jute on their books, but this year most of them have yet to open their New Crop account. This is believed to be due partly to the fact that early purchases and deliveries of New Crop in 1955 were far from satisfactory, and partly to the bearish views held by the trade.

Rise in Jute Goods Stocks

The gunny market saw some erratic fluctuations during the past week. The big rise of 12,300 tons in mills' stocks of jute goods at the end of April 1956 caused a temporary slump in prices, but they soon recovered. The recent dock strike, which brought work virtually to a standstill in the last week of April, may have been one reason for the increase. Total stocks at 107,300 tons are now the highest since September 1953, and sacking stocks at 62,700 tons the highest since April last year. Speculative activity at one stage during the past week had brought goods prices down to a very low level, and local shippers took advantage of the situation to cover against the recent overseas orders which they held on their own account. The main transactions were in sacking, where price fluctuations were heavy. Hessian was neglected and price movements were most in sympathy with heavy goods.

THE JUTE MARKETS

Manufactured Goods: The market opened last Thursday on a steadier note, and sacking prices showed a slight improvement. May shipment B Twills advanced by 4 annas to Rs. 104-14 a 100 bags while October-December shipment moved up by 2 annas to Rs. 103. Hessian was comparatively neglected and rates lost 1 or 2 annas for 40in. 10oz. to be quoted at Rs. 38-1 for May shipment and Rs. 37-14 a 100 yards for October-December. Speculative activity caused prices to fluctuate within narrow limits throughout the day, but towards evening a definitely upward tendency developed on local covering. On Friday morning, sacking was 4 annas up on the previous day's opening quotations, and hessian showed a rise of 2 annas. Heavy selling pressure from both bazaar operators and mills caused prices to decline rapidly throughout the day. By the evening, the previous day's gains had been lost, and Saturday brought a very weak market. Local shippers did some covering business at this stage, but over the week-end there was very little movement, and on Monday markets were virtually unchanged. Shippers again began covering in the afternoon and this, coupled with the improved jute markets, caused gunnies to recover. By Tuesday morning, B Twills had risen by Re. 1 to Rs. 105-14 for May shipment and hessian advanced to Rs. 38 in sympathy. Sacking was now about Re. 1 higher than the week's opening quotations, but hessian was more or less the same.

Opening quotations on Wednesday morning were as follows:

	May	June	July-Sept.	Oct.-Dec.
40in. 8oz.	Rs. 31-14	Rs. 31-10	Rs. 31-4	Rs. 30-12
40in. 10oz.	37-15	38	38-2	37-10
B Twills	106-2	105-10	105	104
Heavy Cees	105-4	105-4	105	104
A Twills	129	128-8	128	127
Liverpools	119-8	119	118-8	117
Cornsacks	106-8	106-12	106-12	105-12

Raw Jute: Calcutta mills took a little more interest in the raw jute markets at the beginning, and successfully undercut prices by 4 annas a maund in purchasing about 75,000 maunds. They continued to make almost daily purchases on a much smaller scale, but eventually prices rose again due to the steadier upcountry markets, and mills lost interest. After the week-end, however, business of about 50,000 maunds was done at the higher levels in spite of sellers' attempts to look reserved. The main difficulty in all transactions was again the question of assortment, as most holders of jute are carrying large quantities of middle quality jute. In an attempt to even out their position, many sellers offered high assortments of middle jute at a premium of only Rs. 2-8 a maund over bottom quality, but only small business was reported on this basis, as mills' stocks of the higher grades were more than adequate.

Opening quotations were based on Upper Assam jute at Rs. 26-4 a maund basis Bottoms for May-June shipment, and although business was steadily done at 4 annas below this level, these rates remained in force until the week-end. In the circumstances, they could only be regarded as nominal and were not a true guide to the state of the market. After the week-end, in sympathy with upcountry markets, quotations advanced to Rs. 26-8 for Upper Assam Bottoms, and sellers were then successful in resisting buyers' attempts to undercut the market. A fair amount of business was done at this level. Towards the close, sellers were again reserved, and prices had a tendency to rise.

Once again, mills paid the same rates for Dhurri, Northern and Assam types of fibre. Fairly good business was done at prices ranging between Rs. 25-12 and Rs. 26-8 a maund, basis Bottoms, for May and May-June shipment. Ready bills of lading also changed hands at Rs. 26 for Bottoms only and Rs. 28 for Middles only. Daissee and good class Tossa were also done in large quantities and prices paid varied between Rs. 26-4 and Rs. 27 a maund basis Bottoms for May shipment. A large mill paid bottom for May shipment. A large mill and group took an interest in Local Northern jute and paid Rs. 25-12 to Rs. 26-4 a maund basis Bottoms for one month's delivery. Daissee Mesta came in for a good deal of interest and business was done at Rs. 23-12 to Rs. 24-8 a maund, with a difference of Rs. 2-8 or Rs. 3 between middles and bottoms. In the pucca bale cuttings at Rs. 120 and Rs. 122 a bale for ready delivery ex Calcutta.

At the close the market is steady and prices have advanced about 8 annas a maund. Opening quotations on Wednesday morning were as follows:

Indian Jute (Kutch):		Landed at Mills		Shipment	
		Rs. a md. basis		May-June

Commodity Markets

WHOLESALE PRICE INDEX RISES

The official wholesale price index (base: year ended August 1939 = 100) advanced by 0.4 percent to 392.1 during the week ended 21st April 1956 as compared with 390.5 (revised) for the previous week. The index was lower by 0.1 percent when compared with the corresponding week of the last month, but was higher than that of a year ago by 14.2 percent. The index for Food Articles moved up by 0.1 percent to 361.3 as a result of an advance in the prices of wheat at Hapur (+4%), rice and bajra (+2% each) and gur (+1%), despite a decline in the prices of tea (-9%), wheat at Amritsar (-7%), dal arhar (-2%) and gram (-1%). Higher prices of raw silk and groundnuts (+6% each), manganese ore (average export price) (+4%), castorseed (+3%), Punjab-American raw cotton in Bombay, raw jute and linseed (+2% each) and rapeseed, cottonseed, and conra (+1% each) raised the index for Industrial Raw Materials by 0.9 percent to 475.4, although the prices of lac (-10%), gingellyseed (-7%), raw wool (-6%), Bengal cotton (-2%) and jarilla cotton (-1%) in Bombay exhibited declines. The index for Semi-Manufactures advanced by 0.9 percent to 378.4 as compared with 375.1 (revised) for the previous week. Items which witnessed significant variations were: mustard oil (+9%), linseed oil in Bombay and copra cake (+4% each), gingelly cake (+3%), coconut oil, groundnut oil and gingelly oil (+2% each) and copper (-3%). The index for the Manufactures group stood at 375.8, as compared with 375.6 (revised) for the previous week; prices of jute manufactures (+1%) moved up, while glass (-2%) and dyestuffs (-1%) were marked down. The Miscellaneous group rose by 0.1 percent to 496.5 as a result of higher prices of phillies (+4%) and betelnuts (+2%) despite a fall in black pepper (-4%) and turmeric (-2%).

AGRICULTURAL PRICES IN INDIA

The world crop production in 1953 was better than in the previous year, especially in respect of rice and wheat in India. The year has generally been regarded as a period of comparative economic stability in this country since World War II. There was a large-scale increase in the output of foodgrains, as well as of commercial crops, except in areas which suffered from adverse weather conditions. This led to an easing of prices. Among the commercial crops, oilseeds and oils witnessed a steep price rise due to speculative activity, while cotton prices fell mainly because of better prospects of the current year's crop. These facts are revealed in a publication entitled *Agricultural Prices in India 1952-53*, brought out by the Directorate of Economics and Statistics, Union Ministry of Food and Agriculture. This issue is the fourth in a series of issues under the above title, and presents in a single compass commodity-wise and State-wise information for 1939 and from 1950 to 1953 on wholesale, retail and farm (harvest) and controlled prices.

MAJOR WOOL EXHIBITION IN AUSTRALIA

The biggest wool exhibition ever attempted in Australia will be held in Melbourne during the Olympic Games. Wool interests throughout the country will combine to conduct the exhibition from 29th November to 4th December. It will be held at Wirth's Olympia, Melbourne's biggest circus and fair ground, which will be re-designed for this purpose. The organisers of the exhibition propose to spend £A100,000. Its organising director, Mr. Maxwell Gibb, announced recently: "We aim to present the woolen industry from shearing to the latest fashions in clothing."

MIDDLE EAST OIL PRODUCTION UP

Production of crude oil in the Middle East totalled just over 43,000,000 metric tons during the first quarter of 1956. This represents an increase of 13 percent over the production figure for the same period of last year. The three largest producers were again Kuwait, with 14,300,000 tons, Saudi Arabia, with 12,400,000 tons, and Iraq, 8,600,000 tons. The largest increase, however, was achieved by Iran, with 5,500,000 tons, which represents an increase of 70 percent above the first quarter of 1955, and nearly 20 percent over the final quarter of last year. Of the other Middle Eastern oil-producing areas, Qatar produced 1,500,000 metric tons, and Egypt, Bahrain, and the Kuwait-Saudi Arabia Neutral Zone lesser quantities.

MOISTURE-PROOFING COMPOSITIONS FOR PRESERVING METAL STORES

To preserve metal stores, it is necessary to wrap them properly to avoid the removal of preservative films during subsequent handling, and then to treat the wraps with a suitable material to prevent the entry of moisture. Moisture-proofing compositions are extensively used for this purpose. At present, India's requirements are mostly met by imports. A suitable composition has been developed by the Technical Development Establishment (Labs), Kanpur. It can be conveniently applied to cartons and other packages wrapped in paper, cloth or hessian. The raw materials are of indigenous origin and are easily available. The manufacturing process is simple, it is stated, and the equipment required can be easily fabricated. Production can be undertaken by industrial units already making allied stores. The process is covered by the Indian Patent No. 47272. The demand for the composition is limited at present, but with the establishment of more and more engineering industries, the requirements may be expected to increase. Parties interested in undertaking the commercial development of the process may correspond with the Secretary, National Research Development Corporation of India, Mandi House, Lytton Road, New Delhi.

Engineering and Transport

FASTER P. & O. SERVICES TO THE FAR EAST

FASTER and more frequent shipping services to the Far East were announced in London by Mr. A. J. M. Crichton, one of the general managers of the P. & O. Steam Navigation Company. As from June, P. & O. will provide three, instead of two, services on Far East routes, with both passenger and cargo vessels running to faster schedules. Mr. Crichton told British users of shipping to the Far East that P. & O. was considering a 40,000-ton vessel to carry passengers and cargo to and from Australia at 27 knots, but that immediate development was concerned solely with Far East services. Delivery of the new ships *Salsette* and *Sabarna* would permit extension and improvement of freight services to and from the Far East as from June.

Mr. Crichton summarised the company's objective as follows: Firstly, by rationalising ports of discharge between three sets of ships they would shorten voyages but continue to cover all ports now served. Secondly, by giving increased frequency and improved coverage, shippers would have a wider range of choice and greater space for cargo. Thirdly, the company, for the first time in its history, would provide a direct service from the east coast of Scotland by loading and discharging at Grangemouth. Fourthly, the revised schedules would provide a fast freight service terminating and turning in China. Fifthly, the improvements would give a better freight service from Continental ports to the Far East.

STANDARD SPECIFICATION FOR OUTDOOR TYPE DISTRIBUTION TRANSFORMERS

The Indian Standards Institution has issued, to elicit comments, a draft Indian Standard Specification for outdoor type distribution transformers up to 100 kVA 11kV. The draft covers oil-immersed, self-cooled, three-phase, outdoor type distribution transformers with Class A insulation of capacities up to 100 kVA for use on systems with nominal voltages up to 11 kV and a frequency of 50 cycles a second. The importance of interchangeability of parts; special needs such as those of tubewells; service conditions, especially high ambient temperatures, etc. have all been considered. The draft is intended to bring about uniformity in production, as far as possible, among different manufacturers. Classification of insulating materials and admissibility of insulation other than Class A have also been given in an Appendix. The draft has been prepared by the Electrical Plant and Switchgear Sectional Committee of the Indian Standards Institution, on which are represented organisations like the Directorate-General of Supplies and Disposals, Development Wing of the Ministry of Commerce and Industry, army, navy, air force, railways, Government Test House, National Physical Laboratory of India, Central Water and Power Commission, and reputed manufacturers and users of transformers in the country. The Indian Standards Institution will receive comments on this draft up to 15th June.

INDIAN ENGINEER TO STUDY STEEL-MAKING

A young Indian engineer from Bihar, Mr. J. M. Naim, has been invited by the East German Republic to spend six months studying steel-making techniques in that country. Mr. Naim will spend the first month in the Metallurgical Department of Berlin University and will then visit various steel plants. His special subject of study is low-shaft furnace practice, a technological innovation which, it is claimed, has helped East Germany to treble her output of steel since the war. A pilot plant using this practice is proposed to be set up in Jamshedpur by the Tata Iron and Steel Company Limited. Mr. Naim is employed in Tata Steel's Research and Control Laboratory.

TEA PROSPECTS FOR THE NEW SEASON

STATISTICAL POSITION CONSIDERED "REASONABLY SATISFACTORY"

THE Calcutta tea-broking firm of W.S. Cresswell and Co. Private Ltd., has issued its report on the 1955-56 season which contains the following assessment of the outlook for the coming year. It is stated that "production in 1955, by countries for which figures are available, showed an increase of 28 million lbs. while consumption, in our estimation, advanced by some 32 million lbs. India, Pakistan and adjoining countries being the principal areas of expansion. Such an assessment might be considered erroneous when it is known that on 1st April, 1956, there is a carry-forward of the 1955 north Indian crop of about 50 million lbs. still awaiting disposal. This however is explained by the peculiar circumstances of the 1954 boom and the crash which so dramatically followed it in early 1955. At that time, it became apparent that overseas buyers, particularly those in the U.K., had panicked and they were faced with heavy financial losses when the market fell. This combined with the growing credit squeeze, resulted in U.K. imports of tea in the past 12 months falling by 95 million lbs. In consequence, while consumption showed little change, stocks in the U.K. have, in recent months, steadily declined and are now at a fairly low level. Viewed in this context the carry-forward of 50 million lbs. with producers in India loses much of its significance and should not be considered an unwanted surplus.

"Prospects, then, for the coming season are, we think, brighter than they were a year ago. There is no doubt that the consumption of tea is steadily expanding, particularly in India, now on the threshold of rapid economic development, while stocks overseas, particularly in the U.K., are comparatively low and can be said to offset the carry-forward of the 1955 north Indian crop. Although, statistically, we can consider the outlook to be reasonably satisfactory, there are a number of factors in the background which cause us to qualify our optimism. First and foremost is the lack of any international agreement among growing countries for the regulation of production and exports. While the market for tea is an expanding one, indiscriminate extension of tea areas by individual countries could rapidly lead to disaster for the majority. It is in this context that we find the ever-increasing cost of production of Indian tea very disturbing. Recent wage and bonus awards, combined with a multitude of taxes, are, in our opinion, slowly pricing the planter varieties of Indian tea out of the world markets. Low cost tea, notably from Africa, is steadily gaining on the Indian product in the London market and, while an alternative outlet exists in India, valuable foreign exchange is being lost. Another depressing aspect of the present cost structure is the increasing difficulty being experienced by many producers in finding the replanting and development programmes often essential for progress and future prosperity. It is against this background of increasing competition from other producing countries, often on a lower cost basis, that the question of quality assumes special importance.

"Quantity at the expense of quality is often profitable as a short-term policy, but in the present circumstances we consider it both dangerous and not in the general interest. If Indian tea is to maintain and develop its position in the world's markets its product must be able to stand comparison in quality and appearance with similar varieties from any other quarter. In conclusion, we think it fair to anticipate a satisfactory season for growers, provided world production remains within reasonable bounds and costs are not forced up still further. We expect a particularly rewarding year for producers of the best quality teas; and to those who, by their geographical position, cannot aspire to come into this category, we recommend the maintenance of a standard of plucking which will ensure a good appearance."

NORTH INDIAN TEA CROP REPORTS

The following summary of crop and weather telegrams has been received for the month of April 1956:

Upper Assam: Weather generally seasonable; rainfall above normal in Dibrugarh and Panitola; immediate prospects fair.

Central Assam: Weather generally seasonable but dry in Jorhat; hailstorms with little damage to crops reported from Moran; immediate prospects fair; year in Nizira; some red spider reported from Jorhat.

Lower Assam: Weather generally seasonable with good rain at Tezpur; abnormally hot in Mangaldai; immediate prospects fair to good.

North Cachar: Weather hot and rainfall below normal in Happy Valley; good rain has fallen in North Cachar and prospects are brighter; severe storms with hail reported from Lakhimpur; red spider prevalent throughout the district and is severe in North Cachar; outlook last month normal to poor.

South Cachar: Weather generally hot and dry with deficient rainfall; severe hailstorms reported from Haikakandi with considerable damage to crops; red spider blight prevalent at Chargola and Longai; immediate prospects fair; outlook good to normal.

Eastern Doonars: Weather favourable; outlook last month about normal; slight red spider; immediate prospects fair.

Western Doonars: Rainfall for the month has been deficient; outlook to date is slightly over last year; red spider blight prevalent; immediate prospects fair.

Darjeeling: Outlook last month good; immediate prospects fair; weather seasonable; severe hailstorms are reported and severe damage has resulted to crops, red spider blight severe; thrips prevalent generally.

Terai: Drought conditions prevailing but useful rain since fallen; crop prospects only fair; red spider blight prevalent; helopeltis in evidence.

TEA EXPORT UNDER SPECIAL LICENCE

As a considerable portion of the tea crop could not be exported during the year 1955-56 due to certain difficulties, the Government of India has decided to extend till 30th June, 1956, the period of validity of special export licences issued during 1956 under the Tea Act. A notification to this effect has been issued in the Gazette of India Extraordinary, dated 5th May.

COCHIN TEA SALES

At Sale No. 1 held on 2nd May, approximately 4,50,000 lbs. were on offer. There was much less demand than has been noticeable in recent sales and withdrawals were heavy. Best liquoring High-grown received less enquiry and sold at 2 to 4 annas below last rates. Good Mediums, Wynaad descriptions and Low Mediums were irregular, but generally declined 1 to 3 annas while residuals were barely steady. There was an increased demand for Black Leaf Middle East descriptions but these sorts also followed in the general decline and were 2 to 3 annas easier. There were fairly strong buyers of Special Licence at 4 pies. In new Season's quota, business has been transacted at 33 pies. Export Sale No. 11 will be held on 15th May. Internal Sale J will be held on 17th May.

LONDON TEA SALES

At last week's London tea sales the 69,918 packages on offer realised an average price of 5s 0.24d a lb. against 4s 11.95d in the previous week and 4s 1.69d a year ago. Plain broken pekoe was quoted at 3s 5.5d nominal; in the previous week 3s 4.1d nominal. Prices obtained by some of the companies are given below:

	No. of packages.	Average a lb.
Amalgamated	588	4/4 1/2
Amgoorie	125	8/2
Assam Frontier	1,119	6/11 1/2
Attaree Khat	216	5/5
Badulipar	54	4/11
Balijan	174	6/4 1/2
Borjan	240	4/10 1/2
British Indian	192	4/0 1/2
Cons. Tea and Lands	2,869	6/9 1/2
Deamoolie	276	6/9 1/2
Dickwella	114	5/7 1/2
Deolabat	258	6/8 1/2
Eastern Produce	822	6/6 1/2
Greenwood	432	5/11
Hakim	359	4/9 1/2
Jedina	270	3/7 1/2
Jhanjee	796	5/5 1/2
Jorehaut	1,327	7/9
Kanan Devan	252	4/5 1/2
Koomsong	136	7/0 1/2
Lanka	258	6/3 1/2
Lungia	366	3/5
Majuli	480	4/7 1/2

Rajawella	747	4/4 1/2
Rajmai	246	4/6
Rupai	198	6/5 1/2
Scottish Assam	300	4/8 1/2
Sephinuri-Bheel	132	4/0 1/2
Surmah Valley	108	4/7
United Planters	502	6/6

COLOMBO RUBBER PRICES

The following prices have been issued by the Rubber Board of India from the weekly market report published by the Colombo Brokers' Association:

	Closing prices on 27-4-1956 (Rupees a lb.)	Average for the period (Rupees a lb.)
Sheet:		
No. 1	1.51	1.51
No. 2	1.48	1.48
No. 3	1.45	1.45
No. 4	1.21	1.21
No. 5	1.16	1.16
Sheet Cuttings 1		90
Sheet Cuttings 2		85
Crepe:		
Water White		
R.M.A. No. 1X	1.22	1.24 1/2
R.M.A. No. 1	1.20/21	1.22 1/2
Crepe No. 2		1.20 1/2
Crepe No. 3		1.17 1/2
Scrap Crepes:		
Sc. Crepe No. 1	1.03 Nom.	1.05 1/2
Sc. Crepe No. 2	.95/97	.99 1/2
Sc. Crepe No. 3	.85/95	.92 1/2
Flat Bark	.75/80	.80 1/2
Sc. Crepe 3X		.96

To arrive at f.o.b. Colombo prices add 53.4 cents a lb in respect of rubber other than scrap crepe and 31.4 cents in respect of scrap crepe to the above market prices.

Calcutta Markets

GOOD GENERAL DEMAND AT TEA EXPORT SALE

DUST PRICES MOSTLY IRREGULAR

AT Sale No. 46, held on 7th and 8th May, offerings at the Export auction consisted of 53,000 packages. There was a good general demand, and most descriptions were fully firm and sometimes dearer. Black leaf Fannings and many teas with bright liquors were a strong feature, while the few good liquoring C.T.C. teas on offer met with keen competition and sold well. Plain and medium Broken were sometimes a little easier, but the plainest sorts were often dearer. As very few teas were of a truly representative description, no quotations have been given this week.

At the Internal Sale, offerings of Dusts consisted of 20,800 packages for which there was a good general demand, but with the exception of a few black leaf teas on offer and any teas with autumnal quality, prices were an irregular 1 to 1 anna below last rates. The very best autumnal C.T.C. Assams were 1 to 2 annas dearer.

Quotations	1956	1955
Medium Broken Dust	1 8 0 to 1 9 0	1 14 6
Medium Assam Grain		
Dust	1 9 0 to 1 10 0	2 0 0 to 2 1 0
Best Assam CTC Dust	2 12 0 to 2 14 0	2 7 0 Nom.

Offerings of other grades consisted of 5,800 packages for which there was a good demand, but the rates were very irregular.

Sale of New Season's Teas

Some new season's teas were put up for auction in Calcutta at Export Sale A on 9th May. The offerings consisted of 4,290 packages of 1956 Darjeeling teas. There was a good general demand and a few flavoury invoices realised prices above valuations. Stylish leaf grades and fannings were the strongest features, but most of the ordinary descriptions met with less demand and were disposed of at prices irregularly below brokers' valuations.

FREIGHT RATES CONTINUE AT HIGH LEVEL

COAL and grain movements again dominated the market in the past week, and owners were quite confident that there was sufficient demand to hold rates at their present high level. Rates in the American coal trade were fully maintained with the single voyage at 76s 6d on French account. South African grain shippers concluded a fixture for the Continent with U.K. options at 122s 6d a ton. The fixture for grain from the Gulf to the Antwerp-Hamburg range was made at 130s a ton on German account. It is reported that a fixture has been made for ore from Bombay to the Continent at 130s. The Indian ore market featured a time charter fixture of a motor ship delivery Persian Gulf, redelivery Japan, trip at 54s for ore India-Japan. Another fixture of ore, Vizagapatnam-Kawasaki, has been concluded at 120s. Good enquiry is maintained for tonnage for both the trips and for period trading with ore from Marmagao and India to Japan.

SUGAR MARKET STEADY

During the week ended 9th May, sugar sales in the Calcutta market averaged 4,000 bags daily. Arrivals a day were 1,500 bags and stocks totalled 50,000 bags. Rates for ready sugar ex-Kantapur delivery were Rs. 28-2 for ordinary grain and Rs. 29-4 for big grain. Ex-mill delivery rates were

Messrs. Hindustan Dealers Ltd., 54, Ezra Street, Calcutta.

Rs. 28-2 and Rs. 29-4 for ordinary and big grains of sugar respectively. The market remained steady.

LINSEED RISES

Prices registered a notable advance last week and trading was on a somewhat increased scale, with buyers showing keen interest. Scarcity of ready goods was the main feature, and crushers were keen to secure all available stocks, thus causing a rapid rise in local prices of seeds. Market conditions upcountry remained firm. The entry into the market of a few large shippers who were loading linseed oil in tank vessels caused a sharp rise in the oil section, with buyers over and sellers demanding increased prices. Latest quotations were as follows: Ready Rs. 23 a maund; May-June Rs. 23 a maund.

HIDES AND SKINS QUIETLY STEADY

The market ruled quietly steady. Stocks were less than in the previous week.

Bazaar Sales

(Between 1st May and 7th May, 1956)

Cowhides: Wet salted (Ord) 6,000 pcs. on the basis of Rs. 6-8 to Rs. 8-4; Wet salted (Slaughtered) 17,500 pcs. on the basis of Rs. 12 to Rs. 18-8.

Goatskins: Wet salted (Daissee, Killed) Rs. 235 to Rs. 325 and Rs. 370 to Rs. 380; Assam-Dinajpur-Jalpaiguri 11,600 pcs. on the basis of Rs. 250 to Rs. 280; Purneah-Kissengani 4,600 pcs. on the basis of Rs. 229 to Rs. 280; Muzafferpore-Patna 2,09,600 pcs. on the basis of Rs. 215 to Rs. 255.

Bazaar Stocks

(7th May, 1956)

Cowhides: Wet salted 2,60,500 pcs.

Goatskins: Wet salted (Daissee, Killed) 11,000 pcs; Assam-Dinajpur-Jalpaiguri-Murshidabad 98,000 pcs; Muzafferpore-Patna-Pakur-Purneah-Kissengani 3,89,000 pcs.

SHELLAC MARKET FIRM

During the week ended 8th May, the market remained firm. The range of quotations was as follows:

Pure Buttonlac	Rs. 123 to 131-8 buyers.
Lemon No. 1 Shellac	Rs. 118 to 133-8 buyers.
Lemon No. 2 Shellac	Rs. 119-8 to 128-8 buyers.
F.O. Std. 1 Shellac	Rs. 113-8 to 122-8 buyers.
Pure TN Shellac	Rs. 108 to 117 basis done and buyers.
4% I.T.N. Shellac	Rs. 100-8 to 108 buyers.
No. 1 Kusmi Seedlac	Rs. 121-8 value, 121-8 to 127, 126 buyers.
No. 2 Kusmi Seedlac	Rs. 112 to 121-8 buyers.
Fine Bysaky Seedlac (Manbhum)	Rs. 110 buyers, 115-8, 120 done, 118-8 buyers.
Fine Bysaky Seedlac (C.P.)	Rs. 104-8 to 113-8 buyers.
Ordinary Bysaky Seedlac (C.P.) under 5%	Rs. 94-8 to 106-8 buyers.
Ordinary Bysaky Seedlac (C.P.)	Rs. 88-8 to 100 buyers.
Kireelac	Rs. 38 to 41-8 buyers.

Shipments during May until the 5th were 3,905 packages comprising shellac 3,284, seedlac 435, buttonlac 104, and others 82 packages.

INDIAN BUYERS AT BRITISH INDUSTRIES FAIR

Indian buyers, numbering 350, formed the largest contingent among the 4,000 overseas buyers who visited the Olympia (London) section of the British Industries Fair (B.I.F.) during its run from 23rd April to 4th May. The Fair was held simultaneously in London and at Castle Bromwich, Birmingham. Other countries which were represented by large contingents of buyers were Australia (300), South Africa (200), New Zealand (160) and France (140). Altogether more than 28,000 people visited Olympia where office appliances, printing and packaging machinery, and scientific instruments were on show. The Indians were mainly interested in electrical plant, communications and lighting equipment, drugs, fertilisers and chemicals for crop protection. Indian buyers were also well to the fore at the Birmingham section of the Fair. Other countries particularly active here included New Zealand, Australia, Holland, Sweden, the U.S.A. and Canada. Business was heavy in the electrical and engineering sections which, it was estimated, attracted three-quarters of all the visiting overseas buyers, who came from 108 countries and represented 114 trades.

"A successful fair concluded and the prospect of an even better one next year", was the note on which the B.I.F. closed its doors at Birmingham, writes a special correspondent. In 1957 the event will take on a new look as a general samples fair, with individual Commonwealth firms taking part for the first time since the war. Already, exhibition bookings for the next fair are higher than at the same time last year, and Birmingham, which will have Britain's annual "shop-window" all to itself in future, is preparing for record business. "In a final-day tour of the stands", adds the correspondent, "I found many exhibitors—some of them newcomers to B.I.F.—whose order books were considerably better than on the opening day. Orders and firm enquiries have ranged over bronze valves for a Persian housing scheme, motor lawn-mowers for Sweden, plastic door-handles for Russia, parcel balances for the Netherlands Post Office, windows for the new Parliament building at Baghdad, and aluminium teapots for the U.S.A."

COMPANY AND PUBLIC NOTICES

MINERVA MILLS, LIMITED.

Notice to Shareholders.

NOTICE is hereby given that the Thirty-sixth Annual General Meeting of the Shareholders of the above Company will be held at the Registered Office of the Company, Temple Bar Building, 70, Forbes Street, Fort, Bombay, on Friday the 15th day of June, 1956 at 4-30 P.M. (S.T.) to transact the following business:—

1. To receive and adopt the Directors' Report and Audited Statements of Accounts for the year ended 31st December, 1955.
2. To declare a dividend.
3. To appoint a Director in place of Mr. N. D. Sirur who retires under Article 100 of the Articles of Association of the Company but who is eligible for re-appointment.

And to consider, and if thought fit, to pass the following resolution as a Special Resolution of which special notice as required by Sec. 261 of the Companies Act, 1956, has been received by the Company.

Special Resolution—

"RESOLVED that in view of the provisions of Sec. 261 of the Companies Act, 1956, Mr. N. D. Sirur an Associate of N. Sirur & Co., Private Ltd., the Managing Agents of the Company, who retires under Article 100 of the Articles of Association of the Company, be and he is hereby re-appointed a Director of the Company as required by the provisions of the said Section."

4. To appoint a Director in place of Mr. Pratapsinh Mathuradas who retires under Article 100 of the Articles of Association of the Company but who is eligible for re-appointment.

5. To appoint a Director in place of Mr. B. D. Kulkarni who retires under Article 100 of the Articles of Association of the Company but who is eligible for re-appointment.

And to consider, and if thought fit, to pass the following resolution as a Special Resolution of which special notice as required by Sec. 261 of the Companies Act, 1956, has been received by the Company:—

Special Resolution—

"RESOLVED in view of the provisions of Sec. 261 of the Companies Act, 1956 that Mr. B. D. Kulkarni, an Officer of The Modern Mills Ltd., which Company is under the management of the Managing Agents, Messrs. N. Sirur & Co., Private Ltd., who are also the Managing Agents of this Company, who retires under Article 100 of the Company's Articles of Association, be and he is hereby re-appointed a Director of the Company."

6. To appoint a Director in place of Mr. Pingle Venkat Rama Reddy who retires by rotation but who is eligible for re-appointment.

And to consider, and if thought fit, to pass the following resolution, of which special notice as required by Section 281 of the Companies Act, 1956, has been received by the Company:—

Ordinary Resolution—

"RESOLVED that the age limit prescribed under Section 280 of the Companies Act, 1956, shall not apply to Mr. Pingle Venkat Rama Reddy who has attained the age of 73 years and who retires by rotation under Article 109 of the Articles of Association and that he be and is hereby re-appointed a Director of the Company."

7. To appoint a Director in place of Mr. Maneklal Premchand who retires by rotation but who is eligible for re-appointment.

And to consider, and if thought fit, to pass the following resolution, of which special notice as required by Section 281 of the Companies Act, 1956, has been received by the Company:—

Ordinary Resolution—

"RESOLVED that the age limit prescribed under Sec. 280 of the Companies Act, 1956, shall not apply to Mr. Maneklal Premchand who has attained the age of 67 years and who retires by rotation under Article 109 of the Articles of Association and that he be and is hereby re-appointed a Director of the Company."

8. To consider, and if thought fit, to pass the following ordinary resolution:—

Ordinary Resolution—

"RESOLVED that the consent of the Company under the provisions of Section 293(1)(d) of the Companies Act, 1956 be and it is hereby accorded to the Board of Directors of the Company borrowing monies for the purposes of the Company even if such borrowings (apart from temporary loans obtained from the Company's Bankers in the ordinary course of business) together with the monies already borrowed by the Company exceed the aggregate of the paid-up capital of the Company and its free reserves, that is to say, reserves not set apart for any specific purpose."

9. To consider, and if thought fit, to pass the following ordinary resolution:—

Ordinary Resolution—

"RESOLVED that the Registers, Minute Books and documents of the Company required to be maintained and disclosed under the provisions of the Companies Act, 1956, and particularly under Sections 49, 118, 143, 144, 150, 151, 152, 157, 163, 193, 196, 301 to 304, 307, 356 to 360, 362 and 372 of the said Act, be kept open to inspection by the persons entitled thereto under the aforesaid provisions, to the extent, in the manner and on payment of the fees, if any, specified in the aforesaid Sections, at the Registered Office of the Company on any working day between the hours of 12 noon to 1 P.M. and 3 P.M. to 4-30 P.M. (S.T.) except on Saturdays and between 11-30 A.M. to 1-30 P.M. (S.T.) on Saturdays, provided however that the Register required to be maintained under Sec. 307 of the Act shall be open to the inspection of any member or holder of debentures of the Company (if any) as aforesaid during the period prescribed by clause (a) of sub-section (5) of Sec. 307 of the said Act."

10. To appoint Auditors for the current year and to fix their remuneration.

An explanatory statement concerning Resolutions Nos. 3, 5, 6, 7, 8 and 9 is being posted to the shareholders.

The Transfer Books of the Company will be closed from the 15th day of May, 1956 to the 9th day of June, 1956, both days inclusive.

A Member entitled to attend and vote at the Meeting is entitled to appoint a Proxy to attend and vote instead of himself and a Proxy need not be a member.

By Order of the Board,
N. SIRUR & CO., PRIVATE LTD.,
Managing Agents,
V. N. CHANDAVARKAR,
Managing Director.

BHARTIA ELECTRIC STEEL CO. LTD.

NOTICE.

NOTICE is hereby given that the Twenty-seventh Annual General Meeting of the members of Bhartia Electric Steel Co., Ltd. will be held at the Registered Office of the Company at 42, Shib-tolla Street, Calcutta on Monday, the 4th June, 1956 at 4 P.M. to transact the following business:—

- (i) To consider and pass the audited Accounts and Balance Sheet of the Company as at 31st December, 1955 and the reports of the Board of Directors and Auditors of the Company.
- (ii) To declare a dividend.
- (iii) (a) To appoint Directors in place of Mr. B. P. Khaitan, Mr. N. L. Bhartia and Mr. P. R. Bagri who retire by rotation and also by virtue of the provisions of Section 261 of the Companies Act, 1956.

(b) To appoint Directors in place of Rai Moongtullal Tapuriah Bahadur and Mr. R. L. Bhartia who also retire by virtue of the provisions of Section 261 of the Companies Act, 1956.

Separate special resolutions will be proposed for re-appointment of each of the said Mr. B. P. Khaitan, Mr. N. L. Bhartia, Mr. P. R. Bagri, Mr. R. L. Bhartia and Rai Moongtullal Tapuriah Bahadur as Directors of the Company. The said Rai Moongtullal Tapuriah Bahadur has attained the age of 69. Notice is hereby given that the resolution relating to his re-appointment will provide for a declaration that the age limit of 65 years shall not apply to him.

(iv) To appoint Auditors for the year 1956 and fix their remuneration.

(v) To transact any other admissible business with the permission of the Chairman.

Explanatory Note with regard to agenda

(iii) (a) & (b) mentioned above:—

Messrs. B. P. Khaitan, N. L. Bhartia, R. L. Bhartia and P. R. Bagri, who are directors of the Company and are proposed to be re-appointed, are also directors of the Managing Agents M/s. Bhartia Company Ltd., Rai Moongtullal Tapuriah Bahadur is the father of Sri Bajinath Tapuriah, one of the Directors of Messrs. Bhartia Co. Ltd. The Managing Agents, by virtue of the Managing Agency Agreement with the Company, are entitled to nominate a director on the Board of this Company. In the premises, having regard to the provisions of Section 261 of the Companies Act, 1956, special resolution is required to be passed at the next Annual General Meeting for their re-appointment as Directors. All the said persons have been on the Board of this Company for several years past and take keen interest in the welfare of the Company. It will, therefore, be proposed that the said persons be re-appointed directors of the Company. Section 281 of the Companies Act, 1956, provides that a person who has exceeded the age of 65 can be appointed director if the appointment is approved by a resolution passed by the Company specifically declaring that the age limit shall not apply to him. In the circumstances so far as the resolution for re-appointment of Rai Moongtullal Tapuriah Bahadur who has attained the age of 69 is concerned the same will have to comply with the requirements of Sec. 281 of the Companies Act 1956.

By Order of the Board,
BHARTIA COMPANY LIMITED,
Managing Agents.

Calcutta, 24th April, 1956.

Note:—(1) The Share Transfer Register of the Company will be closed from 18th May to 4th June, 1956, both days inclusive.

(2) A member of the Company entitled to attend and vote at the above meeting of the Company shall be entitled to appoint another person as his proxy to attend and vote instead of himself and a proxy need not be a member.

(3) Dividend declared, if any, at the above meeting shall be paid only to the Registered Shareholders of the Company as on 4th June, 1956 or to their order or to their bankers.

THE BENGAL FLOUR MILLS CO. LTD.

THE Board of Directors has decided to recommend to the forthcoming Ordinary General Meeting of the Company a dividend @ 15% per annum for the half-year ended 31st December, 1955.

By Order of the Board,
BALMER LAWRIE & CO., LTD.,
Managing Agents.

21, Netaji Subhas Road,
Calcutta, 7th May, 1956.

I.L.O. REPORT ON SAFETY IN COAL MINES

Coal mines are safer today than they were a quarter of a century ago, the International Labour Organisation declares in a worldwide survey of safety in coal mining. But, says the report, the fall in the frequency rates of accidents over the past 25 years has been slow compared with the considerable efforts made to reduce them. The report suggests the need for continued research into the causes of accidents in coal mines, with particular attention to the importance of human factor. The report will be discussed by Government, worker and employer delegates of 16 leading coal producing countries at the sixth session of the I.L.O. Coal Mines Committee which is being held in Istanbul. The Committee will also consider the question of recruitment and vocational training in coal mines.

THE INDO-BURMA PETROLEUM COMPANY LIMITED

NOTICE is hereby given that the Forty-eighth Ordinary General Meeting of Members of the Company will be held at the Registered Office of the Company at Clive Buildings, Netaji Subhas Road, Calcutta, on Tuesday, the 29th May, 1956, at 12 noon to transact the following business:—

- (1) To receive and adopt the Directors' Report and the audited Balance Sheet and Profit & Loss Account for the year ended 31st December, 1955.
- (2) To sanction the declaration of a Dividend.
- (3) To elect Directors in place of Messrs. M. I. KeeKeeBhai and H. J. Silverston, Directors, who retire by rotation, but are eligible for re-election and offer themselves accordingly.
- (4) To pass a Special Resolution for the re-election of Mr. J. N. C. Killick who is an employee of the Managing Agents and who retires by rotation and is otherwise eligible for re-election. (See Special Resolution and Special Notice below.)
- (5) To appoint Auditors for the year ending 31st December, 1956, and to fix their remuneration.

Notice is further given that the Ordinary Share Transfer Books of the Company will be closed from the 14th May, 1956 to 28th May, 1956, both days inclusive.

AS A SPECIAL RESOLUTION

That Mr. J. N. C. Killick who is an employee of Messrs. Steel Brothers & Company Limited, the Managing Agents, be and is hereby re-elected a Director of the Company.

SPECIAL NOTICE

The above Special Resolution is in accordance with section 261(1)(f) of the Companies Act 1956, since Mr. J. N. C. Killick is an employee of the Managing Agents, and it will be necessary for the Shareholders to pass a Special Resolution if they decide to re-elect Mr. Killick a Director.

By Order of the Board,
STEEL BROTHERS & COMPANY LIMITED,
Managing Agents.

Clive Buildings,
Netaji Subhas Road,
Calcutta, 30th April, 1956.

N.B.—A member entitled to attend and vote at the abovementioned Meeting may appoint a Proxy who need not be a member to attend and, on a poll, to vote on his behalf.

..such a situation

Thoroughly proven in efficiency, reliability and economy of operation, Miniature Direct Wire remote control systems by Standard are serving electricity undertakings at home and overseas, greatly simplifying the central control of electricity generation and distribution networks. Employing telephone-type apparatus to effect switchgear control through interpose relay, the Standard system of Miniature Direct Wire remote control operates at merely a few milliamperes at 50 volts D.C. over light-current multicore cables. Systems of this type are proving highly efficient and have introduced a new economy in the local control of electricity distribution substations. There is undoubtedly a Standard remote control system which will deal effectively with your control situation. Ask for further details.

JOINT STOCK COMPANIES' PREFERENCE SHARES

Dividends are cumulative and shares carry a preferential claim on the property for the payment of capital and on the profits for dividend except in case of companies marked otherwise. Months against names of companies indicate approximately times of payment of dividends.

TEA COMPANIES

O. Po. and Dd. indicate Ordinary, Preferred Ordinary and Deferred Shares, respectively. P. next to the name of the company indicates that the company also has Preference Shares. Figures in "accounts closed" column indicate the months of the calendar year in which accounts are closed. For Managing Agents refer to the Key (last page) under the numbers indicated.

DEMOCRACY, PROSPERITY AND STATE ENTERPRISE

DR. MATTHAI OPENS THE DEBATE

THE main feature of the new industrial policy announced a fortnight ago is the increased scope it provides for the expansion of State enterprise. A good deal of the justification for this is, of course, openly admitted to be ideological, and regrettable though this may be, it is probably inevitable considering the present trends in public thinking. But there has never been any lack of economic argument in favour of extending the public sector both absolutely and relatively and not all of them are to be dismissed as the dreams of impractical idealists. It is now obvious that there is a great need for serious discussion on this proposition, if it is to play the part in economic development which is apparently being assigned to it. Some of the more important points have already been raised in these columns but it is rare that any leading intellectual figure, whose motives and opinions are known to be free from the influences of both public office and private gain, takes the trouble to express a personal and objective view about the possibilities of State industrial enterprise in this country. That is why the address which Dr. John Matthai, Chairman of the State Bank of India, and Vice-Chancellor of Bombay University, gave to the Bombay Rotary Club last Tuesday is of such value. Dr. Matthai has helped start a debate which should now be joined by all who hold the prospects of future economic prosperity above motives of personal jealousy and prejudice. His initiative should also help to remind those who are calling for an end to all discussion about the relative merits of public and private enterprise that the issue is fundamental to the problems of rapid economic development in a modern democracy and cannot be solved simply by being ignored.

The first principle which Dr. Matthai recommends is one which may have lurked in the minds of those who drafted the industrial policy statement, even if there was no attempt to acknowledge it in the preamble. It is that all decisions about whether private or public enterprise is to prevail should be based "not on a priori considerations applicable to industries generally or to categories of industries but to particular industries on the merits of each." This is a formula which excludes all judgements made on grounds which exclude economic expediency and long-term political considerations. It is important to realise that every concession made now to unthinking ideology or popular prejudice involves a heavy economic cost to the community, and one which may well increase as time goes on due to the establishment of strong vested interests beyond the practical scope of normal democratic government. Until the implications of State ownership and management in this country's industries are fully understood, it would be inadvisable to push ahead too rapidly with expanding the public sector, especially when this involves restraints and discouragement for private industry. Hard, objective thinking is required on all aspects of the problem now if mistakes are to be avoided. There is no lack of foreign experience on which discussion can draw and it should not be difficult to accumulate and interpret that which is already available here in India. It is certainly essential that the debate should be lifted permanently above the level at which it has been dealt with in recent Lok Sabha sessions. Matters of such importance cannot be settled in an atmosphere of spiteful threats, vehement accusations and equally indignant denials.

On the present preference for public ownership and management in industry, Dr. Matthai delivers himself unequivocally in the following terms: "I would reverse the order of emphasis and make free enterprise the normal practice..." He justifies this view on two main grounds, that nationalisation is not essential to socialism and that State enterprise does not necessarily guarantee the speedy development of industry. The first is a conclusion drawn from Britain's experience which has far more relevance for India, with her intentions of maintaining democratic government, than has that of the Soviet

Union. The attitude of the British socialist in the '30s was very similar to that of his Indian counterpart now; and there too there was massive support from the trade unions. Now, after up to ten years' experience of nationalisation in the coal industry, on the railways, in gas, electricity and steel and in road and air transport, the picture is one of disillusionment for the intellectuals, cynical scepticism from the electorate and open hostility on the part of all but the most extreme communist-led unions. The point has been reached where the Labour Party dares no longer advocate nationalisation as an election slogan for fear of making itself appear too reactionary, and a Conservative Government is able to return the road transport and steel industries to private ownership without the least sign of public disapproval. The reasons for this remarkably rapid retreat from a policy advocated for almost half a century have been chiefly two in number—nationalisation has achieved none of the economic and social advantages expected of it, while it is plain for all to see that its bureaucratic tendencies and its need for a large measure of autonomy strike directly at the basis of democracy.

If it is accepted that State enterprise must play a more positive rôle in economic development here than in Britain (and there are few who will deny this) then it is essential that these criticisms are understood and steps taken to counter them. Few of those who at present advocate indiscriminate nationalisation appreciate that far from reducing social inequalities, it is more likely to perpetuate them. The replacement of the entrepreneurial society by the managerial is no step towards decentralising economic power, or ensuring equality of economic opportunity for the individual. Nor is it likely to ensure greater efficiency if Dr. Matthai's comments on the prospects of the present administration being able to maintain its standards and integrity are considered. Paradoxically, the move towards expanding public enterprise is intensifying in direct proportion to the desire to see the administration reduced to financial and intellectual penury. The Civil Service appears to be falling victim to the hatred which is increasingly being directed in this country against all forms of personal efficiency and success; and this at a time when

PAKISTAN'S FIRST FIVE YEAR PLAN

ALMOST since her inception, Pakistan's economic development has followed a rather haphazard course. To some extent, this has been inevitable, for she started with at least three huge handicaps: a serious refugee problem, widespread administrative disorganisation, and an obvious lack of diversity in her economic structure. To these were added a considerable measure of inexperience and political instability. The smoother progress of recent years indicates that problems are now being solved more efficiently; and the draft five year plan announced from Karachi this week

shows that the earlier policy of depending on temporary shifts and expedients to surmount economic difficulties may now be giving way to a logical, reasoned and long-term approach. The plan is an ambitious one; but that does not detract from the fact that in most of its important aspects it is fairly conceived. There is a welcome emphasis on the development of water and power resources in a country where agriculture is by far the most vital of economic activities and whose energy shortage has been an outstanding handicap. Village aid and farm programmes are given special attention, in contrast to the neglect of earlier years which has made formerly food-surplus areas now almost steadily dependent on imports. Transport and communications are to be improved. Industrial development, although planned on a modest scale, is to pay closer heed to the limitations set by the lack of diversity in physical resources, and will to a large extent be left to private enterprise. The dependence on foreign assistance is heavy, but perhaps not unrealistically so in view of Pakistan's recent friendships.

The attention which it is proposed to give to agriculture and rural betterment generally is probably the most reassuring feature of the draft plan; this is described as "its most important objective". The basic target is that by 1960 there should be a secure food supply for the country's growing population and that a substantial begin-

Contents

India's Second Plan Finalised	711
-------------------------------	-----

ning be made towards a more diversified agricultural output. Among the targets recommended are a 13 percent increase in foodgrain output, and larger increases in cotton, oilseeds, sugarcane, fruits and vegetables. The Planning Board, which has drafted the plan, points out that these targets will not be easy to achieve because not enough attention has been given so far to agricultural development. The increases in production, it is intended, will be achieved by using better seeds, more manures and chemical fertilisers, and by bringing about 3 million acres of new land under cultivation. Storage capacity will be expanded, and more effective measures taken to control pests and diseases. A far-reaching scheme of land reform is proposed, with specified ceilings on holdings of various types of land; this scheme, however, is likely to be the subject of vigorous political controversy, and the sources of political power in Pakistan being what they are, it would be surprising if it were easily accepted. Karachi's planners have nevertheless done their country a great service by deciding to prick the semi-feudalistic interests of its social structure.

The industrial development programmes in the five year plan aim at a 70 percent increase in production. The Planning Board has emphasised that because of the limited resources available, it is important to select those lines of industrial development which promise the maximum results and which contribute most to balanced economic development. Of the total expenditure of Rs. 236.4 crores, Rs. 188.8 crores is expected to be in the private sector and Rs. 107.6 crores in the public sector. The more striking targets are for cement, fertilisers, sugar, jute manufacture and cotton spinning. Ambitions are also entertained for setting up a shipbuilding yard and a steel industry. The last of these, in particular, might seem a somewhat over-ambitious hope for a country which suffers an acute shortage of both iron ore and coal.

The financial assumptions of the draft plan are interesting, though they cannot yet be looked upon as anything other than largely tentative. Total resources available for development over the five years to 1960 are taken as Rs. 1,160 crores. Of this, as much as Rs. 420 crores are expected from abroad—Rs. 40 crores only in the form of net foreign investment and Rs. 380 crores as foreign loans and aid. Private savings, it is hoped, will total Rs. 590 crores, and public savings (representing the excess of State revenues over non-development expenditures) Rs. 150 crores. Deficit financing up to about Rs. 70 crores is planned for, although it seems risky for a country which is still struggling with domestic inflation and where larger food supplies can hardly yet be taken as assured. Of the total expenditure of Rs. 1,160 crores on development, it is proposed that Rs. 800 crores will be in the public sector (allowing for a shortfall of over Rs. 123 crores), and Rs. 360 crores in the private sector. Pakistan's capitalists have yet to show that they are not shy; until they do, many of the planners' dreams may not materialise. Their deficiencies could of course be made up to some extent if foreign aid exceeds present estimates, and that it well might.

CURRENT COIN

Indian Copper Wins Case.—The shares of the Indian Copper Corporation have been remarkably steady during the past week. There are three main reasons. One is that the company has won the litigation between it and the Bihar Government over the renewal of kyanite mining leases in Kharwan. The second is that a formal announcement on the terms of the proposed bonus issue is expected very soon. The third is that some in the market believe the ordinary distribution, when announced later, will be good. The judgment of Mr. T. P. Mukherjee, First Sub-Judge in Patna, on the litigation over the Kharwan kyanite leases is important and logical. The judge has dismissed the title suit filed by the State of Bihar for compensation amounting to over Rs. 43.78 lakhs for alleged breaches of the terms of the lease by the Corporation, as well as the Government's claim that because of these alleged breaches it is entitled to determine the lease and to re-enter the leasehold property. In a 151-page judgment, the court has determined 15 main issues. It has held that the covenant of the lease should be so construed as to effectuate the contract and not to frustrate it. The object of the Mines and Minerals Act and Mineral Concession Rules, it states, is the development of mines and conservation of essential minerals. "The object is defeated if leases are granted for short terms and that is why there is provision in the Mineral Concession Rules for compulsory renewal." It has held that to use the Mineral Concession Rules to negate the Corporation's right of renewal would be to defeat the very object for which they stand. On these considerations, the Rules are no bar to the renewal of the lease granted to the Corporation in 1926. As for the charges about breach of terms and conditions of the lease made by the State Government against the Corporation, the court has held that these have not been substantiated. On the

contrary, the Corporation has performed and observed all the terms and conditions of the lease with scrupulous exactitude.

Future of Hooghly Mills.—Shareholders of the Hooghly Mills Co. Ltd., jute manufacturers, have been invited to an extraordinary general meeting tomorrow, which may be decisive for the future control and management of the company. The present managing agents of Hooghly Mills are Gillanders Arbuthnot and Co. Ltd., but an important group of shareholders seeks to remove them. It is the latter which has requisitioned the extraordinary general meeting, at which it proposes to sponsor resolutions removing four of Hooghly's present directors and appointing three of its own nominees instead. It is believed that the opposition group jointly holds slightly under half the total shares in Hooghly Mills. Gillanders hold 27 percent, and they think that if the remaining shareholders support them, they will be able to get slightly more votes than the group, "although this is by no means certain." They explain why it is in the shareholders' interests to give them the support. Gillanders say that, as far as they are concerned, they are quite prepared to sell their holdings to the group and drop the managing agency. But they feel that the group should offer all other shareholders the same price as it pays to Gillanders. This it has not yet agreed to do. Gillanders do not propose to sell their holding and relinquish the managing agency unless it agrees. Gillanders say therefore that it is to safeguard their own interests that these remaining shareholders should support the present managing agents at tomorrow's meeting; they can do this by appointing a Gillanders representative on the Hooghly Mills board as their proxy for the voting.

Hope for Private Enterprise.—The Government's latest industrial policy means many things to many men, thanks to the clever language its authors have employed. But it has at least one merit. It has acknowledged the fact, though not quite so explicitly, that in an under-developed economy trying to develop itself at a quick pace, private enterprise has as vital a part to play as enterprise by the State. Whether the Government will always act up to the fact is still a question mark for most business men, and it was with this aspect of the Government's economic policy that Mr. N. L. Kanoria's presidential address to the thirtieth annual general meeting of the Indian Chamber of Commerce, held last week, was largely concerned. "Under the revised policy," said Mr. Kanoria, "the activities of the State are to be widened further and that of private sector correspondingly restricted. To me it seems the more important and urgent question is to increase the national wealth so that it is possible to raise the standard of living of the people and give them a fuller and richer life." Such an end cannot be fulfilled by nationalising the existing private concerns since that means merely the transfer of assets from one sector to another and no new addition to the national wealth results in the process. Mr. Kanoria pointed out that the Industrial Policy Resolution of 1948 had shown a correct appreciation of this fact. Nothing has happened in the meanwhile to justify the introduction of radical changes into the Government's economic policy, and private enterprise has performed its task of increasing production and adding to the productive wealth of the country more than could have been expected of it under the circumstances. Besides, Mr. Kanoria stressed the point that in a country where industrial or managerial talent is not so abundant, the experience and talent of the existing industrialists should not be allowed to run to waste if the basic need of raising production is to be successfully met. The new Policy, however, has in it elements that can encourage industrial expansion through private enterprise—such as the assurance that in the industries reserved exclusively for the public sector, expansion of the existing private units can be permitted "in the national interest," the promise of financial and fiscal assistance and that of non-discriminating treatment to public and private firms in the same industry. The private sector can and does take heart from these. But the ultimate test of the Government's sincerity lies in actual practice. Mr. Kanoria concluded with a note of "fervent hope that the policy will be adhered to for a reasonable length of time so that industry is free from doubts and uncertainty in regard to its future and is thus able to plan and execute its programme of expansion and development with confidence."

Bombay State Financial Corporation.—Mr. Purushottam Kanji, chairman, told shareholders of the Bombay State Financial Corporation at the annual general meeting last week that most of the Corporation's funds are now employed as loans to industrial concerns. The portfolio of Government securities has been reduced, and will be brought down further in the next couple of months when more payment are made against loan commitments. Loans have been disbursed at a steady rate during the year ended March 1956. Over Rs. 62.7 lakhs have already been given, and there are firm commitments for another Rs. 25.44 lakhs under the con-

tracts already signed. Cases involving Rs. 22.26 lakhs are being investigated, and part of this sum will become payable when the Corporation's solicitors have examined title deeds and transactions have been completed. Instalments totalling Rs. 2.25 lakhs have been repaid in time. Mr. Kanji pointed out that as the loan commitments of the Corporation have now exceeded the issued share capital, measures to raise additional resources are being considered. He added that of the 39 applications sanctioned during the past year, 28 were for fresh loans and 11 were for additional loans from those who have already been given loans by the Corporation. Of the fresh loans, five were sanctioned for the development of new projects and 23 were mostly for acquiring fixed assets for expansion or modernisation. Some of the concerns which required further long-term accommodation as a result of the revision of their schemes or an increase in the prices of the fixed assets they proposed to acquire asked for additional accommodation and this was given on the merits of each case. The Corporation has served small-scale as well as medium-scale units, though most small-scale units are now being provided for under the State Aid to Industries Rules.

Tighter Money in U.S.A.—The drop in the bond markets and the increases in Federal Reserve Bank discount rates have made April an eventful month in business, says the First National City Bank of New York in its monthly letter on U.S. business and economic conditions. A heavy demand for money is in itself a sign of high activity and expansive trends, and general business reports reflect the same conditions. However, the effect of money market tightening and the purpose of Federal Reserve policy is to put a little more pressure on the brakes. It is not surprising that the month's developments have led to a fresh analysis and reappraisal of the outlook. In doing this, most people ask two questions. First, what is the importance of the well-advertised "soft spots"? They are unlikely to disappear soon. Well over 800,000 new 1956-model passenger cars are in dealers' stocks and must be worked off before the introduction of new models in the early autumn. Current passenger car production rates are roughly in line with domestic sales; before inventories can be reduced substantially, sales must be boosted or production cut. Inventory reduction is also necessary in agricultural machinery and to a lesser marked extent in some other lines. Even the booming steel industry faces a possibility of lower demand in the third quarter because of inventory liquidation. Inventory liquidation in these lines may offset accumulation elsewhere during the summer months, and to that extent the pressure of demand may be lightened. Business inventories (non-farm) rose during the fourth quarter of 1955 at the rate of \$5.1 billion annually, and during the first quarter of this year at the rate of \$4 billion. On the whole, however, stocks are no greater in relation to sales than a year ago. The second question is whether tighter money will reduce investment and construction expenditures below previous expectations. Inventory liquidation is unlikely to go far or to have a major depressing effect as long as capital expenditures are maintained. There is little reason to doubt the firmness of business expansion and modernisation plans. They are parts of long-term programmes for cost-cutting, introduction of new products, and supplying growing markets. The extent to which commitments have already been made is evident from heavy unfilled orders for machine and other tools, dies, and specialised capital goods of all kinds, including shipping and railway freight cars. For the remainder of 1956 at least, the prospects of any material slackening in the heavy goods industries are small indeed. They promise to be exempt from the "rolling readjustment" that is affecting some sections of the economy, and the direct and indirect employment that they give will provide strong support for consumer income and expenditures.

Thoughts on the Plan.—The central theme of Mr. G. Basu's presidential address to the sixty-ninth annual general meeting of the Bengal National Chamber of Commerce, last week, was the second five year plan. He also dealt with some of the practical aspects of the Government's policy for executing it. As the draft plan has just been finalised for Parliament's consideration, Mr. Basu's comments are timely. He has no differences with its broad approaches. But the plan, he thinks, aims at achieving too many things within a period of five years, and it shows a lack of balance between the scale of investment proposed for heavy industries and that for transport. Moreover, considered from the resources point of view, the plan is over-ambitious. Mr. Basu belongs to that school of thought which pleads for a cautious approach to planning. Recalling the Prime Minister's statement that there will be a series of several such plans, since planning is a continuing process, Mr. Basu suggested that fullest consideration should be given to all cognate factors such as the resources, the competitive claims of different sectors of the economy and, finally, the capacity of the people to bear the burden. "The limit to which the present may be made to pay for the future cannot

be extended too far." But the present official policy apparently shows scant regard for this, and judging from the way in which resources are being raised, it seemed to him that "having decided on embarking upon an ambitious plan, they could not afford to let go any opportunity of collecting additional revenues." But while the Government is bent upon collecting more and more funds, the private sector is being left with less and less because all resources come from the same pool of savings. Mr. Basu was glad that the latest Industrial Policy took note of the private sector's problem of finding adequate finance for its needs. But he was not sure if the central aim of the Policy itself had been soundly conceived. Considering that at any given time there are definite limits to the resources of the State, and the Policy envisages a considerable extension of the public sector, the Government, he suggested, should have allowed a much wider field of industrial enterprise to experienced business men. Yet they are expected "to supplement the deficiencies in the public sector and catch up with the intended pace of industrialisation in case the public sector does not move fast enough for the purpose." Mr. Basu was not sure whether the Policy had the right flexibility for such an eventuality.

Compensating Life Insurers.—The Indian Insurance Companies Association, Bombay, has criticised the compensation formula in the Life Insurance Corporation Bill, as amended by the Select Committee. It says that shareholders of Indian insurance companies showing surpluses will receive only 42 percent of the value of their property. Adjustments are made under the formula which curtail the valuation of the interest of shareholders, firstly, by averaging the last two valuations, and secondly, by arbitrarily reducing the allocation to shareholders from 71 percent to 5 percent. The amended Bill provides for compensation on the average business in force for the six-year period, 1950-55. In consequence, as against a business in force of about Rs. 1,020 crores on 31st December, 1955, only a business of Rs. 800 crores enters the compensation calculations. In other words, companies are compensated not on the current basis but on the basis of business in force of 1952 or earlier. This reduces the actual compensation by 21.8 percent. Instead of basing the compensation on the surplus-earning capacity on 31st December, 1955, the Bill compensates according to the average rate of the surplus-earning capacity over the period of the last two valuations. The Government has contended that an average of two valuations is necessary to eliminate chance variations. This argument overlooks the fact that it is normal for insurance operations to bring an increasing quantum of surplus at successive valuations. The Government's compensation formula, in introducing an average, takes into account not more than 80 percent of the earning capacity on the basis of the last valuation alone. In the case of 43 companies, by reducing the percentage of valuation surplus normally allotted to shareholders from 71 percent to 5 percent, the amount of compensation is further reduced by one-third to 41.7 percent. In India, the Association says, 71 percent is a small allocation, because the size of the portfolio of most companies is small and the amount received by their shareholders annually is meagre. The Government itself is taking 5 percent of the surplus under the Bill, despite the economies of large-scale trading, the advantage of operating as a monopoly, and the ambitious goal of a fourfold increase in business. If it is fair for the Government to take 5 percent in future on the total portfolio of business, including cases where policyholders received more than 95 percent of the surplus, there are no convincing reasons for compensating shareholders on a lower basis than their current expectations of future earnings. The Government formula reduces the compensation to 41.7 percent of what shareholders should reasonably expect to receive on a proper appraisal of the value of their interests. This serious reduction in compensation is not the only fault of the formula. It also fails to deal uniformly with all companies. It does not provide for equity and fairness in compensation between different units by ignoring the rate of growth of their business and efficiency of organisation.

Developing the Villages.—The central theme of Mr. V. T. Krishnamachari's address to the Naini Tal Conference of State Development Commissioners was the special measure that it is proposed will be undertaken to develop India's five million villages during the current plan. The approach, the Deputy Chairman of the Planning Commission pointed out, is an integrated one, because rural improvement is "a single, permanent process which is co-extensive with the whole range of rural life." The programme of development is both economic and social because, in an under-developed country such as India, without a far-reaching social change, defined in this context as the change in the traditional attitudes and habits of the people, as also in ownership and the modes of production, quick economic growth will be impossible. For the moment, the king-pin of the plan is production and employment, and for securing a higher level of producti-

vity and thus higher agricultural output (without which employment cannot be promoted), the National Extension Service is being organised all over the country. The N.E.S. blocks will be permanent structures covering specific areas, and they will pass through four stages before attaining this status. In its penultimate stage, an N.E.S. block is called a community development project. The principle of National Extension Service is to introduce science to agriculture, and Mr. Krishnamachari stressed strongly the need for raising agricultural output with the help of the Service not only to raise the national income, but also to check inflation. Rising agricultural production, he thought, is the key to economic development without inflation in this country. The Planning Commission aimed at doubling this production in 10 years, and Mr. Krishnamachari explained it to mean "the doubling of the value (italics his) of production in agriculture, including foodgrains, raw materials, fruit and vegetables, animal husbandry, dairying, milk supply and poultry etc." Much can be done in this matter in the existing community development and N.E.S. block areas, where an appreciable amount of work has already been done. The effort, as Mr. Krishnamachari pointed out, needs to be multiplied. Relevant to this problem is the provision for adequate agricultural finance, particularly for people in the lowest income brackets, who, for that matter, have been denied membership of agricultural co-operative societies. Mr. Krishnamachari suggested a change in the policy of State Governments, who, under the Constitution, are administratively responsible for these projects, of judging the credit-worthiness of a person according to the assets he commands. The right criterion, he said, should be the purpose to which credit will be put, and all abuses can be checked by advancing loans in kind.

World Experts Confer on Textiles.—About 100 delegates from both sides of the Iron Curtain were expected to attend a four-day meeting of textile technologists which opened at Southport, England, on 15th May. The visitors, from at least 14 countries, are all members of the International Organisation for Standardisation and have gone to Southport for the third meeting of I.S.O.'s Textiles Committee. The object of their meeting is to facilitate international trade by reaching world agreement on methods of test for textiles. Among the subjects they will discuss are: (1) Waterproofness testing, which is intended to evaluate properties of cloths which have been treated to give a water-resistant finish; (2) Cloth strength testing; (3) Commercial weights of textiles, to standardise methods of calculating the moisture content of textile materials; (4) Atmospheric standards for textile testing, to secure reproducible conditions under which tests are carried out; (5) Measurement of cloth dimensions, to remove avoidable variations created by extensibility, compressibility, moisture content, etc., in the determination of length, width, thickness and weight a unit area. The delegates will also try to agree on an international method of setting out the contents of textile standards so as to facilitate comparison between the requirements of individual national standards. The countries which have said they will be represented at Southport are: Australia, Belgium, Canada, Czechoslovakia, Denmark, France, Germany, Hungary, Japan, Netherlands, Switzerland, United Kingdom, United States and the U.S.S.R. The absence of India is notable.

