WANTED: FIRST-CLASS MANAGERS FINDING THE BEST FOR STATE ENTERPRISE

THE problem of securing adequate numbers of the right kind of managers for the expanding public sector has already been recognised. Last week's announcement that a new service is being formed to recruit officers for State-owned industrial undertakings is proof that something is already being done about it. The need for such a body is clear enough. What is not quite so easy to appreciate at this stage is that it is unlikely to be adequate to the duties which it appears will be thrust upon it. It has become a platitude among socialism's critics that industrial concerns cannot be run on the lines of public utilities; but it is none the less true for being that. A State managerial service is an admirable way of recruiting the type of good second-rater who is so necessary for conducting the day-to-day operations of all kinds of organisations, whether commercial, industrial or public utility. It can provide that background of continuity, collective experience, security and sense of service which is indispensable to work of this kind. Its efficiency will depend on the initial choice of candidates, the vigour with which rules and customs are enforced, and the morale it is able to maintain. In other words, it will act as an executive-grade civil service for State industry. At that level the problems of competitive undertakings and the public-utility type are similar. But higher up, say, at the director level, they do not coincide. There the qualities which make a good business man differ widely from those which make a first-class administrative civil servant. This point does not yet appear to have been fully grasped in Government circles. There seems to be a ready inclination to regard a service of the kind announced as the answer to the problem of top management. If this is indeed what is happening, it will not be long before disillusionment sets in. In the meantime, if the price of experience is to be kept to the minimum, it would be as well if some serious public discussion on the question were to be launched without delay.

If it is intended that public industry should not compete with private and that losses are irrelevant because they can be made good from taxation, or that State concerns should be so completely the tool of official economic policy that all commercial considerations are to be regarded as of secondary importance, major management difficulties are not likely to arise. But this is not yet the Government's stated intention; the policy seems to be to operate all public industrial concerns on approved commercial lines and, in some cases, actually to run them in competition with private organisations for the economic benefit of industry as a whole. This is the more rational approach, but it means that the top managers of all State-owned concerns will have to be at least as capable and enterprising as those in private ones. Whatever may be the prevailing opinion about private industrialists in India today, this criterion would not be easy to meet. That there are capable men in this country who would be willing to work for the taxpayer instead of the shareholder need not be doubted; and there may be more of them as time goes on. But whether they will do so on the terms the taxpayer, through his Government, is now offering is a different matter. It is not simply a question of salary, although that consideration alone will be a stumbling block considering current ideas about socialism. What is every bit as important is the satisfaction, the power and the public prestige which the State-manager will be permitted to secure for himself through the independent performance of his important duties.

*

The Government and the general public have recently been given an object lesson on the importance managers of State-owned undertakings attach to matters which cannot strictly be included under the headings of pay and conditions of service. The chairman and managing director of the State Bank—the Government's most ambitious venture into national ownership so far—have both resigned, as far as can be deduced, on points of principle. Their cases are typical of what is likely

to arise when, given the present stage of thinking on the problems of managing public concerns, men of self-respect, sound experience and independent judgment find themselves in control of a State-owned undertaking which they must run on commercial lines. The experience of Dr. Matthai appears to be that the Government is eager to interfere in certain matters of day-to-day managerial concern in which it may consider itself interested, while reserving for his shoulders the overall responsibility for the successful running of the organisation. Dr. Matthai has decided his position is untenable and has submitted his resignation. The Government is now faced with the alternative of accepting it and replacing a man of outstanding ability with one more amenable to its meddling, or facing up to the long-term implications of the situation and perhaps trying to persuade Dr. Matthai to change his mind in return for a clearer and more satisfactory definition of his functions and responsibilities. There is no doubt which course is in the interest of successful State management. These problems have had to be faced wherever there has been Government intrusion into commercial and industrial affairs; there is really no excuse for their not having been settled here in India long before the present policy of progressive State ownership was decided upon. If the country is to have a sound, well-run nationalised commercial bank, it has no choice in the matter; Dr. Matthai, or his successor, must be allowed to run the organisation according to his own lights, subject of course to whatever general policy the Government may lay down in the public interest. He must not be interfered with in his conduct of everyday affairs if he is eventually to be held accountable for the success or failure of the business. The same can be said for public undertakings as a whole.

*

The lesson to be learned from Mr. Handoo's resignation is rather different, but no less important. One of the chief prerequisites of giving a manager full responsibility within the framework of overall policy, is that he should be chosen carefully. Mr. Handoo was not chosen, he was taken along with the business and persuaded to remain with it—a method of selection which one would imagine is every bit as rigorous and even more personal than that of a selection board. After being prevailed upon to stay and accept a lower scale of salary payments, ostensibly in the national interest, he had a right to expect complete protection from all forms of politically-inspired criticism. This he has not had. On the contrary his remuneration has been the subject of discussion in Parliament while the gesture he and his colleagues made

when accepting the changes which nationalisation brought with it was referred to in patronising terms by a Minister. It is difficult to imagine anything more destructive of morale among State industrial and commercial managers than treatment of this kind.

What has happened to these two men is an example of what should never befall the top personnel of any State-owned undertaking. If Government control is to be extended in commerce and industry it is important to realise that first-class managers will not permit themselves to be over-regulated or under-appreciated; if they do they will soon cease to be first-class. Judgment, initiative and personal integrity are the indispensable attributes of top management, just as honesty, dexterity and alertness are needed in the lower grades. These cannot be provided for within the framework of a service corps, nor survive under any but the most favourable conditions. Without them, State undertakings will always remain the economy's lame ducks, as they have so often become in other countries. The difficulties of managing State enterprises do not, therefore, end with the formation of a single organisation; they may only be starting if there is any truth in the rumours about the salaries which are being contemplated for its members. The big problem will remain how to ensure the essential attributes of enterprise, initiative and sound judgment at the very highest level. The experience with the State Bank is not reassuring. Government industrial managers throughout the country, both actual and prospective, will be watching the outcome of the State Bank affair with the keenest interest.

The problem of keeping in public enterprise what first-class men are already there remains a small one compared with that of enticing them to enter it in the first place. To find them from among the members of the management service will scarcely be possible on any large scale because they will not generally be of the temperament which would lead them to join it. Retired generals, admirals and air marshals have been the curse of nationalisation in Britain and are worth taking a great deal of trouble to avoid in India. The alternative would seem to be to recruit from private industry and commerce and that would mean offering salaries and conditions of employment approximating those which exist there. However distasteful this might be to current socialistic theory, it is quite unavoidable if State undertakings are not to become notorious for stolid inefficiency and the economy is not to be seriously hampered in its progress. The fact has had to be faced in other countries, more conspicuously the Soviet Union where political power and privilege have had to replace monetary and social incentives. If the creation of such power and privilege offends prevailing ideas of equality here in India as much as the granting of realistic salaries and working conditions injures the spirit of socialism, there is only one alternative left. That is to follow the advice of Dr. Matthai and keep nationalisation and State-ownership down to the indispensable minimum.

INDIA AND THE WORLD

DESPITE contrary evidence in the Press—which, for reasons it is unnecessary to examine, deals with world affairs more than fully—intelligent interest in international relations is of necessity limited in India. It is so in most countries, and in this contributory factors are widespread illiteracy and the inescapable preoccupation of the majority with eking out a living. It is, therefore, not wholly unfair to describe India's foreign policy as very much the product of one man's thinking, Mr. Nehru's, although this view is known to be resented by India's Prime Minister. But this Indian indifference is in sharp contrast to the interest the rest of the world is now increasingly obliged to take in India's views on various questions. It is not necessarily a criticism of India's foreign policy that a good deal of it is inadequately understood in many capitals.

What, more than anything else, obscures vision is the ideological mask foreign policy has been made to wear since that good, if slightly confused, President of the United States, the late Mr. Wilson, decided to take a hand in international affairs. Ever since India came into her own nine years ago, ideology has appeared to figure prominently

in the making of her foreign policy, and not even the sharpest critics of Mr. Nehru can deny that he has often been guided by the most unselfish motives. But the claim made by some that he has always been so guided has tended to conceal the realistic foundations of India's foreign policy, and this is an additional reason for welcoming an Indian's assessment* of his country's attitude to the world which puts it under the sub-title that it has something to do with the "defence of national interest." Dr. Gupta's handling of the English language is unrepresentative of the mastery many Indians still possess; his denial of the second "n" in Mr. Lippmann's name mistakenly suggests carelessness, for he is in fact extremely painstaking; and his articles are sometimes unnecessarily indefinite; but he does present a fairly coherent and continuous survey of India's developing foreign policy, and his contribution acquires special relevance from the fact that the Prime Ministers of the Commonwealth are now in conference in London.

Exaggerated treatment, here and abroad, of spectacular visits by foreign dignitaries has done

much to hide the real foundations of India's foreign policy, one of which is her membership of the Commonwealth. It is a tribute to that ill-defined association of free nations that India's belonging to it is mentioned so infrequently. But when the advisability of India's membership of the Commonwealth has been questioned, Mr. Nehru has always defended it in the clearest terms. As one of Dr. Gupta's excellent array of quotations has it, Mr. Nehru said on 17th March, 1953: "So far as we are concerned...our relationship with the Commonwealth has been completely different from the relationship of any other country in the Commonwealth...We have economic relations with England because we feel they are to our advantage...It has nothing to do with our remaining in the Commonwealth or not...I think we have gained positively by being in the Commonwealth. During the past five years especially, many avenues have opened out to us which might not have been opened if we had not been there. I think that we have somewhat affected world politics, not only directly so far as we can, but to some extent indirectly also through the Commonwealth, and I think that is to our and to the world's advantage."

This central—though not unalterable—fact, India's membership of the Commonwealth, is so often forgotten that most debates on India's foreign policy start with the main premise missing. Pace President Wilson, the chief, if not sole determinant of a country's foreign policy is self-interest, and to say this is not to accept the philosophy of Realpolitik but only to introduce an element of much-needed realism into a discussion befogged by ideological verbiage, to which, it must be admitted, India's contribution is not inconsiderable. India's foreign policy has doubtless been shaped by tradition, history, geography and all that, but considerations of national interest have, very rightly, never been forgotten, and it may be part of policy that praise on this score has been only intermittent and mainly external. Dr. Gupta falls into the error of over-emphasising the element of historical compulsion in India's membership of the Commonwealth, for there was nothing, barring political wisdom, to prevent India's walking out of the "club." Indeed, the history of Indian nationalism was against the association. As for the economic and strategic considerations, both are going through significant changes. Soviet Russia is determined to play an increasingly important rôle in the Asian economy, and recent developments in Egypt, Ceylon and Singapore—to say nothing of advances in science—have so altered old concepts of Commonwealth defence that it can no longer be considered a decisive factor in India's continued membership in the Commonwealth.

Although Commonwealth membership is the beginning of India's foreign policy, it is by no means the end—and it would be a serious error to take anything for granted. Indeed, the most deplorable aspect of Wilsonian principles in international relations may be that they encouraged people to seek the foreign policy of every country. As a matter of fact, no country—and India is no exception—has a fixed, rigid and unalterable foreign policy. Flexibility is its essence, and not the least of the merits of Dr. Gupta's analysis is that it ruthlessly exposes the many contradictions in India's nine-year-old foreign policy. There is no doubt at all that the main emphasis is on peace, which itself is not unrelated to India's aspirations of economic progress, but there are demonstrable degrees of adherence to fixed principles, so that, in spite of the thick ideological veneer, India's foreign policy may be considered exactly as empirical as any other country's. India's criticism of British policy in Cyprus or Malaya is less outspoken than that of French policy in Algeria; India's very sincere anti-colonialism is, naturally, more concerned with Goa than with Poland or Puerto Rico. To be surprised by these apparent inconsistencies is to fall into the dangers of what Dr. Gupta rather uncharitably calls "America's gigantic adolescence," which is not America's alone. On what seems to be inadequate evidence, Dr. Gupta suggests that the Korean war was a decisive turning point in shaping India's foreign policy. What he succeeds in proving, with a wealth of documentation, is that India has not got a foreign policy but has a plurality of them. And this is as true of every other country, to which has to be added the final observation that this is not necessarily a bad thing. Like love, or hatred, foreign policy is a many-splendoured thing—and should be so.

*Indian Foreign Policy, by Karunakar Gupta (World Press, Rs. 10.)

THE TWIN AIMS OF IMPORT POLICY

THE Government of India's import policy for July-December 1956 indicates an adjustment much along the lines which might have been expected since the discussions at the Import Advisory

Council meeting last May. The needs of accelerated economic development are pressing more and more heavily, but sharp changes have fortunately been avoided for the majority of items. The basic principles of the policy remain closely similar to what they have been in recent half-years. They are to stimulate domestic production and to satisfy consumer needs—both under the broad limitations set by the shortage of foreign exchange. Tangible evidence of the effort to stimulate domestic production lies in the more liberal import licensing for machinery, spare parts and industrial raw materials. In satisfying consumer needs, the aim is becoming the negative one of cutting imports as little as possible rather than the positive one of ensuring a large supply of good and cheap foreign goods. There is nothing inherently wrong in this; the trimming, naturally affects the relatively inessential items, and among the more important of those now judged as such are watches.

Promoting industrialisation and subduing price inflation are thus the keynote of the import policy. The Government has judged correctly that the former should receive increasingly greater emphasis as the policy is reorientated from time to time; since imports of producer-goods will increase, those of consumer-goods may have to be cut. The scissors will presumably then apply to items consumed mainly by the higher income groups, on the assumption that they can afford to pay more for the limited supplies on offer. Import policy may thus become more and more an instrument to serve current egalitarian aims.

The policy seems to be becoming more positive in another aspect also. This is in warning domestic industry that it is risking its neck if it fails to meet requirements or to improve quality. The crockery manufacturers are reported to have come in for harsh words on this count. They have been punish-

ed with the announcement of a bigger import quota, and threatened with still bigger ones if they do not pull their socks up. The Commerce and Industry Ministry's eagerness to safeguard the interests of consumers will be widely admired, provided it is recognised that actions of this sort are liable to prove a tricky affair. It is not always possible for officials, from their distant perch in New Delhi, to judge which industries have gone right, and which have gone wrong, and why. In the case of crockery, even if the fact of expert wifely advice being readily available be admitted, the authorities would have been on stronger ground if they had consulted the major domestic manufacturers.

It is possible that having returned from a parade of chipped, ugly and wobbly half-plates at their private luncheon tables, no different conclusions would have been reached; but at least the manufacturers could not then have said that they are not listened to. The attempt to popularise cooking ranges by liberalising their import is interesting, for those who use crockery and for others besides. But many who compare the costs, and who have in mind the more egalitarian society of tomorrow, will wonder whether there is much scope for anything apart from the humble chula, except perhaps in Secretariat canteens.

The encroachment of the State Trading Corporation into private trade's normal spheres of operation is disturbing. It has been decided that imports of certain important chemicals and raw materials, such as caustic soda, soda ash and portland cement, will be canalised through this body. Rumours are that sulphur and copper may be added to the list. The Corporation thus seems to be fast outgrowing its original purpose. Assurances are periodically issued that it will not compete with private interests in this sphere and that, but it is hard to see how such neat demarcations can be achieved. They might have been achieved if its transactions had been restricted to Government-to-Government trading, but the Corporation is being arbitrarily donated privileges far beyond those implied in its original conception. Neither it, nor any Government agency, can yet claim much efficiency or reassuring experience as an importer. It may have certain distinct advantages in negotiating monopoly purchases from Com-

munist exporters, but in more competitive conditions neither its structure nor its manner of operation is likely to bring it much credit.

CURRENT COIN

Compensating Life Insurers.—From the shareholders' point of view, a main feature of interest in the statement made by Mr. A. D. Shroff at last week's ordinary general meeting of the New India Assurance Co. Ltd. in Bombay was the news that the company would get between Rs. 40 lakhs and Rs. 50 lakhs as compensation for its life section having been nationalised. (The statement is published on a later page.) It had been estimated that the compensation should have amounted to about Rs. 150 lakhs, so Mr. Shroff was understandably strong in criticising the new basis on which it had been calculated. The scientific basis for assessing compensation would have been to determine the annual surplus earning capacity of each life portfolio after making a valuation as on 31st December 1955; to consider as an annual dividend such percentage of this surplus earning capacity as was customarily allocated to shareholders, with a maximum statutory limit of 7½ percent; and to commute this dividend earning capacity on the basis of 2½ years' purchase. Instead, the formula which had been adopted generally gave shareholders of life offices only 41.7 percent of what they should have got. This basis, commented Mr. Shroff, "is nearer to expropriation rather than compensation which would be fair." The nationalisation of life insurance has created a number of new problems for such companies as New India. It had considered the activities of its life and general departments as complementary, and "had built up common organisations, common personnel and common offices, not only in India but also abroad." Life and general insurance were being developed simultaneously, but nationalisation of the former will now interrupt this process. Not only will shareholders lose some of their share in the valuation surplus, which would have increased with the growth of life insurance; the company will also lose many of its personnel whose main interest was life business but who were assisting in the development of general business as well. During the past two years particularly, New India built a large field force to cater to insurance needs throughout the country, practically all of which it will now lose. As Mr. Shroff pointed out, rehabilitating the company's operations after the life and general branches have been separated will be difficult and intricate; costs are likely to rise by about Rs. 5 lakhs.

