SEEKING THE TRUTH ABOUT UNEMPLOYMENT

THE RISKS OF POLICY-MAKING WITHOUT THE FACTS

RECENT controversies over the Ambar Charkha have shown that sentiment rather than reason dictates much current thinking on unemployment problems. The fact has not escaped the many critics of the plan frame. For their pains, they have risked being accused of "interested" meddling. But lately their ranks have been joined by some whose motives are beyond that sort of suspicion, but who are, nevertheless, very much concerned with whether the second plan is going to succeed. The Minister of Commerce and Industry, Mr. T. T. Krishnamachari, is reported to have labelled the *Ambar Charkha*, and what it signifies, as an obstacle to progress. Few people are better able to appreciate the damage this "labour intensive" approach to production can do to the growth of industry if it is not based on an appreciation of the true facts. A similar suspicion seems to have occurred to a personality no less intimately concerned with the country's industrial and agricultural progress—Sir Benegal Rama Rau, Governor of the Reserve Bank of India. In his address to the Agricultural Economic Conference in Poona last week, Sir Benegal called for more information and improved thinking about unemployment. In the meantime, he clearly feels that to curb the output of factory consumer goods so as to encourage hand and cottage industries would be a rash thing to do. His words command attention. It would be economic suicide to implement any policy based on a profusion of sentiment and a lack of information. With the beginning of the second plan only three months away, the matter is now urgent. A policy of this magnitude, once introduced, will be exceedingly difficult to reverse no matter how misguided it eventually proves to have been.

Present thinking on India's employment problems owes much to the work of the late John Maynard Keynes. But the Keynesian analysis was based on unemployment arising from the cyclical fluctuations experienced pre-war in advanced industrial economies. It was never meant to cover all types of unemployment; for example, it was quite irrelevant to that which was chiefly affecting the British economy at the time he was writing. The most prominent of the practical examples which Keynes had in mind concerned the United States and it was there that his analysis was closest to reality. To confuse India's unemployment with that which existed in America after the slump is to fall into the grave error of ignoring plain fact. To attempt to apply the same theoretical remedies is to show an unhealthy fascination for ideas for their own sake rather than for empirical methods. Sir Benegal may be stating the obvious when he points out that unemployment in India's villages is not the "short-term phenomenon" familiar in organised industrial countries; but it is amazing how seldom that truth is realised. And far-reaching measures for curbing factory output have been accepted by the drafters of the plan frame and by many members of the Panel of Economists apparently on just this assumption.

In a peasant economy unemployment is endemic. This point is usually ignored by those who cherish dreams of a mass of contented smallholders, intelligently progressive and industriously engaged in improving their standards of living. Peasant communities are rarely interested in progress and their ideas about prosperity are not such as can keep them busy for longer than is required to provide the barest of necessities. Without entering the debate on land holding, it is enough to draw from these facts the conclusion that efforts to increase the tempo of activity in rural communities are apt to meet with disappointment. Rural hand industries will always be on the margin of the economy. They can never be relied upon to provide a major part of modern consumer wants, if for no other reason than that they are likely to

vary their output inversely rather than directly with the prosperity of the community generally. Any system which encourages workers to stay in low-productivity agriculture instead of accepting better conditions and earnings in modern factory industry, when these are available, does not increase the wealth of the community. To curb factory output so that workers can stay in agriculture is the quickest way to reversing the progress of the last five years. The least it will do is to transfer unemployment from the country-side to the towns. That may suit some rural sentimentalists, but as Sir Benegal points out, the towns are becoming more important as every year goes by. The decision facing India is whether the growing prosperity of these important outlets for the surplus and completely unemployed rural population can be condemned to stagnation in an attempt to correct an evil which is not yet adequately understood.

One aspect of the unemployment problem is perhaps clearer than the rest, and that is the plight of the educated jobless. The political danger which this group constitutes is already appreciated. These people cannot fall back on subsistence agriculture; they can be left without any livelihood at all. Their numbers are increasing, as Sir Benegal maintains. Yet these workers will be first to be hit if factory production is curbed and development resources diverted to hand industry. Their resentment may prove too high a price to pay for providing more employment to a rural population whose primary occupation, after all, should be agricultural, and for whom, as we hear from Sir Benegal, so much has already been done.

★

There are many good reasons why a nation planning for industrial prosperity cannot afford to impose too many burdens on the more progressive sections of the community. The drift to the towns

COMMON SENSE ON BONUS SHARES

THERE are not many aspects of corporate working on which greater ignorance and misunderstanding have been found to exist during the past year or so than on bonus shares. In this case, it is not confined to the politicians and the demagogues, whose professional activities might suffer if they devoted a little intelligent attention to the aims and methods of private enterprise. The disturbing feature is that it sometimes seems to pervade the thinking of such august and influential bodies as the Tariff Commission, which recently relieved itself of some astonishing opinions on the bonus issues of a tyre company, by suggesting that no return on them was necessary. Admittedly, it retracted these opinions later by flatly denying that it had ever held them, and privately sought to be excused for the error by saying that this particular section of its report was badly drafted. But even if this was the reason, it shows a weakness of ideas and expression that is surprising for a body expected to be familiar with the nature of corporate working. Other misconceptions regarding bonus shares still survive. The most important of these is the proposal which has attracted much attention in official quarters that such issues be taxed. The Association of Indian Trade and Industry, Bombay, is to be warmly commended on its attempt to explain the nature of the problem, and to indicate the sources of misconception, in an excellent study entitled *Taxation of Bonus Shares* issued recently.

The study begins by mentioning that the Taxation Enquiry Commission, headed by Dr. John Matthai, has opposed the levy of a tax on bonus shares issued by joint stock companies. The Royal Commission on the Taxation of Profits and Income

need not be expected to stop until rural overcrowding is cured; and that goats are certainly nowhere in sight. It has itself been one of the most important factors in relieving unemployment in the country-side. It has its disadvantages in the form of excessive concentration. But until the problems of industrial organisation can be solved without this particular evil, it will have to be reckoned as a small part of the price of greater prosperity. At the moment, the towns are providing the chief markets for the hand industries. If their wealth ceases to grow, the proposed increase in the supply of hand-made articles is unlikely to be absorbed; certainly the countryside itself will be unable to take them, if only because the prevailing level of demand is so low. The towns are the main source of the Government's revenue. Taxes on rural communities can be increased, and must be if a large proportion of the resources for the second plan are to be found within the country. But the difficulties are many and will take time to solve. In the meantime, any move to restrict the tax-paying capacity of the urban communities can only serve to slow the pace of development. Distortions of the normal pattern of economic growth will produce inflation, which is bound to be more damaging to an industrial than an agricultural community. Throughout the world, progress has originated from urban civilisations; at the present stage of development, India needs all the initiative and progressive ideas she can muster.

All this is not to say that the idea of encouraging hand industry should be abandoned altogether. The contention is that they should not be encouraged at the expense of factory output in response to some theory based on inadequate facts and out-of-date conceptions. It may be possible to establish a complete justification for such proposals. But on present information it is not. And commonsense suggests that a knowledge of the true facts will ensure that it never will be. What is wanted is an investigation into the true nature of the Indian unemployment problem, both rural and urban. Without it, planning will always be hazardous and liable to serious error. Such a survey is more likely to prove that many of the present ideas about unemployment in India, on which planning is being based, are completely fallacious, as Sir Benegal suspects. It would probably be found that the problem is inseparable from an undercapitalised economy with a rapidly growing population. If that is so, it would be a pity to mortgage heavily the industrial progress which alone can provide the final solution to the problem. Facts, and an understanding of them, are the first requirements of any policy for removing unemployment.

★

From the company's point of view, the capitalisation of reserves has definite, if indirect, advantages when circumstances indicate such a move. To begin with, the change helps reflect better the capital structure of the company, by bringing the

paid-up capital more closely into balance with that actually invested in the business. It helps provide a truer picture of profit and dividend rates, which are usually expressed as a proportion of the paid-up capital when they should be considered in relation to the capital invested. Finally, reserves, which sometimes attract the covetous attention of shareholders and workers, can be kept away from both, if the interests of the company demand it, by capitalisation.

To subject bonus shares to income tax or capital gains tax is unjustified since the company does not earn any revenue or capital income by issuing them. The reserves that are capitalised are in fact undistributed profits which have already borne the full income tax and supertax. The study points out that "the receipt of bonus shares subject to tax in the hands of shareholders would actually leave them poorer than they would be without the issue of bonus shares." It goes on to deal with the argument that the gain to a shareholder who buys a share before a bonus issue is announced and sells it later either before or after receiving the bonus share should be taxed as profit. In answer, it declares that under the present income-tax law any person who makes a profit by buying and selling shares is taxed if this profit is regarded as revenue profit, and is not taxed if it is regarded as capital gain—irrespective of the reason for the price rise. The tax authorities always take into account bonus issues in calculating profits from share transactions.

According to the study, "the most devastating argument against a tax on bonus issues is that its yield would be negligible as it would be the easiest tax to avoid." Since the capitalisation of reserves does not afford any income benefit, most companies would prefer to let their reserves remain uncaptialised. As a result, their accounts would continue to give a distorted picture of the capital structure and returns; also, the growing trend toward profit retention would be reversed, thus affecting corporate saving and capital formation. Another very real danger which the study does not mention has been evident in recent attempts to corner companies. Cornerers' attention has often been directed primarily at companies which have built large reserves on a small capital base. With a relatively small outlay, cornerers have sometimes been able to gain a controlling interest and have then proceeded to appropriate reserves for quite doubtful ends. This trend is liable to be accentuated if the expansion of nominal capital to reflect the actual amount employed in the business is discouraged, as it would be by taxing bonus shares. It would be accentuated particularly in the case of companies which do not give shareholders enough information to judge the value of their properties, and where shareholders therefore never really get a finding out what their stock is worth. There are unfortunately still many such companies, and when they attract the cornerers' attention it is the shareholders who are the main, if not the only, sufferers.

BASIS OF BRITISH ECONOMIC POLICY

A NEW BREAK AT THE TREATY

THE tariff negotiations beginning in Geneva on 18th January will test the policy of the re-constituted British Government. Will it reveal any important difference between the policy of Mr. R. A. Butler and that of Mr. Harold Macmillan, his successor at the Treasury? It is hardly necessary to remark that Mr. Butler's policy was not independent of or in opposition to that of the rest of the Cabinet. Yet it would be hasty to assume that any Conservative succeeding a Conservative would follow a set Conservative policy; for there is no such thing. There are forces around, and even within, the Government which oppose the policies followed by the two Conservative Governments since 1951, and it is not inconceivable that Mr. Macmillan will be more amenable to these forces than Mr. Butler was. There is no doubt that Mr. Butler has been the architect of Britain's economic policies, both internal and external, over the past four years, though he has certainly been assisted in the task by such colleagues as Mr. Peter Thorneycroft at the Board of Trade and Mr. Cameron Cobbold at the Bank of England (the latter without comparable executive powers but with essential knowledge of the financial mechanism).

The policies are not merely financial. If one were to attempt to express them in one word that word might be "Decontrol". Under Mr. Butler's guidance, all economic controls that are not, as it were, built into the system have been dismantled or are intended for dismantling as soon as possible. An alternative word to summarise policy would be "Non-intervention". The Government has withdrawn from many activities that it regards as proper to private enterprise. As applied at home such ideas are generally approved among Conservatives. But Mr. Butler did not apply them only at home. In international bodies such as the International Monetary Fund, the General Agreement

on Tariffs and Trade, the Organisation for European Economic Co-operation, the representatives of Britain have urged withdrawal of Governments as far as possible from interference in affairs of trade and payments. They have at times been less urgent than the representatives of Germany and the Netherlands, but at least in principle they have been consistently opposed to import quotas, export subsidies, manipulation of exchanges, and other such illiberal practices. It may seem obvious that Britain's interests—as an international banker and trader—are inseparable from such a policy of freedom, and Mr. Butler has certainly seen them in that light. But the policy does not suit all Britons individually; nor does it easily harmonise with the idea of the British Commonwealth as an economic unit.

After the changes in the Government, Mr. Heathcoat Amory—still Minister of Agriculture, Fisheries and Food—assured the farmers, that the Government had no intention of changing its agricultural policy—a policy of production-subsidies and of protection against foreign produce. No Government, apparently, can radically change the policy for agriculture, even when it is out of line with economic policy as a whole. It is significant, however, that the Minister had to defend the Government against the farmers' charge that industry was better protected than farming; in fact, he said, the average of tariffs on manufactured goods was about 15 percent and the value of agricultural subsidies (as a percentage of output) rather above 15 percent. The average tariff on manufactures conceals some high rates which are unashamedly protective. It is by comparison with the better-protected industries that the cotton industry persistently demands protection—preferably by quota—against low-priced imports. The Butler-Thorneycroft policy has firmly opposed these demands, and there is no indication at present that the new team will be any more responsive to them. But the reason for the Government's resistance is its respect for imperial preference rather than for free trade; for the offending imports come from the Commonwealth, and to restrict them it would be necessary to change the whole basis of Commonwealth trade. The truth is that Mr. Butler himself, conditioned by circumstances, had developed a split personality. By inclination he favoured the international approach to the problems, with free trade and convertible sterling as, ideally, the objectives. In practice he did not depart far from the principle that British goods should enjoy special privileges, supported by imperial preference, in the markets of the Commonwealth; and he was reluctant to associate Britain closely with the "common market" developing gradually in Western Europe, because to do so would have involved concessions on the preferential tariffs.

What some observers abroad fear, and others at home hope, is that Mr. Macmillan will withdraw further from the internationalist policy. The advocates of Commonwealth trade, as being more important than any foreign trade, had no positive success while Mr. Butler was in charge of economic affairs, but they have not abandoned their faith—they are awaiting an opportunity to reassert it. It is possible that Mr. Macmillan will provide that opportunity. The new Chancellor has hinted that liberalisation of imports may have to be restrained. He can, indeed, argue that there is no other solution of the problem that Mr. Butler left unsolved: how to maintain strong external finances when resources are so fully employed at home that any increase in demand immediately increases imports. For the same reason he may argue that privileged markets in the Commonwealth are necessary because it is difficult to keep British exports internationally competitive while full employment allows costs to rise but prevents them from falling. Essentially, Mr. Macmillan's problem is, the same as Mr. Butler's: to keep resources fully employed, and expanding, but so finely balanced that no strain results. It was because he could not achieve that balance that Mr. Butler failed to prepare sterling, as he intended, for convertibility. Will Mr. Macmillan even try to do better?

CURRENT COIN

National Carbon Share Offer.—On a later page today appear details concerning the very attractive offer of shares in the National Carbon Company (India) Ltd., which will be open to public subscription from Wednesday next. The Union Carbide and Carbon Corporation, which is the parent company, proposes to sell 400,000 shares of Rs. 10 each at a price of Rs. 19.8 a share, and National Carbon will be making a similar offer by issuing new shares. As a result of the offer, the ordinary capital of the company will be increased to Rs. 2 crores. An interim dividend of Rs. 2 a share on the old capital has been paid for the year ended 25th December, 1955, and it is expected that the company will easily be able to maintain the dividend of 20 percent on the increased capital. (Only once in the last eight years have the company's net profits been less than Rs. 40 lakhs.) At the issue price of Rs. 19.8, the yield would be 10.3 percent—which is nothing

short of excellent for a company of such standing. The return factor is reinforced by growth prospects, which suggest that the company might in time be in a position to increase the distribution or possibly issue bonus shares. Most of its activities have so far been concerned with the manufacture and sale of dry cells and batteries. It relies on the import and indigenous manufacture of appliances, radio sets, flashlights, torches, etc., which depend on dry batteries, to maintain the demand for its products. Plans have been drawn up to establish a fully-equipped factory to manufacture flashlight cases, and it is expected to commence production during 1957. Plans are also in hand for a modern chemical plant which is expected to start production in 1958. The object of the new issue is to provide Indian capital with an opportunity to participate in the company's activities, and to raise money for expansion. A zinc rolling mill is being constructed to produce high quality zinc alloy strip, and it is estimated that Rs. 55 lakhs will be needed to establish and equip it. The mill will begin operations within six months. The net block of the company is Rs. 63.49 lakhs, after depreciation of Rs. 40.23 lakhs. Reserves total Rs. 40.16 lakhs. As ordinary dividends of 4 percent or more per year have been paid for periods specified in the Insurance Act, the shares are expected to qualify as an "approved investment" under the Act.

Dock Labour Troubles.—The address of Sir Ramaswami Mudaliar, chairman, to the shareholders of the India Steamship Company in Calcutta recently contained an effective commentary on the working of labour at Indian ports. He reviewed briefly the circumstances prevailing around the time the Vast Committee was appointed to investigate ways of restoring normal conditions at the ports, and gave a welcome hint that practically all the Committee's recommendations had been accepted. The most important of these recommendations, according to Sir Ramaswami, was that the piece-rate system be introduced for the work of stevedore labour, and consequently of port labour also. Another notable suggestion was that special powers should be given to chairmen of dock labour boards on the lines of the emergency powers recently given to the chairman of the Calcutta Port Trust. "These two reforms have now been realised by those responsible at the highest level, the Transport Minister and the Labour Minister, to be essential, and I trust that they will be put into effect before the end of the year." Sir Ramaswami thought that it now remained for the chairmen of the dock labour boards to carry out their responsibilities firmly, fairly and equitably, without being thwarted in their work either by the intransigence of certain sections of labour, or by any unreasonable attitude which stevedores may take in connection with the fair amenities required by labour. Discussing the company's prospects, the chairman stated that two new ships were plying the India-U.K. Continent route. Another two vessels of the same class are being constructed; one is expected to be delivered next month, and the other by May or June. These four ships of 10,000 tons deadweight, with a proved trial speed of over 20 knots, will add considerably to the shipping resources of the company, and will improve freight results substantially. Sir Ramaswami claimed that the financial position of the company remained healthy. The directors are thinking of adding ships to the fleet at the rate of at least one every year during the next five years.

Expanding Scope for Insurance.—Optimism was the keynote of the address delivered by Dr. N. N. Law, chairman, at the recent annual general meeting of the Hindustan Co-operative Insurance Society Ltd. in Calcutta. He pointed out that the company had benefited from the country's growing prosperity; it wrote completed new business of Rs. 30.44 crores during 1954, which was a record increase of over Rs. 11.55 crores compared with the corresponding period of the previous year. The results would have been even better but for two adverse factors. Firstly, the recession in agricultural prices hit the farmers hard, so this class, which is now fast becoming insurance-minded, could not be tapped as effectively as would otherwise have been possible. Secondly, unemployment remained as bad as ever, and was likely to be worse at the end of the first plan period. "This, coupled with the high cost of living, considerably crippled what otherwise promised to be a rapidly expanding field for catering by the life insurers." Though the general economic background was thus not as satisfactory as he had expected, Dr. Law thought that prospects for the future growth of the business were quite reassuring in view of the targets set before the country under the second five year plan. But he was worried by threats of nationalisation, declaring: "I can say without hesitation that the rumour of nationalising the insurance industry, which is spreading far and wide, is acting as a damper to private enterprise." Dr. Law felt that insurance was least fitted for nationalisation. "The prompt and efficient service that is essential for the development of insurance business cannot be expected from State-controlled organisations in the same measure as private insurers offer

under competitive conditions to their prospective policyholders." State enterprise could sell security, he said, but it could not sell security and service together.

Assam Railways and Trading.—Colonel C. F. Birney's address from the chair at the seventy-fifth annual general meeting of the Assam Railway and Trading Company in London recently indicated broadly the situation in which the Indian tea and coal industries found themselves in the year 1954-55. During the year, the Company's investments yielded less revenue than before from coal mining, while the return from tea improved. That was typical of the financial conditions of these two industries during the year. In spite of this change in the character of profit, the Company's net profit for the year showed an increase at £87,569 compared with £73,473 in the previous year, due to an exceptionally good year of prosperity enjoyed by its tea gardens. As for the collieries, the chairman expressed concern at the fact that while the cost of production was rising, no adequate increase in the controlled selling price was permitted. He felt that the present uncertainty over its future arising from the Indian Government's current policy was responsible for the unsatisfactory conditions in the coal mining industry. The position, he said, was harmful to the industry and the national economy alike, and he hoped that the Government of India would put the industry's mind at rest by formulating a clear policy.

Foreign Investors in Burma.—At the twenty-fourth annual general meeting of the Mergui Town Estates Ltd., Mr. W. J. C. Richards, Chairman, referred to the difficulties confronting foreign investors in Burma. The Union Government of Burma, he said, was not fulfilling its undertaking to permit the remittance of profits of foreign concerns from the country. Formal applications for the purpose to the Exchange Control were being entertained, but they were not being granted. Even the sums sanctioned for personal remittances for family expenses abroad were, by U.K. standards, woefully inadequate. The Government's policy of employment of foreign nationals in foreign firms also operated equally harshly. For instance, the Company's plantation manager who had gone on home leave was refused permission to return. The Government had given an assurance to the rubber plantation industry that it would not be nationalised for 30 years. But Mr. Richards felt that in the circumstances described above, the Government's policy of attracting new capital either for replanting the existing areas or for converting the highly suitable expansive jungle areas into fresh rubber plantations would fail. Furthermore, the state of lawlessness prevailing around the Company's plantations continued and without there being some improvement in the law and order situation, the prospects of the Company's rubber interests in Burma remained uncertain. The crop harvested was therefore lower. Its rubber plantations in Malaya also did not enjoy a good working year. But replanting in that country has been resumed now that the insurrection has been practically brought under control. Financially, the Company's subsidiary concerns both in Malaya and Burma, fared better. That was due to an improvement in prices.

The State and the Nation. The interdependence of economics and industry was stressed by Mr. B. L. Jalan in his presidential address to members of the Indian Commerce Association at the opening of its 9th All-India Conference. In an outspoken comment on the implications of the change-over from a "Co-operative Commonwealth" to a "Socialistic Pattern of Society" Mr. Jalan pointed out that the new conception raises the fundamental question of the comparative rôle of the State in the economic activities of the nation. He viewed with concern the increasing tendency towards a rapid extension of the public sector coupled with the imposition of controls and regulations directed solely towards the private sector, and the prevailing "political slogan" advocating nationalisation "at the cost of the basic necessities of the situation." Recommending a modification in the whole procedure of planning for further industrialisation, Mr. Jalan put in a plea for the preparation of detailed blue-prints of selected industries, to be offered to the public, Chambers of Commerce and trade associations for their consideration well before the State decided to instal the industry on its own account. Speaking of the growing number of controls on the private sector, Mr. Jalan strongly opposed the condemnation which the managing agency system has received in recent months due largely to "political inhibitions and ideological make-belief." "Almost the entire existing industry in the country," he said, "has been pioneered, developed and sustained against heavy odds by this institution." Not only would the new Companies Bill produce uncertainty affecting capital formation, he added, but there would be a natural disinclination on the part of managements to embark on long-term programmes of expansion. As an example of the disquieting rumours of nationalisation, Mr. Jalan cited the Government's active con-

sideration of the nationalisation of insurance which he said "has damped the atmosphere of confidence, stability and steady progress generated by the phenomenal success achieved by Indian insurance in recent years." While welcoming the emphasis placed on the creation of 10 to 12 million new jobs in the second five year plan, Mr. Jalan underlined the gravity of the situation, and the necessity for immediate action, especially among the rural under-employed. He described the success of self-help schemes which he had implemented in about a dozen villages of West Bengal, where during the first few months work was created to the gross value of Rs. 30,000. As far as the urban unemployed was concerned, Mr. Jalan emphasised the vital need for a re-orientation of commercial education and a more realistic approach to the employment market in the light of the new industrial revolution.

Non-ferrous Metals.—India's growing need for supplies of non-ferrous metals as basic components in all future industrial and engineering projects, was emphasised by Mr. Purna Chandra Dass in his address from the chair at the 10th annual general meeting of the Calcutta Metal Merchants Association. Formed originally to protect and promote the interests of traders in non-ferrous metals in undivided Bengal, the Association is now affiliated to the Bengal National Chamber of Commerce, a development which Mr. Dass noted with satisfaction. Although some expansion of the trade has taken place during the first five year plan, Mr. Dass remarked on the disquieting situation brought about by the Government of India's

THE APPLICATION OF BANKER'S LIEN

A CASE INVOLVING TWO FIRMS WITH THE SAME PARTNERS
(FROM OUR LEGAL CORRESPONDENT)

THIS note concerns the rather thorny subject of banker's lien. We say "thorny" because, although the principles of the law are clear enough, their application has produced, down the years, a crop of judicial decisions often very difficult to reconcile. As far back as the middle of the 19th century, it was judicially decided that "bankers most undoubtedly have a general lien on all securities deposited with them as bankers by a customer, unless there be an express contract on circumstances that show an implied contract inconsistent with lien". (*Brandao v Barnett* 1846). The above statement of banker's lien excludes documents or securities deposited for safe custody or deposited for any special purpose inconsistent with lien. And quite distinct from this implied general lien is the case of charges taken by bankers to secure advances. The big banks have well recognised common forms printed for lien mortgages and charges upon property of all kinds, and these forms are so worded, being prepared by the most eminent legal experts, as to give the banker the fullest possible right over the property free from conflicting rights of third parties.

Yes, the principles of the law on lien are plain and unambiguous. It is their application wherein lies the difficulty; the task of applying them to the facts and circumstances of each particular case. A frequent cause of litigation arises where the bank has had one of these forms or a special agreement signed by a constituent which provides that the bank's lien shall extend to all monies paid into the customer's account and it turns out that the monies so paid in and sought to be made the subject of the lien are trust monies. In that case difficult questions of notice of the trust, negligence by bank, constituent or trustees, and fraud may arise, which may complicate and alter the common law position. Again, the customer may have two or more accounts, operating perhaps in respect of different businesses, and carried on, both in regard

to, the businesses and the accounts with the bank under different names. Is solvent account A of business B with its assets, liable under a general lien for the liabilities of account X of insolvent business Y? Or, where the customer pays money into his bank for a specific purpose and the bank accepts it with instructions from the customer to apply it to that purpose, does that particular money become earmarked and outside the scope of the general lien? These are the sort of questions that arise and to them no hard and fast rule can be laid down to supply an answer. What you have to do is to apply the facts to the printed or oral agreement for the lien, and then be guided by the law of contract and of lien. Not an easy job, often; hence multifarious law suits, and here we have the latest Indian one.

This appeal to the Punjab High Court was from the Tribunal at Panipat dismissing the appellant's application under the Displaced Persons (Debts Adjustment) Act (1951) S. 13. There were two firms at Chichawatni, Jai Kishan Das-Hans Raj, and Jai Kishan Das-Jinda Ram. The partners in both the firms were the same persons, namely Sant Lal, Hans Raj and Chaman Lal, though it was asserted that the shares of the individual partners in the two firms were different. There is no legal objection to such a course. Two firms consisting of exactly the same partners may nevertheless constitute separate and distinct partnerships and carry on different businesses, and the question whether two such firms are separate and distinct or whether they constitute only one firm is another of those questions of fact which have to be determined upon the circumstances of each case.

From a copy of the accounts produced by the respondent bank (the Central Bank of India Ltd.), it appeared that at the relevant time the firm Jai Kishan Das-Hans Raj was indebted to the Bank to the extent of Rs. 26,193. This amount was in the cash credit account in which there was a limit of Rs. 2,25,000 and this firm had executed in favour of the bank a promissory note and certain other documents and some goods had been pledged with the bank. The other firm Jai Kishan Das-Jinda Ram also had a cash credit account with the bank, and had executed similar documents for a limit of Rs. 2,25,000. There was also an agreement in the case of both the firms for pledge of goods to secure a demand cash credit. The 14th and 16th

clauses of this agreement gave the bank a right of lien over other monies. The relevant portions of these clauses were:

"14th—Provided always that nothing herein contained shall be deemed to negative, qualify or otherwise prejudicially affect the right of the bank (which it is hereby expressly agreed that the bank shall have) to recover from the borrowers the balance for the time being remaining due from the borrowers to the bank upon the said cash credit account notwithstanding that all or any of the said securities may not have been realised."

"16th—That in the event of there being a surplus available of the net proceeds of such sale after payment in full of the balance due to the bank, it shall be lawful for the bank to retain and apply the said surplus belonging to the borrowers or any one or more of them for the time being in the hands of the bank in or under whatever account as far as the same shall extend against in or towards payment or liquidation of any and all other moneys which shall be or may become due from the borrowers or any one or any more of them whether solely or jointly with any other person or persons firms or company by way of loans, discounted bills, letters of credit, guarantees, charges or of any other debt or liability, including bills."

On 7th August, 1947, the firm Jai Kishan Das-Jinda Ram paid Rs. 15,000 to the bank at Chichawatni to remit to the Upper Doab Sugar Mills, Samli, U.P. When the money was offered to the sugar mills, they informed the bank that they had no claim over the monies, which were returned to the remitting office at Chichawatni to be dealt with. And on 15th September, 1948, the bank dealt with this sum by crediting it in the account of the partners, Sant Lal, Hans Raj and Chaman Lal, trading under the firm Jai Kishan Das-Hans Raj.

On 9th December, 1952, the applicant firm Jai Kishan Das-Jinda Ram made an application under S. 13, Debts Adjustment Act, claiming this Rs. 15,000. The bank pleaded that this amount had already been lawfully appropriated towards the debt due from the partners of the firm and the matter could not be reopened as under S. 49 Debts Adjustment Act, past transactions discharging debts due from a displaced debtor are not affected by the passing of the Act.

We have been a long time in coming to the point of this rather confusing story. But it is this. If that money was rightly appropriated, the Act was not applicable to the transaction and the application must fail. Was, therefore, the money rightly appropriated?

And that brings us to the law. We are concerned with it in two aspects, the law in regard to different accounts and the law of bankers' lien, and this is what the High Court held: The law in regard to different accounts is that a banker is entitled to combine the accounts. Thus, if money is due from the customer on loan account and there is a balance in the customer's favour on the current account, the banker must treat the two accounts as one. (*Grant's Law of Banking*, Edn. 7, p. 294). In an English leading case, *Greenwood Teale v W. Brown*, the lien was even asserted against a trust account, the bankers having no notice that it would be a fraud for the customer to draw against it. The law in regard to bankers in India is contained in S. 171, Contract Act, which provides: "171. Bankers . . . may, in the absence of a contrary, retain as a security for a general balance of account any goods bailed to them . . . and according to *Mulla on Contracts* a banker's lien extends to all bills, cheques and monies entrusted or paid to him in his character as a banker."

Having thus cleared the legal air, let us briefly recapitulate the essential facts. We will call these two firms A and B. The partners were the same individuals in both firms. Both the firms had identical contracts with the bank, as a result of which the bank possessed a general lien on the goods and monies of both firms coming into the hands of the bank. Firm B paid Rs. 15,000 to the bank, with instructions to remit it to a sugar mill. The bank did so. The mill refused to accept the money, having no claim to it. The money was returned, therefore, to the bank. The bank, instead of crediting the money in the account of firm B, credited it in the account of firm A thus appropriating the money towards firm A's debt. Was the bank entitled to do this? "Yes," said Kapur J. in the Punjab High Court. As the partners of the firm A had specifically agreed with the bank that any sums standing in the names of the partners would be subject to the lien of the bank and the object of the trust in respect of payment to the sugar mills having come to an end, the relationship between the banker and the customer was that of debtor and creditor and, in the absence of any special instructions to the contrary, the lien of the bank attached to the money returned by the sugar mills.

A.I.R. (1955, December). Punjab 251.

OVERSEAS RADIO-TELEPHONE CALLS

Overseas Radio-Telephone calls put through before or after regular working hours of the service will henceforth be charged for the actual period of duration subject to a minimum of three minutes instead of a minimum of six minutes as hitherto. This change came into effect from 25th December, 1955.

A DITCHER'S DIARY

IF most of Calcutta's British business community finds the prospect of 1957 anything but reassuring, it has at least brought consolation for one of its members. I know I express the feelings of all those who have in any way had contact with the Bengal Chamber when I say that its Secretary, Mr. Douglas Fairbairn, has more than earned the C.B.E. announced in the Queen's New Year Honours list. Perhaps the shortage of other Calcutta names must be accepted as a sign of the times. But it is good to learn that the work of Mrs. Flora Bonthron Lawson for "The Good Companions" has been rewarded with an O.B.E. Among others honoured I am glad to note that Mr. Cyril Dundas, whose efforts on behalf of the British Council have obviously been more rewarding than his frequent good-humoured attempts to change the Ditcher's views on some of the aspects of its work, has also received a C.B.E.

It seems to me that some among the sixty thousand or so bank employees have a genuine personal grievance; it is always hard to pay back excess salary received through no fault of one's own. How many workers are involved does not seem to be clear, but I suspect the unions' estimate of 50 percent is exaggerated. Perhaps 20 percent would be nearer the mark. And the adjustments are, I believe, being made under the terms of the Gajandragadkar Award, which in all other respects is favourable to the employees and is certainly better than the Indian Government had previously considered was in the interests of the banking industry and the economy generally. Yet we are once again being threatened with a bank strike. It is difficult not to feel that there are deeper and less creditable motives at work in the minds of the union leaders. If a strike was not justified in November 1954, it is far less so now. Then, the workers were smarting from the Government Order modifying the findings of the Labour Appellate Tribunal; now, they have the solid consolations provided by the Gajandragadkar Award. When, it seems fair to ask, is somebody going to stand up for the interests of the remaining 360 million people in India who have to make a living? There need be no mistake about it; a bank strike can bring industrial and commercial life to a standstill. By introducing the grave risk of public disorder, it can even endanger political stability. It is to be hoped the appropriate steps are taken in time, because a strike once started will be much more difficult to end. The convenience of the general public in Calcutta has already suffered from the closing of the Clearing House—a move which the unions have deplored, but which the banks have been unable to avoid. The risks of attempting to carry on clearing operations with staffs likely to strike at any moment, are more than any banker dare undertake. But this discomfort will scarcely compare with what can be expected if banks are forced to close their doors altogether for any length of time. It is no use dwelling on the mistakes of the past seven years. An answer is needed now to the question whether the country can afford to jeopardise so much through the actions of so few.

Along with the British Council, and one or two other well-known institutions, Mr. Nehru is among those who share the distinction of having incurred the permanent personal disapproval of Lord Beaverbrook and his powerful publicity machine. I am reminded of this by an article written in the *New Statesman* by Malcolm Muggeridge, who himself recently managed to secure an honourable

place in the lordship's private index and who says that the pleasure of being attacked by a Beaverbrook newspaper is enhanced if, like him, one has at some time or other been employed by one of them. Then, of course, one knows how the machinery of vendetta works. In the mind's eye one can see the chosen scribe being briefed and subsequently striving "to instil into his writing a malignity he does not necessarily share". The strange thing, as Muggeridge points out, is that those who have, through the years, been praised by the great Press Lord have invariably sunk into obscurity, while those who have been the subject of his most unscrupulous attacks have usually gone from strength to strength. The savage onslaughts of the Beaverbrook Press maintained Baldwin as leader of the Conservative Party long after his inadequacy as Prime Minister was apparent to all. Lord Mountbatten (hated partly because of his personal friendship with Mr. Nehru) moves from one high office to another. "It is difficult," says Malcolm Muggeridge "to think of a single case in which abuse has not proved beneficial and praise ruinous". A former editor of this paper told me once that in giving evidence for a non-official survey of the Asian Press, which was being held in the U.K., he caused some surprise in the assembled committee when he declared that responsible newspapers in India were a good deal more objective in their treatment of practically everything than were the heavily biased Beaverbrook newspapers in Britain. I can see the force of the argument. Muggeridge discerns in the extent to which Lord Beaverbrook is himself nowadays featured in the columns of his own newspapers a sign of failing powers: "It would seem" that the great man "now not only wants his newspapers written for him, but also wants them written about him".

I am sure we all agree that some social achievements have the most inauspicious beginnings. I have heard, for example, that skill at bridge often varies inversely with the strength of one's financial position as a undergraduate. Rubbers, squeezed between lectures, have been known to open the way to many a brilliant first. Fortunately for most of us, time dulls the sharper edge of such necessity and the skill gained merely serves as a pleasant diversion for our later years. According to present-day values, an accomplished bridge player is able to enter society with a standing credit on the favourable side of his personal balance sheet, although it will only remain so if his activities are kept within reasonable bounds. When they develop into a *force majeure* they are no longer a social grace, but a deciding factor in drawing-room politics. Although I have felt recently that my undergraduate days might have been unnecessarily lean, and my social opportunities needlessly squandered, since I never did have resource to the gaming tables, I am sure that I would have been even less acceptable had I developed into an Ely Culbertson. If being a bridge player of negligible talents has made me less of a good companion than I might have been, I am still thankful that I have never gained the reputation of being the world's greatest exponent of the game. Ely Culbertson, after a varied career, settled down to create a reign of terror at the world's bridge tables. He died only a few days ago with his reputation unchallenged and a fortune to his credit. But the risk is a grave one. I can think of no more certain way of ensuring that people will not ask one out than to carry a label announcing that the challenge to a

simple evening's card playing can lead to a lifetime paying off the debt.

After so liberal a dose of Mr. Khrushchev's poison it should be refreshing for anybody in India to discover for himself that Americans are far more interested in the problems of art, literature, philosophy and, of course, making money, than they are in launching aggressive wars or subjugating free peoples. Such an opportunity is being provided for a fortunate few by this year's Harvard International Seminar, scheduled for the period 2nd July to 22nd August, 1956. The number of participants is expected to be forty—twenty from Europe and the rest from Asia and the Middle East. The only requirements are that candidates should be between twenty-six and forty years of age, should have a good command of the English language, possess a record of activity in some field of endeavour and show promise of achieving eminence. Students, I believe, will be considered only if exceptionally qualified. All expenses, including transport to and from, and a personal allowance, will be paid by the Seminar. The programme will combine a formal academic course, opportunities for contact with various aspects of American life, and the right of each national delegation to address, at least once, an American audience on conditions and problems in its own country. The latest day for applications to reach the Harvard International Seminar, 10 Weld Hall, Cambridge 38, Massachusetts, is 15th March. It seems to me an excellent opportunity for discovering and being discovered. It is a pity numbers are so limited.

We Ditchers, like all members of the breed *Homo Sapien*, must needs stand in awe before the grim shadow of the ever-spreading mushroom cloud. If we are given to panic, there is the virtual certainty that within three hundred million years, or maybe less, life will be impossible in this fair city. It positively makes a poor Ditcher's flesh creep to ponder what might happen if flying saucers really were to land on the Maidan. But a new menace now faces the home of Ditchers which makes the prospect of these catastrophes appear as pleasant as the weather in December. This terrible threat which now darkens our horizons comes not from New Zealand cricketers, Russian footballers, or Mr. Deshmukh's Budget plans, but from that small, insignificant, though ever magnanimously inclined, municipality on the west coast. I refer of course, though in nothing more than a hushed whisper, to Bombay, the city of Parsees, Picegoths and Prohibition. To which enemy of our dear Calcutta do we owe this idea to make Bombay the economic capital of India? Why should he go to such trouble to frighten Ditchers, be they Blackmarketeers, Marwaris or Scotsmen? Has he at some time been immobilised by a tramway strike, or kept hanging on by one of our telephone operators? Has he lost a packet on Indian Irons? These are dark days for this fair city. The central office of the State Bank and now this. What next? Is there some hideous purpose which will only be satisfied when the jute mills are jostling the cotton industry, coal pits are being dug at Juhu and tea bushes are sprouting on the slopes of the Western Ghats? The time has come for Ditchers to unite against this malevolent spectre which has come to haunt the blasted heath which is fast encroaching on our Clive Street. There is no time to lose. Ditchers, the call is "To the barricades". The honour, influence and prestige of this no mean city is under seige.

THE DITCHER.

How strong must the foundation be for 43 lakh houses?

In the last few years, large segments of our population have moved into the cities. Here they live in unbelievably congested tenement houses, adding to the cities' already acute housing shortage. We need 43 lakh houses to ease the strain on our cities.

In 1947 our cement production was 1.45 million tons. Today, it is 4.34 million tons—almost three times the 1947 figure. 40,000 people are employed in 26 modern, efficiently run factories.

In our developing economy steel is

essential. That is why the Tata Iron & Steel Company has launched an expansion programme which will raise its capacity.

Ingot Production	
1955	1,050,000 tons
1959	2,000,000 tons

The consent of the Government of India has been obtained to this Issue by an order a complete copy of which is available for public inspection at the Head Office of the Company. It must be distinctly understood that in giving this consent the Government of India do not take any responsibility for the financial soundness of any scheme or for the correctness of any of the statements made or opinions expressed with regard to them.

A licence (No. L/20/5/55) has been obtained from the Government for effecting a substantial expansion to this industrial undertaking of which a copy is open to public inspection at Head Office of the Company. It must be distinctly understood that in granting this Licence the Government of India do not take any responsibility for the financial soundness of this undertaking or for the correctness of the statements made or opinions expressed in regard to it.

A copy of this Prospectus has been delivered to the Registrar of Joint Stock Companies, West Bengal for registration.

Application will be made to the Calcutta Stock Exchange for permission to deal in and for official quotation of the ordinary shares of the Company.

The subscription list will open on the eleventh day of January, 1956 and will close on the eighteenth day of January, 1956, or earlier or later, at the discretion of the Directors.

NATIONAL CARBON COMPANY (INDIA) LIMITED

(Incorporated on 20th June, 1934 under the Companies Act, 1913).

SHARE CAPITAL:

AUTHORISED:

Rs. 2,50,00,000 divided into 25,00,000 Shares of Rs. 10/- each.

ISSUED, SUBSCRIBED AND PAID-UP:

Rs. 1,60,00,000 divided into 16,00,000 Ordinary Shares of Rs. 10/- each.

LOAN CAPITAL:

The Company has no Debentures or other loan capital outstanding.

ISSUE OF 4,00,000 Ordinary Shares of Rs. 10/- each fully paid at Rs. 19 As. 8 per share payable in full on application.

The Company is advised that the Ordinary Shares now being offered for subscription are "Approved Investments" within Section 27A of the Insurance Act, 1938.

The shares now being issued will rank for any dividend declared in respect of the financial year commencing on December 26th, 1955, and all succeeding years and in all other respects *pari passu* with the ordinary shares of the Company already issued.

A second interim dividend, which in effect was a final dividend, of Rs. 20.00,000 free of income tax amounting to Re. 1 As. 4 on each share of the issued share capital of the Company, was declared and paid on December 1955, for the financial year ended December 25th, 1955.

This dividend makes a total amount of Rs. 40,24,814 paid in respect of dividends for the Company's 1955 Financial year, which is equivalent to over 20% or more than Rs. 2/- per share on a capital of Rs. 2,00,00,000 fully paid.

Applications must be for a minimum of 50 shares or for multiples of 50 shares.

PARTICULARS

History and Business:

The Company was incorporated in Bengal as a Private Company in 1934. It acquired in June, 1934 and has since carried on the business in India of the Ever-Ready Company (Great Britain), Limited, including the sole right to use in India the world famous "EVEREADY" Trade Mark as well as other well-known Trade Marks including "MINI-MAX", "LAYERBILT", "MASTERLITE", "AIR CELL", etc.

The Company's predecessors commenced manufacturing dry cells and batteries for flashlights and radios in 1926 when the first plant was set up. From the beginning the manufacture of dry cells and batteries progressively passed from a purely assembly process of imported parts to a position where a majority of those parts are now produced by the Company in India.

Throughout its history the Company has shown a consistent and healthy growth. In 1935 the installed capacity of the production plant was approximately 15,000,000 cells per annum, with an

area of 25,000 square feet being used for manufacturing and storage purposes. A new plant at Cossipore commenced operations in 1940 by which time production had doubled. In 1952 the Company increased its productive capacity by the installation of a modern factory in Madras; this installation, while showing a considerable saving in freight on finished batteries, also forms part of an overall plan of decentralization thus avoiding the possibility of complete disruption of the Company's business by civil disorder or natural calamity. Today the Company has a capacity of almost ten times that of 1935 and utilizes over 300,000 square feet of space for the manufacture of components and finished batteries.

In 1937 the Company's Sales Offices and warehouses were located in Calcutta, Bombay and Madras. Today they are spread over Calcutta, Bombay, Madras, Delhi, Cochin, Vijayawada, Allahabad, Gondia, thus shortening the Company's lines of contact with its customers and thereby improving its service to them.

In keeping with its declared policy of manufacturing as many as possible of the component parts required in its operations, the Company installed in 1949 a manganese ore crushing and grinding mill with auxiliary air classifying and filter unit. The installation of this unit, the first of its kind in India, has enabled the Company to use basic raw materials direct from the mine in bulk for further processing in India thus eliminating costly packing and handling charges.

Ever watchful of its manufacturing costs, the Company has followed a steady plan of mechanization of its manufacturing processes. Soon after the end of the second World War a plan was adopted for the complete automation of its zinc can manufacturing department. The automation of this department, while reducing the labour component to approximately 10% of its former strength, was so carefully integrated with the Company's other expansion plans that no lay-off of the labour force was necessary.

The dry cell for many of its components relies on small punched and formed metal and paper parts. Prior to 1948 practically all of these were imported. Today in its well-equipped punch press shop a large volume of components is produced annually. This department has recently been supplemented with machinery for the production of multiple connection sockets for radio batteries, etc. For the maintenance and manufacture of the special high precision dies required in the punch

press shop, the Company has set up a die department as a special adjunct to its machine shop. All the activities of this machine shop, in which is installed the most modern equipment, are supervised by experts with long experience in die making and machine shop operation.

The Company, in its efforts to keep up a high standard of quality has always maintained laboratories for examination of raw materials, finished products and for research. In 1940 it installed the first air-conditioned constant temperature and humidity laboratory for dry cell testing in India and most of the specification data evolved from information collected in this laboratory and from the Company's overseas associates was made available to the INDIAN STANDARDS INSTITUTE for developing its dry cell and battery specifications. In 1950 this laboratory was considerably enlarged and fitted with complex and automatic testing equipment with accommodation for testing over 5,000 cells simultaneously.

In 1953 the Company introduced into India for the first time the large scale manufacture of a special design of flat cell which is assembled into batteries known by the trade mark "MINI-MAX". Because of its shape this cell lends itself readily to the requirements of the radio battery and hearing-aid trade and since its inception the business has grown to a point where it is a very important part of the Company's operations.

During the time the Company has done business in India it has always cultivated good relations with its employees and has been in the forefront of industry in India with a provident fund and credit society as well as many auxiliary activities such as sports, clubs, libraries, canteens, etc. The Company has maintained a policy of including Indian nationals within its management group as well as providing practical training with its overseas associates to Indian supervisory and technical staff.

The Company was converted into a Public Company on December 23rd, 1955.

Objects of Issue:

The objects of the present issue are to afford an opportunity for the participation of Indian capital, and to provide additional capital for the expansion of the Company's business. The Directors are satisfied that all the capital intended to be raised by means of subscriptions received in response to this Prospectus can be usefully employed.

Financial Information:

Auditors' Report:

The following is a copy of the report of the Company's Auditors, Messrs. Ford, Rhodes, Parks & Co.,
The Directors,
Messrs. National Carbon Company (India) Limited,
18A, Brabourne Road,
CALCUTTA-1.
Gentlemen,

We have examined the Accounts of National Carbon Company (India) Limited, as audited by us September, 1955 and report as follows:

I. Profits:

The Profits of the Company arrived at on the basis set out below were as follows:

	Year Ended 25th December, 1953	Year Ended 25th December, 1954	Nine Months Ended 25th September, 1955
Sales	Rs. 3,88,75,052	Rs. 3,70,00,797	Rs. 3,30,98,331
Cost of Materials	2,06,21,848	1,75,83,524	1,78,81,264
Salaries & Wages	52,04,779	55,09,486	41,64,898
Expenses	44,52,967	47,92,171	39,85,177
Depreciation	5,50,788	7,15,585	5,89,056
Net Profit before Taxation	3,08,30,382	2,86,00,766	2,66,00,395
	80,44,670	84,00,031	64,97,936
Net Profit before Taxation	3,88,75,052	3,70,00,797	3,30,98,331
Provision for Taxation	80,44,670	84,00,031	64,97,936
Net Profit after Taxation	33,46,889	34,98,861	27,34,512
Amount Capitalized, Bonus Shares issued.	46,97,781	49,01,170	37,63,424
			18,75,930

NATIONAL CARBON COMPANY (INDIA) LIMITED—Cont'd.

Excise Duty was imposed on 1st March, 1955 on Batteries manufactured in India. Cost of materials for the nine months ended 25th September, 1955 includes such Excise Duty amounting to Rs. 19,67,513.

II. Dividends:

The Dividends paid (free of income-tax) in respect of each of the two years and nine months to 25th September, 1955 were as follows:—

1953	30%
1954	40%
1955	20% Interim Dividend (before increase in Capital).

III. Net Assets:

The Net Assets of the Company as at 25th September, 1955 based in the audited Balance Sheet at that date were as follows:—

	Book Value at 25th September, 1955.	Depreciation to 25th September, 1955.	Net.
	Rs.	Rs.	Rs.
Fixed Capital Expenditure:			
Land and Buildings	15,58,847	3,23,275	12,35,572
Plant and Machinery	70,28,203	28,15,445	42,12,758
Other Assets	17,85,359	8,84,576	9,00,783
	1,03,72,409	40,23,296	63,49,113
Goodwill (At Cost)			30,00,243
Current Assets:			
Stocks and Stores at Cost	...	1,54,72,221	...
Sundry Debtors	...	23,08,745	...
Due by Associated Companies	...	5,87,794	...
Cash and Bank Balances	...	15,40,767	...
Other Current Assets	...	11,17,387	...
		2,10,26,914	
Less Current Liabilities and Provisions:			
Due to Associated Companies	...	11,63,372	...
Sundry Creditors	...	13,61,524	...
Bank Overdraft	...	33,46,485	...
Provision for: Taxation	...	17,52,916	...
Expenses	...	3,43,335	...
		79,67,632	
Net Current Assets			1,30,59,282
Net Assets as at 25th September, 1955.			2,24,08,638

A revaluation of the Company's Fixed Assets carried out on the instruction of the Board showed that the cost of replacement would amount to Rs. 79,80,669 compared with the corresponding book value at 25th December, 1952 of Rs. 64,65,164. By a resolution of the Board dated 15th August, 1953 it was decided to incorporate this increase in valuation in the books of the Company, the excess of Rs. 15,15,505 being carried to a Capital Reserve Account.

IV. Share Capital:

The Share Capital of the Company was increased during the third quarter of 1955 by the issue of 4,00,000 Ordinary Shares of Rs. 10/- each, fully paid for each, and 1,87,593 Ordinary Shares of Rs. 10/- each, by way of fully paid Bonus Shares. The issued Share Capital on 25th September, 1955 was:—

16,00,000 Ordinary Shares of Rs. 10/- each, fully paid Rs. 1,60,00,000.

V. Accounts:

No audited Accounts have been made up in respect of any period since 25th September, 1955. Yours faithfully,
FORD, RHODES, PARKS & CO.,
Chartered Accountants.

New Projects:

The Company is presently constructing a zinc rolling mill for the production of high quality zinc alloy strip which ultimately will eliminate the need to import zinc strip for the dry battery trade thus taking a further step in its programme of self-sufficiency. It is expected that this zinc mill will be operating during the first half of 1956. Of the total amount of capital intended to be raised by means of the proposed issue, it is estimated that Rs. 55 lacs will be required for the purpose of equipping and establishing this zinc rolling mill. The major part of the Company's business up to the present has been concerned with manufacture and sale of dry cells and batteries and it relies on the importation and indigenous manufacture of appliances, radio sets, flashlights, torches, etc., which operate with, or are powered by, dry batteries, to maintain the demand for its battery products.

The supply of flashlights and torches, the major stimulants to dry battery sales, is almost wholly dependent on importation from abroad, and, of course, on the foreign exchange that may be available to cover the necessary import licences. The Company has, therefore, formulated plans for and is proceeding with the establishment of a fully equipped factory for the manufacture of flashlight cases and it is expected to commence production during 1957. It will be equipped with the latest techniques known for the production of high quality, economically priced flashlight cases. When completed the factory will be the most modern of its kind in Asia.

With the output from this factory the Company can expect to benefit not only from the extra volume of business from the new product itself, but also from a large increase in the sale of flashlight cells which will be required to power the flashlight cases produced and also for the replacement cells.

In addition to its manufacturing activities, the Company has imported for a number of years many of the various chemicals, plastic raw material, and industrial products produced by its associates in the U.S.A. and elsewhere. These associates are recognized as leaders in the field of chemicals and plastics both from the quality and quantity view point. The sales volume of these products has grown to a point where their manufacture in India and their sale to the Company have indicated that certain of these chemicals and plastics can now be manufactured economically in India because of the existence of regular supplies of the raw materials required. Plans for a modern chemical plant are now nearing completion and it is hoped to go into production in 1958. It is intended that products from this plant should consist of polyethylene, ethylene dichloride, a chemical in great demand as a fumigant for foodgrains, and some industrial solvents. It is anticipated that the sale of these products will add considerably to the Company's earnings.

Prospects:

The present total sales density of dry cells in India is equivalent to 0.40 cells per capita per

annum which compared adversely with adjacent Asian countries where densities run over 1.00 cells per capita per annum. With the application of the present Five Year Plan which envisages an all-round improvement in the standard of living, there is no reason to believe that the Indian consumption of dry cells will not rise to match or go beyond this figure. Were the consumption of dry cells to increase to one cell per capita, it is not unreasonable to assume that a very substantial portion of this increase would be secured by the Company.

There is also another good reason for optimism which arises from the rapid increase in the demand for batteries for radio sets which has increased approximately four times in the last five years. This growth in demand for radio batteries is due in a major degree to the ever-widening network of broadcasting stations presently erected and planned for the future by Government.

STATUTORY AND GENERAL INFORMATION

Miscellaneous:

(a) **Revaluation:** The assets of the Company were revalued as at December 26th, 1952 and particulars of such revaluation are given below.

Original Value	Value on Revaluation	Surplus
Rs. 64,65,164	Rs. 79,80,669	Rs. 15,15,505

A reserve was created out of the total surplus arising on the aforesaid revaluation.

(b) Bonus Issues:

(i) The sum of Rs. 43,38,890 being a part of the balance standing to the credit of Profit and Loss Account as at December 25th, 1951, was capitalised and utilised for the purpose of paying up in full 4,33,889 shares of Rs. 10/- each in the capital of the Company and these shares were allotted and issued on December 23rd, 1952 as fully paid up to Union Carbide and Carbon Corporation, a company incorporated in the United States of America.

(ii) The sum of Rs. 18,75,930 being a part of the balance standing to the credit of Profit and Loss Account as at the December 25th, 1954, was capitalised and utilised for the purpose of paying up in full 1,87,593 shares of Rs. 10/- each in the capital of the Company and these shares were allotted and issued on September 24th, 1955, as fully paid up to the said Union Carbide and Carbon Corporation.

(c) Cash Issue:

400,000 new shares of Rs. 10/- each were allotted and issued to the said Union Carbide and Carbon Corporation at par on July 2nd, 1955 for cash.

(d) Minimum Subscription:

The minimum amount which in the opinion of the Directors is required to be provided in respect of each of the matters mentioned in Section 101 (2) of the INDIAN COMPANIES ACT, 1913 is Rs. 39 lacs made up as follows:

(i) Cash Purchase Price of plant and machinery Rs. 33 lacs. (ii) Estimated expenses of this issue, Rs. 2,00,000. (iii) Repayment of monies bor-

rowed in respect of the foregoing matters, Nil. (iv) Working Capital Rs. 4,00,000.

(e) Underwriting:

The shares now being issued have not been underwritten but the Company will pay brokerage as indicated below.

(f) Redeemable Preference Shares:

The Company has not issued and it does not at present intend to issue any Redeemable Preference Shares.

(g) New Issues and Offer for Sale:

Save as mentioned above no shares or debentures have been issued or agreed to be issued within the two years preceding the date hereof. An Offer for Sale in respect of 4,00,000 shares of the Company of Rs. 10/- each at Rs. 19 As. 8 per share was issued by Union Carbide and Carbon Corporation, the principal shareholder in the Company, on the same date as that upon which this Prospectus was issued.

(h) Payment of Commission:

No sums have been paid within the two years preceding the date hereof or are payable as commission for subscribing or agreeing to subscribe or procuring or agreeing to procure subscriptions for any shares in or debentures of the Company or as discount in respect of shares issued.

(i) Payment to Promoter:

No sum has been paid within the two years preceding the date hereof or is intended to be paid to any promoter.

(j) Licence:

The licence referred to at the commencement of this Prospectus has been granted in respect of the zinc mill Project. No licences are necessary for the flashlight case project, the manufacture of polyethylene, and the manufacture of industrial solvents, for which projects, Government approval has been given.

Directors:

The Articles of the Company provide that the number of Directors shall not be less than three nor (unless otherwise determined by the Company in General Meeting and, if required by law, sanctioned by the Central Government) more than ten.

Unless otherwise determined by the Company in General Meeting a Director does not require any share qualification.

The Articles provide that each Director shall be paid out of the funds of the Company as remuneration for his services the sum of Rs. 300 for each meeting of the Directors attended by him or such other sum as may be determined by the Company in General Meeting and also that the Directors shall be entitled to be paid all travelling, hotel and other expenses, properly incurred in connection with the business of the Company.

The Articles also provide that the Directors may appoint a Managing Director, Joint Managing Director or Managers of the Company on such terms as to remuneration as the Directors shall deem fit.

A Director who is absent from or who is about to leave the District in which the Directors' Meeting is ordinarily held for a period of three months or more may appoint, with the consent of the Board of Directors, any person to be an alternate Director during his absence.

No sums have been or will be paid to any Director in cash or shares or otherwise to induce him to become a Director.

Powers of Directors:

The Articles provide that the Company shall be managed by the Directors who may exercise all such powers of the Company as are not by law or by the Articles, required to be exercised by the Company in General Meeting. The powers of the Directors are, however, subject to any regulations, not being inconsistent with the Articles or the law, which may be made by the Company in General Meeting.

Interest of Directors:

Mr. J. R. Galloway is the Managing Director of the Company and receives remuneration for his services as such. Mr. Galloway is also a Director of Alipore Estates Ltd., of which this Company is a shareholder.

Mr. J. E. Potts, Mr. F. J. Drane, Mr. T. G. Lewis and Mr. D. P. Antia are employed by the Company, and receive remuneration accordingly.

Mr. R. V. Farrell and Mr. J. K. Grassle are shareholders each holding less than 1/100th of 1% of the issued capital of Union Carbide and Carbon Corporation the principal shareholder of this Company.

Mr. D. P. Dunderdale is a partner in the firm of Messrs. Sandersons & Morgans, Solicitors to the Company.

Save as above no Director has any financial or other interest in any of the property proposed to be acquired by the Company.

Indemnity:

Every Director, Managing Agent, Manager, or Officer of the Company or any person (whether an Officer of the Company or not) employed by the Company as Auditor shall be indemnified out of the funds of the Company against all liability incurred by him as such Director, Managing Agent, Manager, Officer or Auditor in defending any proceedings, whether civil or criminal, in which judgment is given in his favour, or in which he is acquitted, or in connection with any application in which relief is granted to him by the Court.

Management:

</

I believe that neither those who believe that hand-loom could produce, nor those who believe that hand-loom could not produce could be absolutely certain in their belief and definitely say that they are right. I, therefore, humbly suggest that a complex ban should not be placed on the increase in production of cloth by big scale industry. If at any time it is found that the hand-arms are not producing as much required by the Government in enough quantities, the restriction can be brought on the mill industry at a later stage. Even in the Five Year Plan, there could be no absolute rigidity, and as our Prime Minister has rightly expressed more than once, our approach has to be dynamic, changes may have to be made from time to time even after the Five Year Plan has been accepted. And, in any case, we will have many more Five Year Plans—all with the object of raising the

I would, therefore, again in all earnestness appeal to all those concerned that the increase in spindles and looms should not be completely banned but permitted in restricted numbers and at any time, when it is found, even after a year, two years, or three years, that Ambar Charkha and the handlooms have come up to the expectations and demands, immediate steps could then be taken to stop further expansion of spindles and/or looms. What with the difficulty

ties of Planning, finance, obtaining of machines and so on, the possible increase in spindles and looms by the mill industry even without a ban during the waiting period could only be limited and hardly such as to impair the prospects of expansion in other sectors. What I fervently urge is that the matter should be approached with an open mind by all concerned, and not in a dogmatic spirit.

We industrialists are a much maligned lot as some debates in Parliament during this year have shown. But I do wish to point out that most of us, at any rate, are not lesser patriots. Indian industrial enterprise has served the country well. Its achievements during the first Plan-period are a testimony won in spite of numerous handicaps. And I am confident that given reasonable opportunity and a co-operative administrative environment, it can deliver the goods in the second Plan. Let us have the tools, and we will do the job.

The need for greater participation on the part of labour in the management of industrial enterprises has been in the air for some time now. I think, in terms of providing a wide range of opportunities for participation in management functions, production committees and works committees are likely to be more useful for a long time to come. Due to many reasons works and production committees have not yet been made a success. As employers, we share a part of the blame, as much as the employees must. But I am confident that given the goodwill and co-operation, our works and production committees can be transformed from mere grievance platforms into vital, living institutions which can provide a multi-point contact, at an easily assimilable level, for a large number of the workers. To my mind, this constitutes a more desirable channel, from the point of view of its value as education in management, into which the urge for greater participation in management can at this stage be most usefully directed.

Before I conclude, ladies and gentlemen, I have great pleasure in putting on record my appreciation of the efforts of all my colleagues, big and small, and I convey to them our thanks for the same.

NEW BRITISH HELICOPTER

Hunting Percival has released further details of the P.74 research helicopter—the first to employ true jet propulsion to drive its rotors. Construction is well advanced, and the makers say it will fly during 1956. There are other gas-turbine powered helicopters flying today but the rotors are either coupled to the engine by shaft drive—as in piston-engined helicopters—or driven by compressed air drawn from the engine. The P.74 is powered by two Napier Oryx 750 h.p. engines, the output of which is conveyed to the rotor tips through ducts.

Hunting Percival design philosophy centres on the creation of an independent engine-rotor system which permits freedom of choice of airframe. The Oryx, designed specifically for helicopter operation, enables this philosophy to be realised, in that power from the turbine is used not only to drive

its own compressor, but also an auxiliary compressor for air which is forced into the rotor duct, where it mixes with the exhaust gases. Thus, the engine consists of two compressors, each with its own air intake, and driven by a common turbine. This, by-pass system increases and cools the flow of air in the rotor duct, creating a low-pressure flow at the rotor tips. This arrangement, say the makers, keeps noise and fuel consumption at a low level, reduces weight and mechanical complications in the form of gear-boxes, clutches and couplings and eliminates vibration and maintenance problems. It is claimed, moreover, that, theoretically, some 10 per cent less power is needed to achieve hovering flight.

A helicopter sustained by shaft-driven rotors suffers from an excess of torque—that is to say, a tendency for the fuselage to revolve in the opposite direction to the rotor. To counter this, small tail rotors are used which, however, use power that could be employed for the main rotor. Torque between airframe and rotor on the P.74 consisting only of rotor-bearing and gas-duct friction is very slight and although a small tail rotor has been fitted initially to this aircraft, it consumes a negligible amount of power. The makers anticipate that it may be possible to dispense with the tail rotor eventually and to substitute a conventional fin. The extreme rear of the fuselage has been made detachable with this in mind. Design work on a ten-passenger development of the P.74—the P.105—has already started. It is expected to fly in 1958, by which time much experience will have been obtained with the P.74.

BE 25's FIRST TEST RUN

Bristol announce that the BE 25 turboprop engine has successfully completed its first test run. This powerplant, six of which have been ordered by BOAC for later Britannias, has also been specified for the projected Super Britannia, scheduled for the early 1960s. Basically an 8,000 h.p. engine, the BE 25 is limited to 4,000 h.p., an output that can be maintained from sea level to about 20,000 ft. Thus, full power is available for take-off from airfields situated high above sea level—an important consideration in certain parts of the world. The BE 25's constant-power characteristics can be varied according to operators' requirements to give greater power over a lesser altitude range or, alternatively, reduced output to a greater height. Production of the transatlantic Britannia 300 L.R.—the aircraft which will be eventually re-equipped with BE 25s—is building up at the Belfast works of Short and Harland. Seven Mk. 300 L.R. and nine Mk. 250 L.R. aircraft are in various stages of construction and Bristol say that the first Mk. 300 L.R. will be ready for non-stop operation during 1957.

Finance in India and Abroad

THE CALCUTTA MONEY MARKET

STRIKERS DISRUPT BUSINESS

Wednesday, 4th January.

IT is difficult at the moment to discern the pattern of demand conditions in the money market because of the disruptions to business caused by the labour dispute. So far as can be judged, of late for funds is still growing. Increases have been recorded in the requirements of the sugar industry. There has been more buying of raw jute, and accommodation is being asked for against storage of seeds and grains in upcountry areas. Business is almost at a standstill in the interbank market but funds remain tight. The call rate is unchanged at 3½ per cent.

The market for export documents has remained quiet; only a few tea bills have come to hand. Remittance continues in fair demand. Sterling has weakened over the last fortnight and the dollar rate is now quoting Rs. 47½.

Silver was firm on speculative buying as the sellers were holding back. The price advanced from the previous week's level of Rs. 170-14 to Rs. 173-12, quoted to-day. The rate for ready delivery was quoted at Rs. 173-14. In London the price rose from 77½d. to 78½d. The price of foreign silver in New York remained the same at 90½ cents.

Gold ruled firm in sympathy with silver and the price rose from Rs. 94-1 to Rs. 95-4. The sovereign at Rs. 61-6 showed a gain of 8 annas.

Tenders for Rs. 1 crore of 91-day Government of India Treasury Bills, which were opened on Tuesday, 3rd January, 1956, totalled Rs. 1,39,75,000. The average rate of acceptance rose to Rs. 2-8-2 percent per annum. Tenders at Rs. 99-6 percent were accepted in full and those at Rs. 99-5-9 percent allotted approximately 28 percent. Tenders for Rs. 1 crore of 91-day Government of India Treasury Bills will be received at all centres up to Monday, 9th January, 1956. During the week ended 30th December, 1955, Government of India Treasury Bills for Rs. 6,17,00,000 were sold in favour of the Reserve Bank of India.

The statement of the position of scheduled banks for the week ended 23rd December, 1955, discloses Demand and Time liabilities at Rs. 606.68 crores (Rs. 6.81 crores on account of borrowings from banks) and Rs. 420.28 crores (Rs. 5.79 crores) compared with Rs. 613.00 crores (Rs. 9.20 crores) and Rs. 421.85 crores (Rs. 6.86 crores) in the previous week. Cash has declined by Rs. 12 lakhs to aggregate Rs. 333.95 crores, while balances with the Reserve Bank have advanced by Rs. 1.46 crores to stand at Rs. 55.70 crores. There is a drop of Rs. 4 crores in investments to Rs. 387.93 crores. Advances and bills discounted at Rs. 622.22 crores reveal a rise of Rs. 8.04 crores. The ratios to total liabilities of cash and balances, and of advances and discounts are, in consequence, shown at 8.7 percent and 60.6 percent against 8.5 percent and 59.3 percent.

The return of the State Bank of India for the week ended 23rd December, 1955, shows a drop of Rs. 25 lakhs in total deposits to Rs. 222.45 crores. Investments in Government Securities are up by Rs. 2 lakhs to Rs. 109.23 crores, while other authorised investments remain unchanged at Rs. 9.26 crores. Advances, including loans, cash credits and overdrafts and bills discounted and purchased have increased by Rs. 1.18 crores to aggregate Rs. 100.48 crores. Cash and balances are, in consequence, shown at Rs. 20.90 crores or Rs. 2.72 crores less.

Rises of Rs. 14.68 crores and Rs. 10.40 crores in the total note issue and notes in circulation to Rs. 1,374.01 crores and Rs. 1,361.98 crores, respectively, were outstanding features of the return of the Reserve Bank of India for the week ended 30th December, 1955. The currency expansion was duly covered by raising foreign securities by Rs. 10 crores to Rs. 686.88 crores and rupee securities by Rs. 4.97 crores to Rs. 558.07 crores. A fall of Rs. 11.07 crores in balances held abroad to Rs. 48.30 crores was presumably due to a transfer of securities to the Issue Department. Deposits showed an all round rise. Deposits of the Government of India and other Government accounts rose by 3.06 crores and Rs. 2.67 crores to Rs. 54.01 crores and Rs. 10.62 crores due to tax collection. Balances of commercial banks at Rs. 57.87 crores were Rs. 2.63 crores higher, following year-end window dressing. Investments increased by Rs. 11 lakhs to Rs. 50.54 crores. Other loans and advances rose from Rs. 32.19 crores to Rs. 44.63 crores of which advances to scheduled banks against usance bills totalled Rs. 18.86 crores (Rs. 10.66 crores). These advances amounted to Rs. 225.44 crores since 1st January, 1955. Ways and means advances stood at Rs. 3.66 crores against 5.29 crores.

TREASURY BILL MATURITIES

Details of 91 days bills outstanding with the public on 6-1-56.

Issue Date	Maturity Date	Amount (000's of Rs.)	Average Acceptance Rate
6-1-56	7-1-56	1,00.00	Rs. 2-8-2½
16-12-55	17-3-56	1,00.00	Rs. 2-8-0½
9-12-55	10-3-56	1,00.00	Rs. 2-8-0½
2-12-55	3-3-56	1,00.00	Rs. 2-8-0½
25-11-55	26-2-56	1,50.00	Rs. 2-8-0½
19-11-55	20-2-56	2,00.00	Rs. 2-7-10½
11-11-55	12-2-56	2,00.00	Rs. 2-7-7½
4-11-55	5-2-56	2,00.00	Rs. 2-7-6½
21-10-55	22-1-56	2,50.00	Rs. 2-7-7½
14-10-55	15-1-56	2,00.00	Rs. 2-7-8½
7-10-55	7-1-56	1,50.00	Rs. 2-7-11½
Monthly Maturities (000's omitted)			
January, 1956		6,00.00	
February, 1956		7,50.00	
March, 1956		3,00.00	
April, 1956		1,00.00	
Total Rs.		17,50.00	

NEW ALUMINIUM SOLDERING TECHNIQUE

Tiltman Langley, research and development consultants, have evolved a new method of soldering aluminium which is expected to be of value to the aircraft industry. Present soft soldering technique usually relies on heavy and expensive soldering tools mechanically or electronically operated. Solder consisting of 90 percent tin and 10 percent zinc alloy is commonly used. Tiltman Langley has developed a soldering tool in the form of a small brush that is capable of being used for the fluxless soldering of aluminium with any normal solder.

The technique involves the use of an electric hot-plate to raise the work to the required temperature. The solder is applied and the surface is lightly scoured with the brush, made of glass fibres, until the area is effectively overlaid. The surfaces to be joined are placed together and a neat fillet of solder produced by sweeping through the molten solder with the brush. It has been found that after being raised to a soldering temperature of 250 Centigrade for a short time, the majority of aluminium alloys experience no appreciable loss of mechanical properties.

U.K. NOVEMBER EXPORTS

Figures for November 1955 show that British aviation exports totalled £6,524,363, almost double the figure—£3,460,983—for November last year. During the first eleven months of 1955, exports totalled £59,472,801, more than £8 million more than in the same period last year.

THE MERCANTILE BANK OF INDIA LTD. ANNOUNCEMENT.

The Bank takes pleasure in announcing the opening of a new branch office on 2nd January, 1956 at:-
123, PALL MALL, LONDON S.W. 1.

The new office will be known as WEST END BRANCH,
Telephone No. Trafalgar 2544/8
Telegraphic Address:- "PARAMALL PICCY, LONDON."

On the same day a new branch office of the Bank will be opened at:
E BLOCK, CONNAUGHT PLACE, NEW DELHI.

ALL-STEEL TRAVEL

The day draws near
when all-steel railway coaches
will roll out from the Perambur Integral Coach
Factory at the rate of one a day. This national
undertaking, situated a few miles from Madras, will
be the largest coach factory in all Asia. To
complete the project, 81,000 tons of Structural
Steel and 12 miles of Railway track will be
required and 15 miles of water supply
pipes will be laid.

INDUSTRIAL EQUITIES SHOW FIRM TREND

GILT-EDGED QUIET

London, 4th January.

BUSINESS was slow to develop in the London stock markets after the Christmas holidays, but in spite of the low level of activity the trend was distinctly firm, particularly in industrial equities. This section attracted the bulk of buying and widespread gains were established. The end-year recovery on Wall Street and favourable comment helped sentiment; the heavy wage claims outstanding and various other factors, including, of course, the credit squeeze, failed to restrain buyers. Demand was selective and confined to better class issues. Gilt-edged securities were unaffected by the better-than-expected revenue figures for the first nine months of the financial year and the reduction in the Treasury Bill rate. Prices moved within narrow limits in very quiet conditions and recorded little material change on balance. German bonds provided the highlight of the foreign market and scored sharp gains following Continental buying, while Japanese issues also advanced. Rails were firmer where changed. Selective buying was responsible for some appreciable gains in industrial equities. The Financial Times Industrial Ordinary Index advanced to 202.1, compared with 198.8 on Christmas eve—an appreciable rise, considering the low level of business. Engineering, electrical and steel shares were among the firmest groups, but nearly all industrial sections recorded gains. Idle conditions prevailed in the gold share market and prices inclined to drift lower in the absence of interest. Platinum shares were firm following American buying at the Cape, and diamonds occasionally hardened. Coppers went ahead on renewed buying, while other base metals were firmer where changed. Oils also advanced, though Shell reacted on profit-taking. Rubbers were a good market following buying on dividend hopes, but tea shares attracted only a modest amount of attention. Rangala were outstanding on hopes of a bid for the shares.

The Money Market

Taken all in all, with only a short working week and a heavy Bill take-up, the money market surmounted the difficulties of the year-end operations with the accompanying shortage of credit reasonably well. Not to be caught as a year ago, when the market was forced to borrow large sums from the Bank of England, discount houses had made early preparations to counter the expected credit shortage by accumulating funds into the new year for which up to 41 percent was paid and by raising the Treasury Bill rate at the tender last week.

Nevertheless, the market still had to borrow from the central bank, though on a much smaller scale than a year ago. Applications of £260 million of 91-day Bills totalled £385,610,000, and the former amount was allotted at an average rate of 81s 5.40d, compared with 82s 9.12d in the previous week. This week's offerings will comprise £260 million worth of 91-day Bills. The Bank of England return for the week ended 28th December revealed that notes in circulation were about £9 million higher at around £1,889 million, while bankers' deposits were about £24 million higher at around £345 million. Fine trade bills were unchanged.

U.S. Federal Reserve Return

The U.S. Federal Reserve return for the week ended 28th December showed gold stocks unchanged at \$21,690 million. Foreign deposits declined by \$11 million to \$468 million, while foreign investments declined by \$17 million to \$3,648 million. The Federal Reserve purchased \$35 million worth of Treasury Bills during the week. Total discounts and advances declined by \$161 million to \$509 million, while excess reserves of member banks declined by \$425 million to \$134 million. Their daily average of excess reserves increased by \$9 million to \$753 million. Business loans of the New York City banks increased by \$42 million to \$9,173 million, compared with an increase of \$21 million to \$7,568 million in the corresponding week a year ago.

Activity on Wall Street

The U.S. domestic bond market was featured last week by the strength of American Telephone and Telegraph's new 3½ percent of 1967. In heavy turnover, the issue rose over one point to sell at 132½, the best level recorded so far. Bethlehem Steel 3½ percent were also active but fractionally lower. Elsewhere among convertibles, trading was slow with the trend mixed. Rails were also mixed, ranging to a point or more. U.S. Government obligations were shaded at first but eventually firmed in expanded dealings. Investment corporates drifted irregularly with World Banks dull. The foreign section was quiet, most of the activity being in such issues as German Nationals, Greeks and Serbs. Australian and Japanese issues generally showed small changes either way. South Americans were featureless.

Hongkong Gold Quiet

The Hongkong gold market moved narrowly before the year-end holidays. Opening at \$(HK)53½, the price advanced to \$(HK)53½, but closed lower at \$(HK)53½. There was a general lack of incentives. Carryover charges were 60 cents in favour of sellers. The official offtake was 3,280 taels and arrivals were 30,000 ounces. A forward contract was done at \$(U.S.)37½.

U.K. Aluminium Prices Raised

Aluminium Union Limited, distributors of Canadian primary aluminium ingot in the U. K., announced that with effect from 1st January the

price of primary aluminium delivered to industrial users in the U. K. is being raised to £179 a long ton from £171. The premiums applicable for the metal in higher purities and in different forms will remain unchanged.

Pakistan's Raw Jute

In the case of raw material for the jute industry, shippers are adhering firmly to the minimum rates and the volume of business that has been done with Pakistan should ensure the maintenance of these values for some time. Indeed, a scheme is being worked in Pakistan whereby all marketing of raw jute will be looked after by one central body. The primary step towards the new co-ordinated policy separates the Jute Branch from the Commerce, Labour and Industries Department. The new Department will be under the East Pakistan Chief Minister. It looks as if the Pakistan Jute Board wants to see prices established once for all at a level which gives growers a good return for their labour. Flax and tow yarns are quiet in Scotland and spinners would be glad to see further orders coming to obviate the curtailment of production.

Prospects for Cotton

The Chairman of the United Kingdom Cotton Board, Sir Raymond Street, commenting on the prospects for cotton in 1956 said it would be foolish to indulge in optimism with the raw cotton situation unavoidably bearish owing to the large American cotton stocks. "I hope Washington is going to act with prudence when it comes to the point of decisions" he said. The cotton industry in several countries is in difficulties of one sort or another. The firm sellers markets which we enjoyed so long after the end of the war are not other hand, there is no need for extreme pessimism. Business has been better in the closing weeks of last year, and he believes that this trend will hold for early 1956.

Vegetable Oil Market

While Continental advances indicated lower rates for American linseed oil on spot in Rotterdam, the U. K. markets retained a firm appearance with sellers for forward arrival and shipment ahead to March wanting around £124 c.i.f. for Indian bulk oil, £121 for April-May and £120 for May-June shipments. Buyers were still rather hesitant. Groundnut oil was claiming moderate attention for near shipment of Indian, with afloat parcels of Indian bulk oil reported sold to Rotterdam around £114 c.i.f. Coconut oil was still lacking attention, although small parcels of Straits one percent bulk oil were taken in the region of £91½ c.i.f. Philippine copra was quieter after reports of the sale of 7,000 tons to Continental ports at \$177 January-February. Only small parcels were reported sold at that price on Thursday. France was reported to be in the market for Canadian linseed but details were undisclosed. Groundnuts, particularly Sudanese, were firmer but buying interest remained subdued.

Stocks and Shares

SHARE MARKET BRIGHTER AT THE CLOSE

TECHNICAL POSITION MUCH IMPROVED AFTER SHAKE-OUT

Wednesday Evening

THE stock market has shown a slightly better tendency after the depressed condition into which it fell during the Christmas period. The various bear influences on the market appear to be the uncertainty about the Tata rights issue, on total wealth and the prospect of a bank strike. A good deal of money has also been absorbed by the National Carbon issue which is due to open a week to-day and to which the response is known to be heavy. The police action which has been taken against illegal traders has further helped to the general despondency. Although there are various bull factors in the background, such as the rumoured change in the Government's coal policy and the excellent technical position in which the market now finds itself, there is little to encourage operators until the question of the bank strike is settled. The Budget prospects will then no doubt ensure that optimism does not get out of hand. Government securities are the only bright feature in the present dull picture.

Details of the week's trading follow.

There was a further improvement in the Government security market and prices were marked up over a broad front. The enquiry was of a general nature but was once again centred on medium and longdated loans and these issues recorded appreciable gains. The volume of business was on a substantial scale but trading was restricted to some extent by the shortage of scrip. Three percent Conversion Loan was unchanged at Rs. 80-7 while 3½ Non-terminable Paper was marked at Rs. 80 x.v. In short-dated loans 3½ 1957 improved to Rs. 99-9 as did 3½ 1958 to Rs. 99-7. In the medium-dated group, 3½ 1959-61 was a firm feature at Rs. 98-2 and 3½ 1964 was marked up to Rs. 94-10 with few declared sellers; 2½ 1961 was taken higher to Rs. 93-2 as was 2½ 1960 to Rs. 96 while 2½ 1962 was traded at around Rs. 93-12. In National Plan loans 3½ 1961 was better at Rs. 99-9 while 3½ 1964 improved to Rs. 98-11; 3½ 1965 was taken higher to Rs. 98-13 x.v. and was later marked at Rs. 98-10 x.v. In long-dated loans 3½ 1966-68 was as 2½ better at Rs. 91-14 and 3½ 1970-75 recorded a further sharp rise to Rs. 87-15. Trading in State Loans was rather dull and business was on a mediocre scale. Four percent U.P. 1967 improved further to Rs. 99-9 while 4½ Madras 1967 was asked for at around Rs. 99-10. Other issues were steady, but prices remained unchanged.

Selected preference shares continued to attract enquiry, but sellers were conspicuous by their absence. In the miscellaneous group Associated Hotels were quoted at Rs. 118 and a small lot of Burrakur 2nd Preference was done at Rs. 7-8. British India Corporation receded to Rs. 134 against a previous quotation of Rs. 137. Calcutta Electric were placed at Rs. 12-6 and Godfrey Phillips were crossed at Rs. 73. Indian Aluminium changed hands at Rs. 75 and Indian Iron & Steel at Rs. 110. Indian Standard Wagon were taken at Rs. 142 and Jardine Henderson were crossed at Rs. 78-8. Karanpura Collieries were marked at Rs. 69 and New Victoria Cotton at Rs. 3-10. In Jute, Bally were quoted at Rs. 118 and Hastings at Rs. 107-8. Hooghly Mills changed hands at Rs. 14-10 and Khardah were crossed at Rs. 104. Reliance came to hand at Rs. 112 and Standard at Rs. 103-8. In the banking section, Hindustan Commercial were crossed at Rs. 9 and later were placed at Rs. 9-12. Punjab National receded from Rs. 49 to Rs. 45-12. United Commercial were steady at Rs. 55-4 and United Bank of India "D" shares were quiet at Rs. 4-14.

In the railway section, Ahmadpur-Katwa were done at Rs. 60-8, Burdwan-Cuttack at Rs. 59-12 and Baraset-Basirhat at Rs. 10-6. A small lot of Kalighat-Falta changed hands at Rs. 60-8.

In cotton, Bengal Nagpur were placed at Rs. 11 and Dunbar receded from Rs. 315 to Rs. 310. Elgin opened at Rs. 28-4 cum-dividend to close at Rs. 25-12 ex-dividend. Kesoram were marked back from Rs. 18-12 to Rs. 17 and Cawnpore Textiles from Rs. 10-10 to Rs. 9-4. New Victoria were dealt in freely at around Rs. 1-15, Jayshree came to hand at Rs. 6-12.

Coal shares found more sellers than buyers and prices receded on a broad front as will be seen from the following table:

	Opening Rs.	Closing Rs.
Bengal	572	558
Burrakur	16 1	15 4
Central India	7 15	7 9
East Indian	32 4	31 12
New Beerbhoom	21 6	21

Jute shares continued to wallow in the mire and prices closed well below the opening rates on 23rd December, 1955. Here is a chart of representative price movements:

	Opening Rs.	Closing Rs.
Agarpara	13 2	12 12
Anglo-India	212	210

	188	185
Belvedere	260	251
Delta	27 12	27 8
Howrah	96	94
Megna	32 13	31 9
National	12 14	12 8
Reliance		

In contrast, Champdany Jute improved from Rs. 175 to Rs. 180.

Comparatively speaking electric supply shares were fairly steady. Agra were unchanged at Rs. 162 as were Benares at Rs. 19-4, Jubbulpore at Rs. 16-10 and U.P. at Rs. 164. Calcutta Electric eased from Rs. 14-8 to Rs. 14-3.

Sugar shares moved in sympathy with the general trend of the market and prices in most cases were easier. Balrampur were lower at Rs. 9-12 and Belsund came back from Rs. 12 to Rs. 11-7 as did Carew from Rs. 11-15 to Rs. 11-12. Cawnpore receded from Rs. 26-8 to Rs. 26 and Champdany from Rs. 34-12 to Rs. 34-8. Durbhanga were quiet at Rs. 24-12 while Ramnugger were unchanged at Rs. 25-8.

Engineering shares which have in recent months kept remarkably steady also lost a few points during the period under review. Here is a chart of representative price movements.

	Opening Rs.	Closing Rs.
Braithwaite & Co.	28 8	27 8
Burn & Co.	330	323
Indian Iron	39 8	37 8
Jessop & Co.	62	60 4
Richardson & Cruddas	28 10	27
Textile Machinery	22 1	20 2

Miscellaneous shares were no exception to the general trend and prices were marked back in the majority of cases as will be seen from the following table:

	Opening Rs.	Closing Rs.
Alkali & Chemical	24 6	22 8
Angelo Brothers	28	26 8
Bengal Flour	32 8	31 2
Calcutta Tramways	18	17 10
Hindustan Motors	10 14	9 12
Imperial Tobacco	14 12	14 2
British India Corporation	13 9	12 15
Jardine Henderson	110	108
National Insulated Cables	22	20 2
Indian Cables	34 8	33 8
F. & C. Osler	16 4	15 12
Sone Valley	8 3	7 14
Clive Row	11 15	11 1
Titagur Paper	46 12	45 12

Mining shares displayed a sagging trend and Indian Copper in particular were marked down from Rs. 7-1 to Rs. 6-12. Karanpura Development shed Rs. 3 to close at Rs. 18. Christien Mica Industries, in contrast, were fairly steady at Rs. 18. Burma Mines closed 1 anna lower at Rs. 2-6 and Metal Corporation lost one point to close at Rs. 11-8.

Tea shares were again neglected and with few buyers prices were marked back further. The following table of representative shares illustrates the trend:—

	Opening Rs.	Closing Rs.
Brooke Bond	20	19 8
Gairkhata	305	300
Banarhat	328	320
Brahmapootra	10 2	9 4
Hasimara	34	32 12
Methoni	21	20
New Doars	280	270
Teloijan	25 8	24 12
Hantapara	264	257
Hansqua	21 8	21
Ledo	23	21 2

The profit of the DELHI CLOTH & GENERAL MILLS COMPANY amounted to Rs. 76.41 lakhs for the year ended last June, after allowing Rs. 66 lakhs (Rs. 54 lakhs) for depreciation and 1.05 crores (Rs. 1.40 crores) for taxation, compared with Rs. 1.09 crores in the previous year. Bringing in Rs. 1,69,241 there is Rs. 78,01,519. Debenture and redemption fund is allocated Rs. 10 lakhs, and renewal reserve Rs. 35 lakhs. The ordinary dividend has been maintained at Rs. 2-4 per share. The carry-forward is Rs. 82,759.

The expansion programme of the company is making good progress. The working of the Daurala and Mawana sugar factories was satisfactory. Efforts are being made to improve and modernise both factories. The crushing capacity of Mawana has been increased from 1,000 tons to 1,400 tons of cane per day. The working of the distillery was good but the position of the confectionery continued to be unsatisfactory. The capacity of the caustic soda plant is being increased from 11 tons to 20 tons per day, and it is now proposed to increase the sulphuric acid plant capacity from 20 tons to 50 tons per day. The Hissar textile mills started production from last October. For the

by external assistance. Clearly, this is not a field in which an estimate can be made either in terms of past trends or in terms of the needs of the country. The suggestion is that provision be made for external assistance of the order of Rs. 800 crores for the public sector. As will be explained later, supplemental resources from abroad will be necessary in order to balance the external account even after providing for reasonable withdrawal from the country's foreign exchange reserves and for some net inflow of private foreign capital. It is estimated that requirements of foreign exchange over the second plan period will exceed earnings from merchandise exports and invisible items by about Rs. 1,100 crores. In the first plan period external assistance available for the plan averaged Rs. 40 crores a year. As compared to this, an average of Rs. 160 crores a year represents a very big increase even when allowance is made for some of the newer avenues of external assistance such as trade credits for steel plants and other industrial undertakings.

Yearly Adjustments in Outlay

Taking all the resources listed above into account, there still remains a gap of Rs. 400 crores to be covered. It is not possible to envisage at this stage any domestic or external resources to fill this gap and there is little gain in attempting an arithmetical balance in respect of financial need and resources extending over a five year period. It is difficult, on the other hand, to cut down a plan which has already been pruned at successive stages; it would involve again a protracted process of re-adjustments and re-allocations. A five year plan is not after all a list of commitments for a five year period all of which will be entered into right at the outset. There are many uncertainties to be taken into account and a continuous review of resources and of ways and means of augmenting them will be necessary. One might also make allowance for the fact that a measure of shortfall in expenditure cannot altogether be ruled out when the implementation of the plan is to be undertaken by a large number of agencies within the public sector.

Controlled Consumption Necessary

It must be emphasised that the feasibility of the scheme of financing outlined here depends on a number of uncertain factors. As against the total outlay of Rs. 4,800 crores there is still a gap of Rs. 400 crores to be covered after taking credit for external assistance of Rs. 800 crores, deficit finance of Rs. 1,200 crores and loans from the people (including small savings) of Rs. 1,200 crores. There cannot be any certainty that external assistance will, in fact, become available on the required scale. The amount of loans from the people and the permissible limit of deficit finance in a democratic society depend in the ultimately on the more or less voluntary decisions of the people to save. It is imperative, therefore, that there should be sufficient flexibility in the execution of the plan so that the programmes to be undertaken from year to year can be adjusted in response to the emergent resources position. Uncertainties in financial resources, the supply of basic material resources, especially steel and equipment imported from abroad are among the factors to be taken into account through more accurate and detailed annual plans.

It must be emphasised also that resources of the order envisaged here cannot become available

automatically in the absence of suitable policies. Planning implies essentially an improvement in the rate and pattern of investment over what would have prevailed in the absence of a plan. A plan for raising resources, therefore, must necessarily include a series of concrete steps to raise the rate of saving in the economy beyond what would occur through the voluntary decision of the people. It is in this context that controls to restrain the consumption of non-essential goods become a vital part of planned development. Controls over the consumption of essential commodities such as foodstuffs have been removed in recent years; the improvement in the economic situation made such relaxation possible. In normal circumstances it would not be desirable to reimpose controls on essential commodities. But some restraints on consumption are nevertheless essential if a larger plan is not to be frustrated for want of resources. The question of controls is often discussed in the context of growing inflationary pressures which have to be prevented from getting out of hand. The need for controls once inflation gets under way is self-evident. But controls have an even more important part to play in averting the emergence of inflationary pressures by releasing a large volume of savings and by discouraging non-essential investment. To some extent, fiscal measures can obviate the necessity for direct controls. For this reason, steeper taxes, including indirect taxes on non-essential expenditure are among the most important steps that must be taken to make the plan financially feasible. But since the scope for additional taxation is circumscribed, it is equally important to control by direct means all forms of conspicuous over-consumption and wasteful expenditure.

A word may finally be said regarding the financing of State plans. Of the total expenditure of Rs. 4,800 crores, about Rs. 2,220 crores represents the expenditure to be incurred by State Governments. The revenue resources of State Governments are, as is well known, far below requirements. The examination undertaken in the Planning Commission in consultation with the State Governments shows that in the second plan period State Governments will be able to find only about Rs. 100 crores from existing revenues. It is proposed, therefore, that States should undertake further taxation totalling Rs. 225 crores. The lines along which this effort can be made have been worked out to a considerable extent in view of the Taxation Enquiry Commission's recommendations and a target of Rs. 160 crores of additional taxation has already been accepted by State Governments. It should not be difficult to raise a further sum of Rs. 65 crores or so over the five year period.

Progressive Tax System

Whether one considers the field of State taxation, or indeed that of Central taxation, one has to bear in mind that large though the effort may at first sight appear, it has to be judged in relation to the even larger and more exacting targets that have been adopted in respect of the other resources of finance in order to implement the plan. The most outstanding fact of the resources situation in India is that taxation at present brings in only about 7.5 percent of national income and that on so slender a base it is extremely difficult to build a big developmental edifice. The main objective should undoubtedly be to raise the proportion of taxation to national income as early as possible.

One of the key requirements of accelerating an economic development programme in the public sector is that the tax system should be more and more progressive in the sense that at increasing levels of income a higher and higher proportion of it should automatically come into the public exchequer. The reliance on non-tax sources proposed in the second plan is already so large as to jeopardise the entire plan.

The Centre and the States

The agreed estimates of capital resources to be raised by State Governments total Rs. 400 crores. Since then, the target for total public borrowings and small savings has been raised as shown in the scheme of financing given earlier. In view of this, the States will have to make an effort to raise much larger amounts, especially under small savings. It is no longer possible to judge the adequacy of the efforts made by State Governments in terms of targets set a few years ago when the small savings campaign was in its early stages. In this connection, the question of revising individual State targets and also the basis for sharing the collections as between the Centre and States will have to be considered.

It is not possible at this stage to strike a balance between the needs and resources of each State Government in precise terms. The position varies from State to State, but, on the whole, the financing of State plans of the magnitude proposed will involve in the present circumstances a larger transfer of resources from the Centre to the States. Granted the need for such transfers, it has to be remembered that the Centre's own resources are by no means unlimited. Full implementation of the plan is possible only if the States on their part strive to the utmost to raise resources within the fields assigned to them. Even on capital account, where the Centre has necessarily to assist State Governments, the latter have a part to play, as mentioned earlier, by raising public loans and promoting the habit of saving in the country.

It is necessary in this context to emphasise the need for each public authority securing a balance on revenue account. In fact, considering the needs of development, the revenue account should make a sizeable contribution to the investment expenditure envisaged in the capital budget. Although this may present difficulties each public authority should be able to raise enough funds by taxation to finance ordinary administrative costs and the recurring expenditure on social services. The present practice of allocating expenditure between revenue and capital accounts is not uniform in all States and steps are being taken to amend this divergence. Once, however, an agreed classification of revenue and capital items has been accepted, it has to be recognised that each public authority has at least to balance its revenue account on the basis of its current earnings. This, of course, raises the question of the correct allocation of tax resources between the Centre and the States. However right the initial balance in this regard may be, it is likely to alter from time to time. It is in view of this that the Constitution has provided for a periodic review of the position by the Finance Commission.

Resources for the Public Sector

The availability of resources for the public sector has ultimately to be judged in relation to the total volume of savings in the economy and

the demands upon them. For the economy as a whole, savings together with external resources available must equal investment. Of the aggregate expenditure of Rs. 4,800 crores in the public sector, Rs. 1,000 crores roughly represents current expenditure, and Rs. 3,800 crores represents investment. As against the requirements of Rs. 1,000 crores, public savings will account for Rs. 950 crores (Rs. 350 crores from current revenues at existing rates, Rs. 450 crores from additional taxation and Rs. 150 crores from the railways). Broadly speaking, therefore, the position which emerges is that the investment expenditure of Rs. 3,800 crores is to be financed by a draft on private savings and through external assistance. To this, before presenting the overall balance, must be added the investment requirements of the private sector.

The Private Sector

It would appear that the requirements of the private sector may be of the order of Rs. 2,300 crores. The broad break-up of this expenditure can be indicated as follows:—

	(Rs. crores)
1. Industry and mining	560
2. Plantations, transport, and electricity undertakings	90
3. Agriculture and rural industries	200
4. Construction	1,050
5. Working capital in trade and industry and miscellaneous items	400
	<u>2,300</u>

The major items of investment in industry and mining have been explained earlier. For private transport, plantations and electricity undertakings, detailed plans are being worked out, but Rs. 90 crores is considered to be a reasonable provision. Investment in the rural sector, monetised and non-monetised, adds up at present to a sizeable total, but the estimate of Rs. 200 crores set out above relates only to monetised investment. Construction, including housing, is at present probably of the order of Rs. 170 crores. On an average, investment of Rs. 210 crores a year under this head for the second plan period cannot be regarded as excessive. Finally, a provision of Rs. 400 crores of additional investment in working capital in trade and industry will probably be called for, considering the increase in the volume of production and in economic activity.

Taking the public and private sectors together, investment in the economy over the second plan period should work out at Rs. 6,100 crores (Rs. 3,800 crores in the public sector and Rs. 2,300 crores in the private sector). It will be observed that whereas in the first plan the ratio of public and private investment was 50, 60, in the second plan it works out at about 62, 38.

Future Rate of Saving

The overall position that emerges from the review so far is that the public sector will have no public savings (surplus on current account) for financing the investment programme proper. With the increases in taxation that have been proposed, the public sector will just be able to meet its current expenditures, including the expenditure of Rs. 1,000 crores on plan schemes in the revenue account. The entire investment of Rs. 6,100 crores, therefore, depends upon private savings and external resources. As will be seen in the next section, the implementation of the plan in the public and private sectors will require import surpluses of the order of Rs. 1,100 crores over the plan period. If the required external resources of this order are forthcoming, the contribution of domestic savings will have to be Rs. 5,000 crores. Savings of this order from within the economy pre-suppose a stepping up of the rate of saving from the current level of about 6 percent of the national income to an average of 8½ percent for the period of the plan. Or, to put it in another way, the rate of saving will have to go up from the present level of 6 percent to a little more than 10 percent by the end of the second plan period. This implies, if the national income goes up by about 25 percent over the plan period as envisaged earlier, an incremental rate of saving of between 20 percent to 25 percent. In a country with a large proportion of the population near minimum living standards, this order of effort is difficult, especially if the new incomes to be generated are to be diffused widely. It is in this context that efforts to restrain the consumption of non-essential commodities by persuasion, differential tax rates and by suitable direct controls, assume the greatest importance.

Some comments are called for. Firstly, the Planning Commission has made a vital reservation namely "should the expenditure, not taken into account, increase markedly, or should acceleration in prohibition programmes necessitate a sacrifice of existing sources of revenue, the resources available for the plan will correspondingly go down."

The Members of the Planning Commission, individually and collectively are cognisant of the extra-draft plan expenditure which is under discussion or which they themselves are agitating for inclusion in the plan. Dr. J. C. Ghose, a Member of the Planning Commission speaking here during the week declared that "there was a probability that the Government might yet provide an additional sum of Rs. 65 crores for improving the salary of teachers." Another Member, Mr. Gulzarilal Nanda has been actively agitating for the adoption of the *Ambar Charkha*, the subsidy on which is placed at Rs. 100 crores. A sum of nearly Rs. 30 lakhs was sanctioned during the week to start a pilot scheme "to collect data regarding the potentialities of the *Ambar Charkha*

and to study the weavers' reaction to the yarn produced on it." The scheme has been entrusted to the principal protagonist of the *Ambar Charkha*, namely the All India Khadi Board.

Calls on Expenditure

The Central Government has extended Prohibition to the State of Kutch, and the recommendations of the Shriman Narain Committee in favour of total prohibition by 1961 have been approved by four States, presumably because the Committee has asked the Centre to foot the bill, estimated at Rs. 200 crores. Provision for railways has been increased from Rs. 850 crores to Rs. 900 crores in the draft plan. It still falls short of the requirements of the Railway Ministry by Rs. 500 crores. The Atomic Energy Commission, which is included in the Prime Minister's portfolio, has demanded a sum of Rs. 60 crores for its development programme. The Ministry of Defence has demanded Rs. 350 crores for its development programme over and above a contract budget of Rs. 200 crores a year.

The following is the extra-draft plan outlay:—

	(Rs. Crores)
1. Dr. J. C. Ghose's demand for a subsidy for teacher's salaries	65
2. Mr. Nanda's demand for a subsidy for the <i>Ambar Charkha</i>	100
3. The cost of Shriman Narain's demand for total prohibition	200
4. Dr. Kati's demand for defence development	350
5. Dr. C. H. Bhabha's demand for atomic energy	60
6. The railways' unsatisfied demand	500
	<u>1,275</u>
	or <u>1,300</u>

In other words, the outlay on the plan instead of Rs. 4,800 crores should be Rs. 6,100 crores.

According to the Planning Commission the gap in the resources, after assuming an additional taxation of Rs. 450 crores is Rs. 2,400 crores, half of which is proposed to be covered by deficit financing. Without discussing the economic consequences of deficit financing, the balance of Rs. 1,200 crores, the Planning Commission has presumed, will be met by external sources. It is for the framers of India's Foreign Policy to determine whether such a large sum could be expected from foreign countries. The American ambassador Mr. Cooper leaves for Washington on 10th January for talks with the U.S. Government. Prior to his departure he has been having consultations with British and Canadian High Commissioners and with members of the planning commission including Mr. V. T. Krishnamachari and Mr. Gulzarilal Nanda to acquaint himself with India's need for foreign assistance during the second plan period, in which he is reputedly anxious to assist. The outlay in the public sector during the second plan is placed at Rs. 4,800 crores, and the Planning Commission envisages a gap of Rs. 24 crores in resources of which Rs. 1,200 crores are to be covered by deficit financing. Foreign assistance has been placed at Rs. 1,800 crores and "the balance of Rs. 400 crores to be made good either from internal or external sources."

It is no secret that additional taxation will not be phased over a period of five years but will be largely raised during the last three years of the second plan period. Additional taxation generally raises an issue, regarded as fundamental by a Government which professes to function on a democratic basis. The Government, it is claimed, should satisfy the tax-payer that it has exhausted all possible avenues for economy before resorting to additional taxation. Thanks to the spectre of unemployment, even the drive for economy has disappeared, so far as the Government is concerned. The Finance Ministry, three years ago, built up a kind of façade, over 70 reports, none of which has so far produced over 70 reports, none of which has been implemented. The Methods and Organisation Division also aims at reducing the strength of offices by increasing efficiency. Notwithstanding these two organisations, employment under Central Government establishments excluding railways has increased from 5,90,662 in December 1951 to 6,32,736 in December 1954 and 7,28,169 in August 1955.

Trainees for Steel

The Government of India, through the Ministry of Iron and Steel, is setting up a Committee to survey the existing training facilities in institutions or in industry with a view to their development for the training of skilled personnel for the three steel plants at an estimated cost of Rs. 10,000. Additional equipment and expert personnel required by the training centres would be recommended by the Committee. It is presumed that the training will consist of two stages; the first at the existing institutions or industries and the second at the steel works. In addition to skilled workers, the steel plants will need at least five hundred qualified engineers.

Iron Ore for Japan

Indo-Japanese negotiations for the mining and export of iron ore to Japan are in new progress. This will involve the development of rail and port facilities in Orissa. The U.S. Government will then be approached for funds to finance the project out of the President's special fund.

Indo-American Air Talks

Indo-U.S.A. Air talks are nearing successful completion. According to reports, the high con-

tracting parties have agreed to leave the existing Agreement un-amended and meet India's objective by an exchange of letters, which will be published. The U.S. Government will declare its willingness to modify the capacity and frequency of the existing services with India's consent. In determining the issue, the India-U.S.A. traffic primarily and the traffic carried by the U.S. Airlines generally will be taken into consideration.

Jet Factory for India

The British Under-Secretary, Ministry of Supply, Mr. A. W. L. Havilland, now in Delhi, has reached an agreement with the Government of India, permitting the manufacture of aircraft and aero-engines in India. Following on this, an Air Technical Mission, headed by Air Commodore Lal will shortly leave for London to finalise the agreement with Bristol for the setting up of a jet aero-engine factory and with Poland for the manufacture of the *Polland Gnat* light-weight jet fighter at the Hindustan Aircraft Factory at Bangalore. A technical team sponsored by Bristol visited India last summer and submitted a project report.

Foreign Exchange

An amendment to the Reserve Bank of India Act is envisaged during the Budget Session of Parliament in order to increase the availability of foreign exchange to finance the second five year plan outlay. According to the existing provisions of the Act, India has to maintain the 40 percent backing, in gold and foreign securities, for its paper currency excluding one rupee notes. On the basis of the present note circulation of Rs. 1,315 crores, India, for example, has to maintain the currency reserve in gold and foreign securities of Rs. 540 crores. The contemplated deficit financing in the second plan period would increase the note circulation and thereby reduce the availability of foreign exchange. Demand for foreign exchange in the second plan period is placed at Rs. 1,400 crores. It is therefore proposed to reduce the statutory backing from 40 percent to 30 percent. It is proposed to revalue the gold in the Paper Currency Reserve from the existing pre-war rate to the I.M.F. rate of \$35 an ounce which would increase its value by Rs. 78 crores. On the basis of the existing note circulation the availability of foreign exchange by the lowering of the statutory limit would be increased by Rs. 135 crores.

Russian Offer Rejected

The Government of India has rejected the Russian offer of assistance to its coal production plan. The Russians, among other things demanded Rs. 95 a day, free of income tax for each man, in addition to free accommodation, free passage and free travelling in India. Under their plan, it would be the Russians, who were to determine the type of equipment, the number of technicians India needed and the number of interpreters required during their stay in India. On this basis the Soviet Government had asked for visa facilities for technicians, the number of which had been determined in Moscow. The Government of India's reply was "No thanks, we no longer need your assistance." India, it has been made clear is in the buyer's market, Russia being one source of supply. So far as the coal mining equipment is concerned the offers which are being considered here, come from the United Kingdom, France, West Germany and Sweden in addition to Soviet Russia. It is pointed out that India's enquiries were regarded by Moscow as requests which have largely created these complications.

A Coal Division under a Joint Secretary has been created in the Ministry of Production, and at the same time coal production has been separated from coal control. The post of Coal Commissioner has therefore been abolished and in its place a Coal Controller and a Commissioner for Coal Production have been appointed; the latter to be in exclusive charge of coal production in the public sector, the 1961 target for which is placed at 18 million tons. The Commission of Coal Production will be similar to a Project Officer and will be treated on equal terms with any commercial undertaking in the private sector.

Bank Strike

The Government of India is considering steps to deal with the unconstitutional and unwarranted demonstrations and threat of a token strike by bank employees. The Government, has pointed out, that it looks with disfavour on such demonstrations, and had hoped that there would be peace in the banking industry after the full implementation of the last Bank Award. The gesture of goodwill shown by the Bombay bankers was a voluntary step and was not, in any way, prompted by the Government. In the Government's view at the attitude adopted by bank employees strikes at the very root of collective bargaining and the system of arbitration. Men who had criticised the Government for modifying the Award, although fully within its right do so, should not launch a campaign against the Award which had become the law of the land. The bank employees are likely lose the Government's protection which they had enjoyed so far if they continue to maintain their unjustified attitude.

Forward Trading in Cotton

Forward trading in Cotton will soon be resumed, after the Government fixes the settlement rates. The Government was opposed to violent upward fluctuations in cotton prices and had issued several warnings, but without results, hence the suspension in forward trading.

CONSUMER GOODS OUTPUT
DURING SECOND PLANSIR B. RAMA RAU ON DANGERS
OF FACTORY PRODUCTION CURB

(FROM OUR BOMBAY CORRESPONDENT)

THE inaugural address of Sir Benegal Rama Rau, Governor of the Reserve Bank of India, to the Agricultural Economic Conference at Poona last week lent considerable strength to the case for larger production of factory consumer goods during the second plan period. The Reserve Bank Governor gave a warning against the placing of unduly high emphasis on cottage and small-scale industries in the belief that their promotion would provide a quick and sure remedy for the prevailing unemployment and under-employment in the country. He pointed out that though unemployment and under-employment in rural areas had received great prominence in the discussions on the draft plan-frame, there had so far been no expert enquiry into the magnitude of this problem and such figures as were available seemed to indicate that some of the implied assumptions on which the conclusions of the plan-frame were based were certainly debatable, if not fallacious.

This led him to question the validity of the suggestion that curbs on the production of consumer goods in factories, which were mostly in urban areas, should be imposed until unemployment is liquidated. He observed that the assumption seemed to be that unemployment, especially in the villages, was a short-term phenomenon of the kind familiar in industrialised countries. He disputed this assumption by pointing out that the number of persons employed in agricultural operations could not have decreased and that even after making allowance for the fact that rural had been classed in the 1951 census as urban due to the natural growth of population, it was clear that there had been a continuous large-scale migration from rural to urban areas which could not but have reduced unemployment in rural areas appreciably.

Educated Unemployment

Looking at the problem of rural unemployment from another angle, Sir Benegal said that the number of students receiving university and college education increased from 74,000 in 1931 to 444,000 in 1951 and of students in secondary schools from 1,800,000 in 1931 to 5,700,000 in 1951. It was recognised generally that the number of jobs open to the educated class had not proportionately increased. He, therefore, concluded that the problem of unemployment among the better-educated classes was more serious than in the villages. These classes were not likely to be attracted by cottage industries which offered only a low level of earning. This naturally led him to assert that a remedy based on a wrong diagnosis and applied at the wrong place might actually aggravate the problem. Consequently, he suggested that before any fundamental change was made in the economic policy, which had hitherto proved very successful, there should be a detailed investigation by expert economists and others into the extent, nature and distribution of unemployment. He also emphasised that in economic development, the interests of the agricultural and non-agricultural sectors of the economy were not conflicting. They were mutually consistent and mostly common.

Nevertheless, the Reserve Bank Governor supported the development of efficient cottage industries in India with a view to providing subsidiary occupation for agriculturists. But he doubted whether this could check the current migration to urban areas, as a wide disparity existed between the rural and urban wage levels. If this drift was inevitable and economically not harmful, the improvement of urban living conditions and a high priority for slum clearance and urban housing would be an appropriate remedy. It was equally clear to him that the need for the maximum increase in consumer goods—agricultural as well as industrial—became imperative because of the high rate of investment and deficit financing contemplated in the second plan. The policy of maximum production was not inconsistent with a socialistic pattern of society, as the goal of social distribution would be practicable with the increasing production of wealth.

The Problem of Resources

In his address to the annual general meeting of the Employers' Federation of India held in Bombay at the end of December, Sir H. P. Modi dealt largely with the second plan-frame. Sir Homi believed that the size of the plan required to be reduced so as to make it consistent with the resources which the country could afford without damaging the foundation of its economy. One of the vital questions in this connection, according to him, was the method and the manner in which the resources for the plan were to be raised. He himself was very doubtful about the possibility of realising the estimated resources. The great bulk of the postulated increase in income would actually accrue to small farmers, agricultural workers, persons engaged in cottage industries and similar classes of people where the incidence of tax would be small and the receipts from them were not likely to make any sizeable addition to official revenue. Sir Homi believed that even if the tax system was provided with the adequate depth

and range recommended by the Taxation Enquiry Commission, and that even if rates of direct and indirect taxes were stepped up by bringing under taxation a large number of essential commodities exempt at present from excise duty, the collections from such taxes were likely to fall short of the estimates by a wide margin. He pointed out that direct taxation in the country was so steep already that it was only one step lower than that prevailing in a rich and highly industrialised country like the United Kingdom. Even with regard to indirect taxation, while there might be limited scope for a judicious expansion it could not be gained that the existing level in the country was near the point where the law of diminishing returns might be expected to operate.

Coming to the question of taxation of individual incomes, Sir Homi observed that it was going against all human experience to seek to stifle the incentive to work and to save in order to achieve the ends of social justice and the equality of opportunity for all. India had gone a long way in a very short space of time towards the establishment of a just social order. Drastic solutions wholly unsuited to the conditions of the country and incompatible with the maintenance of a free society, could not usher in the millennium. They could only seriously impair the foundations of progress. Sir Homi Modi was re-elected president of the Federation with Sir V. N. Chandavarkar, Sir Robert Menzies and Sir Allan Elliott Lockhart as deputy presidents for 1956.

Lack of a Shipping Policy

The Governments' shipping policy was discussed at some length at the recent annual prize day of the training ship *Dufferin*, as well as at the annual general meeting of the Government-sponsored Eastern Shipping Corporation. Mr. O. V. Alagesan who presided over both functions reaffirmed that it was the Government of India's policy to reach the two-million ton target set for mercantile shipping. But he was not specific about the time when this target could be reached. In fact, he had to admit that in spite of the efforts made during the first plan they had succeeded in building up Indian-owned tonnage to the extent of 600,000 tons only. The Deputy Minister for Transport could do nothing better than give a vague assurance that with the co-operation of the shipping industry they hoped to travel far in the direction of reaching the two-million ton target set for the second plan period. Mr. Alagesan however stressed the fact that the expansion of shipping did not simply mean the acquisition of more and more ships. It was equally necessary to produce ships in the country's own shipyards and to man them with trained Indians. So far as the latter went, he was happy that the Government of India had come to control and provide training facilities for the merchant navy. This tended not only to centralise the training arrangements but also ensured that the maintenance and the expansion of training institutions were not hampered by financial difficulties. Mr. Alagesan called for the closest co-ordination between the shipping industry and the authorities in the matter of this training.

Mr. Bhabha's Suggestions

In the course of his address, Mr. C. H. Bhabha, chairman of the Eastern Shipping Corporation, reiterated the need for the evolution of a shipping policy which would prove beneficial both to the Government Departments and the Indian lines concerned. He dealt with several important aspects of the desired policy. He suggested it should include the provision of Government cargoes likely to move under the second plan and also under various aid schemes, for Indian ships, at least until such time as they stabilised their position in the highly competitive overseas trade. Mr. Bhabha said that, while Government departments expected Indian companies to assist, even by making special arrangements in dealing with urgent movements if necessary, there was not the corresponding realisation of a reciprocal obligation. What was necessary was a proper liaison between the Indian shipping companies and the Government agencies. On the loan assistance given to the shipping companies, Mr. Bhabha suggested that Government should consider the policy of liberalising the terms, particularly in respect of passenger services if they wanted Indian lines to evince any serious interest. He said that experience in this Corporation showed that, with the present level of initial and recurring costs of passenger ships, there was little prospect of making any profit without some assistance from the Government. Mr. Bhabha complained that no decision had yet been taken on the acquisition of a few tankers, the management of which was to have been entrusted to the Eastern Shipping Corporation though the proposal had been pending for a long time. Regarding the slow turn-round of ships, he observed that while labour was an important factor in the efficient working of a port, there were many other factors which could not be ignored. Berthing arrangements, navigational aids, tugs and other facilities for the prompt and safe placing of ships in docks; availability of adequate and efficient means for loading and unloading cargo, transit sheds, rail, road and other transport for removal of cargo to and from the dock areas, were just as important for the efficient running of a port. While the Vaisit Committee had tried to improve the position of labour output with its recommendation of a piece-rate system of payment for dock workers, there was much leeway to be made up with regard to dock equipment. Mr. Bhabha also remarked that it was not shipping alone that suffered due round of ships and the consequent rise in expenses would affect adversely the whole export and im-

port trade and in the long run the interests of the consumer and tax-payer as well.

Fresh Bank Strike Threat

Serious trouble is likely to develop in 1956 in the banking industry in spite of the member banks of the Indian Banks' Association and the Exchange Banks' decision, with the full agreement of the State Bank of India, to implement the Industrial Disputes (Banking Companies) Decision Act, 1955, in a more liberal manner, in respect of some of the provisions of the Act. One of the provisions of the Act lays down that whatever arrears of payment might be due to bank employees for the period from April, 1954 to March, 1955 should be spread over three accounting years in the proportion of 40 percent, 30 percent, and 30 percent, to be paid on 31st December, 1955, 30th June, 1956 and 31st January, 1957 respectively. The joint statement issued by the Chairman of the Indian Banks' Association and the Bombay Exchange Banks' Association has announced the payment of arrears in one lump sum, instead of in three instalments as laid down in the Act. The joint statement also announces some concession relating to over-payment resulting from the Government order of August, 1954 that modified the decision of the Labour Appellate Tribunal. The greatest concession, however, is regarding the adjustment of dearness allowance. The reduction in dearness allowance by one-seventh in the case of clerks and one-tenth in the case of subordinates because of a drop in the average cost of living index which falls due from 1st July, 1955, will be made effective only from December, 1955. Thus no recovery would be made of the excess paid during the period July to November, 1955. The response to this gesture from the All-India Bank Employees' Association, however, has been very disappointing, and the Association is believed to be contemplating direct action against the implementation of the latest award, legalised by the Industrial Disputes (Banking Companies) Decision Act of 1955. As an earnest of this coming storm, there was a day's token strike here on 28th December, and banking business was very nearly paralysed in 36 banks. The call for this strike was given by the Bombay State Bank Employees' Federation. In addition to this, the Central Committee of the All-India Bank Employees' Association has decided to issue a call for a general strike all over the country on 6th and 7th January. Bank employees in Bombay have endorsed this call and further, given an assurance that they are prepared for a strike of indefinite duration on this issue.

Power Position in Bombay

Apprehensions of an electric power famine in Bombay between 1957 and 1961 persist, particularly in the Poona region. These were expressed by the Chairman of the Tata group of hydro-electric companies and more recently by the President of the Association of Electrical Undertakings in Bombay. Mr. M. H. Hasham Premji, chairman of the Bombay Electricity Board, therefore, considered it expedient to clarify the actual position in the Bombay-Poona area, with a view, as he said at a Press conference, to removing any misconception arising in the public mind. Referring to the grave doubts expressed as to the commencement of power generations from the Koyna Project, Mr. Premji believed that power from this source was likely to be available in October, 1960, though he qualified his statement with an observation that in a major project of this nature one could not be absolutely certain about the exact date of its coming into operation. At the same time, he gave an assurance that every effort was being made by the Koyna Board not only to keep to the schedule but if possible, He also gave an assurance that, with a judicious use of the standby capacity and correct timing of maintenance and annual overhaul, it might be possible to meet the normal requirement of power during the next four or five years prior to the commissioning of the Koyna generating station. He admitted that as regards the Station, there had been more than the normal working satisfactorily now and producing its full rated capacity. With regard to the thermal station at Trombay, Mr. Premji said that from the information given by Tatas the first set was likely to be commissioned in October, 1956 and increase the installed capacity in the region by 100 MW. Continuing he said that with the commissioning of these two thermal sets at Trombay and one set of 18 MW ordered by the railways for installation at Chola, which was likely to be commissioned some time in 1958, there would be a firm capacity of 447 MW against 345 MW at present. This additional firm capacity would be available prior to the commissioning of Koyna, Mr. Premji added that while it was difficult to estimate the actual requirements of electric power over a five-year period without making an assumption of a *pro rata* rise in consumption, the latter part of 1956 and up to 1959. In view of this assurance, the public has been disagreeably surprised by the revelation by the Western Railway authorities that the State Government had been putting pressure on them to reduce the number of local trains for economising in the use of electric power during the coming months. The General Manager of this Railway announced publicly his intention to resist this pressure, because a reduction in the number of trains is not possible in view of the volume of traffic to be carried every day.

Uttar Pradesh

U.P. CHAMBER CALLS FOR
CHEAPER POWERSTRONG CRITICISM OF INDUSTRIAL
DISPUTES ACT

(FROM OUR LUCKNOW CORRESPONDENT)

THE U.P. Chamber of Commerce has addressed a memorandum to the State Government making out a case for the supply of electricity at concessional rates to the existing industries, in addition to the new ones. Electricity in Kanpur was relatively cheap until 1948 when the rates went up all of a sudden. The position became worse when in 1953, as a revenue measure, the Government imposed a 25 percent surcharge as electricity duty on the price of power consumed. At present electricity in Kanpur is dearer than in other important manufacturing centres although the price of coal, which constitutes a major part of the generating cost, is cheaper there than in Ahmedabad or Delhi. The Chamber is of the view that the Kanpur Electric Supply, which is a nationalised undertaking, should be run on a "no-profit-no-loss" basis.

Lending Policy of State Banks

In another representation made by the Chamber to the Union Ministry of Finance, the question of finance for the private sector has been discussed with particular reference to the Reserve Bank and the State Bank of India. The President of the Chamber has suggested that the Reserve Bank should regulate its lending policy more on the basis of a scheduled bank than on that of its constituents, and that having agreed upon an aggregate limit of advances for a particular scheduled bank, less attention should be given to the standing of the bank's client who submitted the application for an advance so long as the reasons for the advance met the Reserve Bank's requirements.

U.P. Chamber's Criticism

In another representation to the Union Labour Ministry, the Chamber expressed its disapproval of the new proposal to substitute the present system of labour tribunals by a three-tier system, namely Labour Courts, Industrial Tribunals and National Tribunals. The Chamber is opposed to these courts and tribunals because absolute power is proposed to be vested in them and they will consist of single individuals. In the opinion of the Chamber it is wrong to include supervisors or managers who are employed in confidential capacities, and whose employment depends on individual merit, in the scope of "workmen." If the Government is unable to accept this contention in principle, the memorandum states that the limit of wages in this regard should be reduced from Rs. 500 to Rs. 200. The Chamber has also taken exception to the provision in the existing Industrial Disputes Act prohibiting the employer, during the pendency of a dispute, from making any change in the conditions of service or taking any action against the workmen concerned. It is stated that this has been preventing employers from taking action even in cases of serious misconduct and indiscipline unconnected with the dispute.

National Academy of Sciences' Meeting

Apart from the scientific papers read, the only incident of public interest which occurred at the Silver Jubilee session of the National Academy of Sciences which concluded in Lucknow last week, was an open clash between Dr. Meghnad Saha and the State's Planning Minister, Mr. C. B. Gupta. Dr. Saha made a bitter attack on politicians whom he described as the bane of scientific research in India. Recalling one of the few occasions when scientists anywhere had the courage to stand up to the Government of the day, Dr. Saha said that George III once wrote a letter to Sir John Pringle, President of the Royal Society, gently reprimanding him for praising Benjamin Franklin and his experiments in atmospheric electricity. Sir John replied: "Sire, the laws of nature do not depend on the whims of royalty," and forthwith sent in his resignation. Dr. Saha, however, spoiled a good case by going on to cite the "independent" status enjoyed by scientists in Russia. This gave an opportunity to the Minister, Mr. C. B. Gupta, to air his own views on the totalitarian régime. Subsequent proceedings showed that Dr. Saha was right in his fears of political interference in the field of science. The election of Mr. Hargobind Singh, Education Minister of U.P., as an honorary member of the Academy, placing his name on a roll which includes not only Einstein but many scientists of world renown, has bewildered several people besides Dr. Saha.

Phosphates in Food Production

An important symposium organised by the National Science Academy dealt with the rôle of phosphates in increasing food production. Sir John Russell who sent in a paper on the subject observed: "It is absolutely essential that more food should be produced in India. Phosphates are among the most effective, for large areas of soil contain insufficient amounts for more than a low level of yields. The chief technological problem is to increase the efficiency of utilisation by the plant which is rarely more than 20 percent to 30 percent and frequently less." It was agreed that the phosphate rocks available in Trichinopoly and Bihar and the basic slags obtained from the Tata steel factory in a finely divided condition, provided excellent material when ploughed into the land with leaves, straw or green manure.

London

GOVERNMENT CHANGES MAKE
GOOD IMPRESSIONMR. BUTLER'S TRANSFER NO TOKEN
OF FAILURE

(FROM OUR LONDON CORRESPONDENT)

THE sweeping changes which Sir Anthony Eden made in his Government a fortnight ago were apparently planned as long ago as last September, and would probably have been given effect to much earlier but for the fact that both the Prime Minister and Mr. Butler felt that the latter should remain Chancellor of the Exchequer until the Supplementary Budget had been introduced and approved by Parliament. The idea that Mr. Butler had been asked to be relieved of his responsibilities at the Treasury, or, as Labour would like to think, that he had been moved because of the failure of his economic policy, is wide of the mark. If anything, he takes on even greater responsibility in his new office, and over a much wider sphere, for he will direct the policy of the Conservative Central Office—with which he has had much to do in the past—and will plan and carry through the Government's programme of legislation in the next few years, besides relieving Sir Anthony generally. His economy policy, indeed, looks like persisting, though that does not necessarily mean that Mr. Macmillan may not introduce slight variations to meet differing circumstances as and when they arise. The "credit squeeze" at all events must continue. This was confirmed in both Mr. Butler's last Parliamentary answer as Chancellor and subsequently by the Governor of the Bank of England. That it might at last be showing signs of effectiveness is deducible from the first indication of a slowing down in industrial re-equipment demand and the increasing criticism of it both by the banks and industrial leaders. Nevertheless, Mr. Butler's departure from the Treasury is profoundly regretted in the City.

By and large, the Government changes have been well received generally. It is widely admitted that the Prime Minister has strengthened his team, and not least by persuading Sir Walter Monckton to remain in it and take over the Ministry of Defence, which promises to be a key Ministry in the immediate future. What is more, the younger men have been given a chance to show their mettle, and the introduction of a number of back-benchers to fill junior posts will do much to maintain the morale of the Party both in the House and in the constituencies.

Tariff Cut Plans

The Government hopes to secure useful cuts in American tariffs against British exports during the Geneva Conference on the General Agreement on Tariffs and Trade, which opens on 18th January. This will be the fourth G.A.T.T. meeting devoted to multilateral bargaining among 25 nations. The extent to which the United States Government will use the power to reduce rates granted to the President under the Trade Agreements Extension Act, 1955, will set the pace for the negotiations. The Act limits tariff reductions generally to 15 percent. This does not permit any drastic cut, but real advantages could be gained by Britain if the new powers were used to the maximum. In consultation with industry, Mr. Thorneycroft, President of the Board of Trade, has been drawing up a list of foreign tariffs, particularly American, reductions in which would most benefit British exports. A list has also been prepared of concessions which Britain would be prepared to offer. These lists may be considered by the Cabinet shortly. The negotiations at Geneva will last until May. Spectacular results are not expected, but the Government hopes for general progress towards a freer trade system which will enable British exporters to gain a larger share of an expanded world market.

Wages and Productivity

The T.U.C.'s recognition that rising costs and prices are the biggest threat to our balance of payments, to continuing full employment, and to living standards takes on a special significance in view of the growing volume of support being accorded to the cement manufacturers' undertaking to maintain prices at the present level for at least six months and even longer and the determination of more and more unions to "fight the budget" by making fresh wage claims. Since 1st January, 1955, according to the British Employers' Confederation (and since confirmed by the latest returns from the Ministry of Labour), some 12 million workpeople have benefited from increases in weekly wage rates, totalling over £5 million a week. This has raised the Ministry of Labour's index of such rates by about 7 percent. In a full year it would amount to an addition to the total wage bill of more than £400 million. Current and pending wage claims affect 7,500,000 workers, "the great majority of whom" have already received a wage increase under these earlier settlements. If these new claims were granted in full, the Confederation calculates that weekly wage rates would go up by a further £6 million, and the Ministry of Labour index by a further 8 percent. The addition to the total annual wages bill would be another £500 million. The Confederation concludes that "increases of this magnitude far outstrip any likely concurrent improvement in the real national income."

The Confederation is particularly severe about the recent announcement by the Transport and General Workers' Union (since supported in almost identical terms by the National Union of General and Municipal Workers) that it must protect its members' living standards and must therefore decline to accept the principle that living

standards must depend upon higher productivity. The Confederation says that this attitude is "regrettable," that if the doctrine were applied generally it "would make sheer nonsense," and concludes that the only meaning it can have is that the union "wishes to beggar its neighbors in other unions." The Confederation agrees that if the gains from increased productivity were to be appropriated solely by workers in those occupations where they occur, workers in other fields, such as transport, would find their relative position instantly depressed. "What is certain, however," according to the Confederation, "is that no class of workers can secure any permanent improvement in its standard of living unless our national productivity continues to rise."

Better Cheer for Lancashire

Fewer cotton workers have been forced to take extended holidays this Christmas than in any holiday period for over a year. A number of factors have contributed to this improvement. There has been a better demand for some of the finer types of cotton textiles in recent weeks, while at the coarser end of the trade, Lancashire has benefited from a slight dulling of the competitive edge of Hong Kong and India—the two foreign competitors which the industry most fears. India's prices have risen markedly of late and Hong Kong has had some difficulty in meeting delivery dates so that merchants who normally buy her goods have been turning to Lancashire instead. Other reasons, less pleasant to contemplate, are that a considerable number of the marginal mills in the industry have closed completely and thousands of operatives have left the industry in the past twelve months.

But the industry still has some qualms with regard to the future. In his first statement as chairman with the report and accounts of the Lancashire Cotton Corporation, Ltd., Mr. Roger M. Lee has much to say about the imports of yarn and piecegoods from low-wage countries. One point which he makes is that, in time, many British industries besides cotton are likely to be confronted with competition from these sources. He considers, accordingly, that "the trade agreements whereby imports from these countries are taken entirely free of duty must be revised sooner or later." Another point which Mr. Lee makes is that in the absence of "some indication as to the extent to which imports from low-wage countries are to be tolerated," the problems raised by the probable further contraction of the industry cannot be dealt with. The increase in imports, the decline in exports, and the deferment of demand because of uncertainty about cotton prices were the main causes of the continued deterioration of conditions in the industry, and Mr. Lee suggests that, in the circumstances, yarn would have been sold at wholly uneconomic prices but for the Yarn Spinners' Association. The margins operated under this scheme, he says, are not adequate to cover present-day replacement costs of buildings and machinery, but without them all hope of continuing re-equipment in the industry would have vanished. The statement records that since 1945 expenditure on machinery and buildings amounted to £632,000. Modern equipment and techniques, Mr. Lee says will help to meet the situation created by the cheap imports but they cannot bridge the gap in wage costs between the United Kingdom and the Far East. One means of maintaining activity when trade is threatened by low-cost competition is to keep ahead of competitors in technological developments. This the combine is endeavouring to do by extending its efforts in spinning man-made fibres and in blending them with cotton.

Central Market for Scrap Metal

A scheme to centralise the buying and selling of scrap metal and create a scrap commodity market is to be started in Birmingham shortly. If it is successful, similar markets may be opened in London and Manchester. A new company—the Scrap Metal Market Ltd.—plans to open a Birmingham market for operations on 8th February. It will be open daily for dealing, and registered members will receive daily reports of market values. The rules for the operation of the market provide that a seller should notify it of the type and quantity of scrap he has for disposal and that this should then be included in the next day's auction and buyers notified accordingly. The following day the parcel is sold on description to the highest bidder but all materials are automatically reserved at 5 percent below the previous day's market price. It is expected that the bulk of the dealings will be in non-ferrous metals in the early stages but the basis may be widened later in the year.

The promoters of the scheme believe that it will offer a quicker and more efficient way of disposing of scrap materials than the present practice of inviting tenders. They point out that at a time of fluctuating prices the time lag inevitably occurring between the inviting and accepting of tenders creates many difficulties and that, arising from the same cause, firms with scrap for disposal are unwilling to enter into long-term contracts. A further argument advanced in its favour is that since only registered dealers are allowed to sell in the market its operations would tend to reduce irregular dealings in stolen scrap. The scheme is not viewed optimistically by the scrap metal merchants, whose business would be considerably reduced. They argue that one reason the trade is without a central market after more than a century's operation is that scrap is not a uniform commodity such as raw cotton or rubber and that ordinary market methods are not suited to its buying and selling. Also, since the Government is one of the biggest offerers of scrap and would probably continue to dispose of it through auction sales and tenders, a great part of the trade would inevitably be carried on outside the field of operations of the new market.

Ceylon

CEYLONESE COMBINE WILL
CONTROL TEA EXPORTS

MARKETS TO BE EXPANDED

(FROM OUR COLOMBO CORRESPONDENT.)

THE Ceylon Export and Import Corporation, the Ceylonese combine which has been formed principally to export tea from Ceylon, has announced that it will go into business from March, 1956, with an authorised capital of Rs. 2 crores, and has submitted its application to the Registrar of Companies. The Corporation, which is the biggest Ceylonese venture of its kind, expects, with a fair measure of Government backing, to take over the island's tea export trade now monopolised by British, Australian and Indian interests, over a two-year period. In terms of money and volume of transactions the Corporation's projected Ceylonisation of the tea export trade, is immense. On an average Ceylon exports about 262.2 million lbs of tea annually, at an estimated value of Rs. 89.4 crores, which is about two-thirds of the country's export income.

The Ceylonisation of the tea export trade, in this country, will be the forerunner of similar changes in the import and export trade in other commodities. Under declared Ceylon Government policy no new licences are issued to non-nationals to enter the import and export business, while those non-nationals who now enjoy monopolies will be progressively deprived of their licences. The Government has also made it a condition, in the signing of recent trade agreements with other countries, that as far as possible only Ceylonese should be employed to handle the new lines of business.

Reduction in Rubber Prices

Rubber producers in Ceylon face the new year with the prospect of a possible reduction in the

price of rubber paid to them by the Government. At the moment producers are paid Rs. 1.51 for top quality sheet, supplied by them to the Rubber Commissioner for shipments to China against the Sino-Ceylon trade agreement. This price was operative till 31st December, 1955 and is due to be reviewed in the first week of January, 1956. Producers have already made representations to the Government urging that the present price should be maintained at least till 31st March, 1956. It is doubtful whether the Government will consider this request favourably, although the world market has displayed a steady tone, over the last few weeks. The price paid to the producers by the Rubber Commissioner actually works out to about Rs. 2.15 including the replanting cess and other duties, and it does not appear likely that the Government will be prepared, or for that matter be in a position, to maintain the present price level particularly as producers have asked for an increase in the replanting cess.

Unemployment Faces 25,000 Tea Workers

The up-country Tea Traders Association has drawn the attention of the Government to the possibility of 25,000 workers in all grades of the tea-growing and manufacturing trade losing their jobs, if the restriction of the sale of certain types of tea at the "off grade" auctions continues to be imposed. The restriction referred to is the prohibition on the sale of "refuse tea", which is defined to mean sweepings, red leaf and fluff. This restriction became operative with the enforcement of the Tea Theft Prevention Act in July, 1954. It was imposed on the basis that "refuse tea" contained substances either poisonous or injurious to the health and was unfit for human consumption.

The Tea Traders Associations claims that this assumption is without foundation, and that to its knowledge nowhere in the world has there been a death reported with tea as its cause. The Association points out that the curb imposed on the sale of "refuse tea" is unnecessary, and has in effect only resulted in obstructing the free exchange of this particular variety of tea. The Association emphasises that if the curb continues to be imposed, nearly 25,000 workers and small producers, who depend on this trade for their livelihood will be seriously affected.

Record Tea Output for 1955

Tea production in Ceylon for the 12 months just completed has reached a new record, totalling around 380 million lbs., nearly 15 million lbs. more than the output for 1954. The situation however is not exactly promising. Statistics available here indicate that Ceylon has been selling less tea to Britain, her best customer, during 1955, and indications are that the declining trend in British purchases will continue. It has been visibly noticeable that Britain is beginning to rely more on her African colonies and Pakistan for supplies of tea, and the extent of the switchover may be gauged from the fact that in 1955, Ceylon exported 10 million lbs. less tea to the U.K., than in 1954.

With production likely to increase still more in 1956, and more acres being brought under cultivation, the tea trade in Ceylon will be up against the problem of finding new markets, or expanding present ones, to prevent any crisis following over-production. Already, under the basis of trade agreements recently concluded with Poland and Czechoslovakia, the trade has an assurance that small and useful quantities of tea will be sold annually to those two countries. The Ministry of Trade and Commerce is contemplating the negotiation of similar agreements with other East European countries, so that the drop in exports to Britain will be adequately offset. But the problem of expanding in the traditional markets seems imperative, and it is expected that the Tea Propaganda Board, which will receive an increased allocation of funds for 1956, will then be able to do a better and more successful job of work.

Third H. E. and Irrigation Project

The Government of Ceylon has completed investigations for the establishment of a Rs. 9.4 crores, multi-purpose irrigation project, in the south-east sector of Ceylon. The project provides for the irrigation of 68,000 acres of paddy land and 22,000 acres of high land, and the generation of electricity. This is the third big multi-purpose irrigation project that the Government has planned to increase food production in the country, so that the import of essential commodities, particularly rice, which accounts for nearly a third of the national income, can be reduced. Work on this new project is expected to take at least four years to complete, and tenders for its construction will be called shortly. The money for the project, it is understood, will either be raised from the World Bank or the International Finance Corporation, of which Ceylon is a member.

Excise Revenue Up by Rs. 20 lakhs

An interesting sidelight upon the campaign to introduce total prohibition in Ceylon, is the increasing revenue that goes into the State coffers from the sale of arrack, an alcoholic spirit distilled from the coconut palm. At the time of writing it has been disclosed that the Home Ministry has this year collected Rs. 1 crore from the more than it earned last year. In spite of the fact that arrack brings in much needed money to the National Exchequer, the Government has decided to reduce the quota for its sale from 810,000 proof gallons to 675,000 proof gallons next year. The decision has been taken to reduce the consumption of alcohol in the country during the Buddha Jayanti year and thereafter.

Commodity Markets

WHOLESALE PRICE INDEX RISES

THE official wholesale price index (base: year ended August 1939=100) advanced further by 0.4 percent to 367.4 during the week ended 17th December 1955 as compared with 366.0 (revised) for the previous week. Relative to the corresponding weeks of last month and a year ago, the index was higher by 1.0 percent and 0.2 percent respectively. During the week under review, the index for Food Articles declined by 0.9 percent to 320.4 as compared with 323.2 (revised) for the previous week as a result of a decline in the prices of tea (11%), jowar (-8%) and rice in Calcutta and at Patna (-4% each) despite an increase in the price of wheat at Amritsar (+9%) and at Hapur (+2%), gur at Muzaffarnagar (+7%), gram (+6%), dal Arhar (+2%) and sugar (+1%). Prices of gingellyseed (+15%), rapeseed (+8%), groundnuts in Bombay and raw jute (+6% each), linseed in Bombay (+4%), raw silk at Malda, castorseed in Bombay and corra (+3% each), lac (+2%) and raw cotton and manganese ore (average export prices) (+1% each), moved up while those of castorseed in Madras (-7%) and raw silk at Bangalore (-3%) were marked down. On the whole, the index for Industrial Raw Materials advanced sharply by 2.9 percent to 440.7 as compared with 428.1 (revised) for the previous week. Higher prices of gingelly oil (+8%), cow hides, groundnut oil and linseed oil (+3% each), coconut oil, mustard oil and zinc (+2% each) and brass in Calcutta, copper, buffalo hides, castor oil and cotton yarn (+% each), raised the index for Semi-Manufactures by 0.7 percent to 345.9 although the prices of groundnut cake (-4%), copra cake and gingelly cake (-2% each) and coir yarn-Anjengo Superior (-1%) showed declines. The index for the Manufactures group stood at 372.8 as compared with 372.7 in the previous week; the prices of Jute Manufactures showed a slight increase. Lower prices of pepper, black in Calcutta (-3%) brought down the index for the Miscellaneous group from 542.5 to 541.9 during the week under review.

INDEX NUMBERS BY GROUPS AND SUB-GROUPS
(Base Year ended August 1939=100)

Groups and Sub-Groups	17-12-55	Week 10-12-55	Ended 19-11-55	18-12-54

CONSUMER PRICE INDEX

The Consumer Price Index Numbers for working class (Base shifted to 1949 = 100 except where otherwise indicated) declined in seven centres during October, 1955, according to the Labour Bureau, Government of India. The maximum fall was recorded by the indices for Cuttack and Silchar which declined by 6 points each to 100 and 84 respectively. The index number for Berhampur declined by 2 points to 96, for Dohri-Sone, Gahat, Tinsukia and Madras Plantation Centres by one point to 87, 87, 102 and 90 respectively. A fuel and lighting indices for 2 centres, in and miscellaneous indices for 3 centres each was bers rose in eight centres during the same period. The maximum rise of 4 points was recorded by the index for Akola, which stood at 83. The index by 2 points each to 101 and 82 respectively, for Jharia, Ludhiana, Jabalpur, Kharagpur and Satna 95 and 73 respectively. In this group of centres, lighting indices for 2 centres, clothing and miscellaneous indices for 1 centre each.

Jute

IMPROVEMENT IN FORWARD RATES
FOR GUNNIESTHE SUPPLY OUTLOOK FOR DAISSEE
AND DAISSEE MESTA

SINCE the closure for the Christmas holidays, the jute goods markets have suffered varying fortunes, but the main movements have been upward. An encouraging feature has been the sudden increase in activity in the forward positions of both sacking and hessian. This has been attributed in the main to speculative covering, but it is understood that fairly large bear accounts have been built up by shippers over the past few months on account of the Argentine, the U.S.A. and China. In spite of the recent impression that fatka operators have tried to create—that of a lack of overseas enquiries, the ultimate aim of which was to depress the markets—it seems that small but steady business has been transacted for the first half of 1956. Most of this has yet to be covered, and consequently a battle has developed between the real and the speculative operator, resulting in a very steady forward market. Speculation has played a prominent part in the near positions. The approach of December fatka settling day brought heavy transactions in ready delivery goods, which, coupled with the activity in the forward section, made for very steady conditions in general.