"ROBBERY UNDER ARMS"

ANOTHER bill for India, that is what it means. The precedent of a most disgraceful instance of common robbery is, according to Lord George Hamilton, to be the guiding rule for English statesmen. We dislike having anything to do with English politics in this country. If a poll were taken among Europeans in India, the majority would probably be found to favour the Conservative and Liberal-Unionist parties. But if the attitude which Lord George Hamilton has chosen to adopt towards India during his tenure of office is a specimen of his party's sense of justice and an example of its highest administrative ability, the sooner we all declare ourselves red-hot Radicals the better. In the matter of the cotton duties, and now in the question of the cost of Indian troops employed in Egypt, the noble Lord is determined to shut his ears to all remonstrances from India. Under any circumstances, it is not even made clear why Indian troops should be sent to Egypt at all. We are inclined to believe that the spirit of jingoism which still haunts the ranks of the old Tories is responsible for much of the naval and military extravagance which has lately been indulged in. We, at any rate, may add our small voice to the millions which will be raised in this country at being mulcted "according to precedent" of large sums of money without any vestige of benefit or compensation.

INDUSTRIAL TRENDS IN THE U.K.

THE CHANCELLOR'S PROMISE AND FULFILMENT

(FROM A SPECIAL CORRESPONDENT)

IT is now an open secret that while there may continue to be much show of taking far-reaching economic and financial measures to combat inflation, the Government has at least half turned away from any really salutary measure in this field. That conclusion could have been drawn from the mild proposals contained within the recent Budget, coming as these did after the loud preliminary heraldings that everyone would be called upon to make sacrifices on an unprecedented scale. As the sharp rises in share prices have shown, investors have found ground for reassurance in the Chancellor's roarings. There has been, after all the prophecies to the contrary, no halt called to rises in salaries and wages, and, in fact, the Government has been well in the van of making the upward gradient still more steep. It has also increased pensions in a number of directions and rendered them easier to get—acts within the professed aims of the welfare State, but not those of trustees of the economic health of the nation. The chairmen of industrial companies in the first rank have viewed these generous developments askance and their speeches have referred just as emphatically as they did a year ago to the stern necessity of doing everything to conserve resources "in the present difficult national economic situation." For them, with their weight of commitments, the crisis has not passed. But if their view is a cautious one, it has to be added that the trading community, without exception, welcomes the Government's change of mood and prays that it be long-lived.

What new factor of general warmth has emerged that the Government's erstwhile alarm has so soon changed into comparative confidence? The nationalised industries of coal and transport are still losing money, hand ever fist; relating rises in wages to rises in output has ceased to be a topic of discussion, let alone of putting into practice; prices are still soaring and cotton mills continue to close. The miss of a typist commands her £6 to £10 a week—and more. Cosmetics are in undiminished demand. Borrowings from the banks have fallen, but only by a nominal amount. On

the other hand, export figures are distinctly better, with a consequent improvement in the balance of trade and a strengthening of sterling. The unemployment which suddenly manifested itself a few months ago has entirely disappeared, and, indeed, shortage of labour has become more acute than ever. The latest official figures show that whereas 1,651,000 workers are on overtime, only 65,000 are on short time—mostly in the textile and furniture industries. The motor industry has a certain amount of short time, but it is not persistent, the position changing from week to week. It should be borne in mind that the description "short time" means, in the majority of cases, the loss of only one working day on an operative a week.

The Slogan of Automation

If, as we have noted above, there has been some staying of adverse tendencies, sufficient perhaps, political principles being as elastic as they are, to justify the Government's slowing down of unpopular measures, the major explanation of the easing of policy has to be sought elsewhere. It is to be found in the Government's discovery, proclaimed through the Press and radio, that by the practice of "automation" all Britain's material problems can be solved. This has been the theme of the speeches of various Cabinet Ministers during the past few weeks, and it is to be the subject of a White Paper promised by the end of May. The ideas associated with "automation" will not be unfamiliar to the readers of this letter, for they have been frequently discussed here during the past two years, although we have hesitated to use the word "automation", disliking it very much, and preferring instead the words mechanisation and instrumentation. But automation we must use more often in future, not only because it has received approval in high places, but by reason also that it is rapidly coming to imply not alone physical changes in industry, more especially relating to equipment, but to indicate a philosophy of life itself, meeting the needs of a materialistic world.

This amplifying of meaning, as is only to be expected, is being accompanied by a good deal of loose thinking, and "automation" is already rather a catchword in the popular mind, symbolising some vague cure-all connected with an increase of horse-power and necessitating the minimum of personal attention. Some industrialists, of the more reflective kind, have thought it desirable to utter a warning that automation will create fresh

problems as well as, it is to be hoped, solve old ones. But all the evidence points to the movement gaining impetus. This is to be gathered, whether one looks to Government, industrialist or trade unionist circles. The support which the trade unions gave to pressing on with increased mechanisation, when discussing the subject at their recent conferences, came as a surprise, and was significant, having regard to the former widespread fears among workers that the increased use of machinery should be contested, as it means the growth of unemployment. Those fears, however, were entertained in days very different from our own, when unemployment, spectre-like, was always near at hand and unemployment pension a pittance. Moreover, the average worker now looks upon his swollen wage packet as dependent upon machine production for its maintenance and further expansion.

Mechanisation of Farming

There is, in fact, nothing which can be termed public opinion in a substantial sense which stands in the way of automation's advance. Much is heard from members of the older generation about the depressing nature of changes which are being brought about in the countryside through the super-mechanisation of agriculture. But these utterances must be classified in the world we know as simply sentiment, although it may be that, in reality, they are far more than that, expressing as they do an overthrown pastoral ideal. The farmers have put their ideas bluntly—and they have the full support of the local agricultural committees, which take their cue from the Ministry of Agriculture's experts at Whitehall. The countryside, say the farmers, is not primarily a place for the enjoyment of amenities; it is a district where food is produced to keep an ever-growing population alive, and nothing must be allowed to interfere with the efficient performance of its proper functioning. And so the bulldozers clear the waste lands spared hitherto (erstwhile home of the goldfinch and the nightingale) that they may be made to yield something eatable with the help of modern methods and modern fertilisers, tractors on the farms get more powerful, hedges give place to wire fences and the cosy nook is made into a car park. Battery hens can now be numbered by the million, (their output duly registered by recording devices), piglets take their nourishment from artificial mothers while their mothers are persuaded to get on with the job of producing more piglets, the cow provides more calves, and so on and so forth.

The farmer is sure of a market for every additional ounce of corn or meat he produces. But what of the industrialist who cannot claim to be supplying such fundamental needs? Can he be equally certain of a market for all the increased volume of goods that he will be able to turn out with the aid of automation's ingenious machinery and equipment? To increase and yet further increase output is officially said to be the imperative duty of every patriotic manufacturer. Duty or not, the manufacturer will be unable to stand outside of the general trend, although it would be hypocritical to pretend that many industrialists would not rather keep within limits of their own making. We are told that, standards of living being low in so many countries, the world's potential demand for goods is virtually unbounded. If that be so, then provided the requisite purchasing power can be forthcoming, there should be no undisposed surpluses as a result of the great accession to supplies which, granted no lack of raw materials, automation will bring about. But it would probably be over-optimistic to believe that an exact equation between purchasing power and available goods can be accomplished quickly, dependent as that is upon the notoriously laggard growth of political wisdom. That being so, a period of severe competition or world trade can hardly be avoided at some time or other in the future.

Conditions of Success

A query which arises out of automation is the extent to which it can be applied with economic success to the older industries, other than agriculture—which has no rival. Its equivalent has yielded so far less than was expected in the coal industry. Must mechanisation be on some occasions for its own sake and supported by State subsidy? Undoubtedly, some of the research work in the older industries begins to show signs of a going over the same ground again and again in a vain effort to find something of value that had been overlooked. Against this, we have the fact that research problems to be solved in connection with nuclear energy mount up every day and they extend over increasing areas of industry. Automation of itself cannot maintain the prosperity of industries in the first throes of obsolescence. The introduction of isotopes may be able to regenerate some of the old industries as well as to bring into existence new ones. Here once more is the ancient question of whether it is possible to put new wine into old bottles. However we look at these related matters of automation and atomic energy, it is beyond question that the amount of capital which will be required for their exploitation is tremendous. The Government's policy at the moment toys with the idea that if it fosters the spirit of change, then inflation will be offset without having recourse to the financial measures it only recently contemplated. It must be admitted that this is not a wild dream—provided that we know how to find the capital needed and use it far less wastefully than we have reason to hope from our economic history of the last 50 years or so.

A DITCHER'S DIARY

community of merchants and industrialists which controls the lion's share of this country's private economic wealth. The former Ditcher went on to say that "impartial observers will judge the new Chamber solely on its record." And that is probably as good a text as any for an inscription should it ever be considered worthwhile to have one over the door of this new building in Royal Exchange Place Extension.

I would not go as far as to say with Ben Jonson that titles are "birdlime for fools". They are, to my mind, an essential part of a highly sophisticated society. These decorations become ludicrous only when worn, as they sometimes are, to hide a small mind and to satisfy a large ego, or are chased for their own sake through the back-alleys of politics. No sensible man would think that a person who, in earlier days, considered that he was ensuring for himself a Rai Sahibship by flashing a bright smile on a District Magistrate's chaprassi was a particularly edifying sight, or that a person hanging round No. 10 in the hope of picking up an M.B.E. is any better. But even admitting that titles do have a place in our scheme of things, I have at times felt that there is more glory in laying them aside when conscience demands than in pursuing or clinging to them. Bertrand Russell is none the less great for having allowed his peerage to fall into disuse while much the same can be said of George Bernard Shaw for refusing the honour he was offered. The case of Mr. Allan Legge Gardner of U.P. is, however, tragically different. As a fairly full story in *The Statesman* said last week, he is the lost heir to a lost glory. Seventy-five, near-blind and sunk in poverty, all that he now has to remind him of the ancestral peerage which is his of right is the yearly form he, along with his sixty or so poor relatives, receives from Debrett's. It seems a pity, all the more so because little appears to have been done about it by the British régime under which he has lived for most of his life. But such regrets are perhaps moderated when one remembers that, at this moment, there may be quite a few of the descendants of the Great Moghuls or the illustrious house of the Nawabs of Oudh or of Tipu Sultan, eking out a miserable existence somewhere by selling milk and vegetables, or doing odd chores, who have been left behind by an age which has all too little time to be sentimental about the glories of the past.

The last paragraph has prompted a brief investigation into the present state of Europe's aristocracy. It appears none-too-happy. Of the nine hundred and fifty-odd peers in the U.K., although most are on the verge of penury, several still possess enormous wealth and treasure into which income-tax and death duties have as yet made no appreciable inroads. When, for example, the Duke of Buccleuch visited the Louvre, the curator, who had previously seen the Duke's ancestral collection of French furniture, said, "I apologise for the furniture, M. le Duc." But for one Duke of Buccleuch there are many Fortinbras. According to a recent article by Nancy Mitford in *Encounter*, Lord Fortinbras appears to typify the aristocratic attitude towards money. It can be enjoyed and spent, but not worked for. In the '30s, Lord Fortinbras shut up most of the rooms of his house, sent away the servants and got the Dowager Lady Fortinbras and her sister to cook and clean for the family. He has sold off everything bit by bit to keep the wolf and the creditors from the door, but it has never occurred to him to get a job. Many others in For-

tinbras's straits have thrown their country houses open to sight-seers and tourists. The takings maintain them. Unlike the U.K., the Continent is still full of fake titles. In another issue of the same magazine an article by Luigi Barzini tells us that the craze for these is so great in Italy that many title-hunters, shortly before King Umberto II left the country, wrested from him patents of nobility of dubious value. They are now called, jocularly, "Counts of Ciampino", from the Roman airport where the King took off. In Rome alone there are two Emperors, both of whom bear titles longer than that of the King of Nepal. One of them is the comedian Toto. On the stage he is a buffoon, off it he is addressed as "Your Highness". While a few of the Italian aristocrats are in big business, most are out-at-elbows and down-at-heel. Some are on public charity, and in the prison at Arezzo there is a Countess locked up on the charge of being the leader of a band of thieves. In Florence, Rome and Venice many Countesses keep antique shops. In one of the great Florentine houses, now up against money difficulties, guests at table are asked to turn over their glasses if they do not want wine.

I could not agree more with those who say that Indian newspapers should seek a better coverage of Asian news. And there is nothing like a complete silence about what might be important happenings in one of this country's neighbours to underline the need. I do not know what is taking place in Tibet, perhaps nothing untoward at all, but I was grieved when I learned from a foreign newspaper that something might be. In the absence of authoritative reports, rumours are the only thing one has to go on and rumour has it that there has been a full-scale rebellion in Tibet, that five hundred Chinese soldiers and several thousand Tibetans have been massacred and that the Chinese are using bombing planes to restore order. It seems a tall story to me and I would not be surprised if it were all nonsense, but so far as the Press in this country is concerned, these rumours might not exist for all the notice that has been taken of them. What inadequate reports have been published here have come from abroad and apparently owe their existence to the initiative and perhaps imagination of foreign newspapermen. They cannot, therefore, hope to carry the conviction here which they might have done had they originated from an Indian correspondent. If the world is not to be forced into relying on notoriously unreliable communist-government handouts for its news about events in the greater part of the Asian continent, it is up to the Pressmen of this country to fill the gap, and I cannot see that they are doing it when these disturbing rumours about Tibet are left without comment, verification or denial. In the meantime, what is really happening up there in those rare altitudes? Is it true that the Chinese are ruthlessly subduing a people whose centuries of independence have made them reluctant to accept domination by the remote and unrepresentative government of what has come through time to be recognised as a foreign power? Or is this another example of secessionary tendencies among irresponsible elements in an outlying province unused to the type of paternal interference which is inseparable from modern government, whether democratic or totalitarian? The answer to this question is of great interest to the whole world and of supreme importance to India. It should not be the sole responsibility of foreign newspapers to find it; if Indian newspapermen are sincere in wishing to prove the value of a free Press in this country now is their chance.

STOCK MARKETS FOLLOW WALL STREET FALL

WIDESPREAD LOSSES IN MOST SECTIONS

London, 16th May.

CONDITIONS deteriorated in the stock markets during the past week, and widespread losses were sustained. A number of adverse factors were responsible for the decline, including the local election results, April overseas trade figures, the Prime Minister's economic warning and further evidence of the effects of the credit squeeze, but the over-riding influence was the uncertainty of Wall Street. The favourable effects of a satisfactory medical report on President Eisenhower were more than offset in New York markets by the difficulties of the U.S. motor industry, and the implications of Russian disarmament moves. Wall Street suffered quite a sharp fall and this was reflected in the London markets. Business in most sections was small, although oils were active. Earlier gains were more than lost later under Wall Street's influence. Gilt-edged securities were unsettled and lost ground in the absence of support to record widespread falls up to over a point. The flow of small new issues and the prospect of further Government issues restrained the gilt-edged market. The *Financial Times* Industrial Ordinary index was around four or five points down on the week. Many of the more notable movements in the industrial market followed dividend statements or other specific items of news. Gold shares were active and strong prior to the setback on Wall Street, but gains were more than lost in later dealings. Rubbers inclined to ease, but tea shares held fairly steady in very quiet conditions.

The Money Market

Credit conditions were not quite so comfortable on the London money market during the past week. The day-to-day situation alternated between tightness and comfort. Monday was rather a difficult day, when there was a large outflow of funds to the Revenue Department on account of customs and excise duty. At no time, however, was the market under great pressure, and the highest rate paid was 4½ percent, while a lower rate of 3 percent was touched when the position was comfortable. Bill rates on the whole kept steady with July maturities at 4½ percent. There was scarcely any change in

the Treasury Bill rate at the week's tender. Applications for £250 million worth of 91-day Treasury bills totalled £404,480,000, and were allotted at an average rate of 98s 11.66d percent against 99s 0.35d percent in the previous week. Offerings this week comprise £250 million worth of 91-day bills. The Bank of England return for the week ended 9th May showed that bankers' deposits were £3 million lower at around £228 million, while notes in circulation were about £27 million higher at around £1,855 million. Fine trade bills were unchanged.

Stock Market Prospects

The *Investors' Chronicle* market news letter writes: London industrial shares seem to have reached saturation point for the time being on the buying side. Speculation in oils is overdone for the time being. Rhodesian coppers are uninteresting as large profits are overshadowed by the weakness of the metal and the substantial rise in costs. Wall Street has turned hesitant. Interest rates appear to have stopped rising. The British industrial situation is clouded by wage claims, and doubts over automation, but the undertone of the London Stock Exchange remains firm. An immediate rally is unlikely, but so is any sharp decline. Any rebuff to the Government at the local elections might be a useful opportunity to buy steel shares.

U.S. Federal Reserve Return

The U.S. Federal Reserve return for the week ended 9th May shows that the gold stock rose by \$25 million to \$21,768 million. Foreign deposits rose by \$1 million to \$336 million, while foreign investments rose by \$11 million to \$3,738 million. The Federal Reserve sold \$109 million worth of bills under the re-purchase agreement. Total discounts and advances rose by \$102 million to \$1,003 million, while the aggregate excess reserves of member banks rose by \$113 million to \$403 million. The daily average of excess reserves of member banks rose by \$127 million to \$591 million, while their daily average borrowings rose by \$25 million to \$1,114 million. The business loans of New York city banks fell by \$65 million to \$9,615 million, compared with the rise of \$5 million to \$6,644 million in the corresponding period of last year.

Hongkong Gold Steady

Hongkong gold steadied in sympathy with the U.S. dollar. A leading bullion merchant said that part of the sudden activity in the market was due to refugee capital being used to buy U.S. dollars, which induced local traders to cover their sales of dollars by buying gold. An additional factor was the uneasiness in Hongkong over sterling, and Socialist successes in the local elections in the U.K. After an early decline, fresh buying later in the week pushed values higher to close steady. The official offtake was 5,200 taels, unofficial 33,100 taels and the carry-over charges totalled 204 cents in favour of sellers. Arrivals in Macao were 80,000 ounces; and the forward contract was done at \$(U.S.)37.91.

Platinum Market Steady

Platinum consumption remained fairly brisk in the past week, especially in the petroleum trade, where its use as a catalyst in oil cracking processes is absorbing increasing quantities. Meanwhile, available supplies remained relatively tight and the market was quite steady. Dealers are making offers anywhere from \$(U.S.)105 to 110 a troy ounce, but the higher figures in this range are quoted in exceptional cases. Leading refiners still allot the metal to regular customers at \$(U.S.) 97 to 99, which is the rate they have been maintaining for over six months. Offerings from Europe are very limited.

Firm Undertone in Quicksilver

The undertone of the London quicksilver market is definitely firmer, according to dealers. The ex-warehouse price is still quoted at £85 a flask, but available supplies for immediate delivery are reported to be much tighter than recently. Exports have been rather small of late, while certain quantities have been re-exported, dealers say. But whether the spot statistical position has tightened sufficiently to reverse the downward drift in prices which persisted for so long is problematical. However, a slight hardening in prices will come as no surprise, according to dealers.

World Output of Rubber

Advance statistics issued by the International Rubber Study Group show that world production of natural rubber in the month of March totalled 127,500 long tons. Consumption amounted to 150,000 tons including estimated imports into Russia of 11,000 tons and into China of 600 tons. Stocks at the end of the period totalled 805,000 tons, of which producing areas had 227,500 tons, consuming areas 402,500 tons, and afloats were 175,000. The stock figures exclude those not available to the industry in the U.K., the U.S.A. and France. Synthetic rubber production during the month was 105,000 tons and consumption 95,000 tons while stocks held at the end of the period were 202,500 tons.

Trading in Shellac

An agreement has been reached on the form of contract and the basis of trading for a London Shellac Terminal Market Association, it was officially announced on Monday. Trading will commence on 22nd June in December 1956, February 1957 and April 1957 deliveries. The market will operate at the London Commodity Exchange and will have three sessions daily. The contracts will be guaranteed by the London Produce Clearing House Ltd. The new market does not at present supersede the London shellac futures market, which is expected to continue until the expiry of the October position in that month.

Finance in India and Abroad

THE CALCUTTA MONEY MARKET

DEMAND SLIGHTLY EASIER

Wednesday, 16th May. INDUSTRIAL credit requirements have eased slightly in the past week. The seasonal slackness is taking time to develop, but already the demands of the sugar industry have passed their peak and funds are beginning to return. The needs of the jute industry are still high, but here again there has been a slight decline. Call for accommodation against grain and seeds storage is slackening but there has been an increase in that provided against oilseeds. The interbank market remains tight, with the call rate unchanged at 3½ percent, borrowers over.

There has been an appreciable improvement in the market for export documents this week, with a fair quantity of gunny bills in evidence; there have been a few tea bills. Remittance has been very good. Sterling continues to fluctuate in value and the dollar rate has increased to Rs. 480½.

Silver was quiet on profit-taking induced by the import of Tibetan silver coins. The price declined slightly from the previous week's level of Rs. 175-4 to Rs. 174-8 quoted today. The rate for ready delivery was Rs. 177-15. The London silver market was quiet, with rates unchanged at 78½d. The price of foreign silver in New York was the same at 90½ cents.

Gold was steady on good spot demand and rose from Rs. 105-10 to Rs. 106-10. The sovereign made Rs. 67.

During the week ended 11th May, Government of India Treasury Bills for Rs. 10,42,00,000 were sold in favour of the Reserve Bank.

Rises of Rs. 8.98 crores and Rs. 7.37 crores to Rs. 1,534.66 crores and Rs. 1,525.88 crores in the total note issue and notes in circulation were outstanding features of the return of the Reserve Bank of India for the week ended 11th May, 1956. The of India for the week ended 11th May, 1956. The currency expansion was covered by raising rupee securities by Rs. 10 crores to Rs. 708.69 crores. Deposits of the Government of India increased by Rs. 9.53 crores to Rs. 65.37 crores while other Government accounts fell by Rs. 11.44 crores to Rs. 6.67 crores. Balances of commercial banks at Rs. 49.72 crores were Rs. 32 lakhs higher. Investments dropped by Rs. 10.12 crores to Rs. 33.75 crores presumably due to a transfer to the Issue Department. Balances held abroad declined by Rs. 3.51 crores to Rs. 36.54 crores. Other loans and advances increased from Rs. 76.89 crores to Rs. 98.07 crores, of which advances to scheduled banks against usance bills amounted to Rs. 52.08 crores (Rs. 42.64 crores). These advances totalled Rs. 107.22 crores since 1st January, 1956. Ways and means advances rose from Rs. 1.83 crores to Rs. 2.58 crores.

The return of the State Bank of India for the week ended 4th May, 1956, shows a drop of Rs. 3.45 crores in deposits to Rs. 226.08 crores. Investments in Government securities are down by Rs. 76 lakhs to Rs. 94.06 crores, while other authorised investments remain unchanged at Rs. 10.45 crores. Advances including loans, cash credits and overdrafts, and bills discounted and purchased, have advanced by Rs. 4.26 crores to Rs. 139.34 crores. Cash and balances are, in consequence, shown at Rs. 14.32 crores or Rs. 1.85 crores less.

The statement of the position of scheduled banks for the week ended 4th May, 1956, discloses Demand and Time liabilities at Rs. 637.89 crores (Rs. 7.06 crores on account of borrowings from banks) and Rs. 429.60 crores (Rs. 2.86 crores), compared with Rs. 645.72 crores (Rs. 6.89 crores) and Rs. 427.29 crores (Rs. 2.96 crores) respectively in the previous week. Cash has declined by Rs. 65 lakhs to Rs. 36.91 crores, while balances with the Reserve Bank have advanced by Rs. 38 lakhs to Rs. 49.18 crores. There is a rise of Rs. 25 lakhs in investments to Rs. 355.34 crores. Advances and bills discounted at Rs. 763.37 crores show an increase of Rs. 5.41 crores. The ratios to total liabilities of cash and balances, and of advances and discounts, are, in consequence, shown at 8.1 percent and 71.5 percent against 8.0 percent and 70.6 percent.

LONDON GOLD MARKET REGAINS PREWAR EMINENCE

SAMUEL MONTAGU'S BULLION REVIEW

THE annual bullion review of Samuel Montagu and Co. Ltd has made a somewhat later appearance than usual this year on account of the recent dispute in the printing trade, but is none the less informative and useful because of that. The outstanding point that it makes is that 1955, the first full year of operation of the London gold market since 1938, confirmed the 1954 experience that it had more than regained its prewar eminence. Probably the main feature was the activity of many of the central banks in the market, which for the first time in its history took the place of that of other institutions, some of which had been specifically constituted for the purpose of handling international gold movements. It was also the first year since the war which saw the price of free gold under the official parity of \$35 a ounce for a considerable period of time, and this despite an estimated increase in private hoarding demand of some 30 percent over 1954. Gold coin markets continued active in 1955, despite a diminution of the threat of, and fear of, war, for coin prices are usually the most sensitive reactors to the state of uncertainty in world affairs. The most outstanding feature was the resurgence of confidence in sovereigns, which reached the highest premium over their gold content for some years. The easing in international tension had another effect. A greater number of travellers went to Russia and the Press, generally speaking, encouraged more than ever speculation about the extent of Russian gold production. Finally, the I.M.F. meeting at Istanbul heard the usual expressions of fervent advocacy, and just as strong rejection, of a higher official dollar price for gold. It is fair to add that neither aroused any speculative interest in gold whatsoever.

The Gold Market in 1955

Seventeen years have gone by since comment was possible on the operations of the London gold market during a complete year. An exact comparison between the gold markets in 1938 and 1955 is difficult because the prewar practice of publishing the total turnover at the daily "fixings" was not resumed when the market reopened in March 1954.

*After deducting 6 million ounces already arrived in the U.S.A. but not yet entered in U.S. Treasury accounts.

It is estimated that the Bank of England's silver stocks were increased by about 10 million ounces last year as a result of the refining of silver coin withdrawn from circulation, and by some 6 million ounces purchased in the market.

Forward Dealings

In the postwar London market, nearly all the buying is for prompt delivery whereas quite a large proportion of the supplies are tendered for forward delivery. Hence the loans of silver which the Bank of England continued to make from its stocks to market members during 1955 were of very great assistance in bringing this gap between supply and demand and maintained the discount on forward silver within reasonable levels. The market, however, cannot count on these facilities being fully available during the present year, as the Bank will have to commence making shipments of silver some time in the second half of the year to ensure delivery of the very large amount due for repayment to the U.S.A. against Lend-Lease obligations. Unlike the New York market, London has always maintained a quotation for forward delivery and before the war dealing in this delivery, especially with the eastern markets, formed an important part of the turnover. With the disappearance of China as a factor in silver and the sealing-off of the Bombay market by Indian import and currency restrictions, buying interest in the forward market is very small. Many years of control and stable prices have accustomed buyers in the U. K. and on the Continent to covering their needs by spot purchases only. Now, when silver prices have become, and are likely to remain, much more fluid, with the prospect of spot silver commanding greater premiums over forward when the Bank withdraws or restricts its silver loans, it may be that buyers will revive the technique of covering their future needs by making full use of the facilities afforded by the London market in forward dealing.

Attempted Repeal of U.S. Silver Legislation

Last year in March a Bill was introduced into the U.S. Senate which sought the repeal of the

Silver Purchase Act of 1934 and the Act of 31st July, 1946. The former Act empowered the U.S. Government to purchase silver of foreign and domestic origin at prices within the discretion of the Treasury, and also imposed a tax of 50 percent on profits arising from all silver transactions within the U.S.A. No purchases have been made under this Act since 1942. By the 1946 Act the U.S. Treasury is obliged to purchase at 90¢ cents an ounce (1000/100 fine) all newly mined domestic silver produced within 12 months prior to sale, and empowered to sell silver from its non-monetary reserves at not below 91 cents an ounce (1000/100 fine). This repeal Bill met with strong opposition and was first referred to the Senate Committee on Banking and Currency and then to a Sub-Committee on the Federal Reserve which held hearings last July, to which representatives of various Government departments and other interested parties were called.

Future of the Silver Market

Although the sharp increase in the price levels of silver in London and New York last year was directly attributable to the announcements of Mexico's large sales to Saudi Arabia and western Germany, these two items were only reminders of factors which had existed for some time. Saudi Arabia had been coining silver for several years and had made previous purchases both in the London market and direct from Mexico. Similarly, the offtake for western Germany is no fresh factor but has been developing apace with her postwar industrial revival over the past few years.

The fundamental cause of the present firmness of the silver markets that the world production of the metal since the war has been quite inadequate to meet the increasing world consumption, a fact that had been masked to a great extent by the huge supplies available from the demonetisation of silver coins by various countries, and to the heavy sales by Russia from the stocks accumulated as a result of her abstention from the silver market over a long period. However, both these factors ceased to be effective some two years ago. Apart from the free silver reserves of the U.S. Treasury, from the free silver production sources that could be tapped now are the silver holdings of Spain and Japan. It is understood that there is no prospect of the former making any sales in the near future, and there are conflicting reports about the intentions of the Japanese Government for the disposal of its silver, but in any case no very large amounts are likely to be offered in the current year. Messrs. Samuel Montagu therefore regard the future of the silver market as firm, with the price in New York ranging between the U.S. Treasury buying and selling prices, but prices in London, of course, may fluctuate to a much wider degree in the absence of any stabilising influence such as the U.S. Treasury exercises on the American market.

¹ Estimated or provisional figure.

Union Corporation Ltd., which has prepared this table, makes the following observations: "From information received to date it is estimated that in 1955 the world production of gold, excluding Russia, was about 27,150,000 ounces fine, an increase of about 5 percent on the previous year.

This increase was by no means uniform. South Africa reported a record production with a gain of 10 percent, while Canada and the U.S.A. were the only other large producers to report an increase. Lower production was reported by most of the other producers."

Stocks and Shares

HEAVY BUYING IN IRONS AFTER CLEARING

COPPERS FIRM ON BONUS RUMOURS: OTHER SCRIP QUIET

Wednesday Evening.

THE stock market has been quiet during the past week with the price of the market leader, Indian Irons, shaded slightly after last Wednesday's interim clearing. The undertone, however, has remained very steady and a great deal of speculative buying in Irons has taken place in unofficial dealings following today's clearing. Most of the support for Indian Irons appears to have come from one prominent bull operator, who has succeeded in pushing the quotation up to Rs. 37-7. A feature of the week's trading has been Indian Copper, which improved rapidly after the announcement of a victory for the company in the Bihar Government's case against it. There have also been rumours in the market that the expected bonus issue is to be announced soon and that an increased dividend will be announced with it. Once again, most of the support for the scrip appears to be coming from a solitary bull operator.

Apart from the speculative issues, other shares have remained quietly steady or dull. What activity has taken place has largely been in the engineering section in sympathy with Indian Irons.

Details of the week's trading follow.

* * * * *

The enquiry in Government securities was fully maintained and a fair volume of business was reported. Money was, however, reported to be tighter in Bombay and there has been evidence of selling pressure in certain loans though prices on the whole have remained fairly steady. Three percent 1986 ruled steady and the price improved further to Rs. 77-8 while 3% non-terminable paper was traded at the same rate. Short-dated issues, but however, found more sellers than buyers, but prices were unchanged. Three percent 1957 was quoted at Rs. 99-13 and 3% 1958 at Rs. 99-11. In the medium-dated group 3% 1959-61 was traded at around Rs. 98-3 while 3% 1963-65 had buyers at the higher rate of Rs. 95-2-6. Three percent 1964 was asked for up to Rs. 95 without attracting sellers, 2½% 1961 met with enquiry at Rs. 93-6, 2½% 1960 was slightly better at Rs. 96-4, while 2½% 1962 was asked for at Rs. 93-15 cum-voucher and later quoted at Rs. 93-14 ex-voucher. In National Plan loans, 3½% at Rs. 99-8, Saurashtra at Rs. 99-10, and Bihar 1967 at Rs. 99-6. Three percent U.P. State Loans were asked for at the quoted rates, but business was reported only in small lots.

In State loans, the demand for discount issues was stronger than ever

raise the sources required. If you scrutinise the money raised during the first plan period by the various State Governments, it is there; facts and figures speak for themselves. If we, in our enthusiasm, agree that we are able to raise so much money by way of taxation, I am afraid, sir, it may not materialise. How these things actually work, we know in the States. So far as the printed books on glazed paper with photos are concerned, all these things look very excellent. I want the members of the Planning Commission to come incognito and see how these social welfare centres and projects are working. I am not going into the details here. I want them to go and see incognito how exactly they are working. To begin with, the Social Welfare Board, I am told, was meant for the mere distribution of grants. You have got National Extension services, you have got community projects and more or less the same thing is being done there.

"In the first chapter, you have been emphasising the need for co-ordination of the various activities and reduction in expenditure and the like. In this plan, sir, if it is properly scrutinised from the point of view of co-ordination and economy in expenditure, I dare say that you can save Rs. 50 crores. Each Ministry is very anxious, and naturally so, that it must have several items of work and it wants to expand its field of activities and in its anxiety it forgets and overlaps. So far as these Ministries are concerned, I do not want to go into details. I hope the committee that you propose to appoint will deal with these questions effectively. But I want to say that there is a good deal to be done by way of effecting co-ordination. The community projects idea and the National Extension services idea are excellent. Let all these things be brought under that scheme. Then we will be able to save so much expenditure."

Sugar, if not Steel

The Finance Minister of Madras said: "I come to the vexed question of regional disparities. I do agree that each State cannot have everything of everything, but at least something of everything—of industrial development and agricultural development. I am even prepared to go to the extent of saying that each State's requirements should be taken into consideration now that we have come to have a zonal conception, namely, that we are divided now into five areas—at least with reference to each zone there should be a certain amount of development. In each State, the investment plan should be worked out and we should be informed what would be the order of investment for each State. Till now, we have not been supplied the figures. It would be helpful not only with reference to the financial side but also about the extra employment. Without that you cannot have a realistic figure for each State in the plan. With reference to each zone there should be a sense of satisfaction that these zones have been properly looked after and there has been a free and equitable allotment. Now, if the Southern Zone is taken into consideration in which the new Andhra, Karnataka and Madras will be, I am afraid the plan allotment to this zone is very inadequate, not only with reference to the State plan but also the Central plan, where it is much more inadequate. Therefore, if it is not possible to have in these areas a steel plant because of non-availability of coal and other essentials for the purpose, certain other things should be given. For example, take the case of the sugar industry. There is great scope, particularly in the south, for putting up sugar factories. The standard of sugar content in the sugarcane produced in the south is much more than in other parts for the purpose of extracting sugar."

The Chief Minister of Andhra declared: "I know of a case where a licence was refused in Andhra. What Mr. Subramaniam is trying to suggest is this: in the case of steel, iron, etc., you say there is no possibility for their development in the south. But in the case of sugar, cement,

etc., there is excellent possibility for development. Why not give a little preference to them?"

Raw Materials

Mr. T. T. Krishnamachari: I am afraid no industry has been assigned to the north. It is a wrong conception altogether. We allocate industries on the basis of availability of raw material, not to favour any particular areas.

Mr. Chairman: What is north, Mr. Subramaniam?

Madras Finance Minister: Those are the zones which you yourself have created. At the moment I am talking about the Southern zone which consists of Andhra, Karnataka, Kerala and Madras.

Mr. T. T. Krishnamachari: Mr. Subramaniam, a question is being asked, I think today or tomorrow, about the number of licences granted for textile mills. The preponderance of textile mills in the south can be argued. It is not a question of first come, first served. The same thing applies to every other industry. The question of raw material is most important in the location of industries, not our partiality as such.

Mr. Subramaniam: I am not complaining in that spirit.

Mr. Chairman: I think your point has been made quite clear.

Madras Finance Minister: I would like to point out another instance. The electrical industries which ought to have gone to any of the southern States have been located in Bhopal. The transport bottleneck is another problem. We have to carry sugar from the northern areas to the southern areas.

The Chief Minister of Mysore stuck to his guns almost to the last. He expressed his dissatisfaction with the resolution approving the plan, because "the point about injustice done in the matter of regional distribution of expenditure" was not included in it.

Prime Minister: You mean it is a dissent?

Chief Minister of Mysore: One thing we were harping upon was this regional distribution and there is not one word about it in the resolution.

Dr. B. C. Roy: If we go on putting that in the main resolution, then everybody has got something.

Mr. Nanda: I do not think it was intended to be in the resolution. It was only meant for the record.

Mr. T. T. Krishnamachari: To invoke the procedure of the United Nations, such a thing is kept on record but does not form part of the resolution which is carried unanimously.

Prime Minister: There is not one person here, including some members of the Planning Commission, who has not got his own viewpoint in regard to some matters contained in the second five year plan. Every one of us has some point of reservation or views of disagreement. But what this resolution says is that we record our general approval and acceptance of the objectives, priorities and programmes.

The resolution was adopted.

Agricultural Co-operatives and Warehousing

The Lok Sabha passed the Agricultural Produce (Development and Warehousing) Corporations Bill, last week. The Act designed to promote programmes for the production, processing, marketing, storage, warehousing, import and export of agricultural produce through co-operative societies. The Minister for Food and Agriculture, Mr. A. P. Jain, has described the scheme under the Act as a "pipeline". At the village level, there will be small storehouses owned by co-operative societies. From here, the produce of small growers will flow through co-operative marketing societies to State and Central warehousing corporations. They will secure the full price for it and send back the money to the primary producers. The Minister announced that the Government would set up a council to give advice on co-operative matters to the Food

and Agricultural Ministry, the proposed national co-operative development and warehousing board and the Reserve Bank.

Permission for New Cotton Mills

The Commerce and Industry Minister, Mr. T. T. Krishnamachari, told the Lok Sabha that the Government had permitted the setting up of a new cotton mill of 12,000 spindles in Tirupati. Two similar applications for 22,600 spindles had been granted to mills in Travancore-Cochin, three applications for 34,000 spindles to mills in Mysore, 55 applications for 606,944 spindles to mills in Madras and five applications for 90,560 spindles to mills in Andhra. He also gave details of the quantity of medium and coarse cloth produced in India during 1955-56, including the yardage of dhories and saris. Here are the figures:

Medium	3,744 million yards
Coarse	606 " "
Sarees:	
Medium	483 " "
Coarse	2 " "
Dhories:	
Medium	364 " "
Coarse	11 " "

Decline in Textile Exports

Mr. Krishnamachari admitted that textile exports had declined by 13 percent during 1955 as compared with the previous year. The main reasons for the decline were: (1) readjustment of trade in the various markets; (2) suspension of the O.G.L. in Burma; (3) labour strike in Bombay port and in the U.K. during 1955; (4) competition from Japan, China and Russia in some of India's traditional markets in Asia and Africa; (5) increased world trade in rayon and other synthetic fibres; (6) shrinkage of world trade in cotton textiles; (7) some of the cotton-growing countries which were large importers of Indian cotton textiles had started manufacturing cloth for their domestic consumption and (8) higher prices ruling in the internal market.

Salary at the State Bank

Replying to a question in the Lok Sabha, the Minister for Revenue and Defence Expenditure stated that prior to its conversion into the State Bank of India, the managing director of the Imperial Bank got a salary of Rs. 7,500 a month, plus an entertainment allowance of Rs. 500 a month. He was also receiving two months' salary as bonus each year, besides the benefits of free residence at Bombay and Calcutta and free conveyance. On his appointment to the same office at the State Bank of India his remuneration was reduced by the Central Government to Rs. 4,500 a month, plus house rent for his residence at Bombay, together with a personal allowance amounting to Rs. 2,000 a month in the first year from 1st July, 1955, Rs. 1,000 a month in the next year, and nothing thereafter. The entertainment allowance of Rs. 500 a month, which was discontinued on the establishment of the State Bank, was subsequently restored. Bonus equal to one month's salary for the last half-year had been sanctioned for all employees except the managing director. The lower emoluments fixed for the managing director by the Central Government were expected to bring about a saving of Rs. 18,000 during the first year, in addition to the cost of a free car and free residence at Calcutta. This saving would be reduced by Rs. 6,000, or equal to a year's entertainment allowance at the rate of Rs. 500 a month, which has since been restored.

Check on Bank Advances

Replying to another question, the Minister said that the Reserve Bank had asked all scheduled banks and two important non-scheduled banks to submit fortnightly reports on their advances against commodities, bullion, shares and debentures. The circular sent by the Reserve Bank, the Minister added, replaced an earlier one issued in March 1950, which asked the banks to submit to the Reserve Bank a monthly statement of advance made against specified commodities and bullion. The information now had to be sent fortnightly and in greater detail so as to enable the Reserve Bank to examine more closely the extent to which accommodation was granted for financing trade in essential commodities, bullion and equities and to take appropriate steps to check any tendency for excessive speculation.

Import and Export Policies

The Import and Export Advisory Councils will meet this week-end to discuss the policy for the next half-year commencing from 1st July. As already indicated, a curb on imports is regarded as a certainty. India, as is known, will be importing 5 million tons of wheat in 1956. Steel imports have been stepped up. Cement has been added to the list of imports. The new pattern of trade has necessitated a greater economy in foreign exchange expenditure. As imports of the industrial raw materials and capital goods needed for industrial expansion cannot be reduced, the axe is likely to fall on goods which are manufactured in India or are regarded as luxuries. Investigation of the scope for cutting down imports is continuing, particularly for items whose output has been expanding. But the rise in prices cannot be ignored. One method of checking inflation is to import goods which are in short supply. The fiscal aspect of the problem will also have to be examined. Curtailment of imports of consumer goods means a corresponding reduction in customs revenue. It is true that foreign exchange has to be conserved for the import of capital goods and industrial raw materials. But it is also true that funds are needed to finance the second five year plan. And Customs duties are an important source of revenue.

London

CREDIT SQUEEZE LITTLE HELP IN CURBING INFLATION

INVESTMENT EXPENDITURE REMAINS HIGH

(FROM OUR LONDON CORRESPONDENT)

REPORTING to the National Production Advisory Council on Industry last week on the progress of the Government's anti-inflationary measures, the Chancellor of the Exchequer had to admit that the credit squeeze had not yet succeeded in restricting demand enough to suit his purposes. The main trouble is that investment is still running "at a high level", but in addition to that, consumer demand for most goods is also still too high and "it is still too early to say that the dangerous trend in the balance of payments has been reversed." The President of the Board of Trade was no more encouraging, for although he said exports were still rising, they were not doing so as fast as they should, and last year our share of world trade in manufactured articles had fallen by an amount equivalent to £70 million worth of exports, whereas Japan and Germany had increased their shares. Finally came a report from the Minister of Agriculture, who said it was imperative to save or do without 1,000,000 tons of animal feeding-stuffs this year, or the equivalent of one quarter of the 1955 balance of payments deficit.

Prospects of an easing of these pressures on the economy are not as bright as they might be. To maintain our competitive position in world markets means that we must keep pace with others in the matter of investment; consumer spending power is being sustained by the large pay increases recently granted and being negotiated; and rising costs, especially those of iron and steel to come into effect this week, and anticipated for coal in June as an inevitable sequel to the National Coal Board's deficit of £18,000,000 last year, raise the accumulated deficit to over £36 million. On the other hand, it is good to be able to record that coal output has improved sufficiently in recent weeks to raise the total output so far this year to a figure higher than for the comparable period of last year. The N. C. B.'s report anticipates 1956 production will be the same as for 1955 and that demand will also be the same, which means further substantial imports, one of the big contributors to our adverse balance of payments.

New Problems for Government

The situation as a whole presents the Government with some fresh problems calling for Labour support for their adequate solution. One of these is the strengthening of Parliamentary control over the expenditure of nationalised industries, particularly in view of the fact that, under Mr. Macmillan's new proposals, the Treasury is taking over responsibility for meeting the needs of some over the next two years and suggests an increase in the borrowing power of others. The Government's idea is a Parliamentary Select Committee to enable a closer scrutiny to be maintained of the whole system of accountability of the State-owned industries, without affecting the Boards' day-to-day responsibility nor Ministers' powers and duties as laid down by the various statutes. It will be concerned with the major interests of the public money invested in these industries. Further inquiries into administration, efficiency and general organisation—on the lines of the recent Flack investigation into the Coal Board and the Herbert Committee's into the electricity undertaking—are not, of course, excluded. Annual reports would be specially studied by the Committee with the object of commenting on development policy.

The other problem is represented by the general reaction to the introduction of automation in industry, which has been proceeding for some time without much opposition—with plant, it is interesting to learn, supplied by Western Germany—but has run into difficulties with the strike at the Standard Company's works occasioned by the proposal to introduce automation in the tractor works and render a proportion of the labour force redundant. The D.S.I.R. has spent more than two years preparing a technical report on the subject, and on the publication of this the Government hopes to have talks with both sides of industry. In view of the fact that the latest unemployment figures (on 16th April) show a fall of 14,000 less than a year previously, labour's fears of redundancy seem rather overdone, but the Minister of Labour has emphasised several times how essential it is that firms which are planning to introduce automation should consider from the beginning how it will affect their workers, and consult them early on. He said there were bound to be employment problems involving the re-deployment of labour. New skills would certainly be required, but the problems could be "satisfactorily resolved" if the Government and both sides of industry worked in close co-operation. He recognised the "very natural anxiety" which automation might cause among workers.

Investment in Industry

One of the Government's miscalculations in dealing with the inflationary situation, and an explanation of the continued boom in industry, are shown by the latest statistics made available by the Board of Trade of expenditure on new industrial buildings and equipment. Three months ago the total for 1955 was estimated to be 18 percent higher than in 1954. It is now seen to have been as much as 27 percent more. One part of this is covered by the rise in prices. The largest increases in expenditure last year were in the motor

industry, which nearly doubled its outlay compared with 1954, and in the paper and printing trades, which showed an increase of 50 percent. The metal-using trades, other than vehicles, and the food, drink and tobacco trades increased their outlay by one-quarter. The "miscellaneous industries" group spent one-third more. Much the greatest increase was in building work. In the motor industry more than three times as much was spent on this account in 1955 than in 1954 (£90 million against £29 million). In the paper and printing group, the outlay on building work was nearly doubled. For manufacturing industry as a whole it was 48 percent up. On the other hand, the outlay for plant and machinery increased only by 20 percent and that for vehicles by 29 percent. In "other industries", as opposed to manufacturing industries, total expenditure rose by 31 percent.

If estimates for the current year prove as much below the mark—and "approvals" of building proposals so far at least suggest they might well be—Mr. Macmillan's plans with regard to savings and debt funding could easily fail. Maybe it was this fresh warning—in addition to labour's reaction to automation, of course—which influenced him to give the public yet another warning this week of the perils which face the country if his proposals failed and the benefits to be expected if they succeeded.

Motor Trade and Industry's Problems

Labour's rather muddled reaction to the introduction of "automation" in industry—as represented particularly in the Communist-inspired strike at Standard Motors and the efforts being made to spread this throughout the engineering industry—invites attention to problems facing this particular section of industry, and from the export point of view an important one. To judge from the hire-purchase figures, there has been a normal seasonal recovery in motor sales, but the trade remains appreciably below the level of a year ago. According to Hire Purchase Information, the number of contracts for motor vehicles in April was 64,247, which is some 16 percent more than in March but 15.8 percent below April, 1955. As a guide to the latest trend in the motor trade, these figures are far from perfect, but as the car registration figures lag three months behind they are the best available. Lower home trade sales compared with 1955 are not the only trouble in the motor trade. Exports of cars and taxis in the first quarter were in value 16 percent below the first quarter of 1955. A fall of 16 percent in market demand is not extreme and ought not to be thought unusual, but the motor industry has made itself vulnerable by its great efforts to raise production last year, as indicated above. In the last two months of 1955, production was 14 percent higher than in the first two months. Broadly, the position seems to be that demand has fallen by 16 percent both at home and overseas while capacity has increased by 14 percent. The figures lead to the rather interesting conclusion that capacity is now 26 percent in excess of demand. Fortunately, the trade in commercial vehicles is much better.

Mysore Gold Disagreement

Mr. Arthur Taylor, Resident Director in India of the Kolar gold mines that are to be nationalised by the Mysore State Government, is now in London discussing the matter with his agents. For the

three mines, Mysore Gold, Champion Reef and Nundrydroog, the State Government has made an offer worth about £620,000. This is based on Stock Exchange values prior to the nationalisation proposals last June. Against this, the companies' claim appears to be about 10 times as large. They are working on the value of net assets and loss of earnings through premature termination of leases.

The Mysore Government has quoted the Iron and Steel Act, 1949 as the justification for its valuation. But, as Mr. Taylor points out, Indian gold shares have been depressed over many years by special imposts, references to nationalisation and doubling of royalty. Unfair treatment of the Kolar mines would have a discouraging effect on foreign capital and for that reason, if for no others, it is believed that the Central Government at Delhi may step in to facilitate a more equitable agreement, though not necessarily on the basis of the impartial valuation of assets which the companies want. About 85 percent of the mines' capital is held in Britain.

The Late "Jack" Hardaker

Those of his friends who are still in Calcutta will learn with regret of the death of Mr. John Hardaker, Press Officer of the Cotton Board, which event occurred suddenly at his home at Marple Bridge, Cheshire, on 6th May. He was only 54. John Hardaker started in journalism with the *Yorkshire Observer* group. Later he went to India to work on *The Statesman* at Calcutta. On his return to this country he joined the staff of a Manchester freelance agency specialising in industrial and commercial news. He also worked with a sports agency, for whom he wrote about golf and Association football. After serving with the army in Italy, he returned to freelance work, and in 1946 became golf correspondent for the *Manchester Guardian*. He joined the Cotton Board as Press Officer at the end of that year.

Brevities

The World Bank has made two loans, aggregating \$19,350,000, for the improvement of Burma's transport system. These are the first World Bank loans to Burma. Of the total amount, \$14 million is being lent to the Port of Rangoon and is guaranteed by the Government. The second loan of \$5,350,000 is being made to the Union of Burma.

The former British destroyers *Gabbard* and *Cudizz*, 2,315 tons, and *Creole* and *Crispin*, 1,710 tons, recently bought by Pakistan, are to be modernised and refitted in Britain. Funds for the work have been made available by the United States under the Mutual Defence Assistance Programme.

A big improvement in profits and a larger dividend are announced by James Finlay and Co., the merchant bankers, shipping and insurance agents, with large interests in tea, cotton and jute in India and Ceylon. The total dividend is raised from 7½ percent to 9 percent, with a second interim of 6 percent in place of a final payment. Profit increased from £565,342 to £1,103,476 before charging £620,000, against £310,000, for taxation.

Indonesia has signified to the Tin Council her willingness to join the International Tin Agreement. Inauguration of the pact has been held up pending Indonesia's ratification, and once this is deposited in London, the Tin Council can be called together within 30 days.

SERIOUS FALL IN INDIA'S
TEXTILE EXPORTSKEEN COMPETITION ABROAD AND
RISING INTERNAL PRICES

(FROM OUR BOMBAY CORRESPONDENT)

THE textile trade is perturbed at the recent fall in cloth exports. In the first four months of this year, exports of cotton piecegoods totalled 238 million yards as compared with 243.3 million yards in the corresponding period of last year and 292.4 million yards in the same period of 1954. These losses have occurred in India's traditional markets, mainly Africa, Burma, Malaya and Indonesia. The entry of some communist countries, notably Bulgaria and China, and of western Germany in the textile export field has adversely affected India's trade. Even Pakistan has emerged as a competitor. Bulgaria is reported to have done considerable business with the Sudan, which has so far been one of India's important customers. It is understood that in recent months, Pakistan has exported approximately 2 million yards of grey sheeting to the Sudan, Mombasa and Aden. Sizeable quantities of other varieties have also been shipped to Malaya and Indonesia. The indications are that competition will stiffen in the immediate future, and there is every reason to think that India's export target of 1,000 million yards will remain unfulfilled.

Pakistan is expected to follow up her initial successes. She has the advantage of modern equipment which helps materially to reduce her production costs while her constantly increasing crops of home-grown cottons put Pakistan in an extremely favourable position. In addition to the deliveries already made, Western Germany has recently signed a textile agreement with Burma,

under which she will supply cotton textiles and yarn valued at approximately Rs. (B)12.5 million. Payment will be made in terms of raw cotton made available to Burma by the U.S. Government.

Abolition of Duty

Alarmed at these developments, the textile trade here feels that some steps must be taken immediately to remedy the situation. It intended to move the Government to abolish the 64 percent export duty on coarse cloth which the Government has already done. The Bombay Stock Exchange anticipated the Government's action, and textile shares rose sharply last week. In his Budget estimates, the Finance Minister took credit, on account of the export duty on coarse cloth, for Rs. 1 crore during the current financial year. In view of the relatively greater importance of foreign exchange earnings, the Government of India has agreed to forgo this revenue.

It is doubtful whether the abolition of the export duty will lead to permanent results or even help solve the problem temporarily to any appreciable degree. The problems of the Indian textile industry are far too deep-rooted for that. The situation has been aggravated by rising internal prices. Local prices have risen by 15 percent since the beginning of this year and there is no evidence to suggest that this upward trend has been checked. Whereas domestic markets have to pay increased prices, overseas customers have turned to India's competitors. Larger supplies have therefore been diverted to the home markets. This process will continue to operate unless the production of cloth is increased. In these circumstances, it is feared, the effect of the abolition of the export duty may be neutralised by rising prices.

Production Policy

This raises the issue of the Government's future textile production policy which fundamentally revolves round the distribution of output between the organised mill industry and the various components of the small-scale industry. An ambitious programme has been planned for the cottage industry at the expense of mill production. It has been proposed that the production of the organised mill industry should be pegged at 5,000 million yards and the balance of 3.20 million yards should be supplied by the smaller units engaged in handloom and the cottage system of production. The present combined production of the two sections is estimated at 1.6 million yards annually which means that to meet the estimated demand, they must increase their output by 100 percent within the second plan period. Apart from the financial outlay involved in equipping the small-scale industry to play its assigned rôle, there is a serious risk that for a variety of reasons, it may fail to achieve the target set for it. Such a failure would inevitably create a scarcity of cloth and soaring prices. India's export trade would then be threatened gravely.

It may be worthwhile to reconsider the problem and to set a more realistic target for the small-scale industry. The export question is a serious one because cotton textiles are expected to earn a substantial proportion of the foreign exchange needed for financing the second five year plan. The question of rationalisation is frequently discussed and shelved. The fact remains that newcomers to the world textile trade derive much of their competitive power from the very latest machines which they have installed and which reduce production costs to the minimum. The Indian industry, on the other hand, has remained static and there has been little rehabilitation. According to official figures, 95 percent of the machinery in use at present is 25 years old and of the 453 mills in production, more than 150 have ceased to be economic units. If India is to compete successfully in world markets, the question of rationalisation cannot be delayed much longer. It is imperative that the Indian industry be based on a fully competitive footing, otherwise its products are liable to be priced out in the international scramble for markets.

How Standard-Vacuum's technical sales staff
help make industry more efficient and productive

LUBRICANTS are a vital need for every factory, power plant and machine shop. But it is not enough just to buy the best lubricants. Expert advice on lubrication is also needed.

Trained Standard-Vacuum specialists render complete lubrication service, by studying each problem, no matter how large or small, and finally recommending the correct GARGOYLE Industrial Lubricant. The customer gets the benefit of 90 years' experience, gained in solving lubrication problems throughout the world.

Standard-Vacuum's Lubrication Service helps to keep machinery running at peak efficiency, and eliminates costly breakdowns — thus increasing the productivity of Indian industry.

REGULATION OF STOCK
EXCHANGESMISUSE OF OFFICIAL POWERS
FEARED

(FROM OUR MADRAS CORRESPONDENT)

THE retiring president of the Madras Stock Exchange Association, Mr. H. Subramaniam touched on a number of subjects at its annual general meeting, held recently. Although he welcomed the Stock Exchange Bill as essentially regulatory in character, he had to re-state the unanimous opinion of all the stock exchanges that the Government might have trusted them a little more. They had been verbally assured that these provisions would not normally be invoked. But, Mr. Subramaniam said, it was difficult to take comfort from these assurances, particularly after what had been seen in recent weeks in the case of the East India Cotton Association in Bombay. Once power was vested by a Parliamentary statute in a bureaucratic body, the question as to what constituted an emergency was one on which it was possible to develop strong or hasty opinions and take no less hasty action. The legislation, he said, should be such as not to impair the elasticity of the Stock Exchange mechanism, which was one of its greatest assets.

He also referred to the nationalisation of life insurance and to the new company law. There was some misgiving at the outset about insurance executives continuing to play their important rôle in the gilt-edged market. Thanks to the prompt action taken by the Government, it proved unfounded. The Custodians of insurance companies continued to impart the necessary fluidity and life to the gilt-edged market, thus dispelling many of the fears that were entertained at the time of the promulgation of the ordinance. About the new company law, he said that, by and large, the policy of all the amendments made and the administrative machinery created was to give protection to the investor in joint-stock companies. He, therefore, hoped that the managerial class, the investors and the stock exchange community would give unstinted co-operation to the Government in the sensible and discriminating administration of this Act.

Sources of Plan Finance

Speaking on finance for the second five year plan, Mr. Subramaniam thought that it would be wise and realistic for the stock exchange community to recollect itself to a period of intensive taxation, direct and indirect, in order that the anticipated revenue surpluses might be available both at the Centre and in the States, as the first source of plan finance. It was also quite obvious that large borrowings would be made in the coming five years both by way of market loans and Treasury bills and also through small savings schemes. The Stock Exchange, he said, was bound to play an active, constructive and helpful part in the mobilisation of subscriptions for these loans. As for deficit financing, he said that this, more than anything else, was likely to influence the course of prices on the stock markets as perhaps of prices in other sectors. The mainstay of the stock market had been the middle-class investor. Increased prices, on the one hand, and increased excise and import duties, on the other, were bound to aggravate his distress. It was of the utmost importance that the middle-class man should not have his economy thrown out of gear and be made to feel bitter about difficult living conditions caused by inflation. He trusted that the scale and manner of deficit financing would be properly correlated with the scale of increased productivity during the second plan period.

Reaction to Industrial Policy

The new Statement of Industrial Policy has not evoked much comment in Madras, although the Press has dealt with it in editorials. The president of the Madras Stock Exchange Association, however, thinks that there is to be no hard and fast rule as to which industry belongs to which sector, because the Government has reserved the right to go into any industry under the statement of the plan. He is also aware that the statement on State trading has caused no small concern in trading circles. He could only express the hope that it might not be the intention of the Government to deprive the merchant of initiative or zest by any drastic narrowing of the field of commerce and trade—domestic or international. The Press here has generally taken the line that the extension of State enterprise should be determined by pragmatic tests of how the public interest can be served best. There should be a cautious expansion of public enterprise—as the training of suitable industrial and business personnel to run public enterprises has been hardly taken up yet. The continuance of a steadily shrinking private sector under conditions of suffrance is described as one of the two features of the new Policy.

Curtailed Imports

The Chief Controller of Imports and Exports told members of the Southern India Chamber of Commerce that imports were likely to be more restricted in the years to come. Though the total might be more, machinery would make up a large part of imports, and those dealing in consumer goods might have to be satisfied with smaller licences. The Government did not want any industry to close down for want of raw materials.

It only wanted the raw materials available in India to be used. The Chamber represented that permission should be granted for the import of ebonite rods and tubes for fountain pens as the standard of indigenous products was not up to the requirements of the industry. A member of the Andhra Chamber of Commerce represented that he proposed to start a factory for the manufacture of playing cards of high quality, but he found it difficult to secure suitable card paper of quality produced by indigenous manufacturers. Another member pointed out that indigenous liquid glucose was not up to the standard required for the confectionery industry. The two members pleaded that licences should be issued for the import of card paper and liquid glucose. The Controller said that the actual user's licence would have to be continued even though some cases of misuse were reported. He also stated that several cases of misuse of licences by consumers' co-operative societies were under investigation in Andhra, Hyderabad, Mysore and Bombay.

Rise in Food Prices

Local foodgrain merchants made some representations about the recent rise in rice prices to the Director-General of Food, Government of India, during his visit here. They told him that the rise in prices was not due to profiteering by merchants, but only due to hoarding by the ryots themselves who were offered liberal loans lest the price of rice should fall to an uneconomic level. They blamed the Government for purchasing rice in

the open market in Andhra at the rate of Rs. 17-8 a maund when the ruling price was only Rs. 14 a maund. The Government also purchased rice in Hyderabad at Rs. 18-7 a maund. The Director-General of Food did not accept the explanation. If rich ryots hoarded, taking advantage of the credit facilities, it would mean that they also turned traders. The allegation, however, would have to be substantiated. But, as far as the merchants were concerned, it was a fact, he said, that the quantity of rice pledged with the banks in the current year was about twice the figure for the previous year. As for the Government's purchase of rice, he said it was for the Army. Since the Army specification was high, a higher price was offered. In any case, the Government had now stopped all purchases.

Electricity Return

The Madras Electricity Department has reviewed its activities in the year 1954-55. The aggregate demand for power under the Government systems during the year was 181,700 k.W. as against 151,925 k.W. in the previous year. The gross revenue was Rs. 597 lakhs as against Rs. 481 lakhs in 1953-54. The net revenue realised yielded a return of 6.4 percent on the capital outlay as at the end of the year 1954-55. The net profit earned by the Department, after meeting the interest charges, was 2.08 percent on the capital outlay. The total of transmission and distribution lines in operation during the year was very nearly 12,000 miles of which H.T. lines accounted for just 50 percent.

Oil from abroad costs valuable foreign exchange.

Oil from inside India saves it. And we must have ever-increasing quantities to cope with the expansion of industry and agriculture.

Scientists and engineers are keeping Assam's oil industry working at full pressure to produce as much oil as possible from our own oilfields. Additional wells are constantly being drilled, yet even in an established area they are not always productive; in spite of modern knowledge and equipment, successful drilling still remains something of a gamble.

But no effort is spared to find oil and turn it into the fuel, lubricants and by-products which are so vital to the progress and prosperity of India.

BRITISH TEXTILE REVIEW
PROMOTING WOOL GOODS

It is not always realised that Britain's consumption of wool by a person is less now than it was before the war, whereas even cotton is being consumed in proportionately greater quantities, and the relative improvement in the man-made fibres is, of course, much larger. In the home market the wool industry has failed to get its share of the benefit of the expansion of demand for textiles. It is because its export trade compares so favourably with cotton's that so much less complaining is heard from Yorkshire than from Lancashire. The industry has begun to recognise that it ought to do more to publicise its goods. Employers' organisations have been discussing the matter; but at present they seem to be concerned with promoting trade abroad rather than at home. The first problem is finance; not that the industry is short of money, but the levy on its production is allocated largely to research and the sum available for promoting sales—in the export field—is only modest. The recent annual report of the National Wool Textile Export Corporation showed a prospective annual income of £110,000 from the levy and a prospective annual expenditure of £130,000. At this rate of deficiency, the Corporation's reserve of £40,000 will be exhausted in two years.

On this reckoning there is nothing at all available for the home market, for none of the inadequate levy can be diverted there; and the Corporation's income is so small a proportion of an export turnover of roughly £150 million that it is surprising that so much sales promotion has been done in the dollar markets, even though the effort has been concentrated there. It is likely that the industry will make more finance available for promotion, and will at the same time direct more effort to the home market. But the problems of publicising wool as such will not be easily overcome. The industry does not make what the consumer buys but what the clothing industry uses as its material; and much cloth that is mainly wool is advertised now as containing other fibres with other properties.

Publicity for Cotton

The cotton industry in also planning a sales campaign, in this case specifically for the home market. Its purpose is not to compete with the wool industry but to counteract the growth of demand for attractively priced goods based on Asian cloth. In the past month, the industry has continued its deputations to the Government in the hope of breaking down the resistance to the idea of controlling imports from the Commonwealth, but many people feel that the method of self-help is prefer-

able. The plan is scheduled to begin in September and to spend about £250,000 at a rate of about £100,000 a year, advertising on the theme, "Buy Britain's Cottons". All sections of the industry, including the operatives' unions, are willing to contribute financially, and the Cotton Board has agreed to provide "a substantial amount" for the campaign. In its internal affairs, the industry is thinking still in terms of stabilisation by agreement. After almost 14 years of discussion, the Cotton Manufacturers' Association formulated last month proposals for fixing minimum prices in the weaving section. But the scheme, put forward in a questionnaire, is not wholeheartedly supported. While its advocates argue that nothing but confusion results from wide differences in quotations for virtually the same product, its critics argue that almost indiscriminate price-cutting is sometimes necessary to maintain a basic minimum of turnover. The present time, when efforts are being made to compete with Asian imports, is hardly the most appropriate for any price-fixing scheme.

Varied Exports to Russia

Before the Russians' "shopping list" was presented to the British Government, the textile trades had noticed a significant development of interest in British fashion goods on the part of Russian buyers. The authorities were not particularly helpful on either side, but representatives of the dress firms here and of the fashion business in Moscow cut through red tape and were soon doing business. As a result of their initiative, scores of models will be flown to Moscow early in June, and they will include, by special request of the buyers, as many glamorous dresses as useful ones. There is no restriction on prices: it appears that some Russian women are able to pay well. At the same time, a useful trade in foundation garments is developing.

The official "shopping list", however, was rather disappointing to the textile trades, which had hoped that the interest in fashion goods signified a broader interest in textiles generally. An unspecified amount of woollen cloth was included in the list, but the idea of a big open market for any of the U.K.'s "surplus" textiles has had to be abandoned. Raw wool is another item in the list, but it is not clear whether the intention is to import more wool or to divert some buying from the primary markets to London. However, wool textiles, at least, are apparently welcome within limits, and in another field, textile machinery, substantial imports into Russia are envisaged. Just after the list was presented, but without relation to it Textile Machinery Makers announced that its subsidiary, Platt Brothers, had contracted to supply carpet looms and ancillary equipment worth more than £2 million, and in the list itself dyeing and finishing equipment is a prominent item.

Textiles in Industry

The National Industrial Textiles Trade Fair has

provided a further reminder of the variety of textiles' industrial uses, and also of the continuing predominance of cotton in this field. It is not surprising that more and more firms in Lancashire are looking with interest at the industrial possibilities. At the best, there is no dramatic expansion of demand for clothing in prospect, whereas post-war experience has confirmed that industrial expansion brings in its train a corresponding increase in demand for industrial textiles, for conveyor belting, electrical insulation, and innumerable other purposes.