Electricity for Calcutta.—Power consumption is among the more reliable indices of industrial expansion. That being so, the review of Sir Harry Burn, chairman, circulated with the report and accounts of the Calcutta Electric Supply Corporation for 1955, is encouraging testimony to what is happening in and around this city. Industrial demand for high-tension power continues to increase. Last year, the Calcutta Electric Supply Corporation sold 100 million units more at 799 million units to fulfil this need. Most of this rise was accounted for, firstly, by jute mills (which increased their working hours); and then by a variety of other manufacturers, including cotton and other textiles, paper, engineering, aluminium and chemicals. Sales of low-tension industrial power also showed an appreciable increase, from 68 million units to 77 million units, after having stagnated around the former level for three years; this suggests the expanding activity of small industrial firms. Domestic and commercial demand for electricity is naturally increasing in a city whose population is growing; sales in this category at the flat rate rose from 171 million units to 184 million units. The supply of high-voltage current under special tariff to owners of large buildings was 6.8 million units more at 38.7 million units. The use of power for public lighting showed a steady increase, and that for tramways a small one. The result is that the Corporation sold 1,242 million units last year, or 142.7 million units more than in 1954. It is to be complimented for its foresight in launching on development and expansion plans, in anticipation of the increased demand; the fruits of those plans are now being shared by itself and the city. The Corporation's receipts for 1955 have increased by £567,826; and its expenditure of a normal nature, taking into account the depreciation charge, by £344,712. In general, the latter is due to an expansion of its operations. Expenditure on capital account amounted to £939,000, most of it being on extending the distribution system. The ordinary dividend of 6 percent for 1955 (including an interim of 3 percent) yields 5.9 percent at a price of Rs. 13.7 a share. Sir Harry Burn hopes that the Electricity Supply (Amendment) Bill, which is expected to raise the "standard rate" of return for electricity undertakings, will be passed before the end of the year. His hope is widely shared, but doubts grow as New Delhi's corps of parliamentary correspondents recount with awe the lengthening list of deferred and new Bills which hard-pressed M.P.s have to face at the start of each

session. The Electricity Bill is urgent enough to deserve high priority.

Control of Capital Issues.—The address Mr. K. R. P. Shroff, President, gave to the recent annual general meeting of the Native Share and Stock Brokers Association in Bombay was an able survey of the economic conditions in this country during the last year of the first plan. The long-term capital market, said Mr. Shroff, had a successful year; the Central and State Governments, particularly the latter, succeeded unexpectedly well in their new loan issues. The success of the private sector in securing fresh capital was equally encouraging. Mr. Shroff recognised that a permanent system of control over capital issues was an "important instrument of planning and progress in an underdeveloped economy with limited resources," and in general he had no complaint about its functioning. But some of its recent decisions had occasioned much surprise, particularly that on the issue of rights shares by some well-known companies. He referred to the ordinary share issues of the Tata Iron and Steel and Associated Cement Companies, where the controlling authorities had insisted on the issue being made at a premium, although both the management and the shareholders were agreed that the issue should be made at par. Mr. Shroff was unable to understand the logic of this insistence, and the authorities, for their part, had not explained the reason adequately. Once the permission to raise a certain amount of capital was granted, observed Mr. Shroff, it should not matter whether the new issue is made at a premium or at par. The shareholders' stakes in the equity of the company is not in any way affected since the issue is offered to them *pro rata*. From the general point of view, no adverse repercussion is likely. The argument that this policy helps new companies if a premium is imposed on rights shares is mistaken, so is the view that an issue at par will seriously disable them. He could understand old companies being refused permission to raise fresh capital if it was in the national interest to promote new companies, but once the permission is granted, it can be assumed that a certain amount of capital will be diverted to the existing companies. Mr. Shroff was of the view that the difficulties of new enterprises obtaining capital from the market was not diminished or enhanced by the old companies' rights issues since "the reduction in the quantum of funds available for investment was the same" in any case. On the other hand, the shareholders of joint stock companies badly needed protection against the current ideological bias, the imposition of predatory taxes, arbitrary labour awards and expropriatory terms of compensation when the concerns came to be nationalised. "In view of these developments, it is more than ever necessary that the customary camouflage of reserves in share premium and other accounts should be done away with and the paid-up capital of companies brought in line with their actual block. This is the only way to ensure that the size and magnitude of the investors' real stake in the business is seen at a glance from the balance sheets and the profits earned by companies and the dividends distributed by them sensibly related to the shareholders' total capital," he said.

World Bank Loan for Tatas.—The World Bank last week made a loan of \$75 million in various currencies to the Tata Iron and Steel Co. Ltd., to assist in the financing of a large-scale expansion programme which will raise the company's annual output to 1½ million long tons of finished steel (2 million long tons of ingot steel). This is the largest loan the Bank has yet made for industry, and also the largest it has made in Asia. Some parts of the Tata steel mills' existing facilities are already being modernised and expanded under a first postwar programme, which began in 1951. The company has now embarked on a second programme of expansion. Both programmes should be substantially completed by 1958, when capacity is scheduled to rise to 2 million tons of ingot steel a year. The total investment programme of the Tata company is expected to be the equivalent of about \$250 million for the period April 1955 to March 1960. The second programme consists of further modernisation and of additions to the existing plant throughout the whole process of steel production. For processing the raw materials, a new battery of coke ovens will be installed, the existing batteries remodelled and expanded, and new ore crushing and sintering plants will be built. A new blast furnace will provide an increased capacity of 1,650 tons of pig iron a day. Steel making capacity will be raised by adding two 200-ton open hearth furnaces and a new 32-ton converter; the capacity of the existing furnaces and converters will also be increased. Rolling capacity will be increased by a new 46-inch blooming mill, a new sheet bar and billet mill, and a medium and light structural mill. This expansion of capacity will also involve extension of various facilities and services throughout the plant and its mining operations. The company has engaged the Kaiser Engineers Division of the Henry J. Kaiser Company and the Kaiser Engineers

Overseas Corporation, of the United States, to design and supervise the construction of most of the works involved in the second expansion programme. The works to be designed and supervised by Kaiser are estimated to cost about \$130 million and are to be completed by June 1958. The Bank's loan will be disbursed against part of the foreign exchange costs of these works. All orders for imported equipment are being placed on the basis of international competition to the fullest extent practicable. The loan is for a period of 15 years and will carry an interest of 4½ percent, including the statutory 1 percent commission charged by the Bank. Amortisation payments will begin on 1st December, 1959, and end on 1st June, 1971. The loan is guaranteed by the Indian Government. This is the Bank's eighth loan to India, bringing total loans here, net of cancellations, to \$199.9 million. It is the second loan which has been made for the expansion of steel production, the first being to the Indian Iron and Steel Co. Ltd.

Co-operative Movement Grows.—There was a considerable expansion in the activities of the co-operative movement during 1954-55. The *Statistical Statements relating to the Co-operative Movement in India for the year 1954-55*, published by the Agricultural Credit Department of the Reserve Bank of India, shows that at the end of the year there were 219,288 co-operative societies of all types, with a membership of 16.02 million and an aggregate working capital of Rs. 390.52 crores, against 198,598 societies with a membership of 15.18 million and a working capital of Rs. 351.79 crores at the end of the preceding year. Taking the average size of an Indian family as five members, it may roughly be estimated that 80.1 million or 21 percent of the population had been brought into the co-operative movement at the end of 1954-55, against 75.9 million or 20.2 percent in 1953-54. There were 24 State co-operative banks at the end of June 1955, against 22 a year before. Such banks were functioning in all Part A and Part B States, and in six Part C States. An important feature of the new banks, and of some of the reconstituted ones (in Punjab, Hyderabad and Mysore) was the substantial State participation in their share capital, which helped strengthen their capital structure. During the year under review, the apex banks advanced loans to the extent of Rs. 50.24 crores, against Rs. 51.77 crores at the close of 1953-54. On the other hand, the number of central co-operative banks, including banking unions, fell from 499 as on the 30th June 1954 to 485 at the close of 1954-55. The decrease was mainly due to the policy of rationalisation in certain States. Agricultural credit societies, which constitute the base of the co-operative credit structure, showed fair progress during 1954-55. They numbered 143,320, against 126,954, and constituted 78.8 percent of the total number of agricultural societies. Their membership and working capital increased from 5,849,380 and Rs. 54.41 crores to 6,565,417 and Rs. 62.93 crores respectively. Total advances stood at Rs. 35.48 crores, against Rs. 29.64 crores. Non-agricultural credit societies also recorded steady progress. Their number, membership and working capital increased from 8,389, 2,738,466 and Rs. 69.89 crores in 1953-54, to 9,348, 2,847,944 and Rs. 78.32 crores in 1954-55. The number of primary agricultural non-credit societies stood at 30,197. They accounted for a membership of 2,494,508 and a working capital of Rs. 20.72 crores. Their sales declined from Rs. 33.74 crores during 1953-54 to Rs. 27.04 crores during 1954-55. The number of central land mortgage banks remained at nine. The loans they advanced stood at Rs. 2.43 crores, compared with Rs. 1.92 crores during the previous year.

UNFAIR DEAL FOR INDIA

THE present Government, though not, we believe, the majority of the House of Commons, stick obstinately to their contention that India is liable to pay the ordinary expenses of Indian troops sent to Egypt, because India is interested in securing the highway through the Suez Canal. We wish to know why India should be exclusively selected to pay this extra charge, when the Australasian colonies, and all the Crown colonies in the East, contribute nothing. Is not the Suez Canal an open high road for ships of all nations? Why should India pay when other nations pay nothing? As a matter of fact, however, the Indian troops now in Egypt have not been sent to guard the Suez Canal, either directly or indirectly; but to help in restoring to Egypt the lost provinces in the Sudan—a policy which does not concern India one iota. It is not for us to say whether such a policy is for the benefit of Egypt or otherwise, but it is perfectly absurd to contend that it can be for the benefit of India. I feel, the argument of the noble Lord who has undertaken to direct Indian affairs is so foolish that it is difficult to understand how he can allow his reason to support it.

CURRENCY AND CREDIT IN AN EXPANDING ECONOMY

MEASURES PROPOSED UNDER THE NEW RESERVE BANK BILL

By R. M. Mitra

A BILL has been introduced in the Lok Sabha to amend the Reserve Bank of India Act, in order to remove possible legislative restrictions on the issue of notes necessary to meet the expected financial deficits of the second five year plan. The existing provisions of the Reserve Bank of India Act require the issue of notes and securities to the holding of gold and foreign securities to the extent of not less than 40 percent of the total issue, and the balance by rupee coin, Government of India and rupee securities and eligible bills of exchange and promissory notes. It is also provided that the holding of gold should never fall below Rs. 40 crores, valued at 8.4712 grains of fine gold a rupee. There are certain other provisions for adjustment in the holding of rupee coin as part of the cover for the holding of gold and foreign securities to notes and securities of gold and foreign securities. The Bill, therefore, requires the issue of notes and securities to the holding of gold and foreign securities to the extent of not less than Rs. 115 crores, valued at 2.88 grains of fine gold a rupee, and foreign securities worth not less than Rs. 400 crores, in absolute quantities, without reference to fluctuations in the volume of notes issued.

History of the Reserve

Fears have been expressed by some that weakening the link between gold and foreign exchange on the one hand, and the total note issue on the other, will tend to remove a salutary check on inflationary tendencies. The history of reserve requirements for note issue, however, tells its own tale. Forces pertaining to inter-State rivalry and a sentimental regard for gold contributed to its dominance during the period 1875-1914 as the determinant of the note issue. But experience of this dominance extending over 40 years showed that expansion or contraction in the supply of gold does not necessarily accompany an expansion or contraction of general economic activity. There have often been substantial changes in its supply, resulting in unhealthy price movements, disorganised production and disturbed employment. This experience was repeated after the gold standard was temporarily revived in 1925. The gold exchange standard, devised as a measure of economy in the use of gold, was introduced in India as early as 1893. It was, however, considered fit mainly for colonial countries until the first world war. The end of the war found a number of countries like Germany, Italy and Belgium adopting it in various modified forms. With the world-wide abandonment of the gold standard starting in 1931, the gold exchange standard lost its link with the

gold standard and became a plain foreign exchange standard.

Gold is still retained as a percentage of the currency reserve in a number of countries, and the technique of currency control in many is even now to ensure that the note issue is covered by gold and/or foreign exchange to the extent of a minimum percentage, and for the balance by specially designated assets (technically known as "eligible assets"). But in the gold and foreign exchange now fulfils its original purpose. The currency authorities are no longer under an obligation to provide gold or foreign currency against the tender of notes issued by them. Redeemability has ceased to be an essential feature of the legal tender note. It is not, therefore, necessary to hold gold or foreign exchange to meet a legal obligation. In fact, opinion is growing in favour of separating gold and foreign exchange from currency reserves. It is being increasingly recognised that gold and foreign currency should be utilised as the working capital of a separate agency set up specifically to deal with problems of foreign exchange and balance of payments.

Currency and Foreign Exchange

The proposed Indian legislation to make expansion of the note issue independent of the holding of gold and foreign exchange need not, therefore, cause particular alarm or misgivings. On the contrary, it seems worth considering whether the quantitative minima provided for in the Bill should not be eliminated and a separate agency created on the British pattern to manage foreign exchange. Gold and foreign exchange resources may then be transferred to this agency. This arrangement would serve to protect the internal currency from the psychological effects of fluctuations in the holding of foreign exchange, and bring under proper attention the forces bearing on the former's value.

In this connection, the question may arise whether an upper limit should be imposed on the quantity of note issue, and any excess over this limit should require the approval of the Finance Ministry or, more appropriately, of Parliament. The method of an upper limit is used in Britain. It was also used to regulate the note issue in France between 1870 and 1928. The French method required parliamentary approval for any excess over the ceiling, whereas the U.K. method is based on the Treasury's approval within specified limits. The Australian law of 1945 makes the note issue independent of a minimum holding of gold and foreign exchange, but it does not introduce a ceiling to prevent recklessness; an amendment of 1951, however, provides in general terms that if there are differences between the Treasury and the Commonwealth Bank on any question of policy, Parliament should be informed of the action taken. It might seem that when the Government's expenses under both revenue and capital heads are subject to parliamentary control, an additional check in the form of a ceiling is not necessary. The question may, however, be regarded as more a matter of public feeling than of financial prudence. Expert opinion now is that international co-operation should help maintain the external value of money and meet the requirement of foreign exchange, while methods of "continuous control of credit" should be evolved to maintain the internal value of money. The International Monetary Fund has been set up to promote international co-operation. Various means are also being devised in different countries to ensure the "continuous control of credit".

Methods of Credit Control

The proposed legislation shows necessary awareness of the importance of continuous control of credit. The plan is based on several tentative assumptions about the availability of monetary resources. Fulfilment of the physical targets is expected to involve credit creation on a considerable scale. The amount of credit creation and its effects on prices, distribution, production and employment may be more far-reaching than the primary quantitative impact of the contemplated deficit financing of Rs. 1,200 crores. The existing Section 42 of the Reserve Bank of India Act is, therefore, to be amended so that notes issued in the course of the execution of the plan may not lead to the undesirable creation of credit and produce disturbing effect. The proposed amendment introduces the system of variable reserve ratios which was first devised in the U.S.A. and received the blessing of Lord Keynes. Legislation passed in 1933, and amended in 1935, empowered the U.S. Federal Reserve System to change the ratios of reserve to be held by member banks with Federal Reserve Banks "in order to prevent injurious credit expansion or contraction".

Scheduled banks in India are now required to hold as credit balances in their current accounts with the Reserve Bank such amounts as will not be less than the aggregate of 2 percent of their time liabilities and 5 percent of their demand liabilities. The proposed amendment allows the Reserve Bank to increase these requirements to 8 percent of time liabilities and 20 percent of demand liabilities. The language of clause 10 of the amending Bill, however, seems to permit the Reserve Bank only to increase the rates and not to decrease the higher rates. But the intention appears to be clear that the Reserve Bank should have the power to vary these rates, and it is hoped that the clause will, if necessary, be re-drafted before the Bill is finally passed. The Bill also makes some operational changes in the existing law. The balance which at present has to be held by a scheduled bank with the Reserve Bank cannot fall below the minimum requirement on any day in the week; under the proposed amendment, it will be sufficient if the average daily balance of the week is not less than the minimum. The method of calculating

minimum requirements on the basis of Friday returns is retained, but Friday will become the last day of the week instead of the first day as under the present law. Unlike the U.S. law, however, the minimum requirements continue to be calculated on the basis of all the outside liabilities of a bank, and not simply of deposits.

Variable Reserve Ratios

There is a distinct echo of Plumptre in the discussions on methods of credit control that have followed the introduction of the Bill in Parliament. Professor Plumptre, in his book *Central Banking in the British Dominions*, argues that the method of variable reserve ratios cannot be effectively employed in an under-developed economy where there is no norm of cash holding and considerable variations take place from time to time in the ratio of the cash held by banks to their deposits. It is possible, however, to question the validity of this argument. Changes in the ratios of cash holdings which take place in a so-called under-developed economy are not adventitious but are due to ascertainable factors relating to the supply of and the demand for credit. It is true that supply and demand show marked seasonal variations in an economy which is mainly based on agricultural production or which has a limited number of articles of manufacture or commerce. But, on the one hand, the pattern of the Indian economy is rapidly expanding in scope, and on the other, the Reserve Bank may well be dependent on to take into consideration seasonal factors of demand and supply when deciding on a change in the ratio of the minimum balances scheduled banks keep with it. It has, again, been pointed out that when the statutory cash reserve is raised, a bank may convert other available assets (like foreign balances, Government securities, etc.) into cash and continue credit expansion. It is also suggested that a bank is guided in its credit policy by prevailing notions about the ratio between loans and deposits, and not by the ratio between cash and deposits. It is submitted, however, that a bank will not normally consider it safe to disturb its secondary reserves. Further, if the occasion arises the Banking Companies Act may be amended to safeguard the secondary reserves of Government securities: pre-war Germany made provisions for legal control of secondary reserves. Moreover, the Reserve Bank will surely not depend exclusively on the method of variable reserve ratios for controlling and regulating credit. It is to be assumed that this method will be used where necessary, in combination with other measures, such as open market operations or control of advances, in exercise of the Reserve Bank's powers under the Banking Companies Act. There seems to be no substantial reason why the method of variable reserve ratios should not be considered as one of several useful techniques of credit control so far devised.

International Comparisons

It is, of course, necessary that, like any other method of control, the method of variable reserve ratios should be used with caution and discrimination. The passing of the law should not create an artificial sense of urgency. Although the enabling law was passed in 1933 in the U.S.A., it was not used until 1936. New Zealand introduced the method of variable reserve ratios in 1936, but is not yet reported to have had any occasion to use it. It is hoped that, as in the U.S.A., the banking authorities in India will base their action more on the basis of surplus reserves than on a reduction of the level of credit which has already been built.