A problem that has been engaging the interest of the jute trade for some time is the apparent shortage of Daissee and Daissee mesta. According to crop reports at the time of sowing, and subsequent progress reports, the yield should have reached large proportions, especially in mesta. It was estimated that of the entire crop, 75 percent would be of the mesta variety. But the fact that this amount has not come forward is demonstrated by the current price of this fibre, which is about Rs. 10 a maund higher than was estimated for this period. It was confidently predicted that by the end of 1955, mesta would be selling for about Rs. 15 to Rs. 16 a maund, taking into consideration the bumper crop. What, then, is the reason for the difference?

Primarily, it is due to the very poor yield an acre. More ground was put under seed this season than ever before, but the germination was very poor, and when the plants were fully grown, it was possible, in many instances, to walk right through a field of jute—so great was the distance between each plant. Secondly, adverse weather conditions, in the form of a shortage of rain for steeping and retting, caused delays in harvesting, and in many cases the delays were so prolonged that the jute went to seed or hardened. This is also one of the main reasons for the very poor quality of mesta despatched this season. It is understood that large areas of mesta have still not been harvested, and farmers have been advised by various agricultural bodies that if this is now cut and stored without retting it will not lose any of its properties, and can be steeped and retted later. This system, apparently, can only be used in the case of mesta, and if the experiment is successful it may have far-reaching effects on the next season's crop. It is estimated that there is now only about 25 percent of the daissee and mesta crop for sale, so there is little likelihood of any great price falls. One safeguard against the latter is that a large mill group has again commenced jute purchase operations; in these transactions, as also in bazaar purchases by mill representatives, the quality and moisture content appear to be of secondary importance.

THE JUTE MARKETS

Manufactured Goods: At the opening of the goods market on 23rd December, 1955, the only alteration in quoted rates was in hessian, where both the near and forward positions reacted to favourable reports from the American markets. Prices advanced about 4 annas a 100 yards, and 40in. 10oz was quoted at Rs. 40-12 for ready shipment, and Re. 1 less for April-June. Dull conditions prevailed in sacking, but prices remained steady in sympathy with hessian. B Twills remained at Rs. 112-8 a 100 bags for ready shipment, and Rs. 108 a 100 bags for April-June shipment. A similar pattern was followed on Saturday when hessians showed a further rise of 2 or 3 annas, whilst heavy goods quotations were unaltered. Markets were officially closed over the Christmas holidays, but at the opening on Tuesday, 27th December, fatka operators indulged in heavy goods covering in the near position in anticipation of the due date settling day, so B Twills advanced to Rs. 112-14. Some real goods covering was also reported in the forward section, and rates improved about 8 annas for April-June B Twills to record Rs. 108-8 a 100 bags. Hessian continued to rise and prices advanced another 2 annas. Very steady conditions prevailed at this stage in both sections of the market, with local fatka operators pushing up the near deliveries, and shipper interests concentrating on the forward section to such an extent that over the next two days both sacking and hessian showed a rise of Rs. 25 or Rs. 30 a ton. On Friday, rumours of a break in a fatka syndicate caused a temporary easing of rates. B Twills lost Re. 1 at the opening, and hessians 6 or 8 annas. Towards evening, reports of business

with Russia, and speculative buying by a large operator caused the market to take on a steadier undertone and by the close before the New Year holidays the morning's losses had been more than made up. Heavy speculative activity was reported over the holidays, and when the market opened on Tuesday, 3rd January, very steady conditions prevailed, partly due to fatka activities and partly in support of the very steady jute markets. Opening quotations of B Twills showed a Re. 1 rise in the January position to Rs. 114-4, whilst April-June shipment jumped by Rs. 2-4 to Rs. 112-8. Hessian also moved up rapidly and 40in. 10oz. improved 10 annas in the near position to Rs. 41-12 and 6 annas for forward shipment to Rs. 40-12. These rates were well maintained throughout the day, more in sympathy with the raw jute market than because of business in gunnies, and very firm conditions prevailed. At the close the forward positions of both sacking and hessian are very firm, but the near positions have lost a little ground. Opening quotations on Wednesday morning were as follows:

	Ready	Jan.	Jan.-Mar.	Apr.-June
40 in. 8 oz.	Rs. 33-12	33-10	33-4	32-12
40 in. 10 oz.	Rs. 41-8	41-8	41-4	42-14
B Twills	Rs. 114-8	114-8	114-0	113-4
Heavy Cees (Plain)	Rs. 114-12	114-8	114-0	113-4
A Twills	Rs. 137-8	138-8	138-0	135-0
Liverpools	Rs. 130-8	131-0	129-0	126-0
Cornacks	Rs. 114-8	115-0	115-0	114-0

Raw Jute: The raw jute markets have ruled firm, with rates showing a gradual rise. Calcutta mills have shown a fair amount of interest, and continued daily purchases at favourable prices created a very steady undertone. Sellers have been reserved, although on occasions Indian mills have been able to undercut the market by 4 or 8 annas a maund. In general, operators have shown a reluctance to sell at below the quoted rates. They have been governed in this attitude by the very steady upcountry markets, where, it is reported, imports are negligible. Prices are well above the parity of Calcutta rates, and consequently sellers cannot show any profit on near delivery jute, even if they could procure it from the agencies. The local Cossipore markets would appear to contradict the impression gained from upcountry sources, as wagon arrivals have shown a welcome improvement over the past week. Much of this, however, is low quality fibre, and has not alleviated the acute shortage of high grade jute, nor has it caused any reduction in price. All available arrivals have been taken up by mill representatives who are paying top prices for inferior jute, or by local balers who have commitments with Calcutta mills to fulfil. At the present moment there is no sign of weakness, and with good demand continuing, the further outlook is one of steady confidence.

Quotations at the opening on 23rd December, 1955, were slightly lower than on the previous day, due to a drop in mill interest, and Upper Assam jute was quoted at Rs. 27 a maund basis Bottoms for January shipment. Over the next few days the market was featureless, but after the Christmas holidays mill interest revived and prices advanced 8 annas a maund. Sellers were reserved and sought higher prices, but business was put through at the quoted rates. Towards the end of the year rates slackened slightly, but after the New Year holidays they opened fully steady and Assam jute was maintained at Rs. 27-8 a maund with a tendency to rise.

Business was good prior to the Christmas holidays and before the New Year, and prices for Dhuri-Northern jute ranged between Rs. 27 to 27-8 a maund basis Bottoms. Local Packing Northern jute was done on several occasions during the period at Rs. 27 a maund for a great deal of delivery. Tossa came in for a much greater interest and selected districts of Murshidabad changed hands at Rs. 26-12 to Rs. 27-8 a maund, whilst Karimpore-Bongora Tossa was also done at Rs. 27-8 a maund for January shipment. Purnea at Rs. 27-8 a maund for January shipment, and 26-8 to Rs. 27 jute of deshal quality passed at Rs. 26-8 to Rs. 27 a maund basis Bottoms for January-February shipment. Good business was reported in the daissee section, and prices paid varied between Rs. 27-8 and Rs. 28-8 a maund basis Bottoms for ready and one month's shipment. Daissee mesta was contracted for at Rs. 25 to Rs. 25-8 a maund for the same shipment. Small lots of bimli were also done at Rs. 25 to Rs. 25-12 a maund for F.A.Q. In the pucca bale section the only business reported for January shipment, and Rs. 108 a bale for ready bills of lading.

At the close the market is unchanged and opening quotations on Wednesday morning were as follows:

Indian Jute :	Landed at Mills Rs. a md. basis Bottoms	Shipment Jan.-Feb.
Lower Assam	25-0	"
Upper Assam	27-0	"
Northern	28-8	"
Murshidabad White	27-8	"
Daissee ex Agency	28-0	"

Daissee ex Cossipore	28-0	"
Daissee Mesta	26-0	"
Bimli	26-0 for F.A.Q.	"
Local Packing	27-8	"

Tossa is quoted at Re. 1 a maund above the price of white jute.

Pakistani Jute :	Rs a maund. basis Bottoms	Shipment Jan.-Feb.
Jat District	28-8	"
Northern	28-0	"
Jat Cuttings	118-0 a bale	"

Imports into the local Cossipore markets have shown a vast improvement recently, a total of 650 wagons having arrived over the past week to make a daily average of about 93 wagons. There have been ready buyers for all arrivals and this has kept the market steady. Local balers and mill representatives are competing for the lower grades of jute, and are accepting parcels containing a considerable amount of moisture. In spite of the improvement in imports sellers are reserved, and at the close Kishengani jute is quoted at Rs. 27 a maund for garsat quality. In the Daissee markets imports are very small, and here again there is keen competition for all available supplies. Dry jute is commanding a Rs. 2 to Rs. 3 premium, and the fact that mills have again commenced to buy jute over the jetty has pushed up prices. At the close quotations in Sheoraphuli are based on Rs. 27 a maund for garsat quality Daissee containing at least 3 percent moisture.

Mofussil: Imports into nearly all upcountry markets in India have fallen off still further over the past two weeks and are extremely small for the time of the year. As a result of this, and due to the steady demand from balers, prices have advanced in all areas, and continue to show an upward tendency. Business is more or less at a standstill and operators are very reserved. Quotations in Dhubri are based on Rs. 24 a maund for garsat quality.

The Pakistan markets are ruling very firm due to speculative buying and covering business. A fair amount of interest has been shown in cuttings, and a large operators is reported to have paid as much as Rs. (P) 102 a bale. Imports have shown a slight improvement and in Narayanganj arrivals have averaged about 25,000 maunds a day. Of this quantity only about 5,000 maunds is baled. Sellers are reserved and prices have advanced by about 8 annas a maund. There is no demand for tossa and prices of this fibre are the same as for white jute. Latest quotations in Narayanganj are as follows:

Pucca Bales :	Rs. (P) a bale.	Kutch Bales: Rs. (P) a maund
Mill Firsts	168	Jat Bottoms 28-8
Export Firsts	141	Jat B Bottoms 24-12
Dandee Tossa 4's	200	Jat C Bottoms 21-12
Dandee Tossa 4's	145	Jat X Bottoms 19-8
Output Tossa 2-3	126	Tossa quotations are the
Output Tossa 4's	106	same as those for white
Narayanganj Cuttings	100	jute.

GUNNY SHIPMENT STATISTICS FOR
NOVEMBER, 1955

The following are the total nett figures of manufactured jute goods shipped from Calcutta during the month of November, 1955 after providing for short shipments. These figures include shipments to coastal ports.

	Hessian Bags (Tons)	Cloth (Tons)	Total (Tons)
Gross	2,115.8	27,143.9	29,259.7
Short Shipped (Nett)	17.9	415.4	433.3
November, 1955 (Nett)	2,097.9	26,728.5	28,826.4
October, 1955 (Nett)	2,588.7	24,561.5	27,150.2
September, 1955 (Nett)	3,255.7	38,591.7	41,847.4
	Sacking		
Gross	34,007.9	783.7	34,791.6
Short Shipped (Nett)	1,688.3	5.4	1,693.7
November, 1955 (Nett)	32,319.6	778.3	33,097.9
October, 1955 (Nett)	22,450.8	718.6	23,169.4
September, 1955 (Nett)	35,422.0	715.1	36,137.1

GUNNY SHIPMENT STATISTICS

The following figures include coastal shipment relating to manufactured jute goods for shipment from the port of Calcutta. These are gross figures based on shipping bills presented.

	Hessian Bags (Tons)	Cloth (Tons)	Total (Tons)
1st to 25th December, 1955	1,458.9	20,900.4	22,359.3
1st to 25th November, 1955	1,642.1	20,388.7	22,030.8
1st to 25th October, 1955	2,219.4	15,494.0	17,713.4
Sacking			
1st to 25th December, 1955	28,573.6	270.1	28,843.7
1st to 25th November, 1955	26,578.4	655.6	27,234.0
1st to 25th October, 1955	19,258.3	695.3	19,953.6

THE FOREIGN JUTE MARKETS

BETTER OUTLOOK FOR NEW YEAR
(FROM OUR DUNDEE CORRESPONDENT)

THE jute markets here closed the year 1955 with a favourable outlook for the present one. Both spinners and manufacturers are comfortably placed with orders for delivery over the next two to three months, and already there are signs of more business pending from English firms. Inquiry has been good during the past few days. About the end of February, the trade will be faced with paying an increase of 5 percent on wages granted to the workers. This now makes about four increases for which producers have had no recompense in the shape of higher prices. Those for yarns and cloth are fixed at a maxima by independent accountants and regulated in accordance with the rise and fall in values of raw jute. Fortunately, there had been only a few minor changes since 9th June last year. For instance, values of Rove were advanced by £2 15s ton week before last to £91 for 48 lbs. and £75 for 200 lbs. due, it is said, to the rise in prices for cuttings and low grade jute in Pakistan. The rise in wages represents an increase of 6s 5d a week to adult males and 4s 5d to adult females, making the basic wages now 133s 11d and 92s 0d respectively. There are few Dundee and district workers getting the minimum basic rates, and many have several pounds a week more than these stated wages. There are systems of incentive bonuses in vogue.

Some interest is being displayed in the report from Pakistan that the whole of the jute industry in that country may be looked after by one body, marketing and selling the raw material and also jute goods. It is thought here that the existing system of selling to local spinners through the jute brokers could hardly be done away with. They have accomplished several sales this week of Mill Lightnings at £80 and £81, and Mill Firsts at £90 and £91, with Mill Hearts sold at £70 to £73, c/c U.K. There are now extremely few sellers at the lowest rates which are the minima. Calcutta goods are very firm, though somewhat irregular at 63s 0d for 10 oz. 40 in. and 47s 3d for 7 1/2 oz. January, 62s 0d and 46s 9d February, 62s 0d and 46s 6d March and 61s 9d and 46s 6d April-June, with B twills at 175s, 173s 3d 171s 3d and 170s 3d for the respective positions of shipment, all fob. Calcutta.

INDIAN COTTON CONTRACTS

By a notification issued on 23rd December, 1955, under Section 14 of the Forward Contracts (Regulation) Act, 1952, the Government of India directed the East India Cotton Association, Bombay, to suspend its business in Indian cotton contracts for seven days. Government have under consideration measures to be taken to arrest the deterioration in the cotton market. In the meantime they have decided to direct the East India Cotton Association to suspend its business in Indian cotton contracts for a further period of seven days ending with 6th January, 1956. A notification to that effect has been issued today.

Plantation Topics

ICED TEA GAINS MORE MARKETS
IN CANADA

TAKING advantage of the summer of 1955, which was hot and therefore ideal iced-tea weather, the Tea Council's two field representatives made over 1,200 personal calls on restaurants and institutions in the Montreal-Quebec and Southern Ontario regions—the two most densely populated areas of Canada—to stimulate the growing interest in and the service of iced tea. The demand for iced tea in Canada inevitably varies by geographical region due to the great diversity of weather conditions experienced in the country. Consumption is likely to be the highest in Quebec and Ontario. In the past, restaurateurs have tended to make iced tea solely with an eye on the American tourist trade, but many caterers outside of tourist centres are beginning to realise that there is a profitable potential market for iced tea when properly merchandised. Due to the Council's efforts, consisting mainly in giving demonstration lectures on iced tea preparation, iced tea sales were at an all-time high during the period in question. More and more restaurateurs are recognising that this is not only a high-profit item, but one which has great customer appeal. The consumer is showing his growing appreciation of the beverage by demanding that it be well-made.

Reports from almost 200 restaurants which were surveyed, disclosed that iced tea sales increased from 100 percent to 300 percent over previous years. Even more significant than this was the number of restaurants serving iced tea for the first time. In Quebec particularly, iced tea was successfully introduced into hospitals and institutions. Because refrigeration equipment is almost universal in Canada, the preparation of iced tea, both in restaurants and institutions and at home, should present little difficulty, although the provision of satisfactory equipment for dispensing the beverage in bulk remains a problem. It is anticipated that during the next few years the popularity of the beverage will grow and that this will help to boost tea sales during the summer months when hot tea consumption tends to fall off.

TEA EXPORT DUTY

The Government of India has issued a notification fixing the price of tea for the purpose of determining the export duty, at Rs. 3-1-5 a lb. against Rs. 3-4-5 a lb. fixed on 1st December 1955. The export duty at this price will be as 6 a lb. compared with as 8 in force hitherto.

COCHIN TEA SALES

At Sale No. 1, 2,70,000 lbs of tea were on offer. There was a useful demand for brighter liquoring Medium and Low Medium teas particularly Fannings which were 2 to 3 annas dearer. Best liquoring Fannings were dearer and others irregular following quality. Stalky types, Whole Leaf and Reprints were neglected.

INDIAN RUBBER PRODUCTION AND
CONSUMPTION IN NOVEMBER 1955

Indian rubber output in November was 2,680 tons, according to the Rubber Board of India. Exports during the month were nil and imports amounted to 4 tons. Consumption by manufacturers was 1,837 tons. Stocks with estates and dealers on the last day of the month totalled 4,452 tons, including 904 tons in transit. Stocks with manufacturers on the same date amounted to 2,926 tons. Manufacturers also used 173 tons of reclaimed rubber, the month-end stock being 447 tons, and consumed 11 tons of synthetic rubber of which they held a total stock of 282 tons at the end of the month.

COLOMBO RUBBER PRICES

The following prices have been issued by the Rubber Board of India from the weekly market report published by the Colombo Brokers' Association:

	Closing prices on 16-12-55	Average for the period
Sheet:		
No. 1	1.51	1.51
No. 2	1.48	1.48
No. 3	1.45	1.45
No. 4	1.21	1.21
No. 5	1.16	1.15
	Sheet Cuttings 1	1.28
	do	2 1.23
Crepe:		
Water White	—	—
R.M.A. No. 1X	1.65	1.651
R.M.A. No. 1	1.64/65	1.641
	Crepe No. 2	1.63
	„ No. 3	1.593
Scrap Crepe:		
Sc. Crepe No. 1	1.32 Nom.	1.311
Sc. Crepe No. 2	1.24/27	1.251
Sc. Crepe No. 3	1.12/20	1.17
Flat Bark	1.08/10	1.091
	Sc. Crepe 3X	1.21

To arrive at f.o.b. Colombo prices add 44.4 cents a lb. in respect of rubber other than scrap crepe and 31.4 cents in respect of scrap crepe to the above market prices.

Calcutta Markets

PRICES RECOVER IN TEA
EXPORT AUCTION

BETTER DEMAND FOR DUSTS

THERE were 48,000 packages on offer in Export Sale 28, held on 27th December, 1955, for which there was a better general demand. Clean Fannings were the strongest feature and were often a full 1 anna dearer, while black leaf Assam O.F.s. were up to 2 annas dearer. The better liquoring BP's sold at fully an anna more than the previous rates but Medium Assam BOP's sold irregularly. Poor liquoring stalky kinds were irregular and easier. The CTC offerings were of very poor quality. They were fully 2 annas easier and there were many withdrawals.

At Export Sale 29, held on 3rd January, 1956, there were again 48,000 packages on offer. Demand was good and more general than in Sale 28, and the number of withdrawals was greatly reduced. Once again, all descriptions of Fannings were the strongest feature and advanced by about 2 annas a lb., clean black O.F.s. often gaining more. Medium BOP's were in more demand than recently and often sold above valuations, while useful liquoring medium BP's were about an anna dearer. Well twisted Leaf grades and stylish BP's were a strong feature of the sale. The CTC offerings were again of poor quality and were the weakest feature selling about 2 annas below the previous rates.

	Quotations	Sale No. 28	Sale No. 29	A Year Ago
Clean Black Pekoe	2 1 0	2 1 0	2 2 0	3 13 6
Plain B.P.	1 7 6	1 8 0	—	3 11 6
Plain B.P.	1 7 6	1 8 0	—	3 11 6
Medium Assam B.P.	1 10 0	1 10 0	1 11 0	3 13 0
Best CTC Assam B.P.	2 3 0	2 1 0	—	4 0 0

The offerings of Dusts in Internal Sale 28, held on 28th December, 1955, consisted of 22,000 packages and these met with a fair general demand. Black leaf teas suitable for the Middle East were the strongest feature but sold at irregular rates and were at times easier. Small powdery teas were again in strong demand and were generally firm but other Doors and Medium Assam teas sold at about an anna below last rates. The very few lines of really good CTC Assams with strong liquors were fully firm to dearer, but most CTC's were of an ordinary description and were from 1 to 3 annas easier.

There were 18,600 packages on offer in Internal Sale 29, held on 4th January, 1956. The market opened quietly but demand improved as the sale progressed. Black leaf teas suitable for the Middle East were the strongest feature of the sale and were keenly competed for at dearer rates. Doors and Medium Assams were easier at the beginning of the sale but closed firm and sometimes half an anna dearer. Brown leaf Doors teas sold at a full anna above last rates. The few lines of really good CTC Assams with strong liquors were keenly competed for and dearer but the remaining CTC's which were again of an ordinary description were 1 to 2 annas easier. The commonest types received much better support than in recent weeks and sold often from 1 to 2 annas above valuations.

	Quotations	Sale No. 28	Sale No. 29	A Year Ago
Medium Doors Dust	1 5 6	1 5 6	1 6 0	2 6 6 to 2 7 0
Medium Assam Grainy Dust	1 7 6	1 7 6	1 8 0	2 7 0 to 2 7 6
Best Assam CTC Dust	2 2 0 to 2 3 0	2 2 0	2 4 0	2 12 6 to 2 13 0

There were 2,300 packages of Leaf on offer in Sale 28 and these met with a good general demand although prices were an irregular 1 anna below last rates. There were a few green teas on offer and these sold very well. In Sale 29, there were 1,900 packages on offer and these were mostly stalky residual types which received fair support and were sometimes dearer.

STEADY FREIGHT MARKETS

MARKETS have ruled steady for the past two weeks and increased demands for grain and sugar charters have been the feature. The Russians have purchased 200,000 tons of sugar from Cuba and have chartered at 152s 6d for January-February loading whilst Pakistan charterers have fixed recently four Liberty types for wheat at \$(U.S.)22.45 Northern Range loading and \$(U.S.)23.45 Gulf loading over December-January. The River Plate market firmed up on reports of the issue by the German Government of import licences for 376,000 tons grain and the Pacific Coast conceded higher rates at \$(U.S.)18.50 for heavy grain to Antwerp-Hamburg Range. Indian ore charters were arranged to various destinations at \$(U.S.)16.75 Kollotttham-New York, 107s 6d Bombay-Genoa, 107s 6d Bombay-Rijaka and 96s Muscatipatam-Japan all for January loading positions. The time charter section continued steady at recent rates and a fair miscellaneous trade was reported.

There was little change in markets over the recent holiday and business has been resumed on the same steady tone. Three cargoes of wheat were arranged from Australia to Bombay for February-March loading at 127s 6d from West Australia, 137s 6d from South Australia. The Continent and further cargoes of sugar were concluded from Cuba to Black Sea at the unchanged

(Continued on page 25)

Engineering and Transport

CALCUTTA PORT TRUST'S
ANNUAL REPORTFINANCIAL RESULTS FOR
1954-1955

THE total income for the financial year 1954-55 amounted to Rs. 8,82,52,947, against the revised estimate of Rs. 8,60,49,676, showing an excess of Rs. 22,03,271. The excess was mainly accounted for by an increase of Rs. 14,15,265 from Income from Goods, Rs. 66,124 from Income from Lands and Buildings, Rs. 3,21,192 from Income from Railways, Rs. 6,76,789 from Income from Miscellaneous Receipts and Rs. 73,831 from Income from Interest. These were to some extent offset by a decrease of Rs. 20,592 from Income from Vessels and Rs. 3,32,009 from Income from Sale of Unserviceable Material.

The total expenditure amounted to Rs. 9,21,48,705, against the revised estimate of Rs. 8,89,76,415, showing an excess of Rs. 31,72,290. The expenditure on Stores was about Rs. 33,000 in excess of the estimated figure and the expenditure on Maintenance and Repairs exceeded the estimated amount by Rs. 2,66 lakhs. There was an increase of about Rs. 2,77 lakhs under Labour, mainly because the traffic handled exceeded the estimated figure by 198,813 tons. The expenditure under Miscellaneous exceeded the estimated amount by about Rs. 2,26 lakhs and this was entirely due to the provision of Rs. 25 lakhs made in the accounts after the preparation of revised estimates in respect of arrears overtime payable to the Heave-up and Hawser boat crews, work done in night shifts etc., under the Minimum Wages Act. Other increases worth mentioning are Rs. 2,37 lakhs under Dredging, Rs. 2,36 lakhs under Workshop, Rs. 47,000 under Electric Light and Power, Rs. 45,000 under House Allowance, Rs. 14,000 under Compensatory Allowance and Rs. 1,59 lakhs under Dearness Allowance. These increases in expenditure were to some extent offset by a saving of Rs. 1,2 lakhs under Establishment, Rs. 1,33 lakhs under Police, Rs. 47,000 under Unforeseen Expenditure, Rs. 17,000 under Minor Works chargeable to Revenue, Rs. 33,000 under P.T.O. Concessions and Rs. 13,000 under Staff Amenities.

The result of the year's working was worse than what was originally anticipated. The anticipated deficit under the revised estimates was Rs. 29,27 lakhs but the year actually ended, after providing for Minor Works chargeable to Revenue, with a deficit of Rs. 38,95,758, despite the increase in the traffic handled. This was entirely due to the provision of Rs. 25 lakhs made in Abstract K—Miscellaneous for arrears overtime payable to Heave-up and Hawser Boat crews, night work in shifts etc., under the Minimum Wages Act, but not provided for in the revised estimates. In order to meet the deficit, a sum of Rs. 39 lakhs was appropriated to the Revenue Account from the Revenue Reserve Fund.

Revenue Reserve and Other Funds

The balance in the Revenue Reserve Fund, as on 31st March, 1955, after contributing Rs. 39 lakhs for meeting the deficit for the year in the Revenue Account, amounted to Rs. 3,43 crores or Rs. 23 lakhs less as compared to the previous year's balance. The Fire Insurance Fund had a closing balance of Rs. 63.81 lakhs on 31st March, 1955, and the balance in the Vessels Replacement Fund was Rs. 92.41 lakhs.

Capital Expenditure

The year opened with a credit balance of Rs. 97,58,982 and closed with a credit balance of Rs. 99,18,471, of which Rs. 73,36,180 represented money unspent out of Government loans. During the year the Commissioners did not raise any loan from the public but obtained from the Government three loans amounting to Rs. 1.91 crores for meeting the expenditure on certain development projects covered by the first five year plan. These loans carried interest at 4 1/2 percent and were repayable in 23 equated annual instalments of principal and interest after a seven years' interest-free period.

The Capital expenditure on works in progress and works closed to Block Account amounted to Rs. 1,95,89,913, the main items costing over Rs. 1 lakh being expenditure on the purchase of 150 second-hand sugarcane trucks from Government (Rs. 1,04,000), installation of flame-proof lights at the General Wharves (Rs. 1,46,880), construction of two survey launches (Rs. 1,22,210), construction of 12 modified type first class Europe buoys (Rs. 1,33,766), construction of 24 first class welded modified type mooring buoys (Rs. 1,54,817), purchase and conversion of two Canadian frigates for use as pilot vessels (Rs. 1,42,414), purchase and installation of new Mechanical Coal Loading Plant (Rs. 4,45,602), provision of a new crane repair yard at No. 14 Berth, Kidderpore Docks (Rs. 1,42,339), construction of a new Sale Tea Warehouse (Rs. 1,19,652), reclamation of land surrounding King George's Dock (Rs. 1,71,508), purchase of two sets of grab dredging equipment and silt pumping plant (Rs. 1,14,066), construction of quarters for Class IV staff at Shalimar (Rs. 1,12,722), construction of two Dock tugs (Rs. 6,90,805), construction of two Heave-up boats (Rs. 2,24,620), construction of two Light vessels (Rs. 6,98,900), construction of a spur at Akra (Rs. 11,20,902), construction 300 "CR" type wagons (Rs. 32,21,495), extension of railway lines at Berth Nos. 15-21, Kidderpore Docks (Rs. 4,54,531), development of the Sonai Yard into a Central

Depot for the storage of ores (Rs. 7,46,325), construction of 3,000 units of Class IV staff quarters at Taratolla (Rs. 80,18,172), development of a heavy lift yard at No. 1 Berth, King George's Dock and installation of an electrically operated 200-ton Heavy Lift Crane (Rs. 1,12,530) and construction of 20 main and 8 cradle pontoons (Rs. 13,25,699).

Hooghly Pilotage

The income from Pilotage during the year amounted to Rs. 29,37,072 and the expenditure to Rs. 27,89,448 showing a surplus of Rs. 1,47,624 in the pro forma account maintained separately under this head. After transferring this amount to the Revenue Balance Account, in which there was an opening balance of Rs. 3,223, a sum of Rs. 1,50,000 was appropriated to Revenue Reserve Fund (Pilotage), leaving a balance of Rs. 847 in that account.

Port Charges

To meet the revenue deficit arising from a fall in traffic and increase in expenditure, port charges were increased with effect from 1st June, 1954, so as to bring an additional income of Rs. 29.94 lakhs per annum. The increases were confined to certain marine charges, freight charges on ores and cargoes other than coal, river dues on certain commodities, inland vessels wharf toll, crane and derrick charges etc. These additional levies did not appear to have had any adverse effect on the trade passing through the Port. The total expenditure incurred on the upkeep and maintenance of the Port worked out to Rs. 11,12-8 a ton of cargo handled as against Rs. 11-2-9 during the previous year, thus registering an increase which was primarily due to the fall of 245,286 tons in the total traffic handled as compared to the previous year with no corresponding reduction in expenditure. The total expenditure incurred less revenue derived from all sources other than goods amounted to Rs. 6-14-10 a ton as against Rs. 6-9-11 during the previous year. The average income for the year from charges levied on goods was Rs. 6-6-11 a ton or as 7 ps. 11 less than the average expenditure a ton resulting in a deficit of Rs. 38,95,758.

Trade and Traffic

The budget estimates were framed on the assumption that imports of salt would amount to 450,000 tons, foodgrains and flour to 300,000 tons, and other cargo to 1,700,000 tons. Exports of coal were expected to amount to 2,350,000 tons, gunnies to 900,000 tons, ores to 1,000,000 tons, tea to 175,000 tons and other cargo to 650,000 tons.

Actually imports of salt amounted to 454,793 tons, foodgrains and flour to 434,987, and other

cargo to 2,350,656 tons. The tonnage of import cargo discharged at the port was 3,240,436 as compared with 2,723,062 during 1953-54, the principal increases in tons being asphalt, bitumen etc. (34,613), bricks, sand and tiles (10,476), cement (28,904), chemicals other than soda (6,281), cotton (9,130), fibres (6,098), iron and steel (108,914), manure (9,745), metals other than iron and steel (24,669), motor vehicles (7,444), oilman stores (12,779), oil other than lubricating oil (9,811), paper including old newspaper (8,483), railway plant and material (13,922), salt (26,169), soda (18,939), sugar (200,546), sulphur (13,216), and sundries (111,747). These increases were to some extent offset by a decrease in tonnage under foodgrains and flour (117,934) and timber (15,977).

Exports of coal amounted to 2,397,897 tons, gunnies to 918,118 tons, ores to 556,364 tons, tea to 177,703 tons and other cargo to 523,295 tons. The total tonnage of exports during the year was 4,573,377 as compared with 5,336,037 during 1953-54, the principal decreases in tons being coal (163,561), ores (509,983), scrap (89,031), sugar (45,497), and tea (32,584). These decreases were to some extent offset by an increase in tonnage under bunker oil (13,480), grain (28,384), gunnies (21,707), pig iron (6,024), and sundries (5,242).

The total tonnage of seaborne traffic which passed through the Port during the year amounted to 7,813,813, as compared with 8,059,099 during 1953-54. Out of this 5,907,411 tons or nearly 75.6 percent of the total traffic passed over the Commissioners' quays, as against 76.7 percent during the previous year.

NEW COMET 4

With an optimum cruising speed of 500 m.p.h. and the capacity to carry 60 first-class passengers with baggage and freight over stage lengths of 3,000 miles, the Comet 4 will have greater power than its predecessors, although its engines will burn less fuel for a given thrust output. These details are revealed by the de Havilland Aircraft Company, which states that the Comet 4 is expected to be in airline service on world routes before any other jet airliner. British Overseas Airways Corporation has ordered 20 for delivery in 1959. De Havilland says the airliner has been designed mainly for world routes (other than transatlantic) on which most of the centres of trade and industry are 2,000 to 3,000 miles apart, but that even on the North Atlantic crossing, with its special conditions, the Comet 4 will provide most comfortable and speedy operation, despite the necessary one-hour halt on the west-bound flight.

Economy and Reliability

The illustration shows a sugarcane rolling mill of triangular type, 14' x 12', built by Guthe/Humboldt, Germany, and equipped with SKF spherical roller bearings.

A few years ago the first SKF roller—bearing—equipped crushers and rolling mills of triangular type were installed in the sugarcane industry. The results obtained have been very satisfactory, and several well-known manufacturers are now ready to offer machinery with such bearings.

The chief advantages gained by the use of SKF roller bearings are:
Lower installation costs:
no equipment needed for water cooling and circulating—oil lubrication of the bearings.
The aligning device between the top roll

and the pressure—regulating apparatus also becomes unnecessary, since the bearings are self-aligning.
Lower maintenance costs:
no wear of the journals and bearings, and consequently less repairs.
Economy of lubricant and reduced shut-down losses.
Lower running costs:
economy of power because of the low friction even at start under full load.
Greater running reliability:
no hot running and no interruptions due to bearing troubles.

Apply to SKF for further information!

COMPANY AND PUBLIC NOTICES

KANKARRAH COMPANY, LIMITED.

NOTICE is hereby given that an Extraordinary General Meeting of the Members of the above-named Company will be held at the Registered Office, 4, Clive Row, Calcutta, on Friday the twenty-seventh day of January, 1956, at 12.25 'clock in the afternoon to consider and, if thought fit, to pass, with or without modification, the following Resolutions which will be proposed as Special Resolutions, namely:—

1. That the Articles of Association of the Company be altered in manner following:—

The following new Article 6A shall be added after Article 6:—

"6A. Subject to the provisions of these Articles, the Company shall have power to issue Redeemable Shares, carrying a right to redemption out of profits or out of the proceeds of a fresh issue of shares made for the purposes of such redemption or out of the sale proceeds of any property of the Company, or liable to be so redeemed at the option of the Company, and the Directors may, subject to the provisions of Section 105B of the Act, exercise such power in any manner they may think fit."

2. That the authorised Capital of the Company be increased from Rs. 70,00,000 to Rs. 95,60,000 by the creation of 25,600 Redeemable Cumulative Preference Shares of Rs. 100 each and that such Redeemable Cumulative Preference Shares shall confer on the holders thereof the rights and privileges set out in the Articles of Association of the Company.

3. That the Articles of Association of the Company be altered in manner following:—

(a) The first paragraph of Article 6, commencing with the words "The Capital of the Company," and ending with the words "...rights and privileges," shall be deleted and the following substituted therefor:—

"6. The capital of the Company is Rs. 95,60,000 divided into 30,000 Ordinary Shares of Rs. 100 each, 30,000 'B' Ordinary Shares of Rs. 100 each, 10,000 Preference Shares of Rs. 100 each and 25,600 Redeemable Preference Shares of Rs. 100 each with the following rights and privileges:—"

(b) After Article 6(b) the following new sub-clause (c) shall be added:—

"(c) The said Redeemable Preference Shares confer on the holders thereof the right to receive a fixed cumulative preferential dividend at the rate of 6 per cent. per annum without deduction of Income-tax on the capital for the time being paid up thereon and the right in a winding up to payment off of capital and arrears of dividend whether declared or not up to the commencement of the winding up *pari passu* with the 10,000 Preference Shares of the Company and in priority to the Ordinary and 'B' Ordinary Shares, but shall not confer any further right to participate in the profits or assets of the Company. The said Redeemable Preference Shares confer on the holders thereof no right to vote at General Meetings of the Company except:—

(i) on any resolution placed before the Company at a General Meeting at the date of which the dividend due on any part thereof remains unpaid in respect of an aggregate period of not less than two years preceding the date of commencement of such meeting and for this purpose the dividend shall be deemed to be due half-yearly on the 31st day of March and the 30th day of September in each year in respect of the half-yearly periods ending on the preceding 31st day of December and 30th day of June respectively, whether or not such dividend has been declared by the Company; or

(ii) on any resolution placed before the Company which directly affects the rights attached to the Redeemable Preference Shares and for this purpose any resolution for winding up the Company or for its share capital shall be deemed directly to affect the rights attached to such shares.

Where the holder of any Redeemable Preference Share has a right to vote on any resolution in accordance with the provisions of this Article his voting right on a poll as the holder of such share shall, subject to any statutory provision for the time being applicable, be in the same proportion as the capital paid up on the Redeemable Preference Share bears to the total paid up equity share capital, as defined in Section 85(2) of the Companies Act, 1955, of the Company for the time being.

The Company shall have the option to redeem the whole or any part of the

said Redeemable Preference Shares at any time or times after the 30th day of June, 1970 at a premium of five rupees per share on giving not less than three calendar months' previous notice in writing and such notice shall be sent by registered post or otherwise served as hereinafter provided specifying the date of redemption and in the case of partial redemption the number of shares to be redeemed and the date of the drawing hereinafter referred to. The particular Redeemable Preference Shares to be redeemed shall be determined by means of a drawing; all such drawings shall be conducted by the Directors in the presence of a Notary Public and also such of the holders of the said Redeemable Preference Shares who care to attend."

RESERVE BANK OF INDIA

APPLICATIONS are invited for the following posts in the various Departments of the Reserve Bank of India:—

(A) Posts and Scales of Pay:—

- 1) Research Officer, Department of Research & Statistics. Rs. 375-55-815 E.B. 55-925-60-1045.
- 2) Assistant Accountant, Department of Banking Development. Rs. 250-25-450 E.B. 25-650.
- 3) Rural Credit Officers, Agricultural Credit Department.
- 4) Probationary Assistants, Department of Banking Development/ Agricultural Credit Department/Legal Division. Rs. 175-121-300 E.B. 20-440.
- 5) Economic Assistants. Rs. 175-121-300 E.B. 20-440.

Note: Candidates possessing exceptionally good qualifications and experience may be given a higher starting salary in the prescribed scales.

(B) Additions to pay:—

- (1) Local Pay: 10% of pay with a minimum of Rs. 10/- per mensem rounded up to next higher complete rupee to the staff working at Bombay, Calcutta, Madras, Delhi, Kanpur and Ahmedabad.
- (2) House Rent Allowance:—

Research Officer, Assistant Accountant, Rural Credit Officers } 15% of pay with a maximum of Rs. 60/- and a maximum of Rs. 300/- per mensem.

Probationary Assistants } 10% of pay with a maximum of Rs. 50/- per mensem.

Economic Assistants } 10% of pay with a maximum of Rs. 20/- per mensem for pay up to Rs. 400/- per mensem and thereafter at Rs. 25/- per mensem for pay up to Rs. 500/- while stationed in Bombay or Calcutta.

(3) Dearness Allowance: At prescribed rates.

Research Officer, Assistant Accountant, Rural Credit Officers } The present rate is 16 2/3% of pay with a maximum of Rs. 125/- p.m.

Probationary Assistants } Rs. 65/- per mensem for pay (including local pay) upto Rs. 300/- per mensem.

Economic Assistants } Rs. 50/- per mensem for pay (including local pay) upto Rs. 200/- per mensem.

(The rate of Dearness Allowance is subject to revision from time to time).

(C) Age limit as on 1st January 1956:—

Research Officer, Assistant Accountant, Rural Credit Officers } Candidates should not ordinarily be over 30 years of age.

Probationary Assistants } Candidates should not ordinarily be over 24 years of age except in regard to the posts of Probationary Assistants in Legal Division where the age limit would be extended upto 30 years.

Economic Assistants } Candidates should not ordinarily be over 24 years of age. The maximum age limit may be extended but not beyond 30 years, in the case of

(i) candidates with approved war service,

(ii) ex-employees of Banking Institutions whose services have had to be terminated for reasons of economy or as consequence of the closure of unremunerative branches or as a result of the Banks going into liquidation.

(iii) personnel retrenched from Government offices after at least one year's service, applying through the Employment Exchange and

(iv) candidates belonging to the Scheduled Castes or Scheduled Tribes.

(D) Qualifications:—

- 1) Research Officer, Department of Research & Statistics.

First or high second class Master's degree in Economics of an Indian University, or first or high second class degree in Economics of a foreign University, or a Doctorate degree in Economics of an Indian or Foreign University and specialisation and research in Agricultural Economics.

- 2) Assistant Accountant, Department of Banking Development.

Applicants should possess a first or high second class M.A. in Economics or M.Com. degree of a recognised University. In addition, the candidate should possess adequate experience of one or more aspects of Industrial Finance or, be a Chartered or Incorporated Accountant with experience of accountancy and audit in a firm of standing and repute.

- 3) Rural Credit Officers, Agricultural Credit Department.

Applicants should possess very high academic qualifications of Indian or Foreign Universities, (preferably post-graduate) in Economics, Sociology or other Social Sciences, and possess degrees which are either first class or high second class. Special study or knowledge of rural economics or rural sociology will be an additional qualification; so also will be the experience gained in a responsible position in a Co-operative Department or in a Co-operative Institution.

- 4) Probationary Assistants, Agricultural Credit Department and Department of Banking Development.

Applicants should possess a first or high second class Master's degree of an Indian or Foreign University in Economics, Sociology or other Social Sciences or in Commerce. Special study or knowledge of rural economics or rural sociology will be an additional qualification; so also will be the experience gained in a responsible position in a Co-operative Department or in a Co-operative Institution. Proficiency in drafting notes, memoranda, reports etc. is expected.

- 5) Probationary Assistants, Legal Division.

Applicants should be advocates or Solicitors and should possess in addition to high academic qualifications in Law, practical experience of work in an Advocate's or Solicitor's Office or have practised independently, for at least 5 years. Preference will be given to candidates having M.L. or LL.M. or other equivalent qualifications and special knowledge of banking and company law and to candidates who have passed the Advocates' (O.S.) examination held by the Bombay High Court or the Solicitors' examination held by the Calcutta High Court or by the Bombay Incorporated Law Society.

- 6) Economic Assistants.

Applicants should possess a high second class Master's degree or a first class Bachelor's degree in Economics or Commerce of an Indian or Foreign University and have practical experience in the Co-operative Department of any State in India or abroad or in a Co-operative Institution of standing. Specialised study in Rural Sociology will be an additional qualification. Graduates who have passed out of any of the Training centres organised by the Central Committee for Co-operative Training or those run by State Government may also apply.

The Board will insist on a very high standard of suitability in making selections for the above posts and only candidates who possess good academic qualifications and adequate experience of the type specified are advised to apply. Candidates who wish to apply for more than one category of posts must submit separate applications accompanied by separate application fees.

The selected candidates for the posts of Research Officer, Assistant Accountant, Rural Credit Officers and Probationary Assistants will ordinarily be on probation for a period of 3 years which may be reduced or extended at the Bank's discretion. Candidates selected for the posts of Economic Assistants will be on probation for a period of one year. Candidates selected for the posts in Department of Research & Statistics, Department of Banking Development and Legal Division will ordinarily be stationed in Bombay but those selected for the posts in the Agricultural Credit Department must be prepared to serve in any office of the Bank in India and to undertake tours when required.

Applications should be in a special form to be obtained from any office of the Reserve Bank. All the applications should be accompanied by copies of two testimonials (originals should not be sent; the Bank does NOT accept responsibility for returning the origi-

nals if sent through oversight) and forwarded to the Secretary, Central Recruitment Board, Reserve Bank of India, Central Office, Post Box No. 406, Bombay No. 1 so as to reach him on or before 31st January 1956. Candidates already in service must submit their applications through their employers. Candidates belonging to Scheduled Castes or Scheduled Tribes should mention this fact prominently on their applications.

Applicants for all the above posts except Economic Assistants must remit application fees of Rs. 7/8/- per application by Postal Order, Cheque or Bank Draft on a Scheduled Bank payable at Bombay along with the application. Candidates for the posts of Economic Assistants must remit an application fee of Rs. 2/- in a similar manner. The application fee is in no case refundable. Bonafide refugee candidates who are not in employment applying through any of the Government Employment Exchanges are exempted from payment of application fees while in the case of Scheduled Castes/Scheduled Tribes candidates the fee will be reduced to 1/4th.

Appointments will be subject to candidates being found medically fit for service in the Bank. If any candidate desires to have his application acknowledged he should enclose a stamped self-addressed envelope or a post-card. Apart from those who may be specially called, interviews will not be granted to candidates nor will the Bank enter into any correspondence with them.

Canvassing in any form will be regarded a disqualification.

THE INDIA PAPER PULP CO. LTD.

THE Board of Directors has today decided to recommend to the forthcoming General Meeting of Shareholders a dividend for the half-year ended 30th September, 1955 of 7% without any deduction in respect of taxation payable by the Company.

By Order of the Board,
ANDREW YULE & COMPANY, LTD.,
Managing Agents.
Calcutta, 28th December, 1955.

Calcutta Markets

(Continued from page 22)

rate of 162s 6d. Ore from Vizagapatnam to Northern Range was up 50 cents at (U.S.) \$17 and Mormugao-Japan paid (U.S.) \$14.85 and 104s. In the time charter section, an 11,000 ton oilburner obtained 30s for the trip out to India, delivery Hamburg early January with the option of a round trip at 31s, whilst 37s 9d was paid for a Liberty for the trip home delivery Indonesia, redelivery U.K.-Continent. Two handy-sized 14 knot motorships were taken for 6 to 8 months general trading, delivery March at a Continental port at (U.S.) \$42,000 a month.

HIDES AND SKINS

The market in skins ruled firm, while that of hides was steady. Stocks were less than in the previous week.

Bazaar Sales

(Between 27th December, 1955 and 2nd January, 1956)

Cowhides:—Wet salted (Ord) 10,600 pcs. on the basis of Annas 9-3 to Annas 10-6; Wet salted (Ord) 26,500 pcs. on the basis of Rs. 8-8 to Rs. 10; Wet salted (Slaughtered) 16,000 pcs. on the basis of Rs. 13-8 to Rs. 25.

JOINT STOCK COMPANIES' PREFERENCE SHARES

Dividends are cumulative and shares carry a preferential claim on the property for the payment of capital and on the profits for dividend except in case of companies marked otherwise. Months against names of companies indicate approximately times of payment of dividends.

No. 3391

LARGER PLAN ALLOCATION FOR THE PRIVATE SECTOR RENEWED CONFIDENCE NEEDED

THE increases expected in the plan estimates for private industrial investment are a welcome step towards a more balanced economic development all round. They appear to be yet another encouraging indication that a trend towards greater realism is developing now that firm decisions are having to be made. Not only private interests stand to benefit from a change in emphasis; the prospects of overall expansion being more rapid, efficient and flexible will also be considerably enhanced. The possible extent of the shift is shown by the Planning Commission's draft memorandum, which proposes a target of Rs. 675 crores for private industrial working capital. This represents a very substantial increase over original allocations. It should help rectify one of the plan frame's more damaging features—its design for an economy completely unsuited to satisfying the wants of the individual consumer. This way, the disadvantages of saddling a democratic community with an economy resembling the Soviet model, can be partially avoided. The private sector may take some heart. Its job will now be, with the necessary co-operation from official quarters, to develop an efficient, low-cost, competitive outlook. If it does this, it need have no fear of the future; results have a habit of speaking for themselves. But new allocations will need the encouragement to go with them if they are to achieve their maximum effect on expansion. It is one thing to set targets, it is quite another to persuade private industry to meet them in circumstances which, during the last year, have often been anything but encouraging for new enterprise.

Heavy investment spending by private industry need encounter none of the administrative difficulties which may yet set a limit to the public sector's growth. Provided the problem of confidence can be solved, there will be many advantages in greater private expansion. There is less likelihood of inflation resulting from distortions in consumer-goods supply. Foreign technical "know how" will be more easily obtained and exploited more fully. The new export industries will have a better chance of developing. Competition, the consumers' best friend, will be encouraged. New techniques will more readily find their way into industrial methods. Most important of all, the theories of public enterprise in this country will be given a run for their money. It would be surprising if they did not benefit from the experience. Provided the private sector does not meet with too much official interference, and unfair competitive advantages are not secured by public concerns, this small though significant increase in plan allocation, if it materialises, should eventually prove to have been amply justified.

The recent improvement in the Government's attitude towards private enterprise has not yet gone very far. The discouragements which industrialists have had to face during the last year will not prove easy to offset. A more responsible note in future official statements would be a great help; so would be the careful encouragement of a climate under which the private sector can work. Resources to fulfil the new allocations are likely to prove difficult to raise after the deprivations of the new Companies Act, the fourth amendment to the Constitution, and the 1955 Budget. The most important among the traditional sources of risk capital—the managing agents, can scarcely be relied upon completely under future conditions. Industrial development corporations are admirable institutions, but their security requirements have been known to exceed those which a promising, though risky, enterprise can provide. And the rôle the capital market can play under a "socialistic pattern" has not yet become clear. If resources can be secured through the stock exchanges there may be little need to lament the twilight of the managing agency system, if indeed that has arrived. But public confidence, on which the markets rely, has taken too many blows during the last year. The struggle it is putting up proves that it is by no means dead altogether. But while every success

sive Ministerial statement seems aimed at finishing it for good, it is little wonder that it shows no sign of blossoming into enthusiasm. So many inadequately considered actions and statements, apparently designed to discourage speculators, have served no purpose other than to frighten away genuine investors. The investment habit has been growing slowly in India for this reason. That is why a larger plan allocation does not necessarily ensure that the resources will be forthcoming at a price which the private sector ought to be called on to pay.

A typical example of this constant discouragement which saving has to face is the level of direct taxation. An article published on another page of this issue of Capital uses the experience of other developing countries to prove the damage personal taxes can do to individual investment. A recent instalment is the Planning Commission's proposal for an annual levy on wealth. It is difficult to see how any body which has earned such an admirable reputation for realism can put forward so impracticable a proposal. To point out the success which this kind of tax has had in certain Scandinavian countries is no answer to the fact that this is India. Here individual saving and investment have no tradition. Personal hoards in this country present a problem which would defeat all attempts at assessment. The cost of collection, if it is administratively possible at all, would be completely disproportionate to the yield, if any. The business of banks, insurance companies, the development of better housing and the purchase of durable consumer goods, and many other habits of the modern economy would immediately be reversed. This proposal has already put money into the pockets of a

dustry, and in doing so imply that impossible times lie ahead of many of the Indian mills.

Yet there is no room for complacency. The Pakistani industry has important advantages, though none of them is decisive enough to tilt the balance in its favour. The more important of these are its modern equipment and machinery, cheap and plentiful supplies of raw jute, and a sympathetic Government that reportedly does not examine its industry's internal and export pricing policies too closely. But these are counterbalanced by such fundamental handicaps as a shortage of trained labour, a lack of power resources, and a certain unfamiliarity with the needs and methods of consuming markets. Each of these handicaps may in course of time be expected to become less important. But India will also meanwhile have made very substantial progress in the department where Pakistan claims her main superiority—in the use of modern equipment and machinery.

There are two aspects to which India will need to give much closer attention than she has hitherto done if she is to ensure the continued well-being of her industry. One is raw jute, where the goal of relative self-sufficiency has been accepted, but is so elastically interpreted as to make many wonder whether provision has been made for the possibly much bigger needs of the future. The other aspect concerns labour costs, which continue to rise steadily in a welfare State that seems oblivious of pricing problems in export industries. If some of the realism shown on other matters, such as on the abolition of the gunny export duties, were to be reflected on these two also, the Indian jute industry could look forward with assurance to a better and more prosperous future.

THE NEW INTEREST IN GOLD

ATTRACTION OF PRE-WAR PRICES

ON many occasions in the closing months of 1955 activity in the London gold market reached the highest levels since the market was reopened in March 1954. The market is going through an interesting phase, although the demand for gold for hoarding purposes is much less than it was in the years when political and monetary uncertainties caused international operators to seek the safety of a commodity that was of stable value and readily accepted anywhere. The "cold war" has been renewed, but fewer people believe that it will be transformed into a "hot war". Currencies are steadier. It is, indeed, partly because this special demand for gold has subsided that demand for other purposes has recently expanded. It is easily forgotten that gold, although in a unique position, is still a commodity, and it is exceptional among commodities in that its official price, \$35 an ounce, is no higher than prewar, and that its free price has declined in the past few years, from the region of \$40 to the region of \$35—by, say, 12½ per cent. As an industrial material, gold has therefore become relatively more attractive; and it has also become rather more freely available for industrial use. And lower prices have also revived some demand for hoarding.

On the monetary side gold becomes especially attractive when its price falls below \$35; and in the London market it has been below that level for long periods. The monthly deficits of members of the European Payments Union may be settled either in gold or in dollars, on the assumption that gold is worth \$35 an ounce; and if gold can be purchased even slightly below that price it is preferred to dollars as a medium of settlement. A good deal of such official business has been done in London on that basis. Likewise, the U.S. Federal Reserve price for gold is \$35 an ounce, and if the London price is around that level—or even a little above, as the costs of London's facilities are less than those of the Federal Reserve system—a central bank converting dollar balances into gold can most advantageously operate through London. Conversion of gold into dollars is similarly cheaper in London. Most of the increase in the turnover of gold in the comparatively recent past has been on private, not on official, account. The International Monetary fund has shown that between the beginning of 1953 and the middle of 1955 gold was flowing into official reserves at a rate—about \$400 million a year—which was a little more than in the preceding four years, but only half that of the period 1937-48. However, American estimates suggest that in the later period, when official reserves were increasing only slightly, appreciably more gold was being released from private hoards than was being added to them. From official and private reserves together there has apparently been a net outflow, contrasted with a big net inflow in the years immediately after the war. The increase in commercial demand must have been substantial.

The aggregate demand in London—including ZPU settlements and central banks' conversions—has certainly exceeded old supplies coming on to the market, but the deficiency has been filled by newly-mined gold and by special sales on Soviet account. A good deal of South African gold comes

on to the London market through the Bank of England, and much of the output of the smaller Commonwealth producers is marketed there directly. Supplies from these sources have evidently been maintained, although the relation between costs and prices has not favoured production. Excluding Soviet supplies, the market seems to be in approximate equilibrium. It is the Soviet position that is now particularly interesting. Deliveries of Soviet gold to the London market have evidently been less in 1955 than in either 1954 or 1953, when substantial quantities were sold to fortify the Soviet Union's sterling account in London. Recently, estimates, however, suggest a big potential increase in Soviet supplies. A correspondent of the London Sunday Times has lately gathered information—necessarily tentative—which indicates that both production and stocks of gold in the Soviet Union are far larger than has been assumed hitherto. An annual London estimate—which has been, admittedly, little better than a guess—has entered Soviet production in the global figures at a steady 2 million ounces a year. The Sunday Times correspondent puts the figure at 12 million ounces minimum, compared with South Africa's 14 million ounces. But he quotes information suggesting that the true Soviet figure is as high as 18 million ounces, much the highest of any country in the world. This large-scale production has been in progress for many years and has built up a huge reserve, estimated at some 200 million ounces, compared with the U.S. Federal Reserve system's holding of rather more than 600 million ounces.

An interesting point is that, whereas the huge and quite exceptional gold stock of the United States has been accumulated mostly by drawing in gold from the outside world, the gold stock of the Soviet Union has been built up internally. In a general sense, current production of gold is very small in relation to the world's total stock, but in the Soviet Union current production is evidently large enough to build up a substantial stock in a comparatively short time. Comparatively short, but, even so, spread over many years—it seems that Soviet output of gold was substantial even 20 years ago. Why, then, should Soviet gold be particularly interesting now. An outstanding development of 1955 in the international economic field—the fact must be recognised, whatever one's political views on it—has been the emergence of the Soviet Union as a developer of under-developed regions outside its own territory. But the Soviet Union and its partner China have vast regions undeveloped within their borders. Their resources available for capital-formation are not sufficient for major development programmes both internal and international. The huge gold reserve, and, large current production of the gold mines, would, however, enable the Soviet Union to finance both programmes, either by loans of gold to foreign countries (which has been done on a small scale already) or by balancing a large current payments deficit with sales of gold.

CURRENT COIN

Expanding Cloth Output.—In an excellent address before shareholders of the Delhi Cloth and General Mills Co. Ltd. recently, the chairman, Sir Shri Ram, made out a strong case for allowing liberal expansion in the cotton textile industry. He suggested that the estimate that cloth consumption would rise to 18 yards a person, as against 15 yards at present, was too low. He thought that consumption would rise to at least 20 yards, and even the figure of 22 yards was quite likely. There was a large body of opinion which felt that even if the estimate of 18 yards per person proved correct, the handlooms would not be able to meet the increase. Without examining whether this was correct or not, Sir Shri Ram felt that an increase in the cloth production of mills should not be banned. "If at any time it is felt that the handlooms are producing what is required by the country in enough quantities, the restriction can be brought on the mill industry at that stage." The cottage industry could thus be given all the help that was necessary, and the authorities would at the same time be able to insure against heavy shortages leading to controls and black-marketing. Sir Shri Ram denied the argument that future shortages could be prevented by working second or third shifts in certain mills. There was a very large number of mills, he declared, where the machinery was in such a bad state of repair, and so old and inefficient, that it would not be possible to increase the number of shifts. If they had been in a position to run extra shifts, they would have done so already since profit margins were above the average. Sir Shri Ram went on to discuss whether the spinning capacity of mills should be increased, or whether reliance should be placed on *Ambar Charkhas*. Quoting figures from a recent issue of the *A.I.C.C. Economic Review* he stated that the cost of producing one lb of 20s yarn was 72.15 pices in the case of the *Ambar Charkha*, whereas it was only 28.9 pices in a mill. If cloth output were insufficient the consumer would suffer, but if yarn output were in-

sufficient both the handloom weaver and the consumer would suffer. As heavy deficit financing was proposed, restrictions on production would tend to accentuate inflation. Sir Shri Ram also pointed out that as the country was short of foreign exchange, the export of commodities such as cotton textiles would have to be encouraged.

Breweries' Future.—In view of the proposed introduction of total prohibition in India by 1958, Mr. N. N. Mohan's address from the chair at the 21st annual general meeting of the Dyer Meakin Breweries Limited, held more than the usual interest for shareholders. Commenting on the Company's hundred-year span of service to the public, Mr. Mohan drew attention to the fact that the year under review had seen an increase in profits and a rising demand for the Company's products, even in the face of strong competition. This he attributed to a marked improvement in quality. Two new brewers had been engaged during the year, one from Belgium, the other from Britain. These had succeeded in producing a new type of beer. Much of the old machinery had been scrapped and the most modern machinery from the U.K. had been installed. Mr. Mohan, admitting that the recommendations of the Prohibition Enquiry Committee had cast gloom over the industry, pointed out that "it is a well known fact that Prohibition wherever introduced by legislation has been a failure." According to reports submitted by the Enquiry Committees set up by the State Governments of Andhra and Madhya Pradesh where total or partial Prohibition is in force, malpractices such as illicit distillation, bootlegging etc. have increased. "While the drinkers obtain their drinks by any means" he said, "the State Governments have lost a considerable amount of revenue by way of excise duty and enforcement expenses, not to mention the injurious effects these deleterious intoxicants have on the health of the consumers." A memorandum on the subject has been submitted by the Directors of the Company to the Planning Commission urging them to view the matter from all angles and Mr. Mohan assured shareholders that all possible steps were being taken to safeguard their interests. Plans to switch on to some other business are receiving the active consideration of the Directors and as a preliminary step the Company's Memorandum of Association has been suitably altered to enable it to take up some other productive line or lines should the situation so warrant. While holding no brief for the unlimited consumption of alcohol, the psychological effect of enforced controls inevitably stimulates demand, a fact proven in our own generation by the farcical results of Prohibition in America. Drawing a logical conclusion from past experience it would seem, from the Committee of Enquiry's own showing, that because only 10 percent of the Indian population drink at all, an increased drive towards health education, social uplift schemes and adult literacy might achieve the desired effect. In this connection too, one cannot help wondering why no public enquiry has been instigated into the relative frequency of drug addiction which surely must be as great if not a greater evil than the craving for strong drink on which such a weighty issue is being made to rest.

A Plan for Coffee.—A 15-year plan to raise India's coffee production to 68,000 tons was considered by the half-yearly meeting of the Coffee Board held in Bangalore last week. The target is planned to be completed by 1970 through intensive and extensive cultivation. If the normal trend of organised cultivation noticed during the last 10 years is continued, the authors of the plan estimate a production of 45,000 tons by 1970. Therefore, they are of the opinion that measures have to be taken to ensure the production of the balance of 23,000 tons so as to achieve the target figure. Under the plan's intensive cultivation scheme, it is proposed to cover only 50 percent of the acreage—77,000 acres under Arabica and 44,000 acres under Robusta. It is estimated that when all measures of intensive cultivation are systematically applied, an increase of nearly 150 to 180 lbs of coffee per acre can be safely expected, resulting in an increased production of 8,000 tons by 1960-61. A recent survey has revealed that nearly 60 percent to 70 percent of the crop now available is borne by only 30 percent to 40 percent of the total number of trees in an average acre. Nearly 30 percent of the existing coffee is either poor bearer or practically non-bearer. The draft plan says that the gradual replacement of these trees with better yielding strains is necessary if the targets have to be achieved. The plan provides schemes for the supply of pedigree seed and seedlings for this purpose. Nearly 13,000 acres which will come under the rehabilitation scheme will give an additional production of nearly 2,000 tons from 1965-66. The extensive cultivation scheme provides for the fresh development of coffee plantations over a total of 35,000 acres. The cost of the scheme, spread over a period of 14 years, is about Rs. 5 crores. Increased production as a result is estimated at 13,000 tons. The total cost of the plan is now placed at Rs. 14 crores, the bulk of which will be incurred during the first five-year period in the form of loans and advances to planters

recoverable after a few years. The draft plan suggests that Rs. 45 lakhs has to be provided by the State Governments as *Takkari* loans and Rs. 5.44 crores secured from the Central Government as the Board's share of the central excise duty on coffee. It also suggests that the Board contribute Rs. 1.38 crores from the general fund and urges the increase of export duty to the maximum permissible under the new Act, namely, Rs. 6 a cwt, which will yield about Rs. 1.33 crores. The other source to be tapped is the Board's pool fund, which will yield another Rs. 2.97 crores. The balance of Rs. 1.61 crores may be found partly by the Central Government and partly met by realisations of interests from planters amounting to Rs. 2.5 crores to Rs. 3 crores. The plan further suggests that the Board may have to secure loans from banks to the extent of the shortfall, if any, in the total funds required. Planning for increasing India's coffee production is all right, but where to market the additional output is the problem. There is the conviction that India's consumption potential is unlimited on account of the large population and the improvement in national income the five year plans are expected to produce. This assumption is based on flimsy grounds; one need not take coffee simply for the reason that his income has increased. Promotional campaigns will increase consumption of coffee in India, but there will be limitations. Even though India has one of the world's finest coffees to offer, the world market may not always absorb at a good price. Price is mostly influenced by the supply and demand situation in the world market and coffee is a commodity which has suffered heavily from over-production. It may be recalled in this connection that the principal producing countries of the world are now thinking in terms of regulating exports as a counter to excessive production of coffee. The suggestions in the draft plan regarding finance will give rise to many apprehensions and as such, that part of the plan will have to be carefully scrutinised. As the success of the plan depends largely on the whole-hearted co-operation of the coffee growers the Board should give due consideration to their views.

Machinery Imports.—In the import policy for the current half year announced recently, the main feature is the liberal quotas granted for the import of machinery and industrial raw materials. This is the right policy to follow at the present stage of India's development. Indigenous production of plant and machinery should be encouraged and a developing economy must produce increasingly capital goods for its own requirements. But not at the cost of machinery imports when domestic demand is not fully satisfied with internal supply, quantitatively and qualitatively. The domestic producer also can face healthy competition by having to sell his goods side by side with foreign products. That will raise the standard of production technique at home and thus the quality of output. It is good from this point of view that the proportion of machinery imports to total imports went up to 16 percent during the last July-December import half year from 10 percent during the preceding period. It is also a sign of the encouraging progress of the domestic capital-goods producing industry, that the value of machinery and plant has been going up steadily since 1953. In 1955, indigenous output was valued at Rs. 21 crores, as against Rs. 17 crores in 1954 and Rs. 14 crores in 1953. The rising volume of imports and the increasing scale of domestic production together point to the happy fact that industrialisation in the country is making sound progress. Another good feature of the current half year's import policy is that import procedure relating to tools for small industries, has been simplified. Since small industries are being given such a crucial place in the planned development of the country, it is a very good thing that official encouragement is being given to the mechanisation of these industries.

Expansion in Chemicals.—The presidential address of Mr. Madanlal H. Vakil to the fifteenth annual general meeting of the Indian Chemical Manufacturers' Association gave a detailed account of the expansion achieved by the industry under the first plan and that in prospect during the second. Output has increased all round. The production of sulphuric acid is up from 60,000 tons in 1946 to 148,842 tons in 1954; caustic soda from 2,904 to 29,148 tons, soda ash from 12,000 to 48,288 tons, liquid chlorine from 1,500 to 9,780 tons, bleaching powder from 2,004 to 2,928 tons, bichromates from 2,076 to 3,240 tons, superphosphates from 4,500 to 104,688 tons, ammonium sulphate from 22,464 to 340,224 tons, power alcohol from 2,397.600 to 8,007,000 bulk gallons, alcohol rectified spirit from 2,146,800 to 4,630,800 bulk gallons, alcohol denatured spirit from 1,023,600 to 2,835,600 bulk gallons, liver extracts (injection) from 7,318,800 c.c. (in 1949) to 16,784,400 c.c., liver extracts (oral) from 181,200 lbs (in 1949) to 280,800 lbs. and rayon yarn from 2,040 tons in 1951 to 4,944 tohs. Photographic chemicals and pharmaceuticals also recorded rapid progress. The president attributed this

striking expansion to the increased demand in the country consequent upon higher economic activities during the first plan. During the second chemical and allied products are to increase to 500 percent taking the production at the end of the first plan as 100. The industry wants to maintain its rapid growth but a number of difficulties, the chief being transport, stand in the way. "While I am confident," said Mr. Vakil, "that the industries in general are in a position to achieve the targets fixed for them in the second five year plan, their progress will ultimately be determined by the availability of transport." He explained how these difficulties were hampering further expansion, and what they consisted of. Junction limitations, the transporting-station bottlenecks, and the inadequacy of metre-gauge wagons were among the most important. Tank wagons for moving liquid alkali and acid were not available in sufficient numbers. There were a number of anomalies in the existing freight structure which were making the transport of raw materials over short distances uneconomic. Mr. Vakil, therefore, welcomed the appointment of the Railway Freight Structure Enquiry Committee which he thought was overdue because the existing structure was already out of date. Mr. Vakil's complaints did not fall on deaf ears as the Union Transport Minister was also present at the meeting. But he was unable to assure the industry of any substantial improvement, except "reasonable co-operation". He asked the industry to bear in mind the increasing demands on railway services from all sectors in the economy, and by implication, gave a warning that the chemical industry could only have a proportionate share in the contemplated railway expansion during the second five year plan. Mr. Shastri of course is in an unhappy position. He does realise the need for greater transport facilities consequent upon the country's industrialisation programme, but he has been denied the resources necessary for expanding the railways adequately.

Possibilities of Triacetate. With the prospect of steadily increasing supplies of "Tricel", triacetate yarn and staple, during the next two or three months, British Celanese Limited, has recently been holding a small private exhibition of fabrics and garments made from this product at its Manchester offices. The object is to give customers an idea of the possibilities of developing these new yarns and staples. Hitherto, apart from a few samples shown at last year's B.I.F., very little has been seen of "Tricel". The fact that triacetate can be heat-stabilised, durably embossed, and durably pleated, as well as having something of the easy washing and quick-drying properties associated with nylon and the other fully synthetic fibres, makes it an interesting fibre, especially as it is akin to secondary acetate rather than the fully synthetic fibres in price. Both yarn and staple are 9d. a lb. above the prices of normal secondary acetate. Delicate embossed fabrics in all-over leather-like designs and a variety of pleated cloths ranging from ninons to mixture suitings are among the most interesting items shown. Lightweight underwear and dress fabrics, many made with a filament warp and a spun weft, are seen in an attractive light with the knowledge that they can be easily finished to give dimensional stability and present no difficulty with washing or ironing.

CORRESPONDENCE

RAIL TRANSPORT IN INDIA

(TO THE EDITOR OF "CAPITAL")

Sir, In your issue of 22nd December, your New Delhi correspondent singled out certain views attributed to me. I do not enjoy the same freedom to disclose what was and what was not said by those who participated in the discussion. But it seems to me that there is a slight difference between asking for higher priority to be given to freight traffic (particularly traffic associated with the basic industries), in preference to such improvements in passenger traffic as the speeding up of the trains from Calcutta to Delhi, air-conditioning of trains, building of palatial new stations, etc., and suggesting (even from an incidental illustration) that the main point made was that the rail traffic in this country should be slowed down because it is slower in Soviet Russia and Communist China.

Yours etc.,
K. N. RAJ,

Delhi, 26th December, 1955.

India's Tea-India's Wealth

EXPORT:
During 1954 India exported 450 million pounds of tea. This is more than 2/3 of her total production. Exports were directed to Great Britain, United States, Eire, Canada, Egypt, Continental ports, Turkey, Sudan, Australia, New Zealand, Iran and other countries.

No other drink refreshes you so much, yet costs so little as **TEA**

Company Meeting

DYER MEAKIN BREWERIES
LIMITEDMANAGING DIRECTOR MR. N. N.
MOHAN'S REVIEW

Speech delivered by Mr. N. N. Mohan, Managing Director of Dyer Meakin Breweries Ltd., as Chairman of the 21st Annual General Meeting of the Company, held at Solan Brewery, on 3rd December, 1955. Ladies and Gentlemen,

At the very outset I have great pleasure to inform you that your Company has completed 100 years of its existence and the current year is its centenary year, I extend to you all, the Board's heartiest congratulations and felicitations on this happy and memorable event. It is a matter of pride for an institution to have been able to serve the public for such a long span of time.

The Company's audited Accounts for the year ended 31st March, 1955, and your Directors' Report thereon have been in your hands for some time, and, I will, therefore, with your permission, take them as read.

As you will have seen from the Profit & Loss Account for the year under report, there has been an increase in profits as compared to last year. Sales of your Company's products, particularly the widely known Solan No. 1 Whisky and Golden Eagle Lager Beer, have registered increases during the year under review. This is attributed to the fact that these two products in particular have greatly improved in quality and the demand for them is on the increase, in spite of the keen competition from the imported brands. The Company's other brands, especially XXXX Rum, are also in good demand. Your Directors, therefore, feel gratified about the results achieved by the Company during the year.

Prohibition

As you all know there is a move to bring about total prohibition in the country. According to the recommendations of the Prohibition Enquiry Committee, set up by the Government of India, total prohibition has been proposed to be introduced by 1958. This has naturally cast a gloom over the industry, although the final shape the Government's policy in this regard will take, is yet to be known.

It is a well-known fact that Prohibition, wherever introduced by legislation, has been a failure. According to reports submitted by the Enquiry Committee set up by the State Governments of Andhra and Madhya Pradesh, where total and/or partial prohibition is in force, malpractices such as illicit distillation, bootlegging, etc., have increased. While the drinkers obtain their drinks by any means, the State Government have lost considerable amount of revenue by way of Excise Duty and enforcement expenses, not to mention the injurious effects these deleterious intoxicants have on the health of the consumers.

Drawing the attention of the Government to all these facts, your Managing Director has submitted a Memorandum on Prohibition to the Planning Commission, Government of India, urging them to view the matter from all its angles before enacting any new Law. In the Memorandum emphatic stress has been laid on the food value of beer, which, as you may be aware, is a harmless health-giving beverage.

The Managing Director is submitting another Memorandum to the Planning Commission as a rejoinder to the various points raised by the Prohibition Enquiry Committee in their Report.

However, it will not be out of place to say that your Directors are fully alive to the situation created by the Government's policy to enforce total Prohibition in the country and are taking all possible steps to safeguard the interests of the shareholders. Plans to switch on to some other business are receiving the active consideration of your Directors and as a preliminary step in the Extraordinary General Meeting of the Company held on 30th September, 1955, the Company's Memorandum of Association has been sought to be suitably altered to enable the Company to take up some other productive line or lines, should the situation so warrant.

European Brewers

During the year under report, we have engaged two new Brewers—one a Belgian and the other a British national. They have succeeded in producing a first class Continental type of beer which the markets throughout the country have heartily welcomed. We have recently replaced our old bottling, crowning and labelling machines with the most up-to-date machinery imported from U.K. These have very greatly helped us to market a first class beer to satisfy even the most discriminating tastes. In view of the fact that we are in a position to meet the entire demand for beer in the country, both from the qualitative and quantitative points of view, it is only fair to the indigenous industry if Government affords full protection, by totally banning imports of foreign beer. Representations to the Government have already been made and we are doing our best to persuade the Government to help us in this regard.

Your Company's Lucknow Distillery continues to make remarkable progress under the supervision and guidance of the Company's Deputy General Manager, Mr. V. R. Mohan. The sale of CO₂ gas, which is a by-product in the distillation process and which was introduced in the market last year, is progressing satisfactorily.

Finally, I wish to place on record on your behalf and on behalf of the Board an appreciation of services rendered to the Company by its employees. Relations between management and labour have remained cordial.

Without Prejudice

NONSENSE IN THE LAW

SERVING PARLIAMENT WITH
OBSCURITIES

(FROM OUR LEGAL CORRESPONDENT)

IN rummaging through the law journals for material for this review of the past year's English decisions applicable, to the legal principles involved, to India, one had many a pleasurable halt by the wayside on finding some interesting tit-bit. Here is one for which we are indebted to the well-known English periodical, *Law Notes*. It concerns the common prejudice against solicitors as a class honestly held by the average citizen. Who has ever read in any work of fiction of a solicitor as the hero? On the other hand, look at the works of Charles Dickens. In virtually every one of them he produces one and generally several of these statutory gentlemen and never without a sneer or a jibe. Mr. Wickfield, Sampson Brass, Uriah Heep, Solomon Pell, Messrs. Dodson and Fogg, Mr. Jaggers, Mr. Perker, Mr. Tulkinghorn and the rest. There they are the family lawyer, the company lawyer, the police court advocate, the election agent, the society solicitor, the tavern tout, a composite picture of tipping, hypocrisy, fraud, dishonesty, incompetence, bullying and blackmail, described with real bitterness by the most generous-hearted writer in English letters. We do not know whether Dr. Johnson was trying to be funny—anyway the great Sam joked with difficulty—when he said this in answer to an enquiry as to the name of a gentleman leaving the coffee room of the Metro. "Sir, I cannot tell you who he is, and I am loth to speak ill of any man, who I know may not deserve it, but I am afraid he is an attorney." Sam was above trying to get a cheap laugh, so he probably meant precisely what he implied, that there is something in itself discreditable in being a solicitor. And Dr. Spurgeon, the great Baptist divine: "No doubt the good people who are called solicitors are as honest as others." Why the two sceptical introductory words which really mean that there is a doubt and a pretty considerable one?

Accepting this universal dislike or distrust as an undeniable fact, the writer, on and off for some years, has been trying to find out the date approximately of the origin of this prejudice against solicitors, and now, thanks to *Law Notes* and Dr. Windeyer in his *Lectures on Legal History*, he has found it. Lawyers, it seems, were first styled "solicitors" in the reign of Charles I and were, as such, detected and denounced as a criminal clan within a year or two of the enrolment of the very first one. *Nemo turpis omnis repente fuit*, so runs the legal maxim. But it is not true of solicitors. They, it seems, were a bad lot from the word "go". At any rate, that is what the seventeenth century historian, "Hudson" by name, states in his contemporary account of the Star Chamber. Says he with engaging candour: "There hath stepped up a new sort of people called solicitors, unknown to the records of the law, who, like the grasshoppers of Egypt, devour the whole land."

A couple of centuries later no less an authority than the Lord Chancellor of England confirmed this denunciation of the jumping, chirping insects. Thus Lord Brougham: "A solicitor is a gentleman who rescues your estate from your enemies and keeps it to himself." Well, well! No one objects to a little robust abuse on occasions. But to be called a grasshopper, and an Egyptian one at that! So undignified.

The Circumlocution Office in England was at its best and brightest during the year. But the tenure of the Tite-Barnacles seems to be becoming uneasy, even precarious. There is actually talk of trying to introduce legislation similar to the *Consol d'Etat* in France under which the courts there are empowered in some circumstances to review irresponsible actions of the executive. What are we to make of the handiwork of the particular Mr. Tite-Barnacle who drafted the following two gems? The writer has submitted them to a university professor of English, to two grasshoppers of Egypt, and to several men of business. Not one could make head or tail of either. Moreover, in regard to the first specimen *Law Notes* says: "Has the art of wording enactments obscurely ever flourished more than in 1955? Here is one example, which apparently completely floored a panel headed by an eminent Q.C. from the ninth schedule of the Landlord and Tenant Act, 1954." Some reader of these notes may take a modest pride in his knowledge of the English language. Well, as a New Year's challenge let him concentrate for an hour or two on the following few lines and become deflated. "For the purposes of section 26 and sub-section (2) of section 40 of this Act a tenancy which is not such a tenancy as is mentioned in sub-section (1) of the said section 26 but is a tenancy to which Part II of this Act applies and in respect of which the following conditions are satisfied, that is to say (a) that it took effect before the commencement of time or notice to quit of a tenancy which is such a tenancy as is mentioned in sub-section (1) of the said section 26 or is by virtue of this paragraph deemed to be such a tenancy; and (b) that if this Act had then been in force the tenancy at the coming to an end of which it took effect would

have been one to which Part II of this Act applies; and (c) that the tenant is either the tenant under the tenancy at the coming to an end of which or a successor to his business, shall be deemed to be such a tenancy as is mentioned in sub-section (1) of the said section 26."

It is almost incredible. One sentence, mind you, of no less than 204 words and figures with but two solitary commas in it, from an Act of Parliament of the greatest importance to the whole country; and that sentence almost meaningless nonsense. A sort of Parliamentary game of Lexicon wherein the Mad Hatter puts words in his hat and Mr. Tite-Barnacle draws them out at random and thus makes his draft.

No. 2 is quite short but do not, for one moment, think that it is the more understandable on that account. Like No. 1, it is an extract from an Act which affects millions of average citizens—the National Insurance Act. The reader who accepts the challenge may be allowed one hour to make sense of half a dozen lines or so. "For the purpose of this part of this Schedule, a person over pensionable age shall be treated as an employed person if he would be, an insured person were he under pensionable age and would be an employed person were he an insured person."

You may not have a very high opinion of modern Parliamentary draftsmanship in India but, at any rate, it is infinitely superior to the English specimens quoted above. Judges inveigh against this abominable obscurity in public, practising lawyers—who nevertheless profit by it—curse it in private, but the Tite-Barnacles continue the merry game unperturbed. One indignant legal correspondent suggests that only ridicule will bring a cure and that the services of A. P. Herbert and his litigious Mr. Haddock should be enlisted in that behalf. What is the reason for this obscurity? That sober journal of lawyers, *Law Notes*, seriously suggests that the obscurity is intentional and that the fault is not so much that of the Parliamentary draftsmen as of Parliament, and it quotes a distinguished judge, and a Lord Justice of Appeal at that, in support of its theory, which is not anything like as fantastic as it may sound. Indian legislators might make a note of it. Said Mackinnon L.J.: "The Parliamentary game... has always been for the Government to propose Bills and for the Opposition by every method of debate, amendment, even of obstruction, to waste time and prevent them passing. The more difficult and unintelligible a Bill is, the harder it is for the Opposition to play this game." Hence one cogent reason for the obscurity of statutes. And lest anyone might think that this eminent commercial judge was joking, his lordship went on to give chapter and verse. Mackinnon L.J. was the chairman of the committee whose report led to the Arbitration Act, 1934, and Parliament ignored his committee's unanimous recommendation that there should be one new comprehensive Act instead of tacking on verbose amendments to the existing 1889 version. "No," said the Government firmly, "certainly not," and his lordship was with great composure given the reason for the rejection of his committee's recommendation, which rejection caused so much muddle that some 16 years later a new Act embodying the recommendations had to be passed. This is what the judge and his committee were told: we quote his own words: ".....A Bill so meant parts: he could debate every section of it, and move endless amendments."

The astonishing complacency of this official utterance rang a bell. It brought back *Iolanthe*, and the policeman outside the Commons. W. S. Gilbert apparently was not being funny or ironical but expressing a high constitutional principle when he made Private Willis sing, ".....But then the prospect of a lot of dull M.P.s. in close proximity; all thinking for themselves is what; no man can view with equanimity." Yet, used as we are to the ways of the Circumlocution Office, it is a little surprising to find the sardonic doggerel of comic opera translated almost literally into an official pronouncement.

(To be continued)

'Law Notes (London). March 1955.

BANKING LICENCE REFUSED

The Reserve Bank of India has served a notice on the Malankara Union Bank Limited, Avroor, vis-a-vis to Sub-Section (2) of Section 22 of the Banking Companies Act, 1949, a licence to carry on banking business in India cannot be granted to it. The issue of this notice makes it obligatory on the part of the Bank to cease transacting the business of banking as defined in Section 5(1)(B) of the Act, and it will not, therefore, be in order for it, among other things, to accept deposits of money from the public.

The Golden Jubilee Celebrations of the Mining, Geological and Metallurgical Institute of India will be inaugurated by Mr. K. D. Malaviya, Minister, Natural Resources and Scientific Research, Government of India, on 20th January, 1956, at St. Xavier's College, 30, Park Street, Calcutta. In connection with the Celebrations a commemorative volume recording the progress of the mineral industry in India in the last 50 years is being published.

I MUST agree with Sardar K. M. Panikkar when he states that newspapers in India are as fair and balanced in presenting news and views as any in the world. But from much of the rest of what he said to the All-India Newspaper Editors' Conference last Saturday I was left feeling that if he were to have his way there would be little chance of their keeping this reputation. I cannot agree that it is a good thing for an editor to delegate his function of shaping any form of opinion, political or otherwise. Specialist commentators there must always be, but, as we know, they are too apt to be influenced by the sources from which they get their news. They tend to become too expert, too easily "got at", and all too ready to scorn popular fears and prejudices which are, after all, what a newspaper has to deal with. Any editor who hands over completely to his "commentators" is apt to find his newspaper degenerating into a Government propaganda organ. I am sure Sardar Panikkar would be the last to wish to see this happen. But when he speaks of commentators "educating" their readers, and urges editors to make a conscious effort to familiarise the public with life in every part of India, I really wonder if he appreciates the danger. I was sorry to hear Dr. Roy fall into the same error. I saw the imprint of the cloven hoof on his suggestion that editors should enthrone people to play their part in the development of projects so that India might build her Welfare State in the shortest possible time. Are we to understand that there is now no room in India for differences of opinion on how long it should take to achieve the Welfare State, or whether indeed it ought to be an object of policy at all? It was not until I heard the President of the Conference, Dr. Sachin Sen, that my spirits revived. In the words "tolerant and critical", which he used to describe what should be the attitude of the Press towards the Government, lay the true appreciation of a newspaper's functions. No one will quarrel with Dr. Roy that freedom entails limitations and restrictions (I would prefer to call them responsibilities, that word does not make my flesh creep). But editors have plenty of these, although they are not necessarily the same as those under which Dr. Roy must work. It is public opinion, not the views of the Government of the day, to which newspapers should be answerable. And I submit that ultimately it is no different for politicians and statesmen either.

Did you see Tagore plain? At least many now in Santiniketan holding high office in the Viswa Bharati University did. Most of them were fortunate enough to have come into close contact with India's greatest poet and to have had their careers shaped under his beneficent patronage. I have no doubt they gratefully cherish the memory and give of their best to maintain the institution to the building of which Tagore devoted so many long years of strenuous labour. It was therefore with something of a shock that I discovered, on a recent trip to Santiniketan, the neglect from which some of the poet's personal effects are suffering. For example, in "Shyamali", a favourite hut of Tagore where he held converse with Mr. Nehru, I found that his beautifully lacquered cot, designed maybe by Mr. Nandalal Bose—I am not quite sure—had fallen to pieces and was lying scattered all over the floor. A similar fate had overtaken the rickshaw in which, in his later years, the poet used to be carried about the various departments. An arm-chair, also used by Tagore, has been rotting away in the open yard in front.

A DITCHER'S DIARY

This callous neglect of what in any other country would be treasured as valuable heirlooms seems to me nothing short of criminal. On the Continent and in Britain, such relics would have been preserved for public exhibition. Sir Walter Scott's residence at Abbotsford, or George Bernard Shaw's house at Ayot St. Lawrence, for instance, can be visited by anybody who cares to buy a ticket for a few pennies. A large portion of the funds for the upkeep of these places is found from the takings thus realised. Bengal has a reputation for being truculently conscious of her cultural achievements. Why, I wonder, is she allowing these Tagore relics to perish uncared for?

If I saw neglect at Santiniketan, I saw worse at Kumrahar, near Patna, a spot now little known, but at one time the seat of India's greatest ancient emperor, Asoka, whose lion capital has been adopted by the Government of India as its crest. Kumrahar has been identified as Pataliputra, the capital of the once prosperous Magadha Empire. The place is being excavated for relics of which a large store has already been unearthed and removed to the fine museum at Patna. Among many other interesting ruins the stumps of the pillars of the famous two thousand year-old assembly hall can still be seen there sticking out of an area from which later super-structures, probably of Moghul origin, have been removed. Visitors are not invited there and this when there is a tourist campaign on. If anybody goes there on his own, as I did, he will find no more than an illiterate workman to show him round. There is no tablet on the spot to facilitate its identification and, worse still, no fence round it to prevent depredation by the local people which, I saw, was going on. It is true that Patna's archaeological museum is only about four miles away. But does it do away with the need for a local museum holding at least some of the less important and yet valuable ruins? The Government of India is apparently very historically minded. But how does it happen that it cannot make proper arrangements for the protection of Asoka's capital city? Its present state is no better than that of Jamshyd's lion-and-lizard-infested courts sung by Omar Khayyam; and yet it deserves so much better. One only wishes that the pioneer work of a long line of brilliant Indologists such as Fergusson, Marshall, Cunningham, Vincent Smith and others had been carried on in recent years with the old spirit of zeal and veneration for India's past.

I read that the History Congress is engaged in preparing a comprehensive history of India. In twelve volumes, this work promises to be a *magnum opus*, although it is still small compared with the need it has to fill and quite puny considering the responsibilities it will have to bear. I can foresee a number of pitfalls which the authors will have to face: the collection, compilation and interpretation of historical evidence is one of the most hazardous of academic pursuits. It is to have two main purposes—to provide a basis for the studies of the student and a book of reference and interest for the general reader. Should current sentiments and prejudices be allowed to colour the inevitable gaps which will have to be closed between what are recognised as established facts? Certainly

not. That would be unfair to the layman and the betrayal of scholarship. But it will be very difficult to avoid. It is possible that joint effort might diminish individual bias, but they will have to be harmonious minds which undertake a task of this kind. For example, a combined work by Marx and Toynbee would only be a hodge-podge, if indeed the opening paragraph could be written at all. The trouble is that history cannot be formulated to any law: its vitality lies in its interpretation and its strength in the mental flexibility it develops in its students. The Claphams and the Webbs have played equally important rôles in sifting historical evidence, not because either has voiced the complete truth, but because their varying opinions have evoked thoughts, not only on the past, but on the present and future as well. Any comprehensive history of India should be aimed at doing just this. If it also serves to stimulate future thinkers to further research and encourages differing shades of opinion to come out in open discussion, it will have shown the road to development over the field of Indian historical thinking.

It was just as true last year as it was in 1954 that the best way to keep wealth intact was to put it into works of art. The January issue of *Pick's World Currency Report* names the French post-impressionists as better hedges against inflation than gold, diamonds, Wall Street, or the comparative newcomer, non-ferrous metal. Paintings by Braque, Dufy, Gauguin, Matisse, Modigliani, Pascin, Rouault, Seurat, Soutine and others added another 100 percent to their value in dollar markets after already gaining between 150 percent and 200 percent in 1954. But this is not a game for the unwary. Such profits are not only rewards for initial outlay; they represent some return on discriminating taste or the sound professional advice which often has to serve for it. But this particular phenomenon is unique for all that, especially when it is remembered that the dollar itself, unlike so many other currencies, remained steady throughout the year. The dollar, incidentally, still ranks as the world's chief hoarding instrument. For those who wanted to make a profit, besides maintaining the value of their assets the investment ranking next to post-impressionist paintings was non-ferrous metals. Over the year platinum rose by 59 percent and copper by 62 percent. Surprisingly enough, next to these came the ferrous metal itself. Steel castings and rolled sheets increased in value by between 35 percent and 57 percent. Wall Street was not such a good proposition as the year before. Government bonds and public utilities were disappointing, but railroad scrip gained 11 percent, according to the Dow Jones Index, and industrials 21 percent. The girls' best friend, diamonds, were as faithful as ever, but their rise was restricted to a mere 5 percent or so. Gold hoarding came at the foot of the list. Bars gained 3 percent in Middle and Eastern Asia, but coins made a better showing at 5 percent. The year's record for the world's currencies was as dismal as ever. Only a few monetary units improved, notably the Brazilian Cruzeiro, the Philippine Peso and the Israeli Pound. But no less than thirty-eight deteriorated including the French Franc, the Colombian Peso, the Yugoslav Dinar and the Argentine Peso. The worst performances were put up by the Polish Zloty with a 41 percent fall and the Chilean Peso with 55 percent. The report remarks, rather ruefully, that billions of dollars were simply wiped out by these declines.

NEW LABOUR DEPARTMENT AT THE BENGAL CHAMBER

QUALIFIED STAFF WILL HELP PROMOTE INDUSTRIAL PEACE

THE Bengal Chamber of Commerce and Industry has announced the formation of a new Labour Department of the Chamber as from the beginning of the year. It is understood that this new Department has been planned for some considerable time and is the outcome of prolonged consultation with the Chamber's constituents and connected interests. Its object is to give more direct, concentrated and specialised attention to the subject of labour relations—largely through the employment of specially qualified staff—than has hitherto been possible in the absence of a Department charged solely with this special responsibility. There can be little doubt that the move will meet with the general approbation of employers.

Labour, as we are always being forcibly reminded, has assumed continuously increasing importance in the years since the war. It is not just that in politics and social thinking generally the immediate post-war years witnessed a worldwide swing to the Left. In India there have been the added complications of newly won independence in operation against a background of abysmally low living standards and backward social conditions. As a result, the need for social amelioration and for improving the worker's standard of living has received special prominence in this country; there has been more and more State intervention, culminating in the explicit adoption of a socialist framework of society as the deliberate policy of the State; and this has produced a flood of labour legislation and social welfare measures.

Need for Co-ordinated Policy

In the face of this spate of legislation, of rules and regulations, of compulsory adjudication, and of State schemes for this, that and the next welfare activity, the ordinary employer finds that the claims of labour not only take up an increasingly large part of his time, but have become a vital factor in the conduct of business operations. More and more, labour relations have become a complex subject which requires continuous expert advice. To some extent the formation of a specialist

Labour Department by the Bengal Chamber represents a measure of self-protection on the part of employers. For many years the larger employers of labour have maintained their own personnel and welfare officers, and more recently the employment of such officers has become a statutory obligation in concerns of a certain size. There remains however a vital need for more centralised co-ordination of labour policies on the part of employers. Hard experience has shown that, no matter how carefully and equitably any particular employer may conduct his labour relations, the peace of his establishment is always in danger of being disrupted by agitation from outside or by the impact of differing policies adopted by other employers in the same area. Again, the ordinary Personnel Officer, though he may be right on top of his job as far as daily routine goes, is apt to find himself on slippery ground if he has to appear before a Tribunal and argue a case before what is virtually a court of law.

Information and Advice

There is then a genuine need for a central nucleus of highly qualified labour specialists who can advise individual managements, supplement their efforts in moments of stress, and co-ordinate policies throughout the labour field; and it is this need which the Chamber's Labour Department is designed to serve. It is understood that the Department will provide an information service to its subscribers, will advise them on current labour practices and trends, will assist them with their day-to-day problems and will actively participate on behalf of its subscribers in negotiations, conciliation proceedings and before Tribunals.

It would be a pity however if the new Labour Department were regarded merely as a creation of the employers in their own selfish interests. The Bengal Chamber has stated that the Department's main object will be the preservation of industrial peace. In other words, the Department will achieve real success not by settling disputes but by promoting conditions which ensure that disputes do not arise. One of its most important functions will be to encourage the adoption of fair labour standards and practices. And, considering its background and genesis, considering the fact that it is being promoted by a body of business interests which have achieved an enviable reputation for progressive and equitable business practices the Department certainly commences its career under favourable auspices.

Finance in India and Abroad

THE CALCUTTA MONEY MARKET

BUSINESS BADLY DISRUPTED

Wednesday, 11th January.

BANKING transactions have been badly disturbed by strikes and workers' go-slow tactics during the past week. A definite pattern is not easy to distinguish but, as far as can be judged, money remains in good demand. Requirements of the sugar industry still account for a major part of advances, but the needs of the jute industry and on account of upcountry stocks of seeds and grains remain at a high level. Money is tight in the inter-bank market, and there are borrowers over at the unchanged call rate of 3½ percent.

There has been no increase in the flow of export bills during the past week, and once again strike and near-strike conditions have interfered with business. Demand for remittance has been poor. Sterling has strengthened in value on the world's markets and the dollar rate is now quoting Rs. 47½.

Silver rose on increased demand. The price advanced from the previous week's level of Rs. 173-12 to Rs. 175-1, being quoted today. The rate for ready delivery was quoted at Rs. 175-4. The London price rose from 78½d. to 78½d. The price of foreign silver in New York was unchanged at 90½ cents.

Gold was steady in sympathy with silver. The price advanced from Rs. 95-4 to Rs. 96-1. The sovereign at Rs. 61-11 showed a rise of 5 annas.

Tenders for Rs. 1 crore of 91-day Government of India Treasury Bills, which were opened on Tuesday, 10th January, 1956, totalled Rs. 1,46,75,000. The average rate of acceptance fell from Rs. 2-8-2 to Rs. 2-8-1 percent per annum. Tenders at Rs. 99-6 percent were accepted in full and those at Rs. 99-5-9 percent allotted approximately 15 percent. Tenders for Rs. 1 crore of 91-day Government of India Treasury Bills will be received at all centres up to Monday, 16th January, 1956. During the week ended 6th January, 1956, Government of India Treasury Bills for Rs. 45,23,000 were sold in favour of the Reserve Bank of India.

Rises of Rs. 23.29 crores and Rs. 23.73 crores in the total note issue and notes in circulation to Rs. 1,397.30 crores and Rs. 1,335.71 crores, respectively, were outstanding features of the return of the Reserve Bank of India for the week ended 6th January, 1956. The currency expansion was duly covered by raising foreign securities by Rs. 5.03 crores to Rs. 691.91 crores and rupee securities by Rs. 19.88 crores to Rs. 558.55 crores. A decline of Rs. 4.90 crores to Rs. 43.40 crores in balances held abroad was presumably due to a transfer to the Issue Department. Deposits of the Government of India rose by Rs. 10 lakhs to Rs. 54.11 crores while other Government accounts fell by Rs. 89 lakhs to Rs. 9.73 crores. Balances of commercial banks at Rs. 51.79 crores were Rs. 6.08 crores lower, following demand for cash by banks. Other loans and advances rose from Rs. 44.63 crores to Rs. 44.68 crores, of which advances to scheduled banks against usance bills totalled Rs. 14.62 crores (Rs. 18.86 crores). These advances amounted to Rs. 1.89 crores since 1st January, 1956. Ways and means advances stood at Rs. 4.11 crores against Rs. 3.66 crores.

The statement of the position of scheduled banks for the week ended 30th December, 1955, discloses Demand and Time liabilities at Rs. 614.48 crores (Rs. 5.22 crores on account of borrowings from banks) and Rs. 418.40 crores (Rs. 5.34 crores) compared with Rs. 606.68 crores (Rs. 6.81 crores) and Rs. 420.28 crores (Rs. 5.79 crores), respectively in the previous week. Cash and balances with the Reserve Bank have increased by Rs. 4.11 crores and Rs. 4.47 crores to aggregate Rs. 38.06 crores and Rs. 60.17 crores, respectively. There is a drop of Rs. 2.92 crores in investments to Rs. 385.05 crores. Advances and bills discounted at Rs. 631.45 crores reveal an increase of Rs. 9.23 crores. The ratios to total liabilities of cash and balances and of advances and discounts are, in consequence, shown at 9.5 percent and 61.1 percent against 8.7 percent and 60.6 percent.

The return of the State Bank of India for the week ended 30th December, 1955, shows a drop of Rs. 15 lakhs in total deposits to Rs. 222.30 crores. Investments in Government securities are down by Rs. 12 lakhs to Rs. 109.11 crores, while other authorised investments remain unchanged at Rs. 9.26 crores. Advances, including loans, cash credits and overdrafts, and bills discounted and purchased have increased by Rs. 2.83 crores to aggregate Rs. 103.31 crores. Cash and balances are, in consequence, shown at Rs. 21.62 crores or Rs. 72 lakhs higher.

According to the land-borne trade returns received in the Department of Commercial Intelligence and Statistics, the provisional figures of the total value of foreign trade of India by land with Pakistan, Afghanistan, Iran and Burma during

November 1955, are as follows:—Merchandise exports Rs. 60 lakhs; Exports to Eastern Pakistan Rs. 23 lakhs; exports to Western Pakistan Rs. 22 lakhs; exports to other countries Rs. 15 lakhs. Merchandise re-exports Nil. Imports Rs. 273 lakhs. Imports from Eastern Pakistan Rs. 197 lakhs; imports from Western Pakistan Rs. 1 lakh; imports from other countries Rs. 75 lakhs. Total trade Rs. 333 lakhs. Trade in Treasure: Negligible. Balance of trade: The total value of exports fell short of imports by Rs. 213 lakhs.

The HONGKONG AND SHANGHAI BANKING CORPORATION's profit for the year 1955 after providing for taxation, etc. amounts to H.K. \$ 20,530,320. A sum of H.K. \$ 4,000,000 is written off Bank premises. The final dividend is £3 per share, leaving a carry-forward of H.K. \$ 10,606,689. As a result of amendments to the inland revenue ordinance dividends are no longer subject to deduction of Hong Kong Corporation profits tax.

(FROM A CORRESPONDENT)

The office of the Joint Chief Controller of Imports and exports, Government of India, Calcutta, has announced the following information in regard to the export trade. A limited quota separated for cotton exports and cotton banding (including tubular bandings) during the period January-June 1956 will be released for export to all permissible destinations. Applications for export of slags of non-ferrous metals and alloys which cannot be treated in the country will hereafter be considered on merits on an *ad hoc* basis. Export of all other slags will not be permitted. Export of copper base alloys conforming to standard specifications such as BSS, ASTN or ISI will continue to remain prohibited. Export of copper ingots will remain prohibited. Export of non-standard alloys will be considered *ad hoc*. Lead-in-antimony alloys (soft alloys) conforming to recognised standard specifications such as BSS, ISI, ASTN, etc., will be licensed freely for export. Export of non-standard (ad-based) soft alloys will be licensed freely provided they conform to the following chemical analysis: Tin 6 to 30 percent; Antimony 6 to 20 percent; Copper 20 to 40 percent; Zinc and Iron 1 percent; Lead and other impurities—balance. Export of zincy white metals will be licensed freely provided they conform to the following chemical analysis: Zinc 15 to 40 percent; copper 10 percent maximum; Lead, tin, antimony and other impurities—balance. Export of other non-standard soft alloys will not be allowed. The U.K. Board of Trade has placed under Open General Licence the import of hand-made lace goods, zari goods, granite pavements, kerbs and setts and granite finished articles into that country. Export of these commodities do not therefore require "token shipment vouchers".

More trade has meant, also, more aviation. At present, indeed, there is no form of insurance more dynamic than this. Dynamic progress involves risk, and the aviation market has in its earlier years suffered some disproportionate losses. But it is characteristic of insurance that it takes the long view. Underwriters in this market regard themselves as pioneers. They suffer without regret the hazards of development expecting a more stable and profitable basis some years hence.

SHARP SETBACK IN STOCK MARKETS

WIDESPREAD FALLS IN GILT-EDGED AND INDUSTRIALS

London, 11th January. A NUMBER of adverse factors combined to bring about a sharp setback in the stock markets and, after the week-end, gains which had been established since the Christmas holiday were lost. Prior to the week-end, the trend became uncertain under the influence of the end-December gold reserve figures and the reaction on Wall Street. Subsequent news of short-time working in the motor industry and talk of a higher Bank rate partially occasioned the setback. In spite of the advance of sterling in the foreign exchange market, gilt-edged securities turned 'weak and sustained widespread' and substantial losses ranging to nearly two points. The fall was accompanied by talk of a higher Bank rate and was partly due to bear selling. German and Japanese bonds were inclined to rise in the foreign bond market but business was small. The industrials market suffered quite a severe shake-out after the week-end, substantial and widespread losses being recorded. The news of short-time working in the motor industry touched off selling and also drew attention to the fact that the credit squeeze was having an increasing effect on the country's economy. Motor shares were marked down sharply, while all industrial groups suffered widespread and appreciable falls, the leading issues being the biggest sufferers. Banking shares were little affected by the unchanged dividend announcements, but Alexanders and National Discounts dropped sharply following lower dividends. Electrical shares were affected by talk of

a new issue. Gold shares continued to attract a minimum of attention and were inclined to be easier, while coppers and other base metals lost ground in sympathy with the rest of the market. Oils recorded a general advance prior to the week-end but reacted sharply later, while rubbers also came back after scoring an all-round improvement. Tea shares were subdued throughout and easier on balance.

The Money Market

Conditions in the money market last week, surprisingly, were very easy. It was expected that at least for the first two days money would be comfortable after the turn of the year due to the usual drawback of funds withdrawn previously for balance-sheet purposes. As large amounts were due to be repaid to the Bank of England from Wednesday, the market had visualised tighter credit conditions, but money continued to flow out freely each day and the market was able to accomplish its task of financing Government paper and repayment loans to the Bank of England with great ease and at cheap rates. The highest rates paid for loans were 3½ percent but they went down to 2 percent under the weight of money. Banks were seen buyers of bills and a good turnover was effected in March-April lots. Applications for £260 million of 91-day Bills totalled £386,975,000, of which the former amount was allotted at an average rate of 8½s 4½d, compared with 8½s 5½d in the previous week. This week, the offerings will comprise £240 million worth of 91-day Bills. The Bank of England return for the week ended 4th January showed notes in circulation £41 million lower at £1,848 million, and bankers' deposits £14 million lower at £231 million.

Stock Market Prospects

The Investors' Chronicle market newsletter writes: Investors were unwilling to sell good equities even when Britain's economic conditions were adverse. No major selling is likely in the next few months, though no rush to buy is likely

either, at least until after the Budget. Over the year as a whole, industrial equities should provide useful opportunities, because of the power of any democratic Government to reduce over-full employment or to stand firm against the wage demands. So the Government will be content to minimise inflation and equities should keep step despite the possibility of lower profits. Moreover, London is influenced by Wall Street, where the auguries are good for coming months. Britain is prosperous and the Government wishes not to end the boom but to control it. The measures which have already been taken can claim some success with the dollar reserves, sterling, and the trade balance. The screw may have to turn further, but on the other hand many leading equities are undervalued on both earnings and prospects.

Activity on Wall Street

U.S. Government bonds eased sharply last week under the lead of intermediate and long-term issues. The reaction was attributed in part to disappointed selling by professionals who had anticipated easier money conditions after the Christmas holidays. The pressure was lifted later, and the market improved on some investment demand attracted by the decline. Industrials were mixed, with Bethlehem Steel, the most active issue, easing at first but recovering later, although still lower on balance. Colorado Fuel and Iron, Phillips Petroleum and Sinclair Oil all lost ground. The foreign section was slow, with Germans advancing fractionally early but declining again later. Australian bonds were inactive and fractionally mixed. Chileans showed some advances, while Cubans were active.

U.S. Federal Reserve Return

The U.S. Federal Reserve return for the week ended 5th January shows the gold stock unchanged at \$21,690 million. Foreign deposits declined by \$17 million to \$451 million, while foreign investments declined by \$103 million to \$3,545 million. The Federal Reserve made no purchases of Treasury Bills during the period and the total remained at \$1,503 million. Total discounts and advances declined by \$111 million to \$398 million, while excess reserves of member banks increased by \$403 million to \$537 million. Member banks' daily average of excess reserves decreased by \$103 million to \$601 million, while their average borrowings also decreased by \$170 million to \$563 million. Business loans of the New York City banks decreased by \$111 million to \$9,062 million, compared with the decrease of \$114 million to \$7,454 million in the corresponding week of a year ago.

Gold and Dollar Reserves

The U.K. gold and dollar reserves fell by \$163 million in December to \$2,120 million. At the end of November, they stood at \$2,283 million. During the month, the U.K. had an £11 million deficit with the European Payments Union, compared with a deficit of £4 million in November.

Gold Buying in Paris

The turnover in the Paris gold market on Thursday of last week was estimated at two milliard francs. This would have been a big day even for the great hoarding waves of the past (when the top daily figure reached about three milliard francs) and is quite unprecedented in recent times. Bullion circles are impressed that only about a fifth of the day's turnover was ingot, four-fifths being coins, including 250,000 Napoleons. They infer that buying was widespread and from the general public rather than from institutions, who would have bought ingots. The latest Paris price was 460 francs bid, with some dealers expecting the demand to continue. The international gold market is unaffected so far because, firstly, the Bank of France was evidently willing and able to sell coins (whose price accordingly rose less than that of ingots); and, secondly, it was difficult to sell French franc notes in Switzerland in order to buy international gold for Paris.

Hongkong Gold Recovers

The Hongkong gold market opened the new year in a bearish mood, with the first day's rate of \$(HK) 253-7/8 dropping to \$(HK) 253-5/8, but it advanced to \$(HK) 254½ in sympathy with the firmness of U.S. dollars. The market closed the period nearly 40 cents higher than the corresponding previous price. Carryover charges were 30 cents in favour of sellers. The official offtake was 2,550 taels and unofficial 13,100 taels. Arrivals totalled 36,000 ounces. A forward contract was done at \$(U.S.) 377, c.i.f. Macao.

Quicksilver Continues Easier

Buying interest in quicksilver has shown no signs of picking up and prices have resumed the downward drift of last year. The present London exchange price for the metal is indicated from £88½ to £89 a flask, compared with £88½ to £89½ recently and around £109½ a year ago. Keen competition is reported for the limited business circulating, and further declines within the foreseeable future would cause no surprise, especially in view of the fact that U.S. purchases on the Continent are now on a much smaller scale than a year ago.

Vegetable Oil Market

Fluctuations in groundnut oil have been narrow and for Indian Jan.-Feb. shipment of Rotterdam in bulk down to £113½ was taken. Offerings of Indian groundnut expellers were reduced to small quantities aloft, which found buyers readily on the West Coast at up to £38½. In the absence of Indian offerings, Avonmouth buyers readily switched their attention to Burma 48 percent, with late business at £38½ for aloft parcels. Indian linseed expellers are still out of the picture with traders hoping to hear something about the new export quotas around the middle of this

Stocks and Shares

SHARE PRICES REACT TO BANKING UNCERTAINTIES

NATIONAL CARBON AND CALCUTTA IMPROVEMENT TRUST ISSUES OVERSUBSCRIBED

Wednesday Evening.

THE share market reacted today after its partial recovery of the past week. Prices closed below best level on profit-taking largely induced by the continued absence of any improvement in the banking situation. The weakness in Indian iron is also attributable to the company's lower output figures for December. Coals have been the feature of the week's trading, following the improvement in the industry's prospects under the second five year plan. Most counters in this section benefited and although prices have receded in line with the rest of the market, the undertone here remains quietly steady. Other sections, apart from jute, have improved after the New Year shake-out. There are signs that the bottom has been touched in tea shares. The market's prospects are now anything but certain. The possible terms of the Tata rights issue still overshadow dealings in Bombay and in Calcutta there is the added difficulty of the Clearing House remaining closed. The technical position is fair, but with the Budget drawing closer, it would be surprising if activity were to be renewed on any large scale for the time being.

The National Carbon Company's issue of Ordinary shares was opened at 10 a.m. today and closed 15 minutes later. It is believed to have been very heavily over-subscribed. The application list for the 4 percent Debenture Loan of the Calcutta Improvement Trust, issued at a price of Rs. 98, opened on 6th January. Owing to the bank strike, subscriptions were not received in Calcutta until 9th January and the list was closed the next day. The Debentures were over-subscribed, receipts amounting to over Rs. 102 lakhs; applications were accepted in full.

Details of the week's trading follow.

The gilt-edged market ruled steady and the volume of business was on a fair scale. Three percent Conversion Loan was slightly easier at Rs. 80-6 but 3½ Non-terminable Paper was unchanged at Rs. 80. Short-dated loans were steady with 3½ 1957 at Rs. 99-9 and 3½ 1958 at Rs. 99-7. Medium-dated group 3½ 1959-61 improved further to Rs. 98-3 and 3½ 1963-65 turned buyers at Rs. 94-10; 2½ 1961 was firm at Rs. 93-2 as was 3½ 1960 at Rs. 96-2½. 1962 was on offer at Rs. 93-12. In National Plan Loans, 3½ 1961 was marked at Rs. 98-8½, while 3½ 1964 was taken at Rs. 98-11. In long-dated loans 3½ 1966-68 had buyers over at Rs. 91-14 dated loans 3½ 1970-75 was on offer at Rs. 87-15. State with sellers reserved, while Choonabhatti were crossed at Rs. 335. Hantapara advanced sharply on short covering from Rs. 247 to Rs. 292 and Hasmara met with investment support at Rs. 33-14. New Doars had many buyers and in the absence of sellers the prices were marked up to Rs. 278 while Ranicherra improved to Rs. 19. Of the remaining shares, Tukvar changed hands Re. 1 lower at Rs. 13 and Sonai River were marked at Rs. 21. Gungaram were marked higher at Rs. 270 as were Hansqua and Jayshee at Rs. 22 and Rs. 12-4 respectively.

Selected preference shares continued to meet with strong enquiry, but as usual sellers were not forthcoming. In the miscellaneous group, a small lot of Bharat Collieries changed hands at Rs. 57-8 and Burn & Co. 7½ Preference were crossed at Rs. 139-12. Calcutta Electric changed hands on several occasions at around Rs. 12-4 and Duncan Brothers were crossed at Rs. 71-6. New Victoria Cotton were placed at Rs. 3-11 and a small lot of Textile Machinery Corporation second was sold at Rs. 70. In jute, Birla Second came to hand at Rs. 101 and Gourepore at Rs. 105.

Business in bank shares was on a restricted scale. Hind Bank were done at Rs. 31-8 and Punjab National at Rs. 48-12.

A solitary transaction was reported in the railway section in Delhi Rohtas at Rs. 14.

Except for Kesoram, which were fairly steady at Rs. 18, cotton shares were featureless. Elgin Mills were marked at Rs. 26-10 and New Victoria at Rs. 2.

There was a revival of interest in coal shares, the outstanding feature being Burrakur which recovered from Rs. 15-4 to Rs. 16-15. Similarly, Bengal spurted from Rs. 55-8 to Rs. 59-7. Other shares which recorded improvements were Amalgamated from Rs. 24-4 to Rs. 25-14, Central India from Rs. 7-9 to Rs. 8-3, New Beerboom from Rs. 21-12 to Rs. 23, Equitable from Rs. 33-2 to Rs. 35-8 and East Indian from Rs. 31-12 to Rs. 35-8. Katras Jheriah rose from Rs. 63-8 to Rs. 65 and South Karanpura from Rs. 11-8 to Rs. 13-8.

Jute shares continued to be neglected and prices showed little variation as will be seen from the following table:

	Opening	Closing
	5-1-56	11-1-56
Rs.		
Agarpara	12 14	12 14
Anglo-India	210	212
Delta	251	253
Howrah	27 8	27 12
Kinnison	197	202
National	31 9	31 14

Although electric supply shares were fairly steady, very little business was reported. Among the few shares that changed hands were Jubbalpore at Rs. 16-10, Patna at Rs. 12 and Shahjehanpur at Rs. 8. In contrast, Calcutta were quiet at Rs. 14-5.

There were few price changes in the sugar section. Belsund were done at Rs. 11-11, Cawnpore at Rs. 25-10, Rannugger Cane were dealt in at Rs. 26 and Durbhanga at Rs. 24-8.

There was a slight improvement in engineering shares following the shake-out in the previous week. For example, Burn improved from Rs. 323 to Rs. 330, Indian Standard Wagon from Rs. 161 to Rs. 167 and Jessops from Rs. 60-4 to Rs. 61. Richardson & Cruddas recovered from Rs. 27 to Rs. 27-10 and Textile Machinery from Rs. 20-2 to Rs. 21-4. Indian Iron & Steel opened at Rs. 37-8, were at one time taken up to Rs. 38-10, and closed tonight at Rs. 38-4.

In the miscellaneous section, India Paper Pulp recovered from Rs. 23 to Rs. 24-6, Orient from Rs. 33-10 to Rs. 34-9 and Titagur from Rs. 45-12 to Rs. 47. Alkali & Chemical were fairly steady at Rs. 22-10 and there was a good demand for Assam Bengal Cement with the price rising from Rs. 7 to Rs. 7-13 on hopes of a dividend distribution. Bengal Flour met with selling pressure and eased from Rs. 31-2 to Rs. 30, while British India Corporation improved from Rs. 14 to Rs. 14-8. Indian Cables reacted from Rs. 33-8 to Rs. 32-14 as did India General Navigation from Rs. 133 to Rs. 131. Metal Box improved from Rs. 27 to 27-8 and Shaw Wallace were steady at Rs. 15-12. Clive Row were dealt in freely at around Rs. 11-7. Martin Burn were steady at Rs. 29 as were Sone Valley at Rs. 8-2.

In the mining section, Indian Copper recovered from Rs. 6-12 to Rs. 7 as did Karanpura Development from Rs. 18-3 to Rs. 19-8. Burma Mines were shaded at Rs. 2-6 and Western Stockholders Investment were unchanged at Rs. 1-1.

In contrast with the situation prevailing in the tea section for the past few months it was noticeable that the selling pressure appears to have ceased and that one or two buyers are appearing for selected scrip. The few transactions recorded have, in the majority of cases, been at higher rates although quite a few have been due to short-covering. In the Assam section there was enquiry for Bishnauth at Rs. 9-14 to Rs. 10-10. Brooke Bond also advanced to Rs. 20-4 as did Dhelekhat to Rs. 18. East India to Rs. 23, Ledo to Rs. 23-12 and Sapoi to Rs. 29-6. On the other hand, Gillapukri changed hands Rs. 4 lower at Rs. 27. Grob "A" and "B" met with support at around Rs. 38 and Rs. 19-8 respectively, but Telojian were fractionally lower at Rs. 24-8. Of the Doars scrip Banarhat met with selective enquiry and improved to Rs. 325 with sellers reserved, while Choonabhatti were crossed at Rs. 335. Hantapara advanced sharply on short covering from Rs. 247 to Rs. 292 and Hasmara met with investment support at Rs. 33-14. New Doars had many buyers and in the absence of sellers the prices were marked up to Rs. 278 while Ranicherra improved to Rs. 19. Of the remaining shares, Tukvar changed hands Re. 1 lower at Rs. 13 and Sonai River were marked at Rs. 21. Gungaram were marked higher at Rs. 270 as were Hansqua and Jayshee at Rs. 22 and Rs. 12-4 respectively.

The profit of the ASSOCIATED CEMENT COMPANIES rose by Rs. 1.29 crores to Rs. 4.72 crores for the year ended last July. Allowing Rs. 1.07 crores (Rs. 86.67 lakhs) for depreciation and Rs. 2.14 crores (Rs. 1.34 crores) for taxation there is Rs. 2,57,67,960. Bringing in Rs. 6,93,281 the available balance amounts to Rs. 2,64,61,241. Plant reinstatement reserve absorbs Rs. 55 lakhs (Rs. 50 lakhs) and development reserve Rs. 20 lakhs (nil). The ordinary dividend has been increased by Rs. 1-8 to Rs. 10 per share, leaving a carry-forward of Rs. 5,62,770.

The directors say that the Government of India has announced a target of 12.5 million tons of cement production to be brought into effect during the course of the second five year plan. It is the intention of the company to undertake a very large programme for increasing its capacity in accordance with this overall national plan, comprising the erection of new factories and substantial extensions at many of the existing works. On the completion of this programme, the company's installed capacity will be a little over 5 million tons per year. This will entail very heavy capital expenditure a part of which will be met from the internal resources of the company and borrowings on the cash credit facilities available from the State Bank of India on the security of debentures. As regards the balance of the expenditure, it has been decided to place a proposal before the ordinary shareholders to issue further capital to the extent of Rs. 6.36 crores and to offer the same to the existing shareholders for subscription in the proportion of one new share at par for every two shares held. This is subject to the consent of the Controller of Capital Issues to whom the necessary application has been made.

Messrs. Tata Industries Limited, managing agents for the TATA IRON AND STEEL COMPANY LTD., report

that the total approximate production of iron and steel at the steel works at Jamshedpur during December 1955 was: pig iron 103,900 tons; steel ingots 97,500 tons; semi-finished steel for sale 22,100 tons, and finished steel 50,200 tons.

The output of the INDIAN IRON AND STEEL COMPANY for the quarter ended 31st December, 1955, shows declines compared with that of the previous quarter in all categories except finished steel. Production of pig iron and steel ingots declined from 176,181 tons and 130,630 tons to 160,750 tons and 124,696 tons respectively. Semi-finished steel for sale was 26,875 tons against 30,292 tons. Finished steel rose from 78,422 tons to 78,877 tons. The latter two, taken together, fell from 108,714 tons to 105,752 tons.

SMITH, STANISTREET & COMPANY raised its profit by Rs. 1.16 lakhs to Rs. 4.35 lakhs for the year ended last June. Providing Rs. 1.03 lakhs (Rs. 1.01 lakhs) for depreciation, Rs. 1.85 lakhs (Rs. 1.19 lakhs) for taxation, transferring Rs. 1 lakh (nil) to general reserve there is a balance of Rs. 2,33,862, including Rs. 93,014 brought in. The ordinary dividend has been doubled to 20 percent, leaving a carry-forward of Rs. 83,668.

The net profit of the EAST INDIAN COAL COMPANY amounted to £80,190 for the year ended last April against £42,702, after allowing £57,450 (£30,375) for taxation and £12,198 (£11,181) for depreciation. Bringing in £53,577 there is £143,767. The dividend has been raised by 8 annas to Rs. 3 per share, including an interim of Re. 1 (12 annas) per share. Sand stowing and development reserve account is allocated £30,000 (£40,150). The carry-forward is £59,767.

Raisings rose by 32,375 tons to 594,429 tons, as did despatches by 101,557 tons to 614,823 tons.

The directors have decided to instal a sand stowing plant for the Bararee colliery. The company has its own reserved area for sand at Sutkidi and fresh tenders have been invited for installation of the plant. Meanwhile, arrangements are being made for sand stowing at the North Jealgora pits of the Bararee colliery by temporary purchase of sand from a neighbouring colliery.

RECOVERY IN THE BOMBAY MARKET

UNDERTONE REMAINS UNCERTAIN

THIS week's recovery in the Bombay stock market began from Thursday's short-covering. Small budla charges combined with higher advices from Dalal Street, helped improve sentiment. Reports of higher Tata Iron's output for December more than offset the disappointment caused by lower production of the Indian Iron and Steel Company. Rumours that the Development Council has not endorsed the new taxation proposals in the Planning Commission assisted in abating selling pressure.

Towards the close equity prices slipped back from the top levels in the absence of through support. Operators were unwilling to extend their commitments due to the political uncertainty in respect of the future of the City. There appears to be a general inclination to await further developments in connection with rights issues by Tata Iron and the Associated Cement Companies.

After opening at Rs. 247.12 Tata Ordinaries closed at Rs. 245.8. Turnover was restricted, and selling pressure seemed to have abated.

Textiles were steady on reports of good cloth offtake. Mr. Krishnamachari's (Industry and Commerce Minister) hint that quality control would be enforced tended to call for caution. Bombay Dyeing ended at Rs. 555 after Rs. 569.8; Kohinoor were in demand at Rs. 337.8 Svadeshi met with support at Rs. 219.4; and India United Ordinaries were active at Rs. 131.16.

In the engineering group, Alcock Ashdown shot up from Rs. 341.4 to Rs. 352.3 on interested buying. Tata Locomotive reacted to Rs. 152 from Rs. 154 of profit-taking. The share has been listed in the forward list of the Bombay Stock Exchange this week.

Good business was done in Scindia Steam, Bombay-Burmah and Associated Cement in the miscellaneous group. Associated Cement closed at Rs. 213.8 after Rs. 218; Belapur Sugar made Rs. 340; Tata Chemical finished at Rs. 17.14; Hindustan Motor was done at Rs. 9.12; National Rayon were in request at Rs. 235.12.

The two-day strike and the present difficulty in the banking situation were mainly responsible for sluggishness in bank and insurance shares which lost on balance.

THE WEEK'S TRANSACTIONS

(In the following list of stocks and shares in which transactions have taken place during the past week the figures indicate: Opening Quotations—Highest for the week—Lowest for the week—Closing Quotations—Quotation for the Corresponding Closing Date a Year Ago the last named being shown in parenthesis and will not be given where such a quotation is not available).

FORWARD TRADING IN RAW JUTE AND JUTE GOODS

Forward trading in raw jute is at present prohibited under Section 17 of the Forward Contracts (Regulation) Act, 1952, and in jute goods under the West Bengal Jute Goods Act, 1950. The question of the resumption of forward trading in these commodities has now been before Government for some time. It was considered by the Jute Enquiry Commission who recommended the establishment of a future market for jute and jute goods and the setting up of a single, well-knit association like the East India Cotton Association in Bombay, for the purpose. The Government of India accepted the recommendation of the Commission in their Resolution No. 14(3)-jute/54 of 4th December, 1954 and indicated that the Forward Markets Commission, which had been established for the purpose of regulating forward trading, would examine sympathetically any scheme submitted to it with this object in view.

The Forward Markets Commission has accordingly taken up for examination the desirability of applying Section 15 of the Forward Contracts (Regulation) Act to raw jute and jute goods within the limits of Calcutta. The Commission will entertain applications from associations situated in Calcutta and concerned with the regulation and control of forward contracts in these commodities for the purpose of recognition under Section 5 and 6 of the Forward Contracts (Regulation) Act, 1952. Applications should be submitted to the Secretary, Forward Markets Commission, Shahibaj House, Second Floor, Witter Road, Ballard Estate, Bombay, so as to reach him, as far as possible, before 10th February, 1956. The application should be in the form prescribed under the Forward Contracts (Regulation) Rules, 1954. The said rules were published in the Gazette of India Extraordinary dated 8th July, 1954 copies of which may be had from the Manager of Publications, Delhi or from the Secretary, Forward Markets Commission, Bombay.

New Delhi

IMPORTS DURING THE SECOND PLAN

SUBSTANTIAL SAVINGS EXPECTED

(FROM OUR NEW DELHI CORRESPONDENT)

IT is estimated here that the requirements of foreign exchange over the second plan period will exceed earnings from merchandise, exports and invisible items by about Rs. 1,100 crores. In 1954-55, the country's payment position in current account was roughly in balance. The problem, says the Planning Commission, is to estimate what changes are likely to occur during the second plan period in receipts and payments arising from the exports and imports of various goods and services. These calculations will indicate the "gap" if any, between the expected availability of foreign exchange on the one hand, and its estimated requirement on the other. In what follows, the estimated import and export values of the various commodities during the second plan period have been calculated on the basis of the prices ruling in 1954-55. In other words, the terms of trade prevailing in 1954-55 have been assumed to remain constant over the second plan period. Allowance has, however, been made at a later stage for any deterioration in the terms of trade.

As for merchandise imports, the first point to note is that owing to the emphasis laid on the development of industry and transport in the second plan, heavy imports of machinery and equipment will be required for the execution of the various schemes. Moreover, the higher rates of production envisaged in the plan period will call for larger imports of raw materials and intermediate products except in so far as increased domestic production is able to meet increased domestic requirements. Account has also to be taken of the anticipated rise in national income which will generate an additional demand for consumer goods in general. This increase in consumer demand will assert itself in many cases in an increase in the demand for imported consumer goods. It is of interest to note in this context that the total of Rs. 610 crores of merchandise imported in 1954-55 about Rs. 190 crores were in the form of consumer goods (including foodstuffs and sugar). Rs. 320 crores in intermediate products and the remaining Rs. 100 crores in capital goods.

Machinery and Equipment

It is estimated that imports of machinery and equipment of the order of Rs. 1,100 crores will be required for the implementation of the plan in the public sector. A provisional break-up of these requirements under the various heads is indicated below:

Imports of machinery and equipment for the plan in the public sector.

Heads of Development	Capital Imports of Rs. Crores and outlay	(3) as a percentage of (2)
1	2	3
Agriculture and community development	565	51
Irrigation and power	898	170
Industries (excluding small and cottage industries and minerals)	691	280
Transport and communications	1,384	580
Social services and miscellaneous (including small and cottage industries)	1,262	35
	4,800	1,100
		23

It will be seen that the bulk of the imports of machinery and equipment required for the plan in the public sector is in respect of industries, minerals, transport and communications. Between them, they account for 82 percent of the total imports of machinery and equipment required for the public development programme. The imports of machinery and equipment needed by the private sector for the purposes of expansion, modernisation and replacement may be estimated to be of the order of Rs. 350 crores over the second plan period. Gross private investment in manufacturing industries and mining is expected to amount to some Rs. 700 crores over the second plan period. Imports of machinery, etc. required to implement this order of investment may be placed at Rs. 300 cro

dities for the great bulk of her export earnings. Thus, in 1954-55 six commodities, namely, tea, jute manufactures, cotton piecegoods, oils, tobacco and hides and skins, accounted for as much as Rs. 384 crores or 67 percent of the total exports of Rs. 572 crores. Earnings from merchandise exports as a whole over the second plan period are estimated to be about Rs. 27 crores higher as compared with the rate of earnings in 1954-55. Thus while significant increases in export earnings over the five year period are expected to occur under tea (Rs. 16 crores), tobacco (Rs. 5 crores), metallic ores and scrap iron or steel (Rs. 24 crores), oils (Rs. 12 crores) and cotton piecegoods (Rs. 48 crores), there may be a reduction in export earnings on certain items, such as, jute manufactures (Rs. 20 crores), raw hides and skins (Rs. 10 crores) and hides and skins, tanned or dressed, Rs. 18 crores.

The internal production of tea is expected to rise from about 650 million pounds in 1955 to about 700 million pounds in 1960. Domestic consumption, on the other hand, is expected to increase from about 190 million pounds in 1955-56 to 230 million pounds in 1960-61. Tea exports during the second plan period are thus estimated to average 465 million pounds a year.

An increase in export earnings is also expected in respect of manganese and iron ores under the head "metallic ores and scrap". Although the trend of rising exports of manganese ore was reversed in 1954-55, the exports in the current year have registered a significant improvement. In view of the projected increase in the raising of manganese ore from 1.4 million tons in 1954 to about 2 million tons in 1960-61 and also of the strength of world demand for the ore, exports during the second plan period may run on an average around 1.25 million tons a year reaching a level of 1.50 million tons in 1960-61. Domestic production of iron ore is expected to increase from 4.3 million tons in 1954 to about 12.5 million tons in 1960-61 and domestic consumption from about 3 million tons to 10.3 million tons during the same period. Exports of iron ore are thus estimated to amount to a yearly average of 1.2 million tons during the second plan period.

Oils and Cotton Piecegoods

Increased earnings from oils are accounted for almost wholly by larger estimated exports of groundnut oil. These larger exports will become available as a consequence of the planned increase in the domestic production of groundnuts by about 900,000 tons during the second plan period. Exports of cotton piecegoods in 1954-55 were 814 million yards. These exports are expected to rise progressively during the second plan period, reach-

ing a level of 1,100 million yards in 1960-61. An average export of 950 million yards a year is thus estimated for the plan period. The production of cotton textiles is expected to increase by about 2,000 million yards over the plan period. The bulk of this increase, however, will be taken up by increased domestic demand resulting from higher incomes within the economy.

Jute and Leather

Exports of jute manufactures in 1954-55 amounted to 852,000 tons. In view, however, of increased competition from other jute manufacturing countries, it does not appear possible to count on more than 825,000 tons of jute goods exports as a yearly average during the second plan period. The leather and leather goods industry is expected to experience a considerable increase in productive activity during the second plan period. In view of this, substantially larger quantities of hides and skins, raw or tanned, will be absorbed internally in the country's productive process, thus leaving reduced quantities of this commodity for export.

Expansion Possibilities

We have so far considered the principal commodities in the country's traditional export trade. It now remains to consider whether the newly developing lines of export, particularly those in the engineering field, namely sewing machines, electric fans, cycles, etc. may bring about any material increase in export earnings during the second plan period. The experience regarding the expansion of these exports during the first plan period, has not however, been very encouraging. Nor are the values involved here quantitatively significant. In 1954-55 exports of machinery, electric apparatus and parts amounted to a total value of only Rs. 44 lakhs. It will take some time before these newly developing industries can establish themselves firmly and secure for themselves sizeable export markets. Thus while every effort should be made to develop these industries during the second plan period, no significant increase in export earnings is expected.

The changes in the exports of the various commodities referred to above are summarised in the following table:—

Changes in the export value of merchandise over the second plan period as compared with 1954-55

	Increase (+) Decrease (-) Rs. crores.
Tea	+ 16
Tobacco	+ 5
Metallic ores and scrap	+ 24

Oils	+ 12
Cotton piecegoods	+ 48
Jute manufactures	- 20
Hides and skins	- 10
Hides, skins, tanned and dressed	- 18
Others	- 30
	+ 27

On invisible account there was a surplus in 1954-55 to the extent of Rs. 77 crores. Detailed estimates of the payments position on invisible account have not been made; but it would appear that the annual average size of the current surplus on invisible account is expected to remain virtually unchanged over the course of the second plan period.

As a result of the effort to promote tourism an improvement of the order of Rs. 4 to Rs. 5 crores per annum may be expected under this item. The development of the country's shipping tonnage is likely to yield additional receipts of about Rs. 3 crores on an average on transportation charges. Payments to foreigners for transportation, on the other hand, are estimated to increase by a similar amount. No significant change in the net receipts under this head is thus expected during the second plan period. Payments of investment income to foreigners are likely to be larger by about Rs. 6 crores during the second plan period. The annual average receipts of investment income may at the same time decline to a small extent.

Briefly, the current account receipts during the second plan may be expected to be about Rs. 27 crores more than the rate of earnings in 1954-55, whereas current payments are estimated to be larger by Rs. 1,053 crores. To this can be added an average of Rs. 10 crores a year or Rs. 50 crores over the five year period in respect of smuggled imports which must be regarded as a charge on current account. The total current account deficit for the five year period, therefore can be taken as Rs. 1,076 or, say Rs. 1,100 crores.

Sterling Balances

On capital account, amortisation payments in respect of the U.S. Food Loan and the World Bank loans will amount to Rs. 6 to Rs. 7 crores a year. There may on the other hand be some receipts on account of repayment of loans made by India to other countries. If the two balance, the question then would be how much of the deficit on current account could be financed out of existing foreign exchange reserves and how much must be the net inflow of capital from abroad. It would probably be safe to provide for a reduction in sterling balances of about Rs. 200 crores. The balance must represent the net inflow of capital from abroad.

The extent to which sterling balances could safely be drawn on must be judged in relation to the fluctuations to which the balance of payments is subject in the ordinary course of events. Export earnings fluctuate widely even within a given year and so may import prices. The index of tea prices for the first quarter of 1955 was 200; by June, 1955 it had come down to 135. A ten percent deterioration in the terms of trade means an additional foreign exchange burden of Rs. 60 to Rs. 80 crores in a single year. As much as 50 percent of the national output in India comes from agriculture and allied occupations and this, on account of the undependability of monsoons, carries a large element of variability in regard to import requirements and export earnings. In such contingencies there is a second line of reserve in the right to draw upon the International Monetary Fund. Even so, caution is necessary in drawing upon the existing foreign exchange reserves for what are essentially long-term and continuing needs.

If accumulated sterling balances are reduced by Rs. 200 crores during the next plan period, as indicated earlier, the balance remaining at the end of 1960-61 would be about Rs. 500 crores. This level of reserves would correspond to about seven months' imports and should therefore, be regarded as essential for enabling the country to tide over temporary balance of payments difficulties. Between July, 1948 and December, 1953, there was a net inflow of private capital into the country of the order of Rs. 70 to Rs. 75 crores. For the next plan period, credit may be taken for Rs. 100 crores or so of net private capital inflow. The balance of Rs. 800 crores of foreign exchange required, after taking credit for withdrawal from reserves and for private capital inflow, has, therefore, to come from external assistance.

The estimated deficit of Rs. 1,100 crores in the balance of payments rests on a number of assumptions. In this field, perhaps more than in any other, estimates are difficult to make and have to be constantly checked and rechecked. What emerges in substance is a broad assessment that external resources of a particular order—around Rs. 1,100 crores—appear on present indications to be a reasonable estimate of the shortfall in domestic savings necessary to finance an investment programme of Rs. 6,100 crores.

Road Development Plans

The Nagpur plan of post-war road development laid down as far back as 1943 certain broad objectives for road development in the country. It took a 20-year view and proposed that at the end of this period no village in a well-developed agricultural areas should remain more than five miles from a main road. At the beginning of the first five year plan India had 97,000 miles of metalled roads and about 1,46,000 miles of unmetalled roads. During the plan period about 6,000 miles of new surfaced roads are expected to be added, about 10,000 miles of low type roads improved and about 20,000 miles of the first plan the total outlay on roads including

grants from the Central Road Fund, is expected to be of the order of Rs. 155 crores. Between 1947 and 1951 Rs. 48 crores was spent on roads, so that since partition the total investment on road development has been of the order of Rs. 200 crores. It is reckoned that about a third of the general target suggested in the Nagpur plan will be achieved by the end of the first plan.

In the second plan the total allotment for road development works out to about Rs. 250 crores including both the Centre and the States, in addition to Rs. 25 crores which are expected to be available as grants from the Central Road Fund. It is estimated that with this programme of investment, about two-thirds of the targets proposed in the Nagpur plan will be realised. Against a provision of about Rs. 28 crores in the first plan for national highways, road construction works costing Rs. 57 crores including the Bannihal tunnel were actually taken up. It was intended that work should start on the construction of 1,250 miles of missing links and 75 bridges and on the improvement of 6,000 miles of existing roads. During the first plan except for the programme of bridges, where there is some delay, the construction of 640 miles of missing links and 40 major bridges and the improvement of 2,500 miles of existing roads are expected to be completed. In respect of improvement works, the achievement will be nearly twice the original target. In the second plan as in the first, the programme will comprise mainly the construction of major bridges and missing links and the improvement of existing roads. The total cost of the programmes to be undertaken under the second plan has been estimated at Rs. 87.5 crores and is made up as follows:

	(Rs. Crores)
Works to be carried forward from the first plan, including Bannihal tunnel	30.0
Lengths of missing links and diversions (600 miles)	10.5
Major bridges (60)	20.0
Minor bridges	5.0
Improvement of existing sections (1,700 miles)	7.0
Widening of carriageway from 12' to 22' (3,750 miles)	15.0
	87.5

The actual outlay on these works during the second plan is expected to be about Rs. 55 crores.

Inter-State Roads

In addition to national highways, the Central Government undertook certain other important roads under the first plan. Work on these will be continued in the second plan at an expenditure of around Rs. 8 crores to Rs. 9 crores. The programme includes the Passi-Badarpur road, the West Coast road, an alternative road connection from Pathankot to Jammu and Kashmir and Kashmir State and roads in Sikkim. Altogether, about 150 miles of new roads will be constructed and over 500 miles upgraded under this part of the programme.

A special programme of inter-State roads and roads of economic importance was taken up in 1954 and Central grants of Rs. 10 crores were approved. This programme will be continued, the total outlay being about Rs. 20 crores, of which about three-fourths will be on schemes begun in the first plan. The programme includes inter-state roads and also roads in the border and hilly areas and roads required for the development of tourist traffic. About 1,000 miles of roads are expected to be constructed under the programme.

As against a provision of Rs. 93 crores for road development in the States in the first plan, a total provision of Rs. 165 crores is being made in the second plan. About 8,000 to 9,000 miles of surfaced roads are expected to be constructed under this programme. The programme takes account of the special needs of backward areas and minor district and village roads which could not be given adequate attention in the first plan. Provision has also been included wherever possible for the improvement of low grade or earth roads constructed during the first plan period through community projects, national extension service and other local works programmes. In the second plan period roads of this type are expected to be added under all these programmes but the likely mileage has yet to be estimated.

Port Development Schemes

Schemes for the development of major ports to be undertaken during the second plan are estimated to cost about Rs. 58 crores. This will include schemes of the order of Rs. 25.5 crores to be carried forward from the first plan. The programme at different ports involves outlay as follows:—

Port	Rs. Crores
Calcutta	19.88
Bombay	17.42
Madras	8.46
Cochin	3.61
Kandla	8.94

The expenditure expected to be actually incurred against these programmes during the plan period is about Rs. 40 crores. Development of Visakhapatnam is provided for in the railway plan.

A provision of Rs. 5 crores is being included in the second plan for the development of minor ports. Of this Rs. 3 crores is required for development programmes in the maritime states and Rs. 30 lakhs for a survey vessel; the balance amount of Rs. 1.7 crores will be available for special schemes like the development of the ports of Tuticorin, Mangalore, Paradip and others which are at present under investigation.

Three New Projects

The Ganga-Brahmaputra Water Transport Board

which was set up under the first five year plan has taken up three projects, namely:

- (1) a shallow-draft push tow pilot project on the upper Ganga;
- (2) a similar project on the feeder rivers of Assam; and
- (3) a project for a passenger and vehicular ferry vessel on the Brahmaputra in Assam.

The craft required for the Upper-Ganga project is to be acquired before the end of the first plan. The Central Government has been contributing at the rate of Rs. 2 lakhs per annum towards the recurring cost of the Board. In the second plan a provision of Rs. 340 lakhs has been included under inland water transport. This includes Rs. 12 lakhs for the purchase of equipment for projects which the Ganga-Brahmaputra Board has in hand, Rs. 20 lakhs for the Government's contribution towards the Board's recurring expenditure, Rs. 150 lakhs for capital expenditure on river control and conservancy works and development of inland port facilities in the Ganga-Brahmaputra region; Rs. 115 lakhs for the development of the Buckingham Canal and Rs. 43 lakhs for the development of the West Coast Canals.

Growth of Indian Shipping

The Shipping Policy Committee had recommended in 1947 a target of 2 million tons to be achieved in five to seven years. In 1950 the Central Government accepted the policy of reservation of coastal trade for Indian tonnage and also assumed responsibility for training personnel for the merchant navy. The growth of Indian tonnage has been a slow process and full advantage has not been taken of the opportunity offered to India in the post-war period. At the beginning of the first plan India had a tonnage of 390,707 G.R.T. The target under the first plan was to add 215,000 G.R.T. after allowing for obsolescence to the extent of 60,000 G.R.T., thus increasing the total tonnage to over 600,000 tons. This target is likely to be achieved, although it will take time for some of the new ships to be actually put into commission. In the second plan about 300,000 G.R.T. will be added after allowing for obsolescence of 90,000 G.R.T. Thus, by the end of the second plan a total tonnage of 900,000 is anticipated.

The broad objectives under the plan are (1) to cater fully for the needs of coastal trade with due regard to the possibilities of diverting some traffic

from railways to coastal shipping, (2) to secure an increasing share of India's overseas trade for Indian ships and (3) to provide the nucleus of a tanker fleet. With the achievement of the proposed targets, Indian tonnage is expected to carry about 15 percent of India's overseas trade as against 5 percent carried hitherto. The tonnage position at the end of the second plan is compared below with that at the end of the first plan:

	Before first plan.	At end of first plan.	At end of second plan.
	Gross registered tons		
Coastal and adjacent	2,17,202	3,12,202	4,12,200
Overseas	1,73,505	2,83,505	4,05,505
Tramp	Nil	Nil	60,000
Tankers	Nil	5,000	23,000
Salvage tug	Nil	Nil	1,000
Total	3,90,707	6,00,707	9,01,707

Three main factors

In the first plan a sum of Rs. 19.5 crores was provided for shipping; this was later increased to Rs. 26.3 crores. The actual expenditure for the plan period will probably be of the order of about Rs. 20 crores. In the second plan a provision of about Rs. 45 crores has been tentatively made. This will provide for a carry-over of about Rs. 6 crores from the first plan, direct investment by Government in the Eastern Shipping Corporation and tanker fleet and loans to shipping companies. The position will be kept under review, so that such further steps as may be required can be taken.