WHOLESALE PRICE INDEX FALLS

THE official wholesale price index (base: year ended August 1939=100) declined by 0.4 percent to 390.4 during the week ended 28th April, 1956, as compared with 392.1 for the previous week. The index was almost the same as in the corresponding week of last month, but was higher by 14.3 percent as compared with 341.5 a year ago. The average for April 1956 stood at 391.2, as against 387.3 for March 1956 and 345.1 for April 1955. A decline in the prices of jowar (-9%), gur (-7%), rice in Calcutta (-4%) and at Vijayawada (-1%), wheat at Jabalpur (-3%), gram (-2%) and coffee (-1%) brought down the index for Food Articles by 1.2 percent to 356.8, despite an advance in the prices of wheat at Amritsar (+8%) and at Hapur (+2%), rice at Patna (+6%), dal arhar (+2%) and salt (+1%). The index for Industrial Raw Materials also declined by 0.8 percent to 471.5 due to a decrease in the prices of ginglyseed in Bombay (-21%), manganese ore (average export price) (-8%), castorseed (-5%), raw jute and raw silk (-3% each) and linseed and copra (-1% each), although the prices of ginglyseed at Jhansi (+11%), lac (+6%) and rapeseed (+2%) showed advances. The index for Semi-Manufactures, however, moved up by 0.6 percent to 380.7. Items which recorded noticeable changes were: mustard oil (+5%); castor oil (+3%); cotton yarn (+2%); gingly oil and gingly cake (-3% each); sheepskins and coconut oil (-2% each). The index for Manufactures declined by 0.1 percent to 375.4 as a result of a fall in the price of jute manufactures (-1%). Higher prices of chillies (+6%) and black pepper (+4%) raised the Miscellaneous group index by 0.5 percent to 499.0 as compared with 496.5 for the previous week.

LOWER PRICES AT TEA EXPORT SALE

HIGHER RATES FOR GOOD DUSTS

AT Sale No. 47, held on 14th and 15th May, offerings at the Export auction, consisted of 52,060 packages, for which there was fairly good demand, but at somewhat lower rates. Better liquoring teas declined by about 2 annas a lb., while Medium kinds, particularly B.P.'s were a full 1 anna lower. The poorest kinds were fully firm to occasionally dearer, while stylish B.P.s and well-made whole leaf grades were also firm to dearer. Once again, no quotations are given.

At the Internal Sale, dust offerings consisted of 21,700 packages. There was a fair general demand. Black leaf teas suitable for the Middle East were the strongest features of the Sale and were often several annas dearer. Good liquoring Mediums and non-wither Doars were fully firm and occasionally dearer, while the very best C.T.C. Assams received good support and advanced by 1 to 2 annas a lb. Commons, poorer mediums and the more ordinary C.T.C. Assams were irregularly 1 to 2 annas easier and the very fibrous residue C.T.C. teas were a weak feature and often difficult of sale. Offerings of other grades consisted of 6,500 packages, for which there was a fair demand but at an irregular 1 to 3 annas below last rates.

FREIGHT MARKETS
QUIET BUT FIRM

IN the past week, the markets remained fairly quiet but very firm. A fixture of American coal on French account was concluded at 78s 6d for May-June single voyage, and owners are now asking for 80s. There was not much activity in the Pacific grain market, but charterers are open for September and October shipments from British Columbia to Peru at about \$ (U.S.) 10.50, 1,000 free discharge. Tonnage for July shipment is sought for North Pacific ports to Vizagapatam, Madras and Calcutta. It is reported that a fixture for scrap Calcutta Kobe has been concluded at 150s f.o.t. The time charter market was also steady for trip and period trading. A Liberty obtained 47s 6d delivery Persian Gulf redelivery Japan for the trip out via India. An 8,000-ton motorship accepted 52s delivery passing Suez redelivery Japan via Indian ore ports.

A fair improvement has been shown in the coal docks and it is likely that there will not be any waiting for coal berths by the end of May. A threatened strike at Vizagapatam has been postponed from 15th May until the end of the month. A strike there now would be disastrous, as ore loaders are waiting up to three weeks for berths, and there is no sign of improvement.

SUGAR STEADY

During the week ended 16th May, sugar sales in the Calcutta market averaged 5,000 bags daily. Arrivals a day were 1,200 bags and stocks totalled 75,000 bags. Sales for ready sugar ex-Kantapur delivery were Rs. 31-8 for ordinary grain and Rs. 32-12 for big grain; ex-mill prices were Rs. 28-6 and Rs. 29-6 respectively. The market was steady.

LINSEED SLIGHTLY EASIER

There was no notable change last week, but a slightly easier tendency was apparent towards the close with buyers showing little interest. Seeds prices reacted slightly, following an improvement in arrivals from upcountry; crushers, however, were seeking lower levels and covering for their immediate requirements only. Trading in the oil market was poor and sellers were more in evidence than buyers. With the exception of an enquiry for ready oil from a prominent shipper, activity was negligible. Latest quotations were as follows: Ready Rs. 22-10 a maund; May-June Rs. 22-10 a maund.

HIDES AND SKINS

The market ruled dull and prices showed a downward tendency. Stocks were higher than in the previous week.

Bazaar Sales

(Between 8th May and 15th May, 1956)

Cowhides: Wet salted (Slaughtered) 12,500 pcs. on the basis of Rs. 11-8 to Rs. 20.

Goatskins: Wet salted (Daissee, Killed) 16,750 pcs. on the basis of Rs. 300 to Rs. 350. Rs. 350 to Rs. 375 and Rs. 245 to Rs. 300; Assam-Dinajpur-Jalpaiguri 6,400 pcs. on the basis of Rs. 265; Purneah-Kissanganj 6,500 pcs. on the basis of Rs. 260; Pakur-Patna (Ord) 9,500 pcs. on the basis of

TEA COMPANIES

O. Po. and Dd. indicate Ordinary, Preferred Ordinary and Deferred Shares, respectively. P. next to the name of the company indicates that the Company also has Preference Shares. Figures in "accounts closed" column indicate the months of the calendar year in which accounts are closed. For Managing Agents refer to the Key (last page) under the numbers indicated.

THE SECOND PLAN PATCHED AND PRESENTED

A LITTLE MORE FOR THE PRIVATE SECTOR

THE upshot of a month's debate on the second five year plan is that it is to remain in most aspects much the same as was presented to the nation in the form of a draft outline earlier this year. That is not necessarily regrettable. It is not regrettable because it must be remembered in what atmosphere the debate on the plan has been conducted—that is, one in which important and powerful interests have sought to expand outlays without bothering where the resources to finance them will come from, attempts have been made to push woolly aims of social welfare ahead of stark economic necessities, and regional jealousies have not been entirely dormant. That the planners have managed to steer through the storms of internal and external controversy with their boats a little rocked, but not overturned, is a tribute to their pragmatism and ability for compromise. Some slight evidence of this is also seen in the decision to increase the target of outlays in the private sector by Rs. 100 crores to Rs. 2,400 crores. The significance of the change, however, may be sentimental rather than real, since the private sector will very largely have to fend for itself in its search for capital, and the rest of the Planning Commission's report gives an idea of how very difficult that search is likely to be with the State's running noose already round the major sources of savings. The fact that the private sector will be expected to invest slightly more now than it was expected to three months ago might, however, suggest a rough assurance that official policies will be adjusted towards that end. If that were so, the revision of the outlay target may be of greater importance than it now seems to be.

The discussions on the second plan before, at and since the National Development Council meeting early this month have centred on four main criticisms. The first is that the estimate of resources has been exaggerated because wishful thinking has been allowed to cloud the strictly practical. The second is that the transport targets are not high enough in relation to the expected increase in production. The third is that a much greater expansion of food output is necessary for an economy which will be walking straight to the brink of inflation. And the fourth is that foreign exchange needs might well be beyond the nation's earning capacity, especially if inefficient methods of production are encouraged in a trading world which is becoming steadily more competitive, and if no special effort is made to attract foreign investors who have the choice of good returns elsewhere. None of these criticisms is new; some of them were born and have gathered strength almost since the publication of Professor Mahalanobis's plan-frame eighteen months back. They are even more valid today than they were a year ago, now that the final plan has been inflated beyond his original very ambitious proposals.

But to say all this is not to imply that the past month's reiteration of known criticisms has served no useful purpose. It has, and if for nothing else then at least for bringing out the fact that doubts exist not merely among the laity but also among many of the more important members of the Central Government and the Planning Commission. It is clear, for instance, that the resources estimates—the kingpin of the plan—have disturbed at least two Ministers and two members of the Planning Commission. The transport shortage is worrying at least one member of the Central Government and one of the Planning Commission. So also is the inadequacy of the food targets. As for the country's ability to earn foreign exchange, the general mood is one of much hope and not much confidence. We have referred here only to the doubts which have been publicly expressed; how many exist elsewhere but have not been discussed openly can perhaps be judged by no one better than by Mr. Nehru himself. The manner in which the various differences of approach have been soft-pedalled suggests that they are more numerous

than would be indicated by a hasty reading of official bulletins and Press reports on the ceremony at which the second plan report was signed. With Mr. Nehru's remarkable abilities for conciliation and compromise, the final version of the plan has emerged with little change; the black and white of conflicting approaches is painted over with the vague grey of agreement on general aims.

In some respects, there is much to be said for such a technique where criticisms are vigorously made and vigorously discussed, then quietly put away on the files—"for the record." The planners have been at pains to emphasise that one of the most distinctive features of the new scheme will be a ready elasticity in

prescribe what a country held as one by a foreign power should do to ensure that it remains one after the external unifying factor has been removed. That certain positive steps need to be taken by its leadership need not be doubted, but students of history will perhaps be inclined to suggest that emergence as a nation is often the result of accidents in history. Ardent efforts of leaders over a period of years avail a country nothing—and then, suddenly, comes an attack from outside and there is a people to face it with courage. To put it more plainly, history has more instances of nations being born under the impact of external dangers than of those who have promoted themselves to full nationhood through their own efforts unaided by the fearful threat of defeat and extinction. It is not suggested that India wait for some such accident. It would be unfair to insinuate that Mr. Nehru sometimes tends to exaggerate the threats of SEATO and the Baghdad Pact with the specific intention of making a contribution to Indian unity, even as it would be foolish to dismiss it as a tactical error that almost as often he plays down external dangers. The question before India today is what to do before history acts.

Before that, there is a good deal to be undone. There is no doubt at all that the biggest single threat to India's unity today is linguistic. With the English language in disfavour, many languages see in the vacuum great opportunities for self-assertion; knowledge that a language is only as powerful as the authority of the State behind it, as the number of miles and men it is spoken over and by, has invested the linguistic agitation with enormous political significance. The Congress Party once fought as one for the linguistic reorganisation of India; vested political interests inevitably grew in the process, and the Congress itself is today sadly divided in consequence. It was perhaps an unfortunate oversight on Mr. Nehru's part to wake up to the latent danger of the agitation too late. Two courses lay before him: one, to impose unity from above with all the firmness necessary—after enforcing on Congressmen greater discipline than is apparent now; two, to accept such local loyalties as there really are, stripped of interested exaggeration by politicians, and then to try and build on them a superstructure of genuine national unity.

Unfortunately, Mr. Nehru is still a long way from choosing either. There must be appreciation for his very real difficulties; his party was far too involved in the pre-independence linguistic agitation to pull out of it on a sudden without serious repercussions on party unity. Secondly, however alluring unity may be as a national objective, it may well gall Indians to have it at the price of a national language and self-government, so that the search for an alternative is perfectly understandable. As it happens, Mr. Nehru is a believer in democracy, with the result that the ruthlessness which would be required in enforcing unity from above has always been lacking. There has been intermittent toughness in dealing with disturbances here and there, very rightly, but the Prime Minister has never given up hope that an agreed solution would be possible after the passions have subsided. It is not entirely his fault that this has not been forthcoming.

The other alternative has not yet been tried. Local loyalties have generally been held to be absolutely antithetical to loyalty to India as a whole, and this may not be entirely correct. This other thesis may be the more deserving of examination and trial because India's methods are, and should continue to be, democratic. It has not been proved yet that a Bihari cannot be a good Indian—after he has realised himself as a Bihari. The same could be true of Maharashtrians and Bengalis; after all, they all once answered the call of Indian nationalism and made considerable sacrifices. Can it not be that once every linguistic group has been conceded its individual entity there will be a general tendency to think of India again? The risk may be well worth taking.

The one thing missing in the continuing debate on statal reorganisation has been leadership. It has already been stated that this is chiefly the result of the Government of India's admirable adherence to, and faith in, the principles of democracy. Something more seems indicated now. It is not good enough for the Congress Party in Bengal completely to abandon an important and far-reaching scheme after a Calcutta by-election; if leadership had a feel of the mood of the people, the scheme might never have been thought of; if the leadership were convinced of the merits of the scheme, it could scarcely have been jettisoned so unceremoniously after the loss of a Parliamentary seat the Congress never held. The twofold lacuna in leadership today are that it reaches decisions without an awareness of the mood of the people, and then lacks the courage of conviction to push its decision through when there is opposition. With no understanding before, and less firmness after, the Government is fast losing the respect which in many other ways is its rightful due. This is the sort of dilemma the British were in during their last phase in India, and this analogy cannot be a compliment to a party only beginning to take shape of the country.

THE ADVENT OF STATE TRADING

THE creation of the long-awaited State Trading Corporation of India was announced last weekend. It is, as was to be expected, a Government enterprise, 100 percent. Incidentally, the announcement brought a long-drawn-out controversy to a close. The question was whether the State should intrude into a field in which it has little experience and take up a job its administrative machinery is ill-equipped to handle. Now that the Corporation is an accomplished fact, further discussion on this point would be futile. Not that the private sector's arguments have thereby lost their validity. But the emphasis must shift from this question to another, that is, how and in what way should the Corporation carry on its job side by side with normal private trade channels. It must be remembered that the country's foreign trade has to be conducted with certain specific aims in view. The most important of these is the export promotion drive, which has to be carried on vigorously because of the large foreign exchange gap in the resources budget of the current five year plan, and the agency best suited for the job should have preference. If experience is any guide, the private sector is better equipped for it. Given adequate backing and encouragement from the State, it could do that job better still.

As it is a matter touching the vital interest of the country at the moment, there is little scope for ideological considerations. The extremists among planners have been suggesting that the export trade in jute, tea and textiles should be taken over by the State because there is a huge profit to be made from it. They may well have their way some time. If that happens, the ideological desire of some people may be satisfied, but the best interest of the country, in the given context of things, is unlikely to be served. For in these lines, India's export trade no longer has the advantageous position it once enjoyed. Even the semi-monopoly position in jute manufactures has been very nearly lost. It now requires a hard struggle to maintain in the markets abroad what India has gained, let alone expand business that becomes more competitive with time. It will indeed be short-sighted in the extreme if the Government interferes with the established channels of trade and risks the loss of contracts and the efficiency of business which these channels have built up over years and at a time when their services are most needed. Speaking in a debate in the Lok Sabha some months ago, the Union Minister for Industry and Commerce, Mr. T. T. Krishnamachari explained why a State trading organisation was necessary. In the first place, India's trade with totalitarian countries has been increasing, and it promises to increase further. Since trade in these countries is handled by monopolistic State bodies, it is better dealt with by a similar organisation in India. Secondly, a quasi-monopoly arrangement, in his opinion, is a better proposition for importing critical items of goods the supply of which at "reasonable rates" private enterprise may not always be able to ensure. These grounds are reasonable enough, but the Corporation's memorandum of association does not suggest it will be limited exclusively to them.

According to that memorandum, the objects are to "organise and effect exports and imports of all such goods and commodities as the Company may from time to time determine". This leaves much to the Corporation's discretion which it may not always use wisely, and Mr. Karmarkar's assurances notwithstanding, that is exactly what the private sector is scared about. Mr. Krishnamachari's rejection that no demarcation of areas in trading between the State body and private trade is possible will not assuage business men's fears; on the other hand, it will accentuate their doubts. If the Government is unwilling to leave any particular field of trade free to private enterprise, it would be unfair to load the scale against the latter by conferring undue competitive advantages on its own Corporation. Competition would be further assisted if the Corporation is not granted a monopoly in any line of trade, barring of course a few items which may be reasonably held to be purely the Government's concern. For monopoly in a particular trading item will not only harm private traders, particularly those who will be displaced because of the change, but also the general body of consumers who are apparently in for some hard times in view of the large-scale deficit financing and the prospective increase in prices. State trading may have its rationale, but it will be a very poor justification for the measure indeed, if because of it, a large number of self-employed persons are thrown on the street, and unnecessary hardship is inflicted on the consumer whom it is also meant to help.

CURRENT COIN

Index of Industrial Activity.—Corrected for seasonal fluctuations, Capital's Index of Indian Industrial Activity shows a rise of 5.3 points during November, 1955. Contributing to this were

increases in jute manufactures, steel ingots, pig iron, paper and coal. Cheque clearances also rose.

Lending on Rice and Paddy Stocks.—Another example of official concern over the rise in food prices is last week's directive from the Reserve Bank to scheduled banks requiring that advances against stocks of paddy and rice be restricted. No scheduled bank is now free to increase any credit limit whether by way of loan, cash credit, overdraft or purchase or discount of bills sanctioned to any person, firm, company or institution on advances against the security of paddy and rice. Where the advances are composite, those against this category of foodstuffs together with the relative limit, must be segregated and the restriction made applicable to the relevant portion of the advances. It is also directed that no scheduled bank is to sanction a fresh credit limit in excess of Rs. 50,000 against security of paddy and rice. Every scheduled bank is to increase the existing margin stipulated or provided for the limits and advances by an amount not less than 10 percent of the value of the commodities. The directive explains that this will mean that if, for instance, an existing margin of a particular advance is 25 percent, a further 10 percent is to be added, raising the total to 35 percent. The directive also calls for a statement to accompany the next fortnightly return about the usual maximum and minimum margins actually maintained by them on advances against paddy and rice. The sense of caution shown in taking this step is especially welcome at a time when prices are rising. The recent anxious attention which is being given to the food situation shows that it is fast being realised in official circles that this may be the key to the success of the second plan. The requirements of the directive do appear to be excessively rigid and may in certain instances cause hardship to genuine stockists if persisted in over a long period. The Reserve Bank would be advised to consider whether freezing the existing upper limit of credit agreements is altogether a just way of coping with the situation.

Oil Sales and Production.—Sir Kenneth Harper, chairman, tells shareholders of the Burmah Oil Co. Ltd. in his latest annual statement that there has been a general expansion in the demand for petroleum products in India during 1955 (the statement appears in full on a later page). Kerosene sales are still the highest in terms of gallons, though motor spirit and automotive diesel oil together are a close second. The company's sales of motor spirit showed little change between 1952 and 1954 in this country, but last year there was an increase of 5 percent. Sales of automotive diesel oil also increased substantially. But Sir Kenneth points to the slow rate of expansion in motor transport, and hopes that the slight recovery which set in last year will continue. "It will certainly be needed if transport is to keep in step with India's second five year plan," he declares. Of greater long-term interest perhaps is his reminder to shareholders that under the latest industrial policy statement, "mineral oils" are in the first schedule, which means that all new units will be set up only by the State. He points out that in this respect, the statement is very similar to the 1948 Resolution, since both draw a distinction between "new units" and "existing units". But discussions are going on to clarify the future scope of the company's operations in India. Sir Kenneth refers to the Indian Government's plan for undertaking oil exploration in collaboration with the Russians; further details on this point have been given by Mr. K. D. Malaviya, India's Minister for Natural Resources, in the Lok Sabha this week. The Russian experts have recommended that "during the coming five years it will be best to concentrate attention in two States—Punjab and Rajasthan (Jaisalmer area) which are the most studied and where the prospects are encouraging. Simultaneously, it is essential to carry out geological and geophysical investigations as well as deep test drilling in the Ganga valley and West Bengal, geological and geophysical survey and core drilling in Cambay area, and geological and geophysical investigations on the Madras coast. The latter four regions will constitute a reserve for extending the exploration during following years and could compensate the first two regions in the case of possible failures." They have also recommended geophysical and geological surveys for oil and gas in Punjab, Jaisalmer, Cambay, West Bengal, Uttar Pradesh and Madras, with a view to preparing these areas for exploration by drilling. Other suggestions made by the Russian experts are:

1. To prepare by seismic survey 16 areas and by core drilling 13 areas for deep tests. To cover 176,000 square miles by gravity and magnetic surveys and 11,400 square miles by geological mapping.
2. To investigate by deep drilling the oil and gas potentialities of five areas in Punjab (Jawalamukhi, Balh, Nana, Dharamsala and Janua) as well as the areas in Jaisalmer regions.
3. To carry out deep test drilling in the Ganga valley in order to ascertain its oil prospects, in West Bengal (the areas which are not under licence) and in the plains of Punjab close to Beas river.

4. To organise research work for oil geology in order to lay the scientific foundation for oil and gas prospecting in India.
 5. To organise 14 gravity, ten seismic and 14 geological parties, five parties for core drilling and five for deep test drilling.
 6. To complete 34 deep test wells and start drilling six more with a total footage of 464,500 feet.
 7. To complete 145 wells, by core drilling, with a total footage of 500,000 feet.
 8. To shoot 17,240 miles of seismic profiles.
- Mr. Malaviya added: "The recommendations in the interim report, which have been examined and discussed, have been mostly adopted by the Director, Oil and Natural Gas Directorate, and the Government and it is intended to work on these lines subject to such modifications as the Government may find necessary."

Hindustan Motors' Preference Issue.—On another page of this issue of Capital, Hindustan Motors Ltd. announce the issue of 500,000 redeemable cumulative preference shares. The scrip will carry fixed cumulative dividends at 6 percent per annum, free of tax, and can be converted into ordinary shares from July 1961. The existing shareholders are being offered the new issue at par in the proportion of one new preference share for each ten ordinary shares held. This fresh capital is required by the company to finance its proposed expansion programmes. For the year ended March, 1955, the company showed a profit of Rs. 64,487 after providing Rs. 34 lakhs for depreciation which now remains uncovered to a total of Rs. 1.5 crores at the end of the same accounting period. Judging from the size of the present profit and the large arrears in depreciation, it is difficult to see how the new preference dividend liability can be met right from the start. Unless a radical improvement is expected in the firm's profit earnings and the arrears in depreciation are going to be allowed to stand, it appears that the dividend on the new preference issue will, for a year or two, absorb all the company's surplus earnings.

Export Guarantee.—The Committee of the Indian Merchants Chamber, in a Memorandum submitted to the Export Credit Guarantee Committee, has welcomed the proposal for an Export Credit Guarantee Scheme. In the Committee's opinion, however, the scheme should—at any rate in the first instance—be made applicable to only a few classes of commodities, so that the Export Credit Guarantee Administration will not be confronted with too heavy a task. The Memorandum suggests that the articles selected for coverage should be those whose export it is desired to promote and for which the trade is already organised on some basis. With the progressive realisation of the schemes of industrial development under the five year plan, India should have a larger variety of manufactured goods for export. The scheme would be particularly helpful in developing the export of such goods. Manufactured articles such as electrical transformers, diesel engines, sewing machines, bicycles etc., for which credit facilities for a longer period have to be offered by Indian exporters should also be covered. Once, however, a commodity is selected to be included it should be compulsory for all exporters of that commodity to insure with the Export Credit Guarantee Organisation. Such a course would, on the one hand, assist the objective of wider coverage which is essential for keeping the premium rates at the minimum level possible, and on the other, remove the possibility of any inequality in competitive capacity as between an exporter who insures with the Export Credit Guarantee Organisation and another who does not. For the type of risk to be covered, the Memorandum suggests those which are, generally, covered by similar schemes in force in the foreign countries, such as (a) insolvency of the foreign buyer, (b) failure of the foreign buyer to pay for delivered goods within the stipulated period, (c) exchange restrictions or shortage of exchange in the buyer's country, (d) occurrence of war between the importing and the exporting countries, (e) occurrence of war, hostilities, rebellion, revolution, etc. in the buyer's country and (f) any other cause of loss outside the selling country which is beyond the control of the exporter. For the structure of the organisation for administering the scheme, the Memorandum suggests it should take the form of a quasi-governmental corporation with which representatives of banking institutions, insurance and trade and commerce, generally, are suitably associated. As for the rate of insurance premium, the Committee of the Chamber has suggested that although the scheme should be worked on commercial principles of insurance, exports paying premium at different rates on the basis of the varying export risks, the object of the scheme should be to obtain a premium income just sufficient to cover the administrative expenses and to meet the cost of the scheme. In other words, the Committee has suggested that the scheme be worked on a "no-profit no-loss" basis. On the suggestion that the scheme contain a provision covering the risks to be faced by the foreign

buyers from the default of Indian exporters, the Committee expresses the view that the scheme should not, at any rate in the initial stage, contain such a provision. They point out that none is to be found in the export credit guarantee schemes in force in other countries. Moreover, such a provision is likely to be construed as an admission that the performance of the Indian exporters as a class is not very reliable and this may lead to hesitation on the part of the foreign importers to have business relations with the Indian exporters.

Sources of State Coal.—The Government of India has decided that of the additional production of 22 million tons of coal a year to be achieved by 1960-61, the public sector will raise 12 million tons and the private sector 10 million tons. Mr. K. C. Reddy, Union Minister for Production, told the Lok Sabha last week that, "of the additional production in the public sector, 2 million tons will come from existing workings, 500,000 tons from existing Central Government collieries and 1.5 million tons from Singareni collieries in Hyderabad State". The Korba coalfields, added the Minister, were expected to produce 4 million tons during the period. The areas in Bihar and Central India from which the remaining 6 million tons would be obtained had been decided only broadly; particulars, including specific allocations for each area, were being determined.

Increased Coal Output.—The output of coal in India increased from 3,358,077 tons in February, 1956, to 3,360,456 tons in March, 1956, according to official statistics released by the Chief Inspector of Mines in India. Despatches of coal amounted to 2,835,244 tons in March, 1956, against 2,696,604 tons in the preceding month. Coal stocks at pit-heads amounted to 3,899,650 tons at the close of the month. During the month under review, 839 collieries were reported to be working with an average daily employment of 333,269 workers. Output per man-shift was estimated at 1.10 tons for miners and loaders, 0.58 ton for all workers underground and in open workings and 0.38 ton for all persons employed, including surface workers. The percentage of absenteeism was of the order of 14.81. Nine coke plants at collieries and elsewhere produced 358,179 tons of hard, soft and other kinds of coke during the month and despatched 170,911 tons.

Industrial Uses for Radio-active Wastes.—Radio-activity from atomic piles may one day be used to make vaccines suitable for use in virus diseases. A hint of this was thrown out by Sir John Cockcroft in his presidential address to the Institute of Physics at Cardiff. He said that research work was now going on at Harwell to see whether it was possible to inactivate viruses by radio-activity without at the same time destroying the potency of any vaccine that might be made from them. This work is being done by the Technological Irradiation Group, which is soon to move to new premises, nine miles from Harwell. Sir John Cockcroft said that it was being provided with what was almost certain to be the largest source of radio-activity in the world. This will consist of a number of spent fuel rods from the Dido reactor at Harwell, and will be as potent as two million grammes of radium. In addition, there will be smaller sources made from waste products from atomic reactors and a large linear accelerator (now being built by Metropolitan-Vickers, Ltd.) which will remain at Harwell. The irradiation group is intended to simplify the problem of disposing of radio-active wastes from reactors by developing industrial uses for them.

A NEW RUPEE LOAN

IN our correspondence column will be found a letter signed B, who argues that it will be neither cheap nor expedient for the Government to issue the proposed new rupee loan at 3 percent. We have had some doubts about the matter, but are inclined to the opinion that provided the loan can be floated at that rate, with a guarantee of, say, twenty years, the result is bound to work out cheaper than if issued at a higher rate. If merely compared with a 31 percent loan repayable in 1903-4, it might not do so, as the average rate of allotment might in such a case be comparatively low for a 3 percent loan, but with a guarantee of twenty years, the rates of tender would, no doubt, be comparatively higher. In regard to expediency, we do not think the transfer of rupee paper to London has more than a temporary effect in raising exchange. The more paper is entered for London the larger the supply of dividend warrants offering in the London market, and these entering into competition with Council Bills and other forms of outward remittance tend to depress exchange. Anything that adds to the annual sum which India has to pay to England is a financial disadvantage.

BUILDING CONTRACTORS

SALE OF 68 CONDEMNED WAGONS

The General Manager invites tenders for the sale of 68 Condemned wagons stabled at Mathurakati Scrap Yard, South Eastern Railway, Khargpur.

Tender No. S4/S/3/3 in this connection is obtainable from the office of the Controller of Stores, South Eastern Railway, Garden Reach, Calcutta-23, on production of Cash Receipt for depositing Rs. 5/- with the Chief Cashier, South Eastern Railway, Garden Reach, Calcutta-23, by local firms and on remittance of Rs. 5/- by Money Order to the Controller of Stores, South Eastern Railway, Garden Reach, Calcutta-23, by outside firms. The cost of the tender forms is not refundable.

The wagons may be inspected on any working day before the closing date of the tender. The closing date of the tender is June 12, 1956 at 12 noon.

Without Prejudice

RETURN OF MONEY AFTER BRIBERY CHARGE FAILS

THE ANALOGOUS CASE OF THE DHOBI'S STOLEN BICYCLE

(FROM OUR LEGAL CORRESPONDENT)

THIS is a true story and relevant to the practical point discussed below. A couple of years ago, the writer's dhoobi arrived late with his weekly bundle and ruefully explained that his bicycle had been stolen. He had bought the machine from a respectable gentleman in the bazaar hitherto unknown to him; a week later, he reported with quiet triumph that the thief had been traced, arrested and charged with larceny of the bicycle. The thief, he said, was the respectable gentleman who had sold the bicycle to him. The dhoobi attended the trial and thereafter was not seen for many weeks. When he eventually did turn up, it was in a very chastened mood and vowing that he would never prosecute anyone again, no matter what they had done to him. The case had come on, the bicycle had been brought into court, the magistrate had examined it and had announced: "This is my bicycle which has been stolen from me"; and both the dhoobi and the respectable gentleman were forthwith clapped into durance vile charged with the theft. It was the magistrate's bicycle. The respectable gentleman had stolen it from his worship, sold it to the dhoobi, re-stolen it and then had the sheer bad luck to come up for trial before the original and lawful owner. He was duly convicted. The dhoobi, perfectly innocent, was in the end honourably acquitted after paying the lawyer's fees and spending quite a time in jail as an under-trial prisoner on remand. The point is this. Had the trying magistrate—not, of course, the magistrate who was the victim of the theft—any authority to order the return of the bicycle to the original owner or must it go back to the dhoobi from whose innocent possession it was taken and be the subject matter later of a civil suit. That is

not at all an easy question, and it becomes an extremely difficult one if the accused alleged thief, perhaps on some technical ground or by being given the benefit of the doubt, is acquitted.

Look at it in this way. Suppose your gramophone is stolen. You trace it to the possession (note that word "possession", it is the crux of the conundrum) of a shady but plausible gentleman named X, who is prosecuted for the theft; X virtuously denies the charge. He is the most innocent of all the innocent men who have ever been the victims of false charges. He bought the gramophone and paid good money for it, from a gentleman in the street whose name, unfortunately, he does not remember and whose address he does not know. He did so out of Christian charity, of which he is now himself the victim; X gets away with it. He is acquitted. Can he walk out of court with your gramophone? Or, if the magistrate is satisfied that it is in fact your property, can he, on your application, order its return to you? Remember the magistrate's court is a criminal court and not a civil one. He is concerned with crimes and the punishment thereof; not, ordinarily, with questions of title or ownership of property, movable or immovable.

Here is an instructive case right on the point, just published. One Abdur Rahim was working as a station master. He was prosecuted for having accepted a bribe of Rs. 600 from Mahabir and Thagram. The case was tried by a Special Magistrate of the first class at Lucknow and ended in the acquittal of Abdur Rahim, who then applied for the return of the Rs. 600 which had been taken from him by the police. The magistrate then addressed his mind to the question of who actually owned the notes and, apparently, finding against Abdur Rahim on this point, rejected his application for the restoration to him of the money. The matter was taken up in appeal by the station master to the Sessions Judge who, like the lower court, also applied himself to the matter of ownership and rejected the appeal. Abdur Rahim then appealed to the Allahabad High Court, with the State as the opposite party supporting the decisions of the courts below, as being "eminently just."

The sole point was whether section 517, Criminal Procedure Code, would justify the return of the money to the station master, or whether it should be given back to Salek Ram who, as the accused, but acquitted station master himself admitted, had paid it over to him. This is section 517(1): "When an enquiry or a trial in any criminal court is concluded, the court may make such order as it thinks fit for the disposal by destruction, confiscation or delivery to any person claiming to be entitled to possession thereof or otherwise of any property or document produced before it or in its custody or regarding which any offence appears to have been committed or which has been used for the commission of any offence."

The appeal for the restoration of the money to the station master was allowed by the High Court. Where the two lower courts had gone wrong was that they had confused the word "possession" with the word "ownership". They had no business entering into a roving commission as to who owned the money. That might be done in a civil suit by a civil court; all the criminal court had to do was to try the criminal issue as to whether the accused had been guilty of the criminal offence of accepting a bribe, and then by virtue of section 517 and that alone the criminal court was entitled to decide who was entitled to the possession of property alleged by the prosecution to be the bribe but claimed by the accused to be his own property. The accused's defence had not been rejected. He had been acquitted and was entitled to be put, as far as possible, in the same position as that in which he was just before he was charged. That position was that he was "in possession" of this sum of Rs. 600.

"It will be seen," said the High Court, "from the above quotation (section 517 above) that what the Court has to determine is as to which person is entitled to possession of the property. It is not for the criminal court to determine title to the property. In the present case, it is not disputed that the currency notes were recovered from the possession of Abdur Rahim. It is further not denied that the charge against Abdur Rahim was held not proved."

The High Court held that when the accused was acquitted, his possession of the notes must be deemed to be lawful. If he was in lawful possession, it would be his possession that would be restored; it was not for him to establish that his possession of the notes was lawful; and where the courts below had directed themselves to a determination of the question of ownership of the notes that approach was not proper. The application was therefore allowed, and the High Court directed that the Rs. 600 should be returned to Abdur Rahim, adding, however, that: "It must be clearly understood that this order does not determine the question of ownership of the notes for Rs. 600. That is a matter for determination by a competent civil court."

[Abdur Rahim v State. A.I.R. Allahabad. 1955. (May) 319.]

A DITCHER'S DIARY

joined in every response with curt military precision. He was deeply moved. But there had to be a Hobbsian climax. After the service he complained bitterly of the callous, unfeeling, mechanical way in which the chaplain had conducted it and wanted Geoffrey Tyson to lead us all back to the graveside and have a little service on our own. His complaint was justified and Tyson was in two minds about actually doing it, I think. Later when I knew that this quiet reverent man was the great iconoclast, Major Harry Hobbs, I could hardly believe it. I find myself marvelling at his composed courage at Journey's End. He knew it was a matter of days, and four days before his death he concluded our weekly correspondence with a farewell letter. Any one of us may well be proud if we can write such a letter when similarly placed. Shed were all the sharp invectives, the biting criticism of men and things, but not in favour of gloomy resignation. Far from it. Written in his bold clear writing it might have been the letter of a brilliant rising young man of thirty. After an admonitory lecture on literary style—"A book, essay, conversation or letter should be interesting, true (or read as if it were) and with a touch of humour....", he tells three witty stories, including Sir J. M. Barrie's reminiscence of Ranji at a farewell dinner:—"I saw him bat twice; the first time he made one run; the second time he was not so successful; and ending with a delightfully risqué one about Spence's Hotel. Death was a casual thing. In this joyous happy letter, not a word about it except a hint just at the end: 'Goodbye. My Blessing.' A good brave stout-hearted Englishman. There are many such and will be many more. But there will not be another Harry Hobbs,—not in our time."

Now that Mr. Nehru has personally debunked this silly idea of a ceiling on incomes, it is to be hoped that no more is heard of the ridiculous move which, rumour has it, has lately been afoot in New Delhi, to persuade top civil servants to take a "voluntary" cut in salaries. To sacrifice one of India's two most important public assets (the other is a loyal and efficient army) to this particular blend of one percent ideology, 75 percent jealousy and 24 percent boneheaded stupidity would be the height of national folly. It is difficult enough to find hardworking efficiency and complete incorruptibility among public servants; if the incentive to those things among the higher ranks is lost, then so is India. I can think of no better and quicker way of reversing the country's current progress and relapsing into Oriental decadence than to reduce the present superb standards of those on whose loyalty and brains this advance largely depends.

I yield to none in my respect for Acharya Vinoba Bhave. His has been a saint's life marked by austerity, purity and love of truth, and although personally I have no faith in his Bhoodan movement, I am prepared to concede its symbolic value. In a world of ordinary folk pursuing their ordinary avocations, it is essential to have men who stand out from the crowd, clothed in an aura of spiritual distinction, and are able to admonish it for its failures and shortcomings. But when such a man proceeds to ride his own pet hobby horse in public I begin to feel depressed. For example, last Sunday Vinobaji aired the view that Delhi can never be the ideal capital of India because it is "indeed, really bad", that it is "like Paris" and that life there is "something artificial". I have

no need to say how much I agree that Delhi lacks a vernacular culture. Only recently I described it as "frantically matching its decaying Moghul monuments with ever-spreading acres of clerical beehives, where life grows dormant soon after sundown." But that it is "really bad" I find hard to credit. Delhi is nothing but a greenish desert dotted with uncouth public buildings and clerks' colonies. Its population is a motley crowd drawn from the four corners of the country by the bitter need to earn a living. The universe of its discourse is usually confined to promotions, transfers and increments. Delhi has not given the country anything except administration, and although I agree that administration is not culture, I cannot see that it is bad in the way that Vinobaji uses the word. Now what, may I ask, have Paris and Delhi got in common? They are both administrative centres, but that is where similarity ends. Paris is supposed to have its bad side, although anybody who has spent more than a few days doing the usual sights will know that a good deal of it is put on for the benefit of the tourists. What Paris has to its credit is that for over five centuries it has been the cultural Mecca of Europe. French prose, painting, drama, cooking, haute couture, even cabaret, have all been born there, and it is not for nothing that France is often popularly described as "Paris plus the desert". In fact, Paris appears to conform perfectly with Vinobaji's requirements for a capital city, and as every saint ought to know, there are worse things in this world than "badness".

It is not to my taste that this week's diary should contain so much obituary. But no commentator with an eye to the more important events of this life can ignore the passing of Sir Max Beerbohm in Rapallo last Sunday. Unlike the Victorian Age, the Edwardian has not even had a Strachey to attack it; its day done, it did not appear to mind being forgotten. But Sir Max's death is a reminder that, although the Age made no strident claim to superiority, something rather valuable may have gone with the passing of those slow-moving days. Sir Max had written, "I will not sink without a struggle into that period when a man begins to bore young people by raving to them about mimes whom they never saw." It was indeed difficult to imagine him raving about anything, just as it was impossible to picture him running to accomplish such trifles as catching a train or seeing the latest play from North America on a streetcar called Desire or something. He preferred slower and less communal means of locomotion, and if they have to be called by a name at all, it had better be Apathy. Not that Sir Max was not serious about the stage, on which not many have written with greater wit. He cared for contemporary events, and drew exquisite cartoons on them. But raise his voice he would not, for that would be bad manners and there never was a cause great enough to justify such a sacrifice. How imperceptibly his influence works! Already the sentences have been getting lengthy, already some archaic expressions and constructions have crept in—as though I was writing at a time when theatre notices could spread themselves over a dozen pages and such a thing as a newspaper short-essay had not even been heard of. Sir Max worked (if that is not too harsh a term) in those spacious days which are as unknown to us as the mimes he would not rave about, and if he lived for many years after his work had been done he did so quietly and happily. At twenty-four he was described by some as an old man; at eighty-three visitors found him remarkably young. His best epigram was his life.

NEW APPROACH TO AN OLD PROBLEM

THE PROSPECTS FOR STERLING CONVERTIBILITY

ONE advantage of the Commonwealth Prime Ministers' conference, due to begin in London at the end of June, is that it will compel the authorities to raise again in their minds the question of convertibility of sterling. This matter has been distressingly absent from official statements in the last few months, and the feeling in the City of London is that it interests the new Chancellor of the Exchequer, Mr. Harold Macmillan, less than the former one, Mr. R. A. Butler. Yet the interest of other countries, sterling and non-sterling alike, is unabated. There have been ominous suggestions occasionally that other European countries, which had agreed to undertake convertibility only as a combined operation with Britain, are unwilling to wait indefinitely while Britain sorts out her problems. It is true that both Western Germany and Holland, previously leading the movement towards convertibility, have lately had to tackle the problem of inflation, which is less familiar to them than to Britain. It may be that their enthusiasm has been somewhat modified in the process. Yet their problems are more localised than Britain's, which involve the whole sterling area, and they may well gain sooner than Britain the financial strength necessary to undertake convertibility without strain.

The U.S. Federal Reserve Board has lately confirmed other evidence that the disturbing experiences of the sterling area were not shared by other non-dollar countries last year. Its survey of the international flow of gold and dollars shows that all countries outside of the U.S.A., combined, increased their holdings of gold and dollars by \$1,800 million in 1955, following an increase of \$2,200 million in 1954. It was a reduction of the sterling area's holding by nearly \$500 million that restrained the aggregate advance last year. The non-sterling countries alone increased their holdings by some \$2,300 million; whereas in 1954 their increase was only some \$2,000 million. Moreover, it was continental western Europe that recorded the most favourable experience last year, with a net increase (despite the relative weakness of Austria and Denmark) of about \$1,700 million. It is not surprising that Britain is dragging her feet in the advance towards convertibility. She is responsible for the currency in which about half of the world's trade is transacted, while that currency is supported by only about one-twentieth of the world's monetary reserves. And the proportion of the reserves attributable to sterling diminished considerably last year.

There are solid reasons for believing that the performance of the sterling area's reserve will be better this year. Early in 1955 the downward tendency that had begun in the middle of 1954 continued, despite the seasonal influences favouring sterling. So far in the current year the tendency has been decidedly upward—indeed, the improvement began late last year but was not visible in the

end-December total because the service of the dollar debts makes heavy demands at each year-end. But the strengthening of the reserve is not more than enough to counter-balance the seasonal weakening that must be expected in the second half-year; it does not ensure that over the year as a whole the reserve will be significantly strengthened. An increase of even a few hundred millions on the last year-end figure of \$2,120 million would bring the reserve little more than half-way to the size that is generally regarded as necessary to protect convertible sterling against fluctuations. It is often argued that short-term movements in the reserve receive too much attention, that what matters is the total balance of payments rather than the dollar account. The distinction is not, however, so clear now as in recent years, because the greater part of any surplus or deficit with one very important non-dollar area, the countries in the European Payments Union, is now settled in gold. Anyway, U.K. exporters are at present doing better in the dollar markets than elsewhere; in the first four months of this year, compared with the same period of 1955, exports to the dollar area increased by 22½ percent, while exports as a whole increased by only 5½ percent. Including also invisible items, the external payments account is evidently in surplus this year, but the surplus, on an annual basis, is probably no more than half of the £300 to £350 million officially estimated as the minimum required.

There are credits still available, and credits that can still be negotiated, that would reinforce the ordinary reserve as a basis for a convertible currency. But the authorities are naturally reluctant to rely on credit, or even on an inflow of capital. They recognise that the only sound basis for convertible sterling is a healthy balance of commercial payments. Therefore, it may seem, the right to convert sterling into dollars must be restricted until the slow process of correction (and it is no secret that the process is slower than the authorities expected) has gone much further. In financial circles in London, however, this argument is no longer regarded as conclusive. It is no longer a question whether conditions are yet favourable for convertibility, but rather whether inconvertibility can any longer protect sterling.

Essentially, the right to convert a non-dollar currency into dollars means the right to pay for goods or services from the dollar area—and, perhaps, the right to transfer capital to the dollar area—without serious restriction. The fact is that in many non-dollar countries restrictions on importing dollar goods have already been relaxed. There is one sterling country, South Africa, which no longer distinguishes between imports from the dollar area and those from other sources, and in other sterling countries (including Britain herself) the distinction has become somewhat blurred; while the sterling countries of the Middle East can obtain almost all the dollars that they require. The sterling area's trade with western Europe is nearly equivalent to trade with the dollar area; and western Europe's discrimination between dollar goods and sterling goods has been relaxed. "Transferable" sterling is already convertible at only a small discount. Formal inconvertibility seems no longer realistic.

Finance in India and Abroad

THE CALCUTTA MONEY MARKET

CREDIT REQUIREMENTS MAINTAINED

Wednesday, 23rd May.

THE slackening in demand for funds, which was reported from the money market last week, has not persisted. This is largely due to the slight rise which has taken place this week in the offtake of the sugar industry. Other sources of demand have, however, tended to be rather less sustained. Buying of raw jute has slowed considerably and requirements for advances are not as strong. The return of funds from upcountry areas is continuing, but the pace is slow. The slack season will obviously be delayed considerably again this year. Demand in the interbank market has eased during the past week. The interbank call rate is unchanged at 3½ percent and at this level the market appears to be in equilibrium.

It has been a quiet week for export bills; those which have come to hand in the past few days have been almost entirely on account of gunny shipments. Remittance has been fair. Sterling appears considerably weaker on the world markets and the dollar is now being quoted at Rs. 481.

Silver ruled easy on lack of support due to the import of Tibetan silver and the price declined from the previous week's level of Rs. 174-8 to Rs. 166-14, quoted today. The rate for ready delivery was quoted at Rs. 171-14. The London silver price was unchanged at 78½d. The price of foreign silver in New York has remained the same at 90½ cents.

Gold was quiet in sympathy with silver and the price dropped from Rs. 106-10 to Rs. 102-2. The sovereign at Rs. 66-12 showed a decline of 4 annas.

During the week ended 18th May, Government of India Treasury Bills for Rs. 3,64,25,000 were sold in favour of the Reserve Bank.

A fall of Rs. 9.61 crores to Rs. 1,516.27 crores in notes in circulation was the outstanding feature of the return of the Reserve Bank of India for the week ended 18th May, 1956, while the total note issue was Rs. 11 lakhs higher at Rs. 1,534.77 crores. Notes held in the Banking Department consequently rose by Rs. 9.72 crores to Rs. 18.50 crores. Deposits showed an all round rise. Deposits of the Government of India and other Government accounts increased by Rs. 2.47 crores and Rs. 49 lakhs to Rs. 67.84 crores and Rs. 7.16 crores, respectively. Balances of commercial banks at Rs. 51.09 crores showed a rise of Rs. 1.37 crores. Balances held abroad dropped by Rs. 1.09 crores to Rs. 35.43 crores but investments were Rs. 1.30 crores up at Rs. 35.05 crores. Other loans and advances fell from Rs. 88.07 crores to Rs. 82.17 crores, of which advances to scheduled banks against usance bills totalled Rs. 46.11 crores (Rs. 52.08 crores). These advances amounted to Rs. 112.26 crores since 1st January, 1956. Ways and means advances stood at Rs. 2.83 crores against Rs. 2.58 crores.

The return of the State Bank of India for the week ended 11th May, 1956, shows a drop of Rs. 2.69 crores in total investments to Rs. 223.39 crores. Investments in Government securities are down by Rs. 72 lakhs to Rs. 93.34 crores, while other authorised investments remain unchanged at Rs. 10.45 crores. Advances, including loans, cash and overdrafts, and bills discounted, to Rs. 140.61 crores. Cash and balances are, in consequence, shown at Rs. 17.77 crores or Rs. 3.45 crores higher.

The statement of the position of scheduled banks for the week ended 11th May, 1956, discloses Demand and Time liabilities at Rs. 632.37 crores (Rs. 7.57 crores on account of borrowings from banks) and Rs. 431.87 crores (Rs. 2.71 crores), compared with Rs. 637.89 crores (Rs. 7.06 crores) and Rs. 429.60 crores (Rs. 2.86 crores), respectively, in the previous week. Cash and balances with the Reserve Bank have declined by Rs. 87 lakhs and Rs. 60 lakhs to aggregate Rs. 36.04 crores and Rs. 48.58 crores, respectively. There is a drop of Rs. 14 lakhs in investments to Rs. 35.20 crores. Advances and bills discounted at Rs. 769.20 crores show an increase of Rs. 6.03 crores. The ratios to total liabilities of cash and balances and of advances and discounts are, in consequence, shown at 8.0 percent and 72.3 percent, against 8.1 percent and 71.5 percent.

According to the returns received in the Department of Commercial Intelligence and Statistics, the total gross sea and land customs revenue collected in the Indian Union during March 1956 amounted to Rs. 1,736 lakhs as compared with Rs. 1,718 lakhs in the corresponding month of the previous year. The comparison in the following should be taken to refer to that of the current figures with those of the corresponding period of the preceding year. Of the total customs revenue collections, import duties accounted for Rs. 1,421 lakhs as against Rs. 1,306 lakhs, export duties for Rs. 303 lakhs as against Rs. 392 lakhs and land customs and miscellaneous for Rs. 12 lakhs as against Rs. 20 lakhs. The total gross collection of Union excise duties amounted to Rs. 1,247 lakhs as compared with Rs. 1,327 lakhs. During the 12 months, April 1955 to March 1956, the grand total of gross customs and Union excise revenue realised was Rs. 31,897 lakhs as compared with Rs. 29,713 lakhs during the same period of the preceding year. Of this amount, import duties accounted for Rs. 13,065 lakhs as against Rs. 14,442 lakhs, export duties for Rs. 3,748 lakhs as against Rs. 4,141 lakhs, land customs and miscellaneous for

LONDON FINANCIAL LETTER

THE SUPPLEMENTARY RESERVES

THE practical convertibility of the West German mark has proceeded so far that the task of preparing sterling for formal convertibility has become urgent. Even if the German authorities refrain from taking the final formal step before the British authorities are ready for it, the challenge of the mark cannot be ignored. The sterling area's difficulty in the matter is two-fold: the absolute insufficiency of the reserves and the tardy improvement in the balance of payments. A rapid improvement could build up the reserves in a relatively short time, and it is needed for its own sake—even ample reserves would not safeguard sterling if the current payments position was precarious. The authorities are now deliberating what they can do to hasten the improvement, their efforts in 1955 and 1956 having produced, so far, disappointing results.

The inadequacy of the reserves is a subject of some argument. The official total, \$2,328 million at the end of April, is very small in relation to the total of transactions in sterling, but the true reserves are considerably larger. The official figures relate to the sterling area's gold and dollar holdings in London controlled by the Exchange Equalisation Account. The U.S. Federal Reserve Board publishes other figures which present a broader picture. They include the gold and dollar holdings of overseas sterling countries individually and the private dollar balances of British individuals and firms. According to the Reserve Board's calculations, the total reserve of the sterling area, thus comprised, was about \$4,000 million at the end of 1955, when the holding of the Exchange Equalisation Account was not much more than \$2,000 million. In reasonably favourable circumstances, an available reserve of the order of \$4,000 million would probably provide adequate support for convertible sterling. But those "outside" reserves have not, for this purpose, the same value as the official reserves. The practical value of the \$266 million that the Reserve Board attributed to South Africa is not obvious, as South Africa does not participate in the pooling system. Some other "outside" holdings could, presumably, be made available to the central authority; but, essentially, it is only the official holdings that are available to the managers of the exchanges.

Whichever figures one takes, the sterling area's reserves make a poor comparison with those of continental western Europe. In 1951-52, the continental reserves remained steady while the sterling area's fell sharply; in 1954-55, the continental reserves, having in the meantime risen faster than the sterling area's, continued to rise while the sterling area's declined. Before the sterling area's setback of 1951, the aggregate reserves of the sterling area were about \$5,000 million, those of continental western Europe rather more than \$7,000 million; by the end of 1955 the sterling area's had declined to \$4,000 million, while the continent's had risen nearly to \$14,000 million. On this showing, sterling is obviously less prepared for convertibility than the other European currencies in general.

New Technique Emerging

To the question what action, if any, the authorities will take to hasten the economic recovery, one can only surmise that the authorities themselves would like to know the answer. Only a month ago, the Budget seemed sufficient to its purpose; now the City is openly expressing its doubt whether inflation is under control at all, though one cannot adduce the recent behaviour of the stock market as evidence of over-confidence among the business community. What one can say with assurance is that the boom has shown more strength and resiliency than anyone can honestly claim to have foreseen. Because of those qualities, the City suspects that it is ready to break out again in full vigour if restraint is relaxed. But not all industrialists hold the same opinion. Some of them have been badly shaken by the slump in the American

motor-car industry, and the recession in the durable consumer-goods industries in this country has covered a fairly extensive range. It is too early to judge the results of Mr. Harold Macmillan's few months at the Treasury; so it would perhaps be overhasty to say that his restraining efforts have been no more successful than Mr. R. A. Butler's. But Mr. Macmillan's approach is different. Mr. Butler was, and is still, respected as a man devoted to the principle of full employment—a principle which is also good politics. It is doubtful whether any such devotion would prevent Mr. Macmillan from acting more firmly against inflation if he deemed it necessary.

There are already signs of a new technique. Mr. Macmillan does not work hastily on any problem. At first he was content to administer further doses of Mr. Butler's medicine. But he has evidently been studying a facet of the problem of inflation that his predecessors, though they must have observed it, have more or less ignored. That is the floating debt, which has for many years been tending to expand, with inflationary consequences. The Budget, it may be recalled, included provision for financing the nationalised industries' deficits by direct loans from the Exchequer, instead of by issues to the investing public of stocks guaranteed by the Treasury, after an intermediate phase of borrowing from the banks. The change could weaken monetary policy if the Exchequer financed the deficits by issues of Treasury bills and allowed the increase in the floating debt to continue. But the Budget was only a few days old when the Treasury made a new issue of stock which was in the nature of a preliminary funding operation.

The practical effect of this issue is, so far, negligible—like most other issues of Government stock, it was taken up mostly by Government departments and did not, therefore, effectively reduce the floating debt. But it was a significant gesture of intention, obviously timed deliberately to demonstrate to the banking community that, having achieved disappointing results in raising the price of credit, the authorities set out to reduce the quantity of credit. If the authorities can materially reduce the supply of Treasury bills they will make the banking system less liquid, thereby exerting more pressure on the banks to reduce credit, either directly by restricting loans or indirectly by selling investments. Whether a reduction of the Bank rate will round off the change of emphasis, as some people suggest, is much less certain.

"CAPITAL" INDEX OF INDIAN INDUSTRIAL ACTIVITY **

The Capital Index of Indian Industrial Activity (Base: 1935) has now been brought up to November, 1955. Compared with the preceding month there were increases in jute manufactures 13.6 points, steel ingots 8.6 points, pig iron 12.9 points,

paper 12.9 points, coal 6.8 points, wagons loaded 5.7 points and electricity 1.3 points, while cotton consumption and cement decreased by 14.0 points and 0.4 points respectively.

The index for cheque clearances rose by 4.6

points, while that for notes in circulation dropped by 2.3 points.

Combining all the factors, the Capital index of Indian Industrial Activity advanced by 5.3 points during November, 1955.

Stocks and Shares

STRONG BULL SUPPORT FOR SPECULATIVE COUNTERS

UNDERTONE OF MARKET FIRM: INVESTMENT BUSINESS DISAPPOINTING

Wednesday Evening.

THERE has been considerable speculative buying in the Calcutta stock market during the past few days. Indian Irons touched Rs. 38 in today's trading, but receded from this level after hours due to profit-taking. There is now no doubting the aggressive intentions of the bulls, who appear to be basing their optimism on the rumour that a rights issue is under consideration for Indian Iron. Other speculatives have been strong, the more notable examples being those in the Birla group of companies, Orient Paper and Texmaco. Indian Coppers were quoted lower last week-end after the market was disappointed by the announcement of a bonus issue in the proportion of one for two. The price has since recovered on operators' expectations that this year's final dividend will show a substantial improvement on that of last year.

In spite of the strong speculative support which the market has enjoyed, there has been conspicuously little investment enquiry. Among the sections, engineering shares have been steady in sympathy with Irons and miscellaneous counters have generally shown more interest taken in coals this week, and, unaccountably, selected jute shares have met with modest support. Teas have been neglected. Government securities remain firm in preparation for the new loan issue which is reported to be due on 10th June.

Details of the week's trading follow.

The Government-securities market continued firm and prices were once again marked up. Three percent Conversion Loan 1986 was slightly lower at Rs. 77-7 while 3% Non-terminable Paper was unchanged at Rs. 77-8. In short-dated loans, 3% 1957 was steady at Rs. 99-13 as was 3% 1958 at Rs. 99-11. Among medium-dated loans, 3% 1959-61 was on offer at about Rs. 98-3, but 3% 1963-65 had buyers over up to Rs. 95-3 and 3% 1964 was asked for up to Rs. 95-1 without attracting sellers. In National Plan issues 3½% 1961 was one anna better at Rs. 99-12 but 3½% 1964 was on offer at Rs. 98-11 as was 3½% 1965 at Rs. 98-10. Long-dated loans ruled steady with 3% 1966-68 quoted higher at Rs. 93-4 and 3% 1970-75 at Rs. 90-8. Provincial loans were unchanged but there were buyers rather than sellers.

Preference shares of jute companies and managing agency houses continued to be freely offered without attracting many buyers. In jute, a small lot of Anglo-India was done at Rs. 113-8 and Reliance were sold at Rs. 98. Among miscellaneous issues, Brooke Bond Estates came to hand at Rs. 86 and a fair parcel of Burrakur Coal 1st Preference shares was crossed at the lower rates of Rs. 110-8. Calcutta Electric were marked at Rs. 11-6, Dalmia Cement Rs. 100 paid-up at Rs. 101 and the Rs. 40 paid-up at Rs. 41. Duncan Brothers were offered at Rs. 64 and Indian Iron & Steel were crossed at Rs. 107. A solitary transaction was reported in New Victoria at Rs. 4-7. Titagur Paper 8% were taken at Rs. 146-12 and a small lot of Shaw Wallace was crossed at Rs. 84-8.

Very little business was reported in bank shares. Hind Bank met with small enquiry at around Rs. 31-8, Punjab National were unchanged at Rs. 52 as were United Commercial at Rs. 50-4.

In the railway section, a small lot of Arrah-Sasaram was done at Rs. 65 and Dehri Rohtas changed hands at around Rs. 13.

In the cotton section, Bengal Nagpur improved from Rs. 8-10 to Rs. 9-2, Elgin Mills from Rs. 26 to Rs. 27-10 and there was a good enquiry for Kesoram at the higher rate of Rs. 18-4. New Victoria closed a shade better at Rs. 2-9.

There was a little more activity in coal shares during the week and prices of a few showed some improvement. Bengal moved up from Rs. 530 to Rs. 542, East Indian from Rs. 32-8 to Rs. 33, Burrakur fluctuated narrowly around Rs. 14-3, New Beerbhoom were unchanged at Rs. 20 as were Standard at Rs. 25-12. Equitable were slightly better at Rs. 30 while Pench Valley were shaded at Rs. 22 and Union at Rs. 12-5. Central India closed easier at Rs. 7-2 but Western Bengal were fairly steady at Rs. 7.

There were indications of slightly more activity in the jute section and a few selected shares met with enquiry. Here is a chart showing representative price movements.

	Opening	Closing
	17-5-56	23-5-56

from Rs. 11-12 to Rs. 12-2. In shipping, Calcutta Steam were marked at Rs. 112 and India Steam-ship, on rumours of an impending interim dividend, rose from Rs. 8-11 to Rs. 9-4. I.G.N. rose today from Rs. 107 to Rs. 112.

Among miscellaneous industrials, Alkali & Chemical were unchanged at Rs. 20-8 as were Angelo Brothers at Rs. 21-10, Assam Saws at Rs. 4-13 and Balmer Lawrie at Rs. 168. Bengal Flour were depressed at Rs. 27 while Birds Investments were unchanged at Rs. 17-1. Britannia Biscuits were steady at Rs. 15-4 as were British India Corporation at Rs. 11-2. British Burmah Petroleum were neglected at Rs. 4-2 and Dunlop Rubber were unchanged at Rs. 30-8. Godfrey Phillips were marked at Rs. 22 ex-dividend and Hindustan Motors were shaded at Rs. 9-11. Imperial Tobacco were slightly better at Rs. 14-8 as were Indian Aluminium at Rs. 21-13 and Indian Cables at Rs. 33-8. National Carbon met with good enquiry and improved from Rs. 26-10 to Rs. 27-8 and good business was reported in Clive Row Investments at the higher rate of Rs. 11-12. Indo-Burma Petroleum met with investment enquiry and rose from Rs. 41-4 to Rs. 41-12. Jardine Henderson were unchanged at Rs. 100 while Martin Burn were slightly higher at Rs. 25-8. Metal Box were unchanged at Rs. 27-8, but National Insulated Cables improved from Rs. 22-4 to Rs. 22-4. Rallis met with enquiry and rose from Rs. 34-8 to Rs. 36. Shaw Wallace were depressed at Rs. 15-4 and Tide Water Oil was unchanged at Rs. 15-6. Hoare Miller were quoted at Rs. 14. Rohas Industries improved from Rs. 22-9 to Rs. 23-12.

In the mining section, interest was centred on Indian Copper during the week following the announcement of a bonus issue in the proportion of one for two as against the Company's original application of one for one. Initially, the bonus news was received with some disappointment and the shares reacted from Rs. 7 to Rs. 6-12, but subsequently the price recovered to Rs. 7 at the close. Karanpura Development were better at Rs. 26-4 while Burma Mines were marked down to Rs. 3-12 and Western Stockholders Investment to Re. 1. Metal Corporation were fairly active and improved from Rs. 10-9 to Rs. 11-3.

Slightly more interest was displayed in tea shares and prices were inclined to be firm. Baghmari found buyers at Rs. 29-6 against the previous quotation of Rs. 28-12 and Basmatia were also steady at Rs. 40-4. Brahmapootra were done at Rs. 9-6 as were Brooke Bond at Rs. 24-4 and Kotamullai at Rs. 37-12. Dhelakhat were crossed at Rs. 22 and East India improved from Rs. 25-8 to Rs. 26-12. A small lot of Seajuli changed hands at Rs. 33-8 and Tezpure were wanted at Rs. 26. Carron met with selling pressure and the price declined to Rs. 224 but Hantapara were in demand at Rs. 232. Hasimara were slightly easier at Rs. 39-12. Poobong were called at Rs. 13 and New Samanbagh changed hands at the higher rate of Rs. 23-2. Kornafuli were crossed at Rs. 15-4 and Belgachia were taken at Rs. 50-8. Jaysree were wanted at Rs. 12-5 and Putinbaree improved further to Rs. 57-8.

The profit of the ASSAM FINANCIAL CORPORATION amounted to Rs. 273 lakhs for the year ended last

March. Taxation absorbs Rs. 1.08 lakhs and reserve fund Rs. 14,500. The Government of Assam has guaranteed the payment of dividends at 31 percent on the share capital. The total amount of dividends payable for the year comes to Rs. 3,49,312-4. It is proposed to utilise the remaining balance of Rs. 1,50,603-6 for the payment of the dividend to shareholders and to request the State Government to give a subvention for the balance of Rs. 1,98,708-14, to make up the total amount of the guaranteed dividend payable for the period under report.

BOMBAY PRICES EASE ON PROFIT-TAKING

MARKET UNCERTAIN ABOUT TATA EX-RIGHTS PRICE

Wednesday Evening.

IRREGULAR fluctuations marked trading on the Bombay Stock Exchange last week. During the early part of the week, equities forged ahead on sustained buying support because operators took a constructive view of the second five year plan. Towards the close, profit-taking pared top gains though all offerings were absorbed without difficulty. Another restraining influence was moderate carry-forward charges which bulls had to pay for the next settlement.

Tata Steels declined to Rs. 251-12 following uncertainty about prices for ex-right and cum-right shares. In the meantime, renunciation letters, it is reported, were being marketed freely around Rs. 58. Indian Irons, however, improved to Rs. 37-14 on strong support from Lyons Range. Bulls have spread the rumour of a rights issue, but this has not been confirmed. Alcock Ashdown declined to Rs. 350-6 on selling pressure and Premier Construction were shaded at Rs. 177. Tata Locomotive rose to Rs. 154 on the expectation of a maiden dividend. Larsen and Toubro were maintained at Rs. 16-1 on maintaining the ordinary dividend at 10 percent.

Good offtake of goods by the internal market helped maintain sentiment in the mill group. Though profit-taking was seen at bulges, prices closed with net gains on balance. Simplex improved to Rs. 222 on hopes of a higher dividend and Century were concerned in brisk activity, rising to Rs. 558. Bombay Dyeing realised Rs. 662-8, and Svadeshi Rs. 230-8. Kohinoor were better at Rs. 376 on institutional support. India United Ordinary made Rs. 13-13.

In the miscellaneous group, Belapur Sugar were steady at Rs. 233-8 while Phaltan rose to Rs. 151 on rumours of a bonus issue. Walchandnagar declined to Rs. 251-4 on profit-taking. In the shipping section, India Steamship spurred to Rs. 9-4 in the expectation of an ordinary dividend. Scindia were taken at Rs. 18-9. Among automobile shares, Hindustan Motors were absorbed at Rs. 9-12. Indian Copper improved smartly to Rs. 7 on strong buying support on hopes of a better dividend. National Rayon rose to Rs. 246 on replacement buying, but Tata Chemicals were shaded at Rs. 18-6 on realising. Tata Oil improved to Rs. 40-4 on reports that the company is likely to acquire a small factory in Calcutta. It is also suggested that results of the current year will show substantial improvement. Associated Cement fell to Rs. 219. Banking shares were fairly steady, with India improving to Rs. 150-8; Punjab National were steady at Rs. 52-8. Central Bank reacted to Rs. 51-4 on profit-taking. Among insurance scrip, New India were taken at Rs. 43 on repeating the same dividend.

Electricity companies were depressed and Ahmedabad slumped to Rs. 97-3. Tata Hydro were done at Rs. 125-8.

THE WEEK'S TRANSACTIONS

PARTIAL RECOVERY IN STOCK VALUES

MARKETS SENSITIVE TO WALL STREET AND U.K. ECONOMIC SITUATION

London, 23rd May.