The method of variable reserve ratios proposed in the amending Bill differs from that in the U.S.A. in several respects. The minimum ratio cannot exceed twice the minimum ratio in the U.S.A., but in India the maximum may go up to four times the minimum. The U.S. law permits different ratios in different regions defined for the purpose, but no provisions for regional differences have been made in the Indian measure. It may be considered whether the Bill should be modified to provide for regional changes. If neither the American method of regional variation nor the Australian method of individual variation is favoured, it may also be considered whether the provision made in the Ceylonese law for graduated increases and due notice for adjustment to an increased ratio should be adopted. It is interesting that Keynes considered such a provision an important feature of the system of variable reserve ratios.

The amending Bill empowers the Reserve Bank to ask every scheduled bank to maintain with it an additional balance to the extent of 100 percent of the excess of its liabilities over those on a date specified for the purpose. It is provided, however, that in no case will the overall balance maintained by a scheduled bank with the Reserve Bank be required to exceed 8 percent of its time liabilities and 20 percent of its demand liabilities. The proposed provision for an additional balance in India is, therefore, materially different from the system of special accounts introduced in Australia in 1941. The provisions for an additional balance with reference to increased deposits have, however, been adopted in several other countries such as Ceylon. But the provisions made for India in the proposed law seem only to contain alternative arrangements of varying reserve ratios up to the maximum of 8 percent of time liabilities and 20 percent of demand liabilities. The amending Bill seems to contain no provisions which are not in force in some country or other (although sometimes in modified form). In fact, the Bill follows modern trends in methods of credit control. Judicious application, in collaboration with scheduled banks, should make the new method a useful instrument of control.

THERE are, so far as I can see, two reasons why there has been so little talk about the weather lately. First, with neither too much heat nor too much rain for this time of year, it has not been giving us a great deal of trouble. In Calcutta, one only talks about the weather, unless one is tackling a creditor or—worse plight—is in love, when it has become a nuisance, just as one rarely discusses one's teeth until they have started to ache. Second, there has been plenty of other topics for tongues to wag over: a python in an aerated-water factory; two bridge accidents in a fortnight; a poor two-point-five percent pass in the first division in this year's school final examination; the strike at the Haringhata dairy which has caused a milk shortage; radioactive foodstuffs; an invasion of yellow-fever carrying mosquitoes; theft of hospital stores and more besides. The Talla bridge accident, in which a double-decker passenger bus was involved, seemed to me nothing short of miraculous in that only two people were reported killed (though more were injured) as a result of a twenty-foot fall. Many, I am sure, were grateful to the Corporation and the State Transport Directorate for having provided between them such a major accident at so little cost. Similar gratitude is owed the railway authorities for the collapse of the Ballygunge overbridge. It has since been discovered that senile decay had attacked the lower of the two planks and considering that Calcutta's various local authorities have decided that no discovery should be made until too late, I find this accident quite in order. It cost the city a cholera epidemic before the Corporation found out that quite one-fifth of its tube-wells fails everyday, and even at this moment citizens in many areas complain that their filtered water frequently looks as cloudy as vegetable soup. Again, it was only recently that corpulent little mountains of filth were dotting the city just when the Government was setting up a high-power "Cleaner Calcutta" Committee. This happened because a controversy was raging between the Corporation and the West Bengal police over a contract for wagons to remove the accumulating refuse. When, at a meeting last month, the Mayor was challenged from the left about the way the Corporation's work was being handled, he irately announced that it was the look-out of the ruling Party. He no doubt forgot that in most recent suburban and mofussil municipal elections power has passed to the leftists.

One of the biggest of the many personal problems facing British business men in India today is early retirement. Crushing taxation here and rising prices at home are squeezing his meagre savings at both ends. Without the assistance of the Indian Government, there is not much that can be done about tax troubles; but in this matter of rising prices there is hope. It has, for example, been proved that anybody who, at the end of the war, invested money in a reasonable selection of the equities quoted on the London Stock Exchange, and did so wisely, is now in the satisfying position of being able to realise capital equivalent to, or even in excess of, the purchasing power of the original outlay—and of having enjoyed a fair income besides. I have often said in this diary that there is no easy way to make a lot of money on any stock exchange unless you are big enough to manipulate it according to your own convenience, in which case, of course, you will scarcely be worried about your retirement anyway. But it is not too difficult for the small investor to ensure a reasonable income and a steady capital appreciation if a few commonsense rules are complied with. One of the simplest exposition of these

A DITCHER'S DIARY

is in a little book which appeared on my table the other day. Its title is *Invest £100*; but the advice it gives holds true for any multiple of that sum. It is written by Mr. Edward Westropp, one-time trust-company director and present city editor of the *Sunday Express*. The publisher's agent in India is Rupa & Co. of Bombay, Allahabad and Bankim Chatterjee Street, Calcutta. Mr. Westropp's book is certainly investment for beginners, but he manages to get into it a summary of all the most important things which anybody buying shares ought to know. I was gratified to read that he advocates a step which I myself advised here some time ago; that is to consult a reputable stock broker and listen to what he has to say.

Until last week I was of the opinion that there were two ways of how not to diplomatisise. One was not to diplomatisise at all—the other was to diplomatisise like Mr. Dulles. That is because, as most will agree, he has consistently shown an uncanny flair for saying exactly the wrong thing at exactly the wrong moment. But it seems I may have to modify my opinion of Mr. Dulles, for he is at present showing unmistakable signs that his views are undergoing an "agonising reappraisal". He appears at long last to be giving up his former position of regarding everybody as an enemy of the U.S.A. who is not an enemy of the Soviet Union. At a Press conference last week he said, or very nearly said, that after his recent visit to Moscow, Marshal Tito still signed himself Marshal Tito and not Nikita Khrushchevling. Mr. Dulles's exact words were that he saw no evidence that the Marshal "was accepting subservience to the Soviet Union" as a result of his visit. When I first read the report I thought perhaps I was fancying things. So I read it a second, then a third time. Yet the words and the meaning remained obstinately clear, and I was forced to conclude that Mr. Dulles himself was suffering from a most welcome attack of political commonsense. If it develops and is prolonged, it may relieve a serious source of embarrassment to the U.S.A.'s allies and neutralist friends, who have been hoping the recent changes in Russia will lessen rather than increase East-West tension. Of this possibility Mr. Dulles provided pleasant symptoms, for, referring to his discussions with M. Pineau, France's Foreign Minister, during the latter's recent visit to Washington, he really "went out on a limb", as he himself would no doubt put it, and said that both of them "were in agreement on the principle of East-West exchanges" in matters of trade and other relations. Mr. Dulles made another interesting point in his Press conference when he said that "Moscow's control over foreign communist parties had greatly weakened." We already know that the British, French, Italian and Indian communists are all of a dither over Moscow's present anti-Stalinist crusade, but Mr. Dulles's view seems to have received a further startling confirmation in last week's Poznan riot. This incident seems to show that if Moscow is losing control over extra-territorial communist parties, these parties in turn are losing control over themselves and their victims.

That depressed period in the world's newspaper calendar known as the "silly season" seems to have got off to a fine start this year. It would be difficult to imagine anything more ridiculous than the fuss the European Press has made over the fact that Queen Juliana of the Netherlands chose, some

three years ago, to enlist the services of a faith-healer in the hope of restoring the sight of her daughter, Princess Marijke. The decision may have been dictated in the first place by maternal desperation rather than dispassionate reason and it is not surprising that the faith-healer's efforts were just about as successful as the doctors' who had tried before her. There the story would have ended had it not been for the German newspaper *Der Spiegel* in which, three years after the event, it was announced as the reason for a completely non-existent State crisis. Whether or not the whole thing was politically inspired (Holland was due for a general election just about that time), the world was immediately treated to as tasteless an exhibition of Press interference in the private lives of royalty as it has witnessed since the American newspapers wallowed in the Edward-Mrs. Simpson affair. Even when the political crisis story collapsed, some newspapers went to the lengths of inventing a domestic one in the marriage of Queen Juliana and Prince Bernhard. Such speculation as to why the consort did not cut short his visit to Sweden when the constitutional mix-up and impending abdication of the newspapers had themselves cooked up, was supposed to be taking place; whether the Queen would meet him at the airport and, if she did, whether or not he would get a welcoming kiss, must rank among the most disgraceful examples of mischievous nonsense for which the Press has ever been responsible. For all their shabby and rambling sentimentality, Indian newspapers have not stooped to this sort of thing yet and it is to be hoped they never will. As a newspaper man I can sympathise with those who have to struggle to find something to fill their columns at this time of the year. But to resort to such methods as these will do the Press more harm in the long run than the spread of television.

The first of this season's six chamber concerts, given by the Calcutta School of Music, was held last Wednesday. The remainder are to be held on alternate Wednesdays, beginning 11th July. The Mother Superior of Loreto House has, as usual, very kindly given permission for the whole series to be performed there. I often wonder how we should survive the constant changes of this modern world if it were not for the fact that certain traditional events turn up year after year and so help us to keep our bearings. Most things which have been lost appear, in retrospect, as unmixed blessings. Of those which remain, many suffer the fate of familiarity. It would seem as if the musical talent offered by and for ditchers, might be one of these. The first concert was not well supported; I only hope one more plaintive plea from my pen will help swell the audiences at the remaining five. I so often feel as if I am simply having a little "moan" when I champion the cause of local music, but anything which succeeds in encouraging those who so unstintingly give of their time and energy to preserve one of Calcutta's finest traditions, is well worth the risk. Spiritual backing is important, but I am sure the School is not so ethereal as to ignore the more material benefits as well, and it is these which they both need and deserve. At the next concert, the newly-formed group of madrigal singers is performing some of the works of Purcell and Vaughan Williams. This is a rare type of entertainment for music lovers and should be well worth their attention. Calcutta was never built on lost opportunities, and without the moral and financial support from those of us who are not blessed with the muse, we might one day wake up and find that yet another familiar and respected landmark has just vanished from our midst.

The Planning Commission arrives at the conclusion that "in spite of concerted efforts for the mobilisation of the available resources and their utilisation as proposed in the second plan, the impact on the two-fold problem of employment and under employment will not be as large as the situation demands." This is hardly reassuring. What is, however, more so is the stress laid on "the importance of implementing the plan so as to maximise its production and employment potential by co-ordinating complementary investments, planning the use of resources such as water, electricity, etc. which are created by the operation of the plan and ensuring that the services of newly-created institutions and agencies are brought effectively within the reach of those whom they are intended to benefit."

Engineering and Transport

CALCUTTA PORT UNDER FIRST PLAN

ONLY ONE-THIRD OF TOTAL SCHEMES COMPLETED

BECAUSE of the shortage of time and various other factors, the Calcutta Port Commissioners have completed only 33 percent of the projects covered by the first five year plan, says an official Press Note issued last week. The expenditure so far incurred amounts to Rs. 3.48 crores. All the projects which have not been completed are being taken over to the second plan.

To handle the increased traffic during the second plan, Calcutta port has chalked out a six-point programme in order to eliminate delays in the loading and unloading of ships. Mr. N. M. Ayyar, Secretary to the Union Ministry of Transport, outlined it at a Press conference on Monday. He said that when the Government of India launched the first plan, the Port Commissioners formulated a scheme to improve port facilities, which had deteriorated during the war and due to lack of replacements. The scheme, as originally drawn up, was to involve an expenditure of Rs. 8 crores. But with the inclusion at a later stage of certain large projects, the estimated outlay rose to Rs. 12 crores. Of this amount, a little over Rs. 8 crores was to be advanced by the Government as loans, interest-free for the first seven years and repayable in 23 equated annual instalments with interest. With the exception of the river training project, such as the Fulta-Hooghly River scheme, all other items of work had either been completed or were in active progress.

Loading Ores and Coal

Mr. Ayyar declared that a notable contribution had been made under the first plan, particularly to the export trade in ores, which now amounted to about a million tons a year from Calcutta port alone. Various ore dumps scattered all over the port area had been abolished, and in their stead a central depot created, with adequate rail facilities and a storage capacity of 300,000 tons in Sonai, near the two Dock Systems. There was a proposal for the conversion of No. 5 Berth, King George's Dock, into a fully mechanised one berth. Work on the first project had been completed. It had eliminated delays in shipment and quickened the turn-round of wagons. The construction of No. 5 Berth, King George's Dock was still in progress. This scheme envisaged the loading of ores either from the dumps at the back of the quay, or from railway wagons stationed at the shed, into a series of tipping wagons mounted on trolleys travelling on a light railway track with the help of diesel locomotives, the line of motion of the trolleys being perpendicular to the quay. With the undersides of trolleys coupled to an endless wire rope worked by an electric reversible winch, the trolleys would undergo a movement towards, and away from, the quay cranes, the tipping wagons would be picked up and emptied into ship's hatches and subsequently released for filling up. This mechanical equipment was capable of loading about 2,000 to 2,500 tons of ores a day. A new mechanical coal loading plant was being erected at No. 18 Berth, Kidder-

pore Docks, at an estimated cost of Rs. 41.24 lakhs. It was likely to come into commission by the end of this year. It was of the belt conveyor type and could ship about 3,000 tons a day.

Development under Second Plan

As both money and time were short, the development schemes undertaken under the first plan had to be considerably restricted in scope with the result that only those which were considered pressing and inescapable could be included. New development schemes had now been framed under the second plan. These could be classified as follows:

(a) Strengthening the quay walls of Dock No. 1 Kidderpore Docks and construction of a general cargo berth at King George's Docks—Rs. 2,75,00,000.

(b) Construction of a new sale tea warehouse and additional transit accommodation—Rs. 1,30,00,000.

(c) Construction of new harbour craft—Rs. 4,80,00,000.

(d) Improvement of dry dock facilities and facilities for ship repairs, etcetera—Rs. 57,10,000.

(e) Purchase of mechanical handling appliances and six diesel locomotives—Rs. 40,00,000.

(f) Improvement of water supply to shipping—Rs. 55,00,000.

(g) Housing for Class III and IV staff—Rs. 1,00,00,000.

(h) Improvement of other facilities, including fire protection works—Rs. 1,11,61,000.

The total cost of the schemes is Rs. 13,02,14,000.

Eliminating Delays

To eliminate delays in loading and unloading ships, the Port Commissioners had the following proposals:

(1) Introduction of a third shift for working a selected number of vessels.

(2) Purchase of six mobile cranes to handle iron and steel.

(3) Purchase of six more mobile cranes and mechanical appliances such as fork lifts, trolleys and jetney motors.

(4) Preventing congestion at transit sheds by the creation of special dumps at various points in the port area capable of accommodating about 20,000 tons of steel and 8,000 tons of cement, the import of which in large quantities was expected in coming years. Storage accommodation was also being found for large imports of foodgrains.

(5) Re-arrangement of cranes at berths, so as to ensure that berths where ships carrying steel were unloaded would be provided with adequate crane facilities.

(6) Speeding up the execution of development projects covered by the first and second plans.

These measures, combined with steps to eliminate procedural and other delays, would enable the port to handle the additional traffic during the second plan, including the plant and machinery intended for the various steel plants, according to Mr. Ayyar. This depended to a very great degree on the maintenance of industrial peace, and the Commissioners on their part would spare

no effort to preserve peaceful relations with their labour.

BRITISH FIRM GETS INDIAN RAILWAY CONTRACT

A contract for 5,000 wheel sets worth £487,500 for the Indian railways has been secured for a British firm through the Indian branch of the United Steel Companies. Competition for the contract was keen, and bids were also put in by Italian and Japanese manufacturers of railway gear. It has been arranged that Mr. C. F. Ryan, chief of the railway materials department of the successful tenderer—Steel, Peech and Tozer, of Sheffield—should visit India to discuss technical and other matters with the officials of the Indian railways. Messrs. Steel, Peech and Tozer were recently awarded a contract to supply the U.S. Air Force with 14,000 rings for use in landing wheels. They are specialist engineers in wheel equipment.

T.W.A. ORDER FOR JET AIRLINERS

Trans World Airlines have announced an order for 30 jet Convair "Golden Arrows", called the world's fastest airliner today. The order brings to 71 the total number of modern aircraft to be acquired within the next three years.

T.W.A. had previously announced that they would add eight Boeing 707 long-haul jet transports and 25 Lockheed 1649A airliners to their existing fleet. Currently they are taking delivery of eight new Super-G Constellations, to add to their present fleet of 20 of these aircraft. Early in 1957, delivery will start on 25 Lockheed 1649A Super Constellations. Delivery of the Boeings will commence during 1959 and later that year the Golden Arrows will be added. The Golden Arrows powered by four General Electric CJ/805 engines, will cruise at a speed of 609 miles an hour at an altitude of 35,000 feet. A medium range designed jet liner, it is built to operate efficiently on flights of 200 to 3,000 miles. The jet liner is the only aircraft of its type today that will have the ability to fly in and out of 5,000-foot runways, the common maximum length of many airports.

NEW RAILWAY MARSHALLING YARDS FOR STEEL PLANTS

Two new marshalling yards are to be built on the South-Eastern Railway to cater for the goods traffic for the new steel plants at Bhilai and Rourkela. The Railway Board has ordered surveys to be undertaken immediately by the South-Eastern Railway in connection with the lay-out of these yards. The yard at Bhilai is needed for handling 13 goods trains daily carrying raw materials for the plant and three trains daily carrying finished products from the steel plant. This yard will also deal with the anticipated increase of traffic to the tune of ten goods trains daily due to heavier movement from the Central India coal fields. The yard at Rourkela will handle more than 13 trains of raw materials and two trains of finished products daily for the steel plant and also for the general traffic on the main line.

INDIA ORDERS MORE SUGAR MILL MACHINERY FROM U.K.

A Paisley (Scotland) engineering firm, which recently executed a £1 million order for machinery for sugar factories in Punjab, has received a further order from India. The new machinery is for mills in the Madras area, and will be capable of crushing 1,000 tons of sugarcane in a day. The value of this new order is estimated at £500,000. The two Punjab factories also have a crushing capacity of 1,000 tons daily, and the firm has previously manufactured machinery for sugar mills in India, the Philippines and South America. Since 1840, the manufacture of sugar-making plant has centred near Glasgow and Paisley. There are six firms in the district engaged in this work. The sugar-machinery industry employs some 4,000 people in the area.