The Transport Committee, in its memorandum has pleaded among other things for a separate Ministry, because the Ministry of Transport was not able to reach the target of two million tons. The shipping industry is still largely in the private sector. The first question should be what has the private sector done to reach this target. It is no secret that the loan programme of the Government was not taken advantage of by some shipping companies. The whole question however rests on factors: finances, availability of ships and trained personnel. Purely for argument's sake, even if the finances and tonnage were available, does India possess trained personnel to man the target tonnage?

STATE BANK OF INDIA

Successors to the Imperial Bank

The need of the day

Our country's economy is expanding rapidly and with the Second Five Year Plan in sight it will gather further momentum. The need for a strong and efficient banking system has never been greater than today as the nation's savings require to be pooled and managed in a resourceful, confident and prudent manner.

The State Bank fulfils these expectations. It has started upon a programme of opening 400 additional branches throughout the country within the next five years.

The State Bank of India offers to serve you efficiently in many ways. It takes care of your savings and valuables, lends moneys against goods, produce and other approved securities and assists you by accepting appointment as executor and/or trustee of your will or trust. Its wide and varied services are at your disposal. Why not talk things over with your nearest bank agent, or write for information?

The State Bank's local head office at Calcutta, one of more than four hundred offices waiting to serve you throughout India.

STATE BANK OF INDIA

Largest of the Indian Joint Stock Banks

Dressed for the occasion

Each occasion demands a different and appropriate dress. Similarly, each particular painting 'job' should have a specialised and suitable paint. I.C.I., over many years, have developed specialised paints for specialised purposes—all Supreme Paints!

Manufactured by:
THE ALKALI & CHEMICAL CORPORATION OF INDIA LTD.
Sole Selling Agents:
IMPERIAL CHEMICAL INDUSTRIES (INDIA) LTD.

Calcutta, Bombay, Madras, Kanpur, New Delhi.

Duco

the car finish used by 9 out of 10 car manufacturers. Give your car complete 'Duco' protection by using the full 'Duco' refinishing system.

Dulux

the synthetic enamel with a world-wide reputation for outstanding durability. Used on all forms of transport; for decorative purposes, too.

Necol

a range of specialised products suitable for a wide variety of industrial uses; a product for every purpose.

Brushing Duco

the 'brushing' version of the famous 'Duco' finish. Used in and around the house for decorating and in the workshop for minor repair jobs.

Madras

BANKING PROSPECTS IN INDIA

FINANCE FOR SMALL-SCALE INDUSTRIES

(FROM OUR MADRAS CORRESPONDENT)

MR. CHINTAMAN DESHMUKH, Union Finance Minister, told the City bankers here that he could see a very bright future for Indian banks in whatever part of the country they might be established. Even after 400 branches had been opened by the State Bank they would cover only 50 per cent of the places where new branches could be established. It seemed to him, therefore, that there was a very large field left to enterprising banks in India for occupying some of that territory. It was wrong to believe that banking could only flourish in periods of inflation or during a rising spiral of prices and costs. Sound banking, he said, could only flourish in an epoch of economic development. One of the avowed objects of the second five year plan was to ensure within the limits of the Constitution that the development that took place was more or less on a uniform scale and that backward parts of the country did not remain backward and more advanced portions did not advance unduly. This was likely to be secured by the almost overwhelming power that the Centre enjoyed in financing the various plans of development. The power to create credit which would be self-liquidating over longer periods than six or nine months rested with the Government, and thus the Centre was able to regulate the pace of economic development in the country.

Mr. Deshmukh continued that the Government's plans, which were not based on the totalitarian model, were perhaps, precise in regard to the public sector, but still left adequate resources for the private sector. Outlining details of allotment under the second plan, he pointed out that a great deal of expenditure was precisely what was required by the private sector. The private sector itself was expected to have resources of the order of Rs. 700 crores for investment in fields generally of its own choice but in important matters indicated by the plan. There was really no antithesis or antagonism between the private and public sectors, and the reiteration of the economic policy of 1954 made it clear as to where the State wished to march forward and where it was content to leave matters to be handled by the private sector. So long as the private sector existed it had to be attended to by private banks as these alone would be in the best position to judge its credit-worthiness. Just as there was a good future for the private sector, he felt, there was a good field for the banks also to develop. Elsewhere in Madras State Mr. T. T. Krishnamachari, Union Minister for Commerce and Industry, said he could not visualise any change during the next 25 years in the private sector or private enterprise, so long as the latter acted within limits and did not harm the building up of an egalitarian society. This, however, he added, was no assurance.

Loan Provisions for Small Units

As regards the question of the extension of financing carried out by the banks, Mr. Deshmukh said the Government had still to take a decision on many of the recommendations of the Shroff Committee. It might be that there were some directions in which they could be venturesome and try out new fields. For instance, he was inducing the Reserve Bank to investigate the problem of financing the small people—people who had only their brains and technical competence as their assets. It was well known that no banker would lend his money without security. So, the banks would have to evolve new methods as they ventured into new fields and find out how to record a man's credit-worthiness consisting of his own technical abilities and general character against the advance they had to make. If they were not prepared, the State, which was very much interested in the small people, would have to devise some new instruments. Mr. Deshmukh said in conclusion that it was not the intention of the Government to spread the field of nationalisation beyond the extent recommended by the Rural Credit Survey Committee.

Ways and means of providing liberal financial assistance to small-scale industries were discussed at a conference here of representatives from Madras, Andhra, Mysore and Travancore-Cochin Governments. Mr. T. T. Krishnamachari told the conference that the loans sanctioned by the Central Government for distribution under the State Aid to Industries Acts had not been spent with that speed which had been expected. The Government of India had already impressed on the State Governments the need for liberalising the conditions for distribution of loans under the Acts. Such loans should be disbursed at three percent interest subject to a maximum of Rs. 50,000 to any single party. Provision should also be made for giving loans for capital expenditure as well as for working capital to small units up to 75 percent of the value of the security offered. Such security should include also the assets and stock-in-trade created out of the loan. In order to help the smaller man, loans up to Rs. 1,000 could be given to him on his own personal bond and up to Rs. 5,000 on the security of two other persons. The Government of India, Mr. Krishnamachari said, had made available Rs. 1.75 crores as loans for this purpose during the last 12 months.

Industrial Co-operatives

The Union Commerce also requested the State Governments to assist in the scheme of setting up industrial estates. An industrial estate would normally cost about Rs. 40 lakhs to Rs. 50 lakhs. The entire amount would be given as an interim loan by the Central Government and it would also share any possible loss in equal ratio. In the second plan it was likely that about Rs. 65 crores would be provided for the development of small industries and a portion of that amount would be earmarked for industrial estates. The Minister was anxious that a beginning should be made in the current year itself for the setting up of industrial estates. The Madras Government had already set one up in Guindy. Mr. Krishnamachari also emphasised the need for starting industrial co-operatives in which the actual workers would be members and all profits would pass to them. The Government of India would give a loan covering 75 percent of the entire sum in respect of capital expenditure, working capital, etc., and the loan would bear an interest of 2½ percent. The Central Government would also bear 50 percent of the expenditure on supervisory staff. Another direction in which the Central Government was willing to assist was in providing machinery and equipment on an easy hire-purchase system. Very recently machinery worth Rs. 13 lakhs had been made available to small industrial units in Mysore State.

It was decided at the conference to start four workshops in Madras State under the scheme of industrial co-operatives. One of these would be for the lock industry, at a cost of Rs. 4 lakhs; another for press metalware at a cost of Rs. 6.5 lakhs; the third for the ceramic industry at a cost of Rs. 3.3 lakhs; and the last for the leather and footwear industry at a cost of Rs. 6.75 lakhs. The Shoranur Metal Industries, now working, would

also be converted into an industrial co-operative in due course. It was also decided to start two general purposes engineering workshops at a cost of Rs. 4.5 lakhs each and to erect a galvanising plant at a cost of Rs. 6 lakhs. These would be run by the State Government, but 75 percent of their cost would be borne by the Central Government.

Cloth Production

Mr. M. A. Chidambaram, President of the Southern India Chamber of Commerce, told a meeting of the Chamber that too much reliance could not be placed on the *ambar charika* for the output of yarn required by the handloom industry. To restrict mill production to a fixed level would also not be in the best interests of the country or the consumer at large. The fortunes of the handloom industry depended to a large extent on the price factor and unless serious attempts were made to reduce production costs, he felt the marketability of handloom goods would be a major problem in spite of the encouragement given to it. He requested the Government to reconsider the far-reaching consequences of its directive to stop the licensing of new spindles. Its aim should be to provide gainful employment combined with production at an economic cost.

Mr. Naval H. Tata, Director of Tatas, was also of the view that the proposed ceiling on mill cloth production would result in a big scarcity of cloth in the country. He said that there was enough room for both the handloom industry and the organised textile industry to exist side by side in an expanding national economy. Mr. Tata also said that the business enterprise of Tatas was conducted according to the "Tata pattern of Capitalism". There was no rivalry between the Tata pattern of capitalism in the private sector and the "Socialistic pattern of society" in the public sector. According to him, Tatas were spending 35 percent of their profits on activities such as research, welfare projects, foreign scholarships, hospitals, etc. Recently they had started rural uplift work in the Satara district of Bombay State, and they were proposing to expand such activities in other parts of the country also.

Mr. M. Somappa, a member of the All-India Handloom Board, has just pleaded for the immediate nationalisation of textile mills in the interests of India's economy. This was in reply to the statement of the President of the Bombay Millowners' Association that India would be faced with a cloth famine if the mills' production was pegged at 5,000 million yards by 1960. According to Mr. Somappa, the handloom industry would not only be able to reach the target of 3,000 million yards by 1960 but would exceed the figure with the use of the improved appliances and equipment proposed to be supplied during the second plan period. The 2.2 million handlooms in the country could well produce 4,000 million yards a year at an orthodox daily rate of six yards a loom. Discountenancing the fear of a possible cloth famine, Mr. Somappa says that "India never suffered from a cloth famine till a century ago when the first textile mill raised its head." The interests of 20 million weavers depending for their livelihood on the handloom industry cannot be jeopardised, he says.

Electronics Factory

Bharat Electronics, the Rs. 10-crore project of the Defence Ministry, has just formally gone into production at Bangalore. When it goes into full production in 1960, the annual turnover in the form of various electronic equipment is expected to be of the value of Rs. 5 crores. In the first year (1956-57) the factory proposes to manufacture a number of mobile transmitters and some general purpose receivers of the value of Rs. 50 lakhs, mostly for the Civil Aviation Department of the Government of India. It will also manufacture during this period miscellaneous equipment for the All-India Radio and the Indian Army. Specialised training, to Indians has been and is being given by a French firm with whom Bharat Electronics has a ten-year agreement. There are at present nine French experts in the factory and during the next six months ten more will be employed.

More Sugar Factories for Andhra

Andhra State has now eight sugar factories producing about 70,000 tons of sugar per annum. These factories have planned to expand their annual output by 5,000 tons. The second five year plan will see nine more sugar factories in Andhra—six of them to be run on a co-operative basis, sponsored by the Government of India, and three by private agencies—and these are expected to produce 100,000 tons of sugar per annum. As in Madras, these new factories will involve a diversion of paddy lands to sugarcane cultivation and their possible exemption from the application of a ceiling on landholdings contemplated by the State Government.

CORRECTION

In the article entitled "Indian Insurance in 1955" which appeared in the Annual Supplement of *Capital* dated 22nd December, the North China Insurance Co. Ltd. was included among those which were stated to have gone into liquidation in 1955. In fact the decision to place the company in voluntary liquidation was made at an extraordinary general meeting held at the head office of the company in Hong Kong on 10th December, 1953. The company had ceased underwriting in India as from 1st January, 1953.

Jute

STEADY CONDITIONS PREVAIL IN JUTE AND GUNNY MARKETS

FORWARD RATES FOR GOODS CONTINUE TO IMPROVE

THE improvement in gunny forward rates has continued during the past week, to such an extent that by Tuesday the near and forward positions were equal. The transformation has really been gradual over the past month, only reaching its peak within the last ten days, when conditions have been akin to a boom. Let us examine the trend of events over the past four weeks, in the relationship between raw jute, sacking and hessian.

	B Twills (100 bags)	Hessian (100 yds.)	Raw Jute (100 yds.)
10th Dec. '55	112-12	107-4	40-13
30th Dec. '55	114-2	110-4	41-6
10th Jan. '56	117	117	42-4

In early December, ready B Twills were at a premium of Rs. 5-12 a 100 bags (or Rs. 57 a ton) over the April-June position. At the end of December, the difference had been reduced to Rs. 36 a ton, and now prices are equal. Thus, in one month, January shipment goods have advanced Rs. 42-8 a ton, while forward shipment goods show an improvement of Rs. 97-8 a ton. Similarly, in hessian near shipment goods are up by Rs. 51 a ton and forward shipment by Rs. 85 a ton. During the same period raw jute rates have gone up by Rs. 81 a ton (Rs. 3 a maund). The position that shows a profit from the mills' point of view is therefore the forward position. Fortunately, there have been good enquiries from overseas for forward delivery, and mills have sold fair quantities for these positions, despite the tendency of local operators to understate the facts. The near positions have been completely neglected, and prices have risen only in support of the forward section. The main reason for this inactivity is the complete cessation of fatka operations since police activity at the beginning of the year put an end to speculation. Had this not taken place, an entirely different story might have been told, as the speculative markets are unpredictable, and it is only now that events are seen in their true perspective. A feature of the present market has been the steadiness of the February-March period, where prices are now showing a small premium over the ready position. This is a very satisfactory position for the trade, and one that may be looked upon with confidence.

Firm Conditions in Raw Jute

Over the past week, Calcutta mills have purchased large quantities of raw jute, and rates have advanced in consequence. One of the main reasons for the firm trend is the very steady upcountry markets, where imports continue to be exceedingly small, and under continual buying pressure prices have advanced about Rs. 2 a maund. One school of thought says that had money not been so tight in the current trading session, due to the difficulties forced on the trade by the banking community, there might have been a greater increase in raw jute rates. There is indeed food for thought in this argument, and the facts were borne out by the sellers agreeing to counterbids towards the close of the week which would not have been possible earlier in the week. At the opening, sellers were very reserved, and business was put through at increasing rates with them dictating the terms. All types of fibre came in for consideration, but there seemed to be a certain amount of difficulty in securing the superior grades of jute. Imports into the local Cossipore markets have again shown an improvement and supplies to the mills from this source are easier than for several weeks. The increase in mills' production which took effect from 9th January has had very little effect on the supply position. Following recent purchases, the trade would appear to be well covered to meet all eventualities, although actual stocks in buyers' godowns are small.

THE JUTE MARKETS

Manufactured Goods: At the opening of the goods market on Thursday last, heavy goods prices showed an increase of 1/2 or 12 annas. B Twills were quoted at Rs. 115 for January shipment and Rs. 114 for April-June shipment. The near position in hessian was completely neglected, and 40in. 10oz. was unchanged at Rs. 41-8 a 100 yards for January shipment, but the forward section showed a slight improvement and was quoted at Rs. 41. Dull conditions prevailed at this stage, and although there was little activity rates were well maintained. Towards the week-end, good trade enquiries from overseas for both sacking and hessian boosted prices. Hessian advanced 6 annas in the near positions and 10 annas for forward shipment, while heavy goods improved 8 annas and Re. 1 respectively for similar shipment periods. Mills took advantage of the rise in forward goods and sold fair quantities of both hessian and sacking for April-June shipment. Shipper-covering over the week-end gave added impetus to the rise, and by Monday morning January B Twills had reached Rs. 116-12 a 100 bags, with April-June shipment only 8 annas lower. The intermediary shipping periods of February and March were actually quoted at a small premium over the ready position at this stage, which demonstrated the very steady conditions prevailing in the forward section. During Monday, mills again did

fair business, which resulted in the gap between the near and forward positions being closed on Tuesday morning, actual quotations for B Twills being Rs. 117 for both January and April-June shipment and Rs. 117-4 for February-March shipment. Hessian also reacted to mill activity and 40in. 10oz. stood at Rs. 42-4 for the near and forward positions, and Rs. 42-6 for February-March shipment. After this firm opening, prices began to ease and towards evening business was possible at well below these rates. At the close, in the absence of further enquiries, the market is easier, and opening quotations on Wednesday morning were as follows:

	Ready	Jan.	Jan.-Mar.	Apr.-June
Rs.	Rs.	Rs.	Rs.	Rs.
40in. 8oz.	33-14	33-14	33-12	33-4
40in. 10oz.	41-14	41-14	41-14	41-12
B Twills	116-4	116-8	116-8	116-4
Heavy Cees	116-4	116-4	116-4	116-4
Plains	142	142	141-8	140
A Twills	134-8	134-8	133-8	131-8
Liverpools	117-8	117-12	117-12	117-12
Cornacks				

Raw Jute: Raw jute prices have shown a rising tendency throughout the week, mainly as a result of daily mill interest. Calcutta mills participated in their biggest buying spree for some time, and it is estimated that business of not less than 5 lakh maunds was put through during the week. The increase in Calcutta business caused a corresponding increase in the upcountry markets, where prices were already very firm. As demand far exceeded the meagre supply, prices in the agencies soared. In most of the business concluded in Calcutta at the beginning of the week, buyers were not able to procure their full requirements at their original indications, but had to revise their ideas as prices rose rapidly. This was invariably the case when two or three buyers were in the market at the same time for similar types of fibre. In Cossipore, wagon arrivals have again belied upcountry reports, and a steady increase has been reported over the week. A large percentage of the imports are reported to be low quality jungli of the imports and, thus high grade jute is showing the biggest premium. Mill representatives in both the local and agency markets are still very active, and wherever their operations are reported, prices tend to rise.

Raw jute quotations showed an increase of 8 annas a maund at the opening last Thursday, bringing Upper Assam jute to Rs. 28 a maund basis Bottoms for January-February shipment. Sellers were reserved at these rates but business was reported over the next two days which eventually brought about another advance of 8 annas. Mills continued to show keen interest, and in competition with each other immediately before and during the week-end they pushed rates up to Rs. 29-8 at the opening on Monday. This was Rs. 1-8 a maund higher than the week's opening quotations. At this stage, mill interest slackened and towards the close easier conditions prevailed with small business reported at slightly lower rates.

The business covered a wide range of varieties and prices. Pakistan Jat jute was purchased on the basis of Rs. 31 a maund basis Bottoms for January-February shipment and Pakistan Cuttings at Rs. 118 to Rs. 124 a bale for similar deliveries. In Indian jute, mills purchased Dhuri-Northern at Rs. 28 to Rs. 29 for January-February shipment and local Northern at the same prices for one month's delivery. Small lots of Upper Assam passed at Rs. 27-8 a maund, but Upper Assam tossa came in for a great deal of interest and changed hands at prices ranging between Rs. 28-8 to Rs. 29-8 a maund for January-February shipment. Murshidabad Tossa was also in demand, prices being between Rs. 28-8 to Rs. 29 a maund, with a Rs. 2-8 difference between Middle and Bottoms. In the Daissee section good business was done in agency Daissee at Rs. 28 to Rs. 30 a maund for one month's shipment, and in Daissee Mesta at Rs. 26 to Rs. 27 a maund for the same delivery. Jungli mesta was done at Rs. 25-8 to Rs. 26 a maund, and bimli at Rs. 26 to Rs. 27 a maund for F.A.Q. for January-February shipment.

At the close, the markets are unchanged but there is an easier undertone. Opening quotations on Wednesday morning were as follows:

Indian Jute:	Landed at Mills Rs. a md. basis	Bottoms	Shipment.
Lower Assam	29-8		Jan.-Feb.
Upper Assam	29-8		"
Northern	29-8		"
Murshidabad White	29		"
Daissee ex Agency	29-9		"
Daissee ex Cossipore	29		"
Daissee Mesta	27	for F.A.Q.	"
Bimli	27		"
Local Packing	29		"
Tossa is quoted at Re. 1 a maund above the price of white jute			
Pakistani Jute:	Rs. a maund.	Bottoms	Shipment
Jat	31-8		Jan.-Feb.
District	31		"
Northern	30-8		"
Jut Cuttings	124	a bale	"

Imports into the local Cossipore markets again showed an improvement, and wagon arrivals have totalled 704 wagons, making a daily average of

just over 100. All arrivals have found ready buyers and high prices have been paid, but most of the business was conducted in low quality jute, and high grade fibre was in short supply. The market is very steady and at the close Kishanganj jute is quoted at Rs. 28-8 a maund for garsat quality. The Daissee markets are very steady due to the continued small imports. All arrivals contain a high percentage of moisture, and at the close this type of jute was quoted in Sheoraphuli at Rs. 28 a maund for garsat quality.

Mofussil: Recent activity in the Calcutta markets, followed by good enquiries in the agencies, has caused a further increase in upcountry rates. Imports have shown no improvement and the demand for the small supplies available has pushed rates up by about Rs. 2 a maund. Very little business is reported as sellers are very reserved. Latest quotations in Dhuri are based on Rs. 26 a maund for garsat quality.

The Pakistan markets continue to rule firm. Good enquiries over the past week from both foreign consumers and Indian mills have caused sellers to become reserved and look for higher prices. A fair amount of covering against January contracts is reported, but on the whole the business has been small. Imports into Narayanganj are unchanged at about 25,000 maunds a day, most of which is in loose jute form. Latest quotations are as follows:

Pucca Bales:	Rs. (P) a bale.	Kutch Bales:	Rs. (P) a maund
Mill Firsts	175	Jat Bottoms	30-8
Export Firsts	145	Jat B Bottoms	26-8
Dacca Tossa 4's	203	Jat C Bottoms	23-8

Raw Jute Consumption

The consumption of raw jute by mills reporting to the I.J.M.A. during December 1955 was 566,400 bales, which was 38,800 bales more than in November 1955. This was due to the gradual changeover by mills from hessian to sacking, there being a 34 percent drop in hessian production with a similar increase in sacking production. The total consumption for July-December 1955 is now 30,27,000 bales. In December 1954, the consumption was 548,000 bales, and the total for July-December 1954 was 28,89,300 bales. Thus in the current season raw jute consumption is now 137,700 bales higher than in the corresponding period of last season.

I.J.M.A. PRODUCTION FIGURES FOR DECEMBER

The Indian Jute Mills Association reports the total production of jute goods during the month of December, 1955:

Description	Quantity
1. Twist and Yarn	
(a) For Sale	3,296 tons
(b) All other including that used in sewing bags	1,234 tons
2. Canvas	355 tons
	8.4 lakh yds.
3. Gunny Bags (Tonnage exclude sewing twist)	3,357 tons
	1,138 lakh yds.
(b) Sacking	85.5 laks Nos.
	54,357 tons
	13,058 lakh yds.
	5,519 lakh Nos.
4. Gunny Cloth	
(a) Hessian	39,284 tons
(b) Sacking	11,092 lakh yds.
	2,265 tons
	54.5 lakh yds.
5. Other manufactures (including ropes)	2,157 tons
6. Total production (above figures combined)	
(a) All kinds	97,395 tons
(b) Hessian (both bags and cloth)	12,830 lakh yds.
(c) Sacking (—do—)	13,693 lakh yds.
(d) Canvas (—do—)	8.4 lakh yds.

Summary

	(00,000 Yds.)			(000 Tons)

THE FOREIGN JUTE MARKETS

BUSINESS BRISK AGAIN

(FROM OUR DUNDEE CORRESPONDENT)

NOW that the festive season is over, business is picking up very quickly again. An advance in prices for white jute in Pakistan is the reason for this and consumers are afraid that they may have delayed purchasing too long. This has happened in the sacking and narrow tarpaulin end of the trade here. Manufacturers have become fully booked up for the first six months of this year and cannot enter any more orders of Calcutta-made sacking have found it unsatisfactory and they are now insisting on Dundee bags, especially flours. In the hessian section of the industry manufacturers are receiving a considerable volume of inquiry and quite a fair business is being booked up for delivery over the next three to four months. The raw jute market is decidedly firmer for Firsts, Lightnings and Hearts, Daisies and Tossa fibre are of very little interest at the moment, though a sale has been reported here at £99 for grade Tossa-2/3 for January-February shipment. Good Daisies-2/3 is freely offered at £90 and grade at £80, but 10s 0d less would be accepted. A few bids have been sent out to Pakistan for Mill Firsts at £92 and they have been refused. Most sellers are now quoting £93 and upwards, while the lowest for Mill Lightnings is £18.10s and not a good mark at that. A number of shippers are quoting £85, and Hearts are usually at £73 to £75, all cif. U.K. It is stated that the firmer tendency has been caused by lack of arrivals at the baling stations in Pakistan, with a good deal of inter-baler business being done. There seems to be little doubt as to the extent of the jute crops this season being sufficient to meet

requirements, but growers are at present more interested in their paddy crops.

Calcutta goods are firmer again at 6s 6d for 10 oz. 40 in. and 48s 3d for 7 1/2 oz. January, 63s 6d and 48s 0d February, 63s 3d and 47s 9d March and 62s 9d and 47s 3d April-June, with B twills at 178s 0d, 177s 9d, 177s 9d and 175s 9d for the respective positions, all f.o.b. Calcutta. Jute yarns are being more freely bought and prices for all descriptions are firmly maintained.

INCENTIVE TO U.P. JUTE GROWERS

To provide impetus to the production of good quality jute in Uttar Pradesh and to create a healthy spirit of competition, the State Government has sanctioned Rs. 10,000 to be distributed as prize-money among growers of fine quality fibre, reports the Indian Central Jute Committee. Traders and manufacturers are also participating in the State-wide jute promotion drive. At a recent exhibition at Colonelgunj mandi organised by the local Merchants' Association, three cash prizes were awarded to producers of high grade jute. It was an attractive show featuring some 2,000 maunds of jute fibre, which were readily lifted by the mill agents and local dealers at prices ranging from Rs. 21 to Rs. 25-8 a maund. Returns submitted by the Jute Grading Party now touring the State reveal that the average quality of U.P. jute is improving. In Lakshimpur-Kheri the party has so far graded 1,008 maunds of fibre. The percentage of grading return is in the order of 0.2 percent top, 36.2 percent middle, 42.7 percent bottom and 20.9 percent cross. The marketing of jute this season is proceeding fast. The rise of the market is helping speedy disposal. Sales to the end of November totalled 1,82,772 maunds 1,01,602 maunds for the corresponding period of 1954. U.P. mills purchased about 37,075 maunds and Calcutta dealers 1,45,697 maunds.

I.J.M.A. STOCK FIGURES FOR DECEMBER

The Indian Jute Mills Association reports stocks of jute goods at the end of December 1955 as follows:

Description	31st December 1955 Lakh Yds. 000 Tons	30th November 1955 Lakh Yds. 000 Tons	Increase over (+) or decrease from (-) last month Lakh Yds. 000 Tons	31st December 1954 Lakh Yds. 000 Tons

Others		5.6	4.3	1.3
Grand Total (000 Tons only)		64.2	63.0	69.6

N.B. These figures are based on replies received and represent all members of the Association and Gagalbhai.

Commodity Markets

REDUCED DEMAND FOR COTTON TEXTILES

YARN PRODUCTION DROPPING

THE trend of cotton yarn production in the non-Communist part of the world, as measured by output figures for a group of countries, including all the important cotton textile exporting nations, appears to be stationary or, perhaps, downward. This is illustrated by figures published in the Cotton Board's latest *Quarterly Statistical Review* showing the percentage increase in yarn production in 1955 compared with the corresponding period of 1954. In the first quarter the increase was about 3 percent, in the second quarter about 1 1/2 percent, and in the third quarter not more than about 1 percent. Of the major producing countries, the U.S.A., Canada, India and Pakistan were, during the third quarter, operating at a considerably higher level of activity than in the corresponding quarter of 1954. Output in Germany and the Netherlands was well maintained at the previous year's level, but the U.K., Japanese, French, Italian and Belgian industries suffered a severe cut in production in comparison with twelve months previously.

World trade in cotton piece goods increased slightly in the third quarter of the year, but the expansion was too small, and there were too many exceptional factors at work, for this to be taken as evidence of a real improvement in demand for imported cotton textiles. Exports of cotton fabrics from the main exporting countries in the first nine months of 1955 were about 11 percent less than in the corresponding period of 1954, the main factors in this decline being the drastically reduced demand from Indonesia, Pakistan, and some of the French colonies. Third quarter exports were greater than the second quarter's figures in the case of the U.K. (a by-product of the June dock strike), Japan, Germany, Italy and Hong Kong. In contrast, shipments from the U.S.A., France and Belgium continued to decline, and Indian exports, also, may have been rather less than in the second quarter.

In the field of international trade in fabrics of rayon and synthetic fibres, the steadily expanding volume of shipments from Japan continues to counterbalance the decline in exports from the rest of the world. Exports from the U.K. and Germany in the third quarter were greater than in the second quarter, but shipments from the U.S.A. and Italy showed a sharp fall. In the first nine months of 1955 total world trade in these fabrics was about 10 percent greater than in the same period of 1954.

Downward Trend in U.K. Exports

The lowest point of the current recession in the United Kingdom cotton industry was reached in August, when the rate of output per working day in both spinning and weaving was about 191 percent less than the peak level reached in October, 1954. Since August there has been a certain recovery, the latest figures showing a level of output 15 percent below the peak in the case of weaving (in October) and 14 percent in the case of spinning (in November). The increase has been more pronounced in the case of man-made fibres—particularly fabrics of synthetic fibre and spun rayon and fabrics—than in the case of cotton, and spinners of Egyptian-type yarns have fared better than spinners of American types. The modest improvement in the volume of orders received appears to have been entirely a home-trade affair, a seasonal expansion in business being expected at this time of the year. There has been no improvement in export demand, however, and the uncertainty over the future of raw cotton prices continues to exert an unfavourable influence. One event which may have an important effect on the pattern of production was the abolition, in the Autumn Budget, of the "D" scheme for apparel, with its artificial division of garments into taxed and untaxed types, and its replacement by a flat-rate tax on all non-wool apparel.

Although the records show that shipments of cotton piece goods from the United Kingdom increased from 117 million square yards in the second quarter to 143 million in the third quarter, this was merely a result of the dock strike which held up shipments during June. In reality the trend of exports is still downward, and in October, when the backlog of deliveries had been cleared, exports totalled only 43 million square yards. The distortion introduced into the figures by the dock strike makes it difficult to discern the trends in shipments to individual markets, but comparison of the third quarter with the first quarter, when exports were similarly swollen by the backlog of an earlier strike, is perhaps, meaningful. This comparison shows a heavy decline in shipments to British West Africa and French West and Equatorial Africa, and more moderate reductions to South Africa, Rhodesia and Nyasaland, Scandinavia and Burma. On the other hand, exports to New Zealand increased to a very high level, and the U.S.A. has also provided an expanding market for British cloth. The volume of exports to India increased in the third quarter, as a consequence of the tariff reduction earlier in the year.

The downward trend in exports of rayon and mixture piece goods is also disguised by the effects of the dock strike. British East and West Africa, Malaya and the Irish Republic took considerably less rayon cloth from Britain in the third quarter than in the first, but there was some slight improvement in shipments to Australia, New Zealand, South Africa and Rhodesia and Nyasaland.

Import of cotton piece goods in total have declined somewhat since the early part of the year.

and the same is true of supplies from each of the three main sources, Japan, India and Hong Kong.

U.S. Cotton Consumption Rises

Most of the published figures suggest that the United States' cotton industry is enjoying fairly satisfactory conditions. Cotton consumption in the third quarter was 6 1/2 percent greater than in the same period of 1954, and the daily rate of cotton consumption showed a further advance in October. Manufacturers' stocks of cloth have continued to decline and order books have continued to lengthen. Cloth prices have been advancing, moreover, at the same time that raw cotton prices have been falling, and profits have risen. Output of cotton cloth in the second quarter was, exceptionally, no greater than in the second quarter of 1954, but output of rayon fabrics showed an increase of about 24 percent and output of synthetic fibre fabrics one of about 13 percent.

Exports of cotton piece goods from the United States suffered a sharp contraction in the third quarter. Almost all the main markets took considerably less American cloth, in particular Canada, Cuba, Venezuela and the Philippines. Shipments to Indonesia expanded, but much of this trade is believed to consist of cloth woven in Japan. Exports of both rayon and synthetic fibre piece goods also decreased during the third quarter. Deliveries of rayon piece goods to Canada have expanded, but shipments to the Philippines, Cuba, Malaya and Hong Kong are well below former levels.

Japan Reduces Stocks

The enforced curtailment of yarn output in Japan, which was stepped up from 12 percent to 16 percent of the average 1954 production in August, appears to be achieving its object of reducing excessive stocks of cotton goods. It was reinforced in the latter part of October by a strike in the "big ten" cotton spinning companies, which ended in-

conclusively with a minor wage advance, the first since 1952. Because of the consequent tightness in yarn supplies, the production cut has been relaxed to 12 percent in December, but will be increased again to 16 percent in January. As a more permanent measure, it is reported that the spinning industry has produced a plan to take 1,200,000 cotton spindles—or 15 percent of present capacity—out of operation. Of these, 500,000 would be held in reserve to meet emergencies, some of the others would be turned over to the production of spun rayon yarns, and the rest would be scrapped. A similar scheme to dispose of surplus weaving capacity is also reported to be under consideration. Meanwhile, while output of cotton yarns and fabrics has been falling, output of spun rayon yarns and of rayon fabrics has been increasing rapidly.

Japan achieved a fairly substantial increase in exports of cotton piece goods during the third quarter, when 279 million square yards were shipped, compared with 246 million in the second quarter. Exports to the U.S.A. expanded to reach the considerable total of 46 million square yards, and there were also notable increases in shipments to Siam, Indonesia and Singapore. Venezuela has also become an important market for Japanese cottons, and large quantities have been shipped to Indo-China for the first time since the war. In contrast, exports to the U.K., the Netherlands, Iran and the Philippines have been declining. To meet American criticism of the growing volume of imports of cloth, household textiles and made-up garments from Japan, the Japanese Government has decided to institute export quotas, and until the quotas are established a complete ban on exports to the U.S.A. has been imposed. Exports to Europe are also to be brought under quota control.

Exports of rayon piece goods increased from 218 million square yards in the second quarter to 230 million in the third quarter. All Japan's main

markets, with the exception of Indonesia, took greater quantities during the quarter and, as in the case of cotton goods, Indo-China became an important market for the first time since the war. British West Africa is currently easily the largest market for Japanese rayons.

India's Cloth Famine

Output of cotton yarn and cloth in the Indian mills continued to run above the record levels of 1954. Despite this high level of production, however, it is reported that the country is suffering something like a cloth famine, stocks having been reduced to an unusually low level. It is unlikely that exports will be reduced or imports increased to meet this situation because of the effect on the foreign exchange position.

Total sea-borne exports of cotton piece goods in the second quarter were much the same as in the first quarter. Shipments to the U.K., Burma, Ethiopia and Afghanistan declined, but exports to British East and West Africa and to Pakistan expanded sharply. The volume of exports in the third quarter is believed to have been rather less than in the second quarter. Government assistance in the export drive, already in evidence in the pre-shipment examination of goods to ensure that they come up to specification, is to be extended by a credit guarantee scheme. This will assist the efforts of the Cotton Textile Export Promotion Council, which has recently completed a successful first year's work.

Western European Production Drops

The French and Italian cotton industries seem to be still in the throes of depression. In both countries output of cotton yarns and fabrics in the third quarter was roughly 20 percent less than in the same period of the previous year, and Italian production of spun rayon yarns and fabrics has also been severely affected. The rate of activity in the Belgian industry also appears to be well below the previous year's level, but Dutch and German production has been well maintained.

Western European exports of cotton piece goods as a whole in the third quarter were much the same as in the second quarter. In the first nine months of 1955, however, they showed a drop of about 8 percent below the level achieved in the corresponding months of 1954. French exports have been particularly badly hit by the reduced volume of imports into French West Africa and Indo-China, and also by greater competition from other suppliers to those markets. To meet this competition, special protective measures have been taken against Indian, Japanese and Hong Kong cloth in the colonies, and it has been decided to raise the level of duties on foreign cloth entering French West Africa. The government have also introduced special incentives for exports to Australia; exports to Indo-China are also subsidised. Belgian exports have been declining, with smaller quantities of cloth being delivered to the U.K., the Netherlands and Sweden, and shipments from Portugal are also much less than last year. Exports of cotton piece goods from both Germany and Italy expanded sharply in the third quarter. In the case of Germany this expansion was entirely due to increased trade with Turkey, and the same factor accounts for most of the increase in shipments from Italy. In both cases this increased volume of exports to Turkey is, presumably, associated with the considerable quantity of grey cloth which these

countries have been importing from Turkey during 1955. Dutch exports of cotton piece goods have been declining in 1955, despite an increasing volume of shipments to Indonesia, but in total they remain above the 1954 level.

Exports of fabrics of man-made fibres from Western Europe in the first nine months of 1955 were about 11 percent less than in the same period of 1954. France, Germany, Italy and Austria having all lost ground. Italian exports declined still further in the third quarter, largely on account of reduced trade with Rumania, Greece and British West Africa. South Africa is Italy's main market for rayon fabrics. German exports of rayon cloth to British West Africa have also been declining. Despite this, German exports in total registered a sharp increase in the third quarter. The United Kingdom, the Scandinavian countries and French Morocco all took considerably greater quantities of rayon cloth from Germany during the quarter. French Morocco now being Germany's largest market for rayon fabrics.

BRITISH TEXTILE REVIEW

AFTER a year in which scores of Lancashire's mills have been forced to close because of the state of trade, it is gratifying to report that trade is now distinctly healthier. The first signs of recovery were perceptible some months ago in spun rayon yarns, which had been very depressed, and the recovery, though uneven, is now fairly general. It is recognised in the annual statement of the biggest spinning group, Lancashire Cotton Corporation, and in the interim statement of the more specialised Fine Spinners and Doublers, both published at the end of December; and independent trading reports sound the same more optimistic though still cautious note. The improvement in trade is not, however, due simply to revival of demand. More fundamental is the adjustment of output to the situation that developed in 1955 as a result of the growth of imports of cheap Asian cloth: the rate of growth was much slower later in the year than earlier, and supplies from home sources had meantime been reduced. In the finer trade—poplin shirting and dress goods, for instance—demand has responded well to the re-organisation of purchase-tax last October.

It is, however, emphasised that no consistent expansion is possible until the international basis of raw cotton prices is assured. The uncertainty of American policy put the Liverpool Cotton Exchange and most of the trade in intermediate and finished goods into a state of chronic apprehension in 1955, and it must be admitted that some of the active buying of recent weeks is no more than a hasty adjustment of stock positions that had been allowed to run too low. Moreover, some of the expansion of business in cotton and rayon cloth has been achieved only by severe price-cutting—it is said that some cloths have been sold at a loss. With all these reservations, and acknowledging the warning of the new chairman of Lancashire Cotton Corporation, Mr. R. M. Lee, that the basic problem of rising imports and falling exports is still unsolved, Lancashire is in a mood confident enough to justify regret that the cotton industry has lost labour to other industries (especially engineering) in the past year and is trying to

attract that labour back into cotton. At the least it can be said that after Christmas 1955 there was no need to extend the holiday for weeks, as happened—with disastrous effects on the workers' confidence—after Christmas 1951.

A New Turn in Research

Members of the British Cotton Industry Research Association visited the Shirley Institute, the Association's headquarters, during December, and they saw there 30 special exhibits illustrating the Institute's latest work. It is a remarkable fact that, whereas cotton was the only fibre available to the industry on a commercial scale when the Institute was founded 30 years ago, all but a few of those 30 exhibits shown in December 1955 were related in some way to man-made fibres. It is also significant that discussions have been in progress for some time between the British Cotton Industry Research Association and its counterpart for an industry that is now as much an ally as a rival, the British Rayon Research Association. These discussions, which have reached an advanced stage, are paving the way towards full economic efficiency in using the two associations' resources—finance, buildings, equipment, scientific personnel, and accumulated knowledge.

Addressing the annual meeting of the Shirley Institute during the month, its retiring Director of Research, Dr. F. C. Toy, was able to announce that the age-long problem of cardroom dust had been solved by his staff. By the method evolved, and now undergoing practical trials, the dust is collected at the points where it is actually emitted from the card, so that it never reaches the general atmosphere of the cardroom. The effect on the atmosphere in the mill where the trials are taking place is astonishing, and Dr. Toy described the appreciation of everybody in the mill as one of the most inspiring experiences he had ever had.

WHOLESALE PRICE INDEX RISES

THE official wholesale price index (base: year ended August 1939=100) advanced by 0.9 percent to 370.7 during the week ended 24th December, 1955 as compared with 367.4 for the previous week. Relative to the corresponding weeks of last month and a year ago, the index was higher by 1.5 percent and 1.0 percent respectively. During the week under review, the index for Food Articles advanced by 1.4 percent to 324.9 owing to increases in the prices of gram at Hapur (+10%), jowar (+8%), gur (+7%), bajra (+4%), wheat (+3%), dal arhar and sugar (+2% each) despite a decline in the prices of tea (-7%) and rice in Calcutta and gram at Patna (-2% each). Prices of groundnuts and castorseed (+10% each), raw silk at Bangalore (+9%), rapeseed in Bombay (+7%) and at Kanpur (+2%), linseed (+5%), manganese ore average export prices (+5%), cottonseed at Amravati (+3%), and raw cotton and ginglylseed (+1% each) moved up while those of raw wool and lac (-3% each), copra (-2%) and rapeseed in Calcutta (-1%) showed declines. On the whole the index for Industrial Raw Materials rose further by 1.2 percent to 446.5 during the week. The index for Semi-Manufactures also witnessed a rise of 1.3 percent to 350.4. Items which showed noticeable changes during the week were: ginglylcake (+10%), linseed oil (+8%) groundnut oil (+7%), buffalo hides (+6%), gingly oil (+5%), cowhides (+3%), castor oil in Calcutta, cotton yarn and copra cake (+2% each) and groundnut cake (-9%). A fall in the prices of jute manufactures (-1%) brought down the index for the Manufactures group from 372.8 to 372.6 although prices of glass (+4%) and paints of red lead dry Genuine (+6%) were marked up. Higher prices of betelnuts at Bangalore (+7%), Vanaspathi (Dalda) (+6%), pepper black at Cochin (+4%), chillies (+2%) and turmeric (+1%) both in Calcutta raised the Miscellaneous group index by 0.8 percent to 546.8 as compared with 542.3 (revised) for the previous week.

Engineering and Transport

ATOMS FOR PEACE

U.K. AIRCRAFT GROUP FORMS NEW COMPANY

THE announcement that the Hawker Siddeley Group, well-known British aircraft and engineering combine, is forming a company to investigate the applications of nuclear power adds one more name to the list of British firms entering the field of peaceful industrial uses of atomic energy. The Group announced the formation of the Hawker Siddeley Power Company, with Sir Roy Dobson as chairman. It was stated that Sir Arnold Hall, who left the Royal Aircraft Establishment, Farnborough, only a few months ago to become the Group's technical director, is joining Sir Roy on the board, which will include members who have worked at the Harwell atomic energy establishment and the head of the team which developed the famous Sapphire jet engine in Coventry.

Nuclear Power Research

Sir Frank Spriggs, the Group's managing director, announcing the new company, said: "The peace-time uses of the atom are very exciting. We have assembled a remarkable team of scientists who will push this project forward without delay". As for what the new company would be doing, all he could say at the moment was "Research and development". The Group announced at the end of November that it was searching for a site to build a nuclear-power research station in which to investigate some of the problems and possibilities of atomic propulsion for aircraft. It was, however, emphasised that any such development as an atom-powered plane was a long way ahead, and the work of the new station would be experimental.

New Viscounts Heavier and Faster

A second order for Viscounts from the United States has been announced by Vickers-Armstrongs. Continental Airlines, whose services cover many of the western states, has ordered twelve aircraft at a cost—including "pre-operational" and additional equipment—of \$181 million (some £6,400,000). Total dollar sales of the Viscount now amount to 103, worth \$110 million (about £40 million). Continental's Viscounts are to be the new V. 810s powered by Rolls-Royce Dart 7/1s which will give a cruising speed of 363 m.p.h. at 17,000 ft. An even later model, the V.840 fitted with more powerful Dart 8s will have a cruising speed of 400 m.p.h. at 20,000 ft. Continental's V.810s are to be re-equipped with the later engine when it becomes available.

To allow for increased speed and greater all-up weight, the new Viscounts incorporate about 1,000 lbs. of additional structure. They are designed to carry 13,500 lbs. of payload for a distance of 1,000 miles with a two hours fuel reserve. There are now 254 Viscounts on order and Vickers-Armstrongs has already taken steps to boost production. The factory at Hurn is turning out five aircraft a month which will be increased to six during 1956. By early 1957, seven Viscounts a month will be produced at Weybridge where production has, in fact, already started. Meanwhile, two Viscounts—for Misrair and the Indian Air Force—were due to be despatched last week, and Capital Airlines' seventh aircraft will be delivered later in the month. Following more deliveries in January, Capital is to receive a Viscount nearly every week until the order for 60 aircraft is fulfilled.

Reports on DC 8 Delivery Dates

Meanwhile, the latest reports from the United States indicate that the DC.8 may not be in transatlantic operation until the early 1960s. The American publication, *Aviation Week*, states: "Some airline officials are inclined to put an 'if' in front of DC.8 delivery dates. They say the plane incorporates a number of unconventional design features. If these fail to prove out as expected, it might mean an extensive re-design effort. Coupled with the change in the customary prototype testing procedure by the manufacturer, this might wash out promised delivery dates. Also of concern to some airlines is the availability of turbojet engines to power the overseas version of the DC.8—an appreciably heavier plane than the 707. The J.75 would give a vastly improved performance, but the earliest date a commercial version of the engine will be available to them probably will be around 1960-65, they say. The situation is aggravated, they claim, because airline technicians cannot obtain any performance data on the J.75 due to security restrictions."

The transatlantic 707, although lighter than the DC.8, is probably subject to a similar engine problem. Consequently, if one, or both, of these aircraft were to be fitted with British engines, transatlantic operation would be practicable at an earlier date than would be possible with J.75-engined versions.

DURGAPUR STEEL PROJECT

Mr. P. R. Das Gupta, a former Coal Commissioner and a retired member of the West Bengal Civil Service, has been appointed as the Project Administrator of the Durgapur Steel Project under the Ministry of Iron and Steel. Mr. Das Gupta has already set up his office at Durgapur where he will look after preliminary work at the site.

Plantation Topics

LONDON TEA SALES

AT last week's London tea sales the 66,977 packages on offer realised an average price of 4s 4.96d a lb., against 4s 5.82d at the previous sale and 6s 11.56d a year ago. Plain broken pekoe was quoted at 3s 5½d. Prices obtained by some of the companies are given below:

	No. of packages	Average per lb
Amalgamated	954	4/1
Assam Frontier	628	5/3½
Attaree Khat	155	4/8½
Bagracote	120	3/9½
Balijan	114	5/6
Bargang	240	4/3½
Bazaloni	222	5/10½
Belsieri	204	3/10½
Borelli	228	4/10½
Borjan	132	4/4½
Cons. Tea and Lands	1,298	4/2½
Dangua Jhar	126	3/9
East India	264	4/2½
Halem	324	3/11½
Jhanzie	120	4/9
Jorehaut	953	5/5
Koomsong	138	4/8½
Longai Valley	234	3/5½
Lungla	104	3/7½
Majuli	156	4/10½
Moabund	680	5/1
Namdang	126	5/3½
Neddeem	793	3/4½
Pabbojan	90	5/7
Rajmai	264	4/6½
Rupai	125	5/3½
Scottish Assam	282	4/2½
Scottish Ceylon	336	4/10½
Surmah Valley	108	4/
United Planters	426	5/4½
Upper Assam	252	4/10½
Yataderia	66	4/10½

U.K. Tea Stocks

U.K. stocks of tea on 30th December amounted to 124.6 million lbs, against 126.4 million lbs a year ago.

COCHIN TEA SALES

At Dust Sale A, 730,000 lbs were on offer. Demand was much better and prices were fully firm to dealer for everything, particularly milled dusts and powdery sorts, which were two to three annas dearer.

COFFEE BOARD

At its meeting held on 4-1-1956 the Coffee Board appointed an ad hoc Committee to examine the draft plan which has been drawn up for the increased production of coffee in India and to submit its recommendation to the Board before 31st January, 1956.

REGULATION OF 1956 TEA CROP

The Calcutta Tea Regulation Committee, representing the main tea-producing Associations of North East India, unanimously decided at a meet-

ing held today that, in view of the existing condition of the tea market, it would be desirable to introduce a scheme for the regulation of the tea crop to be produced in the 1956 season. The various Associations represented on the Committee are now considering specific proposals to that end. The Committee also unanimously agreed to ask their constituent Associations to recommend to their Members that all tea waste should be destroyed on the gardens, and that all residue teas of doubtful quality should likewise be destroyed, to prevent such grades of tea having a further depressing effect upon prices.

COLOMBO RUBBER PRICES

The following prices have been issued by the Rubber Board of India from the weekly market report published by the Colombo Brokers' Association:

	The closing prices on 30-12-55 (Rupees a lb.)	Average prices for the period (Rupees a lb.)
Sheet:		
No. 1	1.51	1.51
No. 2	1.48	1.48
No. 3	1.45	1.45
No. 4	1.21	1.21
No. 5	1.16	1.16
Sht. cuttings 1	1.25	
Sht. cuttings 2	1.20	
Crepe:		
Water White	—	—
R.M.A. No. 1X	1.65	1.65
R.M.A. No. 1	1.64	1.64½
Crepe No. 2	1.63	
Crepe No. 3	1.59½	
Scrap Crepes:		
Sc. Crepe No. 1	1.28	1.28½
Sc. Crepe No. 2	1.20/25	1.22½
Sc. Crepe No. 3	1.12/18	1.15½
Flat Bark	1.05/10	1.08½
Sc. Crepe 3X	1.19	

To arrive at f.o.b. Colombo prices add 44.4 cents a lb. in respect of rubber other than scrap crepe and 31.4 cents in respect of scrap crepe to the above market prices.

BONUS FOR TEA PLANTATION WORKERS

Nearly 800,000 tea garden workers in the north-eastern region of India will receive about Rs. ½ crores as bonus according to an agreement between the representatives of planters and workers signed in New Delhi this week. The agreement which has been brought about by the intervention of the Union Minister for Labour and Commerce and Industry covers a four-year period from 1953 to 1956. The representatives of the Indian Tea Association have accepted the agreement while the Indian section of the industry have yet to ratify it. The question of bonus was referred to an ad hoc committee consisting of the representatives of the industry and workers at the meeting of the Industrial Committee on Plantation held recently in New Delhi. The committee examined the question in all its aspects before finalising the agreement. The agreement provides for cash payment ranging from Rs. 55 to Rs. 130 depending upon the prosperity of different plantation regions. It also provides that two thirds of the bonus for each worker for 1953 and 1954 is to be paid not later than 29th February, 1956, and the second payment to be made by the end of November, 1956. The workers' representatives on the committee desired that the second payment should be in the form of Government saving certificates. Scales of bonus for 1953 and 1954 will be taken as a base for determining payment for 1955 and 1956.

TEA BOARD

EXPORT QUOTA 1956-57

TEA PRODUCERS IN INDIA ARE HEREBY reminded that in terms of Rule 23(1) of the Tea Rules 1954, Tea Estates desiring to be allotted an export quota for the year 1st April 1956 to 31st March 1957 are required to submit an application therefor, which must be filed with the Tea Board not later than the 1st February 1956. No export quota will be allotted unless application under this rule is duly filed. Application forms have already been issued to all registered estates, but the Tea Board will not hold themselves responsible for any omission in this respect, and Proprietors, Agents, Managing Agents or Secretaries who have not received the application forms are requested to apply for these, in the case of estates situated in North India, to the Controller of Licensing, Tea Board, 27 & 29, Brabourne Road, Calcutta, and, in the case of estates situated in South India, to the Joint Controller of Licensing, Tea Board, Church Road, Fort Cochin, Cochin 1, South India.

K. Senthippan,
Controller of Licensing

Calcutta Markets

MIXED TREND IN TEA EXPORT SALE

GOOD GENERAL DEMAND FOR DUSTS

AT Sale No. 30, held on 9th and 10th January, 58,600 chests were on offer in the Export auction. There was a fair general demand, but an easier tendency prevailed. Fannings grades of all descriptions were the strongest feature, and Medium O. Fgs. with black leaf were often 2 to 3 annas dearer. There was an improved demand for CTC teas, particularly the best sorts, which were in keen competition. Medium brokens were steady to occasionally dearer, while Common and Low Medium Brokens were selling at half an anna below last rates. Leaf grades were from 1 to 2 annas easier, while BPS grades were in less demand. Tippy teas again sold well.

Quotations	1956		1955	
	Rs.		Rs.	
Clean Black Pekoe	2 0 0	to 2 1 0	3 10	6
Plain B.P.	1 7 6		3 8	6
Medium Assam B.P.	1 10	0	3 10	6
Best CTC Assam B.P.	2 1 0	to 2 3 0	3 14	5

At the Internal Sale, 19,400 packages of Dusts were on offer. There was a good general demand for all descriptions, except for some of the poorer

liquoring grainy types which were irregularly 1 to 1 anna easier. Black leaf types suitable for the Middle East and the very best CTC Assams with good liquors were the strongest features and sold generally at several annas above valuations. Commons, Dooars and Medium Assams were fully firm to dearer, while commonest types were in much stronger demand than in previous weeks. The poorer fibrous CTCs were irregular and generally easier.

Quotations	1956		1955	
	Rs.		Rs.	
Medium Dooars Dust	1 6	to 1 6 6	2 8	6 to 2 9
Medium Assam Grainy Dust	1 7	to 1 8	2 9	to 2 9 6
Best Assam CTC Dust	2 4	to 2 5	2 13	

There were 1,500 chests of Leaf on offer, which were mostly of a stalky and residual type. These met with a fair demand and sold at 1 or 2 annas above last rates.

FREIGHT RATES FIRM

ALTHOUGH no great volume of business was concluded last week, markets remained very firm and many enquiries are circulating particularly for early positions. The American coal trade paid 69s 6d for two consecutive voyages to the Continent and reports circulate of consecutive over two years at 55s. The grain trades were active with W. Australia-Bombay paying 127s 6d. W. Australia-U.K. 170s, Gulf-U.K. 103s, North China-Continent 180s. The Indian ore trades also featured

with 120s being conceded from Vizagapatam to Genoa which compares favourably with the 85s paid from Mormugao to Trieste. Bombay-Venice was fixed at 107s 6d and a Liberty obtained 42s for a trip time charter to Japan via Mormugao with delivery Karachi in February. Local coal charterers are still unable to cover requirements due to the paucity of tonnage and the low rates offered.

SUGAR MARKET INACTIVE

During the week ended 11th January, sugar sales in the Calcutta market averaged 2,500 bags a day. Arrivals daily were 2,000 bags and stocks totalled 115,000 bags. Rates for ready sugar ex-Kantapur delivery were Rs. 32-13 for big grain, Rs. 31-4 for medium grain and Rs. 30-14 for small grain. The market remained inactive.

LINSEED

Generally firm conditions prevailed in the market last week and fairly good enquiries were noted at slightly lower levels; trading was rather poor owing to scarcity of ready goods and firm advices from the centres. The oil market was active and there was a fair demand from shippers, whilst a good overseas demand resulted in some fresh business. Latest quotations were as follows: January Rs. 22-10-0 a maund; April-May Rs. 20-4-0 a maund.

HIDES AND SKINS

The market in skins continued firm and prices showed an upward tendency. Stocks were less than in the previous week.

Bazaar Sales

(Between 3rd January and 9th January, 1956)

Cowhides:—Wet salted (Ord.) 6,000 pcs. on the basis of Annas 10-9 to Annas 11-6; Wet salted (Ord.) 20,000 pcs. on the basis of Rs. 8-8 to Rs. 10; Wet salted (Slaughtered) 16,000 pcs. on the basis of Rs. 13-8 to Rs. 22.

Goatskins:—Wet salted (Daissee, Killed) 52,200 pcs. on the basis of Rs. 275 to Rs. 315. Rs. 325 to Rs. 350 and Rs. 350 to Rs. 400; Assam-Dinajpur-Murshidabad 20,000 pcs. on the basis of Rs. 265 to Rs. 315; Pakur-Patna 5,000 pcs. on the basis of Rs. 275 to Rs. 290; Muzaffarpore 6,600 pcs. on the basis of Rs. 335 to Rs. 395; Muzaffarpore-Patna 1,12,800 pcs. on the basis of Rs. 310 to Rs. 340.

Bazaar Stocks

(9th January, 1956)

Goatskins: Wet salted (Daissee, Killed) 29,000 pcs.; Assam - Dinajpur - Murshidabad - Jalpaiguri 39,500 pcs.; Muzaffarpore-Patna-Pakur-Purneah-Kissenganj 2,46,500 pcs.

Cowhides:—Wet salted 52,500 pcs.

SHELLAC MARKET QUIET

During the week ended 10th January, the market was steady at the beginning and quiet at the end. The range of quotations was as follows:

Pure Buttonlac	Rs. 170 to 172 buyers; 169/168 value.
Lemon No. 1 Shellac	Rs. 174 to 170 buyers; 170 value.
Lemon No. 2 Shellac	Rs. 168 to 164 buyers; 164 value.
F.O. Std. 1 Shellac	Rs. 163 to 156-8 buyers.
Pure T.N. Shellac	Rs. 158 to 153 basis done and buyers.
4% I.T.N. Shellac	Rs. 150 to 143 buyers.
No. 1 Kusmi Seedlac	Rs. 165 buyers; 164 to 161-8 value.
No. 2 Kusmi Seedlac	Rs. 158, 156-8 buyers; 152-8 value.
Fine Bysaky Seedlac (Manbhumi)	Rs. 153 to 147 buyers.
Fine Bysaky Seedlac (C.P.)	Rs. 148, 141, 143-8, 146 buyers.
Ordinary Bysaky Seedlac (C.P.) under 5%.	Rs. 134, 133 buyers; 129-8 value.
Ordinary Bysaky Seedlac (C.P.)	Rs. 130 buyers; 126 value; 124 buyers; 124-8 value.
Kireelac	Rs. 71 to 70 buyers.

Shipments during January until the 7th were 5,098 packages comprising shellac 3,203 packages; Seedlac 1,280 packages; Buttonlac 95 packages; Others 520 packages.

"SLUMBERETTES" IN B.O.A.C. CONSTELLATIONS

The British Overseas Airways Corporation is equipping its first class Constellation services, which operate through India, with "Slumberettes", a new type of long chair designed by the Corporation. These new wide seats, cushioned with soft foam-rubber, are provided with leg-rests and are adjustable within wide limits so that a comfortable reclining position can be adopted by passengers. As these chairs require more leg-room than the normal first class seats, the number of passengers in B.O.A.C. Constellations has been reduced from 40 to 30. The result of this reduction in numbers is to provide considerably more space for each passenger, with a consequent improvement in comfort. The first aircraft to get the "slumberettes" passed through Delhi this week en route to Hong Kong. The full programme of re-equipment will be completed in two months' time.

COMPANY AND PUBLIC NOTICES

JESSOP AND COMPANY, LIMITED.

NOTICE is hereby given that the Twenty-fourth Annual General Meeting of the Members of Jessop and Company, Limited, will be held at the Registered Office of the Company on Monday, the thirteenth day of February, 1956, at 11 o'clock in the forenoon, for the transaction of the following business:—

1. To receive and consider the Accounts, together with the Reports of the Directors and Auditors, for the year ended 31st October, 1955.
2. To declare a Dividend.
3. To re-elect Directors.
4. To re-appoint the Auditors.
5. To transact any other business of an Ordinary General Meeting.

By Order of the Board,

RISING U.K. STEEL OUTPUT

Britain produced nearly 19,800,000 tons of steel last year, an increase of more than 1,250,000 tons on 1954. The aim in 1956 is to boost production by over six percent to yield a new record of the 21,000,000 tons. A statement just issued of a decade British Iron and Steel Federation tells the output has of tremendous expansion in which output has risen by two-thirds. Five tons of steel are now produced for every three in 1945. The statement says: "During this 10-year period the U.K. steel

industry has spent, on an average, over £1 million weekly on modernisation and development. Current expenditure is about £20 million a year. Pig iron output per furnace is 75 percent higher than 10 years ago; similarly, steel output per open-hearth furnace is 75 percent higher. Total steel output has averaged an annual increase of about 5 1/2 percent—under 12 million tons in 1945 to nearly 20 million last year. The statement speaks of "ever-increasing efficiency and economy", and points out, for instance, that since the war, fuel consumption per ton of steel has been cut by about 15 percent. More modern methods have also helped towards a greater output of the alloy steels needed for high-quality and precision engineering. Output has been more than doubled—from 535,000 tons in 1946 to 1,200,000 tons last year.

Aluminium—India's fastest growing Industry

REGARDED with little favour—even for household uses—by the ordinary man-in-the-bazaar some fifteen years ago, Aluminium has today become the engineer's favourite light metal. It is now fast replacing other metals and wood in the construction of railway-coaches, bus-bodies, aircraft and ships. Experts estimate that by 1960 demand for Aluminium will have doubled, rising to about 40,000 tons per annum.

Company's production capacity to 15,000 tons by 1958. In implementing this major project, Indian Aluminium Company will be able to draw upon the resources and know-how of its Canadian associates, Aluminium Limited—the world's largest group of aluminium companies

What will it cost?

The estimated capital requirements for Indian Aluminium Company's Hirakud project are about Rs. 9 crores. A part of these requirements will be raised by a fresh capital issue, half of which will be subscribed by Aluminium Limited and the other half offered to the public.

Aluminium is facing a bright future in India today. India's vast bauxite deposits and water-power resources can support a large aluminium industry for years to come. Harnessing these natural resources, Indian Aluminium Company's Hirakud project will be an important step towards India's goal of self-sufficiency in Aluminium.

What is being done to increase Aluminium production?

Simultaneously with expanding demand, India's production of Aluminium will increase many times. Indian Aluminium Company, who started the first Aluminium smelter in India, are now installing another smelter at Hirakud, Orissa. This smelter will triple the

JOINT STOCK COMPANIES' PREFERENCE SHARES

Dividends are cumulative and shares carry a preferential claim on the property for the payment of capital and on the profits for dividend except in case of companies marked otherwise. Months against names of companies indicate approximately times of payment of dividends.

TEA COMPANIES

O. Po. and Dd. indicate Ordinary, Preferred Ordinary and Deferred Shares, respectively. P. next to the name of the company indicates that the Company also has Preference Shares. Figures in "accounts closed" column indicate the months of the calendar year in which accounts are closed. For Managing Agents refer to the Key (last page) under the numbers indicated.

THE COST OF INDIAN TEA

HIGH TAXES AND WELFARE CHARGES IMPAIR COMPETITIVE STRENGTH

IT is already clear that the 1955 crop year will not be a good one for the world's tea growers. The reason is over-production; the same as held true the last time the industry was in difficulties. Regulation plans are again in the offing, while for those who care to see the obvious, here is one more reminder that plantation industries are inevitably subject to sharp changes in fortune. This fact is all too readily forgotten. It is easier to remember that there have been difficult times before, but that the gardens are still there. This is certainly likely to be true in India, especially after the spectacular recovery of the past two years. It is one price the industry will have to pay for its recent prosperity: the other is already being met in higher costs. Steps are being taken to cope with the situation, both from the supply and demand points of view. But what the industry itself seems unable to influence is its own cost position. The last two years have seen this deteriorate steadily. The Plantations Labour Act is a current charge which will have to be met whether overseas tea drinkers are prepared to pay for it or not. The list of taxes is already a long and dismal one. Now there is the bonus agreement to add to it. The industry is not in anywhere near as good shape to meet a crisis as it was in 1951, and largely for this reason. A lower level of costs would be a useful competitive advantage in a market which is increasingly price and quality conscious; a flexible one has now become an absolute necessity if the industry is to avoid the damage which these violent swings of prosperity and depression can inflict.

The new bonus agreement is not a fixed cost, but it is a charge on the profits from which the industry must replenish its reserves and pay its shareholders. When the temptation is to dismiss these two items as having been well taken care of recently, it is as well to remember that their reserves were often all that stood between the gardens and complete bankruptcy in 1952 and that prospective investors are as likely to remember that year as everybody else seems to be to forget it. This is scarcely the time for granting plantation workers conditions more favourable than those enjoyed by any other class of industrial labour. There are many ways in which the Government can help the industry over its present difficulties. But the chief among them would be to take a more realistic view of the cost problem. Efforts to establish steady and expanding demand conditions will not ensure continued prosperity for the gardens while their costs are so completely beyond their own control.

The industry's present difficulties are due to three main causes. The first is the world's long-term tendency to over-produce, considering the rate at which the consumption of tea is likely to grow. The second is the medium-term prospect of an excess of North Indian supply over demand in the coming season. The third, and one which is dealt with at length on another page of this issue of Capital, is the Government's decision to restrict the quantity of tea for sale at the London auctions. The first two are already being tackled from the demand side, but the effects are necessarily slow in manifesting themselves. The supply problem is largely a question of whether another international tea agreement can be negotiated. The attitude of Ceylon has been the chief obstacle up to now and, although the prospect of a more reasonable view has improved lately, the initiative of the Indian producers in restricting their own crop may have put this one stage further back. There can no longer be any doubt about the need for another international agreement if the Indian industry is to maintain its present size and carry its excessive weight of costs. Ceylon's interest can be expected to vary directly with the prospect of its tea industry being ruined by low prices on the world market; this may well become more serious as the year progresses. Negotiations are at present going on with Ceylon. Time may be in India's favour because, as a last resort, there is always a home

market to supplement export demand. Voluntary restriction by the North Indian gardens can help temporarily to keep prices up and the destruction of residue teas is a useful way of improving quality. But in the long run it is no substitute for an international agreement and, if maintained for many years, might grant the Ceylon producers and those of South India an unnecessary competitive advantage. It was perhaps the weather rather than the restriction scheme itself which restored prosperity to the industry in 1953.

The fact underlying the problem of regulation is that the increase in the North Indian crop is likely to be permanent, averaged over good and bad years. The lower quality of teas produced this year (due to the weather) means that the destruction of 10 million pounds of residue varieties will justify itself by keeping up the prices of the lower grades generally. But in a year when quality is high, the loss of so much tea could be a bad blow for the North Indian industry. Ultimately, unilateral restriction is the path of suicide. Markets once abandoned will not be easy to regain, especially when other producers

this will be effective against the ravenous trade which survives and flourishes openly today despite the nearly similar provisions that the law already contains.

The main criticism against the new Bill, however, is likely to centre not on the details, but on the motivating assumption under which a maximum return of 6½ percent gross taxable is regarded as sufficient to induce larger investment in property. Indeed, this provision alone would seem to ensure that the effects may be quite contrary to those intended. Rather than tenants being able to secure accommodation and stay in it with less difficulty, there is a very real danger that in years to come they may have progressively less accommodation left to secure. The investor who proposes to build a house other than for his own limited needs realises that property is a long-term investment to which many special risks apply. It is relatively illiquid as an asset, the premises may remain vacant for considerable periods, and rents are sometimes difficult (often expensive) to collect. In this context, even the maximum return which is proposed to be allowed him under the new Bill is most inadequate in comparison with other investments of a similar nature. The actual return, after provision is made for repairs, etc., is liable to be even less adequate. In fact, on one calculation, it will be no more than 6½ percent taxable, and for none except a few types of property is this likely to be regarded as adequate. The demand for such properties is already approaching satisfaction.

The type of property which is in most urgent need is that which offers residential accommodation to the "lower" and "middle" middle classes. The security attaching to these is less, so higher returns are expected, but since the Bill does not allow these it seems to ensure that fewer and fewer properties of this nature will be built. If the Bill seems to ignore the conditions under which new buildings can be put up, it seems equally to ignore the conditions under which the old ones can be maintained. The fact that the increase in controlled rents has been far short of the increase in building and repairing costs is responsible for the shoddy state of a vast majority of structures today. To the extent that the new Bill does nothing to alleviate this state of affairs, it will accentuate the housing shortage, especially since many houses are deteriorating so rapidly today that they may soon become uninhabitable. The housing dilemma is a real one. People will not build houses until they can get better returns through higher rents, but the latter the Government is not prepared to inflict on an already hard-pressed middle class. Yet, it is difficult to see how this can be avoided if the bigger cities—and Calcutta especially—are to become less deficient and slummy than they already are. The Government could undertake vast new construction schemes, but it does not have the money. One reason why it does not have the money is that, like Maulana Azad, it is more interested in education, especially the sort of education that brings an army of misfits into the cities, for whom no jobs nor accommodation can be found and who lose much that is good in them in the demoralising atmosphere of parasitic urban living. The reliance must, it seems, remain primarily on private enterprise, on the sort of thinking that looks much further ahead than the needs of today, tomorrow or the next year. If higher returns were to be allowed on investment in property, the community would pay a price in the short period, but would certainly reap much bigger rewards in the longer run—by having more houses whose initially high rentals would steadily decline to a level where tenants would be paying no more than they do relatively for their other needs.

This alone would not be enough. The new freedom would need to be tempered by much more stringent regulations on other aspects of building, such as the type of structure proposed, its likely life, and—most important of all—its spacing away from other structures. The brotherly neighbourliness with which shoddy structures arise today within six feet of other structures, and the way they encroach with impunity on already narrow roadways, needs to be firmly stopped. The problem is not as difficult as it might at first sight seem, for, as other cities and countries have already discovered, one way to ease congestion is to build taller buildings. In other words, it is necessary to give building expansion sharp new impetus in a "vertical", rather than in a "horizontal", direction. Expansion of the sort that is going on in Calcutta nowadays—"horizontal", rather than "vertical"—is mainly responsible for the congestion on the roadways, and for the lunacy which finds free play there. In the same manner, this sort of expansion, threatening as it does the "lungs of Calcutta", the Maidan, requires to be ruthlessly ended unless this city is to be presented with more slums.

It seems that the order of priorities for India's bigger cities, Calcutta especially, is fairly clear. Firstly, it is essential to stop the vast waste of resources that goes into the construction of flimsy, ugly and nearly uninhabitable buildings. Secondly, it is necessary to allow greater freedom for new construction—from the investment aspect, from the legal aspect (by making eviction easier

where "vertical" expansion of a site is planned), and in the supply of cheaper building materials. Thirdly, until some sort of a town plan can be evolved, there is a need to regulate firmly certain aspects of any construction that is proposed, such as its distance from the road and from other buildings, and the proportion of land on which it is built. Perhaps, if some moves were made along these lines, the homeless may be able to see an end to their years-old trek in the footsteps of rapacious house-brokers and landlords which has hitherto often ended in the converted *gaushalas* and pigsties of the city.

A NEW CENTURY FOR JOINT STOCK ENTERPRISE

RESOLVING RIVAL CLAIMS WITHOUT DEPENDENCY ON INFLATION

IT has not been very widely noticed that Britain has lately entered the second century of modern industrial finance—the method of the free enterprise, or capitalist, system. Just over 100 years ago, in 1855, after heated controversy outside and inside of Parliament, the Limited Liability Act was passed. As the President of the Chartered Institute of Secretaries, Mr. B. G. Porter, said in London when commemorating this event, the needs of modern industrial development could not have been met unless the liability of individual subscribers of capital had been limited, so that the area from which capital could be drawn into business could be greatly widened. The whole system of modern corporate enterprise is founded on that principle, and we are apt to forget that, for generations before the Act was passed, the corporate principle itself was tolerated rather than encouraged. Indeed, it is interesting to reflect that if Britain had been the pioneer of limited liability, instead of adopting it tardily after Italy, France and the United States, she might have built up more industrial strength and, later, resisted the challenge of competitors more successfully.

Turning abruptly from history to the present day, we may note that one of Britain's big motor companies, Standard Motor, has stated that "if there is to be any further sharing out of profits then it is the customers who must have benefit"; and that Sir Thomas Sopwith, chairman of one of Britain's big aircraft companies, Hawker Siddeley, has remarked that "the shareholders have for too long been left behind in the race against rising prices and should be allowed to participate in the increased prosperity of the company". Both these companies have been troubled by strong demands from their employees for a bigger share of profits. So we have a picture—which is representative of most companies in Britain or anywhere—of a three-way conflict of interest between employees and shareholders and customers. In this second century of modern free enterprise this conflict will not be easily resolved. In recent years it has been partly hidden by inflation. Rising prices have meant rising profits, out of which both workers and shareholders have got larger incomes, where with they have been able to pay the higher prices. However, Mr. Porter, quoted above, described it as "a pernicious idea" that "inflation is not too bad after all." There is no general legal limitation of prices as there is of liability to creditors, and people with fixed incomes have a social right to protection against erosion of the value of their money. Moreover, the savings which the system of limited liability has helped to make available are not now accumulated so willingly, when their real value is always tending to diminish.

Lack of personal savings brings into prominence a fourth element in this conflict of interest: the need for each company to save a substantial proportion of its profits to finance its development. This method of providing industrial finance is often criticised, for it may distort an economy's total development by retaining in particular companies and industries money which, if more freely distributed to shareholders, would finance development of other companies and industries. But it can equally be argued that in present circumstances a considerable part of any additional distribution to shareholders would not be made available for investment at all but spent on consumer goods. It is perhaps unfair to say that, against so much criticism from so many conflicting interests, the whole system has become defensive, but it has certainly become more adaptable. Always in the background is the judgment of John Stuart Mill (who played a leading part in the controversy of the 1850s) that "whatever, if left to spontaneous agency, can only be done by joint stock associations, will often be as well and sometimes better done, as far as the actual work is concerned, by the State". Either spontaneously or because there is always the alternative of nationalisation, big companies have developed a social morality, which recognises that profit is not the only possible motive for their activities. Yet as soon as the principle of big profits is abandoned all sorts of complications arise. An industry that

does not earn good profits cannot at the same time attract workers by high wages and capital by high dividends; nor has it large resources which it can, if desirable, invest in its own development. In the compromise between apparent self-interest and apparent social interest, the true interest of the community may be obscured.

There is perhaps more danger at present that two interests will combine against a third—the management (representing also the shareholders) and the employees against the consumers; while the needs of capital development are also provided out of excessive profits arising from high prices. Employees have their own restrictive practices, designed to get as much as possible out of the profits that their labour, combined with management and capital, earns; but they are equally interested in the restrictive practices of their companies, which help to maintain or increase the profits available. In various countries, not least in Britain, sterner action is being taken against industries and trades which form themselves into associations to restrict competition and so maintain prices and profits. The consumer as such (no matter that in another capacity he is usually a producer) must not be allowed to establish a level of prices that weakens its power to compete against foreign goods and services. But the most insidious protection of all is, perhaps, inflation. It has been used by Governments to provide plenty of money to distribute among all the conflicting interests and to maintain an illusion of prosperity—or, if the prosperity is not an illusion, it is unfairly distributed. The process cannot go on indefinitely. The time has come when the system based on the joint stock company, now mature, must solve its problems without inflation.

CURRENT COIN

Cycling to Prosperity.—Few chairman's addresses in recent months have been as pleasant to read as Sir Ramaswami Mudaliar's at the recent annual general meeting of T.I. Cycles of India Ltd., in Madras. (A full version appears on a later page.) Since bicycle manufacture is in many respects a branch of the smaller engineering industries, the address has much broader implication and lessons than just for T.I. Cycle shareholders. Other sectors of engineering are apt frequently to complain that they cannot get enough work to do; the progress of T.I. Cycles—as indeed also of some of its competitors—offers, in contrast, some valuable clues as to why this may be so. Sir Ramaswami reports that the position of his company is so good that demand often outstrips production; yet—and this is the crucial point—prices have been further reduced in order to expand what is a very promising market. The price reduction has not involved a decline in quality; on the contrary, quality has steadily improved, so much so that experts from the British factory consider it no longer necessary to distinguish the Indian product from the British by giving it a different name. Sir Ramaswami attributes the improvement in quality to two factors. One is that the latest machinery has been installed, most of which is automatic. The other is that the utmost care is taken to see that any component which may be below standard is immediately rejected. It is encouraging to note that T.I. Cycles of India is contemplating expansion. Under the second five year plan, the total demand for cycles is expected to rise beyond one million a year, and T.I. Cycles has received Government sanction to increase its manufacturing capacity from the present limit of 100,000 cycles a year to 200,000 during 1956. Sanction has also been received to manufacture 100,000 sets of cycle components a year, and this will be possible with the additional machinery now being installed. The company will then be in a position to manufacture in its own factory more than 80 percent of the components required for a complete cycle. Tubes are the only components that will have to be imported for some time, but a new company—Tube Products of India Ltd.—has been floated, which is to set up a factory in Avadi to produce electrically-welded tubes for all industrial requirements, and in particular for the requirements of the cycle industry. The factory is expected to be in production early next year, and is to be built with the participation of the British collaborators of T.I. Cycles of India.

Rights Issues at Par.—In recent weeks, the question whether established companies whose shares are quoted at a substantial premium should be allowed to issue fresh capital to shareholders at par has gained fresh importance. The Committee of the Bombay Shareholders' Association has just published a memorandum which discusses the proposed issue of ordinary rights shares by the Tata Iron and Steel Company. The memorandum points out that a bonus issue is fundamentally different in character from a rights issue. An offer of rights shares at par, it says, cannot be inflationary in real terms; on the contrary, it could

actually cause prices to fall as many shareholders might have to sell off a part of their holdings in order to get money to obtain the new shares. Since as large a sum as Rs. 10 crores is involved in the Tata Iron issue the fall in the market might in fact be quite steep, unless the psychological factors are markedly favourable. The memorandum denies the argument that an issue of shares at par by established companies, whose stock already commands a good premium, would handicap new companies in obtaining their capital requirements. Capital issues by new companies, it points out, are successful mostly on a rising market. Far from preventing new companies from obtaining their capital requirements, an upward movement would thus be psychologically more favourable in encouraging public interest, and thereby improving the chances of success. As the Tata Iron ordinary shares exert a particularly strong influence on the general trend, if their price fell sharply the market as a whole would suffer a severe slump. With sentiment depressed, issues by new companies would fail to find much investment support. The issue of new shares at par would help improve sentiment and the dangers would be minimised; a premium issue may prove to be a psychological mistake and damage the prospects not only for the stock markets but also for new capital issues. The memorandum goes on to state that the perverse attitude of labour courts and tribunals has made it necessary to abandon the practice of issuing rights shares at a premium. In considering wage and bonus questions, the authorities have been prepared to allow a reasonable return only on the paid-up capital, and have awarded either a lower return or no return at all on the reserves built by shareholders in earlier years. Another reason why rights shares should not be issued at a premium is that inequitable and confiscatory terms of compensation are sometimes paid to shareholders when nationalisation takes place. The memorandum contends that companies' reluctance to issue additional share capital at a premium is no longer based on apprehension and expediency. It is now a matter of necessity in view of the recent amendment to Section 26(A) of the Indian Income-tax Act. This amendment provides that, on the liquidation of a company, all the surplus over and above the paid-up capital is chargeable to tax in the hands of shareholders just as if it were a dividend earned by them in that single year. It is therefore unfair to ask shareholders to sanction a new issue at a premium on these terms, particularly when, as in the case of the iron and steel industry, there is talk of nationalisation every now and again. The Committee of the Bombay Shareholders' Association states that the new Tata Iron issue should be made at par, otherwise the market may be disorganised, its capacity for subscribing to new capital will be weakened, the confidence of shareholders will be undermined and the interests of investors will suffer serious damage.

U.S. Economic Aid.—Economic development has now emerged as one of the most vital forces both in international and national politics and policies. In countries where capital is scarce and the elements of large-scale expansion at a premium, economic aid in the form of finance, technical co-operation and gifts in kind, has come to be accepted as a moral obligation on the part of the more advanced nations toward the common struggle for a higher standard of living. One of the first countries to translate this policy into practical terms was the United States under the Marshall Plan. Under the circumstances existing in South and South East Asia today, the Colombo Plan, is the expression of the idea. Many nations have contributed to many schemes, each to the extent of its ability, but it is possible that more has been expected of America with her vast resources than from some of the smaller donor countries. Her open-handed, almost impetuous generosity in the past has set a high standard. Disappointment was all the keener therefore when evidence of an unwelcome reluctance to participate in certain projects crept into America's economic aid policy, which has more and more appeared to be swayed rather by political considerations than by philanthropic aims. In the light of the subsequent antipathy aroused and the mounting fears of a dollar-controlled colonialism, President Eisenhower's recent speeches are doubly welcome. He has stated that his administration proposes to spend \$1,200 million on existing economic programmes in the fiscal year ending June 1957 and \$500 million on new programmes. He has appealed for limited authority to make long-term commitments to be fulfilled with funds appropriated in future years. Moreover, in his State of the Union message, speaking for the American people as "co-operating members of the family of nations" a more balanced note was apparent when he said: "We must act in the firm assurance that the fruits of freedom are more attractive and desirable to mankind in the pursuit of happiness than the record of Communism." It is understandable that America's pre-occupation with the possibilities of Communist infiltration should surprise India, who has seen behind the Iron Curtain and whose present fears are so

obviously less than America's horrible imaginings. It will now be up to India to convince the still sceptical public of the United States that the red carpet so recently laid down for the Russian leaders was a physical and not a spiritual one. For out of the vast sum voted by the American people to economic aid, a substantial portion will be earmarked for this country, and although Mr. Krishnamachari voices a correct and laudable sentiment when he eschews the begging bowl, Rs. 800 crores, the estimated amount of foreign aid required for the second five year plan, is a considerable sum. And it is difficult to see how else it could be provided. According to *Time* the U.S.A. has helped India to the extent of \$718 million in the last three years, and there is little doubt but that she could be India's biggest source of external aid for many years to come. But the free flow of capital which India so badly needs and America desires so genuinely to give, depends very largely on a two-way renunciation of the present spirit of mutual suspicion and mistrust.

Boom Year for U.S.A.—The United States has ended its busiest and most prosperous year with the indices of overall business activity at the highest levels of the year, says the First National City Bank of New York in its January letter on U.S. business and economic conditions. Latest figures on production, non-farm employment, consumption, income and investment indicate that the trend is still upward. In some lines of industry, output has ceased to expand only because it is bumping against the ceiling of capacity. In the exceptional cases where slackening of demand is reported, seasonal influences, whose weight is always difficult to appraise, are at least partly responsible. Although business activity has increased, without even a temporary reversal, for nearly a year and a half, and it would be unreasonable to expect growth to continue at the recent extraordinary rate, the momentum derived from well-filled order books and expanding investment programmes will carry the economy into the opening months of 1956 at record levels. More people are at work in the United States than ever before. By any practical definition, employment is full, and overtime work is frequent. Workers are now turning out goods and services at a rate which is approaching \$400 billion annually, compared with a total output of \$360.5 billion in 1954. Personal incomes and purchasing power have increased to all-time peaks. People have bought freely, augmenting their own resources by borrowing and living standards, already high, have risen to new heights. Corporations are reporting their best peacetime profits, and increased dividends doubtless have helped make Christmas retail sales the highest, by a good margin, in the country's history. Along with this activity go feelings of optimism and well-being. It may be added that the prosperity which the United States is enjoying exists not only across the nation but also throughout much of the free world. This is by no means the only country that can call 1955 its record year. A year ago most observers were optimistic; the consensus was that 1955 would be a good year. Few, however, thought it would be a record-breaker. The ever, thought it would be a record-breaker. The actual year-to-year expansion of 9 percent in total output of goods and services and 7 percent in disposable income, as shown by the latest figures, is considerably greater than most people expected and more than double the economy's long-term average rate of growth. The gains of 1955 were all in the private sector; Government expenditures scarcely changed. The under-estimates of the prospect stemmed essentially from under-estimates of consumer expenditures and the willingness of people to borrow and buy. The actual turn upward in business indices in the autumn of 1954 was attributable more to the end of inventory liquidation and the resulting lift in orders and production than to any other single factor.

Employment in November.—The employment situation during November, 1955, showed signs of improvement as the number of registered unemployed at the end of the month declined to 681,161 from 695,239 in the previous month. The number of placements during the month was 14,856 as against 13,461 during October, 1955. Of the placements secured, 6,210 were under Central Government departments, 4,971 under State Government departments and 3,675 in non-Government establishments. The number of employers that utilised the services of the Exchanges during November was 4,835 as against 4,599 during October. There was a larger supply of untrained teachers, clerks, freshers from schools and colleges, motor drivers, carpenters and unskilled office workers during the month. Automobile cleaners, motor mechanics, chowkidars and semi-skilled fitters were generally surplus to requirements. There was a shortage of suitable applicants for posts of stenographers, compounders, experienced draughtsmen, overseers, trained teachers, experienced typists and midwives. A number of Exchanges reported a dearth of qualified doctors, experienced civil engineers, surveyors, lady health visitors, nurses, road roller drivers, welders, electricians and physical training instructors.

TEA BOARD

EXPORT QUOTA 1956-57

TEA PRODUCERS IN INDIA ARE HEREBY reminded that in terms of Rule 23(1) of the Tea Rules 1954, Tea Estates desiring to be allotted an export quota for the year 1st April 1956 to 31st March 1957 are required to submit an application therefor, which must be filed with the Tea Board not later than the 1st February 1956. No export quota will be allotted unless application under this rule is duly filed. Application forms have already been issued to all registered estates, but the Tea Board will not hold themselves responsible for any omission in this respect, and Proprietors, Agents, Managing Agents or Secretaries who have not received the application forms are requested to apply for these, in the case of estates situated in North India, to the Controller of Licensing, Tea Board, 27 & 29, Brabourne Road, Calcutta, and, in the case of estates situated in South India, to the Joint Controller of Licensing, Tea Board, Church Road, Fort Cochin, Cochin 1, South India.

Without Prejudice

MORE ENGLISH CASES IN 1955

ESCAPING BURGLARS, WANDERING CHILDREN AND CURIOUS COWS

(FROM OUR LEGAL CORRESPONDENT)

THE following is not an actual decided case but a moot: a prize one set for decision by the law debating societies of England by the learned editors of *Law Notes*. The principles of law which arise in it are the same both in India and England, and the incident itself might at any time occur to a householder here. As is usual with these moots, the wording is cunningly devised and full of snags, and therefore has to be carefully studied: the question, nevertheless, in the writer's view, is essentially one of common sense and the opinion of the non-legal reader is just as likely to be right as that of the most learned lawyer. This is the problem: Slick, while staying with friends in the country, hears a noise at 1 a.m. under his bedroom window. He jumps out of bed, looks out of his open bedroom window and sees a man, subsequently identified as a notorious burglar named Sykes, on the dining room window-sill trying to force open the latch of the window. Slick picks up one of his dumbbells weighing four pounds, looks out of the window again and sees Sykes jumping from the sill on to the garden path. Sykes, at the same time, shouts: "Run for it, I'm off." As Sykes lands on the path five feet below the sill, Slick throws the bell at him and it hits him on the head. Sykes collapses and dies in hospital the next day from the effects of the blow. Is Slick guilty of felonious homicide?

Nine societies debated the point. They came to a majority decision of seven societies to two, and personally one cannot remember disagreeing more wholeheartedly with a majority vote: moreover, one confidently expects the reader to disagree too. Durham and North Yorkshire carried off the first prize and they, with six other societies, decided that Slick was guilty of homicide—presumably manslaughter. Two societies decided that Slick had committed no offence, and so says this deponent and, he hopes, the reader. And whatever the judge's directions on the law were, one is certain that no jury, and especially no Bengali jury, would convict a man whose only motive was to try to do his duty as a citizen and bring about the arrest of an escaping felon.

A majority decision of the High Court, which

may put a number of the smaller professional football clubs in England out of business and which is of interest to other clubs too, was that in *Maynard v Williams and Others*. *Law Notes* (74) p 35, 1955. The Supporters Club of a certain professional club organised a weekly lottery for the purpose of raising funds for the football club. This was being done by other Supporters Clubs all over the country from the big League Clubs to the small village ones, and the decision roused great consternation everywhere. It seems that whether the strict law is enforced or not depends on the whim of the chief constable of the county or borough concerned. In the case of this particular club about 5,000 one-shilling tickets were sold each week, the sale being confined to members of the Supporters Club. It was held by a Divisional Court (Lord Goddard, L.C.J., and Cassels J., Devlin J. dissenting) that the lottery was illegal and its promoters liable to prosecution. Efforts are being made in Parliament to amend the law in the face of this disastrous decision.

Here is another of those legal conundrums where the facts are quite simple, but which will make you think a lot before you come to a hesitant and possibly incorrect conclusion. It concerns the duty, if any, of owners of land or buildings who tacitly allow children to wander about thereon, to take care of the personal safety of those children. What would you say on these facts? The defendants were the occupiers of a large open space of grass-land, part of a building site on which they were erecting a housing site. Across this space ran a long and deep trench dug for the purpose of laying a sewer. A boy of five years of age, together with his sister, aged seven, went on to the land to pick blackberries, and the boy fell into the trench and broke his leg. Children were in the habit of using the open space. The defendants knew this and had taken no steps to prevent these small children from so doing. Were the defendants liable for the injury to the child? Now this case is nothing like as easy of solution as it sounds. It raises all sorts of questions like the duty to take care, responsibility to invitees, licencees, trespassers and the like, wherefore one presents the judicial answer, which may go further by way of appeal, with considerable diffidence. Judges in India may hold different views as to what constitutes negligence.

Nevertheless the English decision seems plain common sense and one ventures the opinion that it will stand. It was that the occupiers of the land were not liable. Parents of children have a duty to take care of them, which means that their duty

is not to be negligent by failing "to do something which a prudent or reasonable mother in her position would have been able to do and would have done." The converse position arose in the House of Lords decision in *Caernarthshire County Council v Lewis*. 74 L.N. (1955) 82. A child of four strayed from school on to the highway and an innocent lorry driver, in saving the little boy's life by avoiding him, was himself killed in the resulting smash. The lorry driver's widow sued the County Council as the Education Authority owning the school from which the boy had wandered. The House of Lords, by a majority, held that the Council was liable, though there was no negligence on the part of the schoolmistress. They were under a duty to take care that a child of four in their care neither became involved in nor caused a traffic accident. The gates from the playground (from which the little boy wandered) must either have been open or so easy to open that a child of four could open them. True it is that "an occupier is under no duty to fence his premises so as to prevent cattle from escaping on to the highway but this rule, even if it applied to towns and populous places, is not to be extended to the presence on the road of human beings of whatever age."

Talking about negligence, there was reported in the *Daily Telegraph* of 14th June, 1955, the remarkable case of a Scottish cow devoured, it seems by curiosity. This cow was in the charge of a firm of livestock auctioneers. She left the auction market and, making her way down the street, entered a building, climbed a flight of stairs and fell through a floor into a shop turning on a water tap in the process, thereby causing considerable damage to the premises, for the recovery of which the auctioneers were sued. The case came on at Inverness and Sheriff Hector McKechie, Q.C., dismissed it. Said he: "For a cow to go up stairs is almost unheard of and it was not a possibility of which a reasonable man would take account. I feel bound to conclude that a gate-crashing, stair-climbing, floor-bursting, tap-turning cow is something for whose depredations the law affords no remedy." Knowing nothing about the laws of Scotland we will refrain from comment except to suggest that if an English cow in an English town had so scandalously misbehaved itself, the auctioneers would have been liable for the damage on the simple ground that the erring cow was in the charge of the auctioneers and that it was their duty to see to it that she was secure in their auction market and not in an upstairs room in somebody else's house. [74, L.N. (1955), 157.]

The cases in this short summary of English decisions during 1956 have all been selected as being borderline ones in which the reader, and especially the legal reader, may take quite a different view of the law from that laid down by the court. Take this one, for instance, which must have given a severe headache to the solicitors of Mrs. Slade before they took the responsibility of advising her to file a suit. Mrs. Slade's husband was a patient and had been such for 24 years in a hospital controlled by the Battersea and Putney Group Hospital Management Committee. The husband was put on the "danger list" and his wife was notified of the fact and given permission to visit him at any time. She did visit him and had been in the habit of so doing during his long illness; and was therefore familiar with the hospital. Whilst she was visiting him one morning, polish was applied to part of the floor of the ward, but, as it had not been polished off, the floor was slippery and dangerous. She was not then warned of the danger, though she had been warned on previous occasions. She did not know that there was polish on the floor and fell, and sustained severe injuries. Were the Hospital Management Committee liable to her?

"Yes," said Finemore J.: and "No," says with due respect one humble protesting voice, the writer's. His lordship held that Mrs. Slade was an invitee, "since, although her husband was not a paying patient, a visit by a wife at the invitation of a hospital to her dangerously ill husband in the hospital is a matter of material interest both to her and to the hospital. She was properly in the ward and the danger to her was caused by a current operation and not by the static condition of the premises so that the distinction between whether she was an invitee or a licensee had no relevance. The Committee's duty to her was to use reasonable care and there had been a breach of that duty." But admitting the Committee's duty to "use reasonable care" what about the duty of the lady to "take reasonable care" of herself? Every housewife knows that it is customary to use floor polish and that, as a result, floors become slippery and must therefore be walked on with care; every adult who has visited a hospital knows that the floors of the wards are polished. Certainly this lady knew from her visits during 24 years to the hospital. Also she had been previously warned and with those warnings one would have thought that the hospital's duty to take "reasonable care" in that respect had been performed. How many times has a busy nurse, with her mind on her other exacting duties, to warn a regular visitor that the floor of the ward has been that day, as on other days on which the same visitor has actually been warned, been polished again? The writer would have thought—wrongly, as now appears—that there was no negligence at all by the hospital authorities; and that, even if there were, the main and primary cause of the accident was the lady's own failure to take reasonable care of herself: in short, contributory negligence. [74, L.N. (1955) p. 90.]

(To be concluded)

*This article is continued from last week's Capital.

A DITCHER'S DIARY

were often four and five-hour struggles with boiled or roast meats weighing up to thirty pounds. In the 19th century, Charles Lamb declared that he suspected a man's taste in higher matters if he swallowed his morsels of deer's flesh, "affecting not to know what he is eating." Contrary to popular belief, the British tradition of gormandising continued into the present century: D. H. Lawrence, for example, was a connoisseur at the table and an excellent cook. He even contemplated writing a cookery book. A. E. Housman was such an artist at eating that a Paris restaurant named a dish after him, *barbe Housman*. And even at the risk of incurring the Prohibitionists' wrath I must end with a quotation from his poem to beer: Malt can more than Milton can Justify God's ways to Man.

I can recommend the agreement the Tata Iron and Steel Company has just signed with its employees as being a most enlightened document; Indian industry would certainly benefit from more of the same. It is only my old-fashioned liberalism which leads me to wonder where those two much-neglected groups, shareholders and consumers, are going to stand if this type of arrangement becomes the fashion. I can see well enough that they gain from the cost-saving which smoother relations between workers and management will ensure. For the consumer that is probably enough. But shareholders were once considered to have interests in their property which reached a little further than this. They were supposed to have, for instance, the right to handle it the way they wished, subject of course to the limitations of the law. I cannot help but regret that such ideas seem to have become long since out of date. Tatas, of course, are merely facing up to an accomplished fact and are making the best of it. If they are among the first to acknowledge openly the right of the worker to a say in the management of what is still, in the eyes of the law if not in those of social reformers, the property of the shareholders, then I suppose that is merely a sign of their progressiveness. All reactionary, outdated ideas of social justice apart, I can see that the agreement is a great step forward. Separated from its participation-in-management provisions it reminds me of some of the pacts between employers and employees which have become a feature of industry in the United States. There they have played an important part in encouraging an appreciation of the fact that both sides have a vested interest in increased output and productivity. Given current ideas about what is and what is not the proper function of a worker, this sort of agreement is without doubt a prototype for the future. But I cannot help sparing a tiny thought for what was once considered to be the proper application of the principles of justice and democracy to company ownership and management. The trouble is that it will probably be dispelled by the uninterrupted roar of increased activity.

It is not often that I have occasion to refer to the same topic twice in quick succession. Events generally move swiftly and one of my besetting problems is deciding which are most worthy of what I consider to be rather precious space allotted to the Ditcher. But I do want to squeeze in one more reference to the concerts sponsored by the Calcutta School of Music. I could not help noticing that attendance at the two given last week seemed rather larger than usual. No doubt the appearance of Raffi Petrossian was responsible, and, as far as I am any judge of music, ample justification. My only comment on M. Petrossian's

exposition at the keyboard, is "superb". At the same time, I cannot help wondering why there should be so much difference in the support given to a celebrity and that granted to local talent. This is supposed to be a city of music-lovers and, although it is a pity that opportunities for listening to really good music are severely limited, I think it is even more regrettable that greater advantage is not taken of those which are offered. If the efforts of local musicians are judged carefully, they must be classed as exceptional, since most performers have heavy commitments other than their music. It is unfortunate indeed that the appreciation which I am sure is felt, is not a little more actively shown. If any consciences have been stirred by what I have just said there is probably no better way of showing appreciation at this late juncture than by expressing it in terms of hard cash. I believe the School is very much in need of a new concert grand. M. Petrossian, I see, has generously donated his fee for his third recital to the piano fund. What better example could be set? I can think of few more appropriate ways of sponsoring what claims to culture Calcutta might possess than by sparing a little of what Mr. Deshmukh leaves for closing the gap in this fund which, by the way, was no more than Rs. 3,700 at the end of December.

If anybody should care to hold a contest for the most de-natured of nature's creatures, with all due respect, I would like to enter that unfortunate bird, the barnyard fowl. Surely no other multicellular organism has had its habits more ruthlessly interfered with for man's convenience. Nowadays it is apt to start life with a kerosene burner instead of a mother. It can expect to be hoodwinked into laying more eggs because its nights are turned into day with the aid of electric lighting. It is put on wire-netting when it goes broody, provided with a pot imitation egg to jog its memory, fattened for eating and when it appears on the table, has had its entrails removed and replaced with stuffing. I have even heard of its being provided with spectacles to prevent its pecking. In every way the poor hen must have come to realise that man regards it as a most unsatisfactory creature, fit only to be substituted by something more suitable as soon as science can devise it. This process has now apparently been carried a stage further. I read in the Economist the other day that in the United States (of course) plastic technologists have devised a process for removing the egg's valuable contents from the useless fragile and unhygienic container in which the hen lays them and encasing them instead, ready for sale, in plastic envelopes. Now this is a brainwave which really recommends itself. There will be no reason to worry any more about breakages. Eggs can be dropped or sat upon at will. A purchaser will not need to ask if they are fresh, he will be able to see for himself. Politicians can address public meetings without a quail; although this, I must submit, is a serious drawback to the idea. And, oh yes, there is the all-important question of hygiene, which nobody these days can afford to overlook. How much better to know that the eggs we eat have been extracted from unclean nature's own casing, especially when we are assured that the whole process is completed "untouched by human hand". It is bad luck for the hen, but I am sure it will accept the change with its traditional progressive appreciation of the fact that, after all, God's creations are very imperfect compared with those of man. It remains only to reach international understanding on the question of how these new shell-substitutes are going to be opened. As we know from our Gulliver's Travels, this can be a very serious matter indeed.

Company Meeting

T. I. CYCLES OF INDIA LIMITED

SIR A. RAMASWAMI MUDALIAR'S REVIEW

Address by Sir A. Ramaswami Mudaliar, Chairman, T. I. Cycles of India Limited at the Sixth Annual Meeting at Madras, on 23rd December, 1955.

Gentlemen,

It gives me very great pleasure to welcome you to this annual meeting of the T. I. Cycles of India Ltd. The Directors' Report and the Audited Accounts and Balance Sheet for the year ended 30th June, 1955, have been before you for sometime and with your permission I shall take them as read.

It is a matter of satisfaction to be in a position to report that your Company has made further progress during the year under review. Factory 'B' which was erected for the manufacture of component parts is being extended to accommodate additional machinery which has been imported to increase the output of cycles and cycle components. The plant for the manufacture of freewheels has also been ordered and will shortly be arriving. This will enable the Company to manufacture freewheels for the cycles produced at the Factory and also to make them available to other manufacturers.

A building is also being erected for housing a modern and up-to-date canteen for the use of the staff and factory workers and it is expected to be opened early in the New Year. The construction of an administrative block for the accommodation of the office is also in progress. When the new office building is completed the present temporary office will be used for the purpose of assembling and storing finished cycles for which space is badly needed.

Development of Manufacturing Activities

As has been stated in the Directors' Report, the Government of India have been good enough to accede to our request to increase the sanctioned capacity for manufacture of cycles from the present limit of 1,00,000 cycles to 2,00,000 in the year 1956. They have also given their sanction for the manufacture of 1,00,000 sets of cycle components per year, and this will be possible with the additional machinery now being installed for the manufacture of component parts including mudguards and freewheels. Your Company will be then in a position to manufacture in the Factory more than 80% of all the components required for a complete cycle. With the incorporation of a few parts that are being manufactured at other centres in India and excluding the tubes required which are now being imported, it may be truly said that the cycle manufactured in your Factory is practically all Indian made.

Quality of Product

I have consistently stressed in these annual speeches the importance of quality in the cycles produced and I am glad to state that it has now been established that the cycles manufactured by your Company are one of the very best manufactured in India. Till recently these cycles were named 'HERCULES-INDIA', distinguishing them from the 'HERCULES' cycles manufactured and exported to this country by our British associates. Experts from the British factory who have been inspecting our production from time to time were so well satisfied with the quality of our manufacture that they recommended

that the name may now be changed from 'HERCULES-INDIA' to 'HERCULES'. Mr. Arthur Chamberlain the Overseas Director of T. I. Cycles and a Director closely associated with the production of 'HERCULES' in England in accepting the changed name states:

"I am delighted to be able to tell you that I am completely satisfied with the quality and general standard of accuracy of all the work now being undertaken in the Factory. I also feel that the very strict standards which we have laid down together with the meticulous care that has been given to the maintenance of these standards, have ensured that the quality of our products is second to none. In consequence the time has now arrived when I believe we should market our products under the trade mark 'HERCULES' in the certain knowledge that all bicycles emanating from our Ambattur Factory will do more than justice to the name...."

This is high praise indeed and the change in the nomenclature of the product has been hailed by the consumers. The factories that have helped to produce these results and continue to maintain the standard attained are, first, that the latest machinery has been installed most of which is automatic, and second, that the utmost care is being taken and proper supervision exercised so that any part below standard is immediately rejected.

Demand for Bicycles

It is a matter for satisfaction that we are in the happy position that the demand for our cycles often outstrips the production. I sincerely hope that both the supervisory staff and the workers will continue to put their best endeavour to further improve production at our Factory and so meet the increase in demand.

Price Factor

I have more than once stated at these meetings that the cycle is the automation not for the rich but for the middle class and the workers and that, therefore, the consumers' interest has always to be kept in view. Your Directors have taken this into consideration from time to time and have recently further reduced the price of the bicycles without any deterioration in quality. I trust that this gesture will be understood and appreciated by the Government, the consuming public and equally by our own employees.

Second Five Year Plan and Labour's Responsibility

The demand for cycles is expected to rise steadily during the Second Five Year Plan. I stated at one of the annual meetings that the expected demand for cycles will be more than one million a year. Under the Second Five Year Plan preliminary investigations have revealed that the demand will be even more than this. Your Directors will do their best to further increase the target of our production and I am sure I am speaking on behalf of all shareholders when I state that we shall fully co-operate to achieve the wish expressed by the Prime Minister that the Second Five Year Plan in regard to the product of your Company. It is my earnest desire, and in this I have the full support of all my colleagues in the Directorate and of the Management, to do all we can to promote reasonable amenities for labour to keep them reasonably contented and to secure production at the rate at which it has been estimated by the planners. There work is according to what is expected of them and there is no needless deterioration either in the quality or the quantity of the output by the workers. The Labour Minister of the Government of India has deprecated any 'go-slow' tactics on the part of the workers and has stressed terms should be introduced so that there can be a definite understanding on the part of labour of what their work is worth and what their remuneration should be on their daily work. I trust that this statement of the Labour Minister will be fully accepted by all labour leaders loyal to the cause they espouse. I have already given the assurance that the Management would do all that is reasonable to promote welfare conditions.

New Tube Project

I now come to a point which I have briefly indicated in my prefatory remarks. I stated that tubes ed into this country for some time. I am glad to be fill this want. The tube is an essential component in cycles and it is necessary in the larger interest of the country that they should be manufactured in India in sufficient quantities to meet the requirements of their country. Your Directors have been exercising been considering the problems of production of tubes for cycles and for other purposes in India. Our British collaborators in the cycle industry who are the precision tubes have now come forward with proposals for participation with Indian interests in this venture. Early this year Sir Ivan Stedford, our British Indian Directors and discussed with some of the establishing a Tube Mill in this part of India. I am glad to inform you that the result of the discussions of India Ltd., has been floated and land acquired in early in 1957 this Factory will be in production and industrial requirements and in particular for the requirements of the cycle industry.

Thanks

I cannot conclude this speech without expressing the sincere thanks of the Company to the Government of India and to the Government of Madras for the encouragement and assistance that we have continuously received during the past few years. The Government of India in particular has shown great interest in the cycle industry and in the allied industry to which I have referred—the production of tubes. The Government Ministers both of the Central and local Governments have noted with satisfaction the progress that your Company has made, a progress which I trust will be maintained in the coming year.

Lastly I should like on your behalf to thank the staff, the staff in the Factory and the workers for their continued co-operation.

THE PROBLEMS OF THE TEA INDUSTRY

EFFECT OF RESTRICTING EXPORTS TO THE LONDON AUCTIONS

By J. Francis

ONCE again the tea industry is in the doldrums, though at the moment it does not appear to be in the slough of despond of 1952. For a change perhaps, the glare of publicity may prove to be a saving grace. That there is a problem and that it requires immediate solution is a matter which has highlighted the articles which have appeared in the Press within the past week or so. The industry now looks to the Government to take steps to remedy the position and rightly so for it has no say in the fluctuating levy of export duty or the restriction in the quantity of tea allowed to be exported to the London auctions for sale. Many reasons were given by leaders of the tea industry and others outside it for the slump of 1952 and many were also given for the boom periods which followed in 1953 and 1954. As the erratic behaviour of the industry attracted a great deal of public attention, these outpourings were the natural consequence of it. There is no need to reiterate them here but a short survey of how the industry managed its affairs during this period and the contribution it made to the economy of the country would not be out of place.

The slump of 1952 shook the industry to its foundations and proved to be the worst in its history. Only those with a stake in the industry appreciated to the full the severity of the slump when the fate of the industry hung in the balance and gave Boards of Directors of all tea companies many anxious moments. It was then a question of survival, but this phase has been shelved and attention is focussed on 1953 and 1954. The industry having shown remarkable powers of recovery in 1953, it is not surprising that the authorities view the present difficulties with complacency. The improvement was welcome and confidence returned. Early in the season, when it was felt the industry had turned the corner, the first to benefit was labour. Cuts in wages of the previous year were voluntarily restored to labour with retrospective effect. This generous gesture on the part of tea companies passed unnoticed. The severest critics of the tea industry would be hard put to it to find any fault in the manner in which most tea companies utilised their good fortune, as their accounts for 1953 amply show. Loans from managing agents or overdrafts with banks were either cleared or substantially reduced; debit balances were partially or wholly wiped out; fresh reserves were created where they had previously been wiped out or added to where they had been depleted. Only when the interests of the companies were satisfied were some modest dividends declared. The improvement was not confined to the industry alone. The large increase in foreign exchange earnings was for the benefit of the country and a valuable contribution was made to the Central Revenues by way of export and excise duties which were never withdrawn even when the fate of the industry was at stake and more, it increased its tax contributions to the revenues of both Central and State Governments. After this successful season the outlook for 1954 was temperate with caution and no one was able to see far enough ahead to predict that just around the corner was prosperity of unprecedented magnitude, the likes of which it had never seen in the industry's history. Quite early in the season prices of tea began to rise steadily and attract the attention of all and sundry, and not least the Central Government which, by July 1954, promptly raised the export duty from 4 as. to 7 as. a lb. The imposition had little effect. Prices continued to rise and the Government once again stepped in by October 1954 and increased the export duty another 3 as. to 10 as. a lb. The rise was phenomenal; due to fortuitous circumstances an all-time high of 7 sh. a lb. for common teas was reached in January 1955.

The Government's Part

All credit must go to the Government for assisting the industry during this period by allowing further releases of tea for export to the London auctions thus enabling it to take full advantage of the booming market. This is in strange contrast to the Government's present policy of frustration. The mad rush for profits, but other factors intervened and by February prices began to tumble. The fall was steeper and quicker than the rise. By this time more than half the Indian crop had been sold, so that the subsequent fall did not affect the profits of tea companies to any great extent. If peak prices had been maintained for the whole crop, the profits would have been colossal, but what was left proved to be the highest in the history of the industry. Long before this, the bumper profits expected attracted the attention of many besides the Central Government, which had in any case intervened at the inception of the boom to relieve the industry of some of its heavy burden of profits. The first imposition was an increase in the wages of labour from January 1955. Then came the budget in February when the cess was doubled. A sliding scale of export duty was introduced but fixed at high rates in keeping with boom prices and the Plantations Labour Act was implemented. It was thought prosperity had come to

stay and these impositions would only touch the fringe of the bumper profits earned in 1954.

The tremendous contribution made by the tea industry to the economy of the country was overshadowed by visions of colossal profits and colossal dividends to be declared. It is doubtful whether any other industry contributed as much to the Central revenues and the economy of the country as the tea industry in 1954. It topped the list as the largest foreign exchange earner, while only the Central and State Governments can give the full figures for export and excise duties collected and the amount received in income and super-tax and agricultural income-tax. The full extent of the contribution will perhaps never be known nor any credit given to the industry for the great part it played in the economy of the country in 1953 and 1954. It can be taken for granted no amount will be set aside to subsidise it in a lean period or for its benefit. An impartial study of tea company accounts for 1954 will show that the majority of companies adopted a very conservative policy when it came to declaration of dividends. Except those companies affected by Section 23A of the Income-Tax Act, the majority did not distribute more than 25 per cent of their gross profits. When period of no dividends and the size of the cake are considered, the dividends must be regarded as modest. And gross profit is not interpreted the same way by all companies. What is of importance is that most companies ploughed back large amounts of their profits into the business in addition to the large amounts already ploughed back in the previous year so that most companies are in a sound financial position today. How long they will enjoy this position remains to be seen. The most striking feature common to all tea company accounts for 1954 is the considerable rise in costs over the previous year. The heaviest items were:—

- (1) Export charges, the result of increased export duty and no mention need be made who took this increase.
 - (2) Increase in wages paid to labour and labour expenses.
 - (3) Profits made by quota holders.
- and in the appropriation section the heavy increase in tax provisions for income and super-tax and agricultural income tax.

Price of Prosperity

This short survey merely touches the more important points of the past three years. What follows will show the heavy price the industry has to pay for the transitory prosperity which chanced its way with little likelihood of it ever being repeated. The tea industry has always been subject to ups and downs in its fortune and for this reason it has been regarded as a speculative industry. The following brief outline for the years 1951 to 1955 will serve to show the fluctuating nature of the industry. No two years appear to be the same and it is clear how necessary it is to bear this in mind when determining the policy to be adopted towards the industry.

1951 was the last year under the bulk purchase scheme and all teas were sold at a modest profit. 1952 was a period of adjustment to trading conditions and only producers of quality teas were able to make a profit while common teas were sold at a heavy loss.

1953 saw an improvement in prices and common teas came into their own with an increase twice that of quality teas. This was a period of recovery and good profits were made by all companies.

1954 was a good year for all teas and handsome profits were made by all companies.

1955 The emphasis is once again for quality teas which are maintaining their prices while common teas are at a discount and it is doubtful if they are recovering their costs of production.

It should be clear from the above that if control is to be exercised over the industry it should be of such a nature that it can be readily adjusted to meet the exigencies of the industry. It will take a long time to live down the prosperity of 1953 and 1954. It seems that prosperity is at a discount and is a distinct disadvantage because it attracts too much attention. The Government steps in, and those industries which have had the privilege of its benign attention and wise counsel know how smoothly their affairs run thereafter and how costly gratuitous "know how" can be. A very recent example is the jute industry which received such attention from the Korean boom onwards. Even with the total withdrawal of controls, and export duty in the last Budget, it is still trying to make up lost ground and it is doubtful whether it will ever achieve its former premier position in the industrial sphere of India. One would think that an industry like tea, which has contributed so handsomely to the wealth and welfare of the country, would be encouraged to prosper. But the official attitude appears to be otherwise.

Auction Policy

Nobody questions the good intentions of the Government, but it is questionable whether good intentions are all that matter. In all good faith the Finance Minister introduced a sliding scale

of export duty based on the average London price in his last Budget, which at that time seemed reasonable enough and suited the prevailing conditions. But conditions have changed since then, while the method of levying the export duty remains unchanged. There is no doubt that the chief factor in bringing about the change for the worse in the Indian tea industry is the restriction in the amount of tea to 140 million lbs. for direct export to the London auction. Before this restriction, prices were improving and it was felt the industry would have a reasonable good year. Since its introduction the position has steadily deteriorated. The restriction was recommended by the Auctions Committee, a committee of experts, who no doubt, gave the matter considerable thought and attention before making the recommendation and advising its immediate implementation. The object was laudable enough and the desire natural to keep the auction business in the country. It was also natural for the Government to implement a recommendation advised by its expert counsellors. But it might have given the matter further consideration before taking action, as the dismal failure of the Ceylon Government early in 1955 to enforce the very same policy now attempted, was available to it. Only when Ceylon modified her policy of restriction to that of restricting the quantity of quality teas, but allowing releases of common teas without restriction, did her industry revive. She is now able to sell her production without difficulty and plans to increase it while India is content to let stocks of tea pile up in warehouses.

Many valuable months have been lost to competitors by interference with the free flow of trade. The fear of being left with a surplus of tea has forced producers to agree to restrict their crops for the new season. Competitors on the other hand, Ceylon, Central and East Africa and Malaya are bent on increasing theirs. Without the co-operation of Ceylon, the present policy of trying to force auctions of Indian teas to be held in Calcutta and Cochin is bound to fail. The sooner it is scrapped the better. There will be time enough to try the experiment when internal consumption rises to at least 1 lb. per person per year and we are not as dependent on exports as we are today. Much of American success in business is due to the outlook "the customer is always right", an outlook which might be adopted here with advantage. The only one to benefit from the restriction is the West Bengal Government. It promptly capitalised on this favourable opportunity offered for all north Indian teas to be sold in Calcutta, to clamp on a terminal tax of 1 anna a lb. The wonder is the astonishingly moderate bite of easy money it was satisfied with. To ease its conscience it announced the levy was for development purposes. If the position of the tea industry continues to deteriorate and becomes serious there will be no want of busybodies ready to blame London buyers for deliberately boycotting the auctions and the U.K. credit squeeze for the ills of the industry. No mention will be made of the heavy imposts forced on it to make certain its tea prices itself out of export markets, the play of economic forces or the impediments which hinder the sale of teas.

Costs of the Industry

The heavy increase in costs as a result of increases in wages, the Plantations Labour Act, provident fund contributions, bonuses, transport and terminal taxes, and heavy export duty are expenses over which the industry has no control. The first four were gratuitously given to labour (at the expense of the industry) "with no strings attached". Fall in production, absenteeism, go-slow tactics, indifferent and careless work seem to be the prerogatives of labour and fully justified in the name of "Social Justice". These impositions are heavy enough, but when the sale of tea, the only way to recover costs, is also subject to restraint and hampered with a fluctuating export duty which shies away shippers who tend to hold back shipments in the hope it will be reduced, can anything else be expected than that the Indian tea industry should be in a depressed state? The export figures for November and December will bear this out and the present price of export quotas at 1½ as. a lb. (last year Rs. 1 a lb.) reflects the state of the export market.

The restriction of export of teas to the London auctions has had the following ill effects on the industry:—

(1) It has made the levy of export duty unrealistic. The price of common teas in London is 3s. 5d. a lb. Add the export duty and terminal and transport taxes to the price of common teas here and it will be found that the price before shipment is as high or higher than the London price. This can hardly be considered an inducement to buyers to operate here. No allowance is made to bridge the gap of price variations when first flush, rains and autumnal teas are sold here and in the U.K. Then again, a great deal of foreign exchange and hard currency at that, is spent on propaganda in the U.S.A. and Canada to make their people tea conscious. These and other markets are well worth developing besides retaining the London market. It seems odd that so much money is spent to encourage these countries to take Indian teas and at the same time to penalise them with a heavy export duty based on London prices if they accept the privilege of buying Indian teas. The natural result has been a big drop in purchases.

(2) Competitors were given a free field to sell their teas. East Africa doubled her production, Malaya increased hers and so did Ceylon and the present stocks of tea in London of 124 million lbs. indicate the time lost in trying to make London buyers toe the line to buy Indian teas.

(3) The slow sale of teas will strain the financial resources of all tea companies. With their cash tied up in heavy stocks of unsold tea and the new season not far away when new crops will have to be financed,

PAA

WORLD'S MOST EXPERIENCED AIRLINE

PAN AMERICAN

In the interests of the industry and the economy of the country, not to mention the welfare and security of the million or so workers, the Government should adopt a more realistic policy. To isolate one section of the economy to create a welfare State and the largest philanthropic institution in the world and out of the funds of that same section which is dependent on the goodwill of foreign buyers for its existence is a risk which should have been taken with care. It is doubtful whether the creation of a privileged class is of more importance than the health of the tea industry and is in the best interests of the country. How the Government deals with the present difficult position of the tea industry will be watched with interest and the means by which it renders help to that industry to surmount it. The present difficulties should serve as a valuable lesson in the pursuit of ideological policies that it often pays to hasten slowly.

Firstly, one airliner in the hand is worth two in the bush. The DC-8 and the civil version of the 707 have yet to be built: the Comet 3 has been flying for some months. Nor is it, as has been suggested in some quarters, that prototype of a prototype that is due to fly in 1958. The Comet 3 is externally the prototype of the mark 4 and will be used in some 80 per cent of the flying required to obtain a certificate of airworthiness for the later model. It is the aircraft which, with fuselage strengthened, modified windows and later model Avon engines, will be known as the Comet 4, the first production version of which will fly next year. Deliveries to B.O.A.C. will start in 1958.

Secondly, as the *New York Times* stated, we, in this country, are "pioneers in the revolutionary world of jet air transport." This is a relevant factor in the Comet 3's success. Between 1952-54, Comet's airline service flew some 30,000 hours and covered 16 million aircraft miles. Indeed at one time, four operators were covering 180,000 Comet miles a week, and Comets of the Royal Canadian Air Force crossed the Atlantic on several occasions. This operational "know-how" will be further expanded as R.A.F. Transport Command bring their Comet 2s into service. No other country possesses comparable experience with jet transport aircraft. Thirdly, the Comet 3's round-the-world flight served to confirm the accuracy of the maker's performance and operating figures which were issued last September. Moreover, it permitted an answer to the question—asked at practically every point of call—"Why is the Comet smaller than the American jet airliners?"

The British aircraft is designed for a different function. Its suitability for linking the centres of trade and industry between Europe and Australasia, the widely spaced cities of the Australasian continent, the trans-Canada highway, and for spanning the Pacific Ocean, was convincingly demonstrated by the world flight. The Comet's short take-off, steep climb, low landing speed and short landing run caused much comment. At Hawaii, for example, the short runway was used for landing, yet the Comet pulled up within a thousand yards, and turned off at the runway intersection—a performance not expected by the watching Hawaiian Aeronautics Commission of a turbojet airliner.

The *Comet* is the only airliner in existence or, indeed, under construction that can provide a 500 m.p.h. service over more than 2,900 miles carrying 60 first class passengers—or, alternatively 76 tourist-class passengers—over 2,700 miles—and yet operate from existing aerodromes. With the exception of direct westerly Atlantic crossings, B.O.A.C.'s *Comet 4s* will be able to handle any of today's arterial routes and will thus fly themselves into many world markets.

The British Motor Corporation exported more vehicles during 1955 than any other motor manufacturer in the world by shipping nearly 200,000 to a total value of approximately £75 million. Total output for the year—a record for the British Motor Corporation—was 468,943 vehicles, an increase of 26.7 percent over 1954. Announcing these figures, Sir Leonard Lord, Chairman of the B.M.C. said, "No other motor manufacturer outside America has ever achieved this output and even in America it has only been exceeded by three of the great corporations there. I consider our export performance to be extremely satisfactory in view of the over-night cuts in imports to Australia and other leading markets." Ford of Dagenham beat all previous records by producing 356,000 cars, trucks and tractors in 1955. Exports of 166,000, worth £69 million constitute an all-time record. Exports of commercial vehicles showed an increase of 51 percent over the previous year, outstandingly successful markets being South Africa, Finland, Spain and the Netherlands. During the first nine months of 1955 Dagenham car exports to the highly competitive Swiss market increased by 69 percent over 1954.

Tenders for Rs. 1 crore of 91-day Government of India Treasury Bills, which were opened on Tuesday, 17th January, 1956, totalled Rs. 1,42,75,000. The average rate of acceptance rose from Rs. 2.8-1 to Rs. 2.8-3 percent per annum. Tenders at Rs. 99.6 percent were accepted in full and those at Rs. 99.5-9 percent allotted approximately 39.9 percent. Tenders for Rs. 1 crore of 91-day Government of India Treasury Bills will be received at all centres till Monday, 23rd January, 1956. During the week ended 13th January, 1956, the Government of India Treasury Bills for Rs. 39,17,50,000 were sold in favour of the Reserve Bank of India.

Further rises of Rs. 4.45 crores and Rs. 3.04 crores to Rs. 1,401.75 crores and Rs. 1,388.75 crores in the total note issue and notes in circulation were outstanding features of the return of the Reserve Bank of India for the week ended 13th January, 1956. The currency expansion was covered by raising rupee securities by Rs. 4.97 crores to Rs. 563.52 crores. Deposits of the Government of India and other Government accounts dropped by Rs. 2 crores and Rs 1.27 crores to Rs. 52.11 crores and Rs. 8.46 crores. Balances of commercial banks at Rs. 55.06 crores were Rs. 3.27 crores higher. Balances held abroad rose by Rs. 56 lakhs to Rs. 43.96 crores, as did investments by Rs. 1.08 crores to Rs. 51.59 crores. Other loans and advances declined from Rs. 44.68 crores to Rs. 43.48 crores, of which advances to scheduled banks against usance bills totalled Rs. 14.38 crores (Rs. 14.62 crores). These advances amounted to Rs. 3.87 crores

The Indian Tea Industry contributed to the National Exchequer Rs. 19 crores as export duty, and over Rs. 3 crores as central excise duty in 1954-55. Besides, it contributed large sums by way of State income tax, agricultural tax, road tax and certain imposts.

PRICES DRIFT DOWN IN STOCK MARKETS

WIDESPREAD FALL IN INDUSTRIALS: TEAS QUIET AND SHADED

London, 18th January.

FOLLOWING a sharp setback in the London stock markets at the beginning of last week, conditions remained unsettled and prices drifted lower under small selling on markets lacking support. There was nothing to help sentiment, but instead quite a few developments to discourage buyers, such as the increase in local loan interest rates. The markets were unsettled in advance of the Prime Minister's speech to be made at Bradford today. It was expected that the Premier would give some indication of the Government's further policy to deal with the economic situation. Against this background, confidence was lacking and the markets steadily lost ground. Wall Street's fall, following the U.S. Budget message to Congress, did not help matters. The previous declines in gilt-edged were extended and brought the losses since the market turned sharply downwards more than a week ago to over two points. Steadier conditions developed after the week-end on bear-covering. Foreign bonds attracted little attention, and similar conditions prevailed in rails. Dollar stocks fluctuated under Wall Street's influence. Industrials suffered further widespread falls after the sharp break at the beginning of last week. The extent of the declines during this period was indicated by The Financial Times Industrial Ordinary Index, which dropped from a little over 200 early in the year to just over 190. Thus the ground gained since the Christmas holiday was more than lost. Leading equities were among the chief sufferers and falls of around 2 shillings were general, while some of the heavier priced shares were 6 or 7 shillings lower. Gold shares were depressed with the rest of the market, while base metals suffered an all round decline, partly under Wall Street's influence and partly reflecting the drop in metal prices. Oil shares sustained substantial falls, with Shell a particularly weak feature. Rubbers eased with the rest of the market, while teas, although quiet, also sustained losses.

The Money Market

During the past week, conditions in the money market remained comfortable until Thursday. Then the market ran up against the first of the big seasonal tax payments, and funds were withdrawn heavily. Money rates, which had been easy, quickly reflected the changed conditions and moved up to 4 percent or 4 1/2 percent, while a moderate amount of penalty borrowing was undertaken from the Bank of England. To some extent, the credit stringency was cushioned by the fact that there were some £60 million of maturing 63-day Bills,

which were introduced two months ago to alleviate the critical credit periods, such as the main tax-gathering season upon which the market is now entering. Applications for last week's offer of £240 million of 91-day Treasury Bills totalled £379,705,000, of which the former amount was allotted at an average rate of 81s 4.90d against 81s 4.97d in the previous week. Offerings this week will consist of £240 million of 91-day Bills. The Bank of England return for the week ended 11th January showed notes in circulation £37 million lower at about £1,811 million, while bankers' deposits were £3 million lower at £228 million.

Activity on Wall Street

Convertible bonds eased early last week in sympathy with the sharp reaction in securities. They recouped part of the losses eventually when the stock market staged a good recovery. Rails generally were steady in light dealings and investment quality corporates ruled firm and quiet. U.S. Government obligations generally improved, partly reflecting the improved investment demand and light inventories. In the foreign department, dealings remained slow. German Nationals gained a point or more, with a number of Municipals showing wide gains. Greek and Polish issues were soft, Italians were fractionally mixed, while Denmarks and Norwegians were largely neglected. Japanese were firm but South Americans ruled quiet.

U.S. Federal Reserve Return

The U.S. Federal Reserve return for the week ended 12th January shows that the gold stock increased by \$1 million to \$21,691 million. Foreign deposits increased by \$7 million to \$458 million, while foreign investments increased by \$84 million to \$3,629 million. The Federal Reserve sold \$251 million worth of Treasury Bills. Total discounts and advances increased by \$408 million to \$806 million, while excess reserves of member banks declined by \$19 million to \$518 million. Member bank's daily average of excess reserves increased by \$148 million to \$749 million, while average borrowings increased by \$216 million to \$799 million. Business loans of the New York City banks decreased by \$106 million to \$8,956 million, compared with the decrease of \$32 million to \$7,422 million in the corresponding week of a year ago.

Hongkong Gold

The Hongkong gold market was featureless during the past week with prices fluctuating narrowly. The carryover charges were 14 cents in sellers' favour. Official offtake totalled 4,740 taels and unofficial 14,050 taels. Forward contracts were done at \$(U.S.) 373. Arrivals from Macao were approximately 36,000 ounces.

Tea Imports into Britain

Imports of tea into Britain in November 1955 totalled 41,197,000 lbs, of which 2,318,000 lbs were re-exported, according to the International Tea Committee. This compared with the November 1954 imports of 65,782,000 lbs and re-exports of 967,000 lbs. The main suppliers were India, with

26,922,000 lbs against 40,915,000 lbs; Ceylon 7,912,000 lbs against 12,212,000 lbs; and Kenya, Uganda and Tanganyika 1,075,000 lbs against 729,000 lbs.

Vegetable Oil Market

The oil market was generally steady but trading interest was slow. Linseed oil barely changed with sellers disinclined to make reductions despite the pause in demand. Groundnut oil was back to £114 c.i.f. for Indian bulk oil after reports of week-end trade to the Continent around that figure. However, first hand offers were still absent with the trade awaiting news from India. South African one percent bulk oil was reported to have been sold at £118 1/2 c.i.f. prior to the week-end but no firm offers are now in evidence. Coconut oil was idle with sellers prepared to make sizeable concessions for near shipment parcels to certain ports. The general level of Straits bulk oil was no better than £38, while Ceylon was readily available at £91 c.i.f. British East African costed continued to rise with sellers reserved at around £62 ex-ship, United Kingdom, February-March shipment. Copra was featureless with the rates barely altered.

Rubber Prices Ease

The rubber market was unsettled at the beginning of last week by the news that the Austin Motor Car Factory at Birmingham was temporarily going on to a four-day working week. Up-country liquidation in Malaya brought easiness to the Singapore market, and London values declined further. Moderate factory orders were attracted by the lower levels and a rally ensued. After small fluctuations during a quiet phase, dealer covering, reported to be in connection with the recent Russian orders, found offers scarce and higher prices had to be paid. New York and Singapore, however, did not fully support the recovery, and towards the close buying interest subsided. Again sellers predominated, and on an easy market final values for near positions were 2 1/2 a lb lower on the week. In the sole crepe market, the small supplies offered were adequate for the limited offtake. Prices were slightly lower on the basis of 42d a lb for 1st smooth No. 1 on the spot.

U.K. Imports of Grey Cloth

A strong condemnation of the British Government's policy in refusing to restrict the import of grey cloth from India and Hongkong was made by Mr. A. Duckett, the new chairman of Joshua, Hoyle and Sons Ltd. at the cotton firm's annual meeting last Thursday. The continuance of present conditions, he said, would have far-reaching effects and would undermine the structure of the Lancashire textile industry. In his view, if the industry had to reconcile itself to the loss of a large part of the export market, it must face a reduction in the country's total production either by voluntary agreements among the trade or by the closure of mills. His firm was continuing to finance from its own resources substantial schemes of modernisation and a further appropriation of £250,000 had been approved by the board.

Stocks and Shares

DULL WEEK FOR SHARE MARKET

BANKING DIFFICULTIES REDUCE BUSINESS TO A MINIMUM

Wednesday Evening.

THE stock market has had a quiet week with a slowly diminishing volume of business. The reason for this is the fact that all deliveries have ceased until the bank clearing house reopens. There has been some movement in speculatives, but this has been narrow. The slight recovery in prices which was apparent last weekend was lost at the beginning of the week. Prices are now rather better but the undertone of the market is uncertain. The chief factor affecting business, apart from banking difficulties, is the weaker sentiment in Bombay due to the possibility of civil disorder, continued doubts about the Tata rights issue and rumours about taxation provisions in the coming Budget. It is becoming increasingly doubtful whether the market will see any marked improvement while the present uncertainties, including the Budget, are out of the way.

Security prices have remained firm, although business has been restricted.

Details of the week's trading follow.

* * * * *
Despite restricted trading in Government Securities, following disruption of business between Bombay and Calcutta due to the difficult banking situation, prices were firm. There was good enquiry in 3% 1966-68 Loan and the price improved one anna to Rs. 91-15. Three percent 1957 Loan also met with enquiry. Three percent Conversion Loan 1986 was unchanged at Rs. 80-6. Other dated stocks showed little variation. Among Provincials, Bombay 1967 and West Bengal 1967 Loans met with scattered enquiry around previous levels.

Selective enquiry for good preference shares continued during the week. Among jutes, Dalhousie came to hand at Rs. 115 and Howrah "A" at Rs. 118; Lansdowne were done at Rs. 116, and Lawrence were crossed at Rs. 95-8. In the miscellaneous group, British India Corporation were crossed at Rs. 135-12, Calcutta Electrics were done at Rs. 12-4 and Elgin at Rs. 135-8. Dunlop Second were taken at Rs. 102, while Indian Iron and Steel were placed at Rs. 110. Jardines were offered at Rs. 79. There were buyers in New Victoria at Rs. 3-12.

In the banking section business was subdued, with United Commercial coming to hand at Rs. 53 and United Bank of India (D) at Rs. 4-14.

Cotton shares were dull and fluctuations were narrow. Elgin quoted Rs. 27-4, Kesoram Rs. 17-12 and New Victoria Rs. 2.

Selective enquiry was seen in the coal section. Amalgamated were taken at Rs. 25-13, Bengal at Rs. 59-4, East Indian at Rs. 35-1, and Equitable at Rs. 35-14. New Beerboom met with support at Rs. 22-11. Central India were on offer around Rs. 8-2.

Listless trading took place in jute shares and prices where changed were lower. National moved between Rs. 31-11 and Rs. 32 to close at Rs. 31-12. Anglo-India were done at Rs. 212, India at Rs. 157, and Champdany at Rs. 182.

Indian Copper were outstanding in the mining section and improved from Rs. 6-14 to Rs. 7-5 to close one anna lower on optimism in respect of bonus issue. Burma Mines were maintained at Rs. 2-6 on prospects of a maiden dividend. Metal Corporation were steady around Rs. 12.

Indian Iron moved narrowly between Rs. 38-1 and Rs. 37-6 to close at Rs. 38 in restricted activity. Investment support was seen in Indian Standard Wagon around Rs. 168. Jessop improved to Rs. 65-8 on rumours of a higher dividend. Textile Machinery rose from Rs. 20-13 to Rs. 22-1 on speculative support.

Aluminium Corporation were a feature in the miscellaneous group and improved 12 annas to Rs. 10-6 on reports of expansion plans. National Insulated Cable gained 10 annas at Rs. 22-8 on investment buying. Indian Cable were absorbed at Rs. 32-8, B.I.C. at Rs. 13, India Steamship at Rs. 8-7, and Martin Burn at Rs. 28-12. Metal Box were higher at Rs. 27-5 and Rohtas were taken at Rs. 23-14.

Among paper shares Orient reacted on profit-taking to Rs. 34-13 after Rs. 35. Titagur Paper closed lower at Rs. 47-7 after being a few annas higher.

Routine business was transacted in sugar shares with minor changes in rates.

Sone Valley Cement realised Rs. 7-15 as did Shaw Wallace Rs. 15-10.

Selling pressure in tea shares has abated and prices gained on balance. Bishnauth improved to Rs. 38-2, Brahmaputra to Rs. 10-5, Telojan to Rs. 26-9, and Grob "A" to Rs. 33. Hantapara came back to Rs. 286 after Rs. 294.

* * * * *
The INDIAN ALUMINIUM COMPANY proposes to raise over Rs. 3 crores of new capital in the form of convertible notes. These notes will carry a fixed rate of interest and confer upon the holders of the notes the right to convert them into ordinary shares of the company. The new issue will give the company a part of the funds required for the establishment of a new smelter at Hirakud in Orissa, which will triple the company's production

 110—110.

The Planning Commission's memorandum on industries, among other things says:—Industrial policy has to be governed by the objective of bringing about a socialistic pattern of society. This implies, first, close adherence to the terms of the industrial policy resolution of April, 1948, under which the establishment of new industrial units in coal, iron and steel, aircraft manufacture, shipbuilding, manufacture of telephone, telegraph, wireless apparatus and mineral oils should be reserved in the public sector. In addition, the Government must enter in a much bigger way than hitherto in fields in which the quantum of development required is so far been inadequate. It should also foster, if necessary, through participation with the private sector or directly, the development of industrial units in relatively under-developed areas such as Assam. The definite steps must also be taken to expand the sphere of co-operative enterprise so that in the course, the benefits of industrial development are transmitted in increasing measure, to the primary producers of raw materials or the consumers of industrial raw materials without the intervention of middlemen or of private industrial undertakings.

INDUSTRIAL PRIORITIES:—Within the framework of the policy set out above, having regard to the stage of development reached by the end of the first five-year plan, the next phase in the expansion of industrial capacity has to be conceived in terms of the following priorities:

1. Development of heavy industries in the field of metals, heavy engineering and chemical industries including nitrogenous fertilisers;
2. expansion of capacity in respect of other developmental commodities and production of goods namely cement and phosphatic fertilisers;
3. modernisation and re-equipment of important national industries already in existence, namely jute and cotton textiles and sugar;
4. fuller utilisation of existing installed capacity in different industries wherever there are wide gaps between capacity and production and
5. expansion of capacity for consumer goods keeping in view the requirements of common production programmes and the production targets for the de-centralised sector.

The expansion of the iron and steel industry has obviously the highest priority since more than any other industrial product, the levels of production of these materials determine the tempo of progress of the economy as a whole. Conditions in India are favourable for securing the production of iron and steel at a cost which is low in comparison with most other countries. Heavy engineering industries, are a natural corollary of iron and steel works.

Iron and Steel Projects

PROGRAMMES OF DEVELOPMENT IN THE PUBLIC SECTOR:—In conformity with the priority given to iron and steel, the second five year plan envisages the construction of three steel plants of one million ingot tons capacity each in the public sector and the provision of facilities in one of these for the production of 350,000 tons of foundry grade pig iron. The plant to be located at Rourkela (on which Rs. 5 crores will be spent in the first plan) is expected to entail an outlay of about Rs. 120 to Rs. 130 crores during the period 1956-60 and to produce 720,000 tons of flat products of steel hot and cold rolled. It is being designed to operate on the L.D. process and will be equipped for the recovery of by-product chemicals from coke-oven gases and coal-gas. It is considered that the liquid iron from the coke-oven gases and the nitrogen from the liquid air plant could be harnessed for the manufacture of nitro-limestone fertilisers at a favourable cost.

The second plant to be located at Bilaspur, Madhya Pradesh and estimated to cost about Rs. 100 lakhs.

Industrial Machinery

HEAVY FOUNDRIES, FORGES AND STRUCTURAL SHOPS AND FACILITIES FOR THE FABRICATION OF INDUSTRIAL MACHINERY:

The development programme connected with the expansion of the Chittaranjan Locomotive Factory under the plan of the Ministry of Railways for stepping up the output of locomotives from 120 to 200, envisaging the establishment of a heavy castings shop for railways, might be secured entirely from within the country. Similarly, the National Industrial Development Corporation has earmarked Rs. 15 crores out of the provision made for it for three heavy foundries and forge shops and for heavy structural shops. As already pointed out, these developments are essential for carrying out plans for the production of machine tools, heavy electrical equipment, etc. envisaged under the second plan.

The heavy machinery industries provided in the public sector of the second plan are:—

	Provision for 1956-61 Rs. crores.
Manufacture of electrical equipment	20
Expansion of Hindustan Machine Tools	2
Manufacture of industrial machinery and machine tools (N.I.D.C.)	10

In addition to these schemes, a provision of Rs. 1.25 crores is envisaged for the expansion of the Government Electric Factory, Bangalore. Among other industries which fall in this category, mention may be made of the aero-engine project and the electronic and wireless equipment project.

For developing the project for the manufacture of heavy electrical equipment, a consultant's agreement has been reached with Associated Electrical Industries of the U.K. who will, among other things, advise the Government regarding the location of the plant and prepare the project report before the end of 1956. The total investment on this project, which is expected to take about seven to eight years for completion, is provisionally estimated at Rs. 25 crores. Certain sections of the plant are expected to go into production by 1960. While heavy switchgear is likely to be produced before the end of the second plan, the production of the more basic items of equipment like hydraulic turbines and generators for diesel sets will be achieved in the early years of the third plan.

The expansion of Hindustan Machine Tools Limited will be directed towards increasing the number and diversifying the range and types of machine tools and also changing the pattern of production from what is predominantly assembly work to complete manufacture. As against 30 high speed lathes of 8½" centre to be completely manufactured and assembled in 1955-56, the number is expected to increase to 400 by the end of 1957. Under the expansion scheme which is to follow in 1957, Hindustan Machine Tools Limited, will undertake the production of lathes of larger sizes and other machines like milling machines and drilling machines, which will constitute integral part of workshops intended to fabricate plant equipment for heavy industries.

Active interest in fostering the development of industrial machinery in the country is also expected to be taken up by the National Industrial Development Corporation. The details of specific items of equipment to be developed have to be worked out. With the assistance that will be provided by foundries, forges and structural shops, it is considered that satisfactory progress in machinery production should be made during the second five year plan.

Multi-Purpose Project at Naiveli

SOUTH ARCOT LIGNITE PROJECT:—Having regard to the paucity of naturally occurring coal deposits in South India, high priority has been given to the development of the multi-purpose South Arcot lignite project at Naiveli, involving according to the current provisional estimates, an investment of Rs. 68 crores. The development programme includes the mining of 3.2 million tons of lignite which is to be used for (a) generation of power in a station of 211,000 kW capacity (b) production of carbonised briquettes in a carbonisation plant of about 700,000 tons annual capacity, and (c) production of 700,000 tons of fixed nitrogen in the form of urea and sulphate nitrate. The plant

makes a provision of about Rs. 52 crores for this project.