THERE was a distinct improvement in the stock market sentiment before the holiday, and although business remained small and selective, falls sustained earlier in the past week were partially recovered. Nevertheless, prices were mostly lower compared with their previous levels, the main exception being the oil shares which were active and strong under the lead of British Petroleum. Conditions were extremely quiet after the holiday under the influence of end-of-account and the decline on Wall Street over the week-end. The uncertain performance of Wall Street and the obscure economic situation are the key factors in the present markets and are effectively restricting interest and activity. The markets have been and remain very sensitive to these. Business was small in the gilt-edged market, but losses recorded at one time were largely recovered later with prices only slightly easier compared with the previous levels. Foreign bonds and rails were subdued throughout. German and Japanese issues eased slightly, but otherwise there was little change. Dollar stocks followed Wall Street's lead and were lower on balance. Some recovery was staged by the industrial market following selective buying prior to the holiday week-end, but this was not sufficient to retrieve all the losses sustained earlier and prices were lower on balance. Falls, compared with the previous levels, were however very small, and a number of good features deve-

loped. The Financial Times Industrial Ordinary Index consequently shows little change. Among the more important dividend statements during the week were those of Marks and Spencer and Rolls Royce; the shares of both companies were lower. Imperial Chemical also lost ground following the publication of their annual report. Gold shares were out of favour and fell back in inactive conditions, but base metals recovered from earlier dullness. A strong recovery developed in the oil share market before the holiday, and appreciable gains were recorded on balance under the lead of British Petroleum which, although below the best, were substantially higher on the week. Reduced dividends by the Finlay group of companies brought very heavy falls in the prices of the shares concerned, and other teas were lower in sympathy. Rubbers, however, held fairly steady in very quiet conditions.

The Money Market

The credit situation in the London money market during the past week was a very trying one. The overall figures were not large. Market requirements were moderate, but due to the seasonal influence and the working of credit squeeze measures, the day-to-day supply of loanable funds was always just that little amount short which made things difficult. The position might have been worse but for the fact that the market had a number of maturities in hand. For most of the week, money ruled at the level of 4½ percent with 4½ percent paid during the most difficult periods. The market made no change in its tender bid for the week's offerings of Treasury bills, and the average rate was only slightly different from that of the previous week at 98s 0.66d percent. Applications for £250 million worth of 91-day Treasury bills totalled £392,975,000, and were allotted at an average rate of 98s 0.66d percent against 98s 11.66d percent in the previous

week. Offerings this week comprise £240 million worth of 91-day bills. The Bank of England return for the week ended 16th May showed that bankers' deposits were £9 million lower at around £219 million, while notes in circulation were about £5 million higher at around £1,860 million.

Activity on Wall Street

Convertibles fluctuated irregularly, with the market largely dominated by the movements in securities. Rails mostly were lower in quiet dealings. U.S. Governments were slightly higher, with dealings largely professional, while investment quality corporates were strong in fairly active trading. In a slow market for foreign bonds, Italian public utility 3 percents and Chile 3 percents were the most active issues, though both were shaded fractionally. Norwegians were unchanged to slightly higher, while Australian and Denmark 4½ percents and the Union of South Africa 4½ percents held steady. Japanese issues were mixed.

U.S. Federal Reserve Return

The U.S. Federal Reserve return for the week ended 16th May shows that gold stocks rose by \$1 million to \$21,769 million. Foreign deposits rose by \$2 million to \$338 million, while foreign investments fell by \$16 million to \$3,722 million. The Federal Reserve sold \$27 million worth of bills and bought \$51 million worth under repurchase agreements. Total discounts and advances fell by \$347 million to \$565 million, while aggregate excess reserves of member banks fell by \$210 million to \$193 million. The daily average of excess reserves of member banks fell by \$138 million to \$453 million, while daily average borrowings fell by \$71 million to \$1,066 million. Business loans of the New York City banks rose by \$36 million to \$9,651 million compared with a fall of \$7 million to \$7,637 million in the same period of last year.

Platinum Prices

The price of free platinum in the U.K. is now indicated around £39 a troy ounce compared with around £38 recently. Rather more buying interest is reported which, some dealers say, could have been prompted by the recent increase in the price of platinum in the U.S.A. The two leading refiners in the U.K. continue to quote £34 to their regular customers.

W. German Move Against Inflation

The Western German bank authorities are seriously considering the minting of gold coin as a new device to combat inflation. The proposal, which is one of the many being considered by the Economics Ministry and the Central Deutscher Laender, is to mint 20-mark pieces. Exports consider that many people suspicious of paper money might be encouraged by the gold coinage to save. It has been suggested that several hundred million marks of purchasing power might be absorbed in this way. Since the war, Western Germany has built up gold reserves totalling 4,400 million marks. Trading in gold coins is permitted inside the country, but import or export of coins is still prohibited, although the Bank, it is understood, is planning to remove the ban. The current price of the 20-mark gold coin is about 44 marks and is slightly higher than in the neighbouring countries. The gold content is worth 3.71 marks so the Bank stands to make a profit by minting coins.

Egypt's Independent Exchange Rate

With effect from 21st May, the Egyptian pound is exchangeable with any foreign currency at the official rate of exchange fixed by the International Monetary Fund. The Egyptian National Bank will publish buying and selling rates daily. Previously, the Egyptian exchange rates were based on sterling.

Vegetable Oil Market

Oilseed trading has been moderate, with resellers mostly involved in the recorded deals. In the majority of cases, sellers have shaded their ideas of value, while consumers have shown a lack of interest in sizable purchases. Linseed oil provided the most spectacular price moves, on reports that the Indian Government had agreed to a reduction of £10 a ton in the export duty recently imposed. This was emphatically denied eventually in authoritative quarters, but not before prices had slipped back by about £6 a ton. In the meantime, Argentina had sold about 14,000 tons of oil for May-June shipment at what are considered satisfactory figures. In castor oil, while the local Indian markets were showing increased firmness, buyers in London were largely unresponsive, as it was possible to buy shipments well ahead at discounted prices compared with those of earlier clearances. There was an initial marking up of prices on reports of Japanese enquiries, but further increments could not be established. South African groundnut May-June was said to be offered down to £147 and British West African at £146.

U.K. Rubber Statistics

Statistics issued by the International Rubber Study Group show the rubber position in the U.K. for February as follows: consumption of natural rubber totalled 17,879 long tons, imports of natural rubber 20,670 long tons, re-exports of natural rubber 12,060 long tons and stocks of natural rubber held by manufacturers and in warehouses (exclusive of U.K. Government stocks) at the end of the month were 43.7 long tons.

New Delhi

BIGGER EXPANSION IN RAILWAY EQUIPMENT MANUFACTURING FACILITIES URGED

OFFICIAL COMMITTEE SAYS STEEL AND PIG IRON SHORTAGES MAINLY RESPONSIBLE FOR IDLE CAPACITY

(FROM OUR NEW DELHI CORRESPONDENT)

THE nine-member Railway Equipment Committee, which submitted its report to the Government of India last week, has recommended that the development of additional capacity for the manufacture of railway equipment within the country should be based on the original railway five year plan of Rs. 1,490 crores, and not on the reduced plan of Rs. 1,125 crores. "Unless this is done," it says, "the development of capacity may fall short of the railways' increasing requirements and result in avoidable imports." The Committee has found that, with the exception of grey iron foundries, engineering capacity in the country is fully booked. Idle capacity as such does not exist, and whatever idle capacity occurs is mainly due to the inadequate and irregular supply of such raw materials as steel, pig iron and hard coke. "The biggest single factor which has prevented the rapid growth of the engineering industry in recent years," it declares, "is the serious shortage of steel and pig iron, which has hampered the manufacturers in their production programmes."

Steel and Pig Iron Imports

The Committee goes on to recommend that substantial imports of steel and pig iron for railway requirements at ruling world prices should be accepted as inescapable, and suitable arrangements made to obtain adequate and regular supplies from abroad after making an assessment of the shortfall expected during the next five years. To ensure timely releases of materials in short supply, it recommends that adequate quantities of controlled raw materials be stocked at "dumps" at suitable places in the country, from where they can be issued to manufacturers. The introduction of uniform prices for basic raw materials is also recommended in order to encourage equitable industrial development. For this purpose, it is suggested that at least one centre in every State should be declared to be a "port" for the purpose of a uniform price for steel, pig iron, coal and coke. To achieve complete self-sufficiency in various items, the Committee stresses that certain "unorthodox" methods will have to be employed. In this connection, it makes the following observations:

Continuity of Orders: Prospective manufacturers, if they are to be attracted to invest capital in new ventures, must be assured, for a reasonable period, of the utilisation of the major portion of the capacity developed.

Equalisation of Prices for Controlled Raw Materials: Many manufacturers who are located unfavourably in relation to sources of raw material find it difficult to compete in costs of manufacture. This factor hampers the creation of new capacity. It is, therefore, necessary to equalise the price of controlled raw materials on an all-India basis.

Purchase Procedure: To facilitate the development of indigenous industry, the Stores Purchase Committee made certain recommendations on the price preference for indigenous products, special preference for small-scale industries, uniform registration of suppliers, protection of industry against unfair competition, and establishment of permanent exhibitions. The adoption of these recommendations by the Ministry of Railways is most desirable.

Passenger Coaches

The import of passenger coaches, the Committee says, will not be necessary during the second plan period, with the exception of electrical multiple unit stock, until indigenous capacity is established. This is already being developed. As for goods wagons, a large number of proposals were received from private manufacturers, who showed "much enthusiasm". The Committee feels that complete self-sufficiency in wagons is assured, provided "educational" orders are placed by the railways liberally. Dealing with locomotive requirements during the second plan period, it recommends the immediate establishment of a diesel and electric locomotive plant to help reduce imports to some extent over the next five years, and to lead the railways to self-sufficiency in the third plan period. The Committee has made a number of specific recommendations on other major items of railway equipment, such as coaching underframes, signalling equipment, permanent way material, train lighting equipment, traction equipment, steel castings, wheels and axles, etc. The extension of indigenous capacity for the manufacture of electric multiple unit stock is also recommended. Pointing out that the construction of passenger coaches and repair work has suffered serious setbacks from time to time through an extreme shortage of steel panels and timber, the Committee stresses the need for an increasing use of aluminium panels. It also recommends the increased use of aluminium

roof tanks in place of galvanised tanks which are in short supply.

Other Recommendations

The following are some of the other recommendations:

1. The principle of booking the capacity of indigenous manufacturers for periods extending up to five years should be applied to all items of railway equipment in short supply.

2. To encourage development, "educational" orders for stores which are likely to be in short supply should be placed liberally.

3. When any equipment is imported, the components which can be manufactured within the country should, as far as practicable, not be imported.

4. A directory of imported stores in use on the railways should be published periodically.

5. The private sector should be allowed to use testing facilities in Government laboratories; institutions which are recognised by the Government and which have adequate testing facilities should be authorised to issue test certificates.

6. Steps should be taken to enable small-scale industries to expand rapidly and to meet in an increasing measure the railways' needs of some manufactured components. Several suggestions are made on this point.

7. For the products of cottage and small-scale industries, a general price preference of up to 25 percent should be made applicable to direct purchases by the railways, on the lines recommended by the Stores Purchase Committee.

8. Small-scale producers should not be at a disadvantage in buying raw materials, particularly steel. Steel should be offered them at the same price as to other industries.

Fall in Export Earnings

In the fourth quarter of 1955, India's export earnings were substantially lower than in either the previous quarter or the corresponding quarter of 1954. In October-December 1955, they amounted to Rs. 147 crores, as against Rs. 160 crores in July-December 1955 and Rs. 173 crores in October-December 1954. This was in spite of a very substantial increase in exports of iron ore, manganese ore and other items between the third and the fourth quarters of 1955. Between July-September 1955 and October-December 1955, iron ore exports rose from Rs. 136 lakhs to Rs. 178 lakhs; manganese rose from Rs. 180 lakhs to Rs. 394 lakhs; black pepper from Rs. 47 lakhs to Rs. 143 lakhs; and other spices from Rs. 224 lakhs to Rs. 401 lakhs. These increases were, however, more than offset by a drop in exports of gunny cloth from Rs. 2,168 lakhs to Rs. 1,404 lakhs; tea from Rs. 3,346 lakhs to Rs. 2,978 lakhs; and linseed oil from Rs. 237 lakhs to Rs. 136 lakhs. Nevertheless, the rise in minor exports is welcome, and these rises have been maintained in the first quarter of 1956. There have been very substantial increases in exports of groundnut and skins; tea exports were at the unusually high level of Rs. 3,423 lakhs. Handloom cloth sold well, but exports of mill-made cloth were at the lowest level in the recent past.

By and large, exports in 1956 are likely to be somewhat lower than in 1955, though well above the 1954 level. While oilseeds, oil and raw cotton exports may rise substantially from 1957 onwards as a result of the decision to stimulate production, a decline in 1956 appears inevitable. On the other hand, exports of ores and hides and skins are likely to rise significantly. Sales of miscellaneous engineering goods, such as diesel engines and sewing machines, have also been increasing sharply and will probably go up further. It is not likely that the increase in exports of such items will be offset by declines in major commodities such as jute and cloth. With cloth, there are indications that further steps will be taken to stimulate exports, in addition to the recent removal of the duty on coarse cloth. A promising factor, the quantitative significance of which cannot at the moment be accurately foreseen, is the effect of the trade agreements with Russia and Poland. It might not be an exaggeration to estimate additional exports on this account in 1956, compared with 1955, at Rs. 20 to Rs. 30 crores. As a sharp increase in imports is expected, there should be enough shipping space for exports and this itself could do much to promote the latter.

Import and Export Council Meetings

The six-monthly meetings of the Import and Export Advisory Councils were held here during the past week. The Commerce and Industry Minister, Mr. T. T. Krishnamachari, presided. In

the Import Advisory Council, most of the 169 suggestions for the liberalisation of imports came from the import trade while those for restrictions, 47 in number and largely relating to machinery and equipment, came from the Federation of Indian Chambers of Commerce and Industry. There were 13 suggestions for a total ban on some imports, including W. I. pipe fittings of up to three inches in size, pruning knives and other agricultural tools, porcelain and brass lamp-holders and electrical accessories, industrial and street lighting fittings, blue ink, solubilised vat dyes, bobbins and pins, bismuth salts, saccharine, toilet, household and laundry soaps, floor cloth and machine tools.

The Union Minister for Commerce, Mr. D. P. Karmarkar, in his opening speech said that the second five year plan envisaged an enormous expansion of imports. "It will, therefore, be necessary for us to take every possible care and to use every possible device to effect savings on items which are not directly related to our development plans. At the same time, I know that we cannot ask our people whose living standards are notoriously low to postpone consumption of essential consumer goods for an indefinite period. It may be necessary to provide for increased imports of some non-industrial items to meet the expected increases in consumer demand. We have by now perfected our machinery to bring about planned shifts in imports from non-essential to essential items. We will have to continue the process of judicious pruning of imports of items which can be economically produced in the country. This will be a continuous process, and we hope that, as the plan proceeds, we will be devoting a larger and larger proportion of our foreign exchange to the import of machinery, equipment and industrial raw materials.

"This is the long-term picture. We are concerned at this meeting with the present position and the policy for the next six months. The value of our imports has risen from Rs. 618 crores in 1954 to Rs. 647 crores in 1955. The value of plant and machinery imported during 1955 exceeded the 1954 figure by Rs. 23 crores. There has been a more significant expansion in the import of metals, the value of which has gone up from Rs. 51 crores in 1954 to Rs. 75 crores in 1955; and yet the balance of trade has not been too unfavourable. In fact, we closed 1955 with an unfavourable balance of only Rs. 41.27 crores, against the corresponding figure of Rs. 54.88 crores for the previous year. Similarly, the balance of payments position has not been unsatisfactory. At the end of March 1956, our sterling balances stood at Rs. 748 crores, against Rs. 732 crores at the end of March 1955. The increased tempo of industrialisation envisaged in the second plan is already beginning to have an effect on our import statistics. In the first three months of the current calendar year, imports were running at a level considerably higher than the figures for the corresponding period in the previous two years. During this period, the balance of trade has already been unfavourable to us to the extent of Rs. 45 crores. The rate of licensing for capital goods has increased sharply, and it is estimated that our expenditure on imports of machinery and metals in the next nine months will exceed the figure for the whole of last year by over Rs. 60 crores."

F. I. C. C. I's Suggestions

Some useful suggestions have been made by the Federation of Indian Chambers of Commerce and Industry to stimulate exports. It says: "In the second plan, the targets of production for iron and manganese ore have been placed at 12.5 million tons and 2 million tons and export at 2 million tons and 1.5 million tons respectively. Exports can take place at a higher rate but the present difficulties in getting wagons severely restrict exports, and many parties have not been able to meet their commitments. Delay in execution of contracts has made foreign buyers apathetic towards making purchases from India. Serious consideration needs to be given to this matter. For example, the closure of the port of Bombay for the purposes of export of minerals going from Madhya Pradesh, on the ground of inadequate return traffic from Bombay to Madhya Pradesh, will severely effect exports from Madhya Pradesh. The port of Visakhapatnam is already congested, as there are only four loading berths, out of which two are meant for minerals. A third berth for minerals is under construction, but even then the loading capacity will not be more than 2,000 tons a day. Since a lot of time is taken to get berths, ships generally do not like to lift the ore from Visakhapatnam. The position of plots for stacking the ores going from different areas is also bad and there is no proper arrangement for getting the ore weighed. As for exports of manganese from Bangalore, mine-owners take the goods in lorries in order to avoid transhipment delays at Yeswantapur (Bangalore). In such cases broad gauge wagons should be allotted. Priority treatment needs to be given to manganese ore movement and it should be considered whether the allotment of wagons could be determined on the basis of the number of active leases of manganese and iron ore in the particular sector affected by the registration slip.

"The non-availability of adequate transport facilities in time, relatively high shipping freight rates, increased competition in foreign markets and declaration of export quotas on a short-term basis hamper the export trade in ores. The reputation of shippers is also affected due to non-fulfilment of commitments. More attention should be given to the export of foreign exchange. Facilities for export to areas such as Barajada should not be curtailed and the huge stockpiles there must be cleared. To solve the difficulties of transport, a

Ship Building and Engineering

A part of the
Martin Burn Enterprise
to make
India industrially
self-sufficient

MARTIN BURN LTD

12 MISSION ROW, CALCUTTA 1

Branches at: NEW DELHI BOMBAY KANPUR

sub-committee consisting of officials and representatives of chambers of commerce should be constituted to fix up transport requirements for ores every month.

Priority for Moving Goods for Export

"Goods meant for export must be accorded the same priority as goods meant for use as industrial raw materials. To prevent the danger of abuse of priority, a declaration may be taken in a prescribed form from the consignor, whether he may be the exporter or his agent, in triplicate stating that the goods are being railed to the ports for export and are covered by valid export licences. The railway authorities should accept the goods and send a copy of the declaration to the export authorities at the ports so that wherever necessary it could be checked. In the shipping bill, a column can be added indicating whether the goods were moved under high priority or not.

"At present, drawback is allowed only on raw materials used in the manufacture of goods subsequently exported. To develop an entrepôt trade, the question of allowing drawback of import duty on items which are merely 'graded' in the country should be considered. For example, dry fruits like pistachios, almonds, apricots, resins and dates can be exported to Far Eastern countries after being imported and graded in India. Other items like Zanzibar cloves, Singapore canes, Chinese cassia can also be exported. Certain rules can be laid down under which exporters must prove by documentary evidence that they imported the goods and a time-limit can be prescribed within which such imported stuff has to be re-exported or a specific drawback can be fixed on the basis of the existing duty.

"In order to stimulate exports of new items, the Government should consider framing an export incentive scheme under which special licences may be issued to exporters for the import of certain categories of goods for an amount equivalent to a certain percentage of the foreign exchange earned by the export of specified new items.

"Items whose exports are allowed freely should be permitted to be shipped without requisitioning all kinds of papers, documents and evidence of sale, etc. Consignments should not be delayed where letters of credit have expired if the seller can export without demanding the extension of letters of credit.

"For freely exportable items, exporters should be given a fresh licence if the cargo against their previous shipping bill is shut out in full or in part. The validity of the shipping bills should be for one month instead of 15 days, with the right to alter the ship or the destination. On the expiry of this period, shipping bills should continue to remain valid till the sailing of the particular ship mentioned in the bill without any fresh validation.

"The Government should consider persuading foreign shipping companies to accept measurement certificates issued by Indian chambers of commerce.

The question has been pending for a very long time, but what is required is not the setting up of a joint agency by Indian and non-Indian chambers of commerce but to impress upon the shipping companies not to disregard certificates issued by the national chambers of commerce.

"The grant of export quotas for chillies and onions to co-operative societies has tended to displace the normal trade channels. It should be stipulated that co-operative societies should export goods produced by their members and not goods bought in the market.

"The export of old hemp rope cuttings is now freely licensed up to 30th June, 1956. A long-term policy of free licensing should be announced for old hemp rope cuttings which are merely thrown off torn pieces of bed twine and the collection of these cuttings depends on demand and prices prevailing in a particular year. Before doing so, the requirements of the indigenous paper industry may, however, be ascertained.

"The export of vialled anti-biotics is not allowed, possibly on the ground that a very large part of the raw materials used in marketing the vialled anti-biotics is imported. A large number of indigenous materials, such as rubber stoppers, aluminium caps, labels, cartons, wooden cases, etc. would be used if vialled anti-biotics are exported. Vialling also involves processing and, therefore, exports should be allowed freely."

Life Insurance Corporation

The Lok Sabha began its consideration of the Life Insurance Corporation Bill, as reported on by the Select Committee, in the past week. The Finance Minister, Mr. C. D. Deshmukh, referred at some length to the changes which had been made. He said: "The first change which is of some consequence is the one in clause 6(2)(d). During the course of the discussion on the Emergency Provisions Bill, I had referred to the difficulties which we envisaged in the way of the Corporation carrying on business outside India. I have mentioned that the Corporation may have to transfer the foreign business to others. The change now made, that is, the addition of the words 'or persons' makes it clear that the transfer of business, if such a course is decided upon, will not be all to one company. We shall consider carefully the request of any existing company to be allowed to carry on life business outside India and where we are satisfied that the company in question has the means and the volume of business sufficient to give a good chance of carrying on the business successfully outside the country, we shall readily give the necessary permission and at the least transfer its own foreign life business to it."

The next important change was the creation of a fifth zone with headquarters at Kanpur. The preferential way in which Uttar Pradesh has been treated has aroused considerable criticism. For instance, it is pointed out, the railways' original zoning system had to be modified by creating an

additional zone for U. P. with headquarters at Gorakhpur. Now, the Finance Minister has had to give in by agreeing to a fifth insurance zone in that State. By another change, the Government's intention to set up an investment committee has been clarified.

The Question of Audit

The Finance Minister discussed the demand of the Comptroller and Auditor-General that a provision should be made in the Bill enabling him to audit the accounts of the Corporation. According to lobby reports, the issue was decided twice against the Auditor-General by the Union Cabinet. But he sent a letter to the members of the Select Committee after that, reiterating his demand. There are four minutes of dissent appended to the report of the Select Committee on this issue. The Finance Minister however is opposed to it and he told Lok Sabha that "under article 149 of the Constitution, it is laid down that the Comptroller and Auditor-General shall perform such duties and exercise such powers in relation to the accounts of the Union and of the States and of any other authority or body as may be prescribed by or under any law made by Parliament. The accounts of the Corporation will be separated from the Union Government's accounts as the former will be an autonomous body. So far, no law has been passed by Parliament prescribing that the audit of accounts of autonomous bodies will be done by the Comptroller and Auditor-General even where the Government has financial interests in them.

"I have no desire", said Mr. Deshmukh "to take refuge behind legal formalities. I mention this only to clear the misapprehension which seems to exist in some quarters that such audit by the Comptroller and Auditor-General is almost a constitutional necessity. The Government has devoted very careful attention to this subject and, let me at once make it clear, that it is ever willing, in fact anxious, to associate the Comptroller and Auditor-General, to the maximum extent possible or advisable, with the financial working of State undertakings. Accordingly, the Comptroller and Auditor-General has been entrusted with the audit of accounts of authorities who function more or less under Government conditions—for instance, the Damodar Valley Corporation, the Industrial Finance Corporation or the Airlines Corporation—and also of Government-sponsored companies whose transactions the staff of the Comptroller and Auditor-General are likely to be familiar. But, where important commercial considerations are involved, like the State Bank or the Insurance Corporation, since Government officers lack experience of the work in such enterprises, the Government would not like the success of these recently nationalised ventures to be jeopardised by some violent change in the system. Such institutions cannot be run without the exercise of a larger measure of discretion by the higher executives, and any system which makes it possible for audit to raise objections to the exercise of such discretion is bound to paralyse their working. Undertakings like the Insurance Corporation are basically different from the Government's ordinary business and until we have had some experience of their working, it seems to us to be best to maintain the status quo. I may explain also that the provision suggested in clause 25 does not affect the accountability to Parliament of the Corporation. Clause 29 requires the report of the auditors to be placed before Parliament and when this is done, the House will be able to discuss the report fully and freely.

U. K. Practice

"It would perhaps be useful in this connection to refer to the practice in similar matters in the United Kingdom, as we have generally been following the United Kingdom in these respects. That country has a fairly large public sector in industry and also a Comptroller and Auditor-General who is independent of the executive as we have here. But so far as we know, the Comptroller and Auditor-General in the United Kingdom does not audit the accounts of the nationalised concerns, nor has he claimed any inherent right to audit them. A Select Committee in the United Kingdom went into this question of the Comptroller and Auditor-General's responsibility for the audit of nationalised undertakings and decided against it for much the same reasons as I have indicated earlier. At no stage, however, did anyone contend that the accountability of these concerns was diminished for that reason. A practical consideration against providing for the audit by or in consultation with the Comptroller and Auditor-General who, I should state here, is of the view that he should be associated with the audit of such concerns, is that he is very short of senior staff. Extensions have repeatedly been given to his superannuated officers. That is all that I have to say at the moment on this important point.

Foreign Business

"I now deal with clause 31 which has been newly inserted. This clause is the corollary to clause 6(2)(d) which empowers the Corporation to transfer the whole or any part of its foreign business to others. Naturally, the companies taking over the foreign business of the Corporation would like to transact new business in these countries. Clause 31(1) empowers the Central Government to permit this. Members may be somewhat intrigued by the actual phraseology employed authorising the insurers to carry on life insurance business in India for the lives of persons ordinarily resident outside India. The legal opinion is that since the head office is deemed to be in India the companies would be deemed to carry on business in India also not

ined to territories outside India. Hence this special provision in clause 31(1).

"The next change relates to clause 35, which concerns the repatriation of assets and liabilities in the case of foreign insurers. The change made by the Select Committee is of a minor character and is intended to expedite the work of repatriation. In the Bill as introduced, the relative clause provides for the Corporation being divested of certain assets and liabilities. One can be divested of something only if it is first vested in him. That means, the repatriation of the excess assets and sterling policies and assets will have to wait till the appointed day, as only on that date the assets and liabilities of the various insurers would vest in the Corporation. Now, there is no real reason why this matter should be delayed till that date. In fact, it would be convenient from the point of view of everyone concerned if the work of repatriation could be taken in hand as soon as the Bill is passed. The amendment, therefore, empowers the Central Government to effect the repatriation both before and after the appointed day."

Terms of Compensation

Dealing with the question of compensation, the Finance Minister briefly recapitulated the principles in the original Bill before indicating the changes made by the Select Committee. He said: "Part A of the Schedule deals with proprietary companies which had distributable surpluses, Part B with other proprietary companies and part C with mutuals, co-operatives and unregistered bodies. Part A is by far the most important as the companies claiming compensation under this Part account for the bulk of the business done in the country, and therefore of compensation. Briefly, the compensation payable under this Part is 20 times the average annual allocation to the shareholders at the last two actuarial valuations. The allocations taken into account are in each case subject to a maximum of 5 percent of the surpluses and a minimum of 3 percent as the Bill stood when it went to the Select Committee. An alternative basis was also provided in terms of which the companies can claim, instead of half the above, an amount that is ten times the average annual surplus, plus the right to retain the paid-up capital. These were proposed in the Bill as introduced. I shall now explain the changes made by the Select Committee in this Part.

"The first change is in the criterion for being placed under this part, that is A. In the Bill as introduced, it was provided that the insurance company should have allocated a part of the surplus to the shareholders. It was noticed that some companies, both Indian and foreign had distributed their entire surplus to policyholders. So, obviously, such insurers should not be penalised for their progressive spirit. It was for this reason that the Select Committee changed the criterion from allocation of the whole or any part of the surplus to the shareholders to allocation of the whole or any part of the surplus to the policyholders.

"The second change, which is more basic and important, is intended to allow for the growth in business. During the earlier debate, I had mentioned that representations had been received that while the broad approach to the question of compensation was equitable, some change was necessary to ensure equity *inter se*, that is, as between the different groups of surplus companies. As I mentioned earlier, compensation was based on the results of the last two statutory valuations. But results of the last two statutory valuations at 31st December, 1953, or in some cases earlier. Those companies which had their last valuation as at 31st December, 1954, had an advantage over the others. This is normally business expands with time. Therefore, during the years 1954 and 1955. Therefore, a suggestion was made that compensation should be based on a standard period applicable uniformly to all insurers and also that the standard period should include 1955, the last completed calendar year. I had indicated that I had a good deal of sympathy with this point of view. This suggestion is being met by the change effected by the Select Committee. In the Bill as revised, the compensation payable is the compensation payable under the Bill as introduced, multiplied by the ratio under the Bill as introduced, during the years 1950-55 the average sum assured during in force during the inter-valuation periods taken into account for calculating compensation. It sounds rather complicated. But, in other words, the effect of the change is that compensation is increased proportionately to the increase in business.

"The third change relates to Explanation 2. In the Bill, as originally introduced, the minimum percentage of surplus deemed to have been allocated was three. It was felt that this minimum was too little and penalised the shareholders of those companies which have taken an enlightened view of their responsibilities and allocated a small proportion of the surplus to the shareholders. As a concession to this point of view, 3 percent has been increased to 3½.

Foreign Insurers

"There is one other change which, however, relates to foreign insurers. In the Bill, as introduced, the compensation payable to foreign insurers was on the basis of only those valuations of their Indian business which were made at the same time as the valuation of their world business. It was represented that these valuations in some cases took them too far back and the principle was, therefore, unjust. It was therefore decided that in their case also, the compensation should be

based on the statutory valuation of the Indian business, irrespective of whether the valuation of the world business was conducted at the same date or not. But this has introduced a difficulty. It is not the practice of foreign insurers to make any allocation of surplus at the time of the valuation of only a part of their total business, particularly where, as it happens in the case of Indian business, that part is a very small one indeed. We have therefore evolved a method which would give us a figure which may be deemed to represent the shareholders' share of the Indian surplus. We assume that the proportion of the Indian surplus deemed to be allocated was the same as the proportion of world surplus allocated to the shareholders. This percentage I hope the House will agree, is fair. Of course, these proportions are subject to the minimum of 3½ and the maximum of 5 percent."

Co-ordination of Rail Transport

A single centralised organisation under the Ministry of Railways is being set up, with headquarters at Calcutta, to co-ordinate rail transport for all imports of steel, cement and machinery expected during the second five year plan period. The Railway Board's Director of Rail Movements, who already has a small organisation at Calcutta, has been placed in charge of the work of co-ordination. He has been asked to obtain advance information of the arrival of consignments at various ports and plan rail movements accordingly. The Calcutta port has some physical limitations, which will necessitate the planning of cargo even at ports of embarkation. The Hooghly, being a shallow river, cannot take in all ocean-going ships. Many cargo boats have to discharge part of their loads at Madras or Visakhapatnam before entering the Hooghly. This factor will have to be borne in mind when machinery and equipment for the steel plants are shipped from Germany and Britain. In planning the loading of plant and machinery, consideration will also have to be given to the line and bridge capacity on the Visakhapatnam-Calcutta main route and on the Visakhapatnam-Poondi route.

AUTOMATION IS INDUSTRY'S MOST DEBATED PROBLEM

E.T.U. LAYS DOWN CONDITIONS FOR ITS APPLICATION

(FROM OUR LONDON CORRESPONDENT)

AUTOMATION, which is little more than the logical extension of the industrial revolution which produced the Luddites, and is in keeping with the electronic and atomic age in which we live, is a topic of real importance at present. Though strenuously denying the fact, labour's reaction to it does not appear to have changed a great deal over the years. The strike at Standards showed this, though it has now been settled, and further confirmation is available in the Electrical Trade Union's resolution on the subject, which lays down as its policy that in any industry or factory employing E.T.U. members the following steps must be taken before automation is introduced:— (1) full consultation; (2) where redundancy occurs full wages to be paid until suitable alternative employment is obtained by the surplus staff; (3) a shorter working week without loss of pay; (4) three weeks' annual holiday instead of two; (5) introduction of adequate superannuation and sickness schemes; (6) the employer to provide training for his workers in the new technique; and (7) higher productivity from automation to be accompanied by higher wages. The resolution also says that to pass on the benefits of automation to the whole people, "it is vital to nationalise our major industries, and to insure that automation is introduced in the framework of a national economic plan." It is significant that the E.T.U. admits that higher productivity may be expected from automation—it could hardly do otherwise in the face of facts and figures already available from its limited application here and wider use in America—but it is determined nevertheless to "fight tooth and nail" virtually to nullify any improvement it has to offer.

The E.T.U. is a Communist-dominated union, so its views may not prevail throughout the trade union movement, but in view of the inevitability of the introduction of automation if Britain is to maintain her position in world export markets, it is certainly high time the way to this development was cleared of misapprehensions and misunderstandings as soon as possible, with a lead from the Government, and clear-cut statements of policy by both sides of industry.

Positive Directive Needed

The forthcoming debate on the subject in the House of Commons—which no doubt will be based largely on the interim findings of the Department of Scientific and Industrial Research on the subject released last week—will perhaps furnish an opportunity for a certain clearing of the air, but something more positive will be needed if the benefits of automation are not to be thrown away. As the D.S.I.R. report states, automation will mean change and, for the most part, change of a special kind. It is likely to spread quickest in the future (as it is doing now) in industries which are already furthest advanced in the introduction of labour-saving machinery. Agriculture, mining and building are likely to be least affected. Unless the economy is to become unbalanced as automation spreads, it is in the technically advanced industries—which are also those most attractive to workers—that redundancy is likely to occur. Though management can do much to ease the situation by cutting down their recruitment at the right time, some workers may find themselves required to transfer to less well-paid and less attractive jobs. It is to facilitate this, with the least disorganisation and the smallest sacrifice, that the minds of the Government and the industrial leaders must be turned. An army of highly trained technicians will be required, so the training or re-training of labour would help, as would, of course, some revision of

unemployment pay regulations and limits, and the encouragement of recruitment to the presently under-manned industries.

Check on Nationalised Industries

Further details have become available of the Government's plans for ensuring greater Parliamentary control over the nationalised industries. The House of Commons is to be asked after the Whitsuntide recess to set up a select committee with these terms of reference: "To examine the reports and accounts of nationalised industries established by statute whose controlling boards are appointed by Ministers of the Crown and whose annual receipts are not wholly or mainly derived from monies provided by Parliament or advanced from the exchequer." A select committee with such terms of reference would have authority to investigate the annual reports and accounts of the National Coal Board, the Gas Council and its satellite boards, the Central Electricity Authority and its area boards, the South of Scotland Electricity Board, the North of Scotland Hydro-electric Board, the British Transport Commission and the two air corporations. It would not have authority to examine the affairs of the Atomic Energy Authority, whose annual receipts are "wholly or mainly derived from monies provided by Parliament or advanced from the exchequer", an exclusion which is justified on the ground that questions about the Atomic Energy Authority can be raised in the ordinary way when estimates are being voted.

The new terms of reference differ from those which the last select committee reported to be unwelcome in that they do not start with a list of forbidden topics and they do include a reference to "reports" as well as "accounts." The new select committee, when investigating accounts, will be dealing with events of the past, but when investigating reports, which normally include a reference to development plans, may manage to comment on future policy. The Government hopes—and the Prime Minister describes the new proposal as an experiment—that the select committee's investigations will produce for the House of Commons from time to time valuable reports which will form a better basis for discussion, on the days set aside each session for debates on nationalised industries, than sporadic study by individual members which are the raw material of debates at present. The argument is that the same amount of time spent in debate will give better results than the present system does. The services of Treasury officials and of various accounting officers will be put at the disposal of the select committee, which will be given the usual powers to send for people, papers and records. The Government proposes that the select committee should be a body of less than twenty members, and assumes therefore that it would not work through sub-committees, as the Select Committee on Estimates does. The Opposition was not consulted in the drafting of the terms and has therefore had no occasion yet to express either approval or disapproval of them. In fact, the Opposition will not declare its official attitude before it has discussed the matter with the T.U.C.

Little Change in Trade Balance

The problem of restraining imports and stimulating exports is still unsolved. That is only too evident from the preliminary overseas trade figures released by the Board of Trade just after last week's despatch had found its way into the letter-box. At £256.4 million, exports in April were still satisfactory, even though they were nearly £15 million below the record figure achieved in March for there were only 24 working days last month, being less than 1 percent below the average for the first quarter. In the first four months of the year the value of exports was 41 percent more than in the corresponding period of 1955 when exports were increased by shipments carried over from the dock strike in October, 1954. Imports in April amounted to £327.3 million, showing little change from the average for the first quarter. For the period January-April they were 1 percent lower than in the same period of 1955. Re-exports were valued at £13,700,000. As a result, however, the

adverse trade balance at £57.2 million was £11.7 million larger than in March, but was only £1 million more than the monthly average for the first quarter of this year.

While the general figures do not come up to expectations and in fact are rather disappointing, they are offset by the success which appears to be attending the drive for dollar exports. Shipments to North America in April, at £33.8 million, were higher than ever before; in the first four months of this year dollar exports were 221 percent up on the same period of 1955. Success was fairly evenly divided between the United States and Canadian markets. The improvement in sales to the United States was 212 percent; in sales to Canada it was 24 percent. This ought to help stop the drain on the gold and dollar reserves.

Materials Prices Lower

A development which will help the balance of payments situation to some extent if it continues—and the trend had been in the opposite direction for the previous two months—was the fall in the index number of basic materials prices compiled by the Board of Trade during April. It returned to the January level of 154.7, against 155.6 in March (base: June 30, 1949=100). Among basic materials used in manufacturing industry, the wholesale price of copper fell 7.8 percent in April compared with March, raw rubber was down 41 percent, tin ingots down 5.3 percent, lead down 41 percent, raw jute down 5 percent and zinc down 3.3 percent. As a result of these declines the mechanical engineering industries got their materials 0.8 percent cheaper, and the electrical machinery industries 2.4 percent cheaper. The relief was offset by higher prices for raw wool (up 34 percent), raw cotton (up 1.6 percent), aluminium ingots (up a further 5.6 percent) and a few other items. The comprehensive index of basic materials was therefore down only 0.6 percent in April, but the relief felt in the mechanical industries, whose costs have been under the greatest pressure, and if it goes on it will help them considerably. Meanwhile the selling prices of manufactured goods are still rising. That index has been going up every month since October, 1954, which goes to show that raw material costs are by no means the only problem we are up against and the increased likelihood that continually rising wages will affect our competitive position in world markets adversely, since our competitors are also deriving the same benefit as we are from the easing of basic materials prices.

Commonwealth Finance

The Commonwealth Development Finance Company came into being in March, 1953, with the backing of several leading industrial, financial, ground and shipping interests. With that backing the answer to Britain's overseas investment problems or the Commonwealth's needs for development funds would be required each year. The available, shows that total loans and investments made until 31st March, 1956, were about £101 million. In spite of the comparative insignificance of this figure, the C.D.F.C. is gradually becoming a useful channel for investment by other institutions and companies, and its normal procedure is to participate in a new project together with others. The nine enterprises which it has helped to finance are scattered over seven different Commonwealth territories. The chairman reports that all the projects are doing well. Only two new investments were made during the past year, the Company taking up £114,000 of 6 percent Sterling Debentures and 45,600 Ordinary shares of £N21 in the New Zealand Cement Co. and making a £500,000 loan, repayable in 1966, to Peak Timbers, Swaziland.

Four further schemes now under consideration are: (1) a share in the Kariba power scheme in Rhodesia; (2) a Development Finance Corporation in Ceylon; (3) an Industrial Development Bank in Pakistan; and (4) an iron and steel works in India. The Company has been embarrassed by the market, as the chairman anticipated it would be in his report last year. It has to borrow most of its funds at a fluctuating interest rate, related to bank rate, and though it has lately made a loan at 61 percent its earlier lending was naturally done at lower rates. As a result the profit before tax is down from £114,963 to £94,198, and after taxation and other adjustments it is down from £25,016 to £18,470. So long as the Company has to charge at least 61 percent for its new loans, the demand for finance is likely to be sluggish.

Brevities

De Havilland's have announced that the Air Registration Board has agreed that requirements for a civil certificate of airworthiness for the Comet II have been met.

More than £7 million worth of the new cupronickel coins was produced by the Royal Mint last year to replace silver coins which were withdrawn from circulation. The silver in these coins was refined and is being sent to the United States in repayment of silver obtained during the war under Lease-Lend.

The signing of a contract worth about £2 million for the installation of a 212-mile natural gas pipeline in West Pakistan was announced in London last week. It is between Pakistan Constructors (the joint venture of D. and C. and William International Corporation of San Francisco) and the Fifty percent of the pipe is being supplied by Stewarts and Lloyds, and the rest by an Italian firm.

Bombay

REACTIONS TO FINAL DRAFT OF SECOND PLAN

HEAVIER TAXATION AND BIGGER ALLOCATION FOR FOOD

(FROM OUR BOMBAY CORRESPONDENT)

WITH its presentation to Parliament, the second five year plan has now assumed its final form. Despite the fears expressed, the size of the plan remains unchanged. Almost the only significant modifications are the raising of additional taxation from Rs. 450 crores as provided for in the draft to Rs. 850 crores and the provisional allocation of a further Rs. 100 crores to achieve the 10 million ton target for foodgrains. This additional sum is to be spent primarily on minor irrigation works. Dr. John Matthai could not have chosen a more interesting or a more timely theme than he actually did when speaking to the Rotary Club recently on free enterprise and socialism. He pointed out that perhaps the cause of a socialist society would be better served if free enterprise were given the dominant rôle in the task of building the new India within a general framework of regulatory fiscal legislation by a Parliament which represents the entire community. "Free enterprise should be the rule, State enterprise being confined to cases where there is proved necessity for it," said Dr. Matthai.

Despite the considerable force of the arguments advanced by Dr. Matthai in support of free enterprise, the fact remains that the second five year plan is about to be launched with all its emphasis on the public sector. Undoubtedly, it is a great experiment but it would seem that the very magnitude of it has led India's planners to make a series of assumptions. It is assumed that they may prove unwarranted. It is assumed that the railways, which failed to yield the anticipated income in the first plan period, will show an average surplus of Rs. 30 crores a year. While freight and passenger traffic has increased tremendously and a further increase of 51 percent is estimated during the next five years, the carrying capacity of the railways has not expanded sufficiently to meet the additional demand. The new railway plan has been drastically reduced and the present serious inadequacy of transport facilities is likely to continue well into and beyond the second plan period. Apart from slowing up industry, this will seriously impair the earning power of the railways. If the income from the railways is to approximate to the estimated amount, then freights and fares will inevitably have to be increased, but clearly there is a limit beyond which further increases would harm the economic development of the country. It seems doubtful if the railways will be able to contribute the budgeted sum.

The second major assumption relates to the volume of internal savings which will be available for investment. The current rate of savings in India is estimated at 7 percent a year. It is now expected that the rate will gradually increase to 11 percent a year during the next five years because of the anticipated rise in the national income. There is no reason to believe that this will come about automatically. Although the national income rose by approximately 121 percent in the first plan period, the rate of savings increased by only 1 percent. It would appear that a substantial proportion of the rise in incomes was reflected in increased consumption.

Savings and National Income

Actual savings will depend on the propensity to consume as long as living standards remain appreciably low, marginal increases in the per capita income will continue to be spent rather than saved. In fact, it is open to question if the average earnings will increase to a point at which a reasonable margin for saving can be said to exist considering that it is intended to use most of the national income in excess of the present level to pay new workers and to provide additional wages for underpaid labour. The problem of stepping up the ratio of savings to national income is not an easy one to solve.

The raising of additional taxation from Rs. 450 crores to Rs. 850 crores would seem to be a theoretical device to bridge the expected gap. A tax on wealth, the imposition of a gifts tax, the widening of the concept of income so as to include in it capital gains and a shifting of the basis of personal taxation, at least for the higher income groups, from income to expenditure are among the measures suggested. The question is whether so much taxable capacity exists in the country. The original provision of Rs. 450 crores was held to be high for the new proposals would appear to be doubly excessive. Although an expanding economy like India's needs an additional supply of money, it is not easy to assess accurately the degree of deficit financing which the country's economy will tolerate. On the proposed basis, the money supply of the country will increase at the rate of 10 percent a year and this may well prove to be excessive. Unfortunately, an inflationary trend is already apparent. The general index of wholesale prices is 14 percent higher today than it was last year. The index has risen by about 28 percent in the case of foodstuffs and by about 20 percent for industrial raw materials. Significantly, the Reserve Bank has already taken action in restricting advances against rice and paddy. These restrictions may have to be extended and a progressively increasing curb on credit imposed. Textile prices, for instance, are also showing a tendency to rise. City circles here attribute a part of this increase to the

anticipated results of the deficit financing envisaged. The Planning Commission has suggested that the Government build buffer stocks of foodgrains and other essential commodities. It is doubtful if this will solve the problem satisfactorily. Assuming that stocks are to be procured from local markets, large-scale purchases by the Government will tend to increase domestic prices still further. This is likely to give an impetus to the inflationary spiral. On the other hand, if supplies are obtained from abroad such imports will widen the foreign exchange gap. In either case, the choice is an unhappy one.

Foreign Exchange Resources

It is assumed that a sum of Rs. 800 crores will be available in terms of foreign assistance. This figure would seem to be excessive when compared with the quantum of aid which was made available from external sources during the first five year plan. An approximate sum of Rs. 200 crores was received in the last five years made up chiefly of the American wheat loan, Indo-American Technical Co-operation, International Bank loans and assistance under the Colombo Plan. Although there is every reason to believe that these agencies will continue to subscribe funds, the rate of capital flow will depend on a number of factors. Apart from purely economic considerations, international relations and the general political atmosphere must be taken into account in assessing the degree of assistance which may be available from government and semi-government sources. The oil refineries represent almost the only major investment of foreign private capital in India during the first five year plan period. Most of the additional outlay has amounted to no more than a ploughing back of earnings in existing enterprises.

The rate of flow of private capital from external sources depends on the investment climate of the country. Basically, the safety of capital and an adequate yield in relation to the risks involved are the primary considerations. Inevitably, investors will seek assurances on these points and look for safeguards against nationalisation or guarantees of appropriate compensation in the event of expropriation. The other factor is that a number of countries are developing simultaneously. For instance, the countries of the middle east and south-east Asia have ambitious development schemes. This widens the field of international investment. Private foreign capital will flow to those areas which offer the best returns commensurate with the risks attached to such ventures. The question of balance of payments on trading account is an equally complicated one. The total current account deficit for the five year period was

originally estimated at Rs. 1,100 crores. It was proposed to reduce the gap somewhat by drawing on the sterling balances at the rate of Rs. 200 crores a year. This would leave the sterling balances at Rs. 500 crores by the end of 1960-61. This level corresponds to about seven months' imports and it is considered essential to maintain it in order to tide the country over any temporary balance of payments difficulties that may arise.

India's Overseas Trade

It now appears that the debit will be even higher than originally estimated. The Commerce Minister, addressing the Export Advisory Council on Sunday, said that the import schedule envisaged in the draft plan might have to be increased "perceptibly", this increasing the foreign exchange deficit. The Commerce Minister expressed the hope that the trade treaties which India had recently concluded with a number of countries on a bilateral basis would lead to an increase in exports and thus help to bridge the foreign exchange gap. The mere conclusion of trade treaties does not mean that they will be implemented in full. A disquieting feature is that nearly 50 percent of India's output is derived from agriculture and allied occupations. A monsoon failure can profoundly influence the import requirements and the export earnings of the country. Quite a few of India's export commodities are of an agricultural or a semi-agricultural nature. A 10 percent deterioration in the terms of trade, for instance, would mean an additional foreign exchange burden of Rs. 60 crores to Rs. 80 crores.

In 1954-55 six items of merchandise, namely, tea, jute manufactures, cotton textiles, oils, tobacco and hides and skins accounted for Rs. 384 crores or 67 percent of the total earnings of Rs. 572 crores. The annual export takings over the second plan period are expected to be about Rs. 27 crores in excess of the 1954-55 figure, but this depends on a number of variable factors.

Increased earnings from oils are based almost entirely on larger estimated exports of groundnuts. It is planned to step up the production of groundnuts by about 900,000 tons and it is believed that the additional quantity of oil available will find a ready market abroad. Increased competition from the other jute manufacturing countries of the world is likely to hit India's export trade in jute goods. An overall drop of Rs. 200 million in the export earnings of this commodity is officially expected over the second plan period. In actual fact the loss may be more. There seem to be far too many imponderables in the plan. It may perhaps be well to keep it on an empirical basis and introduce revisions whenever necessary.

TEA CONSUMPTION IN SOUTH INDIA

BONUS AGREEMENTS WITH PLANTATION WORKERS

(FROM A CORRESPONDENT IN SOUTH INDIA)

A CONSUMER survey conducted recently by the Tea Board in Trivandrum reveals that 64 per cent of the population in that city is "tea-minded." Similar surveys were made some time ago in Madras and Bangalore and it was found that tea was popular there too. This may be more or less true of almost all urban centres in south India, as about 48 per cent of the tea produced in the area is retained for its own consumption, as against only 27 per cent or so in the case of the north Indian crop. The past few years' statistics show that consumption here has been steadily increasing. Out of 129 million lbs. of tea produced in 1955, over 64 million lbs. have been absorbed in the internal market, as against 551 million lbs. in 1954 out of the year's crop of 128½ million lbs.

The amount of tea sold through the Cochin auctions showed a substantial increase in 1955. It amounted to 48½ million lbs. in 1955, compared with 40½ million lbs. in 1954. The former figure is 37.6 per cent of the production in south India last year. Tea auctions started in Cochin only in 1947 and since then they have made impressive progress. The trade claims that "the Cochin market now holds solid and worldwide representation." There was a further fall in forward crop contracts in 1955.

Bonus for Plantation Labour

The question of a bonus for plantation labour in south India has been settled. According to a tripartite agreement, tea workers in Travancore-Cochin will get a bonus for 1955-56 at the rate of 12½ per cent, and rubber workers will get 8½ per cent. Estate owners have already paid an interim bonus, and it is estimated that they will have to give another Rs. 50 lakhs now. An agreement covering roughly 100,000 workers on tea plantations in Madras State has been signed by representatives of the Indian National Trade Union Congress and the United Planters Association of Southern India on the bonus payable for 1952, 1953 and 1954. Management had already voluntarily paid a bonus at the rate of 6½ per cent for 1952, 8½ per cent for 1953, and 10 per cent for 1954. Workers wanted more, so the question was referred to a tribunal, before which it is still pending. Under the agreement now signed, employers have to pay a total bonus of nearly 33 per cent of the annual wages earned during the three years, which means that they will have to pay an additional bonus equivalent to 8½ per cent of the total annual wages. A feature of the agreement is that estate owners have to pay this additional bonus even if they sustained a loss. The Travancore-Cochin Government has constituted a Standing Committee for Plantations consisting of representatives of labour, management and the Government, to settle the remaining disputes between planters and their employees. This Committee has been entrusted with the task of working out a formula on the bonus for 1955-56.

Bumper Coffee Crop

South India will harvest the largest coffee crop on record during the 1955-56 season, which is now approaching its end. From the current crop, pool receipts until the middle of April amounted to 31,286 tons, and another 1,000 or 2,000 tons are likely to come in by the time the season closes. The previous record was 29,500 tons in 1954. This season's exceptionally large crop presents certain problems to the Coffee Board, the most important of which is marketing. On 15th April, the Board was holding a stock of nearly 27,000 tons. There are only eight months more for the new season's coffee to reach the market. Even if internal consumption runs at the high rate of 2,000 tons a month, the total for the eight months will be 16,000 tons, which means that there will be a surplus of over 10,000 tons. Informed sources say that there is no need to keep a big buffer stock as crop prospects for the next season are bright. In their opinion, no more than a month's requirements should be carried over to the next season, which means that about 8,000 tons or so can be exported. Another problem created by the large crop is storage. It is reported that warehouses under the Board's control are full, and a portion of the crop might decay because of the shortage of facilities. This means that a substantial portion of the surplus should be exported before the monsoon sets in. The Board is expected to take a decision on exports at its half-yearly meeting next month.

Rubber Steady

The rubber market in India is steady despite the steep fall in world prices. Production and consumption of raw rubber during the first three

months of 1956 amounted to 4,338 tons and 7,228 tons, respectively, as against 3,464 tons and 6,771 tons in the corresponding period of 1955. The Import and Export Committee of the Rubber Board reviewed the situation for the first half of the year at its meeting a few days ago, and decided to recommend the import of 3,600 tons of natural rubber during the second half of the year. For the first half, it recommended a figure of 4,600 tons.

The Government of India has approved, after some modifications, the replanting scheme submitted by the Rubber Board. The scheme covers the replanting of 70,000 acres with high-yielding strains at the rate of 7,000 acres a year, for which the Government will give a subsidy to the growers. As it is too late to implement the scheme during the current year, the Board has decided to put it into operation during 1957-58.

Increase in Ginger Area

The planting of ginger is spreading on the west coast. The high price is encouraging many to cultivate it, and it is expected that more land will be brought under ginger this season. Exports have been very good during the past two years. Crop failures in Jamaica and Sierra Leone have been largely responsible for rise in prices. The Middle East is the largest customer for Indian ginger. Last season's crop was estimated at about 9,000 tons.

Record Output of Lemongrass Oil

India is expected to harvest another record crop of lemongrass oil in the season which has just commenced. According to some estimates, the output will total 1,250 tons, as against last season's estimated production of 1,000 tons. The market is steady, with prices hovering around Rs. 127-8 a dozen bottles in Cochin.

LONDON TEA SALES

AT last week's London tea sales, the 63,040 packages on offer realised an average price of 4s 9½d a lb. against 4s 11½d in the previous week and 4s 9½d a year ago. Plain broken pekoe was quoted at 3s 2½d to 3s 3½d a lb. nominal; in the previous week 3s 4d nominal. Prices obtained by some of the companies are given below:

	No. of packages	Average a lb.
Amalgamated	644	4/5½
Anglo-Ceylon and Genl.	384	7/3
Assam Co.	732	6/2½
Assam Frontier	1,064	5/
Buxa Dooars	597	6/5½
Central Provinces	354	4/8½
Chulsa	252	5/3½
Cons. Estates	426	3/10½
Cons. Tea and Lands	1,962	6/5½
Eastern Produce	504	3/11½
Jhanzie	350	6/1½
Jokai	1,596	4/9½
Jorehaut	1,671	4/10½
Kanan Devan	684	6/10
Lankapara	264	5/2½
Lungia	432	4/1½
Lunuva	491	3/4
Majuli	348	5/11½
Makum	922	4/7½
Malayalam	1,116	4/7½
New Dimbala	306	5/11½
Nuwara Eliya	182	6/7
Pabbojan	562	5/7½
Rajawella	528	5/7½
Scottish Ceylon	438	5/7½
Scottish Tea and Lands	636	6/1
Singlo	282	4/4
Standard	708	6/3½
Travancore	294	4/10½
United Planters	546	6/2½
Upper Assam	918	5/0½

U.K. Tea Stocks

U.K. tea stocks in London provincial warehouses on 11th May amounted to 105,144,270 lbs. against 102,047,000 lbs. in the previous week. The total amount to be landed on 11th May was 12,512,280 lbs. Deliveries during the week totalled 10,168,820 lbs. Landings during the same period totalled 13,624,000 lbs. Total afloat on 11th May was 29,811,331 lbs. The average price realised at the auction during the week ended 18th May was 57.61d against previous week's 59.42d and 45.72d of the corresponding week of last year.

COCHIN TEA SALES

At Sale No. 12, 750,000 lbs of tea were on offer. There was a strong demand for all Fannings which were dearer; others were irregular and easier, particularly B.O.P.s.

SIEVING MACHINE FOR TEA GRADING

A recent innovation of interest to the tea industry has been the adaptation by a London firm—Russell Construction Ltd.—of its "Cascade" sieving machine for the process of tea grading. The manufacturers are already well known for their development work in the field of sieving and training which has resulted in the introduction of completely new techniques to many branches of industry. Careful research with the Russell "Cascade" has revealed that this machine can bring considerable improvement to the process of tea grading. A revolutionary feature of the use of this machine is that no air extraction plant is necessary as there is no flying dust whatsoever to be contended with. The improvement in hygienic

conditions obtained by the elimination of airborne dust and the removal of one of the most frequent causes of fire are in consonance with the Government decrees recently promulgated in south-east Asia with the object of ameliorating the working conditions of employees.

The "Cascade" has a throughput of one to one and a half tons an hour achieved with a total absence of any clogging and blinding. It is available with a great variety of mesh sizes including, for example, 10, 11, 12, 16, 20 mesh sieves and the manufacturers also recommend a further run through with a 40 mesh sieve for de-dusting. The machine is extremely economical in operation and occupies very little floor space being only 2 feet (61 cm.) in diameter and 3 feet 6 inches (107 cm.) in height. As it is mounted on wheels it has the additional advantage of being transportable. It is completely silent in operation and has no gears, belts or shafts. One final feature of importance is that excellent grading is obtained without "tey-ing". Further information can be obtained from the manufacturers at Russell House, Adam Street, London, W.C.2, England.

"TEA FOR CANADA WEEK"

The second annual "Tea for Canada Week" was held from 12th to 17th March. Judging from the requests for display material received from grocery stores, trade activity this year was more than double that during the 1955 promotion. What is more, the amount of publicity given to the event exceeded that of last year. An interesting outcome of the "Tea Week" was an almost overwhelming response to an offer, over a small number of T.V. stations, of coloured transfers of Teaki, the little symbol of the Tea Council who has been the principal character in the Council's animated television commercials, and also has appeared in newspaper and magazine advertising. He has apparently become very popular. From the areas in which the offer was made, which do not include the main centres of population, requests have already been received for over 15,000 transfers.

A motivation study into consumer attitudes to tea has just been completed by the Motivation Research Centre. This type of research is different in method and intention from the conventional type of market analysis. Consumers were not asked when they drink tea or how much they drink, rather their sub-conscious attitudes towards the beverage were explored by techniques akin to those used in psychology and the interviewers employed were, in fact, trained psychologists. The resulting data has confirmed some aspects of tea drinking which had been suspected and brought to light a number of unsuspected attitudes.

AREA UNDER TOBACCO INCREASES

According to the Directorate of Economics and Statistics, Union Ministry of Food and Agriculture, the all-India second estimate of tobacco, 1955-56, puts the current year's area at 852,000 acres as against the adjusted second estimate of 839,000 acres for 1954-55. This shows an increase of 13,000 acres or 1.5 per cent in area during the current year as compared with last year. The increase in area during the current year has occurred in Andhra, Bihar, Bombay, Madhya Pradesh, Madras and Hyderabad, and is generally attributed to favourable weather conditions at the time of sowing. This increase has, however, been offset to some extent by decreases recorded in Madhya Bharat and Rajasthan. The information given in this estimate generally relates to the period up to the end of February 1956. Till then, the condition of the crop was reported to be generally satisfactory. This estimate does not cover the entire area sown with tobacco crop during 1955-56. Past experience has shown that the area at the second estimate stage forms roughly 95 per cent of the area under the crop finally reported.

COLOMBO RUBBER PRICES

The following prices have been issued by the Rubber Board of India from the weekly market report published by the Colombo Brokers' Association:

Sheet :	Closing prices on 11th May, 1956 (Rupees a lb.)	Average for the period. (Rupees a lb.)
No. 1	1.51	1.51
No. 2	1.48	1.48
No. 3	1.45	1.45
No. 4	1.21	1.21
No. 5	1.16	1.16
Sheet Cuttings	1	1.88
do.	2	1.83
Crape :		
Water White	—	—
R.M.A. No. 1X	1.19/20	1.20½
R.M.A. No. 1	1.19	1.19½
do.		
Crape No. 2		1.18½
do.		1.16½
Scrap Crape :		
Sc.Crape No. 1	.98 Nom	.98½
Sc.Crape No. 2	.92/95	.94½
Sc.Crape No. 3	.84/90	.87½
Flat Bark	.75/80	.77
do.		.91

To arrive at f.o.b. Colombo prices add 53.45 cents a lb. in respect of rubber other than scrap crepes and 31.45 cents in respect of scrap crepe to the above market prices.

Commodity Markets

WHOLESALE PRICE INDEX FALLS

THE official wholesale price index (base: year ended August 1939=100) declined by 0.4 per cent to 388.9 during the week ended 5th May, 1956 as compared with 390.4 for the previous week. The index was lower by 0.8 per cent when compared with the corresponding week of the last month, but was 14.2 per cent higher than that of a year ago. The index for Food Articles declined by 0.9 per cent to 353.5, because of a fall in the prices of wheat (-7%), bajra (-3%) and rice, gram, gur and salt (-1% each) despite an advance in the prices of tea (+6%) and dal arhar (+2%). A fall of 0.4 per cent to 469.6 in the index for Industrial Raw Materials was the result of a decrease in the prices of rapeseed in Bombay (-10%), raw jute (-5%), raw silk (-3%) and raw wool (-1%); prices of manganese ore (average export price) and gingelly-seed (+5% each), rapeseed at Kanpur (+3%) and in Calcutta (+2%), castorseed (+3%), groundnuts, linseed and lac (+2% each) and raw cotton (+1%) were, however, marked up. The index for Semi-Manufactures stood at 380.9 as compared with 380.7 for the previous week. Items which witnessed significant variations were: Mustard oil at Patna (+6%), groundnut oil (+3%), gingelly cake (-9%), (+6%), groundnut oil in Bombay (-5%), gingelly oil and coplised oil in Bombay (-3%), and buff hides (-4% each), copra-cake (-3%) and buff hides (-2%). The index for Manufactures moved down by 0.1 per cent to 374.9, prices of jute manufactures and paints (-1% each) were marked up while glass (+1%) showed an advance. Higher prices of betelnuts (+3%) raised the Miscellaneous group index by 0.1 per cent to 498.7, despite a decline in the prices of black pepper (-3%) and cashewnuts (-1%).

INDEX NUMBERS BY GROUPS AND SUB-GROUPS (Base: Year ended August 1939=100)

Groups and Sub-Groups	5-5-56	Week Ended 28-4-56	7-4-56	7-6-55

R = Revised * = Estimated

FINAL SUGAR OUTPUT ESTIMATE OF 18.48 LAKH TONS FOR 1955-56

According to the Directorate of Economics and Statistics, Union Ministry of Food and Agriculture, the production of white sugar on the basis of the final estimate for 1955-56 season is estimated at 18.48 lakh tons, as compared with 15.90 lakh at 18.48 lakh tons, as compared with 15.90 lakh (actual) during 1954-55. This shows an increase of about 2.58 lakh tons or 16 per cent over the previous year's production. The increase in production has been shared by all sugar producing States, prominent among which are Uttar Pradesh, Bihar, Bombay, Hyderabad and Madhya Bharat.

FINAL ESTIMATE INDICATES LOWER PRODUCTION OF DRY CHILLIES

According to the Directorate of Economics and Statistics, Union Ministry of Food and Agriculture, the all-India final estimate of dry chillies for 1955-56 puts area and production at 1,492,000 acres and 340,000 tons, as against the partially revised estimate of 1,523,000 acres and 373,000 tons respectively for 1954-55. This shows a decrease of 31,000 acres or 2 per cent in area and 23,000 tons or 6.3 per cent in production. The declines have occurred mainly in Rajasthan and Punjab, and to a lesser extent in Pepsu, Andhra, Hyderabad, Madhya Bharat and Delhi. They are attributed generally to unfavourable weather conditions, especially heavy rain, at sowing time. The decreases in area and production in these places have been offset to some extent by Madras and Mysore.

Engineering and Transport

NEW BRITISH DIESEL-ELECTRIC SHUNTING LOCOMOTIVE

DEVELOPED to meet the needs of heavy industry, a new British diesel-electric shunting locomotive is said to provide for the driver an all-round view, probably unique in vehicles of this type. The locomotive is being produced in two versions—one of 200 h.p. and the other of 400 h.p. Both have Rolls-Royce diesel engines and British Thomson-Houston transmission. By adopting the comparatively new 200 h.p. Rolls-Royce engine, the builders say, the new loco has been provided with an engine generator set considerably smaller than is typical in installations of its horsepower. This, besides reducing costs, makes possible a smaller bonnet, thus improving visibility from the locomotive cab. The driving cab is centrally placed, with doors opening on to diagonally opposite platforms accessible from the front and rear buffer platforms. The control desk in the centre of the cab is positioned to allow the driver considerable freedom of movement without loss of visibility. All the controls are duplicated at either end of the desk.

COLLAPSIBLE TANKS TO CARRY LIQUIDS IN DRY-CARGO SHIP

British-invented and designed collapsible tanks which enable liquids to be carried in the holds of dry-cargo ships, after having been successfully tried out on land, are now being given more extensive trials at sea. The particular advantage of these collapsible tanks, it is stated, is that they would obviate dry-cargo ships sailing in ballast due to a lack of suitable cargo. The collapsible tanks can be used to transport crude oil and petroleum products, or such liquid freight as edible oils and wines. Basically, the tank consists of a collapsible fabric-reinforced synthetic rubber bag contained in a light alloy telescopic frame. When not filled with liquid, the tank folds flat, and placed in the bottom of the ship's hold, dry cargo may be stacked on top of it. There are three sizes of tank—with a capacity of 1,620, 2,260, and 2,900 gallons. The weights range from two tons for the smallest size to two and a half tons for the largest, and the tanks have a manhole in the centre of the top to give access for cleaning. The inventors say that although the collapsible tanks were primarily designed for use in ships, they can be adapted to road and rail vehicles and also to freight-carrying aircraft.