REGIONAL BUSINESS EFFICIENCY EXHIBITION IN U.K.

Britain's first postwar regional business efficiency exhibition, to be held at Southampton in September, will be opened by Capt. D. W. Sorrell, Master of the Cunard liner *Queen Mary*. He has been invited by the organisers—the Office of Applied Science and Business Equipment Trades Association—as a tribute to his ship's 20 years of efficient Atlantic service. The opening will take place on the eve of the twenty-second anniversary of the launching of the 80,000-ton liner by the late *Queen Mary* in 1934. The office equipment industry will be showing some of Britain's latest electronic accounting machines at the exhibition. These include a machine which counts 20,000 bank-notes an hour, and another for counting coins of any shape and of all nations at the rate of 2,000 a minute.

A representative of the association states that film stars arriving on the *Queen Mary* the night before the exhibition should note that there will be on view a machine for opening fan mail at 500 letters a minute and sealing up replies at 300 a minute. The association announces that exports of British office equipment of all types during the first five months of the year attained the new record of £10,090,694. Principal customers were Australia, Canada and the United States. A notable feature was the increase in demand for portable typewriters and more complex book-keeping and accounting equipment.

Bombay

AN INDUSTRIAL WAGE POLICY FOR INDIA

CONDITIONS OF ECONOMIC GROWTH (FROM OUR BOMBAY CORRESPONDENT)

AN Indian delegate to the International Labour Conference in Geneva, Mr. Naval H. Tata, had some significant comments to make on the wage problems of this country. He said: "In a planned economy of the type India is envisaging, we are very rightly told from all quarters at all stages that all interests have to be subordinated to the general upliftment of the masses. The industrial worker, as a natural consequence under such circumstances, has to mark time, and go without further embellishments in his wages inspired by the international yardstick of international security, so long as a fair wage, as laid down by national tribunals, in conformity with the standards of national income, is paid to him. Despite international acceptance of a dynamic wage policy, he will have to be in the straitjacket of a static wage structure, without maligning the employer for his lot, because the employer for his part of the sacrifice, will be subjected to crushing taxation to create added resources for the national economy." His comments came at a time when a sub-committee of the Joint Consultative Board of Industry and Labour is busily engaged in formulating principles on the basis of which the existing wage level at any given time can be tested against the concept of a living wage. This, it is held, will enable the necessary adjustments to be carried out in accordance with agreed policy.

Presumably, the need for adjustment is felt to have arisen in view of the recent statement of the General Secretary of the Indian Trades Union Congress that a uniform increase of 25 percent in the industrial wage level was called for in present economic circumstances. Industrial circles here believe that a formal demand to this effect will be made by labour once the sub-committee concludes its deliberations and agrees on a theoretical formula to determine living wages in concrete terms. Another perplexing question that is likely to crop up for settlement between employers and workers is the problem of bonus payments. This follows the recent agreement between the Bombay Mill-owners Association and the textile workers. Based on the Ahmedabad pattern, the agreement provide for a minimum payment of 15 days' earnings to a maximum of three months' wages, depending on the surplus available with employers at the end of each financial year after allowing for taxation, depreciation and reserves for rehabilitation. If no profits are made, the management will still be liable to pay the prescribed minimum in terms of bonus.

Rising Real Wages

Working conditions in the textile industry profoundly influence Bombay's industrial labour force. Employers here believe that a similar demand will soon be made by workers in other establishments. Custom has transformed the nature of bonus from an *ex gratia* payment to an obligation, subject to the accruing of trading profits. It now seems that a further transformation is imminent, which would make bonus payments compulsory, irrespective of actual profits or losses. However, the main problem relates to the industrial wage level. The fact is that the real wages of the Indian worker have steadily risen from 78.4 in 1947 to 102.7 in 1954, taking 1939 as the base. In effect this means that the loss in real wages since 1939 has been more than made up during the first plan period. If the social security measures introduced since 1947 are taken into account, then real wages must be held to have risen from 15 to 20 percent. In terms of percentages, this represents a spectacular increase by any standards.

In support of his claim for increased wages to labour, the General Secretary of the Indian National Trades Union Congress, relied on two points. He maintained that a higher wage level was justified because the second five year plan provided for expanded employment which would mean a higher turnover requiring less profit margins for the maintenance of industry. It is difficult to follow the line of this argument. Certainly, the second five year plan provides for the creation of additional employment, but an increased wage bill in the present context does not necessarily mean an automatic increase in the rate of wages. In actual fact, a substantial proportion of the expected increase in the national income will have to be spent in paying new workers and upgrading the earnings of those who subsist on a marginal level through part-time or under-employment. Neither is it certain that this expanded employment will lead to a higher turnover in the sense that lower profit margins will be adequate for the maintenance of industry. The major development schemes envisaged under the second plan relate to heavy industry and large-scale projects which are not expected to show profits for some considerable time. The fundamental object of the second five year plan is to create the means of production. Obviously this necessitates capital expenditure of a considerable magnitude, the returns on which accrue after a certain time lag. The second point that the consumer also stands to benefit by a reduction of prices consequent on the increased output envisaged under the second plan seems to be equally fallacious. There is no reason to believe that there will be a fall in prices. On the contrary, the present indications are that the price level will rise as the second plan proceeds. The reason for this is that the plan does not envisage an increase in the output of consumer goods which would have a deflationary effect. It is no secret that the Government itself fears an inflation-

ary spiral and is standing by to take effective measures as and when necessary. One of these measures is likely to be an inflow of consumer goods from abroad. Such imports would worsen the foreign exchange position of the country, but the fact that such a step might have to be taken indicates the precarious balance of the internal price level.

Industrial and Rural Wages

In these circumstances, it is open to question whether an indiscriminate rise in wages would not actually contribute to the inflationary trend. Clearly, labour will have to make sacrifices no less than the consumer or the producer, as Mr. Tata rightly pointed out. Mr. Tata also referred to the difficulty of reconciling "an ever growing demand for an improved wage structure from an industrial worker of an urban area with the comparatively low standard of wages, amenities and social security of the non-industrial worker of the rural area." This point is well made, for clearly there must be a balance between urban and rural earnings if a lopsided development is to be avoided which would be harmful to the economy. It is curious that no attempt is made to relate wages to productivity, nor is this factor taken into account when arriving at a living wage. The *Indian Labour Gazette* comments: "During the period 1943 to 1954, the index of rural earnings has advanced geometrically at an average rate of 3.9 percent per annum. During the same period the corresponding rise in the index of productivity has been of the order of 2.7 percent. It is therefore clear that the rate of growth in real earnings has on the whole been higher than in productivity, whether we look at the question from the point of view of the rise since the pre-war years or since 1943-1944, from which year the index of real earnings showed a more or less steady upward movement."

Increased productivity implies, among other

factors, the use of modern methods of production. Mr. Tata accurately summed up the attitude of labour on this point when he said: "Take, for example, the question of modernisation of the process of production. In these days of highly competitive international markets and in the context of technological improvement all round, the need to keep pace with technological progress elsewhere is a compelling necessity to ensure the very survival of the nation. If in such a crucial decision of a country, trade unions offer passive resistance to schemes of modernisation of equipment and rationalisation of labour on grounds of temporary displacement of workers, then that country must face the inevitable dilemma with which many countries had the misfortune to deal, namely, to produce more by modernising at competitive cost to serve the interest of consumers and maintain exports by facing mutually agreed doses of rationalisation with the minimum of unavoidable unemployment—and survive; or to maintain uneconomic production at prohibitive cost to consumers, losing foreign markets by resisting retrenchment and modernisation unequivocally—and perish. So long as the workers are allowed to share equitably in the resultant profit arising through higher productivity consequent on modernisation and rationalisation, the worker can hardly be justified in choosing the latter alternative. In the ultimate analysis, he is the loser if he chooses to do so, and yet it is tragic to find that he is not convinced of the former." The trade unions would be well advised to give this warning their earnest consideration. It matters little whether the employer is a private company or a State enterprise. The fact remains that more must be produced with maximum efficiency at decreasing costs. In such a process, labour itself stands to gain the most, protected as it is by statutory safeguards. A grave responsibility rests on the trade unions of India who must now shoulder the burdens of economic development, in addition to the privileges attached to trade unionism.

When you have a journey to make, think first of flying. It's the fastest way to travel, and often the only way to get there in time. You escape all the tedium of a long journey—flying is so quick, convenient, and wonderfully comfortable.

INDIAN AIRLINES CORPORATION

4-Chittaranjan Avenue, Calcutta. Telephone: 23-5141 (6 lines)

Completely at ease in one of Pan American's Super Stratocruisers to the U.S.A.

RELAX—you're on the World's Most Experienced Airline

Enjoy yourself. You're surrounded by comforts and services unmatched anywhere in the air. Luxuries that are solidly backed by an unequalled record of air pioneering and accomplishment.

You're flying with the only airline that has made over 53,000 Atlantic crossings, over 35,000 Pacific crossings and 2,500 Round-the-World flights.

Pan American has carried 13 million passengers overseas in dependable speed and comfort—has flown over one billion miles overseas—and has 1200 pilots who have flown over one million miles each, 100 who have flown over three million miles.

This record is unmatched by any airline anywhere. So next time, choose Pan American—the only airline that gives you the priceless advantage of Round-the-World experience on every Tourist and First-class flight.

Let your Travel Agent arrange your trip—his services are free. Or call Pan American in:

INFLATION STILL CAUSES ANXIETY

THE TREASURY'S PROGRESS REPORT MAKES GUARDED COMMENTS (FROM OUR LONDON CORRESPONDENT)

NOT all of our worries about the way the fight against inflation is going will be set at rest by a candid progress report on the economy which appears in the Treasury's latest *Bulletin for Industry*. This provides the facts and figures on which the Chancellor's recent speeches appear to have been based, but expresses only guarded satisfaction with the adjustments which have already taken place and permits itself no more than the cautious forecast that if further increases in total wages, dividends and profits—which are held equally responsible for inflation—are no more than in line with increases in the country's output, there is a reasonable prospect that the recovery made so far will be consolidated and that the rise in prices will be checked. After stating that wage rates had risen over twelve months by 8 percent, and published company profits by 11 percent, it makes this severe comment: "Increases of this kind are incompatible with price stability." This may or may not be a hint at the trend of official policy. The report supplies some of the arguments for the Chancellor's hopes of a price "plateau". Consumption seems to have fallen slightly this year, and within the total consumer demand, sales of cars and durable consumer goods have fallen heavily. The resources set free by this restraint have moved into export and productive investment, both of which have continued to expand. Exports are still rising, though more slowly, whereas although imports are also still rising their rate of increase has been even slower. This could also be due to some running down of stocks. If all this readjustment is really going in the right direction, as the report suggests it is, we should soon see a sharp recovery in total industrial production. But the great question of wages has yet to be resolved.

Steps Towards Stability

So far as lies within its power, without the resort to physical controls which its critics favour, the Government is certainly playing its part. The Prime Minister's meetings with employers, the T.U.C. and the chairmen of the nationalised industries have turned out to be much more productive than could have been hoped for earlier. All the nationalised industries except civil aviation are now committed to some form of limited or temporary price "freeze". They have, therefore, done as much as the representatives of the British Employers' Confederation and the Federation of British Industries urged that they should do. The

example has now been set. The manufacturers know that some at least of their basic materials and services will stay constant in price for a time. The ball is in their court. The next step will be a joint meeting between the Government, the nationalised industries and other employers to consider how policy can be co-ordinated in an effort to reduce inflation. This is not likely to take place, however, until after the Commonwealth Prime Ministers' conference, which has only just opened, and before it is held there may be separate meetings between the Prime Minister, the private employers and the T.U.C.

The Government has also made, at least in part, one other contribution it had to make—a £100 million cut in its own expenditure. Mr. Macmillan has presented an "interim" list of proposed economies to save £76 million a year to the House of Commons and promised a further list later. Of this, £50.5 million will come from the defence programme or from defence expenditure by civil departments (including £4 million on Civil Defence), and £25.5 million from civil expenditure. It would be impossible to give the detailed figures here, but Colombo Plan expenditure is to be cut by £80,000. The Chancellor's announcement has met with a mixed reception. Its critics are sarcastic, but the City has welcomed it as a useful contribution to the fight against inflation as representing a substantial reduction in the money put out by the Government and therefore an easing of the pressure on the country's resources. It is true, of course, that part of the savings is being achieved by postponement of spending rather than its complete elimination, but even temporary relief could be useful at the present time of abnormal pressure.

Labour Uncommitted

The response of the employers to these moves can hardly be other than favourable in view of their conditional promise to play their part if the Government and the nationalised industries played theirs. There was also a proviso regarding the co-operation of labour, of course, but so far that party to a four-cornered agreement has preferred to hold its own counsel. The employers are certain to pass the ball, and it will be interesting to study the reactions of the T.U.C. In themselves these will not be conclusive, or the last word. That rests with the individual unions—the rank and file—and he would be a brave man who would be prepared to make a forecast about them, especially now when the Government's present policies producing redundancy in certain industries are giving rise to much perturbation and even resentment. On the other hand, the situation does strengthen the hands of the employers in resisting what in fact are suicidal suggestions—such as a three-day week, as the Standard car workers have asked for to prevent the dismissal of some thousands of workers rendered redundant by automation, or the demand of the shipbuilders and the engineering unions generally for a 40-hour working week without loss of earnings and higher holiday pay—calculated to price our products out of world markets, particularly against those of Germany and Japan.

Change in Cotton Import Rules

The open general licence under which raw cotton is at present imported will be amended from 4th July to exclude raw cotton from dollar countries. This change, which is authorised by the Board of Trade, does not represent a change in the policy of the Government, which said recently that it would be unwilling to impose further restrictions upon imports; it is, in fact, a short-term measure to meet special conditions, and has been made with the full agreement of the industry. From 4th July dollar cotton will have to be imported under open individual licences, but there will be no restrictions on the amount exported. The change has been made to meet difficulties which have arisen over the import of American cotton for which dollar aid has been available.

The recent decrease in the size of lots of American cotton imported under the general licence has made the procedure necessary to document each lot irksome to the smaller traders, with the result that the lots actually documented have left untaken a large proportion both of the direct dollar aid and of the dollar amounts available under the agreement with Pakistan. Dollars have been spent needlessly, and traders have incurred unexpected interest charges in triangular transactions with Pakistan. The open individual licences will be issued on condition that importers comply with the appropriate procedure for all imports of American cotton for which dollar aid is available. The sole reason for the change is to ensure the full use of the dollar aid funds to finance the import of American cotton; at times when no dollar aid funds are available, importers will be free to import American cotton under licence in the ordinary way. Moreover, imports of cotton from dollar account countries other than the United States and of American cotton shipped from third countries will not be affected.

Foreign Exchange Relaxation

Another small restriction has been dropped in the London foreign exchange market. The Bank of England states that in future all non-residents—whether banks, individuals or private institutions—may deal direct in non-sterling currencies in London. Previously only banks were allowed access to the London market for spot and forward exchanges in non-sterling currencies. Now individuals abroad, particularly in the E.P.U. countries, will be able to deal with the London banks instead of using their own banks as intermediaries.

This may reduce the rates slightly. Similar facilities will also now be allowed to residents of Canada and the American account area.

British Participation in Overseas Development

The Bradford Dyers Association Ltd. appears to have found the answer to participation in overseas countries with a keen nationalist consciousness without too great a loss of its own interests and, indeed, to the ultimate benefit of both parties. This leading textile finishing combine has just announced the conclusion of an agreement under which it will reduce its present holding in Beida Dyers S.A.E. but will continue to be represented by five members on the board of that concern, and will be responsible for its technical direction. The transaction will increase the funds available to the British combine for financing the further development of its activities in the United Kingdom and abroad though, of course, its share of the earnings of the Egyptian company will be reduced. It has disposed of part of its interest in Beida Dyers to the Banque Misr and its associated textile companies. This amounts to 80,000 shares of £E4 each at a price of £E20 a share. Bradford Dyers will now hold only about 22 percent of the capital of the Beida company, the control of which has passed from it to the Banque Misr group. This group includes two cotton spinning and weaving concerns and a silk weaving concern, and the agreement provides that all the group's dyeing, finishing and printing shall be transferred to Beida Dyers. In order to deal with this additional work, Beida Dyers has undertaken to make substantial extensions to its works which, among other things, will enable it to process wool and rayon textiles as well as cotton. To finance these extensions, Beida Dyers will double its capital by offering to its shareholders one new share of £E4 for each existing share. The Bradford Dyers has undertaken to apply for its quota of the new issue, which will cost approximately £E225,000.

Floating Showroom for British Goods

A new line in the export trade is being planned—a floating sales showroom in the form of a ship full of samples of British goods, which will sail round the Caribbean and parts of the Latin American coast. It will visit a total of 442 ports (all having 10,000 or more inhabitants), and will deal directly with the main importers at each call. As well as providing the salesroom space, the promoters plan to give demonstrations, negotiate orders, obtain bank reports on the credit of customers, compile market reports and generally operate as a clearing-house for all orders and inquiries. It is estimated that it will cost at least £100,000, apart from the cost of the vessel, to put the whole plan into operation, but the sponsors hope that the attractions of the scheme will appeal to firms who would not normally be able to afford their own travelling representatives in these markets. Meanwhile, they are canvassing the plan in industry and will soon be putting it to manufacturers in the Midlands.

Defence Bonds Conversion

The Treasury has announced that a conversion offer will be made to holders of 2½ percent Defence Bonds bought between 1st October, 1946, and 31st March, 1947, and maturing between October, 1956, and 31st March, 1957, of which about £31 million are outstanding. Holders will be invited to exchange their holdings into 4½ percent Defence Bonds (conversion issue) on the tenth anniversary of the date of purchase. If they accept the offer, they will be paid interest at 2½ percent per annum for the period from 1st October, 1956, to the date of exchange, and at 4½ percent from the date of exchange to 31st March, 1957. The maturity premium of £1 percent will be paid on the date of exchange. If the offer is not accepted, interest on the maturing bonds will cease on the tenth anniversary of the date of purchase.