FERTILISER PRODUCTION—The consumption of nitrogenous fertilisers by 1960-61 has been estimated at 70,000 tons in terms of fixed nitrogen. The annual capacity at present is for about 80,000 tons. There is thus a wide gap to be bridged between the existing capacity and the anticipated requirements. During the first plan steps have already been taken to secure the expansion of fertiliser production by 40,000 tons of fixed nitrogen (in terms of urea and nitrate/sulphate) through the expansion of the Sindri fertiliser factory on the basis of its coke oven gas. Further, taking into consideration the recommendations made by the Fertiliser Production Committee on appropriate locations and processes for further expansion of fertiliser production, it is envisaged that two more fertiliser factories, apart from the unit provided under the South Arcot lignite scheme, will be brought into existence in the course of the second plan period. One of these plants, which will be located at Nangal in the Punjab, will produce 20,000 tons of urea corresponding to 70,000 tons of fixed nitrogen per annum. The plant is already being designed to produce simultaneously 7.5 tons of heavy water per annum and will be the largest single industrial consumer of electric power on the basis of the requirements assessed at 160,000 kW per annum. The site of the third fertiliser factory is under consideration with reference to the comparative advantages of locating it at Trombay or at Rourkela.

Ship-Building Programme

HEAVY ENGINEERING INDUSTRIES:—The plan provides for further expansion of the Hindustan Shipyard and the Chittaranjan Locomotive Factory. As a result of these expansions, the rate of construction of ships at Visakhapatnam will be increased to five per annum and of locomotives to 200 per annum before the end of the second five-year plan. The development programme for the shipbuilding industry also envisaged the construction of a dry dock at Visakhapatnam and preliminary studies in connection with the establishment of a second shipyard. The outstanding work on the integral coach factory at Perambur, is expected to be completed during the second plan on the basis of the phased manufacturing programme for a production of 350 coaches from 1959 onwards.

Expansion of D.D.T. Factories

Among light and medium industries in the public sector, the plan envisages expansion of the existing D.D.T. and antibiotic factories and the establishment in Travancore-Cochin of a second D.D.T. factory. Similarly, expansion of the Hindustan Cables Limited, the National Instruments Factory and the Indian Telephone Industries will be taken up. The development of the Mandi salt mines, on which little progress was made under the first plan, is expected to be carried out in the second plan. With a view to achieving self-sufficiency in the supply of security and bond paper, the establishment of a security paper mill has also been included in the second five year plan. During the early years of the second plan, the silver refinery under construction is also expected to go into production.

Production of Foundry Coke

Among industrial projects of State Governments, mention may be made of the expansion programme of the Mysore Iron and Steel Works already referred to and the Durgapur Scheme of the West Bengal Government for the production of foundry coke, and by-products of coal carbonisation and thermal power based on waste gases. Among medium industries expected to be expanded or newly developed by State Governments, the more important are the manufacture of electric porcelain insulators and transformers in Mysore, the re-organisation of the Praga Tools Factory in Hyderabad, expansion of a paper mill in Andhra Pradesh, and creation of additional capacity in the U.P. cement factory and in the Bihar superphosphate factory.

New investment in industrial projects of the Central Government is expected to be of the order of Rs. 487 crores between 1956-57 and 1960-61. A provision of Rs. 29 crores is envisaged in respect of industrial projects in the States. This includes a provision of about Rs. 5.0 crores for assisting in the establishment of co-operative sugar factories in different states. It also provides for assisting the development of certain industries in areas like Assam and Pondicherry.

Development in the Private Sector

As in the public sector, the iron and steel industry holds an important place among industrial projects in the private sector. An investment of Rs. 115 crores is envisaged in this field. The benefits of this investment as well as the expenditure incurred on iron and steel expansion in the private sector under the first plan will only be felt from the middle of 1958 when the combined production capacity of TISCO and IISCO is expected to reach 2.3 million tons as against the current level of 1.25 million tons. The supply position of steel will, as a consequence, become considerably easier by the middle of 1958. Among the secondary producers, the two newcomers, Messrs. Kalinga Tubes Ltd., and the Indian Tube Company are expected to develop the production of tubes and pipes including E.R.W. tubes.

Among other metallurgical industries in which substantial expansion is expected during the second plan, reference should be made to aluminium and ferro-manganese. The demand for aluminium is expected to increase, from more extensive utilisation of A.C.S.R. cables for electric power trans-

mission. In the case of ferro-manganese, for which a target of 160,000 tons has been proposed, considerable expansion in domestic consumption as well as exports is envisaged.

Cement

Cement is another developmental commodity expected to be in considerable demand as a result of the high level of activity in different sectors over the next five years. It is proposed to expand capacity to 11.5 million tons and production to 9.5 million tons in this sector out of the overall increase envisaging the corresponding figures at 12 million and 10 million tons respectively. By-product slag from new steel plants is expected to relieve the strain on limestone supplies to some extent since a part of the additional cement output will be based on this material.

Engineering and Industrial Machinery

Substantial expansion of engineering industries, heavy and light, is a necessary consequence of an expanding iron and steel industry. The domestic demands for the products of engineering industries are still being met largely from imports and these demands are expected to be much more substantial under the second plan. The industrial programme, therefore, assigns an important place to these industries. Structural fabrication, automobiles, railway rolling stock, castings and forgings, industrial machinery, bicycles, sewing machines, motors and transformers are a few items for which high levels of production have been envisaged. In all these industries, plans for achieving near self-sufficiency within a decade or less will be taken in hand. As already pointed out a nucleus of experience has been built up during the first plan for initiating bigger developments in these fields in the coming years.

INDUSTRIAL MACHINERY.—The plan for the private sector also provides for the expansion of output of industrial machinery. The investment anticipated during the period of the second plan and the level of output by 1960-61 in certain lines are expected to be as given below:

	Investment 1955-61 Rs. crores.	Value of output 1955-61 Rs. crores.
1. Cotton textile machinery	4.5	4.0
2. Jute textile machinery	1.3	0.06
	(1954)	2.5
3. Sugar machinery	2.0	0.28
	(1954)	2.5
4. Paper machinery	1.3	negligible
5. Cement machinery	—	0.56
	(1954)	2.0
6. Electric motors (000 HP)	—	240
7. Electric transformers '000 KVA	—	520
		600

Though no final proposals have emerged so far, discussions are in progress for the development of the manufacture of earth moving equipment, diesel engines of 50 HP and above and high pressure boilers. Considerable advance in these fields is envisaged. Other lines in which progress will be made are the manufacture of tea machinery, dairying equipment, agricultural machinery such as trailers for tractors, etc. and road making machinery including diesel-propelled road rollers. In most of these industries, foreign technical assistance is required and the necessary arrangements are being made. Since the manufacture of industrial machinery is assigned a high priority under the plan, adequate opportunities for the inflow of foreign technical assistance and private investment will be provided.

Chemical Industry

In the development of the chemical industry, soda ash, caustic soda, phosphatic fertilisers, industrial explosives, dyestuffs and intermediates occupy an important place in the programmes of the private sector in the second five year plan. The achievement of self-sufficiency is envisaged in most of these fields by the end of the second plan. This would imply quantitative expansion as well as diversification of production. A fourfold increase in production is planned in the case of soda ash and caustic soda. The expansion of sulphuric acid production is primarily related to the demands of the iron and steel, fertiliser, rayon and staple fibre industries.

Consumer Goods

Among consumer goods, expansion of output by about 100 percent is envisaged in the case of paper and paper board. The production of sugar is expected to be increased from 1.65 million tons in the last year of the first plan to 2.25 million tons by 1960-61. Of this production the share of the co-operative sugar mills is estimated to be about 350,000 tons per annum. The production of vegetable oils is expected to increase from 1.6 million tons to 1.95 million tons. It has been proposed to step up the production of mill yarn and mill cloth to 1,950 million lbs. and 5,500 million yards respectively, but no final decision has so far been taken.

Change in Pattern of Investment

Though the progress of industry under the first plan has brought about some shift in the relative positions of the public and private sectors and strengthened the economy at some important points, the changes wrought can by no means be regarded as commensurate with requirements. Structurally, the industrial economy made some advance in the producer and capital goods sector chiefly through the contribution made by the Sindri Fertiliser Factory, the Chittaranjan Locomotive Factory, Tata Locomotive Works, textile machinery factories and the petroleum refineries. As a result of the emphasis given to industries under the second plan, the pattern of investment is expected to undergo a significant change by 1960-61. Broadly speaking the capital and producer goods sectors will register increases during the five years which will be substantially in excess of the investments made in these fields in the last

five years. Though the investments in the consumer goods industries will also be large compared to outlays in the past in corresponding periods, they will have but a minor influence on the new relationship between the different sectors of industry that will emerge as a result of the second plan. The data in the following statement will be of some interest for an appraisal of the new patterns.

Break-up of anticipated investments in large-scale industries during 1956-61.

	Public Sector	Private & Total N.I.D.C. (Rs. crores)
Producer goods	453.0	283.0
Industrial machinery and capital goods	45.0	77.0
Consumer goods	12.0	165.0
	510.0	525.0
		1,035.0

Power Development

At the beginning of the first plan the total installed capacity of power generating plant was 2.3 million kW, of which 1.7 million kW was in public utility undertakings and 0.6 million kW in industrial establishments. During the first plan installed capacity has been increased by 1.2 million kW in public utilities and by 100,000 kW in industrial establishments, making a total of 3.6 million kW in all. Power schemes now under execution will add 1.5 million kW more of capacity during the second plan.

For the period of the second plan, the additional power demand is estimated to be 1.2 million kW on account of the normal development of medium and small scale industries and of commercial and domestic consumption, and 1.2 million kW on account of new programmes of industrial development. Allowing for the necessary standby capacity, the additional requirements amount to 3.2 million kW, of which 2.7 million kW is being provided in the public sector, 200,000 kW by companies in the electricity supply industry and 300,000 kW by industries which have to provide for generation of their own power needs. Thus, the additional installed capacity during the second five year plan will be 3.2 million kW, raising the total installed capacity in the country in 1961 to 6.8 million kW.

The 15 year target for power development which was set five years ago at 7 million kW is now expected to be reached earlier than was anticipated. In view of the progress achieved in industry and the growing demand for power in small towns and rural areas, it is proposed to raise the target of total installed capacity in 1966 to about 12 million kW.

According to the programmes of states for the second five year plan, the installed capacity is expected to increase by 2.7 million kW, of which 2 million kW will be obtained through hydro-electric schemes and 0.7 million kW from thermal plants. Out of 2.7 million kW of plan capacity 1.5 million kW will be due to schemes begun during the first plan. Forty-two hydro and steam power generation schemes which include new schemes as well as extensions to existing stations are proposed to be taken up during the second five year plan, of which 23 will be hydro-electric and 19 thermal schemes. Nine of these new schemes are estimated to cost over Rs. 10 crores each, 4 between Rs. 5 crores and Rs. 10 crores each, and 17 schemes will cost less than Rs. 1 crore each. There are in addition small diesel generating schemes and a large number of power schemes in the public sector which are mainly intended for transmission and distribution.

The following are some of the more important power generation schemes which have now been accepted for the second plan:

No.	Project	State	Benefits (installed kW capacity)
1.	Umtru project extensions	Assam	5,000
2.	Machkund project extensions	Andhra/Orissa	17,000
3.	T. Bhadra-Nellore	Andhra	66,000
4.	Sileru hydro-electric scheme	Andhra	75,000
5.	South Gujarat grid extensions	Bombay	30,000
6.	Barauni thermal station	Bihar	20,000
7.	Korba thermal station	Madhya Pradesh	90,000
8.	Southern grid extensions	Madhya Pradesh	60,000
9.	Kundah hydro-electric scheme	Madras	180,000
10.	Hirakud extensions and subsidiary dam power station	Orissa	108,000
11.	Yamuna hydro electric scheme	Uttar Pradesh	201,000
12.	Ranaganga hydro electric scheme	Uttar Pradesh	75,000
13.	Harduaganj steam station	Uttar Pradesh	30,000
14.	Jaldhaka or Bala-sun scheme	West Bengal	17,000/5,000
15.	Thermal and hydro schemes of DVC.	Bengal & Bihar	240,000
16.	Purna project	Hyderabad	10,000
17.	Sharavati hydro-electric scheme	Mysore	142,000
18.	Ranapratapsagar dam power station	Madhya Bharat	75,000
19.	Sholayar hydro electric scheme	Travancore-Cochin	54,000
20.	Panniar hydro-electric scheme	Travancore-Cochin	30,000
21.	Pamba or Poringal-kuthu hydro electric scheme	Travancore-Cochin	75,000
22.	7 Thermal stations	Saurashtra	90,000
23.	Barhar and Satna power station	Vindhya Pradesh	20,000

The distribution of additional installed capacity anticipated in the public sector during the second plan is shown in the statement below:

State	kW	Additional installed capacity, State	kW
Andhra	123,300	Rajasthan	72,000
Assam	22,500	Saurashtra	50,050
Bihar	22,500	Travancore-Cochin	137,000
Bombay	272,000	Jammu & Kashmir	11,000
Madhya Pradesh	170,000	Ajmer	170
Madras	287,000	Bhopal	5,000
Orissa	247,800	Himachal Pradesh	3,100
Punjab	498,000	Kutch	6,300
Uttar Pradesh	261,000	Manipur	340
West Bengal	5,000	Tripura	400
Hyderabad	365,000	Vindhya Pradesh	23,000
Madhya Bharat	37,000	NEFA	1,150
	51,000	Mysore	47,600
	Total	2,730,010	kW

Companies in the electricity supply industry will provide 200,000 kW of installed capacity, the principal ones being as follows:

Calcutta Electric Supply Company	50,000 kW
Ahmedabad Electric Supply Company	45,000 kW
Tata's Power System	100,000 kW
Others	5,000 kW
	200,000 kW

The following are some of the more important new irrigation projects which have been included in the second five year plan.

No.	Name of project	State	Area to be irrigated ('000 acres)
1.	Vam Sadhara	Andhra	306
2.	Gundak	Bihar	2650
3.	Sone Barrage	Bihar	500
4.	Ukai	Bombay	600
5.	Narmada	Bombay	1157
6.	Banas	Bombay	120
7.	Mula	Bombay	204
8.	Girna	Bombay	184
9.	Khadakwasla	Madhya Pradesh	590
10.	Tawa	Madras	21
11.	New Kattalai Canal	Madras	51
12.	Salandi	Orissa	250
13.	Gurgaon Canal	Punjab	186
14.	Ram Ganga	Uttar Pradesh	700
15.	Kangabati	West Bengal	155
16.	Purna	Hyderabad	850
17.	Chandakeshar	Madhya Bharat	15
18.	Kabini	Mysore	30
19.	Banas	Rajasthan	225
20.	Bhadar	Saurashtra	90
21.	Boothankettu	Travancore-Cochin	63
22.	Lidder Canal	Jammu & Kashmir	15
23.	Barni or Kolar	Bhopal	250
24.	Laxmanathirtha	Coorg	3
25.	Kasavari	Vindhya Pradesh	4
26.	Vidur	Pondicherry	1.7

Machine Tool Committees

The Government of India, in the Ministry of Commerce and Industry, as already indicated, has set up two Committees, one to assess the country's requirements in machine tools in different categories and determine the gap between requirements and the present manufacturing capacity; and the other to consider the scope of the export credit guarantee scheme and make recommendations in regard to the nature of the risks to be covered, the basis on which premia should be fixed and the structure of the organisation required for the implementation of the scheme.

Raw Materials for Newsprint

Two teams of Italian experts have arrived here at the invitation of the Government of India. Two experts from Snia Viscosa of Milan will study the scope for the manufacture of rayon grade pulp and newsprint from Himalayan firs, eucalyptus from the Nilgiris and bagasse, in order to prepare a project report. Earlier last year, a team of two German experts from Messrs. Ascha Affen Burkert Zellstoff toured a number of places to study the possibility of using bagasse and other suitable raw materials for the manufacture of pulp and newsprint. Their project report is now being awaited.

Steel Castings and Forgings

It is estimated that the additional annual demands of the various heavy industries proposed to be developed under the second five year plan for steel castings will be of the order of 17,000 tons. Some of the specific items of heavy steel castings proposed to be manufactured are frames for locomotive engines, side frames for sugar mill crushers, frames for earth moving equipment, gear blanks for cement mill machinery, loco wheel centres, wagon wheel centres, etc.

The requirements for forgings during the second plan will include the demands of steel plants, fertiliser factories, heavy electrical project and heavy earth moving machinery, heavy duty tractors and heavy machine tools, among other industries. Among specific items to be manufactured are spindles and other components for heavy machine tools, crank shafts for diesel engines, now imported, components for heavy water turbines, components of cement and mining machinery, etc. The demand for structural forgings during the second plan is estimated at 450,000 tons a year.

The structural forgings likely to be manufactured include those for workshops, buildings, power houses, hangars, structural for road, railway or river bridges, steel plants, coke oven plants, wagons, underframes, tractors, ships; mechanical handling equipment such as cranes, sluice gates and operating gear required in hydro-electric and irrigation schemes and power transmission towers.

London

SIR ANTHONY EDEN NOT TO RETIRE

DOWNING STREET ISSUES DENIAL TO KILL RUMOUR

(FROM OUR LONDON CORRESPONDENT)

DOWNING Street took the unusual course this week of issuing an official denial that Sir Anthony Eden, the Prime Minister, was contemplating retiring in the near future. It is not easy to trace the source of rumours of this kind—the German press was held to be responsible in a near-official reference—but our own Labour press for some time has been hammering away at what it calls the "indecisiveness" of Government policy and what it claimed as a back-bench revolt against the Prime Minister, and matters were no doubt brought to a head by the publication in *The Daily Telegraph* of a somewhat critical article on the Government's lack of achievement to date. The American press was not slow to follow up these leads, and that fact, coming just prior to Sir Anthony's visit to the U.S. for policy discussions with President Eisenhower, was no doubt responsible for the issue of the denial. Otherwise the rumours would no doubt have been ignored, for not only have they no basis on the score of the Prime Minister's health, but the anticipated revolt in the ranks of the Conservative Party is apparently little more than wishful thinking.

Far from creating the confusion and doubt which was probably its intention, the bother would seem to have galvanised both the Prime Minister and his re-organised Government. Ministerial discussions and Cabinet meetings occupied Sir Anthony every day last week, and as a result it is anticipated that he will be able to indicate the general lines of a new development of Government policy over a wide field in a speech he is to give at Bradford on 18th January and in a television appearance he is due to make three days later. Fuller details will follow in a series of important statements to be made from time to time before Easter. Just what the new policy includes it is not as yet possible to say, but informed quarters favour early action in respect of the Monopolies Bill to deal with collective discrimination and restriction in industry; the enlistment of trade union co-operation in achieving greater mobility of labour and the elimination of restrictive practices; the production of a new unified defence plan; important measures to improve technological education; and the launching of a fresh attack on inflation by way of a campaign for price stabilisation and reduction. Mr. Butler, when he returns from his fortnight's holiday on the Riviera, is expected to adopt a tougher attitude towards the Opposition in his new rôle of Leader of the House of Commons, to prevent any further misunderstandings with the Conservative back-benchers and to keep the Conservative Central Organisation and the constituency organisations in step with the Government and the party in the House of Commons.

Difficulties Ahead

On paper these plans sound encouraging enough, and Sir Anthony Eden might well return from his visit to America with his own and his party's prestige considerably rehabilitated. In the long run, however, the success or failure of the Government's new policy must rest to a large extent on the response and co-operation it can engender among the British public. In this respect organised labour occupies what is a key position. The trade union leaders are well aware of the difficulties that lie ahead and are by no means averse to playing a constructive part in overcoming them. Their rank and file followers, however, are an uncertain factor. They are in a strong bargaining position, as the latest employment figures—with 290,000 more in work than a year ago and nearly two million working overtime and the total unemployed down by 41,000 to represent only one percent of the estimated total number of employees—go to show, and they are less concerned with the inflationary effects of their wage claims than the profits which company results have disclosed during the past year.

The introduction this week of short-time working in some units of the motor industry, to reduce production so as to keep it in line with the reduced demand as a result of hire-purchase and purchase-tax restrictions in this country and the import restrictions in Commonwealth markets, might have been expected to give the workers something to think about. This was reinforced by the Standard Motor Company's rejection of a claim for a "substantial" wage increase with the explanation that "1956 will be a serious year for our industry and its ability to maintain employment will be jeopardised by any increased costs arising from recurring wage claims." The unions concerned, however, refused to withdraw the claim and pointed instead to the company's profits. As regards short-time working, the union reaction is that the Government should abandon the H.P. restrictions and purchase-tax and the firms concerned reduce the working week, cut out overtime and provide work for all. All the wage claims now being considered, if granted, will add £250 million to the country's annual wage bill. This must filter into the cost of living in due course, for although the price stabilisation campaign is gaining fresh adherents each day, the absorption of increased wage costs of this magnitude, with the possibility of more to follow, cannot continue indefinitely.

Imports Still Too High

That our imports are still running at too high a level for safety is made clear by the provisional

figures of overseas trade for December just issued by the Board of Trade. The visible trade deficit for 1955 is £884 million, or £265 million higher than it was in 1954. How much the gap was covered by invisible earnings will not be disclosed for some months, but the experience of the oil and shipping companies, two of the main contributors, does not inspire much optimism. Exports, which at the beginning of last year were affected by the backlog from the October 1954 dock strike, rose 8½ percent to £2,906 million. Most of the improvement, 7 percent, was attributable to higher volume and the rest to price increases. Imports rose more sharply, by 15 percent, to £3,889 million, but only 12 percent arose from greater volume and the balance from higher prices.

December's contribution to the larger deficit was £72 million, the worst of any month in the concluding quarter but below the average of earlier quarters. December exports, at £253.8 million, were £84 million below the November, but were still above the average of the first nine months of the year. Re-exports, at £10.7 million, were slightly above average. Imports, at £330.1 million, were also higher last month than the average of the opening months, although £5 million down on November. Exports to North America gave a more encouraging picture. The December total of £32.1 million was £4.1 million up on the month and only £90,000 short of October's record figure. For 1955 as a whole exports to the dollar area were £42.7 million higher at £324 million, making the best year so far. Most of the improvement was in sales to the United States, where December's record figure of £19.4 million brought the year's total to a new peak of £183.2 million, or £33.8 million up on the year. Exports to Canada last month were £12.7 million, bringing the 1955 total to £140.9 million, below the best but £8.9 million more than in 1954.

Time and Motion Study

Time, motion, and work study have already been accepted in theory by the more enlightened sections of trade unionism, but they have met strong opposition in some unions. Although local agreements with individual firms have existed for some years, there has until now been no specific scheme approved on a national basis. This week, however, history has been made with the announcement of the first national agreement laying down principles and rules for time and motion study in a whole industry, reached by the Footwear Manufacturers' Federation and the National Union of Boot and Shoe Operatives. The agreement, which regulates the minimum rates of pay under time and motion study, will operate for two years when, after modification in the light of further experience, they will probably be written into the industry's national wage agreement. The agreement cannot be worked in any firm without

the permission of its employees. Experiments with the plan have been going on for ten years and have produced many remarkable results in lower costs, higher productivity and higher wages. One firm's output has risen by 35 percent and the pay of its workers by 25 percent; another has shown increases of 25 percent and 17 percent respectively and a 10 percent reduction in labour costs; yet another changed over from day working to "time and motion" piece-rates with a consequent rise of 80 percent in production. One group of skilled women operatives used to earn £9 5s to £9 15s a week before work study was applied to their work-bench—now they are earning £10 15s a week.

National Savings Disappointing

There was certainly justification for Lord Macintosh, chairman of the National Savings Committee, to refer to the net figure of new National Savings in 1955 as rather disappointing when he commented on the year's figures. While new savings were the highest on record, being £4 million more than in 1954, he pointed out that withdrawals, which were also a record, were £138 million up on the previous year. The net figure for the year was rather disappointing because the excellent results in the first six months, when net savings amounted to £113 million, seemed to fore-shadow another record year. However, in the second half of the year there was a net repayment of £36 million. As long as the amount put into new savings continued to increase there would appear to be no lack of confidence or willingness to save, but a way had to be found to discourage excessive withdrawals. The Committee announced that total savings were £1,342 million and withdrawals from past savings were £1,265 million, giving an excess of new savings of £77 million. Last week, withdrawals exceeded new savings by £1,960,000, savings totalled £19,881,000, and withdrawals £21,841,000.

Balmer Lawrie Change

It is probably symptomatic of some of the difficulties being faced by European business concerns carrying on business in India through subsidiary companies that Alex. Lawrie the East India merchant house, has divested itself of its controlling interest in its Calcutta off-shoot, Balmer Lawrie. It has just sold slightly less than half its holdings to Indo-Burma Petroleum which is associated with Steel Brothers. For the 20,000 shares transferred, it has paid Alex. Lawrie £449,213, and this has now been received in London.

Brevities

Brush Export Ltd., the Loughborough member of the Brush Group, has secured a contract worth £360,000 for the supply and installation of equipment for the new Chopan steam power station, near Mirzapur, in Uttar Pradesh.

PRODUCTION STANDARDS
OF CLOTH EXPORTSMR. KRISHNAMACHARI HINTS AT
GOVERNMENT INTERVENTION

(FROM OUR BOMBAY CORRESPONDENT)

THE Chemical and Textiles Standards Convention was held here last week. Organised by the Indian Standards Institution, of which Mr. T. T. Krishnamachari is the President, it was attended by over 600 technical experts, scientists, engineers, research workers, top Government executives and leading industrialists and lasted for five days. Last year a similar convention was held at Calcutta for the engineering industry. The main items of discussion this year apart from the introduction of the metric system of weights and measures, were the two basic industries of textiles and chemicals. Inaugurating the convention, Mr. Krishnamachari observed that it was a matter of little significance whether the public or the private sector took the initiative, in promoting the speedy development of the industrial field. He made it still more explicit by saying "whoever does it economically and quickly will be encouraged." Mr. Krishnamachari stated that the future of industries in the country was undoubtedly bright. Speaking for himself he said that on balancing the strength and weakness of industries he found a lot of hope for the future. He explained that it was in this great task of building up industries that standards had a big part to play. It was only on the basis of the reputation of these standards that the country could build its trade and economy for earning a material portion of the resources that it wanted.

Speaking about the Indian Standards Institution, Mr. Krishnamachari observed that it was not an official body. It was likely that the institution might be identified with the Government because he happened to be its President. He hoped that before he laid down his office, he would be able to persuade some distinguished industrialist, economist or eminent citizen to undertake the responsibility. He described the Institution as one of the greatest co-operative enterprises in the country. But he regretted that while the co-operation of the technicians and scientists was being enlisted, the Institution had not been able to get the co-operation of private enterprise in producing standard goods. He was, therefore, happy to note that the Bombay Millowners' Association had again come into the fold. At the same time, he warned the textile interests that if they failed to improve the standard of cloth exports in a year's time, the Government would have to step in to improve the quality. He referred to the poor quality of textiles which had affected the country's export market and gave the warning that the Government might have to think in terms of introducing definite standards of production of cloth if the industry did not take steps to rectify its failings. The chemical industry, Mr. Krishnamachari believed, had made remarkable progress even though it was still in an infant stage. When the production of steel in the country increased, the chemical industry would derive a great fillip for its development.

Bonus Pact with Textile Workers

A five-year agreement was finalised last week between the Bombay Millowners' Association and the Rashtriya Mill Mazdoor Sangh, the representative union for textile workers in the city, on the question of bonus. In most respects, the pact follows a similar agreement at Ahmedabad with "only a few modifications to suit local conditions." Under this agreement, which took three months of delicate negotiation, about a quarter of a million textile workers in Bombay will now receive an annual bonus ranging from 16 days to three months for five years from 1953. In addition, even those mills whose bonus disputes for 1952 are still pending before industrial courts, will pay bonus for that year to their workers calculated according to the terms of this new settlement. It has been ac-

knowledge that the conclusions of the long-drawn-out negotiations owed much to the good offices of the Central Labour Minister, Mr. Khandubhai Desai, who was present at the final settlement. While all textile workers are assured of bonus for the next five years equivalent to their 15 days' wages, the actual quantum in the case of each mill will be decided according to the profits made by the unit concerned. The agreement also provides for a request to the Government to appoint a committee to revise the rehabilitation reserve for 1956-57. This reserve is allowed to be treated as a prior charge on the mills' profits before the amount available for bonus is determined. In addition to the payment of minimum bonus, the Millowners' Association has also agreed to contribute Rs. 50 lakhs during the next five years towards the implementation of housing schemes which the State Government might undertake for industrial workers in the city. This provision is expected to finance the construction of 4,000 tenements for textile workers in Bombay.

Tata's Example Welcomed

The Central Labour Minister, Mr. Desai has welcomed the agreement between the Tata Iron and Steel Co. and its workers associating the employees with the management, as a progressive step. Hoping that "such association of employees and management will spread to all industries in the country," Mr. Desai is of the view that an industry can no longer be claimed as the exclusive property of industrialists or shareholders, and that the technicians and the workers have a right to be associated with management. Participation in the management of industries he added, is the urge of the present age, and is also in line with the future labour policy. At the same time, he reminded the workers that not only industrialists but they themselves should change their mode of thinking and prepare themselves for such association. In fact, Mr. Desai said that he would ask the industrialists to force workers to accept some responsibility in the management even if the latter refused to do so. A suggestion for the association of workers with the management of industries has been included in the memorandum submitted by the Labour Ministry to the Planning Commission. The Labour Minister remarked that everybody including the industrialists had accepted the socialistic pattern of society but asked that they should not be satisfied by merely agreeing with it but must try to help the establishment of such a pattern in a constructive and enthusiastic manner. The workers also should stop thinking in terms of class rivalry. "If the workers and the technicians think of breaking up the management, the industry will be destroyed. Every industry has, from now on, to be organised on a national basis and as part of the nation's industries."

Port Trouble Again

For some time the work of loading and unloading ships at Bombay harbour has been unsatisfactory. At the annual meetings of some of the leading shipping companies here, bitter complaints were made against the output of work and the delay in the turn-round of ships involving unnecessarily heavy expenses for the steamship companies. Moreover, there have also been threats of strikes and direct action from responsible dock workers' leaders to force various issues. Even the President of the All-India Port and Dock Workers' Federation stated some time ago that the constituent units of the Federation would organise a nation-wide strike to back up the workers. In addition, the E.P.T. General Workers' Union here gave a strike call at the beginning of this week. The Government of India has, therefore, been obliged to propose the amendment of the Dock Workers (Regulation of Employment) Scheme, 1951, so as to vest the Chairman of the Port Trust, who is also the Chairman of the Bombay Dock Labour Board, with emergency powers to deal with workmen employed through the Board. Similar powers were delegated to the Calcutta Port Commissioner about eight months ago following a strike there, and later renewed for another three months on the expiry of the state of emergency period. It is believed that this proposal, on which views of the public have been invited, will be followed by the necessary notification to enable the Port Trust Chairman to exercise the power of suspending, summarily dismissing or discharging any employee of the Dock Labour Board for alleged indiscipline, "go-slow", misconduct or any other act which may be deemed injurious.

One of the reasons which might have led the Government to take this drastic step is the forthcoming award of the Appellate Tribunal in the Bombay Dock dispute relating to the system of wage payment on a piece-rate basis which might cause acute trouble in the docks.

Oil Tanker Fleet

The country may soon have a fleet of oil tankers for coastal oil traffic, as a result of the discussions on this matter between the Government of India and leading shipping companies held here last week. It is believed that Mr. N. M. Ayyar, Secretary to the Ministry of Transport, of the Union Government, who was here last week on a five-day visit had talks with shipowners regarding liberal financial assistance including long-term loans to shipping companies if they took the initiative in acquiring tankers for the coastal oil trade. He is believed to have pointed out the anomalous position regarding the oil tanker trade on the Indian coastline, which had been reserved by the Government for Indian shipping companies as far back as in 1951, though as yet not a single Indian tanker was plying on this route. It has further been suggested that the Government would like

Indian shipowners to go in individually for oil tankers from abroad so that a sizeable fleet could be built up in a short time. It is gathered that the shipowners, were cautious in their response to the proposal and even while welcoming the offer of financial assistance, they would not take advantage of the loan facilities unless assured of a fair return. It is however believed that a tentative agreement has been reached between the Ministry of Transport and one of the leading shipping companies for the latter to purchase five oil tankers from abroad forming the nucleus of the country's first tanker fleet. According to this reported agreement, the Government of India is believed to have offered Rs. 3 crores by way of a loan to the company, which will bear the remaining cost of about Rs. 1.5 crores. It is believed that concrete assurances were given on behalf of the Ministry by its Secretary that the Government would help the Company secure adequate oil cargo for these tankers. As a result of this encouragement, a number of other shipping companies are contemplating the purchase of tankers during the second plan period.

During the Union Transport Ministry Secretary's visit, confirmation was available of the fact that negotiations between Russia and India to establish a trade link between the Black Sea and Indian ports were progressing satisfactorily. Mr. Ayyar is also believed to have held talks with the Chairman of the Bombay Port Trust on the plans for the development and modernisation of Bombay Harbour in the second plan. According to the draft memorandum, the Commission has tentatively allotted a sum of Rs. 17.42 crores for this purpose. It is learnt that a major portion of the funds allotted for harbour development will be expended on the modernisation of the Princess and Victoria Docks and the installation of electric cranes at the Alexandra Docks. Fifty-four new cranes are proposed to be erected at the Alexandra Docks, replacing the existing hydraulic ones.

Legal Action Against E.I.C.A.

As anticipated in last week's despatch, the controversy over the declaration of a state of emergency in forward cotton trading and the fixing of the ceiling price at Rs. 700 a khandy has now been taken to law. A member of the East India Cotton Association has taken out a notice of motion before Mr. Justice Coyajee at the Bombay High Court to restrain the Association and its Board from enforcing the resolution on the alleged ground that the Board of Directors of the E.I.C.A. had been coerced and compelled by the Central Government into passing the resolution under question. As a result of this, an undertaking was given on behalf of the Association that it would not fix the rates for hedge contract clearing for February and May deliveries for a week. The plaintiff submitted that he and others had entered into hedge contracts in cotton for these deliveries under the rules of the Association, but that in December 1955 a directive from the Central Government was received by the President of the Association to the effect that the Board should declare an emergency and take appropriate action immediately to prevent the prices in respect of hedge contracts from rising above Rs. 700 a khandy. It was further alleged by the plaintiff that this directive was considered at a meeting of the Board on 23rd December, 1955 when the Board, after reviewing the prevailing market conditions and prices, resolved unanimously that in its opinion no emergency had arisen and that, therefore, there was no occasion for fixing a uniform price as suggested by the Government. Further, as the Board did not comply with the Government's directive, the Government suspended trading in hedge contracts for a week. Subsequently, a Committee appointed by the Board of Directors met the representatives of the Central Government and the Forward Markets Commission, when the latter insisted that the Board should declare the existence of an emergency and fix ceiling rates for hedge contracts in cotton for February and May settlements at Rs. 700 a khandy. As the Committee of the E.I.C.A. again refused to do so, the Government extended the period of suspension of trading for another week. It was also alleged by the plaintiff that finally the Central Government threatened that if the Board declined to act as required by the Government it would have to consider the question of superseding the Board. The plaintiff, therefore, claimed that the Board was coerced and compelled against its own views into passing the controversial resolution on 6th January, 1956, and submitted that there had neither arisen nor existed any emergency, and the declaration of an emergency in the resolution did not express the bona fide opinion of the Board, and that it was passed only at the behest of the Central Government, contrary to and against its own considered judgment and opinion. He, therefore, pleaded that the said resolution was invalid and of no effect and not binding on the Association and its members, as it constituted wrongful interference with their right to trade in cotton.

The notice of motion came up for hearing last Friday when the Counsel for the E.I.C.A. took up the stand that the Central Government, in the exercise of its powers, had suspended trading in hedge contracts for a week from 23rd December, 1955 and then for another smaller period. Due to this suspension, an emergency had arisen and as the Board considered that the suspension of business would harm the growers, traders and their employees, it passed the resolution as the only way of solving the deadlock. He contended that the Board had acted legally and bona fide to meet the emergency that arose and existed. Again this, the plaintiff in a rejoinder submitted that the emergency contemplated under by-Law 52 of the Association was emergency in the trade and not an emergency arising by reason of cessation of trade as a result of the action of the Government.

Uttar Pradesh

A SMALLER SECOND PLAN
FOR UTTAR PRADESHCONFLICT OF RESOURCES
AND NEEDS

(FROM OUR LUCKNOW CORRESPONDENT.)

THE Chief Minister for Uttar Pradesh, Dr. Sampurnanand, announced regretfully at a Press conference that the size of the State's second five year plan had to be cut from Rs. 700 crores to Rs. 260 crores. The original plan, he said, was based on the State's needs, whereas the pruning was done on the basis of resources. The accent in the second plan would be on industrialisation and he mentioned a number of industries such as fertilisers, electrical goods and the manufacture of railway wagons which could be suitably situated in U.P. The necessary raw materials were available inside the State but he could not say exactly where the proposed industries would be located. As regards the private sector, the Government would allow a number of concessions to new industries depending on negotiations with the parties concerned. All new industries however would be eligible for concessional rates of sales tax and power supply.

Achievements of First Plan

An official review of the first plan's achievements claims an impressive success on a wide front. It was planned to raise food production to 9.82 million tons by 1955-56, but it actually raised 12.45 million tons by 1954-55. The irrigated area will increase by 38.5 percent by the end of the current plan period, a rate of progress well ahead of schedule. The total increase in the installed capacity of power plants will amount to 100,555 kW, and in the second plan, it is proposed to spend Rs. 57 crores on power development. The two State enterprises in the industrial field, namely, the Chark cement factory and the precision instruments factory in Lucknow, it is claimed, have surmounted the initial difficulties. The second plan makes provision for doubling the output of the cement factory and trebling the output of the precision instruments factory. The performance of the cement factory, it is stated, might have been better if, in the words of the Chief Minister, "gentlemen from Bihar had not been visiting the factory and taking a keen interest in the affairs of workers." Incidentally, this is not the only dispute between U.P. and Bihar. They are also at loggerheads over a minor boundary question, for which they have approached the Centre for a settlement. U.P. claims the Ganga river bed of 1848 as its boundary, which Bihar disputes.

Steel and Coal Shortage

Though the Government of India re-imposed control on iron and steel in November, 1955, the State's quota for the last quarter has not yet been received. In 1952, the State's quota was about 17,000 tons a quarter. The allotment for the current quarter is 14,000 tons as against a minimum requirement of 20,000 tons. The State Government has approached the Centre for making good the deficit immediately and for doubling the State's quota from April next. A similar request has also been made in respect of cement. The present monthly allotment for U.P. is 29,000 tons for non-agricultural and 3,500 tons for agricultural purposes. Coal is another commodity very much in short supply at the moment. According to the Civil Supplies Minister, Mr. C. B. Gupta, 24,000 wagons of coal are already needed by the State to make up the present shortage, and he added that 20,000 wagons would be required exclusively for the second plan. There were 1,700 private kilns and 716 co-operative kilns working in the State each using 15 wagons of coal. Although the total allotment for the State was 20,000 wagons only, 12,000 wagons had so far been received.

Railway Rolling Stock

Addressing the North-East Railway Zonal Users' Consultative Committee in Gorakhpore last week, the General Manager of N.E.R., Mr. Arora, disclosed that 25 new locomotives had been received on the line since the Committee met last in October, and that 38 more were expected to arrive soon. As to the supply of new coaches, Mr. Arora stated that the coach-building programme for this 1955-56 provided for about 472 coaches for this railway, including 72 timber coach bodies to be built in the railway's workshops. The outturn of coaches from Jessops' shells alone was expected to be 30 bogies a month. Between April and November last, 128 new bogies had been put on the line from various sources. Wagon loading in October and November exceeded the loading in the corresponding months of the previous year by 7 per cent and 9 per cent respectively.

Jute Industry's Difficulties

The problems of U.P.'s jute industry, especially in relation to competition from Bengal, were dealt with by Sir Padampat Singhania, Chairman of the J. K. Jute Mills Co., Kanpur, at its annual meeting held on 31st December. Unlike Bengal and Andhra, U.P.'s jute industry was handicapped by having no outlet to the sea, a necessity for effective participation in overseas markets, but to depend, therefore, on internal markets, but here also it was no match for the competition from Bengal. The additional cost of power in Kanpur, Bengal. The additional cost of power by the Govdu to the electricity duty imposed by the Government further reduced the competitive capacity of the local industry. Perhaps the most crippling blow to the industry, according to Sir Padampat, came from the railways which had been periodically increasing the station-to-station rates. He

said: "There has been no justification for the increases as the rates do not correspond in any way, percentage for percentage, with the increase either in the net cost of working or increase in the average ton mile rate for goods charged by the railway administration concerned." The rises in the different station-to-station rates between 1936 and 1955 have been anywhere between 250 percent and 400 percent. What appears is that the rates are sought to be fixed anew, based upon the principle of what the Bengal jute industry for a much shorter haul, with port facilities at its door is capable of shouldering, rather than on the principle of sound economics and transportation costs as reflected by what is charged per ton mile generally on an average."

Employees State Insurance

The Employees State Insurance Act will be extended to three more U.P. towns from 15th January, namely, Lucknow, Agra and Saharanpur, bringing within its scope another 17,000 employees. Seasonal factories and mines are excluded. Employers covered under the scheme in these areas will be required to contribute at the enhanced rate of 1½ percent of the total wage bill instead of ¾ percent as at present. They are required to pay 4 percent more in view of the fact that their liability under the Workmen's Compensation Act and the Maternity Benefit Act will be taken over by the Corporation to the extent provided under the Employees State Insurance Act.

Books and Publications

COMMERCE ANNUAL REVIEW

Commerce Annual Review 1955 : Editor V. S. Rayan. (Published by Commerce (1935) Ltd., Royal Insurance Buildings, Veer Nariman Road, Bombay. Pages 199; price Rs. 7-8.)

With India on the threshold of momentous new developments, a practical assessment of past achievements coupled with a frank approach to future problems is of ever present interest and significance. The wide range of subjects covered in Commerce's annual number provides an excellent commentary on the country's industrial, economic and administrative progress. The Review includes feature articles by many eminent authorities such as Sir Oscar Hobson, followed by a summary of events in 1955 from insurance to planting and a section devoted to market trends. Statistical tables provide a useful reference section. It is not

surprising that the theme underlying many of the contributions should be largely the implications of State administration in a socialistic pattern of society; conjecture about the nature of the specifics it will employ; their potential efficacy and recommendations as to alterations in the prescription. Mr. T. T. Krishnamachari, Minister for Commerce and Industry, discussing the question of the survival of the private sector in a socialist economy, takes pains to stress the evolutionary aspects of the new creed, which emanates, he says, rather from an ideological than a practical basis. Putting the onus on the private sector to develop a tolerance for controls, he points out that it will finally be judged on its own ability to assist in capital formation, by the ease and rapidity with which it can socialise its management and by the degree of restraint it will exercise in the operation of profit motives. Dr. Sudhir Sen follows with reflections on the private sector in the light of the new Company Law. As to the position of the State, he emphasises the quality of the regulation envisaged rather than the quantity. Although this need not be construed as a threat to the private sector, he admits that the outlook is far from cloudless. Taxation, allocation of resources between the public and private sectors, the trend to bolster up the worker's rights while ignoring his responsibilities, and the danger that the powers exercised may one day be used not for the benefit of the nation but for a particular political party, are some of the danger points to which he draws attention.

* * * * *
Indian Mining Journal : Indian Coal Industry Symposium Number : Vol. III no. 9. Edited by H. Ghosal. (Printed and published by P. K. Menon from the Temple Press, 2, Nayaratra Lane, Calcutta. Illustrated. Pages 196; price Rs. 7-8.)

This special number of the Indian Mining Journal is devoted to the publication of articles contributed to the symposium on the coal industry held in Calcutta under the auspices of the Geological, Mining and Metallurgical Society of India, and the Indian Mining Journal. A collection of no less than 45 articles provides a valuable and comprehensive survey of one of the country's most important industries, vital indeed to the success of the second five year plan. The contributors cover between them nearly all aspects of the working and development of Indian coal and lignite, including coal geology and reserves, mining, processing, utilisation, conservation, legislation and trade.

Concrete thin shell roofs
mean economy
in industrial construction

Concrete shell roofs are ideal for buildings requiring large interior areas free from obstructions. This type of construction offers these distinct advantages:-

- long spans without supporting columns
- maximum usable floor space
- adaptability to a variety of plan requirements
- unusual economy in large structures
- high durability and fire-safety.

INDIAN INSURANCE IN 1954

NEED TO EXPLORE WORLD MARKETS

NEW life insurance business transacted in India by Indian insurers during the year 1954 amounted to about 6,83,000 policies assuring a sum of Rs. 213.32 crores and yielding a premium income of Rs. 10.67 crores. Foreign insurance companies working in India issued about 22,000 policies during the year assuring a sum of Rs. 16.22 crores and yielding a premium income of Rs. 0.94 crores. These figures are given in the *Indian Insurance Year Book, 1955*, just published by the Controller of Insurance, Government of India. The net premium income in 1954 in fire, marine and miscellaneous classes of insurance business showed an increase over that in 1953.

The report of the Controller of Insurance contains the following new features: Information regarding the gross direct life insurance business of Indian and non-Indian insurers into life and non-life. Detailed analysis regarding the actual expenses incurred vis-a-vis the allowance for expenses prescribed in the Act and lists of insurers and provident societies who did not furnish their returns within the statutory due date.

Life Insurance Business

Compared to the year 1953, there has been an increase of about 1,44,000 policies. Rs. 75.14 crores in the sum assured and Rs. 3.29 crores in the yearly renewal premium income in the new life insurance business transacted in India by Indian insurers. The life insurance business of non-Indian insurers in India registered a slight decrease.

The net amount of life insurance business effected in India by Indian insurers which was in force at the end of 1954 amounted to about 40,69,000 policies assuring a sum of Rs. 921.90 crores with a premium income of Rs. 42.68 crores. These figures represent an increase under each respective item over those of the previous year of about 2,14,000 policies, Rs. 88.54 crores and Rs. 2.51 crores. The corresponding figures for non-Indian insurers were about 2,44,000 policies assuring a sum of Rs. 136.93 crores and having a premium income of Rs. 7.45 crores, representing a decrease of about 7,000 policies and Rs. 0.31 crores in the renewal premium income but an increase of Rs. 3.90 crores in the sum assured.

The net amount of life insurance business effected outside India by Indian insurers in 1954 and the amount remaining in force at the end of that year were about 32,000 policies assuring a sum of Rs. 17.46 crores and about 2,74,000 policies assuring a sum of Rs. 85.03 crores respectively. The total revenue income for 1954 of Indian insurers for their entire life business and non-Indian insurers in respect of their life business in India was Rs. 58.91 crores and Rs. 9.35 crores respectively. The corresponding total outgoings, including amounts disbursed as claims and surrenders, was Rs. 31.70 crores and Rs. 7.41 crores. The balance—Rs. 27.21 crores and Rs. 1.97 crores—represented the increase in the life funds of these insurers.

New Business Trends

Reviewing the trend in the new life insurance business in India during the year 1954, the Controller of Insurance remarks that new business registered a sharp increase. He adds that part of the increase is no doubt attributable to the tendency to make old policies paid up with a view to taking advantage of the reduced rates of premium, but even if allowance is made for this fact, the increase is significant. The reduction in premium rates has reduced the cost of insurance and to the extent that this is due to an improvement in the mortality experience and increase in the interest yields of insurers, is a healthy development. A table is included in the report giving the combined experience of all Indian insurers in the matter of lapses classified according to mean duration which continue to be heavy. In order to gain some indication of the economic condition of the country in 1954 a ratio for Indian insurers of the

total amount of lapses during the year to the mean gross direct business in force (sum insured) was calculated. The ratio works out to 8.5 percent as against 8.9 percent for 1953.

The average net rate of interest earned on mean life funds of insurers has increased very slightly in the case of Indian insurers and works out to 3.51 percent. The rate of interest in the case of non-Indian insurers has, however, fallen from 3.3 percent in 1953 to 3.06 percent in 1954. The total expenses of management expressed as a percentage of the premium income during the year worked out to 29.3 percent and 21.4 percent respectively for Indian and non-Indian insurers. The corresponding figures for the previous year were 27.4 percent and 20.7 percent respectively. The renewal expense ratio for the year 1954 for all Indian insurers combined, calculated on the basis of Rule 25(b) of the Insurance Rules, 1939 was 14.6 percent. The corresponding figure for the half a dozen insurers having the largest premium income was 12.7 percent, while that for the remaining was 17.2 percent.

The frequency distributions of Indian insurers according to mortality, rate of interest and expenses provision in the rates of life insurance premiums charged by Indian insurers are shown by tables. The classification is restricted to whole life assurance, with and without profits plans, for ages at entry 25, 30 and 35 years and endowment assurance, with and without profits plan, maturing at age 55 for ages at entry 25, 30 and 35 years. The expense provision given in these tables is a notional renewal provision (expressed as a percentage of the office premium), assuming in all cases a uniform allowance of 90 percent of the first year's premiums for initial expenses.

Analysis of Valuations

Of the 61 new valuations of Indian insurers published in the *Year Book*, 52 disclosed a surplus. In the case of 47 of these, the surplus was allocated to policyholders and/or shareholders and in the case of others the surplus was carried forward unappropriated. Nine companies disclosed a deficit. In the case of four of these, the deficit was covered by free paid up capital, whereas in that of the remaining the deficit was not so covered. The valuations submitted by four insurers and one provident society were questioned by the Controller of Insurance as the basis adopted was considered faulty.

Twenty-four Indian insurers, two non-Indian insurers and 12 provident societies were in default under section 27(1) of the Insurance Act, 1938. Of the Indian insurers, four did not comply with Section 27A (2) (i) of the Act.

As at 31-12-54, three insurers contravened the provisions of Section 27A (3) (b) of the Act in the matter of five investments, and the amount held in excess of the limit laid down in that section was Rs. 4.88 lakhs. The corresponding figures for clauses (a) and (b) of sub-section (4) and sub-section (5) of section 27A of the Act were 13, 16, 4.88; 7, 13, 60.83 and 1, 1, 3.27 respectively.

Non-Life Business

Reviewing the trend in non-life insurance business during the year 1954, the Controller remarks that an important event during that year relating to non-life insurance business was the reduction in the tariff rates for fire insurance business. He says that while, in general, the gross direct premium written in India during the year has shown a fall compared to the previous year (except in "marine") the net premium income has been on the increase. He adds that the net business Indian insurers are able to write in the world market is still not quite satisfactory although the position in this respect has shown an improvement over previous years.

The total net premium income of Indian insurers under these classes of business was Rs. 6.98 crores inside India and Rs. 8.96 crores outside India. The corresponding figures relating to gross premium written direct were Rs. 12.01 crores and Rs. 4.91 crores respectively. The net premium income of non-Indian insurers inside India was Rs. 6.41 crores and the gross premium income

written direct in India was Rs. 8.81 crores. The ratio of claims to the net premium income of Indian and non-Indian insurers combined was 31 percent for fire insurance, 57 percent for marine insurance and 48 percent for miscellaneous insurance. The corresponding percentages for 1953 were 35, 57 and 49 percent respectively.

The ratio of commission to the net premium income was 16 percent in fire insurance, as against 15 percent for 1953; 8 percent in marine insurance and 16 percent in miscellaneous insurance, these being the same as for 1953. The ratio of expenses of management to the net premium income was: Fire insurance: 34 percent as against 33 percent for 1953; Marine insurance: 26 percent as against 28 percent for 1953; and Miscellaneous insurance: 28 percent the same as for 1953. Out of the total net premium income in different classes of non-life business, 67.9 percent was received on account of business outside India in respect of fire insurance. The corresponding percentages for marine, miscellaneous and all non-life classes combined were 58.4, 35.1 and 56.2 respectively. Out of the total gross premium written direct by Indian insurers in different classes of non-life business, 24.8 percent was received on account of business outside India in respect of fire insurance. The corresponding percentages for marine, miscellaneous and all non-life classes combined were 35.4, 29.9 and 29.0 percent respectively.

Transfers and Windings Up

In his report, the Controller of Insurance states that the life insurance business of four insurers and the provident insurance business of two provident societies have been transferred. Two insurers and three provident societies were wound up by the courts. One insurer and one provident society went into voluntary liquidation. For one insurer, a provisional liquidator has been appointed. The Central Government appointed an Administrator under section 52A of the Act to manage the affairs of the Bharat Insurance Company Ltd. Seven companies are now being managed by Administrators.

The number of disputes referred to the Controller of Insurance under section 47A of the Act was 287 up to 1st November, 1955. Out of these, 36 were not entertained, 125 were withdrawn or allowed to be dropped, 40 were decided in favour of the claimant, 7 were decided in favour of the insurers and the remaining 77 are pending. Pointing out that the number of disputes referred to him is on the increase, most of which relate to mere delay in the payment of the claims by certain insurers, the Controller remarks that this attitude of withholding payment without any material reasons is to be highly deprecated.

Thirty schemes of capital reconstruction under sub-section (1) of section 6B of the Act were submitted to the Controller, who is the officer appointed by the Central Government under that subsection. Of these, 27 schemes have been sanctioned so far. Of the remaining three schemes, one has been dropped as the life insurance business of the insurer concerned has been transferred to another insurer. The two other schemes are still pending. Licences issued under the Act to insurance agents in 1954 numbered 1,19,268; out of this, 38,409 or 32.2 percent were issued to women. In addition, 857 certificates for principal agents, 369 for chief agents and 5,073 for special agents were issued.

Insurance Association of India

The Controller remarks that the "code" evolved by the General Executive Committee of the Insurance Association of India for observance by insurers carrying on general insurance business in India has had a healthy effect on the insurance industry though the evils of rebating and payment of excessive commission to principal agents, insurance agents, etc., may not have been checked to any considerable extent. In consultation with the Institute of Chartered Accountants in India, the Committee has evolved a standard form for agents' accounts, for adoption by insurers. The Committee is considering the question of establishing a Reinsurance Corporation in India. The Life Executive Committee decided to prohibit staff schemes with effect from 1-1-56; however, staff pension (superannuation) schemes and staff schemes for insurers' own employees may be offered with the prior approval of the Controller of Insurance. To ensure uniformity in practice in the matter of granting paid up policies by life insurers, the Committee made two recommendations.

Provident Societies

On 31-10-55, there were 71 provident societies registered under the Insurance Act. The new business effected by these societies in 1954 was 15,728 policies assuring a sum of Rs. 125.62 lakhs. This showed an increase in the number of policies by 2,315 and Rs. 19.24 lakhs in the sum insured. The total business in force at the end of the year was 65,392 policies insuring a sum of Rs. 417.19 lakhs.

Defaults in Furnishing Returns

Winding up his report, the Controller says that the record of insurers in the matter of furnishing their accounts and valuation returns within the statutory time limit has not shown any appreciable improvement. He adds that delay in the submission of returns is not in most cases due to any unavoidable circumstances but to lack of efficiency and willingness on the part of insurers. With a view to ending this state of affairs, a circular letter has been addressed to all insurers warning them that in future action will be taken promptly under the appropriate provisions of the Act and that the Controller will not hesitate to give the widest publicity to such a step. Similar action may have to be taken in respect of other returns under the Act if necessary.

Jute

GUNNY MARKETS BECOME DULL AND QUIET

VERY LITTLE BUSINESS FROM ABROAD: RAW JUTE RELATIVELY STEADIER

CONDITIONS in the gunny markets over the past week were very different from those of the previous week, and in general trading was dull and quiet. Overseas interest was very poor. With local speculators holding back, there was no support and prices gradually fell. The decline was not confined to any one section. Although sacking lost more than hessian, the ready position in both hessian and sacking showed a weaker tendency. The premium of forward shipment over ready delivery improved at the lower levels, but this was not due to any single factor; rather, it was an indication of quiet confidence in the future. Indeed the only interest shown over the whole week was in forward shipment but this was on such a limited scale, and was in the main confined to shipper-covering, that its effect on the market can be discounted. U.S. burlap consumption was well maintained during December, and in the absence of any fresh foreign business this had a temporary steadying influence. Mills in general have been fairly keen sellers of jute goods, and this, in a market where buyers are few and far between, has been a major factor in the depressed conditions. Towards the close, prices fell away sharply on speculative liquidation, but the cheaper rates brought out buyers, and rates recovered slightly.

Raw Jute Dull

Similar conditions existed in raw jute. Mills showed very little interest, there being a wide discrepancy between jute and gunny rates. In spite of the inactivity, prices recorded only nominal movements, and were still inclined to be governed by the steady upcountry markets. Calcutta sellers, although keen for business, were reluctant to meet the lower prices indicated by mills, and the steadier tendency in raw jute was demonstrated by the fact that rates fell only by about Rs. 20 a ton while the goods market was falling through a range of about Rs. 40 a ton. There appears to be an acute shortage of high grade jute, and in many cases buyers were willing to pay fairly substantial premiums provided certain guarantees of colour and strength were met. The question of moisture in jute continues to cause discontent, not only among mills but also among middlemen. Mills demand dry jute, but are not willing to meet the premiums that middlemen have to pay to procure fibre in this condition. Consequently, most parcels contain a high percentage of moisture. At this stage in the season, though it is reasonable for mills to expect jute in good condition, the blame lies not with the local middlemen, but with the agriculturists who have forced these conditions on the market. In many quarters, it is thought that this season is the worst as regards moisture for many years.

THE JUTE MARKETS

Manufactured Goods: At the opening last Thursday, the jute goods market ruled quiet due to selling pressure from mills and the lack of overseas enquiries. Local shippers did small covering business in the forward section, and this pushed up April-June rates a few annas. B Twills for this period rose to Rs. 116-8 a 100 bags, which was 4 annas higher than for January shipment. In hessian 40in. 10oz. also showed a 2-anna premium for forward shipment, and rates for April-June shipment stood at Rs. 41-14 a 100 yards. Only small business was reported at the opening, but heavy selling pressure in the absence of buyers caused depressed conditions. Heavy goods fell by Re. 1 by Friday morning, with hessian showing a drop of 6 annas. Dull conditions persisted but the lower rates again interested local shippers, and covering activity had a slightly steadying influence. In the absence of overseas enquiries, the improved conditions were short-lived. By Saturday morning B Twills had lost a further 12 annas to be quoted at Rs. 114-8 for January shipment, and Rs. 114-12 for April-June shipment. Hessian was inclined to be a little steadier, but interest there was not enough to prevent a 2-anna drop to Rs. 41-4 for January shipment, and Rs. 41-6 for forward shipment. The announcement over the week-end of the U.S. hessian consumption figures for December arrested the downward tendency, and at the opening on Monday prices were unchanged for the first time in the current week. Overseas interest however was still poor, and mills continued to depress the market with steady selling pressure. Heavy goods lost Re. 1 and hessian 2 annas, and these losses increased as the day wore on. At one stage, B Twills dropped below Rs. 112 a 100 bags, but recovered slightly towards the close. On Wednesday opening quotations were as follows:

	January	February	March	April-June
Rs.	Rs.	Rs.	Rs.	Rs.
40in. 8oz.	33	33	33	32-12
40in. 10oz.	40-12	40-14	40-14	40-14
B Twills	112-4	112-8	112-12	112-12
Heavy Coes (Plain)	111-8	112	112-8	112-8
A Twills	141	140-8	139-8	138
Liverpools	131-4	130-8	129-8	128
Cornsacks	114	114-4	114-4	114-8

Raw Jute: There was very little activity in the jute markets during the past week, buyers

being content to pick up small lots at cheap rates as and when they were offered. In spite of the falling goods market raw jute showed very little change, and sellers were inclined to be reserved, showing no interest in the prices mills were willing to pay. Upcountry prices continued to rule very steady due to the very small imports reported from most agencies, and sellers' ideas were governed by conditions ruling in the mofussil. After the week-end, mills displayed a little more interest, but as this was mainly in high-grade jute which was in short supply, only small business was concluded. The gunny market gave the mills little incentive to buy, and the raw jute market ruled dull but steady.

Quotations at the opening on Thursday morning showed a drop of 8 annas a maund, and Upper Assam was offered at Rs. 29 a maund basis Bottoms for January-February shipment. Lack of mill interest at these rates brought about an easier feeling, and by Friday another 8 annas had been taken off the price. Buyers gave out regular indications at well below these rates, but sellers were not inclined to discount, and only very small business was reported. Prices were unaltered over the next few days in spite of the slump in the goods market, but towards the close an easier tendency prevailed, and more offers were forthcoming.

Business during the week was on a very small scale due to the comparative steadiness of the market. Good Northern jute was done at Rs. 28 to Rs. 28-8 a maund basis Bottoms for January-February shipment, and Northern ex Local Godown at 8 annas less. Small lots of Upper Assam jute were also done between Rs. 28 and Rs. 28-8 a maund for the same shipment. Tossa came in for a good deal of interest and Karimpore-Bongaon tossa fetched Rs. 28-8 to Rs. 29 a maund, while selected districts of Murshidabad Tossa passed at Rs. 28 to Rs. 28-8 a maund, all for January-February shipment. Business in Daissee was slack at the opening, but towards the close good business was done at between Rs. 28-8 and Rs. 29-8 basis

Bottoms, with Middles alone passing at Rs. 30-8 to Rs. 31 a maund. Small lots of Daissee Mesta changed hands at Rs. 26 to Rs. 26-8 basis Bottoms.

In the pucca bale section Mill Firsts were done at Rs. 204 a bale, Export Firsts at Rs. 179 a bale, both for one month's shipment, and Pakistan Cuttings at Rs. 115 to Rs. 118 a bale, also for the same shipment. Pakistan Jat Jute was done at Rs. 30 a maund basis Bottoms for January-February shipment.

At the close prices are unchanged in spite of a fair amount of business reported late on Tuesday. Opening quotations on Wednesday morning were as follows:

Indian Jute :	Landed at Mills Rs. a md. basis Bottoms	Shipment.
Lower Assam	28-8	January-February
Upper Assam	28-8	"
Northern	28	"
Murshidabad White	27-8	"
Daissee ex Agency	29	"
Daissee ex Cossipore	28-8	"
Daissee Mesta	26-8	"
Bimil	26-8	"
Local Packing	28	"

Tossa is quoted at Rs. 1 a maund above the price of white jute.

Pakistani Jute :	Rs. a maund. basis Bottoms	Shipment
Jat	30-8	January-February
Distric	30	"
Northern	28-8	"
Jat Cuttings	120 a bale	"

The local Cossipore markets have tended to rule steady over the week, with a fair amount of inter-seller covering taking place. Mill representatives are still active, and all arrivals meet with keen competition. Imports have again been good and over the week a total of 685 wagons arrived at the Cossipore sidings—an average of about 100 a day. High-grade jute is in good demand, and the current shortage has forced high prices to be paid for it. At the close, Kishenganj jute is quoted at Rs. 27-8 a maund for garsat quality. In the Daissee markets, imports are negligible, with the consequence that agency prices continue to be very steady. Mill interest over the week has been small, but towards the close it improved, and a fair amount of business was concluded. At the close quotations in Sheoraphuli were based on Rs. 27-8 a maund for garsat quality, but jute at this rate contained a considerable amount of moisture.

Mofussil: Upcountry markets in India are very steady due to the small imports, and prices con-

GUNNY SHIPMENT STATISTICS

The following figures include coastal shipment relating to manufactured jute goods for shipment from the port of Calcutta. These are gross figures based on shipping bills presented.

	Hessian Bags (Tons)	Cloth (Tons)	Total (Tons)
1st to 10th January, 1956	1,491.5	11,813.3	13,304.8
1st to 10th December, 1955	1,028.7	17,481.2	18,509.9
1st to 10th November, 1955	1,307.5	14,053.1	15,360.6
	Sacking		
1st to 10th January, 1956	11,606.9	426.6	12,033.5
1st to 10th December, 1955	21,701.5	74.3	21,775.8
1st to 10th November, 1955	21,564.4	655.6	22,220.0

U.S. CONSUMPTION AND STOCKS

U.S. burlap consumption increased last month, bringing the total for the year to 826 million yds.—an increase of 5.6 yards over 1954. This quite satisfactory gain reflects consumer acceptance of burlap for so many packaging and industrial uses, when available in adequate quantities at reasonable and stable prices. U.S. burlap stocks at the end of December at 247 million yds. increased 8 million yds., ending the year at just about the same level as at the beginning of the year. Appearing below are tables which include the December figures—(1) based on member reports to the Textile Bag Manufacturers Association and the Burlap and Jute Association and (2) projected to represent the estimated consumption and stocks for the entire industry:

QUIETER TONE RULING

(FROM OUR DUNDEE CORRESPONDENT)

AN unexpected advance in prices for yarns and cloth was notified to the trade here towards the end of the first week of this month. For some time past, there has been dissatisfaction expressed by spinners and manufacturers because they have received no increase in prices on account of addi-

INDUSTRIAL TRENDS IN THE UNITED KINGDOM

(FROM A SPECIAL CORRESPONDENT IN THE U.K.)

THE year 1955 moved to its close in the midst of a seasonal home trade which, in many directions, is of greater volume than ever previously experienced, as might be gathered from the record sales of their National Savings Certificates by the public and very heavy withdrawals from the banks. Wages still tend upward and Christmas bonuses have been large. Nearly everyone now has the feeling well ingrained that, come what may, an allowance or pension awaits him or her in any period of vicissitude or when old age arrives with "stealing steps." Toys are expensive, but rare indeed the father or mother who restricted their buying accordingly. It can easily be understood that, under these circumstances, the recent Supplementary Budget has had little influence upon the rate of spending by the ordinary family, and that the price level index has moved up fully a point.

The credit squeeze is said to have hit some small men severely, and certainly the latest official figures of bankruptcies would seem to confirm this. It is to be noted, however, that the highest percentage of casualties recorded is among the more speculative types of businesses, notably minor builders. These include men, who by any strict test, have little claim to the title, being persons who have hitherto obtained credit from banks in order to finance land purchase and have then contracted with groups of more or less skilled building operatives, "working on their own" to erect dwellings. It is an unhealthy form of industrial activity, lacking a management either substantial or responsible, and its disappearance is a gain to the community as a whole.

Prominent firms in several of the chief export industries state that they are meeting with irre-

gularity of demand for their goods; but, with few exceptions, these concerns have heavy accumulations of past orders still to be worked off. There is, in fact, little sign of a substantial setback occurring to these industries over the next six months. It should be added, from the general economic point of view, that what the Chancellor so strongly desires is not merely a maintenance of the present export figures, but a marked expansion; and of this happy event the latest Board of Trade Returns give no indication. Excepting for firms manufacturing small machine tools, all forms of engineering and associated activities are outstandingly busy. This state of affairs has been reflected in a record output of iron and steel. Alarm has been expressed by leaders of the cement industry that prices of many products are still advancing, in spite of the Government's drive against inflation. This industry has promised to set an example by stabilising the prices of its own manufactures over the next six months, whatever may be the trend of raw material prices over that period. Leaders of other industries are invited to assist the development of a general industrial policy based on this practice. The cement industry is in a favourable position not to raise the prices of its manufactures over a limited period, assuming that cement workers do not demand large increases in wages. For the cement companies own the actual sources of the raw materials they use. Industries in a similar privileged position are rare, although some of the big chemical companies are well situated in this respect. Nevertheless, it remains that, unsatisfactory to date although the politicians attempt to deal with inflation appears to be, Government measures for this purpose can be more far reaching than steps taken by individual industries, whose contribution best takes the form of keeping costs of production as low as members of trade unions will allow.

WHAT'S NEW IN PRODUCTION METHODS?

What's better, faster-working, more economical, more accurate? What's the shape of things to come in production engineering? For all the answers, come to the...

INTERNATIONAL MACHINE TOOL EXHIBITION 1956

Olympia · London · England June 22—July 6
(Sundays excepted)

Here, under one vast roof, for close study and comparison at first-hand, the Machine Tool Trades Association (of Great Britain) will present an extensive show of the most modern machine tools and allied equipment from the world's leading makers—British, European, American.

This show will surpass in information value a whole library of catalogues, a mile of correspondence. You can see the machines themselves at work in actual production. You can discuss with the world's best informed experts your own production problems and plans.

The huge range of exhibits includes machine tools, engineers' small tools, gauges and measuring equipment, testing equipment, presses and power hammers, heat-treatment plant, woodworking machinery.

This will be Europe's outstanding engineering display of 1956. Be there! Be sure to be there! Note the dates and make your plans now!

Organized by The Machine Tool Trades Association (of Great Britain)
Victoria House, Southampton Row, London, W.C.1, England.

Commodity Markets

WORLD NICKEL OUTPUT RISES

FURTHER INCREASE EXPECTED

FREE world nickel production in 1955 again set a record and was estimated at about 427 million lbs. Dr. John F. Thompson, Chairman of the International Nickel Company of Canada Ltd states in a review of the nickel industry. This is an increase of approximately 40 million lbs over the previous high of 387 million lbs in 1954, and 87 million lbs over 1953. Total output by producers in Canada is expected to reach 347 million lbs in 1955, also constituting a new high. This production is some 24 million lbs higher than in 1954, and represents about 81 percent of the free world production. Of the remaining free world production, Cuba accounted for approximately 7 percent; New Caledonia 5 percent; Japan 3 percent; the United States 2 percent, and various other countries 2 percent.

Total free world supply, including commercial production and government subsidised production, was distributed to the extent of approximately two-thirds to the United States and one-third to Canada, the United Kingdom and other portions of the free world. A substantial part of the distribution to the United States was used for its heavy defence production and stockpile requirements. The increased tempo of industrial activity throughout Europe and North America increased the 1955 demand for nickel in every established field of interest. Slightly more nickel was available for civilian applications than during 1954. However, the limitations in the supply caused by large and augmented defence requirements and the needs of the U.S. Government's strategic stockpile continued to place a burden upon the expansion of civilian markets, thus retarding the future growth of the nickel consuming and producing industries. In meeting the increased defence requirements during the year, substantial assistance was provided in the United States through the action of the U.S. Government in diverting to industry approximately 24 million lbs of scheduled stockpile purchases of nickel.

Basic Prices Unchanged

Throughout the year the basic prices for Canadian nickel to industrial consumers in all world markets remained unchanged at 64½ cents U.S. currency (including the 1½ cents U.S. import duty) or the equivalent prices in Canadian and British currencies.

During 1955 civilian applications for nickel again were influenced by the heavy demand for the metal for atomic energy, military and stockpiling requirements. The steel industries continued to

constitute the largest markets for nickel. The production of chromium-nickel stainless steels showed a further increase. An exceptionally high utilisation of nickel-bearing scrap was helpful in this accomplishment. The nickel-containing stainless steels continued to be employed throughout industry because of their superior resistance to heat and corrosion, ease of fabrication and good appearance. Similarly, the demand for nickel by the steel industries in the production of nickel containing engineering alloy steels has improved. Established applications for these alloys, such as in automobiles, trucks, tractors, aircraft, military equipment, farm machinery, road building equipment, power generation machinery and railroad equipment, were responsible for the major portion of their consumption. During the year International Nickel's nickel-chromium alloys maintained their position as standard materials in the construction of aircraft turbo-prop and jet engines.

Shortage of Supplies

As in other industries, supplies of nickel available for the nickel-plating industries during 1955 continued to fall short of the demand. This condition was further aggravated by the sustaining trend in North America toward larger areas of bright metal on passenger cars together with the higher rate of automobile production. Among new developments in this field during the year was the production of nickel-plated heavy steel plate and sheet for fabrication into materials handling and processing equipment. The copper-nickel-zinc alloys known as nickel silvers maintained their position as the superior base metal for silver-plated tableware. These alloys also have wide acceptance as preferred materials in the communications field. The cupro-nickel alloys containing 10 to 30 percent nickel have proven themselves in heat exchanger applications in the power, marine and petroleum industries. Their combination of mechanical properties and resistance to corrosion has been a vital factor in establishing this group of alloys on a firm basis. The 30 percent nickel alloy has been adopted as the preferred material for oil coolers in automatic clutches by large segments of the automotive industry.

The output of nickel-chromium alloy castings in 1955 was about the same as in the previous year. The heat-resisting types find their principal application in industrial heat-treating furnaces; the petroleum and chemical industries are also important users. The corrosion-resisting types are used in the chemical, food processing and petroleum industries. In addition, increasing amounts of corrosion-resisting alloy castings are being employed by the Atomic Energy Commission. Consumption of nickel as a catalyst during 1955 by the chemical and allied industries again showed an increase. Quantities of nickel compounds used by the ceramics and electronics industries were also higher.

WHOLESALE PRICE INDEX RISES

THE official wholesale price index (base: year ended August 1939=100) advanced further by 0.7 percent to 373.4 during the week ended 31st December, 1955 as compared with 370.9 (revised) for the previous week. The index was higher by 2.4 percent and 1.9 percent as compared with that of last month and a year ago. The average for December, 1955 stood at 368.4 as compared with 365.0 (revised) for November, 1955 and 367.8 for December, 1954. The average for 1955 worked out to 355.4 as compared with 386.7 for 1954. During the week under review the index for Food Articles advanced further by 0.6 percent to 327.4 as compared with 325.3 (revised) for the previous week as a result of higher prices of jowar (+16%), wheat at Jabalpur (+12%), tea for internal consumption (+11%), salt (+2%), and coffee-plantation (+1%) in spite of lower prices of rice at Vijayavada (new crop) (-7%), bajra (-4%), gram at Hapur and gur at Muzaffarnagar (-3% each), wheat at Hapur (-2%) and at Amritsar (-1%) and sugar (-1%). The index for Industrial Raw Materials also moved up by 1.8 percent to 454.7 due to an increase in the prices of manganese ore (average export prices) (+21%), Karungani cotton at Tirupur (+12%), gingelly seed (+7%), linseed in Calcutta and raw jute (+2% each) and rapeseed in Calcutta (+1%). The prices of groundnuts in Bombay (-4%), raw silk at Bangalore and Bengal cotton in Bombay (-3% each); castorseed (-2%) and linseed (-1%) in Bombay and lac (-1%) were, however, marked down. The index for Semi-Manufactures rose by 0.3 percent to 351.4 as a result of advances in the prices of castor oil in Madras (+3%), cow hides, buffalo hides, mustard oil, cotton yarn and zinc (+1% each), while the prices of groundnut oil (-3%), gingelly oil and linseed oil (-2% each), and copper in Calcutta (-1%) exhibited declines. A rise of 0.3 percent to 373.6 in the index for Manufactures was brought about by an advance in the prices of jute manufactures (+2%). Prices of Vanaspathi (Dalda) (+1%), and betelnuts in Calcutta (+1%) moved up while those of pepper, cutta at Cochin (-2%) moved down. On the whole, the index for the Miscellaneous group advanced by 0.2 percent to 547.5 as compared with 546.6 (revised) for the previous week.

Plantation Topics

CALCUTTA TEA SALES IN DECEMBER

DEMAND IMPROVES IN LAST SALE WITH SMALLER OFFERINGS

IN Sale No. 25, demand was less general than in the latter half of November and most kinds were irregularly lower, although Fannings, good clean leafy Broken Pekoes and stylish B.P.S. grades showed little change, say Messrs. Carritt Moran & Co., Ltd. in their monthly tea market review. Medium Assam B.O.P.s were again a weak feature and declined by one to two annas and Orange Fannings by one anna, whilst common and low medium broken were half to one anna lower. With the announcement of the North India crop figure for November, the offerings in Sale No. 26 met with a very much realised for the majority of teas and a decline of 3 to 4 annas was realised for the feature of the sale. Sale No. 27 witnessed a further decline of two to three annas for nearly all kinds, though the very few best quality C.T.C. Assams and tippy teas sold well. The smaller quantity on offer in Sale No. 28 met with a better general demand. Fannings grades were the strongest feature and were often one anna dearer, while black leaf Assam O.F.s were up to 2 annas dearer. Medium Assam B.O.P.s received rather better support but were somewhat irregular and generally sold at or a little below previous rates. The better liquoring Broken Pekoes were a full one anna dearer, while clean black teas were fully firm. Stalky poor liquoring teas sold at irregular rates and were often easier. The majority of the C.T.C. Assams catalogued during the month were of poor quality with the result that prices for these teas declined considerably. Darjeelings met with a fairly good demand throughout the month.

Darjeeling offerings catalogued during December showed little change from those of the previous month and were of a satisfactory standard for late rains teas. Assam leaf appearance showed a further decline and the majority of the teas were plain in character. A particular feature of the month has been a few brown clean teas; although there have been a few brown clean teas with colour, strong liquors, the majority of this type of tea has been very heavy and has often lacked strength and colour. Stalk and fibre became increasingly prominent during the month in Doora teas and the majority of liquors were of a very ordinary rains description. In general, teas from this district were below average, both as regards leaf and liquor, for the time of the year. In Cachar teas with a few exceptions, leaf appearance was dull, mixed and stalky, with soft and plain liquors.

Internal Market

In the four sales held during the month a total of approximately 12,100 chests of Leaf were offered. Demand in the earlier sales was only fair but this improved in the sale, although prices continued to show a further downward tendency. The need to show the offerings were again of a stalky majority of the offerings were again of a stalky residual description. Altogether approximately 79,800 chests of Dust were offered. There was a fair demand for the slightly larger quantity on offer. The black leaf kinds suitable for the Middle East continued to be the strongest feature of the sale although dusts in this category met rather less support in the final sale. The selection of C.T.C. Assam dusts on offer showed a considerable increase compared with recent months and, resulted combined with some decline in quality, resulted in a drop in prices by as much as 8 annas for the very best and more for the poorer types which were occasionally difficult to sell. All other descriptions were generally 3 to 4 annas easier with the exception of best liquoring Assam dusts which continued to receive good support and were only 2 to 3 annas easier.

Quotations

	1955-56	1954-55
Rs. As. P.	Rs. As. P.	Rs. As. P.
Sale No. 25 Clean Common Dust	1 9 0	1 14 0

Sale No. 27 " "	1 6 3	2 0 9
Sale No. 28 " "	1 6 0	1 14 0

Export sales up to No. 28 totalled 1,192,539 chests at an average price of Rs. 2.5-1 compared with 1,199,930 at an average price of Rs. 3-0-7 during the corresponding period of the 1954-55 season. Internal sales stand at 57,622 chests of season. Internal sales stand at 57,622 chests of season. Internal sales stand at 57,622 chests of season. Internal sales stand at 57,622 chests of season.

The price of export quota declined steadily as the month progressed, except for a slight recovery immediately after each of the last three sales. This steadily decline showed very little relation to the fluctuations in the price of tea, especially when it is remembered that there was a firmer tendency prevailing during the final tea sale which was not rejected in the price of quota. Business at the beginning of the month was transacted at rates between 59 and 62 pies a lb. thereafter, and as previously mentioned, it showed a steady decline until at the close buyers were able to secure quantities at 24 pies a lb.

The estimated North India crop to the end of November, 1955 was 518,316,357 lbs. as compared with 502,504,126 lbs. to the same date last year. The average figure at this date for the three years 1952-1954 was 491,258,202 lbs.

The Government of India has issued a notification fixing the price of tea for the purpose of determining the export duty at Rs. 3-1-5 a lb. as against Rs. 3-4-5 a lb. in force from 1st December, 1955. The export duty at this price will be As. 6 a lb. as against As. 8 in force hitherto.

Arrivals (in chests) in Calcutta warehouses during the period 24th November, 1955 to 23rd December, 1955 with the corresponding figures in parentheses, were as follows: By steamer 372,188 (418,054), by rail 161,705 (171,141), and by air 17,414 (22,132), making a total of 551,307 (611,327) chests. Since the beginning of the season, 1st April to 23rd December, 1955 arrivals have been: by steamer 2,644,113 (2,962,980), by rail 710,358 (642,616) and by air 161,107 (146,296), totalling 3,515,578 (3,751,894) chests.

NORTH INDIAN TEA CROP REPORTS

The following is a summary of the crop and weather reports received from different districts for the month of December, 1955.

Upper Assam: The season has closed, with the weather generally seasonable but wet in Nahorkatiya. Outturn to date in Dibrugarh is considerably over last year.

Central Assam: The cold weather has set in and the season is closed.

Lower Assam: Weather seasonable. The season is closed. Outturn to date is considerably over last year.

North Cachar: Weather seasonable. The season has closed. Outturn last month in Lakhimpur good.

South Cachar: Cold weather has set in and the season is closed. Outturn last month poor to about normal. Outturn in Chargola considerably under last year. Blister blight prevalent in some districts of Longai.

Eastern Doora: Season closed. Outturn last month below normal. Outturn to date under last year's. Weather dry.

Western Doora: The season has closed. Outturn to date about level with last year.

Darjeeling: Weather seasonable. The season has closed.

Teral: The season has closed. Outturn last month about normal. Weather dry. Helopeltis prevalent in North Teral. Blister in evidence.

COCHIN TEA SALES

At Sale No. 2, 1,350,000 lbs. of tea were on offer. There was a very much better and all round demand. Common sorts were steady. Low Mediums and Mediums 2 to 3 annas dearer, particularly of the Fannings grade. Best liquorings were very strong and higher in price according to quality.

SOUTH INDIAN TEAS

Production of tea in South India during the month of November at 10.8 million lbs. fell short of the October crop by about 4 million lbs. Crop reports for December from individual estates show declines over the production figures for December 1954. In view of the poor crop in November and the possible smaller production in December the year-end production figure will probably fall short of the original estimate of 130 million lbs. Production in 1954 at 128 million lbs. was a record. Exports of South Indian teas from Cochin during the period Jan.-November 1955 were equal to the shipments in the previous corresponding period. Out of the total export of 69.3 million lbs., 40.5 million went to the U.K. as against 47.2 million lbs. in the same period in 1954. Shipment to other Indian ports, mostly for internal consumption, registered a substantial gain at 11 million lbs. Australia's offtake at 2.4 million lbs. compares with 0.8 million lbs. in the like period of 1954.

LONDON TEA SALES

At last week's London tea sales the 60,483 packages on offer realised an average price of 4s 5.31d a lb. against 4s 4.94d in the previous week and 7s 0.42d a year ago. Plain broken pekoe

was unchanged at 3s 5.1d. Prices obtained by some of the companies are given below:

	No. of packages	Average per lb.
Amalgamated	492	4.1
Assam Frontier	950	5.4
Attaree Khat	258	4.24

U.K. Tea Stocks

U.K. stocks of tea on 6th January amounted to 122.2 million lbs., against 126.2 million lbs. a year ago.

SETBACK IN PEPPER

India's pepper exports suffered a severe setback in the season ended 31st October, 1955. The total export was 2,23,723 cwt as against 2,95,275 cwt in the 1953-54 season. This heavy landslide was largely on account of the considerable underselling by India's rivals—Indonesia and Sarawak—in the U.S. market, which is the largest single market for Indian pepper. During the season under review the U.S.A. took 1,47,973 cwt of pepper from India which form 66.15 percent of the total export. The share of the U.S.S.R., the next important customer for Indian pepper, was 20,000 cwt or 8.94 percent of the total. Since the beginning of the new season the Malabar pepper market has been rather active and the total volume of trade is larger than that witnessed in the beginning of the previous season. Prices are more or less steady around Rs. 850 a candy of 6 cwt. The new season's crop is estimated at 23,000 tons compared with last season's 19,000 tons.

INDIA'S COFFEE CONSUMPTION

India's coffee crop for the 1955-56 season is now estimated by the Coffee Board at 27,740 tons consisting of 18,175 tons of Arabica Cherry and 9,565 tons of Robusta. After providing for growers' requirements the pool receipts will amount to 27,400 tons. With the carryover from the previous season's crop the total supply of the season will therefore be something like 31,000 tons. Steady progress was noticed in the internal consumption during 1955, the total release in the internal market being about 22,250 tons despite the lower monthly releases necessitated by the coffee situation prevailing in the latter half of the year. In view of this increasing trend in internal consumption the Board allots provisionally 23,500 to 24,000 tons for that purpose. Provision is also made for a carryover of about 5,600 tons. The Board recommends an initial export of 800 tons of Plantation and 500 tons of Arabica cherry out of the 1955-56 crop. The position will be reviewed later. However, the export allotment in 1956 is most likely to last week. The Coffee Board at its meeting Ramanna has unanimously elected Mr. S. N. Ramanna as its Vice-Chairman for the year 1956. The Board also appointed an eight member Executive Committee, a propaganda committee, a marketing committee and a research committee for the period ending 31st July this year.

COLOMBO RUBBER PRICES

The following prices have been issued by the Indian Rubber Board from the weekly market report published by the Colombo Brokers' Association:

Calcutta Markets

MUCH BETTER DEMAND AT TEA EXPORT AUCTION

PRICES OF DUSTS IMPROVE

At Sale No. 31, held on 16th and 17th January, the Export auction consisted of 57,000 packages. There was a much better demand than in previous weeks and buying from outmarkets was much stronger. Fannings grades of all description were once again the strongest feature, particularly Medium O.F.s. with black leaf appearance. Medium Assam BOP's were well supported and the very best CTC's met with good demand. The remaining CTC offerings, however, were rather irregular and tended to be a little easier. Stylish Leaf grades were strong and generally dearer, but the more ordinary types of this description were about 1 anna easier. The remaining kinds advanced by about 1 or 2 annas over last rates.

	1956 Rs.	1955 Rs.
Clean Black Pekoe 2 1 0	3 11 9	3 11 0
Plain B.P. 1 8 0 to 1 8 6	3 11 0	3 11 0
Medium Assam B.P. 1 10 0 to 1 11 0	3 12 6	3 12 6
Best CTC Assam B.P. 2 3 0	4 0 0 to 4 2 0	4 0 0 to 4 2 0

The offerings of Dusts at the Internal sale consisted of 17,800 packages. There was a strong and active demand for all descriptions. Black leaf types suitable for the Middle East were again a very strong feature and advanced by several annas. Grainy Dooars, Commons and Medium Assams were generally 1 to 2 annas dearer, while powdery types were fully firm. Commons types received good support and were dearer by 2 to 3 annas, while very best CTC Assams with good liquors were fully firm to dearer. The poorer sorts of this description, however, were rather irregular and were sometimes easier.

	1956 Rs.	1955 Rs.
Medium Dooars Dust 1 7 0 to 1 8 0	2 9 0 to 2 9 6	2 9 0 to 2 9 6
Medium Assam Grainy Dust 1 8 6 to 1 9 6	2 9 6 to 2 10 0	2 9 6 to 2 10 0
Best Assam CTC Dust 2 4 0 to 2 6 0	2 14 0	2 14 0

The Leaf offerings consisted of 2,500 packages, for which there was a good demand and prices advanced by 1 or 2 annas above last rates.

COAL FIXTURES AT GOOD RATES IN FREIGHT MARKET

It is reported that 60s has been paid for coal from Hampton Roads to the Continent for one year's consecutive voyages and 46s 5d for voyages after that up to 1960. This would seem to indicate that charterers are prepared to fix well ahead and that they are not expecting rates to deteriorate for some time. Single trip voyages from the U.S. to the Continent with coal were fixed at 70s 9d and 71s with 79s for the option of North France. Gulf 71s with 79s for the option of North France. Continent at \$ (U.S.) 12.25 while River Plate Continent brought 125s for heavy grain and 127s for barley. North China to the Continent with soya beans was fixed at 185s and grain in bulk from the same source 191s 3d f.i.o. The Australian market was quiet although there are still a number of orders to be covered. No ore cargoes were reported fixed from the Indian area. There is a fair demand for time charter tonnage with rates maintained at previous levels.

SUGAR MARKET QUIET

During the week ended 18th January, sugar sales in the Calcutta market averaged 2,000 bags a day. Arrivals daily were 2,000 bags and stocks totalled 110,000 bags. Rates for ready sugar ex-Kantapur delivery were Rs. 32.14 for big grain and Rs. 30.8 for small grain. The market remained quiet.

LINSEED

Firm conditions prevailed during the past week and trading was small. Sellers were reserved owing to very poor arrivals and lack of selling orders from upcountry. There were enquiries from crushers both for ready and forward deliveries but the turnover was small. The oil market was fairly active; there were fair enquiries from shippers and from overseas buyers; local sellers, however, were rather reserved. Latest quotations were as follows: January Rs. 23-0-0 per maund; April-May Rs. 20-6-0 per maund.

HIDES AND SKINS

The market was steady. Stocks were higher than in the previous week.

Bazaar Sale

(Between 10th January and 16th January, 1956)

Cowhides:—Wet salted 17,000 pcs. on the basis of Rs. 13-8 to Rs. 22.

Assam-Dinajpur-Murshidabad 23,500 pcs. on the basis of Rs. 310; Pakur-Patna 9,700 pcs. on the basis of Rs. 270 to Rs. 285; Muzafferpore-Patna 33,780 pcs. on the basis of Rs. 315 to Rs. 340.

Bazaar Stocks

(16th January, 1956)
Cowhides:—Wet salted 1,51,500 pcs.
Goatskins:—Wet salted (Daissee, Killed) 26,000 pcs.; Assam-Dinajpur-Murshidabad 48,500 pcs.; Muzafferpore - Patna - Pakur - Purneah - Kissen-gani 3,13,000 pcs.

COMPANY AND PUBLIC NOTICES

BOR PUKHURI TEA COMPANY LIMITED.

NOTICE is hereby given that an Extraordinary General Meeting of the Members of the above-named Company will be held at the Registered Office of the Company, 4, Mangoe Lane, Calcutta, on Thursday the 9th day of February, 1956 at 12-10 o'clock in the afternoon to consider and if thought fit to pass, with or without modification the following resolutions namely:—

1. (As a Special Resolution). That the authorised capital of the Company be increased from Rs. 3,00,000 to Rs. 7,50,000 by the creation of 45,000 new Ordinary Shares of Rs. 10/- each.
2. (As an Ordinary Resolution) (a) That it is desirable to capitalise a sum of Rs. 1,50,000 being part of the undivided profits of the company standing at the credit of the General Reserve Account and accordingly that the said sum of Rs. 1,50,000 be capitalised and that this amount be used as a capital bonus which shall be applied on behalf of the persons who are on the 24th day of January, 1956, the holders of the 30,000 issued Ordinary Shares of Rs. 10/- each in the Company in payment in full for 15,000 new Ordinary Shares of Rs. 10/- each credited as fully paid and that such 15,000 new Ordinary Shares credited as fully paid, shall be accordingly allotted to such persons in the proportion of one new Ordinary Share for every two issued Ordinary Shares held by them respectively on the said 24th day of January, 1956 provision being made for fractional cases and that the said new Ordinary Shares so distributed shall rank in all respects *pari passu* with the existing Ordinary Shares save and except that they shall not be entitled to participate in any dividend declared in respect of any period ending on or before 31st December, 1955 and shall be treated for all purposes as an increase of the nominal amount of the capital of the Company held by each such Shareholder and not as income.

(b) That in respect of fractional entitlements the shares represented by such fractions shall be allotted to the Chairman of the meeting as Trustee on behalf of those shareholders who are entitled to fractions of a share and that the Chairman be and is hereby authorised to sell such shares and to distribute the sale proceeds thereof to such shareholders in accordance with their respective entitlements.

(c) That pursuant to the above resolution and in satisfaction of the said capital bonus the Directors be and they are hereby directed to allot and distribute 15,000 new Ordinary Shares credited as fully paid up amongst the persons who on the 24th day of January, 1956, are the holders of the 30,000 issued Ordinary Shares of the Company in proportion to the issued Ordinary Shares held by them.

(d) That the draft of the Agreement providing for the allotment of the said new Ordinary Shares in satisfaction of the said capital bonus submitted to this Meeting and signed in the margin by the Chairman thereof by way of identification be and the same is hereby approved and that the Directors be and are hereby authorised to affix the Seal of the Company to duplicate engrossments of such Agreement as and when the same shall have been signed on behalf of the members holding Ordinary Shares in the Company on the 24th day of January, 1956, by some person to be appointed by the Directors in that behalf under Article 163 of the Articles of Association of the Company.

The Share Transfer Books of the Company will be closed from 25th January, 1956 to 30th January, 1956 inclusive.

By Order of the Board,

C. C. SANDYS-LUMSDAINE,

Chairman.

Calcutta, 12th January, 1956.

U.K. EXPERT TO HELP INDIAN COMMERCE MINISTRY

Mr. F. C. Mann, manager of the Birmingham office of the Export Credits Guarantee Department, is now in New Delhi to advise the Indian Ministry of Commerce and Industry on the establishment of credit insurance schemes for Indian exporters. Mr. Mann, whose visit is at the request of the Government of India, is expected to stay in the country for three or four months. Mr. Mann has been selected because of his wide knowledge of export requirements. Credit insurance schemes have to be established on proved lines if they are to be effective. Such schemes depend on their ability to attract general support from exporters, for to be successful they have to pay their own way.

BRITISH STEEL OUTPUT

Steel production in the United Kingdom in 1955 reached the record level of 19,791,000 tons. This was an increase of 1,271,000 tons over the 1954 figure. Last year's pig-iron output of 12,470,000 tons was 587,000 tons more than in 1954. Output of steel in December was at an annual rate almost 1½ million tons higher—at 19,800,000 tons—than the annual rate of 18,400,000 tons in December, 1954.

JOINT STOCK COMPANIES' PREFERENCE SHARES

Dividends are cumulative and shares carry a preferential claim on the property for the payment of capital and on the profits for dividend except in case of companies marked otherwise. Months against names of companies indicate approximately times of payment of dividends.

TEA COMPANIES

O Po and Dd indicate Ordinary, Preferred Ordinary and Deferred Shares, respectively. P next to the name of the company indicates that the Company also has Preference Shares. Figures in "accounts closed" column indicate the months of the calendar year in which accounts are closed. For Managing Agents refer to the Key (last page) under the numbers indicated.

NATIONALISATION IN A COMPETITIVE INDUSTRY

THE STATE'S VENTURE INTO LIFE INSURANCE

NOBODY can say that the Government's decision to nationalise life insurance has come as a surprise. The idea has been under discussion so long that it already had the appearance of an established fact. But that does not make the reasons behind it any easier to understand. In his broadcast, Mr. Deshmukh was able to suggest a number of these. He was clearly speaking the truth when he said that "the decision to nationalise has been taken after deep and careful consideration." Only the conclusion seems wrong. It is difficult to escape the feeling that what the Finance Minister really meant to say was that the Government had considered carefully and deeply, but had decided to nationalise all the same. That would probably have been nearer the mark, because Mr. Deshmukh must surely not believe that the reasons he put forward justify such a far-reaching move. The industry has admittedly given provocation and it may be true to say that it has only itself to blame. But to rely on economic excuses as well is to invite resounding contradiction. The Government is not without its difficulties in this matter of nationalisation generally. Pressure from its more doctrinaire supporters has been especially strong at just this point. And the unfortunate business about the Bharat Insurance Company has not made it any easier to resist. Only the economic justifications are unconvincing; the political ones are clear and understandable. The Government is perhaps to be congratulated on limiting its action to life insurance. At least in that sphere, if State management can do no good, it may do the least harm. But some harm it will do, and not only to the spread of the life insurance habit itself. This move is another blow to the already inadequate confidence of the private investor. When so much will depend on this factor in the approaching plan, it is a pity it is once again to be ignored. Generous terms of compensation may go some way to repairing the damage. But even in the unlikely event of these being granted, the impression will remain that no section of private industry is nowadays immune from nationalisation, no matter how sound the economic arguments in its favour.

Putting aside the question of confidence, there seems no reason why the private sector should suffer unduly from the decision. The statements made by Mr. Deshmukh about the disposition of investment money were not without ambiguity. At one point he promised not "to divert the available funds to the public sector to a greater degree than under present arrangements" while at another he said he would "see that at least as much money as is today made available for investment in the private sector continues to be so made available." If what he really meant was that no able, at present flowing into the two sectors, then there may be little cause for concern. Private industry generally might actually benefit from a better distribution of investment which admittedly, under former arrangements, tended to go exclusively to concerns in which the management of the insurance companies themselves were interested. A good deal will depend on whether the State substitutes its own protégés for those of the management. But there will be an all-round loss to the economy from the setback which the growth of the insurance business, whatever Mr. Deshmukh's hopes, is bound to suffer. This will be more apparent over a period of many years, in the short-run, the share markets should find little less support while enjoying considerably more stability.

The first criticism against nationalisation is that it ought not to be necessary. If Government control and regulation is all it is said to be, it could have prevented the excesses of the private managements. Apparently it was not able to do this, or so we must believe if there is any substance in the "misappropriation" argument Mr. Deshmukh put forward. When Government officials have shown themselves unable to use properly the considerable powers they already have, it seems

pointless to ask the public to have faith in them now they have been given more. Blunders are easier to cover up under State control because the annual profit and loss account loses much of its significance. But on past performance, there is absolutely no cause to expect companies' affairs to be conducted more efficiently now they are being run by Government servants. If nationalisation can at best encourage honesty without improving efficiency, then the second criticism, that it will not increase savings and will therefore be no help to the plan, also stands. Unless the intention is to increase the proportion of funds to be invested in Government securities of various types, and Mr. Deshmukh says it is not, then nationalisation will not affect the plan one way or another. That is unless the Government wants to suggest that its management of life insurance will actually increase the business. It will not be easy to recommend such an unlikely eventuality. Nationalisation will give the Government direct control over where the funds go. But the idea that civil servants are better able than business men to choose what are economically the best propositions is preposterous. No doubt the criteria for the investment of funds will be clearly laid down. But they are unlikely to be based completely on straightforward economic advantage, and if they are not, they will be of little benefit to the plan. When it is also remembered that instances of mismanagement among officials are no less frequent than those among business men, it is easy to see that the overall economy can expect no benefit from the nationalisation of life insurance.

On balance, the total of savings for the plan is bound to suffer. The Government has entered an industry whose highly-competitive selling techniques are based on the individual approach. Insurance is something which has to be sold aggressively or it does not go. If the Government thinks it can expand the industry from behind a counter it is going to be badly disappointed. There can be no hope of saving on overheads while a client not only has to be sold a policy, but actually to be sold the idea of one. Efficiency, even if nationalisation guaranteed it, will not by itself encourage business. Only the spur of competition can do that—the knowledge that to let up is to go out of business and lose a livelihood. And this is the very thing which the Government

THE FATE OF THE PRIVATE SECTOR

THE approach of the Budget brings the annual season of speeches and shivers—a season which this year promises to be, for organised business, the most crucial of any since India's independence. Last week's meeting of the National Development Council, which had before it the draft memorandum on the second five year plan, produced perhaps rather more than its expected quota of both; together with the thunderbolt on nationalisation of insurance, it has given business confidence a blow from which an easy recovery can hardly be foreseen. The air of unreality which pervaded some of the Council's deliberations might perhaps have seemed to offer a strange contrast to the hardy, practical and down-to-earth problems with which it was faced. If a number of faulty conclusions emerged, they are merely a measure of the sway ideology and sentiment has come to have over economic thinking in India today. The Government's policy of moving toward "a socialistic pattern of society" has been generally accepted; but the means by which that policy is to be implemented—especially the means which received the sanction of the National Development Council last week—are such as to raise doubts whether the co-ordinated growth of the public

as bullion. As the trend in the gold and silver markets suggests, this process has already received considerable impetus since the Planning Commission's proposal first became known.

Some re-thinking would seem to be necessary on the precise benefits that are expected to be gained by such proposals. The main justification offered is moral rather than economic—that a progressive society must redress the imbalance between the "haves" and the "have-nots". The aim is commendable, provided it is realised that the imbalance is redressed better not by reducing the haves to the level of the have-nots, but the other way around. There is little prospect that this will be so in an economy which, for excellent reasons, wishes to retain private enterprise, and yet denies it the sustenance provided by an adequate flow of savings and investment. The second major justification that is offered for soak-the-rich proposals of the sort that are now being considered is that the Government urgently needs money for its own plans. This may be so, but it is difficult to see why it needs to compete with private industries for the limited funds that the latter need just as urgently, and could probably use much more efficiently. It becomes even more difficult to understand when other important sources of revenue, such as betterment levies on agricultural land, are allowed to remain mostly unexploited; and while the administrative machinery permits the honest to be penalised by its inability to stop tax evasion. In fact, the administrative shortcomings are enough to ensure that the tax on total wealth, for one, will not be fully applicable to many of those for whom it is intended, and will thus fail in its purpose.

In the current scramble for resources, started by a plan which time may prove to have been far too ambitious, the Government inevitably has the upper hand. It would be unfortunate for the country if the advantage were allowed to be misused. Yet anxiety that it might be misused is difficult to avoid in view of recent statements by Mr. Nehru on the lines that the 1948 resolution on industrial policy "did not go far"; that "no field of activity is sacrosanct for the private owner"; and that "all really big industries, all basic industries should be State-owned completely, all mineral resources and heavy industries and the like." When statements such as these are accompanied by dark hints about the future of banking and insurance—two major sources of industrial investment—the private sector has reason sincerely to wonder what sort of a future is in fact intended for it. Is it to be allowed a reasonable measure of freedom and facilities that are necessary to the growth expected of it; or is it merely expected to wait and stagnate, while an expanding public sector gradually elbows it into the nooks and crannies of the economy? With just over two months left for the inauguration of the second plan, a clarification of official policy toward private enterprise is still urgently awaited. Many "clarifications" have been forthcoming in the past, but perhaps a new one could be distinguished from its predecessors by having full ministerial backing—not only on the generalities but also on details. And once it is issued, it would perhaps not be too much to expect that responsible official spokesmen conform to it strictly instead of indulging in "thinking aloud" and kite-flying of the sort that has recently been much in evidence.

CINDERELLA OF THE SECOND PLAN

THE National Development Council, which has just approved the final draft for the second five year plan, appears to have committed the same error as the Planning Commission in not fully appreciating the transport needs. It is unfortunate that the transport plan, as prepared by the Railway Board, should not have been given more consideration. Instead, it has received a somewhat Cinderella-like treatment. The railways' case for spending Rs. 1,480 crores was based on sound reasons, the main among them being the estimated extra volume of traffic expected. The Railway Board anticipates an increase of at least 61 million tons in goods carried, in addition to the present 121 million tons. The Planning Commission's experts do not dispute this figure. But they somehow feel that the railways will be able to manage the new traffic with the Rs. 1,125 crores now allocated, if only the efficiency of the service can be stepped up.

This is indeed a difficult situation for the railway administration to face. With its plan reduced by Rs. 355 crores, which means a scaling down of some of the vital targets for rolling stock replacement, line capacity works, track renewal and the construction of new lines, it has announced that under the revised estimates it can handle only 40 million more tons of traffic than are being carried now. That means new capacity will not be sufficient to meet the developmental needs of the steel, cement and coal industries alone. These, between themselves, will require at least 43 million tons more. Other vital industries, chemicals to name one, are already finding it difficult to expand production, in spite of a steadily rising demand, precisely because of transport shortages. And it

is common knowledge that serious bottlenecks in goods traffic have occurred during the last two years of the current plan. How then is it expected to work the whole plan such as it is with a transport system that cannot cope with the demands made on it?

The Union Minister for Commerce and Industry, Mr. T. T. Krishnamachari, has stressed time and again the essential and urgent need for expanding the transport. "The plan will stand or fall by the country's transport system," he is reported to have said while discussing the economics of India's steel development programme, which itself will require at least 30 million tons of capacity. The latest person to have stressed the same need is Dr. M. S. Krishnan, a former Director-General of Geological Survey, who is now engaged at the Union Ministry of Natural Resources in important work on mineral development. Dr. Krishnan is of the opinion, and all knowledgeable persons will agree with him, that transport should receive the highest priority for developing industries such as are being planned for the next quinquennium. The railways' claim on resources has not been judged as favourably as that of the small-scale industries, whose share has actually been increased. This fact is clearly evident from the manner in which the targets have been whittled down. The revised plan cuts the original provision for rolling stock by Rs. 80 crores to Rs. 380 crores, in spite of the present abnormal arrears of replacement. Large reductions in the programme for line capacity works and conversion of gauge at strategic sectors have been made, bringing them down to 1,600 miles and 260 miles or 33 percent and 38 percent respectively less than what the Railway Board wanted. Track renewal will only be possible at the rate of 1,600 miles a year, with the result that attempts to remove the existing restrictions on speed and improve wagon turn-round may be frustrated. Construction of new lines has been severely pruned, the financial sanction amounting to Rs. 63 crores only, as against Rs. 200 crores provided in the original plan. As a result of this drastic cut, the sufferer will not be the railways alone. The private sector will perhaps bear the whole brunt, since the claims of public industry will inevitably be considered first.

CURRENT COIN

Britannia Building and Iron Shares.—The Britannia Building and Iron Co. Ltd., is taking advantage of the increasing demand for engineering products to raise Rs. 20 lakhs of further capital to expand its activities. (The details appear on a later page.) The company's present paid-up capital is Rs. 10 lakhs, divided into 100,000 ordinary shares of Rs. 10 each. The rights offer consists of 100,000 ordinary shares of Rs. 10 each, and 10,000 6 percent redeemable cumulative preference of Rs. 100 each, all at par. Existing shareholders are being offered these in proportion to their present holdings. The directors, managing agents and friends have agreed to take 40,000 ordinaries and 4,000 preferences out of the new shares for which present shareholders do not apply. The public is also allowed to apply, but what it will get depends on how many shares remain unlifted. The company's net profit has risen steadily from Rs. 1.31 lakhs in 1953 (year ended March) to Rs. 1.42 lakhs in 1954 and Rs. 2.41 lakhs in 1955. The ordinary dividend of 5 percent in each of the former two years was doubled to 10 percent in 1955, when it absorbed Rs. 1 lakh. The directors say that the workshop capacity is already booked for the next two years, and there are good prospects that further orders may materialise in the near future. The company is engaged in various types of steel fabrication work for buildings and sheds, wagons, crane manufacture, and civil engineering. The Government's permission has been sought to expand the existing factories in Calcutta and to build a new one in Durgapur. It is also proposed to widen civil engineering activities and arrangements have been made for technical assistance from a firm of consulting engineers in the U.K. The managing agents are Holmes, Wilson and Co. Ltd.

Hotels and Tourism.—The shareholders of the Associated Hotels of India Limited were addressed both by the chairman, the Rt. Hon. Lord Sinha of Raipur, and by Mr. M. S. Oberoi, president, Oberoi Hotels (India) Limited, at the company's 39th ordinary general meeting. The much-maligned managing agency system received a well-deserved tribute from Lord Sinha who emphasised the steady progress and the improvements in increased turnover and profits enjoyed by the Company since the appointment of Messrs. Oberoi as managing agents. Outlining the extensive nature of the alterations which had been effected, Lord Sinha pointed out that these had been amply justified in that they were now in a position to compete favourably with any new

hotels that may be built. The prospects of the hotel industry in India were then briefly discussed by Mr. Oberoi who stressed the importance of the tourist both in the economy of the country and in world politics. The tourist trade, he said, had been accepted all over the world as a means of earning foreign exchange and he welcomed the Ministry of Transport's recommendation for its inclusion in the second five year plan. In this connection, he said, three important events in the Government of India's tourist development programme had taken place in the course of the year. The Council Meeting of the International Hotel Association was held in New Delhi, after which leading hoteliers from Europe had travelled extensively in India. At the meeting of the International Union of Official Travel Organisations, heads of these bodies from all over the world met in Delhi to discuss ways and means of improving facilities for tourists. The Travel Agents Congress Annual Convention has been held in Kashmir, and this is a section of the tourist industry which is now becoming organised in India. Mr. Oberoi informed the Company that three young Indian boys had been sent for training to the Hotel School in Scotland and announced the Company's intention of sending more such boys and girls in the future so that experienced, trained Indian personnel will eventually be available to man further projects. While it is good to learn of the care and thought which is being expended on this group of fine hotels, perhaps the Company might be persuaded to extend its activities to include some of the less frequented but equally important places of historic, cultural or scenic interest in which each State abounds. For the tourist who wants to get off the beaten track is defeated every time by the lamentable lack of even the most modest form of accommodation. At the same time, aid from the Government to the hotel industry in the interest of tourism might embrace a contribution to a country-wide scheme for the repair and preservation of these ancient sites and relics which are part of India's heritage.

Newsprint Manufacture in India.—Since India relies heavily on imports for her newsprint, the progress of the only domestic manufacturer, the National Newsprint and Paper Mills Ltd., is watched closely not only by consumers who have a direct and obvious concern the newspapers but by many others besides. Sir Ramaswami Mudaliar's address from the chair at the recent ordinary general meeting of the company in Napanagar, Madhya Pradesh, contains a cheerful summary of its production achievements. "This last year," he said, "has been a fruitful one, and the outlook is now brighter than it has ever been in the past in the history of this mill." Sir Ramaswami recalled that when the previous meeting was held, the paper machine and groundwood mill had been installed but production had not begun. Since the chemical mill was not ready, it was decided to start trial production of newsprint with imported chemical pulp and indigenous groundwood. This continued until May. But unleached newsprint could not be readily sold, so it was decided in July to bleach groundwood pulp with the existing equipment. Since then, bleached newsprint has been produced. This has found a ready market, and all that has been manufactured so far has been sold. According to Sir Ramaswami, the newsprint now being produced compares very favourably with the imported product in physical characteristics and brightness; the former has a creamy shade because of the tannin in the Salai, "but it is a characteristic which does not in any way detract from its quality." Many medium and small newspapers are using Nnpa newsprint regularly, and even some of the larger ones use it for their evening and mofussil editions. "The most outstanding achievement," according to Sir Ramaswami, is that Salai groundwood has been proved suitable for newsprint manufacture. He went on to say that the newsprint now produced contains about 60 percent mechanical pulp, and with the erection of the chemical mill, the company is in a position to manufacture 100 percent Indian newsprint. This is reassuring, but it seems that greater attention is necessary to the question of reducing costs. Already excise duty does not have to be paid on the Nnpa newsprint sold to newspapers—an exemption which is admitted to have considerably helped sales. The chairman seeks further official support by asking that a pool of indigenous and imported newsprint be created; there is no reason why this should be necessary, unless difficulties in competing with the imported products on grounds of cost and quality are foreseen.

Delhi School of Economics.—The School's new buildings, which Mr. Nehru opened recently, are part of the rapid progress which this institution has achieved within its seven years of existence. The credit for that must go to its well-known Director, Dr. V. K. R. V. Rao, who succeeded only in 1949 in realising a long-cherished dream of establishing a national institution in this country on the lines of the famous London School. At the time Dr. Rao was Professor of Economics at the University of Delhi. That Dr. Rao was able to persuade the Vice-Chancellor and his colleagues to convert the Department into the School "with its own name and individuality" speaks as well for his vision and endeavour as for the idea itself. For there is little doubt that the School is serving a vital national need today. The School provides post-graduate teaching and research in economics and specialised work in different branches of the subject. But its method of instruction, which tutorials and seminars are a unique feature, distinguishes it in many ways from other similar bodies. It also conducts courses in economic statistics, economic administration (mainly for recruits to the Civil Service), and business administration of varying lengths of duration. The Department of Research and Training in Economic Development has just been opened and seven Ph.D. scholars and two Post Ph.D. Fellows have been admitted. The School has been running a Centre, named the Delhi Training and Orientations Centre, for the benefit of foreign technicians coming to India. These receive training in subjects concerning Indian culture, and economic and social development. Some 262 technicians have received training so far. The Prime Minister of India has taken a keen personal interest in the development of the School. Many State Governments and leading public men have also given it the active support and encouragement which can be said to have materially contributed to its

tor. "While we all agree," he said, "that in undertaking the second five year plan it will be necessary to put up with larger burdens and even restraints on consumption by the high income groups, we also feel that taxation should not cut at the root of initiative and enterprise in a big way." Stressing the valuable experience gained during the first plan, Mr. Jain remarked that the contribution of the private sector towards the increase in national income during 1951-55 was a noteworthy pointer. To the estimated national income of Rs. 10,300 crores for 1954-55, the private sector had contributed to the extent of 75 percent, a figure which could be placed much higher if the activities of the tertiary industries were taken into consideration. The position in the second plan however is very different. Out of Rs. 675 crores expected to be invested, as much as Rs. 300 crores would have to be found from profits ploughed back, which, according to Mr. Jain, is double the rate of internal capital formation in the industrial corporate sector in 1951-56. "But," he added, "with no prospect of a decrease in corporate taxation and the application of Section 23A in its amended form, not to speak of the contemplated taxation of bonus issues, profits ploughed back cannot amount to Rs. 300 crores over the five-year period." While confident that, given the facilities and resources, the private sector can undoubtedly be expected to make a significant contribution to the development of the national economy, Mr. Jain viewed with concern the increasing appropriation of larger shares of national savings for the public sector. "The task for the private sector is clear," said Mr. Jain, "but in the context of conflicting ideals and competing forces, to what extent initiative and scope will remain with the private sector appears a moot point."

Fan Makers' Future.—In his presidential address to the eighth annual general meeting of the Fan Makers' Association of India held recently, Mr. T. R. Gupta took an entirely optimistic view of the industry's future. His optimism was based on the increasing trends of production and demand, an appreciable proportion of which now comes from foreign sources. In 1954, said Mr. Gupta, the output of the industry was estimated at 280,000 fans, as against 221,000 fans produced in 1951, which was a record in itself. "Now the production is increasing every year and each year's production is a record," he stated. As against this level of production, the level of demand has kept pace. It was estimated that demand for fans in India will amount to 320,000 a year by the end of the first plan. During the second, demand is expected to rise to 600,000. According to Mr. Gupta, the first plan's demand target will be reached early in the second plan, and the target for the latter is "on the low side." He estimated that over one million fans might be required in the country due to development activities in the next five year period. Besides, Indian fans continued to gain markets abroad in the teeth of acute competition, and he felt confident that with this rate of progress maintained, India "should be able to export 500,000 fans a year and that too not in the distant future."

Economic Development Institute.—The Economic Development Institute, organised by the World Bank as a "staff college" where senior officials from the lesser-developed countries can study economic problems, opened in Washington recently. The keynote of its work was sounded by its Director, Professor Alexander Cairncross, of Glasgow University, who said it was urgent to find an alternative to "violent and dictatorial methods of economic advance," and to convey to relatively backward peoples a sense of movement, purpose and participation. Each course will last six months. Fourteen officials are attending the first, but more students will be enrolled for the succeeding courses. The cost is being shared initially by the Bank, the Governments concerned, and the Ford and Rockefeller Foundations. Countries which have each sent an official are Ceylon, Egypt, India, Japan, Mexico, Haiti, Belgian African territories, Nigeria, Pakistan, the Philippines, Thailand, Yugoslavia, Columbia and Uganda. In his address at the opening ceremony, Professor Cairncross described the Institute as unique in the history of international banking. "Standards of living in many countries are so appallingly low that it is a matter of practical urgency to raise that it is a matter of practical usefulness to their countries of a picked group of administrators whose normal duties had some fairly direct bearing on economic development."

Without Prejudice

MORE ENGLISH CASES IN 1955

SAVAGERY OF BULLS, ALLERGY TO DYES, ALIMONY FOR THE IDLE

(FROM OUR LEGAL CORRESPONDENT)

LAST week, * we commented on the case of an impudent Scottish cow which, wandering forth from the premises of an auctioneer, in whose legal custody it was, strolled down the highway at Inverness, trespassed into a private dwelling house, climbed a flight of stairs, entered an upper room, turned on a tap, and fell through the floor into the room below causing considerable damage: wherefore the aggrieved householder sued the auctioneer for compensation. The plaintiff lost his claim, and we now present the case of a savage English bull. But as a lot of these cases depend on the law of negligence, we will first interpolate a reminder as to what negligence is, in law. It is the doing of something which a reasonably prudent man would not do, or the omission to do something which a reasonably prudent man would do. Simple enough in theory, that is. But when it comes to applying the definition to the facts in a particular case, it is then that you are, more often than not, in difficulties, and lawyer A will come to a different conclusion from that of lawyer B. Take that cow for instance. The learned judge came to what, it is respectfully submitted, was a wrong conclusion because, as the writer believes, he knew nothing of the nefarious habits of cows, whereas the writer and most people in India do. His lordship held that a gate-crashing, stair-climbing, floor-bursting, tap-turning cow was so unheard of that an ordinarily reasonable man could not be expected to have her in contemplation and therefore there was no negligence.

Climbing stairs and entering private rooms are, however, nothing to a cow. The writer himself has seen from the shelter of a screen, not once but several times, cows climb a flight of steps on to a verandah merely to shelter from the rain which cows object to. It is not only unheard of but habitual; one knows, and as an expert witness could have given evidence in that Inverness case of a particularly unladylike cow which climbed the steps, entered the dining room, consumed a light repast of bananas and potted flowers, and

*This article is continued from last week's Capital.

walked out again down the steps, the rain having stopped. So one thinks that that Inverness auctioneer should have foreseen the possibility of the cow's activities and was negligent in not securing that she did not perpetrate the same. We have all heard, moreover, of the legendary bull in a china shop, which brings us to Farmer McNeil's bull, whose activities led to a majority decision, the correctness of which you may view with some hesitation, as the writer does. In fact, all these borderline cases make us realise how extraordinarily difficult it is for the professional advisor to give a definite opinion one way or the other.

Consider the dilemma of the solicitor advising this farmer. He must have been on tenterhooks until the case was decided, if, indeed, it has yet been finally decided. The farmer kept a bull. He knew that it was a savage and highly dangerous animal. He had therefore taken certain precautions. He had had the animal dehorned and ordered it to be kept in a loose box and never let out. He had warned some of his men not to go into the box and all of them knew of the danger. The "beastman" M, whose duty it was to clean out the box, had been instructed not to do so until the bull had been secured, which was done by catching the ring in the bull's nose by a hooked staff inserted through the window or a half door in the box. One day M, who wished to clean out the box, having failed to catch the ring with the staff from outside the box, got the plaintiff R, who worked on the farm, to help him by holding the door open whilst M entered the box. M having still failed to catch the bull, R offered to try, but when he entered the box the bull charged him and injured him. R sued the farmer for damages. Now put yourself in the position of Farmer McNeil's solicitor or counsel. What would you advise him? Is he liable to farm labourer Rands or not? Assume that the farmer is not the type of client who will accept a hedging opinion; nor is he the type to compromise. He will pay the full amount if he is advised that he is liable; otherwise not a penny.

The Court of Appeal disagreed. The presiding judge, Denning L. J., held that the farmer was liable as he had been negligent. The other two Lord Justices found that he was not liable, on two grounds, the first of which is a highly technical one. It was this: "There was no strict liability on the farmer for the plaintiff's injuries, since the animal, though known to be dangerous, had not escaped." We present this finding without much comment, as we completely fail to grasp its meaning. It seems that if the farmer kept the bull in the loose box and it escaped from it, he might be liable to the injured farm labourer; but if the ani-

mal was still in the box which the man in the course of his work entered and was savaged, the farmer would not be liable. Why not? We give it up. The other ground is clear enough, though you may disagree with it. It was that the farmer had not been negligent at all. Denning L. J. disagreeing, the other two judges held that "on these facts the farmer had not been negligent since the method laid down by him was a practical one, though sometimes a slow one," and therefore he was not liable. Not negligent, though the "practical method" did not work, since two men were unable by its use to catch the nose ring by the hooked staff. Nor does it strike one as completely impractical to dehorn the animal thus rendering it impossible for a labourer to be gored to death in favour of the lesser penalty of being savaged to a pulp. The farmer knew that this bull was vicious and highly dangerous, not made the less so by the attempt to keep it in permanent solitary confinement. In that loose box Farmer McNeil, with hardly greater risk, might as well have kept a Bengal tiger or a wolf, and you may think that he should have been under the same liability, as if he had. But that is not the law. (*Rands v McNeil*, 1955 L.N. Vol. 74, p. 6.

We will refer to this lady as Mrs. X since her visit to the establishment was a matter of delicacy, namely, to have her hair dyed. She had had this done before. Knowing, as well she knew for she had suffered before, that she was allergic to a particular brand of hair dye she, without disclosing to the hairdresser this allergy, allowed him to dye her hair with that same hair dye. The hairdresser was a cautious and competent operator. Before applying the dye, he "carried out the test required by the manufacturer of the dye with skill and care." Nevertheless—it is not surprising in view of the allergy—Mrs. X developed dermatitis with disastrous results to her general health and hair, and she sued the hairdresser for damages. There was no question of negligence, not by the hairdresser anyway, though the lady's lack of reasonable care in not warning him of her constitutional reaction to that particular dye was about as reckless as it well could be. So she would not have had a ghost of a chance in any suit for damages in a claim based on the hairdresser's negligence. But she had another possible remedy, and on this, no doubt, her legal advisers relied. The operation of hairdyeing, like others of the hairdresser's art, is a matter of contract, and the law imports into the contract an implied warranty that the materials used are reasonably fit for the particular purpose. For this implied term of the contract to arise, the customer must make known expressly or by implication the "particular purpose" for which the materials are required so as to show that she relies on the contractor's skill or judgment.

Now this is a real teaser and, though the answer is solely based on common sense and requires with the previous explanation no knowledge of law at all, and is in fact simple logic, one will be surprised if you get it right. The question is this. What was "the particular purpose" for which the materials (i.e. the hair dye) were required? Or more simply, what was the purpose of Mrs. X's visit to that hairdresser? You can visualise the reply of the lady, indignant at the stupidity of the question: "To get my hair dyed, of course." If that is your reply too, then you are clean off the track. Said Denning, Birkett and Romer L.J.J.: "The particular purpose, namely, to dye the hair of a person known to be allergic to the dye was not made known." So Mrs. X, who knew that she was so allergic and who did not disclose the fact to the hairdresser, was sunk. And quite right too. (1955, 74, L.N. 185.)

It is odd that this important point relating to a husband's liability to maintain his wife appears not to have come up for decision before. The decision may or may not be followed in India. As we all know, women, whether wives, widows or spinsters, are on terms of full equality with men. Virtually all the professions, the Army, the Navy, the Air Force, the law, medicine and all trades are open to them. Now take the imaginary case of a youngish woman who before her marriage was successfully carrying on the profession of, say, a doctor or chartered accountant, or, for that matter, earning her living as a shop assistant or clerk. She marries and, on her marriage, gives up her profession or trade and is supported by her husband. Bear in mind that while it is obligatory upon a husband by law to maintain his wife, according to his (not "her") position and condition in life, a wife, however wealthy, is under no corresponding obligation to maintain her husband; so that our statement that wives and husbands are now on terms of full equality is not quite accurate in that, to paraphrase George Orwell, though they are both equal the wife is more equal than the husband. The marriage breaks up and the husband deserts his wife and ceases to maintain her. The wife thereupon sues him for maintenance. The marriage has been childless, the wife is still young and healthy, and her previous profession or trade is still open to her. In order to lessen the financial burden on the husband, is it obligatory on the wife to resume her work?

"No," said Barnard J. in the Divorce Court, "there is no reason why a wife whose husband is able to maintain her should go back to work and earn her living in order to reduce her husband's liability to her." Good law, no doubt. But it seems a trifle one-sided surely? (73, Law Notes, p. 286 (*Le Roy Lewis v Le Roy Lewis*.)

FOR those who, like myself, were forced to muster their air-conditioners back to premature activity early last week, the events of the past few days may have a simple explanation. After a period when the mercury climbed to un-mid-January heights, Indian Irons have fallen to Rs. 24.4, the bank employees have promised to behave themselves, life insurance has fallen prey to the bureaucrat, Maharashtrians and Oriyas have gone on the rampage and a hartal in Calcutta has passed off as peacefully as midsummer's day. What else could be responsible for all this but the weather? I am always reluctant to dismiss any human calamity in a light-hearted fashion. But when circumstances defy all laws of reason I can think of no broader shoulders on which to put the blame. As one reads about the depressing happenings of the past week or so it is such a comfort to trace them back to the bursting of too many hydrogen bombs, or something of the sort. And there is so much consolation to be derived from the hope that things are going to be different when the first man-made satellite is launched.

The past week may have damaged Bombay's reputation for being law abiding, but it has certainly enhanced Calcutta's. I am sure those who, on Friday evening, expected last Saturday's hartal to pass off as peacefully as it did, would not have taken long to count. After the example set by Bombay, and faithfully copied nearer home in Orissa, it seemed inevitable that Calcutta was in for a lively time. Instead, everybody was forced to take a quiet rest indoors, and probably benefited from it. That is except for the police, for whom the day must have been as active as it was anxious. If this "new look" in Calcutta's traditional temper has come to stay, then so much the better. It is too early to draw any conclusions yet, but perhaps Bombay's plight will serve as a lesson to all but the more extreme of left-wing political leaders that violence, once released, can soon get out of hand. One factor which I fear is going to make little contribution to continued peace is this otherwise admirable proposal for merging West Bengal and Bihar. At least Doctors Roy and Sinha are attempting to live up to the truth often repeated, and equally often ignored, that it is unity India needs, not separatism. One must share Mr. Nehru's hope that this lead will be followed, although after reading something of the various reactions, one fears that it will not be. Of course the Communists have already detected a capitalistic plot and nothing further by way of reason need be expected from them. But even among those who ought to know better, the idea has not exactly been accepted eagerly. I can see all too lean a future for the project: both historical and current circumstances are too strong against it. The fact seems to be that many decades of struggle for independence did not succeed in giving nationalism firm enough roots in the Indian character. That is why changes which put a strain on it, such as anything to do with States reorganisation, are perhaps better left alone for the time being.

I have heard of people falling a bit behind in their reading of Capital, but the other day I received a letter commenting on something I wrote as far back as September 1953. My correspondent is obviously one of those rare people who finds statistics intriguing rather than terrifying. In the Ditcher piece he refers to, I pointed out that, according to the latest method, if you want to find the average weight of 25 sheaves of corn standing in a field, you do not, as commonsense would suggest, weigh each one and take the average. Instead, you divide them up into five groups of five, choose the largest sheaf from the first group, the second largest from the second and so on, weigh the chosen sheaves and then take an average. The

A DITCHER'S DIARY

second method gives a better result than the first and, as I said at the time, I have not the remotest idea why. Now my correspondent suggests an even better way. He would use 35 sheaves, which I consider is taking rather a liberty, but which he assures me is a much better number to deal with. We now have five groups of seven or seven groups of five. If we take the sheaf from each group which, in our judgment, has the middle weight, and then take an average, we will get a much more accurate result. He estimates that using 25 sheaves, the percentage of trials in which an error of one pound or more need be expected, would be 29.0 with my method, but only 17.5 using his. Taking his method and 35 sheaves the percentage error would be 11.5 and 12.0 for seven groups of five and five groups of seven respectively. I must say I marvel at his magic. He has been kind enough to provide me with a table which, besides confirming what I suspected, that the more sheaves one takes the better the result is likely to be, also tells me that if I were to take 15 groups of five and apply his method, the percentage of trials giving an error of more than one pound would be 2.2. It is still a mystery to me why I can get my error down to such a low percentage by taking 25 sheaves and applying either his method or my previous one than I would by weighing all the sheaves and taking the average. I think perhaps the catch lies in his premise that our judgment must be perfect when we choose our sheaves. But I see he admits that if we assume perfect ease as well as perfect judgment in choosing the middle sheaf from a group of 37, we would get a result as reliable as that obtained by weighing all our 25 sheaves. I do not think any of these methods have yet reached the stage when they can be recommended to the farmer.

It used to be said, I am told, by bankers of a half-century ago, that the road to immortality in their department of life lay through a career in the Presidency banks. Sidney Sitwell, who died at his Scottish home in Kelso last Thursday, at the ripe old age of 85, followed that road with success and distinction for more than twenty years in the old Bank of Bengal. Ditchers of his age and time are few and far between today, though Sir Sidney was perhaps not strictly a Ditcher in that the multifarious responsibilities of his profession frequently took him to all parts of the then Indian Empire—Rangoon, Bombay, Delhi and Madras. But echoes of his distinguished career are, I believe, still heard in this city today; not only from old-timers of the Imperial Bank, whose first Managing Governor he became in 1923, but also from grateful depositors (and later inheritors) of the ill-fated Alliance Bank, whose troubled affairs Sir Sidney did much to sort out just after the first world war. With a staid professional life, he combined a keen interest in sport, such as shooting, angling and tennis. He was a lover of wild life, and I am told that he could handle a gun even as recently as four years ago, although a soft heart would not always allow it to be used. Until not many months ago, he was to Kelsonians one of the more familiar anglers on the banks of the Tweed. Many will share the sorrow of his death with his two sons who have both distinguished themselves in business. The elder, Mr. Sisson Sitwell, is vice-chairman of Jessops here in Calcutta.

A week or two ago I commented on Mr. Krishnamachari's comparison between an annual income of Rs. 25,000 in India and one of £2,000 in the U.K. I expressed the view that, in terms of 1955 purchasing power, the latter would go further, where-

as the Commerce Minister claimed at the opening of the Associated Chambers of Commerce that "the quantum of satisfaction that you get in India is far more than what you get in the U.K." I am still unable to define and measure such a personal thing as the quantum of satisfaction, because according to the old adage, what is one man's meat is another man's poison, and will probably remain so. But it has struck me since I last discussed this question that perhaps the decline in the value of money is as important in any such comparison as the rate of tax. I may possibly have neglected this aspect of the matter when I said I thought £900 a year in Britain was roughly equivalent to Rs. 25,000 a year in India, although I still feel that these two sums provide a fair comparison of buying power if both have to be spent now. My attention has just been drawn to some figures recently provided by Mr. Nicholas Davenport in the columns of a British weekly newspaper. Mr. Davenport is a well-known commentator on the British economic scene, and he points out that the pound sterling, which bought 20 shillings' worth of goods in 1938 is now, on this basis of comparison, worth only 7s 10d. A gross income of £2,000 would, therefore, produce the equivalent of about £580 of goods at 1938 prices or £387 at 1914 prices. Going back no further than 1947, the cost of living in the U.K. has risen on an average by 5 percent annually and in 1955 there has been a 6½ percent increase in prices. At the present rate, creeping inflation is wiping out about 50 percent of the purchasing power of the pound every ten years. I do not know what the comparable rate is for the rupee, but it is probably not quite so rapid. The real problem is perhaps not whether £2,000 or Rs. 25,000 will buy more, but how to provide for one's old age in any currency.

I was startled recently to see a copyright caution notice issued by Messrs. Walt Disney Productions of California, through their trade marks and patents attorney in Bombay. It prohibited any "unauthorised use" by any person of a number of "names, characters and illustrations" which it claims are "universally associated in the public mind" as being the creations of the Walt Disney organisation. With millions of others throughout the world, I have always enjoyed the Disney fantasies, and I have no doubt those creations of his, Micky and Minnie Mouse, Donald Duck and a host of others, qualify for immortality. But it took my breath away to find that the Disney organisation is claiming the characters and names of Snow White, Cinderella and Peter Pan. I was under the impression that these were in existence long before Mr. Disney was born. If they are now linked with his name that is a tribute to his genius for adaptation, not for creation. Take Pluto for example. Everybody knows that this was the name of a not-too-likeable Roman god, and at present belongs to the outermost planet of the solar system. If Disney is now claiming all the canine characters sporting that name, he is likely to find himself somewhat inundated. The claim to Cinderella is something I cannot understand; arrogance has never been a Disney characteristic. Surely the origin of this fairy-tale character is lost in antiquity. And just about the same can be said for Snow White. As for who owns Peter Pan, I should have thought the literary executors of the late Sir James Barrie, if not the world's entire fairy-story reading population, would have something to say about that. It is time somebody disabused the Disney organisation of its belief that to touch is to own. These characters have a much wider public than even Mr. Disney's admirable cartoon films and I could not see any judge in his right mind entertaining claims for infringement of copyrights which attempted to cover them.

THE DITCHER

CONCRETE roads stand the test of time and traffic

The ever-growing traffic in India needs concrete roads, because:

- * Concrete is safe
- * Concrete is economical
- * Concrete is satisfying to drive on

Company Meeting

ASSOCIATED HOTELS OF INDIA
LIMITEDTHIRTY-NINTH ORDINARY GENERAL MEETING OF
THE SHAREHOLDERS HELD ON DECEMBER, 30, 1955.

Addresses by the Right Hon'ble Lord Sinha of Raipur, Chairman, and Mr. M. S. Oberoi, President, Oberoi Hotels (India) Limited.

ADDRESS BY LORD SINHA

Gentlemen,

It gives me a great pleasure to welcome you today to the 39th Ordinary General Meeting of the Company.

The Report of the Directors and the Audited Accounts for the year 1954-55 have been with you for some time and with your permission I will take them as read.

I would like to acquaint you with a few salient facts, which will give you an idea as to the steady progress of your Company and the improvements in the increased turnover and profits since the appointment of Messrs. Oberoi Hotels (India) Ltd., as Managing Agents. It will be observed that before the Managing Agents were appointed, the turnover for the year ending 31st March, 1947, was Rs. 50 lakhs, which has steadily risen to about Rs. 65 lakhs during the year under review. There has been a corresponding increase in profits.

You will, no doubt, wish me to explain the reasons for low dividend recommended by the Directors during the last few years. To satisfactorily explain the position, it is necessary to give you a brief background of the hotel industry in this country, in which your Company plays a major part. You are aware that all the hotels in our group were built in pre-war times, and soon after independence, it became necessary to improve the standard of the hotels and bring them up to the standard of the hotels in the West. The Company, therefore, undertook extensive programme of reconditioning and air-conditioning of rooms in each hotel and also redecorating and air-conditioning of the public rooms. You will appreciate that such an ambitious programme naturally entailed heavy expenditure. Although the Company spent, at an average, about Rs. 6 lakhs a year towards improvements, it would be gratifying to note that in spite of that the profits for all these years have been maintained. Furthermore, the Company has spent about Rs. 14 lakhs in the course of the last five years for additions. This money has had to be provided from the profits, and I am glad to report that this expenditure has resulted in good dividend, inasmuch as there has been a big increase in the turnover and profits. Had it not been necessary to make provision for this heavy expenditure, the Company would have been in easy position to declare higher dividends even to the extent of 15 to 20%.

I am glad to be able to say that today our hotels compare with the best in the world and important visitors from abroad have commended the standard of our hotels.

It is, however, our intention to complete our programme of improvements during the next year or so, and soon after that, the Company will be in a position to pay substantially increased dividends which, I am sure, will be higher than those declared in the previous years. I might also mention that our Company would have been very adversely affected had these improvements not been undertaken, as new hotels will be built all over the country and our hotels will be faced with increased competition. I must thank our Managing Director, Mr. M. S. Oberoi, for his foresightedness in taking up this bold step. With these immense improvements in the hotels of our group, we are now in a position to compete with any new hotels that may be built.

During the year under review, Hotels (1938) Ltd., which runs the Grand Hotel, Calcutta, became a subsidiary company of your Company. You are aware that the Grand Hotel is one of the leading hotels in Calcutta, and the addition of this hotel to the Company will, no doubt, be an asset to the chain of hotels controlled by the Associated Hotels of India Limited.

Before I conclude, I would like to take this opportunity of thanking Mr. M. S. Oberoi, Managing Director,

of Messrs. Oberoi Hotels (India) Ltd., the Managing Agents of your Company, under whose guidance and through whose untiring efforts the Company has shown such marvellous results. I would also like to thank the officials and staff for their contribution towards the Company's success.

I would now request Mr. M. S. Oberoi to address the shareholders.

ADDRESS BY MR. M. S. OBEROI

Lord Sinha and Gentlemen,

I thank Lord Sinha, the Chairman, for giving me an opportunity of addressing you.

Lord Sinha has already placed before you the activities of the Company during the current year. I hope you have noted with satisfaction the results achieved by the Company during the last 7 years. I am also pleased that Lord Sinha has clarified the position of lower dividends declared during the last few years in spite of the increased turnover and profits. I can assure you, Gentlemen, that the foresight shown in this programme of improvements will be appreciated by you in the coming years. The sacrifice made by the Shareholders in accepting reduced dividends in the last few years will be repaid in ample measure.

It is my intention today to touch briefly on the prospects of the hotel industry in the country and its place in the economic development of the country.

Tourism

Since independence tremendous efforts have been made, and we hope will continue to be made, to raise the standard of living and to bring India on the economic level of other first class nations of the world. In addition to the various activities in the development of industries and commerce, it is gratifying to note that India has also appreciated the importance of the tourist industry. This industry has been accepted all over the world as an extremely important industry for purpose of earning foreign exchange. Besides, the economic advantage of the development of tourism, the importance of tourism from the point of view of world politics should not be minimised.

Our efforts to promote tourism have continued and we have been in contact with travel promotional organizations all over the world by regularly sending them literature and looking after their personnel when visiting this country. We have found that our close attention to travel personnel abroad, and domestically, have resulted in increased tourist business. I would also take this opportunity of thanking the Travel Agents in India for their co-operation. Also, due to the improved international status of our country, we are receiving more and more attention from tourists of different countries, and I anticipate an increased number every year. The figures of turnover in our hotels is an indication of improved business.

International Meetings

Three important events in the tourist development programme of the Government of India took place during the course of this year. The first was the holding of the Council Meeting of the International Hotel Association in New Delhi in February, 1955. As a result of this, leading hoteliers from all the European countries visited India. After the Conferences they undertook an extensive tour of India, visiting important places of touristic interest. I have received numerous letters from the visitors in my capacity as President of the Indian Hotel Federation, saying how pleased they were with their visit and how little people abroad realised the attractions and comforts of this country. I am confident that these visitors will be excellent ambassadors for promoting tourism to this country. The second important event was the meeting of the International Union of Official Travel Organization in Delhi in October, 1955. Heads of official tourist organisations from all parts of the world met in Delhi to discuss ways and means of improving facilities for tourists. More than anything else these Conferences helped to impress upon the

Indian Government the importance given to tourism in other countries of the world. The delegates were very appreciative of the address given to them by our Prime Minister. I am glad to be able to report that the Ministry of Transport (Tourist Section) are now taking an increasing interest in the development of tourism and their efforts will without doubt help to increase the volume of tourists to this country. The third event was the Travel Agents Annual Convention in Kashmir. It is gratifying to note that this important section of the Tourist Industry is becoming organised in India. I am sure that it will help to develop the industry on healthy lines.

Indo-U.S. Air Agreement

In view of the hotel industry being an integral part of the tourist industry, I feel that it is relevant to say a few words about the Indo-U.S. Air Agreement which, I consider, vitally affects the tourist industry in the country. At present the agreement is still under negotiation, and it is my hope that it will be brought to a satisfactory conclusion, so that American Airlines continue to operate through India. These Airlines can be extremely helpful in promoting tourism to a particular country with their vast resources.

Second Five Year Plan

I am very glad that the Ministry of Transport have strongly recommended to the Planning Commission the inclusion of tourism in the second Five Year Plan. The hotel industry plays a very important part in the promotion of tourism and it is expected that the Government will give due consideration for providing aid for the improvement of present hotels and building new hotels.

Important Visitors

During the course of the year, a large number of Government visitors have travelled through India, including Marshal Tito, the King of Saudi Arabia, the King of Nepal and the heads of the USSR Government. I am proud to say that your Company was entrusted with catering to these distinguished guests at various places. The Cecil Hotel, Simla, was specially opened for the King of Saudi Arabia and his party, and a number of functions were catered for by your Company. We were also asked to cater for Marshal Bulganin and his party in Delhi and Srinagar. Our new hotel in Kashmir, the Oberoi Palace Hotel, owned by your subsidiary company, was used to accommodate Mr. the entire party including Marshal Bulganin and Mr. Khrushchev. This hotel is Maharaja Hari Singh's converted palace and all those who have visited it have without exception stated that it is one of the finest hotels they have visited. The building has been completely remodelled and refurbished and the rooms are according to international standards providing all modern conveniences. I am glad to report that Marshal Bulganin and his party were very complimentary in their remarks about the arrangements made for them. It is also interesting to note that this was the only place on their entire tour where the party stayed in a hotel.

Kashmir Activities

I am very happy that our Company took the right decision to extend their activities in Kashmir. Apart from the fact that this hotel will play a great part in the promotion of tourist industry in Kashmir State, it has, without a doubt, created a big confidence amongst the business community, in India and abroad. Besides, it is my confirmed belief that the facilities now offered in Kashmir will draw people from all over the world. This should prove an incentive to business in India and abroad to explore possibilities in trade, commerce and industry, even when they visit Kashmir on a holiday. It will not be out of place to mention that the Government of Kashmir is taking keen interest to extend their patronage both to the development of tourist traffic and through them to the expansion of trade and industry.

Training of Personnel

In view of the increased activities of your Company, there has naturally been an increased demand for staff. To keep in line with the policy of Indianisation, we have sent abroad three young Indian boys for training in the Hotel School in Scotland. It is our intention to send more such boys and girls, so that we have experienced trained Indian personnel to man our projects in the future.

New Hotel Projects

I take this opportunity of informing you of the new Hotel projects in Delhi. A public limited company has been floated with the Government having a substantial interest for building a large size hotel in the Diplomatic Enclave. Construction of this hotel has already been commenced. The Government of India have also allotted land adjacent to the Golf Club to build another hotel. This project has been entrusted to East India Hotels Ltd., a public limited company.