INDO-POLISH SHIPPING AGREEMENT

Following the trade agreement between the Government of India and the Government of the

Polish People's Republic on 3rd April, which envisaged the possibility of India and Polish ships carrying the trade between the two countries, an agreement to organise a cargo shipping service between them. The agreement was signed by Mr. N. M. Ayyar, Secretary to the Union Ministry of Transport, on behalf of the Government of India, and by His Excellency Jerzy Grudzinski, Polish Ambassador in New Delhi, and Mr. Heller Rudolf, Director-General of the Ministry of Navigation of the Polish People's Republic, and leader of the Polish shipping delegation, on behalf of the Polish People's Republic. Under the terms of the agreement, each side will nominate a shipping organisation which will be responsible for the operation of its ships. To begin with, each side will nominate three ships for operation in the new service, which is expected to commence before the end of October, 1956. Additional ships will be put in by both sides as and when required, the total tonnage participation by each side being always equal. The service will be operated on the basis of equality of advantages and avoidance of competition between the two parties and the agreement envisages the possibility of an arrangement to be made between the two shipping organisations for pooling and sharing of freight earnings.

200 YEARS OF BRITISH TRANSPORT ON SHOW

An exhibition illustrating the development of means of transport in Britain since the mid-eighteenth century will open at Marlborough House, London, on 10th July. It is being organised by a committee of well-known people, under the patronage of the Countess Mountbatten of Burma, in aid of the Royal College of Nursing. A centre of attraction at the exhibition will be a show of travel clothes (including models for 1956), showing the changing trend in fashion since 1756 and linking it up with some of the main exhibits. The British Transport Commission is providing models of locomotives and carriages of various dates, as well as a selection of paintings and prints from its collection of historical relics. The main shipping lines are combining to illustrate the development of shipping by means of both models and photographs. The British Airlines' contribution will be a cavalcade of passenger air travel from the days of "bamboo-and-string" planes to the Britannia and Viscount airliners; and the Rootes Group is exhibiting four cars to show the changes in the conception and styling of motor-cars since the beginning of the century. The Sunbeam Mabley of 1901, with tiller steering and a single-cylinder, 3½-h.p. engine, will stand beside the 1956 Sunbeam Rapier. The exhibition will also include coaches, a horse-drawn bus and bicycles ranging from the "penny-farthing" to the latest models.

GOOD GENERAL DEMAND
AT TEA EXPORT SALE

MEDIUM DUSTS DEARER

AT Sale No. 48, held on 21st and 22nd May, offerings at the Export auction consisted of 22,200 packages for which there was a good general demand. Black leafed medium Assam broken and stylish Orange Pekoes were the strongest feature and were 1 to 2 annas dearer. Fannings remained about steady, but poor liquoring stalky kinds were generally easier.

At the Internal Sale, Dusts offerings were 21,500 chests which met with a fair general demand. Commons and Low Mediums were 1 to 1½ annas easier, while poor liquoring sorts were generally selling 2 annas below last rates. Medium Dusts with good liquors, however, were dearer. There was a selective enquiry for black leafed exportable types, while C.T.C. Assams received fair support at irregular rates.

Quotations	1956
Medium Doona Dust	Rs. 1 8 0
Medium Assam Grainy Dust	1 9 0
Best Assam CTC Dust	2 13 0 to 2 14 0 (Nominal)

Other grades offered were 3,300 chests of leaf. They met with a fair demand at prices which were generally easier.

COAL AND GRAIN FIXTURES
IN FREIGHT MARKETS

THE main interest was again centred in the American coal and grain trades and one large contract for 250,000 tons of coal a year for four years was arranged. It is reported that a fixture on French account for May shipment was concluded at 80s. The U.S. Government has authorised the sale of over 300,000 tons of wheat and barley to Korea and the first fixture on this trade was fixed at \$ (U.S.) 17 a ton from North Pacific to Korea, June-July shipment. Australian shippers are open for vessels to load in eastern or western States for the U.K. option Antwerp, Hamburg Range at about 170s. Shanghai-Colombo rice was fixed at 87½ bd f.i.o. June shipment. Gulf shippers concluded another fixture of rice in bags to Karachi and Chittagong or Chalna at \$ (U.S.) 38.50 basis, two ports discharge. Ore shippers are quiet at present, but are open for May tonnage from Madras to Poland;

indications are at 148s f.i.o. The Time Charter market has been active for period trading. A Liberty obtained 52s 6d, delivery Singapore, re-delivery Tokyo-Nagasaki range, trip via Malaya.

SUGAR MARKET

During the week ended 23rd May, sales in the Calcutta market averaged 6,000 bags daily. Arrivals a day were 2,500 bags and stocks totalled 600,000 bags. Rates for ready sugar ex-Kantapukur delivery were Rs. 31-10 for ordinary grain and Rs. 32-13 for big grain. Ex-mill delivery rates respectively were Rs. 28-10 and Rs. 29-8. The market tended to rise.

LINSEED QUIETER

Trading has been on a much reduced scale during the past week, but values have not declined owing to insufficient supplies of seeds. Arrivals were somewhat below normal for this period, and availability of goods was much below the present absorption capacity of local crushers. It is felt that the high price prevailing for mustard oil has contributed to the withholding of linseed stocks up-country for the purpose of adulteration. Linseed oil has mainly been inactive; weak overseas advances and lack of parity have ruled out any prospects of fresh business. The reluctance of some exporters to ship against former contracts made before the announcement of export duty was causing grave concern overseas. Local enquiries for oil have been spasmodic, and prices have registered a small decline. Latest quotations were as follows: Ready Rs. 22-11 a maund; May-June Rs. 22-11 a maund.

HIDES AND SKINS DULL

The market was dull. Stocks were less than in the previous week.

Bazaar Sales

(Between 15th May and 21st May, 1956)
Cowhides: Wet salted (Slaughtered) 18,800 pcs. on the basis of Rs. 11-8 to Rs. 20.

VICTORIA HOUSE,

Calcutta, 21st May, 1956.

BENGAL POTTERIES LIMITED

For Shareholders Only

(Consent of the Central Government has been obtained to this issue by an order of which a complete copy is open to public inspection at the Head Office of the Company. It must be distinctly understood that in giving this consent the Government of India do not take any responsibility for the financial soundness of any schemes or for the correctness of any of the statements made or opinions expressed with regard to them.)

NOTICE

By virtue of an Extraordinary Resolution passed at the Extraordinary General Meeting held on 30th March, 1956, the Capital of the Company was increased from Rs. 32,42,212/8/- to Rupees One Crore by the creation of 27,03,115 new shares of Rs. 2/8/- each, and the Directors of the Company were empowered to issue these new shares, or so much thereof as they may decide, with the permission of the Controller of Capital Issues.

The Directors decided to issue 9,45,500 new shares at Rs. 2/8/- each and the Company applied accordingly to the Controller of Capital Issues for consent of the Central Government. This consent has since been received.

The Directors have decided to offer the new issue, in accordance with the terms of the Extraordinary Resolution dated 30th March, 1956, to Shareholders of the Company whose names appear on the Share Register of the Company as on the 1st June, 1956. Application forms regarding the issue of shares to Shareholders will be sent out on or after the 10th of June, 1956.

In the meanwhile notice is hereby given that the Share Transfer Register of the Company will be closed from the 1st of June, 1956 to the 10th of June, 1956, both days inclusive. It is advisable for those who are holding shares of the Company on blank transfers to get them transferred in their names before the closing date.

By Order of the Board of Directors,
BHARAT RAM BHAGAT & CO.,
Managing Agents.

45, Tangra Road,
Calcutta-15.

NOTICE TO SHAREHOLDERS

Issue of 5 lakhs cumulative preference shares with shareholders' right to convert them into ordinary shares

SHAREHOLDERS are hereby informed, in continuation of the previous notice dated 7th May, 1956 that the Directors of the Company, in view of the expanding activities of the Company and to meet the increased demand for vehicles anticipated in the next Five-Year Plan as also to ensure manufacture of a larger number of parts and components of vehicles of various types and to make the factory increasingly self-sufficient as well as to diversify manufacturing activities of the Company, have decided to raise the capital of the company by issue of five lakh cumulative convertible redeemable preference shares of Rs. 100/- each forming part of the unissued capital of the Company with right to convert them into ordinary shares on the following terms and conditions:

(a) That the preference shares shall be issued for cash at par.

(b) That the preference shares shall carry fixed cumulative preferential dividend @ 6% per annum, free of income tax payable on the capital for the time being paid thereon from the date of allotment and such preference shares in winding up shall rank both as regards capital and dividend (up to the commencement of winding up whether declared or not) in priority to the ordinary shares and shall not confer on the holders thereof the right to any further participation in profits or assets and shall not confer on the holders thereof the right to vote either in person or by proxy or by attorney at any general meeting, except as provided in Section 87 of the Companies Act 1956.

(c) That the holder of any of the said preference shares may by notice in writing left, together with the certificate for the shares therein referred to, at the company's registered office not earlier than 1st July, 1961 and not later than 30th June 1966 if the same remain unexercised at that time, elect to convert the preference shares, specified in the said notice into ordinary shares, whereupon such shares shall become ordinary shares, and shall rank in all respects pari passu with the ordinary shares of the company and shall cease to have any preference or priority as above mentioned, and a new certificate shall be issued to the holder thereof free of charge.

(d) That the preference shares shall be redeemable at par at any time after 30th June 1963 at the option of the company by giving three calendar months' notice.

(e) That the preference shareholders will be entitled, in priority to and before any dividend is distributed on ordinary shares, to payment of the arrear dividend (whether declared or not) if any, which may have accrued in respect of all financial years ending before the date on which a shareholder elects to convert the preference shares into ordinary shares.

The shareholders of the Company whose names shall appear on the Shareholders' Register of the Company on the 25th May, 1956 will be entitled to one such preference share for every ten ordinary shares held by them ignoring fractions, if any. The shareholders may also apply for additional shares which will be allotted to them, if available, at the discretion of the Directors. The amount payable on application has been fixed at Rs. 25/- per share as application money which must be paid along with the application. Rs. 25/- per share shall be payable on allotment, and remaining Rs. 50/- per share shall be payable by one or more calls as may be made by the Directors by giving three calendar months' notice for each call.

Necessary circular along with applications for right shares (in terms of Section 81 of the Companies Act 1956) and additional shares and also forms of renunciation will be sent to the shareholders on or about the 25th May, 1956. If, for any reason, any shareholder is not in receipt of the circular and the said forms, etc. he should apply to or contact the Company and secure the requisite forms and copy of the circular.

Necessary consent of the Central Government has been obtained to the aforesaid issue.

JOINT STOCK COMPANIES' PREFERENCE SHARES

Dividends are cumulative and shares carry a preferential claim on the property for the payment of capital and on the profits for dividend except in case of companies marked otherwise. Months against names of companies indicate approximately times of payment of dividends.

reason that domestic consumption accounts for only a small proportion of total production. The third aim has been to diversify exports as a natural response to the diversification of production generally, and thus to help cushion the economy against sharply fluctuating conditions abroad.

None of these broad aims relating either to imports or to exports is to be dropped. The reorientation now being considered essentially involves a shift in emphasis. In the case of imports, the main impetus for this shift comes from the fact that industrialisation is gathering pace. As Mr. D. P. Karmakar, Central Minister for Commerce, explained before the Import Advisory Council, imports in the first quarter of 1955 have already been running at a level considerably higher than in the corresponding periods of the previous two years. The adverse trade balance for the three months has amounted to Rs. 45 crores. The rate of licensing for capital goods has increased sharply, and it is estimated that in the remaining nine months of the year, expenditure on machinery and metals will be over Rs. 60 crores more than in the whole of last year. "You will see, therefore," he added, "how difficult it would be for us to give favourable consideration to the suggestions that have been made by some of you for liberalising imports in certain sectors." The pressure on foreign exchange resources is likely to grow, since it is expected that over the next five years Rs. 1,500 crores of machinery and equipment, and Rs. 650 crores of metals, will have to be imported. This means, as Mr. Karmakar said, that it will be necessary "to effect savings on items which are not directly related to our development plans.... We hope that as the plan proceeds, we will be devoting a larger and larger proportion of our foreign exchange to the import of machinery, equipment and raw materials."

In the case of exports, the shift in emphasis is not so clearly definable. Mr. T. T. Krishnamachari, Central Minister for Commerce and Industry, pointed out in an excellent speech to the Export Advisory Council that "while the quantum of import trade depends very largely on factors operating within our economy, export trade is a matter which depends very largely on conditions obtaining elsewhere in the world." It is not possible, therefore, to forecast precisely the evolving pattern of changes. But where matters are in India's own hands, Mr. Krishnamachari's speech gives an heartening indication that the approach to export problems may be much more realistic in future. He emphasises, for instance, that to promote exports, it is not necessary merely to increase the production of export goods; it is necessary to introduce "along with it a reasonable degree of price flexibility." This, he adds, is not something "which could be easily induced into the economy." It depends on such factors as domestic financial policy, fiscal changes, and wage and profit trends. It is clear that adjustments will have to be prompt and adequate if they are to fulfil their purpose.

One of the most praiseworthy features of Mr. Krishnamachari's speech was the way in which he, by implication, strongly denounced the intrusion of woolly ideological considerations into certain aspects of economic policy—an intrusion which constitutes the most clearly foreseeable threat to the achievement of export targets. Discussing the rapid decline in India's textile exports, he said with a forthrightness which Ministers would do well sometimes to emulate: "It is my view that if any blame is to be apportioned for the present export trends in textiles, that blame must be laid on the shoulders of the Government. I am prepared to accept the responsibility for it. It is no extenuation of my responsibility to say that I am myself a creature of circumstances, a victim of antediluvian thinking. It is perhaps to some extent true that we cannot reconcile our export ambitions with the restrictive production policy in regard to textiles—though that policy is primarily directed towards home consumption—and it is not always easy to separate the relative interest of home consumption and export trade.... I am not unduly depressed by the present state of affairs because ultimately reason asserts itself in a democracy. But what I am afraid of is that the time for reason to assert itself might take so long that we might lose the advantages of our exports in the foreign countries." Mr. Krishnamachari has been quoted at length because it is precisely the ideological considerations which are among the most dangerous, and yet the most quickly dispensable, of the adverse factors which are in conflict with the country's export ambitions. The conflict between "socialistic" ideology and a plain industrial necessity is seen nowhere so clearly as in the cotton textile industry. Yet, it is one which pervades the whole economy. The decline in coal exports, and the present-day threat to jute goods, tea and a host of other exports, are directly attributable to the fact that production costs have lost the flexibility which alone can assure the health of these industries in an increasingly competitive world.

It is to this aspect of the question that much more thought needs to be given in official circles. It is true that something can be done by negotiating more bilateral trade agreements of the sort that

have mushroomed in recent months, and by tinkering around with fiscal policies. But there is a limit to both these methods for promoting exports. In the case of bilateral trade agreements, the basic fact is that their nature is determined more by India's need for imports than by her capacity to export. And in the case of fiscal policies, the jute industry finds today that there is a limit beyond which export duties cannot be reduced. The scope for signing more trade agreements, and for tinkering around with fiscal levies, will be the greater if industrial costs are low, which today they are not. It is a very superficial view which considers that pleas for lower costs are inspired purely by the greed for higher profits. Taxation and general economic policies being what they are in India today, big profits cannot be easily earned; and if they are, they cannot be easily distributed. The tentacles of State intervention, as seen in recent decisions on corporate financial policies, reach down far enough to take care of that; but they do little to maintain the long-term health of corporate working by ensuring that more and more goods are produced more and more cheaply. Until they do, India's economic ambitions at home and abroad will be clouded by serious uncertainty. It is an uncertainty she cannot afford to accentuate; good monsoons do not repeat themselves endlessly anywhere, and certainly cannot be assumed to do so in a country which owes its healthy foreign exchange position today largely to three successive years of agricultural luck.

FINDING RISK CAPITAL FOR INDUSTRY

FOR the past few years, Indian joint stock companies have been finding it difficult to obtain finance from external sources—that is, sources outside their own internal reserves. This has created a serious problem for them, firstly because they now find it difficult to obtain the finance they need for various purposes including business expansion programmes, their own resources having already been considerably curtailed by taxation and inflated costs, and secondly, as well as being unable to attract a steady flow of equity capital, some companies are failing to qualify for loans from State Finance Corporations because they cannot provide the security required. In brief, the corporate sector of private enterprise faces the problem of scarcity of finance especially for those undertakings which take a long time to yield a return—new manufacturing enterprises for instance—which is precisely the sort of enterprise the Government wants to encourage. The main reason for this is, of course, the high level of taxation, which has cut deeply into the savings of the existing active investing class, the urban investing class that is. But there is also another reason. Incomes have risen in the rural sector of the economy due to the increasing plan expenditure, but the incomes have not been channelled into that form of savings which flows readily into industrial investment. There is no possibility of this happening in the foreseeable future either. The problem is therefore a difficult one and the only solution to it seems to lie in effective official steps to promote the savings of the urban community and simultaneously provide the incentive to invest.

In Mr. B. M. Birla's presidential address to the annual general meeting of the West Bengal Finance Corporation this week, this question was given the central place. Mr. Birla stressed the fact that, during the period 1950-53, 771 joint stock companies in India could obtain only one-fifth of their finance requirements from external sources; the rest they had to find from their own reserves, including depreciation, taxation, capitalised reserves and refunds of E.P.T. deposits. With the growing burden of taxation and the decline in the savings of the investing classes, the private sector can depend in the future even less on external sources of finance. Therefore, maintained Mr. Birla, the difficulty of finding finance particularly equity capital, is a real one. He contradicted the notion held in high quarters, and by some economists, that there is enough money in the cities, but that it is going underground, and he supported his case by pointing out that of the extra currency put into circulation during the last two years, 60 percent went to banks as deposits. This showed the fact that almost the entire extra urban income was being deposited with the banks. But that part of the extra currency which went to rural areas was mostly being hoarded, forming a large inflationary potential. He stressed the point that if rural savings could take the place of urban savings for investment in business enterprise, the problem might be solved. But that was unlikely to happen for a long time yet, and he did not consider that loans by the Finance Corporations or the Government to private industry were proper substitutes for equity capital.

The essence of the problem therefore lay, according to Mr. Birla, in stepping up industrial investment through increased urban savings, and this could only happen if the investing class in cities were not so heavily taxed. Even if the Finance Corporations were there to provide long-term loan capital, the rigid conditions fixed for

granting loans often prevented them from fulfilling the purpose for which they have been brought into being. Mr. Birla regretted that anxious as the West Bengal Finance Corporation is to accommodate applications for loans from business undertakings, it is finding it difficult to do so because not all the applicants can satisfy the necessary conditions. Out of 60 applications made in 1955-56, for loans totalling Rs. 1,44,04,565, as many as 51 applications, (Rs. 1,15,27,065) were rejected or withdrawn, and only nine applications (Rs. 28,77,500) were granted.

The anxiety of the authorities to run the Corporation on sound principles is understandable, and it must be said to their credit that the gross income of the Corporation went up to Rs. 3,45,173 in 1955-56 compared with Rs. 2,32,841 in the previous year. But it seems that the rigid rules fixed for granting loans may require re-examination in the present context of industrial development of the country, and business men have already been complaining about them. But more important than this is the taking of those measures which can strengthen the traditional source of risk capital for private industry, and there is really a basic difference between equity capital and that raised through loans.

CURRENT COIN

Wage Increases for Miners.—The award of the All-India Industrial Tribunal (Colliery Disputes) was announced last week-end. Increases have been recommended in the minimum for all nine categories of surface and underground workers. The new minima are set out below.

Categories	Total per day for surface worker	Total per day for underground worker	Total per month for surface worker	Total per month for underground worker
I	Rs. as p. 2 10 6	Rs. as p. 2 12 5	Rs. as p. 68 1 0	Rs. as p. 72 2 10
II	2 13 4	2 15 4	73 10 8	76 14 8
III	3 0 2	3 2 4	78 4 4	81 12 8
IV	3 3 0	3 5 3	82 14 0	86 8 6
V	3 5 0	3 7 5	86 2 0	90 0 10
VI	3 6 4	3 8 10	88 4 8	92 5 8
VII	4 1 4	4 4 10	106 2 8	111 13 8
VIII	4 12 1	5 0 4	123 10 2	130 8 8
IX	5 6 9	5 12 0	140 15 6	149 8 0

The general increase appears to work out at roughly 40 percent of current wage levels and is expected to add Rs. 9 crores a year to the present wage bill of just over Rs. 20 crores. This will represent an increase in costs of about Rs. 2 a ton for all grades of coal. In addition to its recommendation for increases in emoluments, the Tribunal is also in favour of granting an extra seven days' festival leave with pay to all workers. This will involve a loss of roughly 2 percent in annual output and costs can be further expected to go up accordingly. It appears very unlikely that any but the more prosperous collieries will be able to absorb an increase in the wage bill in the region of 40 percent. One of the features of the award is that it is intended to bring about a uniform wage scale for all collieries throughout the country. This is bound to affect individual collieries differently, and those situated in the low cost areas will apparently be the worst hit. The general effect and ramification of the award will only become obvious in the months ahead. But if the recommendations of the Tribunal are adopted, a revision of coal prices would seem to be inevitable if the industry is to achieve the targets set for it under the second five year plan. This, in turn, would give a new upward twist to industrial prices generally.

Cloth Prices in Calcutta.—Replying to the enquiry of the West Bengal Government about the recent rise in the prices of certain varieties of cloth, the Bharat Chamber of Commerce says that the prices ruling in the Calcutta market are often below the parity of those in the principal producing centres such as Bombay, Ahmedabad and Kanpur. Dhotis and saris in the Calcutta wholesale market are in many cases four to six annas cheaper. The Chamber points out that the prices of dhotis have risen since January by eight annas to Re. 1 on an average, and those of superfine yardage cloth like poplin and addi by about two annas six pices to four annas a yard. Price changes in articles like cotton textiles depend on many factors, and it is difficult to assess the exact contribution of each. But the Chamber thinks that the changes are not due to a shortage. The increase of six pices a square yard in the excise duty on all cotton piecegoods, except coarse dhotis, it is stated, has caused an increase of six to seven annas a pair. The rise of 20 percent in the price of Egyptian cotton and of 25 to 35 percent in Indian cotton during recent months, together with the imposition of a surcharge on railway freight, have pushed up ex-mill prices. The entire rise in the final prices, it is claimed, is due to higher mill quotations. The Chamber asserts that the wholesale trade margin remains less than what was allowed during the period of control, namely 1 to 2 percent. The alteration in the sales tax scheme in November last year, bringing within the orbit of the tax a large

proportion of dhotis and saris which were previously exempt, is also mentioned as one of the reasons for the current high prices.

Pig Iron for the Foundries.—A memorandum submitted by the Indian Foundry Association to the Minister for Commerce and Industry, Mr. T. T. Krishnamachari, entitled "Crisis in Foundry Industry," naturally concentrates on raw material shortages, since they are now the industry's greatest difficulty. It states that, according to a recent survey, 60 percent of capacity is estimated to be lying idle, and an important reason for this is the scarcity of pig iron and scrap. During 1955, only 300,000 tons of pig iron were allotted to the foundries as against an estimated demand of 700,000 tons. During the last two years very little cast iron scrap has been forthcoming from the railways; previously they had quite a lot to offer. The memorandum says that there has been a phenomenal increase in the demand for castings but no increase in the production of pig iron by the main producers. As things stand, the acute shortage is likely to continue up to 1958, when the Government steel plants will start coming into production. The Association suggests, therefore, that supplies should be obtained from abroad or from other sources. Long-term arrangements should be made with countries which offer the most competitive prices. As imported pig iron will be more expensive than the local pig iron, the Association suggests that the former should be used exclusively for the manufacture of cast iron sleepers for the railways. Alternatively, it says that the Government should subsidise the price from an equalisation fund as it does in the case of imported steel. Other suggestions include a ban on exports and stricter distribution controls.

Things Russia Wants to Buy.—The trading aspect of the official discussions between Marshal Bulganin and Mr. Khrushchev, on the one hand, and Sir Anthony Eden and other Ministers on the other, have given rise to optimism in some quarters about the possibility of a substantial increase in Anglo-Russian trade, but the astronomical figures freely mentioned have been treated with considerable reserve in others. The Soviet list of requirements has now been usefully analysed by the U.K. Board of Trade. It states that although 42 types of goods (out of 93 on the Russian list) could be sent to Russia without further ado, goods could not be sent to Russia without further ado. The Board also in 18 other categories could not. The Board also published a list of ten categories of goods "some of which are subject to embargo", a further list of four categories of goods subject to quantity restrictions on exports, and a list of 18 categories about which the Board has not yet made up its mind. At the present rate of exchange, the Russian requirements represent a total value of £400 million, against last year's actual purchases of £23 million and Russian exports to Britain of £62 million. It is unlikely that Britain could absorb a balancing value of imports from Russia, though the Russians could do their selling in other parts of the sterling area—capital equipment to India, for example—to earn sufficient sterling to pay for her imports from Britain, or alternatively pay in gold or silver as she has been doing in the recent years to quite a considerable extent. The Board of Trade analysis of the Russian list is of interest. It has come to the conclusion, after a comparison with the "List of Goods Controlled for Strategic Reasons"—which is continuously under review—that an important range of machine tools, raw materials and railway equipment are not affected. Their value, according to a preliminary estimate by Sir Anthony Eden, is about two-thirds of the total Russian requirement. This list includes: gas turbine locomotives, electric furnaces, presses for plastics, forging manipulators, automatic transfer machines, multiple-head machines for mass production, wood-working machinery, nut and bolt-making machinery, several types of machines used in foundries, floating grain transporters, dyeing and finishing equipment for the textile industry, printing machinery, gear-making machinery, marine diesel engines, rubber, tinplate, wool, cocoa and herrings. The Board's list of "goods subject to embargo" includes several types of forging presses and hammers, rolling mills, boring machines, compressors, gear-cutting machinery of special types, floating docks, copper and cargo ships, of which the Russians require 20 10,000-tonners. A third list gives details of goods "some types only of which are subject to embargo." This types only of which are subject to embargo. It includes steam and water valves, steam, air and gravity hammers, compressors, vacuum pumps, equipment for making radio valves, television equipment and tractors of more than 200 h.p. A short list of goods which can only be exported in limited quantities includes large gas turbines, dredgers and fish carriers. The Board is undecided about vacuum electric furnaces, plate-straightening machines, equipment for making radio apparatus with printed circuits, medical equipment, laboratory equipment, grinding machines, milling machines, small marine diesels, and equipment for the chemical and the rubber industries. The Board is also not sure whether it would be in

order for the Russians to buy a complete razor-blade factory, capable of producing 1,000 million razor blades a year.

Human Problems in Industry.—Final arrangements for the Duke of Edinburgh's study conference on the "human problems of industrial communities within the Commonwealth and the Empire" have been announced. The talks will be held in Oxford from 9th to 27th July, and the Duke will preside over some meetings of the 300 representatives of management and workers. In a foreword to the programme, he says that Britain and some Commonwealth countries had already experienced many of the human problems that industrialisation created, and countries undergoing industrial development were beginning to face them. "So the idea of a conference for a study of these problems and a pooling of experience appealed to me." It was not a study for research workers but for people facing increasing responsibilities in industry. Its main value would depend on "what members make of what they see and hear." Its value would lie in their ability to describe their points of view and experience for the benefit of others, and to distinguish what was likely to be useful in their own cases. Ultimately it was hoped that the members could extend their influence so that industrial enterprises "are so organised that they form an integral part of a happy and healthy community."

Fabians Look at Lancashire.—The Fabian Society pamphlet *Plan for Cotton* by Mr. John Murray is refreshing. It is full of ideas. Mr. Murray breaks with all the earlier Labour schemes in his scepticism about State control. "Most industrial decisions are undoubtedly best made by management, and interference with managerial freedom of decision by trade unions or Parliament leads in most cases to commercial inefficiency." He assumes that Lancashire's "cheap trade" has almost disappeared; her exporting future must lie in cloths that depend on quality and design. But, he suggests, we do not pay designers adequately or take enough notice of them. On organisation, Mr. Murray's proposals are not daring; some are merely odd. "The arch-enemy of Lancashire is instability." He deprecates attacks on the Yarn Spinners Association and the Federation of Calico Printers, which have had "a great stabilising influence"; the large combines have been in the forefront of technical advance and re-equipment. He thinks, however, that the minimum prices are adjusted tardily to world prices. He would have them framed by the Board of Trade. Mr. Murray accepts the argument of the calico printers for control, but asks whether it would not be more logical to nationalise their sector or have a controlling State interest. This will not be generally acceptable, nor will his other proposal for re-establishing the Raw Cotton Commission with a monopoly of buying. Mr. Murray makes some interesting points on distribution and re-equipment. On foreign competition he supports the Labour proposal—an adaptation of the plan for the jute trade. He has some rather sharp things to say about labour. He thinks the opposition to three-shift working has been tragic and suggests the striking of a bargain for a guaranteed annual wage, introduced gradually over 12 years at the rate of a month a year, in return for a sweeping away of "the present hotch-potch of obsolete rates and anachronistic practices." Mr. Murray's pamphlet should set many people thinking.

FREE TRADERS OF MANCHESTER

SOME suggestions, which we put forward in our issue of 8th April in regard to cotton duties do not find favour with the Textile Mercury of Manchester. We are not surprised at this, as such a consistent and staunch supporter of the rights and interests of Manchester as the Textile Mercury must necessarily be sensitive to opposition in any form. Possibly, if we were in the position of our contemporary we should be equally sensitive, but we think we should be more logical. Our contemporary writes that the cotton duties "are the most iniquitous and selfish ever devised by an oligarchy, and are sought to be maintained with utter disregard of the disastrous consequences to the country which has sent these men forth to govern its principal dependencies." It is as far removed from the truth as it can be that, "in order to extend railways and Manchester trade, India has in the past incurred considerable debt." The "services" and the commercial adventurers have been deeply interested in this expenditure, but not Manchester. Cotton duties were imposed not as a necessity, but because they came "first to hand," and placed the burden of payment upon the cotton trade of Lancashire. The mere denial that Lancashire is not interested in the expenditure on railways in India is not convincing. Cheaper and more extended communication has done much to widen and increase the demand for Manchester goods and cheapen the cost of the raw materials.

SALE OF 68 CONDEMNED WAGONS

The General Manager invites tenders for the sale of 68 Condemned wagons stabled at Mathurakati Scrap Yard, South Eastern Railway, Khargpur.

Tender No. S4/S/3 in this connection is obtainable from the office of the Controller of Stores, South Eastern Railway, Garden Reach, Calcutta-23, on production of Cash Receipt for depositing Rs. 5/- with the Chief Cashier, South Eastern Railway, Garden Reach, Calcutta-23, by local firms and on remittance of Rs. 5/- by Money Order to the Controller of Stores, South Eastern Railway, Garden Reach, Calcutta-23, by outside firms. The cost of the tender forms is not refundable.

The wagons may be inspected on any working day before the closing date of the tender. The closing date of the tender is June 12, 1956 at 12 noon.

DIFFERENTIATING CLOSURE
FROM LOCK-OUTMADRAS JUDGMENT AMPLIFIES
INDUSTRIAL DISPUTES ACT
(FROM OUR LEGAL CORRESPONDENT)

THIS is a case on the difference between a closure and a lock-out, and is noteworthy on account of some interesting and informative observations by Balakrishna Ayyar J. in the Madras High Court on the distinction. It is an important one. On it may depend the answer to the question whether a tribunal is competent to grant compensation to the workmen affected by the stoppage. There is no doubt about the inherent right of an employer to close down the concern. As the Madras High Court put it some years ago, "just as a person cannot be compelled to commence a new business to provide employment for several unemployed persons, so, too, a person cannot be compelled to continue a business, though he decides for reasons of his own to stop it." It may be and, no doubt, is a fact that an industrial tribunal has no jurisdiction to go behind a genuine closure. But stoppage does not become a closure merely because the employer chooses to call it one; it may be, in fact, an illegal lock-out or a subterfuge adopted by an employer to bring the employees to their knees. "The management," it has been said, "may close down its door but cannot shut the door of equity at the same time." The tribunal has always the jurisdiction to look into the bona fides of such a move, and to decide whether a so-called closure is in fact an illegal lock-out or an unfair labour practice.

In this Madras case, the facts were as follows. The plaintiff was a partnership firm, called Sri Ramachandra Spinning Mill. The first defendant was the State of Madras, and the second defendant was one Venkata Reddi, who was an employee in the plaintiff's mill. Certain matters relating to rates of dearness allowance in the plaintiff's mill, and later, on a wider scale, relating to the wage structure of all the textile mills in the Madras area had been referred by the local Government for enquiry and report to Mr. Sherfuddin, then a District Judge. Mr. Sherfuddin made certain recommendations which Government accepted, and by an order dated 4th January, 1947, directed that the rates of pay and dearness allowance recommended should be implemented for a period of one year as from 1st April, 1947. The plaintiff mill paid these rates

down to the end of June 1947. The mill's case was that it was then found that the mill was working at a loss and could not any longer carry on the business. Therefore on 11th June, 1947, the management of the mill notified the Inspector of Factories that they intended to shut down from 1st July, 1947, until more favourable conditions appeared. Accordingly, the mill was closed on 1st July, 1947, and remained closed until 1st April, 1948.

On 10th July, 1947, the Government issued an order referring what it termed an industrial dispute "on the question of closure of the mill" for adjudication by Mr. Markandeyulu, and a day later issued a further order prohibiting the continuance of what the Government termed the "lock-out" in the mill. The adjudicator's award was that the closure was not justified and that the revised rates be given effect to. Later the workman, Reddi, filed a suit against the plaintiff firm for the recovery of wages and dearness allowance for the period between July 1947 and March 1948, when the mill was closed at the rate fixed in the award; and the Government also filed a criminal complaint against the firm under Section 29 of the Industrial Disputes Act.

The plaintiffs therefore came to the Madras High Court praying for a declaration that the Government orders referring the matter to the Industrial Tribunal were *ultra vires*, without jurisdiction and void, that the workman be restrained from proceeding with his civil suit, and for an injunction against the Government restraining it from proceeding with the criminal complaint. They claimed that there was no industrial dispute at all because the closure of the mill "could in no sense of the term be treated as an industrial dispute within the meaning of the Act."

The main issue, therefore, was this. Was this stoppage a genuine closure, or was it a lock-out? Well, the first thing to do is to consult the definition. If, as the writer used mistakenly to do, you believe that plain English words and sentences mean, and should be construed as meaning, just what they say, you will find the definition grim reading from an employer's point of view. This is the definition in Section 2(1) of the Industrial Disputes Act: "Lock-out means the closing of a place of employment, or the suspension of work, or the refusal by an employer to continue to employ any number of persons employed by him." The purpose of a definition, if one may be forgiven for imparting the information, is to define. But under this statutory definition, which presumably some expert draftsman was paid to put together, if the mill had been blown to minute particles by a hydrogen

bomb, thus "closing (the) place of employment" and bringing about "the suspension of work", the surviving employers, if any, would be guilty of causing a lock-out. To put it plainly, the definition is pure bosh. As Balakrishna J. put it later, "a flood may have swept away the factory; a fire may have gutted the premises; a convulsion of nature may have sucked the whole place underground; still, if the place of employment is closed or the work is suspended or the employer refuses to continue to employ his previous workers, there would be a lock-out and the employer would find himself exposed to the penalties laid down in the Act."

That, in his lordship's words, would be the position, "as the words of the definition stand." So the words cannot be allowed to stand; which solution is all to the bad, for where we are governed by a statute, non-compliance with which will involve us with all sorts of penal and even criminal liability, we are at least entitled to know precisely what it is with which we are obliged to comply, from the words of the statute itself. The fundamental fault in the definition is that it destroys the whole essence of a lock-out, which is that it is a deliberate act arising from the volition of the employer. It is an act of the human will. For that matter so is a closure; and what we want to get at is the distinction between the two.

We are grateful therefore for the careful and practical analysis of Balakrishna J., and only wish that considerations of space did not prevent us from quoting it in full. His lordship said: "In the constant tussle between employee and employer, the strike is the weapon of the former and the lock-out the weapon of the latter. If a number of employees stay away from work in pursuance of an understanding they have previously come to, there would be a strike; but if they keep away because all of them happen to be taken ill suddenly by a wave of fever or dysentery for instance, there would be no strike. Absence from work even of a considerable number of persons would not become a strike unless there is an understanding behind it and usually such an understanding is accompanied by a desire to put pressure on the employer." All this may seem to you to be emphasising the obvious, but that emphasis is exactly what is necessary when, unaided by the penal statute which is supposed to guide us, we want to get at the principle involved. The principle may be summed up in the word "intention." The learned judge proceeded: "When a number of employees abstain from work, the test as to whether such abstention amounts to a strike or not would be found in the intention behind such abstention. If their intention is to put pressure, and if with that intention they agree together to stay away from work, then there would be a strike. The lock-out is the corresponding weapon in the armoury of the employer. If an employer shuts down his place of business as a means of reprisal or as an instrument of coercion or as a mode of exerting pressure on the employees or, generally speaking, when his act is what may be called an act of belligerency, there would be a lock-out. If, on the other hand, he shuts down his work because he cannot, for instance, get the raw materials, or the fuel, or the power necessary to carry on his undertaking, or because he is unable to sell the goods he has made or because his credit is exhausted or because he is losing money, that would not be a lock-out."

We underlined above the temporary character of the shut-down in this case, because it has been contended that in order to be a closure and not a lock-out the shut-down must be permanent. This is not so. "In order to avoid a shut-down being called a lock-out, it is not necessary that the shut-down be permanent. A factory or an industry can be 'sick', though not, of course, in the same manner as a labourer, if it is unable to pay its way. The duration of the inability, except as evidence of bona fides, is not very relevant. When an employer suspends work and the question is whether that suspension is a lock-out or not, we shall have to enquire 'why did he shut down?' Was it a bona fide business decision or was it a move *vis-à-vis* the labourers employed? In a number of cases, the answer to this question would present no difficulty. If, for instance, it is seen that profits were being made and that profits can still be made but, nevertheless, the employer shuts down, it would be legitimate to conclude in the absence of another acceptable explanation that the closure was a lock-out. If, on the other hand, losses have been incurred, the conclusion that it was shut down as the result of a genuine bona fide decision and that it was not a lock-out would be justified. Of course, marginal cases may exist which lie on either side of the line."

Contending that the shut-down was not bona fide and was a lock-out on the ground that the mill was not making a loss but a profit, counsel for the workman extracted a refreshingly humorous answer from the judge which disposed of his argument in one pithy sentence. The firm, counsel said and it was admittedly true, could manufacture 1,200 lbs of yarn a day. They had 280 working days in a year. The controlled price was Rs. 11-2 for 10 lbs. of yarn. On that basis, the value of the yarn would be about Rs. 3,73,800 a year; and at that rate there was bound to be a profit; at which his lordship innocently enquired whether, "if a man can walk four miles an hour, it would be right to conclude therefrom that in a month he can walk 2,880 miles?" Another illustration of the falsity involved in averages.

The Court held that there had been no lock-out but genuine closure and found for the plaintiff firm.

[A. I. R. (Madras). 1956. (May). p. 241.]

A DITCHER'S DIARY

is the various descriptions I have read of the effect of high mountain altitudes on the human spirit. It is supposed to create a feeling of ineffable peace divorced from anything one can know down below. I remember having seen a report somewhere that in the rarefied atmosphere and in the presence of the impressive scenic grandeur experienced on a high peak, one can be so lost in joy that it may take a good deal of persuading to descend. This must be very trying, because from photographs I have seen of the summit of Everest and environs, I cannot envy anybody who finds himself wanting to stay there. To mountaineering the world owes a fine crop of literature and I am now looking forward to a new addition. Sir Francis Younghusband, Sir Eric Shipton and Mr. G. L. Mallory are already established classics in this field, but it seems a pity that so far nothing as good has made its appearance in recent years. Sir John Hunt's *Ascent of Everest*, written partly in collaboration with some of the members of his team, seemed to me as dull as a bluebook. M. Maurice Herzog's *Annapurna*, which resulted from the French conquest of the peak of that name, is, of course, a notable exception.

I am afraid I cannot claim to be as well informed as some people about the precise length of one film star's nose, or the exact location of the mole on another's ear. My knowledge of the erratic personalities of the silver screen is, like a fool's philosophy, soon spent. Almost all that I know about them outside, of course, of the great career of Charlie Chaplin, sadly spoiled with streaks of communism, is that Greta Garbo was once a shop assistant and Yvonne de Carlo's real name is Peggy Middleton. Yes, I do remember another bit, about Marlene Dietrich, who, I am told, made high cheek-bones and the horizontal shoulder-line—apparently, aesthetic absurdities—powerful weapons in the armoury of feminine charm. Once, when her car was caught in a crowd on the Champs Elysees and a posse of policemen marched up threateningly, she calmly opened the door and flashed a silk-clad leg together with one of her bewitching smiles. This quickly helped the angry myrmidons of the law remember that, after all, they were gallant Frenchmen, and her car was politely conducted to a safe parking place in no time. All this is by the way. What I really want to comment on is the American reader's reported reaction to Grace Kelly's wedding. The newspapers and news agencies in the U.S.A. I find from a recent issue of *Newsweek*, invested over two million dollars on ensuring an adequate coverage of the event by an army of two hundred special correspondents. After having done this in haste, they are now regretting it at their leisure, for reader response is said to have been poor, and they did not experience the sales boom they bargained for. Typical was this comment from a news vendor, "I did not sell an extra paper because of them—ever-loving lovers' marriage." Grace Kelly wed and not an extra paper sold! The conclusion would seem to be that the American newspaper reader is at last slowly awaking to other and deeper realities—and there may be real hope in this. Or, is he merely bored with the quick changes in the life of film stars? That seems to me quite likely. I for one have completely lost count of Rita Hayworth's divorces. It seems as hard to keep abreast of them as of the constant re-classification of the Indian railways or Miss Agatha Christie's thrillers, not to mention the too-frequent coups in South America, or Governments in Paris.

So much is heard about racial segregation troubles in the United States that it is easy to for-

get that a good deal more than lip service is paid there to the principles of democracy and equal rights for all races, creeds and colours. How many people in India (where the newspapers feature disputes in the southern States because they are news and ignore the nation-wide examples of race harmony because they are not) know that two Indians, one a professor, the other a judge, and both American citizens, are busy campaigning for election to the House of Representatives next year? I must admit that I did not, until I read about it in a United States information service handout; but now that I do, I cannot help feeling it is an example of the American way of living about which far too little is heard in this part of the world. Perhaps there will soon be more, because one of the candidates, Judge Dalip S. Saund, who is considered a likely Democratic choice for Westmoreland, California, proposes, if elected, to fly "to India and the Middle East and say 'Here you see a living example of democracy at work'." Saund has lived in the United States for thirty-six years and owns a prosperous fertiliser business. The other candidate is Professor Haridas T. Mazumdar, who is seeking the Republican nomination for Iowa's second district on a platform of improving U.S. relations with Asia and Africa. Dr. Mazumdar has been in the United States for thirty years or so and was once known as "India's unofficial ambassador of goodwill to America" when he was writing, lecturing and working on behalf of Mahatma Gandhi and the Indian independence movement. Perhaps the significant fact in all this is that one is a Democrat while the other is a Republican, which suggests that, in the opinion of these two Indo-American politicians, neither of the two great Parties have principles which cannot be reconciled with those they stand for.

I have no hesitation, although not a little shame, in admitting the fact that my knowledge of Lord Buddha and his cult is rather limited. But this does not prevent me from joining the millions all over the East in making obeisances to this great teacher of mankind on the occasion of his 2,500th Mahaparinirvana. It is one of the features of greatness that one can recognise and praise it without knowing its precise lineaments. Comparatively few read Shakespeare, and even fewer really appreciate him, but his genius is universally acknowledged. Not many have a understanding of Einstein's work, but admiration for his contribution to human achievement is world-wide. So far as the Buddha is concerned, for the non-specialist it seems enough to know that he was one of the greatest lovers of mankind and that his teaching of ahimsa has not lost its validity through twenty-five centuries. The modern world has perhaps more use for the doctrine than had the one to which he preached. It is, therefore, quite in the fitness of things, that his death anniversary should be celebrated on the widest possible scale. But I cannot help pointing out something which I think has jarred. We must all have noticed that a few business houses used the occasion to issue special advertisements linking the great name of the Buddha with their goods or services. This struck me as particularly reprehensible. I have nothing to say against firms—Tata was one—which featured tastefully a message or a picture of the Buddha with their own names appearing inconspicuously underneath. But, for a lamp manufacturer—this, for obvious reasons, is a hypothetical but nonetheless illustrative case—to try to equate the spiritual illumination of the Buddha with that provided by his hurricane lantern, is nothing short of obnoxious.

THE DITCHER.

A NEW CHAPTER IN
CANADIAN-INDIAN CO-OPERATION

THIRTEEN years ago, when Indian Aluminium Company's smelter at Alupuram produced aluminium for the first time in India, this versatile metal was being used mainly in the manufacture of cooking utensils. Today, aluminium has become important in a variety of industrial applications, and to meet the rapidly increasing demand, the Company is installing a new 10,000 ton smelter at Hirakud, Orissa.

Here, as at Alupuram, the Company's Canadian associates will help not only with their technical know-how and world-wide experience, but they will also share the costs of the project, to finance a part of which the Company proposes to issue fresh capital.

UNCERTAIN CONDITIONS IN STOCK MARKETS

GILT-EDGED LOWER: INDUSTRIALS FAIRLY STEADY

London, 30th May.

UNCERTAIN conditions prevailed in the stock markets during the past week, and although no decided trend was established, prices were mostly lower. The sustained weakness on Wall Street was mainly responsible for the unsettled and nervous conditions, although the obscure economic situation and the Chancellor of Exchequer's statement that the country faces a "crucial test" during the next few months were contributory factors. Business throughout was at a low level, and prices were changed were often slightly easier in the absence of interest. With little hope of an early easing of the credit squeeze, the gilt-edged market suffered from small selling and lost further ground following the announcement of the new £5 million Bristol issue. Falls were not heavy compared with the previous levels. This market was virtually without support and medium, long and undated issues all recorded falls. Foreign bonds, in contrast, attracted modest and selective demand, and a number of small gains were scored under the lead of Japanese issues. Dollar stocks fell back in sympathy with the steady fall in New York. The industrial market stood up to a fresh fall on Wall Street remarkably well in the circumstances, and prices were only slightly easier where changed. Selective buying and a lack of selling was the main reason for the resistance. The Financial Times Industrial Ordinary index is around two points lower compared with the previous week. Idle conditions prevailed in the gold share market and prices drifted lower in the absence of interest. Coppers fell back in sympathy with the fall in the metal price and the decline on Wall Street, while other base metals were dull. Oils held up well in the face of Wall Street's performance, but prices moved somewhat erratically. Rubbers receded under the influence of the fall in the commodity's price, but tea held fairly steady, following sharp falls sustained by the Finlay group of companies in the previous week in response to the sharp reductions in dividends.

The Money Market

The credit position in the money market during the past week was to some extent dislocated by the holiday. For the first two days, there was a heavy calling from the market. Little borrowing had to be undertaken from the Bank of England, and 42 percent was frequently paid for day-to-day borrowing on the open market. Some improvement in this connection was seen towards the end of the week, with the disbursement of Health money on Friday bringing about more comfortable conditions. The market made no change in its tender bid for the week's Treasury bills, but with competition less keen, the average rate moved slightly upwards, and the market secured a bigger quota of the larger number of bills offered. Applications for £240 million worth of 91-day Treasury bills totalled £273,165,000 and were allotted at the average rate of 98s. 11.5d against 99s. 0.6d percent in the previous week. Offerings this week consist of £260 million worth of 91-day bills. The Bank of England return for the week ended 23rd May showed that bankers' deposits were £3 million higher at about £222 million, while notes in circu-

lation were about £7 million higher at around £1,867 million.

Activity on Wall Street

Sharp declines in convertibles and slow but a steady continuation of the rise in Treasury bonds featured Wall Street during the past week. Trading was moderately active. The fall in convertibles followed the stock market trend, with Bethlehem Steel 34 percents and Union Oil of California 3 percents being prominent, both reaching new lows. Standard Oil of Indiana also was lower. U.S. Gov. Securities continued to advance. The movement of investment funds away from corporate equities into Treasury obligations was quiet, but steady and continuous. Rails also lost some ground. Foreign issues were largely neglected but some declines were registered. German 5½ percents of 1960 and Union of South Africa 4½ percents eased, while fractions were lost by Serbs 7 percents and Chile 3 percents.

Nickel Supply Remains Tight

Nickel supplies in the open market are still fairly tight, according to some trade sources, but perhaps not quite so tight as recently, because of the cutbacks in the motor car industry in the U.S.A. and the U.K. Open market prices for the metal remain quotably unchanged at between £1,500 and £2,000 a ton. But some quarters are of the opinion that if the present trend in motor car production continues it could conceivably soften the present price structure. Japanese nickel is understood to be unchanged at £1,900 a ton, c.i.f. European ports for shipment during the first half of next year. Most of the U.K.'s requirements continue to be supplied on the unchanged basis of £519 a ton delivered consumers' works.

Hongkong Gold Steadier

The undertone of Hongkong gold was steadier following the firmness in American dollars. After opening easier, the rate declined to \$(H)254½ where resistance appeared, resulting in the value fluctuating around \$(H)255½. The carry-over charges totalled 50 cents in sellers' favour. The official offtake was 1,420 ounces, unofficial 17,000 ounces and arrivals from Macao were 30,000 ounces. Forward contracts were done at \$(U.S.) 37.90.

Vegetable Oil Market

Trading was extremely slow and featureless in most sections of vegetable oils and seeds, with buyers apathetic and sellers not pressing in the absence of interest. General asking levels, however, were tending to sag, and in some cases, were rather nominal due to a lack of buying interest. Linseed oil was imparting a decidedly easy tone, reflecting a paucity of buying interest in an over-bought market, with Indian bulk oil for June arrival available at £144 c.i.f., while later arrivals were correspondingly easier. Coconut oil was moving lower, but was virtually neglected, while groundnut oil was in a similar position, and though no quotable change was made in prices, the undertone was easy. Philippine copra was reported traded down to \$188 for June-July, but the volume of business was small. Linseed was moving off in response to opening Winnipeg advices. The Board reduced the price of Nigerian palm kernel to £55 c.i.f. for July-August and soy beans to £50 c.i.f. July-August, but lower prices attracted little attention. Meanwhile, the Board was still not offering Nigerian groundnuts and trading was featureless.

Sheet Rubber Weak

Sheet rubber prices continued to ease during the week ended 24th May and finished about 2d a lb lower on balance. Traders attributed the decline to the absence of any important trade demand, and to prospects of increased supplies in the offing, because of the likelihood of an early settlement of the Malayan wage dispute. Towards the close, new selling and stopless offers accelerated the decline and prices fell to the lowest since October 1954. In contrast with sheet rubber, sole crepe was very steady. A few modest orders found offers scarce, and holders were unwilling to make concessions. No. 1 smooth, 1 inch, on the spot was quoted at 38d a lb, bid particularly for good samples.

COLOMBO PLAN COURSES FOR INDIANS IN U.K.

Four Indians figure in the latest list of trainees for whom courses have been arranged in the United Kingdom under the Colombo Plan Technical Co-operation Scheme by the British Government. One of them, Dr. Sukh Dev Khanna, a demonstrator in pathology at the Amritsar Medical College, is undertaking two years' training in histopathology at the medical school of the London University College Hospital, followed by a six months' course in neuropathology. Mr. S. Hariharan Iyer, a lecturer at Trivandrum University, is in Britain for two years' research in ultra-short-wave techniques at the Department of Electrical Engineering, Leeds University. Mr. L. C. Jain is undergoing 18 months' training in cement chemistry at the Building Research Station at Garston, near Watford, Hertfordshire; and Dr. B. A. Ranga Rao is engaged in a year's course in the clinical aspects of respiratory diseases and the epidemiological aspects of tuberculosis at the Institute of Diseases of the Chest at Brompton Hospital, London.

Finance in India and Abroad

THE CALCUTTA MONEY MARKET

LITTLE SLACKNESS IN DEMAND

Wednesday, 30th May.

CREDIT requirements throughout the economy have been well-maintained during the past week and progress towards slacker seasonal conditions is very slow. Sugar stocks continue high, and there has been little change on account of requirements for seed and grain storage in up-country areas. The needs of the jute industry have declined slightly, but once again the change has been small. Demand in the interbank market has been extremely tight, although the call rate remains unchanged at 3½ percent.

Another quiet week is reported from the bill market, with only a few gunny documents in evidence. Remittance has been normal. Sterling continues to weaken on the world's markets, and its value, compared with the dollar, has taken a sharp dip during the past week. The dollar is now quoting Rs. 48½.

Silver was quiet on long liquidation. The price dropped from the previous week's level of Rs. 166-14 to Rs. 166-4, quoted today. The rate for ready delivery was quoted at Rs. 167-12. The London price advanced from 78½ to 79d. The price of foreign silver in New York remained the same at 90½ cents.

Gold was rather steady and the price rose from Rs. 102-2 to Rs. 103-8. The sovereign at Rs. 67 showed a gain of 4 annas.

During the week ended 25th May, Government of India Treasury Bills for Rs. 1,10,75,000 were sold in favour of the Reserve Bank.

Further falls of Rs. 10.14 crores and Rs. 9.66 crores to Rs. 1,506.13 crores and Rs. 1,525.11 crores in notes in circulation and the total note issue were outstanding features of the return of the Reserve Bank of India for the week ended 25th May, 1956. Notes held in the Banking Department consequently rose by Rs. 27 lakhs to Rs. 18.99 crores. Deposits of the Government of India and other Government accounts declined by Rs. 11.15 crores and Rs. 1.96 crores to Rs. 56.69 crores and Rs. 7.16 crores, respectively. Balances of commercial banks at Rs. 51.21 crores were Rs. 12 lakhs higher. Investments rose by Rs. 33 lakhs to Rs. 35.38 crores but balances held abroad declined by Rs. 4.76 crores to Rs. 31.69 crores. Other loans and advances fell from Rs. 82.17 crores to Rs. 78.53 crores, of which advances to scheduled banks against advance bills totalled Rs. 44.22 crores (Rs. 46.11 crores). These advances amounted to Rs. 119.54 crores since 1st January, 1956. Ways and means advances stood at Rs. 2.19 crores (Rs. 2.83 crores).

The return of the State Bank of India for the week ended 18th May, 1956, shows a rise of Rs. 2.47 crores in total deposits to Rs. 225.86 crores. Investments in Government securities and other authorised investments are down by Rs. 1.58 crores and Rs. 1 lakh to Rs. 91.76 crores and Rs. 10.44 crores, respectively. Advances, including loans, cash credits and overdrafts, and bills discounted and purchased have decreased by Rs. 1.14 crores to Rs. 139.47 crores. Cash and balances are, in consequence, shown at Rs. 17.49 crores or Rs. 28 lakhs less.

The statement of the position of scheduled banks for the week ended 18th May, 1956, discloses Demand and Time liabilities at Rs. 637.98 crores (Rs. 7.00 crores on account of borrowings from banks) and Rs. 433.72 crores (Rs. 3.11 crores) compared with Rs. 632.37 crores (Rs. 7.57 crores) and Rs. 431.87 crores (Rs. 2.71 crores), respectively, in the previous week. Cash has increased by Rs. 2.53 crores to aggregate Rs. 38.57 crores, while balances with the Reserve Bank have decreased by Rs. 35 lakhs to stand at Rs. 48.23 crores. There is a drop of Rs. 1.65 crores in investments to Rs. 355.55 crores. Advances and bills discounted at Rs. 768.08 crores reveal a fall of Rs. 1.12 crores. The ratios to total liabilities of cash and balances and of advances and discounts are, in consequence, shown at 8.1 percent and 71.7 percent against 8.0 percent and 72.3 percent.

The Reserve Bank of India has served a notice on the Travancore Sanathana Bank Limited, Changanur, informing the bank that in terms of the proviso to sub-section (2) of section 22 of the Banking Companies Act, 1949, a licence to carry on banking business in India cannot be granted to it. The issue of the bank to cease transacting the business of banking as defined in section 5(1) (b) of the Act, and it would not, therefore, be in order for it, among other things, to accept deposits of money from the public.

Provisional figures of foreign sea and air-borne trade of India on private and Government accounts during April 1956, according to data so far available in the Department of Commercial Intelligence and Statistics, Calcutta, are as follows: Merchandise, excluding transit trade of Pakistan but including that of other land frontier countries: Exports Rs. 3,825 lakhs, re-exports Rs. 86 lakhs (transit trade—nil), imports Rs. 5,772 lakhs (transit trade Rs. 4 lakhs); Total trade Rs. 9,683 lakhs. *Treasure:* Exports of currency notes Rs. 7 lakhs, others negligible. Imports of gold Rs. 1 lakh, currency notes Rs. 102 lakhs, others nil. *Balance of trade:* The merchandise import figures are exclusive of the value of certain consignments of Government stores awaiting adjustment. Subject to this deficiency in import figures and to the exclusion of figures for transit trade, the total value of exports (including re-exports) of merchandise, gold and silver fell short of imports by Rs. 1,358 lakhs.

SERVICE IN INDUSTRY

By N. BARWELL AND S. S. KAR

Demy 8vo

995 pages

Rs. 37-8-0

This is the Second Volume of the monumental work on the Law of Service in India, and, as the title indicates, deals exhaustively with all the industrial legislation in this country with particular reference to service. It contains

1. The Factories Act.
2. The Factories (Amendment) Act, 1954.
3. The Workmen's Compensation Act.
4. The Workmen's Compensation Rules.
5. The Mines Act.
6. The Dock Labourers Act.
7. The Dock Labourers Regulations.
8. The Plantations Labour Act.
9. The Dock Workers (Regulation of Employment) Act.
10. The Employment of Children Act.
11. The Apprentices Act.
12. The Employees' Provident Fund Act.
13. The Employees' State Insurance Act.
14. The Employees' State Insurance (Central) Rules.
15. The Employees' State Insurance (General) Regulations.
16. The Mines Maternity Benefit Act.
17. The Payment of Wages Act.
18. The Minimum Wages Act.
19. The Trade Unions Act.
20. The Industrial Disputes Act.
21. The Industrial Disputes (Central) Rules.
22. The Industrial Tribunal (Central Procedure) Rules.
23. The Industrial Disputes (Appellate Tribunal) Act.
24. The Industrial Disputes (Appellate Tribunal) Rules.
25. The Industrial Disputes (Appellate Tribunal) Rules: Regulating Practice and Procedure.

With exhaustive commentaries and up-to-date case law.

Invaluable for practising lawyers, students of law, trade unions and employers and employees in commercial organisations, factories, mines, plantations and Docks.

Initial bulk stock received from binders nearly exhausted and further bulk quantities expected shortly.

ADMINISTRATIVE PROBLEMS OF THE SECOND PLAN TRAINING PERSONNEL FOR THE EXPANSION IN STATE ACTIVITY

(FROM A CORRESPONDENT)

WITH such problems as investment, financial resources, production, and the roles of the public and private sectors inevitably claiming first attention in discussions on the second five year plan, other basic ones such as those relating to administration tend to receive comparatively little notice. Yet, as the planners admit, good, efficient and honest administration is the cornerstone of the plan's success. It is an old and well-understood maxim that even the best policies can fail with a bad, inefficient or corrupt administration. The administrative system today is very different from what it was in the earlier decades of this century, when the late Mr. Montagu characterised it as "too wooden and antediluvian". It is more streamlined and works more quickly. Since independence, it has withstood a number of severe tests of its strength and efficiency. Although it has failed in some, by and large it has done quite well. But it has yet to pass the severest test of all—to make itself an efficient instrument of the State in the execution of big schemes for industry, agriculture and commerce, and in evoking public co-operation for them on a wide scale. The measure of its success will be determined by the manner in which it can discharge the functions of an agency for the implementation of these schemes under a democratic Government. The administrative machinery, which until independence functioned in the cloistered seclusion of secretariats, beyond the ken of popular Ministers and of Parliament has now to move to the forefront as the instrument of a popularly-elected Government, and is, therefore, answerable to public opinion for all its actions and policies. This makes a basic difference in the responsibilities that it has to shoulder in making the plan a success. Among these responsibilities is the execution of a variety of irrigation and other projects, big and small, the intensification of agricultural production, the promotion of small-scale industries through co-operative methods involving close and intimate contact with people at various levels, the promotion of small savings, and the enlisting of public co-operation for rural development. The management and running of a number of State industrial enterprises and commercial bodies, in which technical competence has to be combined with experience of general administration, will be a big responsibility.

The Quality of Administrators

All these tasks need initiative, tact, the capacity to enlist the good will and co-operation of the common man and the competence to deal with the management of technical departments. At the same time, they call for the training of specialist personnel; and the general has to be blended with the specialised and the technical. Above all, administrative personnel at all levels have to demonstrate that their activity is genuinely inspired by a desire to promote and serve the public interest and that their integrity and honesty are above reproach. Promptness and efficiency in the disposal of public business should also be shown so that the common people who are compelled to deal more and more with Government officials will notice the change.

The Planning Commission has enunciated the broad aims in the administrative sphere in its report on the second five year plan as follows: "As development proceeds, the expression 'administration' steadily assumes a broader content. It includes within its scope the building up of personnel, training of men, running the administrative machine, seeking the co-operation and participation of the people, informing and educating the public, and finally, organising a sound system of planning based as much on the participation of people at each level as on the best, technical, economic and statistical information."

Corruption and Delay

These are the main tasks, but their accomplishment will by no means be easy. At the Central level, the need to expedite public business is appreciated well enough, and efforts to eradicate corruption and red tape are sincere. The functioning of the Organisation and Methods Division of the Home Ministry shows that a constant search for new methods to ensure speed in the disposal of secretariat work is going on. The activities of the Vigilance Division have reduced corrupt practices. Nevertheless, it cannot be asserted that the spirit has permeated all officials or that corruption has been stamped out. It would also be over-optimistic to say that it has infected all the State Governments or seeped down to the district and local administration levels.

It is at the last-mentioned level, in fact, that reform is most urgently needed, because it is there that corruption in its different forms is widespread. In this sphere the administrative machine comes into its most intimate contact with the general public. It is of the first importance that these sections of the population should feel confident that the administration exists for them and not vice versa. Since it is also the sphere in which public co-operation and participation in the tasks of development and progress are most vitally needed, a gigantic and heavy responsibility rests on State Governments and district administrations to improve standards. This can best be done by a constant study of local needs and by sustained measures to stamp out corruption while avoiding delay in the performance of official business so that petty officials will no longer be able to hold the common man to ransom.

New Cadre for Industry

While administrators are adapting their attitude and outlook to the needs of the new situation which planning for a welfare State has imposed on them, a new cadre has to be trained and equipped to cope with the tasks arising from an expansion of the public sector in the industry. The Planning Commission has expressed the view that the "extension of training facilities has considerable bearing on the rate at which the industrial sector can expand". How far the requirements in this field can be fulfilled as they arise and how far an effective balance can be maintained between the training of personnel and the expansion of State or private industrial enterprises, are issues to which attention should be constantly devoted. The establishment of an industrial management service has been somewhat belatedly recommended by the Planning Commission; while the cadre of this service has to be built up almost from scratch, public enterprise has registered considerable extension already. The States have also to build up such technical cadres for managing the industries under their control.

A problem of unprecedented magnitude and complexity which confronts the administration is the obligation to evoke public co-operation in

national development. Methods and techniques which could prove fruitful in this field are being constantly experimented with in the community projects and National Extension Service areas, and have produced encouraging results. The need for social education of the village population has to be met. The Programme Evaluation Organisation's report shows that the scope for improvement is considerable and more organisers are required.

Voluntary Organisations

Another administrative aspect of public co-operation concerns the bringing in of voluntary organisations representing diverse sections of the people for development activity. If he is to discharge his duties in this sphere properly the official cannot afford to keep himself severely aloof from his fellow citizens. His task as an administrator can be effectively accomplished if he harnesses the goodwill of voluntary organisations engaged in social and public welfare activities for the benefit of backward or under-privileged groups. The Planning Commission has recognised the valuable rôle such organisations can play in the promotion of various plan objectives; and it is for the administrative personnel to translate State policy into practice.

Two other points made by the Commission deserve special attention. The first is the warning that initiative and the making of administrative decisions tend to become more and more centralised, whereas the process should be in the opposite direction. The second is that attached or subordinate offices of Ministries should be enabled to function with "reasonable freedom and initiative." The aim of good administration should, in other words, be to encourage initiative in persons entrusted with responsibility, and within clearly defined limits the various administrative agencies should be able to function with freedom. Excellent as these propositions are in theory, there is a considerable leeway to be made up in translating them into practice, and scepticism among the public is obviously shared by the Planning Commission itself.

A complicated task to which the administrative machine has been hitherto unaccustomed will fall on its shoulders in the second plan period. The Planning Commission has explained it as the need "to evolve suitable administrative methods and agencies for carrying technical, financial and other assistance to persons of small means", whether in industries, agriculture or the social services. This is an essential aspect of the schemes to tackle unemployment. Quickness and sympathy in determining the principles of financial aid for small-scale industries, giving appropriate guidance and advice on the methods by which assistance can be sought by persons with small means willing to set up industrial or business units, and wherever necessary, organising them into co-operative societies for mutual aid are some of the responsibilities that will be imposed upon officials.

Efficient Working of the Plan

The major problems of administration which await attention during the plan period, and which are essential to ensure the efficient implementation of schemes, have been set forth with commendable clarity and precision by the Planning Commission. But the Commission is not a "super-Ministry" which can get things accomplished by a series of orders or directives. It can at best advise and guide, and leave the Ministries and departments to implement the directives as they consider best, though the fact that the Prime Minister is its Chairman invests the Commission with considerable prestige and facilitates the performance of its co-ordinating functions. Two factors of paramount importance require emphasis in conclusion. The first is that changes in administrative procedures and in the devolution of responsibilities on officials at different levels have to be on a uniform basis, so that all Ministries at the Centre, all departments in the States and all local and district administrative agencies are imbued with the same sense of purpose and urgency. The second is that equal importance has to be attached to the need for the proper training of administrative personnel at all levels as to that for improving procedures. Not only should be the aim to provide trained personnel in adequate numbers, but the training itself should be such as to fit them for functioning under a democratic system of planning. The second plan is so closely integrated in the administrative sense that a co-ordinated effort on the part of all administrative agencies is essential.