Terms of Trade Improve

Record exports and the consequent narrowing of the visible trade gap to £31.9 million are now shown to have been accompanied by a favourable movement in Britain's terms of trade, as measured by the ratio of import to export prices. While the index of import prices (1954=100) was unchanged at 106 for the third successive month, the export price index rose by one point to 105. The result was an improvement of 1 point in the terms of trade from 102 to 101.

Brevities

The official retail index price was 103 on 15th May, the same figure as at 17th April. The Ministry of Labour, announcing this, said that between 17th April and 15th May there were increases in some prices, including those of tobacco, but food prices on balance fell and there were also seasonal reductions in coal prices.

Aircraft exports this year are running 77 percent higher than a year ago—the best performance put up by any British industry. In the first five months the value was £45,440,000, and in May alone £8,338,000.

Twelve electric power experts from Asian and Far Eastern countries are to visit Britain on a study tour from 26th July to 31st July.

It is understood that the Soviet representatives who have been discussing with the Board of Trade the extension of Anglo-Soviet trade, following on the Bulgarian and Khrushchev visit to London, have suggested the visit to London of a full Soviet trade delegation. The British Government has apparently agreed in principle to this, and the details of the visit are now under discussion with the Soviet authorities.

Uttar Pradesh

U.P. OPPOSED TO CEILINGS ON LAND HOLDINGS

PLEA FOR NEW ENGINEERING AND ALUMINIUM UNITS

(FROM OUR LUCKNOW CORRESPONDENT)

THE U.P. Government has decided that ceilings on land holdings should not be imposed on existing farms, as the imposition may impair the efficiency of agricultural production. At a conference in Naini Tal convened by the Chief Minister last week, it was decided that the Government should also press for an increase in ceiling should they be fixed by the Planning Commission. In the Government's view, there is no need to fix ceilings on the existing holdings as long as they follow the cropping method laid down by the Agriculture Department. The conference also expressed the view that the more urgent need was to counteract the bad effects of fragmentation by consolidating holdings. During the first five year plan, 100 co-operative farming societies have been established in U.P. and it is proposed to establish a similar number in the second plan period. But the success of these societies is not as spectacular as has been claimed, and in recent months, the State's Minister for Agriculture, Mr. Charan Singh, has been openly campaigning against co-operative or collective farming. In his opinion, these terms are interchangeable. In a collective or co-operative system, he argues, a member might possess the right of leaving and of getting back his land, but that works for the failure of the system. On the other hand, if the farmer is not given the right to get back his land, it is difficult to persuade him into joining it.

Support for Small Farming

He holds the view that per unit production in agriculture has little relation to the size of holdings, for a plant of wheat requires the same space to grow and time to mature irrespective of whether it is sown in a small piece of land or in a vast farm. The factors which govern the yield are water, seed and manure and the amount of attention given by the farmer. All factors being equal, according to Mr. Charan Singh, the yield is likely to be more in a small unit than in a big one. He also sees in small holdings the advantage of their employment potential, and greater opportunities for the peasant to develop his personality.

The State Government has framed rules on the ownership of land which comes out of river-beds as a result of rivers changing their courses. The vagaries of rivers like the Ganga, the Ghagra, the Rapti and the Ghandak often cause disputes among landowners, and the rules lay down that all such disputes will in future be settled according to the Bengal Alluvial Diluvial Regulation of 1925. These rules cannot, of course, apply to ownership when the parties to the dispute are two State Governments. There is a long-standing border dispute between U.P. and Bihar, and both Governments have approached the Centre for a decision. A few years ago, the Ganga ate away whole villages in the Ballia district of U.P. and vast tracts of fertile land were lost. The river changed its course and the land appearing on the other side of the river was promptly appropriated by the villagers of Bihar. It remains in their possession; U.P.'s area has, to that extent, shrunk. The Centre takes the philosophic attitude that whether in Bihar or U.P., the land remains in India, but the villagers of U.P. who have been affected by the river do not share it.

State Government's Loss

While the State Government has welcomed the imposition of uniform prices of steel, it has reacted adversely to the decision on State trading in cement. The U.P. Government owns one of the largest cement factories in the country. The State Planning Minister, Mr. C. B. Gupta, has stated in an interview that equalisation of prices of indigenous and imported cement would affect the Government's revenue, as it would cost Rs. 10 a ton to the State Government and the saving of an equal amount to the private consumer. The Government has decided that indigenous cement will be used for Government constructions and that imported cement will be offered to private individuals. According to Mr. Gupta, the State will get about 20 percent of its demand, and private consumers, including institutions such as schools and hospitals, not more than 25 percent of theirs. The increase in cement prices will mean an extra expenditure of Rs. 3 crores for the Government.

Industrial Investment

A 57-page memorandum dealing with various industries has been submitted by the U.P. Merchants Chamber to the Birla Fact-finding Committee on Industries. The Chamber at the outset complains that top Government personnel charged with the formulation of policies are adept in the art of evading issues and that this is more marked in U.P. than elsewhere. According to the memorandum, the State accounts for the employment of only about Rs. 85 crores of productive capital in about 20 manufacturing industries. These industries pay, as wages and salaries, a sum of Rs. 19 crores, in order to add only Rs. 27 crores to the value of the raw materials they used. The ex-factory value of their products and by-products is about Rs. 140 crores. These figures, if viewed against the background of U.P.'s area, population and resources,

are depressing. The net balance of trade of the State, calculated on the basis of these figures and in terms of existing rail, road and river-borne trade, is stated to be adverse.

Referring to the sugar industry, the memorandum states that the total capital employed in U.P. sugar mills is about Rs. 40 crores. The industry provides employment to about 68,000 workers a day on an average. The main problem which confronts it is the poor recovery of sugar. The cane price accounts for at least 50 percent of the cost of finished sugar. In the opinion of the Chamber, a fair price for cane should not exceed Re. 1 a maund. The present price, as statutorily fixed, varies from Rs. 1.4 to Rs. 1.7. This price applies to cane of any quality, irrespective of its sugar content. Cotton textiles are one of the oldest industries in U.P. It provides employment to about 44,000 persons daily. The mills in Kanpur were erected originally to manufacture coarse and medium cloth. Of a total of 29 mills in U.P., nine have already closed down, but three of them are expected to resume working with a change in management. The sales tax on cloth, which is higher in

U.P. than in the neighbouring States, has increased the price of cloth by 6½ percent.

Dealing with the possibilities of fresh industrial units in the State, the memorandum says: "There are immense possibilities for the establishment of structural engineering units to feed the area covered by U.P. and the neighbouring areas. Of the 10 specific categories of structural fabrication determined by the Board of the National Industrial Development Corporation Ltd., five categories can be profitably manufactured in U.P. There is also considerable scope for the establishment of an electrical engineering unit. The State Government, in consultation with the reputed firm of foreign electrical engineers, applied for permission to establish and operate a large electrical engineering unit, but this proposal was not favoured, and Bhopal has been chosen as the location. With the prospect of power being made available by 1960 at rates at which the aluminium industry gets power in other States, there is no reason why a plant for the production of aluminium from bauxite cannot come into existence if the scheme is sponsored, and supported by the State Government."

How banking helps the FISHING INDUSTRY

THE seas around India's 2,900 miles of coastline are rich in fish. In the South of India, particularly, fishing is an important industry. It supplies food and many valuable by-products, some of which are exported.

In South India alone, the fishing industry employs over 1½ lakhs of people, and its catches are worth about Rs. 3½ crores every year.

Banking has greatly helped the growth of the fishing industry. The facilities and guidance of a good bank, such as the availability of ready funds when needed, and the collection of dues in any part of the country, are an essential part of good organisation in the fishing industry.

We at Palai are proud that so many leading fishing firms, and indeed important firms in every field of business and industry in South India, employ the complete banking service we offer:

Current Accounts — Demand Drafts — Telegraphic Transfers — Investments — Letters of Credit — Bill Collection — Deposits — Loans and Overdrafts — Confidential Credit Reports, etc.

If you have business interests in the South, it will pay you to open an account with us. Our 25 branches are strategically located, 23 in important South Indian business centres and two in Delhi and New Delhi; and we have correspondents in all important Indian cities. We offer a fully comprehensive banking service at each office.

Our clients can make deposits at any of our correspondent banks, situated in all important Indian towns, and have the amounts credited to their accounts at any of our branches.

PALAI CENTRAL BANK LTD.

Head Office: PALAI, TRAVANCORE-COCHIN
Branches at: Madras, Cochin, Quilon, Trivandrum, Alleppy, Mangalore, Bangalore, etc. Also at: Delhi and New Delhi.

FALL IN U.S. TEA CONSUMPTION
HIGH PRICES REDUCE IMPORTS
AND SALES

THE year 1955, though next to 1954 in point of tea sales in the United States, was not a good year. After six years of continuous promotion, tea sales fell back instead of following the expanding pattern begun in 1952. This is the conclusion of the U.S. Tea Council's annual report reviewing the course of tea business in 1955. When the campaign started in the U.S. market, the objective was to halt the downward trend of sales and consumption. This trend was reversed, and in 1953 and 1954, the total sales increased by 6.4 percent. Then, in 1954, when one might reasonably have expected sales to move up, two things occurred further to boost tea sales in the U.S. market. First, sky-rocketing coffee prices accelerated tea sales. Secondly, tea prices, which had begun to rise in the fall of 1953, continued their ascent through 1954. This was so because it is a phenomenon of business that buyers continue to purchase in a rising market, up to a point, to protect themselves in anticipation of further price increases. It was anticipated that 1955 must be a year of consolidating gains—some artificial—which had been made in the preceding years.

Total imports and sales of tea during the year were 105.5 million lbs. and 106.6 million lbs. respectively. The last four years have seen the total U.S. tea market increase by 10.7 percent—a heartening achievement in view of the cautious predictions by most partners in the Council that the first years of operation would probably be needed merely to halt the downward trend. The U.S. tea industry's mood at the year's end was aggressive and optimistic, though it expected to have a tough year. It did. It fought a good fight and feels, with cautious optimism, that the future is good. There are several indices which are used throughout the year to measure tea's position. The general picture revealed by these indices is one of serious trouble early in the year, and recovery in the second half. Here is a brief review of what they showed during the year.

Wholesale to Retail Movement

During the first three months of 1955, wholesale to retail movement of tea was exactly even with the same period in 1954. But there were storm clouds on the horizon. High coffee prices, which had been of great help to tea in 1954, returned to a level that was for some time below normal. Then, tea at the retail level received several price increases and consumer resistance seemed to be almost instantaneous each time. At the end of the first six months of 1955, sales to groceries and institutions showed a decrease of 4 percent over a similar period in 1954. By the third quarter, the wholesale to retail movement of tea was off 10 percent. Year-end figures show a decrease of 5 percent for 1955 compared with 1954, a significant decrease, it is true, but a remarkable gain from the position at the end of nine months. Import figures tell much the same story. For the six-month period ending June, imports declined by 25 percent. The month of June alone showed imports recording a startling fall of 58 percent as compared with June 1954. From that point on, however, the situation improved and at the year's end, the net fall in imports amounted to 8.8 percent. It is, perhaps, worthy of note that the 12-month period ending 31st January 1956, was slightly ahead of the comparable preceding period.

Another indication of tea's 1955 performance was revealed throughout the year in the index of sales by packers who contribute to the Tea Council. Through the first three months, sales were even with 1954. By the end of September they were 3.5 percent behind and fell by 4.6 percent through

November. The index for December however shows sales up by five percent over December 1954, which is interpreted as a definite sign that tea has come through the year in a strong position to move forward once again. The final year-end figures show a 4.5 percent decrease in 1955 as compared with 1954.

The conclusions to be drawn from tea's experience in 1955 are:

1. Sharply fluctuating tea prices in any year cause hardship to producer and distributor alike.
2. Tea's fortune in any one year is extremely sensitive to the pressures of competition, the level of prices and the effectiveness of consumer advertising and merchandising efforts.
3. The Council's campaign needs to be sharpened and strengthened in future to produce a new period of dynamic growth for tea in the U.S.A.

The following indicates the main features of the Council's 1955 campaign and also give a brief idea of the campaign for 1956.

Consumer Advertising

Consumer advertising is the most important function of the Council, accounting for 72 percent of its expenditure in 1955. Since 1953, advertising has consisted exclusively of filmed television commercials for hot tea and a combination of television and large outdoor posters for iced tea. As funds are not sufficient to cover the entire country, the Council concentrates its hot tea advertising in 12 most important markets, which account for 40 percent of retail grocery food sales. During the iced tea season, 18 more markets are added which account for 13.6 percent of grocery food sales. In 1955, it continued this strategy, but the advertising problem became complicated by the fact that even though it was covering the same geographic pattern as in the past, the market for messages had actually increased by 50 percent due to the increased purchase of television sets by families within the Council's coverage area.

This increase in T.V. set ownership naturally led the television stations to adjust their rates upward and the Tea Council, along with other advertisers, was caught in this rising cost spiral. The average rate increase in its markets for 1955 was 19.98 percent. The Council was working with the following appraisal of the growing weakness in its schedules: (1) its audience composition had slowly been shifting from family groups to viewing situations composed predominantly of women; and (2) the average weekly frequency in most markets—i.e. the average number of times a week each T.V. home in a market received the Council's messages—was dropping by as much as 50 percent. The paradox of the situation in 1955 was that while it was reaching more "total people" than ever before as the market had increased by 50 percent, it was reaching these people less frequently; and as it reached out to more people it began to talk more and more to women and much less to the family group. Nevertheless, the efficiency of its dollar expenditure has continued to improve from an estimated cost of \$2.30 in 1953 and \$1.13 in 1954 to less than \$1.00 in 1955 for every 1,000 T.V. homes that actually received a Tea Council advertising message. Efficiency of advertising is not the same as effectiveness of advertising, however, and, as the new media plans now being developed are analysed, it is apparent that it cannot achieve the level of effectiveness it had several years ago unless it can (1) increase its frequency of impression on the total market by the 50 percent it has lost thanks to the growth of its audience; and (2) meet increased T.V. costs with increased expenditure.

Retail Support

In grocery stores, packers who contribute to the Council's campaign and retailers who handle the final sale teamed up to give its advertising slogans, themes and ideas the heaviest support ever. About 75 percent of the total 1955 tea sales occurred in

grocery stores, and the support tea received was a fine testimonial to the materials which the Council produced and made available for use in this field. In restaurants, special display material was distributed upon order every working day of 1955 to packers, importers and restaurateurs of every size and description. The Council's material for both the hot and iced tea campaign is carefully designed to fulfil three functions: (1) it must repeat the advertising themes and ideas; (2) it must be an effective tea salesman with the consumer; and (3) it must be acceptable and desirable to every type of out-of-home feeding establishment.

Media of Publicity

Besides television, other important media were chosen. About 40 major stories on tea were placed in magazines. Approximately 25,000 daily and weekly newspapers, consumer, farm, trade magazines and employee publications covering many millions of consumers received 60 publicity releases during the year. Two thousand radio stations received programme material on a regular monthly basis. Figures for radio coverage are astronomical and it is impossible to estimate the audience reached by these messages. Special attention was given to the school programme through the Council's exhibition at the Annual Convention of the American Home Economics Association. During 1955, the Council concentrated on two major projects in the out-of-home market: (1) Armed Forces tea; and, (2) the automatic tea-maker.

Research is a constant companion of the other activities at the Tea Council. It is used in its qualitative and quantitative aspects to help the Council judge market sizes and positions; to study past consumption trends and indications of future likelihoods; to assemble marketing data on competitive beverages; to study and report on physical or chemical characteristics of tea which might be of major importance to the promulgation of the campaign or to individual subscribers to the Fund.

LONDON TEA SALES

AT last week's London tea sales, the 72,603 packages on offer realised an average price of 3s 11.38d a lb., against 4s 1.11d in the previous sale and 3s 7.59d a year ago. Plain broken pekoe was quoted at 2s 11.1d a lb. nominal; in the previous sale, 3s nominal.

Prices obtained by some of the companies are given below:

	No. of packages	Average a lb.
Amalgamated	461	3/4 1/2
Amblamana	486	4/3 1/2
Anglo-American	726	4/1 1/2
Anglo-Ceylon	462	5/0 1/2
Assam Doora	1,130	3/6 1/2
Assam Frontier	1,223	6/10 1/2
Bagracote	454	2/10 1/2
Borhat	523	3/10 1/2
British Assam	219	2/11 1/2
Budha Beta	540	4/10 1/2
Central Provinces	939	4/6 1/2
Consolidated Estates	650	5/2 1/2
Cons. Tea and Lands	4,650	3/1 1/2
Dekhari	1,177	4/5 1/2
Doora	809	3/2
Eastern Produce	1,632	4/11 1/2
Imperial Company	1,231	3/4 1/2
Jhanzie	249	3/11 1/2
Jokai	1,266	4/3 1/2
Jorehaut	928	5/3 1/2
Kanan Devan	1,260	4/2 1/2
Lanka Plants	342	5/3 1/2
Lunova	1,236	4/9
Makum	936	4/10 1/2
Rajawella	786	5/0 1/2
Malayalam	835	3/9 1/2
Scot. Tea and Lands	792	5/11 1/2
Sepinjur-Bheel	390	3/0 1/2
Shakomato	779	3/6 1/2
Standard	431	5/9 1/2
Travancore	438	4/0 1/2
United Planters	594	5/3

NO CHANGE IN TEA EXPORT DUTY

The Government of India has issued a notification fixing the price of tea, for the purpose of determining the export duty, at Rs. 2-13-11 a lb. against Rs. 3-5-0 a lb. fixed on 1st June, 1956. There is no change in the existing rate of duty of 6 annas a lb.

COCHIN TEA SALES

At Sale No. 18, the 1,500,000 lbs. of tea on offer met with fair demand. Commons and Low Mediums were 2 to 3 annas lower and the Medium sorts were 1 to 2 annas easier. There was a good demand for better liquoring teas, and all Middle East types and Whole Leaf grades were fully firm.

U.K. TEA STOCKS

U.K. tea stocks in London and provincial warehouses during the week ended 22nd June totalled 106,403,990 lbs., against the previous week's 109,000,980 lbs. The total amount to be landed was 14,853,740 lbs. Deliveries during the week totalled 11,059,950 lbs. and landings 8,462,960 lbs. The total afloat on 22nd June was 35,442,546 lbs., including 22,781,990 lbs from Calcutta, 1,248,000 lbs from Chittagong, 4,500,566 lbs from Cochin and 6,912,000 lbs from Colombo.