Foreign Interests

You may have noticed from the news item in the papers the other day that a third project is being considered and a foreign company is being entrusted to handle the project. With the building of 2 new hotels, mentioned above, it is my opinion that the requirements of hotel accommodation in Delhi will be met for many years to come. It is expected that our Government will not agree to a foreign company running a hotel in the Capital, when we have sufficient business acumen in the country to run hotels of international standards. I am not aware of the details of the arrangements arrived at between the foreign company and the investment company in India, but in view of the fact that we have sufficient material for running hotels in the country, the necessity for foreign help in this industry is not desirable. I would earnestly request the Government of India and particularly the Ministry of Transport to please look into this important matter in all its aspects.

I would like to take this opportunity of thanking the Ministry of Home Affairs, External Affairs, Transport, Commerce, Works, Housing and Supply and other Ministries for giving us all the co-operation and assistance. My thanks are due to all our staff for the whole-hearted co-operation and hard work which they have put in to achieve these results. I would also like to thank the Directors and Shareholders for the confidence that they have shown in the Managing Agents and their support.

India is on the road to great achievements, and the general economic outlook in the country is far brighter than it has ever been in the past. I am confident that with the economic improvements in our country, all industries will flourish and I end my report on an extremely optimistic note.

This is not a Prospectus in continuation of the existing Prospectus of the Company.

(A copy of the Prospectus has duly been filed with the Registrar of Joint Stock Companies, West Bengal as required under Section 92 of the Indian Companies Act.)

"Consent of the Central Government has been obtained to this issue by an order of which a complete copy is open to public inspection at the Registered Office of the Company. It must be distinctly understood that in giving this consent the Government of India do not take any responsibility for the financial soundness of any schemes or for the correctness of any of the statements made or opinions expressed with regard to them."

As the Company has paid dividend on its Ordinary Shares for the five years within the six preceding years, the Preference Shares fall within the category of approved investments under Section 21A (ii) of the Indian Insurance Act, 1938.

The subscription list opened on 16th January, 1956 and will close on 28th January, 1956 or earlier at the discretion of the Directors.

BRITANNIA BUILDING & IRON CO., LTD.

(Incorporated under the Indian Companies Act. 1913)

Authorised Capital	Rs. 1,00,00,000/-
Divided into 7,00,000 Ordinary Shares of Rs. 10/- each and 30,000 (6%) Redeemable Cumulative Preference Shares of Rs. 100/- each.	
Subscribed, Allotted and Paid-up Capital	Rs. 10,00,000/-
Divided into 1,00,000 Ordinary Shares of Rs. 10/- each	
PRESENT OFFER	
(A part of the unissued Capital)	Rs. 20,00,000/-

Divided into 1,00,000 Ordinary Shares of Rs. 10/- each and 10,000 (6%) Preference Shares of Rs. 100/- each at par, payable at Rs. 10/- per Ordinary Share and Rs. 100/- per Preference Share with application.

The Directors of the Company have decided to offer to the existing Shareholders the further issue of 1,00,000 Ordinary Shares and 10,000 (6%) Preference Shares at par, in proportion to their present holdings. For every 100 Ordinary Shares held at present the shareholders will be entitled to receive 100 Ordinary Shares and 10 Preference Shares. Shareholders whose names stand in the books of the Company as on the 14th January, 1956 shall be entitled to receive this offer and exercise their option of accepting, transferring or declining the same. The offer will remain open till the 28th January, 1956, whereafter the Directors will be at liberty to dispose of the shares, not applied for within the aforesaid date by the existing shareholders in any manner beneficial to the Company.

The Directors, the Managing Agents and their friends have agreed to take 40,000 Ordinary Shares and 4,000 (6%) Preference Shares of the face value of Rs. 8,00,000/- at par and these will be allotted to the shareholders not applied for by the existing shareholders. No commission or brokerage of any kind will be incurred by the Company on the aforesaid shares of the face value of Rs. 8,00,000/-. Public may apply for the shares subject to the proviso that their application will be considered only in the event of any shares being available for disposal by the Directors. All moneys received along with the applications will be refunded in case no allotment is made.

MANAGING AGENTS:

Messrs. HOLMES WILSON & CO. LTD.

'Stephen House' 4, Dalhousie Square East, Calcutta.

REGISTERED OFFICE:

'Stephen House' 4, Dalhousie Square East, Calcutta.

OBJECTS

The Company has been formed to carry out the several objects stated in the Memorandum of Association and more particularly for Steel Fabrication, Construction, Wagon building and Civil Engineering Works, etc., etc.

OBJECTS OF THE PRESENT ISSUE

Since the independence of India there is all round development to the country under the Five Year Plans and the schemes of the State Governments, Railways, other ministries and different industries. The Company at present has in hand many orders and contracts from the State and Central Governments, Semi-Government bodies, Railways and industrial concerns. It is engaged in various types of Steel Fabrication works for Buildings and Sheds, Wagon, Crane manufacture and Civil Engineering works with modern mechanical equipments and construction of buildings. Tenders are being quoted for various types of works and some orders are also materialising.

The workshop capacity is already booked up for the next two years with good prospects for further orders materialising in the near future. The Planning Commission also sometime back desired this Company, along with other fabricators in the country, to expand its capacity in the Workshops to meet the increase in demand in the Steel Plants, Railways and under the Second Five Year Plan. Therefore schemes have been drawn out and an application has been made to the Commerce Ministry for granting licence to expand the Company's existing factories in Calcutta and for putting up a new factory at Durgapur. A plot of land (108 bighas) for putting up a factory is being acquired at Durgapur which is going to be the location of the third Steel Plant and various other large industries.

It is contemplated to widen the activities in the civil side as well by going in for construction of Bridges, Roads, Dams, Waterways, Tunnels, excavations of all types with modern mechanical equipments under the different multipurpose Projects all over the country. Arrangements have been concluded with a firm of consulting Engineers of repute in U.K. for technical assistance.

With the industrialisation of the country in both the private and the public sector and the launching of different multipurpose projects and consequent larger demands on the engineering industry in all its spheres the Directors of this Company consider that the demand in all the lines handled by the Company is likely to increase for many years to come and therefore the expansion by way of manufacture of boats, barges, wagons, cranes, conveyors, etc. and equipping the Company with heavy civil engineering machineries and modern plants of all descriptions and increasing the present capacity appears not only to be justified but also essential. With the completion of the proposed expansion the Company can reasonably expect to strengthen its position in the future years and also to make good profits.

MANAGING AGENTS

Messrs. Holmes Wilson & Co. Ltd. have been appointed as the Managing Agents of the Company and shall hold the office until the 31st December, 1962. They shall be entitled to a remuneration of Rs. 1,500/- per month as office allowance and a commission of 10% of the net profits subject to a minimum guaranteed sum of Rs. 20,000/-.

Note:—No audited accounts have been made up in respect of any period since 31-3-1955. G. BASU & CO. Chartered Accountants. Auditors.

Company Meeting

THE NATIONAL NEWSPRINT AND
PAPER MILLS, LIMITEDA YEAR OF ACHIEVEMENT: BRIGHT
FUTURE OUTLOOK

Addressing the eighth ordinary general meeting of the National Newprint and Paper Mills, Ltd., held at Neplanagar, (M.P.), on 31st December, 1955, Sir A. Ramaswami Mudaliar, Chairman, said:

Gentlemen,

I have much pleasure in welcoming you to Neplanagar and I do hope that you will be adequately compensated for the discomforts of your journey to this rather out of the way place by your visit to the mill and by seeing it in actual production.

The annual report and the audited accounts of the Company for the year ended 31st March, 1955 together with the balance-sheet as on that date have been in your hands for some time and with your permission I shall take as read.

When we assembled at Neplanagar last year for the first time, the paper machine and the ground-wood mill had been installed, but the mill had not started producing paper. Since then important developments have taken place. As the chemical mill was not ready, your directors decided that trial production of newsprint should be started with imported chemical pulp and indigenous groundwood. Trial production continued until May. As unbleached newsprint was not readily marketable it was decided to bleach the groundwood pulp with the existing equipment in July. Since then bleached newsprint has been in production. Although considerable difficulty was experienced in disposing of the sub-standard paper produced initially it helped to train the crew and to tune the paper machine. The bleached newsprint found a ready market and it has been possible to sell all the paper produced up-to-date. The newsprint now being produced compares very favourably with the imported newsprint in physical characteristics and brightness. Our newsprint has of course a creamy shade which it derives from the tannin in the Salai, but it is a characteristic which does not in any way detract from its quality.

Outstanding Achievement

During the year the mill produced 2,600 tons of paper and we have been able to sell all of it. A large number of medium and small newspapers are regularly using the Neplanagar newsprint. Some larger newspapers also use it for their evening and mofussil editions. We are greatly appreciative of the patronage that they have extended to the mill and we hope that they will use our paper in larger quantities in future. The most outstanding achievement has been that the salai groundwood, about which serious doubts were expressed in many quarters, has now been proved beyond doubt as a suitable raw material for the manufacture of newsprint. The credit for this achievement of course goes to the courage shown by the Governments of India and Madhya Pradesh in supporting this venture but in no lesser degree it is attributable to the skill and patience of our own technicians. Equally important is the achievement that our technicians have standardized the finish of the paper. The newsprint now manufactured contains not less than 60% mechanical pulp. The erection of the chemical mill has been completed and the mill is now in a position to produce for the first time a hundred per cent Indian newsprint.

I am also very happy to inform you that the Government of India has exempted the sale of Neplanagar newsprint to newspapers from payment of excise duty. We are grateful to the Government of India for this decision which will be of considerable help to the mill in disposing of its product. We also hope that the Government of India will further assure for the product of this mill a market by creating a pool of indigenous and imported newsprint. Without this assistance our efforts to achieve a steady marketable production may not be easy. This last year has therefore been a fruitful one and the outlook is now brighter than it has ever been in the past in the history of this mill. It is a matter of satisfaction to all concerned that it has been possible to complete this project within the period of India's First Five Year Plan. I take this opportunity of congratulating all the workers for their sustained hard work and loyalty to the mill.

Exciting Adventure

I would also like to mention on this occasion that the welfare of the mill's employees is and has been a prime consideration with your directors. The main objective of India's industrialization plans is to improve the living standards of the people and it would be ironical if the people serving those industries are not enabled to live better than they have done in the past. But the success of this mill, as of the country's plans, depends upon the workers themselves. Their fortunes are inevitably linked up with the fortunes of the industries for which they work. This mill is a combination of private and public enterprise and it has accordingly a special obligation to fulfil. It has to assimilate the virtues of both and the evils of neither and its employees are privileged to be participating in the "exciting adventure of India's development". They should, therefore, be inspired by a sense of pride and patriotic purposefulness.

I now propose that the audited accounts of the Company and the balance-sheet be adopted.

Finance in India and Abroad

THE CALCUTTA MONEY MARKET

STEADIER BUSINESS CONDITIONS

Wednesday, 25th January.

THE banking world has settled down to steadier conditions this week and, with the reopening of the clearing house last week-end, a start was made in bringing conditions back to normal. Banks are, however, still dealing with considerable arrears of work. In the meantime, money remains in good demand. The primary source of offtake is the sugar industry, but a considerable increase in requirements on account of kharif crop storage has also been recorded. The buying of raw jute continues. Money remains tight in the interbank market, and the call rate is unchanged at 3½ percent.

A slack week is reported from the bill market, with very few export documents coming to hand. Those in evidence were chiefly on account of tea. Remittance continues poor. Sterling is unchanged and the dollar rate is quoting Rs. 47½.

Silver was steady and the price rose from the previous week's level of Rs. 176-8 to Rs. 177-1, quoted today. The rate for ready delivery was quoted at Rs. 177-4. The price was unchanged at 78½d. in London and at 90½ cents in New York.

Gold ruled steady in sympathy with silver and the price advanced from Rs. 96-8 to Rs. 97-8. The sovereign at Rs. 97-8 showed a gain of one rupee.

A fall of Rs. 6.04 crores to Rs. 1,382.71 crores in notes in circulation was the outstanding feature of the return of the Reserve Bank of India for the week ended 20th January, 1956. The total note issue at Rs. 1,491.83 crores showed little change. Foreign securities were reduced by Rs. 24.84 crores to Rs. 667.07 crores while rupee securities were raised by an equivalent amount to Rs. 588.36 crores. This was probably done by a transfer to the Banking Department in which balances held abroad rose by Rs. 28.59 crores to Rs. 72.55 crores. Deposits of the Government of India fell by Rs. 1.81 crores to Rs. 50.30 crores but other Government accounts rose by Rs. 4.92 crores to Rs. 13.33 crores. Balances of commercial banks at Rs. 67.51 crores were Rs. 12.45 crores higher. Other loans and advances fell from Rs. 43.48 crores to Rs. 42.59 crores, of which advances to scheduled banks against usance bills totalled Rs. 15.25 crores (Rs. 14.38 crores). These advances amounted to Rs. 5.50 crores since 1st January, 1956. Investments dropped by Rs. 35 lakhs to Rs. 51.24 crores. Ways and means advances stood at Rs. 1.82 crores (Rs. 3.58 crores).

The return of the State Bank of India for the week ended 13th January, 1956 shows a rise of Rs. 7.23 crores in total deposits to Rs. 231.12 crores. Investments in Government Securities are down by Rs. 6 lakhs to Rs. 107.49 crores, while other authorised investments remain unchanged at Rs. 9.09 crores. Advances, including cash credits and overdrafts, and bills discounted and purchased have increased by Rs. 2.67 crores to stand at Rs. 111.84 crores. Cash and balances are, in consequence, shown at Rs. 23.50 crores or Rs. 5.53 crores higher.

The provisional figures of foreign sea and air-borne trade of India on private and Government accounts during December 1955, according to data so far available in the Department of Commercial Intelligence and Statistics, Calcutta, are as follows: *Merchandise*, excluding transit trade of Pakistan but including that of other land frontier countries: Exports Rs. 5,067 lakhs, re-exports Rs. 42 lakhs (transit trade—nil); imports Rs. 5,616 lakhs (transit trade Rs. 1 lakh); total trade Rs. 10,725 lakhs. *Treasure*: Exports of currency notes Rs. 8 lakhs; others negligible. Imports of gold Rs. 1 lakh; Government of India coins Rs. 1 lakh; currency notes Rs. 196 lakhs; others—nil. *Balance of Trade*: The merchandise import figures are exclusive of the value of certain consignments of Government stores awaiting adjustment. Subject to this deficiency in import figures and to the exclusion of figures for transit trade, the total value of exports (including re-exports) of merchandise, gold and silver fell short of imports by Rs. 507 lakhs.

CHANGING PATTERN OF WORLD
OIL SUPPLIES

Although the U.S.A. remains the world's largest oil producer, the most remarkable developments of recent years have taken place in other countries—particularly in the Middle East. Figures just published by the Petroleum Information Bureau in London show how the oil industries in the Middle East have grown over the past 30 years. In 1925, the Middle East supplied no more than five million tons of oil, and the only major producer in that area was Persia. Last year's contribution from the Middle East was over 160 million tons, of which 16 million tons came from Persia—equal to half her output in her peak year of production (1950). Persia's contribution last year was far exceeded by that of three other States—Kuwait, Saudi Arabia and Iraq—none of which produced oil 30 years ago. Indeed, Kuwait only supplied her first oil in 1946, and Saudi Arabia

in 1938, but the two are together producing over 100 million tons of oil annually at the present time. In fact, the Middle East as a whole is now providing more oil than the entire world did in 1925.

Other areas have shown comparatively less rapid development. In the Far East, oil output in 1925 was about five million tons; but due to wartime destruction the figure had dropped to little more than two million tons by 1945. Last year, at some 18 million tons, it had shown a remarkable recovery, for which Indonesia and British Borneo were almost entirely responsible. Despite this welcome revival, production is still insufficient for the rapidly expanding needs of the Far Eastern countries themselves. Russian output during the past 30 years has also fluctuated considerably, and now represents about the same proportion of the world total (nine percent) as it did in 1925. Russia last year produced 70 million tons.

Electricity bills are a problem, and not only to the recipient. It is not surprising, therefore, that Electricity Supply Companies turn to mechanisation in their Billing Departments, in order that their bills may be promptly and accurately despatched. Mechanisation, of course, means Hollerith, and the Electricity Undertaking in Bombay despatches 170,000 bills per month prepared in this way. In Calcutta the figure is 190,000, in Madras 42,000 and in Kanpur 40,000. May we talk Hollerith with you?

FURTHER FALLS IN STOCK MARKETS

UNCERTAINTY ABOUT GOVERNMENT'S ECONOMIC POLICY

London, 25th January

FURTHER losses were recorded in the stock markets last week following renewed selling and the virtual absence of buyers. The uncertain economic situation continued to overshadow sentiment, which remained unsettled by the lack of information on official economic policy. The Prime Minister's speech at Bradford failed to shed any light on the subject, and news was still awaited regarding the Government's "further measures" to deal with inflation. While nervousness about official intentions remained the chief adverse influence, there were a number of other unfavourable factors, including the decline on Wall Street, with little of an encouraging nature to assist the markets. Losses consequently were widespread and, in places, appreciable compared with previous levels. The recovery in the gilt-edged market early in the previous week proved to be short-lived and prices lost ground steadily. Selling was not heavy but the market was without support. Short-dated stocks, however, resisted the trend. Talk of the possibility of a higher Bank rate and nervousness regarding interest rates were the main unsettling factors in the gilt-edged market. Among foreign bonds, Far Easterns attracted modest support, although Chinese issues reacted later. German bonds inclined easier. Rails provided little of interest. Dollar stocks fell back in sympathy with Wall Street. The new American

Ford shares were well below the opening price established when dealings started. Industrial equities fell back further on a broad front. The leaders were among the main sufferers and the Financial Times Industrial Ordinary index dropped another four points. The losses however were not as large as in the previous week. The substantial recovery in gold shares at the end of the previous week was not held and prices turned downwards again after the week-end. Base metals lost ground, partly under Wall Street's influence, while oils recorded appreciable losses. Rubbers and teas, although quiet, drifted lower with the rest of the market.

The Money Market

The trend of the money market last week was much the same as in the previous week. For the first few days, the supply of funds was very comfortable, aided by an excess of maturities and a smaller bills take-up. But Thursday's tax payments cut the flow, and conditions thereafter were less comfortable. Difficulties were not as great as in the previous week, but calling was on a smaller scale, and discount houses were able to reduce to a very small extent the amount of their Bank of England borrowings. Good business was done in bills when banks were in funds, with the effective rate of 4 percent hardening to 4-1/32 percent when conditions became tighter. Applications for £240 million of 91-day bills totalled £387,325,000, of which the former amount was allotted at an average rate of 81s 4.02d against 81s 4.90d in the previous week. Offerings this week will be comprised of £250 million of 91-day bills. The Bank of England return for the week ended 18th January showed notes in circulation £25 million lower at about £1,786 million, while bankers' deposits were £4 million higher at £232 million.

Stock Market Prospects

The Investors' Chronicle newsletter writes: After the sharp reaction that brought down the Financial Times Industrial Ordinary index by 6 percent in six working days, the stock markets have remained virtually featureless, awaiting further developments. It is clear that the rally which took the index clean through the 200 mark was hard to justify on sound economic grounds. At it follows, then, that after the fall, prices are at least approaching a firmer basis. Whether, and by how much, they have still to fall must be tempered by conjecture, though opinions must be tempered by individual views on the ability or the willingness of the Government to tackle the economic problem at its roots, and on the attitude of the new Chancellor who so far has been emulating the calm so far as economic policy is concerned. One thought must be that leading equities are getting to an attractive level for a genuine investor.

Activity on Wall Street

Trading in foreign bonds was slow last week as the marketing of the Ford stock commanded most of the attention. Some German Nationals and Italians lost small ground in limited turnover although the Rhine Westphalian issues continued firm, advancing two points or so. Danish 4 1/2 percent of 1962 declined a major fraction on light offerings, while Japanese showed only minor changes either way. Chile 3 percent of 1993 finished with a slight loss in a quiet market for South Americans. The domestic market was highlighted by heavy dealings in American Telephone and Telegraph 3-7/8 percent, which dipped one point following the redemption call of the company's 3 1/2 percent. Other convertibles eased in sympathy. U.S. Government securities ruled firm and active, reflecting increased investment demand and comparatively light inventories of dealers. Investment quality corporates were slightly higher, but rails ruled irregular.

Softer Trend in Platinum

A softer tone was noted in the U.K. free platinum market last week, with the price mentioned around £40 1/4 a troy ounce, compared with about £42 1/4 recently. The lower trend was attributed more to the lack of demand rather than to any particular pressure to sell, as supplies were still reported to be far from plentiful. Two leading suppliers of Commonwealth metal continued to quote £32 1/4 to regular customers.

Rhodesian Import Duty on Hessian

The duty of 6d a lb. on hessian imported into the Rhodesian Federation has been suspended. It was announced in the Federal Gazette. It was imposed last September, and has been replaced by a protective duty of 4d a lb. with effect from 20th January. According to the official statement, investigation has shown that some degree of protection for the local jute industry is justified.

Yields on Tea and Rubber Shares

Although there is more interest in rubber shares, it is thought that the small rise in their price still fails to conceal the anomaly of high yields being shown by them and by tea shares at the same time. Many of the best tea shares offer yields of 25 percent or more. An explanation often given is that these returns reflect only the sky-high prices of tea a year ago and the big profits cannot be repeated with tea selling at least 1s to 1 1/2s a lb. cheaper today. In the case of rubber, however, the exact opposite rules. Companies whose year ended last June, during which rubber averaged 1s 10d a lb. also show a yield of over 20 percent. Yet rubber has averaged a good deal more since then, and on the analogy of tea shares rubbers should be considerably higher to discount the big profits coming along this year.

Vegetable Oil Market

The absence of trading in India brought nominal conditions to the Indian linseed oil section. Scarcely any firm offers were made and valuations were around £1 a ton higher. Early shipment of bulk oil tentatively quoted around £128, while April-May was up to £125 1/2 and May-June at £125, all c.i.f. The Argentine Grain Institute offered 8,000 tons for Feb-March shipment and bids were expected to be above the last rate of \$288.20 f.o.b. Groundnut oil was in better demand and values improved. Italy showed the most interest in Indian bulk oil, business being reported up to £116 1/2 c.i.f. with further buyers. Enquiry from North European ports also expanded with bids up to £115, while resellers wanted £115 1/2 c.i.f. Coconut oil was steadier on the firmness of origin advices, but European buyers were not inclined to follow the advance. Straits bulk oil Jan-Feb. and Feb-March shipment was quoted at £87 1/2 c.i.f. and Ceylon at £90 1/2, although earlier afloat parcels of Straits were available down to £86 1/2. More sellers of British East African castorseed were evidenced and buyers were resistant. Feb-March shipments were offered at £66, but bids were no better than £64 1/2 ex-ship U.K.

U.K. STEEL EXPERTS TO VISIT INDIA

Mr. N. H. Bacon, chief work metallurgist of Steel, Peckh and Tozer, of Rotherham, Yorkshire, and Mr. J. F. Sewell, liaison metallurgist of Samuel Fox and Company Ltd., of Stockbridge, Yorkshire, are visiting India to attend a symposium on the production, properties, and applications of alloy and special steels. The symposium is being held under the auspices of the National Metallurgical Laboratory at Jamshedpur from 1st to 3rd February. Both are contributing technical papers to the symposium. Mr. Bacon on "Ingots for High-Duty Forging", and Mr. Sewell on "Forti-world". They expect to be in India for about a month.

Stocks and Shares

WEEK OF SHOCKS FOR THE SHARE MARKET

ALL-ROUND DECLINE IN PRICES FOLLOWS LIFE INSURANCE ORDINANCE

Wednesday Evening.

THE position on the Calcutta stock exchange has been confused throughout the past week. Holidays, hartals, the bank dispute, the nationalisation of insurance and more frightening tax news from New Delhi have all conspired to give the market one of its worst weeks since 1947. At an emergency meeting held yesterday, the Committee of the exchange announced a clearing next Monday, with minimum prices fixed and compulsory carry-over. It is hoped by this method to dispel the confusion caused by the postponement of clearing during the bank dispute. Rumours are circulating that certain operators may have difficulty in meeting their commitments while it is clear that the news of the nationalisation of life insurance did not come as a surprise to others. The market was closed yesterday and open today only for transactions in shares other than clearing scrip.

The various uncertainties affecting the market have slowed business almost to a standstill and prices, where quoted, tend to be nominal. Any view of future possibilities is extremely hazardous under these conditions. The nationalisation of life insurance has made it uncertain what support equities will get from this source in future, while such rumours as a limit on incomes and a tax on total wealth in the next Budget, make it doubtful if any reasonable recovery can now be expected before March. In any case, the results of the clearing will have to be known before prices can find levels which discount the various uncertainties.

The clearing rates have been fixed at: Irons Rs. 36, Coppers Rs. 6-12, Texmaco Rs. 20-8, Orient Rs. 33-8, Burrakur Rs. 15-4, Nationals Rs. 30-8.

Details of the week's trading follow.

Conditions in the gilt-edged market have shown no change since these notes were last written. Prices remained firm and turnover was negligible due to the disruption of business owing to the bank strike and the disturbances in Bombay city. Three percent Conversion Loan 1986 was unchanged at Rs. 80-6. In short-dated loans there were buyers of 2 1/2% 1961 at Rs. 93-3, 2 1/2% 1960 at Rs. 96 and 2 1/2% 1962 at Rs. 93-12, but sellers were scarce. Similarly, there were strong buyers of 3% 1957 at Rs. 99-9 but offerings were small. Three percent 1958 was also in demand at Rs. 99-7. Amongst medium-dated loans, 3% 1959-61 was quoted at Rs. 98-3 and 3% 1963-65 at Rs. 94-10. There was also an enquiry for 3% 1964 at Rs. 94-10, but sellers were not attracted; 3 1/2% 1961 changed hands at Rs. 99-8, 3 1/2% 1964 at Rs. 98-12 and there were sellers of 3 1/2% 1965 at Rs. 98-9. Among long-dated loans there were buyers of 3% 1970-75 were quoted at Rs. 87-15. In the Provincial section there were buyers of 4% U.P. 1967, West Bengal 1964 and Mysore 1963 but there were no sellers to meet the market.

Very few transactions were reported in Preference shares during the three days on which the stock exchange was open. In jute, Bally changed hands at Rs. 115 and a small odd lot of Howrah 7% at Rs. 117-8. A small lot of Lawrence "B" was crossed at Rs. 95-8. In the miscellaneous group, Calcutta Electric were easier at Rs. 12-2 and Duncan Brothers were crossed at Rs. 71-6. Indian Iron & Steel were done at Rs. 109 and Jardine Henderson at Rs. 78. Humayun Properties came to hand at Rs. 10-7. Karanpura Collieries were marked at Rs. 66-8. Rohas Industries "B" were offered at Rs. 68 and a small lot of Textile Machinery 2nd changed hands at Rs. 73.

In the banking section, a few transactions were reported in Punjab National at around Rs. 48-12; later the shares reacted to Rs. 47-8. A solitary transaction was done in Hindusthan Commercial at Rs. 10 and a small lot of Allahabad Bank Contributory was taken at Rs. 186.

Among railway shares, Bankura-Damodar were taken at Rs. 74-8. No other transactions were reported in this section.

In the cotton section, Cawnpore Textiles were subbed at Rs. 9-6 as were Kesoram at Rs. 17. Swadeshi Cotton preferred-ordinary dropped Re. 1 to Rs. 9.

Coal shares ruled quiet and sellers predominated. Burrakur opened at Rs. 16-15 and receded steadily to close at Rs. 14-14. Bengal were easier at Rs. 55-5 as were East Indian at Rs. 32-10. Central India closed lower at Rs. 7-4 as did Western Bengal at Rs. 7. South Karanpura were fairly steady at Rs. 12.

Despite the decision to unseal a further 5 percent of the looms of mills in the I.J.M.A. group, jute shares were devoid of interest and prices were marked down further. Here is a chart showing representative price movements:—

	Opening 19-1-56	Closing 25-1-56
Rs.	Rs.	Rs.
Anglo-India	212	208
Champdany	182	170 x.d.
Gourepore	322	315

	Opening 19-1-56	Closing 25-1-56
Rs.	Rs.	Rs.
Howrah	27	26 8
Kamarhatti	190	188
National	31 10	29 13
Reliance	12 12	12 8

Only two shares were dealt in the electric supply section, namely, Calcutta at around Rs. 14 and Patna at Rs. 12-2.

Over-production and falling prices kept buyers away from the sugar section. Ramnugger Cane were crossed at Rs. 25-4 and were later marked down to Rs. 23-8. Shree Krishna Gyanoday were offered at Rs. 12-12.

In the engineering section, Indian Iron & Steel broke sharply from Rs. 38-4 to Rs. 34-6 and near-panic conditions prevailed; this afternoon's closing price is Rs. 35. Jessop reacted from Rs. 64-8 to Rs. 60 and Marshalls found sellers at Rs. 6-14. By contrast, Indian Standard Wagon were fairly steady at Rs. 167. Richardson & Cruddas dropped from Rs. 27-8 to Rs. 26 and Textile Machinery from Rs. 22 to Rs. 20.

In the miscellaneous group, Bengal Paper changed hands at Rs. 116 and Orient Paper receded from Rs. 34-12 to Rs. 33. Titaghur eased from Rs. 47-8 to Rs. 45-12. Ashoka Cement were marked at Rs. 10 and Sone Valley were crossed at Rs. 7-12. Indian Steamship, after a brief spurt to Rs. 8-12, receded at the close to Rs. 8-4. Port Shipping changed hands at around Rs. 17. Aluminium Corporation were steady at Rs. 9-15. Angelo Brothers eased to Rs. 24, while Bengal Flour were maintained at Rs. 31. British Burma Petroleum were quiet at Rs. 4 as were British India Corporation at Rs. 11-13. Clive Row changed hands freely at around Rs. 11-4. F. & C. Osier were depressed at Rs. 15. Indian Cables were crossed at Rs. 31-4. Martin Burn

HINDUSTHAN BUILDINGS
CALCUTTAHow strong must the foundation
be for 43 lakh houses?

In the last few years, large segments of our population have moved into the cities. Here they live in unbelievably congested tenement houses, adding to the cities' already acute housing shortage. We need 43 lakh houses to ease the strain on our cities.

In 1947 our cement production was 1.45 million tons. Today, it is 4.34 million tons—almost three times the 1947 figure. 40,000 people are employed in 26 modern, efficiently run factories.

In our developing economy steel is

essential. That is why the Tata Iron & Steel Company has launched an expansion programme which will raise its capacity.

	Ingot Production
1955	1,050,000 tons
1959	2,000,000 tons

current demands on the Government for increased selling prices which would probably vary with the efficiency or inefficiency of a plant.

We now come to the actual capital requirements of a plant and the cost of operation and maintenance, plant location, and disposal of products. These subjects have been commented on in former articles and were more recently discussed by the Coal Washing Committee. Certain broad principles were stated which have not yet received substantial consideration from any quarter. In the articles referred to, it was stated that capital charges are not directly proportional to the size of a plant, but considerably less a ton of throughput as the plants increase in size. It has also been shown that operational charges are inversely proportional to the quantity of coal processed and these economic factors have been the reasons for the recommendations put up from time to time for as large individual units as possible. It is considered by fabricators of heavy media plants that the minimum economic size is 100 tons an hour to 120 tons of raw run of mine coal throughput or, on a two-shift basis of eight hours each, approximately 1,600 tons to 2,000 tons a day.

Large Central Plants

Only the largest collieries are in a position to erect and operate a plant of this description. Following the practice of other countries central plants are advocated for dealing with the combined outputs of a group of collieries from which coal of somewhat similar washing characteristics can be obtained for processing. This was the purpose underlying the installation of the Jamadoba plant which was designed to process 5,000 tons of raw coal a day on a two-shift basis of eight hours each, provided railway facilities were available. Unfortunately, these facilities did not materialise and the operation of the plant has been confined to the production of the colliery at which the washing plant is located. Consequently the best economic results have not yet been achieved. The plant, however, is capable of dealing with the production of outside collieries as soon as the railway facilities have been approved and completed. The necessity of applying these measures to the whole of the Jharia coalfields is evidenced by the figures of production as given by Mr. Guha in the article already referred to.

- | | |
|---|-----|
| (a) The number of collieries producing an average of 600 tons a month or approximately 24 tons a day on a 25-day working basis ... | 320 |
| (b) The number of collieries producing an average of 601 tons to 2,500 tons a month on the same basis, or approximately 24 tons to 100 tons a day ... | 260 |
| (c) The number of collieries producing more than 2,500 tons a month on the same basis or more than 100 tons a day ... | 270 |

Compulsory Grouping

Collieries in categories (a) and (b) respectively cannot individually adopt scientific means of improving their production and few in category (c) can do so unless rationalisation is effected either on a unitary basis or through compulsory grouping and central washing. The only alternative is for the sale of the run-of-mine coal to a central organisation for processing and marketing. The recommendations put forward by the Coal Washing Committee have proved unacceptable to the producers and it would appear that if compulsion is applied, collieries with an economic production of 100 tons a day and over would prefer to install their own plants but with the minimum capital commitments unless adequate assistance and inducements are given by the Government. Such small production would not justify large capital outlay and herein lies the danger to which attention has already been drawn—the introduction of cheap processes and half-measures which have been condemned in other countries for washing difficult coals and which were stated by Dr. Randal in 1924 as unsuitable for washing Indian coals.

It is apparent, however, that the policy of the producers is directed to pressing the Government to place the responsibilities of the matter on consumers of coal and they quote as an example the enterprise of the Tata Iron and Steel Co. without taking into consideration the fact that it was as a producer of coal that led it to install the two plants at its collieries. Although it is common practice, particularly in the U.S.A., for industrial consumers to own and equip collieries with washing plants, the onus has always been on producers to sell their coal on a competitive basis, and this means on a quality basis. This system, moreover, was the basis of coal grading in India long before the question of scientific coal preparation gained any prominence and price-fixing has been on this basis ever since the formation of the Grading Board. Consequently, the processing of coal by colliery owners does not give rise to any precedents, either abroad or in this country.

Transporting Waste Material

In a recent article Dr. Whitaker appeared to support the contention that large consumers should be responsible for washing their own supplies in accordance with their specifications. No doubt this may be a simple and obvious solution for producers and an easy way out of the existing deadlock. If these views gained acceptance there would then be no restraint on the quality of the coal produced at the collieries and the rate of ash increase commented on by Mr. Guha would be

greatly accelerated. Moreover it would defeat the objects to be achieved, namely the help to traffic by the retention of waste materials at the mines where they are so badly required to supplement stowing. It is surprising that this question of traffic alleviation which can be accomplished by universal washing at the coalfields has been so little appreciated. Only the railways know apparently how much track facilities, and how many additional locomotives and wagons are involved in transporting over great distances the waste material which could be eliminated at the source and used in the mines. It is also all the more surprising that such proposals should be put forward when, in addition to these and other disadvantages, the most serious to consumers is probably the loss in rail freight in transporting waste material to remote centres. It has always been an accepted maxim that raw materials should be beneficiated, as near the point of production as possible and it is not surprising to learn that the proposals have not been entertained.

Screening Plant

Arising out of these discussions it would appear that the location of washing plants should be at the coalfields where the precedent was established many years ago when screening plants were first installed by the more important concerns and are still in operation. It must not be overlooked that screening plants are coal preparation plants and served our purpose as long as the better grades of coal were available. Their only defect now is that they are unable to clean the inferior seams which are now being produced. In these seams, the waste material is present in a more complicated form and requires the application of more scientific methods. I have tried to show that out of the many available, the heavy media process is the most suitable for our purposes and the nature of our coals. Also, in view of the low average outputs, grouping is essential to justify the installation of a plant of the minimum economic size.

Each plant would be sited at the largest producing unit where coal of the requisite quality, adequate water supply and power are available, and also facilities for stowing the rejections from the plant without necessitating rail or other means of transport to remote points. Additional railway facilities should only be provided for the colliery at which the washing plant is installed and un-economic sidings and branch lines should be abandoned. This would alleviate existing traffic difficulties and reduce the demand for new siding accommodation. Moreover, these arrangements would release great quantities of coal reserves at present locked up in branches and sidings. If we glance again at the table put up by Mr. Guha showing the number of collieries and their average output, it is clear that we in India have not been alert to the advances made in the removal of raw materials by road transport. In no other country in the world today would branch lines and sidings be installed and maintained for such small production. In other countries small producing units are uncommon, but where they exist they are totally dependent on efficient road transport for a distance of many miles. The boundaries of a group created for the purposes of installing a central washing plant, after selecting the centre, should be fixed or drawn with relationship to the distance for which road transport would be efficient. Where roads are reasonably good 20-ton trucks could be used, and on the inferior ones smaller trucks. All these trucks would of course be of a self-dumping design. Each colliery would have a storage bunker commensurate with its daily production and the trucks would be self-loaded. One of the requisites of the washing plant is a storage bunker and this should be designed to facilitate the automatic discharging of the incoming road trucks.

Possible Sizes of Trucks

In the case of category (a) 320 collieries, the average turn-round with 20-ton trucks would be one only a day and would not be excessive even with the minimum size of truck. In the case of category (b) up to five trips a day would be necessary with the maximum size of truck and it would also be well within the capacity of even smaller trucks. The smaller units in category (c) may be served in the same manner and it is necessary to ascertain if the larger units could not be adopted as the centres for locating the washing plants. Whatever means are eventually adopted, the branch lines and sidings cannot remain indefinitely in the Jharia coalfields, since with the deterioration of the mines through exhaustion they will in due course have to be abandoned in order to release the supporting coal if this is not to be irretrievably lost. Surveys should be carried out along these lines in order to determine a suitable location for each plant and the total number required. Aerial ropeways have been suggested by some experts and I would only request them to scrutinise Mr. Guha's production tabulation to see if the figures contained therein can support a network of ropeways.

The question of capital requirements, operational charges and disposal of products now arises. If producers within the respective groups cannot be persuaded to amalgamate or co-operate, then they should be bought out by the Government or by a larger concern now producing in the same area, and groups should be formed to warrant the installation of a plant. Each group would be large enough to render it economic, and with sales of products on a revised price schedule in accordance with quality, it should be able to

prosper. The only alternative is a Coal Beneficiation and Distributing Agency, somewhat on the lines already recommended by the Coal Washing Committee. This concern would purchase the raw coal at the pit's mouth, maintain the roads, transport the coal, process it and place the products on the market. Each colliery would be responsible for the cost of erection and maintenance of its own bunker but in accordance with the specifications and requirements of the transport and beneficiation concern which would pay the raw coal grade price less current loading charges, always provided, however, that the raw coal was supplied in accordance with the grading of the seam or seams.

Functions of the Agency

The Agency should be free to market the washed products in direct negotiation with consumers, or alternatively to charge the statutory price of the beneficiated grades plus a reasonable margin for processing, capital charges and profits. There should be no objection to an existing producer installing a plant larger in size than will meet his own requirements with the intention of also processing coal from adjacent collieries and on the lines indicated above, provided that this does not infringe on the rights of an already established concern. Whatever the methods or system which may be adopted ultimately to guarantee supplies to consumers in accordance with specifications, it is most important that the Government take timely action to provide the necessary traffic facilities for washing plants and to assist in the organisation of markets for the by-products of the plants.

The production of certain grades of steam coal of a high ash quality in the form of middlings is unavoidable and these will be in considerable amounts, probably an average of 20 percent of the total quantity of coal processed. Power plants formerly installed were not designed to consume such a class of fuel and the existing market is negligible. Moreover, these middlings will come into competition with producers of grades II and III respectively, for whatever market there may be and unless they also are compelled to wash their inferior grades they will strongly oppose the placing of middlings on the market. This state of affairs must be clarified since the success of washing depends largely on the disposal of the middling products at a remunerative price. Action should be taken to ensure that arrangements will be made under the next five year plan. All thermal stations within a reasonable distance from the washing plants should be designed or converted for the consumption of these classes of fuel as in South Africa and in the U.S.A., where power stations are generally installed adjacent to washing plants.

Fragmented Mining Units

There are also the depressing but important problems of fragmented mining and small producing units, to which attention has been drawn frequently, and again by Mr. Guha in his production table referred to earlier in this article. Compulsory washing will no doubt in time help to solve these problems, but under the prevailing conditions neither can conservation of the reserves be effected nor scientific methods of mining be adopted. The failure to make an adequate provision for the rationalisation of the coal industry in the first five year plan, and also apparently in the second, will make the implementation of the programme for 60 million tons in 1960 extremely difficult.

Judging from Mr. Guha's tabulation, the potential is no doubt there, but this may be only a temporary state of affairs. Many of the collieries listed are merely shallow outcrop workings already in an advanced state of exhaustion and ill-equipped for maintaining regular and dependable production. The deeper mines are suffering from exhaustion to a great degree, and under the stress of the second world war and the subsequent restrictions imposed by stowing regulations and the quota system, they are no longer as dependable as formerly. It would appear, therefore, that the second five year plan will depend more on the opening of the new coalfields on a regional basis in order to reduce traffic congestion in the older fields.

It is certain, however, that even if it were possible to produce 60 million tons in 1960, without washing the inferior coal, it would jam the wheels of industry and the railways, and would be largely unsuitable for the steel plants. Again, if it were possible to implement washing on a large scale before that time a rejection factor of at least 20 percent may have to be considered. After allowing for local consumption there would be considerably less than 50 million tons available for despatching. Even this is a formidable target to achieve in view of the difficulties discussed here and those pointed out by Mr. Guha in his article. One thing, however, which has so far not been considered, either in this article or in the one put out by Mr. Guha, is that of increasing the labour forces in such a short period. The provision of training facilities, housing, and all the amenities which must go with the recruitment of a large labour force will alone be a gigantic task. Can this be offset by the further intensification of mechanical production? If so, the burden and responsibilities will fall on the collieries in category (c) of Mr. Guha's table, and few of them are in a position to undertake them, either now or in the future. If they are, it will further intensify the difficulties pointed out by Mr. Guha.

Bombay

A WEEK OF RIOTING IN BOMBAY INSURANCE ORDINANCE DAMAGES BUSINESS CONFIDENCE

(FROM OUR BOMBAY CORRESPONDENT)

BOMBAY'S week of violent unrest completely paralysed normal activities in the city; neither did the Maharashtra region of the State escape the effects of unrestrained mob violence and disregard for law and order. With transport almost at a standstill, it is a wonder that economic activity, even in an attenuated form, continued throughout the week. The situation, at first purely political, deteriorated rapidly into one of looting and arson throughout several cities. One of the worst instances of these was the fire in the cotton godowns at Sewri resulting in the destruction of goods amounting to at least a year's consumption requirements of the city. Even now the situation is far from normal. The greater part of the city is still under a rigorous curfew from 7-30 p.m. to 5 a.m. Although signs of returning confidence are evident, sporadic instances of mob law continue. The Bombay Government, divided as it is on the issue of the State's reorganisation, has enhanced its prestige for firm and efficient administration. This is mainly due to its Chief Minister Mr. Morarji R. Desai. It is also appreciated universally that without the staunch loyalty and untiring efforts of the city police force, conditions might have been almost unendurable for three million people of this State. While retail and wholesale trading in commodities naturally came to a halt for the most part last week, the stock, bullion and cotton exchanges, together with some other forward markets, kept functioning without any serious interruption for short periods every day. In spite of adverse conditions banks, all important business offices and Bombay Port preserved some form of continuity in the economic life of the city.

Investors Scared

While the blow dealt to commerce and industry in the city and the State has been severe, the proceedings of the National Development Council at its last meeting, and the publication of the Ordinance for nationalisation of all life insurance business, have further shaken the morale of the investing public. It is now believed that this will be followed, in spite of past assurances, by the Government taking over banking at an early date and that with the removal of these two props to the private enterprise, all activities in the private sector must eventually come under a rigid control. As a result of these two developments, the stock exchange witnessed a collapse at the end of last week. This is not regarded here as a phase of the normal cycle of business booms and slumps, but as a precursor to a complete change in the investment pattern and the credit structure in the economy of the country for appreciation in share values, because its effects will not be seen in increased savings for long-term investment. It is increasingly believed that the impact of inflation will fall more on the prices of agricultural commodities and both speculation and investment are likely to be diverted to this channel, because it would provide a better hedge against the inevitable depreciation of currency. Even for those who would not be inclined toward investment in commodities, the gilt-edged market is likely to prove a more attractive field than equities. The belief in the gradual decline of equity values is based on more on this transformation in the pattern of the investment habits than on any fear regarding the working of the industries which would still form part of private enterprise for at least some years to come. The industries might actually fare well as a result of the increased consumption of manufactured goods; but investors will lack the long-term confidence which prompted them to put their savings in stocks. To a certain extent, the phase of this change in investment outlook will depend on the precise terms of compensation that are offered for investments in the shares of life insurance companies.

Mr. Shroff's Views on Ordinance

The sudden decision with regard to life insurance business, announced by way of an Ordinance instead of taking recourse to the normal process of legislation, has gone to strengthen the conviction in business circles that it has been inspired by political and ideological theories and not by the alleged failure of life insurance companies. Mr. A. D. Shroff, Chairman of the New India Insurance Co., one of the largest units in the field, has stated that it is obviously a political decision inasmuch as it is contrary to all facts and experience of most of the countries in the world which, after prolonged investigation, have decided not to nationalise life insurance. Describing this move as the most severe blow so far dealt to private enterprise in India, Mr. Shroff pointed out in a Press interview that life insurance was the one business in which private motive was at its minimum, because not only were shareholders in any individual company restricted by law but only 7½ percent of the hands restricted by law were available to surplus of the life department was available to shareholders. He therefore could not help regarding it as a political decision and not one dictated by the interests of the Indian economy. Replying to the Finance Minister's charge regarding the failure of some insurance companies during the last decade and mismanagement in some others, Mr. Shroff stated that under the Insurance Act the Government was armed with sufficient powers to safeguard the interests of shareholders and

policyholders against such malpractices. It was because of lack of vigilance and a disinclination to use the powers given to the Government under the law that these malpractices had continued. In this context, Mr. Shroff commented on what he described as "a tragic sense of unfairness" in the authorities for not voicing a word of appreciation for the management of those companies which through enterprise, high standards of integrity and a judicious investment of funds, are in a position to hand over to the country, institutions of which any fair minded citizen would be proud. Mr. Shroff also considered the basis of compensation, as indicated in the Ordinance, both inadequate and inequitable; but he hoped that when the Government had time to study this matter, the companies concerned would be treated on a fair basis.

Reactions of other business leaders to this move have been equally critical. Mr. Shantilal Mangaldas, President of the Indian Chambers of Commerce and Industry at Ahmedabad expressed it as his opinion that nationalisation of life insurance would retard the efforts for progressive industrialisation envisaged in the second plan which expected the private sector to step up production. He also feared that as a result of the absence of competition, the rates of premia would tend to go up holding up the development of life insurance itself in the country. Sir Cowaji Jehangir, head of the Oriental Government Security Life Assurance Co. characterised the Ordinance as undemocratic and believed that the Government felt compelled to issue the Ordinance because it feared opposition and criticism. He also held that if this step was taken to obtain greater financial resources for the second five year plan this would be possible only at the sacrifice of the interests of both policyholders and shareholders. Mr. P. M. Chinai, a leading Congressman in Bombay and President of the Indian Merchants' Chamber, also questioned the wisdom of resorting for this purpose to ordinance-making powers which were meant to be used only in emergencies. Mr. Chinai was also of the opinion that if securing additional resources for financing the plan was the immediate objective of this step, it was not likely to be furthered because of the obvious reason that, as it was, a major portion of the resources from this source was already being invested in Government and other approved securities. On the other hand, Mr. Chinai pointed out that nationalised insurance would not be in a position to render the individual services and to build up the vast organisational machinery so essential for making up the large leeway in the field of life insurance. Mr. Tulsi Das Kilachand, M.P. also criticised this move. He considered it as thoroughly ill-advised and feared that the cost of life insurance would increase as a result of this step. Mr. Kilachand said that the Government had enormous responsibilities and it should not burden itself with more without realising the implications. On the other hand, the Insurance Employees' Federation in Bombay has welcomed the Ordinance and asked the Government to associate representative bodies of insurance employees with the running of the industry.

Joint Consultation in Industry

While explaining the implications of the bonus agreement concluded last week between the Bombay Millowners' Association and the Rashtriya Mill Mazdoor Sangh, Mr. G. D. Somani, Chairman of the Association, hinted at a press conference that there was every possibility of the establishment of an organisation composed of representatives of the textile industry and the workers to settle disputes. Mr. Somani also believed that once both the parties started working on the basis of joint consultation and mutual accommodation, the industry would be able to achieve higher productivity and real earnings for labour. Explaining the implications of the pact, he observed that individually, members of the Association had a right to keep out of the agreement, but he hoped that they would all collectively endorse it, in which case every unit would have to pay at least the minimum bonus equivalent to 15 days' wages whether or not it made a profit. He pointed out that this was of far-reaching importance in view of the fact that various courts, including the Labour Appellate Tribunal had conceded the right of mills incurring losses to be exempted from paying any bonus and that the Supreme Court had also upheld this principle in the Muir Mills' case. Mr. Somani further explained that one or two departures which had been made from the Ahmedabad formula had been to satisfy the desires of the workers' representatives. One of these was that for the two years—1956 and 1957—the development rebate which was introduced in the Central Government's budget of 1955, should be ignored altogether in all bonus calculations. Another change introduced in the Bombay agreement related to the setting up of a Commission with agreed terms of reference to enquire into the rehabilitation requirements of the Bombay mills. The Millowners' Association had agreed to the re-opening of this question and investigation by an impartial commission so as to remove the cause of constant friction between the parties. He hoped that this would lead to more cordial relations in the future. Mr. Somani concluded with the observation that the agreement, which was arrived at on the eve of the second five year plan, provided a good augury in the field of labour relations.

Case Against E.I.C.A.

The notice of motion taken out at the Bombay High Court by one of the members of the East India Cotton Association against the resolution declaring an emergency and fixing maximum prices for the January and May contracts in forward trading in cotton was dismissed last week by Mr. Justice Gajjee. The notice was for restraining the Association and its Board of Directors

from enforcing this resolution on the ground that it was not valid, not being in accordance with the by-laws of the Association. The judgment dismissing the notice pointed out from the minutes of the Board of Directors' meeting that even as far back as the middle of December 1955, the Board had felt very much concerned about the situation in the market which, as the Chairman pointed out to the Board, was heading for a crisis owing to the uncontrolled option business. At subsequent meetings, also early in January, the Board had reviewed the situation. The judgment therefore recorded that the contentions of the plaintiff that the Board had not applied its mind before passing the resolution and that the said resolution was passed under threats from the Government were untenable. It also added that the record showed that it was not correct to say that the resolution was passed under threats from the Government. In the circumstances, his Lordship held that the resolution of 6th January was valid. Since then, however, an appeal has been preferred by the same party against the judgment which has been admitted by the Chief Justice and Mr. Justice Dixit. The appeal is expected to come up for hearing early this week and in the meantime, an undertaking has been given by the E.I.C.A. that it will not fix the clearance date till the disposal of the appeal.

Freight Rate Increase

The long dreaded increase of 10 percent in the freight rates between Indian and U.K.—Continental Ports was announced here last week. The decision for the increase in freight rates was originally taken in London by the Karmahom Liners' Conference consisting of 19 shipping lines and subsequently endorsed here at a meeting of the representatives of the liners in Bombay. The reason given for raising the rates is the increase in operating costs, which will be only partly covered by the increase which comes into force from the beginning of March. The 10 percent increase will not, however, operate in the case of chrome, manganese, manganese dioxide and peroxide ores and all bulk oils.

Site for Atomic Reactor

During his visit to Ahmedabad last week, Mr. K. G. Milne, President of the Federation of Electricity Supply Undertakings of India, revealed that Dr. H. J. Bhabha had suggested Ahmedabad as the ideal site for locating India's first atomic power generator. This highly industrialised centre, which is also likely to be the capital of one of the leading industrial States has been selected not only because of the heavy concentration of industries in the city and its surroundings but because of its proximity to the coalfields and the easy availability of water resources.

Gift Foodgrains from U.S.

A consignment of approximately 10,000 tons of wheat forming part of the 20,000-tons foodgrains gift by the Government of the United States for relief distribution to flood victims in India arrived here last week. A similar consignment of rice was expected to reach Madras simultaneously. It may be recalled that the American Ambassador had offered 20,000 tons of foodgrains on behalf of the United States as emergency assistance to this country, which was accepted by the Union Minister for Agriculture on behalf of the Government and people of India. According to the terms of this offer which were agreed upon between the representatives of the Government of India and of the Technical Co-operation Mission to India of the International Co-operation Administration, this gift of foodgrains, landed free at an Indian port, is for the purpose of meeting urgent relief requirements of the people in the areas which were damaged by the recent natural disaster. The relief was granted immediately from the stocks under the control of the Government of India and these consignments will go to replace the stocks so released.

Elections

Elections for the new year of some of the most important office-bearers of two leading business organisations took place last week. Mr. J. C. Burns was elected Chairman of the Millowners' Association, Bombay for 1956. Mr. Burns, who is Chairman of the Board of Directors of the Finlay group of textile mills, was first elected a Member of the Committee of the Millowners' Association in 1939. Besides being Deputy Chairman of the Association last year, Mr. Burns has represented the Association on several occasions since 1950. It may also be mentioned that Mr. Burns was President of the Bombay Chamber of Commerce in 1952. Mr. Murarji J. Vaidya and Mr. Naval H. Tata have been unanimously elected as President and Vice-President of the Indian Merchants' Chamber, Bombay for 1956. Mr. Vaidya is also Chairman of the All-India Manufacturers' Organisation and the Indian Council of Foreign Trade and a director of several industrial concerns in Bombay city. He is a Trustee of the Bombay Port Trust and a member of several committees including the Central Advisory Council of Industries and the Central Silk Board. Mr. Naval H. Tata, the Vice-President, is a director of several companies including Tata Sons Ltd., and Tata Industries Ltd. He is the Chairman of Tata Mills and Managing Director of Tata Oil Mills. Mr. Tata has been President of the Central Organisation for Oil Industry and Trade since its inception in 1952 and President of the Indian Soap and Toiletries Makers' Association. He is a member of the committees of the Federation of Indian Chambers of Commerce and Industry, of the Millowners' Association, Bombay, and also of the Board of the Bombay State Financial Corporation.

London

SIR ANTHONY DENIES RUMOURS
OF RESIGNATION

NO TOUGH ECONOMIC POLICY

YET

(FROM OUR LONDON CORRESPONDENT)

SIR ANTHONY EDEN'S speech at Bradford—perhaps because too much was expected of it, proved something of an anti-climax. He categorically refuted all suggestions that the Government would not serve out its full term or that he would not continue to lead it, but was content, so far as the fight against inflation is concerned, to appeal and exhort rather than to outline the tougher policy which had been anticipated. "At home, this Government is determined to do what is necessary, whatever it may cost in popularity or electoral fortune. We cannot drift to safety. But we can command it, if every citizen will help us in our country's cause." That sounded promising, but the Prime Minister followed it up with a warning that there was no "slick or swift" solution to our difficulties. "The way to hold what we have now is not to be greedy for more." Further improvements could come only from increased production and new resources.

On the Government's contribution to the process Sir Anthony was apt to generalise. A drive against restrictive practices in industry is visualised, through the now completed Monopolies Bill and further talks with trade union and industrial leaders to lessen labour disputes. Further reductions in Government expenditure are anticipated from Mr. Macmillan's review of the estimates and it is intended to "go on cutting," while incentives are under active consideration to make savings more attractive. Supporting the movement to stabilise prices—to which more firms are adhering every day—the Prime Minister stressed that increased profits should be used to reduce prices rather than to raise dividends. Promising priority for the development of nuclear energy, he said there would be a White Paper on technical education next month giving the Government's plans to ensure that the supply of skill keeps pace with the expansion of this new industry. Though Sir Anthony referred to "drastic economies" in Defence, he qualified this by pointing out the high cost of new weapons. He stressed that the object of proposed increases in Service pay (almost double, it is believed, in the lower ranks) was to

build up the Regular element till National Service could be abolished.

No Lack of Advice

For the moment, it would seem, the fight against inflation is to be maintained along the lines already in force, at least until Mr. Macmillan has completed his study of the situation, and that may continue until he is due to present his Budget. That would appear to be the City's reading of events, for the only effect Sir Anthony's speech has had in that quarter has been a further strengthening of sterling on the exchange market. Whatever lack of co-operation in the anti-inflationary battle the Government may complain of, it certainly cannot say that it is lacking in advice, but whether it is good or bad advice is a matter of opinion. So far, the bank chairmen who have issued their annual statements, including Sir Thomas Barlow of the District, Mr. A. W. Tuke of Barclays and Sir Eric Carpenter of Williams Deacon's follow a more or less common trend, pointing out that the Government's measures to deal with inflation have been too little and too late and that it has not yet adopted what they regard as the only real solution—the reduction of Government expenditure. Mr. Tuke also blames "over-full employment"—which Labour misrepresents as a sign that the Conservatives are aiming at ensuring a measure of unemployment—while Sir Thomas and Sir Eric both urge a reduction of taxation.

The Federation of British Industries also thinks that monetary measures will be prevented from taking their full effect by the high level of Government expenditure. In a memorandum to the Chancellor, it says that the proportion of the national product taken in tax is higher than in competing countries and calls for positive measures to bring about an absolute cut in public spending. It is not enough, it says, to arrest public expenditure at its present level and to rely on an increase in production to reduce the relative burden. The memorandum makes a number of other points which, the Federation hopes, the Chancellor will take into account when framing his Budget. Tax on road fuels should be reduced to help industry. Earned income relief should be extended to incomes up to £3,000 to encourage business executives. Purchase tax should be gradually reduced, and British industry should be aided in its efforts to build up overseas subsidiaries by special tax concessions, as recommended by the recent Royal Commission on Taxation.

Cost of Living Steady

The interim index of retail prices, the official measure of the cost of living, did not rise in December, for the first time since August. The figure on 13th December was 154, the same as that on

15th November, compared with the level of 100 on the base date, 17th July 1947, according to the Ministry of Labour and National Service. In December 1950, the level was 116, in December 1953, 130, and December 1954, 145. On the other hand, last year ended with an upward swing in prices of basic materials. According to the Board of Trade statistics, higher prices of rubber, copper, tin ingots, lead, zinc, wool and cotton all contributed to a rise of 1½ percent during December on cost of materials used in the manufacturing industry. The total index figure based on mid-1949, rose to 155.4 in December, compared with 149.1 last January and a low point of 148.9 in April. Prices in the building industries rose by nearly 5 percent to 140 percent of the 1949 level. Rises were sharper in other fields. The index for the mechanical engineering industry rose from 155.8 to 176.1 over the year to December and for the electrical machinery industry from 168.3 to 195.8. A new index now published for the cost of fuel used in the manufacturing industry shows a jump from 136.2 to 147.4 last year.

Another Steel Offer

Against a background of market uncertainty Sir John Morrison's Iron and Steel Holding and Realisation Agency, is to resell to the public the capital of South Dymham Steel and Iron Company. This week eight million Ordinary £1 shares will be offered at 27s. 6d. each for subscription. At the same time the issue of £3 million 5½ percent Debenture Stock, 1976-81, at 97, to yield just under 5½ percent, will be advertised. About £14 million will be raised by the two offers and this money will be used to finance the development programme. Mr. Chetwynd Talbot and his co-directors estimate profits for the year to 1st October next at £2½ million. These would cover the Ordinary dividend, forecast at 8 percent, more than twice. The terms for the Ordinaries are finer than the recent Consett issue. But public demand for steel shares appears undiminished. After this resale and apart from some fixed interest stocks, only the Steel Company of Wales and Richard Thomas and Baldwins will remain among I.S.H.R.A.'s major problems.

B.E.A.'s Good Year

More than 2,150,000 passengers were carried by British European Airways during 1955. Traffic increased by 23 percent and the total revenue amounted to over £20 million. Announcing this, the Corporation said: "After achieving a profit in October, for the first time in any winter month, B.E.A. sustained a loss of £408,000 in November when expenditure rose by 22 percent compared with November, 1954. Most of this increase was due to the cost of providing 24 percent more capacity, but operating costs were inflated by measures taken to keep services flying to and across France during the air traffic control strike." Three days of fog early in January are estimated to have cost B.E.A. £25,000. "The dislocation of its services showed once again the urgent need for an effective fog dispersal system at London Airport," said the Chairman.

Insurance Changes

There have been two developments of interest in the insurance world this week. The first is the decision of the Indian Government to nationalise life insurance. The exact effect of this on British life insurance companies operating out there is difficult to assess, and conjectures vary quite considerably. It is safe to assume, however, that the total Indian premium income of the British life offices is considerably less than £1 million a year. Canadian offices are probably interested to a greater extent. Offices with business in India include the Prudential, Norwich Union, North British & Mercantile, and Sun Life of Canada. Total annual premium income of British and Canadian offices there is about £6,000,000. The second development is less controversial. It is the announcement by the Institute of London Underwriters of a general reduction of 25 percent from 1s. percent to 9d. percent in most cargo war risk rates. Certain areas, such as parts of the Middle East and the China coast, are still excluded. Importers and exporters will benefit from the change, which has come through favourable results. Savings will run into hundreds of thousands of pounds. Cargo business has been competitive for some time, and a normal market reaction now would be for marine cargo rates to harden. The war risk rates are fixed by the Cargo War Risk Rating Committee composed of Lloyd's and company underwriters.

Brevities

Trading profits of Jute Industries fell from £1,331,361 to £1,172,078 for the year ended 30th September last, but with tax down from £552,854 to £489,279, the group's net profit is only £75,708 lower at £462,799. The dividend on the £1,050,000 Ordinary capital is maintained at 20 percent by payment of a 15 percent final.

CORRECTION

In our London Letter appearing on page 87 of the issue of Capital dated 19th January, it was incorrectly stated that Alex Lawrie, the East India Merchant house, had divested itself of its controlling interest in its Calcutta off-shoot, Balmer Lawrie. It is also wrongly believed in some quarters that the Indo-Burma Petroleum Company Limited have been given the option to purchase the balance of Alex Lawrie's holding in five years time. No such option exists and the only condition of sale is the not unusual one in a transaction of this kind which provides that neither party will sell either the whole or part of their holding in the Company without giving the other the option to purchase.

Madras

REACTIONS TO STATE CONTROL
OF LIFE INSURANCEPLANS FOR INDUSTRY IN
SOUTH INDIA

(FROM OUR MADRAS CORRESPONDENT)

"ONCE again, as in the case of the nationalisation of the Imperial Bank, the Government of India has presented the country with a fait accompli in attempting to carry out a sweeping measure of nationalisation—that of life insurance." This is the opening sentence in *The Hindu's* comments on the Life Insurance (Emergency Provisions) Ordinance. The paper continues: "The Finance Minister, in his broadcast, has taken public approval for the measure for granted and has described it as 'another milestone on the road the country has chosen in order to reach its goal of a socialistic pattern of society.' The precise implications of the 'socialistic pattern'—which, by the way, is the objective of the Congress and not certainly that of the country, unless by a mystical process the two are treated as identical—have never been clear and it would be placing a great strain on public credulity to make them accept every measure of nationalisation as a contribution to the building up of the 'socialistic pattern.' Mr. Deshmukh claims that 'there has been a very general demand for the nationalisation of the entire insurance industry', but judging from the public expression of this demand it would seem that the Government has had some esoteric sources for discovering it. The truth is that some of the Government's advisers have looked upon the insurance companies' funds as an easy and readily available source of funds for their development programmes. While admitting this aim, Mr. Deshmukh has sought to assure private industry that under the new dispensation there will be no reduction in the quantum of insurance funds going into investment in joint stock companies' shares. If this is the case, where does the Government expect to find increased funds from life insurance for public investment apart from what in any case would have been available even without nationalisation? Mr. Deshmukh looks forward to mobilising rural savings through nationalisation. Does this mean that the rural masses have been all these years waiting for a monolithic nationalised insurance corporation to bring them the benefits of insurance? If really a State agency could bring a new spirit into life insurance, the Government could have demonstrated it by starting a new venture of its own instead of laying its hands on the existing companies. Parliament would do well to consider whether it would not be better to permit the companies to continue with greater voice for policyholders' representatives on the directorate, instead of eliminating them altogether and launching on a nationalised venture, the future of which is fraught with uncertainty. Nor should the Government be indifferent to the psychological effects of such sudden decisions regarding nationalisation on people interested in private industry and investment."

Insurance Companies' Comments

The Ordinance has come as a surprise to insurance, financial and general business circles in Madras. Mr. N. Rama Rao, President of the Insurance Association of South India fears that the Government's expectation of increased funds for its development programmes may not be realised and that one certain result will be a shrinking in the volume of insurance business. While the General Manager of the Prithvi Insurance Company thinks that the Ordinance is a step in the right direction, Mr. H. D. Rajah, M.P. of the Vanguard Insurance Company criticises it in no uncertain terms. "It is on a grand pattern of universal distribution of poverty based on the so-called socialistic pattern of Society," he says. Referring to the misapplication of the funds of the Bharat Insurance Company, Mr. Rajah says that it was only due to lack of vigilance on the part of the authorities. "I have no doubt that nationalisation of insurance is the death-knell in insurance business itself in this country, for the bureaucrat will look only for his salary at the end of every month and will not worry about the development of the business," concludes Mr. Rajah. Representatives of eight insurance employees' unions have, on the other hand, welcomed the Ordinance and urged that "the big monopoly groups now dominating the insurance field must be strictly excluded from the nationalised set-up." Mr. T. T. Krishnamachari, Union Minister for Commerce and Industry, who has been here, has justified nationalisation on the ground that the Government could not devise any legislative hedge which could not be jumped over by those in the insurance field who put public funds to "misapplication."

Industrial Policy in the Second Plan

Addressing the Southern India Chamber of Commerce on the occasion of the opening of its new building, Mr. T. T. Krishnamachari broadly outlined the future industrial policy in the second five year plan. The Government would take on itself the responsibility of developing mainly key industries. Where they had a few units of private enterprise functioning in the sphere of key industries, normally the Government would see, as far as possible, that they continued to function without being asked to fit into the Procrustean bed that might be devised for developing the public sector. They, however, had to go a little further, for the public sector could not restrict itself to one field. While they allowed existing units to operate, it

should also be open to the Government to enter into a field where private enterprise operated, and to operate it in such a manner that existing institutions could function effectively.

Industries for South India

Mr. Krishnamachari also referred to the complaint of the comparative backwardness of industry in Madras State and pointed out that there were several States in India which were even more backward. The country itself was backward industrially, though they had evidence of progress in isolated areas like Bombay. The Government of India and the State Government were committed irrevocably to the Nevelly lignite project which would cost up to Rs. 60 crores. The Commerce Minister continued that it was his intention to persuade the Government of India to undertake a scheme for putting up an aluminium plant somewhere in South India. The Government was also in communication with the East German authorities to help them to find out whether a low-shaft furnace would work in Salem, utilising its iron ores. He was also sure that the Government would look favourably upon any attempts to put up sugar factories in this part of the country, because the cost of production here would be so low that even if they produced sugar in excess of their demand, they would be able to find export markets. The Minister finally suggested to the Chamber that it might set up an economic and industrial research institute which would study the problems relating to medium-scale industries and bring them to the notice of the Central and State Governments.

Tobacco for Export

The Tobacco Export Promotion Council was inaugurated by the Union Minister for Commerce here last week. He said that East European countries were opening their gates, and there was no longer an iron curtain or even a silk curtain. They had come to an agreement with Russia for getting a million tons of steel, and so they were exploring the possibilities of what Russia would take. The Minister hoped that tobacco might form a part of the long list of goods which they might export to Russia. Referring to representations for a reduction in excise duty on tobacco, the Minister said that a higher excise duty on tobacco and liquor rarely resulted in the operation of the law of diminishing returns. That had been the experience of the world. The Government was only just beginning to tax tobacco on a rather liberal scale and they would not reach the limits of taxation for some years to come. The Chairman of the Export Council said that tobacco was the ninth big-

gest earner of foreign exchange for India, producing about 500 million lbs. every year and exporting about 90 million lbs. valued at Rs. 13 crores. Virginia tobacco produced in Andhra State formed the bulk of tobacco exports from India.

Fair Rent Bill Controversy

The Cultivating Tenants (Payment of Fair Rent) Bill, recently published by the Madras Government, has roused a big controversy here. The Bill seeks to fix fair rent at a uniform rate of 40 percent of normal gross produce for wet and rain-fed dry lands and at 30 percent to 35 percent for dry lands irrigated by wells. As against the proposed rates, the prevailing rents or owner-shares, depending on the yielding capacities of lands (which in Madras yield far better than in most North Indian States), are—60 percent to 80 percent of gross produce in regard to one category of wet lands of high fertility; 50 percent to 60 percent in respect of another category of wet lands; 40 percent to 50 percent on wet lands requiring supplemental baling of water from wells; 33½ percent to 40 percent on dry lands irrigated by private wells; and 50 percent on unirrigated (rain-fed) dry lands.

In its statement of objects and reasons the Fair Rent Bill says that fixation of fair rent is intended to ensure social justice in pursuance of the directive principles of State policy. That greater social injustice than justice will be caused by the Bill may be inferred from the following facts. Although the tenant-cultivated area covers now just two million acres out of 20 million acres, it may be recalled that in 1943 it covered not less than eight million acres; the standing threat, since the Kuznarappa Committee reported in 1949, of a drastic reduction in customary rents and owner-shares has already had the calamitous effects of dispossessing just under a million tillers of the soil belonging mostly to the traditional cultivating classes like the Harijans. This, in turn, has swelled the ranks of the landless labour force for which the time-honoured outlets in emigration and war-time army are now practically barred. As most of the tenants on the truncated tenant-sector are cultivating mostly dry lands, they will have little or no relief under the Bill; on the other hand, such small and medium owners of wet lands as have not resumed or cannot resume them for cultivation by casual labour will stand to lose up to 50 percent of their accustomed incomes. The former Convener of the T.N.C.C. Land Reforms Committee has, therefore, suggested that customary rents or owner-shares on all kinds of lands could be reduced by a uniform 25 percent so that all the tenants could have the benefit of a uniform reduction.

Get Extra Protection Against
Blowouts and Punctures
at No Extra Cost!WITH
Firestone
TUBELESS
TYRES

With no tube to pinch or blow-out, this tyre gives protection beyond compare. If a nail should penetrate this tyre, the Safety-liner hugs it and prevents immediate loss of air, enabling you to continue driving. Think what these advantages mean in increased safety, extra protection! Built with Safety-Tensioned Gum-Dipped cords for greater strength and longer mileage, they give you full value for every anna of your tyre money. Yet this tyre, with all its features, costs no more than an ordinary tyre and tube. See your Firestone dealer—instant on Firestone Tubeless!

These tyres are so good that many Automobile Manufacturers are now fitting them as standard safety equipment on new car models.

NEW, SAFETY-TENSIONED, SUPER GUM-DIPPED CORD BODY AND TUBELESS CONSTRUCTION GIVES STRONGER BODY—MORE PROTECTION AGAINST BLOW-OUTS AND PUNCTURES.

P187-43

The Department of Scientific and Industrial Research is to carry out a study of industrial design. The first step will be to collect data with regard to the various types of factories now in existence and to compare their respective advantages and disadvantages. Funds are being derived for this purpose from various industrial undertakings and also from local authorities. It is not expected that the final report will be ready for two years. It is difficult to see at the moment that much more will emerge than recommendations that standardisation be more widely practised, since most of the matters to which the Department refers in its initial statement have been already discussed. For example, the great variation in factory roofs, both in materials and in types, which is to be a principal subject of study, was discussed at length at the Textile Institute Conference in May last. It was then observed that the basis of long span in building is still the steel lattice girder, which has been the normal construction for half a century although there has hitherto been a most ingenious use of concrete, including in particular the new and elegant conception of a thin curved shell spanning considerable distances in its length. The main changes in roofing construction have been the use of a wider range of light materials; asbestos in many forms, wood wool slabs and light metal decking as well as lighter concrete slabs than were formerly available. Standardisation and pre-fabrication, as it would seem that the Department of Scientific and Industrial Research will advocate, presumably with suggested designs, will certainly mean that factory buildings are erected more cheaply and more quickly. How this can be carried out while not imposing too great a uniformity upon the industrial areas, and while retaining freedom to achieve architectural distinction will be the most difficult question to answer in details.

Thirty-one airlines and other users throughout the world have ordered, between them, 274 Vickers Viscount turbo-prop airlines, 88 of which have been delivered. The latest order—for four Viscounts—was placed recently by the new Air Austria. The value of the 274 aircraft and spares is about £90 million and of this orders from overseas countries account for about £64 million. Recently, the export total was increased by transfer when a Cuban airline took over the order for three Viscounts placed originally by Airwork Ltd. of the U.K., whose hopes of establishing new routes on which Viscounts could operate could not be realised. A report states that the Cuban company paid Airwork \$1 million for their option on the Viscount. The United States is so far the largest overseas customer, with a total of 77 orders placed.

GOOD GENERAL DEMAND IN TEA EXPORT AUCTION

IRREGULAR TREND IN DUSTS

AT Sale No. 32, held on 24th and 25th January, offerings in the Export auction consisted of 58,800 packages, for which there was a good general demand. Medium Assam Orange Fannings were again the strongest feature and often advanced by as much as 2 to 3 annas a lb. The best C.T.C. teas were from 1 to 1½ annas dearer, while the more ordinary sorts of this description were slightly dearer. Commonest kinds were about 1 to 2 annas dearer, while Medium and Clean Common Broken were fully firm and sometimes dearer. Whole Leaf grades met with fair demand but at lower rates than in the previous week.

Quotations

	1956	1955
	Rs.	Rs.
Clean Black Pekoe	2 0 to 2 1 0	3 12 0
Platg B.P.	1 8 6	3 11 6 to 3 12 0
Medium Assam B.P.	1 10 0 to 1 11 0	3 13 6 to 3 14 0
Best CTC Assam B.P.	2 3 0 to 2 4 0	4 2 0

At the Internal Sale, offerings of Dusts consisted of 20,200 packages, for which there was a good general demand. Although prices were irregular, the market was firm at about last rates. The strongest feature were again the black leaf types for the Middle East while the very best CTCs received good support.

Quotations

	1956	1955
	Rs.	Rs.
Medium Donors Dust	1 7 6 to 1 8 0	2 10 0 to 2 10 6
Medium Assam Grainy Dust	1 8 6 to 1 9 6	2 11 0 to 2 11 6
Best Assam CTC Dust	2 4 0 to 2 6 0	2 15 6 to 3 0 0

The Leaf offerings consisted of 1,800 packages, for which there was a fairly good demand, with prices an irregular 1 to 2 annas dearer.

COAL FIXTURES FEATURE FREIGHT MARKET

IT has been reported that tonnage has been fixed for three years' consecutive voyages for coals from America to the Continent at 50s a ton starting at the end of this year. Single voyage trips from the U.S. to the Continent remain unchanged at 71s. Other trades remain quiet and the main enquiry for grain is from St. John-Halfax to the Continent but no fixtures have been concluded. Four vessels have been fixed for scrap

from the U.S. to the Continent on a lump-sum basis and a cargo of sugar from Cuba to East Mediterranean Port brought \$(US)20 a ton with free discharge. The Indian ore trade remains quiet although there was a good demand for tonnage from East Coast ports to Japan, Poland and Adriatic. The River Plate and North Pacific trades were also quiet with no fixtures reported. Time Charter enquiries are of a miscellaneous nature. A British vessel of 4,670 d.w.t. was fixed for two seasons' trading in Canada with delivery April-May and re-delivery November in both 1956 and 1957. A 13 knot Motor vessel was fixed for 12 to 15 months' trading at 39s 6d.

SUGAR MARKET

During the week ended 25th January, sugar sales in the Calcutta market averaged 4,000 bags daily. Arrivals a day were 2,500 bags and stocks totalled 80,000 bags. Rates for ready sugar ex-Kantapur delivery were Rs. 30-11 for ordinary grain and Rs. 33 for big grain. The market was steady.

SHELLAC MARKET

During the week ended 24th January, the range of quotations in the market was as follows:

Pure Buttonlac	Rs. 160 value, 162 buyers, 158 value.
Lemon No. 1 Shellac	Rs. 161 value, 160-8 buyers, 156 done and buyers.
Lemon No. 2 Shellac	Rs. 155 value, 153-8 buyers, 151-8 value.
F. O. Std. 1 Shellac	Rs. 147 done, 148 buyers, 145 done.
Pure TN Shellac	Rs. 142, 143-8, 140 basis done and buyers.
4%, I.T.N. Shellac	Rs. 132 to 130 buyers.
No. 1 Kusmi Seedlac	Rs. 151-8 value, 151-8, 145 buyers.
No. 2 Kusmi Seedlac	Rs. 143 done, 144-8, 140 buyers.
Fine Bysaky Seedlac (Manbhum)	Rs. 140 value, 142-8, 138-8 buyers.
Fine Bysaky Seedlac (C.P.)	Rs. 135 value, 139, 132-8 buyers.
Ordinary Bysaky Seedlac (C.P.) Under 5%	Rs. 119-8 value, 124, 121 done.
Ordinary Bysaky Seedlac (C.P.)	Rs. 114 value, 117-8, 116 buyers.
Kireelac	Rs. 65, 65-8 done, 65 buyers.

Shipments during January until the 20th were 15,006 packages, comprising shellac 9,434 packages, seedlac 3,163 packages, buttonlac 225 packages, others 2,184 packages.

HIDES AND SKINS

The market showed little change. Stocks were higher than in the previous week.

Bazaar Sales

(Between 17th and 23rd January, 1956)
Cowhides: Wet salted (Ord) 15,600 pcs. on the basis of Rs. 8-12 to Rs. 9; Wet salted (slaughtered) 17,500 pcs. on the basis of Rs. 13-8 to Rs. 22.
Goatskins: Wet salted (Daissee, Killed) 63,200 pcs. on the basis of Rs. 260 to Rs. 285; Rs. 325 to Rs. 365 and Rs. 350 to Rs. 400; Assam-Dinajpur 16,800 pcs. on the basis of Rs. 275 to Rs. 345; Purneah-Kissenganj 10,200 pcs. on the basis of Rs. 315 to Rs. 340; Pakur-Patna 6,950 pcs. on the basis of Rs. 280 to Rs. 290; Muzafferpore 5,100 pcs. on the basis of Rs. 337-8.

Bazaar Stocks

(23rd January, 1956)
Cowhides: Wet salted 1,89,000 pcs.
Goatskins: Wet salted (Daissee, Killed) 23,000 pcs.; Assam-Dinajpur-Murshidabad 37,000 pcs.; Muzafferpore - Patna - Pakur - Purneah - Kissenganj 3,62,000 pcs.

CHALLENGE TO HELICOPTER

The makers of the *Twin Pioneer*—Scottish Aviation—claim that this transport offers real competition to the large helicopter. At the Society's flying display last September, the aircraft demonstrated its quite startling take-off and landing qualities. At a laden weight of 13,500 lbs. it can take-off from a concrete runway in a mere 85 yards, and land in about 60 yards. While the *Twin Pioneer* can challenge the transport helicopter in many ways, the helicopter does not yet challenge in speed the *Twin Pioneer*, which can cruise at 150 m.p.h. for 500 miles with 16 passengers. Moreover, the operating costs of a rotating wing aircraft are likely to be higher than 1½d a passenger-mile—the figure quoted for the fixed-wing aircraft.

Not only will this aeroplane have many uses in those parts of the world where landing strips are few and far between and of limited size, but also over some of the more competitive European inter-city routes. For example, it has been estimated that, using a strip the size of a football field in a central London park, the time to Paris could be cut by 1½ hours as compared with present services. Consideration is at present being given to at least one plan for the creation of such a strip. Plans are well in hand for production of the *Twin Pioneer*. Reports indicate widespread interest from many countries, and an initial batch of 15 aircraft has been laid down, while an even larger batch is in hand. At present, factory space exists for the production of up to ten aircraft a week.

COMPANY AND PUBLIC NOTICES

SONAI RIVER TEA COMPANY, LTD.

SHAREHOLDERS of the above Company are advised that an offer has been made by Mr. R. G. Saharia of 35, Chittaranjan Avenue, Calcutta supported by a majority shareholding to purchase all or any of the shares in the Company at a price of Rs. 101/- including brokerage for every Preference Share and Rs. 18/8/- including brokerage for every Ordinary Share on condition that we the present Managing Agents of the Company resign our office. We have, after careful consideration, decided to accept this offer.

The offer to all Shareholders will remain open until the 3rd March, 1956. Shareholders who wish to accept the offer should send us by that date their Share Certificates together with transfer deeds properly signed by the transferor and witnessed so that the proceeds may be realized and remitted to them.

By Order of the Directors,
 DAVENPORT & CO., LTD.,
 Managing Agents.

Calcutta, 24th January, 1956.

STATE BANK OF INDIA
NOTICE

THE Annual General Meeting of the Shareholders of the State Bank of India will be held at the Local Head Office of the Bank, Apollo Street, Bombay, on Wednesday, the 29th February, 1956, at 4-30 P.M. (Standard Time) for the transaction of the following business:—

To receive the Central Board's Report, the Balance Sheet and Profit and Loss Account of the Bank made up to the 31st December, 1955 and the Auditors' Report on the Balance Sheet and Accounts.

JOHN MATTHAI,
 Chairman.

Bombay, 23rd January, 1956.

STATE BANK OF INDIA

THE following is a note of the net profits of the State Bank of India for the half-year ended the 31st December, 1955 and their distribution:—

Net profits for the half-year	Rs. 68,59,400
Amount transferred from the Imperial Bank of India	Rs. 33,56,400
	Rs. 1,02,15,800
The Directors have declared a dividend of Rs. 8/- per share, absorbing	Rs. 45,00,000
Transferred to Pension Funds	Rs. 2,78,500
Bonus to Staff	Rs. 20,00,000
Carried Forward	Rs. 34,37,300
	Rs. 1,02,15,800

THE ATTOCK OIL COMPANY LIMITED
(Incorporated in England)

AT a Board Meeting held in London on 19th January, 1956, the Directors declared an Interim Dividend for 1955 at the rate of 7d (seven pence) free of Income Tax per £1 unit of Stock payable on 2nd March, 1956 to stockholders on the Registers at 31st January, 1956.

BOOKING OF
'EXCEPTED ARTICLES'
and the Railways' Responsibility

The Railway shall not accept responsibility for the loss, destruction or deterioration of any package containing articles which are enumerated as "Excepted Articles" in the Second Schedule under Section 75 of the Indian Railways Act, when the total value of such articles contained in the package exceeds Rs. 300/-, unless the contents of the package and their value are declared and the authorised percentage charge (compensation for increased risk) paid at the time the package is booked for carriage by the Railway.

Where the value of such articles in any parcel or package exceeds Rs. 300/-, the sender or his authorised agent must record in the Forwarding Note whether he engages to pay the percentage charge prescribed. Should he elect not to pay prescribed percentage charge on value, the package will be accepted for carriage but the Railway shall not be responsible for the loss, destruction or deterioration of the same. The percentage charge on value must in all cases be pre-paid.

Commodities like Watches, Clocks and Timepieces of any description, Maps, Art Pottery and all articles made of Glass, China or Marble, Silk, Shawls, Lace and Furs, Radio (Wireless) apparatus, Photographic apparatus, Statuary, Scents are a few examples of the "Excepted Articles."

★ Rules and conditions regarding the booking of "Excepted Articles" and the full list of these articles appear in the Goods and Coaching Tariff published by the Indian Railways Conference Association and in placards displayed at stations. Detailed information may also be obtained from the Station Masters.

BANKS

H indicates that Share capital is half paid. O, C and Dd indicate Ordinary Contributory and Deferred Shares respectively. P next to the name of the company indicates that the company also has Preference Shares. Figures in "accounts closed" column indicate the months of the calendar year in which accounts are closed. For Managing Agents refer to the Key (last page) under the numbers indicated.

Year Issue	NAMES	Amount issued in 000 Rs.	Rate per cent	Paid up per Share Rs.	Market Quotations		Year of issue	NAMES	Amount issued in 000 Rs.	Rate per cent	Paid up per Share Rs.	Market Quotations	
					25-1-56. Rs.	A year ago Rs.						25-1-56. Rs.	A year ago Rs.

COAL COMPANIES

F. and Dd. indicate Ordinary Preferred Ordinary. Founders' and Deferred shares respectively P. next to the name of the company indicates that the company also has Preference Shares. Figures in "accounts closed" column indicate the months of the calendar year in which accounts are closed. For Managing Agents refer to the Key (last page) under the numbers indicated.

Vol. CXXXVI No. 3394

THE PREDICAMENT OF THE STOCK MARKETS

RESPONSIBILITY OF THE GOVERNMENT FOR FUTURE PROSPERITY

WITH only two months to go to the beginning of the second plan, the condition of the economy's most important institution, the stock exchanges, is causing anxiety. Falls of about Rs. 9 and Rs. 35 in the prices of Indian Iron and Tata Ordinary respectively are not to be dismissed as merely seasonal or simply due to speculation. They also represent genuine doubts in the minds of those people and institutions whose resources are desperately needed for financing the expansion planned for private industry. The fall in share prices and transactions is especially discouraging after last year's buoyancy. Some technical adjustments were of course to be expected. Heavy speculation had taken place up to the year's ending and the markets were over-bought. Further, the banking situation aggravated the heavy technical position. But a good deal of the uncertainty of the past three months, culminating in acute settlement difficulties in Bombay and especially Calcutta, is in fact due to fears evoked by the Government's doings. It is normal and proper that the markets should react to official statements and actions. It is also true that Ministers should be able to go about their business without having to pay too much heed to what the market will think. But recent events show that reactions are becoming so frequent and violent that the market is having difficulty in carrying on normal working and that Ministerial statements are being made without any regard for whether the effect it is known they must have, is justified or not.

Since the nationalisation of life insurance it is more than ever true that the Government has the future of the market completely in its hands. The first step towards matching the increased power with appropriate responsibility is to accept this fact. It is now true not only of long-term considerations, but increasingly of short-term considerations as well. This has not yet been properly appreciated by any except the more responsible Ministers. The market often appears to be regarded by the doctrinaire as a mere drag on economic expansion rather than its most important prop. Such a view could not survive an unbiased assessment of the facts. If the market is to play its part in raising resources for the second plan, the economy cannot afford confusion of this kind. An "assured place" for private industry presupposes a healthy stock market. The alternative is the extinction of the country's already inadequate personal investment habits, and the subsequent disappearance of private industry. But at a time when their importance as an instrument of planning is growing, the stock markets are being heaped with abuse, condemned on incorrect evidence, and disrupted regardless of the consequences. A firm decision has not yet apparently been made whether in fact private enterprise has a place in the future scheme of things. If it is to have a place, there will be no choice but to let the stock markets function as they should, subject of course to reasonable regulation. If it is not, there is nothing more to say. But to expect private industry to prosper without healthy stock markets is to invite bitter disappointment.

The markets have two important prerequisites for their proper functioning. The first is reasonable freedom from unnecessary shocks in the short period. The second is confidence in the long-term outlook. Both these have been seriously damaged in the last three months. The number and frequency of startling utterances need not be recounted. The recent meeting of the National Development Council produced a sizable crop of them. The coming Amritsar meeting of the All-India Congress Committee will account for more. Most are easily recognised as cheap bids for personal popularity from politicians who care little and know less about the working of an economy. But some come from distinguished members of the Government whose words must always command

attention. The impression created is that what little respect for private enterprise formerly existed, is fast dying and that its prospects under the second plan, far from being "assured", are extremely doubtful. To these uncertainties must be added a number recently created by rumours of taxation prospects. A limit on income and a tax on total wealth will obviously strike at the fundamental economic facts on which personal saving is based. A tax on capital gains can be expected to slow, if not halt altogether, the change from personal hoarding to the purchase of equities. The reality of such taxes will certainly damage the markets; loose talk about them is contributing handsomely and unnecessarily to the present stagnation. Investors' ideas about long-term prospects are now concerned with future nationalisation and the functioning of the market under State-controlled life insurance. The words of the Prime Minister have led investors to believe that the take-over of banking may not now be far off. The flimsy arguments brought forward to justify nationalising life companies suggest that the Government will not be deterred on economic grounds alone. These events foretell a period of difficulty and uncertainty for private industry. For the stock markets, they may mean conditions under which it will be impossible to operate properly at all.

The danger of the present situation is not only that investors will lose money and the private sector their support. The wrong conclusions may be drawn by the Government and eventually the blame for what has happened, any attempt to do so will only serve to obscure the truth. Advantage has been taken of the situation and the type of violent movement which the markets have suffered in the last three months cannot fail to attract some speculative elements. It is futile to maintain that speculation can be stopped altogether, but certainly there is a way of keeping it to a minimum and that is to maintain a healthy market. The temptation may now be to seek a remedy for present difficulties through direct Government interference, such as that taken in the Bombay cotton futures market. Proof of the damage this would do is evident from the present

PAKISTAN'S DOUBLE-EDGED JUTE POLICIES

THE general tone of Mr. Maqbul Ilaahi's presidential address to the annual meeting of the Pakistan Jute Association on Monday was one of satisfaction, some of it rather smug. There will be fair agreement on the point that, from East Pakistan's point of view, official and trade policies governing the biggest export

ed at previous conferences. The financial resources of West Bengal are limited for this purpose. Therefore, deserves much-needed relief from others which happily now are coming. If the proposed Purva Pradesh comes into being, the task of rehabilitating East Bengal refugees might further be facilitated.

A Private Investors' Corporation.—A recently published statement by Mr. Robert L. Garner, vice-president of the I.B.R.D., outlining the proposed activities of the International Finance Corporation, leaves no room for doubt as to its purpose. The Corporation, although affiliated to the World Bank, is basically a financing agency required to limit its assistance to investment in private enterprise. It has been set up specifically for the stimulation of the flow of private capital, both domestic and foreign into productive investment in under-developed countries. Its reasons for so doing are sensibly based on the previous experience of the Bank itself, "which has made very clear that in most countries the pace of economic growth depends in large measure upon the degree of private initiative and the extent of private investment....and in the field of production, particularly of industrial production, many of the essential ingredients for effective performance can usually best be obtained and sometimes can only be obtained from private enterprise." The salient characteristics of private enterprise are described by Mr. Garner as entrepreneurship—venture capital—technology and research facilities and management—"that compound of institutional continuity and experience, on the one hand, and of personal qualifications on the other, which alone can successfully transmute machines, labour and capital into a dynamic growing concern producing at a competitive cost goods of a quality that the market will accept." The IFC hopes in time to contribute to a constructive change of attitude to the whole problem of private capital movements, for it has become obvious over the last few years that the flow of private capital and especially foreign private capital, so essential to the development plans of young countries, has materially lessened. Investors have turned shy, frightened off by political tensions; by fears of nationalisation or the vagaries of changing ide-

ologies. Investment in private enterprise involves risk, a risk that varies with the investment climate, with the political and economic stability of the country and the returns that can be expected on that investment. The decision to participate in any enterprise will be taken only after a close scrutiny of the general climate for that enterprise. The Corporation will do so, says Mr. Garner, "as a matter of principle since it can scarcely succeed in promoting a productive investment of private capital in an environment that is hostile to such an investment. And it will do so as a matter of necessity too since it can only invest in association with private interests and the climate must therefore be such that private capital both foreign and domestic will find it congenial."

CORRESPONDENCE

TRANSPORT FACILITIES FOR RAW JUTE

(TO THE EDITOR OF "CAPITAL")

Sir,

The attention of the Eastern Railway Administration was drawn to the article under the caption "Shortage of Transport for Raw Jute" which appeared in your issue of 8th December, 1955.

It is not correct to say, so far as the Eastern Railway is concerned, that the allotment of wagons for jute has been low in recent times. This will be evident if the figures for raw jute loading for the months of September, October and November and the first ten days of December, 1955 are compared with those for the corresponding period of 1954, as given below:

	1954	1955	
September	536	825	+ 289
October	1670	2540	+ 870
November	2558	3464	+ 906
December (up to 10th)	717	826	+ 109
Total	5481	7655	+ 2174

It is true that there was a sudden spurt of registration of 440 wagons on one day (21st October, 1955) at Nimtita and Rajmahal. The wagons could not be loaded immediately due to the limited

loading capacity of those stations. Another factor contributing to the difficulty in clearing the registrations at those stations was the heavy accumulation of jute at Cossipore Road largely due to slow removal by merchants. The accumulation and slow removal led to the imposition of restrictions on the booking of jute to Sahabazpur, Rutherford, Cossipore and Baghbazar from 11th November, 1955 to 19th November, 1955 and to Cossipore Road from 11th November, 1955 to 14th November, 1955. In spite of the slow removal and the heavy congestion the number of jute wagons loaded during November was 906 more than that loaded during the corresponding period of last year.

You have referred to the pre-Puja congestion in the goods sheds in the Calcutta area following the cloth merchants' failure to take delivery of their consignments. The details of that unhappy episode and the efforts of the railways to overcome a situation, for which they were not to blame, are too well known to be recounted. May I point out, however, that it is not a fact that jute consignments never caused a congestion similar to that created by the accumulation of cotton piecegoods.

In the absence of specific details it is not possible to verify the correctness of the allegation made in the article that "one railway upcountry stops booking and gives as the reason that this has been done at the request of the authorities in Calcutta while the authorities in Calcutta deny this." Restrictions imposed by the receiving railway are not always the only cause for booking being stopped. The booking may be stopped to meet interchange obligations due to a shortage of stock. Besides, the booking railway may be obliged to stop booking for other internal reasons. It is not a fact either that through trains are converted into virtually work and shunting trains for want of adequate shunting power. The Sealdah Division, which is primarily concerned with jute traffic, has its full complement of engines to do its daily shunting and there is no necessity, except in very special circumstances, to utilise through trains for shunting work to be done at intermediate points.

Yours etc.,

P. GUHA THAKURTA,
PUBLIC RELATIONS OFFICER,
Calcutta Railways.

Calcutta, 6th January, 1956.

A DITCHER'S DIARY

set a fashion in diplomatic tactics for which a suitable name might be "diplomacy by public relations". It is odd that a country where this science was born, and which is still its greatest commercial exponent, should be so reluctant to turn it to advantage in the international field. Perhaps if Mr. Dulles were to waste less time explaining the fundamental and inalienable truths of diplomacy to people who cannot hope to understand them and to learn instead something about the gentle art of putting one's self always in the right, United States foreign policy, which remains a monument to honesty and frankness, would gain some much-deserved popularity as well.

I was under the impression that so far as Shakespeare was concerned the rob-Peter-to-pay-Paul business had long since lost its popularity. But I seem unfortunately to have been wrong. Some months ago, an American—I forget his name—created a bit of a to-do by trying to revive the discredited theory that Marlowe had written all the Shakespeares. I believe he is at present begging permission to break open Sir Thomas Walsingham's grave in search of evidence to prove it. Now another literary filibuster, a Russian-become-American, dangles before the world an even crazier theory. In his newly-published book entitled *Shakespeare Unmasked*, Pierre S. Porokhovnikov seeks to father upon Roger Manners, Earl of Rutland, all that Shakespeare is immortal for, although the Manners documents he is quoting only seem to prove that the poor fellow knew little English, less Latin and no Greek at all. My own Shakespeareana, I am afraid, is sadly in need of replenishment. Ever since my college days I have not concerned myself overmuch with researches on the dramatist's life. For me "the play's the thing." But even so, I remember that the propounders of the Baconian theory came as much a cropper as those who tried to make out the Earl of Oxford as the "online begetter" of the Shakespeares. I do not see why it is not enough to know the established facts concerning the dramatist; that early in life he was caught deer-stealing on the estate of Sir Thomas Lucy, which fact sent him careering for London and immortality; that, as the city-bred fop Oscar Wilde was so fond of pointing out, he had never penned a line before arriving in London and never another after leaving it; and that he had three children and a wife, Anne Hathaway, eight years his senior. The epitaph that Shakespeare left for himself "Cursed be they who move my bones", etc. should have been sufficiently discouraging for literary body-snatchers. But the potency of those ominous words has apparently been effectively reduced by the fact that their authorship is in doubt.

There is no doubt that concepts of speed are fast escaping the grasp of the man in the street. Stephenson's rocket was an object to be marvelled at when it careered along at 15 m.p.h. Now super-sonic bangs are nothing more than a nuisance for which air-forces can be sued and we are being told we shall soon see a man-made moon circling the earth at 18,000 miles an hour. Speed is just something which contributes to making modern man more blasé than he would be if he only had such commonplaces as radar, television and antibiotics to be amazed about. It is, therefore, all the more surprising such a stir should be caused by the news that we shall soon have an express train service between Howrah and Delhi averaging 65 m.p.h. There is, of course, a cap-

reason and it is not that here is satisfaction on the Jehu in us. For the man in the street—or more correctly in the railway carriage—this is going to mean so many hours less of acute discomfort. I feel with him; with due respect to the genuine efforts the railways are making, my own experience of long-distance train journeys in India has left me a firm devotee of air travel. What might surprise me would be the same interest evoked by an announcement that the average speed was in future to be only 30 m.p.h. When the railways can arouse enthusiasm by doing that, I shall congratulate them on really being able to satisfy their passengers. They could make a useful start with their cuisine. I know that they do their best and I am certainly no gourmet. But, with even average gastronomic indifference, a depot at Bard railway fare, for a period of 19 hours, cement from quarried to make the journey from Calcutta to Ranchi, twice that length. I am told that the airlines companies are now measuring in cock-tails per hour and that, as a result, they are contriving to make distances look shorter and shorter. That is too much to recommend in Prohibitionist India. But I can guarantee the railways that the surest way to knock a few hours off the Delhi-Howrah run is to ensure not only that the "outer passenger" is comfortable, but also that the "inner" one is more than normally well fed.

The daughters of the Nile are, I see, celebrating their new-found franchise with processions and public speeches in honour of their benefactor, Colonel Nasser. This is, perhaps, as it should be, and no doubt Egypt's Prime Minister will eventually, like his predecessors, have good use for a little public esteem. But I have my doubts about what these women will do with their freedom. Send more and more representatives of their own sex to the legislature? Call for parity of wages with male workers? Urge increased maternity benefits? Throw open to themselves the professions and the services? They will probably do all these and more besides—in the beginning. And in the beginning only. Afterwards, I feel sure, they will tire of this suffragette business as their sisters elsewhere seem to have tired. It has happened in Britain and, I believe, is happening here. In a recent issue of the *Spectator*, Professor Denis Brogan points out that in the U.K., in order to attract women workers, the employer has to advertise, not so much the wage rates, as the fact that the jobs will not spoil nail varnish or otherwise interfere with make-up, that tea and music are provided at work and that hours are short in order to allow a little shop-gazing. Here in India, it is still quite common to find educated women who refuse to work for a living or anything else; they would rather sit and wait for a husband. I shall be surprised if it works out differently in Egypt. Cairo's working girls may soon discover that just as Cleopatra required ass's milk for her bath, they still need at least sufficient quantities of peroxide and cloudy ammonia. With them, as with their counterparts elsewhere, cosmetics, clothes and jewellery, together with a bit of husband-nagging, are quite likely eventually to count for much more than fatter wage packets, leave with full pay and the privilege of placing a cross against a name printed on a small slip of paper.

"I don't mind the style or colour of the shoes, but I do want low heels," said the tall blonde to the salesman. "To wear with what madame?" "A short, fat, elderly executive."

DECK-CHAIRS AND MINK COATS ACTS RESTRICTING LIABILITY FOR DAMAGE

(FROM OUR LEGAL CORRESPONDENT)

WE all know that the common law liability for consequences of negligence can be got round by express contract exempting the person at fault from liability. What we are concerned with here are conditions on tickets, receipts and the like. Railway tickets, bus tickets, sea and air travel tickets, laundry receipts, hotel and restaurant notices, gas, electricity and telephone documents, cloak room tickets, conditions in hiring agreements of car cycles and so on, most of them design business to deprive the small man, the average citizen, of lawful rights which would otherwise undoubtedly be his. For instance, you park your car on a site provided by a local authority and you pay a fee for so doing. A set of regulations displayed on the car park announces to the world and to you that the authority accepts no liability for damage or loss. Your car is stolen through the negligence of the authority. Can you recover? Certainly not. So decided, in effect, *McNair J.* whose decision was upheld by the Court of Appeal in *Halbauer v Brighton Corporation*. A friend of the writer's sent his dress suit for cleansing by dry cleaners. It was returned with the trousers ruined by acid and he made his claim for compensation. But up popped the company's printed conditions on the receipt given by it for the suit. No liability. *Law Notes* tells of a case of an irate lady who, having submitted to the cleaners an almost new pair of grey slacks, received back a neatly cleaned pair of old jeans. No remedy, the same being excluded by express conditions. The learned editors suggest that what we should do is to take the offensive, and when delivering clothes pin to the parcel a note stating the conditions on which we hand the clothes to the cleaners. Or you might, when parking your car, survey the printed regulations stuck up and write four words opposite the condition repudiating liability: "This condition not accepted"; and sign your name to it. All the same the small man has no legitimate grievance. It is a matter of contract, of freedom of contract. People are entitled to enter into any lawful contract they like or not to do so at their option. The Mayor, Aldermen and Burgesses of Brighton did not compel Mr. Halbauer to park his car on their site; all they said was: "You may do so, but if you do, it is

at your own risk." You are under no obligation to send your trousers to any particular cleaners, nor deposit your valuables in your hotel cloak-room or to have electricity or gas in your house, and if you do, the dispensers of these amenities are within their rights in stipulating the conditions under which they will accept or supply them respectively. Of course, you may say that there is no real freedom of contract at all because you have no bargaining power whatsoever vis-à-vis big business or public utility concerns, and that you must either accept the manifestly oppressive conditions or do without electricity or whatever it is you want. To this, the law, which does not like pertinacious people like you and is apt to put them down with a firm hand, will reply: "True indeed it is that through the gross negligence of these people your money and valuables have been stolen, your wife electrocuted, your trousers destroyed or as the case may be, but this is a matter of the sanctity of contract which, at all costs, must be maintained. No case."

Yet there are signs that the judges, tied and bound though they are by previous decisions, are becoming restive at this state of things and are even straining at the bonds and are trying to establish that freedom of contract is not synonymous with freedom to cause loss by a negligent or even criminal act with impunity. We see a fairly recent example of this judicial tendency in the case of notices in hotels—not inns, be it noted, which are under venerable statutory liability. Most hotel owners put up notices in the bedrooms limiting their liability to the inmates. Very interesting and ingenious documents these are, too, and well worth a careful perusal. The "guests" so called, have sometimes virtually no rights left at all. In this case, the notice was prominently displayed in the hotel bedroom and it exempted, or purported to exempt, the proprietors from liability to the hotel guest. But the particular guest did not see the notice until after he had paid in advance, that is, until after he had entered into the contract; and it was held that the exemption condition was not incorporated in the contract at all and therefore, of course, the guest was not bound by it! It appears nowadays to be the law that the hotel proprietors must either show the guest the special conditions or give him reasonable notice of the existence of the clause before or during the making of the contract, and not leave the guest to find out after he has booked and taken possession of the room. The hotel, in short, must "let the dog see the rabbit". The new tendency of the courts in all these exemption clause cases is stated in the *Law Quarterly Review*, January 1954, thus: "The courts have shown enthusiasm for exemption clauses and have construed them as narrowly as possible."

It may be of interest to the non-legal reader to know how the judicial mind operates to correct a wrong and to administer substantial justice when faced with a previous adverse decision by a long dead judge of equal standing which has stood the test of years, but which his present lordship intends to get round by hook or by crook. Suppose Skimpin J. is of the private opinion that the rule in *Burdell v Pickwick*, as laid down a century or so before by Starcleigh J. is bad law, and that he has no intention of following it, but, on the contrary, will decide the exact opposite. You may think that the simplest thing to do would be to say so and to act accordingly. You will be very wrong indeed. Skimpin J. will refer to the rule with the greatest deference as being without doubt good law. But in the case before him he will, to use the correct jargon, "distinguish" it. His lordship will say something like this: "I do not think that my learned brother, Starcleigh J., intended to lay down as a definite rule that what the soldier said was not evidence." (This having been precisely what the learned brother did lay down), "what he really meant if one has regard to the full judgment was..." (and his lordship will then state with similar clarity and precision what his predecessor did not mean; and, in effect, overrule him).

Another illustration of the judicial leaning towards an equitable construction of these exempting conditions is a recent bicycle hire case. These are the exact words of the exemption clause in the hiring agreement. "Nothing in this clause shall render the owner liable for any personal injuries." Note the two words "nothing" and "any". You can hardly have a more exclusive word than "nothing", nor a more comprehensive one than "any". Or, so you may wrongly opine. The clause did not save the owners. The court holding that the exempting words "nothing" and "any" were too wide to cover the exemption and that the exemption was not intended to exempt the owners from their liability in tort for negligence. "It would have been otherwise had there been an agreement for exemption from liability for damage howsoever caused..." (74 *Law Notes* 21). This seems to the writer an excellent example of Skimpin J.'s line of thought in actual operation. What is the difference between not being liable for "any personal injuries" and not being liable for "any personal injuries howsoever caused"? No difference at all, one would have thought, except added emphasis. But that is how Skimpin J. would "distinguish" the two cases in order to be able to do justice.

Or consider the famous deck-chair ticket case. You take a chair owned by a corporation in a public park, the seat, with others, being let out to members of the public by the corporation on payment of a hiring fee. You pay the fee and the attendant gives you a ticket, which you take to be and which is a receipt which will save you from having to pay again when the attendant comes round inspecting tickets. But the corporation has negligently supplied you with a defective chair. You sit on it, it collapses and you sustain injuries. You sue the corporation for damages. You are met with the defence that on the back of the ticket there is a printed condition expressly absolving the corporation from the consequences of their own negligence. Do you win your case? You do. The corporation did not give you reasonable notice of the existence of the clause during the making of the contract. It did not let the dog see the rabbit.

Our concluding case about ticket conditions is described by *Law Notes* as "likely to make a flutter in the receipt contracts' world." It really is an astonishing decision. The plaintiff's case was that she left a mink coat with the defendants for storage and that the defendants had failed, after demand, to return the coat. The lady therefore sued for the return of the coat or its value. The defendants were unable to prove how they had lost the coat. It seemed to have simply disappeared without a trace. Anyway it was not returned either on demand or at all. But there was the usual exemption of liability clause in the receipt given by the defendants for the coat and you may assume that the lady knew of the clause's existence. These were the plain words of the condition. "All goods left at customer's risk." Now reading these six simple words in their ordinary grammatical English interpretation, would you not say that if this mink coat were lost, stolen or had strayed in any manner whatsoever from the defendant's custody, the defendants would not be liable for the loss etc. to the owner? The goods were gone in an inexplicable manner, but they had been left at the customer's risk and that was that. You can assume nothing as to the cause of their disappearance since nothing could be proved about it. The court held "that the words used would have sufficed to exempt the defendants from liability if they could have proved that the loss did occur by their negligence, and equally they would escape liability if they established that the loss occurred in some way not involving their negligence. But as there was no evidence of how the loss occurred, the defendants were liable because the loss might have occurred in a way involving a fundamental breach of the contract which would not have been covered by the clause." One makes no comment on this through an unhappy lack of ability to comprehend it, but may conclude with the dry observation of the *Law Notes* in its editorial. "If the defendants had established that the loss occurred by their negligence the clause would have protected them, which seems to show that the maxim about not taking advantage of your own wrong can work in reverse."

Company Meetings

THE ASSOCIATED CEMENT COMPANIES LIMITED

CHAIRMAN MR. DHARAMSEY M. KHATAU'S REVIEW

The Nineteenth Annual General Meeting of the Associated Cement Companies Limited was held in Bombay on 27th January, 1956. The Chairman, Mr. Dharamsey M. Khatau, reviewing the major developments in the economic and industrial field that have taken place in the country, said:

"We in this country have got into a curious habit of achieving political, economic and social progress by sudden jerks. Every year, two or three major economic or political concepts are mooted and bitterly pressed, often to extreme limit; this is followed by some hasty legislative action; and the controversy then dies down as suddenly as it began."

"This has been going on since 1950; and the year 1955 was no exception. It began with the proclamation of the 'socialistic pattern of society' as the ultimate objective of political and economic policy. This was followed by the Fourth Amendment to the Constitution, whereby it would no longer be unconstitutional to nationalise, either by acquisition or by obtaining complete physical and management control, every form of private property on payment of only such compensation as may be laid down in the particular nationalisation enactment. Quick on the heels of this serious detraction from fundamental rights came the taxation proposals of the 1955 Budget which contained a serious mixture of measures adversely affecting individual enterprise and incentive, savings and investment, on the one hand, and affording encouragement to industrial development, on the other! And before the ink was dry on this drastic scheme of taxation came the nationalisation of the Imperial Bank. Later, we had the Indian Companies Act, which was an unjustified attack on the Managing Agency system, the objective apparently being to kill rather than to cure the one institution which had been most responsible for the rapid industrial advance we have achieved since the First World War. And finally, the nationalisation of life insurance was announced only last week!"

The Second Five-Year Plan

Referring to the 'Plan Frame' of the Second Five-Year Plan, Mr. Khatau said that he felt it had caused grave concern to knowledgeable circles. He characterised it as "no more than a jumble of ill-conceived and unattainable 'physical targets' of production, tied together with bits and pieces of loose thinking, which completely ignored such practical issues as how or where with they were to be achieved". It was fortunate, Mr. Khatau added, that the Plan Frame had since been subjected to the most rigid scrutiny with the result that while its old name persisted in substance, it was new and more in the region of practical economics. Mr. Khatau continued: "Even so, two features of the Second Five-Year Plan as it is now emerging give cause for some anxiety. One is the drastic cutting down of the outlay on transport, especially Railways; and the other, the impractical approach to the problem of resources to cover the enormous over-all outlay of some Rs. 4,000 crores contemplated in the public sector. There lies before us, in consequence, the grave prospect of the probable incapacity of the transport system to cope with the increased production envisaged under the Plan, alongside with acute inflation coupled with crushing taxation of income and capital."

The Private Sector

Speaking on the progress and prospects of the private sector, the Chairman observed that there could be no doubt that the urgent need to achieve industrial expansion along sound lines was appreciated as keenly by free enterprise as by those who spoke from the ideological or political platforms. "Whether it is a question of raising the general standard of living or of avoiding inflation in the wake of deficit financing of development in the public sector, the time has now come when free enterprise has played its part, and will continue to do so subject to the numerous handicaps imposed upon it even within the limited scope permitted to it. It is admitted that the targets set for the private sector under the First Five-Year Plan have generally been fulfilled; and that in some cases, they are even likely to be exceeded—as has already happened in the cotton textile industry. No one need doubt, therefore, that the role allotted to the private sector in the Second Five-Year Plan will be equally significant. But its achievement will depend to a large extent on the broad-based backing of the public as well as of the Government, on wise planning and sound fiscal and political policies, on full and unstinted co-operation from labour, and on the uninterrupted flow of savings and investment year after year. In all these matters the most effective single factor will be the plans and policies of the Central and State Governments in relation to financial matters generally and in regard to taxation and nationalisation in particular."

Production and Sales

Turning to the affairs of the Company, the Chairman reported yet another successful year of working for the A.C.C. Both production and sales of cement were satisfactory, though the Company had not been able fully to cope with the demand. These results were due to the very strenuous and sustained efforts the Company had already made to increase production.

Plant Rehabilitation and Expansion

Mr. Khatau stated that since the ACC embarked upon its post-war expansion programme, it had already increased its annual manufacturing capacity by nearly 1.5 million tons. Satisfactory progress was maintained during the year in the modernisation and extension of the Shahabad, Bhupendra and Kistna factories. The new works for the production of refractories at Katni was about to go into production, and by October 1956 would have a capacity of three times that of the old plant.

Sindri

Coming to the field of new installations, the Chairman reported that the first unit of the Sindri plant having a capacity of one lakh tons was put into operation in September 1955 and a second unit with a

similar capacity went into production two months later. That plant, utilising calcium carbonate sludge (hitherto a waste by-product from the Sindri Fertiliser Factory) for the manufacture of cement is the second of its kind in the world. "This splendid achievement," Mr. Khatau said, "involving the solution of some very difficult technical problems, was the work of the members of our own staff, unaided by any outside consultants or experts. I am glad to say that the cement produced there is well up to our best standards."

Target for Cement Industry

Referring to the target of 12.5 million tons set for the Cement Industry under the Second Five-Year Plan, Mr. Khatau spoke of the ACC's role in the implementation of this huge target: "As the leading manufacturers of cement in the country, we have to play our full part in bringing about the very large expansion which the achievement of this target will necessitate. This we plan to do by establishing a number of new factories in various parts of the country and by extending those of our existing Works which are favourably situated with raw materials in sufficient quantities. We have already formulated plans to increase our capacity to nearly 5.2 million tons by extending our existing factories at Kymore, Lakheri, Shahabad, Dwarka, Kistna, Chhabasa and Sindri, and by putting up five new factories—at Mancherial in Hyderabad, at Yerraguntla in Andhra, at Drug near the site of the Bhilai Steel plant, at Abu Road and at a new site in Porbandar in replacement of the present old factory. Further projects are under consideration. Apart from our contribution other interests in the cement industry will also undoubtedly have similar plans of expansion so that we may collectively achieve the extremely rapid expansion which is required in fulfilment of the high target."

Finance for Expansion Projects

Speaking about the very substantial capital expenditure entailed by these expansion projects, Mr. Khatau said that the ACC had entered into a cash-credit arrangement with the State Bank of India enabling the Company to borrow up to a limit of Rs. 4 crores against the security of its own 5% First Mortgage Debentures deposited with the Bank. He also said that the Extraordinary General Meeting to be held later that evening would consider the issue of 6,35,928 shares of Rs. 100/- each to be offered at par to existing shareholders in the ratio of one new share for every two shares held, subject to the sanction of the Controller of Capital Issues. This additional finance, supplemented by the Company's own present and prospective internal resources, the Chairman observed, would be adequate for the purpose of attaining an annual production of nearly 5.2 million tons.

Central Workshops

During the past few years, Mr. Khatau continued, some of the machinery required for the ACC had been manufactured in the Company's own workshops. But with the plans for rapid expansion ahead, there was now urgent need for considerably higher production of cement-making machinery in India utilising the best techniques and newest developments. Mr. Khatau announced that the ACC, with the approval of the Government of India, was negotiating with Messrs. Vickers Ltd. for jointly setting up a plant for the manufacture of a wider range of cement-making and other machinery in India. Vickers Ltd., together with their many associated companies and their respective subsidiaries, the Chairman said, constituted perhaps the largest engineering group in the United Kingdom manufacturing an extensive range of products including heavy engineering machinery, plant and tools of all kinds, cement making machinery, ships, aircraft, railway rolling stock and numerous other products. After preliminary negotiations, Lord Knollys, the Deputy Chairman of Vickers Ltd. visited India. That was followed by Vickers sending out a team of experts who, along with an ACC team, made a thorough investigation of the project and submitted a joint report which is now under consideration by Vickers Board and by ACC Directors. It was envisaged that the new works to be jointly established would manufacture not only a wide range of cement machinery adequate for the country's entire requirements, but also such badly needed machinery as gears,

pumps, mining equipment, etc. The bulk of the capital required for the project would be contributed by Vickers and the ACC in equal shares; and provision for the ACC's contribution had been made in the financial arrangements referred to earlier. If on careful consideration the scheme proved to be a worthwhile proposition, it would be put before the shareholders for their sanction.

White Cement

Mr. Khatau then stated that the ACC had embarked on the manufacture of white cement at the Porbandar factory on a small scale, and said the production would be gradually increased with growing demand. The new product, which was also an excellent base for making coloured cements and cement paints, was now being marketed under the trade name of "Silvirete".

Bulk Cement

The Chairman turned next to the ACC taking the lead in supplying cement in bulk to its customers, and stated that the first Bulk Cement Depot at Delhi was now ready and deliveries of bulk cement from this depot would commence next week. Depending on the experience gained from this experimental project, the Company intended to establish similar bulk cement depots wherever feasible.

Pakistan

The Chairman stated that the ACC's two factories in Pakistan were operating satisfactorily, and that remittance of part of the profits from Pakistan were with great difficulty being allowed from time to time. He felt that with the devaluation of the rupee by the Government of Pakistan, the remittance problem should ease. Mr. Khatau anticipated some increase in costs there and expressed the hope that the Government of Pakistan would take this into account when fixing cement prices for the current year.

Collieries

Reviewing the progress of the ACC's two collieries at Kotma and Nowrozabad, the Chairman said that in line with the targets for coal production in the Second Five-Year Plan, the ACC was considering schemes for increasing the output of the Nowrozabad Colliery and for setting up a coal-washing plant to improve the quality of the coal despatched.

Labour Management Relations

Turning to labour-management relations, the Chairman observed: "I referred last year with some satisfaction to the unanimous decisions of the Industrial Committee on cement reached at the Hyderabad Conference, and also expressed the hope that we in the cement industry could look forward to a long period of peaceful and productive hard work."

"Unfortunately the goodwill fostered by the Hyderabad Conference and the 'peace within industry' which the ACC has so assiduously sought to build up by its progressive labour policy over a period of years, was marred by the efforts of certain interests to negative the joint decisions taken at the Hyderabad meeting. The interpretations sought to be put on the deliberations of that Conference, as also on the ACC's readiness to react generously to the wishes of labour, have resulted in demands being made on the Company to assume more and more responsibilities and financial burdens without any reciprocal gesture on the part of labour. It is, therefore, with some sorrow that I have to report that at our Chhabasa factory the workers were misled into a prolonged strike on issues which had already been previously settled by mutual negotiations. Ultimately, when, after a lapse of four months, the Government referred the matter to an Industrial Tribunal, the harm had already been done, and this futile and wasteful stoppage of work resulted in a loss of production of over 60,000 tons of cement. However, I am glad to report that it was possible later to work out a settlement with the Chhabasa Works Union on all matters pending before the adjudicator, resulting in a joint request to him to give his award in terms of the settlement."

"The great majority of the Company's employees, I can say with confidence, are well-satisfied and enthusiastic workers who take pride in the part they are playing in the progress of this great organisation and its service to the nation."

Bonus

The Chairman announced that the Board had recommended the payment of a bonus equivalent to three months' basic earnings to all employees at the Head Office, the Works and Branch Offices, and concluded by recording the Company's appreciation of the excellent work and fullest co-operation of the staff and operatives.

The Report and Audited Statement of Accounts for the year ended 31st July, 1955 were then adopted and confirmed.

Thoroughly proven in efficiency, reliability and economy of operation, Miniature Direct Wire remote control systems by Standard are serving electricity undertakings at home and overseas, greatly simplifying the central control of electricity generation and distribution networks. Employing telephone-type apparatus to effect switchgear control through interposing relays, the Standard system of Miniature Direct Wire remote control operates at merely a few milliamperes at 50 volts D.C. over light-current multicore cables. Systems of this type are proving highly efficient and have introduced a new economy in the local control of electricity distribution substations. There is undoubtedly a Standard remote control system which will deal effectively with your control situation. Ask for further details.

LLOYDS BANK LIMITED

MONETARY POLICY ON TRIAL

The Annual General Meeting of Lloyds Bank Limited will be held on February 17 in London.

The following are extracts from the Statement by the Chairman, The Rt. Hon. Sir Oliver Franks, G.C.M.G., K.C.B., C.B.E., accompanying the report and accounts for the year 1955:—

The profit, at £2,322,439, is £136,367 higher than last year and we propose a dividend of 12% per annum on the "A" Shares, which is the equivalent—allowing for the capital operation carried out a year ago—of the 15% dividend paid for the year 1954.

Branches in India, Pakistan and Burma

The business of our Eastern branches has continued to develop satisfactorily. During the year we opened a new branch in Eastern Pakistan at Khulna, a port which is becoming of increasing significance to the jute trade, and have moved into new and more commodious premises in Madras and Chittagong.

World prices of cotton, jute, tea and rice—the main exporting products of the three countries—have all fallen during the year but progress has been accelerated in the development of natural resources and industrialisation. This bank continues to adopt a sympathetic attitude towards proposals for finance connected directly or indirectly with the establishment of new industries in the countries of the sub-continent.

In August, the Pakistan rupee was re-valued at 1s. 8d. as against 2s. 2d. at which it had remained since the devaluation of sterling in 1949, and it is now on a par with the Indian rupee; the operation went through smoothly and there is little doubt that the revaluation should result in an increase in the overseas trade of Pakistan as well as in the trade between that country and India. During the year, both countries have been beset by serious floods and it is not yet possible to estimate the full extent of the damage, though it is feared that cotton and wheat crops may be adversely affected.

Our staff in the East are responding well to the changing conditions in the sub-continent. We, in this country, fully appreciate the services which the Eastern staff render in the bank's interests and I take this opportunity of making full acknowledgment of them.

Inflation

For the majority of our countrymen 1955 must count as a very good year indeed. It is not, unfortunately, the whole story. Very few of us were prevented from enjoying the general well-being by lack of work. Large sections of our people, on the other hand, were again robbed of that opportunity by inflation, which for many years past has taken the place of unemployment as the main evil afflicting our society. Moreover, while the national standard of living was higher than ever before, it was also higher than the nation could afford without imperilling its future. From the financial point of view, the year was therefore dominated by the Chancellor's efforts, in which the banks were directly involved, to remedy this situation with the aid of monetary restraints.

There was a period in which it was felt in certain quarters that we might not find it easy to maintain the present rate of exchange. Fortunately, the recent performance of exports shows that our competitive position has not been seriously impaired. Our failure in recent years to obtain our share of an expanding world market has been due rather to the other commitments of inflation—such as delays in delivery and lack of incentive to venture upon the risks of export trade—than to excessive prices. If so, the reduction of inflationary pressure which is now in progress ought not only to restrain imports but also to give a fresh impetus to exports. There should be no doubt, therefore, about our ability to avoid a deficit in the balance of payments. But that is not enough. What we need is a positive surplus, considerable in amount.

Lessons for the Future

Looking back, the important thing is to be as clear as we can about the lessons we can draw as a guide to future policy.

The first moral is surely the overwhelming importance of adequate exchange reserves. Had our reserves not been so near the danger level, we could have ignored a temporary loss of gold due to a running down of overseas holdings of sterling. The second is that a modest application of the normal restraints, if undertaken early, will often avoid the need for drastic expedients later on.

The third is the importance of keeping a tight rein upon the volume of bank deposits as one of the main determinants of the flow of spending. In other words, the authorities must keep a tight rein upon the supply of Treasury bills available to the banking system.

The true measure of the disinflation brought about since February is the decline of just on 6 per cent. in bank deposits, leaving them no higher than in the middle of 1953. It is this decline in deposits—and therefore in the totality of bank assets—which is ultimately of importance, not the movement of the single asset advances. This is not new doctrine; it is all clearly set out in the Macmillan Report.

Conditions today are in many respects very different from those in which monetary policy used to operate. It would be premature to suggest that the disinflationary measures have as yet accomplished their purpose. Undoubtedly, one nasty corner has been turned. The heavy gold losses of the third quarter have tapered off sharply, but we have not reached a point when we can be sure of steady progress and secure from all anxiety about the balance of payments; nor can we yet hope to achieve that substantial surplus which is one of our basic aims.

A solution acceptable to us all, consonant with our developed views about the kind of society we want, is well within our power. The condition is that we have the will to choose and carry out the means, which are necessary to the ends we acclaim.

NATIONALISATION OF LIFE INSURANCE
IN THEORY AND PRACTICE

THE IMPLICATIONS OF STATE CONTROL

(FROM OUR NEW DELHI CORRESPONDENT)

THE nationalisation of life insurance, announced during the week, has been discussed for the last 12 years. The original demand for nationalisation was made during the consideration of the Insurance Act Amendment Bill in 1944. Curiously enough, one of the arguments then advanced was that the funds of the insurance companies should be made available for financing schemes projected under the head of "National Planning." Mr. L. S. Vaidyanathan was then the Superintendent of Insurance. In the Government publication, the *Indian Insurance Year Book for 1945*, refuting the argument he said: "One fails to see why using insurance funds for nation building purposes should be achieved only through the process of nationalisation. Since the commencement of World War II, Indian companies have been substantially increasing the proportion of their funds invested in Government securities. In the United Kingdom, companies entered into a voluntary agreement whereby insurers undertook to support Government war loans with the entire amount of the surplus available for investment, at least with respect to the insurance transactions in the U.K. The sacrifice involved would be appreciated, if it is realised that the yield on the new investments in Government securities was only about two per cent net while other investments yielded a much higher rate. It would therefore follow that when the occasion demands, insurance business could be depended upon to rise equal to it and would not lag behind other classes of business in the desire, out of patriotic motives, to do all things within their power which would advance the economic health and well-being of the country. Another example pertinent to the point at issue is provided by what happened in the United States of America soon after the close of World War I. There was in the U.S.A. a serious housing shortage, to relieve which a very large life insurance company built low cost model apartments under its own management and ownership, and incidentally provided a demonstration in planned housing developments. What is of great importance to note is that the company undertook this work on the suggestion of a Legislative Committee. National planning can surely be achieved by taking over life insurance funds at a reasonable rate of interest for its purpose without necessarily demolishing the structure of administration of insurance companies by nationalisation in which very great defects are inherent.

Finance Corporations

We have before us an outstanding example of how the resources of insurance companies can be harnessed to the industrial and financial development of a country in the proposed formation of the 'Finance Corporation for Industry' in the U.K. which is designed to assist industry in that country in the post-war period by providing temporary and long term finance to speed up reconstruction and development, thereby also assisting in the maintenance and increase of employment. Insurance companies have been approached to participate in the formation of the Corporation. At the time of writing no further details are available as regards the exact structure and scope of the Corporation but by approaching the insurers of the country the Chancellor of the Exchequer is tapping the best material available to further his object. For, apart from the financial help which the Corporation might derive out of the large funds of the insurers, incidentally providing a fruitful field of investment for these funds, the Corporation would secure immense technical and expert help and guidance, for, in the personnel of the directorate and executives of insurers, who would, it is expected, be largely represented on the board of the proposed Corporation, it would find men who would bring to bear on the complicated task of the Corporation their high calibre, strong and independent personality and, in the words of the Chancellor of the Exchequer himself, 'men of wide industrial and general business experience.'

"Here then we have a constructive programme for utilising the talent, experience and resources of insurers for the common weal. Even where the services of insurance executives are not directly requisitioned, the funds of insurance companies, which are of huge dimensions and form a large part of the national wealth in those countries where the insurance idea has permeated among the population, help in stabilising the entire economic fabric of the nation by being invested in Government and other high class securities, and provide by the very security they offer both in good times and bad the very motive power for further spread of the insuring habit. It is gratifying to find as this Report goes to Press that the Government of India are also considering the establishment of an Industrial Finance Corporation for the financing of industry, which is to be a bank with fairly large capital and borrowing powers, the shares of which will be held by Government, the Reserve Bank and institutional investors, such as insurance companies. Further details regarding this will be awaited with interest.

State Versus Private Enterprise

"There are certain types of activities catering to the needs of practically every individual which, even though savouring of the commercial, are best managed only by the Government of the country,

for example the Post, Telegraph, Telephone, and, to a large extent, the transport services as also any scheme of social insurance. In these cases the service being every man's need, special efforts to popularise it may not be necessary. But where, as in the case of life insurance, the population has to be systematically trained in the insuring habit and the service rendered has to be popularised, Government administration has proved itself unequal to the task as exemplified by the history of the Post Office Scheme of life insurance set up in the U.K. which was established in 1864 and had to be discontinued in 1928 consequent upon a progressive dwindling of business. The failure of the Postal Scheme in the U.K. which was working side by side with private enterprise has demonstrated that in the field of insurance a Government-run scheme could not compete successfully with private enterprise. In New Zealand also a Government Life Insurance Department and Fire Insurance Department have been running for a long time in competition with private enterprise, but after 50 years it was found that the progress made by the Government departments was very much slower than that made by private companies.

"The highly advanced stage of development reached and the high standard attained by the business of insurance in all its forms are due to private enterprise. An officially run insurance department is apt to remain satisfied with a static state of affairs and not being subject to the stress of competition, would merely keep itself to the trodden path. From its very composition it would be incapable of taking quick decisions and acting on them, a course so very essential for progress. For even if the officer at the head considered the adoption of a particular course desirable, others unconnected with the department would have a large say as every problem connected with one department is likely to have a bearing on the work of some other departments.

"A Government-run department would be inelastic in its administration as it would be bound by rules, regulations and precedents and cannot readily adapt them to allow for special circumstances and changing tastes of the public. The writer is aware of several instances in which concessions were given relaxing the rules of the insurer he is associated with taking into account the special circumstances of each case. He is sure that other insurers also would have acted similarly under like circumstances. Such relaxation of rules to allow for the special circumstances of particular cases would not be possible under the rigid system of Government administration. While by virtue of the experience he has gained by being a part of it for some time, the writer is not prepared to go the entire length with those who consider, and there is a good number who do so, that bureaucratic control means stagnation. Yet it has to be admitted that the very great personal interest characteristic of private enterprise and the unceasing attention paid to efficiency of administration so that maximum results may be achieved at a minimum outlay, would be absent when healthy competition, which in the past has contributed so much for the evolution, efficiency and progress of life insurance, is eliminated by coalescing all life insurance companies into one. One serious disadvantage attaching to the administration of insurance companies by Government as a result of combining all insurance companies into one large unit would be that such combination would, by eliminating competition, deprive the administration of the advantage of healthy comparison with rivals to see in what direction it could improve its efficiency to bring down over-head costs and would mask inefficiency.

Psychology and Salesmanship

"Government management of insurance has failed where it has been tried because it has, *inter alia*, omitted to pay attention to the basic truth that insurance has to be sold by an army or agents well trained in the art and psychology of selling. The outstanding contribution of life insurance arising out of its private management is the arousing of the natural instinct of thrift lying dormant in every person but which in most cases requires an external stimulus to be made active. To the field force represented by the licensed agents the credit goes for providing this stimulus and for making the public understand the scope and purpose of insurance and the part it plays in the national economy.

"Thrift as distinct from miserliness brings out the noble quality of self-denial in the individual and is fostered by imagination, foresight and a desire to acquire a position of independence for the one practising thrift as well as for his near and dear ones. Taking it by and large the national wealth of any country, conserved so far as the middle classes are concerned through the medium of life insurance, is the direct result of the practice of thrift by generations of its nationals. In a country where the people are trained in habits of thrift each generation lives in a condition of greater comfort than its predecessor because of its inheritance of national wealth which goes on progressively increasing from one generation to another. The primitive man who lives from day to day has no thought for the morrow and leaves his children to fight the world in the same way as he did. It will thus be seen that national wealth, the result

tant of thrift, is an index of civilisation and the service rendered to the country at large by life insurance companies and their agents who pay house to house visits and preach the gospel of thrift can never be exaggerated. This has been made possible only by the wholesome rivalry between companies in healthy competition under the system of private management of the business of life insurance. When this competition is removed the inevitable result would be a decline in the insuring habit of the nation.

"Considering the effect of nationalisation on the various classes that have built up this important business activity, which is the pulse of the economic life of the nation, one's attention is naturally turned to the agents, the very source of the business. That their lot is not an easy one, particularly in a country like India where the insurance consciousness is very poorly developed, will be evident if it is realised that they have to adapt themselves to suit the angularities of the various types of persons with whom their calling brings them into contact. They have constantly to change their line of approach to suit the whims of the prospect and what is sauce for the goose may not be sauce for the gander applies with the greatest force to their profession. In short, a proper study of man is the basis of successful life insurance selling. A successful life insurance agent in view of the qualities he has imbibed can with little training in the new line easily switch over from life insurance canvassing to canvassing for any other type of business. What is it that has given the agents this training? Mostly they are not men out of the Universities and have not acquired their art through lengthy college courses. They have imbibed their art slowly through experience and under the stress of that great and potent factor, competition, so necessary for progress, and it is the intensive study made by them of insurance and the varying advantages of the tables in the prospectuses of the insurers that gives them the training in the art of effective canvassing and successful selling. When the incentive created by competition is removed their efficiency will naturally fall and the result would be a decline in the insuring habit of the nation and the already low *per capita* insurance, noticed earlier, will become lower still. As for the agents themselves, even if they are not taboo under a State scheme, a large number of them will be thrown out of employment and they are now nearly 90,000 strong and are daily increasing.

The Role of the Actuary

"The effect of nationalisation on those that have devoted themselves to a study of the various specialised aspects of the business and particularly actuaries would be evident. The evolution of the scientific ideas which provide the basis for the activities of insurance in its various aspects is due to several giant brains associated with private institutions focussing their attention upon ways and means of developing the business and thereby making insurance capable of rendering social service of a unique type. Plans of life insurance have to be constantly evolved and perfected to meet the changing financial needs of the individual. Some people have to be protected against poverty in old age and others against the consequences of premature death. In a few cases special policies which modern life assurance has evolved have to be made available to conserve the estate for the beneficiary. It would require enormous humanitarian prompted in the initial stages by the stress of competition to be constantly studying the insurance needs of the modern man and devising plans to meet them. Any scheme of benefits under a social security plan to be introduced in the future would, if anything, introduce further complications in devising insurance schemes for the various social classes which, supplementing the benefits under the social security plan, would provide an ideal pattern of insurance to meet the needs of each family.

"Such development would never have taken place under a system of unification of all companies substantially narrowing down the size of the technical personnel required to conduct the business. Any field of specialised knowledge would either become barren or its development would be substantially arrested if the prospects held out to those who pursue the line are so meagre as to make the number taking to it diminish. The few that might be absorbed in Government service would suffer from the disadvantage of restricted research activities attaching to a small number in any specialised field. As applied to a country like India the results would be particularly deplorable. It is hardly a matter of two decades since Indians have come to realise that there is anything like an actuarial profession and it is only during the period of less than a decade in the past that young Indians have been turning their attention to acquiring knowledge in this specialised course.

"While actuarial training is highly useful in the conduct of the affairs of life insurance business in all its aspects, both under Government and private bodies and while the call on his professional abilities made by the business of life insurance is the primary incentive for any young man to undertake this arduous course, the usefulness of such training in other fields of activity has been well recognised in countries where this profession has made considerable headway. Broadly speaking, where a financial transaction depends upon the happening of a contingency, not necessarily associated with life only, to wit sickness and unemployment, the problem becomes actuarial. The direct result of nationalisation would be that this profession will be nipped in the bud in this country. It is assumed that a State which is so advanced as to consider seriously nationalisation of a specialised

business activity such as insurance would be very much concerned with the unemployment of its subjects. To the extent that nationalisation brings about unemployment amongst the agents and the others connected with the insurance business, the State would be creating for itself a problem difficult to solve.

Effect of State Control on Export

"Another deleterious effect which nationalisation of insurance will have on the economy of the country should not be overlooked. It was stressed in the last issue of the *Year Book* that India should not continue in the post-war world as an importer on balance of insurance but should try to export insurance to its neighbours, both across sea and land. Speeches made at the Annual General Meetings by the chairman of insurance companies located in countries which have been large exporters of insurance in pre-war times and which export they have lost in part during the war years, contain an earnest plea for making endeavours to recapture the lost market. As, apart from the fact that the State cannot carry on commercial activities in a foreign land without making their non-national character too evident, the State would consider it undignified to indulge in such activities, any scheme of nationalisation would necessarily have to be confined to the nationals of the country only and export of insurance would be impossible. Even if permission is granted to private institutions to undertake insurance activities in foreign lands, the very fact that the Government of the country thought it best to nationalise insurance would certainly give the impression that all was not well with the business when it was in private hands and with that stigma attaching to them it will be very difficult for private companies to compete successfully in foreign countries. Therefore, from every point of view, it would appear that nationalisation of insurance would be an entirely retrograde step and it would be inadvisable to embark on this venture without giving careful consideration to the various untoward repercussions which the change would engender."

The Argument for Nationalisation

In the following year, Mr. M. A. Aziz Ansari succeeded Mr. Vaidyanathan as the Superintendent of Insurance. In the *Insurance Year Book for 1956* he answered Mr. Vaidyanathan's arguments in the following words:—

"This is one of the important topics discussed everywhere. Last year the case against State management of Life Insurance was put in *extenso* in the *Insurance Year Book*. An attempt has been made to summarise those points and mention, against them the reasons in favour of State management of Life Insurance business. Non-life business is excluded from the scope of this brief discussion. It is left to the public to form its own conclusions about the matter.

Arguments against Nationalisation.

1. The State-managed business will not have the experience, the expert knowledge and years of training behind it.

2. The State-run scheme must of necessity be rigid and bound by red tape and will lack the flexibility so necessary for an enterprise of this kind.

3. Efforts made in the past in the United Kingdom ended in failure. We cannot hope for anything better.

4. Variety in schemes will go.

5. Popularisation of insurance will suffer.

6. Agents will suffer.

Arguments for Nationalisation (and answers to the arguments advanced against Nationalisation)

The State could profit by the experience of those in business now by employing them; to suggest that these men will not co-operate is a reflection on their patriotism.

Whatever might have been the case in the past, to assume that these defects are inherent in the system is a totally unwarranted assumption. Government was running successfully such enterprises as Railways, Posts and Telegraphs, Telephones, etc., in peacetime. During the war, the Government took over many other activities and ran them successfully.

The United Kingdom scheme was started without agents and was never given a fair trial. Anyway, the world has moved very much since. In India, Mysore is running a State-scheme successfully and in competition with the best private insurers.

Not at all. What private insurers can do the State also can.

Just the reverse. The State can publicise insurance as such whereas insurers now more often than not are keen on publicising their individual merit. The can be planned publicity and all areas can be developed instead of concentrating on the fertile one alone.

Just the reverse. They can be trained in their profession whereas now they receive little or no training. Each agent can

be given a sufficiently big area which will yield a fair income. The status of agents will improve as well as security of their employment.

7. Healthy rivalry will cease.

8. Inefficiency will be masked by State subsidy.

9. Exports (i.e. doing insurance in other countries) will cease.

10. There will be a setback to technical progress.

11. The proposal will be expropriatory in nature. It will take away the living from the present employees.

Competition is not always necessary for efficiency. On the contrary it may be wasteful.

Cost-accounting can always be employed to ascertain the true position.

Not necessarily; in any case, India is a net importer now and from this to self-sufficiency is a good step forward.

Just the reverse. People in Government service have contributed and can contribute their quota to technical progress. Besides pooling of technical skill will yield better results.

Fair compensation can be paid. All efficient men, including the Agents can be absorbed.

Other Reasons for Nationalisation:

a. The policy-holders, unlike now, will have cent percent security.

b. Expenses will be very much reduced due to i. absence of duplication (managers, agency managers, actuaries, inspectors, Head Office buildings, etc.)

ii. absence of wasteful competition.

iii. economy which is possible only in large-scale enterprises.

The saving in expenses will accrue to the benefit of the policy-holders.

c. Better service due to absence of profit-motive.

d. The dividends to shareholders will be saved.

e. The funds will be available for nation-building activities.

f. At present a company can be wound up only when it is insolvent. The loss caused to many innocent policy-holders by unscrupulous or inefficient management will be avoided.

g. Insurance is a social service and should therefore be in the hands of the Government."

Mr. Ansari, it will be seen, lays stress on economy in expenses. The experience of Indian Airlines, which were also nationalised on similar grounds, do not indicate much hope. In their case, the Minister for Communication gave an undertaking against reduction in staff. Since then the pay bill of the Indian Airline Corporation has gone up by Rs. 50 lakhs a year.

Indian Aluminium Company plans to treble output

Why this expansion?

Aluminium has become an important metal today in many fields—from structural engineering to electrical distribution. Experts estimate that by 1960 demand for aluminium will have doubled, rising to about 40,000 tons per annum.

Company's rapid expansion

In order to keep pace with expanding demand, Indian Aluminium Company is increasing its capacity for aluminium production. The new smelter which Indian Aluminium Company is installing at Hirakud, Orissa, will triple the Company's production capacity to 15,000 tons by 1958. In implementing this major project, Indian Aluminium Company will be able to draw upon the resources and know-how of its Canadian associates, Aluminium Limited—the world's largest group of aluminium companies.

Our City Cable

STOCK MARKETS QUIET

GILT-EDGED AND INDUSTRIALS

EASE SLIGHTLY

London, 1st February.