Dr. Matthai's View

Dr. John Matthai recently stated that India is, by and large, an under-administered country, which is true in the sense that administration, until recently, touched only a few aspects of the people's lives while such matters as industrial development, rural reconstruction, provision of employment or promotion of national health were left largely to private initiative. That state of affairs no longer exists; and with the change has naturally come also a large expansion of the sphere of administration. The point is whether the competence of the machinery and the personnel that run it have been correspondingly improved and augmented. What is even more important is whether it is possible so to augment the number of qualified administrative personnel, and to improve the working of the machine in the immediate future, that the supply of personnel will equal demand and the efficiency and competence of the machine will correspond to requirements. The second plan, if at all it breaks down, will do so more because of organisational weakness or the inability of the administrative machine to stand up to the strain imposed on it than because of shortfalls in resources for investment.

May 31, 1956.

Stocks and Shares

SOME PROFIT-TAKING BEFORE CLEARING

ORIENT PAPER FEATURES: STEADY UNDERTONE IN MARKET

Wednesday Evening. THE share market has been steady throughout the past week and the undertone at today's clearing was distinctly cheerful. The price of Indian Irons closed around the level quoted this time last week, but the other main speculative shares showed divergent trends. Texmaco and Orient Paper, both in the Birla group of companies, have enjoyed a substantial rise over their last clearing quotations, especially the last-mentioned, which has benefited on rumours that a rights issue is in prospect. Among the other main speculative counters, Burrakurs have dipped on the announcement of the Colliery Tribunal's recommendations, while Indian Coppers have encountered profit-taking in spite of a coming dividend announcement which is expected to be an excellent one. After hours this evening heavy buying took place in both Indian Irons and Indian Coppers, the former encouraged by the improved tone of the Bombay market.

Dealings in the various sections have been mixed. Engineering scrip were well supported and miscellaneous have also been steady; coal shares weakened and teas have been neglected. Both the jute and the cotton sections have encountered scattered interest. The Government security market is still receiving official support in preparation for the forthcoming issue which is expected in June.

Details of the week's trading follow.

The Government securities market continued firm and once again prices were marked up. Three percent Conversion Loan 1985 was slightly better at Rs. 77.8 and 3% Non-terminable was taken up at around the same price. In short-dated issues, 3% 1957 changed hands at Rs. 99.13 while 3% 1958 was quoted at Rs. 99.11. Among medium-dated issues, 3% 1959-61 was slightly easier at Rs. 95.2-6, but 3% 1963-65 was in strong demand at Rs. 95.3 and 3% 1964 had no sellers at Rs. 95.1. In National Plan issues, 3½% 1961 hardened to Rs. 99.13, 3½% 1964 was better at Rs. 98.12, 3½% 1965 was traded at around Rs. 98.11 while 2½% 1961 and 2½% 1960 had buyers over at Rs. 93.7 and Rs. 96.4 respectively, with practically no business reported. Among long-dated loans, both 3% 1966-68 and 1970-75 were in short supply and their prices were marked up one anna in each case to Rs. 93.5 and Rs. 90.2 respectively. Provincial loans continued firm, but business was almost entirely confined to 4% issues maturing in 1967. Four percent Madras 1967 improved further to Rs. 99.14 as did 4% U.P. 1967 to Rs. 99.12. Other issues were notably unchanged; 2½% U.P. 1961 changed hands at Rs. 92.13 while other 3% U.P. issues were in good demand with few declared sellers.

Once again jute preference shares were languid and buyers were difficult to find. Business was reported in Anglo-India at Rs. 113, Nihati second at Rs. 78 and Northbrook at Rs. 86. Standard Jute were crossed at Rs. 95. Among miscellaneous issues, British India Corporation improved to Rs. 125 and there were further buyers at this rate. Bathgate & Co. were crossed at Rs. 41.4 as were Burrakur 1st at Rs. 111.8. Dalmia Cement Rs. 100 paid-up were better at Rs. 103. Duncan Brothers were crossed at Rs. 64.6 and there was a small enquiry for Dunlop Rubber 2nd at Rs. 99.8. Humayun Properties changed hands at Rs. 10 as did Indian Iron & Steel at Rs. 107 and Indo-Burma Petroleum at the higher rate of Rs. 108. Orient Paper 2nd were crossed at Rs. 74.8 as were Rohtas Industries "B" at Rs. 64.6 and Shaw Wallace at Rs. 84.

In the banking section, Hind Bank met with small enquiry at around Rs. 31. United Commercial were unchanged at Rs. 50.14, but Punjab National improved from Rs. 52 to Rs. 53. United Bank of India "D" shares were crossed at Rs. 4.8.

In the railway section, Dehri Rohtas was a feature and improved from Rs. 13 to Rs. 13.10. Baraset-Basirhat, after a long interval, were sold down to Rs. 9.10.

There were a few features in the cotton section with buyers of Bowreah at Rs. 160 against a previous quotation of Rs. 150, while Jayshree, on interested buying, improved from Rs. 6.8 to Rs. 7. Kesoram met with enquiry at Rs. 18.5 while both Cawnpore Textile and Elgin Mills were unchanged at Rs. 8.12 and Rs. 27.10.

Operators in the coal section were busy working out the implications of the latest All-India Tribunal award but in the absence of fuller details it was not possible to take a view on the future prospects of coal companies in the light of the latest award. The initial reaction was one of uncertainty and prices in some cases were easier with buyers showing little interest. Burrakur came back from Rs. 14.3 to Rs. 13.12. Bengal were unchanged at Rs. 5.45 as were East Indian at Rs. 33 and Equitable at Rs. 30.8. New Beerboom were marked back from Rs. 20 to Rs. 19.8. Standard were steady at Rs. 25.12 following the latest proposal of the directors to offer two shares of the Burrakur Coal Company for every one share of Standard Coal held. Central India and Western Bengal were unchanged at Rs. 7.2 and Rs. 6.14 respectively.

There was a little more activity in the jute section this week and bargain hunters were busy making small purchases. Here is a chart showing representative price movements.

	Opening 25.5.56	Closing 30.5.56
Rs.	Rs.	Rs.
Alliance	138	140
Barnagore	152	148
Chandpany	162	163
Birla	18 4	18 10
Howrah	23 12	23 12
Kelvin	245	245
Khaddah	138	140
Megna	87	87
New Central	16 12	17 8
Northbrook	24	24
Kinnison	172	175
Reliance	11 4	11 8

There was slightly more enquiry in electric supply shares. Agra improved from Rs. 150 to Rs. 152, Calcutta from Rs. 13.10 to Rs. 13.13 and U.P. from Rs. 141.8 to Rs. 146. Benares and Jubbulpore were unchanged at Rs. 17.10 and Rs. 14.6 respectively.

In the sugar section, Durbhanga were slightly easier at Rs. 22.12 while Ramnugger were steady at Rs. 25. Shree Krishna Gyanoday were active and improved from Rs. 13.2 to Rs. 14. Carew were unchanged at Rs. 8.11, Cawnpore at Rs. 19.12 and Champaran at Rs. 29.6.

In the engineering section, Indian Iron & Steel were somewhat subdued during the week and at one stage reacted from Rs. 37.15 to Rs. 37.4; to night's closing quotation is Rs. 37.9. Braithwaite were better at Rs. 28.4 as were Burn & Co., which improved from Rs. 365 to Rs. 372. Indian Standard Wagon were steady at Rs. 182 and Jessop moved up from Rs. 35 to Rs. 36.11. Textile Machinery were shaded at Rs. 25. Business was reported in Britannia Engineering Old and New at around Rs.

'Glad we won. Now I must rush - I've another case in Bombay tomorrow. I'm going by air, of course.'

When you have a journey to make, think first of flying. It's the fastest way to travel, and often the only way to get there in time. You escape all the tedium of a long journey - flying is so quick, convenient, and wonderfully comfortable.

INDIAN AIRLINES CORPORATION

4-Chittaranjan Avenue, Calcutta Telephone: 23-5141 (6 lines)

16. Hooghly Docking met with enquiry and rose from Rs. 115 to Rs. 121.

In the paper section, Orient provided the outstanding feature improving from Rs. 39.5 to Rs. 40.8. Tonight's closing quotation is Rs. 39.4. A fair parcel of India Paper Pulp changed hands at the higher rate of Rs. 25.8 and the price improved further today to Rs. 25.12 while Bengal Paper were marked back from Rs. 130 to Rs. 121. Titaghar Paper improved from Rs. 44 to Rs. 44.8.

In cement, Assam Bengal met with good enquiry at Rs. 7.8 as did Dalmia which improved from Rs. 17.12 to Rs. 18. The latter closed today at Rs. 17.10. Sone Valley were better at Rs. 8.15 and Ashoka were steady at Rs. 12. In insurance, a solitary transaction was reported in Ruby General at Rs. 6.

In shipping, the outstanding feature was India General Navigation which spurred under the influence of strong buying from Rs. 115 to Rs. 127. India Steamship, on the news of an eight anna interim dividend, rose from Rs. 9.4 to Rs. 9.8. Port Shipping were marked at Rs. 16.4.

Among miscellaneous industrials, good business was reported in Clive Row Investment with the approach of dividend time at around Rs. 11.12. Anglo Brothers were shaded at Rs. 21.6 while Alkali & Chemical Corporation were unchanged at Rs. 20.10. Bengal Flour were offered at Rs. 27 and Britannia Biscuits were crossed at Rs. 15.4. British India Corporation met with some enquiry during the week and at one time were taken up to Rs. 11.6; tonight's closing quotation is Rs. 11.2. Dunlop Rubber were steady at Rs. 30.8 while Hindustan Motors were quiet at Rs. 9.6. Imperial Tobacco were a shade better at Rs. 14.8 and there was a good enquiry for Indian Aluminium at the higher price of Rs. 22. Indian Cables met with strong support and rose smartly from Rs. 33.8 to Rs. 36. Indo-Burma Petroleum were unchanged at Rs. 41.10 as were Indian Wood Products at Rs. 38.2. Jardine Henderson at Rs. 100, Martin Burn at Rs. 25.4 and Shaw Wallace at Rs. 15.4. Metal Box met with some enquiry at Rs. 27.10 as did Rallis which improved from Rs. 36.4 to Rs. 38.4. National Carbon were steady at Rs. 27.6 as were National Insulated Cables at Rs. 23.6. Rohtas Industries met with good enquiry and rose from Rs. 24 to Rs. 25.

In the mining group, Burma Mines and Western Stockholders Investment were unchanged at Rs.

3.15 and Re. 1. Indian Copper met with some profit-taking at around Rs. 6.15 and closed lower at Rs. 6.12. Metal Corporation were steady at Rs. 11.8 as were Karanpura Development at Rs. 26.

Tea shares were again neglected with turnover nominal. Baghmari had buyers at Rs. 29.8 as did Basmatia at Rs. 40.4 and Brahmaputra at Rs. 9.4. Bateli were marked at Rs. 22.8 ex-dividend while Brooke Bond were easier at Rs. 23.12. Delakhat came to business at Rs. 21.8 as did Dibruagarh at Rs. 27. Methoni, after being done at Rs. 24.4, later had sellers at Rs. 23.12. Rajgarh were fully steady at Rs. 50 as were Tezpur at Rs. 26.6. Hasimara had sellers at Rs. 39.8 and Nagaisuree came to business at around the previous quotation of Rs. 250. Margaret's Hope were crossed at Rs. 17.8 and Okayti improved to Rs. 540 from the previous nominal quotation of Rs. 500. Runglee Rungliot were transacted after a considerable period at Rs. 408 and Singtom were depressed to Rs. 5. Chundecherra had buyers at Rs. 29.2 and small lots of Patrakola changed hands at Rs. 181. Jayashree were slightly better at Rs. 12.9 but New Chumta eased to Rs. 43.2.

The profit of the BENGAL FLOUR MILLS COMPANY, Ltd., amounted to Rs. 1.90 lakhs for the half year ended last December. This was Rs. 2.63 lakhs lower. Providing Rs. 95,722 (Rs. 1.94 lakhs) for taxation and Rs. 69,977 (Rs. 71,187) for depreciation, there is Rs. 94,546. Bringing in Rs. 72,375 and transferring Rs. 1 lakh from dividend equalisation account, the balance amounts to Rs. 2,66,830. The dividend has been halved to 7½%. General reserve is allocated Rs. 1 lakh, leaving a carry-forward of Rs. 76,830.

The WEST BENGAL FINANCIAL CORPORATION made a profit of Rs. 2.45 lakhs for the year ended last March, compared with Rs. 1.23 lakhs. Bringing forward Rs. 6,251 on account of over-provision for taxation, there is Rs. 2.51 lakhs. Taxation absorbs Rs. 1.08 lakhs. reserve fund Rs. 45,250 and investment reserve fund Rs. 4,000. The State Government has guaranteed a minimum dividend of 3½% on the paid-up share capital. It is proposed to utilise the amount of Rs. 94,452 towards the payment of the dividend at the rate of 3½%, and request the Government of West Bengal to give a subvention for the balance of Rs. 2,53,552 to make up the guaranteed dividend. The amount of subvention received from the State Government to meet the guaranteed dividend for the period ended 31st March, 1955, was Rs. 2,13,567-5-3.

BOMBAY RULES QUIETER

INDIAN IRONS FIRM FEATURE

Wednesday Evening.

RESTRICTED business was transacted on the Bombay Stock Exchange last week and equity values tended to drift downward on profit-taking. The undertone, however, remained fairly steady. Tata Steels declined on long liquidation. The announcement of the Stock Exchange authorities concerning the procedure for Budla in the case of Tata Steels was regarded as an unhelpful factor. Operators were inclined to take a cautious view of the ex-right price of the scrip. Textile shares, excepting a few selected ones, dipped lower on realisation. Prospect of better dividends and improved working helped some selective rises in the miscellaneous group.

Tata Steel declined to Rs. 249.4 on liquidation by a prominent operator. Uncertainties prevailed about cum-right and ex-right values of the scrip. In the meantime, renunciation letters were reported to have been done around Rs. 58. Indian Iron, however, presented a firm front and closed steady around Rs. 37.10 after bouts of profit-taking. The inspiration came mainly from Calcutta interests. Alcock Ashdown were transacted at Rs. 350 as were Tata Locomotive at Rs. 154. Premier Construction realised Rs. 176.4.

Textile shares were generally lower, excepting Century and Simplex. The former improved to Rs. 354 on prospects of a rayon plant, while the latter rose to Rs. 230 on influential support in the expectation of a higher dividend. India United Ordinary were better at Rs. 13.7 on the suggestion of a satisfactory dividend. Bombay Dyeing fell to Rs. 647.8, as did Swadeshi to Rs. 229.8. Central India were shaded at Rs. 139.8.

In the miscellaneous group, Associated Cement came to hand at Rs. 216.4 and Digvijay Cement at Rs. 191. Sugar shares showed minor variations. Belapur closed slightly lower at Rs. 238.8 and Walchandnagar Industries were done at Rs. 248.12. India Steamship highlighted shipping shares and spurred to Rs. 9.8 on rumours of an ordinary dividend. Scindia were active at Rs. 18.3-6 on increased freight earning prospects. Automobile shares were subdued. Hindustan Motors slipped back to Rs. 9.10 on the issue of new preference shares. Bombay Burmah came to hand at Rs. 632.8 and Indian Copper backed to Rs. 6.12 on profit-taking. Larsen and Toubro were marked higher at Rs. 16.5 on maintaining an ordinary dividend of 10 percent. Tata Chemicals were steady at Rs. 18.2. B.I.C. declined to Rs. 11.3 on profit-taking, while Tata Oil were better at Rs. 52 on reports of improved working. Gwalior Rayon were in demand at Rs. 18 and National Carbon were done at Rs. 27.8.

Banking shares were steady, though business was limited. Central Bank fetched Rs. 51 and Bank of India made Rs. 160.8. Insurance shares showed minor changes. New India were taken at Rs. 43 and Oriental at Rs. 3,900.

Electric supply shares were depressed, with Ahmedabad on offer at Rs. 97.8. Andhra Valley, however, improved to Rs. 1,200.

THE WEEK'S TRANSACTIONS

(In the following list of stocks and shares in which transactions have taken place during the past week the figures indicate: Opening Quotations—Highest for the week—Lowest for the week—Closing Quotations—Quotation for the Corresponding Closing Date a Year Ago the last named being shown in parenthesis and will not be given where such a quotation is not available.)

WORLD TEXTILE FIBRE SUPPLIES AND PRICES

RECORD PRODUCTION FIGURES

FIGURES of world production of cellulosic and other man-made fibres given in the annual report of Snia Viscosa show that, with a few unimportant exceptions, increases took place everywhere in 1955, the total rising to 2,556 million kilos, compared with 2,263 million kilos in 1954, and with an average of 632 million kilos for the five years ended 1938. One surprising aspect of this increase is that it is proceeding fairly steadily and is not interrupted by the existence of an uncomfortably large surplus of raw cotton. When it is remembered that cotton prices have not yet been adjusted to the big excess of supply over demand, however, it is understandable. Their artificially high level prevents the natural fibre from competing as effectively as it might otherwise do with the man-made fibres. The belief that the artificially high level cannot be maintained much longer, moreover, causes a great many traders to buy as little as possible in cotton textiles in order to reduce the risk of losses through depreciation of stock values. High prices for the natural fibres also help the man-made fibres by broadening the scope for using the less expensive of them in blends to reduce the total cost of textiles as well as to increase their variety. This influence, of course, does not affect cotton only. There are indications everywhere that the non-cellulosic fibres are encroaching further on the trade formerly done by wool, especially perhaps in men's clothing. In some of the latest manifestations of this trend, moreover, the man-made fibres are used alone as well as in blends.

Rise in Output

According to the figures published by Snia Viscosa, world production of rayon yarn increased last year to 1,044 million kilos, compared with 928.6 million kilos in 1955, while that of rayon staple rose to 1,226 million kilos, compared with 1,117.6 million kilos, and that of non-cellulosic yarns and staples rose to 286 million kilos, compared with 216.1 million kilos.

In rayon yarns, the largest contributor to the increase in total output was the United States, where production rose by 72 million kilos to 393 million kilos. The U.K. came second in the list last year, with 97.5 million kilos, with Japan third (83.7 million kilos) and Western Germany, by increasing its output by nearly 16 percent, to 87.5 million kilos, taking the fourth place from Italy, which showed only a small increase, to 64.2 million kilos. The increase from 1,118 million kilos in 1954 to 1,226 million kilos last year in rayon staples was much more widely spread. Japan headed the list with 243.7 million kilos, and the United States came second with 179.7 million kilos. Output of non-cellulosic fibres was 286 million kilos last year, against 216 million kilos in 1954. The United States increased its output to 208 million kilos, against 157 million kilos, and the U.K. retained the second place with 20 million kilos, against 15.6 million kilos.

U.K. Production Rising

The British Board of Trade figures for man-made fibres now include all such fibres in commercial production. Apart from rayon and nylon, the leading "synthetics" are Terylene, Ardil, Fibrolane and Courlene. While these newer man-made fibres, especially Terylene, are now beginning to make an impact on the industry, production figures are still dominated by rayon. Although no official breakdown is available, it is estimated that of the total staple fibre output in March, 84 percent was viscose staple. Output of man-made fibres in March is shown to have reached a new record level at 45.4 million lbs. This was 6 percent more than in February and 7 percent greater than a year earlier. On either comparison, staple fibre accounted for most of the

increase. Production in the first quarter of this year was 12 percent up on the same period of 1955. Deliveries of continuous filament yarn in the January-March period were the highest yet achieved. These were 5 percent more than in the previous quarter and 7 percent greater than a year earlier.

Export deliveries showed the most marked rise to 13 percent above the October-December level and 5 percent more than in the first quarter of last year. Deliveries for narrow fabrics and industrial purposes showed a substantial increase over both the previous quarter and a year ago.

Slightly more than one-half of these man-made staple fibres went to cotton spinning mills, according to a new addition to these statistics covering deliveries. The total deliveries of staples in the quarter ended March were 66,519,000 lbs., or 3 percent more than in the December quarter, and 13 percent more than in the March quarter of 1955. Compared with the previous quarter and with the quarterly averages for 1955, there were increases in the first quarter of this year in the deliveries of cotton, wool, flax and jute spinning, but those for export were sharply lower. Cotton spinning absorbed 33,527,000 lbs. compared with 28,825,000 lbs. in the previous quarter, and with quarterly average of only 26,897,000 lbs. for the whole of last year. For wool spinning deliveries in the first quarter were 11,698,000 lbs. against the quarterly average of 9,515,000 lbs. for 1955, for flax spinning they were 6,304,000 lbs. against 4,089,000 lbs., and for jute spinning they were 1,217,000 lbs. against 1,166,000 lbs.

WORLD NITROGEN CONSUMPTION

While production of nitrogen continues to expand, consumption has fallen below expectations. In Europe and Egypt, say Aikman (London) in their latest report, the consumption setback is partly due to the very severe frost in February. For the year ending in June it is now estimated that the amount used will show a 24 percent increase. An earlier forecast put the rise at 44 percent. Against a background of large surpluses in farm products and falling prices in the United States, the situation has become acute. Nitrogen consumption for agriculture for the current year is now estimated to be at least 124 percent below the previous year. Six months ago, an increase of 6 percent was forecast. The biggest reduction will be in sales of sulphate of ammonia with an anticipated decrease of 30 percent. Against that, the nitrogen used by American industry may well come up to the previous estimate of 8 percent. But the net fall in the U.S. total consumption is likely to be at least 61 percent compared with 1954-55. Stocks there are estimated at 800,000 tons, or a surplus of 300,000 tons over normal stock requirements at the present production rate. Meantime, Aikman expresses doubts whether Chilean nitrate producers can maintain their present selling price in competition with synthetic nitrogen products, supplies of which are increasing. In view of the higher nitrogen contents of these competitors, it would appear probable that Chile must reduce her prices to be competitive.

WHOLESALE PRICE INDEX RISES

THE official wholesale price index (base: year ended August 1939 = 100) advanced by 0.2 percent to 389.8 during the week ended 12th May, 1956, as compared with 388.9 for the previous week. The index was lower by 0.2 percent when compared with the corresponding week of the last month, but was 13.9 percent higher than that of a year ago. A fall of 1.0 percent to 350.1 in the index for Food Articles was brought about by a decline in the prices of tea (-7%), rice (-3%) and salt (-1%) despite an advance in the prices of dal arhar (+6%), gram (+4%) and wheat and gur (+2% each). The index for industrial Raw Materials advanced by 1.2 percent to 475.2 as a result of an increase in the prices of castorseed (+5%), groundnuts and raw silk (+3% each), raw jute, linseed, rapeseed and lac (+2% each) and raw

cotton (+1%), prices of manganese (+2%), iron (export price) (-9%) and copra (-1%), and declines. The index for Semi-manufactures moved up by 0.5 percent to 382.8. Items which showed significant variations were: Linseed oil (+5%), mustard oil at Patna (+4%) and Kanpur (+3%), castor oil and gingelly oil (+3% each), sheepskins and copra cake (+2% each), gingelly cake (-3%), mustard oil in Calcutta (-2%). An increase in the price of cotton manufactures (+2%) raised the Manufactures group index by 0.8 percent to 378.2 as compared with 375.1 (revised) for the previous week; the prices of glass, however, fell by 1 percent. Prices of black pepper, cashew-nuts and tobacco (-1% each) moved down while those of chillies (+4%) and betelnuts (+2%) witnessed advances and the index for the Miscellaneous group declined by 0.3 percent to 498.0.

INDEX NUMBERS BY GROUPS AND SUB-GROUPS
(Base: Year ended August 1939=100)

ESTIMATED INCREASE IN GRAM ACREAGE AND OUTPUT

According to the Directorate of Economics and Statistics, Ministry of Food and Agriculture, the all-India second estimate of gram, 1955-56, puts the current year's area and production at 22,206,000 acres and 4,702,000 tons, as against the adjusted second estimate of 20,065,000 acres and 4,535,000 tons respectively for 1954-55. This shows an increase of 2,141,000 acres or 10.7 percent in area and 167,000 tons or 3.7 percent in production over 1954-55. The increase in acreage under gram during the current year, has been shared mainly by Punjab, Rajasthan, Bihar, Saurashtra, Madhya Pradesh, Hyderabad and P.E.P.S.U. and to a lesser extent by Delhi, Ajmer, Bombay and Himachal Pradesh. This increase is generally attributed to favourable climatic conditions at the time of sowing. The increases recorded in these States have, however, been offset to some extent by decreases in area in Madhya Bharat, Bhopal, Uttar Pradesh, West Bengal, Andhra, Madras, Mysore and Vindhya Pradesh.

The increase in production has been shared mainly by Punjab, Rajasthan, Bihar and to a lesser extent by Madhya Pradesh, Hyderabad, Bombay, Saurashtra, Ajmer and Bhopal, and is attributed partly to increase in area and partly to favourable climatic conditions during the growing period. Uttar Pradesh and P.E.P.S.U. are the two main States, which have reported decrease in production due to unfavourable weather and hailstorm during the growing period. The estimate generally covers the period up to the beginning of March, 1956. Till then the condition for the growth of the crop was generally reported to be satisfactory. In Buldana, Teotmal, Betul, Chhindwara, Wardha, Nagpur, Chhanda, Raigarh, Akola and Amaravati districts of Madhya Pradesh, however, the crop was reported to have been adversely affected by inadequate rainfall. The crop was also reported to have been damaged to some extent in a few districts of Uttar Pradesh by hailstorm. This estimate does not cover the entire area sown with gram during 1955-56. Past experience has shown that the area at the second estimate stage forms roughly 96 percent of the area under the crop finally reported.

EXCISE DUTY ON WOOLLEN FABRICS

A statutory exemption from Central excise duty already exists for such woollen fabrics as are manufactured by or on behalf of the same person in one or more factories in which less than five power-looms in all are installed. The Government of India has now decided to convert this exemption into a slab exemption available to all manufacturers. Effect to this decision is being given from 1st June, according to a notification published in the Gazette of India dated 26th May. Further particulars may be obtained from the local officers of Central Excise.

OFFICIAL POLICY ON EXPLORATION, PRODUCTION AND REFINING OF OIL

PROPOSED AMENDMENTS TO THE PETROLEUM CONCESSION RULES

(FROM OUR NEW DELHI CORRESPONDENT)

FOR reasons which are not easy to appreciate, the oil industry in general and the Assam Oil Company in particular have had unusual publicity during the past week. The Government is apparently not being fair in dealing with the Assam Oil Company. It has de-linked oil refining from oil production, and said that the former can be in the public sector. Difficulties in getting plant, equipment and trained personnel to operate a refinery do not seem to worry official circles. Originally, it was decided to explore for oil in the Jaisalmer area. A team of Canadian experts has been doing aero-magnetic surveys there since March this year. The Ministry concerned meanwhile feared that failure of prospecting in one area would invoke criticism by Parliament, so it extended exploration to four areas. The Russians have further inflated the plan, which now covers almost the whole of India. Their proposals involve an expenditure of Rs. 30 crores, as against Rs. 114 crores allocated by the Planning Commission in the second five year plan. In addition to the Russians, a U.S. geological consultant, Mr. Levenson, and a German expert, Mr. Bentz, have submitted reports to the Government.

Until recently, the Ministry would have been satisfied with a Directorate of Oil and Natural Gas, which was actually sanctioned. While the Directorate is still in its infancy, the Ministry has come forward with a plan to set up a commission. To begin with, the Minister for Natural Resources will be chairman of the commission. The Director of the Oil and Natural Gas Division will be one of its members, the other being a nominee of the Finance Ministry. It is urged that the commission should have powers comparable to those of a separately managed company. In actual practice, the proposal would make the financial control exercised by the Finance Ministry ineffective. Whether this Ministry will ultimately concede the Auditor-General's claim to audit the accounts of every State undertaking cannot yet be said.

Amending the Petroleum Rules

Some draft amendments to the Petroleum Concession Rules have been circulated for eliciting opinions. The background to these is as follows. Originally, under the Petroleum Concession Rules, prospecting licences were given for 30 years, to be renewed at the option of the licensee for another 30 years. The revised Rules now in operation have reduced this period to 20 years, and the renewal of the licence, "at the option of the Government", can be for another 20 years. The following are the draft amendments of the Rules:

- In future, there will be only one licence, called the prospecting licence. It will permit geophysical and geological work and wild-cat drilling, but no oil production.
- The area of the licence will be subject to a maximum of 6,000 square miles. It will be in the form of a rectangle, of which the length will not be more than twice the breadth.
- The term of a prospecting licence will be 15 years, subject to surrender to the Government:
 - at the end of the first five years of one-third of the area granted, less any area for which a mining lease may have been granted or applied for;
 - at the end of ten years of one-half of the remainder, less any area for which a mining lease may have been granted or applied for; and
 - at the end of 15 years of the remainder, less that for which a mining lease may have been granted or applied for.
- No licensee will be granted more than one prospecting licence in each of the districts into which the country will be divided, and no licensee will at any time hold more than four licences.
- Surface rent will be payable by the licensee at rates varying from Rs. 50 to Rs. 150 a square mile a year, one-half to three-fourths of the surface rent being remitted if spent for geological and geophysical work or wild-cat drilling.
- A prospecting licence will be subject to the condition that, within a period of three years, a test well designed to reach the basement rocks or a depth of 10,000 feet, whichever is less, will be started.
- Within three months of the completion of every test well drilled, the licensee will furnish the Central Government with the following records:

Drilling: A detailed description of the drilling rig, its type, size, power, pumps, crew, method, casing, cement, mud, perforations, tests made and the results of each, etc.

Geological: Accurate copies of all logs, as sample logs, electric logs, radioactivity

logs, drilling time logs, analyses of gas, oil and water encountered, drill stem tests made, pressure measurements, a complete set of well samples, including specimens from each core recovered, etc.

The drilling and geological information so furnished will be kept confidential by the Central Government until the licence or that part of it on which the test well was drilled is released to the Central Government. Thereafter, it will be open to the Central Government to make the information public, if it should so desire.

8. Upon the surrender of any area covered by a prospecting licence, a complete record of all geophysical data, seismograms, surface geological maps, core drill survey records, and all other data which may have a bearing on its ultimate petroleum possibilities, will be furnished to the Central Government.

9. Detailed reports of all geological exploration and drilling activity carried on by the licensee will be furnished monthly to the Central Government.

10. The licensee will employ Indian nationals whenever possible, who will be trained at all levels in all technical operations of the programme.

Mining Leases

As for mining leases, it is suggested that:

- No mining lease will be granted unless a discovery of oil or gas has been made and it appears that an oil or gas pool has been located by drilling.
- A mining lease will not be granted for more than 100 square miles. The area will be of rectangular shape, the length being not more than twice the breadth.
- A lessee will not hold more than five mining leases in India.
- No mining lease will be transferred except with the permission of the Central Government and on terms and conditions approved by it.
- The term of a mining lease will continue in effect as long as oil or gas or both are being produced therefrom, or as long as drilling continues to be done. If production ceases (except for lack of market, etc.) or drilling ceases, for a period of six months, the mining lease will stand terminated.
- Royalty will be payable to the Central Government at the rate of one-eighth of all oil or gas or both produced by the lessee, free of all costs of production. The royalty will be paid in kind or in cash on the basis of the market value at the well head, at the option of the Government.
- The licensee will furnish to the Central Government copies of all geological records, water analyses, oil and gas analyses, sample logs, electric logs, radio-activity logs, and specimens of all cores, well samples and any other information obtained from wells, within three months of the completion of any well drilled on the mining lease, whether the well is a producer or not.
- The lessee will, furnish to the Central Government monthly reports containing all production data, such as pressure changes, water encroachment and gas-oil ratios, obtained from each well on each mining lease.
- A mining lease will be subject to the condition that the approval agents of the Central Government will have access at all times to all data concerning the drilling, development and production of all wells and operations in the leased area. Such agents will have permission to be present and witness any testing, drilling, coring or producing operations.

Professor Mahalanobis on Planning

Operational research for planning in India is the subject of papers which Professor P. C. Mahalanobis has contributed to the statistical journal, *Sankhya*. The following are some important extracts from these papers which, in view of the Parliamentary debates on the second five year plan, may be of interest. Professor Mahalanobis says: "The aim of planning in India must be to obtain the maximum possible rate of increase of employment and national income over a given time period. Planning must, therefore, maintain a wide perspective of the growth of the national economy over ten, 20 or 30 years or more; and, at the same time, give adequate attention to the urgent need of eliminating unemployment as quickly as possible. In the present approach, the strategy is to balance the increase in demand created by investments in the heavy capital-intensive industries and expenditure on services by adequate production of consumer goods at first through small and household industries. The rate of development, if inflation is to be avoided, would be determined by the amount of surplus consumer goods which can be actually produced. The production of enough consumer goods in the small and household industries is therefore of strategic importance and may constitute a limiting factor.

tries is therefore of strategic importance and may constitute a limiting factor.

"The capacity to invest (without import of capital goods) in any given year is determined by the pattern and volume of production of capital goods in the previous year. The rate of expansion of the basic industries therefore sets a limit to the rate of growth of the economy as a whole and may constitute a second limiting factor. The capacity to increase both production and the flow of services would depend on the rate at which technical personnel of the required type can be trained. Lack of trained personnel may be a serious bottleneck. The rate at which training can be provided would thus constitute a third limiting factor. The possibility of planning on the proposed scale would depend on raising adequate financial resources, which may constitute a fourth limiting factor. This, no doubt, involves technical questions of monetary and financial policy; but ultimately the basic decisions must be made on broad social and political considerations. Finally, as pointed out in the plan-frame, even if adequate financial resources can be raised, implementation may become difficult or impossible owing to rigidities in the existing system of administration. There must be thorough decentralisation of administrative and financial powers in the case of public enterprises and institutions, and also active co-operation between official and non-official agencies. Inadequate administrative machinery may form a fifth limiting factor.

Feasibility of Plan-Frame

"We are aware of these difficulties. The logical consistency of the plan-frame is not a sufficient guarantee of its feasibility in practice. Any one (or two or more in combination) of the five limiting factors mentioned above can retard progress. However, so far as plan-making is concerned (as distinguished from plan-implementation) all that can be demanded is internal consistency, valid technical reasoning and a correct appreciation of social needs. If the present plan has these merits, then there is only one single issue, namely, whether there is any alternative plan which would eliminate unemployment and poverty more quickly and more effectively; and at the same time, lay the foundations for a continuing increase in the level of living in future. If there is no alternative plan which is more satisfactory, then the proper policy would be to try to implement the present plan. The theoretical model which I have used does not, and cannot, obviously incorporate all these supplementary considerations. In our view, the proper function of the theoretical model is to supply some broad general guidance leaving the details to be settled from supplementary considerations. This gives flexibility to the approach, and the scope to adjust the details in accordance with priorities to be reached by agreement through discussions. It is also clear that the theoretical model (being purely technological in character) is necessarily neutral to questions of social or administrative policy. Here also we must give proper attention to methods which are likely to be of help in attaining the desired objectives. That is, it is necessary continually to refer to what I have called the 'supplementary considerations' in making decisions about the plan-frame.

"Let us consider an example, namely, the improvement in the efficiency of Government machinery. Our theoretical model is neutral because it does not include any variable or parameter corresponding to the type or the efficiency of the administrative machinery. It is our knowledge of the defects and delays of the existing system, and our general appreciation of the level of efficiency which would have to be attained in the management of large Government enterprises that make us think that proper implementation of the plan would be practically impossible without a thorough decentralisation of administrative and financial powers. In future, the efficiency of public enterprises must be judged on results; and suitable incentives must be offered to increase efficiency. Our appreciation of future possibilities is based partly on the experience of other countries; but, obviously, a good deal of experimentation will have to be done to evolve a system suited to Indian conditions and requirements. The recommendations in the plan-frame on the training programme are very general. There is urgent need of much detailed work being done, on the basis of technical coefficients, to formulate the requirements of technicians at various levels and to formulate appropriate training programmes to meet the demand.

Public and Private Sectors

"Also consider the important question of the respective shares of the public and the private sectors in the new enterprises which would be started during the second plan. Our theoretical model does not, and cannot, say that a particular industry should be included in the public sector while some other industry should be included in the private sector. Our basic recommendations in this matter are guided by the need of general Government control over the entire economy of the country. This is also in keeping with the Industrial Policy Resolution of the Government of India of 1946 reaffirmed in December 1954, and is in keeping with the resolution of the Lok Sabha of December 1954 and the Avadi resolution on the 'socialistic pattern' adopted by the Congress Party in January 1955. Again, consider the question of raising adequate financial resources for investment. Our theoretical model cannot give any specific guidance. Our recommendations are based on preliminary studies made by experts in public finance; but it is only proper to admit that much detailed study would have to be undertaken in this field in the immediate future.

MIDDLE CLASS COST OF LIVING INDEX NUMBER FOR CALCUTTA

(Base: August, 1939)

THE Middle Class Cost of Living Index, by groups, have now been brought up to April, 1956. As compared with March, the April Index for Food shows a rise of 8 points, while those for Clothing, miscellaneous, and Fuel and Lighting remain unchanged at 520, 283 and 239 points.

Correlating all the factors, the Middle Class Cost of Living Index for Calcutta shows that the cost of living increased by 4 points during April, 1956.

Middle Class Cost of Living Index Number for Calcutta. Prices in August, 1939=100

Groups	Weights	GROUP INDICES											
		Apr. 1953	May 1953	June 1953	July 1953	Aug. 1953	Sept. 1953	Oct. 1953	Nov. 1953	Dec. 1953	Jan. 1954	Feb. 1954	March 1954
Food	53.6	430	433	439	446	447	450	453	455	455	446	442	453
Fuel and Lighting	4.4	235	239	239	239	239	239	239	239	239	239	239	239
Clothing	12.4	494	494	494	494	497	497	503	503	503	507	507	520
Miscellaneous	29.6	282	282	282	282	282	282	282	282	282	282	282	283
Combined Index	100.0	386	388	391	394	396	397	399	401	401	396	394	406

Compiled and constructed by the Statistical Department of "Capital".

At this stage, our main task has been to work out a tentative solution in short terms, leaving it to the financial experts to work out the details of the monetary counterpart. We have taken our stand on the obviously true proposition that if something can be shown to be feasible in physical terms, then the financial and fiscal machinery can always be adjusted to supply a satisfactory monetary counterpart (provided there is no difficulty in making necessary institutional changes). I agree that models should be elaborated to include the monetary counterpart. This would enable us to set targets not only of production but also of the price level. Until this is done, other ad hoc methods have to be used.

"I would like to recapitulate the basic features of the plan-frame. We start with a given total investment over the plan period (Rs. 5,600 crores), a given rise of national income (5 percent a year), and an assigned large volume of new employment to be created (11 million) during the plan period together with a steady improvement of income in future. Our solution indicates a large increase in investment in industries producing investment goods, a small rise in investment in factory industries producing consumer goods, considerable activation of all capital-light small and household enterprises, and a fairly large increase in various services. This solution is not intuitively obvious, and depends both on the validity of the analytical methods used as well as on the approximate accuracy of the values of the parameters adopted. The advantage of putting the whole thing in this form is that the reader can check the validity of the solution. India has very little of heavy industries for the production of investment goods; this sector contributes something like perhaps 1 percent to national income. The plan-frame has stressed the need of establishing and expanding the basic industries to manufacture heavy machinery with all possible speed. This would enable India to instal new plants for the production of steel, cement and other investment goods with the help of machinery manufactured in India out of domestic resources; and to produce in increasing quantities machinery required for mineral prospecting and mining, hydro-electric projects, electrical appliances, railways and other forms of transport, and for the production of consumer goods generally. India has bigger reserves of high quality iron ore than any other country of the world (three times more than either the United States or Russia and also coal and large possibilities of increasing the production of electricity. The object of expanding the basic heavy industries would be the continuing expansion in future of the production of both investment and consumer goods with the help of modern machinery driven by power.

Imports of Capital Goods

"This would require a large amount of capital goods, much of which will have to be imported in the beginning. India's present dependence on imports of capital goods is a fundamental structural weakness which must be corrected as quickly as possible. It would be obviously more economical from the national point of view to produce in India as much heavy machinery as possible because this would ensure a supply of capital goods which would make India increasingly independent of imports and would strengthen India's position in the world market. In my opinion, the development of the heavy machine building industry is so important that, if necessary, targets of even steel, coal or transport should be reduced to give higher priority to heavy machines because this would facilitate a much quicker rate of industrialisation after four or five years. The heavy machinery industry should be in the public sector. For rapid industrialisation of an under-developed country, it would be desirable to keep the cost of capital goods as low as possible. The further removed the type of capital goods under consideration is from the production of final consumer goods the greater is the need of keeping the price low. Heavy machinery which would manufacture machinery to produce investment goods is the furthest removed from the consumption end. It is essential, therefore, that the Government should have complete control over the heavy machinery industry so as to be able to fix prices to suit national needs. Such control would enable the Government to shape the future pattern of industrialisation through a properly planned programme of production of heavy machinery. If imports are properly regulated it would be also possible to influence the pattern of investment in the private sector through Government policy in respect of the production and price of heavy machinery for that sector.

"It is neither necessary nor desirable that India should try to become completely self-sufficient in the production of machinery. India should, however, acquire both the means of production and technical knowledge to be able, if and when necessary, to manufacture essential investment goods within the country. This is necessary for economic independence. But under normal conditions India should continue to purchase abroad such machinery and capital goods as it would not be economic from a national point of view to manufacture in India. On the other hand, India should also develop in course of time the production of specialised machinery for which there would be an external market. The policy should be to encourage both imports and exports of machinery and capital goods which would be of mutual benefit to India and other countries.

Encouraging Automation

"In the field of mechanised production, India should encourage automation, that is, the use of automatic and electronically controlled machines,

to the fullest extent possible. There would be many advantages. The requirements of highly trained and experienced technical personnel would be appreciably reduced, which would save much expense on training and, what is more important, would also save a good deal of time. The high quality of the product would be automatically maintained and would reduce rejections and waste. Production would proceed at a uniform rate, which would facilitate working out integrated programmes. The capital cost of automation would be, of course, much higher, which may, however, be partly or wholly offset by savings on account of training and elimination of wastage. One serious disadvantage would be the greater rigidity of an automatised system of production in which it would be difficult to introduce improvements of technique in a piecemeal fashion. The automatised system, even if only obsolete in parts, would have to be either scrapped or continued without any change. In spite of such difficulties, India may benefit much by the use of automation from an early date, and possibilities in this direction should be continually explored.

"It is, however, neither necessary nor desirable to copy the developments in the more advanced countries of America and Europe and concentrate production in large factories. On the contrary, the wise policy in India, in my opinion, would be to adopt a policy of the greatest dispersal of industrial production. This would, of course, include geographical dispersal, that is, locating units of production in such a way that the different regions of India can share equitably in the programme of production. Specialised regional resources and economy of transport must receive proper consideration; but planning should be deliberately aimed at achieving a broad parity in the level of production and of living in the different regions of India and preventing the formation of depressed areas.

Classification of Industries

"But this is not all. It would be desirable to try to classify all industries into two broad groups. One would include those in which the physical scale of production would have to be large, for example, steel, cement, railway rolling stock, fertilisers, heavy machinery, motor cars, antibiotics, etc. In such cases, larger factories must be established. It would be desirable to do this in well-planned, new industrial towns with adequate housing, schools, medical clinics, hospitals, and facilities for sports and cultural activities not only for the workers employed directly in the planned factories but also for other people who would come to live in the new town for subsidiary occupations. The capital cost of large and medium factories established in this way would be high but the additional expenditure would be a social obligation. The second type of industries would be those in which production is technologically possible in small units. In the case of these industries, preference should be given to the smallest units which are economical from the point of view of the nation as a whole. Consider, for example, the traditional, highly skilled artistic handicrafts of India such as, Banaras or Patola textiles, Kashmir shawls, silver and gold work, metal work of Moradabad or Bidri, ivory and wood carving, Midnapore and Masulipatam mats, artistic leather work, etc.; everyone would agree that India should try to preserve and encourage these handicrafts. There is a good deal of scope and need for improving efficiency of production by developing specialised small tools driven by power which would lighten manual labour. There is no reason, for example, why a metal box should not be pressed out by machinery and the artistic part of the work done by hand. Efforts should be made to improve the design from a functional point of view and to introduce standards of quality.

"I have much more in view. I believe it would be possible to produce economically in small units many articles which are now manufactured in large factories. The large factories at present enjoy certain facilities which are not available to small-scale and household enterprises. The most important advantage is the use of machinery driven by power. If a policy of dispersal is deliberately adopted, then arrangements would be made to supply modern machinery driven by power to the small-scale and household enterprises. There is no inherent reason why all efficient machines should be large. With the growth of capitalism, as big factories began to be established in large numbers, the mind of the inventor was more and more directed to large units of production which would suit the big factories because such factories (and not small producers) were in a position to offer large financial incentives for new inventions. The increasing use of electronic technology has, however, already changed the direction of invention towards smaller machines in many fields. Also, in large factories in many cases, machines are comparatively small in size and are looked after by one or two persons. In such cases it is even now possible to set up small independent units of production. Under planning, incentives can be offered for the invention of small but efficient machines,

Financial Resources

"Secondly, large factories are usually able to raise capital or borrow money at low rates of interest, purchase raw materials at competitive prices, and enjoy good facilities for marketing which are often under their direct control. The handicapped in this respect. They have difficulty in securing credit and even when they are able to borrow money, they are obliged to pay high rates of interest. Their supply of raw materials and

tools is uncertain; also, they are sometimes obliged to pay unreasonable high prices. They have very little marketing facilities; and are usually exploited by middlemen. If the Government can arrange to supply credit, raw materials and marketing facilities to small-scale and household industries, then their efficiency of production would be much improved, and they would be able to compete with large factories in many cases.

"The large factories also enjoy many external economies, the cost of which is borne by the taxpayer. Most of the large factories are located in or near large towns and cities; and the factory owners usually do not offer housing, education, medical care and other amenities for their workers. There are, of course, exceptions; but by and large most of the privately owned factories depend on the public authorities for such facilities. The cost of roads, water, electricity, drainage, transport are not charged to the factories. If the large investment required for such purposes as well as maintenance expenses are taken into consideration, then it may be found in many cases that the social cost of factory production is much higher than the cost as it appears in the factory accounts. In addition, there are intangible costs which cannot be expressed in terms of money such as the misery of slum life, evils arising from the workers having to live away from their families, and other adverse social repercussions. If all economic, social and human costs of large factories are properly taken into account, in many cases it would be preferable, from the point of view of the nation as a whole, to substitute production in small-scale and household enterprises.

"As electricity begins to reach the village (or with the help of small steam or diesel engines) it would be also possible gradually to convert small and household enterprises in the villages into high-efficiency and low-cost mechanised units of production. This would avoid the heavy expenses which would be incurred and there would also be large savings in transport and other overheads. In small co-operatives or in self-employed household enterprises the workers would be able to work much longer hours than in factories; also, some of the members of the household would do part-time work so that there would be practically double shift operation. Working at home or very near home in the village would be less fatiguing than in factories because the workers would be able to take some rest as and when necessary. Household activities and family life would not be disrupted.

Dispersing Production Centres

"Dispersal of production in small units in villages or small towns would be particularly suited to social and economic conditions in this country. India has many geographical, linguistic and ethnic regions with large differences in climate, food habits and social customs. It is difficult to transfer surplus labour from one part of the country to another. There is practically no migration from villages in one region to villages in other regions. Labourers come from villages to work in towns and cities; but a good number are seasonal who go back to their villages at the time of peak-loads of agriculture. If mechanised industrial occupations can be established in the country many of the labourers would stay in or near villages which would ensure an adequate supply of agricultural labour at peak loads. This would be of great help in the transition phase. The policy of dispersal would tend to raise the level of living in villages and remove the present large disparities between rural and urban areas. For all these reasons it is desirable to adopt a deliberate policy of 'back to the village', in however, a new form in which electricity (or small steam or diesel engines) and modern machinery would be supplied to the village for industrial production.

"The future policy, in my opinion, should be to establish and bring all large units of production under direct Government control; to develop enterprises of a medium size on a co-operative basis and leave small units of production to household enterprises. Such a policy of dispersal would have political advantages. It would tend to create a large number of household or small-scale enterprises which would be organised more and more in the form of co-operatives and would supply a sound foundation for a democratic society. It would avoid, on the one hand, the disadvantages of heavy concentration of financial power in the hands of a small number of monopoly capitalists; and, on the other hand, would also avoid the rigidities of a highly centralised, bureaucratic administration. Through a policy of industrial dispersal, it would be possible to combine the advantages of both economic and political democracy in an effective manner. This would be a solution entirely in keeping with Indian social and cultural traditions."

Loans from Abroad

The Joint Secretary of the Finance Ministry, Mr. B. K. Nehru, will shortly visit Germany, Britain and the United States to investigate the scope for raising loans to finance the second five year plan. In addition to finalising the two British loans for the Durgapur steel works, he will appraise the climate for floating a loan on the London money market. In doing so, he will ascertain whether the British Government will give trusteeship status to the Indian loans and, if so, on what conditions. The second plan has a foreign exchange gap of at least Rs. 800 crores.

London

FIGHT AGAINST INFLATION BEGINS TO TELL

RETAIL PRICE RISES ALMOST STOPPED

(FROM OUR LONDON CORRESPONDENT)

AN examination of recent Government pronouncements suggests that it thinks we have reached the psychological moment in the fight against inflation. As the Prime Minister put it after his recent further discussions with both sides of industry, "It looks as though there is at last a chance to steady the boat." On what facts is this opinion based? Well, for the past four months retail prices have virtually stopped rising; though the index of wage rates has increased seven points, nothing like the equivalent purchasing power has been released. For one thing, overtime working has diminished and short-time working has increased. For another, the control of hire purchase has changed it from a multiplier of buying into a channel for savings. Because hire purchase repayments go on, while new business has been cut, the outstanding debt has been reduced in the last three months by £30 million to £420 million. The Chancellor of the Exchequer reinforced this view when surveying the economic situation in Newcastle last week, but with the inevitable reservations. The Government is cautious in its assessments of the future, but there is no doubt about its hopes, which are that wage claims may now abate, that manufacturers may make some reductions in prices, and that the probable increases in general charges—coal and railway freight charges, for example—may be absorbed in the cost of living claims. The Government would like to be sure that both sides of industry, realising the growing pressure of competition in overseas markets, would assist Ministers in bringing about a period of stability. It is always possible, of course, that these hopes may not be realised. Indeed, we may be too near to events ourselves to be able to take a detached view of the prospects. It is interesting, therefore, to be able to turn at this point to some rather striking, even original, views on the subject by a foreign observer.

An American Opinion

These comments appear in an article in *Business Week*, an American magazine, and come from the pen of the Foreign Editor. After talking to senior Ministers and officials in London, he says he feels that the Government is now making a serious effort to come to grips with the long-term problem and to work out the appropriate solutions. The writer bases his view on what he believes to be a radically new departure in the assumptions on which the Treasury is conducting its long-term economic thinking. These assumptions are, first, that our traditional position as the centre of a commercial empire has been largely undermined by developments within the Commonwealth, so that these countries no longer offer a safe and privileged market for British traders and investors; and, secondly, that political and social changes since the war have transformed Britain into a consumer economy on the American model. What follows, in the author's opinion, is that we must expand as rapidly as the United States and, at the same time, contrive to export. It is this combination of a tight discipline with adequate incentives that poses such peculiar difficulties, and the writer foresees a shift towards some middle ground, with greater use of physical controls than in recent years but also with some borrowing of American ideas.

Granted a new approach along these lines, the writer believes that the prospects for the British economy are hopeful. There is still the frightful external weakness; but at least we start off with our domestic resources far greater than ever before. He was also much impressed by what he considered to be the changing attitudes of management and skilled labour. He believes that the new generation of British managers is "more aggressive, more production-minded than any in this century." He found them ready to embrace new techniques and imbued with the typically American faith in continuous industrial expansion. His verdict on the British workman is equally reassuring. "British labour," he writes, "is still not as productivity-minded as American labour—but in expanding industries it's getting closer in this respect year by year." Along with these changes he finds encouragement in the speed with which the industrial pattern has been adapted to meet the requirements of new markets overseas.

But there are three possibilities which, he feels, may weigh heavily against us. One is that fear of unemployment (the chief bogey of British policy) may lead to continued inflation and eventually drive sterling into the position of an inferior currency. This is the danger that the Government must cross. The other danger that he foresees are the loss of our Middle Eastern oil supplies and a Communist advance in Asia that would rob us of our main sources of raw materials. Either of these catastrophes would leave us, he believes, with the choice of retreating into a siege economy or becoming the wards of the United States.

Trade Trends

The full figures for overseas trade in April record a further shift towards a higher proportion of metal and engineering products and a further fall in the share of textiles—maintaining the re-

cent trend. Engineering products sales rose by 11 percent over the January-March average. It is disclosed, however, that the record exports to North America included £11 million of silver bullion, being the first instalment of the repayment of the 88 million ounces borrowed during the war, so that Canadian purchases in April represented the real feature of our dollar-earning exports. On the import side, food arrivals were 4 percent down with sharp falls in meat and dairy products offset by a seasonal rise in sugar. On an area basis, sterling area imports rose and our exports to it fell, raising the visible trade deficit to over £18 million, or £10 million more than the first quarter's average. On the other hand, from the non-sterling area imports were lower while exports to it increased. Taking invisible trade into account, we are probably now round about striking a balance on payments.

The index of import prices was unchanged in April at 106, to which it had risen in March after being 105 in the preceding three months. But as the export index fell one point to 104, the terms of trade deteriorated a further point to 102. It is unfortunate, however, that after remaining more or less stable for several months now, the retail price index rose two points between mid-March and mid-April to reach its highest post-war level (June, 1947=100) at 158. This does not vitiate the Government's argument that wage increases are outstripping price rises, but it renders it somewhat less effective as a plea for wage freezing, seeing that about two million workers have their wages linked with the index and must get an automatic increase.

Decline in the Car Industry

The Board of Trade has done well to get the position of Britain's car industry, which has been going rise to so much alarm in the Midlands recently, into better perspective by releasing figures of production and exports, and especially by pointing out that the recent decline in both must be considered against the increase which has occurred during the past three years. Production exactly doubled between 1952 and 1955 in terms of the number of cars turned out—from 448,000 in 1952 to 897,560 in 1955. Taking the last two years alone, production increased by 16 percent between 1954 and 1955. But in the first four months of this year only 274,270 cars were produced, some 9 percent less than in the same period of last year. In April alone, production was 58,947 units, about 13 percent less than in April of 1955. The setback is too recent and has been going on for too short a time to judge whether this is the beginning of a prolonged decline, or merely the result of over-rapid expansion in the past year or so. The export picture is perhaps less satisfactory. Although shipments of passenger cars, including taxis, increased from 309,890 in 1952 to 373,203 in 1955, or about 25 percent in three years, the increase in the last two years was only 2 percent, and in the first four months of this year shipments were 24 percent less than in the same period of 1955. The rate of exports this year has come back to little more than the rate of 1953, and there was no recovery in April.

On the other hand, British commercial vehicles are holding their own in export markets. Production of goods vehicles, after remaining static for three years, increased last year by over 25 percent and the expansion has continued this year at a somewhat slower pace. The output of public service vehicles increased by about 20 percent last year, and again the trend is still upward, though not quite so rapid as last year. Exports of goods vehicles were 154,253 last year, nearly 50 percent of production. The number exported was about 25 percent more than in 1954. In the first four months exports were 3 percent down from the exceptionally high figures of last spring. Exports of public service vehicles amounted to 3,206 last year and have continued to increase. In the first four months of this year 1,273 were shipped abroad, compared with 951 in the same period of last year.

The Squeeze and Hire Purchase

Hire-purchase debts are now being repaid at a net rate of about £10 million a month. That may be one of the reasons why retail trade is quiet in spite of the rise in wage earnings over the past few months. The Board of Trade Journal reports that outstanding hire-purchase debt probably fell by about 7 percent between the end of December and the end of March, when it was estimated to be £419 million. A net reduction of £30 million in three months means, of course, that gross repayments must be much larger, as new instalment debt is being contracted all the time. Sales may rise again when the present wage claims add to purchasing power, but meanwhile hire-purchase sales of radio and electrical goods fell by 10 percent between February and March, while hire-purchase sales of furniture and furnishings increased by 3 percent from the low February level. In both types of shop the proportion of sales done on instalment credit declined. Furniture and furnishings still form the largest section of outstanding hire-purchase credit, with private and commercial vehicles following close behind and "hardware, radio and electrical goods" only a little less.

To help in the more accurate measurement of trade, the Central Electricity Authority is now reporting on quarterly sales of domestic electrical appliances by its area boards. In the year to March, 1956, the number of cookers was 181 percent less, that of water-heaters 6 percent more, of washing-machines 23 percent less, but of refrigerators 281 percent more than the year before. In the March quarter, 1956, the sales were even

more heavily down compared with the first quarter of last year. Sales of washing-machines dropped by nearly 60 percent and 23 percent fewer refrigerators were sold. In this field of household equipment, the credit restrictions have clearly been most effective.

Labour Costs a Unit of Output

An analysis of labour costs in the annual report of Imperial Chemical Industries provides an interesting comparison with the figures which the Treasury has published for industry as a whole. The table reproduced below shows that the cost of wages and salaries a unit of output in I.C.I.'s factories has risen by much less than the national average since 1948, although the company's wage and salary bill has increased substantially more than that of industry generally.

Year	Output		Total wages and salaries		Wages and salaries a unit of output	
	All Industry	I.C.I.	All Industry	I.C.I.	All Industry	I.C.I.
1948	100	100	100	100	100	100
1949	106	103	107	108	101	105
1950	114	127	112	118	98	93
1951	117	142	125	137	107	96
1952	114	129	134	149	118	116
1953	121	146	144	154	119	105
1954	129	173	156	173	124	100
1955	136*	195	1	193	†	99

* Provisional † Not available.

The figures for I.C.I. cover all of the company's activities except the Metal Division. At the end of last year the company's employees numbered 115,306, of whom 89,045 were men and boys, and 26,261 were women and girls. Overtime working averaged 10 percent for men last year. The value of the company's consolidated sales in 1955 was £411 million compared with £352,100,000 in 1954. Exports last year were worth £711 million—£3.6 million more than in 1954. Expenditure on the construction programme last year was £33 million, bringing the total spent on new fixed assets since the war to £223 million.

Heavy Fall in Tea Profits

The results of four tea companies of the Finlay Group, published last week, reflect last year's sharp drop in tea prices. Kanan Devan Hills Produce made a net profit after tax for the year to 30th November of £257,000, against £642,000. The final dividend is 71 percent, making 10 percent tax-free, against 271 percent, tax-free, Anglo American Direct Tea Trading made a net profit over the same period of £196,000, against £508,000, and is paying a final dividend of 10 percent, making 121 percent, tax-free, against 25 percent, tax-free. Amalgamated Tea Estates made a net profit after tax of £241,000, against £356,000, and announces a final dividend of 5 percent, making 61 percent, tax-free, against 111 percent, tax-free. Consolidated Tea and Lands actually ended its year with a net loss of £158,000, against a profit of £1,148,000 for the previous year. But this was after charging a Pakistan exchange loss of £701,801 as well as the tax figure of £370,000. The final dividend is 71 percent, making 10 percent, tax-free, for the year, against 30 percent, tax-free.

Brevities

The Indian Copper Corporation has obtained permission of the Government of India and the United Kingdom Treasury to make a scrip issue of one new 2s. share for every two stock units held.

IRON ORE OUTPUT IN MARCH

The output of iron ore in India increased to 399,651 tons in March 1956 from 377,591 tons in February 1956, according to official statistics released by the Chief Inspector of Mines in India. Returns received from 99 mines for the month of March 1956 show despatches totalling 285,377 tons to the iron and steel plants and 49,972 tons to the export market. The reported stocks at the end of the month amounted to 1,130,667 tons.

Madras

ACHARYA BHAVE OPPOSED TO STATE CAPITALISM

MR. A. D. SHROFF DISCUSSES FINANCE FOR THE PRIVATE SECTOR

(FROM OUR MADRAS CORRESPONDENT)

THE Bhodan tour of Acharya Vinobha Bhave in Tamil Nad has just begun. His daily prayer meetings are well attended. According to him, the foremost problem facing the country today is the inequitable distribution of land, but he does not believe that legislation can improve matters without bitterness. His views on State capitalism are equally forthright. "We cannot say that people will be happy under State capitalism. It is no use people becoming mere automatons by handing over everything to be done for them to the State. There is also a danger of more harm being done if a wrong thing is done by the State. The power of doing things, good or bad, should not be in the hands of the State. In the name of welfare State, nothing should be done to centralise everything."

In a speech at the Nilgiris Rotary Club, Mr. A. D. Shroff severely criticised the industrial policy of the Government. He recalled that when he was the chairman of the Control of Capital Issues Advisory Committee, he found that not even 25 percent of the ventures for which capital issues were sanctioned came into existence. This was due to the fear engendered in the minds of the investing public by the Government's Industrial Policy Resolution of 1948. As a result of stringent conditions, small and medium industries are frustrated after wasting thousands of rupees in their effort to obtain licences. The amendment of the

Constitution relating to the acquisition of private property has disturbed potential investors. Mr. Shroff referred in this connection to the low rate of compensation paid to Tatas for the acquisition of their airlines. Speaking on the lack of finance for the private sector, he said that the formation of the Industrial Finance Corporation was a good thing. But in spite of the Corporation, promotion of new companies had definitely received a setback during the past four or five years.

Criticising the new industrial policy, Mr. Shroff continued that the encroachment of the public sector into trading was a very serious matter. It was not true, he said, that the extension of the public sector was due to the inability of the private sector to fulfil its obligations. If the private sector had no initiative to start new enterprises, it was not only due to the industrial policy of 1948, but also due to the fact that in recent years the fiscal policy had been so devised that the private sector had been "straitjacketed" into a position which has left it no alternative but to remain inert.

Silk Factories Close Down

Some 180 silk factories in Mysore, with a total of 3,000 looms, have suspended production indefinitely, throwing 5,000 workers out of work. The closure of the silk factories, according to the president of the Mysore Silk Manufacturers Association, is due to the heavy incidence of taxation and labour demands.

World Bank Mission's Visit

The World Bank Mission had discussions with the Madras Government on the development projects in this State during its recent visit. It is learnt that the members of the Mission were particularly interested in the programmes of the State Government for solving the unemployment problem. The Government, it is further understood, told the Mission that the problem could be tackled successfully if there was sufficient finance to push through the various items of the development programme. It was pointed out to the visitors that the main source of revenue for the State was sales tax.

I. C. I. SALES SHOW BIG INCREASE

STATING that the value and volume of sales for 1955 were both new records, the annual report of Imperial Chemical Industries, to be submitted to the general meeting in London on 14th June, reveals that expenditure on the construction programme last year was £33 million, making a total outlay on new fixed assets since the end of the war of £223 million. The value of the whole I.C.I. group's consolidated sales in 1955 was £411 million, compared with £352 million in the previous year. About £95 million was spent last year on research and development, and on this, the report notes that experience shows that chemical processes hardly ever reach such a stage of perfection that further research cannot give rise to improvements. As an example, the report says that although ammonia has been one of the company's major products for nearly 30 years, a good deal of research and development work is still in progress to discover more efficient catalysts and to find methods of producing hydrogen—one of the materials for the production of ammonia—more economically from fuel-oil than is now possible from coke. Of the activities of its Indian associated companies, the I.C.I. report says that steps are being taken to ensure that I.C.I. misses no suitable opportunity of taking part in those sections of the chemical industry which are open to private enterprise under the Government of India's industrialisation plans.

Plant Extensions

The Alkali and Chemical Corporation of India Ltd.—an I.C.I. associate—had another successful year, the report notes, and there were particularly satisfactory increases in the production and sales of paints and Gammaxane formulations. The plants making these products are now being extended to cater for the growing demand. The report also says that after protracted negotiations with the Government of Bihar, Indian Explosives Ltd.—an I.C.I. subsidiary formed to manufacture explosives—has obtained possession of its factory site and has begun building operations.

Atic Industries Ltd.—a joint dyestuffs manufacturing company established with Atul Products Ltd.—has made considerable progress with its first plant, which is expected to be producing jade greens during the present year. A proposal to increase the scope of Atic Industries by the manufacture of an extended range of vat dyestuffs and their intermediates is at present awaiting the approval of the Indian Government. The polythene film plant of Imperial Chemical Industries (India) Private Ltd. had a most successful year in the manufacture of film from imported polythene granules, and it is considered that the market prospects for polythene in this and other forms are sufficiently promising to justify the erection of a substantial plant to make polythene from Indian industrial alcohol. Proposals to this end have been approved by the Indian Government, and the erection of a plant is shortly to begin in the factory at Rishra of the Alkali and Chemical Corporation of India Ltd.

The report says that a principal interest of I.C.I. remains the import of chemicals from overseas and their sale throughout India. It is remarked in the report that the traditional pattern of trade is changing with the increasing manufacture in India of heavy chemicals, especially fertilisers and alkalies, and with growing Government control of purchase and distribution which has recently included soda ash. Nevertheless, the report says, I.C.I. trade in other products has so developed that both the value of the company's exports to India and the sales of I.C.I. (India) have been maintained.

Ceylon

DEVELOPMENT FINANCE BODY STARTS WORK

EXPANSION OF INDUSTRY AND AGRICULTURE

(FROM OUR COLOMBO CORRESPONDENT)

A SIGNIFICANT landmark in the development of Ceylon's agriculture and industry was reached recently when the State-sponsored Development Finance Corporation began business after 60,000 of its 80,000 shares had been subscribed. The Corporation was set up by an Act of Parliament to assist in the establishment, expansion and modernisation of private industrial and agricultural enterprise, and to encourage the participation of foreign and local capital. Its General Manager, Mr. W. T. Yoxall, who comes from Britain, announced that emphasis would be laid on farming enterprise in the form of large-scale agricultural or livestock undertakings operated on a commercial basis. In giving financial aid to agriculturists and industrialists, the Corporation would conform to the Government's plan of increasing employment, utilising raw materials found locally, and economising in the use of foreign exchange.