INCREASING THE JUTE CROP

RESEARCH ON FIBRE RATIO
NEGLECTED

A PRESS Note issued recently states that the Government of West Bengal is to undertake a programme of intensive cultivation of jute under the second five year plan. The total yield of jute in West Bengal during 1950-51, it stated, was 1,496,000 sales and the target for the second plan is 2,321,000 sales. It is planned to achieve this not so much by expanding the area under jute, but by intensive cultivation through the distribution of better seed, replacement of broadcast sowing by line sowing, plant protection measures and the increased use of fertilisers. It is also proposed to encourage the growing of early varieties of white jute instead of daissee, so that a crop of aman paddy can be taken off the same land. All this is very good, but it will be noticed that there is no mention of the development by selection or hybridisation of new strains which give a greater yield of fibre per plant. The authorities have thus not yet realised that this is the key to the solution of the problem of raw jute supplies at prices which will enable jute goods to compete in world markets. Granted, this is a long-term policy, as opposed to the Government's programme which is short-term, aiming at quick results; but the latter is uneconomic in that it involves the increased production of useless material whereas the "more fibre per plant" policy means less waste.

In a recent address on jute production, Dr. P. R. Deshmukh, Union Minister of Agriculture, expressed his satisfaction at the fact that the yield of fibre per acre in 1955-56 was 14.1 percent more than in 1954-55. This satisfaction must, however, be qualified by the possibility that the increase may have been due, in part, to better weather conditions during the growing period. If this increase were apparent over a period of, say, five years, it would be more significant. In his address, Dr. Deshmukh made no reference to the yield of fibre per plant. As he is ex-officio President of the Indian Central Jute Committee, it appears that the research section of that body has not yet been impressed by the importance of this factor. It may be thought that we are stressing this matter too often, but it is so important to the well-being of the industry and the prosperity of growers that frequent repetition is necessary until it is recognised by the authorities as a key point.

As for the Government of West Bengal's plan for intensive cultivation, it is felt that propaganda for the 1957 crop should be intensified and should be getting under way now. There is visual evidence of more line-sowing this year, and wheel-hoeing is also being done on a small scale. Between now and harvest-time, the Indian Central Jute Committee's field staff could demonstrate to growers who have sown broadcast this year the advantages of line sowing. Wheel hoes could be lent to growers to prove that they are efficient and labour-saving. The advantages of timely weeding to help the growth of the plants may easily be demonstrated at present, since many fields are choked with weeds. It is necessary to do all these things now in preparation for the 1957 crop.

Raw Jute Pushes Up Gunnies

The Calcutta jute goods markets have not yet fully recovered from the slump which followed the announcement about re-sealing 2½ percent of the industry's loomage. Throughout the week, all prices fluctuated sharply, but none more than the speculative B 'twills. Operators continued to unload their holdings on a weak market, and consequently had to accept low prices. The ready position was hammered down, but forward rates continued to enjoy a substantial premium. The situation improved on rumours that the Argentine had put out feelers for hessian for delivery from July up to the end of the year. So far, there are no reports of any business having been placed, but the mere fact that interest has been shown from this source after such a long interval has influenced the market to a greater extent than the reported quantity would normally warrant. Further bullish factors have been a call by the Burmese Government for tenders or the supply of sacking cloth and bags, and the report that the Indian Government has purchased small quantities of heavy goods. All these have combined to lift the forward sections, and the weaker ready positions have risen in sympathy.

The pattern of the market showed considerable changes over the week-end, when the very strong fibre rates extended their influence to jute goods and carried them up to the week's highest level. At this stage, Calcutta mills attempted to take advantage of the rise, and were keen sellers of forward shipment goods. But their selling pressure and the rapid rise frightened potential buyers, so with demand diminishing, interest waned. Prices remained at the improved levels, however, held up by raw jute. The rise in fibre prices was accentuated over the week-end, when they jumped by Re. 1 a maund. The initial increase was started by a large mill group indicating that it wanted quick delivery jute ex Calcutta, or ready bills of lading and rail receipts. It had to get this because the jute on which it had been depending had not been delivered. As more and more sellers requested the extension of delivery dates, mills were forced to obtain ready jute to tide them over the period of the extensions. Prices soared, and matters were brought to a head over the week-end by adverse reports from upcountry agencies and transshipment

stations about the severe disruption of transport and communications as a result of flooding. The areas most affected were the Kishanganj and northern Bengal districts. As a large backlog had already developed because of the shortage of wagons at these stations, mills were hard put to it to obtain supplies. Stocks in the Cossipore markets were reported to be down to about 300,000 maunds, which was about a quarter of what they were a month ago. Imports barely averaged 25 wagons a day, which did little to alleviate the position. Conditions in the jute-growing areas showed little improvement, although the weather was more favourable. Disappointing New Crop reports increased sellers' determination to seek higher prices. Towards the close, both sides appeared to be reluctant to make a move, so business in the raw jute markets came to a standstill.

Argentine Jute Goods Stocks

An agency report says that stocks of hessian and bags at present held by the Argentine Government are estimated to be sufficient for local requirements until February 1957, according to Buenos Aires traders. These stocks were imported through the official buying agency at the old exchange rate of 7.5 pesos to the dollar, and the bags are still subject to the ceiling price of 2.43 pesos each. Current imports would have to be effected at the new rate of 18 pesos to the dollar. Traders appear unwilling to import unless the Government removes the ceiling price. The central bank, it is reported, has advised importers that it will allow the import of about 30,000 tons of hessian, but no trading is reported so far.

THE JUTE MARKETS

Manufactured Goods: At the opening of the Calcutta jute goods markets last Thursday, prices were steady on rumours of interest from the Argentine for forward shipment. B 'twills reacted with a rise of 12 annas for ready delivery and Re. 1 for October-December, bringing quotations up to Rs. 103-2 and Rs. 104 a 100 bags respectively. Hessian also advanced, and 40in. 10oz. was quoted at Rs. 37-14 for ready shipment and Rs. 38 a 100 yards for October-December. Prices fluctuated sharply throughout the day, and mills sold small quantities at the higher level, but there were very few buyers and prices soon fell back under selling pressure. Conditions improved later, especially in heavy goods, when rumours were circulated about tenders for the supply of sacking to the Burmese Government. By the time the market closed on Friday, rates had reverted to the opening levels, and steadier conditions prevailed. After the week-end, the market opened on a very firm note because of a soaring fibre market. Heavy goods advanced by Rs. 1-8 to Rs. 2, while hessian improved 6 or 8 annas. Jute goods at this stage depended entirely on the raw jute market for support. But as the sudden rise caused buyers to withdraw, and mills again showed selling pressure, prices fell. There was little change on Tuesday when an easier jute market and a general lack of buying interest for goods caused prices to ease.

At the close, the heavy goods market was slightly easier in the absence of business, but hessian was unchanged. Opening quotations on Wednesday morning were as follows:

	Ready	July	July-Sept.	Oct.-Dec.
	Rs.	Rs.	Rs.	Rs.
46in. 8oz.	31-10	31-8	31-4	31
40in. 10 oz.	38-2	38-6	38-9	38-4
B 'twills	103-10	104-4	104-12	105
Heavy Ceers				
(Plain)	102-8	103-8	104-8	105
A 'twills	125-8	126-8	127-8	128-4
Liverpools	115-8	116-8	117-4	117-8
Cornsacks	104-12	105-8	105-8	105-12

Raw Jute: There was a steadier tendency in the Calcutta jute markets at the opening last Thursday. Quotations advanced to Rs. 27-8 basis for Assam Bottoms and the general undertone was one of confidence. Sellers withdrew from the market almost completely as several mills showed interest in quick delivery jute or ready bills of lading. Premium prices were paid, and although quotations remained at the same level, buyers experienced increasing resistance from operators. Reports from upcountry agencies did little to relieve the situation, and eventually proved the main cause for the sudden bullish tendency that developed over the week-end. Communication and transport difficulties, added to the already acute shortage of wagons, brought the movement of jute almost to a standstill. With local stocks at a very low level, it was inevitable that prices should rise. General indications on Monday morning showed a rise of Re. 1 a maund to Rs. 26-8 for July shipment, but even at this rate sellers were reserved. No business was reported, but on Tuesday mills purchased about 50,000 maunds on the basis of Rs. 28 and Rs. 27-12 a maund for July shipment and ready bills of lading.

Business concluded over the week was on a very small scale, and consisted mainly of ready bills of lading or local delivery jute. Prices for Dhubri-Northern jute varied between Rs. 27 and Rs. 28 a maund basis Bottoms for one month's shipment and ready bills of lading, while other Assam

agencies got Rs. 27-8 a maund. There was a demand for Assam Tossa and premium rates up to Rs. 28-12 were paid. Local Northern and local packing jute came in for a good deal of interest; prices covered a wide range between Rs. 27-8 and Rs. 29 a maund for assortment and Bottoms only quality for ready delivery. Small lots of Daissee Mesta were also purchased at Rs. 25-8 to Rs. 26-8 a maund for July delivery.

No business was reported in New Crop jute, but Pakistan Cuttings were done for Old and New Crop at Rs. 120 to Rs. 124 a bale for July and July-August shipment.

At the close, following small business at the full market rates, quotations rose by 8 annas a maund and on Wednesday morning were as follows:

Indian Jute (Old Crop Kutch)	Landed at Mills Rs. a md. basis	Shipment
Lower Assam	28	July
Northern	28	"
Murshidabad White	27 3/4	"
Daissee ex Agency	29	"
Daissee ex Cossipore	28-8	"
Daissee Mesta	27	"
Local Packing (Northern)	28	"
Bimil	26-8 for F.A.Q.	"

New Crop (Kutch):

Lower Assam-Northern 26-8 Aug.-Sept.
Tossa is quoted at 8 annas to Re. 1 a maund above the price for white jute.

Pucca:	Rs. a bale	Shipment.
Mill Firsts 2/3	180	Aug.-Sept.
Mill Lightnings 2/3	165	"
Mill Hearts 2/3	150	"
S. G. Daissee 2/3	175	"
L. G. Daissee 2/3	160	"

Pakistan Jute (New Crop Kutch):	Landed at Mills Rs. a md. basis	Shipment.
	Bottoms	
Jat	30	August-Sept.
District	29-8	"
Pucca:	Rs. a bale	Shipment.
Mill Firsts 2/3	200	July-Aug.
Export Firsts 2/3	180	"
Export Lightnings 2/3	163	"
Jat Cuttings	115	Aug.-Sept.

The local Cossipore markets were very steady. Recent mill purchases and poor imports depleted stocks, and sellers were asking for very high prices. Very little business was reported after the week-end, although buyers were still interested at lower rates. Total imports over the week again showed a decline, and wagon arrivals amounted to only 215 wagons. At the close, quotations were based on Kishanganj jute at Rs. 28-4 a maund for garsat quality. There is nothing to report from the Daissee markets, and quotations in Sheoraphuli were based on Rs. 29 a maund for garsat quality. New Crop reports from the Daissee districts continue to be disappointing, although recent weather conditions have been more favourable than of late. A dry spell with plenty of sunshine is now required to dry the plants and promote growth.

Mofussil: The main news from upcountry areas is about transport difficulties. The movement of jute has been severely handicapped because the rise in river levels has breached lines and flooded rail heads and transshipment stations. As a result, upcountry markets are very steady and sellers are reserved. At the close, quotations in Dhubri are based on Rs. 24-8 a maund basis Bottoms.

THE FOREIGN JUTE MARKETS

IMPROVEMENT IN BUSINESS
(FROM OUR DUNDEE CORRESPONDENT)

WITH Pakistan maintaining a very firm front for raw jute, buyers of jute yarns and cloth have been displaying more interest and business is somewhat better. Consumers of all jute materials have been allowing their stocks to run very low and these need replenishing. Some trades are still very depressed in the U.K., such as the motor industry and carpets, two of those which consume large quantities of jute cloth and yarns. Shippers of the fibre from Pakistan have been a bit irregular in their reports of the conditions prevailing in that country, but there seems no doubt that the position is very firm, with some prices tending to advance. While Mill Firsts are available yet at £91, because of the lack of demand for these, Mill Lightnings have risen to £82 lowest for August-September and £85 for July-August, and Mill Hearts are offered at £77 10s and £80 respectively, c.i.f. U.K. Only a week ago, Mill Lightnings were freely offered at £81 and Mill Hearts at £78 for August-September.

Daissee-3 is still at £91 for good marks and £81 for grade, with Tossa-3 at £100 and fours at £90 for grade marks, September-October, c.i.f. U.K. Dundee spinners have bought very moderately and are not much inclined to pay higher prices, though some have had to pay about £2 more than the rates mentioned above for July-August shipment. The mentioned above for July-August shipment, but it is understood that about 800,000 bales have been sold for shipment by the end of August and that a large amount of jute has to be transported to the ports in time. Hessian yarns are in rather better demand, also sacking qualities. Yarns are busier in all sizes but twists and the small sizes are dull. Demand for jute cloth remains steady but quantities are small. Prices are firm and unchanged. Samnugur Jute Company Ltd. made a trading loss of £25,741 for the year ending 31st December last. Titagur lost £37,076 and Victoria £16,091. The respective balances carried forward to this year were £58,994, £83,548 and £80,501.

BETTER GENERAL DEMAND
AT TEA EXPORT SALE

MIXED TREND IN DUSTS

AT Sale No. 4, held on 2nd and 3rd July offerings at the Export auction consisted of 25,400 packages. There was a better general demand for all kinds, except thin plain liquoring sorts. There was more demand for low medium teas, which were firm and sometimes dearer, but the plain and thin descriptions were easier, and most of the withdrawals were of this category. Well-made and twisted leaf grades sold well, while the C.T.C. teas on offer were keenly competed for, the very best realising high prices. Good liquoring teas from all districts were a strong feature and these generally sold at dearer rates. Darjeelings followed the trend of the previous sale, being irregular and generally easier, except for a very few flavoury sorts, which met with a good demand. There was good demand for tippy teas, and these sold well.

	Quotations	
	1956	1955
Clean Black Pekoe	1120 to 1140	2150 to 300
Plain B. P.	176 to 186	250
Medium Assam B.P.	240 to 260	270 to 280
Best CTC Assam B.P.	380 to 400	2140 to 2150

At the Internal Sale, Dust offerings amounted to 19,350 packages, comprising 12,000 chests of New

Season's and 7,350 chests of Old Season's teas. Black Middle East types and useful liquoring C.T.C.'s were keenly competed for and were generally dearer, but for the remainder of the offerings, there was only a fair demand. Mediums were an irregular 2 annas easier, while poor liquoring kinds met with a weak enquiry and withdrawals were heavy. Residue descriptions received fair support, but at generally easier rates. Darjeelings with any flavour were a strong feature.

	Quotations	
	1956	1955
Medium Doars	180	240 to 250
Dust		
Medium Assam	1120 to 1130	Nominal 270 to 280
Grainy Dust		
Best Assam	300	380 to 340
CTC Dust		

Other grades offered consisted of 240 chests of New Season's and 300 chests of Old Season's teas, for which there was a fair enquiry, but at generally lower rates.

FREIGHT RATES FALL

CHARTERING activities were at a very low ebb last week and charterers again succeeded in reducing rates. A fixture for American coal has been reported at 67s representing a further decrease of 1s. Wheat was arranged from New South Wales to India at 142s 6d for July loading or 140s if August, also from West Australia at 130s August or

127s 6d September and charterers are now quoting 127s 6d for August, 125s for September. A number of vessels were arranged to Karachi with grain from U.S. Gulf Ports at \$ (U.S.) 28.44. In the time charter section, a reduction of 1s was achieved with the fixture of a Liberty at 44s, delivery Persian Gulf redelivery Japan. A statement in the Press, attributed to Mr. N. M. Ayyar, to the effect that "working at Calcutta Port at present was going on satisfactorily" has come as a shock. It is felt that there must be some misunderstanding since Mr. Ayyar with his long experience of this Port must know that working is very far from satisfactory, and various committees have been formed in an endeavour to improve the present position.

LINSEED DULL

The market has been dull and featureless during the past week. The continued disparity between seeds and oil prices, and the lack of demand for oil, has forced several small crushers to suspend production temporarily. The availability of seeds remains poor as the movement of wagons is restricted, but the withdrawal of buyers from the market has resulted in a small price decline. The daily turnover has been negligible. Oil prices have registered a further fall in sympathy with lower overseas advices; business has been confined to meagre enquiries from local consumers. Latest quotations are as follows: Ready Rs. 21-4 a maund; July-August Rs. 21 a maund.

HIDES AND SKINS

The market was dull. Stocks were higher than in the previous week.

Bazaar Sales

(Between 26th June and 2nd July, 1956)

Cowhides: Wet salted (Ord.) 45,000 pcs. on the basis of Rs. 4-12 to Rs. 7; Wet salted (Slaughtered) 19,600 pcs. on the basis of Rs. 12 to Rs. 20.

Goatskins: Wet salted (Daisse, Killed) 73,660 pcs. on the basis of Rs. 150 to Rs. 170, Rs. 260 to Rs. 280 and Rs. 330 to Rs. 340; Assam-Dinajpur-Jalpaiguri 23,600 pcs. on the basis of Rs. 225 to Rs. 245; Patna-Pakur 1,050 pcs. on the basis of Rs. 150 to Rs. 175.

Bazaar Stocks

(2nd July, 1956)

Cowhides: Wet salted 3,29,000 pcs.
Goatskins: Wet salted 59,000 pcs. Assam-Dinajpur-Jalpaiguri 55,500 pcs; Muzafferpore-Patna-Pakur-Purneah-Kissenganj 2,11,000 pcs.

SUGAR MARKET

During the week ended 4th July, sugar sales in the Calcutta market averaged 2,500 bags daily. Arrivals a day were 3,500 bags and stocks totalled 30,000 bags. Rates for ready sugar ex-Kantapur delivery were Rs. 32-9 for ordinary grain and Rs. 33-12 for big grain. Ex-mill delivery rates ranged from Rs. 29 to Rs. 30-4. The market was steady.