IN the absence of favourable news and under the influence of the uncertain economic situation, the stock markets were very quiet and generally dull last week. Oil shares were the only group to move against the trend. Business contracted further, and at the end of the account on Tuesday was virtually down to a minimum. The economic situation continued as the dominant factor, and it appeared likely that the quiet conditions would persist until the outlook became clearer. The markets were waiting for the Government's further measures to deal with the economic situation. Gilt-edged securities moved somewhat irregularly following the previous week's fall, but business was very thin and had a disproportionate effect on prices. On balance, there was not a great deal of change, although prices were easier, if anything. Short-dated stocks resisted the trend and were firmer on balance. Foreign bonds and rails attracted only a very limited amount of interest and were little changed. While dollar stocks fluctuated with Wall Street, very quiet conditions prevailed in industrials. A rally on bear-covering prior to the week-end soon petered out, and prices resumed their downward movement. Selling, however, was small, and the majority of prices recorded little change compared with the previous levels. Small declines predominated, but a number of favourable movements developed. The Financial Times Industrial Ordinary index, after rallying, fell back to around its previous level. Interest in gold shares was at a very low level and they recorded further widespread losses under the lead of Free State issues. Diamonds responded to Anglo-American Investments' higher dividend, but base metals moved uncertainly and were mostly lower. The best feature was provided by oil shares, which went ahead on forecasts of rising consumption of fuel oils and subsequent favourable comment on the prospects. Widespread gains were recorded, although best prices were not always held. Rubber and tea shares were very quiet and inclined to ease in sympathy with the general tendency.

The Money Market

Seasonal factors and the continuation of the credit squeeze had a more decisive effect on the money market last week. The supply of funds contracted sufficiently to create stringency at a time when the market had only a small quota of

new Treasury Bills to pay for, and against which there was an excess of gratuities. Money in consequence was in keen demand throughout, and ruled on the basis of 3½ percent to 4 percent. With this attenuated supply, business in bills also contracted. Applications for £250 million of 91-day bills totalled £390,131,000, of which the former amount was allotted at an average rate of 8½ 4/97d as against 8½ 4/02d in the previous week. Offerings this week will be comprised of £250 million of 91-day bills. The Bank of England return for the week ended 25th January showed that notes in circulation were £14 million lower at £1,772 million, while bankers' deposits were £5 million higher at £237 million. Fine trade bills were unchanged.

Activity on Wall Street

Convertible bonds moved ahead along a fairly broad front early last week, largely as a result of the brisk recovery in security values. Advances were generally held to fractions, although a number of issues managed to score wider gains. Dealer's issues eventually slowed down and prices tended to back away when the stock market faltered. American Telephone and Telegraph debentures, however, were active and firm, advancing a point. Investment quality corporates were mixed. Rails were mixed. World Bankers were dull. In the foreign department, German Nationals were lower by fractions to a couple of points. Berlin City 6 percent of 1958 added four points, while Cologne 6½ percent of 1950 dropped nearly two. Japanese were mixed with Municipals higher.

Vegetable Oil Market

Very firm conditions developed in linseed oil last week and following heavy European demand prices advanced by £5 or £6 a ton. The level was the highest reached since the closing days of 1952. One factor responsible for the rise was an indication that India might impose an export duty on linseed oil, which would probably go on buyers' account. Demand for Indian castor oil for shipment was restricted by the paucity of offers and small business was done at higher rates. Enquiries for spot were more numerous. Groundnut oil headed the sharp upsurge in prices of edible oils, rising by £5 a ton.

Rubber Closes Firm

In mostly slow trading, values in the rubber market continued to sag during the greater part of last week. Upcountry liquidation in Malayan, unloading by tired holders and poor support from consumers put prices down by a 1d or 1½ a lb., and the easiness was accentuated by increased Malayan production during December. Towards the close, sentiment improved as U.S. consumption estimates were better than expected. A small setback with buyers holding off was quickly recovered, and finally renewed buying orders for "landed" and shipment rubber found offers scarce. Although final values were 1d a lb. lower on balance, the close was firm. The sole crepe market was dull, with only modest business in small parcels on the lower basis of 40d a lb. for 1/8 inch smooth number one on spot.

Indian Coconut Yarn Goods

The increasing Indian efforts to export coconut yarn fabrics and finished goods instead of coconut yarns represented a serious danger to the European coconut yarn industries, stated the president of the European Coconut Yarn Industry at a recent meeting with West German yarn weavers. He warned against the liberalisation of imports of coconut fabrics from India, saying that this could ruin European industries; India, he added, could offer her goods at "dumping" prices because she paid her workers lower wages. As France, the Netherlands, Switzerland and Austria had strongly rejected the idea of having their markets flooded with cheap Indian goods, he expected that West Germany would also abstain from liberalising imports.

Reducing British Stockpiles

Officials on Monday declined to comment on newspaper reports that the U.K.'s strategic stockpiles of food, oil, metals and chemicals would be drastically reduced. Informed sources said that the Defence White Paper due to be published on 16th February would probably contain a policy statement about future reserves and may outline Government plans for the realignment of existing stocks. Earlier newspaper reports had suggested that the Ministries of Supply and Agriculture intended to sell part of their strategic reserves. Copper, tin and zinc all lost ground on the metal markets, but trade circles thought that this had no visible connection with reports that stocks would be reduced or that the Government would suspend purchases. Authoritative sources here later stated that there was to be no basic change in U.K. policy on stockpiling. Stocks were always being turned over and adjusted without disturbing the market, they said. It was not to be expected, they added, that at present, when the Government was working on plans to reduce British living costs, there should be heavy purchases for stockpiling purposes.

South Africa's Sugar Output

South Africa's sugar production this year is expected to be the highest ever at about 940,000 tons, which is 110,000 tons more than last year, according to figures supplied by the South African Sugar Association. The value of the crops is estimated at £30 million; out of this must be deducted production costs which, some millers say, have been "quite high" in recent months. Nearly 2½ million tons of sugarcane are expected to be handled during the present season.

Finance in India and Abroad

THE CALCUTTA MONEY MARKET

STOCK MARKET POSITION

CAUSES ANXIETY

Wednesday, 1st February.

ALTHOUGH labour conditions in banking have been rather more disturbed this week than last, the buoyancy in demand for funds has continued. The requirements of the sugar industry and on account of the kharif crop have remained at a high level, and those of the cotton mills are increasing. There has been good buying of raw jute. The present clearing difficulties on the stock markets are causing considerable anxiety in banking circles. Money is very tight in the interbank market and there are reports to be borrowed over at the unchanged call rate of 3½ percent.

Business has been better in the market for export documents this week and a fair number of tea and gunny bills have come to hand. Remittance has been normal. The strength of sterling remains unchanged and the dollar rate is quoting Rs. 47½.

Bullion was quiet on profit-taking. Silver declined from the previous week's level of Rs. 177-10 to Rs. 173-15-0, quoted today. The rate for ready delivery was quoted at Rs. 174-2-0. The London price fell from 78½d. to 77½d. The price of foreign silver in New York declined from 90½ to 90 cents.

Gold ruled quiet in sympathy with silver and the price fell from 97-8-0 to Rs. 96-8-0. The sovereign at Rs. 61-12 showed a loss of 3 annas.

A further fall of Rs. 3.64 crores to Rs. 1,379.07 crores was the outstanding feature of the return of the Reserve Bank of India for the week ended 27th January, 1956. The total note issue was Rs. 21 lakhs higher at Rs. 1,401.83 crores. Deposits of the Government of India and other Government accounts rose by Rs. 3.72 crores and Rs. 5.09 crores to Rs. 54.02 crores and Rs. 18.47 crores, respectively. Balances of commercial banks at Rs. 65.24 crores showed a decline of Rs. 2.27 crores. Balances held abroad fell by Rs. 5.50 crores to Rs. 67.05 crores. Other loans and advances rose from Rs. 42.59 crores to Rs. 44.33 crores, of which advances to scheduled banks against usance bills totalled Rs. 17.70 crores (Rs. 15.25 crores). These advances amounted to Rs. 9.21 crores since 1st January 1956. Ways and means advances stood at Rs. 1.79 crores (Rs. 1.82 crores). Other features showed little change.

The return of the State Bank of India for the week ended 20th January, 1956, shows a rise of Rs. 10.78 crores in total deposits to Rs. 241.90 crores. Investment in Government securities and other authorised investments are down by Rs. 17 lakhs and Rs. 9 lakhs to Rs. 107.32 crores and Rs. 9.00 crores, respectively. Advances including loans, cash credits and overdrafts, and bills discounted and purchased have decreased by Rs. 1.75 crores to aggregate Rs. 110.09 crores. Cash and balances are in consequence, shown at Rs. 30.77 crores or Rs. 7.27 crores higher.

The net profits of the Central Bank of India, Ltd., for the year ended 31st December, 1955, subject to audit, including the sum of Rs. 2,70,301-15-5 brought in, amounts to Rs. 32,35,546-1-9 which the directors have disposed of as follows: interim dividend at 6%, Rs. 18,87,255; transfer to banks investments Rs. 15,00,000; taxation Rs. 5,50,000; staff gratuity fund Rs. 5,50,000 and bonus to staff Rs. 13,50,000.

The directors propose to recommend a final dividend for the half-year ended 31st December, 1955 at 6%, making 12% for the year. The carry-forward is Rs. 18,40,358-8-6.

The profit of the Bank of Baroda, Ltd., for the year 1955, subject to audit, including the sum of Rs. 2,70,301-15-5 brought in, amounts to Rs. 32,35,546-1-9 which the directors have disposed of as follows: interim dividend at 10% per annum Rs. 5,00,000; taxation Rs. 9,00,000 and bonus to staff Rs. 8,00,000.

The directors propose to pay a final dividend for the half-year ended 31st December, 1955 at 14 percent per annum, making 12% for the year and to carry-forward Rs. 3,35,546-1-9.

CLOUDS OVER GENEVA

AMERICA'S INFLUENCE ON
FREE TRADE

NO observers of the current conference of the General Agreement on Tariffs and Trade in Geneva expect any spectacular results from it, but it is quite as important as its predecessors, in some ways more so. It provides an opportunity for the major trading powers to show that in the interests of freer trade they are willing to sacrifice some protection of their producers at a time when protection may be demanded more urgently than in recent years. After the opening of these conferences news of them is usually sparse until the close, months later. There is no drama to catch the public imagination. Some of the results are negative, preventing adverse developments rather than positively promoting favourable ones. Yet, with all these limitations, the conferences can be and have been of profound importance.

These three conferences so far completed—in Geneva in 1947, in Annecy in 1949, in Torquay in 1950—negotiated as many as 58,700 concessions on tariffs. As the work proceeds the scope for concessions diminishes. Therefore, at the third conference, in Torquay, agreement to bind a low tariff was treated as a concession equivalent to agreement to reduce a high tariff. It is a reasonable assumption that many tariffs would have been raised if they had not been so bound; therefore G.A.T.T. has preserved the principle of free trade as well as promoting it. However, this principle will be severely treated in Geneva in the coming months. Tariffs are more important now than they were when any of the previous conferences was held. It was in many cases easy to concede on tariffs when the quantity of imports was controlled by quota; now many quantitative restrictions have been removed. Domestic producers were less concerned with foreign competition when many goods were scarce and demand was uninhibited; now most shortages have been overcome and monetary restraints in various countries are deliberately restricting demand.

The impressive total of concessions granted at previous conferences includes some that were of little value, and in present conditions the large number of items on which the nations are still willing to negotiate exclude most of the items in which a large trade could be done at lower tariffs. There are no illusions about the items, nearly 1,000 of them, on which the Americans have declared themselves willing to make concessions: the list

does not include the controversial products on which America maintains high tariffs—on some of which she raised tariffs last year—to protect some domestic interest allegedly threatened by imports. In any case, the scope for concessions reluctantly allowed by the American Congress to the American negotiators is strictly limited: no individual tariff may be reduced by more than 15 percent over three years—5 percent a year (so that, for example, a tariff of 20 percent could be immediately reduced only to 19 percent).

The Americans will do their best, doubtless, to dispel the idea that they are backing away from the principle of free trade, but the mood of Geneva does not suggest much hope that they will contribute much to the success of the conference. Other countries, it seems, will follow the American lead; if America does not go far, nor will they. On behalf of Britain Sir Frank Lee, Permanent Secretary to the Board of Trade, said "it would be unrealistic to expect that economically more vulnerable countries should take a more substantial contribution than that which the U.S. with its creditor position in the world, its large internal markets, and its highly developed and efficient economy is in a position to offer". Britain feels at present too vulnerable to make substantial concessions. In the present precarious state of her balance of payments she cannot risk a substantial addition to her imports. Yet no other country needs concessions from other parties to the conference as much as Britain does.

Some people feel that the British Government should be more venturesome. British policy is focussed more on quota-free trading than on tariff reductions. Quantitative restrictions have, indeed, been the curse of international trading since the war; but not much is gained by admitting goods without limit if tariffs raise the prices of those goods so high that they are no longer wanted. International trade is so vital to Britain that reasonable freedom to trade without either quotas or tariffs is essential to her economic health. A larger inflow of goods would, of course, be unwelcome in some ways (though it would have the merit of depressing prices); but, by hypothesis, a concession is granted in Geneva only in exchange for a concession and should therefore expand exports as well as imports. Manchester is renowned for the doctrine of free trade, and it was appropriate that the Manchester Chamber of Commerce pointed out, in its annual report this January that Britain could not expect to sell to other countries unless she would by from them—"we fare best", said the report, "when there is fair trading for all concerned".

LONDON FINANCIAL LETTER

A SIGNIFICANT CHANGE

By Air Mail.

BUSINESS sentiment has noticeably changed in this country in the short period of 1956 that has already elapsed. The change can perhaps be summed up by saying that, whereas until even a few weeks ago all efforts to check inflation were viewed with scepticism, most people are now agreed that the rise in prices can be and must be stopped. The Premier himself is now leading the campaign against the rise, and most of the producing community, as well as the whole of the consuming community, is not only supporting him in his endeavour but urging him on. Mr. Harold Macmillan, the new Chancellor of the Exchequer, has made a methodical study of his new problems—the old ones bequeathed by Mr. R. A. Butler. His policy has therefore been slow to emerge, but it is already fairly clear that it will continue, and in some ways reinforce, Mr. Butler's. It will be ironical if Mr. Macmillan gets all the credit for halting inflation in 1956, for it becomes more apparent every week that Mr. Butler's policy prepared and started that important action. Mr. Butler had little enough help from either the business community or the general public; both continued to spend freely and to raise their prices (including the price of labour). Mr. Macmillan will be more widely assisted.

However, anyone who imagines that the task is easy from now on will soon be disillusioned. The Government's intention, certainly, is merely to remove the excess of demand from the total economy. But it is not possible—nor, indeed, desirable—to reduce demand evenly, by a few percent, over the whole. Total trade is probably still expanding, but the building industry has increasing difficulty in arranging new contracts (and in financing those which it secures), and the much-publicised short-time working in the motor industry exposes problems of marketing increased output which are not merely seasonal. While most industries are now sympathetic to the idea of checking prices, none is willing to suffer underemployment of its resources in the interest of national stability—even supposing that underemployment is the right way to attain stability. Further, employees are by no means convinced that wages as well as prices ought to be stabilised on the present basis. Even in the motor industry, whose prosperity is manifestly threatened, there are demands for higher wages, which, the unions argue, can be paid out of profits. It is no secret that employers hope that stable prices and tougher trading conditions will stop demands for higher wages, but it is by no means certain that this hope will be realised.

Much to be Done

Some of the main statistics for 1955 are now available—though not, of course, the official estimate of the balance of payments, which is in present circumstances the most important of all. They show even more clearly than had been perceived before that inflation on the scale of 1955 cannot be allowed to continue in 1956; if it were, a major financial crisis would be almost inevitable. Hopes aroused by the overseas trade figures last autumn have not been fulfilled. It seemed then that the visible deficit might be stabilised around £50 million a month, but imports have since expanded

again while the trend of exports has been static, so that the deficit in each of the last two months was of the order of £70 million. In the whole year, compared with 1954, exports increased by nearly 9 percent to £3,024 million, imports by 15 percent to £3,889 million, and the deficit of £864 million was £265 million more than in 1954. The least unsatisfactory element in this position is the expansion of exports to North America—by 23 percent to £183 million in the U.S. trade and by 7 percent to £141 million in the Canadian trade. This improvement moderated the year's decline in the gold and dollar reserve, but the reserve declined nonetheless, disturbingly, by as much as \$642 million to only \$2,120 million.

There is in these figures no evidence of success in the Government's restraining policy, but the thought of what might have happened without that policy is disturbing. While inflation has not prevented exports from expanding quite well, it has drawn in a much larger quantity of goods from abroad. There is no doubt that the cost and the scarcity of credit have restrained some traders' buying for stock, yet total stocks continued to increase during at least the first three quarters of 1955. An important new index introduced by the Board of Trade shows that the value of stock and work-in-progress rose 12 percent between December 1954 and end-September 1955, whereas in the whole of 1954 the rise was about 7 percent. As the credit-squeeze did not reach full pressure until August last, later figures may show a reversal of the trend, but in the light of the upturn of imports in the last three months such a reversal seems unlikely.

Spending and Saving

Figures for personal spending have now been brought up to the third quarter of 1955. As one of the most disturbing features of the year was the rise in the cost of living, monetary expenditure continued, of course, to increase considerably. But in real terms the rate of increase in consumption has steadily declined. Taking a twelvemonth and comparing each quarter with the corresponding quarter a year earlier we have the following increases: 4th quarter 1954 6.3 percent, last quarter 1955 4.9 percent, 2nd quarter 1955 3.2 percent, 3rd quarter 1955 2.7 percent. And rough estimates suggest that in the 4th quarter of 1955 the increase over a year earlier may have disappeared entirely.

In a year when production has increased (by nearly 5 percent) and imports have increased more than exports, consumption, it can be claimed, was not excessive. It was, indeed, consumption that suffered most from the restraints. In other words, the direct restraints—control of hire-purchase and raising of purchase-tax—were more effective than the indirect restraints—higher interest rates, and the selective restriction of bank credit—which might be described as semi-direct—has been applied most severely to consumers. In real terms even the rise in wage-rates—another outstanding feature of the year—did not amount to much, being virtually annulled by the rise in prices. But it was a bad year for small saving and not, evidently, a good year for larger personal saving. Large-scale dissaving—which might occur if the rise in prices persisted—could frustrate the whole purpose of the Government's policy. On the other hand, much more restraint of consumption—when in some trade goods are already piling up—could affect production more than has been intended.

STOCK EXCHANGE COMMITTEE FIXES MINIMUM PRICES

BUSINESS ALMOST AT STANDSTILL DUE TO SETTLEMENT DIFFICULTIES

Wednesday Evening.

SETTLEMENT difficulties have curtailed all business in the share market this week. Prices have tended lower. After successive meetings the committee of the Exchange has decided to fix minimum prices for the clearing shares in order to facilitate the clearing. The following is the text of the committee's resolution passed at the special meeting held today at noon.

In view of the serious situation that has overtaken the market the Committee deems it imperative to save the situation by taking some emergency steps. It is therefore resolved that so far as the transactions in the clearing shares are concerned the following rules shall be observed by the members. Rates for clearing shares are fixed as follows:—Indian Iron Rs. 36; Burrakur Rs. 15-4; National Rs. 30-8; Orient Paper Rs. 33-8; Texmaco Rs. 20-8; Indian Copper Rs. 6-12, until otherwise fixed. All dues due at the aforesaid rates shall be paid and received as the case may be by the members concerned.

(2) All outstanding transactions shall be ipso facto carried over to the next clearing without any charges to be levied either by the seller or by the buyer until the buyer demands delivery at the above fixed clearing rates.

(3) Outstanding transactions shall be allowed to be squared up at the above mentioned fixed rates and no new transactions shall be done by the members until further notice.

(4) Any transactions done below the fixed clearing rates should be adjusted direct between the seller and the buyer at the fixed clearing rates and the clearing is to be effected according to the fixed rates.

Details of this week's limited trading follow:

The Calcutta Stock Exchange was open for trading for only one hour on Friday of last week and Monday and Tuesday of this week. Today the market was open as usual until 2-30 p.m. The suspension of deliveries has reduced fresh business to a trickle and brokers report that the few selling orders that they have been receiving during the period under review were practically impossible to execute.

The Gilt-edged section was the only steady feature in an otherwise dull market. Turnover increased as a result of the settlement of the bank strike and the return to normal in Bombay. Three percent 1986 was unaltered at Rs. 80-7 as was 3% Non-terminable Paper at Rs. 80 at which price there were buyers but few sellers. Among short-dated loans, 3% 1957 had strong buyers at Rs. 99-9 as had 3% 1958 at the higher rate of Rs. 99-8. In medium-dated loans, 3% 1959-61 were quoted at Rs. 98-3, while 2½% 1961 had strong buyers at Rs. 93-1 ex-voucher; 2½% 1960 were fully steady and the price improved from Rs. 96 to Rs. 96-2 with buyers over while 2½% 1962 was also wanted at Rs. 93-12 but again sellers were scarce and 3½% 1961 had buyers at Rs. 99-8 as had 3½% 1964 at Rs. 98-12 and 3½% 1965 at Rs. 98-9. In contrast, 3% 1963-65 had sellers at Rs. 94-10. Long-dated loans also met with good enquiry and 3% 1966-68 were marked up from Rs. 91-15 to Rs. 92-2. Three percent 1970-75 improved from Rs. 87-15 to Rs. 88-2. Provincials continued to be popular, particularly 4% issues maturing in 1964 and 1967.

Among Preference shares, a small odd lot of British India Corporation changed hands at Rs. 137 and Calcutta Tramways at Rs. 7-12. A small lot of Elgin Mills 8% Preference was crossed at Rs. 136-12. Railis were reported at Rs. 58 and an odd lot of Dalmia Cement fully-paid at Rs. 98. In Jute, only one transaction was reported in Dalhousie at Rs. 115.

In the banking and railway sections, solitary transactions were reported in United Bank of India "D" shares at Rs. 4-14 and Baraset-Basirhat at Rs. 10-10.

Very few transactions took place in cotton shares. Cawnpore Textiles were marked at Rs. 9-1, Elgin at Rs. 27-4, Kesoram at Rs. 17 and Swadeshi Cotton Preferred-Ordinary at Rs. 10. New Victoria changed hands at Rs. 1-14.

Coal shares continued to rule dull and there was a sharp contraction in the volume of business. Amalgamated and Bengal were reasonably steady at Rs. 24 and Rs. 55-7 as were Burrakur at Rs. 15. East Indian were quoted at Rs. 32-8 and Central India recovered slightly from Rs. 7-4 to Rs. 7-6. Equitable were marked at Rs. 33-14 and New Beerboom at Rs. 20-14 against a previous quotation of Rs. 21-4.

Jute was the duller section of the week and a mere handful of shares changed hands. Shares which were dealt in included Agarpara at Rs. 12-8,

Howrah at Rs. 24-14 against Rs. 25-10 and Kamarhatty "B" at Rs. 160. The reduction in the half-yearly dividend of the National Jute Company from Re. 1 to As. 12 a share brought the price down from Rs. 30-4 to Rs. 29-6. Nellimaria were transacted at Rs. 12, Northbrook at Rs. 25-14 and Nuddea were marked down from Rs. 47-8 to Rs. 45-8.

There were dealing in only two shares in the electric supply section, namely Calcutta Electric at around Rs. 13-12 and Muttra at Rs. 9-4.

Similarly, two transactions were reported in the sugar section. Durbhanga were placed at Rs. 23-3 and Rammugger at Rs. 24-6.

In the engineering section, a small lot of Burn & Co. changed hands at Rs. 318 and Indian Galvanizing were marked at Rs. 26-6. Jessop & Co., on publication of a satisfactory report, were reasonably steady at Rs. 61-12. Richardson & Cruddas were quoted at Rs. 26 at which price there were sellers. Textile Machinery came to hand at Rs. 19-15 and Kumardhubi Engineering were crossed at Rs. 11-10. A few squaring-up transactions were reported in Indian Iron & Steel at around Rs. 35-4 against the floor price of Rs. 36. The quotation in the Bombay market at 2-30 p.m. today was Rs. 32-14.

In paper, Bengal Paper were marked down from Rs. 116 to Rs. 113 and Titagur from Rs. 45-12 to Rs. 45-8. Shree Gopal receded from Rs. 18-4 to Rs. 17-12 while Orient were unchanged at Rs. 33. In cement, Ashoka were marked at Rs. 9-12 and Sone Valley at Rs. 7-11. In insurance, New Asiatic had sellers at Rs. 5-3. In shipping, India General Navigation were recorded at Rs. 126 and India Steamship were depressed at Rs. 8. Among miscellaneous industrial, Aluminium Corporation changed hands at Rs. 9-10. Angelo Brothers were offered at Rs. 23-12 as were Balmer Lawrie at Rs. 186. British Burmah Petroleum were unchanged at Rs. 4 and British India Corporation were quiet at Rs. 11-14. Calcutta Tramways receded from Rs. 17-8 to Rs. 17 and Clive Row were dealt in at Rs. 11-2. F. & C. Osler were crossed at Rs. 15, but at the close there were sellers at this price. Fraser & Co., were quoted at Rs. 14. Hindustan Motors at Rs. 8-15 and Indian Cables receded from Rs. 30-12 to Rs. 29-12. Indo-Burma Petroleum were marked back from Rs. 43-8 to Rs. 43. James Wright were quoted at Rs. 4-8 and Martin Burn were easier at Rs. 27-8 as were National Insulated Cables at Rs. 21-7. National Tobacco were fairly steady at Rs. 11-2 as were Railis India at Rs. 36-12. Rohtas Industries closed slightly lower at Rs. 22.

In the mining section, Karanpura Development were steady at Rs. 20-4 as were Burma Mines at Rs. 2-6 and Western Stockholders Investment at Re. 1 ex-dividend. Metal Corporation found buyers at the lower level of Rs. 10-14. Consolidated Tin were marked at Rs. 2-8 and Indian Copper were quoted at Rs. 6-9.

Tea shares were practically moribund in sympathy with the rest of the market, and transactions recorded numbered less than a dozen. Sungma changed hands lower at Rs. 9-7 as did Brooke Bond at Rs. 19-14. Nya Hills had sellers at Rs. 39-12 and Rs. 23-12. Tyroon had sellers at around the previous rate of Rs. 22-8. Dhelakhat were crossed at Rs. 18-8 and Tukwar were marked at around the previous rate of Rs. 13-8.

Providing Rs. 5.25 lakhs (Rs. 3.10 lakhs) for depreciation and Rs. 20.26 lakhs (Rs. 10.10 lakhs) for taxation the profit of JESSOP & COMPANY for amounted to Rs. 27.01 lakhs (Rs. 16.86 lakhs) for the year ended last October. Bringing in Rs. 2.93 lakhs there is a balance of Rs. 29.94 lakhs. Special reserve is allocated Rs. 4.75 lakhs (same) and the general reserve Rs. 9.25 lakhs (Rs. 4 lakhs). The ordinary dividend has been doubled to 30%, leaving a carry-forward of Rs. 14,000.

* * * * *

The profit of the CAWNPORE SUGAR WORKS rose by Rs. 4 lakhs to Rs. 12.41 lakhs for the year ended last October. Providing Rs. 3 lakhs (Rs. 3.25 lakhs) for depreciation, Rs. 6 lakhs (Rs. 3 lakhs) for taxation, transferring Rs. 80,000 to contingencies reserve, Rs. 4 lakhs (Rs. 5 lakhs) to rehabilitation reserve and bringing in Rs. 59,696 there is Rs. 3,87,023. The ordinary dividend is the same at 12 annas per share, leaving a carry-forward of Rs. 82,023.

The Marhowrah factory crushed 32,62,453 maunds of cane with recovery of 10.21%, and the Gauri factory 24,14,693 maunds (10.68%).

The directors say that the prospects for season 1955-56 indicate that a good cane crop will be available for the Marhowrah factory but adverse weather conditions have reduced the quantity of cane available for the Gauri factory.

The Committee will study the range of general purpose machine tools required by the various Government Departments with a view to standardising them to the most widely popular requirements. In this task the Committee will take particular note of the standardisation work already completed by the Railways. It will also suggest the machinery for laying down standards of performance and specifications for inspection of the final product in order to ensure that the product measures up to the required quality. It will re-

In the chemical industry, the Government has had an examination made as to the size of a coal-tar distillation plant. It is proposed to instal one each, at the three steel plants. It is expected that a petro-chemical industry will be located at the sites

The advance guard of the British Steel Mission, sponsored by the Indian Steel Construction Corporation and consisting of Mr. D. R. Mittal, its leader, Dr. P. F. Colclough and Mr. Ginsberg arrived here on 31st January to finalise the negotiations for setting up a one million ton steel plant at Durgapur in West Bengal. Mr. A. M. Dent also arrived on 31st January while the remaining members of the team are expected today. As reported earlier, the final offer of I.S.C.C. was received here on 16th January and the mission will now finalise the negotiations and reach an agreement. As already reported the negotiations relate to the rate of interest and mode of payment for the plant and equipment. I.S.C.C. had originally suggested a rate of interest, one percent higher to the bank rate and the repayments to commence on the date of delivery of the plant. This was unacceptable to India. India was prepared to make part payment forthwith, when its sterling balance was favourable, but wanted credit facilities for its replenishment during the second plan period. The latest British offer, although an improvement on the previous one requires further negotiations. So far as the German steel plant is concerned, the

5. Model principles for drawing up reciprocal arrangements for inter-State operation of transport vehicles.
6. The recommendations of the Taxation Enquiry Commission regarding taxes on motor vehicles.

The British Iron and Steel Board expects steel production to increase by more than 3 million ingot tons in the three years 1956 to 1958, said Mr. J. Thorneycroft, President of the Board of Trade, in the House of Commons on 26th January. With this overall figure, there would, he said, be a substantial increase in sheet capacity and some increase towards the end of the period, in plate capacity. In view of the growth of the engineering industry, and the orders recently received by the U.K. shipbuilding industry in particular, demand for steel was increasing.

Now that the detailed trade figures are available it is possible to look at 1955 as a whole and to see how the trend worked. The year's real exports of £2,905 million was 81 percent higher than 1954 and compares with an increase of 34 percent in 1954 over 1953. Most of the improvement—77 percent—was in volume and the remainder derived from a modest price-rise. The Board of Trade calculates that, allowing for the way in which shipments delayed by the October, 1954, dock strike were carried over into early 1955, the underlying rate of increase in the value of exports was much the same in both years—between 5 and 6 percent. The fear that heavy pressure in the home market might be diverting goods from exports is not borne out by these figures. The record of imports is particularly revealing. Total imports were up 12 percent in volume and

The President of the Board of Trade, Mr. Peter Thorneycroft, has agreed to meet another deputation from the cotton industry to discuss the new case, made out by the Cotton Board last year, for protecting Lancashire from cheap duty-free cloth from Hongkong and India. A date for the meeting has not yet been fixed, and what new arguments the industry has to put forward it is difficult to say, but it is obvious that it does not intend to do things as they are at present. It is possible that the fresh move stems from the fact that the statistical position is now clearer. British imports of grey cotton cloth in the first six months of 1955 were nearly 155,500,000 square yards, but the volume of the trade declined, and in the second half of the year the imports were only 113,000,000 square yards. Even with this change in the trend the total for the year exceeded that for 1954 by over 32 million square yards and that for 1953 by over 192 million square yards. There

In view of increased costs, the recent heavy fall on the London and Calcutta markets, and the proportion of the crop sold to date, the question of an interim dividend has been deferred by the following tea companies in the James Warren group: Balijan, Deamoolie, Tara, Dooma, Duamamara, Eastern Assam, Pabbojan, Rajah Alli, Rupai and Shakomato.

Bombay

UNEASY PEACE IN BOMBAY

BUSINESSMEN'S SUPPORT FOR MULTI-LINGUAL STATE

(FROM OUR BOMBAY CORRESPONDENT)

PEACE has returned to Bombay. It is, however, still an uneasy peace. The Government considered it expedient to curtail most of the customary Republic Day ceremonies. The Press Note issued in connection with the celebration stated that while the Government realised that, notwithstanding the disturbances in Bombay recently, the general public would like to celebrate the national festival with its usual warmth and enthusiasm, it considered that it would not be justified in exposing innocent women and children to the risk of violence from anti-national elements which could not altogether be eliminated, howsoever efficient the arrangements for protection might be. The Government, therefore, appealed to the citizens to restrain their enthusiasm and to spend the day quietly in a spirit of prayerful devotion to the country.

Business and industry are resuming their normal activities gradually. The transport situation has improved considerably and the outgoing and incoming trains are more or less punctual. The accumulations both at the port and at the two Railway termini are also being rapidly cleared. The uncertainty as to the future political set-up of the city and the State is however a discouraging factor for industry and commerce and until the present deadlock is resolved, it would be idle to expect any appreciable progress in these fields. There seems to be little enthusiasm for the proposal for a multi-lingual State of Maharashtra, Gujarat and Rajasthan, as has been suggested by some Congress leaders. The Maharashtrians seem determined to have a unilingual State for themselves, though it is regarded likely that Gujarat, Saurashtra, Kutch and Rajasthan might decide in favour of the merger proposal. Will such a multi-lingual State be formed without Maharashtra? In any case, the matter must await the final reply of Maharashtrian leaders to the proposal. The business community on the whole favours a multi-lingual State as indicated above, and failing that, a bi-lingual State composed of Gujarat and Rajasthan.

In the meantime, prominent business men in Western India, meeting at the Indian Merchants' Chamber last week, expressed their "profound distress and serious concern over the disturbances in the city which, besides paralysing normal trade and economic activities, brought about a general sense of insecurity in the public mind." The meeting passed a resolution calling upon the industrialists and business men of Bombay to "organise and assist in efforts for self-defence wherever necessary and possible so that the official efforts for restoring an atmosphere of confidence may be supplemented and strengthened." The meeting also recorded its appreciation of the efforts of the authorities, and in particular, the police who had acted with great restraint in dealing with the situation, and extended its full support to steps that might be necessary for restoring normal conditions.

Settlement in Cotton Case

Some breath-taking developments have taken place in the cotton trade. In the appeal filed by a member of the East India Cotton Association before the Chief Justice and Mr. Justice Dixit against Mr. Justice Coyajee's order of dismissal, on the plaintiff's move to restrain the Association and its Board of Directors from declaring an emergency in the cotton trade and fixing the ceiling price for February and May 1956 at Rs. 700 a khandi, the Court suggested a settlement on hedge contracts terms to which the parties agreed. The terms recorded by their Lordships were that the resolution under issue was declared valid but the Board of Directors agreed to meet immediately and consider under Bye-law 52(2) of the Association whether the maximum rate of Rs. 700 a khandi, fixed by the Board, should continue or whether it should be varied. In considering this, the Board would apply its own mind and exercise its own judgment. Their Lordships, in recording these settlement terms, observed that they were in the best interests of all concerned. All this however, was rendered null and void by the Government of India's action, in exercise of its powers under Sub-section(1) of Section XII of the Forward Contracts (Regulation) Act, 1952, dictating immediately two important radical changes in the bye-laws of the East India Cotton Association. The notification, which shocked the market, directed that for clauses (1) and (2) of Bye-law 52AA, the following clauses shall be substituted, namely: "(1) Whether or not prices at which cotton may be bought or sold are at any time controlled under the provision of the Essential Commodities Act, 1955, if the Forward Markets Commission is of the opinion that continuation of trading in hedge contract for any delivery or deliveries is detrimental to the interest of the trade or the public interest or to the larger interest of the economy of India and so notifies the Chairman, then notwithstanding anything to the contrary contained in these Bye-laws or in any hedge or on call contract made subject to these Bye-laws, the following provision shall take effect; (2) Every hedge contract and every call contract in so far as the cotton is uncalled thereunder or in so far as the price has not been fixed thereunder and relating to the delivery or deliveries notified under clause (1) entered into between a member and a member or between a member and a non-

member then outstanding, shall be deemed closed out at such rate, appropriate to such contract and with effect from such date as shall be fixed by the Forward Markets Commission and the provisions of clauses (3), (4) and (16) of Bye-law 52A, in so far as they apply to hedge and on call contracts, shall apply as if they formed part of this Bye-law."

In doing this, the Government not only deprived the Board of the powers to reconsider the terms of the resolution in the light of the settlement reached in the High Court, but the Government even dispensed with the conditions regarding the previous publication in respect of any amendments that might be made in the Bye-laws. It was explained that this was done, "in the interest of the trade and in the public interest." But more surprises for the cotton trade were yet to come. The Government's order was soon followed by the Forward Markets Commission's direction to the E.I.C.A. on Tuesday last that the February and May hedge contracts in cotton should be closed out with effect from the Wednesday following "in the larger interest of the economy of India." In a communication to the Chairman of the Board of Directors of the East India Cotton Association, the Commission also directed that these contracts should be deemed to be closed out at the rates of Rs. 700 a khandi for the February contract and Rs. 686-8 a khandi for the May contract, which were the closing rates respectively for these contracts at the close of business on Tuesday, 24th January, 1956.

Fresh Litigation

The matter, however, did not rest there. Just when the Board of Directors of the E.I.C.A. were about to fix the date for paying price differentials arising out of every contract under the above notification, a fresh suit was filed and a fresh notice of motion taken out by the same member of the Association to restrain the Board from giving effect to the terms of the above communication from the Forward Markets Commission. The suit came up for hearing before Mr. Justice Coyajee who issued an interim injunction. There was also another notice of motion by another member with a petition brought under clause 226 of the Constitution against the Chairman and members of the Forward Markets Commission. His Lordship admitted the petition and issued a rule on the Commission returnable on 14th March. All these developments have resulted in the closure of the cotton futures market with repercussions on other forward markets in the city. Even the ceiling of Rs. 700, originally suggested by the Forward Markets Commission to the E.I.C.A., has not been respected, and the rate for terminating outstanding business for May delivery has been fixed at Rs. 686-8 a khandi. It now appears certain that the market will remain closed until the Government allows trading in the August contract, for which terms have yet to be decided. A special committee of the Directors of the E.I.C.A. has been working for some time to finalise the new terms for the hedge contracts, but it will take time to get the terms endorsed by the Forward Markets Commission. Now that there is no outlet for hedging cotton, even the spot market here as well as in upcountry centres, has been disorganised and unduly depressed. The trade is still of the opinion that the Government's fears with regard to the supply and price position in Indian cotton are unfounded. Even though it is admitted that the crop this year will be smaller, the gap in supplies will be made up by the increased use of foreign cotton by a number of mills both in Ahmedabad and Bombay. Besides this, the trade also anticipates an appreciable reduction in the export of Indian cotton. The estimated stock at the beginning of the 1955-56 season was 980,000 bales of Indian cotton and 69,000 bales of foreign cotton with the trade, and 1,441,000 of Indian cotton and 179,000 foreign cotton with the mills. A conservative estimate of the commercial crop for the current season is 4,500,000 bales of Indian cotton, while imports during the season can be confidently placed at 650,000. This means that during the year the total available supply of cotton will be 7,822,000 bales, made up of 6,924,000 bales of indigenous cotton and 898,000 bales foreign cotton. As against this, estimated mill consumption during the season is placed at 4,300,000 bales of Indian cotton and 700,000 bales of foreign cotton, making a total of 5 million bales. Even after adding 450,000 bales of Indian cotton for export, the prospective supply position at the end of the 1955-56 season would be about 1,400,000 bales of Indian and 150,000 bales of imported cotton with the mills, and 774,000 bales of Indian and 48,000 bales of imported cotton with the trade. It is feared that any undue interference at this stage with the marketing of cotton, which is the most important commercial crop in Western India, might upset the whole economy of the region and create uncertainties about next year's sowings.

Mr. Khatau Reads the Portents

Mr. Dharamsey M. Khatau's address from the chair, to the Associated Cement Companies here last Friday discloses to the Government not only the general mood of business men but their specific reactions to major issues of policy affecting private enterprise in the country. The grounds on which Mr. Khatau based his observations were that it had become habitual with the Government to try to achieve political, economic and social progress not in a smooth and continuous manner, but by jerks. Mr. Khatau pointed out that every year, two or more major economic or political concepts were mooted and pressed bitterly often to an extreme limit, followed by hasty legislative action. Mr. Khatau believed that this had been going on since 1950 and the year which had just

closed was no exception to this. The year 1955 had begun with the proclamation of the "Socialistic pattern of society as the ultimate objective of political and economic policy". This was followed by the Fourth Amendment to the Constitution whereby it would no longer be unconstitutional to nationalise, either by acquisition or by obtaining complete physical and management control, every form of private property on payment of only such compensation as might be laid down in the particular nationalisation enactment. Then came the taxation proposals of the 1955 Budget which contained a curious mixture of measures adversely affecting individual enterprise and incentive to savings and investment, on the one hand, and affording encouragement to industrial development on the other. Not long after, followed the nationalisation of the Imperial Bank. Later, came the Indian Companies Act with its quite unjustified attack on the managing agency system, the objective apparently being to kill rather than to cure the one institution which had been most responsible for the rapid industrial advance achieved since the first world war. And finally, the nationalisation of life insurance was announced only last week.

Planning and Private Enterprise

Mr. Khatau also had some pertinent observations to make on the second five year plan. He described the plan-frame, as published originally, as no more than a jumble of ill-conceived and unattainable physical targets of production tied together with bits and pieces of loose thinking, completely ignoring such practical issues as to how they were to be achieved. Fortunately, this plan-frame had since been subjected to the most rigid scrutiny with the result that while its old name persisted, in substance the scope of the plan lay more within range of practical economies. Mr. Khatau still felt anxious about the drastic cutting down of the outlay on transport, especially railways; and the unpractical approach to the problem of resources to cover the enormous outlay of Rs. 4,800 crores in the public sector alone. Mr. Khatau feared that the inadequate recognition of transport might result in the incapacity of the transport system to cope with the increased production envisaged under the plan along with acute inflation, coupled with the crushing taxation of both income and capital. Referring to the progress and prospects of the private sector, Mr. Khatau observed that there could be no doubt that the urgent need to achieve industrial expansion along sound lines was appreciated as keenly by free enterprise as by those who spoke from the ideological or political platform. Whether it was a question of raising the general standard of living or of avoiding inflation, the sine qua non was a progressive increase in production. Towards this end, free enterprise had played its part and he was confident that it would continue to do so subject to the enormous handicaps imposed upon it even within the limited scope permitted. He pointed out that the targets set for the private sector under the first plan had generally been fulfilled and in some cases, such as cotton textiles, even exceeded. But he gave a warning that its achievement under the second plan would depend, to a large extent, on public backing as well as on the Government's wise planning and sound fiscal and political policies, on full co-operation from labour and on the uninterrupted flow of savings and investment year after year. In all these matters the most effective single factor would be the plans and the policies of the Central and State Governments in relation to financial matters generally and in regard to taxation and nationalisation in particular.

Fresh Capital Issue

Following this meeting, an extraordinary general meeting was held to decide on the issue of 6,35,928 shares of Rs. 100 each at par to the existing shareholders in the ratio of one share for every two shares held. This decision is subject to the sanction of the Controller of Capital Issues. With regard to the issue of additional capital, Mr. Khatau informed the shareholders that the company had not so far heard anything from the Government officially on its application for the issue of shares at par. At the same time, he indicated that the Government was possibly considering the question of asking the company to issue these shares at a premium. He, however, refused to express any opinion on this question and told the meeting that whether there was any justification for issuing the shares at a premium or not, the matter could be dealt with when the question actually arose. As for the concern expressed by some shareholders over the expansion programme of the company in view of the possibility of the industry being nationalised in future, Mr. Khatau stated that there was a great need for expansion because of the rising demand for cement. The company, being one of the foremost producers of cement in the country, should not neglect its duty of increasing production to meet the needs of the country.

Aid to Small Production

With a view to giving a fillip to the development of small-scale and cottage industries, the Government of Bombay has liberalised its terms of loans under the State Aid to Small-Scale and Cottage Industries Rules. The rate of interest on loans, not exceeding Rs. 50,000 has been brought down from 5 percent to 3 percent a year. For loans above Rs. 50,000, however, the normal rate of 5 percent will be charged. It has been arranged to give loans also against the securities of the value of raw materials, goods in process and stock in trade.

Uttar Pradesh

METHODS TO IMPROVE CANE CULTIVATION DISCUSSED

INCREASE IN ACREAGE PROPOSED UNDER NEW PLAN

(FROM OUR LUCKNOW CORRESPONDENT)

THE visit to Lucknow by some delegates of the International Sugarcane Technologists Association was used by the Government to discuss methods of improving sugarcane cultivation in the State. Mr. N. J. King, Director of the Sugar Experiment Bureau, Brisbane, thought that with greater attention to the varieties suitable for different areas, correct fertilising and improved pest control, it should be possible for the State to reap high dividends in a short time. The average yield in Uttar Pradesh during the five years from 1941-42 was 13.7 tons an acre. In the next quinquennium it dropped to 13.2 tons. Efforts are now being made to arrest this trend and the crop competitions, for which prizes were distributed by the Chief Minister, showed that U.P. can do it. The first prize went to a cultivator who produced 1.763 maunds of cane an acre in 1954. The second was awarded to another with 1,630 maunds an acre.

The Centre has asked the State Government to produce 40 million tons of cane, which is equal to 52 percent of the all-India target of 77 million tons fixed in the second plan. In 1954-55 the State produced 28.34 million tons, which means that an additional output of 11.66 million tons is necessary to fulfil the State quota at the end of the plan period. Speaking at the prize-giving ceremony, the Planning Minister, Mr. C. B. Gupta, said that it was proposed to achieve this target partly by extending the area under sugarcane and partly by mechanised cultivation. Cane zones for factories would be allotted for longer periods so that mills may take more interest in the development

of their respective zones. It was proposed to launch an intensive experiment for the development of cane areas in the neighbourhood of factories and to increase the acreage from the present figure of 300,000 to 1,100,000 by 1960-61. The total cost of this and other schemes to develop non-reserved areas as well was estimated at about Rs. 8½ crores. The cost would be met mostly by the State Government and the Centre, and partly by local contributions. The great leeway which the State has to make up is evident from the fact that U.P.'s share of the total output of cane in the country fell from 63 percent in 1932 to 50.2 percent last year.

It is proposed to establish four co-operative sugar mills in the State during the second plan period. There are at present 72 sugar mills in the State with a total crushing capacity of 67,484 tons a day. The co-operative factories, it is stated, will benefit nearly nine million kisan families. The U.P. Molasses Control (Amendment) Bill passed by the Legislature early last month provides for the establishment of a Molasses Board to advise the Government on matters relating to the grading and marketing of molasses, the prices at which they should be sold, allocations for distilleries and other purposes. During 1954-55, 6.17 million tons of molasses were produced, mostly in U.P.

Resolution on Abolishing Capitalism

While the State Government has officially been offering inducements to private capital seeking domicile in Uttar Pradesh, the State Legislative Council has adopted a resolution moved by a Congress member urging that "the abolition of capitalism in all its forms is necessary for the well-being of society." The resolution recommends that the Government take steps at once to "bring about socialisation of the principal means of production, exchange and distribution." An amendment moved by the Leader of the Opposition, who is a former zamindar, to delete the words "in all its forms" and to substitute it by "as far as possible" was rejected. His effort to insert a stipulation,

namely, "without impairing efficiency in production", was also rejected. The course of the debate was naturally outlined by the socialistic pattern of society to which the Congress is committed, but one Congress member defied the Party Whip by denouncing the concept. He said that the Congress movement would not have succeeded without the support of Indian capitalists.

Sample Survey on Prohibition

Though statistics, especially on prohibition, are unreliable, the results of a sample survey conducted by the State Excise Department in the 11 dry districts of Uttar Pradesh indicate that progress has been poor. Thirty-nine percent of those who formerly drank have become teetotallers, but, says the official report, 60 percent have not given up the habit and 1 percent are not worried either way by the problem. Forty-eight percent admit that their financial position has improved, 46 percent say that there has been no change for better or worse, and 6 percent believe that it has deteriorated. 48 percent are now spending less on drink, 17 percent are spending more and 35 percent almost as much as before. The debts of 57 percent have decreased, but in the case of 23 percent they have increased. They are unchanged for 20 percent. At the time prohibition was introduced, only 32 percent of the addicts were in favour, sixty-three percent were against it and 5 percent did not express any opinion. It is now claimed that 67 percent are in favour of prohibition, although this does not tally with the other finding that 60 percent continue to drink as before in spite of many years of experiment.

Bonus Award in B.I.C. Concerns

The State Industrial Tribunal, Allahabad, has pronounced judgment awarding a total bonus of Rs. 6,42,312 to the workmen of the Kanpur Cotton Mill branch, the Kanpur Woollen Mill branch, the Cooper Allen and Company branch and the North West Tannery branch of the British India Corporation Ltd for 1954.

Reach any city in India by midday tomorrow

Luxurious new *Skymaster* night service connects 5 cities — gives choice of 34 morning flights onwards

SAVE precious time and unnecessary expenditure on the way — fly overnight by new, luxurious Skymaster service, connecting Bombay, Delhi, Calcutta, Nagpur and Madras.

The new service cuts out irritating overnight stops, lands you in time for breakfast — and it is carefully scheduled to connect with 34 morning flights from the five big airports. So by midday tomorrow you can reach almost any important town in India!

Wherever you want to go, whichever flight you choose — Skymaster service makes sure you get there in time! And you have complimentary meals, free travel to and from airport, everything. No extras to pay.

"CAPITAL" INDEX OF INDIAN INDUSTRIAL ACTIVITY **

The Capital Index of Indian Industrial Activity (Base: 1935) has now been brought up to July, 1955. Compared with the preceding month there were increases in cotton consumption 6.0 points, pig iron 34.1 points, cement 14.8 points, paper 13.8

points, coal 0.4 points and wagons loaded 6.8 points, while decreases occurred in jute manufactures 9.0 points, steel ingots 5.3 points, and electricity 0.9 points.

The index for cheque clearances rose by 1.8

points, while that for notes in circulation dropped by 4.8 points. Combining all the factors the Capital index of Indian Industrial Activity advanced by 7.4 points, during July, 1955.

Jute

GRADUAL DECLINE IN JUTE GOODS PRICES

FIBRE FIRM IN THIN TRADING: UPCOUNTRY ADVICES PUSHING UP LOCAL RATES

THE jute goods market has shown a gradual decline during the past week following the decision to unseal more looms later this month. The fall has been aided by the general tendency of buyers, both local and overseas, to wait and see what the outcome of the first unsealing of looms will be. Consequently, with no business on the market, prices have been started. Enquiries which were supposed to come from overseas eventually have not yet arrived. It is obvious that with the fatka markets closed, operators are unable to sway prices as they did previously. A factor which has played a prominent part in the present situation is the fairly heavy selling pressure from mills, who are anxious to dispose of their excess balances resulting from the increases in production before the price falls too low. Most of these balances are for forward shipment; and as this section of the market is considerably more attractive than the near positions, competition has been keen, although very few buyers could be found.

The premium of forward shipment goods over near deliveries has been well maintained in both sacking and hessian at about Rs. 10 a ton. Although this is not particularly large, it is of some significance when related to the raw material, which shows no alteration between ready and forward shipment. Thus, it is equivalent to gaining about 8 annas a maund on jute. It is also a complete reversal of the conditions prevailing at the beginning of the year when April-June shipment goods were at a discount of nearly Rs. 25 a ton on the near positions. It is interesting to note that the price of April-June shipment jute goods today is substantially the same as it was at the beginning of the year, but near delivery goods have dropped nearly Rs. 30 a ton. Considering that raw jute rates over the same period have risen by about Rs. 40 a ton (Rs. 1-8 a maund), it is not surprising that mills are showing no interest in the near positions. Their interest in forward shipment indicates an expectation of lower prices when the full weight of the increased production makes itself felt.

As mills have had difficulty in selling their products there has been little hope of large-scale business in raw jute. Apart from this, manufacturers are more concerned to see some of their previous bulk purchases delivered before contracting for more. In spite of this lack of interest on the part of mills, fibre has ruled fairly steady throughout the week. Prices varied on occasions in sympathy with the weaker goods market, but raw jute tended to move independently and towards the close gained strength from the very steady upcountry markets. In the absence of business, however, prices in general could be regarded as nominal, but it was not thought likely that sellers would meet mills' ideas if they came into the market. This was clearly demonstrated when one or two buyers had difficulty in procuring their requirements of low assortment jute, even though they were willing to pay full market rates. Other buyers found it virtually impossible to buy anything below the quoted prices. The steadiness in the upcountry markets is due almost entirely to the shortage of imports, which for this time of the year are very small indeed. Operators are also aware that large-scale covering has still to be done against last week's heavy sales to mills, so stocks are being held against a possible rise in prices when demand is at its height.

THE JUTE MARKETS

Manufactured Goods: The market did not open until Friday due to the Republic Day holiday on Thursday. Conditions at the opening were depressed on account of the absence of fresh business either in the local or the overseas markets. Heavy goods prices slumped by about Rs. 1-4 or Rs. 1-8, bringing B Twills down to Rs. 112-4 a 100 bags for ready shipment and Rs. 113-8 for April-June shipment. Hessian followed a similar pattern, and prices continued to decline in the absence of enquiries and by Saturday morning sacking had lost 8 or 12 annas and hessian 2 annas. Over the week-end, rumours of good overseas enquiries lifted rates. This, coupled with small local shipper covering at the lower levels, tended to steady the market, and by Monday the losses were partially recouped. The advance was not maintained when business failed to materialise, and rates fell to former levels. Tuesday's quotations were based on B Twills at Rs. 111-4 for ready shipment, with forward shipment at a premium of Rs. 1-8. In hessian, ready 40in. 10oz. fell to Rs. 40-4 with April-June shipment 5 annas higher. These rates in both sections were the lowest recorded so far this year. Dull conditions continued to prevail throughout the day and only minor fluctuations were recorded, but towards evening some confidence returned to the market on reports of business with Burma and Russia. At the opening on Wednesday morning,

ing, quotations had advanced Rs. 1 in heavy goods and 4 annas in hessian and were based on the following:

	Ready Rs.	February Rs.	March Rs.	Apr.-June Rs.
40in. 8oz.	33-2	33-2	33-2	33
40in. 10oz.	40-8	40-12	40-14	40-14
B Twills	112-4	113	113-8	113-12
Heavy Cees (Plain)	111	112-8	113	113-4
A Twills	140-8	140	139-8	138-8
Liverpools	129-8	130	130	128-8
Cornacks	113-12	114-8	115-4	115-8

Raw Jute: Activity in fibre was restricted during the current week, as the disparity in rates between jute and gunnies gradually widened. Mills displayed practically no buying interest, but, contrary to the general procedure, this did not bring about any large-scale reductions. The main price movements were in sympathy with the goods market, but the depressed conditions there eventually failed to hold back jute. After initial losses were recorded, prices regained strength and steadier conditions prevailed. This was mainly due to the firm upcountry markets, where imports were negligible for the time of the year, and where stockists and sellers were determined to get higher prices. Business was at a standstill as agency prices were well above the parity of those quoted to Calcutta mills even if the latter had been willing to pay full market rates.

Prices at the opening after the holiday on Thursday were slightly lower than last week, and Upper Assam jute was quoted at Rs. 29-8 a maund basis Bottoms. No enquiries were received at this level. In the absence of business, and in sympathy with the rapidly falling goods market, rates dropped Re. 1 a maund by Saturday morning. The fall was arrested by the firmness of upcountry reports, and prices rose over the week-end to Rs. 29 a maund for all Northern, Dhubri and Assam agencies. Steady conditions prevailed in spite of the weak gunny section, and the market developed a rising tendency, but in the absence of any mill interest prices showed no alteration.

Only small business was reported over the week, the main transactions being in Dhubri and good Northern Agencies at Rs. 28-8 to Rs. 29 a maund basis Bottoms for February-March shipment. Small lots of Upper Assam jute were also done at the same price and shipment, and Cuttack jute at Rs. 29-8 to Rs. 30 a maund basis Bottoms, with Mid-dies only at Rs. 32 and Rs. 32-8. Daissee Mesta was done at Rs. 27 a maund and jungli Mesta at Rs. 25-8 to Rs. 26 a maund.

At the close the market is very steady following small business on Tuesday. Opening quotations on Wednesday morning were as follows:

Indian Jute :	Landed at Mills Rs. a md. basis Bottoms	Shipment
Lower Assam	30	

THE FOREIGN JUTE MARKETS

FIRM UNDERTONE

(FROM OUR DUNDEE CORRESPONDENT)

RAW jute prices have fluctuated a little lately, but the firm undertone, with some shippers raising their terms, keeps buyers of yarns and cloth on tenterhooks. Generally speaking, buyers are fairly comfortably bought over the next two to three months and they are not keen to go any distance ahead in the case of the ordinary spins of yarns and makes of cloth. Narrow sackings and tarpaulins are an outstanding exception and makers of these are already taking orders for October at the present firm prices. Shippers are quoting anything from £97 to £100 for Mill Firsts, after £95 being possible at the end of last week, with Mill Lightnings at £85 to £88 10s and Mill Hearts £76 to £78, after £84 and £74 possible about a week ago. Freight rates will be going up by 18s 6d a ton from 9th March, and there are rumours that Pakistan will add £1 to the minimum prices to cover this. Spinners are waiting in the hope that the extra freight will be absorbed into the minimum prices. Some secured lots are being offered on the market here at 10s to 20s less than the market limits, such as Mill Lightnings of decent quality at £84 10s and Mill Firsts at £96, c/c U.K. Calcutta goods are easing off to some extent this week, down to 61s 9d being quoted for January 10 oz. 40in. and 62s 9d February-June, with 71 oz. at 46s 9d January-June, and "B" twills 171s 9d, January, 172s 6d February-March and 173s 3d April-June, all f.o.b. Calcutta.

The Board of Trade, through the Jute Control, made a trading profit of £3,312,849 on jute and jute goods during the year to 31st March, 1955, an increase of £137,249 over the previous year. On 15th July, 1954, private trading in raw jute was restored to spinners, and the 12 months' transactions were largely concerned with liquidating stocks and outstanding contracts. Trading in jute goods is still carried on by the Jute Control, the sole buyers of imported cloth and bags. Purchases for the year to 31st March last were valued at £13,350,594, against £22,143,300 for the previous year. These were mostly from India, of course. Stocks at 31st March were £3,342,165, against £10,682,344 a year previously. Sales during the year brought in £24,168,243, against £25,366,892.

NO CHANGE IN TEA DUTY

The Government of India has issued a notification stating the price of tea, for the purpose of determining the export duty, at Rs. 2-14-1 a lb. against Rs. 3-1-5 a lb. which has operated from 1st January, 1956. There is no change in the existing rate of duty of 6 annas a lb.

Plantation Topics

COLOMBO RUBBER PRICES

The following prices have been issued by the Rubber Board of India from the weekly market report published by the Colombo Brokers' Association:

	Closing prices on 20-1-1956 (Rupees a lb.)	Average for the period (Rupees a lb.)
Sheet:		
No. 1	1.51	1.51
No. 2	1.48	1.48
No. 3	1.45	1.45
No. 4	1.21	1.21
No. 5	1.16	1.16
Sheet Cuttings 1	1.12	1.12
Sheet Cuttings 2	1.07	1.07
Crape:		
Water White	—	—
R.M.A. No. 1X	1.35/36	1.391
R.M.A. No. 1	1.34/35	1.381
Crape No. 2	—	1.371
Crape No. 3	—	1.33
Scrap Cresses:		
Sc. Crape No. 1	1.10 Nom.	1.151
Sc. Crape No. 2	92/100	1.051
Sc. Crape No. 3	88/92	971
Flat Bark	80/85	891
Sc. Crape 3X	—	1.01

To arrive at f.o.b. Colombo prices add 49.4 cents a lb in respect of rubber other than scrap crape and 31.4 cents in respect of scrap crape to the above market prices.

COCHIN TEA SALES

At Sale No. 3, the 1,000,000 lbs. of tea on offer met with a strong general demand. Low and Medium Broken were fully firm, and Fannings were 2 to 3 annas dearer. Brighter liquoring mediums of improved quality were 3 to 4 annas dearer. Best liquoring High-grown were rather irregular and sometimes easier. Black leaf Middle East Fannings met with a keen enquiry. Whole Leaf types were 2 annas dearer.

ALL-INDIA TEA ASSOCIATION FORMED

With a view to promote and protect the common interests of indigenous tea planters and to foster trade, commerce and industry connected with tea, an all-India Association called the Tea Association of India was formed on Friday, 27th January, 1956. The Association will provide, in addition, facilities for representing the case of its members before tribunals and other public bodies, and facilities for research. Membership has been thrown open to all tea estates and tea gardens. The office of the Association is located in the India Exchange, Calcutta-1.

Commodity Markets

WHOLESALE PRICES INDEX MOVES UP

THE official wholesale price index (base: year ended August, 1939=100) advanced by 0.1 percent to 376.1 during the week ended 14th January, 1956 as compared with 375.8 for the previous week. The index was higher by 2.4 and 2.8 percent respectively when compared with the corresponding weeks of the previous month and a year ago. The index for Food Articles rose by 0.8 percent to 333.8 as a result of increases in the prices of jowar (1.6%), wheat at Hapur (+4.7%) and at Amritsar (1.1%), tea for internal consumption and gram (+3.3% each), and gur at Mazaffarnagar and sugar (+1.1% each) despite a decline in the prices of wheat at Jabalpur (-8.1%) and dal arhar (-2.1%). A decline in the prices of manganese ore (average export prices) (-19%), rapeseed at Kanpur (-5.1%), raw wool in Bombay, copra and lac (-4.4% each), raw cowhides at Kanpur (-3.1%), gingellyseed at Jhansi and rapeseed in Calcutta (-2.1% each) and cottonseed in Bombay (-1.1%) brought down the index for Industrial Raw Materials by 0.5 percent to 455.2 as compared with 457.4 (revised) for the previous week although the prices of raw silk (+3.1%), Bengal Cotton and rapeseed in Bombay (+2.2% each) and groundnuts, linseed and raw buffalo hides (+1.1% each) were marked up. The index for Semi-Manufactures advanced by 0.1 percent to 352.4 as compared with 351.9 (revised) for the previous week. Items which showed significant variations were: Cowhides (+6.1%), castor oil and gingelly oil (1.5% each), coir yarn-Anjengo Superior (1.2%) and goatskins, coconut oil, mustard oil and zinc (-2.2% each). The index for Manufactures stood at 375.8 as compared with 375.6 for the previous week, there was a slight rise in the prices of jute manufactures. A fall of 1.9 percent to 538.4 in the index for the Miscellaneous group was brought about by a decline in the prices of tobacco in Calcutta and betelnuts at Bangalore (-4.4% each) and black Pepper at Cochin (-1.1%), prices of chillies at Patna (+4.1%) and cashewnuts at Quilon (+3.1%), however, recorded advances.

INDEX NUMBERS BY GROUPS AND SUB-GROUPS (Base Year ended August 1939=100)

Groups and Sub-Groups	14-1-56	7-1-56	17-12-55	15-1-55

BAN ON EXPORT OF WHEAT PRODUCTS

The Government of India has reviewed the policy regarding the export of wheat products (atta, maida, sooji and rawa) and in view of the rising trend of wheat prices, it has been decided to ban export of these wheat products outside India with immediate effect.

THE POWER OF ADVERTISING

HOW TO SELL YOUR PRODUCTS

(By R. K. Swamy)

WHILE on a journey in 1950, Philip Wrigley, Jr., Chairman of the Wrigley Company is said to have engaged in a conversation with a chance acquaintance. The other man asked Wrigley why, when their chewing gum was the best in the world, they did not stop advertising and save the money. "How fast," asked Wrigley, "did the conductor tell us this train is going?" "About 80 miles an hour," "Hm-m-m," observed Wrigley. "That momentum should carry us onward quite a few miles. Let's demand that the locomotive be unhooked from this train. That would save this railroad—which I am a stockholder—a lot of money".

This philosophy seems to pervade most American business today. For, though Wrigleys are among the top \$224 million advertisers, their combined share of the entire outlay on advertising in the United States is only 12.4 percent. The annual advertising bill is around 7,000 million dollars, which, in the rupee equivalent is one-and-a-half times the amount we spent over five years in implementing our first five year plan. Wrigleys alone spend over \$5 million a year on advertising, which is about equal to the entire advertising business placed by 34 organised advertising agencies in India. The significance of these figures is not so much in showing up how little advertising is used in India. What is of greater interest is the attitude displayed towards advertising by successful businessmen in the West.

Wrigley likens his advertising to a locomotive that keeps his business moving. Why does he think that advertising is the motive force of his business? What difference does advertising really make even to an established business? From what follows we shall see the wisdom of Wrigley's reasoning even for your business. The product you make is to you like your own child. You do everything in your power to see that only the best things go into its making, be it in plant and machinery, raw materials, skilled technicians, manual labour, design or physical finish. You know very well that it has to stand the test of competition to grow up into a leader in its class. To this end, you nearly stake your all. The risk you face is not merely in your financial investment; your own honest endeavour to succeed in life, your prestige and the welfare of those who work with you (and their families) are all inextricably linked with it. It is therefore important to you that your product must succeed in gaining public acceptance in a big way. You soon realise, however, that the factors you have to deal with in marketing are not as easily amenable to your wishes as are the factors of production.

People Don't Buy Products

Although the product you offer may serve a basic human need, you'll find that people are not immediately interested in it. Maybe you wonder why? Let's take an example. When Gopal grows up he finds thin hair sprouting out on his chin, upper and lower lips. He knows that growing a beard is not in fashion today, and he soon feels the need to get rid of it. But he doesn't decide to shave it off immediately. In his day to day contacts with other people he slowly begins to feel that his face looks ugly with those patches of unwanted hair, and that he would do well without them. Finally, the day arrives when he decides to shave. The need long felt has at last culminated in an active want. Now he has his preferences on how best he will have it done. Never having shaved before, Gopal is scared to attempt self-shaving. The first few times he has himself shaved by his barber, or at a nearby hairdressing saloon. When it becomes a daily necessity he again begins to choose between a razor, different razor blades or any other gadget he has known by then. Or he may be quite content to follow what his father (or anyone else he chooses to emulate) does. This example is typical of how every act of consumption takes place though the time-lag may vary according to the nature of the want satisfied.

The facts are:

1. People do not buy products just because they have money. Nor do they buy because they happen to like some products. They buy things only when they have some urgent problems to solve; active wants they must satisfy for their own good.
2. People are not interested in products; they are only interested in what those products will do for them. Men do not buy razor blades; they buy close comfortable shaves. Women do not buy cosmetics; they buy glamour.
3. There are several different products available to satisfy every human want. In the above instance, the choice ranged from a barber to the latest model of an electric shaver, and indeed, there are several kinds of each of them.
4. The customer's choice at any particular time is guided entirely by what is good for him at the time he is in the market to buy.
5. The customer plays safe. He either depends on his own experience or on the experience of the people he trusts.

In other words, even as you are intensely interested in your product, your customers are only interested in what is good for them. The quantity you can sell of your product, therefore, is at any time equal only to the wants of the number of people who may actively desire it. This means

that you have to seek out your customers even as they select your product from among your competitors. You could do this if you were dealing with them directly but normally you do not. Consequently, you do not know who they are, what they do and how they live. You wouldn't know if you gained a new customer, or lost one. Maybe some buy twice a month or some once in six months. You would have no chance to know why they act that way. You are entirely dependent on the indents you get from your channels of distribution. The dealers and retailers, in turn, are guided in their purchases on the quantities they have been selling or are, in their opinion, likely to sell. This surely is no adequate method through which to expect a stable business. What is worse, some fundamental facts about people show that you cannot expect steady custom from a set group of people over a period of years.

People Change Constantly

With our average life expectancy at no more than 30 years you no doubt expect to face a new set of people in every cycle of 30 years. But the change does not occur over such definite blocks of periods; it happens every day. We have 38 percent of our population under 15 years, 33 percent between 15 and 34, 21 percent between 35 and 54, and 8 percent above 55. Year after year the people in these age-groups grow from one station in their life to another, and with it their wants and desires change. The outlook of a boy in school will not be the same when he reaches college or enters a career. The needs of a girl in her teens are incompatible with her wants as a newly married bride, and later as a mother. The word "insurance" to a married youth means something different from what it meant to him while at college. The hopes and aspirations of men at 30 centre on themselves; at 50 these turn on their children.

With every turn of a generation you not only face new people, you deal with a new kind of people. The new need not necessarily prefer the same products or have the same habits as did his father. The father might have been content with a home-made tooth powder. The son may start off with a tooth-brush and toothpaste. A married daughter may accept modern methods of dressing and beauty-aids undreamt of by her mother. A South Indian boy today starts off with short pants, shirt, underthings, footwear and stockings, not so common until a few years ago. Such changes are evident in every walk of life. Age-long habits are slowly changing yielding place to new ideas, new values in life, tending to forge a new way of living itself. In a word, as people grow up your sales organisation is constantly facing a changing market for your product in the same communities in which you are selling today.

Major Shifts in Population Occur

Due to a variety of socio-economic trends people keep on moving from their ancient moorings. Major shifts in population have occurred, resulting in some manufacturers losing customers in some places, and gaining new ones in others. There are in India today 23 more cities with a population of 100,000 and over than there were in 1941. The increase in urban population between 1941 and 1951, was 42 percent. These shifts are slowly breaking up large joint-family households; nearly 80 percent of our families in cities and towns today are natural families consisting of father, mother and their children. Families in urban areas are also tending to be small, with no more than three children in 40 percent of the families. You may well imagine the new power the housewife has gained in these modern natural family households, and the influence she will wield in the choice of your product. And also reflect how much her family will be affected in its habits and preferences by conditions obtaining in her new environment.

Although 70 percent of our population continues to be engaged in agriculture, the changes in employment patterns in the last 25 years are significant. People engaged in commerce, transport, manufacturing industries and other services have more than trebled. This trend is going to be perceptibly improved, with the successful implementation of the two five-year plans, by 1960. All this is going to change the hopes, aspirations, social values and material needs of our people to a degree unthought of a generation ago. And they will now have the means also to fulfil their new-found wants.

How Advertising Helps

The problems we have now seen in your approach to consumers can all be greatly assisted and solved by careful planning and intelligent use of the techniques of modern methods of mass communication, popularly called ADVERTISING. Advertising could have helped to persuade Gopal (in our example above) how desirable it was for him to commence shaving early, and how a brand-new product could have solved his problem in an easy, comfortable and hygienic way. It could have built up his confidence in getting rid of his problem early, and the time-lag in a long-felt need culminating in an active want would have been greatly reduced. Advertising could have made him "want" to shave.

Similarly, the acceptance of new ideas and habits can be accelerated if advertising is employed to persuade people on how these new trends will help them to improve their lot. It is the function of advertising to open up voluntary communication with your current and potential customers as a substitute for personal selling. In dealing with your customers advertising is the only element which is entirely controllable, and can be used effectively to promote business. Advertising will serve to seek out people in need of

your product, or make them want it. It will give them your message when and where they are in a mood to receive it. It will demonstrate the use of the product, and leave in their minds a good, friendly impression about it. Your current customers will feel elated on seeing your message and will be proud of the wise decision they have made in choosing your product. The others will be exposed to the need of it and will feel invited to try it.

The message, often repeated, makes people conscious of your brand, and they soon begin to recognise it. This familiarity results in the belief that the product is good, and is one worth trying. In time, this conviction leads people to use the product, and if it is found desirable they will stay your customers. Advertising thus builds a "quasi-monopoly" for your product in its brand personality, and in what people come to associate with it. It makes people want your product, and a strong consumer preference develops in due course. Once this happens you become more and more independent of your dealers and retailers in their control of your business; on the other hand, they begin to take courage in stocking your product, and a stable business follows.

Continuity Essential

It is well to remember that the success of a product does not depend entirely on how good it is; the extent of consumer acceptance it will achieve is entirely dependent on the measure of people's knowledge of it. This knowledge results from a combination of various factors: word of mouth advertising, spread of product use from one customer to another by a process of emulation and habit, product advertising in all its forms, and measure of satisfaction with the product among the current users.

So far as you can help it advertising is the only force left to you that you can regulate to your advantage. Therefore, occasional one-shot advertising will not do. The purpose of advertising may be to hold your current customers, secure new ones, or any other reason that your marketing picture may indicate. It is best to define the job advertising will be expected to do, plan for it in one, three or five-year periods, produce it carefully in answer to your needs and place it in the appropriate media. That is a good way to forestall competition and to cultivate and persuade people to keep using your product frequently. If advertising is to do its part it must be used continuously and consistently.

Press Advertising

The most organised and readily accessible advertising medium in India is the newspaper. It is also the primary medium of information for people in every community. This makes it an article in daily trade and people buy it regularly as a matter of habit. They spend at least Rs. 2 a month in maintaining this habit, which makes them ready prospects for your product too. Every newspaper reader is a kind of leader in his home; in the smaller towns and villages he is a leader in his community. He is expected to be a wide-awake person interested in world affairs, and is therefore looked upon by the people around him for guidance and assistance in their day-to-day life. The way he lives and what he does become a standard for others to follow.

The newspaper appears daily, with fresh news, and it is avidly read. Its readership is mostly among men who are the bread-winners; people who decide how the available money will be spent. You can appeal to their reason, and if you have a good case why your product should be bought you are most likely to succeed. The total circulation of daily newspapers in India, as reported by the Press Commission, is around 25,00,000. The figure is certainly not impressive considering the size and population of our country. But as an advertiser you are interested in reaching people who can be induced to use your product. Unless you are in the market to sell automobiles or refrigerators, there is not much waste coverage for you in this medium.

Newspapers are published in all the leading languages of India, and every paper offers you coverage in a limited area. Except for a few big English dailies (which offer exceedingly valuable coverage), most newspapers circulate in their linguistic areas which do not extend beyond a few districts. You therefore get a highly localised coverage which is a great advantage if you wish to concentrate on smaller areas and build up your business before spreading out nationally. If you have something to announce, there isn't a faster medium available in India today than newspapers to carry your message to your prospects within 24 hours. In consequence you can expect fast action from your patrons. Witness the response to a "Sale" advertisement even before the shop opens; see the length of the queues lining up following the announcement of a new movie in the morning newspapers.

Finally, you have the advantage of presenting your message to the same people over and over again. This truly makes advertising in newspapers a real investment; investment in cultivating a class of people who will be your customers year after year. No wonder then that even in America the daily newspaper still remains the most used advertising medium. But press advertising alone is not enough. The dynamic forces that we have to contend with in marketing cannot be countered by any one medium. In a planned advertising programme, therefore, newspapers could be the spearhead of attack, but there are several other valuable media which must be used to do a thorough selling job. Any well-equipped advertising agency will tell you why.

Calcutta Markets

LESS GENERAL DEMAND AT TEA EXPORT SALE

IRREGULAR TREND IN DUSTS

AT Sale No. 33, held on 30th and 31st January, there were 64,800 chests on offer at the Export auction. Demand was less general and a quieter tone prevailed. All Fannings, particularly black Assam O.F.s, with a few tips, were in strong demand and were the strongest feature. CTCs, teas met with good support and sold generally at dearer rates. Commonest and common broken teas met with less demand and were 1 to 1 anna easier, as were medium Assam B.O.P.s. Stylish whole leaf grades were in fair competition but there was less demand for the more ordinary kinds. Darjeelings with any flavour were fairly well supported.

Quotations		1955	1956
lean Black Pekoe	2 0 0	Rs.	3 11 0
lain B.P.	1 7 6		3 9 6 to 3 10 0
edium Assam B.P.	1 10 0		3 11 6 to 3 12 0
est CTC Assam B.P.	2 3 to 2 5 0		

At the Internal Sale, 20,600 chests of Dusts were a offer. There was a fair general demand. Black af teas suitable for the Middle East were in raf demand and were the best feature. Teas ith useful liquors from all districts were fully rth and occasionally dearer, but the remaining fterings were an irregular half to one anna be- w last rates, except for selected lots of CTC ssams which were one to two annas dearer. The oorer CTCs showed a decline of one to two annas.

Quotations		1955	1956
edium Donors Dust	1 7 6	Rs.	2 11 0
edium Assam Grainy			
Dust	1 8 6 to 1 9 0		2 12 0
est Assam CTC Dust	2 4 0 to 2 6 0		3 9 0 to 3 1 0

There were 2,200 packages of Leaf on offer, hich met with a fair demand at slightly easier ates. Fannings grades were the strongest feature. ew lines of Green Tea were on offer and they et with only limited support.

FREIGHT MARKET QUIET

RATHER quiet conditions prevailed in most markets and chartering was on a modest scale. n the Indian ore trade, a 5,000 tonner was fixed rom Port Redi to Hamburg at 13 7s 6d f.i.o. for pril loading and Vizagapatam-U.S.N.H. paid the igher rate of \$45.18 for April. Mormugao-lapan was done at 102s 9d f.i.o. and Mormugao-rieste at 84s f.i.o. The Australian dock strike as curtailed activity in that market but the Pacific market has brightened and fixtures were concluded or the Continent at \$45.17 and to the U.K. at 170s. In the time charter sector, the Shahzada s reported fixed at 38s for 6 to 8 months' local rading which appears a cheap rate for a handy sized ship. There are also unconfirmed reports of the fixture of a 1920-built 3,000 tonner at 46s for 3 months India-Japan trading which seems about 8s above Wednesday's market. A handy-sized motorship obtained 51s 6d for a trip to Japan via Mormugao with delivery Persian Gulf in April. A rather interesting unofficial statement was issued in Rome recently, during the visit of the Italian Foreign Minister to New Delhi, to the effect that Indian and Italian lines would be afforded special facilities at Indian and Indian ports respectively. It is difficult to see how this will be accomplished without creating a certain amount of chaos.

LINSEED

The advance of the past few weeks continued and the existing bullish tendency was maintained owing to shortage of seeds and a strong buying interest for linseed oil from abroad. Supplies of seeds uncountry were extremely poor with old crop goods almost exhausted; ready goods were at a premium whilst new crop delivery was changing hands at increased levels. Crushers were cautious and did little fresh business in oil with past commitments still in hand. A keen overseas demand for linseed oil was maintained with prices touch- ing new high levels at £132 for ready and £128 for April-May shipment. Latest quotations were as follows: February Rs. 24-12 a maund; April-May Rs. 21-12 a maund.

HIDES AND SKINS

The market ruled dull. Stocks were higher than in the previous week.

Bazaar Sale

The other terms and conditions mentioned in the Announcement dated 16th January, 1956 remain the same.

HOLMES WILSON & CO. LTD.,
Managing Agents.

Dated
28th January, 1956.

THE BENGAL POTTERIES LIMITED.

NOTICE.

To
The Shareholders.

Please take notice that a General Meeting of the Company will be held on Saturday, the 18th day of February, 1956, at 3-30 P.M. at the Registered Office of the Company at No. 45, Tangra Road, Calcutta, to consider and if thought fit to pass the undermentioned Resolution, with or without modification:—

“RESOLVED that the Capital of the Company be increased to Rupees One Crore by creation of 27,03,115 new shares of Rs. 2/8/- each ranking for dividends and in all respects pari passu with the existing shares in the Company, and that out of the said 27,03,115 new shares, or so much thereof, which the Directors may decide to issue at par, for subscription, with the permission of the Controller of Capital Issues, 1,00,000 shares of the face value of Rs. 2/8/- each in the first instance, be issued to Mr. M. G. Bhagat (or his nominee or nominees) of No. 11, Rawdon Street, Calcutta, for consideration, payable in cash and thereafter, after the balance of the issue remaining after allotting the said 1,00,000 shares to Mr. M. G. Bhagat (or his nominee or nominees) as aforesaid, be offered to the existing members of the Company, as nearly as circumstances admit, in proportion to the existing shares held by each member of the Company as on the date of the issue.”

By Order of the Board of Directors,
BHARAT RAM BHAGAT & CO.,
Managing Agents.

45, Tangra Road,
Calcutta-15.
Dated the 25th January, 1956.

THE SOUTH KARANPURA COAL COMPANY LIMITED

NOTICE is hereby given that the Sixty-sixth Ordinary General Meeting of the Shareholders will be held at the Registered Office of the Company, Chartered Bank Buildings, Calcutta, on Friday, the 24th February, 1956, at 11 A.M., for the following purposes:—

1. To receive the Directors' and Auditors' Reports and pass the Audited Accounts for the half-year ended 31st August, 1955.
2. To elect Directors and Auditors for the half-year to 31st August, 1956, in view of the decision of the Board of Directors to hold Annual General Meetings at the end of August instead of at the end of February each year.
3. To transact any other business that may be brought before the meeting.

The Share Transfer Register of the Company will be closed from the 10th to the 24th February, 1956, both days inclusive.

By Order of the Board,
BIRD & CO. LIMITED,
Managing Agents.

Calcutta, 27th January, 1956.

THE UNITED COMMERCIAL BANK LIMITED

THE profit of the Bank for the year 1955, subject to audit, including the amount brought forward from last year's accounts, is Rs. 37,77,761-2-0. Out of this sum, the Directors have made the following appropriations:

Transfer to Reserve Fund Rs. 8,50,000; Provision for Taxes Rs. 14,90,000, leaving a balance of Rs. 15,27,761-2-0.

Out of the balance, the Directors propose to recommend to the Shareholders at the next Annual General Meeting the payment of a dividend at Rs. 2-12-0 per share, free of income tax, which will absorb Rs. 11,00,000, leaving Rs. 4,27,761-2-0 to be carried forward subject to payment of bonus to staff.

The securities and investments of the Bank appear in the accounts on 31st December, 1955 at or below the market rate ruling on that date.

By Order of the Board,
S. T. SADASIVAN,
General Manager.

Calcutta, 27th January, 1956.

TEA COMPANIES

O. Po and Dd indicate Ordinary, Preferred Ordinary and Deferred Shares, respectively. P next to the name of the company indicates that the Company also has Preference Shares. Figures in "accounts closed" column indicate the months of the calendar year in which accounts are closed. For Managing Agents refer to the Key (last page) under the numbers indicated.

Vol. CXXXVI No. 3395

REVIEWING ASIA'S ECONOMIC PROGRESS

CAPITAL NEEDS STRESSED AT E.C.A.F.E. MEETING

ASIA has had another year of fair economic progress, but the problems faced are as many and diverse as ever. That seems to be the verdict of the survey presented to the E.C.A.F.E. session in Bangalore. Whatever the practical value of these meetings, they do provide an opportunity for Asian countries to get their difficulties into perspective and relate them to those of the region as a whole. These have differed little since the last session. Lack of capital, shortage of technical knowledge and "know-how" and too great a reliance on traditional export staples, remain to be remedied. In individual instances, progress has taken place—India is one of the best examples. And whatever their faults and weaknesses, the various national Governments are still determined to work to improve their economic lot. But for all that, the region remains poverty-stricken and under-developed compared with the more fortunate countries of North America and Western Europe. It may have been too acute an awareness of this depressing fact which made Mr. Nehru call for a new approach to Asia's economic problems. New approaches are certainly required, but a more realistic and resolute pursuit of the old ones is just as important for producing much-needed results in the short run. Enthusiasm and impatience are only one aspect of the approach to action. The other is the will to look unpleasant economic facts in the face and do something about them. Fortunately for Asia, there has been more than the usual evidence of this at the Bangalore session.

The essential work of E.C.A.F.E. is still hampered by shortage of staff and political impediments. This point has been pressed with some force by Mr. Lokanathan, retiring executive secretary. The first complaint is one which should be dealt with at once. If the services which this organisation performs are related to the amount spent on them, it is quite clear that the world would get even better value if it gave more money. The political difficulty is one from which any United Nations agency is bound to suffer, given the current facts of the cold war. While certain nations are excluded from the benefits of E.C.A.F.E. there is little chance of the organisation achieving its maximum effect. It might help towards the eventual inclusion of these countries if their aims when taking part were less political and more economic. One of the more distressing features of Asia's struggle for development is this continued conflict of ideologies. There is little evidence that it is diminishing. Until it does, there will always be a feeling of unreality pervading all United Nations deliberations. In the meantime, a more sympathetic ear for the recommendations of Secretary-General Mr. Hammarskjöld on the strengthening of the E.C.A.F.E. secretariat, would help increase that body's influence and independence.

Development continues to be patchy throughout the region. The food shortage is easier, compared with the immediate post-war years, but total output is still only approximately the same as it was 15 years ago and in the meantime population growth has proceeded. It is clear, whatever the present position, that food must continue to be the first consideration for many years to come. Those Asian countries which have given industrial projects first priority for development have usually been taking unjustified risks; many have been disappointed. India's example of basing her first plan on agriculture is one which can profitably be copied. But planning is not the only answer to food needs. The primary problem, that of land-holding, is being tackled with determination only in Communist China. Other countries, India included, are either making half-hearted attempts at voluntary co-operation, or reconciling themselves

an academic career. In the case of girls, the motives are somewhat more diffuse, but are often in some way or other allied to the demands of the marriage market. It is not surprising that the proportion of students who aim later "to seek employment" has been steadily increasing, while those who intend "either to join the family business or start some independent business" has been steadily decreasing. This seems to be in accordance with the increasing admiration for the beauties of bigness in what is, with mistaken grandiloquence, described as the "Age of the Small Man."

The incidence of unemployment among various categories might perhaps offer a clue to where the "over-production" and "under-consumption" of educated individuals is greatest. At the time the investigation was held, 20 percent to 25 percent of those covered by it were unemployed and looking for jobs. All categories, except Education graduates, showed a steady increase in unemployment over the years. This need not necessarily imply that demand in these categories was shrinking. The incidence of unemployment was greatest among Commerce students; next came the Arts group. More than half the students in these two groups were unable to get jobs with the minimum expected income; in general, it seems that they had to wait longer than others. The first job was more often temporary in their case.

The increasing "over-production" of Arts and Commerce graduates seems indeed to be one of the key defects of the educational system. A variety of reasons has been offered in the past to explain why large numbers of students continue to choose these two types of education when they know that their chances of getting jobs are liable to diminish as a result of such a choice. One is their eagerness to secure "white-collar" jobs, which is indicated in the finding of the Lucknow report that "except for about one-third of boys, the rest are positively averse to manual work." Furthermore, as the report shows, "more students are inclined towards training of 'administrative-supervisory' nature than any other. Teacher's training and Social Service training are also coveted high by them." Another reason for the extraordinary partiality for an Arts or Commerce education may be that it is in these two categories that standards are lowest, and therefore the chances of getting a degree the best.

The lowering of standards that is widely acknowledged to have occurred in Indian universities during recent years seems indeed to be a key factor in the problem of unemployment among the educated. It is the worst disservice that the universities have yet done the country. By lowering their standards, for whatever reasons, they have increased their output of matriculates, graduates and the like. Certificates have been handed out to people who had no business to be given them. As a result, these people have arrived on the employment market only to discover that the educational training they received does not fit them for the limited number of jobs the nation has to offer. Frustration is the inevitable consequence, with all its implications of political and social unrest. It is important that it be realised that in tackling the question of educated unemployment, the universities have a fundamental rôle to play. Since their resources are limited, they are best devoted to training—but training properly—as many students as can be reasonably afforded. If staff is ill paid and overworked, if equipment is shoddy, if the library facilities are just not there, and if lecture rooms and hostels bear the appearance of slums, the solution is not to lower standards and maintain the flow of frustrated misfits. It is to offer the limited facilities to fewer people, who are chosen on merit and who are willing to go for the sort of education that society needs rather than for the sort that fits them merely for Maidan demagoguery.

A DEARER BILL MARKET

THE Reserve Bank decided last week to take two measures which will make it more expensive for commercial banks to borrow under the four-year-old Bill Market Scheme. Both take effect from 1st March, 1956. The first, and more important, is that advances to banks against usance bills will be made at an interest rate of 3½ percent, instead of 3 percent as hitherto. The second is that the Reserve Bank will pay no portion of the stamp duty. The change is described, somewhat euphemistically, as a withdrawal of "concessions" given originally to popularise the Bill Market Scheme. It is thereby implied that the Scheme has now become sufficiently popular, so the need for concessions no longer exists. To some extent, this may be true; the Scheme has made useful progress in financing the short-term needs of trade, and good advantage has been taken of it by banks, especially in meeting seasonal demands. But whether the progress has been sufficiently fast to be able to stand the deceleration that is likely to result from the increase in borrowing costs, is a matter on which not all may be entirely agreed. It is, of course, not possible to calculate with any precision what the practical effects will be—that is, to what extent the qualifying banks will hold down their demands on

the Reserve Bank. But it is conceivable that, should circumstances justify it, these restricting effects might perhaps be partially offset by later revision. Some speculation has arisen as to whether the latest measures regarding the Bill Market Scheme presage a move toward higher interest rates generally. It is pointed out that as heavy deficit financing is proposed or under way, these may be the first of a series of disinflationary moves. There are, of course, few signs of inflation yet; but it is not impossible that the authorities may be girding their loins to meet such a situation, should it arise. The more sanguine feel, however, that the measures are of no more than limited significance, because they merely indicate that the Reserve Bank would like to make more money on what is doubtless an already quite profitable venture.

Meanwhile, some reform seems to be necessary in the Reserve Bank's manner of presenting its statistics on this subject. The latest communique, for instance, mentions that "advances available of by banks under the Scheme have increased from Rs. 81 crores in 1952 to Rs. 255 crores in 1955." The significance of such figures is difficult to appreciate, unless there is also some indication of the average outstandings during the period covered. In so far as they represent cumulative totals of varying advances, they do not convey very much. Advances against usance bills could, under the Scheme, be retained for 90 days, but many are liable to be repaid a good while earlier, and it is this that vitiates the value of the cumulative total. A hypothetical example could perhaps illustrate the point better. Bank X may, during a particular week, find it necessary to borrow and repay Rs. 1 crore on each day of the week against various usance bills. Its cumulative total, such as would be given by the present Reserve Bank statistics, would total Rs. 7 crores for that week. Another bank Y, which borrowed Rs. 1 crore under the Scheme and repaid it a week later, would be shown to have a cumulative total of only Rs. 1 crore. Clearly the needs of, and the accommodation given to, the two banks have been nowhere near as dissimilar as the widely divergent totals would suggest. Reporting the advances under the present system, the Reserve Bank would claim that they totalled Rs. 8 crores—Rs. 7 crores for Bank X and Rs. 1 crore for Bank Y. In fact, they would be nearer Rs. 2 crores—Rs. 1 crore for Bank X and Rs. 1 crore for Bank Y.

CURRENT COIN

Steel Retention Prices.—The market was mildly pleased when the Government of India announced the new steel retention prices for the Tata Iron and Steel Company and the Indian Iron and Steel Company last week. Sentiment showed a minor improvement in the midst of preoccupations with settlement muddles, but the pleasure was qualified by an inability to calculate quickly whether the new retention prices would enable the companies to find enough money for their expansion plans. Doubts regarding the latter have grown since, and the trickle of extracts from the Tariff Commission's report that has been appearing almost daily has given the impression that the Government has been niggardly. The details remain to be worked out, and it will probably be some time before it is discovered what the conception passing under the description of an "average retention price" means in actual practice. Summarising the decisions, the official Press Note says that the Government has accepted the Tariff Commission's main recommendation that the average retention price of steel produced by Tata and Indian Iron should be fixed at the uniform rate of Rs. 393 a ton, and that the revised price should remain in force for a period of five years from 1955-56 to 1959-60. It has also accepted the Commission's recommendation that the 1954-55 retention prices, adjusted for variations in manufacturing costs, for Tata and Indian Iron, should be Rs. 343 and Rs. 386 a ton respectively, and the amount to be credited by each to its development fund should be the difference between the adjusted retention price and the uniform retention price referred to above and its actual sales. The scheme of retention prices is based on the assumption that Indian Iron will also sign an agreement with the Government similar to that signed by Tata, so that the excess of the effective retention prices, as adjusted for the factors that may be current from time to time over the 1954-55 retention prices, similarly adjusted, would, after deduction of all taxes payable thereon, be transferred to a separate fund. The amounts in that fund would be used only for the purpose of financing the company's expansion programme. If, for reasons beyond its control, Indian Iron finds its works costs in 1958-59 or 1959-60 to be higher than those assumed by the Commission to such an extent as to cause a serious decline in the total internal resources expected to be available to it over the period of price fixation, it may ask the Government to review the retention prices. The

retention prices, the Commission recommends, may be adjusted from time to time to the extent that the Government is satisfied that manufacturing costs have altered from the 1954-55 level as a result of changes in railway freights, changes in statutory prices of coal and other fuel, raw materials, stores or machinery and changes in labour costs caused by labour legislation or adjudication or conciliation awards. It will be open to the companies to make representations to the Government if a situation visualised in these recommendations arises.

Nationalised Life Insurance.—Life insurance has begun to don its new look under State management. Premium rates have been reduced with effect from 20th January, and the machinery is soon to be set in motion for securing the merger of individual units into big zonal organisations. Even the possibility of the entire life insurance business being managed by a single-firm organisation has been mentioned in Press reports. That might very well happen, as the planners' standards for judging the social consequences of a State monopoly are different from those applied to private business. The case for reducing premium rates under State management has been judged in a similar way. When the private companies reduced premium rates to enlarge their business the Government frowned on the idea. Now the Government is doing the same thing, fundamentally for the same reason, and quite forgetting what are its professed aims of life insurance nationalisation. For all one can see, the immediate effect of this reduction will be a fall in premium incomes, as that was the experience of those companies who reduced their premium rates in 1954. It is interesting to recall the observations of Sir Cowasji Jehangir on the matter, at the seventy-ninth ordinary general meeting of the Oriental Government Security Life Assurance in 1954—the company whose premium rates now form the basis of the new tariffs: "It is unfortunate," he said, "that premiums have been reduced, as has happened, to such an extent that it becomes worthwhile for existing policyholders to drop their policies, which have been placed on the books after incurring the usual heavy initial expenditure, and take instead policies offering similar benefits at the revised rates of premiums. The overall effect of this is that insurers have to suffer a considerable reduction in premium income, and at the same time bear the higher initial cost resulting from the process of substitution." There is no reason why that eventuality will not repeat itself now. The Government, of course, does not bother about costs, but will its objective of securing larger funds for development planning be served, in the short run at any rate, if premium incomes fall? As for the long run, a good deal will depend on the state of efficiency of this State-run business. The field staff, it has been suggested, should be remunerated better so that it can work more usefully and efficiently, and a comparison has been made with the average income of an insurance agent in Australia. But such comparison is meaningless, without going into the causes that make life insurance canvassing such a well paid calling in that country, and without examining how far those conditions can be fulfilled by a non-competitive State-run business in an economically backward country.

Transport Shortage.—The presidential address of Mr. N. L. Kanoria to the third quarterly general meeting of the Indian Chamber of Commerce laid special stress on the current shortage of transport. The existing transport services, he pointed out, were already falling short of the economy's requirements, due to the increase in industrial production during the first five year plan, and Mr. Kanoria thought the situation during the next five year plan might well be worse with the heavy reduction in the railway's plan for developing traffic. Some of the statistics which he quoted in support of his case were convincing enough. The average number of wagons loaded in 1950 was 522,000 a month, and it increased to 640,000 in 1955, representing an increase of 25 percent. As against that, industrial production over the five-year period increased by 50 percent, with the result that the railways were hard put to it to carry the extra volume of traffic with the desired speed and efficiency. Explaining why he anticipated worse difficulties during the next quinquennium, Mr. Kanoria said that the original railway plan of Rs. 1,480 crores was based on the assumption that 61 million tons of new traffic would result from the second plan activities. That estimate itself erred on the low side, as the steel, coal and cement industries would alone require 43 million tons of new traffic. Yet the Planning Commission, while agreeing with the needs of the railways as estimated by the Railway Board, had cut down the plan to Rs. 1,125 crores, and chances were that further reductions might be made. Fearing that the private sector in particular might suffer as a consequence of this reduction, he suggested that road transport should be developed as the only alternative in the circumstances. But here again, the crippling burden of taxation stood in the way. Compared with

the rate in the United States, Mr. Kanoria pointed out, the lorry-owner in India was taxed "seven times as heavily".

Blueprint for State Enterprise.—That State control over a large portion of the economy has been adopted as the leit motif of India's future planning policy appears now an open secret. But its successful interpretation in the form of an incentive to development has yet to come. It is revealing therefore to have the criteria for such success, set forth by no less a person than the Comptroller and Auditor General, Mr. Asok Kumar Chanda, in an address to members of the Institute of Chartered Accountants in Madras last week. "State enterprise in India is on trial," said Mr. Chanda. "It has come to be established in the teeth of the opposition of vested interests. It is necessary for the success of this policy of nationalisation to provide a form of management suitable to the requirements of each undertaking, endowed with the same degree of flexibility in operation as the private enterprises." Against this background of development, Mr. Chanda discussed the question of the public accountability of State undertakings and the provisions needed to secure a measure of Parliamentary control consistent with the requirements of autonomy. Mr. Chanda remarked on the unsuitability of departmental management in the administration of industrial enterprise when, in competition with private enterprise, mass production and competitive efficiency were essential. Such units as have been set up, he said, statutory boards, corporations, joint stock or limited companies, must be organised and operated on business lines with a comparable degree of elasticity of control and business efficiency as private units in the same field. This could only be done if they were managed on commercial lines, adopted a commercial form of accounting and were operated, financed and taxed in the same manner as enterprises in the private sector. In the words of Mr. Herbert Morrison, said Mr. Chanda: "I am certain that if we run these public corporations—highly commercial, highly industrial, highly economic—on the basis of meticulous accountability to political channels, we are going to ruin the commercial enterprise and the adventurous spirit of these public corporations in their work." "These considerations," added Mr. Chanda, "apply with even greater force in the case of State industrial units in competition with private units in the same field." Imitation may be the sincerest form of flattery, but such high standards as Mr. Chanda has attributed to private enterprise will not be easy of attainment. Efficiency, scrupulous accounting, freedom from day-to-day Parliamentary control, all may be achieved, but there can be no substitute for personal initiative and responsibility.

International Trade Statistics.—Between 1937 and 1954 the quantity of goods moving in world trade, excluding Communist countries, increased by about 51 percent and the average price (computed in U. S. dollars) increased by about 118 percent. The result of these two increases is that the value of trade in 1954, in dollars, has increased more than three times its value in 1937. The exports of the highly industrialised areas of the world (the United States, Western Europe and Japan) contributed considerably more than their share to the increase in quantity and markedly less than their share to the rise in price (increase in index figures for 1954 as a percentage of their values in 1937: quantity, 77 percent; price 88 percent). In the same period, the quantity of goods produced by industry and mining increased by about the same amount as the volume of exports of the manufacturing areas. A higher proportion than before the war of the exports of the manufacturing areas is now sent to the less developed areas (45 percent by value in 1954 as against 40 percent in 1937). These general increases since the war in the level of world trade are shown in the fifth issue of the *Yearbook of International Trade Statistics, 1954* to be due to increases in the trade in all regions of the world. The largest increases in exports are those of the Middle East (increase in 1954 of 405 percent by value over 1937, mostly due to increased exports of oil) and North America (337 percent). The smallest increase in exports is shown by the Far East (65 percent). The largest increases in imports are 326 percent for Latin America and 269 percent for North America, while the smallest increase in imports is that shown by the Far East (123 percent). The *Yearbook* shows that in recent years world exports had a peak value (\$75,100 million, U.S.) in 1951, they climbed from \$55,400 million in 1950 and in 1952 fell to a value of \$72,450 million. They then began climbing again, reaching the value of \$76,250 million in 1954. The figures for the first quarter of 1955 indicate that a further increase will probably be registered in 1955. The remarkable growth in U.S. exports (from 14 percent to 20 percent of the world exports between 1937 and 1954) has been accompanied by a less than proportional expansion in the U. S. imports (from 12 percent of the world total in 1937 to 13 percent in 1954). This disparity between the levels and rates of growth of U.S. exports and im-

tion of world trade, explain many of the current problems of the restriction and currency convertibility which continue to hamper international trade. The share of Continental Western Europe, including their dependencies, in world exports has recovered steadily year by year to a figure of 32 percent of world exports in 1954, which is one point above its share in 1937. The exports of the sterling area countries in 1954 constitute 24 percent of world exports compared with 26 percent in 1937. This fall was due mainly to a decrease in the exports of the United Kingdom and Malaya (1 percent each). The *Yearbook* which is the only readily available source of data in the external trade of many countries, provides detailed statistics of imports and exports of 100 countries (as against 90 in the previous issue) covering over 98 percent of that part of world trade for which current statistics are available at all. For 55 of these countries (covering about 81 percent of world trade) the analysis by commodity of imports and exports is according to the United Nations Standard International Trade Classification.

Capital Needed, Not Charity.—In view of the suspicion with which certain efforts to assist the development of Asian countries are regarded, some pertinent and even useful advice was given by Lord Chandos, a former Colonial Secretary, when addressing a luncheon meeting of the Anglo-American Chamber of Commerce in London. "It sometimes seems curious that the United States should pour out vast sums in dollars by way of gifts of goods. I would like to see the quantity of these goods—so generously given—reduced, and the amount of money invested increased. There is something artificial, something not built to last, about financing a surplus of exports by gifts and subsidies. I would much prefer to see these surpluses invested in developing countries, and the American investor get some return." The great challenge to the nations of the West today, he continued, was the low standard of life in many countries of Asia and Africa. The fate that had already befallen some of those countries was a warning of the consequences if the challenge was not met. It did not require the statesmanship of a Lincoln to see that the free world could not survive half in reasonable comfort and half in penury. But this was not a problem to be solved by doles and charity. Some countries with forms of government and languages

different from our own did not particularly appreciate the outright gift of cash or goods. Often they misused such gifts and they did not appreciate them as much as investment. What was required from the more advanced nations of the West was a readiness to communicate skill and knowledge, and to invest capital with an eye to the long term, as well as to the short. Describing himself as "notoriously pro-American," Lord Chandos said he hoped it would not be misunderstood if he suggested that the burden of the new international adjustment by overseas investment should now be borne by America, as the world's chief creditor nation.

More Joint Stock Companies.—According to the monthly blue book on joint stock companies in India, issued by the Department of Company Law Administration, during November, 1955, the number of new registrations in all States, excluding Jammu and Kashmir, totalled 102 companies with a total authorised capital of Rs. 16,24 lakhs. Of these, 22 were public and 80 private companies with a total authorised capital of Rs. 12,40 lakhs and Rs. 3,84 lakhs, respectively. The cumulative total of the newly-formed companies at the end of November, 1955 for the current fiscal year, was 892. Total authorised capital was Rs. 96,73 lakhs. The number of new registrations exceeds those during the corresponding period of the preceding fiscal year by 144. The progressive total of 892 companies comprises 128 public and 764 private companies. Of the 102 new companies formed during November, 1955, 32 companies with an authorised capital of Rs. 3,51 lakhs were registered in the State of West Bengal. The States of Madras, Bombay, Delhi and Travancore-Cochin registered 18, 17, 9 and 8 new companies with a total authorised capital of Rs. 1,84 lakhs, Rs. 1,36 lakhs,

Without Prejudice

THE "ABSOLUTE PRIVILEGE"
OF WITNESSES

CASES OF MALICIOUS EVIDENCE

(FROM OUR LEGAL CORRESPONDENT)

THIS case was reported just too late to be included in our recent survey of outstanding decisions for the past year of Industrial and Appellate Tribunals. What the reader's reaction will be to a certain aspect of the case, the writer, of course, is unaware; personally one views it with astonishment and disquiet. This aspect concerns the law of privilege and an attempt to extend its scope, hitherto, as far as the writer knows, entirely unprecedented. Therefore let us, for the benefit of the non-legal reader, say an explanatory few words about what privilege is. It is one of the most ancient and jealously guarded rights known to the law. It dates back far beyond the time when Britain first began to have settled laws, to ancient Rome itself. It was introduced into Britain by the Roman conquerors under their name for it, *privilegium*, and (extended but not substantially altered in principle down the centuries) that is what it still is, a right to immunity or exemption granted from "time whereof the memory of man runneth not to the contrary" to certain individuals or classes of individuals, from the consequences of acts or words which would otherwise be civilly actionable or criminally punishable; the *privilegium* of Parliament under which an M.P. or a peer may in Parliament slander and ruin thereby anyone he likes with impunity, that of solicitors and counsel who are protected from disclosing information on their clients disclosed to them professionally.

But, straying away from the main point and just as a matter of passing interest, a doctor or a priest has not, as is often erroneously believed, any such privilege of the surgery or the confessional. In judicial proceedings he would be legally liable on *subpoena*, under pain of contempt of court and jail, to disclose that his patient suffered from syphilis, or that his penitent was a murderer. No doubt, physician or priest would go to jail rather than do so, but that is not the point. Neither has any *privilegium*. Now, the form of *privilegium* with which we are concerned here is that of a witness giving evidence in the witness box. That is

a case of what the law terms "absolute privilege". No action will lie for any statement, however defamatory, wicked and scandalous made by a witness in the course of any proceedings before a court of justice. One remembers well the tall, languid monocled figure of the late Mr. Pemberton-Billing, M.P., quietly spitting out in the King's Bench Division the most venomous and ruinous allegations against the world-famous lady who was prosecuting him for libel, one of the least harmful of which was that her brother had been hanged for murder. The extraordinary young man was acquitted and the lady could do nothing about his vile allegations. Made in court, they were the subject of absolute privilege. And that brings us to the latest and very remarkable attempt to extend the exemption afforded by the age-old doctrine in a manner never before sought to be done.

There were two cases before the Labour Appellate Tribunal, Calcutta, and they were heard together for the sake of convenience. The first was an application by employers under Section 22 of the 1950 Act for express permission in writing to dismiss one of their employees, Sri Kashi Nath Das; and the second was one started by the same employee with a complaint under Section 23 of the same Act for punishing him during the pendency of the appeal without the permission of the Tribunal.

Sri Kashi Nath Das was, the Appellate Tribunal found, a responsible employee under the employers, Ispahani Ltd., and was drawing a salary of Rs. 594 a month. He was the chief accountant of the company. It was an admitted fact that he fell into disfavour with the management, though the reasons assigned therefor were different. According to the employee, the reason for this disfavour was that he had become the assistant secretary of the newly formed union, according to the employers, the reason was his irresponsible conduct. But whatever the reason may have been, its effect was that the employee was transferred to the company's tea department, but without any loss of salary. This transfer was, as the Appellate Tribunal held later, "not taken in good grace by Kashi Nath Das." There were references of two adjudications before the State Tribunal, one relating to retrenchment and the other to wages and claim for bonus. It was the case of the union that the company made large profits, but that in spite of this a loss was shown in the balance-sheet. In this case, Sri Kashi

Nath Das gave evidence for the union, and in the course of his evidence said: "In 1952-53 the balance-sheet disclosed a loss. The accounts have been manipulated so long. I was instructed to prepare false accounts, which I did." The Appellate Tribunal, referring to these statements in its order, observed that: "The Tribunal thoroughly disbelieved the witness on this point and proceeded to observe that these statements were made with a view to advance the cause of the union and to bring discredit to the company and to injure its reputation."

It is hardly surprising that a charge-sheet for dismissal was drawn up against Sri Kashi Nath Das for giving alleged "false evidence containing imputations against the company, intending or knowing or having reason to believe that such imputation would harm the reputation of the company." He was asked to submit his explanation within seven days and pending enquiry he was suspended. Sri Kashi Nath Das duly submitted his explanation. In it, he protested against the action of the management as an infringement of Section 33 of the Industrial Disputes Act, denied the charges and stated that he would make a further statement afterwards. He did not reply on the facts, though he threatened legal action against the company for alleged violation of Section 33. The enquiry was eventually held by three of the directors of the company and though asked, Sri Kashi Nath Das refused to make any statement or produce any witness. "The directors," the Appellate Tribunal's order proceeds to say, "thought that it would be highly prejudicial and adverse to the interest of the concern to have in employment such a person who could make such unwarranted false, malicious and damaging statements before the judge," and accordingly it was decided to apply to the Appellate Tribunal under Section 22 of the Act for permission to dismiss him. The employee, on the other hand, alleging that his suspension amounted to a transgression of Section 22 and that he had been punished during the pendency of the appeal (it will be remembered that two adjudications of the State Tribunals were the subject of appeals, so pending) filed his complaint on that ground.

We are concerned here with one aspect only of the two cases, namely, the employee's statement in the witness box and its consequences. Counsel for the union referred to the chapter on "Absolute Privilege" in that standard authority, *Frazer (Sir Hugh) on Libel and Slander*, and contended that the statements made by Sri Kashi Nath Das on the witness stand were absolutely privileged. It was argued that when these were privileged statements, the master who had been the opposite party could take no action against him in any way. That was the foundation of the argument advanced, and it is the argument on account of which one finds the case disquieting. If sound, it would mean not only absolute privilege but absolute chaos. We are not now referring to Sri Kashi Nath Das or in any way whatsoever to his particular case or to the facts therein. But, speaking generally and without reference to him, if the argument advanced were a sound one it would follow that the master is at the mercy of the servant. Imagine some honest and reputable firm or company in a delicate financial position but one from which, given a reasonable chance, there is every hope that it will recover. It is touch and go. Its secretary, next to the manager its most important employee, in litigation in which the concern is involved volunteers to go into the witness box and, his loyalty to his employers disregarded, gives evidence on the other side. Not only that, which you may think, even if it were truthful evidence, was given in breach of duty and by itself would justify dismissal, the secretary gives evidence which is false and malicious on the employers' financial position. He might easily ruin the company. What an opportunity for the exercise of spite or for blackmail! Now, true it is and hard it is that the secretary can so wreak his vengeance, immune by the law of absolute privilege from liability for civil or criminal, for libel or for slander. But if it were the law also that the employers, though the secretary's evidence may be proved to be untrue, cannot even take disciplinary action against him and must retain him in his post or, at any rate, in their employment, it would be simply staggering.

To return to the case of Sri Kashi Nath Das, whom and whose employers let us again emphasise we disassociate expressly from the preceding paragraph, the Appellate Tribunal held that "the doctrine of 'absolute privilege' as prevalent in England has not, however, been accepted by the court of India so universally as in England.... In civil action for damages for defamation, absolute privilege has been allowed following the English rule. The case here is different—this is neither a civil action nor a criminal case for defamation. The master who has been maliciously defamed by the servant does not want to proceed against him in any civil or criminal court but wants to cut off all connection with him. I do not think this is covered by the doctrine of 'privilege' as enunciated in English law." Then followed words which, if one may respectfully say so, are pregnant with wisdom and common sense. "The question is whether the extension of the doctrine of 'absolute privilege' to the sphere of the master and servant relationship will be conducive to the good of the country or to industrial peace. I think industrial peace will be at stake if the servant be given immunity of maliciously scandalising the master and the next moment work under him. The doctrine of 'absolute privilege' cannot be extended to these matters.... Trade unionism is no excuse for a malicious libel." Permission was granted to the company to dismiss the employee with effect from a future date.

A DITCHER'S DIARY

Ford, could still afford to pay (or couldn't afford not to, have it how you like) its chairman, Mr. K. T. Keller and its president, Mr. L. I. Colbert, the handsome sums of \$300,900 and \$250,900 respectively in 1954, which, when all is said and done, are fair incentives. But no salary figures have much importance unless the share of the tax authorities is deducted and top-ranking salary drawers in the United States, although considerably less affected by this grasping hand than those of Britain and India, nevertheless get their share of its attention. As one of the articles puts it: "Financially, any salary above \$300,000 (just over £100,000) per annum confers comparatively little in the way of additional benefit, and certainly nothing commensurate with the gross increase." At \$300,000, tax takes 90 percent of every additional dollar. After tax, a man with Mr. Curtice's income will take home only \$112,280, or about £40,000. Messrs. Ford and Breech are left with a paltry \$91,670. But the picture is not as black as all that. There are ways of softening the blow and the United States Government takes a more lenient view of these than most. Some of the devices include company-financed retirement pensions; endowment insurance taken out by the company and paid to the executive on maturity; deferred compensation schemes by which actual payment of salary increases is postponed until retirement when the recipient falls to a lower tax bracket; and options to buy stock in the company on favourable terms. The last mentioned is becoming quite a favourite. Just how much these executives do get, in all probability neither they nor the tax authorities really know. But one thing is quite clear, somebody must consider them worth it.

I read that Calcutta's annual dog show has just been held on the Maidan. Never having been to one, I have no more than a vague idea what happens there. I always visualise them as being occasions when that infinite variety which is the canine world is held up for public admiration and awarded suitable prizes. As one who has always had little to do with animals, I am no more than theoretically interested in alsatians, bloodhounds, great danes, dachshunds or pekinese, although I do feel on occasions that they may be better company than some humans. The dog that I have loved most since my childhood is the one seen on some gramophone records; there is another couple which I came to appreciate rather later and they are found on the label of the bottle whose contents are at the same time exhilarating and mildly medicinal. But history is, of course, full of famous dogs and their exploits. I shall mention only two to show that sometimes these friends of man have inadvertently done great mischief. One is Diamond, Sir Isaac Newton's pet, who once upset his master's table lamp, thereby starting a fire which consumed the manuscripts of the *Principia*, embodying the results of two decades of strenuous research. The other is John Stuart Mill's dog. By an exactly similar act, it helped to destroy the manuscripts of Carlyle's *French Revolution*, which had been given to Mill to read. In both cases, however, the authors succeeded in rewriting the books largely from memory. If I mention these incidents, it is certainly not to suggest that dogs should be treated as they frequently are in this city—with cruelty and indifference. In fact, it gives me great pleasure to learn that Calcutta's All Lovers of Animals Society, which held its flag day last week, plans to build an animal hos-

pital in this city where sick animals, including no doubt sick dogs, will receive proper medical attention.

It is easy to be impressed when Mr. Khrushchev promises to share Russia's last crust of bread; if one is gullible enough that is. And when the Soviet representative at the Bangalore session of the E.C.A.F.E. suggests a grant of two hundred scholarships, people who do not know any better are apt to marvel at his generosity. That is why it is good for those of a more practical turn of mind to learn that real progress, as distinct from big talk, is taking place with little publicity and even less fuss. I am referring of course to the Colombo Plan and the training which is being given under it. The one-thousandth trainee, Mr. B. P. Singh, the fifty-year old blast furnace fireman from the T.I.S.C.O. works at Jamshedpur, was selected a few days ago and the news prompted me to make a small calculation. If the Soviet Government were to grant two hundred scholarships a year, which is not in fact anywhere near what Mr. Maletin suggested, it would take it about seventeen years to catch up on Britain's achievements if the record of the last seven or so were simply to continue. What is more, all this has been accomplished without the least suggestion of the political indoctrination which all but the determinedly simple-minded know is the usual price of Russia's generosity. I hope Mr. Singh enjoys his stay in Britain and profits from it. One thing is certain, if he does derive anything from his training it will be in the form of knowledge and technique of a practical nature and will not be just a carefully implanted desire to create chaos and overthrow democratic government.

A correspondent writes to me with news of the Reverend C. J. Alchin, formerly senior chaplain at St. Paul's Cathedral, Calcutta and as such one of the most popular figures in the resident British community in the city. After his marriage, which took place at the end of last week, Cecil Alchin is taking the post of Rector of Theydon Mount, Epping, Essex. His bride hails from Johannesburg, where Alchin was a clergyman prior to the thirteen years which he spent in India, first as chaplain to the forces and then at St. Paul's, Calcutta. His new living is in a remote rural area on the edge of Epping Forest and, I understand, includes the spiritual supervision of one of the new "open jails" or prisons without bars. Since leaving Calcutta he has been on the staff of St. Mary Abbots, Kensington, a large parish in the West End of London. He now goes to a ministry quite different from anything he has known before and will, I am sure, take with him the good wishes of many old friends in this country.

When a worker left his factory at the end of the day pushing a wheelbarrow full of straw the policeman at the factory gate halted him and carefully examined the straw, but found nothing. Each day the performance was repeated, and each day the policeman found nothing, no matter how carefully he searched. After a month of this, he said to the worker: "Look, I'm leaving this job tomorrow; so you can talk freely. I give you my word I won't tell. But I'm curious—what are you stealing?" "I'm stealing wheelbarrows!" the worker confessed.

THE DITCHER

STATE BANK OF INDIA

Successors to the Imperial Bank

The need of the day

Our country's economy is expanding rapidly and with the Second Five Year Plan in sight it will gather further momentum. The need for a strong and efficient banking system has never been greater than today as the nation's savings require to be pooled and managed in a resourceful, confident and prudent manner.

The State Bank fulfils these expectations. It has started upon a programme of opening 400 additional branches throughout the country within the next five years

The State Bank of India offers to serve you efficiently in many ways. It takes care of your savings and valuables, lends moneys against goods, produce and other approved securities and assists you by accepting appointment as executor and/or trustee of your will or trust. Its wide and varied services are at your disposal. Why not talk things over with your nearest bank agent, or write for information?

The State Bank's local head office at Calcutta, one of more than four hundred offices waiting to serve you throughout India

STRONG DEMAND FOR GOLD
SHARES IN STOCK MARKETSOTHER SECTIONS QUIET AND
LITTLE CHANGED

London, 8th February.

THE revival of interest in gold shares and the consequent sharp advance in prices provided the main feature of otherwise quiet stock markets during the past week. Outside gold shares, business and interest was at a very low level. The slightly harder tendency which developed prior to the week-end was not maintained following the Chancellor of the Exchequer's review of the economic situation calling for restraint and warning of the dangers of inflation. The slight improvement before the week-end was apparently due to the firmness of Wall Street and the end-January gold reserve figures, which showed a rise for the first time since last April. On balance, gold shares recorded extensive and appreciable gains compared with previous levels, but other sections of the market were little changed. Small gains were recorded in gilt-edged securities before the week-end under the lead of undated stocks but were not fully held subsequently and prices on balance were only slightly firmer. Interest in foreign bonds was at a low level, although Rumanians improved. Rails were subdued, but dollar stocks moved up in response to the improvement on Wall Street. Industrial equities gave a rather mixed display, although business was very small and selective. The better tendency which developed at the start of the new account in the previous week was not maintained after the week-end and prices resumed their dull trend later. On balance, however, the markets were a little higher and the Financial Times Industrial Ordinary index recorded a small rise. Gains were largely confined to leading issues. The improvement in gold shares started at the end of the week and continued on Monday when the Kafir market had its most active day for a long time. Free State issues and other developing mines led the advance and gains ranged up to several shillings in these shares. Coppers tended higher, but other base metals moved uncertainly. Oil shares went further ahead, although the best levels were not always maintained. Rubber and tea shares lacked interest and generally were inclined to be easier.

The Money Market

Credit was kept tight in the money market last week, and under the pressure of demand day-to-day money ruled on the basis of 4 percent. The heavy seasonal tax payments continued to be a drain on resources, but another factor that contri-

buted to the contraction in supplies was a fall in bank deposits. So far, the banks' and the market's resources have been bolstered by a large number of excess bills. In view of the difficulties of the past week and the high cost of money, and expectations that there will be no improvement in short loan conditions, the money market raised the share of Government borrowing through the Treasury. Applications for £250 million worth of 91-day bills totalled £395,350,000, of which the former amount was allocated at an average rate of 82s 6.14d against 81s 4.97d in the previous week. Offerings this week will consist of £260 million of 91-day bills. The Bank of England return for the week ended 1st February showed notes in circulation £1 million lower at £1,771 million, while bankers' deposits were £3 million lower at £234 million.

Activity on Wall Street

A feature in domestic bonds was the strength of activity in Missouri Pacific issues, with the balance of the list showing a mixed appearance. American Telephone and Telegraph were higher among convertibles in heavy dealings. Prices, however, backed away later. Quality corporates were firm but quiet with U.S. Governments steady in small volume. World Banks were neglected. In foreign dealings, a number of German Nationals showed gains and losses of a point. Berlin City Electrics fluctuated erratically. Italians were slightly higher. Australians were firm and Japanese also gained ground.

Hongkong Gold Steady

Prices on the Hongkong gold market were steady last week, but trading was restricted because of the approaching holidays. There were no special features, and prices moved purely in accordance with traders' sentiment. Carryover charges were 5 cents in buyers' favour. Official offtake was 2,720 taels, and unofficial offtake 15,000 taels. Arrivals were 50,000 ounces. Forward contracts quoted \$(U.S.) 37½ c.i.f. Macao.

Quicksilver Decline Continues

The ex-warehouse price of quicksilver continues to decline and is now indicated from £87 to £87½ a flask, a fall of 10s from recent levels. Demand is generally still sluggish as consumers are presumably buying only their bare necessities on hopes of a further decline in prices soon. Competition for the limited demand circulating remains keen, while available stocks are reported to be at a much better level than for some time past.

U.S. Imports of Lead and Zinc

Saint Joseph Lead Company has proposed a 2 cent a lb. import tax on foreign lead and zinc when prices fall below a point which imperils domestic ore producers. Its spokesman told the National Western Mining Conference in Denver that domestic producers should not seek restrictions in im-

ports that would cut off the United States entirely from foreign sources of ore and slab.

Steel Goods for India

The Stanton Iron Works Company near Nottingham announces that it received orders worth £700,000 from India in 1955. The orders were for pipes and special castings for water supply schemes, and included some from the Andhra and Saurashtra Governments and the Madras Corporation.

Vegetable Oil Market

Demand for linseed oil was quieter last week following satisfaction of heavy consumer demand. Indian affloat to London was offered at £12½ c.i.f. but found no takers. There was more interest in castor oil for shipment but offers were sparingly obtained. Indian BSS February-March shipment was quoted at £118 to £124 a ton. Demand for tung oil remained steady, but with the reaction in linseed oil there was a tendency for prices to be shaded. Indian tobacco-seed oil for shipment firmed to £115 c. and f. in drums. Demand for groundnut oil was sustained and Indian was sold afloat to Rotterdam at £118½. Indian kardi and nigersed oil have shown some advance, and for the latter Genoa paid £118 in drums.

Rubber Slightly Easier

The rubber market had a firm tone at the beginning of last week. Values hardened by nearly 1d a lb largely because covering demand for February shipment of No. 1 RSS found offers scarce. Demand subsided later, and the easier trend was accelerated by a sharp decline at Singapore following up-country liquidation. Minor upturns in modest trading were short-lived as the market lacked support from the consuming end of the trade. Towards the close, dull conditions were relieved by some switching deals, but finally a few Continental enquiries induced a steadier tone. Values were about ½d lower on balance. Very little interest was shown in sole crepe and prices were difficult to maintain on the basis of 40d a lb for ½ inch smooth No. 1 on the spot.

NEW STOPS FOR B.O.A.C. FREIGHTER

Two new stops in Europe are to be included in the schedule of the B.O.A.C. freighter which operates through India between Singapore and London. They are Milan (Italy) and Frankfurt-on-Main (Germany). The new stops will come into use from the middle of February subject to governmental clearance. Freight shippers in India will thus have an important service available to them, operating once weekly to the continent of Europe. The service will be flown by Hermes airliners instead of the Yorks which have previously been used. The Hermes are faster and capable of carrying bigger loads. Their stops west of Calcutta will be Delhi, Karachi, Bahrain, Cairo, Tripoli, Milan, Frankfurt and London.

Finance in India and Abroad

THE CALCUTTA MONEY MARKET

INCREASE IN DEMAND FOR MONEY

Wednesday, 8th February.

THE excellent offtake of funds has continued throughout the past week and banks are reporting that requirements are showing new high levels. There has been fresh buying of raw jute following the announcement that more looms are to be unsealed next month. Other sources of demand, such as the sugar industry and the cotton mill industry, have maintained their requirements. Money is going upcountry on account of kharif crop storage. Labour conditions in the banks have been better in the past week, and normal working was resumed on Tuesday. Money remains very tight in the interbank market with borrowers over at the unchanged call rate of 3½ percent.

After last week's slight improvement in the bill market, conditions have once again been quiet this week. Only a few tea and gunny bills have been reported. Remittance is about normal for the time of year. Sterling remains steady and the dollar rate is unchanged at Rs. 47½.

* * * *

Silver was steady. The price rose from the previous week's level of Rs. 173-15 to Rs. 174-1, quoted today. The rate for ready delivery was quoted at Rs. 174-4. The London price advanced from 77½d. to 77½d. The price of foreign silver in New York also rose from 90 cents to 90½ cents.

Gold was firm on good demand. The price advanced from Rs. 96-8 to Rs. 97-4. The sovereign at Rs. 61-15 showed a gain of 3 annas.

* * * *

A rise of Rs. 13.30 crores to Rs. 1,392.37 crores in notes in circulation was the outstanding feature of the return of the Reserve Bank of India for the week ended 3rd February, 1956. The total note issue was Rs. 1,22 crores lower at Rs. 1,400.82 crores. An increase of Rs. 14.91 crores to Rs. 603.27 crores in rupee securities was offset by a fall of an equivalent amount to Rs. 652.16 crores in foreign securities. This was done by a transfer to the Banking Department in which foreign balances rose by Rs. 14.36 crores to Rs. 81.41 crores. Deposits of the Government of India and other Government accounts declined by Rs. 1.14 crores and Rs. 4.07 crores to Rs. 52.88 crores and Rs. 14.40 crores. Balances of commercial banks at Rs. 63.23 crores were Rs. 1.01 crores lower. Other loans and advances rose from Rs. 44.33 crores to Rs. 49.62 crores, of which advances to scheduled banks against usance bills totalled Rs. 18.88 crores (Rs. 17.70 crores). Ways and means advances were higher at Rs. 2.52 crores against Rs. 1.79 crores. Other features showed little change.

* * * *

The return of the State Bank of India for the week ended 27th January, 1956, shows a drop of Rs. 3.48 crores in total deposits to Rs. 238.42 crores. Investments in Government securities and other authorised investments are down by Rs. 17 lakhs and Rs. 3 lakhs to Rs. 107.15 crores and Rs. 8.97 crores, respectively. Advances, including loans, cash credits and overdrafts, and bills discounted and purchased have increased by Rs. 4.38 crores to aggregate to Rs. 114.47 crores. Cash and balances are, in consequence, shown at Rs. 32.04 crores or Rs. 1.27 crores higher.

* * * *

The statement of the position of scheduled banks for the week ended 27th January, 1956, discloses Demand and Time liabilities at Rs. 648.88 crores (Rs. 6.45 crores on account of borrowings from banks) and Rs. 409.88 crores (Rs. 3.31 crores) compared with Rs. 655.46 crores (Rs. 7.34 crores) and Rs. 411.08 crores (Rs. 2.88 crores) respectively, in the previous week. Cash has increased by Rs. 1.04 crores to a aggregate Rs. 37.22 crores, while balances with the Reserve Bank have decreased by Rs. 1.19 crores to stand at Rs. 62.04 crores. There is a rise of Rs. 17 lakhs in investments to Rs. 381.77 crores. Advances and bills discounted at Rs. 677.60 crores reveal an increase of Rs. 11.90 crores. The ratios to total liabilities of cash and balances and of advances and discounts are, in consequence, shown at 9.4 percent and 64.0 percent against 9.3 percent and 62.4 percent.

* * * *

According to the land-borne trade returns received in the Department of Commercial Intelligence and Statistics, the provisional figures of the total value of India's foreign trade by land with Pakistan, Afghanistan, Iran and Burma during December 1955 are as follows: Merchandise: Exports Rs. 93 lakhs. Exports to Eastern Pakistan Rs. 60 lakhs, exports to Western Pakistan Rs. 20 lakhs and exports to other countries Rs. 13 lakhs; Re-exports—nil; imports Rs. 317 lakhs; imports from Eastern Pakistan Rs. 227 lakhs; imports from Western Pakistan Rs. 2 lakhs and imports from other countries Rs. 88 lakhs; total trade Rs. 410 lakhs. Trade in Treasure: Negligible. Balance of Trade: The total value of exports fell short of imports by Rs. 224 lakhs.

* * * *

In terms of the Government of Pakistan Notification No. F. 12(4)—IF. 11/55, dated 1st February.

series in the denominations of Rs. 10/- and Rs. 100/- printed in red and green colours respectively and signed by the then Minister of Finance Mr. Ghulam Mohammad will cease to be legal tender with effect from 1st August, 1956. On and after that date these notes will be accepted for exchange with bank notes printed on water mark paper with security thread only at the offices and branches of the State Bank of Pakistan, all the branches of the National Bank of Pakistan and all Government treasuries and sub-treasuries in Pakistan. To avoid inconvenience to themselves, the public are requested to get their holdings in the notes mentioned above exchanged with bank notes before 1st August, 1956.

LIFE INSURANCE

It has been decided that in future all insurers carrying on life insurance business in India will offer uniform rates and policy conditions. The new rates and policy conditions will be applicable to all policies where the risk commenced to run on or after 20th January, 1956. The new rates will be the rates of premium quoted hitherto by the Oriental Government Security Life Assurance Company Limited diminished by Re. 1 for every Rs. 1,000 of the sum assured for all terms and ages and for all plans of assurance, provided that where the premium is below Rs. 20 per Rs. 1,000 of the sum assured, the reduction will be 5 percent of the premium. Plans of assurance which are not covered in the current prospectus of the "Oriental" will be discontinued for the present. As regards annuities, the present rates of the "Oriental" will be adopted. The present rates will continue unchanged in respect of business transacted outside India.

CONFIDENCE GRADUALLY RETURNING TO THE SHARE MARKET

DELIVERIES RESUMED: TECHNICAL POSITION IMPROVED

Wednesday Evening.

THE share market has shown distinct signs of returning life during the last day or two. With clearing number 203 out of the way and deliveries resumed, confidence is beginning to revive. Attention is now turned to the prospects of clearings numbers 204 and 205 which are to take place together possibly early next week. At the moment there are reasonable prospects of these clearings going off without hitch, but it is too early to say definitely. Deliveries of shares up to 13th January are due to take place tomorrow. There is some business being transacted in the market, but dealings are largely a matter for direct negotiation between the parties concerned. The last couple of days has brought two reassuring events for stock markets throughout the country. The first has been the purchase by a number of custodians of the newly-nationalised life insurance companies of Tata Steel and Associated Cement equities in Bombay. The second is the fact that in Calcutta, two clearing shares have already crossed the minimum price line set by the Stock Exchange Committee; they are Texmaco and Orient Paper, both in the Birla group of companies.

The gilt-edged section of the market continues to enjoy buoyant conditions in an otherwise completely dull setting.

Details of the week's limited trading follow.

The recent crisis in the Calcutta stock market appears to be resolving itself following the satisfactory settlement of clearing difficulties at the 203rd clearing and the resumption of normal deliveries. There has been a slight increase in the volume of business and the technical position of the market, if anything, appears somewhat healthier.

The gilt-edged section was the once bright spot in a featureless market and prices improved due to the fact that there was a strong demand with insufficient scrip in the market. Three percent Conversion Loan 1986 improved from Rs. 80-7 to Rs. 80-9 but 3% Non-terminable Paper was unchanged at Rs. 80 at which price there were buyers. Of the short-dated Loans 3% 1957 continued to have strong buyers and the price was marked up to Rs. 99-10. Similarly 3% 1958 improved to Rs. 99-9. Medium-dated loans were steady. Three percent 1959-61 was inquired for at Rs. 98-4 and 2% 1961 improved by 4 annas to Rs. 93-5; 2% 1960 was 2 annas better at Rs. 96-4 while 2% 1960 was unchanged at Rs. 93-12 at which price there were sellers and 3% 1961 had buyers at Rs. 99-8 as did 3% 1964 at Rs. 98-12 and 3% 1965 at Rs. 98-9. Three percent 1963-65 met with good enquiry and was taken up to Rs. 94-11. In the long-dated section 3% 1966-68 was firm at Rs. 92-5, an improvement of 3 annas on the previous price and 3% 1970-75 was also a strong feature, improving from Rs. 88-2 to Rs. 88-6. During the week the Reserve Bank of India raised the selling price of 2% 1976 from Rs. 82-2 to Rs. 82-6.

There was again a good inquiry for Provincial loans, particularly 4% West Bengal 1967 at Rs. 100-1.

There were buyers of selected Preference shares, but sellers were not keen to part with their holdings. In the miscellaneous group, Calcutta Electric were turned over freely at around Rs. 11-8 and Chrestien Mica Industries were placed at Rs. 66. Dalmia Cement partly paid Preference were quoted at Rs. 38-8 and Elgin Mills "B" changed hands at Rs. 9-4. A small odd lot of Indian Iron & Steel came to hand at Rs. 109 as did Jardine Henderson at Rs. 79. Orient Paper 2nd were taken at Rs. 75 and Shaw Wallace were crossed at Rs. 85-8. A solitary transaction was reported in the jute section, namely the Belvedere at Rs. 119.

In the banking section, Hind Bank were marked at Rs. 38-4 and Punjab National Bank were knocked down from Rs. 45 to Rs. 43-8. Similarly United Commercial came back from Rs. 51-8 to Rs. 49-8.

In the railway section, the only share dealt in was Dehri Rhtas at Rs. 13.

The reports of the MACNEILL & BARRY group of jute mills for the half-year ended last September are published below. Gouapore and Nuddea have

Half-year ended	Gunny Sales	Depreciation	Rs.	Rs.
The Gouapore Co. Ltd.—				
Sept./55	1,34,19,855	1,50,000	Nil	3,12,039
Mar./55	1,45,05,084	1,50,000	Nil	2,07,742
Sept./54	1,15,87,496	2,66,880	Nil	5,64,283
The Nuddea Mills Co. Ltd.—				
Sept./55	1,07,17,041	3,50,000	Nil	—3,20,482
Mar./55	1,11,23,471	1,00,000	Nil	79,266
Sept./54	94,65,299	2,00,000	Nil	93,454
The Ganges Manufacturing Co. Ltd.—				
Sept./55	1,54,68,499	3,00,000	Nil	—3,14,292
Mar./55	1,60,23,779	2,00,000	Nil	6,51,897
Sept./54	1,42,96,053	1,22,368	Nil	5,40,848

Among cotton shares, Elgin improved from Rs. 26-15 to Rs. 27-8. Jayshree Textiles were crossed at Rs. 5-14 and New Victoria were done at Rs. 1-15. Swadeshi Cotton Preferred-Ordinary were transacted at Rs. 10.

There was little activity in coal shares and prices were changed were lower than the opening rates. For example, Amalgamated were marked down from Rs. 24 to Rs. 23-2, Bengal from Rs. 550 to Rs. 548, Equitable from Rs. 33-4 to Rs. 33 and East Indian from Rs. 32-12 to Rs. 32-4. Burrakur were quoted nominally at Rs. 15-4 which is the price fixed by the Calcutta Stock Exchange Committee. Central India changed hands at Rs. 7-7 and Western Bengal at Rs. 7-4. South Karanpura were quoted lower at Rs. 11-6.

Business in jute shares was practically moribund and a minimum number of transactions were reported. Howrah came to hand at Rs. 25-10, Presidency at Rs. 6-4 and a small odd lot of Waverley at Rs. 5-12. Reliance were marked at Rs. 12. National were quoted nominally at Rs. 30-8 which is the minimum price fixed by the Committee of the Calcutta Stock Exchange.

In the electric supply section, Calcutta Electric initially met with selling pressure and were marked down to Rs. 13-9 but towards the close buyers appeared and the price improved to Rs. 13-14. No other shares in this section were dealt in during the period under review.

Sugar shares were devoid of interest and the only share mentioned was Shree Krishna Gyanodaya at Rs. 12-10.

In the engineering section, Indian Iron & Steel shares were quoted nominally at Rs. 36 (fixed price), but there was an improvement in the Bombay quotation on bear covering from Rs. 33 to Rs. 34. Burn & Co. were a shade better at Rs. 312 and Indian Standard Wagon were unchanged at Rs. 161. Jessop & Co. were steady at Rs. 69 ex dividend cum-rights as were Richardson & Cruddas at Rs. 26-2. Kumardhubi Engineering were sold at Rs. 11-2 against a previous quotation of Rs. 11-10 but recovered again to Rs. 11-8.

In the miscellaneous section, India Paper Pulp were crossed at Rs. 22-14 and Orient Paper were taken up to Rs. 35-10 against the fixed price of Rs. 33-8. Shree Gopal were better at Rs. 18 while Titagur eased from Rs. 45-4 to Rs. 44-12. Ashoka Cement were placed at Rs. 9-10. Dalmia were crossed at Rs. 13-7 and Sone Valley were quoted at Rs. 7-12. In the insurance section, Great Pyramid were sold at Rs. 3-7. India Steamship met with enquiry on expectations of a valuable Government contract and improved from Rs. 7-14 to Rs. 8-8. Aluminium Corporation were done at Rs. 9-12 and Anglo Brothers were better at Rs. 24-12 as were British Burmah Petroleum at Rs. 4. British India Corporation recovered from Rs. 11-11 to Rs. 11-14 while Dunlop Rubber eased from Rs. 33-8 to Rs. 33. Imperial Tobacco were unchanged at Rs. 14 while Indian Aluminium were marked back from Rs. 192 to Rs. 185. Indian Cables met with good enquiry and recovered from Rs. 29-12 to Rs. 30-12 as did Alkali & Chemical from Rs. 21-4 to Rs. 21-12. Indo-Burma Petroleum were unchanged at Rs. 42-8 as were Indian Wood Products at Rs. 41. Martin Burn were quoted at Rs. 27-4 and Metal Box eased from Rs. 25-8 to Rs. 25. F. & C. Osler had sellers at Rs. 14-8 while Rallis were fairly steady on expectations of a better report at Rs. 36-12. Rohtas Industries improved from Rs. 21-9 to Rs. 22-8 and there was a nibbling enquiry for National Insulated Cables at Rs. 21. Shaw Wallace were steady at Rs. 15-8 as were Clive Row at Rs. 11-2. Indian National Airways Ordinary were placed at Rs. 5 and the Preferred-Ordinary at Rs. 7-2.

In the mining section, Indian Copper were quoted nominally at Rs. 6-12 (fixed price), Burma Mines were unchanged at Rs. 2-6 and Western Stockholders Investment at as. 15-6. Karanpura Developers were marked at Rs. 19. Metal Corporation at Rs. 10-14 and Orissa Minerals at Rs. 24-8.

Tea shares continued weak and for the few transactions recorded, prices were generally lower. Among Assam scrips Bishnauth declined to Rs.

maintained the dividends while Ganges have passed it. The profit of Gouapore rose while Nuddea and Ganges incurred losses.

agricultural commodities in the States so as to cover all of them before the end of the second five year plan.

Market News Service

Realising the importance of the market news service in providing all segments of the industry from the grower to the processor with information on prices, arrivals, movements, sales and other factors affecting prices of farm produce as promptly as modern communications permit, the Government of India proposes to set up an All India Markets News Service in collaboration with State Governments during the second five year plan.

It is proposed to have four regions, namely—

1. **Northern**—comprising Punjab, Pepsu, Himachal Pradesh, Delhi, Rajasthan, Madhya Bharat and Western U.P. with a regional office located at Delhi;
2. **Eastern**—comprising Assam, Bengal, Bihar, Orissa and Eastern U.P. with a regional office located at Calcutta;
3. **Western**—comprising Bombay, Saurashtra, Madhya Pradesh and Hyderabad with a regional office located at Bombay and
4. **Southern**—comprising Madras, Andhra, Mysore and Travancore-Cochin with a regional office at Madras.

To begin with, it is proposed to have nine to 11 field offices in each region which would collect information from five or six primary assembling centres, preferably regulated markets. During the second five year plan, it is proposed to set up 40 field offices in various states, four regional offices and a Central office. The field offices, which will be located in the States, are to be run by the State Governments concerned, with financial assistance from the Centre on a fifty-fifty basis. The regional offices will collect information from the terminal or central markets in which they are located and forward it to all field offices in the region. The field offices will then issue a local report for the sub-region incorporating the information received from the key market. The regional offices will issue a comprehensive daily report for their region disseminated through radio, press and mimeographed hand-outs and the central office in Delhi will issue periodical national reviews for different commodities.

In the first instance, it is proposed to cover only important commodities falling under different groups namely (1) foodgrains, fibres, oilseeds and pulses; (2) fruit and vegetables, and (3) livestock and its products. The organisation will be gradually expanded to cover more markets and more commodities. It was originally proposed to commence the scheme in the first year of the second five year plan, namely 1956-57, in the Western Region and to cover the entire country by 1960-61. The subject was discussed at the Regional Conference on Marketing and Co-operation held at Hyderabad from 27th to 29th November 1955, and the Conference resolved that "the Market News Service is an important activity for the dissemination of market information to the farmers in order to enable them to market their produce at the best available prices and that the entire country should be covered within three years instead of five years as now contemplated." The scheme has been revised accordingly and it is now proposed to cover the entire country by 1958-59, commencing with the Western Region in 1956-57, followed by the Northern and Southern Regions in 1957-58 and the Eastern Region in 1958-59.