Within a day of commencing business, the Corporation received 15 applications for assistance to set up new small-scale agricultural and industrial ventures. These applications are now being considered, and will later be sent to the Ceylon Institute for Scientific and Industrial Research to ascertain the technical possibilities of the projects for which assistance is sought. The establishment of the Corporation has been welcomed by many of the Ceylonese who are interested in small industries. They hope, with its help, to start the production of agricultural implements, iron goods, cutlery and plastic ware, all of which are at present imported in substantial quantities.

Tea Prices Drop

The price of tea, which accounts for 63 percent of Ceylon's export earnings, suffered seriously at the first three auctions held in Colombo this month. At the first week's sale, prices were on the down-grade. In the second week, the trade reported a near collapse of the market due to an excess of offerings (8 million lbs. was offered instead of the normal 6 million lbs.) and a decline in quality. The drop in tea prices affected the stock market. The drop in tea prices were on offer. The selling and many tea shares were on offer. The party had threatened to nationalise the plantation industry. City circles, however, are optimistic now. They say that there is no cause for panic. They maintain that, on a long view, tea is a good investment, and they advise people to buy the cheap shares of quality producers which have paid regular dividends. But many holders of tea shares are looking for more adventurous buyers.

New Commercial Harbour

The Government is thinking of turning Trincomalee, now used as a British naval base, into a commercial harbour. Mr. S. W. R. D. Bandaranaike, Prime Minister, has already indicated that he intends asking the British Government, which has the use of the Trincomalee harbour under a mutual defence agreement reached when Ceylon gained independence, to leave the base. When the British hand it over to Ceylon, the Ministry of Transport and Works will start to develop it into a commercial port for merchant shipping. The Ministry expects to be able to undertake the project in the next financial year. The building of a second commercial port in the island should help to ease congestion in Colombo and from a number of labour strikes. The Ceylon port authorities have shown much concern recently over the growing tendency among shippers to by-pass Colombo and go to other ports where the turn-round of ships is faster. The Government feels that if another modern port is developed, ships can be induced to continue to touch at Ceylon. A substantial percentage of transshipment cargo, now reaching Indian ports, can also be attracted to hold that way. In case the British continue to hold Trincomalee for their naval base, the Ceylon Government will develop Galle, on the south coast, into a commercial harbour. Galle is about 70 miles from Colombo.

Government's Film Studio

The Government proposes to establish a modern film studio. The Minister of Posts, Broadcasting and Information has announced that he will convert the Government's Film Unit into a Corporation shortly. At present, all films in Sinhalese, the language spoken by 51 million of Ceylon's 83 million people, are produced in India. The Government has decided to set up a modern studio to help Ceylonese film producers to keep their money here instead of sending it to India. Initially, it will spend Rs. 3 lakhs on the studio. Additional funds for the project will be given by Ceylonese in the movie business—both producers and exhibitors. The Technical Assistance Bureau of the Colombo Plan will be asked to loan foreign technicians to organise the industry and train Ceylonese.

Exploiting Ilmenite Deposits

The ilmenite deposits, valued at over Rs. 300 million, which overseas industrial interests offered

to exploit, will now be exploited only by the Ceylon Government. In June 1955, the Government invited worldwide tenders for the exploitation of these deposits. Within a fortnight, offers were made by well-known industrial groups in the United States, Britain and Germany, who were prepared to join with local industrialists and contribute capital. Early this year, the Government was considering these offers. No decision was reached as it was decided to finalise the matter only after the general elections in April. One of the first decisions taken by the new Minister of Industries after the elections was to cancel the offer made by the previous Government. He said that he would consider setting up a suitable body to see whether the State should exploit the deposits.

Export of Canned Fruit

Ceylon will shortly begin exporting canned fruit. The Ministry of Food and Agriculture has already set up a plant in Colombo which has a capacity of 10,000 tins a day. Exports will include pineapples and mangoes, and jams made of guava, papaw, wood apple and other fruits. A survey conducted in Britain and New Zealand indicated that canned tropical fruits would sell well there. The authorities feel that the demand for this country's products will be good in the United States, Canada and Europe. Annual imports of tinned fruits, jams and jellies cost Rs. 1½ million at present here.

AN EDUCATION IN

Oil

This is not an abstract design in an Art Class. It is one of the chemist's symbols for the structure of hydrocarbons. And hydrocarbons are the most important ingredients in oil—that vital fluid on which India depends so much for the progress of industry, transport and agriculture.

In the Assam Oil Company, chemists, physicists and geologists are engaged all the time on research, helping to find new sources of oil, devising more efficient and more economical methods of refining oil and discovering new uses for oil.

The results of such research mean that more and more of the oil and oil products which are needed for our expanding economy come direct from India's own oilfields.

STEADY INCREASE IN COFFEE PRODUCTION

There has been a steady increase in the production of coffee (cured) in India during the past few years, according to the 28th edition of *Indian Coffee Statistics*, now renamed *Coffee in India*, brought out by the Directorate of Economics and Statistics, Union Ministry of Food and Agriculture. During the year 1952-53, the output of coffee rose to 59.8 million lbs., as against 54.5 million lbs. in 1951-52 and 54.3 million lbs. in 1950-51. The increase was due to a progressive extension of the area under coffee cultivation. In India, Mysore is by far the largest producer of coffee, accounting for about 47 percent of the total area under coffee in the country. The State of Madras comes next with about 27 percent of the area, while Coorg contributes nearly 22 percent. India, however, accounts for only 1.1 percent of the total world production of this commodity. The quantity of coffee available for home consumption during the year was 45.3 million lbs. About 4.8 million lbs. of coffee were exported, mainly to Western Germany, the United Kingdom, Italy, the Netherlands and France.

COCHIN TEA SALES

At Sale No. 13, 1,100,000 lbs of tea were on offer. There was an irregular demand and practically no enquiry for medium and low medium B.O.P.s with heavy withdrawals. Good medium and best liquoring B.O.P.s met with useful demand. There was a keen competition for all Fannings which were dearer. Whole Leaf types had less demand and were easier.

RUBBER PRODUCTION AND CONSUMPTION IN APRIL

Indian rubber output in April was 1,826 tons, according to the Indian Rubber Board. Exports were 10 tons and imports 788 tons during the month. Consumption by manufacturers was 2,402 tons. Stocks with estates and dealers on the last day of May totalled 2,934 tons including 418 tons in transit. Stocks with manufacturers at the end of the month amounted to 2,342 tons. Manufacturers also consumed 294 tons of reclaimed rubber, the month-end stock being 576 tons, and used 205 tons of synthetic rubber of which they held a total stock of 550 tons.

COLOMBO RUBBER PRICES

The following prices have been issued by the Rubber Board of India from the weekly market report published by the Colombo Brokers Association.

	Closing prices 18-5-1956 (Rupees a lb.)	Average price for the period. (Rupees a lb.)
No. 1	1.41	1.47
No. 2	1.38	1.45
No. 3	1.35	1.41
No. 4	1.11	1.17
No. 5	1.06	1.12
Sheet Cuttings 1	-/85	
Sheet Cuttings 2	-/80	
Crepe:		
Water White	—	—
R.M.A. No. 1X	1.18 Nom.	1.204
R.M.A. No. 1	1.17/18	1.19
	Crepe No. 2	1.17
	Crepe No. 3	1.154
Scrap Crepes:		
Sc. Crepe No. 1	.90/92	.924
Sc. Crepe No. 2	.85/88	.88
Sc. Crepe No. 3	.78/84	.824
Flat Bark	.67/75	.714
	Sc. Crepe 3X	.85

To arrive at f.o.b. Colombo prices add 53.45 cents a lb. in respect of rubber other than scrap crepes and 31.45 cents in respect of scrap crepe to the above market prices.

TECHNICAL EDUCATION IN INDIA

ENGINEERING COLLEGES FOR ASSAM AND ORISSA

THE Eastern Regional Committee of the All-India Council of Technical Education meeting in Calcutta recently under the chairmanship of Sir Jehangir Ghandy approved schemes for the establishment of two engineering colleges—one in Assam and the other in Orissa. It also recommended the starting of a polytechnic at Asansol, and a civil engineering institute at Berhampur (Ganjam). Grants recommended for these new institutions and the development of existing training facilities total Rs. 87.57 lakhs. The Committee's meeting opened with an address by Sir Jehangir Ghandy in which he surveyed the development of technical education in the country during the period of the first five year plan and the schemes proposed under the second plan. He disclosed that only a half of the total allocation of Rs. 28 crores under the first plan had actually been spent. Despite this shortfall in expenditure the list of achievements was undoubtedly impressive. The number of institutions offering post-graduate courses and research facilities in engineering and technology increased from eight in 1949-50 to 18, degree colleges from 53 to 60, and diploma schools from 81 to 108. As a result, the output of graduates and diploma holders increased by about 50 percent. 30 national research fellowships were instituted during the period. In recognition of the importance of management studies, courses in industrial engineering and business management were started at a number of centres. A decision was taken to set up an Administrative Staff College at Hyderabad on the same pattern as Britain's Staff College at Henley-on-Thames.

Second Plan Proposals

The original allocation of Rs. 80 crores proposed by the Planning Commission for the development of technical education in the second plan period had been reduced to Rs. 50 crores, but even so, it was nearly double the first plan figure. It had been decided to set up three higher technological institutes on the pattern of the Khargpur College in the west, north and south. When fully developed, each of the four institutes should be able to take in 1,200 under-graduates and 600 post-graduate students. It was hoped to start a number of engineering colleges and polytechnics to meet regional requirements, while special provision had been made for the establishment of junior technical schools for boys of the age group 14-17. The Indian School of Mines at Dhanbad is to be expanded, and it is proposed to start a Central Institute of Printing Technology. The number of research scholarships will be substantially increased.

Eastern Region's Needs

Discussing the special problems of the eastern region, Sir Jehangir pointed out that there were as yet only 19 technical institutions of degree standard in the area, compared with 20 in the south, 14 in the west and 11 in the north. Since 80 percent of the country's heavy engineering capacity was located in this area, its demand for technical personnel was the heaviest, whereas training facilities were "woefully deficient". "We must go all out to strengthen the existing institutions and develop new ones. There is no room for complacency, no time to be lost". Referring to the work done by the Committee in securing practical training facilities, he said that 250 graduates and 28 diploma holders had been placed in some 50 firms. "Our aim is to provide every graduate with training facilities before he starts life as a professional engineer", Sir Jehangir said.

Committee's Decisions

The college in Orissa, the location of which has yet to be decided, will offer courses in electrical, mechanical and civil engineering. The civil engineering college proposed for Assam will be at Gauhati. Grants recommended by the Committee for these new institutions are Rs. 38 lakhs for Orissa and Rs. 24 lakhs for Assam. The Committee recommended a grant of Rs. 4.5 lakhs for the establishment of a polytechnic at Asansol which will offer a part-time diploma course in electrical and mechanical engineering for the benefit of industrial workers in the area. A grant of Rs. 7 lakhs was recommended for opening a Civil Engineering Diploma Institution at Berhampur (Ganjam). Grants of over Rs. 1 lakh each were recommended for the Assam Civil Engineering Institute and the Hooghly Institute of Technology to permit doubling the intake of students. The Jadavpur College of Engineering and Technology was recommended for a grant of Rs. 5.2 lakhs for the development of existing training facilities and a similar grant of Rs. 6 lakhs was voted for the Bihar Institute of Technology, Sindri. The Committee also decided to allocate seats to students from the neighbouring States of Bihar, Orissa, Assam, Manipur and Tripura at the Calcutta School of Printing and Technology.

TEST EQUIPMENT FOR BRITISH AIRCRAFT INDUSTRY

NEW DEVICES FOR RESEARCH ON PROTOTYPES

A "REFRIGERATOR" operated by four 150 h.p. motors with a 40-ton hydraulic jack to open and close the door; tunnels that can absorb tons of air a minute at speeds of up to 2,700 m.p.h.; fans driven by electric motors whose horse-power is counted in tens of thousands; research chambers simulating "heights" of more than 15 miles at sea level; an immense "rack" used to torture an airframe to destruction—these are but a few of the new facilities acquired by the British aircraft industry to turn today's prototype into tomorrow's production job.

Stratosphere research chambers, reproducing conditions at altitudes of ten to 15 miles, are vital to engine and airframe manufacturers alike. Icing conditions experienced at temperatures of less than minus 50 degrees centigrade ten miles up is the particular concern of the Lucas engine-testing chamber at Burnley, in Lancashire. Since mid-1953, when the plant began operations, engines from many manufacturers have been tested and reported on by Lucas engineers. Two years ago, Vickers-Armstrongs opened a similar installation for testing airframe components at heights of up to 80,000 feet, more than 15 miles. The 50 feet long compression chamber is actuated by four compressors each driven by a motor of 150 h.p.

Some idea of the expense involved in building and equipping such facilities is contained in a recent Rolls-Royce announcement which quoted an expenditure of almost £4 million on their engine test chamber. Ready for full-scale operation in January 1958, it will reproduce conditions at 70,000 feet at speeds of up to 1,500 m.p.h. Rolls-Royce also announced a few months ago that laboratories and equipment are under construction for research into nuclear power plants. This followed a cryptic statement from the Hawker Siddeley Group that work on similar lines was being undertaken. Dowty, famous for their undercarriages, stated in March that a nineteenth century mansion in Brockhampton Park, near Cheltenham, had been acquired for 80 nuclear research specialists and their equipment.

Importance of Wind Tunnels

Wind tunnels are much in the public eye following the opening of the industry's £1½ million co-operative transonic tunnel at Bedford early in May. There is a considerable number of large, small, low and high-speed tunnels in Britain today. One of the most spectacular, the Hawker Siddeley Group's £200,000 Mach 3 supersonic tunnel in Coventry, is housed in a building, part of which is 300 years old. Opened last year, the tunnel employs a 10,000 h.p. electric motor which, when operating, consumes a tenth of Coventry's peak load electricity supply. It is available for use by the whole industry for testing rockets and engines as well as guided missiles and aircraft. In 1952, Bristol began operating their Mach 3.5 wind tunnel, driven by a 27,000 h.p. motor. A year later, Handley Page opened a high-speed tunnel which has provided much data in evolving the Victor.

Two months ago, Avro announced that a Vulcan V-bomber airframe had completed two years of fatigue testing in a special skeleton-like "rack" mounted on 104 concrete piles sunk 30 feet into the ground. The Vulcan was suspended by 22 hydraulic jacks in a "zero gravity" condition while some up to 700 tons. Engine manufacturers require test and deHavilland alone have, between them, built more than a dozen. One of the latest and largest is the latter's £140,000 Gyrone test bed designed for engines of up to 30,000 lbs. thrust and more.

Water tanks for testing fuselages of pressurised airliners have been built and are in use by de Havilland, Bristol and Vickers while Saunders-Roe have two tanks at Cowes used for a different purpose. One, 130 feet by 50 feet, is for testing flying boat hull shapes: large-scale models are catapulted on to the water which can be agitated to simulate a rough sea. The other tank is 618 feet long and holds 400 tons of water. In this, hull models and components are towed along the water at high speed in order to examine their behaviour. The industry has, in the last few years, invested many millions of pounds in vital research facilities and is now spending millions more on test equipment.

K.L.M. PAYS 6 PERCENT DIVIDEND

K.L.M.'s financial results in 1955 were satisfactory with the net profit at 18,995,000 guilders—over 8 million guilders more than in 1954. After adding 10.5 million guilders to reserves, a dividend of 6 percent will be paid out of this surplus. The profit and loss account for 1955 shows a total turnover of 384,517,000 guilders as compared with 367,697,000 guilders for 1954, the traffic revenue in 1955 being 348,087,000 guilders (1954: 333,291,000 guilders). The load factor rose from 59.3 percent to 61.1 percent. Passenger traffic was 7 percent higher and freight traffic increased by more than 15 percent. Substantial orders have been placed for new aircraft to be delivered between 1957 and 1960. K.L.M. expects to be able to finance the greater part of these purchases from its own resources and the remainder by obtaining funds elsewhere. Some banks in the United States have already expressed their willingness to lend a large sum to K.L.M. on favourable terms.

Jute

I. J. M. A. VIEWS ON MINIMUM EXPORT PRICE SCHEME AWAITED

GUNNY PRICES STEADIER: RAW JUTE ALSO WELL MAINTAINED

THERE was a very swift reaction in the jute goods market last week to the report that the Government of India was considering some sort of a minimum export price scheme. Gunny rates advanced rapidly with heavy speculative buying by several large operators who attempted to corner various fabrics at low prices in the hope that rates would be fixed at a much higher level. This tendency was encouraged by the news that the I.J.M.A. committee was to debate at its meeting last Friday afternoon ways and means of relieving the present uneconomic trading conditions brought on by the disparity between jute goods and raw material prices. Speculation continued on the outcome of the discussions, and throughout the day a bullish sentiment prevailed, as operators professing to have "inside knowledge" propounded various remedies which they felt sure would be put into force. It came as rather an anti-climax late on Friday afternoon when it was learned that the meeting had been adjourned until Tuesday with no decisions taken. Prices immediately fell back, but soon recovered under similar conditions prior to the Tuesday meeting, which, however, ended like the original one.

The events of the week brought no response from overseas buyers, and there was no rush to place orders at current rates in anticipation of minimum rates being imposed. Any attempt to increase gunny prices would only strengthen consumers' ideas towards alternative forms of packaging, etc. That world consumption of jute goods may be decreasing is suggested by reports from Dundee that spinners and manufacturers there have had to curtail production. Carpet manufacturers, who are large consumers of hessian, have already in many cases reverted to a three-day week, and prospects for an improvement are not bright with high prices now demanded for Pakistani jute. This is the problem which may face India in the near future, unless gunny rates can be made more attractive to overseas buyers.

The remedy might appear to be in the reduction of raw jute rates, but these have been very steady throughout. A firm stand has been taken by sellers of New Crop jute. Over the past three years, New Crop sellers have lost heavily on their early transactions, and this year they are determined not to make the same mistakes. Consequently, while mills want to buy New Crop jute for August-September shipment at about Rs. 25 a maund, sellers' ideas in most cases are at least Re. 1 a maund higher. The volume of New Crop jute on mills' books so far this season is much less than in other years and this has prompted sellers of Old Crop jute to adopt similar tactics and hold out for higher prices. Operators have also been guided by the very steady upcountry markets. Imports in the main agencies have been negligible and prices are very firm at 8 annas to Re. 1 above Calcutta indications. In spite of this, however, a fair amount of business has been transacted just below the quoted rates, and if it had not been for the fact that assortment conditions were difficult to meet, business might have been much larger.

THE JUTE MARKETS

Manufactured Goods: Very firm conditions prevailed in the jute goods market early in the week when it was reported that some form of price support was being considered. Heavy goods rose by Re. 1 at the close last week, and after the holiday on Thursday, B Twills opened on Friday for morning a further 14 annas up at Rs. 105-8 for May shipment. Forward shipment also advanced and the October-December period improved by Re. 1 to Rs. 104-12. The reaction in hessian was not so marked and prices rose by about 4 annas for 40in. 100z. to Rs. 37-12 for May shipment and Rs. 38 40in. 100z. to Rs. 37-12 for May shipment. Heavy speculation covering maintained the bullish tendency that developed from the prospect of the fixing of the minimum export prices, and it was obvious that the general opinion was that the minimum price would be well above the current rates. The confidence of the market received at Friday's meeting of the I.J.M.A., which was primarily called to discuss the trading difficulties. Rates in all sections lost 2 or 4 annas, and a temporary lull in speculative activity lasted right through until Tuesday, when the I.J.M.A. committee again met. Heavy goods then advanced to Rs. 106 a 100 bags of B Twills, while 40in. 100z. hessians rose to Rs. 38-1 a 100 yards. But as no definite decisions were announced prices again fell, and easier conditions prevailed, with B Twills losing Re. 1 and hessian 4 annas by Tuesday evening.

At the close, the market was easier. Opening quotations on Wednesday morning were as follows:

	Ready Rs.	June Rs.	July-Sept. Rs.	Oct.-Dec. Rs.
40in. 80z.	31-12	31-6	31-2	30-12
40in. 100z.	37-14	38-2	38-8	38
B Twills	105-8	105-10	105-4	104-12

Heavy Cees (Plain)	103	104-8	105	104-12
A Twills	128	128	128	127
Liverpools	116-8	117	117	117
Cornsacks	105	105-14	106-4	106

Raw Jute: Raw jute rates have been very steady. Opening prices of Assam jute were based on Rs. 26-8 a maund for May-June shipment, and fairly good business was done at this level on Friday, although mills' ideas in general were below this rate. Prices advanced 8 annas a maund on Saturday and mills lost interest at the higher levels, although they were still buyers at the old rates. Sellers were inclined to be reserved under the influence of the upcountry markets and of the firm stand taken by New Crop operators. They were not willing to entertain buyers' counter-bids, especially as the assortment indicated usually consisted of a large percentage of bottom quality jute. The two meetings held by the I.J.M.A. committee during the week dominated proceedings, and on both occasions business came to a standstill until the results were known. As no final plans were formulated, there was very little reaction, and the market settled down to wait for the committee's next meeting. Only small quantities of New Crop jute were purchased during the week due to the high prices demanded by sellers. It remains to be seen how long they can pursue their present policy in the light of current favourable New Crop reports. Sowings have been completed in nearly all areas, and the standing crop is reported to be very healthy, although more sunshine is required in the northern Bengal Districts following a long rainy spell. Some areas in Assam have reported that the standing crop has sustained slight damage from flood waters, but this is not considered serious. In Pakistan all sowings have been completed and weeding is taking place. Weather conditions have been very favourable and the crop continues to be about one month ahead of last year. River levels are above normal and are tending to rise.

During the week, business was again done for Dhubri, Northern and Assam jute at the same rates of Rs. 26 to Rs. 27 a maund basis Bottoms for June shipment. Larger quantities of local Northern jute were also bought at prices ranging from Rs. 26 to Rs. 26-12 for one month's delivery. Assam Tossa and Karimpore-Bongaon Tossa was in good demand and mills paid Rs. 27 to Rs. 27-8, according to the district. Interest in Daissee and Daissee Mesta slackened, but small business was done in the former at Rs. 27 to Rs. 27-8 a maund, and in the latter at Rs. 24 to Rs. 24-8 for low assortments. Jungli Mesta Bottoms were also done at Rs. 24 a maund. Small quantities of Bimil were done at Rs. 24-12 to Rs. 25 for F.A.Q.

Business in New Crop jute was limited, but transactions were reported in Dhubri-Raha-Northern jute at Rs. 25-8 to Rs. 26-8 for July-August shipment, and Rs. 25 to Rs. 25-8 for August-September shipment.

There were no reports of any New Crop business in Pakistani loose jute, but Cuttings were done at Rs. 107-8 a bale for September-October shipment.

At the close, the market was a little easier and quotations were reduced 8 annas a maund. Opening quotations on Wednesday morning were as follows:

Indian Jute (Old Crop Kutch):	Landed at Mills Rs. a md. basis	Shipment.
Lower Assam	26-8	June-July
Upper Assam	26-8	"
Northern	26-8	"
Murshidabad White	26	"
Daissee ex Agency	27	"
Daissee ex Cossipore	26-8	"
Daissee Mesta	25	"
Local Packing (Northern)	26-8	"
Bimil	25 for F.A.Q.	"
New Crop:		
Lower Assam	25-8	Aug.-Sept.
Indian Jute (Old Crop Pucca):	Rs. a bale.	Shipment.
Mill Firsts 2/3	175	June-July
Mill Lightnings 2/3	160	"
Mill Hearts 2/3	145	"
Pakistan Jute (Old Crop Pucca):	Landed at Mills Rs. a bale	Shipment.
Jat	29-8	June
District	29	"
Northern	29	"
New Crop:		
Jat	28-8	Aug.-Sept.

Imports into the local Cossipore markets have again been irregular. Wagon arrivals have fallen slightly, and over the week a total of 400 wagons reached the sidings. There has been a fair amount of activity from mill representatives, and purchases of local jute through brokers has also added to the steadier tendency. Sellers are inclined to be reserved, and prices are on the high side. Quotations at the close were based on Kishanganj jute at Rs. 26 a maund for garsat quality. Activity

in the Daissee markets is at a standstill due to the large disparity between agency prices and those quoted to Calcutta mills. In Sheoraphuli, these are based on Rs. 28 a maund for garsat quality.

THE FOREIGN JUTE MARKETS

DULL CONDITIONS PREVAIL

(FROM OUR DUNDEE CORRESPONDENT)

DULL conditions still prevail in the jute industry here and on the Continent of Europe. Demand appears to be non-existent at the moment. Consumers of jute yarns and cloth are content to run their stocks down to rock-bottom and await the lower prices which they believe are bound to come in due course. At the prices ruling for old crop jute, Dundee spinners and manufacturers would be losing money by selling at current rates for yarns and cloth, but, if conditions continue as dull as they are, there may be a reduction in prices for these in order to attract business. Paper is gaining ground in the battle for existence in the U.K. and more and more firms are putting in plants to take paper in place of jute for the making of bags, and Dundee manufacturers are very worried over how to combat substitutes. It looks as if the only solution to this problem, which affects the whole of the jute industry, is for Pakistan to grow more raw material and make it available to the trade at some pounds less a ton. Of course, it may be that Pakistan has in view that she should have the monopoly of the whole industry from the raw material to the finished article. Values of raw jute have remained unchanged for both old and new crop. There is little interest in the former, but some new crop is being bought at £91 for Mill Firsts, £81 for Mill Lightnings and £76 for Mill Hearts, August-September, c.i.f. U.K. Daissee and Tossa continue unchanged for old and new crop at the minimum prices in most cases. New grade Tossa-2/3 is available at £100 and 4's at £90, with crack Daissee-2/3 at £91 and grade at £81 for October-November shipment, c.i.f.

Calcutta goods have continued to ease off and business was done with the Jute Control last week at 56s 6d for 40in. 100z. hessians and at 15s 9d for B Twills for May-June shipment, f.o.b. Calcutta. Quotations were generally higher by 6d to 9d for hessians and 2s for B Twills. Yarns and cloth are so quiet here that curtailment of production is increasing by short time and stopping of machinery.

QUALITY TESTS FOR INDUSTRIAL GOODS

An index of the expansion in industrial activity is provided by the increase of over 33,000 in the number of tests carried out by the Government Test House at Alipore for determining the quality of industrial and engineering materials during 1955-56 as compared with the previous year. Disclosing this, Dr. A. N. Ghosh, Director, Government Test House, said that 144,053 tests were carried out in 1955-56 as against 110,327 in 1954-55. To meet the increasing demand for testing facilities, the Government has agreed to expand the activities of the Test House. A sum of Rs. 50 lakhs has been sanctioned for this purpose under the second plan during which a branch Test House will also be opened in Bombay. The fees charged for the tests brought a revenue of Rs. 7,51,658 in 1955-56, as against Rs. 6,87,011 in 1954-55.

TEA COMPANIES

O. Po and Dd indicate Ordinary, Preferred Ordinary and Deferred Shares, respectively. P next to the name of the company indicates that the Company also has Preference Shares. Figures in "accounts closed" column indicate the months of the calendar year in which accounts are closed. For Managing Agents refer to the Key (last page) under the numbers indicated.

IN SEARCH OF BETTER TAXES

LIKELY FATE OF THE KALDOR PROPOSALS

THE sudden jump in the second-plan estimate for new taxation was little more than a convenient way of dealing with an unwelcome discrepancy between estimated outlay and expected income. But it did serve one purpose—to remind the country that the next few years will see a large increase in the tax burden which cannot necessarily be forecast now, and that the sooner some constructive thinking is done on how best it can be shouldered, the smaller will be the inevitably large economic cost involved. That is why the recommendations of the British economist Mr. Nicholas Kaldor, of Cambridge University, are of such importance, and why the reports of the experts Mr. Deshmukh is sending to Europe to study taxes on wealth and capital gains will be awaited with interest. India is not the only country in the world where current systems of taxation are both burdensome and wasteful. If something can be done to bring them more into line with modern requirements, the benefit in terms of economic development and social justice might be incalculable. The possibilities are certainly worth the effort involved in their investigation, provided two important principles are kept in mind. The first is that tax systems should be formulated so as to encourage the expansion of the nation's wealth (or at least to inflict the least discouragement) and to further legitimate social ends, not to satisfy the jealousies and prejudices of any particularly noisy sector of the community. The second is that justice ought to be an objective concept, and it does not contribute to a society's sum of it if a new wrong is done whenever an old one is righted.

India's needs are clear enough. Some method has to be found to ensure that the inflationary potential which development expenditure must generate during the next few years, is effectively immobilised; that the burden of revenue raising is distributed fairly and with least damage to progress; and that a permanent system is established for embodying the maximum of social justice and administrative efficiency with the minimum of economic cost. These are no easy requirements to reconcile. India would be in good company if she avoided all dreams of attaining the ideal and continued simply to muddle from one expedient to the next. The changing fashions in social thinking and the variation in political trends will, to a certain extent, make this inevitable anyway. The tendency can already be recognised clearly enough from the reception some of the more admirable of Mr. Kaldor's suggestions have received. But unless it can be resisted, the country will have to be prepared to pay the price, and as with most tax matters, it is likely to be a heavy one.

It was not to be expected that Mr. Kaldor's recommendations would suit everybody, perhaps the Government least of all. They may be difficult to implement, and certainly contain one or two irritating qualifications. Like all radical changes, they will involve a good deal of political unpopularity if implemented in the manner proposed. They are not completely free from personal bias, and there will be an overpowering temptation to take some proposals out of context. But, from an economic point of view, Mr. Kaldor has outlined a tax system which is probably preferable to the one existing at present. The suggested reforms in corporate taxing would secure valuable economies of simplification. Although it is not possible to say the same for those covering personal taxation, it is doubtful whether the steps Mr. Kaldor recommends would give rise to greater complications than already exist. The main features of the Kaldor scheme appear to be a combination of income and capital taxes, a levy on capital gains, a "personal expenditure tax" of Mr. Kaldor's own formulation, a gift tax and a self-checking system for the whole which would help reduce the present scale of evasion. It is claimed this reform will restore incentive and, at the same time, improve the efficiency of collection.

The main point of the system, so far as incentive is concerned, is the 45 percent ceiling Mr.

Kaldor recommends for personal taxation. There is little doubting the fact that, if the maximum proportion of his income which any individual has to pay in tax is 45 percent, he would have every incentive to increase it beyond the level where, under the present system, he would most certainly stop. He might also be less inclined to go to the trouble of dodging his liability. In theory, at least, the combination of income-tax with an annual tax on wealth (supertax appears to play no part in the Kaldor system) would help eliminate two of the worst features of the present set-up—the inequality of liability between income earners and property owners and the encouragement given to holding wealth in economically useless instead of productive forms. This is, of course, on the hazardous assumption that Mr. Kaldor's checking system would work the way he says it would. It is quite true that an annual tax on wealth, if kept down to the figure suggested, would be a tax on accruals although levied on the principal—an advantage which certainly cannot be claimed for such impositions as estate duties and capital levies. If it were, in fact, to be limited to a charge on accruals, an annual tax on wealth, together with the proposed levy on capital gains, would help eliminate one of the main methods of avoiding income taxation. The resulting blow to incentive would be offset to the benefit of the economy by the reduced level of taxes on the upper income grounds and would probably, as Mr. Kaldor maintains, be less damaging to the productive employment of capital than the encouragement which the present system gives to the hoarding of wealth in the form of gold and jewellery. Of the other personal taxes proposed, the most interesting and novel is that for an expenditure one on all individual outlays of over Rs. 50,000 a year. It is difficult to assess the value of this suggestion because it is without precedent anywhere in the world. Anyway, the radical psychological changes which would be required before it could be introduced will almost certainly ensure that it never will be. The proposed gift tax seems to be a fairly routine device for checking evasions.

The proposed system has two main disadvantages. The first is that it has to be taken as a whole to be of much use

mine a man's suitability to enter the managerial ranks. This might seem a mere platitude, to which every recruitment board pays lip-service, and which each one claims to follow. In fact, the principle is extensively violated. The tendency towards the adoption of a "caste system" is a feature of many enterprises which otherwise claim to believe that "only the fittest should survive." There is discrimination on grounds such as those of birth, social background and education, which sometimes have little to do with the general suitability of candidates. In more recent times, the compromise with sources of influence, patronage and other favours has not been entirely shunned. This is not necessarily always the fault of those who recruit; inefficiency and corruption among those who wield political and administrative power inevitably creates the need for adjustments among concerns whose smooth working demands the frequent and kindly attention of authority. It is therefore good that Lord Heyworth should have re-emphasised the importance of merit, and also that he should have put in its proper perspective the value of a university education. On the latter, he points out: "An increasing proportion of prospective managers have had a university education but my forecast is that, in future, as today, many Unilever managers will be men who came in at one of the lowest levels, who 'came up the hard way' and whose qualities of leadership were developed after they had joined the business." The only university they had been to was "the university of hard knocks." Lord Heyworth lays much stress on the need for what may be described as a greater "vertical mobility" in managerial cadres. Few circumstances can be more demoralising for an individual than to know that, for reasons unconnected with his ability, certain higher posts are outside his reach. "We try to see," he says, "that in our business there is always a ladder by which the man with the right qualities can climb to the next stage."

Referring to training problems, Lord Heyworth points out that "the most important training is that which is done individually and on the job." There is no general scheme of training into which everyone will fit, "no universal and all-embracing sausage-machine into one end of which you can put a trainee and expect a trained manager to emerge at the other." The managerial needs of modern industry are so diverse that increasing specialisation has become necessary—specialisation often to a degree which can only be provided by the individual firms. Yet it is necessary to temper the risks of over-specialisation by cultivating a broader outlook on the problems of the firm, the industry and the economy. In the case of Unilever, the holding of courses, conferences and study groups is aimed partly at meeting this need. Lord Heyworth's remarks on the need for closer co-operation between educational institutions and industry are welcome for drawing attention to a problem which is still very widely neglected. In the United States, education specifically for a career in industry is more highly developed than in Europe, and certainly much more than in India. This is partly a result of the greater status and prestige attached to industrial careers in America, and partly a result of the attractions and opportunities of Government service being comparatively small. In India, conditions have been almost entirely the opposite at least until the end of the war; only recently have popular attitudes been changing. The security and prestige offered by Government service attracted much of the country's best talent until a decade or more ago; but political changes and growing industrialisation have opened new avenues of managerial employment for Indians, which they have not been slow in exploring. Only a slender beginning, however, has so far been made towards ensuring that educational facilities are geared to meeting industry's personnel needs.

This problem calls for more urgent attention than it has so far been given. On the one hand, industry is already experiencing a shortage of qualified managers, and there is every indication that the shortage will grow more acute with the rapid industrialisation of the economy. On the other hand, there is a multitude of educated unemployed persons engaged in a frustrating trek from door to door in search of jobs for which their training might fit them. This yawning gap between vacancies and job-hunters is due primarily to the nature and quality of university education in India today. It can be closed only if industry and the universities draw closer together and discuss what sort of people the former wants and what sort the latter can provide. A two-way traffic in ideas and assistance would do much to promote the healthy working of both. It is idle to expect that the greatly increased output of matriculants, graduates and the like will be absorbed simply if the State sets up a factory here and somebody else sets up a factory there. A factory, business concern or any other type of enterprise requires a certain training and quality of the people who are to run it. What the universities in this country have done so far is largely to imitate the carton-manufacturers by issuing graduates with impressive-looking labels across their chests; it is time they thought of put-

ting something into those cartons, and it is the duty of industry to indicate more precisely what it ought to be.

U.K. INCOME AND CAPITAL FORMATION OVERSEAS INVESTMENT PROSPECTS DIMINISHING

IT will be interesting to see whether finance ministers in other countries follow the example of Britain's Chancellor of the Exchequer in his efforts to stimulate savings; because lack of saving is a crucial problem for others besides Britain. For Britain, however, the problem is special; not merely to divert purchasing-power from consumption to internal investment but also to provide a continuing flow of capital for export. The present time (like most other times) seems inopportune for fundamental adjustments—the immediate need is stability. But a policy that promotes saving can serve both short-term and long-term purposes; and there is no doubt that Mr. Harold Macmillan had both in mind when he presented his Budget in mid-April. However, saving does not become effective immediately; so interest has lately turned to longer-term developments. It is foolish to pretend that the recent changes, important though they are, have gone to the root of the problem. The British public may be willing to add as much as a few hundred million pounds a year to its personal saving (officially estimated at nearly £1,000 million last year)—provided that the rise in prices can be stopped and the public can hold money on the confident assumption that its real value will be at least maintained. Such an increase would relieve the authorities of most of their short-term anxieties, but it would do little to restore Britain to her former eminence on the international plane.

What Britain achieved in the nineteenth century seems to the modern mind incredible. At the same time as she was continuing to build her own industries and services she was financing the development of other countries all over the world—their railways and ports, their water systems, their agriculture, their mines, and—though to a less extent—their industries. How was it possible, on a much smaller economic base than the present one, to accumulate the amount of capital that such commitments imply? Should it not be easy, on a much broader economic base, to accumulate the capital needed for the relatively smaller commitments that Britain wishes now to undertake? The simple answer to the first question is that wealth was very unevenly distributed in the nineteenth century, so that comparatively few people could provide abundance of capital through their saving. The simple answer to the second question is that such an arrangement, whatever its merits and demerits, is politically impossible now, so that large savings can accrue only as an aggregate of small savings. This process of redistribution is not a matter of past history. True, it has been in progress for some generations; but it has been so rapid since the war that the number of persons in the medium net-income category, £500-£1,000 a year, is now (at approximately 7 million) more than 3½ times as large as the number of persons with an equivalent net income in 1938. There are signs that this social transformation has temporarily ceased, or at least that the pace is slower than in recent years; but it has already, even since the war, profoundly changed the basis of capital-formation; and, though it may be slightly modified in changed economic circumstances, it cannot be reversed.

Economic policy must accept the facts as they are—especially the political facts. Economists and industrialists who urge the Government to create a pool of unemployed labour, so that the redistribution of wealth can be reversed by a reduction of wages, evoke little sympathy in a Government which knows that it would be voted out of office if there were any serious threat of unemployment. The redistribution is generally accepted as a fact. The task, therefore, is to draw a large aggregate of savings from these incomes in the medium range. That is not, however, the whole task. It is necessary not only to provide an adequate total of savings but also to allocate those savings to appropriate uses, so that they will strengthen the economy—its fuel and power, transport, and industry and make a surplus for investment abroad. On the other hand, industry's need of outside finance has been moderated by the growth of its internal savings: companies are earning much more, and distributing a smaller proportion of their earnings, than they did before the war. This self-financing by companies is a necessary adaptation to circumstances in which personal savings are inadequate and, also, are directed mainly to non-industrial uses. It is not, however, an ideal method of financing. Some companies hoard too much of their profits, investing in their own enterprises money which would have been more usefully employed in others. And capital that flows from profits may become inadequate when profits are diminishing—as they appear to be now. However, this system

has, so far, worked reasonably well; in any case, there is no practical alternative to it.

The kind of saving that Mr. Macmillan is now trying to stimulate is that which flows through the National Savings Movement and the insurance companies. National Savings are directly deflationary, not only because they represent deferment of consumers' spending but also because, made available directly to the Government, they reduce (or restrict the advance of) the inflationary floating debt. Insurance premiums have a similar effect on current spending, and they assist the Government's financing indirectly, as they are invested largely in Government stocks. The Government is often criticised for investing in fuel and power, transport, and housing, more (it is said) than the nation can afford in its present circumstances. But the present—and presumably permanent—distribution of income makes personal savings available to the Government much more than to industry. And only the Government, by regulating the balance of payments, can make enough capital available for export.

CURRENT COIN

Record Sales of B.I.C.C.—The expanding scope for electrical manufactures is reflected in the statement made by Mr. W. H. McFadzean, chairman and managing director, to shareholders of the British Insulated Callender's Cables Ltd. (a fuller version of it appears on a later page). The company's trading profit has increased sharply by 61 percent to £11.85 million. An important reason for this is the rise of 36 percent in sales to the record level of £119 million. A considerable proportion of the latter increase is accounted for by higher raw material prices, particularly those of copper. But there has also been a substantial increase in the physical volume of output due mainly to the consistently high demand for practically all the company's products, and to the benefits of modernisation and expansion plans carried out in recent years. Mr. McFadzean points out that competition overseas during 1955 has been "more intensive than ever and profit rates have suffered accordingly." Still, the company has done business in 120 countries, and directly exported £18 million worth of goods from Britain. One of its most important developments is in the submarine power cable field; what the chairman describes as a "unique order" has been completed for the British Columbia Electric Company, and the cables are on their way to Vancouver. The Indian Cable Company, he mentions, has had a successful year, and a new factory has been opened in Pakistan. The outstanding memory of 1955, Mr. McFadzean declares, "will be the problems we encountered relative to the supply, price and financing of copper. Copper is a metal which is, and I believe always will be, of great importance to the electrical industry, and I hope there will be an absence of the labour troubles which have bedevilled the position in recent years; that supply and demand will soon be in balance; and that prices will stabilise at a much lower level than they are today." The company has spent considerable time and money on developing and using other metals, particularly aluminium, efforts on which were further intensified last year. Summing up the outlook for the current year, Mr. McFadzean says that while "I view it with some caution and certainly cannot visualise the uniformly favourable conditions of 1955 being repeated, I feel we can look forward to satisfactory results."

Progress of Domestic Currencies.—Cost of living statistics are published by nearly every government. They are not always correct and are often subject to "retouching" by the officials who compile them. They are not popular reading matter as they are the surest indicators of inflationary conditions. But they present, even with frequent "patriotic falsification," an excellent picture of the considerable destruction of currency value in the post-war period. According to the 1956 edition of Franz Pick's *Pick's Currency Yearbook*, due to be published in a few weeks' time, out of 60 currencies with available cost of living statistics, only five rose in domestic purchasing power during these ten years. Led by the Russian ruble which, after a drastic currency reform in 1947, gained not less than 57 percent in purchasing power until the end of 1955, they include the Iraqi dinar, the Philippine peso, the Panamanian dollar and the Cuban peso. Unchanged in purchasing power were only the Burmese kyat and the well-managed Portuguese escudo. All other currencies of the globe lost in purchasing power. Smallest losses over this ten-year period were registered for the Dominican peso and the Egyptian pound, which showed only a 2 percent rise in the cost of living. The U.S. dollar, the world's monetary pivot, shrank 17 percent in buying power over the past decade. The Canadian dollar lost 28 percent; the pound sterling 35 percent; the Mexican peso 48 percent. Fifteen monetary units saw their purchasing power more than halved; many of them, like the units of Chile, Paraguay, Bolivia, Korea, etc. had it practically wiped out. This creeping destruction of buying power, nevertheless, contributed to the most sense-

tional period of industrial and economic progress in world history. One great question remains open: Russia not only managed to proceed without inflation, but deflated her price level considerably and arrived at undeniable results of full employment and colossal increases of production in nearly every field of her economy. She also financed her industrial progress with unlisted and highly popular lottery loans that carry tax-free winnings, corresponding to an over-all interest of only 2 percent per annum. Whether this new currency policy will be imitated by the West, cannot be foretold. The following statistics are based on official government "cost of living" indices.

Employers' Concern.—Industrial employers in this country rightly feel concerned about some of the provisions of the Government's new draft legislation on labour. The provisions, it is thought, are least likely to encourage the establishment of the industrial truce during the second plan which the Government so often talks about. On the contrary, they would introduce fresh complications into management-labour relations by legally defining those as workmen who by the nature of their jobs hold managerial and supervisory appointments. A few days ago, the views of Mr. E. F. G. Hunter, chairman of the South India Employers' Association, were the subject of comment in these columns, and what Mr. Hunter said, in a markedly objective vein about the prospects of industrial relations in the country, has just been fully supported by Mr. J. K. Srivastava, deputy chairman (now elected chairman) of the Employers' Association of Northern India. Mr. Srivastava, as did Mr. Hunter, takes an entirely enlightened view of the employer's rôle in India today, where the aim is a socialist pattern of society. But he could not help feeling that much of the legislation on labour was being unduly "weighted against employers", while nothing much was being done to make labour realise the responsibilities and duties it must shoulder for the socialist goal to be achieved. Labour, he stressed, gained nothing from the loss of production, yet it went on strike on very trivial grounds. He referred particularly to the textile strike at Kanpur where the losses resulting ran into lakhs of rupees, and rationalisation, which was supposed to be the grievance for which the workers struck work, was conceded by them to be in the best interests of the industry when they finally gave up the strike unconditionally. Such things happened because labour today was misguided by "outsiders" who not only often harmed the cause of labour itself, but kept the workers hopelessly divided among themselves. This was also one of the important points of Mr. Hunter's address, and most industrial employers feel the same way. Mr. Srivastava pointed out that the trade union leadership in the country was responsible, in most cases, for creating a gulf between workers and their employers. He therefore welcomed the idea of joint consultation in industry, which would bring the workers and the management closer. Besides it would make the former feel that they have a more vital stake in industry than the mere cash nexus. He also welcomed such happy agreements between both sides as Tatas have entered into with their steel workers at Jamshedpur, and the Ahmedabad and Bombay textile millowners with theirs on the bonus issue. But he would like finance and the general administrative policy to be left to the exclusive charge of managements. Considering the complex nature of the financial and general administration of industrial undertakings of which the workers can be presumed to have yet acquired little understanding, his suggestion is not unreasonable.

Industrial Relations in March.—Despite the rise in the number of disputes, industrial relations

showed an improvement during March, 1956, according to the provisional statistics released by the Labour Bureau, Government of India. There were 53 cases of fresh disputes involving 97,908 workers against 87 and 42,079 respectively during the previous month. But the time lost was 686,020 man-days against 876,859 in the preceding month. The number of disputes current at any time during the month was 133, of which 131 involved 130,517 workers. In the previous month, the number of disputes current at any time was 124 involving 69,785 workers. The time-loss during the corresponding month last year and the monthly average time-loss for the year, 1955, were 334,696 and 474,821 respectively. The time-loss figures, however, indicate that the industrial relations during this period were not better than during the corresponding month for the previous year and also compared with the monthly average time-loss during 1955, by 105.0 percent and 44.5 percent respectively. The average duration of disputes current at any time during the month was 5.3 days against 12.6 days in the previous month. Fourteen of the disputes were lock-outs. These involved 15,983 workers and accounted for a time-loss of 218,213 man-days. There were seven lock-outs in West Bengal, three in Madras and one in Assam, Madhya Pradesh, Punjab and Uttar Pradesh. One hundred and three disputes terminated during the month under review. Of these, 73 lasted for not more than five days each and ten lasted for more than 30 days each.

Mineral Production in 1954.—India produced Rs. 102 crores worth of minerals during 1954, according to the latest issue of the *Indian Minerals* (Vol. X, No. 1, January, 1956) published by the Geological Survey of India. The figure does not include the value of petroleum produced in the country. The total value of metals obtained from ores during the year was Rs. 70 crores. There was a considerable increase in the production of pig iron, steel, copper,

ferro-manganese and silver, figures for ferro-manganese, 36,712 tons, and silver, 161,185 ozs. being the highest so far recorded. The output of aluminium and gold was appreciably higher than that of the earlier year. In the case of lead and zinc there was a shortfall. There was, however, an appreciable increase in the output of barytes, calcite, china clay, copper, corundum, felspar, graphite, kyanite, ochre, mica and steatite. There was a rise in the output of bauxite, fireclay, coal, gypsum, ilmenite, iron-ore and saltpetre. The figures for apatite, asbestos, chromite, Fuller's earth, magnesite, manganese-ore, salt, sillimanite and wolfram registered declines in production, and those for bentonite and diamond indicated a slight fall. The output of rutile remained the same as in the previous year.

EXPANSION OF RAILWAYS

WE are glad to record the fact that the Administration report of the Indian Railway system relating to the year 1955-56 bears abundant evidence of the pursuit of a far more energetic policy in railway matters than we have been accustomed to in recent years. The addition of new mileage opened to traffic during the past year, it is true, has only amounted to 823 miles, bringing the total mileage up to 19,678 miles; and this, though hardly satisfactory in itself, is nevertheless a very decided improvement on the miserable record of 255 miles for the previous year. Railways, however, cannot be built in a day, and time must necessarily elapse before the increased activity to which we have alluded can make itself apparent. It would, however, appear that the suicidal policy of arresting the progress of railway construction, upon which the full development of the resources of any country is so essentially dependent, merely because there was a temporary lack of money in the public purse, has now been definitely abandoned, and we may, therefore, hope in the future to witness a very substantial improvement in the yearly additions to the railway mileage of the country. In addition, moreover, it is to the mileage added during the year, it is observed that on 31st March last, the railway programme included some 3,789 miles of line, either actually under construction or definitely sanctioned, while the survey operations of the year were both numerous and extensive.

BRITISH INSULATED CALLENDER'S CABLES LIMITED

SALES INCREASE OF 36 PER CENT.

BENEFITS FROM CAPITAL EXPENDITURE PROGRAMME

MR. W. H. MCFADZEAN ON PROGRESS OVERSEAS

The Eleventh Annual General Meeting of British Insulated Calender's Cables, Limited will be held on 15th June, 1956 at the Adelphi Hotel, Liverpool, England.

The following is an extract from the circulated statement by the Chairman and Managing Director, Mr. W. H. McFadzean, C.A., Companion I.E.E.

Profit on Trading has increased by £4,473,647 or 61 per cent. to £11,852,852. A combination of several favourable factors has contributed to this record, but the two main reasons have been the increase of 36 per cent. in sales with its great benefit to our load factor and, of at least equal satisfaction to your Directors, the benefits now being received from our substantial capital expenditure over recent years at home and abroad.

After adding other Income and deducting Depreciation and the other items detailed in the Profit and Loss Account, the Group Profit left available from 1955, subject only to Taxation, is £4,024,603, higher at £9,967,219. Out of this Taxation absorbs £4,839,058 or almost 50 per cent.

In view of the necessity of strengthening certain reserves in the ordinary prudent conduct of the business, it is proposed to transfer £3,331,355 to strengthen

en Revenue Reserves and Carry Forward, in addition to adding to Special Capital Reserve the profit of £87,740 made on the Realisation of Investments.

Following the Interim Dividend of 4 per cent. (less income tax), paid on the Ordinary Stock before our recent new issue, we propose a Final Dividend of 8½ per cent. (less income tax) on the new Ordinary Capital.

The Balance Sheet is a strong one with disclosed Reserves of over £27,000,000 and manufacturing assets shown at very conservative figures.

Sales of the Group were 36 per cent. higher at the record figure of £119,000,000.

A considerable proportion of the increase is accounted for by the higher prices ruling for many of our raw materials and copper in particular, but there has also been a substantial increase in the physical volume of our output due mainly to (a) the consistent demand for practically all our products as distinct from the somewhat uneven load factor of the previous years; and (b) the benefits of the extensive modernisation and expansion of manufacturing facilities carried out in recent years enabling us not only to increase the volume of our production but also to comply with the frequent demands for quick delivery

and the ever-increasing emphasis being rightly placed on price and quality.

Direct Exports Total £18m.

Competition overseas during 1955 has been more intensive than ever and profit rates have suffered accordingly. Through the sustained efforts of our personnel at home and abroad, often involving arduous and long journeys, we have nevertheless done business in 130 countries and achieved direct exports from this country of £18,000,000 including a substantial amount to the dollar area. To arrive at our full contribution to this vital national problem there must also be taken into account our indirect exports from this country (substantial but unfortunately impossible to assess accurately), represented by our products incorporated in plant manufactured and exported by other British Companies, and also the benefits of the further £23,000,000 turnover achieved by our Overseas Subsidiaries.

In Australia, we have received orders for the installation of overhead traction equipment for two extensions to the electrification we are carrying out for the New South Wales Railways.

Two important cable contracts in Canada employing 230,000-volt oil-filled cables, have been secured; one from the British Columbia Electric Company and the other from the Hydro-Electric Commission of Ontario in connection with the St. Lawrence Seaway Project.

Important Submarine Power Cable Development

One of our most important developments which is attracting world-wide attention is in the submarine power cable field. Stockholders are already aware of the unique order we are executing for British Columbia Electric Company. I am glad to report that manufacture of the cables has been successfully completed ahead of schedule. The cables are now being loaded on to a special cable ship for transport to Vancouver and installation this summer.

In this same sphere we are proud of the recent award to us by the New Zealand Government of a contract to investigate and report on the practicability of a submarine power cable across the Cook Strait. If this can be successfully accomplished it will bring to the New Zealand Government and State Hydro Department not only a fitting reward for their vision and courage, but also great financial economies.

Our own Group Companies in Australia have all made further progress during 1955 and are steadily justifying our confidence in their future.

As I advised you in my Statement last year, our new Canadian Company, Phillips Electrical Co. Ltd., had an extremely difficult time in 1954, mainly due to the major re-organisation we were then carrying out. The first fruits of the latter were certainly gained in 1955, for Phillips then made a profit of over £700,000 before taxation as compared with virtually breaking even the previous year.

The Indian Cable Company, in which Indian Nationals have now a substantial shareholding, has also had a successful year and is making its full contribution to the great industrial development of that country.

Associated British Cables Ltd. in New Zealand, in which we have an important shareholding and act as technical advisers, has made further splendid progress. We have recently formed our own B.I.C.C. New Zealand Company with a New Zealand Board to deal with major contracts there and to strengthen still further the co-ordination between the Parent Company and the valuable Agents of long standing we have in New Zealand.

The new factory in Pakistan in which we and certain other Companies in this country together with Pakistan Nationals are interested, was recently opened by the Hon. Mr. Habib I. Rahimtoola, Minister for Industries and Commerce.

Copper—Supply and Demand

To many of us in B.I.C.C. the outstanding memory of 1955 will be the problems we encountered relative to the supply, price and financing of copper. Copper is a metal which is and I believe always will be of great importance to the electrical industry, and I hope there will be an absence of the labour troubles which have bedevilled the position in recent years: that supply and demand will soon be in balance; and that prices will stabilise at a much lower level than they are to-day. It will be of great benefit to all concerned if these three practical possibilities can be achieved.

Although copper is a vital metal to us, we have over recent years spent considerable time and money on the development and use of other metals and in particular aluminium. Our efforts under this latter head were further intensified last year and to-day we can justly claim to be in the forefront technically in our particular sphere.

I would sum up the outlook for 1956 by saying that whilst I view it with some caution and certainly cannot visualise the uniformly favourable conditions of 1955 being repeated, I feel we can look forward to satisfactory results.

From the longer term aspect I have every confidence. The electrical field must be an expanding one, and the fact that it is becoming more and more technical is all in our favour. We have a wide base of products and, through our overseas policy, a world-wide sphere of activity. Above all, we have the personnel—the greatest single factor in assessing the future of any concern.

THE difficulties under which the British business community in Calcutta is forced to labour remain the strength of many conversations at the diminished number of cocktail parties and will no doubt continue to provide an ever-ready topic for a quiet little grouse in the city's offices. Last week-end's cyclone was perhaps a case in point, as anybody will confirm who was forced to carry on with depleted complements at desk and bench, whose telephones are still out of order, and who is still aching at the joints from the wetting he got. And the feeling of helplessness which comes when a car, because the brakes are wet, goes sailing on in spite of a foot hard on the pedal is probably even worse than the disgust felt when there is obviously no alternative to taking off shoes and socks and getting out to push. But such trials are, of course, of little significance compared with the many countless unfortunates who have lost their livelihoods and perhaps all their inadequate belongings as well, just because the weather chose to take an unseasonal turn. In fact, a long and useful business career can have its compensations, and one of them is the richly-deserved knighthood which often goes to those who have served in the exacting post of President of the Bengal Chamber of Commerce. The one which the Queen has chosen to bestow on Mr. G. A. S. (Sandy) Sim is so completely expected and so obviously richly-earned that it seems to need no further comment; except perhaps that it is a pity that he is not here to accept our congratulations. Among the many other awards in this birthday honours list which are of interest to us in Calcutta, is one for another personality to whom difficulties and frustrations must be the substance of his daily toil. I refer of course to Mr. Leslie James Goddard, Rector of St. Paul's School, Darjeeling. My own admiration for the teaching profession dates from the time I left school, but it is none the less sincere for that, and there will be many Ditchers, past and present, who will join me in my congratulations to Mr. Goddard on his O.B.E. From what I remember of the occasion when my own late Headmaster was awarded this honour many years ago, they will also be joined whole-heartedly by St. Paul's fortunate pupils.

I am told there were certain distinctive features about this year's Calcutta Dinner. The attendance was as large as ever and the function, therefore, maintained its pre-eminent place among the annual reunions of Britons working in the East. One innovation, of more than purely sartorial significance, was that dinner jackets and black ties were worn—even at the top table, replete with ex-governors and other proconsuls—in place of tail coats and decorations. Whether this is to be taken as a sign of the prevailing subdued mood of the business community and a desire to avoid being thought of as ostentatious, I do not know. Anyway it was a break with an ancient tradition. But an even more conspicuous departure from the past was that, for the first time in the forty-odd years of the Dinner, a woman was in the chair of honour. It is customary to ask the Indian High Commissioner in London to be chief guest at the Dinner once during his or her term of office. This year the invitation went to Mrs. Vijaylakshmi Pandit who, by all accounts, filled the rôle admirably. My information is that her speech was a model of what a postprandial address ought to be. She pointed out that while 24th May was Empire Day in the English calendar, it was also the first day of the present Buddha Jayanti and succeeded in drawing from the coincidence some apt conclusions which were put out with grace and wit, although I do not know whether the inference was that we are all still seeking enlightenment. Mrs. Pandit remarked that she had been told by one ex-governor

A DITCHER'S DIARY

nor of Bengal that in the old days her rare visits to Calcutta usually ended in a riot. But at the conclusion of her speech she received one of the warmest ovations ever accorded a visiting diplomat at a London dinner. American audiences, said Mrs. Pandit, sometimes called her "honey" during her ambassadorship in Washington. Ditchers are perhaps a little more formal in their mode of address, but they left her in no doubt about the friendly regard which she has won for herself in Britain.

I must confess I am not a great admirer of modern English poetry. After a good deal of hearty skirmishing with it I have usually had to beat a retreat. Sir Winston Churchill once said of his cigars that he got more out of them than they did out of him: I am afraid I cannot truthfully say the same of my encounters with modern English poetry. But old habits die hard, and if I do not read much modern poetry these days I still like to read about it now and then. It was, therefore, with eagerness that I seized a copy of Mr. Robert Graves's *The Crowning Privilege* when it came my way. It contains, besides a miscellany of essays and sixteen new poems from Mr. Graves's own pen, a bunch of six addresses given by him last autumn at the Clark Lectures, annually sponsored by Trinity College, Cambridge. The thing that most impressed me in the book, as I hope it will every reader with feelings towards modern poetry similar to mine, is the Tamburlainian way in which Mr. Graves carries fire and sword into its very citadel. He burns and slashes with a devilish abandon and when everybody and everything he dislikes has been laid low and in ruins, he stands akinbo and surveys the scene with profound self-satisfaction. I wonder why he leaves himself untouched because, to my mind, he qualifies for slaughter almost as well as any of his fellows. He finishes the later Yeats, T. S. Eliot, W. H. Auden and Dylan Thomas swiftly enough, but hacks Ezra Pound, because he is not "Pound-foolish", stroke by stroke to death. Reasons? There are many, but obscurity is a prominent one. This is a charge which, I am sure, almost every reader of modern poetry has mentally framed at one time or another but left, through fear of ridicule, unspoken. Now, one of its most notable practitioners has done it for him. But, as might be expected, Mr. Graves has not been universally acclaimed for his audacity. I remember a critic of a high-brow magazine calling his book *The Crowning Privilege*. Considering the quality and scale of Mr. Graves's performance, this, however, seems to me an undeserved comment.

Exit Molotov. In the immortal words of Lewis Carroll "thick and fast they came at last, and more and more and more". It seems quite clear that anybody still left alive in Russia who was associated with the old régime can pack his bags, if he has not already done so, and prepare himself for an early retirement. He has the sole consolation, though, that he stands a fair chance of enjoying it in reasonably full possession of his life and liberty—something which could not be said for the unfortunates at whose removal he must have connived in his time. The eclipse of Molotov is, to date, perhaps the most important twist to current events in the Soviet Union. It confirms what has so far only been suspected—that in fact a breach has been made with the old policies of caution and suspicion and that a new phase of aggressive (though

not necessarily warlike) expansion is in on the way. Molotov has been pastured because he has been unable to adjust his outlook to the needs of the new times. And that might be taken as a hint elsewhere, especially in Washington, that Foreign Ministers who cannot keep abreast of rapid changes are better writing their memoirs than directing affairs. I note with interest that the successor is a fellow journalist, although it is probably just as risky to admit a Russian newspaper editor to the fraternity of the Press as it would be to acknowledge Marshal Bulganin as a member of the military profession; both appear to have reached their present eminence through their qualifications in other fields. But the coincidence at least offers some precedent for believing that the ambitions rumoured to be cherished by a certain prominent Indian newspaper editor might not be so fantastic after all. The fall of Molotov is said to be the personal triumph of Marshal Tito. I would not be surprised. If it is true, it is a pretty good example of the fact that it does not always pay to jump on the political bandwagon; sometimes independence has its reward too.

We have seen how, like the jack-in-the-box, the connection between smoking and lung cancer keeps popping back into the news. I have not seen the letter Sir Alan Herbert wrote on this subject to a British newspaper recently, but I have read some of his comments quoted in a pleasant editorial in *The Statesman*. One of the many important points he makes is that cigars, unlike cigarettes, have nothing to do with paper or salt-petre, and are, therefore, perhaps the most harmless—or should it be the least harmful—of all smokes. He calls for statistics of the incidence of lung cancer "in sensible countries where cigars are cheap and smoked by the common man". I believe there may be some force in this contention, and I wonder if I may venture one of my own. Most of us have observed how nicotine fiends apply to their cigars, cigarettes or pipes the match or the lighter immediately it has been lit, thus inhaling part of the poisonous fumes emitted by the sulphur-chemicals or the petrol. This may be a point worth investigating. To return to Sir Alan, I see he has been shaking off "this ridiculous and dangerous habit" of smoking for the last forty years. Seeing his progress it is not difficult to predict that he will continue to do so for the rest of his days. Indeed, nothing seems to be so easy to give up as smoking. Mark Twain gave it up a hundred times as, I have no doubt, have many others. Sir Alan (then a mere esquire) wrote a piece several years ago on how fit he felt on the day after he gave up smoking for the umpteenth time. Here is an extract: "Gad! I feel fit. Homicidal, but fit. A different man. Irritable, moody, depressed, rude, nervy, perhaps; but the lungs are fine. And if I bash somebody over the head it will at least be said in my defence that I had the strength of mind to give up smoking". I have no doubt that his neighbours were grateful for his heroic decision to sacrifice his lungs rather than put a couple or so of them out of circulation altogether.

(Heard at the bar): "I hope they don't raise the standard of living any higher. I can't afford it now."

(Heard at a cocktail party): "We're a non-profit organisation. We didn't mean to be—but we are."

Finance in India and Abroad

THE CALCUTTA MONEY MARKET

CREDIT STILL IN GOOD DEMAND

Wednesday, 6th June.
VERY little change is reported in the credit needs of industry and commerce during the past seven days. There have been a few signs of slackening, although the trend has been unusually weak for the time of year. Some evidence of decline in the requirements of the sugar industry has come to hand, but accommodation on account of raw jute and grains and seeds in upcountry areas remains about the same. Demand for funds in the interbank market has eased considerably in the past week, but the call rate remains unchanged at 3½ percent.

A market of stagnation has been reported from the market for export documents; what few bills have been in evidence have been on account of gunny shipments. Remittance has been normal. Sterling continues to weaken, and the U.S. dollar is quoted Rs. 47.81. The quotation of Rs. 48.31 mentioned last week was an error; this was in fact the value of the Canadian dollar.

Silver was quietly steady owing to increased demands at lower level and the price advanced from the previous week's level of Rs. 166.4 to Rs. 168.8, quoted today. The rate for ready delivery was quoted at Rs. 169.11. The London price was unchanged at 78.3d.

Gold was steady in sympathy with silver and the price increased from Rs. 103.8 to Rs. 104.12. The sovereign was quoted at Rs. 65.14.

During the week ended 1st June, Government of India Treasury Bills for Rs. 10,05,00,000 were sold in favour of the Reserve Bank.

A further fall of Rs. 4.2 crores to Rs. 1,501.84 crores in notes in circulation was the outstanding feature of the return of the Reserve Bank of India for the week ended 1st June, 1956. The total note issue was Rs. 16 lakhs higher at Rs. 1,525.27 crores. Notes held in the Banking Department consequently rose by Rs. 4.45 crores to Rs. 23.43 crores. A decline of Rs. 4.96 crores to Rs. 676.48 crores in foreign securities was offset by an increase of an equivalent amount to Rs. 703.72 crores in rupee securities. Deposits of the Government of India declined by Rs. 2.21 crores to Rs. 54.48 crores but other Government accounts rose by Rs. 1.14 crores to Rs. 10.26 crores. Balances of commercial banks were Rs. 67 lakhs higher at Rs. 51.88 crores. Balances held abroad fell by Rs. 1.83 crores to Rs. 28.86 crores while investments increased by Rs. 1.65 crores to Rs. 37.03 crores. Other loans and advances improved from Rs. 78.53 crores to Rs. 80.25 crores, of which advances to scheduled banks against usance bills amounted to Rs. 45.58 crores against Rs. 44.22 crores. These advances totalled Rs. 133.33 crores since 1st January, 1956. Ways and means advances were shown at Rs. 2.80 crores (Rs. 2.19 crores).