SHELLAC MARKET QUIET

During the week ended 3rd July, the market was steady at the beginning, and quiet at the end. The range of quotations was as follows:

Pure Buttonlac	Rs. 145, 145-8, 143 buyers, 143-8 value.
Lemon No. 1 Shellac	Rs. 145 done and buyers, 145-8 to 143 buyers.
Lemon No. 2 Shellac	Rs. 141 to 139 buyers.
F.O. Std. 1 Shellac	Rs. 136-8 buyers, 135/136 done and buyers, 134-8 buyers.
Pure TN Shellac	Rs. 130, 128, 129-8, 128-8 buyers.
4% I.T.N. Shellac	Rs. 123, 123-8, 121, 122 buyers.
No. 1 Kusmi Seedlac	Rs. 132 to 128-8 value.
No. 2 Kusmi Seedlac	Rs. 127-8 value, 125 buyers, 124-8 value.
Fine Bysaky Seedlac (Marbhum)	Rs. 124 buyers, 124/123 done and buyers, 121-8 buyers.
Fine Bysaky Seedlac (C.P.)	Rs. 121-8, 119-8 buyers.
Ordinary Bysaky Seedlac (C.P.) under 5%	Rs. 117 done and buyers, 117-8, 115-8 buyers.
Ordinary Bysaky Seedlac (C.P.)	Rs. 112 done and buyers, 112, 110 buyers.
Kireelac	Rs. 55, 55-8, 55 buyers.

Shipments during June were 31,239 packages comprising shellac 16,577 packages, seedlac 10,581 packages, buttonlac 954 packages and others 3,127 packages.

NAMES OF COMPANIES TO BE EXHIBITED
IN LOCAL LANGUAGES

There appears to be some doubt in commercial quarters as to the language or languages to be employed in exhibiting the names of companies outside their offices or places of business as required under sub-section (1) (a) of section 147 of the Companies Act, 1956. Unlike the corresponding section (section 73) in the now repealed Indian Companies Act of 1913, which required the name of a company to be shown in the English language, section 147 (1) (a) of the new Act enjoins on all companies to print or affix their names, outside their offices or places of business in the language or one of the languages in general use in the locality. Exhibition of the names in English alone without, at the same time, showing them in the local language will not, therefore, be sufficient compliance with the requirements of the section. Attention of all concerned is drawn to this change brought about by the new Act.

COMPANY AND PUBLIC NOTICES

BENGAL POTTERIES LIMITED.

NOTICE.

NOTICE is hereby given that the Forty-fourth Ordinary General Meeting of the Bengal Potteries Limited, will be held at the Registered Office of the Company, 45, Tangra Road, Calcutta, on Tuesday, the 17th July, 1956, at 4-0 P.M. to transact the following items of business:—

1. To receive and adopt the Directors' Report, the Audited Balance Sheet and the Profit and Loss Account for the year ended 31st December, 1955.
2. To declare dividend.
3. To elect Directors.
4. To appoint Auditors for the current year.
5. Placing of the appointment of Allied Distributors & Co. as Sole Selling Agents of the Company, before the meeting under Section 294(3) of the Companies Act, 1956.
6. To consider, and if thought fit to pass the following Resolutions as special resolutions:—

Special notice under Section 261-(2) has been received from shareholders sponsoring the Resolutions.

(1) "Whereas Messrs. Bharat Ram Bhagat & Co., Managing Agents, are authorized by the Agreement of Managing Agency to appoint Directors to the Board of this Company and, as such, under Section 261-(2) of the New Companies Act, a Special Resolution is required for appointment as elected Director of any person who is an Officer of any other body corporate under the management of the said Managing Agents, and whereas Shri D. N. Sen being a Director, and hence Officer of the Jay Engineering Works Ltd., a Company under the management of M/s. Madan Mohan Lall Shri Ram & Co. (Private) Ltd., one of the partners in the Firm of M/s. Bharat Ram Bhagat & Co., and is also an elected Director of this Company, who retires this year by rotation and whereas it may be construed that M/s. Jay Engineering Works Ltd., is under the Management of M/s. Bharat Ram Bhagat & Co., Managing Agents of this Company, it is resolved that the said Shri D. N. Sen be and is hereby elected a Director of this Company."

(2) "Whereas M/s. Bharat Ram Bhagat & Co., Managing Agents, are authorized by the agreement of the Managing Agency to appoint Directors to the Board of this Company, and as such, under Section 261-(2) of the New Companies Act, a Special Resolution is required for appointment as elected Director of any person who is an Officer of any other body corporate under the management of the said Managing Agents and whereas Shri Bishan Swarup Agarwal being an Officer of the Jay Engineering Works Ltd., a Company under the management of Messrs. Madan Mohan Lall Shri Ram & Co. (Private) Ltd., who are one of the partners of the Firm of M/s. Bharat Ram Bhagat & Co., and is also an elected Director of the Bengal Potteries Ltd., who retires this year by rotation and being eligible, offers himself for re-election, and whereas it may be construed that M/s. Jay Engineering Works Ltd. is under the management of M/s. Bharat Ram Bhagat & Co., Managing Agents of this Company, it is resolved that the said Shri Bishan Swarup Agarwal be and is hereby re-elected a Director of this Company."

(3) "Whereas Messrs. Bharat Ram Bhagat & Co., are authorized by the Agreement of the Managing Agency to appoint Directors to the Board of this Company, and as such, under Section 261-(2) of the New Companies Act, a Special Resolution is required for appointment as elected Director of any person who is an Officer of any other body corporate under the management of the said Managing Agents, and whereas Lala Shri Dhar is a Director of Messrs. Madan Mohan Lall Shri Ram & Co. (Private) Ltd., partner in the Firm of M/s. Bharat Ram Bhagat & Co., and hence is an Officer of M/s. Madan Mohan Lall Shri Ram & Co. (Private) Ltd., and is also an elected Director of the Bengal Potteries Ltd., it is resolved that the appointment of the said Lala Shri Dhar as a Director of this Company be and is hereby approved."

Explanatory Note:—

With reference to Sub-Section 3 of Section 261 of the Companies Act, 1956, the references which make the Resolutions necessary are stated in the body of the Resolutions. Strictly speaking, the Jay Engineering Works Ltd., is not under the management of

the Managing Agents of this Company within the meaning of the Companies Act. However, it will be advisable to pass a Special Resolution as required under the Act on the presumption that Messrs. Bharat Ram Bhagat & Co., being a Firm of which Messrs. Madan Mohan Lall Shri Ram & Co. (Private) Ltd., is a partner, this Company and the Jay Engineering Works Ltd., may be considered to be under the management of the same Managing Agents. It is, therefore, considered advisable that these Resolutions be passed at the Annual General Meeting of the Company and accordingly notice under Sub-Section 3 of Section 261 is being given to the Shareholders.

7. To consider and if thought fit, to pass the following Resolution as Ordinary Resolution:—
- That the Registers and documents of the Company required to be maintained and disclosed under the Companies Act, 1956, an inspection of which is allowable under Provisions of the said Act, will be kept open for inspection by the persons entitled thereto, between the hours of 2 P.M. to 4 P.M. on any working day of the Company, except during such periods when such registers, etc., are closed under provisions of the said Act.
8. As per Section 176(2) of the Companies Act, 1956, every Shareholder of the Company is entitled to appoint a Proxy if he does not attend the meeting personally. The Proxy need not be a member of the Company. Proxies must be deposited with the Company duly completed 48 hours before the time of the meeting.

The Share Transfer Register of the Company will be closed from 5th July to 23rd July, 1956, both days inclusive.

By Order of the Board of Directors,
BHARAT RAM BHAGAT & COMPANY,
Managing Agents.

45, Tangra Road,
Calcutta.
Dated, 22nd June, 1956.

By Order of the Board,

BIRD & CO. (PRIVATE) LTD.,
Secretaries.

Chartered Bank Buildings,
Calcutta, 29th June, 1956.

THE UNITED PROVINCES SUGAR COMPANY,
LIMITED.

THE Directors at a Board Meeting held to-day decided to recommend to the Shareholders in General Meeting the payment of a dividend of 15 per cent for the year ended 30th September, 1955.

A notice calling the Annual General Meeting for 31st July, 1956, will be published shortly.

By Order of the Board,

JAMES FINLAY & CO., LIMITED,
Managing Agents.

Calcutta, 27th June, 1956.

THE UNITED FLOUR MILLS COMPANY,
LIMITED.

NOTICE is hereby given that the Annual General Meeting of the Members will be held at the Registered Office of the Company, No. 4, Bankshall Street, Calcutta, at 4-00 p.m. on Wednesday the 25th July, 1956, for the following purposes:—

- (1) To receive and adopt the Directors' Report and the Audited Accounts for the half-year ended 30th November, 1955.
- (2) To declare a Dividend.
- (3) To elect a Director.
- (4) To appoint Auditors and to fix their remuneration.
- (5) To consider and if thought fit to pass the following Resolution as a Special Resolution:—

"Resolved that the appointment of Messrs. Chaudri & Co. as Sole Banians of the Company on the terms and conditions set out in an Agreement dated 27th March, 1945 for the period 1st January, 1945 to 31st December, 1959, be and is hereby approved."

- (6) To consider and if thought fit to pass the following Resolution as a Special Resolution:—

"Resolved that an Agreement be entered into between the Company and Messrs. Shaw Wallace & Co. for a period of 5 years from 1st April, 1956 whereby the Company will purchase from Shaw Wallace & Co., and Shaw Wallace & Co. will sell to the Company goods of the description and quantities set out hereunder at the prices hereunder described, delivery of such goods to be as mutually agreed, such Agreement not to impose any obligation upon either Shaw Wallace & Co. or the Company for the former to sell or the latter to purchase more than the maximum quantities as specified below, but all purchases of goods in excess of such maximum quantities hereunder specified shall be purchased and sold under and in pursuance of the terms of the Agreement above referred to."

Description of Goods.	Maximum Quantity.	Price.
New Gunny Bags	2,50,000 per annum	prevailing price at dates of orders

The Transfer Register will be closed from the 18th July, 1956 to 25th July, 1956, both days inclusive.

N.B. A member entitled to attend and vote at the Meeting is entitled to appoint a Proxy who need not be a Shareholder of the Company. If it is desired to use a Proxy, the same should be completed in the manner described by Section 176(5) of the Companies Act, 1956, and delivered at the Registered Office of the Company at least 48 hours before the time fixed for the Meeting.

By Order of the Board,

SHAW WALLACE & COMPANY LTD.,
Managing Agents.

Calcutta, 25th June, 1956.

Explanatory Statement for item No. 5 above.
Under the provisions of Section 294 of the Companies Act, 1956, the appointment of Sole Selling Agents prior to the 15th February, 1955 requires to be confirmed by the Members in general meeting.

Chaudri & Co. have been actively associated with the Company since its inception and the prosperity of the Company is in no small measure due to their industry, energy and foresight. They have acted as Sole Banians for the Company for very many years and an Agreement, officially appointing them as such for 15 years as and from the 1st January, 1945, was entered into on the 27th March, 1945. The remuneration currently payable to the Sole Banians under this Agreement is as follows:—

- (1) Commission of 1% on all sales of Wheat Products with an additional ½% on all sales guaranteed by the Banians.
- (2) Commission of 1% on all sales of old gunnies, refractions and waste products.

The Agreement is open to inspection by any Member of the Company at the Registered Office on any working day during normal office hours.

Explanatory Statement for item No. 6 above.
Under the provisions of Section 360 of the Companies Act, 1956, a special resolution is required to approve a contract between a Company and its Managing Agent, or an Associate of its Managing Agent, for inter alia, the sale, purchase or supply of any property, movable or immovable.

For very many years, the Company has obtained its requirements of Gunny Bags from Messrs. Shaw Wallace & Co. who, as one of the leading Calcutta shippers of Gunnies, are in a position to obtain the Company's supplies for it on favourable terms. It is therefore considered that the Company will benefit by a continuance of this arrangement.

Since the Managing Agents are a Partner in the firm of Shaw Wallace & Co., the latter might be held to be an associate of the Managing Agents within the meaning of the Companies Act, 1956, and this resolution is required to regularise this arrangement and authorise its continuance.

Mr. C. I. M. Arnold, a Director, is an employee of Shaw Wallace & Co. Ltd. and is to that extent interested in the above Agreement.

AN EDUCATION IN

Oil

This is not an abstract design in an Art Class. It is one of the chemist's symbols for the structure of hydrocarbons. And hydrocarbons are the most important ingredients in oil—that vital fluid on which India depends so much for the progress of industry, transport and agriculture.

In the Assam Oil Company, chemists, physicists and geologists are engaged all the time on research, helping to find new sources of oil, devising more efficient and more economical methods of refining oil and discovering new uses for oil.

The results of such research mean that more and more of the oil and oil products which are needed for our expanding economy come direct from India's own oilfields.

A member of the
Burmah Group of Oil Companies

ASSAM OIL
COMPANY

does

COAL COMPANIES

O. P. F. and Dd. indicate Ordinary Preferred Ordinary Founders' and Deferred shares respectively. P. next to the name of the company indicates that the company also has Preference Shares. Figures in "accounts closed" column indicate the months of the calendar year in which accounts are closed. For Managing Agents refer to the Key (last page) under the numbers indicated.

STRENGTHENING THE INDEFINABLE

THE GROWING IMPORTANCE OF THE COMMONWEALTH

THIS year's Commonwealth Prime Ministers' conference has raised more than the usual number of questions, and has done just as little as any other to provide the answers. The Commonwealth is one year older, but it is still as great a mystery and every bit as definition-defying as it has always been. It remains all things to all members. It is gaining in moral significance and losing in strategic. Its form is indistinct, its objects obscure and its unity tangled in a mass of conflicting ideology. Yet it has emerged from this year's discussion stronger than ever and bursting with hopes for the future. It seems, in other words, to have acquired that characteristic of being able to thrive on compromise and contradiction which has always been associated with the nation whose empire its various members once comprised. It is possible that those who are seeking something more tangible in form and positive in purpose are doomed forever to disappointment, if not to damage the Commonwealth concept altogether. Or perhaps the present unco-ordinated stage represents merely the building of a moral platform from which can be launched the more positive and concerted policies of the future. The riddle remains, and the conference which has just been concluded in London has done conspicuously little to solve it.

There is no doubting the advantages of an annual meeting of democratic Prime Ministers, whether Commonwealth or otherwise. The exchange of views is of inestimable value, so is the opportunity of reconciling a variety of differing viewpoints on any particular matter which may invite radical changes in thinking. That is why discussion at this year's conference has featured so prominently and successfully the changes at present taking place in the Soviet Union. That is a topic on which democratic Governments throughout the world may share similar points of view, whether in fact they continue to identify the interests of their respective countries with a "neutralist" policy or a committed one. The meeting has, therefore, provided something more than a forum in which the problem of Ceylon's British bases can be settled amicably and the difficulties of the Kashmir dispute be appreciated for the intricate problem they are. It has helped towards formulating a democratic outlook towards a phenomenon of world-wide interest and significance, one which is bound to be reflected in all subsequent policy decisions made individually by the various participants. More than any single topic since the war, that of Russia's changes has helped to crystallise the like-mindedness of the Commonwealth countries which everybody has suspected but which nobody has yet identified satisfactorily. It is certainly premature and incorrect to say that the passive and the active attitudes towards the cold war have been reconciled, but it does appear that a basis of mutual sympathy might have been created which will bring these two differing and often conflicting attitudes of the free world closer to a single concerted democratic point of view.

*

Opportunities for the discussion of differing viewpoints are not the only ones the Prime Ministers' conferences provide. The warm welcome given Mr. Nehru by Britain's leaders and general public was ample evidence of the respect which a western nation, brought up until recently to think of an eastern one in purely colonial terms, now has for that country's independence. Despite the efforts of the mass-circulation Beaverbrook Press, and many die-hard politicians besides, to convince the average Briton that he has been robbed of an empire and that Mr. Nehru is the symbol of that deed, it is quite clear that he does not believe a word of it—that he now accepts India as a nation whose independent views, as much as its sovereignty, must be respected. What is true of India, will soon be true of Malaya, the West Indies, Nigeria, the Gold Coast and the many

other nations which will soon be enjoying full national status. The tenure of colonialism in those places will be shortened because public opinion in the imperial country finds its disappearance easier to accept, and the changeover will be smoother because the colony can see from India's example that continued association with its former rulers, which it unconsciously recognises as being both inevitable and desirable, can be tolerated without any loss of self-respect. It is true to say that the existence of the Commonwealth and the opportunities for co-operation which it provides, are among the chief influences accelerating the peaceful transformation of what was once the British Empire into a group of independent powers united in their adherence to individual freedom and democracy.

*

The strategic aspect of the Commonwealth association has been considerably modified by the arrival of the hydrogen bomb. So have considerations of strategy the world over. That does not mean, as a body of opinion in the east sometimes appears to think, that all questions of national defence are now outdated. Throughout the entire course of

remains more private than is good for it. Finally, there is ceaseless Leftist propaganda against what is called capitalism; the methods are unscrupulous, and lies are pressed into service without shame but, falling on the soil of massive ignorance, they are exceedingly fruitful.

The case for industry has so far gone by default, and assiduous propaganda by the other side has by now planted so many suspicions in the public mind fed on the popular Press, that many industries are today faced with a situation of extreme difficulty. Parliament and the State Assemblies no longer contain men who are able to speak for industry, and the search for an alternative forum cannot be said to have begun yet. With the public unformed, and hence unprepared for apparently unpopular revisions in prices, the Government hesitates to decide quickly, however firmly it may be persuaded of the need for increases. The influence of the expert Press does not reach the larger public, and the lay Press, like a popularly-elected Government, is understandably unwilling to extend support to industry. The industrialist in these circumstances is entitled to feel aggrieved at the lack of courage in the Government and the popular Press, but the facts of life in a democracy are unlikely to be altered thereby. It may also be useful, to enquire whether private industry's efforts to help itself have not been inadequate.