Warehouse Construction Programme

The programme for warehouse construction in the second five year plan is expected to cost about Rs 20 crores to Rs 25 crores, with the result that storage capacity of 2 million to 2.5 million tons is likely to be available. It is expected that the Central Warehousing Corporation will establish nearly 100 warehouses, each having storage accommodation of 10,000 tons to 20,000 tons or more. On the basis of information available from sources like the Prices Enquiry Committee Report, the Marketing Reports, etc., a list was circulated to all the State Governments for their comments on the location of Central Warehouses. In addition the State Warehousing Corporations are likely to have about 250 warehouses of 2,000 tons to 10,000 tons capacity in important trading centres. The ware-

houses can be classified under the following five categories of storage accommodation:

1. Important ports, towns and centres: 20,000 tons and above.
2. 10,000 to 20,000 tons capacity.
3. 5,000 tons to 10,000 tons capacity.
4. 2,000 tons to 5,000 tons capacity.
5. 1,000 tons to 2,000 tons capacity.

The warehouses in the first two categories will generally be established by the Central Warehousing Corporation, while the State Warehousing Corporations are expected to establish warehouses with the capacities indicated in categories 3, 4 and 5.

The total number of warehouses in each category is estimated as follows:

Category	Warehouses
1	25
2	75
3	100
4	100
5	50

State	Total No. of warehouses proposed.	State
1. Assam	5	—
2. Bihar	15	15
3. Orissa	9	—
4. Uttar Pradesh	14	—
5. West Bengal	10	62
6. Rajasthan	6	41
7. Madhya Bharat	6	—
8. Delhi	1	—
9. Himachal Pradesh	1	—
10. Vindhya Pradesh	12	—

List of commodities for which warehouses are to be constructed:

Food Grains.		
1. Rice	8.	Gram
2. Paddy	9.	Maize
3. Wheat	10.	Toor (whole)
4. Barley	11.	Toor (dhal)

4. Cashewnut	—
5. Pepper	—
6. Arecanut	—
7. Onion	—
8. Chillies	—

Industrial Expansion

Applications for industrial expansion totalling 1,006, were made during 1955 of which 756 were considered by the Licensing Committee; 563 were approved, 119 were rejected, 18 were referred back, 5 were withdrawn and the decision on 52 was deferred. Of 563 applications approved, 164 were in respect of new undertakings, 319 for substantial expansion, 5 were for shifting, and 75 for "carrying on business." The details follow:

	Number considered	Number approved	Expansion	Total
Iron and Steel	79	16	29	57
Sugar	36	9	17	26
Textile cotton	159	53	59	124
Jute	3	1	—	1
Wool	14	4	9	13
Silk	5	—	—	5
Art. silk	65	5	22	41

Rolling stock	13	2	8	11
Pharmaceuticals and drugs	29	3	19	24
Vegetable oils	23	4	2	10
Bievels	25	3	8	11
Glass and ceramics	25	13	8	24
Soap	7	—	5	7
Ferro-manganese	5	3	1	4

Considerable progress is reported in regard to the reorganisation of the small-scale industries sector. Dr. Eugene Stanley of the Stanford Institute and his team of economists and technicians have completed a detailed survey of six industries, namely footwear, bicycle and sewing machine parts, cutlery, sports goods, agricultural implements and electrical appliances. The team has made concrete suggestions for assisting these industries through credit facilities and technical assistance. It has been decided to start industrial extension centres for four of these industries; for footwear at Agra, for cycle and sewing machine parts at Ludhiana in the Punjab, for sports goods at Meerut, and for agricultural implements at Batala (Punjab). At the same time, foreign experts have been engaged to render assistance. Two Germans have been appointed, in the footwear industry. Experts have also been appointed for the lock industry (located at Aligarh) for cycle and sewing machine parts, electro-plating and surgical instruments (located at Bombay), glassware and cutlery.

The team under Dr. Stanley has also trained Indian personnel, working in Bombay, Calcutta and Madras in groups of four economists and two technicians. Dr. Stanley and his team are now working out blueprints for industries which do not exist at present but the products of which are in considerable demand in India. The Ford Foundation proposes to train 50 more Indians during the current year.

The necessary finance is made available on easy terms. The security required includes all assets plus stock-in-trade. The rate of interest is three percent per annum and 2½ percent for co-operatives.

India's Trade with Japan

Indo-Japanese trade has been steadily on the increase. During the six months ending September 1955, for which the figures are available, imports from Japan have risen from Rs. 6,58,77,013 in 1954 to Rs. 12,29,97,689 in 1955. Exports to Japan, during the same period, increased from Rs. 5,47,17,153 to Rs. 12,11,40,873 in 1955. Iron ore, raw cotton and cotton waste accounted for more than half the exports.

Commodity	Sept. 1955	Six months ending Sept. 1954	Six months ending Sept. 1955
	Rs.	Rs.	Rs.
Raw cotton	133,63,091	166,38,655	481,54,781
Cotton waste	26,82,212	65,47,747	179,52,662
Iron ore	25,99,517	78,30,042	160,33,514
	186,44,820	310,16,444	824,40,957

The Indo-Japanese Treaty includes trade clauses, which accord "Most Favoured Nation" treatment to Japan for a temporary period, which expires on 27th April 1956. A matter which is giving some anxiety to Japan is how to stabilise her trade relations with India after the Trade Clause of the Treaty expires. This aspect is an important one, because India is one of the countries which, in order to protect its industries, has involved Article 35 of the GATT against Japan. Enquiries show that India is not in a position to give unqualified "Most Favoured Nation" treatment to Japan, particularly because Indian goods cannot stand Japanese competition, due to the comparatively low prices of Japanese goods. Japan, therefore will have to ally India's apprehensions in this respect before the question of a bilateral trade agreement can be entertained.

Trainees for Steel Plants

The Government of India in the Ministry of Iron and Steel has appointed a Committee to survey existing training facilities in India and to make recommendations for the expansion of existing institutions or the establishment of new ones in order to meet the requirements of the three steel plants for trained personnel. Mr. M. K. Rangnathan, former Chief Engineer of Madras State, is Chairman of the Committee which includes two Russians, Mr. G. F. Michalevich and Mr. P. C. Ivanov, and Mr. N. N. Sengupta, Mr. K. A. Shenoy and Mr. D. V. Krishna Rao.

London

SIGNS OF IMPROVEMENT IN THE ECONOMIC SITUATION

CREDIT SQUEEZE MAKES POOR CONTRIBUTION

(FROM OUR LONDON CORRESPONDENT)

THERE are at least indications that the deterioration of the economic situation which threatened a crisis throughout last year is at last being held in its broader aspects, but the contribution which the credit squeeze was expected to make towards this process would appear to have fallen lamentably short of requirements. Bank advances in December fell by £62.4 million, but repayments by the Electricity and Gas Boards amounted to £75 million. The mid-January figures, however, are more encouraging, showing a further drop of £13 million for ten of the 11 clearing banks without any funding by nationalised industries to set against this. As shown in more detail below, capital spending by industry and hire purchase sales are still being maintained at comparatively high levels, while the January deficit with the European Payments Union, at a time when we should normally be running a fairly substantial surplus, confirms that our imports continue to be much higher than they should be if the economic deterioration is not only to be stopped but the whole process reversed.

Mr. Macmillan, the new Chancellor of the Exchequer, has apparently made some assessment of the situation, for he addressed a meeting of the Conservative Finance Committee on the subject the other day. His diagnosis, apparently agrees with that of his predecessor, Mr. Butler. He was fairly optimistic, and indicated that new measures to deal with inflation would probably have to await the Budget. On the other hand, the Opposition is pressing hard for an early debate on the economic situation and this may well take place before the end of the month, though it is unlikely that Mr. Macmillan will do more than make a general statement on the position. Meantime, he has received some further advice on what he should do from the Association of British Chambers of Commerce, namely, to defer expenditure by the Government, to increase interest rates on savings accounts, to remodel purchase tax and, as an aid to reducing prices, to reduce the petrol duty. It also suggests raising earned income relief to £660 and setting back the commencing point of sur-tax to £2,500 to stimulate effort. Mr. Macmillan's anticipated revenue surplus, which should be well in excess of the estimate, is certainly being rapidly dispersed by his "advisers."

Gold Reserve Improves

A welcome addition of \$29 million raised the sterling area's gold and dollar reserves to \$2,149 million last month after the steady fall in the second half of last year. Further, January witnessed a substantial improvement in the residual surplus in defence aid of \$6 million, for £23 million paid in to E.P.U. in settlement of the December deficit and for \$2 million paid to E.P.U. creditors in bilateral settlements, last month's residual figure came out as a surplus of \$48 million. This compares with a residual surplus of \$29 million in December and of \$10 million last November. Although these are small credits in relation to the formidable task of re-building the reserves, they do at least suggest that the external payments position is slowly improving, and it has been achieved moreover in spite of speculative influences having worked against sterling in foreign countries and the hold-up in wool sales to America occasioned by the Australian dock strike. The deficit with E.P.U. in January was reduced to \$14.2 million after \$30.8 million in December. This is not so satisfactory a result, since the sterling area ought at this time to be in surplus with the E.P.U. The tailing off in coal exports to Europe is probably the explanation, which, since it is likely to continue, may mean that this deficit may become a permanent feature of sterling trade.

Industry's Capital Outlays

First results of the Board of Trade's inquiry into private industry's capital outlay forecasts (a new aid to official planning of economic policy in which about 650 firms have co-operated) show that the rise in spending is likely to be less steep this year than last. Compared with the 1954 total of nearly £600 million, manufacturing industry is estimated to have spent 18 percent more last year. The increase this year is likely to be 17 percent. Within the total, where new building is estimated to have absorbed 34 percent more in 1955 than it did in 1954, this year a rise of only 27 percent is forecast. Outlays on plant, machinery and vehicles, which last year were estimated to have been 14 percent above 1954, may be 15 percent up in 1956. For "other industries," excluding shipping but including building and service enterprises, capital expenditure last year is estimated to have been 21 percent higher than the actual figure of about £250 million for 1954. This year the rise may be only 12 percent. These are generally the smaller industries where capital spending is more sensitive to the economic climate. In the case of the larger companies it is frequently more difficult to retard expansion programmes once they have been put in hand and fresh capital is readily available.

Hire-Purchase Upswing

Reversing the downswing at the end of 1955, motor vehicle hire-purchase contracts last month rose by about 4 percent to 48,510 from 46,360 in

December. This compares with a fall from 42,306 in December, 1954, to 41,912 in January, 1955. Hire-Purchase Information reports 6,782 contracts in new cars for January, 570 more than for December, 4,088 in new commercial vehicles, against 3,607, and 3,427 in used commercial vehicles, against 3,128. In contrast, contracts in used cars rose by only 456, or 2 percent, to 21,546. The total figure is well below the peak of 87,842 reached last July, just before minimum deposits were stepped up. But in view of recent speculations about the motor trade it is much higher than might have been expected.

Changes in Industrial Output

Industrial production last year is estimated by the Treasury to have risen by 4.6 percent. The index for the year averaged 136, compared with 130 in 1954. In December it is estimated that the index reached 134-135, representing an increase of only three percent over December, 1954. This confirmed the trend which had become evident from earlier figures. In the first two quarters of the year production was six percent higher than in the first half of 1954. In the last two quarters the increase was only four percent. The index has been revised to include new information on plastics and on building. Because of this the figure for each month in the last three years has been increased by one point.

A comparison of the December figures for the two years shows how the pattern of production has changed in the intervening twelve months. Output of commercial vehicles is up 22 percent. Cotton yarns are down 17 percent. Passenger cars, up 12 percent, have gained less than commercial vehicles. While cotton yarns have fallen, rayon, nylon, etc. are up 12 percent. Crude steel is 7½ percent higher. Output of bricks is unchanged, but cement is 13 percent up. Coal, with a 4 percent increase, does better than might have been feared.

The Monopolies Bill

Regarded as a powerful weapon in the official campaign for checking rising prices, the Government's proposed Monopolies Bill has been approved in its main principles by the Cabinet and is undergoing a lengthy process of drafting because of its complex nature and in an effort to reduce to the minimum the inevitable controversy to which it will give rise. It is intended to present it to Parliament some time this month as the Restrictive Practices Bill and it will, it is understood, lay down the basic principles according to which the effect on the public interest of any particular practice or agreement in industry will be judged. The Bill will empower the President of the Board of Trade to call for registration of restrictive practices which are held to operate against the public interest. These will become illegal unless firms employing them can show before a new High Court division, staffed by judges specialising in industrial cases, that they are not against the public interest. Practices held to be against the public interest will not be made criminal offences. They will be forbidden by injunction, defiance of which will involve the penalties of contempt of court.

Report on Nationalised Electricity

The first major independent survey of a nationalised industry, the Herbert Committee's report covering electricity supply in England and Wales, made its appearance this week after an inquiry extending over a period of eighteen months. A critical document of 150 pages with 125 recommendations, it will take some time for its conclusions to be properly appreciated although its main points have been generally well received. While stating that the industry is not inefficient, it holds that it is in danger of losing efficiency, "partly for reasons beyond its control," and proceeds to speak its mind frankly and outline what needs to be done. Its main criticisms are that the formal structure of the industry is not conducive to the highest efficiency; the industry has not yet solved the problem of the right degree of delegation; it has a long way to go in the introduction of modern aids to good management; it must take energetic steps to ensure that it attracts and retains an adequate supply of first-rate talent for both technical and managerial posts; and it has not done as much hard thinking as it should about the economics of electricity supply. Because the supply of electricity is a monopoly—for whose product the demand is constantly growing—there is a danger that it could be used for transferring wealth from one section of the community to another without the consent of Parliament.

It proposes a drastic overhaul of the organisation. The Central Electricity Authority's existing responsibility for generation of electricity, including the construction and operation of power stations, should be transferred to a new body to be called the Central Electricity Generation Board. The reconstituted Central Authority, it is suggested, could become an independent body of expert opinion to "provide the critical scrutiny of the industry's finance and development which is now lacking." Detailed criticism is made of some of the Authority's financial policies, including its acceptance "in the national interest" of the need to replace capital equipment from British manufacturers instead of inviting competitive tenders. Its financing of investment programmes under a Treasury guarantee is also criticised, and it is suggested the industry should work as a commercial concern and raise what money it needs in the market. Concerning sales policy, it is suggested domestic tariffs should be related to the price of coal, all consumers should be given the chance to buy electricity more cheaply at off-peak hours, and consumers in rural areas where costs are higher must

either pay more for their power or help to pay for the installation of the lines.

De-Nationalising Steel

In its second annual report, covering the year to 30th September, 1955, Sir John Morison's Iron and Steel Holding and Realisation Agency records distinctly satisfactory progress. Despite many difficulties, it has somehow succeeded in accomplishing the major part of its task. In its first financial year, the Agency realised a gross sum of £78 million. To this another £741 million was added in the year ended 30th September last, making a gross total of £1521 million. Out of this amount £55 million came from the sale of 19 companies whose entire capital was disposed of. These realisations gave a profit of £41 million over book values. By the end of last September, 28 companies had ceased to be subsidiaries of the Agency. But in nine instances, including such important concerns as United Steel, Dorman Long, Colvilles, Stewarts and Lloyds and Whitehead Iron, the Agency has retained big blocks of prior-charge securities with a book value of £63.2 million for future disposal.

In terms of employment and steel production the 28 companies, whose equities had been sold, represented about three-fifths of I.S.H.R.A.'s inheritance. Since 30th September Brymbo Steel Works and John Lysaght's Scunthorpe Works have been disposed of by private sale, and Consett Iron and South Durham Steel have been sold by public offers, bringing up the proportion of the industry back in private hands to nearly 70 percent and total sales to nearly £196 million. The Steel Company of Wales and Richard Thomas and Baldwins alone now account for about two-thirds of the Agency's assets in companies still to be sold.

ECONOMIC DEVELOPMENT
IN ASIA
FINDINGS OF E.C.A.F.E. SURVEY
FOR 1955

THE Economic Survey for 1955, presented to the twelfth session of the E.C.A.F.E. at Bangalore, speaks of an improvement in food and agricultural production in Asia and the Far East. The 1954-55 cereal production in the region, excluding the Chinese mainland, was lower by 1.5 percent than in 1953-54, but in the mainland of China, it rose by over 2 percent. Although the production of agricultural commodities other than food was well above the pre-war average, production of cotton and jute in particular was still lower than the pre-war average. The region as a whole, according to the Survey, has still a long way to go before its food and raw material supplies can be said to match the needs of domestic consumption and of export to exchange for capital goods or other essential imports. The per capita agricultural production in the region, excluding the Chinese mainland, was still 14 percent below its 1934-38 level. As the slow recovery of agriculture could become a serious obstacle to rapid economic development, the emphasis in many countries continues to be on programmes of agricultural development.

Industrial Production

Industrial production has increased at a rate varying from 5 to 8 percent over 1954 in China, India and Japan. The foundations for industrial development have been laid in many other countries in the region. The desire of countries to process their own materials and become self-suffi-

cient in certain commodities is responsible for the growth of cotton textile, paper, rubber re-milling, leather, sugar-refining, oil-pressing and other food-processing industries. Special attention is being paid to certain basic commodities, such as cement. The accent on cottage and small-scale industries is due to social as well as economic considerations. The total power capacity in the region excluding Japan is expected to be doubled to about 15 million k.W. While China, India and Japan have plans for the rapid expansion of heavy metals, engineering and chemical industries, Ceylon, Indonesia, Pakistan and the Philippines have set up or are about to set up caustic soda and fertiliser plants, iron and steel works, machine shops and other industries.

Monetary Conditions

Monetary conditions in the region, says the Survey, have continued to be fairly stable and variations in prices and the cost of living have remained within fairly narrow limits. All available evidence points to a rate of economic growth which in many cases, surpasses that of population growth in the post-war period. This economic growth since 1948 is the result of successful efforts for development and capital formation. The really significant thing, continues the Survey, is perhaps that Asia seems to have emerged at last from a long period of economic stagnation and is ready for a decisive forward march towards economic development. But the margins of advance are still narrow and insecure, and the scarcity of foreign exchange resources continues to be a threat and hindrance to the implementation of development programmes. So, the extent to which adequate external assistance will be available will determine the trend of progress in the ensuing years. Although population pressures in the region make progress more difficult, the fact that the rate of production has, in a number of countries, outpaced the rise in population during the last few years

is too significant to be missed. This, says, the report should give hope and strength for further effort.

Although countries are generally developing a policy for population control, the Survey advises that in view of the divergent emotional attitudes which the subject evokes, it may be helpful to remember that it is economic growth that will ultimately bring about a better balance between birth and death rates. In any case, it is not so much the population increase in itself that governs living standards as the low rates of savings and investment. An eclectic approach and a comprehensive social and economic policy seem to be called for, it concludes. While this is the picture of the region in general, the major cause of the unemployment problem in India, says the Survey, has to be sought in the rapid growth of population. While this has been generally true of India, the diagnosis does not wholly explain the aggravation of the problem in recent years. There is a view here, which is explained in some detail in the following paragraphs, that the ill-conceived land policy of the first five year plan has precipitated considerable rural unemployment in the last few years.

The Human Aspect

The Indian delegate to the session said that whatever political, ideological or doctrinaire system of Government each of the Asian countries might adopt for its speedy advancement in the course of its future history, for the next few decades the human aspect of economic development alone could and should be considered the determining factor in the matter of external assistance. Whether a largely political approach in India to internal social and economic problems is consistent with the expectation of a non-political approach on the part of countries in a position to give assistance, is a matter to be seriously pondered. A strictly liberal-conservative or moderately progressive approach, which does not allow the party in power to be stamped into an emotional or doctrinaire form of radicalism as the only antidote to Communism, appears to be called for in underdeveloped countries that need external assistance so desperately. In this context, the Indian delegate's hope that in the years to come, with the increasing tempo of industrial development, the scope for private foreign investment would be even greater than it has been hitherto may remain largely unfulfilled. The delegate himself appeared to be aware of this when he said that the bulk of the resources from abroad "must continue to come from international agencies and from government and semi-governmental agencies."

Thailand's Open Door

The Thai delegate to the session said that his country hoped to attract foreign capital by offering it the most liberal terms. The Government of his country had promised not to nationalise any industry and also guaranteed the transfer of invested capital and its profit out of the country in foreign currency. The Government had also promised not to interfere with the operation of investors except in a few cases which might prove to be harmful to the country. The British delegate said that the net British private investments in India amounted to Rs. 137 crores between June 1948 and December 1953. This was more than 10 times the net investment of any other foreign country. The U. S. delegate admitted that private U. S. investments in the E.C.A.F.E. region had not been large.

Business Confidence

At Bangalore, Mr. T. T. Krishnamachari, Union Minister for Commerce and Industry, told the business community that the fears entertained by it about the Government's policy of nationalisation were largely psychological, and therefore not real. He said that the private sector would remain so long as democracy prevailed in the country, although it might not be dominant. He continued that in the three cases of nationalisation to date, the Government should have intervened earlier. It was decided to nationalise the Imperial Bank because "it was imperial in name, content and behaviour." The Minister concluded that the goal of a "socialistic pattern of society" was not merely an ideology but, as far as the Government was concerned, a grim necessity in view of the common man's poverty.

Viewpoints on Land Policy

The Rent Bill of the Madras Government, just referred to the Select Committee, continues to occupy a major place in the Press and Public debate here. The Hindu and other papers have written a number of leading articles. In public discussions, the view has crystallised that, in the present agrarian situation in Tamil Nad, it would be most desirable to enable all wage labourers and tenant-labourers to get, without any attendant social tension, something more than their present subsistence wage generally in all areas where acquiescence on their part in the customary scheme of things has been more assiduously undermined than elsewhere. The national land policy is also being discussed by a public organisation here. One strong criticism is that the real cost of the first five year plan policy, in terms of human misery and suffering and of the additional rural unemployment precipitated by it, is yet to be measured. As the evolution of land policies continues to be in the hands of immature, though well-meaning, radicals, the land policy of the second plan will continue to be its Achilles' heel. Basically, the land problem is the most difficult of all problems facing the country because of the huge number of people involved.

Ceylon

CEYLON INVESTORS LOOK
OVERSEASGOVERNMENT'S PLAN FOR
IDLE CAPITAL

(FROM OUR COLOMBO CORRESPONDENT.)

THE Minister of Finance, Mr. M. D. H. Jayawardene, disclosed here last week, that the Central Bank of Ceylon had advised him that there was plenty of money in the country, and it was becoming increasingly difficult to resist the pressure for permission to invest abroad. According to figures released by the Central Bank, the money supply has increased by over Rs. 427 million during the last year. Most of the country's new wealth is stated to be in the hands of the plantations, which have accumulated the funds during the past few months, following the favourable price trends both in the tea and rubber trade. The Central Bank has also revealed that a foreign commercial bank in the country has several million rupees lying idle, in the hope that the Government will permit its investment abroad. This, according to the Central Bank, is one of several institutions in Ceylon at the moment looking around for suitable investment opportunities.

The Government of Ceylon does not, however, favour the idea of overseas investments, particularly at a time when the prices of both tea and rubber appear uncertain. Rubber, particularly, is worrying the Government, following reports from Malaya that Malayan rubber producers may soon be in a position to supply Red China with the bulk of her requirements. If this is so, the five-year Sino-Ceylon rubber-rice trade agreement, which terminates next year, stands a very slender chance of renewal and Ceylon rubber will once more have to find a place in the world market. The Government is therefore anxious to conserve to the greatest possible extent all the country's capital resources. A proposal is now under the consideration of the Government for floating a big loan in order to siphon off excess funds, and allow the money to remain in the country. If the loan is raised, it is expected, that it will be utilised to pay off a part of the debt to the U.K.

Tenders for Bank Deposit

The Bank of Ceylon, the biggest Ceylonese commercial bank, has taken what must be regarded as an unprecedented step in banking history, by calling for tenders for deposits. The Bank has invited holders of money in the country to tender for medium-term deposits of four, five, and six years' duration. Tenderers have been asked to quote the rate of interest at which they are prepared to deposit the money, and those who quote the lowest, will be accepted. Initially the bank wants deposits up to a total value of Rs. 150,000 for four years, up to Rs. 200,000 for five years and Rs. 650,000 for six years. These deposits will be used to grant medium-term loans for house building and development projects. The demand for loans for house building has been increasing in the last few months, following the Government's recent announcement that it is prepared to give all assistance to help make Ceylon a house owning democracy. Under a Government scheme now in operation, people wishing to build houses are required to purchase the land on which the houses are to be built, while the Government makes available the funds for the construction of the houses, repayable over a 20-year period. The Bank of Ceylon will repeat its tender call for deposits if more money is required to match advances in housing and development work.

Asbestos Factory for Ceylon

The first factory to be established here for the manufacture of asbestos (plain and corrugated) will go into production in June this year. Asbestos production, which marks another step in the island's progress in the field of small industries, will be undertaken by the Asbestos Cement Industries Ltd., a public liability company with a capital of Rs. 5 crores, which includes Government participation to the extent of Rs. 20,000. The manufacturers expect, on the basis of the present production programme, to turn out sufficient asbestos products to meet Ceylon's entire requirements, which are now imported, and valued at over Rs. 4 crores annually. Asbestos products, which will be turned out locally, are expected to find a ready market here, because at the present moment nearly 40 percent of the cost of import represents freight, insurance and commission charges. The manufacturers hope to be able to meet local needs within two years, and then to begin production for the overseas market. They are confident that they will be able to find buyers in the Eastern markets. This will be the second Ceylonese enterprise connected with cement to be started here. The other is the Rs. 12½ crores, Ceylon Cement Corporation, which was floated a few months ago, to undertake the production of 100,000 tons of cement annually.

Rubber Reserve Fund

The Government has decided to set up a Rs. 50 crores fund to maintain rubber prices at certain established levels, for all grades, during a slump, and to meet claims made by Red China in the matter of weight and quality of rubber, shipped to that country from Ceylon, or demurrage incurred on the loading of ships. The fund, which will be known as the Rubber Reserve Fund, will be established from the profits made by the Government of Ceylon on the sale of rubber to Red China under the five year rubber-rice trade agreement contracted between the countries. Already, the

Government has Rs. 30 crores to its credit from the business so far concluded. Any money in excess of the Rs. 50 crores which the Government will obtain from the sale of rubber to China, will be credited to revenue. The rubber trade here has welcomed the Government proposal, but is opposed to the fixing of a ceiling to the fund, or the crediting of any part of the takings to revenue. The trade view is that a bigger fund should be built up with the profits, in view of the fact that the agreement with China concludes next year, and Ceylon will have to sell once more in the open market.

World's Biggest Rubber Nursery

A further step in the Government's plan to rehabilitate the rubber industry in Ceylon, has been taken by the decision by the Ceylon Rubber Rehabilitation Board, to open a 90-acre rubber nursery at Agalawatte, in the centre of the island's rubber-producing regions. This nursery will supply three million seedlings a year, and provide high quality planting material to rubber owners under the Government-subsidies rehabilitation scheme. Together with the nursery already set up at Egaloya, also in the heart of the rubber-growing country, it will provide material for replanting nearly 25,000 acres of rubber land in the next two years. This replanting programme will cost the Government over Rs. 20 crores.

More Hardships for Coconut Growers

The Low-Country Products Association, the biggest association of Ceylonese planters, has protested to the Government against the 25 percent increase in the freight rates on copra and coconut oil, between India and Ceylon, imposed recently by shipping interests. This increase is expected to have a serious effect on the Ceylon coconut trade, especially as India recently reduced her freight rates on copra and coconut oil to Europe. Already Ceylon has lost a share of its West German market,

because the Philippines, enjoying cheaper freight rates from Manila to Hamburg, has been able to offer these commodities at cheaper rates. The trade here has taken a grave view of the situation, and feels that immediate action should be taken by the Government to induce shipping interests not to raise their charges without prior consultation with the Government. Producers have also urged the Government to take steps to stabilise the freight rates on coconut products between India and Ceylon.

Fall in Tea Prices Expected

A warning that there will be another steep drop in tea prices around Easter if there is over-production and a fall in quality as well, is given by some members of the tea trade here. The trade view is that producers would be well advised to concentrate on quality, and not quantity, in the next few months. The cause for this pessimism, is the continuing accumulation of stocks of poor-quality tea in Calcutta, and reported financial stringency in London. The present drought in Ceylon has therefore, been welcomed by the trade, which hopes that it will correct any tendency towards over-production.

ROAD DEVELOPMENT SCHEMES

Amounts totalling about Rs. 13.57 lakhs have been sanctioned by the Government of India for road development work in Manipur, Andhra, Saurashtra and Kutch. Schemes sanctioned are: A bridge across the Imphal river at Mayang-Imphal costing Rs. 2.79 lakhs; construction of an 18-mile road from Chinturu to Kunavaram in East Godavari District, Andhra State, at a cost of Rs. 3.53 lakhs; construction of the Ranavav-Bhanvad section of the Jamnagar-Portbandar Road costing Rs. 6,57,600 and Rs. 67,300 for a bridge on the Manjal-Lakhpat Road in Kutch.

WHOLESALE PRICE INDEX FALLS

THE official wholesale price index (base: year ended August 1939=100) declined by 0.1 percent to 375.6 during the week ended 21st January, 1956 as compared with 376.1 for the previous week. The index was higher by 1.3 and 3.7 percent respectively when compared with the corresponding weeks of last month and a year ago. The effect of lower prices of wheat at Amritsar (-5%) and at Jabalpur (-3%), bajra (-5) and dal arhar (-2%) was almost neutralised by higher prices of gram at Patna (+10%), wheat at Hapur (+3%), tea (+2%) and sugar (+1%), and the index for Food Articles stood at 333.6 as compared with 333.8 for the previous week. The index for Industrial Raw Materials declined by 0.7 percent to 452.0 due to a fall in the prices of lac (-7%), raw jute (-5%), raw silk at Bangalore (-4%), cottonseed at Amravati (-2%), groundnuts at Cuddalore and raw wool at Kalimpong (-1% each) although prices of manganese ore (average export prices) (+27%), raw cotton (Umma) at Amravati (+3%), Bengal cotton in Bombay and rapeseed in Calcutta (+1% each) showed advances. The index for Semi-Manufactures advanced by 0.6 percent to 354.4. Items which witnessed noticeable changes during the week were: groundnut cake (+9%), buffalo hides (+5%), castor oil in Madras (+4%) and in Calcutta (-2%), groundnut oil in Madras and goatskins (+3% each) cop-

per in Calcutta (+2%), and zinc (-3%). A decline in the prices of jute manufactures (-3%), brought about a fall of 0.4 percent to 374.4 in the index for Manufactures. The index for the Miscellaneous group moved down further by 0.7 percent to 534.6 as a result of a decline in the prices of tobacco in Calcutta (-2%) and black pepper at Cochin (-1%).

R - Revised

* - Estimated

RAPE AND MUSTARD ESTIMATES

The all-India first estimate of rape and mustard for the year 1955-56 puts the current year's area at 2,403,000 acres as against the adjusted first estimate of 2,374,000 acres for 1954-55. This shows an increase of 29,000 acres or about one percent in area over last year. The increase in acreage under rape and mustard during current year has occurred mainly in PEPSU, the Punjab and Rajasthan due generally to favourable weather conditions during sowing time. This increase has, however, been reduced to some extent by the decrease reported mainly by Bihar. The information given in this estimate relates generally to the period up to the middle of December, 1955. Till then, the condition of the crop was reported to be, on the whole, satisfactory. This estimate relates to the area sown exclusively to this crop. Information regarding the crop sown mixed with other crops will be given in the final estimate only. Past experience has shown that the area in the first estimate forms roughly 40 percent of the area under the crop finally reported.

HEAVY-WATER PLANT FOR INDIA

To meet the forward commitments of its atomic energy plan, the Government of India is to build a £15 million fertiliser and heavy-water plant, and the British firm of Costain-John Brown Ltd. has been appointed to advise on the type of heavy-water plant to be installed. The first step, according to information available in London, may be the installation of plants associated with nitrogen fertiliser factories which will be built in conjunction with the Bhakra-Nangal dam project. The proposal is that the electric power from the dam project will be utilised to operate the fertiliser plant. The integration of heavy-water production with the manufacture of fertilisers means that the heavy water may be produced at considerably less cost than by other methods, such as that which was proposed for the Wairakei scheme in New Zealand, which has now been abandoned. Costain-John Brown Ltd., who are experts in the specialised aspects of atomic energy, state that they will first conduct a world-wide examination of all processes of making heavy water—including the capital costs—and then relate the best methods to Indian conditions. In the meantime, the company's technicians are leaving for India immediately to study the entire project.

THE COMPANIES ACT 1956

The Companies Act, 1956, is expected to come into force with effect from 1st April this year. The Act is being published in a Gazette of India Extraordinary and copies which may be obtained from the Manager of Publications, Civil Lines, Delhi, and all authorised agents are expected to be available for sale to the public before the end of February.

International Finance Corporation

The Board of Directors of the Commonwealth Development Finance Company Ltd. is releasing its Managing Director, Mr. J. G. Beevor, to work with the International Bank for Reconstruction and Development. Mr. Beevor is to undertake preliminary work on the International Finance Corporation (I.F.C.)—the proposed new affiliate of the World Bank.

Jute

GUNNIES EASE AFTER EARLY FIRMNESS

VERY STEADY CONDITIONS CONTINUE IN RAW

JUTE MARKETS

THE jute goods market was firm during the early part of the week mainly because of very heavy covering business by speculators in anticipation of orders from Australia, Burma and other centres. Prices rose generally, but the main interest was in heavy goods. Hessian moved in sympathy. At one stage, following the confirmation of enquiries from Burma, sacking rates rose by Rs. 2.8 a 100 bags over the week's opening prices. But they soon fell back when reports on the size of the Australian order did not come up to expectations. After the week-end, there appeared to be a general reaction against the earlier activity, and an easier tendency prevailed with the trade awaiting the January stock figures, which were rumoured to be high. There was very little interest from the U.S.A., but this was not surprising in the light of the normal seasonal decline in consumption at this time, and the fairly healthy burlap stock position. Overseas buyers felt that prices would decline once the full weight of the increase in Calcutta production was felt, and were thus inclined to delay their purchases. Mills were keen for business for much the same reason, and were encouraged to sell at the higher levels. Rumours of Russian interest in gunnies continued to excite the market, but so far no confirmation of any business could be obtained.

The very firm conditions prevailing in raw jute influenced the gunny section to a large extent, and helped keep prices steady. The Calcutta market derived much of their strength from up-country centres, which continued to report very small imports, and they in turn were encouraged by conditions in Pakistan. Consequently, sellers were very reserved being reluctant to release any of their holdings while there was a prospect of higher prices. At the beginning of the period, Calcutta mills supported the firm tendency by daily purchases, being encouraged by the higher goods prices, but towards the close a reaction set in, and the majority of buyers showed no interest. There was very little alteration in fibre rates, but prices may be regarded as nominal as the market had not been tested, and there was no indication as to which way sellers might react if business had been offered.

THE JUTE MARKETS

Manufactured Goods: The gunny markets opened firm last Thursday, prices having advanced rapidly towards the close the previous day on heavy speculative covering. B Twill quotations rose by Rs. 1-12 in the ready position to Rs. 114 a 100 bags, with forward shipment at a premium of Rs. 1-12, making April-June shipment Rs. 115-12. This latter price was Rs. 2 over the previous day's quotations. Hessian, although neglected by overseas interests and speculators alike, moved in sympathy. Ready shipment 40in. 100z. rose by 6 annas to Rs. 40-14, while forward shipment jumped by 10 annas to Rs. 41-4. Mills took advantage of the higher rates to sell small quantities, but buyers were few and far between, so the constant selling pressure caused prices to ease towards evening. Rumours regarding business with Russia arrested the fall, and by Friday morning sacking rates showed a further gain of 8 or 12 annas, hessian prices remaining constant. Small business was reported, but profit-taking at the higher levels soon brought about a decline, and prices receded rapidly, losing the previous day's gains by Saturday morning. Local operators lost interest at this stage and prices were only prevented from falling by the very steady raw jute markets. Over the week-end, rates fluctuated within narrow limits, but conditions in general pointed to a downward tendency. Following a quiet opening after the week-end, prices again hardened in sympathy with the fibre section, but the general lack of interest produced a decline and easier conditions prevailed. By Tuesday morning, B Twills had fallen back to Rs. 114 in the near positions, with forward shipment only showing a Re. 1 premium. The trade in general was then reluctant to enter into any fresh business. Speculation regarding the mills' gunny stock figures for January, which were rumoured to be higher than anticipated, caused a quieter tone to develop towards evening on Tuesday and rates again fell back. At the close the market is slightly easier and opening quotations on Wednesday morning were as follows:

	Ready	February	March	Apr.-June
	Rs.	Rs.	Rs.	Rs.
40in. 80z.	33-6	33-6	33-4	33-2
40in. 100z.	40-11	40-13	41	41-2
B Twills	114	114-4	114-8	114-12
Heavy Ceers (Plain)	113	113-4	114	114-4
A Twills	141	140-8	140	139
Liverpools	130	130	130	129-8
Cornsacks	116-4	116-4	116-4	116-4

Raw Jute: Calcutta mills took a fair amount of interest in the fibre markets early in the period, and are reported to have bought 3 or 4 lakh maunds. Such support at rising prices encouraged operators to push up rates, which rose to Rs. 31 a maund, the highest figure touched for nine

months. They were further assisted in their efforts by the very steady upcountry markets, where imports at most agencies were small. Buyers were influenced by these events; visualising the possibility of shortages later in the season, with further rises, they covered for forward shipment. Towards the close, the situation changed, and with the goods market showing an easier tendency, mills were content to sit out and await the gunny stock figures. Consequently, with interest in raw material waning, easier conditions prevailed in this section, but prices showed no change and could be regarded as nominal.

Prices at the opening of business on Thursday advanced Re. 1 a maund over the previous week's closing rates and Upper Assam jute was quoted at Rs. 31 a maund basis Bottoms for February-March shipment. Good business at this level on both Thursday and Friday maintained prices. But on Saturday less was wanted and Upper Assam rates were reduced by 8 annas a maund, though Dhubri and Northern prices were unchanged. Little business was reported at this stage, but the steady upcountry markets continued to influence sellers' ideas, so they remained reserved with the market steady.

The main business was transacted in Dhubri-Northern jute at prices ranging between Rs. 29-8 and Rs. 31 a maund for deliveries during February and March; in many cases the contracts carried options to deliver the jute ex local godown. Ordinary local Northern was also done at Rs. 30 to Rs. 30-8 a maund. Daissee and Karimpore-Bongaon Tossa came in for a great deal of interest and the main business was done at Rs. 30-8 to Rs. 31 a maund for February-March shipment. Daissee Middles alone were also done for the same period at Rs. 32-8 a maund. Interest in Daissee Mesta slackened, but small lots were done at Rs. 28 a maund basis Bottoms, the same price being paid for F.A.Q. bimli. Pakistan Cuttings were reported done at between Rs. 130 and Rs. 137-8 a bale for ready and February-March shipment.

At the close, the market is unchanged with sellers' ideas slightly easier and mills showing no interest. Opening quotations on Wednesday morning were as follows:

Indian Jute:	Landed at Mills Rs. a md. basis Bottoms	Shipment
Lower Assam	31	February-March
Upper Assam	30-8	"
Northern	30-3	"
Murshidabad White	29-8	"
Daissee ex Agency	31-8	"
Daissee ex Cossipore	31	"
Daissee Mesta	28-8	"
Local Packing (Northern)	30-8	"
Bimli	29 for F.A.Q.	"

Tossa is quoted at Re. 1 a maund above the price of white jute.

Pakistani Jute:	Rs. a maund basis Bottoms	Shipment
Jat	34	February-March
District	33	"
Northern	32-8	"
Jat Cuttings	135 a bale	"

Conditions in the local Cossipore markets have been very steady over the past week, as a fair amount of mill interest in the early period caused sellers to hold reserved ideas. Mill representatives have again been busy and all available supplies have found ready buyers. Imports have improved and a total of 700 wagons arrived, which is 285 more than in the previous week. The increased arrivals have had no effect on prices as a large percentage was low quality jute, for which there was only a limited demand. At the close quotations were based on Kishenganj jute at Rs. 29-4 a maund garsat quality. In the Daissee section, prices have ruled very firm throughout the period due to the poor imports in all agencies. Only small business has been reported, mainly in middles only, but in spite of the lack of interest sellers hold very reserved ideas. Quotations in Sheoraphuli at the close are based on Rs. 28-8 a maund for garsat quality, but guaranteed dry jute commands a premium of Re. 1 to Rs. 2 a maund.

Mofussil: Indian upcountry markets are very firm indeed. Imports into all the principal agencies are negligible, and prices quoted by sellers and stockists are very often as much as Rs. 2 a maund above the parity of those quoted to Calcutta mills. A large amount of covering has still to be done and operators are relying on this to keep up prices. The steadiness in the Pakistan markets has also influenced sellers' firm ideas, as they have been able to increase rates without the fear of Indian jute becoming unattractive in favour of the Pakistan variety. At the close, quotations in Dhubri were based on Rs. 27 a maund for garsat quality.

GUNNY SHIPMENT STATISTICS

The following figures include coastal shipment relating to manufactured jute goods for shipment from the port of Calcutta. These are gross figures based on shipping bills presented:

	Hessian Bags (Tons)	Cloth (Tons)	Total (Tons)
1st to 31st January, 1956	2,563.7	21,382.3	23,946.0
1st to 31st December, 1955	2,876.4	35,230.1	38,106.5
1st to 30th November, 1955	2,115.7	27,144.0	29,259.7
	Sacking		
1st to 31st January, 1956	27,747.8	976.1	28,723.9
1st to 31st December, 1955	37,253.9	418.3	37,672.2
1st to 30th November, 1955	34,038.0	783.5	34,791.5

THE FOREIGN JUTE MARKETS

FIRM CONDITIONS PREVAIL

(FROM OUR DUNDEE CORRESPONDENT)

THE raw jute market is very firm; and some sellers are even making it "strong" in Pakistan. Spinners here, however, are not to be intimidated into following any advance and purchasing is being done on a quiet scale. So far as white jute is concerned, it is impossible for spinners to pay new rates and sell their yarns at the current maximum fixed prices. Daissee and Tossa are obtainable at more reasonable limits, but these too are now beginning to show an upward tendency. Until last week, it was possible to buy the dark-coloured jute at 20s under the minimum rates, but now, with the new £1 niger freight quotations, the minimum rates have become lowest. This means that Daissee and Tossa are actually advanced by £2 a ton. Quotations are £91 for crack marks of Daissee-2/3 and sellers are now wanting £82 10s for grade (against £81 minimum), while good Tossa-2/3 is lowest at £110 and fours at £100, with grade at £100 and £90 respectively, cif. U.K. The cheapest seller on the market here is now at £100 for Mill Firsts, £89 for Mill Lightnings and £78 for Mill Hearts, but there are others asking £2 to £3 more, all cif. U.K. Spinners are buying a few parcels of Daissee, and Tossa, but it is unfortunate that, so far, they have received little advance in their prices for yarns. They must now buy the dark jute, which will change the colour of their yarns. Dundee manufacturers have now been accustomed for some time past to buy light-coloured yarns spun from Mill Firsts and Mill Lightnings, which were for months quoted at practically the same level as Daissee-2/3 and Tossa-4.

There are expectations in the trade that those responsible for changing prices for yarns and cloth will move to intimate a rise in the course of the next day or two. In anticipation of this, there has been a fair volume of business done and spinners and manufacturers are comfortably situated with orders for delivery over the next three months at least. Some manufacturers have bought yarns for delivery to the end of June. Calcutta goods are very firm and dearer now after displaying weakness. Hessians are quoted at 62s 3d for 100z. 40in. and 47s 6d for 70z., February and March, and 62s 6d and 47s 3d April-June, with "B" twills at 17s 6d, 17s 6d and 17s 3d for the respective positions of shipment, all f.o.b. Calcutta.

It's a BIG job....
running an oilfield

Many special kinds of skill are required to keep India supplied with oil, from the study of fossils to the operation of complicated plant in refineries—and not excluding the care of elephants.

Consider the complexity of the Assam Oil Company's operations at Digboi, in north-east India. Here, at India's first and hitherto only oilfield, nearly a thousand wells have been drilled into the earth's rocks—a total of over 300 miles of hole. More than 600 of these wells still yield oil regularly, modern production techniques ensuring that the maximum amount of crude is recovered from the field. Science and engineering skills guide every phase of the company's work, nowhere less than in Digboi refinery which in a single day supplies the Indian market with over 250,000 gallons of high-quality petroleum products. In all branches of this full-scale industry the Assam Oil Company employs nearly 9,000 persons, while many hundreds more are engaged in serving the consumer.

Yes, the day-to-day running of the oil industry is a big job. To keep it running the Assam Oil Company has to spend crores of rupees just in "looking ahead". For no oilfield lasts for ever, and in order that India's vital flow of oil may be supplied to an increasing extent from India's own resources, the company is constantly exploring for new sources of petroleum.

ASSAM OIL COMPANY

does it all

LONDON INSURANCE LETTER

ANOTHER BUOYANT YEAR

By Air Mail.
THE figures for new life assurance compiled by the Life Offices' Association, the Associated Scottish Life Offices, and the Industrial Life Offices, show a substantial increase for 1955 over 1954. Net new sums assured under individual and group contracts amounted to some £1,050 million, compared with £920 million for 1954. On figures which are not quite complete, it appears that the percentage increases were approximately 14 percent for ordinary life business, 12 percent for ordinary and "home service" combined. A corresponding figure for group business would probably be roughly similar, or larger.

In percentage terms, the increases in ordinary and "home service" business are slightly less than those of 1954 over 1953, but it is evident that 1955 maintained the inflationary standard of the two preceding years. When the whole working population was in employment and incomes and profits were rising, the further growth of life assurance might seem natural enough; yet the fact remains that saving in other forms last year was disappointing. When figures for life assurance funds at the end of 1955 are available it will be possible to see more clearly how much was saved through this medium, but it was certainly satisfactory. Group business is more fluctuating, but it was active last year. In last year's circumstances it increases for two reasons. New groups swell the total membership; and there were many new schemes last year, including one of the largest ever transacted in this country, on behalf of the British Motor Corporation. And as the wages and salaries of existing members rise so group assurance rises automatically.

Investments and Bonuses

A mutual office, the Scottish Widows' Fund, declared recently an intermediate bonus increas-

ed by 4s. to 44s. percent on claims arising under with-profit policies on or after 1st January and a special additional intermediate bonus of 7½ percent on with-profit policies in force at the end of 1955 on which at least 5 years' premiums had been paid on the participating scale; which special bonus might be worth in an average case some 30s. percent. These seemingly mundane figures are mentioned with a purpose. Even in a period when the virtues of ordinary shares are well appreciated, the Scottish Widows' Fund is uncommon in the extent of its participation in ordinary shares, roughly one-third of its funds being invested in them—including U.S. and Canadian. The uncommonly large bonuses are a result of this enterprising policy.

There are still differences of opinion on equity investment of insurance and pension funds. It can be argued that known commitments are best covered by investments yielding a known income and that capital profits are not appropriate to this kind of business. But capital profits have unquestionably helped the Scottish Widows' Fund, and in varying degrees other offices, to accord generous treatment to with-profit policyholders. The recent behaviour of the stock market does not suggest that capital profits will come easily in 1956. Yet it is doubtful if other offices can afford to ignore the competitive advantage that the Scottish Widows' Fund has gained by the bonuses resulting from its investment policy.

Special Treatment for Abstainers

Motor insurance is not as adaptable in this country as in some others, but attempts are made periodically to fit premiums to individual risks. One company, United Kingdom Fire and Accident, made an interesting innovation, not long ago, by reducing substantially premiums payable by drivers who never drank alcohol. It is apparently too early to judge whether the experiment is successful. The company's accident manager, Mr. L. D. Gates, writing to the National Commercial Temperance League, has reported: "Our experi-

ment is still in the early stages, and until we have had at least three years' experience I should hesitate to quote any statistics, because three years is regarded by insurance companies as the minimum period from which to derive any conclusions." Mr. Gates is satisfied, however, that "very many accidents arise not because the driver is drunk but because he has been drinking". If, in due time, statistics can confirm this belief, it will doubtless be possible to correct some of the anomalies whereby, generally, safe and dangerous drivers pay the same for quite different risks. Such anomalies are only modified by no-claims bonuses.

INDIAN FIRM TO BUILD BRITISH ENGINES

Automobile Products of India (API) has made an agreement with the firm of Henry Meadows—a subsidiary of Associated British Engineering Ltd.—for the manufacture of British engines under licence in India. The agreement is the culmination of negotiations begun about 12 months ago, and provides that API will sell, service and ultimately, manufacture the whole range of Henry Meadows products in every type of application—automotive and marine engines, generating sets, and compressors. A three-year period is envisaged before Indian production of the Henry Meadows range of engines is fully under way. Thus, the agreement provides that in the initial stages complete engines will be imported from Britain; and the first batch, worth about £1 million has already been shipped. Progressively, over the next three years, these will be followed by "knocked-down" engines of increasing range to the point where all Meadows engines will be fully manufactured in India under the control of Indian nationals. API's managing director is at present touring Britain and the Continent to arrange for the purchase of £250,000 worth of machine tools for the further equipment of the company's Indian factories.

Engineering and Transport

TURBINE-DRIVEN CARS

RESEARCH AND DEVELOPMENT IN THE U.K.

ONE day we may wake up to find that the development of automatic transmissions for motor vehicles, research work on petrol injection systems and the ceaseless controversy about the qualities of air or water-cooled engines, have become things of the past. For this is what the turbine can mean to motorists: no clutch or gearbox for normal forward driving, no carburation problems, and no cooling system. Furthermore, it starts easily and reaches normal working temperature in a few seconds, whatever the weather, can operate on low grade fuels, uses little lubricating oil, and is easily maintained. But it has its drawbacks, chiefly the cost of production and its high rate of fuel consumption. The recent announcement by the Austin Motor Company, seems to bring the golden age of gas turbine motoring closer, and the development of their secret turbine engine has reached a stage where operating economy even approaching that of diesel engines, can be foreseen.

Principles of the Gas Turbine

Britain was first off the mark with the gas turbine car which the Rover Company demonstrated in 1950. Since then experimental cars have come from the United States, France and Italy, but in no case has the principle of the Rover power unit been substantially changed. In the gas turbine engine a revolving compressor passes incoming air under pressure to a combustion chamber, where it is mixed with fuel. The mixture becomes transformed into hot, expanding gases, which leave the combustion chamber with tremendous force to rotate the turbine wheel. This wheel drives the compressor.

This arrangement is appropriate for aircraft requirements where the compressor and turbine need only operate over a limited speed range. The Rover design, however, introduced a second free-running turbine, driven by the still expanding gases issuing from the compressor turbine. This second free turbine, which is coupled through a reduction gear to the road wheels, provides the variations of speed required of a motor vehicle, and performs the functions of a clutch and gearbox.

Recent Experiments

The original Rover turbine, developed to give 240 b.h.p. was installed in an open two-seater car, and in 1952 this was officially timed on the Jabbeke highway near Ostend at 151.965 m.p.h. (244.585 k.p.h.). This remains the world speed record for a gas turbine engine car. By June, 1954, a scaled down version of this engine, delivering 100 b.h.p. was fitted into the luggage boot of a Rover 75 saloon. Only a streamlined exhaust funnel, moulded vertically into the body of the car at the rear, revealed that it was no ordinary Rover.

By August, 1954, Austin, whose experiments with a small gas turbine had been going on for five years, installed a complete 125 h.p. power unit in the normal engine position in an Austin "Sheerline" saloon. The only alterations found necessary to the car were the extension of the bonnet nose to accommodate the air intake silencer, and the provisions of louvers in the bonnet to allow excess heat to escape. Less than 12 months later this car made its first and only public appearance at the company's jubilee celebrations, and it was then made known that it had covered several thousand miles in Great Britain without anyone noticing that it was different from an ordinary "Sheerline".

In this car the Austin Company had gone a long way towards solving the problem of excessive fuel consumption by incorporating a highly developed heat exchanger. This device utilises the heat of the exhaust gases to warm up the air from the compressor before it enters the combustion chamber. It has the dual effect of cooling the exhaust gases to a safe temperature before they are allowed to escape into the atmosphere and, most important of all, reducing the amount of fuel required to raise the compressed air to its proper working temperature.

Problems of Production

There are still many difficulties to be overcome, mostly problems of economical production. The gas turbine demands great precision in its construction with clearances of less than one thousandth of an inch between parts which are rotating at speeds up to 50,000 r.p.m. The metals which must be used to withstand temperatures ranging from 1,200°F to 1,800°F (640°C to 970°C), together with the high speeds are themselves expensive, and the manufacture of the highly accurate turbine blades is a costly process.

For example, the blades of the Rover engine are machined from a solid alloy disc, although Austin has succeeded in producing 90 blades at one operation by casting them by the "lost wax" process. Many other well-known names in the British motor industry are known to be carrying out researches behind the scenes.

Pronouncements made by the experts at this juncture are a mixture of optimism and caution. Dr. J. H. Weaving, head of Austin's gas turbine research, points out that among problems still to be solved is the production of a cheap heat-exchanger of light construction. When this has

in compressor and turbine efficiencies, he foresees fuel economy comparable to that of diesel engines.

The construction of a power unit suitable for modern production methods and road conditions is however now a possibility. The gas turbine may well be the automobile engine of the future and may one day make the piston engine as outmoded as the horse. And Britain, who led the world with the first practicable gas turbines in aircraft, is working ceaselessly to maintain its lead in the field of turbine driven motor vehicles.

AUTOMATION AND MACHINE TOOL CONTROL

A recent number of *The British Export Gazette* describes what is believed to be the first example of automation applied to machine tool control, either in Britain or America, which has travelled outside the development laboratory and has been installed in the workshop of an independent user. At the Norwich works of Laurence, Scott and Electromotors, Ltd., a milling machine based on a copy miller made by Research Engineers, Ltd., and modified by the British firm of Electrical and Musical Industries, Ltd., for fully automatic electronic control, has been installed for precise copying of two-dimensional cams.

The normal copy-miller can copy a master quickly and cheaply but when a new master is required it must be made by hand—a slow and extremely costly process when a high degree of accuracy is required. The electronically-controlled machine, on the other hand, takes its instructions not from a master but direct from design data fed to the control unit in the form of a table giving the dimensions of the part required at a series of specific points. The control unit deduces what movements should be made by the cutting tool and the work-table to produce the correct profile and passes appropriate instructions to servomotors controlling the respective feeds of the machine.

From Design to Prototype

The table of dimensions forming the design data can be prepared immediately the design is fixed. It is typed on a special machine which records the figures as perforations in a tape, in which form they are assimilable by the control unit, and simultaneously produces a typed copy for checking purposes.

The perforated tape is then run through the "reading head" of the control unit which transfers the data to the information store. To reduce complication the tape is made to run at a speed which corresponds to the cutting speed of the machine and the store only retains information referring to points in the immediate vicinity of the tool. In order to reduce to a minimum the number of dimensions to be worked out and listed in the table, the control unit includes an interpolator which permits it to deduce, from a relatively small number of "marker" points in the table, a large number of other points lying on a smooth curve through the "markers". These points are then used to give the profile which the tool is instructed to cut.

The E.M.I. system can be adapted to a wide range of machines used in a variety of manufacturing processes. Operation is simple and one operator can supervise several machines. Changing from one job to another is equally simple and can be effected in a matter of seconds. It offers tremendous savings in both time and cost by making it possible to produce a single development prototype immediately the design is finished and at no more cost than a mass production part or to make changes during production runs without scrapping costly templates or enduring long waits for making and setting up new ones.

INDO-U.S. AIR AGREEMENT

The Government of India and the Government of the United States have signed a civil air transport agreement governing the operation of air services between the two countries. Mr. M. M. Philip, Secretary, Ministry of Communications, signed for the Government of India and Mr. L. Satterthwaite, Special United States Representative, for the United States. In addition, the Government of India and the Embassy of the United States entered into an exchange of letters noting the unique nature of air transport between the United States and India, and setting forth certain procedures which would serve as guidance in interpreting and carrying out the agreement. The agreement together with the letters of exchange replaces the Air Transport Agreement signed on 14th November, 1946, which expired on 15th January, 1955. United States air services to India since the expiration of that agreement have been carried on under a temporary permit issued by the Government of India.

The Government of India and the Government of the United States recognised that in many respects their philosophies differ as to the methods through which to achieve the orderly development of air transportation, but were agreed that air transportation between the two countries would continue the rapid growth of the last few years. Accordingly, the two Governments contemplate consultations, in order to ensure that the arrangements entered into remain adequate, not only to deal with any situation which may arise, but also to provide the necessary flexibility to guarantee a permanent foundation upon which their respective air transport systems could prosper. Both delegations were gratified with the progress which had been made in developing the new agreement and the exchange of letters, and were confident that both nations would benefit from the successful aviation relationship which would ensue.

Plantation Topics

TEA EXPORT QUOTA

BIGGER RELEASE

The Government of India has raised the export quota of tea (1955 crop) to 480 million lbs. The new quota is 15.1 million lbs higher than the previous season's 464.9 million lbs. It amounts to 69.3 percent of the total crop. In terms of the "standard export" figure, it would have represented 138 percent, or 3 percent more than was permitted under the International Tea Agreement—which expired last March.

COCHIN TEA SALES

Offerings at Sale No. 3, held on 31st January (reported briefly last week) amounted to approximately 9,85,000 lbs. There was a fair selection on offer, and quality, particularly for Medium and Low Medium descriptions, showed improvement. The Sale was characterised by a good general demand. Best Liquoring Nilgiri Highgrowns were well supported, but at rates which were irregularly easier, other Nilgiri descriptions being about steady. Improved Bright liquoring Mediums and Fannings grades advanced by 2 to 4 annas while Common Brokens were firm to dearer. There was a better demand for Whole leaf grades which were a full 2 annas dearer, while black leaf Middle East types were a strong feature.

	1956	1955
	Rs. as. ps.	Rs. as. ps.
Low Grown Travancore B.O.P.	1 12 0	3 10 0
Medium Travancore B.O.P.	2 2 0	3 10 6
Anamallais B.O.P.	2 8 0	3 13 0
The Best Liquoring Nilgiri B.O.P.	4 3 0	4 8 0
Black well made O.P.	2 7 0	3 9 0

The Export Quota market has shown an easier trend, and sellers were quoted at 17 pies with buyers scarce. Export Sale No. 4 will be held on 14th February.

At Dust Sale C, held on 7th February, 425,000 lbs. of tea were on offer. There was a strong and general demand, and prices tended higher.

INDO-BRITISH COLLABORATION

Close and happy co-operation with the Tata Iron and Steel Co. was stressed by Mr. A. G. Stewart in his address to the 67th annual general meeting of Stewarts and Lloyds Ltd., held in Glasgow recently. This United Kingdom firm, which specialises in the production of steel tubes, has associations with all the major countries of the Commonwealth. Referring to Stewarts and Lloyds' collaboration with Tata's, Mr. Stewart said that as a result of this, the Indian Tube Co. (1953) was formed and the first plant—a continuous weld mill for the production of commercial-quality tubes—had recently commenced operations. "We are now engaged", he said, "in installing for the Indian Tube Co. an electric resistance weld tube plant which will produce high-quality tubes for use in the boiler and bicycle industries and for other pressure and non-pressure purposes. We are also installing a mill for cold-rolling strip, which is essential for the production of precision tubes on the electric resistance weld tube plant, and which will also supply strip for bicycle components, electrical parts, box strapping, and other similar purposes. These units should be completed early in 1957". Mr. Stewart added that, at 1st October, 1955, Stewarts and Lloyds had invested £658,000 in the Indian Tube Co. representing the British company's 40 percent interest in the Indian venture.

Mr. Stewart also said that Tata's and his own company were considering further expansion, and had formally applied to the Government of India for permission to erect a seamless-tube plant. These seamless tubes, he explained, were required for high-pressure work and for certain other special purposes. Mr. Stewart declared that his firm was happy to be associated, through the Indian Tube Co., with the Tata interests, and that he felt that through this joint venture Stewarts and Lloyds was making a not inconsiderable contribution towards equipping India with the technical knowledge, capital and plant which she undoubtedly needed and desired. Speaking of Stewarts and Lloyds' activities generally, Mr. Stewart said that the post-war plan begun in 1945 had been practically completed, at a capital cost of more than £40 million.

Calcutta Markets

DEMAND IMPROVES AT TEA EXPORT AUCTION

EASIER CLOSE AT INTERNAL SALE

AT Sale No. 34, held on 6th and 7th February, there were 67,250 chests on offer in the Export auction. The market opened with a fair general demand which strengthened considerably as the sale progressed. When the sale opened commonest and common broken were from 1 to 2 annas easier but at the close were only about half an anna below valuations. Any teas with useful bright liquors were a very strong feature and were dearer by 2 to 3 annas, while the more ordinary CTC teas were from 1 to 2 annas higher. Fannings grades, particularly those of black leaf

appearance, were again the strongest feature being generally 2 to 3 annas dearer and sometimes more. Whole Leaf grades were the weakest feature and were from 2 to 3 annas easier.

	Quotations		
	1956	1955	
Clean Black Pekoe	1 13 0	3 10 0 to 3 11 0	
Plain B.P.	1 7 0	3 9 0	
Medium Assam B.P.	1 9 6 to 1 10 0	3 11 0	
Best CTC Assam B.P.	2 5 0 to 2 6 0	Not Quotable	

At the internal sale, 20,600 packages of Dusts were on offer. There was a fair demand and the market opened fully firm, but towards the close demand eased. Black leaf teas suitable for the Middle East received fair support but generally sold at prices below those of the last sale, when they were the strongest feature. All teas with bright liquors were fully firm, but poorer liquoring teas were an irregular half to one anna easier. The best CTC Assams with good liquors

were strong but poorer teas of this type were inclined to be irregular.

	Quotations		
	1956	1955	
Medium Doorga Dust	1 7 0	2 10 0	
Medium Assam Grassy	1 8 6	2 11 5	
Best Assam CTC Dust	2 4 0 to 2 6 0	3 1 0 to 3 2 0	

There were 3,450 packages of Leaf on offer, which met with a fair demand at prices which were generally 1 to 1½ annas below those of the last sale.

FREIGHT MARKETS QUIET BUT FIRM

THERE has been little activity in the chartering market. The undertone however remains quiet but firm in most trades. The demand for tonnage for long periods of consecutive voyages in the American coal trade to the Continent remains unabated, but no new fixtures have been reported. The enquiry for grain from North America is a little brighter, but there appears to be less early business available, although tonnage has been fixed from Northern Range to West Pakistan at \$ (U.S.) 22.95 for heavy grain and \$ (U.S.) 18.90 for wheat in bulk, and it is understood that charterers require further tonnage for the same destination. Idle conditions prevail in Eastern markets, but it is reported that tonnage is negotiating for cereals from North China to the Black Sea. A number of ore cargoes are available from India but no fixtures have been reported. A cargo of phosphates has been fixed from Aqaba to Bombay at 67s 6d f.i.o. and stowed. The Time Charter market remains quiet with rates maintained on the few fixtures made.

SUGAR MARKET

During the week ended 8th February, sugar sales in the Calcutta market averaged 4,500 bags daily. Arrivals a day were 1,200 bags and stocks totalled 70,000 bags. Rates for ready sugar ex-Kantapukur delivery were Rs. 31-6 for ordinary grain and Rs. 33-2 for big grain of new sugar. The increased prices reflected better conditions in the market where prices tend to rise even further.

LINSEED

After the strong upward tendency of the past few weeks, a reaction has set in, and the past week saw an appreciable lowering in the price level. This was attributable to two factors, namely, a slackening in the demand for linseed oil from abroad and a fear of the imposition of an export duty on linseed oil. The prevailing scarcity of linseed at the centres continued and whilst new crop seeds were offered more freely, local crushers were experiencing an acute shortage of ready goods. Very little fresh business was reported in linseed oil. Buyers were pausing, whilst sellers indicated £128 for ready and £125 for April-May shipment.

HIDES AND SKINS

The market continued dull. Stocks were higher than in the previous week.

Bazaar Sales

(Between 31st January and 6th February, 1956)
Cowhides: Wet salted (Ord.) 2,500 pcs. on the basis of Annas 10 to Annas 13-3; Wet salted (Ord.) 5,000 pcs. on the basis of Rs. 8-12 to Rs. 11-8; Wet salted (Slaughtered) 16,800 pcs. on the basis of Rs. 13 to Rs. 22.

Goatskins: Wet salted (Daissee, Killed) 83,900 pcs. on the basis of Rs. 275 to Rs. 295, Rs. 330 to Rs. 350 and Rs. 350 to Rs. 400; Assam-Dinajpur-Murshidabad 6,900 pcs. on the basis of Rs. 280 to Rs. 330; Purneah-Kissenganj 4,000 pcs. on the basis of Rs. 290 to Rs. 300; Muzafferpore 1,700 pcs. on the basis of Rs. 375 to Rs. 385; Muzafferpore-Patna 9,000 pcs. on the basis of Rs. 320 to Rs. 330.

Bazaar Stocks

(6th February, 1956)
Cowhides: Wet salted 1,89,600 pcs.
Goatskins: Wet salted 22,000 pcs.; Assam-Dinajpur-Murshidabad 68,000 pcs.; Muzafferpore-Patna-Pakur-Purneah-Kissenganj 4,92,000 pcs.

SHELLAC MARKET STEADY

During the week ended 7th February, the market was steady. The range of quotations was as follows:

Pure Buttonlac	Rs. 158, 150 to 158 buyers
Lemon No. 1 Shellac	Rs. 150 done, 151 to 157-8 buyers
Lemon No. 2 Shellac	Rs. 141 to 149-8 buyers, 153 done
F.O. Std. 1 Shellac	Rs. 136-8 buyers, 140 done and buyers, 147 done
Pure TN Shellac	Rs. 132-8 to 142 basis done and buyers
4% I.T.N. Shellac	Rs. 124 to 134 buyers
No. 1 Kusmi Seedlac	Rs. 142-8 value, 150 to 155 buyers
No. 2 Kusmi Seedlac	Rs. 134-8 value, 130, 145 done and buyers
Fine Bysaky Seedlac (Manbhumi)	Rs. 130-8 value, 129 to 141 buyers
Fine Katki Seedlac (C.P.)	Rs. 121 to 127-8 buyers, 133 done
Katki Seedlac (C.P.) under 5%	Rs. 109 value, 112 to 118 buyers
Ordinary Katki Seedlac (C.P.)	Rs. 104-8 value, 105 to 110 buyers
Kiroelac	Rs. 59, 58, 60-8 buyers

Shipments during February until the 4th were 2,990 packages comprising shellac 2,047 packages, Seedlac 730 packages, buttonlac 93 packages, others 120 packages.

JOINT STOCK COMPANIES' PREFERENCE SHARES

Dividends are cumulative and shares carry a preferential claim on the property for the payment of capital and on the profits for dividend except in case of companies marked otherwise. Months against names of companies indicate approximately times of payment of dividends.

TEA COMPANIES

O. Po and Dd indicate Ordinary, Preferred Ordinary and Deferred Shares, respectively. P next to the name of the company indicates that the Company also has Preference Shares. Figures in "accounts closed" column indicate the months of the calendar year in which accounts are closed. For Managing Agents refer to the Key (last page) under the numbers indicated.

THE OUTLINE FOR PROGRESS

SECOND PLAN BLENDS MUCH OPTIMISM AND SOME REALISM

THE past few weeks have been packed full of pointers to the direction in which India's economic affairs are moving. Most of them, practical or idealistic, seemed to have found a place somewhere in the draft outline of the second five year plan. That is what makes this document so important as a blueprint for the future. It is not that the plan is likely to succeed. Nor that it is the best from a purely economic point of view. Its significance lies in the way it has reconciled the economically desirable with the politically possible and yet preserved most of the essentials for increasing the nation's wealth. Its targets are probably over-ambitious, its assumptions too optimistic and its aims more dictated by ideology than they ought to be. But it has more than a semblance of a practical proposition and deserves to be respected and supported accordingly. One of its more encouraging features is the comparative neglect of such red herrings in the path of economic progress as prohibition and support for the Ambar Charkha. Too little consideration may have been given to the railways' claims and there is no doubt that increases in teachers' salaries are both socially desirable and eventually an economic necessity. But few will regret the omission of atomic energy development, at least in its present costly experimental stage; and increased defence expenditure seems out of place if India's foreign policy is as successful as the Government suggests. On the whole, the plan is remarkably successful in steering a course between ideological considerations and conflicting ministerial claims. If economic progress eventually founders, it will not be because the shoals have been ignored by those whose business it has been to set the course.

The criticism which can be levelled against the plan is that it is too large and is based on too many economic imponderables. When the various categories of resources are mustered for inspection, it can be seen that their success depends on two main factors—the expansion of the public sector and the availability of external assistance. When other doubts are added, such as whether there will be five good monsoons in a row and how badly the confidence of the private sector has been shaken by threats of more nationalisation and higher taxes, all of which planning tends to overlook, it can be seen how shaky the basis of this blueprint really is. There is no questioning the importance of making all efforts to achieve the targets. And if the attitudes towards the first plan's shortfalls are any guide, progress actually attained will always be rated higher than what might have been. But the fact must be faced that, with all the will in the world, nothing short of a miracle can ensure that the second plan accomplishes all that has been set for it.

Just how optimistic are some of the assumptions on the resources side can be judged by taking each item in turn. They are five in number—that current revenue will yield a surplus of Rs. 800 crores, public borrowing Rs. 1,200 crores, other budgetary resources Rs. 400 crores and external assistance Rs. 800 crores, over the five years; and that deficit financing totalling Rs. 1,200 crores will be absorbed successfully. The yield from current revenues will depend on the general increase in overall wealth, and especially in that section of the community which pays most of the taxes. But one of the aims of the plan is to redistribute income so that this section gets a progressively smaller proportion of it. Success under this particular resources target will, then, vary inversely as the energy with which one of the plan's chief purposes is pursued. The only way shortfalls in the item "surplus from current revenue" could be avoided would be to broaden the basis of taxation. How this can be done has already been indicated by the Taxation Enquiry Commission. It will involve taxing small incomes indirectly

just as large ones are already curtailed directly, total wealth in land at least as much as is contemplated for total wealth in the bank and agricultural betterment as rigorously as that suggested for betterment in stocks and shares. These needs have only to be enumerated to show that political considerations will finally decide if this target is to be reached, whether the 25 per cent expansion in income on which it is based is realised or not. The temptation will be to heap more and more on salary earners and business profits. But that will only make the planned expansion of the private sector less likely, increase evasion and set unhealthy precedents in social injustice. The coming Budget and its successors are awaited with trepidation by all whose efforts will be required to achieve this resources target. If they bring fresh blows to incentive, more harassment for the honest taxpayer and new evidence of ideological aims, the possibility of such bright hopes being fulfilled are bound to be the first casualty.

Borrowings from the public are expected to provide Rs. 1,200 crores over the five-year period. A target for market loans averaging Rs. 140 crores a year is large compared with the present annual average for new capital raising of perhaps Rs. 70 crores. The main factor here will be the health of the capital market which has lately suffered a number of serious blows to its confidence. Firms and individuals do not lend their money if there is civil unrest in the community, whatever its causes. Nor can they if it is taken from them in taxation or frightened into inactivity by general economic uncertainties. The capital market has been remarkably healthy in the past year, but it is difficult to see how it can double its capabilities, unless the resources of the nationalised life insurance industry are to be used to a greater extent than at present promised. Much the same can be said of small savings. These are likely to vary directly with the Government's success in holding back inflation and here again the prospects are not reassuring. They in their turn must also bear some relation to the rigours of future taxation provisions.

The two items whose prospects are most difficult to assess are undoubtedly the "external assistance" and the "deficit financing" ones. Doubts about the first are too obvious to need much comment. Apart from such sources as the World Bank, almost the whole is going to depend on the mood

BRIGHTER PROSPECTS IN PAKISTAN

PAKISTAN'S economy has in recent times achieved a stability that was conspicuously absent during the first six years of its separate existence. The earlier disturbances it suffered were to some extent caused by circumstances beyond its control, such as refugee migrations, a Korean war boom and the subsequent slump. To a considerable extent, however, they were also man-made: the administration of the country had passed into the hands of inexperienced politicians, who devoted themselves more keenly to ideological preoccupations than to establishing a sound political and economic structure. The progress which has now been achieved owes as much to good luck as to good sense. Greater political realism within Pakistan has been matched by greater economic stability outside, and the two together have facilitated advance on a scale that is not unimpressive in relation to the serious limitations imposed by the nature and size of the country's resources. The chief weakness of the economy still lies in the fact that, in common with many other under-developed countries, it is very narrowly based; its mainstays have been a few agricultural commodities, the production of which depends

of the United States Congress. And this towards a country which is rightly determined to offer no accommodation in its foreign policy. It is a tribute to American generosity and the farsightedness of many of her leaders that efforts are being made to ensure aid to India which can be counted on not to rise and fall with the prevailing tides of political opinion. But it remains true that the only certain thing about this item is its uncertainty. Even the present high figure of Rs. 800 crores may be an under-estimate. It is based on the assumption that Rs. 100 crores of foreign exchange will be available from private investment. This is a hazardous one to say the least, especially after the recent nationalisation of life insurance. The proposals for deficit financing call for discussion. The target is more than twice that set for the first plan, which itself is still a long way from being attained. If it were in fact possible to create Rs. 1,200 crores in five years, it is difficult to see how a runaway inflation could be avoided. To date, deficit financing in the first plan is probably Rs. 150 crores, and lately prices have begun to rise. The impact of eight times this total, one-third of which is proposed for the first year of the plan and will therefore meet a volume of goods and services only slightly greater than exists at present, could inflate the economy like a balloon. When the chances of increasing the volume of goods and services depend so much on an inelastic agricultural economy, a doubting private sector and a new and untied public one, it is not difficult to see the dangers involved. The inflationary possibilities of this huge quantity of created funds would be less if they did not depend on the rapid installation and utilisation of new capacity, especially in a public sector wholly unfamiliar with, and completely unadapted to, the techniques of industrial management. The chief safeguard against inflation is

are in operation, and Mr. Cree states that "by this time next year, with the anticipated 7,500 looms working double shifts, the annual exportable surplus should be in the region of 200,000 tons." Other major industrial enterprises which have started production during the past year are the sugar mills at Jauharabad and Leiah, the caustic soda and the D.D.T. factories at Nowshera, the cardboard and strawboard mills at Rihawali and Nowshera, the Pakistan Cables and Glaxo Laboratories factories at Karachi, and the cement works at Hyderabad.

One of the chief factors hampering industrial expansion in Pakistan—both East and West—is the shortage of power resources. This has been accentuated by the pursuit of illogical policies on the import of coal from India, but attempts are being made to ease the shortage from new sources of gas, petroleum and electricity. Supplies of natural gas from Sui have been available in Karachi for the past four months, and new reserves have been found at Uch, Attock and Sylhet. Consumption of gas by various industries has already reached 20 million cubic feet a day. Prospecting for petroleum is also proceeding in West Pakistan, extensive geophysical surveys have been carried out and drilling is expected to start soon. Several major oil companies have been negotiating with the Government to start operations.

Progress in agriculture seems to have been less solid than that of industrial and power plans, but this is perhaps inevitable in view of its susceptibility to climatic factors. During the past year, food crops in both East and West Pakistan have been severely damaged by floods, and wheat has had to be imported. The cotton and jute crops have also suffered from bad climatic conditions, and output of the former is well below the official target of 2.5 million bales. Tea production has fallen, mainly because fertilisers, fungicides, insecticides and machinery have not been available in adequate quantities; it is hoped, however, that more liberal import policies may allow these deficiencies to be overcome later. As various irrigation schemes are implemented, it is likely that agriculture, especially in West Pakistan, will be placed on a more stable foundation. The ambitiousness of these schemes is indicated by the proposals for developing an extra 11 million acres of land; but there are doubts as to how far achievement will correspond to ambition.

Pakistan's decision to devalue her rupee six months ago has been commended as a recognition, even if rather belated, of economic facts. Mr. Cree describes it as "a wise and bold step," and adds: "I have every confidence that the operation will, in its long-term effects, prove beneficial to the country's economic health." For years foreign investors, who could have made a large contribution to Pakistan's development plans, have hesitated because of the adverse exchange rate and the possibility of devaluation. Now that the uncertainty has been removed, their interest is likely to grow, since many attractive opportunities are forthcoming, especially in secondary industries. The attraction is increased by the fact that after an initial spell of muddled thinking on capitalist enterprise, particularly foreign, the Government has been settling down to a more realistic assessment of the possibilities. The difficulties in setting up industries are still formidable. There is too much "red tape", technical skill is often difficult to come by, serious labour troubles sometimes take place, living costs are high, and domestic entrepreneurs and investors are shy. But against these difficulties must be counted at least one major advantage: that in the past couple of years, the administration has become increasingly conscious of the country's economic shortcomings and is making correspondingly greater efforts to overcome them by allowing more scope to private enterprise. These efforts are seen in the evolution of helpful taxation policies whereby partial exemptions from income-tax have been allowed on profits from new enterprises, special depreciation allowances have been given, and some local products have been exempted from sales tax and excise duty. The Pakistan Government also does not have the same attachment to ideas of nationalisation such as is to be found in many newly independent countries, including India. It has been arriving at the sound conclusion that since it does not itself have the money, equipment and skill to do all that is necessary for the country's growing prosperity, the alternative is to encourage those who do have them—and are willing to bring them in.

BURMA'S BALANCE OF PAYMENTS CRISIS

SINCE the seller's market for rice collapsed, Burma has been facing uneasy days. The country has become involved in a balance of payments crisis which still shows no sign of ending. The Government has made all possible efforts to get rid of the rice surplus year after year, and India has been able to render some assistance. But the essence of this nagging problem still defies a permanent solution. Other Asian countries with a predominantly rice economy have been facing

difficulties similar to Burma's, but the country's misfortunes are two-dimensional, being as much a product of political insurrection as of the caprices of international commerce. This is a conspiracy of circumstances which could have broken any Government's will. But that of U Nu has stood up manfully to its task of restoring peace and order to the countryside and the country's economy to its former health. How far it will succeed will depend on a number of factors outside the Government's control.

In his chairman's address to the last annual general meeting of the Burma Chamber of Commerce, as also in the review of the economic conditions in Burma in 1955, Mr. E. P. Stewart-Williams fully appreciated the Government's problems, and commended it for the measures taken to re-construct the country's economy. He also spoke well of the Government's capital development programme, which made significant progress during last year, of its efforts to develop some of the principal industries such as oil and pharmaceuticals, to rehabilitate timber, mining and rubber industries, and of the way it has been facing its own political problems. As a well-wisher of Burma and her people, Mr. Stewart-Williams expressed his sympathy with their social and economic aspirations. But he had a few suggestions to offer in the practical field. These related, first, to the stringent system of import controls, essentially a device to save the country's depleted foreign exchange resources, but which in effect created such difficulties for the trading community that it was often impossible to honour commitments entered into with overseas suppliers before the import controls were established. As a result, not only were the credit and reputation of the importers in danger, apart from their being involved in unnecessary losses, but the good name of the country itself was suffering. Mr. Stewart-Williams suggested that the "price" of granting licences for all prior commitments was not too high to pay for Burma's good name. He also stressed the obvious economic effect of consumer goods scarcities when the Government was making large capital outlays, and pointed out that the inflationary conditions of 1955 were its inevitable result. He might have added that the increased unemployment in the country during the year was also partly due to cuts in import trading, which in Burma affords a livelihood to a very large number.

As a chosen representative of foreign capital in Burma, Mr. Stewart-Williams's offer of co-operation in the country's economic development was forthright. "Foreign enterprise in Burma" he said "can hope to survive only in so far as it contributes to Burma's best interests. We think, however, that there is still a not inconsiderable part which can be played by us in Burma's development and which we are ready, as always, to play." He mentioned the various advantages which foreign concerns in Burma offer in the promotion of the country's foreign trade, and in general economic progress. The decision rested with the Government whether or not to make use of these assets, but he considered their value to the economy of the country was undoubtedly great. At the present stage of the country's foreign trade development, particularly that of exports, which are at present in difficulties not only because of the buyer's market in rice, but also due to the decline of the trade in timber and other products, the foreign concerns in the country, with their long-established contacts abroad, could play a highly useful part. The encroachment of the State in this field has brought no rich dividends. Also, in its desire for quick economic development, the Government has chosen many other wrong methods. After its eight years of struggle to stand on its own feet, the Burmese Government should have come to realise that foreign capital is indispensable for the economic progress it desires. Unfortunately, the restrictions placed on foreign capital in the country will not only scare away new investors, but will also force existing enterprises to disinvest.

CURRENT COIN

The World of Labour.—The I.L.O. Director-General, Mr. David A. Morse's review of the general labour conditions in the world in 1955 is a happy picture. It shows, in the aggregate, increased employment, higher productivity, better wages and a rise in real incomes due to the stable level of prices and many additional welfare benefits. Mr. Morse describes it as another "good year for world labour", and the data on which this conclusion is based fully confirm the statement. Employment increased in 21 of the 22 countries reporting—a gain which was shared by most regions. Total employment in the world reached an "all-time high", despite an addition of 12 to 15 million new working hands. The picture was particularly favourable in Europe, and also in North America including Canada. The countries reporting the largest increases were the United States (5 percent), Canada (4 percent), in both of which there had recently been concern over an increase in unemployment, Japan and Austria (4 percent each),

Western Germany (6 percent) and Luxembourg (7 percent). Consumer prices remained relatively stable with a variation of 3 percent either way in half the 72 countries reporting. Real wage gains amounted to 3.5 percent in some 20 countries; liberalisation and extension of social insurance and more working amenities contributed substantially to the economic betterment of workers in most countries. Improvements in wages in 1955 surpassed all previous post-war levels, and the median increase from 1954 (three-month average) to late 1955 was 3.5 percent. Among the countries indicating the largest increases were Finland and France, where real wages rose by about 9 percent. Others were Norway (6), Germany (5), the United States (5), Austria (5) and Belgium (4). The increase in wages, both real and nominal, and in employment were more than matched by the rise in labour productivity. Per capita output expanded, and, in many countries it too was at "an all-time high". In the United States, the increase in per capita output was 8 percent and in Canada 3 percent; France, Germany, Belgium, Italy and Norway recorded increases as high as 10 percent each. For Western Europe as a whole, the average increase has provisionally been estimated at 8 percent. In the East, Japan showed a 5 percent increase; data from other countries were insufficient to work out any definite result. But this picture of general improvement has some important qualifications. Firstly, industrial disputes in the year increased to 55 million man-days from 49 million in 1954, though the figure was appreciably below the average of 70 million for the five year period 1950-54. Secondly, unemployment increased in the five Asian countries reporting, such as Burma, Ceylon, India, Japan and Pakistan. Commenting on this divergence Mr. Morse writes: "The labour market in Asia is characterised by unemployment of serious dimensions. Rising unemployment in Asia must consequently be regarded as a serious problem, which will justify continuing attention."

U.S. Business Upturn Slowing.—The January business reports have again been good, except for the downward revision of automobile production schedules, says the First National City Bank of New York in its monthly letter on U.S. economic conditions. Since the automotive industry is the largest buyer of materials, parts, and supplies in the country, even a modest curtailment causes some dampening of enthusiasm and takes something away from the force of the business advance. Together with the slippage in housing starts, which continued through December and has now lasted for some months, it signifies a narrowing and slowing of the rise, and possibly the reaching of the crest which so many have been expecting. In other lines, however, there are few indications of slackening, and some are still gaining. Where a crest seems to be forming, as in steel and certain other industrial materials, it is due generally to limitations of capacity rather than to softening demand. In many industries, manufacturers would be producing more if they could possibly do so. Unfilled orders are heavy, often requiring capacity output for months to come. Incoming business holds at high levels. Machinery and equipment output and non-residential construction are expanding. In the general merchandise trades, reports from the January wholesale markets, which reflect retail conditions and buyers' sentiments, have been uniformly good. From all indications, the country will cross the invisible boundary line into a \$400-billion-a-year economy, measured by the total output of goods and services, some time in the current quarter. There is no particular magic in this figure except as it emphasises the rapid growth of the past year, the unprecedented height reached, and the way in which many lines must strain at the limits of manpower, materials and capacity to make this possible. In the past year the extraordinary total of 3.1 million people have been added to the working force, and output of steel, non-ferrous metals, glass, paper and other materials has been pushed as close to capacity as is economically feasible. At such high levels, further gains are difficult and limited, while cutbacks in lines which have become temporarily over-extended are to be expected. This is the situation in automobiles. The stock market has been vacillating, and some tendency to shorten commitments is reported by purchasing agents. In view of the dangers of duplication of orders and excessive inventory build-up, which could only carry on the boom at the expense of later recession, conservative buying policies should be welcomed. None of these developments provides clear signs that business is at a turning point.

Swiss Economy Set Fair.—Switzerland has just enjoyed one of the best years in her economic history. Prices during 1955 remained stable in spite of the increasing cost of raw materials and all sectors of the economy recorded great activity. The capital investment industries in particular still enjoy well filled order books. Full employment with jobs for nearly 300,000 foreign workers during the peak season appears to have brought no attendant train of labour troubles. The consumer price index rose only slightly and there were few demands for higher wages. Imports increased by

15 percent over the figures for 1954, reflecting the continued upward trend in the spending power of the population, with motor cars heading the list. Within the last six years the number of motor vehicles registered in Switzerland has doubled so that there is now one car or motor vehicle for every nine inhabitants, an astonishingly high ratio for such a small and mountainous country. Although exports also registered an increase in most of the articles of traditional Swiss manufacture, an advance of seven percent was not sufficient to prevent a particularly high adverse balance of trade, more than double that of the previous year. The deficit was mainly incurred in trade with Europe and Germany in particular, which is now Switzerland's biggest supplier and best client. Imports from European countries accounted for 71.4 percent of the country's total imports, against an export percentage of 59.9. Exports of machinery, instruments, apparatus and watches all increased and the opening up of new markets largely offset the obstacles encountered in trade with America, Britain and France. While Swiss exports to France and Italy fell off slightly, exporters exploring the overseas markets recorded their biggest increases in Egypt, Argentina, Japan and Canada. Trade with America was characterised by a substantial increase in imports from that country, whereas the value of exports from Switzerland remained unchanged. A firm believer in free trade, Switzerland has always been noted for the quality of her products. With a sound economy at home and a flourishing tourist trade the prospects for the future seem favourable indeed.

November Coal Output.—The output of coal in collieries in India increased to 3,387,664 tons in December, 1955, from 3,096,644 tons in November, according to official statistics released by the Chief Inspector of Mines. Despatches of coal amounted to 2,782,267 tons in December, 1955, against 2,770,609 tons in the preceding month. Coal stocks at pitheads totalled 3,605,870 tons at the close of the month. During the month, 832 collieries were reported to be working with an average daily employment of 337,065 workers. Output per man-shift was estimated at 1.13 tons for miners and loaders; 0.60 ton for all workers underground and in open workings and 0.39 ton for all persons employed including surface workers. The percentage of absenteeism was about 13.22. Coke plants at collieries and elsewhere produced 355,450 tons of hard, soft and other kinds of coke during the month and despatched 170,684 tons.

China as a Textile Competitor.—Far Eastern competition is a question to which a great deal of thought is being given in Lancashire at present. There is a tendency to regard Japan as a much less serious danger, at any rate in cotton goods, than it was formerly considered to be. Japan grows no cotton and the state of its balance of trade frequently restricts the expenditure which it can undertake on the purchase of cotton abroad. China, however, like India, can grow enough cotton to meet a large proportion of its own needs, and in the report of the China and Far East section of the Manchester Chamber of Commerce attention is drawn to what China is already doing in world trade in cotton goods and what it may do in future. In recent years China has both exported and imported less cotton than India in order to adjust its supplies to the particular requirements of its textile industry. It is thus in a better position than India to disregard the level of cotton prices in the world market and to provide its own cotton to domestic mills at prices well below those which mills in other countries have to pay for raw material of comparable spinning value. There can be little doubt that India, by regulating internal prices of raw cotton and charging a duty on the cotton it exports to spinners in other countries, has given its own mills a considerable advantage, and China could no doubt go much farther in that direction. Another possibility must be borne in mind. Russia, when it has needed foreign exchange for particular purposes, has been known to export cotton piecegoods at low prices even in times when there was an internal shortage of cloth and clothing. Much the same thing has been done by other authoritarian States, and it is an expedient which Communist China would no doubt adopt if it suited its purposes at any particular time. Chinese goods, unlike goods from India and Hongkong, would not enjoy duty-free entry into the United Kingdom but they might well cause much more serious damage to Lancashire trade elsewhere.

Non-voting Shares.—For some time now controversy has raged in British business circles on the uses and abuses of the growing tendency to issue non-voting shares or shares with restricted voting rights. Institutional investors have come out strongly against the practice; others do not feel quite so strongly. It now appears that the Chartered Institute of Secretaries has taken a hand in the matter. Their view is that the practice tends to contravene the commonly accepted doctrine that the equity shareholder should have a voice in the control of the company. Acting on

this, the Institute recently approached the London Stock Exchange authorities with a request that it should be made a condition precedent to the granting of an official quotation that the words "non-voting" or "voting restricted" should appear in the title of any such shares or stock. In reply, the Stock Exchange Council has informed the Institute that with regard to new issues it is not prepared to make the matter a condition of the granting of quotations for non-voting shares. It has met the Institute's case up to a point, however, by instructing the Share and Loan Department to recommend that the words "non-voting" be included in the title. With regard to shares with restricted rights, the Stock Exchange has decided that it would be "impracticable" to adopt the Institute's recommendation. Further, in the case of all existing shares the Stock Exchange considers it would be impossible to insist on companies altering the title of their securities and that any such alteration would require legislation. Another possibility considered by the Quotations Committee of the Stock Exchange was that of placing a note in the Official List against non-voting securities. This course has been rejected "in view of the practical difficulties and the risk of further confusing the public."

Outlook for Tin.—With the U. S. stockpile absorbing more tin than the actual surplus of world supplies over consumption, the present tightness in tin is expected to continue for some months. But, say A. Strauss and Company, the London metal dealers, the second half of the year should see a surplus. Its size will depend on the speed with which the International Tin Agreement comes into operation. The Texas Smelter is taking up to 23,000 tons of tin-in-ore during this financial year, whereas the world surplus is running at the rate of about 16,000

tons. Even assuming, as is expected, that American stockpiling will end with the closing of the Texas Smelter at the end of June, the full amount of the supplies thus released cannot become available to the market before July. The International Tin Agreement, only awaiting ratification by Indonesia, cannot now be expected to come into operation before the middle of the year. It would be unable to operate while a shortage of metal exists as it would not possess the stocks with which to relieve the scarcity. Among recent factors aggravating the short supply position was the ending of deliveries in the latter half of December by the Straits Trading Smelter in Singapore. One of the two largest tin metal producing plants in the world, it was closed for annual stock-taking and overhaul. As the Smelter's normal deliveries amount to about 2,750 tons a month, the close-down means that for a few weeks there has been a drop in shipments of about 1,250 tons. This is expected to intensify the shortage in late January and early February. Two other minor factors recently have been the loss in Nigeria of 350 tons due to a strike and the loss of about an equal amount in Malaya due to floods in November. Small in themselves, these losses have gained in significance as they have come at a time when the market is already short of metal.

New Plant for Textured Yarns.—Just over a year ago Fine Spinners and Doublers Ltd. announced that it had secured a licence to produce yarns textured by the Taslan process devised by the du Pont concern in the United States. It now announces that it has completed the installation in Britain of its first plant for this production and that textured yarn is being offered to the weaving and knitting trades from both nylon and "Terylene." In contrast with the smooth, rod-like structure of ordinary filament yarn and the less uniform and fibrous staple yarn, the Taslan textured process produces a yarn covered with innumerable minute loops, each formed by an individual filament. The loops give fullness and bulk, besides making the material opaque and soft to the touch. At the same time the valuable properties of ordinary nylon and "Terylene" materials—quick drying, ease of ironing, resistance to crushing, and durability—are unimpaired by the treatment.

LIABILITY FOR CONTEMPT OF COURT

SLAUGHTERED COWS, CONVICTED THIEVES AND ANGRY EDITORS

(FROM OUR LEGAL CORRESPONDENT)

THIS is another case of alleged contempt of court by a newspaper, and it is interesting, as all these newspaper contempt cases are, because they illustrate the difficulty of reconciling the claims of the Press to liberty and to free discussion of the proceedings of courts of justice with the court's right, and indeed its duty, to punish by imprisonment or fine conduct tending to bring the authority or administration of the law into disrespect or disregard. The particular form of contempt alleged here was what is called "scandalising the court" by attacking, ridiculing and attributing motives to a judge in regard to his conduct and judgment in a criminal case tried by him. Now the editor who indulges in that form of personal invective is almost certainly "for it", and is hardly likely for a considerable time to be at large to continue his editorial functions. Only an abject, unqualified and humiliating apology will sometimes induce the court to substitute a fine for a jail sentence. Moreover, in addition to the actual writer of the article who will probably accompany the editor into enforced retirement, the owners of the paper, the manager and the printers may in varying degrees of culpability be held liable too.

Nevertheless, the existence of this power vested in the court to punish for contempt does not militate against the right of the Press to publish full reports of trials and judgments, or to make with fairness, good faith, candour and decency comments and criticisms on what passed at the trial, and on the correctness of the verdict or the judgment. Fair criticism is allowed, but not the imputation of bad faith. It is sometimes difficult to steer a perfectly straight course between the two banks, however careful one is, especially in regard to comments and criticism. To slip up is so easy; and, perhaps, it is especially so when the editor or writer in his script is trying to be funny. Fancying himself as a wit and moved by genuine indignation at what he honestly considers a monstrous grievance, he tries to crack the satiric thong, which turns out not to be a thong but a boomerang. That, if one may respectfully and sympathetically suggest it, was the cause of the trouble which descended on the editor of *Vatan*, a newspaper published in Bombay. That and a failure to realise a vital distinction, which is this. It is not the law

but its administration, its officers, its courts and its judges which and who respectively are protected by contempt procedure. You may with impunity attack the law as much as you like. Sir Alan Herbert in *Holy Deadlock*, with its savage satire, virtually forced through Parliament the 1925 Divorce Act; and consider the present envenomed assault on the law of capital punishment. But you must not attack the judges whose duty it is to administer the law though they may, as individuals, disapprove of a particular enactment and the sentence they have no alternative but to impose, as much as you do. That is where the editor of *Vatan* came to grief. In attacking the law he attacked the judge. And that was fatal.

The case on which editor Saifuddin Kharawala commented was not of any outstanding importance, except in regard to one aspect of it, which was the amazing sentence imposed on the culprit. One Traya Bavla Nathu was tried by the Additional Sessions Judge, Kutch, for having committed the theft of a cow and having slaughtered it. Four other persons were charged with him, but they were acquitted and only Traya Bavla Nathu was convicted. We have said that the sentence was amazing, by which we mean not so much the sentence itself as the law under which it had to be imposed. The unhappy man was sentenced to suffer rigorous imprisonment for two years for the theft of the cow and rigorous imprisonment for seven years and a fine of Rs. 100, or, in default, further rigorous imprisonment for one month, for slaughtering it, the sentences for theft and slaughtering to run concurrently.

Now, when you are simmering with indignation at some event which you think monstrously unjust, and intend to let yourself go in a scaringly article, there are several things to bear in mind.

The first is to get your facts right; and the second is like unto it—get your law right. Or you will be "for it", yourself; and that criminally. The two most powerful and moving pieces of invective the writer has ever read were composed in just blazing wrath. The first was the work of Cardinal Newman. An unfrocked Italian priest, Dr. Achilli, an ex-Dominican friar, was touring Britain mouth-ing charges of immorality against the hierarchy and priesthood of the Church from which he had himself been expelled for that identical offence, and Newman ground him to powder in a wonderful article in which he recited in detail numerous acts of immorality. But a few of his facts were wrong, or rather not demonstrably true, and the ex-priest seized on these, with the result that perhaps the most venerable and venerated man in England found himself in the dock charged with criminal libel. The jury reluctantly convicted him

and the fine and costs amounted to over £14,000. The British public of all creeds and no creed subscribed for and paid it within a matter of days. The second instance concerns Robert Louis Stevenson. He knew and held in great affection Father Damien and had visited and bravely stayed in the leper settlement at Molokai. Father Damien died, a leper, among his lepers; and some American missionaries safe in Honolulu and jealous of the saint published a scurrilous attack on the dead man. Stevenson went clean berserk and there sat down and wrote his *Father Damien: An Open Letter to the Rev. Dr. Hyde of Honolulu* in vindication of his friend and his work among the lepers of the Pacific. Cardinal Newman's attack is immensely powerful, but Stevenson's is incomparable. Lloyd Osbourne tells us that there were consequences. Lawyers were consulted, who conveyed the usual threats. But with all his seething anger Stevenson, unlike Newman, knew his facts at first hand and had taken care to get them right. He refused to apologise or withdraw a single word and nothing was done. That is the lesson for the editor of *Vatan*. Be sure of your facts or else.....

That was where the editor went wrong. Like Newman and unlike Stevenson he erred in some of his facts. And equally serious was another fundamental error. He had what he, no doubt, genuinely considered a very serious grievance to disclose with the object, one assumes, of securing a merciful diminution of a remarkably heavy sentence. But instead of attacking the system or the law which makes the penalty inevitable, he poured his invective on the judge who, being helpless, was blameless. Moreover, he tried to "write sarkastikul". Now, you need not be a Chesterton or a Belloc or a Gilbert or an Orwell, a Swift or a Maugham to possess in your humble way that most piercing of all weapons, the gift of sarcasm. But it is a gift and not an acquired art and you have to be born with it. It must be spontaneous, sharp, deadly and incisive. You are better without it, for it can break hearts and an habitually ironic man has no friends. He is a living sneer. And our editor, instead of the keen polished razor, operated with a blunderbuss. This is the material part of the article which landed him for contempt.

It started all wrong with the caption: "What is more important—a man's moustache or a cow's tail?" Then there were two smaller headlines: "Unmatched favour of a magistrate of Kutch—Imposed sentence of eight years for the offence of cow-slaughter." The article then went on to say that the sentence of eight years' imprisonment was given because one man of Kutch had slaughtered the cow of another person, and to comment on the severity of the sentence, asserting that lesser sentences are imposed by courts for offences like murder or culpable homicide, abduction, rape, etc. The article then ironically commented that a cow is more sacred and more valuable than human life; and that cow dung is more valuable than the prestige of a woman; and that the tail of a cow is more valuable than the moustache of a man; and, after saying that the learned "magistrate" was carried away by the atmosphere and sentenced the man to eight years' imprisonment, sarcastically stated that no one should say that the sentence was severe; and added: "Really it was very light. The learned Additional Sessions Judge could even pass a sentence of death.... Sentence of eight years is negligible and the learned judge showed great pity to the offender in sentencing him to only eight years' imprisonment. The magistrate could have passed a sentence of 14 years and 50 stripes with the whip but the learned magistrate is very kind of heart and merciful and that is why he took pity on the offender and gave him a smaller sentence of eight years." In the last paragraph the article ridicules the cow and says that "no one should even give a push to one otherwise he will be imprisoned for one or two years."

You could hardly have a better instance of how not to do it.

Personally, one was thunderstruck to know that in this year of grace a man can go to jail for a period of seven years and more for the offence which this man had committed, and if the writer of that article had contented himself with a dignified, accurate protest at the existence of the legislative enactment by which such a state of things is possible, many may think he was performing a public service. Instead of this, he splashed about him with corny heavy-handed humour, amid a mass of inaccurate allegations. The sentence was passed by a judge and not by a magistrate. It was not for eight years but for seven. Lesser sentences are not and cannot be passed for the crime of murder. The judge could not have passed a sentence of 14 years and 50 stripes. It was a simple fact and not a matter of ironical suggestion that the judge showed pity on the culprit by passing upon him the very lowest penalty it was within his power to impose. Moreover, the judge himself commented on the fact that he had no scope or discretion to inflict a lesser sentence and that was why he passed that particular sentence.

There was no excuse for the editor's not getting his facts right and very little for his not acquainting himself with the law, which is that under the Kutch Penal Code the maximum sentence for killing a cow is ten years and the minimum seven, plus a fine. For doing his inescapable and unpleasant duty, the judge was publicly ridiculed and his impartiality attacked. This was clear contempt of court. While declining to accept the editor's full and unqualified apology in extenuation, the court was merciful too, and let him off with a fine of Rs. 200 and the costs of the proceedings.

[State v Saifuddin. 43, A.I.R. (1956, February). Kutch. 7.]

IT was no doubt the preoccupation with State-reorganisation worries which steered this year's Congress session surprisingly clear of excesses in economic matters. Not that the depressed stock markets can take heart from the fact; the Planning Commission's proposals were endorsed, even if they were not elaborated upon. Government spokesmen tended to be as non-committal as usual and were obviously at pains to avoid any rash promises about limitation of incomes. Mr. Nanda paraded his favourite *Ambar Charkha* hobby-horse, but otherwise his performance at last Friday's Subjects Committee meeting was statesmanlike. So was Mr. Dhebar's address the following afternoon; the Congress President has obviously come a long way since the occasion when he appeared to be advocating that the Government take its orders from the Party. But this proposal to limit incomes is beginning to catch the imagination, in spite of the Government's obvious interest in keeping discussion on a logical plane. There is a good deal of difference between the effective limitation of incomes by progressive taxation, as most countries indulge in these days, and the fixing of an absolute ceiling such as some fanatics advocate. The first is a sign of the times, although a dangerous one for India at the present stage of development. The second is economic suicide, if indeed it is not political suicide as well, because senior civil servants in addition to the higher-paid managers and technicians in State enterprises, will be among the first to suffer. It is idealistic claptrap to suggest that patriotism and the desire to help in the country's development are substitutes for a reasonable rate for the job. Even Britain at the height of the war, when patriotism could be relied on to the limit, shrank from the final step of removing incentive altogether. It was a wise decision. While there remains something to work for, even if it is more the prestige of a multi-figure income than the actual reality, a man will go on working. But remove completely the reward for extra effort and for a hundred and one excuses will soon be found for not making it. And if the socialists do not believe that, they need look no further than the experience of the Soviet Union for confirmation. India might still find, as Britain has already done, that the only practical way to ensure equality is to create equal opportunity, not penalise those whose willingness to risk ulcers, insomnia and early death is at the root of all liberal economic progress.

All men of goodwill must agree that at this troubled hour India needs addition and subtraction, not division and multiplication. That is to say, she will benefit by reducing the number of States, not by creating more of them. The proposed merger of West Bengal and Bihar would thus appear to be nothing if not rational although, unfortunately, there is little evidence that the idea has attracted many heads and hearts in either of these States. In many cases, even when the head is for, the heart is against. In Bihar, Mr. Jai Prakash Narain, among others, has condemned the idea out of hand, while in West Bengal there are few outside Government circles who bless it. Nothing but uncompromising opposition is heard either in private conversation or from public platforms. West Bengal's fear centres round her culture. She is afraid, under merger, of being swamped by a majority whose scale of values is "different". She is full of apprehension that her language, of which she is justly proud, will wither away under the dominion of State-pampered Hindi. These anxieties will have to be faced, they cannot just be wished away. Other objections to merger, and they come not only from West Bengal, are based on concepts of democracy. People are beginning to feel that a wide gulf divides them from

A DITCHER'S DIARY

their leaders who alone, they complain, decide crucial issues regardless of their feelings and emotions. For the Congress as well as the Government this is a danger signal. Whether it will be taken as such is, of course, a question apart. When things are thus so dark and confused, it was disappointing to find less than adequate guidance issuing from Shaheednagar. In the first place, Mr. Pant decreed, not inappropriately considering his official position as Home Minister, that the merger "is going through and will go through." This was followed by Mr. Dhebar who wisely took note of the widening gap between the masses and the Congress. In his reference to the question of merger there was no note of ominous finality, and he felt the need for "identification at an emotional level with the people." And then, rather at a tangent, Mr. Nehru deprecated the term "High Command", saying incidentally that everything is done by that august pantheon only after mutual consultation. But consultation with whom? The people who will be affected by the merger are being told merely to obey without so much as seeing a blueprint. Those who seek solutions in the streets are being warned that they "will be met in the streets", but how much better would it be to keep them from going out there in the first place. It is here that a dose of democracy may be needed. If the leaders wait for further experience, they may discover that it alone remains after everything else has gone.

In a city with a notoriously high infant mortality rate among its philanthropic organisations, it is good to know that a few do manage to attain a respectable old age. The Society for the Protection of Children in India—better known by its short name, the S.P.C.I.—is one of them. I must admit that along with many others, I was completely unaware, until some of its literature recently came my way, that it is due to celebrate its diamond jubilee two years hence. That shows, among other things, how quietly the Society has been going on doing its good work. Founded in 1898, it spends every month over Rs. 12,000 on schooling and providing for the large number of derelict children in its care. These are of various castes and creeds, and so far over 100,000 children have passed through its hands to find useful places in society. The patron-in-chief of the organisation is none other than Dr. Rajendra Prasad, President of the Indian Union, and its local chief patron is Dr. H. C. Mookerjee, Governor of West Bengal. Its patrons include the Governors of Bihar and Orissa, His Grace the Archbishop of Calcutta and The Most Reverend the Metropolitan of India, Burma and Ceylon. The committee, which is composed of the city's leading social workers, is this week presenting *Hamlet* on the stage of the New Empire cinema. The object is to raise funds to finance the transfer of its children's hostel to better and larger accommodation. Having been to a few rehearsals of the play at the British Council auditorium, I think I can recommend to Calcutta's charitably disposed that a ticket for one of these performances will mean the double pleasure of contributing to a good cause and ensuring a really enjoyable evening.

The chief reason why the United States Government refused to accept the recent pleas for an increase in the price of gold, was the benefit which the Soviet bloc was bound to derive from it. It is difficult to blame the U.S. Treasury. It already has a very large proportion of the world's gold stacked up in Fort Knox and, to parody the late Lord Keynes, there are by no means enough rick-

ety teeth in the United States to compensate for the expense of keeping it there. The reason people buy gold, as Keynes never tired of pointing out, was due to the remarkable capacity it has always possessed for inspiring confidence in those who have it that somebody else is prepared to accept it from them. I might mention in passing that I can recommend a study of the history of gold to all those, Mr. Krishnamachari included, after what he said in Bangalore a fortnight ago, who do not believe that confidence is at the root of all affairs economic. Now the February issue of *Pick's World Currency Report* publishes figures which give some idea of the "unearned increment" which the communist world would get if the United States were to increase its price for gold. The report accepts figures recently given by the German Industrial Institute of Dusseldorf as being approximately true and on that basis, shows that the Soviet orbit's gold production is about 30 percent of the world's total output. The Soviet orbit here covers the U.S.S.R., North Korea, Rumania, Czechoslovakia and China. The pattern of world gold stocks presents a similar picture. Valued at \$35 an ounce, the Soviet monetary gold stock at the end of 1955 was larger than the combined gold reserves of the United Kingdom, Switzerland, Canada, Belgium and Germany. The French stocks, if they were to be placed on the scale, might change this balance. Habit, bitter experience and inherent Gallic mistrust of paper money have left France with private hoards estimated at \$1,200 million compared with a total of \$11,500 million for the rest of the world outside the iron curtain and \$7,250 million for the entire stocks of the Soviet bloc. The United States would certainly benefit the world by increasing the price it is prepared to pay for its gold. But it could achieve the same effect so far as the non-communist countries are concerned, and at the same time avoid enriching the world behind the iron curtain, by simply paying them a sum equivalent to the difference.

It is not only the heat, the Budget and an end to the social round that this time of year brings with it. It is also the season for departures and there is every sign that this one will see more than most. One personality which has been a part of the Clive Street scene since—to quote our legal correspondent—the memory of man runneth not to the contrary, made a quiet exit a week or so ago. It belonged to "Teddy" Shuttleworth, senior partner of the stockbroking firm of Stewart & Company, who has retired after very nearly a lifetime spent in India. Edward Shuttleworth left the army in 1922 to join the Calcutta exchange brokers, Normans, Ross & Co., with whom he stayed until 1937, the last two years as head of the firm. He went to Stewart & Company a year later and became senior partner in 1942. His interests were widespread. He played cricket and hockey and was a member of the only Calcutta Football Club team ever to win the Beighton Cup. Timekeeper, assistant judge and judge to the R.C.T.C. for eighteen years, he acted from time to time as steward, generally during the moonson meetings when it did not interfere with his shooting. He was a well-known *shikari* and probably one of the best shots in the country. I am told that his last few years in Calcutta were troubled by personal anxieties—something about his not being able to leave Bengal before the arrival of Prohibition. He plans to settle in Bishop Stortford, Essex, where I am sure he will not have that sort of worry. I know he takes with him the best wishes of us all.

THE PROBLEMS AND PROSPECTS OF LIFE INSURANCE UNDER STATE OWNERSHIP

NEW METHODS FOR EXPANDING BUSINESS

By N. T. Raju

NATIONALISATION of life insurance is now an accomplished fact, and no useful purpose will be served by debating its reasonableness. It is now the duty of everyone, who has the interest of the country at heart, to co-operate with the State and make its efforts a success. Life insurance made remarkable progress in the past decade, nearly doubling the business in force but it had many shortcomings. Firstly, competition among life offices was severe—perhaps more so than was necessary to maintain efficiency and advancement. There were too many independent units, most of them uneconomic, badly managed and barely solvent. The result could be seen in the increase in the number of companies transferring their business to others, or of those in course of liquidation. Secondly, expenses were heavy, mainly because of the craze for new business. The rate of lapses was high, exceeding by nearly a third that prevailing in some of the more advanced countries where new business bears a similar proportion to the business in force (though part of the extra cost in India can be attributed to the lower sum insured per policy). Lastly, the investments of some life offices were causing much concern. Insurance legislation had to be specifically recast to cope with the situation and during the last five years the penal provisions of the Insurance Act had to be invoked by the Government with disturbing frequency.

The circumstances leading to the appointment of an Administrator for Bharat Insurance and the numerous cases of misappropriation of funds of other offices which came to light after Custodians were appointed under the Insurance Ordinance, apparently support the Government's move. These facts, governing its latest and probably greatest venture into the conventional reserve of the private sector, have alienated much of the sympathy felt for those firms thus deprived of their control

of life insurance. Most of these shortcomings could have been avoided by stricter official vigilance over the affairs of individual companies. Additional powers could have been assumed by the Government to ensure their management on the right lines. In lieu of such action nationalisation is bound to leave the impression on the private sector that it is a collective fine on the good neighbours of a few culprits, even when the latter were within easy reach of the arm of the law.

Control of Funds

Whatever the arguments put forward by the Government or private enterprise for or against nationalisation, the bone of contention is the control of the huge funds which accumulate in the process of the business. Dividends to shareholders of life offices, with two or three exceptions, have not been excessive. The main attraction lies in the right to manage the funds which are many times the share capital. Control of such large funds without an adequate stake in the results obviously involves certain moral principles and their accumulation in private hands could conceivably be construed as not wholly in the public interest.

Surplus Staff

With the acquisition of the management of life offices by the State as a prelude to nationalisation, several problems arise. The number of offices in existence is unquestionably far beyond that necessary for promoting healthy competition. Most of the large and medium-sized offices have branches in all the big cities, where competition, not infrequently, has been carried to the point of duplication and wasted effort. Each major office has its full complement of technical, office and field staff, and the fusion of all offices into one or a few units cannot but result in a substantial surplus of personnel. The Government may have plans to enter new and hitherto insufficiently explored fields to tap new sources of business and at the same time, to provide employment for the surplus staff. But a sudden increase in the volume of life policies is not likely; it takes time for new business to pick up. In the meantime, the uneconomic load of the under-employed but not under-paid staff has to be borne by the insurance organisation, or the awkward problem of retrenchment must be faced.

New Business Prospects

It is generally agreed that life insurance will have to continue to be sold in the country for several years to come. The rate of progress will therefore depend on the success with which an enthusiastic and dynamic field force is established. Adequate incentives will have to be provided for rousing and sustaining the zeal of the agents and supervisory staff. Efficiency of service to the policyholders will have to be maintained if not improved and a creative approach made to make life insurance increasingly popular. Social needs are ever changing so a constant watch has to be kept to ascertain these and cater for them. Even fresh needs will have to be created by devising new types of policies. In the past, the expansion of life insurance gathered momentum with the introduction of the now familiar endowment assurance and family income policies. In such matters, experiments will have to be made, many without success, others at considerable cost, and some may take years to yield favourable results. For instance, the introduction of disability benefits attached to life policies proved extremely expensive in North America and many life offices had to pay dearly for it until the nature of the benefits were gradually altered as experience was gained. In India, group insurances and life annuities are practically non-existent. Provident funds, which are most popular with employees, leave very little for the dependents in case of early death, and no pension for those who live long. There is thus a vast field awaiting exploitation for making up the deficiencies in the prevailing systems of employees' benefits. It is a familiar criticism that the impersonal nature of State-ownership, and the stereotyped and dilatory procedures which are alleged to be its characteristics, are inimical to a highly specialised and personalised business like life insurance, and that it may induce an insensibility or irresponsiveness to the needs of the clients. It is often said that under the aegis of the State, rewards for enterprise and successful work are likely to be inadequate or even absent. In this connection many, including chairmen of life offices have referred to the state of Government-managed insurance offices in other countries, especially in New Zealand, and the closure of Postal life insurance in the United Kingdom.

Japanese Experience

The Union Finance Minister, in his recent broadcast on the nationalisation of life insurance, stated that there was no reason why State enterprise should not succeed if it was taken up wholeheartedly. Recently, Dr. Paul Einzig, writing about nationalised industries in Britain, stated that the employees were not exerting themselves sufficiently to make nationalisation a success. Yet, there is the example of the postal life insurance system in Japan which has witnessed a significant rise since 1948, and the authorised number of em-

ployees is, according to recent figures, 57,206 of which 47,102 are engaged in field work. The following tables show the comparison between the operations of the Postal life insurance and those of private companies in that country (20 companies as at the end of March 1951):

	(In million Yen)		(In million Yen)	
	New Contracts.	Outstanding Contracts.	Postal Life	Private Cos.
1940	2,589	8,020	9,057	20,282
1948	104,743	227,526	143,367	365,619
1949	218,608	248,918	322,672	477,412
1950	187,024	235,481	426,098	551,532

INCREASE IN ASSETS.

	(In million Yen)		(In million Yen)	
	Postal Life	Private Cos.	Postal Life	Private Cos.
	Amount of increase.	Balance as at the end of fiscal year.	Amount of increase.	Balance as at the end of fiscal year.
1948	3,795	9,827	2,059	18,974
1949	8,629	18,456	5,082	24,056
1950	18,211	36,767	12,599	36,555

The reasons for the prosperous expansion of Postal life insurance in Japan are stated to be that the insurance premiums are collected mostly on a monthly instalment basis by Post Office employees going from door to door, and that canvassing is very actively carried on because of the encouragement given in the form of allowances to Post Office employees. If similar encouragement is given in this country to lower grade Government employees, good results may, not unreasonably, be expected. Remittance of premiums from rural areas will be greatly facilitated if it is arranged through local post offices. Introduction of Insurance Payment books for recording premium payments would save much of the labour and expense involved in sending premium notices and issuing individual receipts. In that case the insurance organisation could concern itself chiefly with policyholders who default in the payment of premiums. The use of literature, documents and advice, translated into the local language could help the average man to understand better the policy contract, the rights and obligations of the policyholder and the formalities to be gone through in particular instances.

Settlement of Claims

One feature which gives rise to some anxiety is the prospect of prompt settlement of death claims under State-owned insurance. It is well known that the settlement of pensions for retired Government employees often takes several years, and that in numerous instances, the earned pension has been granted to the dependents only after the pensioner's death. This aspect of the problem deserves careful consideration. All possible efforts should be made to cut red tape to the minimum, and to create conditions which will facilitate the early settlement of claims. It is often found that a good number of death claims remain pending for want of evidence as to the age of the deceased. Sometimes, the claimant has to obtain a grant of representation to enable him to receive the policy monies. The process is costly where small amounts are involved, especially so when the grant has to be obtained only for receiving the insurance monies and for no other purpose. These hardships could be avoided, and consequently, the settlement of some claims facilitated, if it were made a rule that no life policy would be issued in the absence of definite proof of the proposed policyholder's age and unless there is a nomination or an assignment in favour of a named beneficiary, in case of death.

Investment Policy

With the State acquiring ownership of life business, it is obvious that the investment of the accumulated funds will be considered in the context of the larger interests of the country. The old dictum that these are in the nature of trust funds for the benefit of policyholders will no longer hold. It is not improbable that the investment policy relating to the life fund may become a political issue, influenced by pre-election promises of political parties. It is possible that risk capital for industries which it is the desire of the Government to support, may be provided partly by the life fund, and in that case it may be argued that such a course of action would be in the national interest even if the life fund stands to lose. The question of insurance finance for the construction of private houses will no doubt receive special consideration. The practice of granting long-term loans for such purposes repayable in instalments, coupled with life insurance to liquidate the loan in case of the premature death of the breadwinner, has been very successful in many countries. Such easy finance for house building not only adds to savings but also provides employment to the building trade as well as to those engaged in manufacturing household goods.

Interest in life insurance could also be created among the rural population by financing small local projects wholly out of insurance funds, and giving wide publicity to the fact. As they reap the benefits flowing from the project after its completion, the families will constantly have before them the picture of the life insurance organisation responsible for the project, in which it has been able to take part through the life policies they themselves have taken out. Life insurance has vast potentialities in the country, and it is for the State to develop it at a rapid pace by freeing the organisation from the traditional inflexibility, characteristic of Government management. The State must now demonstrate that by nationalising life insurance, it can not only make the business more secure but that at the same time prove itself the equal of private enterprise.

Finance in India and Abroad

THE CALCUTTA MONEY MARKET

CONTINUED SCARCITY OF EXPORT BILLS

Wednesday, 15th February.

GOOD demand for funds has been maintained throughout the past week. Offtake is chiefly from the sugar industry and on account of storage of the kharif crop. Cotton mills are at present buying raw material, and purchases of raw jute have maintained their volume. Money continues to be very tight in the interbank market, chiefly due to the continuing shortage of export documents. There are borrowers over at the unchanged call rate of 3½ percent.

There have been very few export documents reported in the market again this week, and those that have been in evidence have been chiefly on account of tea. Remittance has been good. Sterling is steady and the dollar rate is unchanged at Rs. 47½.

Silver was steady on good demand. The price improved from the previous week's level of Rs. 174-1 to Rs. 175-9, quoted today. The rate for ready delivery was quoted at Rs. 175-10. The London price advanced from 77½d to 79½d. The price of foreign silver in New York also rose from 90½ to 91 cents.

Gold maintained a very steady tone in sympathy with silver and the price registered a rise from Rs. 97-4 to Rs. 98-15. The sovereign at Rs. 62 showed a gain of 2 annas.

Tenders for Rs. 1 crore of 91-day Government of India Treasury Bills, which were opened on Tuesday, 14th February, 1956, totalled Rs. 1,53,00,000. The average rate of acceptance was unchanged at Rs. 2-8-3 percent per annum. Tenders at Rs. 99-6 percent were accepted in full and those at Rs. 99-5-4 percent allotted approximately 88 percent. Tenders for Rs. 1 crore of 91-day Government of India Treasury Bills will be received at all centres up to Monday, 20th February. During the week ended 10th February, Government of India Treasury Bills for Rs. 3,29,50,000 were sold in favour of the Reserve Bank of India.

Rises of Rs. 14.14 crores and Rs. 15.28 crores in the total note issue and notes in circulation to Rs. 1,414.96 crores and Rs. 1,407.65 crores were outstanding features of the return of the Reserve Bank of India for the week ended 10th February, 1956. The expansion in currency was covered by increasing foreign securities by Rs. 15 crores to Rs. 667.16 crores. Deposits of the Government of India were Rs. 7.68 crores higher at Rs. 69.55 crores but other Government accounts dropped by Rs. 3.40 crores to Rs. 11 crores. Balances of commercial banks declined by Rs. 10.22 crores to Rs. 53.01 crores, following increased monetary demand. Balances held abroad fell by Rs. 10.45 crores to Rs. 71.06 crores due to a transfer to the Issue Department. Investments at Rs. 49.36 crores showed a decrease of Rs. 62 lakhs. Other loans and advances rose from Rs. 49.62 crores to Rs. 54.36 crores, of which advances to scheduled banks against usance bills amounted to Rs. 19.41 crores (Rs. 18.88 crores). These advances totalled Rs. 13.79 crores since 1st January, 1956. Ways and means advances were up at Rs. 3.69 crores against Rs. 2.52 crores.

The return of the State Bank of India for the week ended 3rd February, 1956, shows a drop of Rs. 1.74 crores in total deposits to Rs. 236.68 crores. Investments in Government Securities and other authorised investments are up by Rs. 19 lakhs and Rs. 63 lakhs to Rs. 107.31 crores and Rs. 9.60 crores, respectively. Advances, including loans, cash credits and overdrafts, and bills discounted and purchased have increased by Rs. 3.24 crores to aggregate Rs. 117.71 crores. Cash and balances are, in consequence, shown at Rs. 29.85 crores or Rs. 2.19 crores less.

The statement of the position of scheduled banks for the week ended 3rd February, 1956, discloses Demand and Time liabilities at Rs. 635.76 crores (Rs. 6.88 crores on account of borrowings from banks) and Rs. 412.30 crores (Rs. 3.56 crores) compared with Rs. 648.88 crores (Rs. 6.45 crores) and Rs. 409.88 crores (Rs. 3.31 crores), respectively in the previous week. Cash has decreased by Rs. 2.66 crores to aggregate Rs. 34.66 crores, while balances with the Reserve Bank have increased by Rs. 1.18 crores to stand at Rs. 63.22 crores. There is a drop of Rs. 1.32 crores in investments to Rs. 380.45 crores. Advances and bills discounted at Rs. 683.04 crores reveal an increase of Rs. 5.44 crores. The ratios to total liabilities of cash and balances, and of advances and discounts are, in consequence, shown at 9.3 percent and 65.2 percent against 9.4 percent and 64.0 percent.

The working of the PUNJAB NATIONAL BANK LTD. for the year ended 31st December, 1955 shows that the profits including Rs. 4.99 lakhs brought in, amount to Rs. 73.6 lakhs.

TREASURY BILL MATURITIES

Details of 91 days bills outstanding with the public on 17-2-56.

Stocks and Shares

STOCK MARKET REMAINS DEPRESSED

BUDGET FEARS REPLACE EARLIER CONFIDENCE: BUSINESS ALMOST AT A STANDSTILL

Wednesday Evening.

THE moderate optimism of last week-end has completely evaporated and the market is once again depressed and inactive. Operators are still doubtful about the outcome of the latest clearing and, together with other rumours which are prevalent in the market, this has brought prices to a new low with all clearing shares below their fixed quotations. Any revival in the market will have to wait at least for settlement difficulties to be cleared up and possibly for Budget anxieties to be dispelled as well.

Details of the week's limited trading follow.

The gilt-edged section of the market has remained steady, but a few more sellers appeared at the higher rates and the volume of business was smaller. Three percent Conversion Loan 1966 was easier at Rs. 80-8 and there were more sellers than buyers. Three percent Non-terminable Paper was unchanged at Rs. 80. In short-dated loans, 3% 1957 was again in strong demand at around the previous quotation of Rs. 99-10 but there were very few sellers. Three percent 1958 was wanted at Rs. 99-9 but here again offerings were small. Three percent 1959-61 improved to Rs. 98-5 and was later marked at Rs. 98-3 ex-voucher. 2% 1961 remained unchanged at Rs. 93-5; 2% 1960 was one anna better at Rs. 96-5; 2% 1962 had small buyers at Rs. 93-12; 3% 1961 was quoted at Rs. 98-8 and there were sellers of 3% 1964 at Rs. 98-12 and 3% 1965 at Rs. 98-9. Three percent 1963-65 improved further to Rs. 94-12. In long-dated loans, 3% 1966-68 was unchanged at Rs. 92-5 but 3% 1970-75 moved up smartly to Rs. 88-11 on persistent enquiry and acute shortage of scrip. Among Provincial Loans, there was enquiry for 4% issues, particularly West Bengal 1964 and 1967, Madras 1967 and U.P. 1967.

Investment enquiry continued for selected Preference shares but sellers were not keen to part with their holdings. In jute, Anglo-India were marked at Rs. 120 and a small odd lot of Shree Ambica at Rs. 102. Among miscellaneous issues a small lot of Associated Hotels was placed at Rs. 62-12 and Bharat Collieries at Rs. 59. British India Corporation changed hands at Rs. 135 and Calcutta Electric at Rs. 11-9. Dalmia Cement Rs. 40 paid-up shares were crossed at Rs. 37. Dunlop Rubber 1st were marked at Rs. 128-8 and Elgin Mills at Rs. 135-8. Indian Iron & Steel changed ownership at Rs. 109-8 as did Kumardhubi Engineering at Rs. 108-8. Rohtas Industries 2nd Preference were reported at Rs. 67.

In the banking section, Hind Bank were a shade easier at Rs. 37-8 and Hindustan Commercial were quoted at Rs. 9-8. There was a small enquiry for Punjab National at the lower rate of Rs. 43 and United Commercial at Rs. 49. United Bank of India "D" shares were steady at Rs. 4-12.

In the railway section, a small lot of Burdwan-Cutwa was crossed at Rs. 60 and Dehri Rohtas came to hand at Rs. 13.

Cotton shares tended towards lower levels. Bengal Nagpur were marked down from Rs. 19-3 to Rs. 10. Bowbazar from Rs. 360 to Rs. 350 and Dunbar from Rs. 300 to Rs. 288. Cawnpore Textiles were easier at Rs. 8-15, as were Elgin Mills at Rs. 27-4. Kesoram dropped Re. 1 to Rs. 16.

Coal shares attracted very little enquiry and in fact prices displayed a sagging tendency. For example, Bengal came down from Rs. 548 to Rs. 540, Central India from Rs. 7-8 to Rs. 7-1 and Western Bengal from Rs. 7-5 to Rs. 7. East Indian were easier at Rs. 31-12, as were Equitable at Rs. 32-8. New Beerboom dropped from Rs. 21-4 to Rs. 19-12. After a long interval, Standard came to hand at Rs. 21-4.

Jute shares spent another dull week and transactions were few and far between. Belvedere were marked at Rs. 181, Kamarhaty "B" at Rs. 150 and Khardah at Rs. 170. Kinnison closed at Rs. 191 against the opening quotation of Rs. 195. Lansdowne were crossed at the lower rate of Rs. 125. New Central were done at Rs. 16-8 and Rameshwar were marked at Rs. 6-12.

In the electric supply section, Calcutta were steady at Rs. 13-12.

Sugar shares were devoid of interest. Ramnagar Cane were placed at Rs. 24-8 and S.K.G. at Rs. 12-10.

In the engineering section, Indian Iron & Steel were quoted nominally throughout at the fixed price of Rs. 36, the unofficial quotation being substantially lower at Rs. 32-6. Burn & Co. were marked down from Rs. 310 to Rs. 303 and Jessop from Rs. 59 to Rs. 57-8. Indian Standard Wagon closed Rs. 2 lower at Rs. 159 and Richardson & Cruddas receded from Rs. 27 to Rs. 25-12.

In the miscellaneous section, Bengal Paper were fairly steady at Rs. 117, while Titagurh dropped back from Rs. 45-2 to Rs. 44, as did India Paper Pulp from Rs. 23-10 to Rs. 23. Shree Gopal Paper eased to Rs. 18 and Sone Valley to Rs. 7-8. Indian Steamship were neglected at Rs. 8, while Alkali & Chemical met with small enquiry at the lower rate of Rs. 21-4. British India Corporation were

marked back from Rs. 11-13 to Rs. 10-13 and Calcutta Tramways from Rs. 17-4 to Rs. 16-10. Dunlop Rubber were offered at the lower rate of Rs. 31-4, as were Clive Row Investment at Rs. 10-12. British Burma Petroleum were subbed at Rs. 3-14, while there was a good enquiry for Godfrey Phillips around Rs. 20 but no declared sellers. Imperial Tobacco were done at Rs. 14 and Indian Cables were lower at Rs. 30. Indo-Burma Petroleum dropped from Rs. 42-8 to Rs. 40-8 and India General Navigation from Rs. 124 to Rs. 118. Metal Box changed hands at Rs. 24-14 and Shaw Wallace at Rs. 15-2. Rohtas Industries opened at Rs. 22-8 c.d. and closed at Rs. 19-9 x.d.

In the mining section, Burma Mines were subbed at Rs. 2-3, as were Western Stockholders Investment at 15 annas. Metal Corporation met with enquiry at Rs. 10-8 and Indian Copper were quoted unofficially at Rs. 6-4 against the fixed price of Rs. 6-12.

There was little of interest in the tea section, prices declined further and the volume of business was at a minimum. Of the Assam shares, Bishnauth were easier at Rs. 36-4 and Brahmaputra had sellers at Rs. 9-8, as did Brooke Bond at Rs. 19-14, and Dhelakhat at Rs. 18-2. Jutilibari changed hands at Rs. 28 and Methoni came to business at Rs. 20-14. Tezpur declined by over a rupee to Rs. 21-6. In the Doorga section, small lots of Banarhat and Hantapara changed hands around Rs. 322 and Rs. 240 respectively. Jaybirpara had sellers at Rs. 24-14, as did Huldibari at Rs. 29-10. Of the remaining shares, Chamong were crossed at Rs. 15, whilst Lackatooah continued to be supported, the price advancing from Rs. 21-4 to Rs. 23-2. Sonai River were also slightly better at Rs. 19.

The ALKALI & CHEMICAL CORPORATION OF INDIA increased its profit from Rs. 8.37 lakhs to Rs. 19.40 lakhs for the year ended last September. Bringing in Rs. 1,13,627 and crediting Rs. 2,39,696 on account of exchange reserves no longer required, there is Rs. 22,93,168. Reserve for taxation liability is allocated Rs. 124 lakhs (Rs. 3 lakhs) and dividend equalisation reserve Rs. 2.73 lakhs (nil). The ordinary dividend has been increased by 2% to 8%, leaving a carry-forward of Rs. 1,19,168.

Production improved all round, and factories worked to capacity.

The SOUTH KARANPURA COAL COMPANY incurred a loss of Rs. 10,025 for the half-year ended last August. The dividend has been passed (1%) after providing Rs. 26,164 for depreciation. The carry-forward is a debit balance of Rs. 51,533.

Raisings totalled 84,571 tons (90,000 tons) and despatches 85,487 tons (93,324 tons).

The directors say that provided transport facilities become available in due time it is hoped progressively to increase output from the colliery from the present average of 12,000 tons per month to 30,000 tons per month.

RALLIS INDIA LTD. again showed a loss of Rs. 22,02 lakhs for the year ended last August. Bringing in a debit balance of Rs. 42,97,067 the total debit balance amounted to Rs. 63,99,179 which is carried forward. There is again no dividend.

The directors say though the re-organisation of the company was effected during the year under review substantial losses had been incurred before the re-organisation was completed and the accounts for this period bear the heavy cost of compensation payable to retrenched staff amounting to no less than Rs. 14,70,456. It will be seen from the accounts, however, that although turnover was slightly below the corresponding figure for the previous year, the gross profit made by the company showed a considerable increase Rs. 15,78,652 over the gross profit for the year ended 31st August, 1954.

The NATIONAL CARBON issue is reported to have been over-subscribed nearly six times. It is understood that processing of applications and allotment of shares has been delayed by difficulties arising out of the suspension of bank clearing in Calcutta as well as by interruptions in mail services, with the result that the company did not receive its final returns until the first week of February.

It is hoped that mailing of allotment letters and refund cheques can commence by the end of February.

Messrs. Tata Industries Limited, managing agents for the TATA IRON AND STEEL COMPANY LIMITED, report that the total approximate production of iron and steel at the Steel Works at Jamshedpur during January 1955 was: pig iron 103,900 tons; steel ingots 96,800 tons; semi-finished steel for sale 24,000 tons; finished steel 47,600 tons.

BETTER FEELING IN BOMBAY MARKET

TATA ISSUE PROPOSALS

Wednesday Evening.

AFTER falling throughout the week on panicky selling, equities on the Bombay stock market rallied substantially today as a result of short-covering and replacement buying. It is generally felt that present prices have discounted almost all adverse developments.

During the week, operators were upset by two main factors. First, the outline of the second five year plan introduced prospects of increased taxation. Secondly a reorientation of the 1948 Industrial Policy Resolution in line with the socialistic pattern of society will, it is feared, prejudice the working of private enterprise. Continuation of the settlement crisis in Calcutta contributed to weakness, and this was mainly responsible for a further decline in the price of Indian Iron.

Tata Ordinary improved from Rs. 219.8 to Rs. 224. An extraordinary meeting of the shareholders of the Tata Iron and Steel Company has been called on 12th March, to consider resolutions pertaining to the proposed issue of new capital for Rs. 9.63 crores. It has been proposed that a sum of Rs. 35 a share, made up of Rs. 10 on premium and Rs. 25 on capital account, should be payable on application and that the balance of Rs. 70 a share on allotment, or as and when called up by the directors. Indian Iron improved from Rs. 31.3 to Rs. 31.12. Larsen and Toubro changed hands higher, following their inclusion in the forward list. Alcock Ashdown shot up to Rs. 373.12 on the report that the company's Karachi factory will be sold.

Some smart rallies occurred in cotton mill shares. Bombay Dyeing rose from Rs. 493.12 to Rs. 516.4, as did Kohinoor from Rs. 323 to Rs. 331. Svaldeshi were higher at Rs. 211 after Rs. 206 and Century improved from Rs. 443 to Rs. 462.8.

In the miscellaneous group, National Rayon rose from Rs. 209 to Rs. 217.8 and Tata Chemical from Rs. 15.9 to Rs. 16.6 on professional support. Belapur Sugar lacked interest at Rs. 215 on fears of an agricultural levy. Bombay-Burmah slumped to Rs. 525 on fears that the profit of the tea industry will be regarded as an industrial one. Associated Cement ended higher at Rs. 203.8 after Rs. 199. Hindustan Motors were available around Rs. 9, while Tata Locomotive were maintained at Rs. 140 on expansion prospects.

Banking and insurance shares were bare of buyers. Among electricity undertakings, Ahmedabad Electric rose to Rs. 105.5 on rumours of an increased dividend.

THE WEEK'S TRANSACTIONS

(In the following list of stocks and shares in which transactions have taken place during the past week the figures indicate: Opening Quotations—Highest for the week—Lowest for the week—Closing Quotations—Quotation for the Corresponding Closing Date a Year Ago, the last named being shown in parenthesis and will not be given where such a quotation is not available.)

New Delhi

DRAFT OUTLINE OF THE SECOND PLAN

DEMANDS OF THE AMBAR CHARKHA ADVOCATES REMAIN UNSATISFIED

(FROM OUR NEW DELHI CORRESPONDENT)

SCARCELY was the draft outline of the second five year plan completed, when the Planning Minister, Mr. Gulzarilal Nanda, speaking at the Amritsar Congress Session on the Resolution relating to the plan, said that those who conducted the trials of the *Ambar Charkha* were of the view that it was capable of meeting the demands of the weavers. "There should, therefore, be no doubt about its utility," he added. A modest sum of Rs. 12 lakhs has been allotted towards the pilot scheme for the *Ambar Charkha*. The following data should speak for itself in regard to the progress of khadi:

Particulars of the schemes.	Funds sanctioned to 31st Dec., 1955 Rs.	Funds utilised. Rs.
Rebate of three annas in the rupee on all sales of khadi	55,00,000	37,47,831
Rebate on the sale of implements	4,25,000	2,60,420
Training in khadi	16,46,700	3,59,497
Research in khadi	53,000	11,709
Spinning competitions	55,530	22,144
Subsidy on the production of khadi	20,18,567	10,15,111
Rehabilitation of weavers	1,00,000	23,000
<i>Ambar Charkha</i>	23,52,625	17,78,625
<i>Khadi Hundees</i>	2,40,000	14,732
Development of khadi on an intensive sale.	2,00,000	43,000

The All-India Board, however is confident that it will be able to utilise the balance of the money during the next three months ending 31st March, 1956. So far as the Handloom Board is concerned a sum of Rs. 11 lakhs was sanctioned to it during the three years ending March 1956. The Board has utilised about Rs. 7 lakhs, while surplus goods worth nearly Rs. 2 lakhs are lying idle at various centres.

Unsatisfied Demands

After the Union Cabinet had finally approved the coal production plan, raising the output to 60 million tons by 1961, the Planning Commission, according to reports, intimated to the Railway Ministry that it would be called upon to provide transport for 48 million tons of coal, or seven million less, in 1961. This follows the reduction in the provision of funds for the railways from Rs. 1,480 crores to Rs. 1,125 crores. In other words, a sum of Rs. 355 crores has to be added to the plan outlay, if the railways are to discharge their function adequately in 1961. Dr. Bhabha has a demand for Rs. 60 crores for the development of atomic energy, Dr. J. C. Ghose for Rs. 65 crores for subsidising teachers' salaries and Dr. K. N. Katju for Rs. 350 crores for defence developments. This leaves unsatisfied the demand of the Commerce Minister, Mr. T. T. Krishnamachari for Rs. 55 crores in respect of heavy industry. Neither does it allow for the cost of Prohibition which is placed at Rs. 250 crores. To sum up the position, the following items have been left out of the plan outlay, namely:—

	Rs. Crores
Subsidy on <i>Ambar Charkha</i>	200
Subsidy on teachers' salaries	65
Unsatisfied demands of the railways	355
Finances for:	
Atomic Energy	60
Defence Developments	350
Heavy Industry	55
Loss on Prohibition	250
	1,275
or	1,300

The real plan outlay, might amount therefore, not to Rs. 4,800 crores but Rs. 6,100 crores.

Curbing Expenditure

A safety valve is being devised by the Ministry of Finance, which is to set up a "watch-dog" organisation to examine the scheme, its administrative machinery, the spending capacity of a unit of administration in the light of past experience and audit objections and the benefits claimed and realised. The flexibility of the plan and its modifications on a yearly basis, is another safety valve. Looked at from this angle, the draft plan is the sum total of all the desirable things India should have during the next five years, with their respective costs. The Government with the assistance of the Planning Commission will allot priorities and undertake schemes in accordance with the resources available.

Survey of Managing Agencies

The three-day conference of Registrars of joint stock companies, held here during the week, finalised plans for a detailed nation-wide survey of managing agencies and foreign concerns operating in India. The meeting considered the practical problems facing the newly-created department of Company Law Administration and the devising of

cities of Bombay and Calcutta. Registrars have been asked to verify the lists by the end of February. Task teams from the department will be later deputed to various States for the collection of detailed information from files in the offices of the Registrars. This phase is expected to be over by June when investigations into the nature of investments and directorates of managing agencies should be complete. The survey will serve as a basis for the inquiry to be made later under Section 324 of the Companies Act.

Foreign Companies Under Scrutiny

The Department of Company Law Administration has also planned a detailed survey of foreign companies. An examination of the annual returns of foreign companies for the year 1953-54, forwarded by the Registrars, showed that a good proportion of their number did not have their registered offices in India. This doubt was confirmed by the examination of the documents available in the Registrar's office of a premier State. It was found that the information relating to foreign companies has in some cases been given from documents filed as long ago as 1935 or in a large number of cases, from documents filed during 1946-47. It was thereupon decided that the position of foreign companies would be checked by making a reference to their head offices and to foreign trade missions in India.

Under the new Act, however, there will be a central registry for foreign companies in Delhi, which will facilitate the verification of data concerning them. Meanwhile a corrected list of foreign companies is being drawn up. The survey will also be extended to Indian companies controlled or managed by foreign companies and their branches and subsidiaries. Citing cases of maladministration, the department has disclosed that 269 companies were finally dissolved between April 1954

ECONOMIC RESEARCH

- is an essential part of modern commerce. But it is
- not always easy to obtain. The ordinary business
- house does not usually possess the records, statistics
- and archives which are the raw material of research.
- CAPITAL'S RESEARCH & STATISTICAL DEPARTMENT
- has a long record of service to Chambers of Commerce,
- Industrial Associations and private business concerns.
- It does not undertake trade inquiries, but its facilities
- and advice are available for all kinds of research
- proper into the problems of Indian commerce
- and industry.