The return of the State Bank of India for the week ended 25th May, 1956, shows a rise of Rs. 1.95 crores in total deposits to Rs. 227.81 crores. Investments in Government securities are down by Rs. 67 lakhs to Rs. 91.09 crores, while other authorised investments remain unchanged at Rs. 10.44 crores. Advances, including loans, cash credits and overdrafts, and bills discounted and purchased have increased by Rs. 73 lakhs to Rs. 140.20 crores. Cash and balances are, in consequence, shown at Rs. 17.60 crores or Rs. 11 lakhs higher.

The statement of the position of scheduled banks for the week ended 25th May, 1956, discloses Demand and Time liabilities at Rs. 645.08 crores (Rs. 7.31 crores on account of borrowings from banks) and Rs. 435.56 crores (Rs. 3.21 crores), compared with Rs. 637.98 crores (Rs. 7.00 crores) and Rs. 433.72 crores (Rs. 3.11 crores), respectively, in the previous week. Cash and balances with the Reserve Bank have increased by Rs. 83 lakhs and Rs. 53 lakhs to Rs. 39.50 crores and Rs. 43.76 crores, respectively. There is a drop of Rs. 76 lakhs in investments to Rs. 352.79 crores. Advances and investments to Rs. 769.03 crores show a rise of bills discounted at Rs. 769.03 crores of cash Rs. 95 lakhs. The ratios to total liabilities of cash and balances and of advances and discounts are, in consequence, shown at 8.2 percent and 71.2 percent against 8.1 percent and 71.7 percent.

According to the land-borne trade returns received in the Department of Commercial Intelligence and Statistics, the provisional figures of the total value of foreign trade of India by land with Pakistan, Afghanistan, Iran and Burma during April, 1956, are as follows (in lakhs of rupees):

	Exports to	Imports from
Eastern Pakistan	24	169
Western Pakistan	17	2
Other Countries	4	15
	45	186

Total value of trade amounted to Rs. 231 lakhs. Re-exports and trade in treasure were negligible. There was thus an adverse balance of trade amounting to Rs. 141 lakhs.

STATE BANK OF INDIA

Successors to the Imperial Bank

Bank with the State Bank

OUR country is planning for prosperity. This cannot be achieved unless the interests of the small depositor, the small trader and the small producer alike in towns and in the countryside receive the same consideration that is bestowed on the more affluent constituents and the larger industrial units.

You are not perhaps aware that the clientele served by the State Bank of India consist predominantly of persons of modest means and modest requirements. It is on the broad and secure foundation of their patronage that the Bank's structure has been built and will continue to rest.

The State Bank's services are many-sided and it would interest you to know that your varied plans and activities—no matter how small they be—can be made to run more smoothly with the help the Bank can offer.

Why not talk things over with your nearest bank agent, or write for information?

STOCK MARKETS DEVELOP FRESH WEAKNESS

HEAVY FALLS IN INDUSTRIALS AND GILT-EDGED

London, 6th June.

RENEWED weakness developed in the stock markets following the Chancellor of Exchequer's further warning on the effect of wage increases on the economic situation. This, coming on top of the Standard Motor developments and the uncertainty of Wall Street, brought about a sharp fall in the markets, and prices were appreciably lower compared with their previous levels. The weakness of sterling in foreign exchange markets contributed to the fall, while the disappointing May gold and dollar reserve figures also played their part. But selling generally was not heavy. Gilt-edged securities fell back steadily and suffered a sharp break on Monday when the War 3½ percent stock dipped at one time to £69½, thus breaking through the previous all-time low of £70 reached immediately after the increase in Bank rate last February. There was a modest recovery subsequently. Compared with their previous levels, falls in gilt-edged securities often exceeded a point and the Financial Times Index was around one and a half points down on the week. Dollar stocks were firmer in spite of the uncertain conditions in Wall Street. Small selling and a virtual absence of support resulted in appreciably lower prices in the industrial market, and many falls extended to several shillings. Compared with the previous level, the Financial Times Industrial Ordinary Index is nearly ten points down. All sections of the industrial market participated in the fall, leaders and the American favourites included. Quiet conditions continued to prevail in the gold share market, although a rather better tendency developed late. Prices however were mostly lower on the week. Coppers reflected the fall in the metal price, and were lower while other base metals also lost ground. Oils gave a rather erratic display and were little changed on balance. Tea share prices held reasonably steady. Rubbers moved to lower levels in sympathy with the fall in the commodity price, while the news of the easing of the ban on Malayan rubber exports to China had little effect.

The Money Market

Credit was kept on a very tight rein in the London money market last week. Supplies of loanable funds were scarce on most of the days and

official help was given to ease out the situation. Money therefore was costly throughout the week which led to a hardening of bill rates. On Friday, however, the position was more comfortable due to the disbursement of War Loan dividend money, but this was deemed only a temporary easement as it was expected that credit situation would continue in an uncomfortable vein as recently. It was not surprising, therefore, in view of the recent shortage, that discount houses tendered a lower bid for the week's offering of Treasury bills charging the Treasury 1/16th percent more, their average rate for bills being 100s 3/4sd percent. Applications for £260 million worth of 91-day Treasury bills totalling £381,425,000 and were allotted at an average rate of 100s 3/4sd against 99s 1/15d in the previous week. Offerings this week consist of £260 million worth of 91-day bills. The Bank of England return for the week ended 30th May showed that bankers' deposits were £9 million higher at about £231 million, while notes in circulation were about £4 million higher at around £1,871 million.

Warning to Manchester

A warning on German and Japanese competition has been given at Manchester to Lancashire cotton firms and textile machine workers by Mr. Noel Belam, United Kingdom Trade Commissioner in Pakistan who is in the U.K. on leave. He said that exports to Pakistan should be stepped up to beat German and Japanese competition. U.K. exports to Pakistan had dropped, he said, and he called for a quick move to end this trend. There had been many complaints in the past of broken delivery dates. Recently, there had been an improvement but there had also been complaints about U.K. prices as compared with those of their competitors, Mr. Belam said. He added that Pakistan wanted quality goods and quality machinery, and in some cases, it was prepared to pay a slightly higher price for British products.

Platinum Falls Back

The price of free platinum in the U.K. has fallen back to about £38 a troy ounce after touching £39 recently. Trade sources say there have been insufficient buying to sustain the rise which was reported to have been influenced by higher U.S. advances. The two leading refiners in the U.K., Johnson Mathey and Baker are still quoting at £34 to regular customers.

Vegetable Oil Market

Trading was generally slow and values tended to be easier. Coconut oil lacked support with both Straits and Ceylon oil in bulk 10s off at £95 and £98 c.i.f. respectively, and buyers about £1 lower. Copra was easier with the Philippine variety in the region of £188 sellers, and £186 c.i.f. possible buyers. Linseed oil was largely neglected, with bulk oil offered on the basis of June to August arrival at £140. Shipment terms were nominal with tentative ideas for Indian oil around £143 and possible buyers at £141 c.i.f. First and second-hand sellers of groundnut oil were well apart, while bids were generally too low to operate. First-hand sellers were offering South African groundnut oil in bulk at £143 and Nigerian at £139 c.i.f., while re-sellers were reported down to £140 and £137 c.i.f. respectively. Indian cotton oil was neglected with about 500 tons reportedly placed into the store unsold. Castor oil was also weaker under the weight of unsold bulk oil offering on ex-tank U.K. terms at £131. Canadian linseed was sharply reduced on the opening Winnipeg advices, but buyers were holding back.

Declining Trend in Rubber

At the beginning of the week to 31st May, the decline in prices was reversed due to a good volume of short-covering, but interest was not maintained. The downward trend was resumed because of increased Eastern offers which met with only spasmodic demand from factories, while dealers were disinclined to take offers on to their books pending reasonably assured outlets. Further recessions in the motor car industry in both the U.K. and the U.S. disturbed traders. Holidays in New York and Singapore contributed to the general quietness. Towards the close, values were a shade higher temporarily, with sellers not pressing, but on the week, most positions were a 1d a lb. lower on balance. The sole crepe market was only moderately active, but with limited supplies available, dealers held to the previous quotations of 38d a lb. for 3/4 inch smooth No. 1 on the spot.

Singapore Rubber Firm

The Singapore rubber market was firm on Monday morning following the announcement by the Malayan Ministry of Commerce and the Government of Singapore that exports of rubber to China in reasonable quantities may now be permitted. The price for the first grade No. 1 R.S.S. reached 77½ cents by noon compared with 74½ cents at the previous close. The ban was imposed in 1951 when the U.N. ruled rubber as a strategic war material.

London Reaction to Ban Relaxation

Rubber trade sources in London have welcomed the news that the ban on rubber shipments from Malaya and Singapore to China is to be relaxed. The general opinion of the trade is that the move is unlikely to have any big effect on the world demand for rubber. Sir Eric Miller, chairman of Harrison and Crossfield Limited, said that the psychological effect would be valuable at this juncture. Trade sources said the trend in rubber prices recently had been downward. Markets had been overwhelmed by the cutbacks in the U.S. and British motor car manufacture. But the Singapore market was greatly influenced by Chinese operations and in the stiffening of prices, there was a reflection of this.

Stocks and Shares

MARKET CLOSES SLIGHTLY EASIER AFTER HECTIC SPECULATIVE ACTIVITY

COALS, JUTES AND TEAS CONTINUE DULL: SHARP RISE IN RALLIS

Wednesday Evening.

THE share market's speculative counters, under the leadership of Indian Irons, have been buoyant throughout the past week, although the undertone was a little easier at today's closing. There has been little or no investment support in the market, but the volume of speculative transactions has been considerable. Indian Irons have risen since the last clearing, when the quotation was Rs. 37-11, to touch Rs. 39. Sentiment has been helped by the better feeling in Bombay following the settlement of the Tata Ordinary ex-right quotation and the decision of Indian Irons' directors to repay the sterling debenture issue. Other speculatives have followed Indian Irons, the most notable being Indian Copper in which scrip heavy speculation is at present taking place. The general opinion among operators appears to be that the final dividend, which is expected some time next week, will be a large one. Heavy dealings have taken place in the two Birla scrip, Texmaco and Orient Paper, and the prices have fluctuated sharply.

Among the sections, engineering and miscellaneous have monopolised the interests of those investors who have been in the market and one of the week's features has been the sharp rise in Rallis. Jute has been depressed and so has coal, with the exception of Katras Jherriah. Tea has been neglected. The Government security market has continued strong with the new issue in the offing.

Details of the week's trading follow.

Government security prices recorded a further improvement over the last week, but there was a shrinkage in the volume of business owing to the continued shortage of scrip. Three percent Conversion Loan 1946 was once again in the lime-light and was marked up by 3 annas to Rs. 77-11, while 3½ Non-terminable Paper remained unchanged at around Rs. 77-8. In short-dated loans, 3½ 1957 was taken at Rs. 99-13 and 3½ 1958 was nominally quoted at Rs. 99-11. In the medium-dated group, 3½ 1959-61 changed hands at around Rs. 98-3 while 3½ 1963-65 was quoted at Rs. 95-3 cum-voucher and later at Rs. 95-2 ex-voucher. Three percent 1964 had buyers over up to Rs. 95-2 without business passing, while 2½ 1961 improved to Rs. 93-9 and 2½ 1961 was better at Rs. 94. In National Plan issues, 3½ 1961 was asked for up to Rs. 99-13-6 cum-voucher and was later marked at Rs. 99-12 ex-voucher while both 3½ 1964 and 1965 were better by one anna at Rs. 98-13 and Rs. 98-12 respectively. In long-dated loans, 3½ 1966-68 changed hands at Rs. 93-5 but the enquiry for 3½ 1970-75 was stronger than ever and the price improved further by 3 annas to Rs. 90-5. State loans were a dull market and business was of a retail nature. Enquiry was confined almost entirely to 4½ issues quoted at a discount, but very little business was reported. Three percent U.P. State loans continued in good demand, but business was transacted only in small lots.

Very little business was reported in preference shares this week. There were sellers of jutes, but buyers of a few selected miscellaneous issues. In jute, transactions were reported in New Central which were crossed at Rs. 107, Kelvin at Rs. 113 and Cheviot at Rs. 112. In the miscellaneous group, Associated Hotels were done at Rs. 65, and there were buyers of Dalmia Cement at Rs. 102. Indian Aluminium were in demand at Rs. 80 and Indian Iron & Steel were crossed at Rs. 107. New Victoria had buyers at Rs. 4-6. Richardson & Cruddas were crossed at Rs. 85 and Rohtas Industries "B" at Rs. 64-12.

In the banking section, there was a strong enquiry for Punjab National which appreciated from Rs. 53 to Rs. 55. United Bank of India "D" shares were done at Rs. 4-8 and Hind Bank were reported at the higher rate of Rs. 32. United Commercial were a shade better at Rs. 50-8.

A little more business was done in the railway section. Shares which changed hands included Ahmadpur-Katwa at Rs. 58-8, Burdwan-Katwa at Rs. 57-8, Bankura-Damodar at Rs. 57-8, Kalighat-Falta at Rs. 58-8 and Katakhal-Lala Bazar at Rs. 73-8. Several transactions were reported in Dehri Rohtas at around Rs. 13-8.

In the cotton section, Jayshree Textiles were enquired for at around Rs. 7-7 and Kesoram were done at Rs. 18-4. Bowreah improved to Rs. 160 and there were small buyers of Cawnpore Textiles at around Rs. 8-13. Dunbar came to hand at Rs. 312 and New Victoria at Rs. 2-9.

The outstanding feature in an otherwise depressed coal section was Katras Jherriah which, on the announcement of a higher dividend (Rs. 3-8 against Rs. 3 for the half-year) appreciated to Rs. 60 with further buyers at this price. Other shares were more or less neglected with Bengal being done at the lower rate of Rs. 5-36 and Burrakur at Rs. 13-2. There was a small enquiry for East Indian at Rs. 33-4, but Equitable were offered at the lower rate of Rs. 29-8. An odd lot of New Beerbhoom was placed at Rs. 19-3, South Karan-

pura were easier at Rs. 8-15 as were Western Bengal at Rs. 6-12.

Except for a small enquiry for Birla, Cheviot, Nellimarla and New Central, jute shares were dull. Here is a chart showing representative price movements.

	Opening 31-5-56	Closing 6-6-56
	Rs.	Rs.
Anglo-India	181	176
Bally	142	137
Cheviot	208	208

A fair parcel of Bareilly Electric was placed at Rs. 14. Business was reported in Benares Electric at Rs. 17-12, Agra at Rs. 149 and U.P. at Rs. 148. Patna were quoted at Rs. 11-8 and Jubbulpore at Rs. 14-5. There was an enquiry for Calcutta Electric at the higher rate of Rs. 13-8 ex-dividend during the earlier part of the session but later sellers appeared at Rs. 13-5.

In the sugar section, the outstanding features were Durbhanga and Ramnugger which met with sustained enquiry and improved from Rs. 22-15 to Rs. 23-12 and Rs. 26 to Rs. 28-12. Carew & Co. were crossed at Rs. 8-12 and Shree Krishna Gyanoday were reported at Rs. 13-4. The decision of the Directors of the Indian Iron & Steel Company at the meeting held yesterday to repay the sterling debenture issue was greeted by market operators, and the shares were fully steady at around Rs. 38-15 against last week's closing price of Rs. 37-8.

How banking serves the RUBBER INDUSTRY

RUBBER was first planted commercially in India in 1902. Today Indian rubber plantations, concentrated in Travancore-Cochin and Malabar, produce 20,000 tons of rubber every year, valued at four and a half crores of rupees. More than 250 Indian factories depend on this output for their production of finished goods.

Without banking, this growth could never have taken place. The facilities and guidance offered by a good bank, such as the availability of ready funds when needed and the collection of dues in any part of the country, have become part of the structure of the rubber industry.

We at Palai are proud that so many important rubber producers, and indeed leading firms in every field of business and industry in South India, employ the complete banking service we offer.

Current Accounts—Demand Drafts—Telegraphic Transfers—Bill Collection—Letters of Credit—Deposits—Investments—Loans & Overdrafts—Confidential Credit Reports, etc.

If you have business interests in the South, it will pay you to open an account with us. Our 24 branches are strategically located, 22 in important South Indian business centres and two in Delhi and New Delhi; and we have correspondents in all important Indian cities. We offer a fully comprehensive banking service at each office.

Our clients can make deposits at any of our correspondent banks, situated in all important Indian towns and have the amounts credited to their accounts at any of our branches.

PALAI CENTRAL BANK LTD.

Head Office: PALAI, TRAVANCORE-COCHIN

Branches at: Madras, Cochin, Quilon, Trivandrum, Madurai, Mangalore, Bangalore etc.

Also at: Delhi & New Delhi.

A LEADING BANK IN SOUTH INDIA

tonight's closing quotation is Rs. 38.9. Braithwaite & Co. were dealt in freely at around Rs. 28.8 and a solitary transaction was reported in Bhartia Electric Steel at Rs. 16.12. British India Electric Construction were steady at Rs. 9.13 and business was reported in Britannia Building & Iron Old at Rs. 8.4. Burn & Co. were done at around Rs. 37.4 and Jessops were steady at Rs. 36.4. A fair block of Kumardhubi Engineering changed hands at Rs. 10.8. National Iron & Steel were steady at Rs. 8.4, but Marshalls were sold at Rs. 6.8. Richardson & Cruddas were steady at Rs. 27, while Textile Machinery were rather subdued at Rs. 24.14.

In paper, Orient were quiet at around Rs. 38.14, while India Paper Pulp and Titagur were steady at Rs. 25.8 and Rs. 44.14. Shree Gopal Paper were better at Rs. 19.6.

In cement, there was a good enquiry for Ashoka at Rs. 12.4 and Assam Bengal at Rs. 8.2. Dalmia were steady at Rs. 17.4 while Sone Valley were unchanged at Rs. 8.14.

In insurance, Concord were done at Rs. 12.8 and Standard General were offered at Rs. 3.14. New Asiatic changed hands at Rs. 3.14.

In shipping, India Steamship fluctuated narrowly around Rs. 9.4 despite the recent announcement of an interim dividend of eight annas a share. Fort Shipping were crossed at the higher rate of Rs. 16.8.

Among miscellaneous industrials, Alkali & Chemical were higher at Rs. 21.8 while Angelo Brothers were steady at around Rs. 21.4. Balmer Lawrie were done at Rs. 167 and British Burmah Petroleum at Rs. 4. British India Corporation were active and improved from Rs. 11 to Rs. 11.5. Bengal Flour were sold at Rs. 26.12. Calcutta Tramways recovered from Rs. 16 to Rs. 16.4 and good business was reported in Dunlop Rubber at Rs. 30.8. Clive Row met with investment enquiry at around Rs. 11.10 and Electric Construction were done at Rs. 14. Gillanders Arbuthnot were offered at Rs. 13.12 and a small parcel of Shaw Wallace changed hands at Rs. 15.2. Imperial Tobacco were unchanged at Rs. 14.12 while Hindustan Motors, on special buying, improved from Rs. 10 to Rs. 10.8. Indian Aluminium were enquired for at Rs. 22.4, but Indian Cables came in for selling pressure and closed easier at Rs. 35. Jardine Henderson were slightly better at Rs. 102 while Martin Burn were offered at Rs. 24.12. Metal box were crossed at Rs. 28 and National Carbon closed at Rs. 27. National Tobacco were a feature and rose from Rs. 12.8 to Rs. 13.12. Rohtas Industries were steady at Rs. 25 as were National Insulated Cables at Rs. 23. Rallis met with strong enquiry on Bombay account

and improved from Rs. 33.8 to Rs. 46. Walford Transport were in demand following the slight increase in the dividend and improved to Rs. 2.12.

In mining, there was a large turnover in Indian Copper in view of the approach of the final dividend and the shares were done at one time up to Rs. 7; tonight's closing quotation is Rs. 6.14. Karanpura Development eased from Rs. 26.12 to Rs. 25 as did Metal Corporation from Rs. 11.8 to Rs. 11. Orissa Minerals met with some enquiry and improved from Rs. 24 to Rs. 24.9 as did Chrestien Mica Industries from Rs. 14.8 to Rs. 15.4. Burma Mines were slightly lower at Rs. 3.11.

There was again little interest in tea shares. Bishnauth Old were crossed at Rs. 25.12, as were Brooke Bond at Rs. 23.6. Dejo Valley were asked for at Rs. 50 and Dessai & Parbutia and Dhela khat changed hands at Rs. 405 and Rs. 21.8 respectively. Ledo had sellers at Rs. 26 and Tengpani came to business at the previous quotation of Rs. 12. Banarhat were marked at Rs. 370 and Hasimara were crossed at Rs. 39.8. Hantapara and Oodlabari recorded Rs. 223 and Rs. 52.8 respectively. Sungma came to business at Rs. 11.6, as did Kunchunpore at Rs. 14.2 and a small lot of Teliapara at Rs. 17.1. A small lot of Rungamattie were placed at Rs. 104 and New Chumta changed hands at the previous quotation of Rs. 43. Belgachi attracted some support and the price improved from Rs. 52.4 to Rs. 55.

Allowing Rs. 59,839 (Rs. 55,020) for depreciation and Rs. 1,86 lakhs (Rs. 1.15 lakhs) for taxation, the profit of WOLFORD TRANSPORT LTD. totalled Rs. 3,77,429, including Rs. 1,34,123 brought in. The previous year's profit amounted to Rs. 3,58,141, including Rs. 1,38,899 brought in. The ordinary dividend has been increased from 12% to 14%. Contingency reserve is allocated the same amount of Rs. 1 lakh, leaving a carry-forward of Rs. 1,34,493.

The profit of LARSEN & TOUBRO LTD. amounted to Rs. 14.60 lakhs for the year ended last March after providing Rs. 2.25 lakhs (Rs. 2.57 lakhs) for depreciation, compared with Rs. 12.09 lakhs in the previous year. Bringing in Rs. 25,125, transferring Rs. 8.66 lakhs (Rs. 5 lakhs) to taxation and making other adjustments, there is Rs. 8,66,240. The ordinary dividend has been maintained at Re. 1 a share. General reserve gets Rs. 4 lakhs (Rs. 2.75 lakhs), leaving a carry-forward of Rs. 28,740. The directors say that during the year under review, the company was granted a licence by the Central

Government to manufacture sheep's foot rollers and more than 50 of these machines have since been manufactured and supplied. Price competition is keen. While a number of overseas manufacturers whom the company represents are extremely heavily booked with orders and their delivery periods consequently tend to increase, a number of competitors with less heavily filled order books are in a position to offer more prompt supplies. The company expects to meet the situation by maintaining inventories at a high level and by efficient planning of its purchases, and sale prospects are encouraging.

BETTER FEELING IN BOMBAY ECONOMIC VIEWS OF A.I.C.C. HELP SENTIMENT

Wednesday Evening.

THE Bombay Stock Exchange closed last week in a cheerful mood after quiet initial trading. In the beginning, operators were hesitant due to political influences. The A.I.C.C. deliberations, it was feared, would contain new shocks for the private sector. Later it was realised that the Government's economic policy was becoming more realistic and private enterprise would be encouraged to fulfil its target of development.

Firm advices from Lyons Range were a helpful factor. The smooth transition of Tata Steels from cum-rights to ex-rights quotation helped improve sentiment. The scrip was quoted at Rs. 202 ex-rights against the cum-rights price of Rs. 253. Renunciation letter rights also soared from Rs. 57.8 to Rs. 60. Indian Iron improved to Rs. 38.12 on sustained bull support, though profit-taking at bulges was seen. Tata Locomotive gained at Rs. 157 on dividend hopes. Premier Construction were a shade higher at Rs. 183.8 on influential buying. Larsen and Toubro improved to Rs. 16.7, while Mahindra and Mahindra met with demand at Rs. 14.8 ex-dividend.

Changes in the textile group were minor. Closing prices, however, showed fractional gains. Century were prominent at Rs. 568 on knowledgeable buying. Kohinoor met with investment support around Rs. 378. Bombay Dyeing ended at Rs. 666.14, as did Simplex at Rs. 252. India United Ordinary realised Rs. 13.13 and Swadeshi were taken at Rs. 239.

Irregular fluctuations marked miscellaneous industrials. Motor shares were in the limelight, with strong enquiries for Hindustan Motors which shot up to Rs. 10.8. Premier Automobiles gained at Rs. 94.8. Scindia Steam highlighted shipping shares and continued to be in demand at Rs. 19.1. India Steamship backed to Rs. 9.4 on profit-taking. Sugar shares were lower where changed. Belapur were Rs. 236.8 and Walchandnagar Industries were marked at Rs. 250.10. Associated Cement were quietly absorbed at Rs. 219.4, but Digvijay Cement fell fractionally to Rs. 189.12. In the mining section, Indian Copper were prominent at Rs. 6.13 on the expectation of a higher distribution. Among chemicals, Tata Chemical were done at Rs. 18.11. National Rayon were absorbed at Rs. 249 and Gwalior Rayon improved to Rs. 18.2. National Carbon were supported around Rs. 27.6 on investment account.

Bank shares were steady and fractional gains were registered. Bank of India were transacted at Rs. 162.8, as were Central Bank at Rs. 51.8. Punjab National were taken higher to Rs. 53 on prospects of capital reorganisation. Business in insurance shares was restricted, and New India were done at Rs. 42.12. Oriental were unchanged around Rs. 3,009.

The Tata group of electricity companies met with demand. Tata Power were done at Rs. 320 and Tata Hydro at Rs. 132, while Ahmedabad closed slightly lower at Rs. 97.5.

Trade with
Australia and
New Zealand

Business men trading with Australia and New Zealand are invited to use the complete banking service of the Bank of New South Wales.

The oldest and largest joint-stock bank operating in Australia and New Zealand, the Bank of New South Wales keeps in close touch with local conditions through over 850 branches and agencies (sub-branches) in Australia, New Zealand, Fiji, Papua and New Guinea. It is thus particularly well equipped to provide enquirers overseas with a full picture of the local business and rural scene.

Engineering and Transport

AUTOMATION SEEN IN PROPER PERSPECTIVE

THE VARIOUS ECONOMIC AND SOCIAL PROBLEMS

WHEN Britain's Department of Scientific and Industrial Research published its report on automation in mid-May, an uneasy peace had lately been restored at the Standard Motor Works in Coventry. A dispute about retooling there had given rise to what was described (not, perhaps, quite correctly) as the first strike of the era of automation. The report was properly concerned with the social problems, as well as the economic possibilities, of the new processes. But it did not sustain the fear of employees that automatic production would be developed too quickly in Britain. On the contrary, it sustained the anxiety of many industrialists that the development would be impeded by lack of technicians and scientists. This report was intended to clarify a subject that had been distorted by exaggeration. There had arisen in some minds a picture of millions of workers wandering idly about the streets while the factories where they were formerly employed were working—and working fast—almost without labour; of goods piling up because only the new class of specialists could afford to buy them. The report has shown that an immense amount of labour will be needed to produce the new machinery, and that if its benefits are properly distributed, mass-unemployment will be unnecessary.

To counteract the exaggeration, some people have been arguing that there is really nothing new in automation, that it is only a further stage in the process of mechanisation that began when man developed the first rudimentary aids to his own actions. The report has shown also, however, that it is dangerous to under-estimate the qualitative change implied in automation. Most people are agreed that it would be perverse and stupid—if, indeed, it were possible—to halt the progress of automation, that what is needed is to clarify its problems and to solve them in their proper order. For a country in Britain's position, utterly dependent on international trade, the paramount need is to produce more efficiently and at lower cost. The first task, therefore, is to overcome the obstacles to automation. The social adjustments to it can be made gradually; for it is certain that, no matter how fast the scientists and technicians and engineers work, the process of automating British industry will be spread over decades rather than years.

Shortage of Skilled Staff

The D.S.I.R. report has been criticised as focusing too much attention on the shortage of qualified manpower, too little on the lack of resources for producing the new equipment. "Over-full employment" stimulates the demand for automatic machinery, to economise labour, yet prevents the electrical and engineering firms that make such machinery from getting enough labour to satisfy the demand. The need to expand output of many products (even now, when demand in some sec-

tors is reduced) makes insistent demands on supplies of steel, and the shortage of steel impedes production of automatic tools. The new "basic" industries need capital, which is not readily available at present. It is still true, however, that the most serious shortage is of qualified personnel. Britain, whose technical training programme is deplorably meagre compared with, say, America's or Russia's, will in the automatic age suffer seriously from her deficiency, unless the highest priority is accorded to this problem forthwith. For the two big developments in technology, automation and nuclear power (which are related), both require the same special skills. And a large proportion of the available personnel is at present engaged—necessarily, it may be, but uselessly—on defence.

Those who argue that there is essentially nothing new in automation overlook this human factor. One of the essential differences between handicraft and mass-production was in the character of work. There is the same essential difference between conventional mass-production employing many workers in association with machines and automated mass-production employing few workers supervising the instruments that remotely control the machines. The difference is not only in the number of people needed to produce a specified quantity of goods, but also in the character of their work. As the first industrial revolution replaced personal skill and created a new class of unskilled workers, so the second industrial revolution will replace unskilled work and create a new class of skilled workers. They will not be concerned primarily with machines, but rather with electronic instruments (including the essential computers), or with preparing production schedules in such a form that they can be "fed" into an automatic system.

The Range of Automation

This new class of workers (some of whom must have knowledge of both electronic computers and engineering), and of supervisors and managers above them, will presumably be very highly paid. One of the difficult social problems of the new age will be, probably, the wide disparity between wages and salaries in automated and in more conventional activities. The D.S.I.R. report listed various activities where automation could not obviously be applied: agriculture, forestry, fishing, mining, building, making clothing, catering, entertaining, personal and professional services. Workers in such activities should benefit from an abundance of cheap goods, but their standard of living might be much lower than that of the "automated" workers. Some sociologists are apprehensive, however, of the purely human element in this new privileged class. Repetitive tasks performed by hand may not engage much of the worker's attention, but they keep him occupied while leaving his mind free. With no physical actions to perform and the eyes and mind focussed on the dials of an instrument, it is difficult to sustain attention for any length of time. The new kind of work might, indeed, be so boring that few people would want to do it, even though well paid. But their objection could presumably be overcome by reducing the working time to short periods. Perhaps offices will be automated first (by computers), fac-

ories later (by automatic-handling systems controlled by computers). Ultimately, however, automation must cover a very wide range.

STEEL CASTING FOUNDRY AT CHITTARANJAN

AN agreement has been signed between the Government of India and the International Technical Co-operation Mission of the United States providing for the allocation of \$144,000 by the latter for obtaining consultant and technical services for the completion of a steel casting foundry at the Chittaranjan Locomotive Works. The Government of India's contribution to the project will be Rs. 3 lakhs. The present agreement supplements the Technical Co-operation Programme Agreement signed between the Governments of India and United States on 5th January, 1952.

U.K. RADAR EQUIPMENT FOR INDIAN HARBOURS

The lighthouse department of the Indian Ministry of Transport has placed a contract, as a result of open competitive tender, for the supply and installation of a Decca (Type 32) harbour radar at the new port of Kandla. The radar will be used to assist in the supervision of vessels navigating the approach channels of Terra creek to the new harbour. Type 32 is the outcome of long-term investigation by Decca Radar Ltd., into the requirements for harbour radar at major ports, and is the most advanced equipment of its kind in the world. Its discrimination in range and bearing is of an extremely high order, enabling it to meet the requirements for the supervision of navigation in dense conditions of traffic. A further major development now being undertaken by the lighthouse department of the Transport Ministry is the scheme for the installation of radar in lighthouses to assist navigation in coastal waters. Decca (Type 30-A) harbour radar has already been chosen for the first stage of this new development programme, and will be fitted in the lighthouses at the approaches to Calcutta and Bombay. The value of the order placed with Decca is estimated at some £27,000.

OIL EXPLORATION IN PAKISTAN

Some 12 acres of Government land on the Hands Hill quarries will be the scene of oil prospecting activities in Drigh Road, Karachi. Pakistan Petroleum Limited, who have been given the possession of the land, moved in their engineers and equipment recently to prepare the site, lay the waterline and make all preliminary arrangements for the drilling of the test well. This exploratory well which will be located at the top of the hill, overlooking the Drigh Road Housing Estate, may be drilled to a depth of over 10,000 feet if necessary. The drilling outfit for this well is the same as that which drilled the discovery wells in the Sui and Uch gas fields.

BELGIAN HYDRAULIC TURBINES

The development of Belgian material for equipping steam power houses has been conditioned by the hydrography of the country. Techniques, however, are being modified to suit the hydro-electric constructions which Belgium is carrying out in the Congo. These large-scale works have made a big demand on the industrial production of Belgium, whose industry is now equipping itself to produce hydraulic turbines. These are mainly necessary to run the most powerful alternators ever built in Belgium (69,000 kVA., 10,500 V., 333 r.p.m.), which are to be installed in the Le Marinel power station at Katanga (Belgian Congo).

An important Belgian firm of electrical goods producers is carrying out an extension to its workshops which will increase by 20 percent the surface area until now used for building heavy equipment. The new premises will be equipped with machine-tools having unusual characteristics. One, for example, will be the largest vertical lathe existing in Belgium. Its 730 tons will be split up to enable it to be loaded on the 60 wagons necessary for its transport; the lathe will rest on a base of 580 cubic metres of concrete, embedded six metres into the ground. Some 340 h.p. will be necessary to work the pieces which can be up to 18 metres in diameter and five metres in height.

BELGIAN MATERIAL FOR SECTIONAL BUILDING CONSTRUCTION

Mecafer is a patented Belgian material which allows the construction of an unlimited number of sectional buildings, transformable and recoverable at will. It is formed of different standard elements perforated with strategically placed holes of correctly chosen sizes. These constituent elements are "U" and "L" bars of different sections which may be assembled in any manner by means of some multi-purpose junction boxes and stay-plates. The various basic elements, their constructive possibilities and their varying resistance, allow a very wide range of constructions, from simple shelving and counters to structural framework and buildings, including publicity hoardings, partitions, etc. The manufacture of Mecafer by an important Belgian study bureau is aimed at generalising the use of sheet-metal in numerous sectors where wood has so far had very little opposition. This substitution has the merit of considerably reducing fire risks, and renders possible accurate construction with the advantages of economy, durability and interchangeability.

Bombay

DEMAND SLACKENS IN TEXTILE MARKET

MILL OUTPUT RESTRICTIONS LIKELY TO AFFECT EXPORTS

(FROM OUR BOMBAY CORRESPONDENT)

ACTIVITY in Bombay's textile market has suddenly slackened and the heavy buying of recent months seems to have come to a halt. The trade is not particularly perturbed. It is believed that internal consumption has risen perceptibly, so the present decline in demand is a temporary phase which will disappear when the accumulated stocks with dealers begin to dwindle. The price level has not fallen. The trade is taking a long-range view based on the Government's policy of freeing mill production in order to encourage the small-scale industry. It is generally believed that this will result in cloth scarcity and tend to keep prices at a high level.

Confidence in an expanding internal market has diverted attention from the export trade. The abolition of the export duty on coarse cloth has had no visible results. There has been no inclination to fight competition in foreign markets in spite of the lull in domestic demand, and foreign buyers have shown no interest in Indian cloth at current prices. The U.K. seems to be the only exception and some brisk enquiries have been received in the last few days for greys of medium counts. Hongkong, Singapore and Malaya, the traditional outlets for Indian cotton piecegoods, have remained quiet. Meanwhile, Colombo reports indicate that the first consignment of Pakistan cloth has now reached Ceylon. This delivery is believed to be satisfactory, and it seems possible that further large orders will be placed with Pakistan manufacturers. It is also reported that Singapore merchants have formed a pool for the purchase of standard quality cotton textiles from Communist China. The value of pool purchases is estimated at Rs. 9 million a year. Most of this cloth will be re-sold to Indonesia, which means that yet another export market will be lost to India. The Chinese have promised prompt delivery at prices which are reported to be lower than Japanese quotations for comparable materials.

Serious Export Problem

The export problem is becoming serious. Losses may be permanent because Pakistan has the advantage of a modern industry and ample supplies of home-grown cottons, while Communist trade is not always conducted on an economic basis. A fall in exports will perhaps not hit the industry very hard because of the expanding home markets, but it will mean an appreciable loss in terms of foreign exchange at a time when the deficit is already large. In these circumstances, the Government may be well advised to reconsider its textile policy, and permit the normal expansion of the mill industry instead of over-emphasising the development of small-scale units.

The optimism of the industry has been reflected in the raw cotton market. Bombay mills have bought heavily and cotton prices now stand at a high level. Most varieties have touched the ceiling prices fixed by the Government. This buying pressure is likely to continue because the mills here are reluctant to buy American cotton at a time when it seems likely that U.S. prices will be reduced still further. Bombay mills have been equally reluctant to import Egyptian and Sudanese growths because of their present high prices. It will be interesting to see the effect of Communist trading with Egypt on the price of Egyptian cotton in recent months. Communist countries have taken delivery of large quantities of Egyptian cotton in payment for goods supplied to Egypt. These deliveries are believed to be far in excess of the productive capacity of the countries concerned—particularly Czechoslovakia—and they are now offering for sale their excess stocks of Egyptian cotton at prices well below the ruling level. This practice, if continued, may depress Egyptian and Sudanese prices.

Standards for Raw Cotton

Meanwhile steps to standardise domestic raw cotton are contemplated. Under the measures recommended by the East India Cotton Association, the fibre will be sample-tested and marked according to staple length, colour, trash content, moisture content and spinning capacity. This will facilitate the identification of various types of cotton for the counts of yarn they can yield and the percentage of waste in the process. A survey reveals that much of the Indian cotton is under-spun, that is, used in counts lower than the spinning capacity of the cotton. It is also intended to apply the new methods of standardisation to exportable cotton, so as to give the foreign buyer an accurate indication of quality. The trade is anxiously awaiting a decision on the matter. The resumption of the futures market. The matter will be finally decided when the Commerce Minister discusses the basis of resumption with those concerned after the A.I.C.C. session in Bombay. Opinion is divided on the proposal to have two concurrent contracts, but this seems to have certain advantages as they will cover the qualities most in use and help to prevent excessive bull speculation.

Prospecting for Oil

Prospecting operations are proceeding along a 100-mile strip in the Cambay-Gogha area bordering the Gulf of Cambay for suitable sites for experimental oil wells. If preliminary investiga-

tions prove satisfactory, test drilling will begin in November. The Cambay-Gogha area was recently surveyed for its oil potential and tests of the rocks found there indicate the occurrence of oil. It is also believed that natural gas may be found in the region. The Geological Survey of India is conducting the necessary operations.

Carbon Black Plant

Godfrey I. Cabot Inc. of the United States has offered to set up a carbon black manufacturing plant in India. It is believed that the firm will shortly send a team of experts to prepare a project report. Negotiations are being conducted with the National Industrial Development Corporation. At present, about 7,000 tons of carbon black is imported annually. Meanwhile, India's first naphthol producing plant is nearing completion at Shahad in Bombay. It is expected that production will begin in October.

Cotton and Cottonseed Stocks

A serious situation has arisen in Gujarat where large stocks of cotton and cottonseed have accumulated. These stocks are lying in the open and cannot be moved because of a shortage of wagons. The Gujarat Chamber of Commerce has urged the railway authorities to take immediate steps to clear the goods; otherwise, it is feared, the stocks may be ruined by an early monsoon.

An All-India Mineral Industry Convention has been organised under the auspices of the Utkal Mining and Industrial Association to be held on 16th and 17th June in Calcutta.

London

MR. MACMILLAN'S WARNING ON
WAGES AND PRICESFRESH EFFORT TO ACHIEVE STABILITY
URGED

(FROM OUR LONDON CORRESPONDENT)

THE Chancellor of the Exchequer last week made a further appeal for co-operation in stopping what he called "this ruinous spiral of wages and prices" when he addressed the Association of British Chambers of Commerce in London. At almost the same time, the annual conference of the Associated Society of Locomotive Engineers and Firemen was instructing its executive to ask for a 15 percent wage increase. Mr. Macmillan had told the country a few days earlier that there was now some prospect of a "plateau of stability" in prices. He meant that certain increases could be foreseen as the inevitable result of changes that had already occurred, partly from increases in wages and partly from reductions in subsidies, but there was no reason to think that these changes would add more than two or three points to the retail price index, and no reason to expect a further net rise, assuming that wages and profits remained at their present levels. His forecast of a rise of not more than 2 or 3 percent took full account of the increase in the price of coal which had just been announced, together with any effect it might have on the prices of gas and electricity and any further effect of these increased fuel costs on transport and manufacturing industry. "My plea," said Mr. Macmillan, "is that rises

which have resulted or will result from wage increases already granted should now be treated as the end of a chapter, and a fresh and serious effort made to achieve stability. If every rise in price resulting from previous wage increases is now to be regarded as ground for further wage increases, then we are certainly on the road to ruin...I say today to the whole country, and in the plainest words I can use, our jobs are at risk, and will be so increasingly, until this ruinous spiral of wages and prices is stopped."

Mr. Macmillan referred to the possible consequences if another round of wage increases drove prices up. The country was already losing markets to Germany and other nations whose prices were steadier. If exporters were handicapped further, there were bound to be more losses, which would result in unemployment or short-time working in the exporting industries, and in all the industries from which they buy components and supplies, and this would be only the beginning. The Chancellor reminded his audience that the country is committed to an extensive system of social services, and that the cost of defence must remain high for some time. "These heavy commitments," he added, "mean that we ought to face the necessity for moderating the rate of increase in consumption, so that we can spare enough resources for the priority claims of higher exports and larger investment. We cannot get any real advantage by demanding more and more paper money that will buy less and less...The dangers that face us are real. I hope we shall have the courage and clear-headedness to face them, and will not take refuge from them in political recrimination."

Amendments to the Finance Bill

The number of amendments, new clauses and new schedules to the Finance Bill that have been tabled so far is quite modest. Labour leads with ten amendments and ten new clauses and schedules; Conservatives have tabled eight amendments and seven new clauses; and there is a joint Labour and Liberal new clause to exempt "living" performances from the entertainments tax. A group of Tories, led by Mr. John Foster, Sir Patrick Spens and Mr. Fort, are to make a determined effort to get the Chancellor to modify the provision in the Bill which will apply the United Kingdom scale of income-tax to income earned in Britain by individuals with overseas interests of various kinds. They claim that the Chancellor's proposal may drive out of this country business organisations whose presence here does nothing but good to the national economy; they would leave Britain for, say, Holland because of the crippling rate of British taxation. The Finance Bill proposes to apply the standard British income-tax system to the "emoluments" from any office or employment held by a person who is resident, or ordinarily resident, in the United Kingdom, and whose duties are not performed wholly outside the United Kingdom. Similarly, anyone not resident or not normally resident here is to be taxed on duties performed in this country, and anyone resident here, whether ordinarily resident or not, is to be taxed at British rates on what he earns in this country.

Production Rate Slows Down

In March, the index of industrial production fell below the level of March 1955. In April, there was a recovery. Preliminary returns put the index for April at 136.137, against 134 for April 1955. The fact that April this year is up on April last year, while March was down, is due to the different timing of the Easter holiday. Allowing for this, it is clear that production is maintaining itself just a shade above the 1955 level. The average of the index for the first four months of this year is 139, compared with 139 for the first four months of 1955. But the stability of the index for industry as a whole disguises considerable changes in individual industries. If the two latest months, March and April 1956, are taken together and compared with the same two months in 1955, it is found that motor-car production is now 17 percent lower, and production of cotton yarn 12 percent lower. The decline in these two important industries offsets some important gains elsewhere. Thus the output of commercial vehicles and of sulphuric acid are both 12 percent higher. Cement is 9 percent higher, electricity generated and output of synthetic fibres are both 8 percent higher, and crude steel is 7 1/2 percent higher. Neither Mr. Butler nor Mr. Macmillan has yet contrived a general industrial recession. The broad picture is still of expansion, with some sharp but localised setbacks.

Commonwealth Trade Problems

The approaching meeting of the Commonwealth Prime Ministers could well prove rather more momentous than its forerunners if Mr. Menzies, of Australia, who arrives here a week earlier than the others, succeeds in his discussions with Sir Anthony Eden, and no doubt other Ministers, for the negotiation of a new agreement covering Anglo-Australian trade to replace the Ottawa Agreement which, apart from being 24 years old, is now being found in some cases to work against Australian interests. Mr. Menzies, it is believed, has two main arguments to put forward. Firstly, the returning of the wheat trade to private hands with the withdrawal of Britain from the International Wheat Agreement has meant British millers buying hard Canadian wheat in preference to the softer Australian variety, with a consequent increase in the demand for dollars. It is pointed out, therefore, that a switch would not only save Britain dollars but also aid Australia in cutting her trade deficit. It cannot be expected that the U.K. Government would alter its policy on either of the basic points, but the Treasury still controls

the allocation of dollars, so the switch could be made by other means of an indirect nature. Secondly, Mr. Menzies will explain that some tariff benefits under the Imperial Preference scheme, because they were originally specified in shillings and pence, have been reduced in value by the fall in the value of money and should be at least restored to their original levels.

So far the British Government has not expressed any views on these matters, if indeed any have yet been formulated pending the presentation and discussion of Mr. Menzies's arguments in greater detail. On the other hand, Canada is known to be strongly opposed to any strengthening of protectionism, either inside the Commonwealth or out of it, and will undoubtedly not react very favourably to Australia's suggestions. The views of other members of the Commonwealth are more uncertain, but their unqualified support certainly cannot be depended upon. The steady decline in Australia's sterling balances of late—and our criticism of her import cuts—strengthen Mr. Menzies's case, but it will be surprising if anything other than a compromise, if that, can be agreed upon.

Commodity Prices

Not directly concerned with the Australian case, but related to it in a way, is the extent to which commodity prices have fallen in recent months. Hitherto this fall has not been reflected in the terms of trade—last month, it will be remembered, they actually deteriorated a point—but it usually takes a month or two for pipeline supplies to be consumed and price drops to be reflected in current production. In due course, however, the trend must have the effect of reducing our import bill. That will be a very welcome development from the point of view of our trade returns for, say, June and/or July, but as the falls also mean that Empire raw material, such as copper, rubber, tin, cocoa and tea, to quote only a few, where prices have dropped quite substantially, will be earning fewer dollars in the American market, the sterling area reserves are not going to benefit unless our exports of manufactured goods to those markets can be expanded considerably. The drop in commodity prices is therefore a mixed blessing so far as the external position is concerned. It has one other advantage, however, and it is one of which Mr. Macmillan will no doubt take full advantage as and when he follows up the ideas he propounded in his Newcastle speech. It ought to have the effect of keeping the internal price level in the U.K. steady and absorb at least part of the wage and other rising costs recently incurred. Mr. Macmillan's contention that retail prices will vary little in the next 12 months might well be realised, but so far there is little indication that the trade unions will accept so uncertain a factor as encouragement to suggest a wage freeze. The price stability will have to come first, and prove itself over a period.

Small Savings

Believing that the Chancellor's Budget incentives, including premium bonds, will greatly stimulate small savings, the National Savings Committee has set itself the high net "target" of £250 million for the current financial year. All the regional organisations are planning special and competitive efforts to celebrate the movement's fortieth anniversary. Last year new savings totalled £1,362 million, but heavy withdrawals reduced the net figure to £44 million. The Committee is greatly encouraged by the big demand for the new 4 1/2 percent Defence Bonds, of which about £14,500,000 worth were sold in the first three weeks of this month, compared with some £5,500,000 worth of the old Bonds in April.

Bank Advances Held

Following the April increase of £4.1 million to £1,908.8 million in bank advances, the statements of the clearing banks made up to 16th May show that the upward movement has been halted. While one member of the "Big Five"—the Westminster—shows an increase of £8.5 million to £259.6 million in its loans, the National Provincial's advances dropped by £6.4 million to £267.3 million. There was practically no net change in the advances total for the clearing banks as a whole. In May 1955, there was a rise in advances of £35.6 million, and in May 1954, the increase was £21.2 million. It appears, therefore, that the latest check to the expansion of bank loans has taken place in face of seasonal influences. It is also worth noting that several of the banks have had to meet additional calls on the nationalised industries during the past month. The general inference to be drawn is that in the private sector the pressure of the squeeze has been fully maintained.

Brevities

The Board of Trade Journal has announced that its price is going up this week from 9d to 1s. The net cost of operations of the United Kingdom Atomic Energy Authority between 1st August, 1954, and 31st March, 1955, was £10,385,129.

Mr. D. J. Roberts, Chairman of the National Provincial Bank, has been elected President of the Sir Oliver S. Franks Association for the coming year. Mr. J. J. Campbell, General Manager of Lloyds Bank, and North of Scotland Bank, and Mr. R. D. Smith, General Manager of Barclays Bank, have been elected Vice-Presidents.

Vickers Ltd., Babcock and Wilcox and the Associated Cement Companies of India are negotiating on the possibility of setting up a joint machinery, boilers and other engineering products.

Uttar Pradesh

AGRICULTURAL TARGETS FOR U.P.

BIG CENTRAL GRANARY UNDER
NEW MARKETING SCHEME

(FROM OUR LUCKNOW CORRESPONDENT)

OF the 10-million ton target of additional food production set for India as a whole under the second plan, U.P. has been asked to raise two million tons. U.P. is not a major cotton-growing State, and it is not considered possible that it can undertake more than one-twelfth of the all-India target. The production of jute went up from 2.83 lakh manuds in 1951-52 to 3.4 lakh maunds in 1954-55. During the second plan period, it is proposed to increase jute production to 5.56 lakh maunds. Sugar is, of course, its most important industry. U.P.'s share of the all-India production being more than half. The production target for sugarcane in the first achievement in 1954-55 was 185 lakh tons. In the second plan, the target fixed is 400 lakh tons. Even if such a near-doubling of cane production in the State is possible, much hardship is bound to be caused to growers who are already burdened with unsaleable cane on their hands, unless the crushing capacity is suitably increased. Mr. A. P. Jain, Union Minister for Agriculture, has said that a revision of the zoning system under which factories are allotted various zones for drawing their cane supplies may have to be made. This may alleviate the distress. But it will provide no permanent solution.

Foodgrain Storage

Hapur, in U.P., is to have one of the biggest granaries in the country. Mr. M. V. Krishnappa, Union Deputy Minister for Food, has already inspected the site. The godown, which will be situated on 32 acres of land, will initially have a storage capacity of 60,000 tons. It appears that so far as the U.P. Government is concerned, it seems to rely more on the provisions of the Storage Requisition Act than on building more of its own godowns. The life of the Act has been extended by the Legislature, but doubts have been expressed whether the gains will equal the bother and expense involved in requisitioning private godowns. Most of these are not up to the mark and the risk of rodent depredations is considerable. Besides, the practice has also given rise to complaints that sometimes the Government requisitions storage from individuals even when they have no space to store their own grains. According to the Government, it has conducted, during the first plan period, warehouses in which about 15 lakh maunds of grain could be stored, but this obviously is not enough. The Government has now under consideration a proposal to start a co-operative warehousing scheme under which peasants can deposit any amount of grains and take loans at a nominal rate of interest on the security of their grains.

Power and Irrigation

Irrigation schemes have been allotted nearly Rs. 25 crores and power schemes Rs. 55 crores in the second State plan. When these schemes have been carried through, 30 percent of the cultivated area in the State will be open to irrigation and additional power to the extent of 4,27,000 kW will be available. Meanwhile, there has been criticism that in the Government's anxiety to fulfil targets anyhow, the quality of the end-product receives only secondary consideration. A newly constructed bridge on the Sharda power channel near the Khatima power station has already collapsed due to, it is stated, the inferior quality of materials used. Engineers are not themselves unaware that in many cases, the materials used are sub-standard, but they plead helplessness as the large-scale demand for construction material has outstripped its supply, and the departments have no other alternative but to make do with what is available. Allegations of inferior quality of materials have also been publicly made in connection with the Rs. 2 crore drainage and water supply scheme now in progress in Lucknow itself as part of a comprehensive scheme to modernise the city.

Migration of Traders

Despite the concessions announced by the Government on the sales tax for various commodities, the agitation against it continues from the cloth and foodgrain trade. Over a dozen varieties of coarse grains have been exempted from tax, but the foodgrain traders assert that these are mostly eaten by hens, partridges and cattle. To evade the tax on wheat and rice, there have been reports that many big grain dealers are exporting these commodities to places outside the State, and if the trend continues, the State Government may ask the Centre to re-impose restrictions on grain exports. Due partly to the incidence of the tax and partly to the artificial scarcity caused by these exports, the ruling prices for foodgrains seem much too high for this time of the post-harvest season. For example, wheat at Rs. 14 a maund is 50 percent higher, and barley at Rs. 9-8 and gram at Rs. 10-8 a maund are higher by 70 percent. The price of "jowar" at Rs. 12 a maund is more than 100 percent above last year's level. The cloth trade is alarmed at the increasing migration of some big dealers from the State. According to Mr. Pannaiah Tripathi, conveyor of the Federation of the U.P. Cloth Dealers Association, and Mr. D. P. Kackkar, conveyor of the Sales Tax Sub-Committee of the Kanpur Kapra Committee, a large number of business houses dealing in cloth are hastily arranging to leave. They also allege that gentleness of sales tax leave has dwindled considerably in the course of the last month. Serious cases of sales tax evasion of cloth worth Rs. 32 lakhs were reported by the sales tax office recently.

Better than any
other battery —
thanks to PORVIC

★ Porvic Separators: Microporous plastic that is virtually indestructible in service.

★ CB 95 alloy plate grids: In combination with Porvic they now show their full lasting capabilities.

★ Hard Rubber Container: Tough, leak-proof and shock-resistant.

This
battery is

how much does a pair of eyes cost ?

Eyes belonging to able administrators...trained technicians...skilled craftsmen...how much are they worth to you and your business? Difficult to calculate in terms of money. Yet if you consider the effect of good lighting on efficiency and output, you will see why you must ensure that everything is done

to prevent eye-strain and fatigue. Merely adequate lighting is not enough. Your office or factory must have good lighting. Free from glare, free from harsh shadows, and planned in such a way that every pair of eyes have the light they need to do their job...without eye-fatigue to hamper their efficiency.

PHILIPS

'TL' Fluorescent Lamps and Fittings
make light work for you!

Expert service for you—Do call in the Philips Lighting Service Bureau to examine your existing installations. You will find that they are trained experts, happy to place their experience in shop, factory and office lighting at your disposal—and the service is free of charge!

"CAPITAL" STOCKS AND SHARES INDEX *

The Capital Stocks and Shares Index (Base: 1939) has now been brought up to April, 1956. Compared with March, the April indices for government securities and preference shares rose by 0.1 points and 0.5 points, respectively.

There were decreases in cottons 2.0 points, coals 5.6 points, jutes 4.0 points, engineering 10.1 points, teas 10.6 points, papers 22.6 points, sugars 3.7 points, minings and oils 2.1 points and miscellaneous 1.6 points, while increases occurred in banks 0.2 points

and cements 0.1 point.

Correlating all the factors, the Capital variable yield securities index shows that the index for stock prices in the above classes of shares declined by 5.1 points during April, 1956.

Calcutta Markets

LITTLE EXPORT DEMAND AT SEASON'S LAST SALE

DUSTS GENERALLY EASIER

A T Export Sale No. 50 held on 4th June, which was the final Sale of the 1955-56 season, offerings consisted of 5,300 packages. There was little demand from the main export buyers for the very few better teas on offer, but there was more competition for the poorer kinds from internal buyers, which generally sold at very irregular rates. Some lots were sold at considerably below valuations. The majority of the offerings were disposed of, which was a satisfactory feature of the Sale.

At the Internal Sale held on 5th June, Dust offerings consisted of 21,150 packages. There was a fair general demand, but generally at easier rates. Black leafy exportable types suitable for the Middle East were the strongest feature and sold at dearer rates. Good liquoring grainy Assams were 1 to 2 annas easier, while clean commons, and other descriptions were 3 annas easier. The commonest residue sorts were about steady. CTC Assams received fair support, but apart from the very best, which were about steady, they were irregular and easier in price.

Medium Decors	Dust	Medium Assam	Grainy Dust	Best Assam CTC	Dust	1956 Rs.	1955 Rs.
1 4 0	1 4 0	1 6 0	1 6 0	2 8 0	2 10 0	2 10 0	2 10 0

Other grades offered consisted of only 167 packages, and met with a fair enquiry, but at generally easier rates.

FREIGHT MARKET FIXTURES

IN the past week, there were no marked changes in American coal rates, but French charterers still have interest in forward positions for consecutive until the end of the year. Fixtures for coal from Hampton Roads to Yugoslavia have been concluded at \$ (U.S.) 14. June-July shipments. Queensland sugar shippers maintained their tendency of cutting the rates and chartered two September-October vessels for sugar shipments to the U.K. at 202s 6d a ton. Two fixtures of Cuban sugar to Japan were made at 180s f.i.o. In the Pacific grain trade, a ship was fixed for Bombay at \$ (U.S.) 22 and to Japan at about \$ (U.S.) 22.50 both 80s f.o.b. for Calcutta-Karachi and 50s f.o.b. for Calcutta-Chittagong, and they are open for tonnage. There is a fair demand for time charter tonnage with rates maintained at the previous levels. The threatened labour strike at Vizagapatam has been averted.

SUGAR MARKET RISES

During the week ended 6th June, sugar sales in the Calcutta market averaged 4,500 bags daily. Arrivals a day were 2,000 bags and stocks totalled 50,000 bags. Rates for ready sugar ex-Kantapur delivery were Rs. 32 for ordinary grain and Rs. 32-14 for big grain. Ex-mill delivery rates respectively were Rs. 28-8 and Rs. 29-6. The market showed a steady tendency to rise.

LINSEED QUIET

A poor demand for seed last week and lack of interest in oil had a weakening effect on prices. Crushers, with a much reduced daily output showed a limited interest in seeds, while freer offers were made from upcountry. The oil market, temporarily devoid of buying interest, declined appreciably. Latest quotations were as follows: ready Rs. 22-4 a maund; June Rs. 22-2 a maund.

HIDES AND SKINS

COMPANY AND PUBLIC NOTICES

THE OODLABARI COMPANY, LIMITED.

Consent of the Central Government has been obtained to this issue by an order of which a complete copy is open to public inspection at the Head Office of the Company. It must be distinctly understood that in giving this consent the Government of India do not take any responsibility for the financial soundness of any schemes or for the correctness of any of the statements made or opinions expressed with regard to them.

NOTICE is hereby given that an Extraordinary General Meeting of The Oodlabari Company, Limited will be held at the Registered Office of the Company No. 14, Old Court House Street, Calcutta, on Tuesday the 26th day of June 1956 at 3-30 p.m. for the purpose of considering and if thought fit of passing with or without modification, the following Resolutions:—

As a Special Resolution:

That the Articles of Association of the Company be amended as follows, that is to say:

- (i) By inserting a "full stop" after the words "in any one or more of such ways" in the 4th line in Article 122 and by deleting the remainder of that Article immediately following those quoted words.
- (ii) By inserting immediately following Article 122 the following three Articles numbered consecutively 122A, 122B and 122C.

"122A. Any General Meeting may upon the recommendation of the Directors resolve that any moneys, investments or other assets forming part of the undivided profits of the Company standing to the credit of any Reserve, or other fund or in the hands of the Company and available for dividend (or representing premiums received on the issue of shares and standing to the credit of share premium account) be capitalised and distributed amongst such of the shareholders as would be entitled to receive the same if distributed by way of dividend and in the same proportions on the footing that they become entitled thereto as capital and that all or any part of such capitalised fund be applied on behalf of such shareholders in paying up in full any unissued shares, debentures or debenture-stock of the Company which shall be distributed accordingly or in or towards payment of the uncalled liability on any issued shares, and that such distribution or payment shall be accepted by such shareholders in full satisfaction of their interest in the said capitalised sum".

"122B. A general meeting may upon the recommendation of the Directors resolve that any surplus moneys arising from the realisation of any capital assets of the Company or any investments representing the same or any other undistributed profits of the Company not subject to charge for income-tax be distributed among the members on the footing that they receive the same as capital and that all or any part thereof be applied on behalf of such shareholders in paying up in full either at par or at such premium as the resolution may provide, any unissued shares or debentures or debenture-stock of the Company which shall be distributed accordingly or in or towards payment of the uncalled liability on any issued shares or debentures or debenture-stock and that such distribution or payment shall be accepted by such shareholders in full satisfaction of their interest in the said money, investments or profits so distributed".

"122C. For the purpose of giving effect to any resolution under the three last preceding Articles the Directors may settle any difficulty which may arise in regard to the distribution as they think expedient and in particular may issue fractional certificates, and may fix the value for distribution of any specific assets and may determine that cash payments shall be made to any members upon the footing of the value so fixed in order to adjust the rights of all parties and may vest any such cash or specific assets in trustees upon such trusts for the persons entitled to the dividend or capitalised fund as may seem expedient to the Directors. Where requisite a proper contract shall be entered into and the Directors may appoint any person or persons to sign such contract on behalf of the persons entitled to the dividend or capitalised fund, and such appointment shall be effective".

II. As Ordinary Resolution: (1) That the authorised Capital of the Company be increased from Rs. 3,20,000/- to Rs. 10,00,000/- by the creation of 68,000 New Shares of Rs. 10/- each.

(2) That upon the recommendation of the Directors it is desirable to capitalise the sum of

Rs. 3,20,000/- being part of the Reserve Account of the Company and representing undivided profits of the Company and accordingly that the said sum of Rs. 3,20,000/- be capitalised and distributed among the members on the footing that they become entitled thereto as capital in pursuance of Article 122A of the Articles of Association of the Company and that the said capital sum be applied on behalf of the persons who are on the 26th day of June 1956 holders of 32,000 shares of the Company of Rs. 10/- each and that such 32,000 shares credited as fully paid be accordingly allotted to such persons respectively in the proportion of one share for every one share held by the holders of the existing shares on the 26th day of June 1956 and that the shares so distributed shall rank in all respects *pari passu* with the existing ordinary shares save and except that they shall not participate in any dividend declared prior to the passing of this Resolution and shall also be treated for all purposes as an increase of Capital of the Company held by each shareholder and not as income.

(3) That pursuant to and in accordance with the last mentioned Resolution and in satisfaction of the said Capital sum the Directors be and are hereby directed to allot and distribute 32,000 new shares of Rs. 10/- each credited as fully paid among the persons who are respectively on the 26th day of June 1956 holders of 32,000 shares of Rs. 10/- each. PROVIDED that the issue of such shares by the Company shall be subject in the case of members not resident in India to the consent of the Reserve Bank of India being obtained thereto in accordance with the provisions of the Foreign Exchange Regulations Act, 1947, for the time being in force PROVIDED also that in the event of such consent not being obtained the Directors be and are hereby authorised to dispose of such new shares which cannot be offered to members not resident in India in such manner and to such persons (including the Directors and the Managing Agents) and upon such terms as they may think fit in the interest of the Company.

(4) That the draft Agreement providing for allotment of 32,000 new shares of Rs. 10/- each in satisfaction of the said capital sum submitted to this meeting and signed in the margin by the Chairman thereof by way of identification be and the same is hereby approved and the Directors be and are hereby authorised to affix the Seal of the Company to duplicate engrossments of such Agreement as and when the same shall have been signed on behalf of the members holding the existing issued shares of the Company on the 26th day of June 1956 by some person or persons on their behalf as may be appointed by the Directors in that behalf under Article 122C of the Articles of Association of the Company.

The Share Transfer Books of the Company will be closed from 19th June, 1956 to 26th June, 1956, both days inclusive.

A member of the Company entitled to attend and vote at the meeting is entitled to appoint a proxy to attend and vote instead of himself and the proxy need not be a member.

THE CALCUTTA JUTE MANUFACTURING CO. LTD.

NOTICE OF EXTRAORDINARY GENERAL MEETING.

NOTICE is hereby given that an Extraordinary General Meeting of the company will be held at the registered office of the company at Stephen House, 4th floor, No. 4, Dalhousie Square East, Calcutta on Friday, the 6th July, 1956 at 3 p.m. to consider and if thought fit to pass with or without modification the following resolutions:

(As an ordinary resolution)

- (1) "Resolved that with effect from 1st April, 1956 the consent of the company be and is hereby accorded to the Board of Directors borrowing moneys which together with the moneys already borrowed by the company may exceed the aggregate of the paid-up capital of the company and its free reserves that is to say reserves not set apart for any specific purpose and that borrowings shall be exclusive of the temporary loans obtained or to be obtained by the company from the company's bankers in the ordinary course of business".

(As an ordinary resolution)

- (2) "Resolved that the company do hereby consent and authorise its Managing Agent or any associate of its Managing Agents with effect from 1st April, 1956 to retain any commission or other remuneration earned or to be earned by such agents or associate as the Managing Agent, Manager, Agent, Secretary or Selling and Buying Agent of any other firm, body corporate or other concern in respect of firm, body corporate or other service (including goods, power, freight or other kind) whatsoever relating to or arising out of the affairs of the company for the sale, purchase, supply or rendering of which a contract has been or will be entered into by such firm, body corporate or concern with the company at rates which are not less favourable to the company than the market rates or which are otherwise favourable".

(As a special resolution)

- (3) "Resolved that the company approves of contracts to be entered into or being entered into with the associates of the Managing Agents for sale, purchase or supply of articles in which the company or the associates do regular trade or business provided that the prices or amount charged or received by the company are at rates which are not less favourable to the company than the market rates or which are otherwise reasonable".

Explanatory Notes

In respect of item 1 of the above notice, under Section 293 Sub-section (1) of the Companies Act 1956 the Board of Directors is not entitled to borrow money after the commencement of the Act without sanction of the company if the amount advanced or borrowed (except the temporary loan) and ready borrowed exceed the paid-up capital of the company and its free reserves and hence this resolution is necessary to enable the Board to borrow money in case of necessity.

In respect of item 3 of the above notice, full particulars of each such contract and all particulars relating thereto will be entered in a separate register to be maintained by the company under Section 360 of the Companies Act 1956.

By Order of the Board,

any price less than par or by annual drawing at par.

JOINT STOCK COMPANIES' PREFERENCE SHARES

Dividends are cumulative and shares carry a preferential claim on the property for the payment of capital and on the profits for dividend except in case of companies marked otherwise. Months against names of companies indicate approximately times of payment of dividends.