- CAPITAL'S RESEARCH & STATISTICAL DEPARTMENT
- has constructed and maintains seven cost of living
- indices for various classes and communities in India
- and Pakistan. It offers the industrialist and business
- house its experience in

- consumer market surveys
- industrial prospecting
- readership analysis
- economic indices
- business research

P.O. Box 14, Calcutta, or 5, Mission Row, Calcutta, India.

and October 1955. For seven of these companies the process took 20 to 30 years. Only 40 companies were finally dissolved within a year of their going into liquidation, the rest taking often between two and 20 years. Considerable discrepancies were discovered in the periodical statements of capital in the existing companies. Normally under the law a company has to intimate changes in its capital within a period of two weeks to a month but the average time-lag was found to be five to six months. Similarly, the Registrars took an inordinate time in reporting liquidations to the research division. Of the 550 cases reported during the year ending April 1955, only 265 were intimated within one month. In 55 cases the period ranged from one to ten years. Consent was given by the Controller of Capital Issues for share capital amounting to Rs. 125 crores during the calendar year 1955. Reports from the Registrars were, however, received by the department only in respect of Rs. 25 crores.

Road Transport Committee

The Transport Advisory Council, at its meeting here during the week, decided to set up an *ad hoc* committee to advise on the re-organisation of transport administration in the States. With the increasing emphasis on industrialisation, the economy of the country has undergone a rapid change during recent years, and there is an increasing demand for transport to carry men and materials. Simultaneously with other forms of conveyance, the development and expansion of mechanised road transport has become a pressing problem. It has been urged that one of the contributory factors to the slow development of motor transport has been the administrative machinery in many of the States, which is concerned more with the regulation of motor transport rather than its planned development. A more concerted effort however, would appear to be necessary if the demand for additional transport capacity arising out of the implementation of the second five year plan is to be met. It is felt that if the development of transport is to keep pace with the expanding economy of the country, it is necessary that:

- Each State should be capable of organising the constant supervision of its road transport requirements;
- there should be regular planning for the development of motor transport so that the fullest use is made of the available road facilities;
- there should be close liaison between the statutory Transport Authorities and the development agencies at different levels.

At present most States have regular Transport Commissioners who are required to undertake the planning as well as the development of road transport. They are however so short-staffed and heavily

burdened with routine administration that they have hardly any time for development problems or the implementation of development plans. At the district level there is no effective agency to tackle transport problems. The work is usually entrusted to the statutory transport authorities to which the already heavily worked District Magistrates or police officers are appointed on a part-time basis. The result is that problems relating to road transport operation and control can be given little attention and the Transport Authorities function more or less as licensing authorities. It is therefore a common feature that undeveloped routes are neglected and over-crowding takes place on routes which are already well served.

To remedy these defects it is proposed that a high-powered *ad hoc* committee, composed of members of Parliament and a few State Legislature representatives of interests connected with the development of road transport like I.R.T.D.A., one or two persons connected with the large-scale operation of transport vehicles and some officials with a knowledge and experience of motor transport administration should be appointed. Broadly speaking, the committee will be required to survey the existing arrangements for the administration of road motor transport in the States and to make recommendations for a model administrative organisation which, in addition to establishing a close liaison with the statutory Transport Authorities at different levels, will be competent to undertake a study of the traffic requirements of the areas under its administrative charge and to plan and foster the development of road services with a view to meeting traffic requirements and making the fullest use of the available road facilities.

It is further proposed that this committee should also review the working of State transport undertakings and make recommendations as to what is the best method of managing nationalised transport—departmentally or through a corporation. With the progressive nationalisation of road motor transport in the States, the problem of administering State undertakings on a sound basis has been engaging the attention of the various States, the Planning Commission and the Central Government. Some States, which have large nationalised transport units, have been urging that departmental operation has proved very successful, whereas the Planning Commission and the Central Government have been of the view that operation through a corporation set up under the Road Transport Corporation Act should basically prove more efficacious. It is desirable to examine these views in the light of practical experience so that the resulting analysis can be profitably utilised by the States in furthering their plans for the nationalisation of transport.

U.K. Insurance Delegates Confer

Sir Percival Griffiths and his colleagues, Mr. Redington and Mr. Males of the Prudential Insurance Company, Mr. Cockram of the Gresham Life Assurance Society, Mr. Cunningham and Mr. Heale of the Sun Life Assurance Company of Canada, and Mr. Roberts had a prolonged conference with the Finance Secretary, Mr. H. M. Patel during the week, when problems connected with the nationalisation of the life business of non-Indian Insurance Companies were discussed. Nationalisation in these cases involves the buying up of the Indian business and the provision of facilities for the repatriation of funds brought into India to provide against claims of policy-holders. It is no secret that British Insurance Companies make a larger provision to meet their liabilities in the initial years of a policy, for which funds are imported from abroad.

Over-production in Tea

While in Delhi, Sir Percival will meet the Commerce Minister, Mr. T. T. Krishnamachari to discuss with him the "over-production" of tea. It is claimed that tea production has been in excess of demand, and if the present situation is allowed to continue without control it might lead to disastrous results. Sir Percival will press for the resumption of international control over the production of tea.

Compensation for the Coal Industry

The Ministry of Production is examining legislative proposals for acquiring the unworked coal-bearing areas of the existing leaseholds. The compensation to be paid is the main issue for determination. There could be three alternatives for the payment of compensation, namely:

1. Salami plus prospecting expenses.
2. Salami plus prospecting expenses plus a certain percentage for solatium.
3. Payment of Royalty for a fixed number of years.

Mr. R. S. Krishnaswamy, I.C.S. has been appointed to the new post of Coal Production and Development Commissioner, and will be in charge of both the existing and the new State collieries. The Coal Controller, however will continue to be in charge of the control aspect of the industry.

Indo-British Aircraft

A team from the Folland Aircraft Company, designers of the Gnat light-weight fighter, is here finalising the terms of agreement under which the Company will collaborate in the manufacture of aircraft at the Hindustan Aircraft Factory at Bangalore. Another team sponsored by Bristol's axial-flow turbo-jet engines in India to be fitted into Folland's Gnat fighters. The Defence Secretary, Mr. M. K. Vellodi, is expected to lead the mission which will visit England this spring to sign both these agreements so that India may be able to manufacture the complete Gnat fighter aircraft by 1961, the end of the second plan period.

U.K. Steel Mission

Sir Cyril Jones and his colleague representing the British Steel Mission have arrived here and held Conferences with the Secretary, Iron and Steel Ministry, Mr. S. Bhoothalingam. While the nationalisation of life insurance has had some repercussions in the London money market, the revised British proposals for setting up a one million ton steel plant at Durgapur, in West Bengal, have failed to evoke the requisite enthusiasm in New Delhi. A resumption of the talks is therefore greeted with cautious optimism.

The Railway's Plans for Coal

The Railway Ministry has taken in hand the following schemes for increasing the movement of coal during the plan period:

1. Ranigunj fields.
 - i. Doubling of the line between Ondal and Ukhra.
 - ii. Doubling of the line between Asansol and Adra including another bridge over the Damodar river.
2. Jharia field.
 - i. Doubling of the line between Amlo and Barkakana.
3. Karanpura field.
 - i. Extension of the Patratu Damodar branch up to Garsula, bridging the Damodar river with back links to the coal bearing area of Gidi.
 - ii. Increasing capacity on the Barwadih-Sone Nagar section.
 - iii. Branch line from Ranchi Road station to Ramgarh coalfield.
 - iv. Extension of the Patratu-Damodar Branch to Garsula and beyond for developing the contiguous coal bearing areas in North Karanpura.
 - Branch line off Patratu-Damodar Branch to serve Sanyal area.
 - vi. Branch lines from Ray and Hindigir to serve the areas nearby to be developed in Karanpura coalfield.

State Bank's Proposals

According to reports the management of the State Bank of India, has been discussing proposals which will have the effect of increasing the pay bill and giving bonuses to its employees in the higher grades. The management has been able to open less than three dozen new branches as against the target of five hundred branches in three years.

London

THE NEW CHANCELLOR'S FIRST PUBLIC ADDRESS

NO FRESH PRONOUNCEMENT ON THE ECONOMIC SITUATION

(FROM OUR LONDON CORRESPONDENT)

MR. HAROLD MACMILLAN made his first public statement as Chancellor of the Exchequer, when he addressed the National Advisory Council composed of representatives of industrialists and the T.U.C. Anticipations that he might utilise the opportunity at least to hint at his proposed economic policy were not realised, but he did review the situation as it stands to-day and reiterated the warnings that Government spokesmen have been uttering for some time against rising prices, wage claims, higher dividends and too much consumption. The analogy he used was that of an overloaded electricity system. Put in yet another plug and the fuse blows. It was his intention, he said, to study the position and then decide which of the plugs would need to be pulled out. That process, we can only presume, will be left until the Budget is presented in April.

There are many, however, who feel that the Chancellor should not wait that long, and that he could well take certain steps, apart from taxation, to stem the inflationary danger right away. Lord Pakenham, chairman of the National Bank, has suggested "a thorough up-to-date practical re-examination of financial ideas and policy" by a committee appointed for the purpose, because he has doubts whether "crucial financial decisions" are receiving the ranking they deserve among the "social priorities." Mr. A. W. Tuke, Barclays' chairman, on the other hand, in an *addendum* to his earlier statement says that since it was issued "some signs have begun to show themselves that economically speaking the weather may be going to change." He did not specifically indicate whether the change was for better or worse, but drew attention to stocks beginning to pile up in the motor industry which may or may not be worked off at present prices in the spring and summer, and to the "menace" hanging over this situation in the shape of wage demands "more related to the conditions of yesterday than to-day." He advised both sides of industry to mark time until the Budget.

Advice to the Chancellor

Meantime, Mr. Macmillan continues to receive advice from all and sundry as to how he should frame his Budget proposals. The Economic Committee of the Trades Union Congress has drawn up a general memorandum on the subject which is to be considered by the General Council before it is formally presented to the Chancellor. This document, it is understood, covers much the same ground as previous representations from this source—which, it is emphasised, Mr. Butler ignored—even down to the imposition of a capital gains tax. The Chancellor has also received a deputation from the Institute of Directors. The Institute is pressing for a reduction of 50 percent in the surtax on incomes between £2,000 and £5,000 a year, and of 25 percent on incomes above £5,000 a year. On death duties its proposal is that the present principle of taxing gifts when they are made within five years of the death of the giver should be abandoned, and instead, that the duty should be graded over the period so that if a person lives for four years after the date of the gift the duty would be reduced by four-fifths, and so on for other periods. On pensions, the Institute has pointed out that the Millard Tucker Committee reported two years ago and "there is still no evidence of any active steps being taken to bring any of the recommendations into effect." In a letter to the Chancellor, the Institute has stated: "Employers are becoming increasingly active in making pension benefits available for their employees. In this they have the active co-operation of the Inland Revenue. What we now seek is that similar benefits should be made available to directors."

The Position of Sterling

With the general increase in world trade, and the increasing relaxation of restrictions on the use of sterling, much greater use is being made of sterling to finance such trade. As the Midland Bank suggests, these developments impose a special responsibility on this country. The background against which management of the currency must work has moved from a creditor to a debtor position. In 1938 sterling liabilities of £598 million were more than matched by gold and dollar reserves of £615 million. Further, Britain had overseas investments in securities known to the Stock Exchange of £3,545 million nominal value. By June last year sterling liabilities to individual countries amounted to £3,860 million, Government debt to £2,130 million, and the European Payments Union debt to £96 million. Gold and dollar reserves were only £957 million. Overseas investments had dropped by over £1,500 million to £2,013 million in nominal value by December, 1953. Even allowing for an increase in market value and that Britain's post-war investment abroad has largely been made directly by companies, the net result is certainly a debit in place of a sizeable surplus. Within the total of sterling balances held, the colonial territories have increased their assets, principally as a result of external investment and not from persistent balance of payments surpluses. Countries outside the sterling area have shown no tendency to reduce their sterling balances, although restrictions on use have become comparatively light. This suggests that the bulk of sterling is held voluntarily. Sterling debts could be

viewed with equanimity were it not for recurring balance of payments crises. The aim of domestic policy in managing the currency must therefore be to ensure that enough of Britain's growing output is made available for settling external obligations. In other words, as the bank chairman pointed out in their speeches last month, the value of the pound can only be backed by suitable goods sold at competitive prices.

The Labour Problem

One of the influences which has worked against the worst effects of inflation in this country has been the steady increase over the past few years in the size of the labour force. In 1953 it rose by 180,000, in 1954 by a further 270,000 and in 1955 the latest statistics released by the Ministry of Labour record a further rise of 280,000. The total number of people in civil employment at the end of December was 23 million. The increase over the year resulted from a fall in the number unemployed and 60,000 in the Armed Forces, with a rise of 200,000 other workers, mainly women. The main increases in employment during 1955 were 180,000 in manufacturing industries and 60,000 in distribution. Within manufacturing there was a rise of 170,000 in metals, engineering and vehicles. Most other groups showed increases, but there was a fall of 10,000 in clothing and 40,000 in textiles, including 30,000 in cotton. There was a seasonal increase of 48,000 in the number of registered unemployed between 12th December and 14th January. Then the total was 264,000, of whom 16,000 were temporarily stopped. The total was 24,000 less than a year earlier. The percentage of unemployment in January was 1.2 compared with 1.0 in December and 1.4 in January, 1955.

The figures suggest that we are, in fact, scraping the bottom of the barrel so far as labour is concerned, especially in industry. Can future needs in this sphere be met? Vital statistics suggest that from 1957 onwards the high birth rate of the war and immediate post-war years will tend to swell the numbers entering the labour market, but the problem will not be solved unless these new entrants can be canalised into production jobs in industry as opposed to clerical or Government service, for the former's proportion is quite inadequate to produce the goods and services we need.

The Colombo Plan

It was appropriate that a special ceremony should have marked the recent arrival in London of the thousandth trainee to come to this country under the Colombo Plan, for this helped to focus attention not only on the value of this scheme for technical co-operation in the economic development of the countries in South-East Asia—which is not, perhaps, appreciated as it should be—but also on the not inconsiderable progress which has been made in the five and a half years since its inception. A 50-year-old blast furnace foreman, Mr. Bisheshwar Prasad Singh, from the Tata Iron and Steel Company was the trainee in question, and he was accorded an official reception at the Ministry of Labour by Mr. Iain Macleod, the Minister. Mr. Singh, it should be mentioned, took this honour in his stride and made a most favourable impression on the invited gathering. His special interest is the use of high pressure, top blast furnaces and sintering plants (a device for using material that is wasted in other processes), and he will study these as well as other processes during the next six months at the Colville Steel Works on the Clyde. Welcoming Mr. Singh, Mr. Macleod said it was appropriate that the thousandth trainee should come from India, which had played from the beginning a key part in the development of the scheme. India had been a most generous exporter of her own skilled men under the scheme and she had also provided training facilities herself for 350 trainees from the other Colombo Plan countries. Nor is the training of technicians overseas the only form of technical co-operation carried on under the scheme. There is also the despatch of experts to give advice on the spot and the provision of training equipment. As Mr. Macleod explained, the United Kingdom has provided 40 percent of the experts sent under the scheme during the past five years (an achievement that was not always easy in a time of full employment). Of the thousand technicians who have received training in Britain, 284 have come from India and the rest from Pakistan, Ceylon, Nepal, Indonesia, Burma, the Philippines, Thailand, Laos, and Vietnam.

Rise in Freight Rates

The U.K./India-Pakistan Conferences, which comprise British and Indian lines, announce that, owing to further increases in operating costs of ships, they have been compelled to revise the existing rates of freight. The increase generally is 10 percent, but with a few items below and a few above that amount. The decision to increase rates to meet part of the higher costs has been made only after the most careful consideration, but the lines emphasise that the existing rates of freight must be more closely related to operating costs if efficient services are to be maintained. The new rates, obtainable on application to the individual lines, will apply to shipments made by vessels commencing to load at each individual U.K. port on and after 15th March. A similar announcement has been made by the U.K.-Colombo Conference, while rates from North Continental ports will be similarly increased. The Continental Conferences comprise Belgian, British, Danish, Dutch, French, German, Indian, Norwegian and Swedish lines. The rates from India-Pakistan to U.K. and Continental ports are being advanced by 10 percent with certain exceptions.

Defence Bonds Conversion

The Treasury is making a conversion offer to holders of 2½ percent Defence Bonds maturing

between May and September, 1956, of which about £12 million are outstanding. Holders will be invited to exchange into 4 percent Defence Bonds, and if they accept will be paid interest at 2½ percent for the period from 1st April to the date of exchange and 4 percent from the date of exchange to 30th September, 1956. The maturity premium of £1 percent will be paid on the date of exchange. The terms of the conversion bonds will be the same as those of the 4 percent Defence Bonds now on sale, except that interest will be paid on 1st April and 1st October. The full terms with forms of request for conversion will be issued to holders on 14th February, and the list of acceptances of the offer will be closed on 15th March. Apart from bonds inherited from a deceased holder, the maximum permitted holding of Defence Bonds is £1,000 of the 4 percent, £2,000 of the 3½ percent, and £3,500 of all other issues, including the present conversion issue.

Brevities

In the liquidation of the Oriental Telephone and Electric Co., the holding of Hongkong Telephone Company shares are to be distributed to Oriental shareholders.

The Board of Trade has announced that the open general licence which authorises the export of certain iron and steel goods valued at more than £25 a ton is being replaced by a new open general licence which raises the limit to more than £35 a ton. This licence will come into operation on 15th February, and from that date individual licences will be required for exports where the value is £35 a ton or less. The licence does not apply to China, Macao, North Vietnam, or Tibet.

British steel output in January was at a rate of 21,069,000 tons a year, about 6½ percent more than in January, 1955. Pig iron output rose even more, being 10 percent higher than a year ago at an annual rate of 13,558,000 tons. Steel stocks in the hands of producers increased by no less than, 380,000 tons last year and consumer stocks are believed to have risen considerably in the last six months.

WHEN IN EUROPE

fly BEA

IN EUROPE'S FINEST AIR FLEET

For business, for pleasure—you'll do far more and see far more... if you fly BEA on your next trip to Europe. BEA's famous—and ever-expanding—network offers passengers fast and frequent services to over 50 of Europe's main business and holiday centres. BEA have more of the best airlines—more VISCONTES for example, than any airline in the world. And BEA's long experience in air transport means you enjoy comfort on all routes, and personal service second to none.

BEA links LONDON with most of the principal cities of Europe, including—PARIS · NICE · BRUSSELS · VIENNA · AMSTERDAM · OSLO · STOCKHOLM · COPENHAGEN · HAMBURG · GENEVA · ZURICH · BARCELONA · ISTANBUL · MADRID · LISBON · PALMA · MILAN · ROME · NAPLES · ATHENS, and further afield (for example, to GIBRALTAR · MALTA · CYPRUS and CAIRO as well as WITHIN BRITAIN).

...and fly on the **BEA CAR HIRE PLAN**
BEA's new Car Hire Plan now makes the rest of your travel smooth as clockwork—in France, Holland, Belgium, Switzerland, Norway, Sweden, Denmark, Italy, Germany, Cyprus and in Great Britain. No deposit; full insurance.

BRITISH EUROPEAN AIRWAYS

Full details of air reservations from your local Travel Agent or any office of B.O.A.C. All arrangements for Car Hire, as well as BEA Offices in Europe, or B.E.A. Offices in London, 16, Old Court House Street, London, E.C.4. (Opp. Old Bailey).

How far will
15 yards of cloth go?

Fifteen yards—no more—is our per capita consumption of cloth. The industry's target for 1960 is 22 yards per head.

Thirty years ago India was importing the bulk of her textile requirements; to-day, she has the second largest textile industry in the world. One hundred crores of rupees have been invested in this key industry. It employs a million workers and produces 5000 million yards of cloth annually.

In our developing economy steel is essential. That is why the Tata Iron & Steel Company has launched an expansion programme which will raise its capacity.

CONGRESS SHAKEN OUT
OF COMPLACENCY
THREE SUCCESSIVE DEFEATS
IN BY-ELECTIONS

(FROM OUR LUCKNOW CORRESPONDENT.)

THE Congress Party in the State suffered three defeats in by-elections during last week—two in the district of Bara Banki and one in Budaun. Bara Banki achieved some notoriety recently because of the murder, in rapid succession, of a Congress M.L.A. and a Socialist M.L.A. Both the murders were committed in broad daylight and it is believed that the outrages were responsible for the slump in Congress stock in the district. As regards Budaun, the Congress candidate was a former Muslim Leaguer, and though Muslims formed a sizeable part of the electorate in this constituency, he was defeated by a Socialist. These three defeats will not, of course, make much difference to the solid Congress strength in the State Assembly, but Congress circles realise that the position of the Party is no longer unchallenged and that it must be prepared for shocks in straight fights. Since the last general elections, Congress has won four Parliamentary and 10 Assembly by-elections, while the P.S.P. has won one Parliamentary and eight Assembly seats. Four Assembly and one Parliamentary elections were won by Independents. The Jan Sangh has annexed one seat.

Mr. Krishnamachari on Costs

A searching enquiry into the affairs of the Kanpur textile industry was urged by the Union Industries and Commerce Minister, Mr. T. T. Krishnamachari, who visited the city towards the end of last month. He said: "I do not approve of your employer-employee relations. I do not agree with your logic of geographical drawbacks. Some of the factors operating here are to your advantage. You are producing goods right down your consuming centre." He was also critical of the suggestions of the President of the U.P. Merchants' Chamber that the employment potential and not the cost factor must dominate the location of new industries in U.P. This proposition might suit the fertiliser factory, which is proposed to be started in U.P., but in the view of Mr. Krishnamachari, that principle if applied universally would mean giving support to the Karve Committee's recommendations. The cost factor, according to him, is extremely important from the point of view of consumption in an under-developed economy. By way of an example he recalled his visit to the Kanpur Technological Laboratories. He saw excellent water colours being manufactured there,

but their cost was more than double the present price paid by school children. "Merely because somebody has done a laboratory experiment," he said, "it cannot be encouraged on a commercial scale without regard to the price factor."

Aluminium Factory

The possibility of starting an aluminium factory is suggested in the preliminary report of the State's Directorate of Geology. The site suggested is near the Rihand dam area where bauxite is found in the nearby region belonging to Vindhya Pradesh, in which the 900-sq. mile Singrauli coal-field is situated. It may be mentioned in this connection that public opinion is moving in favour of the merger of Vindhya Pradesh with Uttar Pradesh. The preliminary report also draws attention to the discovery of gypsum in a pure form in the Naini Tal district. The previous estimates of 200,000 tons of gypsum will be greatly exceeded with the new find. At present good quality gypsum, which can be used in the manufacture of sulphuric acid, is being washed down by the Nangal river from Naini Tal. It is being dynamited in Dehra Dun and exported from the State for the manufacture of fertilisers. The report says that this is a waste of good quality gypsum and that for fertilisers, an inferior quality of the mineral should suffice. The Central Government has recommended the manufacture of sulphuric acid from gypsum to the greatest possible extent because it will also yield clinker for the manufacture of cement as a by-product. At present, U.P. is producing, by various methods, 6.7 percent of India's total output of sulphuric acid.

Estimates of Rural Income

Certain glaring discrepancies between the claims put forward by Government and the figures put out by the State's Economics and Statistics Department have become the subject of much unfavourable comment here. In a recent Press hand-out issued in connection with the Chief Minister's Press conference on the second plan, it was claimed that the rural income increased from Rs. 999 crores in 1947-48 to Rs. 1,070 crores in 1952-53. But the index of the value of agricultural produce, which accounts for nearly 75 percent of the rural income, shows that it fell during this period from 98 to 93. The index for the value of cottage industries has remained constant at 129. The index of income from agricultural trade it is shown, fell from 34.1 to 32.2 during the same period. If these statistics are correct, then the Government's assessment cannot be an accurate one. If the Government is correct, then the Department's statistics are false. The same discrepancy occurs also in respect of food production. Whereas the Government has been claiming that food production has registered a phenomenal increase as a result of various schemes, the Monthly Bulletin of Statistics shows that the general index of agricultural

production, which was 110 in 1947-48, never rose even once in the following seven years, and actually dropped to 108 in 1953-54.

Regulated Marketing

Following the Planning Commission's directives, the State Government proposes to take early steps to regulate rural marketing in Uttar Pradesh. The articles to be covered under the scheme would include cereals, pulses, oils and oilseeds, fruits and livestock. The scheme also envisages the licensing of warehouses. At present, warehouse owners, who are generally wholesale dealers, are at liberty to purchase any amount of stocks and keep them for any length of time. In future, they will not only be required to take out licenses but their purchases and sales will also be regulated. The expenses of the scheme will be met by a small cess imposed on the sale of goods in the markets. The surplus from the cess, if any, it is stated will be expended in providing amenities for the producers. It is announced that the work of collection of the necessary data will begin in the next budget year. About 600 persons will be employed for the purpose.

Interim Bonus for Textile Workers

Some 13 sugar mills of Uttar Pradesh have been ordered by the State Industrial Tribunal to pay an interim bonus to their workers for the year 1954-55. The total amount to be paid by these mills is Rs. 692 lakhs. The mills concerned had sought exemption from the orders of the Government directing them to pay the interim bonus.

PUMPS FOR ALL PURPOSES

A British firm, the Crown Engineering Co., have brought out new designs in self-priming pumps. The gear type "A" is designed for use where high or low pressures are required and is especially suitable for water, insecticides and certain chemicals. The models available range from the 1-in. B.S.P., giving 150 gallons per hour at 100 lb. pressure to the 2-in. B.S.P. giving 2,350 gallons. The gear-type B, for use with cutting oils and self-lubricating liquids, is suitable for machine tools where a constant and regular supply of lubricant is required at high or low pressure. There are all sizes available. The vertical pump is specially designed for use with machine tools or open sumps where the pump itself is operating at a depth of 1 in. to 7 in. As the pump is below water level no suction line is necessary. The vane-type pump, of which there are few models, has been designed for use where a strong flow of liquid is required on any machine tool. It needs no priming and will run for long periods without attention. It can be used with all self-lubricating liquids and is especially useful where a fluid of dense quality requires displacing.

Jute

QUIET CONDITIONS IN GUNNY AND
FIBRE MARKETSSUBSTANTIAL ACCEPTANCES AGAINST BURMESE
TENDER REPORTED

DURING the early part of the past week, there was very little of interest in the jute goods market and conditions in general were dull. Buyers were content to watch developments, and showed no inclination to support the prevailing prices. Rumours of interest nearer home caused temporary steadiness when speculators covered in heavy goods, but the rise was short-lived due to the lack of support. Calcutta mills, although keen for business, were looking for higher prices in the light of the steady jute markets, but met with very little success. Their selling pressure was concentrated on the forward section, where prices continued to show premiums over the nearer positions. These premiums, however, were reduced considerably. There were very few opportunities to avail of, as any business going was for early delivery and mills in general were well sold for these positions.

After the week-end, interest revived when confirmation of a small Indian Government order for internal consumption was received. This in itself was not large enough to cause any large alterations, but on Tuesday it was coupled with the Burmese Government's acceptance of tenders made against its recent enquiries. The latter order was understood to be in the region of 36,000 bales, with delivery spread over the April-June period. Operators who had submitted tenders and had them accepted immediately began covering in the sacking market against the earlier shipment dates. During the day, prices rose about Rs. 1-8 a 100 bags, but most of the business was absorbed by bazaar parties and very little found its way to mills. There was still no confirmation at this stage of the long-awaited Russian order, but speculation regarding its outcome continued to play a major part in price movements for all deliveries.

Raw Jute Quiet but Steady

Events in the goods market appeared to have very little effect on fibre prices, and raw jute continued to show a firm trend in the initial stages. Sellers persisted in their ideas in spite of the almost complete lack of interest among mills. Business concluded was the smallest for several weeks, and consisted in the main of inter-seller covering. Upcountry markets, encouraged by firm conditions in Pakistan, continued to lead Calcutta rates, and imports in most agencies were negligible. The local Cossipore markets, however, once again reported larger imports. Wagon arrivals over the week-end averaged about 110 a day, this being more than double those in the corresponding period of last year. It is reported that much of this jute was from the Daissee areas, and consisted mainly of Daissee Mesta. Advances from the interior appeared to indicate that 25 percent of the crop had still to come forward. Most of this was Mesta, and very little Daissee had yet to be marketed. These balances are larger than normal for the time of the year, but are not really unexpected considering the bumper crops reported in the early days of the season. It may be that cultivators have held on to these surpluses too long, as demand for Mesta has diminished of late due to the poor yield of this season's deliveries.

THE JUTE MARKETS

Manufactured Goods: Publication of the mill stock figures for January, showing substantial increases, had a bearish effect last week, but speculative covering at the lower levels in anticipation of orders from Burma soon brought about a recovery. On Thursday morning, B Twills had advanced by Re. 1 to Rs. 115-4 for February shipment, and Rs. 115-12 for April-June shipment. Although no business was reported in hessian, 40in 100z rose by 4 or 5 annas. February shipment stood at Rs. 41-2 and forward shipment at Rs. 41-6. Prices continued to rise after the opening, but profit-taking at the higher levels and lack of support from overseas buyers caused a gradual decline. Over the next two days, they fell back to last week's closing rates. Very little business was reported and over the week-end listless conditions prevailed with prices fluctuating narrowly. Monday's opening brought no improvement, and heavy goods lost a further 6 or 8 annas in the absence of buyers. On Tuesday, B Twill quotations had fallen back to Rs. 113-4 for the near positions, with forward shipment at a premium of 6 annas. Hessian also showed a weaker tendency and 40in 100z dropped to Rs. 40-8 for February shipment. Quiet conditions prevailed for most of the morning, but by the afternoon local and shipper covering at the lower levels against Indian and Burmese Government orders brought a recovery. Prices then advanced by Rs. 1-8 a 100 bags in a few hours.

At the close on Wednesday morning, prices had eased slightly from the highest touched on Tues-

day but quotations were well up on the previous day's opening rates and were as follows:

	February	March	April-June
	Rs.	Rs.	Rs.
40in 80z	33-6	33-4	33
40in 100z	40-10	40-13	41
B Twills	113-14	114-4	114-8
Heavy Cees (Plain)	112-4	113-12	114
A Twills	130	138-8	138
Liverpools	130	129-8	129
Corn sacks	115-12	115-12	115-12

Raw Jute: The fibre markets experienced their quietest session for several weeks. Apart from small mill purchases, business was confined to inter-seller covering, mainly in Daissee, against previous contracts. Prices showed very little alteration in the early period, but as the week progressed rates declined and sellers showed more inclination to sell but were reluctant to discount to any great extent due to the very steady upcountry markets. Operators in the agencies were encouraged in their bullish attitude by the firm Pakistan markets, and it is very unlikely that there will be very much alteration while this disparity exists. Mills have shown no interest at all in Pakistan jute which is about Rs. 3-8 a maund higher than Indian fibres.

Opening quotations on Thursday last were unchanged from the previous day and Upper Assam Bottoms were quoted at Rs. 30-8 a maund. Mills showed no interest at these levels due to the weaker goods markets, but as the session progressed and gunnies improved, small business was transacted which pushed prices up 8 annas a maund by Friday morning. Steady upcountry markets fixed local rates at this level, and up to the week-end no alterations were recorded. During the week-end a fair amount of business was reported on an inter-seller basis, mainly covering in Daissee against last week's purchases. This strengthened the market, although by the time business commenced on Monday morning Upper Assam rates had fallen back to Rs. 30-8 a maund. Lack of mill interest and the quieter goods markets reduced prices a further 8 annas on Tuesday. Activity in gunnies in the late afternoon arrested the fall and the market closed on a steady note, but with prices unchanged.

Business reported during the week was on a very restricted scale. Only small lots of Dhubri-Northern jute changed hands at Rs. 30-8 to Rs. 31 a maund basis bottoms for February-March shipment, and local Northern at Rs. 30 to Rs. 30-8 a maund for ready and one month's delivery. The main business of the week was in Daissee jute, and inter-seller covering took place at Rs. 31 to Rs. 31-8 a maund, with a Rs. 2-8 difference between Middles and Bottoms, and also at Rs. 33 a maund for Middles only, delivery dates in all cases being during February and/or March. Some Daissee Mesta was also included in these transactions at Rs. 27-8 to Rs. 28 a maund basis Bottoms for the same deliveries. Small parcels of Pakistan Cuttings were done at Rs. 130 a bale.

At the close, markets were unchanged and opening quotations on Wednesday morning were as follows:

Indian Jute:	Landed at Mills Rs. a maund basis Bottoms	Shipment
Lower Assam	29-8	February-March
Upper Assam	30	"
Northern	30	"
Murshidabad White	29	"
Daissee ex Agency	30-8	"
Daissee ex Cossipore	30	"
Daissee Mesta	27-8	"
Local Packing (Northern)	29-8	"
Bimil	28	"
Tossa is quoted at Re. 1 a maund above the price of white jute.		
Pakistan Jute:	Rs. a maund basis Bottoms	Shipment
Jat	34	February-March
District	32-3	"
Northern	32	"
Jat Cuttings	135 a bale	"

Local Cossipore markets have again reported increased activity, and imports have improved to the extent that over the week a total of 750 wagons arrived at the sidings. Inter-seller covering has accounted for most of the business, but mill representatives have been active, and all arrivals have been snapped up. Consequently prices have tended to rule steady in spite of the Calcutta mill prices easing. Quotations at the close were based on Kishengani jute at Rs. 29 a maund for garsat quality. The Daissee markets are reporting increased imports of Daissee Mesta, but Daissee is still in very short supply. Cultivators estimate that there is still about 4 annas of the entire crop to be marketed, but most of this is Mesta. Heavy covering during the week for Daissee kept the markets steady. At the close sellers are reserved

and quotations in Sheoraphuli are based on Rs. 28 a maund for garsat quality.

Mofussil: Reports from upcountry indicate that there has been no improvement in the import position, but over the week demand has increased. Consequently, prices continue to be very firm, supported by the Pakistan markets. Quotations are still in advance of Calcutta prices, but in spite of this there is keen competition among operators for the small supplies available. At the close, Dhubri quotations were based on Rs. 26 a maund for garsat quality.

Raw Jute Consumption

The consumption of raw jute by mills reporting to the I.J.M.A. during January 1956 was 518,300 bales, which was 48,100 bales less than the previous month. This fall was partly due to the fact that January was a shorter working month due to mill holidays. The total consumption for July 1955-January 1956 is now 35,45,300 bales. In January 1955, the consumption was 489,000 bales, and the total for the corresponding period of last season was 33,78,000 bales. Thus, in the current season, consumption is now ahead of last season by 167,300 bales.

I. J. M. A. Production

The production in January 1956 of jute mills reporting to the I.J.M.A. was 86,900 tons, or 8,400 tons less than in December 1955. This figure was made up of 30,300 tons of hessian, 52,600 tons of sacking and 6,000 tons of miscellaneous manufactures. During the month the percentage of hessian goods produced dropped 0.8, while that of sacking increased by 1.1. The general trend of the market can be studied from the variations in production over the last six months. Since August 1955, hessian production has dropped from 40.8 percent to 34.1 percent, a drop of 6.7 percent, while sacking production has increased from 53.6 percent to 59.2 percent, a rise of 5.6 percent. The balance of 1.1 percent was taken up by an increase in miscellaneous goods. It would appear from these figures that the increased world demand for sacking goods has been satisfactorily catered for by the industry, and that the recent increases in production came from sacking looms.

RAILWAY WAGONS FOR JUTE
TRANSPORTCONFLICTING INFORMATION GIVEN
ON BOOKING FACILITIES

THE figures given by the Public Relations Officer, Calcutta Railways, in his recent letter, regarding the loading of jute wagons in the current season compared with those of last season show an improvement that is gratifying. It is to be hoped that there will be further improvement so that the large quantities of jute awaiting transport to mills may be moved expeditiously and thus bring about an improvement in the mills' stock position. The figures given relate, of course, only to the Eastern Railway. No information has been given by the other railways concerned in the transport of jute. As regards the lack of co-operation between railways, we have had an instance cited where the North-Eastern Railway (Bareilly-Lucknow section) stated that booking to certain mills in the Calcutta area had been stopped at the request of the authorities in Calcutta. On reference being made to these authorities in Calcutta it was denied that any such request had been made. At the time of writing, the station-masters on the Baharwa-Howrah section and the Murshidabad-Sealdah section of the Eastern Railway say that booking to certain mills has been stopped but the authorities in Calcutta say that this is incorrect. Nevertheless those who want to book jute cannot do so and this produces a sense of frustration besides the possibility of loss through contracts not being fulfilled in time. The cases cited are only a

few of the instances which are almost continually occurring.

On the question of shunting capacity, it is interesting that it is ample in the Sealdah division, but here is an example given to us from personal observation of how jute wagons are handled. A train of 50 or 60 wagons, not necessarily all jute, arrives at junction A about 30 miles from Calcutta where there are four or five jute mills. The train is put in a siding and the main-line goods engine is then used to place jute wagons at several or all of the mills in that area—say two or three wagons to each mill. The train then moves down to station B where there are several more jute mills and the train again goes into a siding while wagons are distributed by the main line engine to the mills in that area. This process is repeated until all the jute wagons have been distributed. The delay caused by this system is so obvious that it needs no emphasis and it could be avoided by the use of a shunting engine.

If there are, as the Public Relations Officer says, sufficient shunting engines, why is the train delayed at these stations while its engine distributes wagons to various destinations? Surely the wagons should be dropped at each station to be dealt with by a shunting engine while the train goes on its way. The system which appears to be in vogue at present probably accounts for the fact that it sometimes takes a wagon two weeks to be moved 20 miles.

GUNNY SHIPMENT STATISTICS FOR DECEMBER 1955

The following are the total net figures of manufactured jute goods shipped from Calcutta during the month of December 1955 after providing for short shipments. These figures include shipments to coastal ports.

	Hessian Bags (Tons)	Cloth (Tons)	Total (Tons)
Gross	2,876.2	35,230.5	38,106.7
Short shipped	134.8	827.7	962.5
December 1955 (Nett)	2,741.4	34,402.8	37,144.2
November 1955 (Nett)	2,097.9	26,728.5	28,826.4
October 1955 (Nett)	2,588.7	24,561.5	27,150.2

I.J.M.A. STOCK FIGURES FOR JANUARY

The Indian Jute Mills Association reports the total stock of jute goods at the end of January 1956, as follows:

Description	31st January 1956		31st December 1955		Increase over (+) or decrease from (-) last month		31st January 1955

THE FOREIGN JUTE MARKETS

A QUIET TONE PREVAILS

(FROM OUR DUNDEE CORRESPONDENT)

PRICES for raw jute have again been tending upwards during the past week, but there is now a rather quieter tone about, with the news that loose jute has gone easier in Pakistan after being quite strong. Growers are evidently in a position to keep back supplies and there seems to be a definite scarcity of good white jute in the upcountry markets. There are certainly few offers of Mill Firsts and grades above, for which fantastic prices are quoted when offered. Crack Lightnings, for instance, are mentioned at £130 and crack Hearts at £120, while there is only an occasional seller of Mill Firsts at £106 to £109, c.i.f. U.K. Mill Lightnings have been sold this week at £92 and that is the cheapest rate yet, with some asking as much as £98 and Mill Hearts are from £85 to £88, c.i.f. U.K. More interest has been taken in Daissee and Tossa by Dundee spinners, as assortment and fours respectively are priced at a level at which yarns can be spun and sold at week-end prices without showing a loss. Good marks of Daissee-3/3 are being sold at £90, £91 and £92, and Tossa-4 at £92 and £92 10s, with Tossa-2/3 done at £102 and also at 10s more, c.i.f. U.K.

On 3rd February, the trade was advised that prices for jute yarns and cloth in the U.K. had been advanced by about £5 a ton, the only exception being sacking wefts, which remain unchanged on the basis of 11.76d a lb. for 24 lbs. Hessian yarns are raised to 15.55d from 14.77d a lb. for common 8 lb. cops and 8 lb. spools, and 3 ply 8 lb. twist to 17.04d from 16.46d a lb. Rove is up from £96 10s to £99 5s for 48 lbs. and from £78

to £80 15s for 200 lbs. This has practically stopped all business in yarns, as buyers refuse to follow. The same applies to the cloth market where very few fresh orders are being placed. Hessians are advanced from 13.51d to 13.92d a yard for 10½oz. 40in., 12.80d to 13.17d for 10oz. and 10.51d to 10.80d for 8oz., while 14d for 36in. 18oz tarpaulin is up from 24.08d to 24.79d a yard, and 8d for 27in. 16oz. twilled sacking from 18.02d to 18.31d a yard.

Calcutta goods are irregular, closing quieter at 62s 0d for 10oz. 40in. and 47s 3d for 7½oz., February, 62s 3d and 47s 3d March, and 62s 6d and 47s 0d April-June, with B twills at 175s 3d, 175s 6d and 176s 0d for respective positions of shipment, f.o.b. Calcutta.

I.J.M.A. PRODUCTION FIGURES FOR JANUARY

The Indian Jute Mills Association reports the total production of jute goods during January 1956 as follows:

Description	Quantity
1. Twist and Yarn	
(a) For Sale	2,774 tons
(b) All other including that used in sewing bags	1,121 tons
2. Canvas	343 tons
	8.2 lakh yds.
3. Gunny Bags (Tonnage exclude sewing twist)	
(a) Hessian	2,229 tons
	78.2 lakh yds.
	59.6 lakh Nos.
(b) Sacking	50,671 tons
	12,342 lakh yds.
	5,222 lakh Nos.
4. Gunny Cloth	
(a) Hessian	27,764 tons
	10,563 lakh yds.
(b) Sacking	1,956 tons
	46.9 lakh yds.
5. Other manufactures (including ropes)	2,048 tons
6. Total production (above figures combined)	
(a) All kinds	88,906 tons
(b) Hessian (both bags and cloth)	11,345 lakh yds.
(c) Sacking (—do—)	12,812 lakh yds.
(d) Canvas (—do—)	8.2 lakh yds.

Summary						
	(00,000 Yds.)			(000 Tons)		
	Jan '56	Dec. '55	Jan. '55	Jan. '56	Dec. '55	Jan. '55
Hessian	11,43	12,91	12,84	30.3	34.0	32.5
Sacking	12,81	13,60	11,44	52.6	56.6	48.5
Others				6.0	6.7	2.9
Grand Total	88.9			97.3		83.9

N.B.—These statistics are based on replies received and represent all members of the Association and Gagalbhai with estimates for three non-member mills.

EXPANDING MARKETS IN WOOL

PRICES TEND HIGHER

AN increasing number of men in Asia are wearing styles of dress. Women also are following the same trend. One result, reports Radio Australia News, is a big expansion in the market for Australian wool. There is an increasing demand for wool in India and China, and expanding markets also in Turkey and Mexico. Spain, the original home of the merino, has again entered the wool-buying field. Prices at February's Melbourne wool sales were about 5 percent above December levels. United Kingdom and Continental buyers were active. Japanese orders and buying on behalf of Australian mills contributed to the higher trend.

Japanese Wool Goods

The Japanese Wool Spinners' Association announces that all goods produced by its members in future are to be marked "Made in Japan". The undertaking is timely in view of the fact that the Anglo-Japanese trade and payments agreement is shortly due for review, writes the I.W.S. trade correspondent in Bradford. Alleged misleading descriptions of exported Japanese wool cloths have been a subject of complaint among British manufacturers for many months. Cases have been cited of Japanese cloths being shipped abroad marked "Made in England", with the word "as" in very small lettering, or bearing in English, such inscription as "guaranteed all wool", "guaranteed English wool" and other expressions and markings calculated to suggest that the goods were of British origin. Many such examples have accumulated in Yorkshire over the months, some of which have been submitted to the United Kingdom Government as evidence of unfair trading practices. Since she joined the International Wool Textile Organisation in 1953, Japan subscribes to the international code of fair trading in wool textiles laid down by the I.W.T.O. This requires that English descriptions and markings of wool cloth shall not be used by non-English speaking countries unless, in the language of the country in question and in lettering as large as the other, the

SOCIAL WELFARE AND COTTAGE INDUSTRIES

THE INDUSTRIAL CO-OPERATIVES PROJECT

(FROM A SPECIAL CORRESPONDENT)

IN the solution of the widespread problem of unemployment, the Industrial Co-operatives scheme is expected to lend itself to a number of profitable uses. Sponsored by the Ministry of Industry and Commerce, small-scale industries on a cottage basis will be established to afford employment opportunities for skilled labour. Apart from the potentialities of the scheme in ensuring gainful employment to the educated middle-class, the industrial co-operatives scheme is capable of providing some gratifying results in other directions such as the promotion of family welfare. It has been found to be a beneficial scheme in the implementation of projects sponsored by the Central Social Welfare Board. The cardinal feature of the scheme is the sharing of responsibility for the management of the cottage industry concerned on the widest possible scale by a number of small shareholders. One particular aspect which should ensure its success is the liberal scale of Government aid in the form of financial grants and technical assistance which will be available to the co-operatives.

Considerable segments of the urban population are victims of the prevailing high cost of living, which makes it difficult for them to adjust their family budgets. Among these can be counted women of the lower middle class families, whose husbands, sons or brothers are employed as school-masters, stenographers, clerks, industrial workers and so on, earning incomes ranging from Rs. 80 to Rs. 150 a month. The women in many of these families often have had a certain amount of education, but are prevented by various factors from seeking or getting regular employment. In helping such women to earn an income without unduly detracting from their domestic responsibilities, so that the family resources can be supplemented, the cottage industries projects under the scheme of industrial co-operatives are proving an extremely appropriate device.

Setting up the Co-operatives

Under the scheme, women of the lower income groups in a selected urban locality constitute themselves into an industrial co-operative society and get it registered. They receive training in a particular craft or industry, which is selected as suitable for being taken up under the scheme. While a number of organisations concerned with the promotion of rural welfare, such as the All India Village Industries and Khadi Board, are utilising the scheme for promoting cottage industries, from which the main beneficiaries will be people of the rural areas, the Urban Family Welfare Industrial Co-operatives sponsored by the Central Social Welfare Board, in pursuance of this scheme, contribute to the relief and welfare of the women in the urban areas.

A preliminary survey is undertaken of localities in selected urban centres, which are predominantly inhabited by families in the income groups referred to above. Women in these families willing to be trained and to take up employment in the selected industry enlist as members of the co-operative. Once the co-operative is established, the Ministry of Industry and Commerce Ministry of the Government of India comes into the picture. Financial assistance is given by the Ministry to the co-operative societies, partly as a loan and partly as a grant, for setting up the industry in the locality. The industry to be started under the scheme will be chosen from among a list of approved industries, suitable for organisation on a cottage industries basis, such as match manufacturing, ceramics, paper manufacture, manufacture of toys and baskets, pencils and so on. In selecting the industry, the prospects of local demand for its products, the availability of raw materials locally and other relevant factors are taken into account. A necessary feature of the urban family welfare projects is that, as far as possible, the industry should be such that some of the manufacturing processes could conveniently be entrusted to women working in their homes. The financial grants by the Central Government are generally dispensed through the State Governments, who will have a hand in the management. Though there is no set pattern for the proportions in which financial assistance will be given in the shape of grants and loans, generally speaking, 75 percent of the working capital of an industrial co-operative and 50 percent of the recurring expenditure on the supervisory staff for a period of three years are given as grants by the Centre, while the State Government is expected to contribute 25 percent of the working capital and 50 percent of the recurring expenditure. It is expected that at the end of the three year period, the co-operative should be in a position to meet the running expenditure of itself. In actual practice, however, in respect of the family welfare industrial co-operative projects, it is proposed to give the entire working capital as a grant by the Ministry of Commerce and Industry, the amount of such grant ranging from Rs. 2.5 lakhs to Rs. 3 lakhs in each case.

Management and Training

The formation of the co-operative societies is followed by the constitution of a managing committee, on which representation is provided to the members of the co-operatives who are also the

general supervision the scheme operates, the Central Government, which provides the finances, and lastly, the Central Social Welfare Board, which is the sponsoring agency. The by-laws of the societies provide for the appointment of seven members to the managing committee, of which two will be State Government nominees, one will be the nominee of the Central Government and the other four will be nominees of Central Social Welfare Board, out of whom one is generally a representative of the members of the co-operative.

The training of the women workers to be employed in the factory or in the industry, will be in charge of qualified technicians, appointed by the Ministry of Commerce and Industry. Not only the teachers but also the technical personnel, who will be in charge of the manufacturing process in the factories, will be appointed by the State Government. For each of the industrial co-operatives to be established under the urban family welfare scheme, the Government of India is expected to make a financial allocation of Rs. 2.5 lakhs to Rs. 3 lakhs, as stated above, while a special grant of about Rs. 60,000, is made towards the payment of stipends to the women trainees, who will later be employed in the industry.

Of greater significance and importance as a contribution to the success of the scheme is the arrangement, under which the Government of India undertakes responsibility for the marketing of the products of the industry. Since in the preliminary stage, the industry selected is one for the products of which there is a prospective demand, this should not ordinarily pose a difficult problem. The agencies, however, of the Marketing Organisation of the Central Government and of the National Small Industries Corporation are available for the marketing of the produce.

Promotion of Community Welfare

So far, five projects under the urban family welfare scheme have been sponsored by the Central Social Welfare Board and have either gone into operation or will do so in the near future. The industries set up under the projects so far established are match factories, and the employment potential of each of these is about 500 persons. The pilot project in Delhi has demonstrated the benefits of the industrial co-operative scheme for ensuring gainful employment to women of the lower income groups. It has also demonstrated its possibilities for serving as an avenue for the promotion of community welfare programmes for women and children in the locality where the industry is situated.

In the Delhi match factory, about 200 women workers are at present employed, nearly half of whom work in the factory and the other half in their homes. As wages of women working at home are paid on a piece rate basis, it facilitates

more than one member of the family taking part in the work and the family earnings increasing in proportion.

The industrial co-operatives scheme generally speaking, and in particular in its application to the promotion of family welfare activities in the urban areas, is distinguished by two characteristics. In the first place, it serves as a means of ensuring gainful employment to a section of the population which cannot or would not offer itself for regular employment in industrial undertakings, for one reason or the other, but which stands in need of finding some way of making a living. Whether or not employment opportunities available under the scheme can be construed as resulting in an alleviation of the incidence of unemployment in the technical sense, there is no doubt that indirectly it contributes to that result. In the second place, the basic principle of the scheme, namely, the organisation of the industry on a co-operative basis, enables the profits, if any, to be ploughed back into the industry itself. The beneficiaries from this process will be the women workers whose wages will go on rising as the profits go on increasing. It is expected that, under the specific form of industrial co-operatives sponsored by the Central Social Welfare Board, one such co-operative project, under which a small scale industry could be organised, will be established in each of the 28 States of the country during the second plan period. It is also proposed to utilise these projects in subsequent years as the centres for Community Welfare Services for women and children in the locality concerned.

"CAPITAL" STOCKS AND SHARES INDEX *

The Capital Stocks and Shares Index (Base: 1939) has now been brought up to December, 1955. Compared with November, the December index for government securities reveals a rise of 0.2 points, while that for preference shares discloses a drop of 0.6 points.

There were decreases in cottons 16.5 points, coals 5.6 points, jutes 7.6 points, cements 5.2 points, engineering 18.5 points, teas 58.1 points, papers 3.4 points, sugars 5.0 points and miscellaneous 18.1 points, while banks and mining and oils increased by 6.5 points and 15.0 points, respectively.

Combining all the factors the Capital variable yield securities index shows that the index for stock prices in the above classes of shares declined by 9.5 points during December, 1955.

CALCUTTA TEA SALES IN JANUARY

GENERAL DEMAND IMPROVES WITH U. K. BUYING

THE January offerings, which averaged about 57,500 packages a week, met with a much better general demand than in December and a very welcome feature was the strong U.K. buying which was in evidence during the last three sales of the month, say Messrs. Carritt Moran & Co. Ltd. in their monthly tea market review. Teas of C.T.C. manufacture, which had been a weak feature during the previous month, received more support particularly the better liquoring kinds for which there was keen competition. Any bright liquoring Doonars teas of non-wither manufacture also received useful support. The limited quantity of tippy teas again sold well, but the outstanding feature of the month was the very strong demand for all kinds of Fannings grades, particularly black Assam Orange Fannings, which appreciated by several annas. Stylish whole leaf grades sold well but the more ordinary kinds were in less demand. Darjeelings with any flavour were also well supported. The only really weak feature was poor liquoring stalky teas which could only be sold at rates well below the cost of production.

No autumnal Darjeeling teas have yet been catalogued and the offerings consisted entirely of late rains production which, with a few exceptions, may be considered well up to standard, most of the teas being well sorted and commendably free from stalk. The majority of Assam teas showed a further decline in quality both as regards leaf and liquor. This was particularly noticeable in the case of C.T.C. teas which, with a few notable exceptions, have been very plain and heavy and lacking briskness and brightness. Although a few Doonars estates have produced blackish well made teas, the majority of the offerings have shown a further decline and have contained far too much stalk and fibre. The liquors also have been of a very ordinary rains description. Cachar leaf appearance showed little change from the previous month, but the bulk of the offerings were very plain in cup and in many cases were soft and stewed.

Sale No. 32 "	1 8 6	3 9 9
Sale No. 33 "	1 7 6	3 9 6

Internal Market

Leaf offerings amounted to approximately 10,000 chests. The bulk of the offerings consisted of unattractive stalky teas, but there was a fair demand for the few lines of clean leaf teas, prices for which followed the trend of the export market. Dust offerings amounted to approximately 96,500 chests. There was a good general demand throughout the month. Black leaf fannings types suitable for the Middle East were a particularly strong feature and sometimes realised prices above all other descriptions. Selected lines of the best C.T.C. Assams were keenly competed for but the poorer sorts in this category were not so strongly supported. Bright liquoring sorts from all districts, especially Doonars, also met with a good demand. The increased quantity of dull residue grades met with rather less support.

Quotations

	1955-56	154-55
Sale No. 29 Clean Common Dust	1 6 0	2 6 9
Sale No. 30 "	1 6 0	2 1 0
Sale No. 31 "	1 7 6	2 11 9
Sale No. 32 "	1 7 9	2 10 3
Sale No. 33 "	1 7 0	2 12 6

By comparison with recent months, the price of export quota has shown little change during the month. During the first week, the market opened with business being negotiated at 24 pias a lb. but this soon declined after the first sale to 15 pias a lb. But after this initial hesitancy, the price rose again slightly and for the final three weeks remained steady with the majority of business being conducted at rates between 20 and 24 pias a lb.

In a notification dated 24th January the Government of India declared that the total export allotment of tea for the financial year 1955-56 would be 480 million lbs. Last year, a total allotment of 465 million lbs. was made. This notification which was not released to the trade until the last day of the month had a very marked effect on the market. The price during the day declined from 21 to 16 pias a lb.

The estimated North India crop to the end of December, 1955 was 533,217,044 lbs. as compared with 513,563,521 lbs. to the same date last year. The average figure at this date for the three years 1952-1954 was 501,820,072 lbs.

The Government of India has issued a notification fixing the price of tea for the purpose of determining the export duty at Rs. 2-14-1 a lb. as against Rs. 3-1-5 a lb. in force from 1st January, 1956. The export duty, therefore, remains unchanged at As. 6 a lb.

Arrivals (in chests) in Calcutta warehouses during the period 24th December, 1955 to 23rd

January, 1956 with the corresponding figures of the previous year in parentheses were as follows: by rail 78,537 (124,256) by steamer 194,774 (193,716) by air 16,080 (15,397) making a total of 289,391 (333,772) chests. Since the beginning of the season, 1st April, 1955 to 23rd January, 1956, arrivals have been: by steamer 2,858,887 (4,152,520), by rail 788,895 (786,466) and by air 177,187 (104,591), making a total of 3,804,969 (4,103,577) chests.

Export sales up to No. 32 totalled 1,422,357 chests at an average price of Rs. 2-3-7 compared with 1,403,926 at an average price of Rs. 3-1-8 during the corresponding period of the 1954-55 season. Internal sales at 68,183 chests of Leaf and 435,153 chests of Dust (Rs. 1-5-2 and Rs. 2-1-0) go against 348,465 and 482,635 (Rs. 2-4-2 and Rs. 2-6-5) for the same period last year.

TEA PRICES CONTINUE TO FALL IN BRITAIN

TEA prices have continued to decline in the U.K. with the result that the differential in rates between London and Calcutta has narrowed further. Not so long ago, invoices of comparable quality were fetching around 1s a lb. more in London than in Calcutta. The present margin is decidedly smaller. Producers of lower grades have been particularly hard hit by the decline as many are selling below the current production costs. The primary reason for the continuing fall in tea prices is over-supply, especially of plain descriptions, in relation to the present none too encouraging demand. If it were not for the credit squeeze in the U.K., some of the present surplus would presumably be taken up as warehouse and landed stocks represent only about three months' supplies at the current rate of off-take. The immediate outlook for producers of lower grades is rather bleak. World supplies exceed world demand by a comfortable margin. In the absence of an international regulation scheme to regulate exports, it now rests with producers to restrict their manufacture relative to the prevailing conditions. But this may well prove to be of only long-term significance to the market as producers still have a good part of their 1955 crop to sell.

NO CONTROL OVER TEA PLANTING IN TANGANYIKA

The recommendation by the Tea Board that control over tea planting is no longer necessary in Tanganyika has been accepted by the Government there. The Legislative Council has approved the Bill amending the Tea Ordinance of 1950, thus removing the obligation on planters to get permission from the Director of Agriculture for planting tea. All planters, however, must still make returns for registration purposes.

COCHIN TEA SALES

At Sale No. 4, 1,175,000 lbs. of tea were on offer. There was a strong and general demand. Low Mediums were fully firm and Good Mediums were irregular, but often 2 to 4 annas dearer. Best Liquoring grades were about steady, while Whole Leaf types were less in demand.

COLOMBO RUBBER PRICES

The following prices have been issued by the Rubber Board of India from the weekly market report published by the Colombo Brokers Association:

	Closing prices on 3-2-1956 (Rupees a lb.)	Average for the period (Rupees a lb.)

A SIGNIFICANT CONTRAST

Lines of Resistance

For the present the cotton industry's confidence is partly restored by the improvement of trade at

Mr. Arthur Duckett, the chairman of Joshua Hoyle (a vertical organisation, spinning, weaving, and merchandising), discussed such problems in his annual statement recently. Noting the repeated advice that Lancashire must devote its attention to higher-class productions, he commented: "the demand for them is limited, and the running of our machinery must therefore be maintained primarily by the manufacture and sale of bulk lines to the home trade." That thought brought him to the problem of Asian competition. "It is in this class of goods that even the most modern Lancashire mills, working two or three shifts, cannot compete in price with the productions of India, Hong Kong and Japan, where comparative living standards are low and the industry, in some cases, is protected and subsidised." On one point, however, agreement is general: Lancashire can slow down, perhaps arrest, the process of decline if it develops research and, thereby, new products. One of these that attracted widespread attention when introduced last month is "Tootoile", a cotton dress fabric produced by the Tootal group after nine years of intensive research. The special characteristic of this fabric is that after washing it requires no ironing—at least, no more than the fastidious wearer may like to perform on her nylon wear. "Non-iron" (or, as the chairman of Tootals, Mr. A. V. Symons, prefers it, "minimum-iron") fabrics of the synthetic-fibre variety are, of course, familiar but this innovation in cotton has the advantage in price. As the process will be made available to licensees all over the world, it may have an important future.

Pure Research

Even the most conventional of textile manufacturers can be persuaded of the significance of research by a conference such as that which was held recently, under the aegis of the Institute of Physics, at the Department of Textile Industries of Leeds University. It was concerned not with immediate commercial problems but with the fundamental structure of fibres. But no knowledge of the material with which one works is irrelevant, especially when the working, or subsequent treatment of it affects its structure. The principal tool of this research is the electron microscope, which, using a beam of fast electrons instead of light, magnifies much more than an optical microscope: details as small as 1.5 millionths of a millimeter can be revealed by equipment now on the market—in conjunction, of course, with extremely elaborate photography. It is thereby possible to see in detail (for instance)

what happens when a fibre is washed, or shrinks. The Leeds conference hinted at the practical significance of such knowledge to the wool and the rayon industries, among others.

WHOLESALE PRICE INDEX FALLS

THE official wholesale price index (base: year ended August 1939=100) declined by 0.1 percent to 375.3 during the week ended 28th January, 1956 as compared with 375.6 for the previous week. The index was higher by 0.5 and 4.3 per cent respectively when compared with the corresponding weeks of last month and a year ago. The average for January 1956 stood at 375.3 as compared with 368.4 for December 1955 and 353.3 for January 1955. The effect of higher prices of tea (+8%), wheat at Amritsar (+5%) bajra (+2%), and sugar (+1%) was almost neutralised by lower prices of dal arhar and gur at Muzaffarnagar (-8% each) and wheat (-4%) and gram (-3%) at Hapur, and the index for Food Articles stood at 333.7 as compared with 333.6 for the previous week. The index for Industrial Raw Materials advanced by 1.2 percent to 457.3 due to an increase in the prices of groundnuts at Cuddalore (+11%), raw wool at Kalimpong (+8%), raw jute (+3%), jingellyseed at Jhansi and raw silk (+2% each) and linseed and rapeseed in Calcutta (+1% each) although prices of manganese ore (average export prices) (-14%), wet salted cowhides at Kanpur (-5%) and Bengal and Jarilla cottons, rapeseed at Kanpur and T. N. Shellac in Calcutta (-1% each) showed declines. A fall in the prices of buffalo hide (-3%), cowhide (-26%), goatskins (-4%) coconut oil at Cochin (-2%), sheepskins (-2% each) and castor oil in Madras and mustard oil (-1% each) brought down the index. Semi-manufactures by 2.0 percent to 347.6. Prices of linseed oil (+4%), groundnut oil and zinc (+3% each) and castor oil in Calcutta (+2%) were, however, marked up. An advance in the prices of jute manufactures (+1%) raised the index for Manufactures from 374.4 to 374.9. Prices of betelnuts at Bangalore (+2%) moved up while those of black pepper at Cochin (-2%) went down. The index for the Miscellaneous group worked out to 536.2 as compared with 536.0 (revised) for the previous week.

NEW TYPE OF AIR CONDITIONER

DESIGNS FOR ALL CLIMATES

From the December number of *The British Export Gazette* comes news of a new air cleaning and cooling unit, the Climatiser, made by Westool, Ltd., of Co. Durham, and distributed overseas by Stamm & Partners, Ltd., of London, is not only suitable for hot climates. There are units providing for climates ranging from temperate to tropical, for they do not only lower the temperature. They also filter out dust, dirt and pollen as well as reducing humidity and introducing clean fresh air. There are five models, each designed for a particular use. All are air-to-air units and must be fitted into windows or wall apertures in rooms having external walls. The standard model embodies a hermetically-sealed refrigeration system for the cooling and dehumidifying of the room air, which is circulated through the unit by an evaporator fan. This fan takes in air from the room through a filter, and a cooling coil, and blows it out, and dry back into the room. The heat extracted from the air is pumped away by the compressor and rejected outside via the condenser through which another fan circulates outside air. The humidity extracted from the room runs along an inclined level formed in the base tray of the unit to this later fan, by means of which it is picked up and atomised outside.

Air Filtering

To achieve the maximum cooling effect, room air is re-circulated, but outside air can be admixed at will in controllable proportions. All air introduced is filtered and distributed through the room in such a way as to sweep the maximum area without creating unpleasant draughts. A controllable amount of stale air can be extracted. When cooling is not required the Climatiser can be used for ventilation only. The hermetically-sealed refrigeration circuit does not require any servicing whatsoever. The totally enclosed fan motors require oiling only once every 2,000—3,000 hours of operation, i.e. once in the season. According to the cleanliness of the atmosphere the filter needs periodic cleaning, which can be carried out with water and detergent.

MOPED CYCLE FACTORY FOR INDIA

Dr. G. S. von Hydekampf, Managing Director of NSU Werke met members of the Calcutta Press on 4th February in connection with plans that NSU have finalised for promoting an Indo-German venture to manufacture the NSU range of motorised transport, particularly the NSU *Quickly* Moped in collaboration with Messrs. Sen and Pandit Limited who have already successfully developed a bicycle industry at Asansol. Dr. von Hydekampf emphasised that the Moped as it has been developed by NSU has an independent rôle to play in the field of individual transport and that the Moped industry which has rapidly developed on the Continent following the introduction of the *Quickly* has not done so at the cost of motorcycles. He felt that there was a great future for the *Quickly* in India. One of the objects of his present tour is the establishment of an adequate servicing system for these units throughout the country. The Moped is a cheap and useful form of transport somewhere between an ordinary cycle and a motorcycle and should serve the needs of the middle and working classes in this country. With the development of new alloys and techniques, the *Quickly* engine is now one of the most reliable and sturdy power packs and over 400,000 *Quicklys* are already on the road on the Continent including 35,000 in the U.K. Mounted on an integral well-sprung frame, the combination gives safe and comfortable riding at a running cost of less than one pice a mile. An Indian engineer has already been trained in all the intricacies of the manufacture and blueprints for the Indian factory are already complete. The Indian factory is to be situated in West Bengal, probably at Kalyani.

SPARES FOR BRITISH VEHICLES

The drive to build up stocks of spares for British cars and trucks operating in overseas markets continues. In 1955 spare parts and accessories worth £107 millions were despatched to overseas distributors, dealers and spares depots—£20 millions more than in the previous twelve months.

BRITISH BUSES FOR THE NETHERLANDS

The Netherlands State Railways has announced the order of 360 bus chassis from the British Company of Leyland Motors Ltd. The buses will replace a fleet of another make which was put in service in 1946, and they will operate inter-city services on class A roads and on long distance tours. The Leyland chassis will be powered by the latest type of 125 h.p. diesel engine, mounted below the level and similar to those fitted in the Leyland Ordnance export bus chassis. All the vehicles will be equipped with the semi-automatic pneumo-cyclic gearbox which dispenses with the need for a clutch pedal. Over 300 buses equipped with this type of gearbox have been ordered previously by various undertakings in the Netherlands.

SELF-ALIGNING ROLLER BEARING PLUMMER BLOCKS FOR SUGAR CANE CUTTERS

ADVANTAGES :

- No attention during the whole working season.
- No complicated cooling systems.
- Lubrication with grease only once before the working season.
- Considerable saving in power.

HIGH SPEED CANE CUTTING KNIVES AT SARASWATI SUGAR MILLS

The **BKF** Double Row Self-Aligning Roller Bearings installed 15 years ago have given trouble-free service during this time without any attention other than being cleaned and re-packed with grease at the start of each crushing season.

Calcutta Markets

LIMITED DEMAND AT TEA EXPORT AUCTION

SELECTIVE ENQUIRY FOR DUSTS

AT Sale No. 35, held on 13th and 14th February. 61,000 packages were on offer in the Export auction. Demand was limited and very little interest was shown by bazar buyers. There was only poor support for the commonest and common broken, which were from 1 to 2 annas easier. Medium broken were about an anna easier. Medium Assam BOPs were sold from 1 to 1½ annas below last rates. Fannings grades were once again the strongest feature but received less support than in recent weeks, and were ½ to 1 anna easier, except for a few selected lines of clean black Fannings, which were slightly dearer. The best CTC Assams on offer were fully firm but the more ordinary sorts were 1 to 1½ annas easier. Darjeelings with any flavour sold well and were generally dearer, but plain liquoring teas from this district were usually easier. Whole Leaf grades were neglected. There were heavy withdrawals amounting to approximately 55 percent of the offerings.

Quotations	Rs.	1955	1956
Clean Black Pekoe	...	1 11 0 to 1 12 0	...
Plain B.P.	...	1 5 6 to 1 6 0	...
Medium Assam B.P.	...	1 8 6 to 1 9 0	...
Best CTC Assam B.P.	...	2 5 0 to 2 6 0	...

At the Internal sale, 19,300 packages of Dusts were on offer. There was a better general demand, especially for black leaf teas suitable for the Middle East and the very best CTC Assam with good liquors. Teas of these descriptions were very strong and sold several annas above valuations. There was fair support for all clean and evenly sorted Dusts and these were fully firm and occasionally up to an anna dearer. Brown leaf teas from the Dooras sold at about last rates. Poor CTC teas were an irregular 1 to 2 annas easier, while residue teas from all districts received very little support.

Quotations	Rs.	1955	1956
Medium Dooras Dust	...	1 7 0 to 1 8 2 10	6 to 2 11
Medium Assam Grainy	...	1 8 6 to 1 9 2 11	6 to 2 12
Dust	...	2 5 0 to 2 7 3 2	0 to 3 3
Best Assam CTC Dust	...	2 5 0 to 2 7 3 2	0 to 3 3

There were 4,000 chests of Leaf on offer, which met with only fair demand. Clean and well made

teas were 2 to 3 annas easier, while there was virtually no support for residue grades.

SMALL REDUCTION LIKELY IN FREIGHT RATES

ALTHOUGH quiet conditions still prevail in the London market, there are signs of a possible small reduction in rates as coal charterers have succeeded in reducing the rate for Hampton Roads to the Continent for single voyages in February and March, and it will be interesting to watch developments during the next few weeks. Grain operators are fairly quiet although there are a few outstanding orders still to be filled but a feature is the number of cargoes of fertilizers fixed to Korea. Sugar has been fixed from Cuba to East Mediterranean Ports at \$(U.S.)18.50 a ton. In the eastern markets, conditions remain quiet although it is reported that a cargo of 4,250 tons of coal has been fixed from Calcutta to Alexandria at the high rate of 140s. Iron ore from Bombay to Yugoslavia has been fixed at 102s. 6d f.i.o. for March shipment, and a full cargo of rice from Rangoon and Bassein to Poland at 169s f.i.o. and stowed for prompt shipment. The Time Charter market still remains quiet but a liberty vessel has been taken at \$(U.S.)430 for a trip Vizagapatam-U.S. East Coast.

SUGAR MARKET

During the week ended 15th February, sugar sales in the Calcutta market averaged 4,000 bags daily. Arrivals a day were 8,000 bags and stocks totalled 1,00,000 bags. Rates for ready sugar ex-Kantapur delivery were Rs. 31-6 for ordinary grain and Rs. 33-8 for big grain of new sugar. The market remained steady despite the increase in stocks.

LINSEED

There was a notable advance in prices during the past week after a quieter opening, and the undertone of the market was fairly steady. A scarcity of ready goods prevailed locally and despatches from the centres remained very poor, with supplies still far short of demand. Despite good enquiries for ready as well as forward positions, the turnover was small. In the oil section, a small rise in foreign prices and a continued demand from shippers caused a slight rise in prices, although actual trading was limited in anticipation of the Government's policy regarding the export duty on linseed oil. The latest quotations were as follows: February-March Rs. 23-8-0 a maund; April-May Rs. 20-12-0 a maund.

HIDES AND SKINS

The market ruled quiet. Stocks were higher than in the previous week.

Bazaar Sales

(Between 7th February and 13th February, 1956)
Cowhides: Wet salted (Ord.) 1,500 pcs. on the basis of annas 13; Wet salted (Ord.) 1,000 pcs. on the basis of Rs. 9-4; Wet salted (Slaughtered) 18,000 pcs. on the basis of Rs. 12-8 to Rs. 21.

Goatskins: Wet salted (Daissee, Killed) 82,500 pcs. on the basis of Rs. 250 to Rs. 270, Rs. 305 to Rs. 350 and Rs. 350 to Rs. 400; Assam-Dinajpur-Murshidabad 27,400 pcs. on the basis of Rs. 290 to Rs. 330; Purneah-Kissenganj 5,000 pcs. on the basis of Rs. 310; Muzafferpore 280 pcs. on the basis of Rs. 375; Muzafferpore-Patna 6,400 pcs. on the basis of Rs. 320 to Rs. 332.

Bazaar Stocks

(13th February, 1956)
Cowhides: Wet salted 2,23,500 pcs.
Goatskins: Wet salted 45,000 pcs.; Assam-Dinajpur-Murshidabad 99,000 pcs.; Muzafferpore-Patna - Pakur - Purneah - Kissenganj 4,85,000 pcs.

SHELLAC MARKET QUIET

During the week ended 15th February, the market remained quiet. The range of quotations was as follows:

Pure Buttonlac	Rs. 155, 150 buyers, 150 value.
Lemon No. 1 Shellac	Rs. 155, 150, 148 buyers.
Lemon No. 2 Shellac	Rs. 150, 145, 142-8 buyers.
F. O. Std. 1 Shellac	Rs. 144-8, 140, 141 buyers.
Pure TN Shellac	Rs. 140 done, 137 buyers.
	Rs. 140 basis done, 134 basis done and buyers, 136 buyers, 135 basis done and buyers, 132-8 buyers.
4% I. T. N. Shellac	Rs. 131, 126-8, 123-8 buyers.
No. 1 Kusmi Seedlac	Rs. 152-8, 149-8 value, 147-3 value.
No. 2 Kusmi Seedlac	Rs. 145-8, 141-8, 139 value.
Fine Bysaky Seedlac (Manbhumi)	Rs. 139 buyers, 136; 135; 131-8 value.
Fine Bysaky Seedlac (C. P.)	Rs. 126 done and buyers, 125; 120 value.
Ordinary Bysaky Seedlac (C. P.)	Rs. 118; 115-8; 107-8 value.
Ordinary Bysaky Seedlac (C. P.)	Rs. 109; 108; 101-8 value.
Kireelac	Rs. 60-8; 60; 58-8 value.

Shipments during February until the 10th were 9,992 packages comprising shellac 7,346 packages, seedlac 2,078 packages, buttonlac 144 packages, others 424 packages.

COMPANY AND PUBLIC NOTICES

THE MEGNA MILLS COMPANY LIMITED

NOTICE

NOTICE is hereby given that the Sixty-ninth Ordinary General Meeting of the Shareholders of the above Company will be held at the Registered Office of the Company, No. 16, Strand Road, Calcutta, on Tuesday, the 28th February, 1956 at 11-00 A.M., for the following purposes:—

1. To receive and consider the Directors' Report and the Accounts for the half-year ended 30th September, 1955.
2. To declare a Dividend.
3. To elect Directors.

COAL COMPANIES

O. Po. F. and Dd. indicate Ordinary Preferred Ordinary Founders' and Deferred shares respectively. P. next to the name of the company indicates that the company also has Preference Shares. Figures in "accounts closed" column indicate the months of the calendar year in which accounts are closed. For Managing Agents refer to the Key (last page) under the numbers indicated.

TEA COMPANIES

O. Po. and Dd. indicate Ordinary, Preferred Ordinary and Deferred Shares, respectively. P next to the name of the company indicates that the Company also has Preference Shares. Figures in "accounts closed" column indicate the months of the calendar year in which accounts are closed. For Managing Agents refer to the Key (last page) under the numbers indicated.

THE MACMILLAN PRESCRIPTION FOR BRITAIN'S MALADY

A NEW APPROACH NEEDED TO SUPPLEMENT EMERGENCY MEASURES

THE most disappointing feature of the recent moves to curb the United Kingdom's inflation is that they are not new. That is why their value is limited unless they are replaced at the next budget by measures designed to cure Britain's chronic problem of inflation once and for all. As a device for reassuring nervous holders of sterling, Mr. Macmillan's proposals have already shown their worth. As the actions of a Chancellor fresh in office, they have the double effect of proving that any necessary future action will be taken speedily and that it will be adequate to requirements. But it is still true that these steps could turn out to be as futile as Mr. Butler's were last October unless they are supplemented in the April budget by a completely fresh approach to these all too familiar difficulties. It is unlikely that the Chancellor's information has convinced him that the threat to the pound comes from short-term capital movement rather than from long-term economic maladjustment. And it is equally unlikely he has decided that these stopgap measures are enough, by themselves, to right the situation even if, as is indeed the case, it is only marginal. Mr. Macmillan has shown that he can act swiftly. It now remains for him to prove that he has courage as well, because he is facing a problem which each of his predecessors since the war has assiduously shied away from.

It would be a pity if the new Chancellor, after such a promising beginning, were to settle down to progressing from one expedient to the next. Britain has become the classic example of a country carrying a burden of taxation which has to be continually shed through the process of inflation. Mr. Macmillan's problem is to balance the various calls on the economy at a reasonably stable level of prices. Consumption needs to be cut, and this has been done by restrictions on hire purchase and rental terms on a wide range of consumer goods. But the level of personal demand is not too high in any absolute sense; since the war it has not been high enough to suit the taste of the average British consumer. If these restrictions are used as anything but measures to tackle an emergency, it is more likely they will give rise to claims for higher wages rather than hold consumption demand permanently in line with what the nation can afford. Mr. Macmillan could not be expected to acknowledge this fact so soon before an annual budget. But unless he does so next April it is likely the British economy will continue to be disturbed by too much money chasing too few goods. The effect of Mr. Butler's interim budget was ruined by the fact that it increased the cost of living and so encouraged fresh wage demands. At the coming budget Mr. Macmillan might, with more profit, make adjustments which would reduce the cost of living and so cut the ground from beneath the unions' feet.

The various steps must be judged as a whole before a balanced verdict can be given on their probable effect. The first, an increase in the bank rate to 5 1/2 percent, its highest level for a quarter of a century, is of doubtful value. After a year of rehabilitated bank rate, the economy is still inflated and the reserves continue to dwindle. This weapon was rusty with disuse when Mr. Butler brought it back to work and it had long since been discredited by leading thinkers on the subject. Up to now they seem to have been right and Mr. Butler wrong. If bank rate is accepted as merely a device for discouraging short-term capital flight, as a symptom of the tendency which has lately reasserted itself throughout Europe and as some encouragement to individual saving, that would seem to be a fair measure of its usefulness in a modern economy. It is certainly inadequate for the task Mr. Butler set it of regulating private investment, while its effect on the level of British industry's essential raw material stocks may have been detrimental

and it has certainly thrown an extra burden on taxation by increasing the cost of the national debt. Perhaps before all the other measures, the new level of bank rate should be accepted as being only temporary. The cancellation of investment allowances to private industry can only be classed as unfortunate, although probably necessary under present circumstances. Investment has lately been too high in Britain, but it has still been too low by comparison with the other economies of the western hemisphere and in it lies the only hope of improving the country's standard of living at the rate required in years to come. Much the same could be said for the "vigorously critical attitude" which is to be adopted by the Capital Issues Committee, and the cuts in the investment programmes of the nationalised industries, because these too will deprive the country of installations essential for future prosperity. The cut in the bread and milk subsidies, at first sight, bears a depressing resemblance to Mr. Butler's mistake of taxing household goods. But if it saves the necessity of introducing further cuts in the April budget, the present emergency may in fact be the best time for slipping these necessary reforms past the noses of the trade unions. The reduction in direct Government spending is desirable enough in itself; unfortunately it is almost offset by an increase in defence allocations. All these measures are so contrary to the ideas of incentive and expansion with which the Conservatives came to power that it is clear Mr. Macmillan will not accept them as permanent. As substitutes for the Labour Party's physical controls they may prove adequate for the emergency. But they remain too far behind the bright prospects for future prosperity and stability which Mr. Butler held out a year ago and which are still the true solution to Britain's inflationary problems.

ANOTHER DEFICIT BUDGET FOR WEST BENGAL

THE season for the mushroom crop of deficit budgets is in full swing. West Bengal makes its expected contribution this week in the form of one which estimates an overall shortage of receipts over expenditure amounting to no less than Rs. 16.89 crores during 1955-57. Of this, the deficit on revenue account amounts to Rs. 14.19 crores (revenue is Rs. 49.36 crores, expenditure is Rs. 63.55 crores); and the deficit outside it is Rs. 2.70 crores. These figures compare significantly with the revised estimates for 1955-56, in which the overall

with the comparative figures for outlays in the all-India plan given by Dr. Roy. He says that the outlay on irrigation and power represents 18.7 percent in the all-India plan but 19.8 percent in the State plan, which seems reasonable enough. The outlay on agriculture and community development projects is 11.8 percent in the all-India plan but 21.7 percent in West Bengal's. The outlay on social services, including education, health and housing, is 19.7 percent in the all-India plan but as much as 35.5 percent in West Bengal's. Why this extraordinary disproportion should have been necessary is difficult to see. It appears that West Bengal, despite its enormous handicaps, has been trying to look very brave in offering to shoulder welfare burdens that the rest of the economy has wisely deferred. However attractive such a course of action might be politically, it is a mistake for a State which continues to be debilitated by refugee immigrations and which constantly complains that it does not have the money for essential development schemes. Some clue as to which development schemes might have suffered is perhaps to be found in the fact that the outlay on industry and mining is 18.6 percent in the all-India plan but only 10 percent in West Bengal's. The corresponding proportions for outlays on transport and communications are 28.8 percent and 12.4 percent. Disparities of this sort are to some extent inevitable: the proposed large expenditure on heavy industry and on the railways is of course, a Central responsibility, and therefore boosts the percentages for industry and transport in the all-India plan. But a State in the position of West Bengal, which will allow itself to part with large sums on such economically unproductive items as education while it postpones its basic responsibilities concerning road transport, can scarcely claim that it is spending its annas very wisely.

U. K. WITHDRAWAL FROM EUROPEAN ATOM POOL

WHILE the British authorities debate whether, or in what way, to associate with the European continent's development of nuclear power, questions are asked in Britain's Parliament on the failure of a project for co-operation within the Commonwealth. The intention was to produce heavy water with the aid of the geothermal springs at Wairakei, in New Zealand. It was to be a joint enterprise combining the U.K. Atomic Energy Authority, which would produce and own the heavy water, and the New Zealand Government, which would produce and distribute electricity. The New Zealand Government will proceed with its part of the project, but the Atomic Energy Authority has withdrawn and no heavy water will be produced there. This decision was a grievous disappointment to many observers of nuclear development. It concerns the Commonwealth and Europe as well as Britain. And it has serious implications for Britain's export trade in nuclear materials and equipment.

Heavy water is one of nuclear industry's important materials. It looks like ordinary water, and the few people who have been privileged to taste this very expensive drink have not reported that it tastes any different. But it is water in which the heavy isotope of hydrogen, deuterium, takes the place of ordinary hydrogen, and on account of its special properties it is essential to modern research and will probably be needed—especially as a substitute for graphite to moderate the speed of neutrons in reactors—for operational purposes in the future. A steady supply of this material at a reasonable cost is essential to Britain's nuclear programme and would in due time be acceptable in other countries. There is no assurance of such a supply from the sources at present alternative to Wairakei. The decision to withdraw from the Wairakei project has therefore been strongly criticised. The ostensible reason for the decision was a reassessment of the capital cost of the equipment, which showed that it might be double the £2 million previously envisaged. The main item of equipment was to be a large-scale version of a distillation unit designed by the Atomic Energy Research Establishment at Harwell. In this unit water is distilled (necessarily in very large quantities, since heavy water represents only about 1 part in 7,000 of ordinary water) by passing steam up tall columns packed with stainless steel gauze, providing a large area for condensation. Since the Americans have shown keen interest in this method, whose efficiency is not in doubt (it can be used, incidentally, for other chemical purposes), it is surmised that the Americans' own methods are not conspicuously cheap.

The Americans, nonetheless, have undercut in advance the price of Wairakei's heavy water. Wairakei was to produce at £40,000 to £45,000 a ton—much less than the £75,000 a ton charged by Norway (the only source in Europe) for heavy water produced by electrolysis. But the American price of \$28 a lb announced last August is equivalent to less than £23,000 a ton. It is evident that this difference influenced the U.K. Atomic Energy Authority in its reassessment of the geothermal

project—although imports from America will cost precious dollars. Even doubling the cost of the Wairakei plant—a matter of some £2 million—is not of overwhelming importance in a nuclear power plan scheduled already to cost hundreds of millions of pounds. Yet there are doubts whether the American price is a long-term economic price. America's heavy water is produced in a wartime plant whose cost has now been written off. And it may well be that the material is now in surplus because the main explosive force of the latest version of the "hydrogen bomb" is no longer hydrogen but natural uranium, activated by hydrogen, which has itself been activated by fissile uranium or plutonium. If the American military programme requires less heavy hydrogen, and therefore less heavy water (from which heavy hydrogen is derived), than had been envisaged, there may be a surplus—but only a temporary surplus—for export.

The whole episode raises the question whether Britain can compete successfully in the export market for nuclear materials—or, indeed, for nuclear equipment—until America's internal demands and the demands of other countries exceed America's producing capacity. But the critics of the decision to withdraw from Wairakei assert that British policy cannot be based on the assumption that America will always have regular surpluses for export. This is a factor peculiarly difficult to assess, because America's position in the industry is unique. The primary purpose of developing nuclear power in Britain, and in other European countries, is to provide as rapidly as possible a permanent alternative to the fuels, particularly coal, which are no longer adequate to needs. In these countries electricity can already be produced by nuclear power as cheaply as by coal, if not more cheaply. In Russia, resources of fuel and water-power are more plentiful and there is probably no economic advantage in nuclear power, but nuclear power is needed in areas that are remote from other developed resources. In the United States, which has abundant developed resources of fuel and water-power, there is no suggestion that nuclear power will be as cheap as other kinds of power within at least the next ten years. Nonetheless, America is developing the techniques of nuclear power as energetically as any other country. It is a reasonable assumption that the industry there is designed, at this stage, primarily as an exporter. The Russian industry is also becoming active in the export field. Yet the British industry (which is, of course, a composite of many industries) has planned to make nuclear power equipment a major item of export. It seems that Britain, with a primary need at home, will be at a disadvantage in this competitive trade.

EXPANDING GOODS TRANSPORT BY ROAD

THE reduced railway plan may have helped the planners to draw up the expenditure budget in the way they have done in the draft outline for the second five year plan. But it is obvious that such an expedient will not help solve the economy's transport problems. The fact is being admitted, at least by implication, through the Planning Commission's recommendations for developing goods transport by road, that the railways will not be able to carry more than 65 percent of the new traffic expected during the next quinquennium, and coastal shipping, if developed as planned, will be able to carry only 3 percent more than it is doing at present. The balance of 32 percent will therefore have to be carried by some other means of transport, if the economy is to develop according to the targets in the plan.

In his presidential address to the annual general meeting of the Federation of Motor Transport Associations in Bombay recently, Mr. A. D. Wenzel made precisely this point. In the past, he said, India relied almost completely on the railways to provide its traffic and transport. Actual experience during the last five years had clearly shown the disadvantage of such a policy. An acute shortage of transport had existed throughout the first five year plan and, unfortunately, still existed, thus seriously hampering the economic development of the country. Mr. Wenzel's observations are fully supported by facts: the Planning Commission's draft outline for the second five year plan also recognises the useful part which road transport can play, and states that the development of goods transport during the next plan is to be left to private operators. If that represents the policy of the Government, then quick action must give practical shape of what is recognised as essential in principle. Mr. Wenzel has also worked out the concrete benefits that expansion in goods transport to make up the gap will transmit to the allied fields of the economy. According to his estimates, about 175,000 new goods trucks will be needed at the minimum, in addition to 100,000 more that the "feeder traffic" will require. These add up to 275,000 goods trucks, or roughly 300,000 if replacements are included, or an average of 60,000 trucks a year. This new demand on the indigenous automobile manufacturers will provide consider-

able impetus to the growth of this industry. Besides, it will do much to check corruption in the railways which the shortage of wagons has fostered.

For employment benefits, direct and indirect, involved in the expansion, a fairly convincing case has already been made out. Mr. Wenzel chose therefore, not to go into the question again. But he did make some constructive suggestions for improving the road goods transport economy, that is, how to ensure the carrying of the optimum load at greater speed and at lower costs. Against the weight limit of approximately 32,000 lb for a transport vehicle as was visualised by the Policy Committee of the Indian Roads Congress in 1940, said Mr. Wenzel, the present possible weight limits in the country ranged from 14,500 lb. to 20,000 lb. This one single factor, he pointed out, was responsible for an appreciable portion of the present high cost of motor transport. He suggested, therefore, that existing roads, bridges and culverts should be so improved that on national highways 28,000 lb. to 32,000 lb. of laden weight could be carried, 22,000 lb. on State highways and on other roads 18,000 to 20,000 lb. The Government, of course, is unable to execute its road development programme according to the targets of the Nagpur Plan, but it would not face any extraordinary difficulty by implementing Mr. Wenzel's suggestions, since the benefits are so obvious and immediate, and the cost involved presumably not large.

CURRENT COIN

Life Insurance Corporation.—The Bill to establish a Life Insurance Corporation, introduced in the Lok Sabha last week, is the logical sequence to nationalisation plans announced a few weeks ago. Its main interest lies less in the theoretical outline of the new Corporation's tasks, and more in the type of structure it proposes to establish. It is encouraging that the Government should realise that a fair measure of independence and flexibility are necessary so that the body may function properly; and, what is more important, so that it may act, "as far as possible, on business principles." The Corporation's original capital of Rs. 5 crores will be provided by the Central Government, and it will have not more than 15 members. The general superintendence and direction of affairs will be done by an executive committee of not more than five members with a whole-time managing director. Zonal offices will be established in Bombay, Calcutta, Delhi and Madras; others may be set up later with the approval of the Central Government. Life insurance business will be carried on in India and outside. The Corporation will also have certain other functions such as capital redemption business, annuity certain business, and reinsurance pertaining to life insurance. But the post office life insurance fund and the existing claims in which payment of money is assured by the Government on account of certain compulsory deductions from the salaries of its employees will not be handled by it. Under the Bill, the Central Government has the power to issue directions to the Corporation on matters of policy involving the public interest. If any question arises whether the directions so given relate to matters of policy involving the public interest or not, the decision of the Government will be final. It is expected that the Corporation will formally come into being by the end of June. When the exact date of its birth is notified, the assets and liabilities of the present life companies will be transferred to it. All contracts, agreements, etc., which are in effect before the appointed day and which have been transferred in this manner will remain in full force. Suits, appeals or other legal proceedings which may be pending will similarly be continued in the name of the Corporation.

Indo-British Trade.—The statistics of Indo-British trade for the year 1955 furnished by the U.K. Trade and Navigation Accounts, disclose a continuously rising trend since 1953. During the year under review, the total value of trade stood at £288 million, which represented an increase of 9.4 percent and 26.3 percent over those of 1954 and the year before. India's exports to the U.K. totalled £158 million as against her imports of £129 million; she thus gained a favourable balance of trade. The structure of trade also reveals a significant co-relation between India's rate of economic progress and the rising trend of her trade with the United Kingdom. Machinery constituted the dominant item in U.K. exports to India, amounting to as much as 37 percent of the total, and valued at £48 million as against £42 million in the previous year, or an increase of 14 percent. India was the third largest market for U.K. machinery. Other important goods recording increases were chemicals, £16 million (£15 million), road vehicles and aircraft, £10 million (£9 million), iron and steel, £8 million (£5 million) and metal manufactures £6 million (£5 million). The only two items which showed declines were wool and other animal hair and tops, and petrol and petroleum products. The net position however was as

13 percent increase in U.K. exports to India during 1955 compared with those of the previous year. India received 4.4 percent of total U.K. exports to all countries and she stood sixth as a market. India's exports to the U.K. rose by £10 million to £158 million during the year, though the value of her principal exports such as tea, tobacco and tobacco manufactures and miscellaneous textile manufactures recorded falls. Tea exports, in particular, were down to £75 million from £76 million in 1954, and those of miscellaneous textile manufactures to £14 million from £16 million. But increases in animal and vegetable oils, fats, greases and derivatives (the largest increase of all items) and in miscellaneous textile fibre and waste, among others, more than offset the falls. U.K. imports from India were 4 percent of the total from all countries.

Raw Material for Rope-making.—The presidential speech of Mr. K. N. Mukherjee, at the recent annual general meeting of the Indian Rope Manufacturers' Association, contained a number of suggestions for improving the economic basis of the indigenous industry. Some of these were useful, but some are open to reasonable doubt. While discussing the possibilities of expanding raw material production within the country, since the industry depends almost wholly for its raw materials upon outside supplies, Mr. Mukherjee suggested that the production of sisal should be tried on a large scale, though he realised that the capital outlay necessary for economic cultivation of this fibre might amount to about Rs. 1 crore. The problem would also arise of the disposal of the surplus crop outside the country in competition with more experienced producers already established in the market. In addition India lacked the right technique in the matter of growing and grading. Under the circumstances he mentioned, one wonders whether the proposition is economic at all, in spite of his argument that "considerable" foreign exchange would thereby be saved. In the second place, Mr. Mukherjee complained that many Indian consumers, particularly some shipping firms, bought their requirements from outside while indigenous products were available and domestic producers made all efforts to meet their demand. That complaint is understandable, but it is scarcely rational. If the consumers prefer foreign products, Mr. Mukherjee should not think, as he appears to suggest, that they lacked "economic patriotism." There is always the possibility that price and quality might conceivably be better, in which case no outside agency can help. Only the industry can help itself.

Departmental Budgeting.—Speaking at the foundation ceremony of the new office of the Accountant General, Central Revenues, Mr. Ashok Kumar Chanda, Comptroller and Auditor General of India, outlined some of the prime considerations for the success of the transfer of accounting responsibilities to the Departments. A review of the present arrangements for financial scrutiny and control, said Mr. Chanda, "reveals that there is avoidable delay in the execution of projects and that lapses of voted appropriations occur with tiresome regularity." "It should be evident," he continued, "that with a dynamic and vital change in the purpose of our Government, our administrative and financial arrangements must inevitably be adjusted to fulfil this purpose. A revolutionary conception calls for a revolutionary reorientation." Mr. Chanda dwelt at some length on the preparation of estimates on new projects. With the amount of total expenditure for the plan period now known, the expenditure scheme in any particular year loses much of its original significance. Demands therefore for grants, according to Mr. Chanda, should be based on administrative charges and expenditure on current projects only. A small provision need be made in the first instance for each new scheme. As and when these schemes mature sufficiently and detailed estimates are prepared, supplementary demands should be placed before Parliament. Mr. Chanda attributed the inability of an administrative Ministry to spend up to the budgetary demands mainly to a tendency to inflate the original demand. First it is assumed that Finance will reduce the allotment demanded and therefore it is advisable to ask for more, and secondly the inclusion of schemes and large provisions for them will, it is thought, give an impression of efficiency and energy. The result being that the Ministry of Finance is often compelled to make allotments even when it is certain that these will not be utilised during the financial year in question. Mr. Chanda also deprecated the practice of drawing up schemes for sanction which are far from being complete and detailed reports. When the scheme is duly accepted for inclusion in the budget, much time is lost by the necessity for repeated applications to the Finance Ministry for sanctions to minor details of expenditure. "Overall financial control," said Mr. Chanda, "should continue to vest in the Finance Ministry but detailed scrutiny of proposals at expert level should vest in the administrative Ministry by installing balancing personnel within the Ministry."

Import Policy Criticised.—In a speech from the chair at the 8th annual general meeting of the Indian Electrical Manufacturers Association, Mr. A. R. Driessen voiced a number of grievances on behalf of local producers, which appear to follow a now familiar pattern. Stressing the fact that indigenous products can be made available in the required quantities if plans are laid well ahead, Mr. Driessen denied that there is or will exist a shortage of transformers within the range of local manufacturers. At the same time he admits that owing to the shortage and inferior quality of transformer grade steel sheets produced in the country "it is impossible to comply with the Government's demands for increased production to the indigenous industries using these products unless Government at the same time increases quotas to indigenous manufacturers of this essential raw material." The Government's decision to relax restrictions on the imports of motors from 3 H.P. to 10 H.P. has also come as a "shock and a disappointment to an industry in the midst of vigorous development... and capable of meeting the country's requirements up to 100 H.P. within which range production on a commercial scale is being carried out, although motors up to 500 H.P. are within its competence." Mr. Driessen attributes the apparent shortage to last minute demands by indentors who, when quoted local delivery from three to five months, immediately cry out for imports which cannot arrive any earlier. If, as Mr. Driessen points out, local manufacturers are capable of producing and delivering the goods in less time than the foreign product takes to arrive then there must be some other factor governing the demand for foreign machines. While one would hesitate to question the quality or the lasting properties of indigenous machinery, it has been proved that over-protection of industries has in most countries where it has been applied, resulted in a definite lowering of standards. At the same time the decision to establish a State-owned heavy electrical plant factory has given rise to much concern on the part of the industry which fears that "this State-

owned factory will poach on the preserves of the private sector." Obviously there will have to be concessions on both sides and an overall policy arrived at which will involve a concerted effort on the part of local suppliers to improve the quality of their products and that of the State to assist them in so doing by maintaining adequate supplies of high quality raw materials while retaining the stimulus of foreign competition and the advantages to be obtained from the technical training provided in the new factory. The electrical industry embraces today a vast field of highly-specialised and complex machinery and it will take the combined resources of both the public and private sectors to fulfil the demand which will be made on them during the second five year plan.

A.I.C.C. Economic Review.—This publication is fast becoming among the more important journals in this country. This is because it is the official organ of the ruling political party, and is enabled thereby to express influential opinion which cannot always be conveyed through the Government's stodgy and ill-written Press Notes. Its most notable recent success took the form of predictions about the fact and methods of insurance nationalisation. It is a tribute to the journal's sources of information that these turned out to be uncannily accurate, although nearly everybody else in the country was greatly surprised. The "Amritsar Session Special Number" (published by the All-India Congress Committee: price Rs. 1-12) suggests that the journal's list of contributors is as impressive as its sources of information. Among the Central Ministers who write about their particular departments of activity are Mr. Khan-dubhai Desai (Labour), Mr. C. D. Deshmukh (Finance), Mr. Jawaharlal Nehru (General) and Sardar Swaran Singh (Housing). State Ministers who write about their particular States include Bakshi Gulam Mohammed (Kashmir), Mr. Bishnuram Medhi (Assam) and Pandit R. S. Shukla (Madhya Pradesh). Not all the Ministers are good journalists. But, everything they write and say nowadays is worthy of attention. That is among the more important reasons why this special number deserves notice.

REPORT OF THE CENTRAL BOARD FOR THE HALF-YEAR ENDED 31ST DECEMBER, 1955

The Directors report that, the usual and necessary provisions having been made, the net profit of the Bank for the half-year ended the 31st December, 1955 amounted to Rs. 68,59,366-1-0 which, with Rs. 23,34,436-13-8 transferred from the Imperial Bank of India, makes a total of Rs. 1,02,15,834-14-8.

This sum the Directors of the Bank have disposed of as follows :—

	Rs.	a p.
1. In payment of a Dividend to the Shareholders at the rate of Rs. 8 per share	45,00,000	0 0
2. Transferred to Pension Funds	2,78,300	0 0
3. Bonus to Staff	20,00,000	0 0
4. Balance carried forward to the Profit and Loss Account	34,37,334	14 8
Total	1,02,15,834	14 8

The Balance Sheet of the Bank as at the 31st December, 1955 and the Report of the Auditors are annexed, together with a statement of the Profit and Loss Account for the half-year ended the 31st December, 1955.

By Order of the Central Board,
S. K. HANDOO,
Managing Director.

9th February, 1956.

REPORT OF THE AUDITORS

TO THE PRESIDENT OF INDIA.

We, the undersigned Auditors of the State Bank of India, appointed under Section 41(1) of the State Bank of India Act, 1955, do hereby report to the Central Government upon the Balance Sheet and Accounts of the Bank as at the 31st December, 1955.

We have examined the above Balance Sheet and the Profit and Loss Account and the Accounts relating thereto of the Central Office and the Local Head Offices at Bombay and Calcutta and the Returns submitted and certified by the Secretary and Treasurer of the Local Head Office at Madras and by Branch Agents, which Returns have been incorporated in the above Balance Sheet and Accounts, and report (i) that in our opinion, the Balance Sheet is a full and fair one, containing all the necessary particulars and properly drawn up so as to exhibit a true and correct view of the affairs of the Bank, according to the best of our information and the explanations given to us and as shown by the Books of the Bank; (ii) that where we have called for any explanation or information such explanation and information have been given to us and have been satisfactory; (iii) that the transactions of the Bank have been found adequate for the purpose of our audit; (iv) that the Returns received from the Local Head Office at Madras and from the Branches of the Bank have been found adequate for the purpose of our audit; (v) that the Profit and Loss Account shows a true balance of profit for the period covered by such account; (vi) that, in our opinion, the Balance Sheet and Profit and Loss Account are drawn up in conformity with the law; and (vii) that, in our opinion, Books of Account have been kept by the Bank as required by law.

The audit of the Books and Accounts of the Central Office has been carried out jointly by Messrs. S. B. Billimoria & Co. and Messrs. Ray and Ray. The audit of the Books and Accounts of the Local Head Offices has been carried out at Bombay by Messrs. S. B. Billimoria & Co. and at Calcutta by Messrs. Ray and Ray.

S. B. BILLIMORIA & CO. } Auditors.

Company Meeting

THE BRITISH TABULATING MACHINE COMPANY LTD.

NOTEWORTHY ACHIEVEMENTS

The 49th Annual General Meeting of The British Tabulating Machine Company, Ltd. was held on February 10th, in London, Sir Cecil M. Weir, K.C.M.G., K.B.E., M.C. (The Chairman) presiding.

The following is an extract from his circulated statement:

The year's trading has been noteworthy from two important aspects: not only is our order-book fuller at the end of the financial year than at any previous date, but it is noteworthy that it contains more orders for our standard electro-mechanical equipment than in any previous year. The demand for units in our range of electronic equipment now in production and about to come into production, including Multipliers, Calculators and Computers, also increases steadily.

Much the larger proportion of the equipment we manufacture, distribute, install and service is rented to users. The system of renting equipment in an expanding market necessitates the provision of more capital and financial resources of one kind and another as the business develops. This is a requirement with which your Board is at present dealing. This need for loans and capital for expansion is in fact the best indication of both the progress and the strength of your Company.

The revenue of your Company has more than doubled since 1950. This not only reflects the trend towards the wider use of office machinery, but gives some indication of the scale on which we should be prepared to expand our activities, providing trading conditions remain favourable and assuming we are accordingly to maintain our place in the market.

I would like to emphasise the important role taken in our business by our card-producing works in Letchworth and Alderley Edge, and in India, South Africa, Australia and Egypt. Cards are the basic requirement of our equipment and the sale of these represents a significant element in our revenue.

The progress of our subsidiary companies and our branches overseas is an element in our business to which we attach much importance. Without a sufficiency of exports our economy in Britain would in common parlance be "sunk". As a Company we are well aware of this and we have devoted a great deal of attention, in our own as in the national interest, to the promotion of business in overseas markets.

The year has closed once again on a hopeful note. Forward business is good, we are pleased with the reception given to our new types of equipment, and developments still in the research laboratories and technical workshops are showing promise.

The report was adopted.

REDUCTION IN WHEAT IMPORTS

There has been a progressive reduction in the imports of wheat from foreign countries during the first five year plan period. From April 1951 to March 1952, India imported 361,700 tons of wheat and wheat flour. Imports of wheat and flour suddenly went down to 180,600,000 tons in 1952-53 and 125,500,000 tons in 1953-54. There was again a marked decline to 37,900,000 tons of wheat in 1954-55, and there will be a still further fall to 32,600,000 tons in 1955-56. This significant decrease in imports of wheat in the course of the past five years has taken place in spite of the increase in population and the partial failure of the recent Kharif crops due to heavy rains and floods. It is a clear indication that internal production has been steadily improving every year.

INTERNATIONAL WHEAT CONTROL

THE DEFEATIST POLICY OF PROTECTION

By Paul de Hevesy

AN International Wheat Conference, lasting from 26th October to 16th November, 1955, was held in Geneva. No decision was taken other than that a further Conference should be convened on 20th February, 1956, when the present type of agreement might be taken as the basis of discussions on the question whether a new International Wheat Agreement should or should not be concluded. Though the majority of the 60 participating countries showed themselves rather favourable to the conception of such an agreement, several Powers, including the United Kingdom, the Soviet Union, Argentina, Turkey, and the Danubian countries, seemed to be reluctant to commit themselves one way or the other. The various governments were represented at the Conference by experts who were mainly civil servants. I make bold to suggest that each country should have been represented by that member of its government who was the soundest economist, and that he should have been assisted not only by a civil servant well versed in the problems under discussion but also by an experienced farmer, miller, and grain-merchant.

The Conference was held in camera, moreover, each delegate was asked not to report to the Press. Why this secrecy? The fact that the Conference lasted as long as three weeks seems to indicate that some acrimonious discussions may have taken place. The public, including representatives of the Press, should have been allowed to witness the proceedings. Those who did not participate in the Conference do not know whether the great conflict of principles—whether to proceed in the direction of free trade or in that of increasing control and restriction—was or was not discussed on that occasion. If an international agreement on wheat—or on any other commodity—is concluded that runs counter to the tenets of competitive private enterprise; that interferes with the freedom of choice of producers and consumers; that maintains prices higher or lower than world supply and world demand warrant; and that for all these reasons, prevents the expansion of a free and prosperous world economy, it will, as time passes, be recognised as ill-conceived and injurious. I should like therefore to submit the following suggestions:

New Outlook Imperative

(1) Though assistance given to any one section of its people is the exclusive concern of every country, it would be desirable if subsidies and price-support for the farmers were to be gradually reduced and finally abolished. The farmer must learn to stand on his own feet and to live by his own exertions. If, in consequence of this policy, he should suffer undeserved hardships, the community should make him a pecuniary grant; but this help should not be given by interfering with the price-mechanism and with the inalienable right of every man to trade freely.

(2) It may be objected that manufacturers and traders are by no means standing on their own feet, since industry is protected by tariffs, by import licences, and often by exchange control, and trade is protected by illicit combines of all sorts. In point of fact, three evil devices prevent modern capitalism from achieving its highest purposes: agriculture-protecting subsidies, industry-protecting tariffs, and trade-protecting combines. These devices are evil because they deprive the consumers of those incomparable advantages that result from competitive pressure. The very survival of the capitalist system depends on vigorous competition both in production and in marketing; for this is the only way to produce goods of the highest qualities at the lowest costs and to sell them at the lowest prices. Yet it would be altogether wrong to deprive farmers, manufacturers, or traders of the benefits of organised protection otherwise than by diminishing, at the same time and in the same proportion, all three of these protective devices.

(3) Since the struggle for survival and for success compels competing businesses to make more strenuous efforts than they would otherwise make, since monopoly is adverse to enterprise, flexibility, and technical progress; and since the future success of the capitalist economy depends on its competitiveness; the first duty of a capitalist State is the establishment and maintenance of fully competitive economic conditions. The experience and competence of independent merchants and bankers present a reassuring contrast to the ineptitude of public functionaries unwisely vested with mercantile powers. Governments should, therefore, abstain from all commercial transactions, including the buying and selling of agricultural products.

(4) In proportion as convertibility of currencies is introduced, the operations of Commodity Exchanges should shake themselves free from State interference. Futures markets should be restored wherever they have been abolished, for instance, in Winnipeg and Buenos Aires.

(5) New policies for agriculture should, as far as possible, be devised without regard to the problem of present surpluses. As for the unsaleable surpluses of United States wheat, the best course would be to give away, say, half of it, but only to such peoples as have never yet been regular wheat-consumers. If it were to be given away to habitual wheat-consuming peoples, this would naturally be resented by other wheat-exporting countries and in particular by Canada. The other

half should be entirely withdrawn from the market and held against any possible future emergency. This policy could well result in setting the world wheat market in order and creating new markets for the future.

(6) If the various governments were to come to the conclusion that some sort of international wheat agreement is indispensable, they should resist the temptation to fix export and import quotas. Like every other commodity, wheat should be bought, regardless of the country of origin, on the sole consideration of quality and price.

Breaches of the Agreement

Nor do I believe that, in case of scarcity or abundance, maximum and minimum prices of wheat will be respected. In case of scarcity, people will pay exorbitant prices, and in case of abundance they will pay less than the minimum price. In they will pay less than the minimum price. In spite of the current unprecedented wheat surpluses, the United States do export below the minimum price. Barter, or bargain sales, or selling for foreign currencies, or supplying on loan, is often a method of undercutting the minimum price. Such motives would be highly laudable if there were no International Wheat Agreement in force, since they would indicate not only a shrewd business sense but also a warm-hearted desire to help less fortunate countries. As things stand, it is to be feared that the political relations between Canada and the United States may be in danger of deteriorating. Such a danger alone would be enough to damn the policy of maximum and minimum prices. The moral is that everybody should sell at the highest and buy at the lowest price that he can secure. The allocated export quotas are not always respected either. Thus it happened in 1934 that Argentina exceeded by 37 million bushels its agreed export quota. This breach was justified by the allegation that the United States and Canada had previously broken their commitments as stipulated in the International Wheat Agreement of 1933: namely, to reduce their sown acreage by 15 percent.

Wheat presents an age-old problem. Some 2,500 years ago, a young man called Glaucou was ambitious to become Governor of Athens. On visiting Socrates, who was closeted with Xenophon, he solicited their votes for his election. When Socrates asked Glaucou how many houses there were in Athens and how much wheat was necessary to feed the householders and their families for a year, Glaucou replied that he had not studied these problems. Remarking that there were 10,000 houses in Athens, Socrates declared that nobody was entitled to become a statesman who was ignorant of the problem of wheat. The two philosophers accordingly refused to vote for Glaucou. It is unfortunate that modern politicians seeking high office are not subjected to questions so pertinent by philosophers so profound. Small wonder that the economy of the capitalist world, often guided by leaders lacking not only in knowledge but also in principle and conviction, is drifting from expedient to expedient and from blunder to blunder.

Free Trade Vital for Prosperity

I believe that a small measure of material prosperity for every member of the human family is attainable to-day; for it is already technically possible to produce enough food and manufactured goods for this limited purpose. But, until economic barriers between countries are abolished and free trade, in the broadest sense, prevails, this purpose cannot be fulfilled and the phrase "human family" remains a mere rhetorical economist. Lord Keynes, the most illustrious economist of our time, thus expressed his profound belief in the freedom of trade: "We must hold to free trade, in its widest interpretation, as an inflexible dogma, to which no exception is admitted whenever the decision rests with us. We must hold to this even where we receive no reciprocity of treatment and even in those rare cases where by infringing it we could in fact obtain a direct economic advantage. We should hold to free trade as a principle of international morals, and not merely as an economic system." It is clear that, in the present economic confusion, this ideal should not be approached otherwise than with the utmost thought and care.

As long as the peoples of the world are prevented from buying and selling goods without regard to origin and with regard only to quality and price, universal prosperity cannot be attained, and unless prosperity is universal, it can neither endure nor improve the position of any country engaged in international trade. If men and markets are free, peace and prosperity will prevail throughout the world, and, however much may be produced, no unsold surpluses will remain.

GIANT FURNACE FROM BRITAIN

Special arrangements had to be made, and a police escort provided, when a giant isoflow furnace for asphalt-mixing was sent on a motor trailer by road from Gillingham, Kent, North-West across England to Birkenhead, Cheshire, to be put aboard a steamer for shipment to India. The cylindrical furnace weighs 12½ tons, and is 12ft. in diameter and 40ft. long. Owing to the length and bulk of the furnace, a police escort was provided to divert other traffic on the narrower stretches of the road. The furnace, manufactured by a Gillingham firm, is bound for Visakhapatnam for the Caltex Oil Company plant.

SO, authors in India are at last to come into their own. That is, when the Copyright Bill is licked into shape and placed on the Statute book. The move is not less than right nor more than timely. It is not uncommon for a writer to discover, usually long after the mischief has been done, that his brain child has been misappropriated on the sly by a fellow writer or publisher. This applies not only here in India. Long before the practice of despoiling factory-owners or bankers of their establishments in the name of nationalisation, authors used to be done in the eye from China to Peru. The blind beggar that was Homer is said rarely to have had his bowl overflowing with alms. And the minnesingers and troubadours of medieval Europe are not known to have paid royalties, in cash or kind, on those songs which were not of their own composing. But there have been some examples of pardonable, even admirable, literary larceny against which there never will be any protection. There is that of the Bahmin scholar who carried in his head the whole of the voluminous grammar of Panini, the ancient Sanskrit grammarian, and transcribed it afterwards for the benefit of his sect; and this because there was a ban on the transcription of this work in the city where he studied. In Victorian England, Robert Browning made an interesting but unfair attack on the Pre-Raphaelite group of poets led by Rossetti and Swinburne because they were developing the Keatsian hints about the use of colour. If pirates are a menace to writers, publishers have often been just as predatory. Milton, for instance, got as little as £10 for *Paradise Lost*. Another publisher's drudge was Goldsmith, always under-paid and never out of debt. Things have improved since: but literature still remains a risky profession to live by. If Maugham made a hit with his first work, Orwell had to live in a garret for the best part of his career. Yet publishers may not have been wholly to blame. They were certainly fair in their dealings with Bernard Shaw and Churchill. But these have both been known to be tough customers.

Two deaths within four days robbed India of eminent men last week. The first to die, Dr. Meghnad Saha, became an internationally famous physicist in quite early youth and did not enter politics until late in life. Many regretted that he should have left the laboratory; for although he continued his connection with scientific research till the very end, it was more in the rôle of an administrator than that of a creative scientist. Dr. Saha, it would appear, cared little for personal fulfilment. He cared infinitely more for the all-round progress of his country, and to this end he created a large band of scientists fit to carry on the fine tradition of research that he himself had helped to build up. Having done that, it is said, he joined politics to strengthen the weak Opposition in Parliament. Whether there or on the public platform—just before his death he spearheaded West Bengal's anti-merger movement—he never lost his academic character, and his speeches and statements were invariably impregnated with facts and statistics and remarkably free from rancour. The other whom India mourns this week is Acharya Narendra Deva. With the late Yusuf Meherally he was one of the founders of the Indian Socialist Party, and at his feet sat many of the present leading Indian exponents of egalitarian philosophy. He was always quiet and unassuming and, although a fine scholar, there was never anything donnish about him. Racking asthma clouded his later years and restricted his political activities. Although he did not succeed in his aim of building a large and united opposition to the

A DITCHER'S DIARY

Congress Party, his leadership will be missed, if only because opposition was never more needed than it is now.

The risk of downfall and disgrace is serious enough for any Communist leader during his lifetime; now apparently even the grave is no refuge. Stalin may never have been a great man in the true sense of the word, but there is no doubt that his memory is being defiled by lesser ones. It is interesting to speculate now how long it will be before his mortal remains are deprived of the revolting honour of being publicly exhibited, in perpetuity, alongside those of his master Lenin. There is no reason for the world to approve the things Stalin did simply because Russia's present leaders now choose not to. But he did do them, and at a time when they needed doing. It is all very well for his successors to criticise him from atop the benefits his ruthlessness has bequeathed, but that does not make them any better liberals. Stalin was a product of Russia's need for strong Government in the post-revolutionary period—a Napoleon who restricted his external ambitions to a Comintern instead of a *Grande Armée*, and was not afraid to cut the Gordian knot of Russia's internal problems when it would have taken too much time to untie it. Now it may be convenient for his successors to renounce the cult of personality, but it is easy to appreciate Mr. Khrushchev's obvious qualifications for becoming a similar "father figure" if given the chance. In spite of the unedifying spectacle of former sycophants stabbing their dead hero in the back, there may be satisfaction to be derived from this latest twist in Soviet affairs. While Russia is ruled by more than one man there will be room for differences of opinion, and that is the beginning of democratic government. We already know that support has not been unanimous for the present policy of holding down the country's standard of living so that a new and technically advanced war machine can be built and maintained. Admittedly its chief exponent has been relegated to a comparatively minor ministerial office, but at least he has escaped the fate of that other dissenter, Comrade Beria. It will probably be a long time before anybody will be heard expressing an opinion on such heresies as a free Press, the privilege of the Russian worker to enjoy the full fruits of his toil, or the right of the colonial peoples of Estonia, Latvia, Lithuania, Poland, East Germany, Rumania, Bulgaria, Hungary and Czechoslovakia to elect governments of their own choosing. But this could be a step in the right direction.

To most foreign residents in Calcutta three years is roughly the cycle of home leave. But for the British diplomat it is usually the duration of a posting between rest periods in "barracks" at the Commonwealth Relations Office. One such spell of duty ended a week or so ago for Mr. G. E. B. Shannon and is just beginning for his successor Mr. A. F. Morley. Since December 1952 Mr. Shannon has been U.K. Deputy High Commissioner here and a familiar figure in Calcutta's social life. Where his next overseas post will be, I imagine, not even he knows. Mr. Morley is coming here after being in charge of the Political Division at the Commonwealth Relations Office. His previous connections with the affairs of this country were made between 1930 and 1936 when he was with the India Office, in the last three years of this period, as Private Secretary to the Parliamentary Under-Secretary of State for India, who at the

HEAVY FALL IN STOCK MARKETS
SECURITIES LEAD MILD RECOVERY
AFTER WEEK-END

London, 22nd February.

A FURTHER heavy fall was sustained by the stock markets prior to the increase in Bank rate and the other economic measures announced by the British Government. The fall continued after these announcements, but steadier conditions developed after the week-end and some recovery was staged under the lead of gilt-edged securities. The effects of these measures took time to work through the market, which meanwhile remained in a sensitive and uncertain condition. Nevertheless, the tentative recovery which developed after the week-end reduced the falls suffered earlier, and in case of gilt-edged, reduced them substantially. Bear-covering was largely responsible for the improvement but a certain amount of investment buying was also reported. The gilt-edged market started its recovery soon after the Bank rate increase was announced but a larger-than-expected increase in the Treasury Bill rate brought a sharp reverse immediately afterwards. The recovery was resumed later and substantial gains were recorded, particularly in dated stocks such as the 3½ percent War Loan. On balance, losses were not large and the Loan recovered to about £73 from an all-time low of £70-3/8 reached immediately after the Bank rate news. Gilt-edged were the key to the whole market and the recovery in funds was reflected in industrials, which also developed a better trend after the week-end. A nervous and uncertain opening on Monday gave way to firmer conditions later, particularly in leading issues, and the previous week's losses were in many cases reduced. Nevertheless, substantial falls were recorded compared with previous levels. The Financial Times Industrial Ordinary index was around four points lower on the week. This understates the fall in some sections such as radio shares. Foreign bonds lost ground but rails were neglected for the most part. Gold shares, although rather quiet, were supported from time to time and were higher on balance. Coppers also tended higher after losing ground earlier. Oils moved to lower levels with the rest of the market although rallying later, while rubbers and teas attracted little attention and drifted downwards.

The Money Market

The increase in Bank rate, although not unexpected in view of the continued deterioration in the balance of trade, came as somewhat of a shock to the money market, particularly as it was a full one percent rise. A number of discount houses were still feeling the effects of last year's

increases and now fresh losses on running bills had to be sustained. With this and the new high cost for money in mind and as the outlook was viewed with misgiving following the Chancellor's new proposals, the money market authorities tendered a bid at the Treasury Bill auction which, together with outside bids, brought an average rate of 105s 5.88d. This was approximately 1-3/16 percent above the previous week, or 3/16 percent more than the one past week, after being on the short side, turned comfortable, with day-to-day loans on the new basis ranging from a high of 4½ percent down to 3½ percent. Applications for £250 million worth of 91-day Treasury Bills totalled £368,650,000, of which the former amount was allocated at an average rate of 105s 5.88d against 82s 8.71d in the previous week. Offerings this week will consist of £220 million of 91-day Bills. The Bank of England return for the week ended 15th February showed that notes in circulation were £2 million higher at £1,779 million while bankers' deposits were £15 million higher at £249 million.

U.S. Federal Reserve Return

The U.S. Federal Reserve return for the week ended 15th February shows that the gold stock rose by \$1 million to \$21,694 million. Foreign investment increased by \$37 million to \$3,775 million. The Federal Reserve system sold \$98 million worth of Treasury Bills. Total discounts and advances rose by \$180 million to \$598 million, while aggregate excess reserves of member banks moved up by \$195 million to \$598 million. Member banks' daily average of excess reserves rose by \$27 million to \$500 million, while their average borrowings increased by \$151 million to \$973 million. Business loans of New York city banks rose by \$74 million to \$8,992 million, compared with a rise of \$73 million to \$7,420 million in the corresponding week a year ago.

Outlook on Wall Street

A large Wall Street firm takes a very cautious view of new commitments in the stock market. It says: "It seems fairly obvious that in coming weeks political uncertainties—until President Eisenhower finally makes up his mind—will become intensified and that the now rapidly approaching 15th April tax date will limit the ability of many individuals to buy stock. These two factors, combined with the continuing restrictive attitude of the monetary authorities, suggest that the stock market should be viewed with great caution and that buying should be limited to favoured groups during periods of weakness."

Platinum Becoming Dearer

The recent down trend in U.K. platinum prices has been reversed, according to dealers in London. From the level of around £39 to £40 a troy ounce, there are reported to be buyers at around £41. Dealers say that there are definite signs of an

improvement in demand against the still limited supply position.

U.K. Jute Control to Stay

Asked in the British Parliament when he proposed to restore private trading facilities for the import of jute goods and when he proposed to wind up the Jute Control, the President of the U.K. Board of Trade said that neither would be done at the present time. He added that it had not yet been possible to find appropriate measures to safeguard the U.K. jute manufacturing industry which could be conducive to efficiency without this particular form of control.

Small Business in Rubber

Trading in the rubber market was small last week. Values eased in the absence of any big offtake by factories, but a recovery ensued, helped by European interest in early shipment parcels, together with covering demand. Quieter conditions followed, with the holidays at Singapore and New York contributing to the dullness. Towards the close, prices were marked up by 1d a lb. in response to a recovery at Singapore but there was not enough support, so values gave way. The advance in the U.K. Bank rate brought selling orders. Values eased further and finally were about three farthings a lb. lower on balance in a slow market. Very little interest was shown in sole crepe, and although sellers were reluctant to make concessions, buyers were looking for offers somewhat below the quoted price of 40d a lb. for 1/8th inch smooth No. 1 on the spot.

Freight Rate Prospects

With the end of the Australian dock workers' strike, Australian shippers have resumed enquiries for tonnage to several destinations, including the U.K. These enquiries are generally for forward positions such as March-April and May-June. Consequently, they are not actually pressing the market, as early requirements will be covered by the release of shipping which has been held up and no sharp advance in freight rates in the Far Eastern market is expected. The strike came at a rather unfortunate time for both charterers and tramp ship owners, as during the first few months of the year good business usually takes place for new crop wheat. Earlier, charterers had held back as regards fixing vessels in the hope that freight rates might ease from the high levels then prevailing because of the slow demand for grain from the Commonwealth. But the decline did not materialise, while sales failed to expand and charterers faced the new crop season with very little tonnage fixed. The dock strike, of course, brought all negotiations for vessels to a standstill. In previous years, this would undoubtedly have caused a general lowering of freight rates in other Far Eastern trades, but the loss of Australian orders this year had no effect because of the heavy demands for tonnage in other trades, especially for ore from India to various destinations.

Finance in India and Abroad

THE CALCUTTA MONEY MARKET

FUNDS TIGHT ALL ROUND

Wednesday, 22nd February.

MONEY is reported to be extremely tight in the market this week. The busy season is now at its height, the requirements of the sugar industry, and on account of raw material, stocks of jute and cotton mills are all running at a high level. Rumours are prevalent in the market that the Indian Bank rate is soon to go up in line with that in the United Kingdom. But there is no confirmation of any such step, and the economic justification for it is non-existent. Interbank call money is also in very short supply, but the call rate has remained unchanged at 3½ percent.

Few export bills have been reported in the market again this week and those which have been in evidence have been chiefly on account of jute goods. Remittance has been normal. Sterling has firmed slightly since Mr. Macmillan's announcement of measures to curb inflation in the United Kingdom and the principal exchange rates quote: sterling TT and OD is 5½d; three months is 6½d; four months is 1s. 6½d. The dollar rate is now quoting Rs. 47½.

Silver was quiet on profit-taking. The price declined from the previous week's level of Rs. 175-9 to Rs. 174-15, quoted today. The rate for ready delivery was quoted at Rs. 175-3. The London price advanced from 79½d. to 79½d. The price of foreign silver in New York also rose from 91 to 91½ cents.

In spite of a fall in silver gold ruled firm on increased demand coupled with scanty arrivals. The price increased from Rs. 98-15 to Rs. 101. The sovereign at Rs. 63-4 showed a gain of Re. 1-4.

The report of the STATE BANK OF INDIA for the half-year ended last December—first six months' working—showed a profit of Rs. 68.59 lakhs. Bringing in Rs. 33,56,438 there is Rs. 102 crores. The dividend has been declared at Rs. 8 per share, being the same as that of the Imperial Bank. Making other adjustments, a balance of Rs. 34,37,335 is carried forward.

Deposits amounted to Rs. 225.99 crores, cash Rs. 30.91 crores, investments Rs. 116.97 crores and advances Rs. 105.81 crores.

The return of the State Bank of India for the week ended 10th February, 1956, shows a decline of Rs. 1.08 crores in total deposits to Rs. 235.60 crores. Investments in Government securities are down by Rs. 54 lakhs to Rs. 106.77 crores, while other authorised investments remain unchanged at Rs. 9.60 crores. Advances, including loans, cash credits and overdrafts, and bills discounted and purchased have increased by Rs. 1.73 crores to aggregate Rs. 119.44 crores. Cash and balances are, in consequence, shown at Rs. 21.33 crores or Rs. 8.52 crores less.

The return of the Reserve Bank of India for the week ended 17th February, 1956 showed a fall of Rs. 82 lakhs in notes in circulation to Rs. 1,406.83 crores while the total note issue rose by Rs. 6 lakhs to Rs. 1,415.02 crores. In the Banking Department deposits of the Government of India and other Government accounts rose by Rs. 4 crores and Rs. 2.06 crores to Rs. 64.55 crores and Rs. 13.06 crores. Balances of commercial banks at Rs. 54.12 crores were Rs. 1.11 crores higher. Investments declined by Rs. 37 lakhs to Rs. 49.39 crores. Other loans and advances fell from Rs. 54.36 crores to Rs. 53.51 crores, of which advances to scheduled banks against usance bills totalled Rs. 18.72 crores (Rs. 19.41 crores). These advances amounted to Rs. 16.70 crores since 1st January, 1956. Ways and means advances stood at Rs. 3.84 crores (Rs. 3.69 crores). Other features showed little change.

Tenders for Rs. 1 crore of 91-day Government of India Treasury Bills which were opened on Tuesday, 21st February, 1956, totalled Rs. 1,00,75,000. The average rate of acceptance rose from Rs. 2-8-3 to Rs. 2-8-6 percent per annum. Tenders at Rs. 99-6 were accepted in full and those at Rs. 99-5-9 were allotted approximately 99 percent. Tenders for Rs. 1 crore of 91-day Government of India Treasury Bills will be received at all centres up to Monday, 27th February. During the week ended 17th February, Government of India Treasury Bills for Rs. 4,96,75,000 were sold in favour of the Reserve Bank.

The statement of the position of scheduled banks for the week ended 10th February, 1956, discloses Demand and Time liabilities at Rs. 628.08 crores (Rs. 619 crores on account of borrowings from banks) and Rs. 413.50 crores (Rs. 3.26 crores) compared with Rs. 635.76 crores (Rs. 6.88 crores) and Rs. 412.30 crores (Rs. 3.56 crores), respectively in the previous week. Cash has increased by Rs. 27 lakhs to aggregate Rs. 34.93 crores, while balances with the Reserve Bank have decreased by Rs. 10.92 crores to stand at Rs. 52.30 crores. There is a drop of Rs. 1.46 crores in investments to Rs. 378.99 crores. Advances and bills discounted at Rs. 685.99 crores reveal a rise of Rs. 2.95 crores. The ratios to total liabilities of cash and balances and of advances and discounts are, in consequence, shown

at 8.4 percent and 65.9 percent against 9.3 percent and 65.2 percent.

The Reserve Bank of India has served a notice on the Sri Sharada Banking Co. Ltd., Raichur, informing the Bank that in terms of the first proviso to Sub-Section (2) of Section 22 of the Banking Companies Act, 1949, a licence to carry on banking business in India cannot be granted to it. The issue of this notice makes it obligatory on the part of the Bank to cease transacting the business of banking as defined in Section 5(1) (B) of the Act, and it would not, therefore, be in order for it, among other things, to accept deposits of money from the public.

LONDON FINANCIAL LETTER

MR. MACMILLAN REPEATS THE PATTERN

SUCCESSING Chancellors of the Exchequer—Messrs Dalton, Cripps, Gaiskell, Butler, and now Macmillan—have uttered warnings for weeks and months before taking action that they have hoped will be effective. In every period of delay the sterling exchange has suffered from the inaction. If every Chancellor must be seized by political paralysis whenever he perceives the need to act, it would perhaps be better to argue out

the problems behind closed doors, and then to act on them and explain them at the same time. Mr. Macmillan, after deliberating the problems for two months, has produced nothing startlingly different from Mr. Butler's policy. On the contrary, the similarities, not the differences, are remarkable. Like his predecessor, he is using a combination of indirect monetary restraints (the rise in the Bank rate), direct monetary restraints (the restriction of credit, both through the banks and in hire-purchase trade), and economies of spending (the restraint of capital plans in the public sector of the economy). Like his predecessor, he has introduced an unpopular measure (one of his economies) which will raise the cost of living—the reduction of the subsidies on milk and bread; thereby directly, and probably indirectly, raising wages.

This year the City, traditionally opposed to direct restraints, has been inclined to view even import-control—if strictly temporary—almost with approval. How far last year's monetary restraints have been effective none can say, since none knows how bad the situation would have been without them, but it is obvious that in the vital sector, overseas trade, they have not been effective enough. It has been argued that in the process of correcting the balance of payments by basic deflationary means many trades whose activity has no direct bearing on external payments will be needlessly depressed. How far must the process go? After

last year's failure, can it be assumed that this year's (very similar) measures will succeed? Perhaps if Mr. Macmillan is seriously intent on "safeguarding the internal purchasing-power of the pound" and on "making fixed incomes mean what they say" he will be able to cure the disease of the balance of payments in the process.

Stock Market Pointers

Industrialists are watching apprehensively the trend of ordinary shares. They still need the new issue market to finance their development schemes; and the behaviour of the market may be a pointer to the behaviour of trade some months hence. This function of the stock market as an advance indicator is sometimes disputed. There have, indeed, been some false warnings and false promises in the past. But the trend of the market has often presaged the trend of trade, and it is therefore worth studying. Some people, on the other hand, dispute whether a "bear market" of traditional character is possible when massive Governmental spending has introduced a major new element of inflation into the economy. However, even this element, if modified, can be accommodated, for the economy is producing much more than it produced before the war. If we accept that a "bear market" can occur, and that it is a prelude to a recession of trade, the outlook for business is unpromising—whereas the outlook for the balance of payments is perhaps, brighter than it has appeared. For by the normal tests, the stock market is unquestionably on a primary downward trend. Industrial ordinary shares were only temporarily upset by the restrictive measures of February last year: their subsequent strong rise until July reflected the general belief that the Government had failed to get to grips with inflation. But it can now be seen that the peak reached in July was the end of the "bull market". The primary downward trend has only recently been established. Relatively severe falls until November did not take prices all the way back to the levels touched in March; so the reaction could have been secondary. But it can now be seen that it was the subsequent rise, into January, that was secondary; for by mid-February the prices of industrial ordinary shares (as measured by the *Financial Times* index) were below the levels of November, below the levels of March, and back to the levels of October 1954. By comparison with the beginning of the "bull market" in mid-1952, ordinary share prices are still very high. It does not follow, however, that they have a long way to fall. The steep rise in 1953 and 1954 was as much a basic—and overdue—adjustment to the general inflation of values as a reflection of the current industrial boom; and that adjustment should be permanent. In any case, it is difficult now to arrange new capital issues on terms which are satisfactory to companies needing finance. The market's setback can therefore be a potent factor in the struggle against inflation, for

it operates against such capital developments—whose wisdom may, anyway, be questionable in the prospective state of trade—as have collectively imposed too heavy a strain on available resources.

Automatic Banking

Capital programmes are not normally associated with the banks as such, though they relate to the activity of the banks as providers of medium-term capital. However, the British banks are now seriously studying the problems and possibilities of mechanisation, in its most modern form—automation. The London clearing banks have set up a committee for this purpose. It may be recalled that a similar committee was appointed by the U.S. Bank Management Commission last year. Equipment which seems intrinsically suitable for banking ranges from relatively simple accounting machines already, of course, used extensively—to elaborate electronic computers, with their related data-processing systems. The committee is considering punch-card methods, but progressive bankers are doubtful if they ought to be developed when more advanced techniques are becoming available. Magnetic marking of cheques for automatic sorting has interesting possibilities. Fluorescent inking can perform a similar function. It is expected that the committee will find merit in magnetic techniques for various applications. Attention to these modern methods of efficiency is especially necessary now, because raised salaries represent a heavy cost and, even at higher rates, personnel are not easily attracted to banking.

Stocks and Shares

MARKET ALMOST CLEAR OF SETTLEMENT DIFFICULTIES

PRICE MOVEMENT NARROW: TRADITIONAL, EVE OF BUDGET SLACKNESS

Wednesday Evening.

THE Calcutta stock market appears to be nearing the end of its settlement difficulties. Payment takes place tomorrow on clearing number 207 and is expected to go through without a hitch, in spite of the difference in the price of Indian Irons at this clearing compared with that ruling at the previous one—Rs. 33-8 against Rs. 36. Provided no new shocks are administered from official sources, there seems no reason why the market should not regain a measure of its former health. The technical position, if payment goes through satisfactorily, should be fairly good by the time the budget is presented. Prices recovered slightly towards the end of last week in response to the improvement in sentiment, but have since subsided in face of fresh rumours about the provisions of the coming budget. Turnover continues to be strictly limited.

Government securities eased towards the close of the market on rumours of an impending increase in the Bank rate, with Paper quoted nominally at Rs. 79-12. The Reserve Bank is reported to be watching the situation, but has not supported the market at the usual level. This feature is not thought to be a prelude to an increased Bank rate in India, but it may be that the Reserve Bank is allowing the market indicator to find its own level considering the slightly higher interest levels at present prevailing in Bombay.

Details of the week's trading follow.

Government securities opened steady but the market turned quiet following the announcement of the raising of the U.K. Bank rate on fears that the Indian Bank rate would also be altered. Three percent Conversion Loan fell sharply from Rs. 80-8 to Rs. 79-12 nominal while 3% Non-terminable Paper, after improving to Rs. 80-1, closed at Rs. 79-12 sellers. In short-dated loans, 3% 1957 was initially marked up to Rs. 99-11 but later eased to 99-10 while 3% 1958 was quoted at Rs. 99-6 ex-voucher but improved to Rs. 99-8. In the medium-dated group 3% 1959-61 was asked for at Rs. 98-3 and 2½% 1961 and 2½% 1960 were taken at Rs. 93-6 and Rs. 96-5 respectively. Both 3% 1963-65 and 3% 1964 met with selling pressure and eased from Rs. 94-12 to Rs. 94-10, while 2½% 1962 was marked around Rs. 93-12. Amongst National Plan Issues 3½% 1961 was quoted lower at Rs. 99-7 and both 3½% 1964 and 1965 turned sellers at the lower rates of Rs. 98-9 and Rs. 98-6 respectively. Despite the easiness in the market long-dated loans were steady with 3% 1966-68 at Rs. 92-5 and 3% 1970-75 at Rs. 88-12. Business in the Provincial section was of a retail nature, but the enquiry for 4% 1967 issues was maintained.

Among miscellaneous Preference shares, Allahabad Bank were done at Rs. 131, Associated Hotels at Rs. 62-4 and Calcutta Electric at Rs. 11-6. Burrakur Coal 7% were placed at Rs. 122 and a small lot of the 2nd Preference at Rs. 8. Elgin Mills were marked at Rs. 135 and Indo-Burma Petroleum at Rs. 107-8. New Victoria changed hands at Rs. 3, Shaw Wallace at Rs. 84 and Smith Stanistreet at Rs. 75. In Jute, Anglo India were done at Rs. 118 and Birla at Rs. 103.

In the banking section, United Commercial changed hands frequently between Rs. 49-8 and Rs. 48-8 and a few transactions were reported in United Bank of India at Rs. 4-14.

The only share dealt in in the railway section was Dehri Rohtas at around Rs. 13.

Cotton shares were devoid of interest and once again very few transactions were reported. Quotations were, however, unchanged. Cawnpore Textiles were marked at Rs. 9, Elgin Mills at Rs. 27-4 and New Victoria at Rs. 2. Swadeshi Cotton Preferred-Ordinary came to hand at Rs. 11.

Coal shares were slightly better and a few price gains were recorded. For example, Amalgamated improved from Rs. 23 to Rs. 23-4, Bengal from Rs. 53-2 to Rs. 53-8 and New Beerbhoom from Rs. 19-12 to Rs. 20-2. Bharat Collieries were marked at Rs. 8 and Burrakur were quoted nominally at the new fixed minimum price of Rs. 14. After a long interval, Lakurka changed hands at Rs. 9-14. Pench Valley were done at Rs. 22-12. Central India and Western Bengal reported business at Rs. 7-2 and Rs. 6-15 respectively.

Jute shares continued to wallow in the mire. Agartara were quoted at Rs. 12-6 ex-dividend, Alliance at Rs. 148 and Auckland at Rs. 136 ex-dividend. Belvedere were transacted at Rs. 180 and later at Rs. 181. Bengal were placed at Rs. 17-14 and a small lot of Caledonian at Rs. 240. Chita and valseah met with small enquiry at Rs. 15-2 and Howrah were subdued at Rs. 24-12. A few transactions were reported in India at around Rs. 154 and a solitary deal was recorded in Kinnison at Rs. 189. Megna were quiet at Rs. 90 and National at Rs. 27-10. New Central were marked at Rs. 15-8 and Presidency at Rs. 6-12. Reliance were quoted at Rs. 11-8.

Business in electric supply shares was small. Calcutta were dealt in frequently at around Rs. 13-9 and Patna were taken at Rs. 11-6.

3 Reasons WHY MORE PEOPLE ARE BUYING DIPTI

CUTS 20% KEROSENE CONSUMPTION

According to the latest Government certificate, Diptych lanterns give you clear six British candle light without any smoke.

TROUBLE FREE PERFORMANCE

STURDY IN CONSTRUCTION ATTRACTIVE IN PRICE

DIPTI LANTERNS FOR MILLION HOMES

When you buy a lantern always insist on Diptych. Remember Diptych not only gives you a trouble-free service but also saves twenty percent of your kerosene consumption. It is sturdy in construction and smart in look. It has a special paint which is good for all weathers.

THE ORIENTAL METAL INDUSTRIES LTD.
Head Office: 77, Bowbazar Street, Calcutta - 12. Factory: Agarpara Estate, Progressive G.M.S.

A fair parcel of Dunlop Rubber changed hands at Rs. 31-12. Godfrey Phillips met with enquiry at Rs. 20-10, but sellers were scarce. Indian Aluminium was unchanged at Rs. 185 as were Indian Cables at Rs. 30 and Indo-Burma Petroleum at Rs. 49-8. India General Navigation were slightly better at Rs. 113. Jardine Henderson were depressed at Rs. 107 while Martin Burn improved from Rs. 26-3 to Rs. 26-14. Metal Box were fairly steady at Rs. 25 as were National Insulated Cables at Rs. 21-4 and Rohtas Industries at Rs. 19-12. Clive Row Investment moved up to Rs. 11-5. Shaw Wallace was steady at Rs. 15-6 while Rallis were quiet at Rs. 34. A few transactions were reported in Imperial Tobacco at around Rs. 14. Walford Transport Ordinary changed hands at around Rs. 2-4 and the Preferred-Ordinary at Rs. 1-14.

In the mining section, Indian Copper were fairly steady at Rs. 6-4 as were Orissa Minerals at Rs. 25. Karanpura Development met with a small enquiry at around Rs. 18-12 as did Metal Corporation at Rs. 11. Burma Mines were unchanged at Rs. 2-1 as were Western Stockholders Investment at Rs. 15.

During the week the Government of India decided to lift the restriction on the amount of tea which may be sold through foreign auctions, the main reasons being the increase in production and mounting stocks in Calcutta. Turnover in shares improved slightly but prices were mostly easier. In the Assam section, Baghmari had sellers at Rs. 21 and Bishnauth were marked back to Rs. 35-8, as was Brahmaputra to Rs. 9-8. Brooke Bond hovered around Rs. 20 and Dhelakhat were marked at Rs. 17-8 ex-dividend. Dufflaghur slumped Rs. 1-8 to Rs. 41-8 and Gohpur were also 12 annas easier at Rs. 41-4. Jutilbari improved slightly to Rs. 28-4 and Sapoi moved up smartly to Rs. 35-8 on interested buying. Methoni changed hands at Rs. 20-4 and Tezpor, after being crossed at Rs. 21-10, improved to close at Rs. 21-14. Of the Dooras shares, small lots of Banarhat were done at Rs. 320 and Btrpara came to business at Rs. 120 against the previous quotation of Rs. 160. Hasimara were slightly better at Rs. 33 and small lots of Hantapara had sellers at Rs. 238. Nagasiree were done at Rs. 231. After a considerable period, New Samanbagh found support at the lower price of Rs. 15. Lactatooah shaded slightly to Rs. 22-12.