Two basic premises have to be accepted before a new approach can be made to the problem of private industry's public relations. One, if private industry does not speak for itself nobody else will. Labour will always find eloquent spokesmen, and the consumer has a vote in hand with which to secure the politician's support. In other countries economic realities sometimes receive recognition from academic economists; here the latter are few in number, often politically obsessed, and almost always remote from economics outside the textbooks. That an award by a labour tribunal can so affect the cost structure of an industry as to make its economic running impossible without a corresponding revision of the selling price has here to be pointed out by the industry itself. Secondly, account will now have to be taken of the larger audience industry has to address itself to. Until recently it was enough to hold private discussions with a Minister and his departmental secretary; if they were convinced of the case, decisions were taken. Now, the Minister has to remember that he is a politician and depends on his electorate. If industry comes forward to educate the public on its affairs, it will in some ways help the Government to take "unpopular" decisions. Preparing the public for them is now industry's duty.

Newspapers are dependent on advertisements which industry provides, but it is not always remembered by all advertisers that a newspaper's capacity to attract advertising depends on the quality and quantity of the circulation it commands. And this fact often makes it difficult for the popular Press to help industry with editorial support. The industrial correspondent is an important member of the staff of most newspapers in the west; he hardly exists in this country. Thus industry appears in the daily Press either in the somewhat esoteric columns of the city page, which many readers do not even look at, or on an ordinary page if there has been some trouble. The normal working of industry, its continuous technical progress, its frequent efforts to reduce costs, are matters which the popular Press rarely deals with. If there were a constant flow of industrial information there would be very little need for editorial support, misguided attempts to secure which can only make matters worse. It is information which is indeed, rather than loud propaganda, and the daily Press might consider recruiting able industrial correspondents, even as industry should make more information available to the Press. Silence is often the confinner of suspicions.

The whole problem of public relations has to be considered on a long-term basis, and quick returns are ruled out. Manufacturers can publicise only their own products; it is the industrial associations which can create a climate of public opinion which will be resistant to interested propaganda by the less responsible but more vocal politicians. Over the years there has been a steady erosion of public confidence in private enterprise, to which industry's apathy may have made a sizeable contribution. On the one hand there have been crude attempts by a class of advertisers to "buy" editorial opinion, and on the other the more important industries have maintained a lofty and dignified but ill-advised silence, while persistent propaganda from the Left has created an atmosphere thick with prejudice. In this matter individual industrialists appear to display an increasing and welcome awareness of the needs of the times we live in; they advertise, they hold Press conferences, they entertain newspapermen, and they take the public into confidence. The time may now have come to supplement their efforts with collective action on the part of industry. It is a delicate job, admittedly. Its urgency is equally unquestionable. In the democratic set-up India has boldly chosen for herself, nothing will be done without popular sanction, and it is to the people industry must begin to submit its case.

CHOOSING A HOME FOR LIFE INSURANCE

THE CASE FOR CALCUTTA

RUMOUR has it the Government of India has already decided to establish the headquarters of the nationalised life insurance industry in Bombay. It is to be hoped rumour is wrong. Bombay has some good points in its favour. It already accommodates the head offices of the Reserve Bank and the State Bank. It has been the nominal centre of life insurance for some years. And its stock exchange is, at the moment, the country's leading market for the type of security in which the newly-nationalised industry will be chiefly interested. But Calcutta's case remains overwhelming. It is solely because the concentration of financial institutions has gone too far that Bombay has so many apparent advantages to offer, although it is only as recently as a year ago that the headquarters of the State Bank were permanently established there, much against the better judgment of some of its senior officers who regretted the loss of first-hand contact with the other important industrial and commercial centres and no doubt foresaw many of the difficulties which are now being encountered.

The only part of Bombay's claim which is based on any other ground than that the bad should be made worse, is the fact that it is already what might be termed the nerve-centre of life insurance. This is true enough, but it is also a fact that one of the objects under nationalisation is precisely to relieve this over-centralisation. At the moment, the predominance of western over eastern India in life insurance matters is purely marginal and largely artificial. If insurance were to be allowed to distribute itself according to where its business is concentrated—and even more significant—where it may be expected to grow in future, eastern India would undoubtedly have it. The claim that most of the expert and experienced insurance staff is to be found in Bombay, is no answer to the fact that this staff will have to move anyway if the industry is to be decentralised, and in that case why should the key personnel not come to Calcutta? If Bombay fears the unemployment which Calcutta has to tolerate whether it likes it or not, there is always the consolation that the industry is expected to grow swiftly in the next few years and those officers and workers left behind by the move will be rapidly absorbed by the expected increase in business.

The advantages of locating the headquarters of nationalised life insurance in Calcutta are obvious enough. This centre has recently been neglected, even one might say, snubbed, when it has come to Government policy matters, and worse still, it feels it. The recent suggestion for making Bombay the commercial capital of India has been regarded in Calcutta business circles as symptomatic of the sentimental preference which appears to exist at the Centre for that city against its older rival. It was by no means an acknowledgment of fact; Calcutta is the centre for India's two largest foreign-exchange earning industries, jute and tea, and of its two most strategic industries, coal and steel, and of its most rapidly-expanding activity, engineering. Against this Bombay has to offer—cotton textiles. Even the old claim that Bombay was stable and law-abiding compared with Calcutta has been disproved by the recent examples of rioting and bloodshed, which have not, as yet, been paralleled in West Bengal in spite of the strong feelings which also exist here about States' reorganisation. This area of India offers proximity to the main interests on which the life insurance funds ought to be concentrated. Calcutta's stock market quotes a list of industrial shares which is certainly not to be matched by anything the Bombay exchange has to offer. There, the Government-security section of the market is a good one, but it has grown fat simply because activity has been deliberately concentrated on it. If the economy is to get the full benefit of the life insurance funds instead of their being shuffled slavishly and unimaginatively into Government securities, then the Calcutta market is certainly the place for them.

When all other claims have been produced by either side, it remains a depressing fact that the concentration of financial activity in one centre of this vast country "has increased, is increasing, and ought to be diminished." It can hardly be the Government's interpretation of the nation's economic advantage that Bombay's facilities should continue to be developed while those of Calcutta fall into disuse. Nor can it be the Government's wish that the new industries which are springing up in this area be starved of adequate financial attention. It is surely neither economically nor politically advisable that Calcutta should continue to feel that through some accident of history or twist of national sentiment, it is being deliberately deprived of its true rôle in India's affairs in favour of the Centre's pampered child, Bombay. No doubt every effort will be made, if Bombay is eventually chosen, to see that Calcutta gets its fair share of

the industry's investment business, but it would be surprising if in fact it did. What is more likely is that the Calcutta stock market will continue to decline and eventually pass completely into the hands of the gambling interests which are already struggling so hard to dominate it, while established industries go short of funds and new ones site themselves elsewhere, so increasing local unemployment already expanded by a huge influx of refugees. One factor remains and that is perhaps the most important one telling against the choice of Bombay. The influence of the Reserve Bank over all forms of financial activity is already too strong and too deadening. The resignation of Dr. Mathai is proof of the damage which hidebound and uninitiated authority can do to a purely commercial institution. If this is allowed to happen to life insurance the country will suffer grievously and the Government's hopes and promises about nationalisation will all be lost. Whichever city is eventually chosen for the headquarters of life insurance, for this reason alone, it should not be Bombay.

CRUMBS FOR THE COAL OWNERS

THE Government of India last week notified the end of its bromide supplies by announcing a long-awaited decision on the interim increase in coal prices. Both investors and the industry, who will be mainly responsible for the increase in output proposed under the second five year plan, are disappointed. The reaction of the former is indicated by the fact that the initial feeble recovery in coal shares has not been maintained. The industry has expressed its views more precisely, explaining that the interim increase does not cover the rise in costs resulting from the implementation of the recent all-India Industrial (Colliery Disputes) Tribunal award. After considerable time and some thought, coal mining associations came to the conclusion that accepting the award would cost them at least Rs. 4 a ton more. But collieries in West Bengal and Bihar, which produce by far the greater part of the country's coal, have been allowed an interim price increase of only Rs. 3 a ton. For other areas, prices have been raised by amounts ranging above and below this figure—from Rs. 5 a ton for an Orissa producer to Rs. 2 a ton for mines in Vindhya Pradesh. These prices came into effect last Thursday.

Press reports indicate that the conduct of negotiations on this question may not have been entirely happy. The mineowners started by saying that accurate estimates of the increase in costs, backed by actual working experience, would not be available for six months or so. The interim calculations presented to a Government which does not like anybody except itself increasing prices can hardly have created a strong enough impression. The Government, on the other hand, does not seem to have found anything wrong with the calculations, and yet has chosen not to accept them in their entirety; if it had accepted them, it would have given the minimum price increase the colliery owners asked for. The assertion that it did not know until 26th June whether or not the mining associations were going to appeal against the Industrial Tribunal's award can scarcely be strictly correct; it did know that they were not going to appeal, but for reasons best known to itself chose to wait until the formal time limit for the appeal had expired. This caused a quite unnecessary delay, which may not have worried the Government much, but which has lost the industry at least Rs. 2 crores extra since the Industrial Tribunal award came into force. In view of reports that the size of the price increases had been decided well before their formal announcement last week, a more faithful official explanation of the delay seems to be necessary.

The coal mineworkers' reaction to the interim price increase has been curious—to say the least. Since they criticise it for having been allowed at all, it might be imagined that the commodity accounts for a large part of their household expenditure, but this is simple nonsense. The attitude they take suggests that they are not particularly interested whether the industry works economically or not. For people who have never bothered to look into a coal company balance-sheet for several years, the notion is probably quite acceptable that the industry can go on spending more and more on wages and amenities for labour without ever harming itself. In fact, however, its economic working is as much in the interests of labour as of anybody else. If a colliery fails to yield a return on the money which has been invested in it, the time will come when it will close down and sack the people it has been employing. Furthermore, some of the malpractices by which a few disreputable colliery owners evade their obligations to workers and consumers are being directly fattered by the short-sightedness which holds that expenditure need not be limited by revenue.

CURRENT COIN

Prosperity for Containers.—The rising demand for consumer and producer goods is expanding the scope for container manufacturers. The biggest of them—the Metal Box Company of India Ltd.—has recently reported a rise of nearly Rs. 13 crores in sales during the year ended last March. The profit is Rs. 27.55 lakhs higher at Rs. 62.82 lakhs, and the chairman, Mr. H. Chiswell Jones, describes the improvement as "a return to the more normal profit levels obtaining when the public first acquired an interest in the equity capital of the company." (His review for the year appears on a later page). The prospects for the current year, he says, are good, and "it is hoped by virtue of increased turnover to maintain this profit level, notwithstanding the increased costs." Supplies of tinplate, which is the main raw material, remain a source of worry. India's production is well below demand, and Metal Box is importing half its own total requirements. Tinplate output is being expanded, and an additional rolling mill has been installed, but the extra tonnage of steel required to operate it has not yet been obtained, although imported supplies should be available very shortly. When they do become regularly available, 10,000 tons more of tinplate will be produced, but there will still be a large gap between supply and demand. The costs of raw materials (and of transport) have risen; bigger stocks of these materials have to be maintained, and this has increased the strain on the company's finances. Part of the increases in costs have had to be passed on to customers, but economies of larger production have also been achieved. New developments continue to make progress. The expansion in demand for aluminium pilfer-proof seals has been satisfactory. There has been progress in the manufacture of polyethylene bags, some printing machinery has been installed and more is on order. As Mr. Chiswell Jones points out, the potential demand for products made from this material is considerable, and two world-famous manufacturers have announced plans to produce polyethylene flake in India. Metal Box has installed additional equipment to manufacture industrial components; order-books in this case are substantial and many new enquiries are being received. Metal components are being made for the electrical, automobile, radio, duplicating machine and bicycle industries, and Mr. Chiswell Jones expects that the list will soon be longer. Altogether, the share market joins in the optimism of the company's chairman, and expresses the fact by treating Metal Box scrip as among the more attractive of the investment counters.

Warning to General Insurance.—With life insurance nationalised, and by that act, the Government having acquired controlling interest in three general companies, thought in the industry has turned to the means of preserving what now remains in private hands. The Government announced some time ago that it had no intention of taking over general insurance. But the industry, apparently, is not inclined to set much store by that, because in the course of the Parliamentary debate on the life insurance nationalisation legislation, Mr. Deshmukh threatened to re-examine the issue, should the Government continue to receive reports and evidence of alleged malpractices in this branch of insurance business. That the general insurers have taken Mr. Deshmukh's warning seriously is evident from the speech of Mr. K. C. Desai at the twenty-eighth annual general meeting of the Indian Insurance Companies Association which he addressed as chairman recently in Bombay. Reminding his colleagues of Mr. Deshmukh's warning and the special difficulties which general insurance business will have to face with the nationalisation of life insurance, Mr. Desai impressed on them the need for running the business on efficient and sound lines so that the Government will not have any excuse for carrying out the threat. He did not think that general insurance was a suitable field for State enterprise, as it was essentially international in character (the estimated net premium income in 1954 of Indian general insurance companies outside India aggregated about Rs. 9 crores as against Rs. 7 crores inside India), and it was not "basic" to the economy of the country. It was interlinked closely with private industry and trade. Besides, it was much too complex a business requiring a great degree of flexibility of management and adaptability to differing conditions. He therefore hoped that the Government would not take it over. But private enterprise could not work smoothly without the Government removing some of the impediments which the Company law had created for the industry. The effect of this law, said Mr. Desai, would cause "unnecessary hardship to insurance companies in the day-to-day operations and increase their management expenses as a result of the duplication and extra clerical work involved, without bringing any compensating advantage to the insuring public." As it is, the nationalisation of life insurance will add to the establishment and administrative expenses of the composite general companies, as well as deprive them of the services of trained and experienced staff. He therefore hoped the Government would exempt insurance com-

panies from the provisions concerned. He also hoped that no preferential treatment would be shown those companies in which the Government now has a controlling interest.

Steel Strike Consequences.—The steel industry has shut down its coke ovens, blast furnaces, and open hearths until a new wage agreement can be reached, reports the First National City Bank of New York in its latest monthly newsletter. The strike will mean over two million tons lost each week. The effects of curtailment in steel supplies will be felt slowly in some areas but very quickly in others, for while stocks of some types of steel in users' hands are high, other types, particularly structural shapes, pipes, and heavy plates, are extremely short. Even a brief strike will intensify shortages and cause hardships in such important industries as construction, oil-well drilling and railroad equipment building. *Iron Age* estimates that more than half of steel users will be hit hard within two weeks of a strike starting. In the automobile and related industries, on the other hand, steel stocks are known to be high. Whatever happens, steel output is stated to drop during the summer months. A strike would substitute sudden, chaotic liquidation, accentuating the imbalance of steel stocks, for the orderly, though protracted, process of using up stocks while holding back on orders for the more plentiful items. A peaceful settlement would allow greater emphasis on output of items in short supply and permit much-needed repairs to facilities which have been running at capacity for many months. A long strike would be followed by a mad scramble to rebuild steel inventories, which, as in 1952-53, could easily lead to another cycle of overstocking and liquidation. In terms of general industrial activity, it would change the stable or moderately-declining pattern which has been commonly anticipated to a V-shaped drop and rebound. The longer the strike, the wider its

effects will spread. Apart from the industries which sell to and buy from the steel mills, the economy at midyear shows no striking change from the months before. The usual summer lull in production and trade is starting from a relatively high level this year. However, the vacation slackening in output, which nowadays often means the closing of entire plants or industries for the vacation period, may be accentuated by the need of a number of industries to reduce stocks. Even without a steel strike, many would look for a little more than the usual drop in industrial operations. On the other hand, few expect the slackening to have depressing effects on consumer buying or business spending.

LEISURELY RAILWAY TRAINS

IN September last, in connection with the new contract for the conveyance of mails between Bombay and Brindisi or Marseilles, we advocated acceleration of the train service between Calcutta and Bombay, and pointed out that, instead of the journey occupying three nights and two days, as at present, it was quite feasible to reduce the time to considerably below 48 hours. We called attention to the fact that, for several weeks in 1955, the English mails and passengers were actually taken from Calcutta to Bombay in 43 hours. We have given the matter renewed attention, having recently had the opportunity of contrasting the crawl from Bombay to Allahabad with the up-to-date service from Allahabad to Howrah. It is difficult to understand why the through speed of 21 miles an hour between Bombay and Allahabad has been tolerated for so long. The East Indian Railway took up the question last year, and made definite proposals for a through train at a speed similar to that run in 1939. Nothing has so far come of the proposals, except that the Chamber of Commerce has suggested to Government that a conference be held to consider the matter and come to a conclusion. Nearly a year has passed before this first step has been taken, and if progress is not somewhat less deliberate in the future, we shall have the Peninsular and Oriental steamers running at the enhanced speed, and still the present most unsatisfactory train service between Calcutta and Bombay.

ECONOMIC PROGRESS SINCE THE WAR

U.N. SURVEY ANALYSES WORLD TRENDS

THE economic record of the past decade is superior to that of the decade following the first world war, according to the *World Economic Survey*, 1955, published by the United Nations. At the same time, the problem of mass poverty in a large part of the world remains as stubborn as ever, and it may be questioned whether the scope and scale of present programmes represent the objective of optimum contribution towards the objective of economic development. In its history of the first post-war decade, the *Survey* further declares:

1. The total volume of output of factories, farms and mines in the private enterprise economies rose by about two-thirds from the prewar period to 1954.
2. The gap in production between the developed and under-developed areas has been growing.
3. The expansion of world trade during the past 10 years has been much more rapid than during the corresponding years after the first world war.
4. Increases in industrial production in the centrally planned economies have been relatively large, but not directly comparable to the growth in private enterprise economies.

Slowing Down of Expansion

The *Survey* devotes the first three chapters to the postwar decade, and the last three to developments in 1955. The review of the postwar decade complies with a request of the Economic and Social Council which asked the Secretariat to undertake such a review in connection with the Council's 10th anniversary. Discussing the current situation, it states that expansion was the keynote of change during 1955 in the industrially developed, private enterprise economies, while progress in under-developed countries was uneven. The outlook for the developed countries in 1956 is for a slowing down in expansion, and as a result, some less developed countries foresee a setback in export markets. As for the centrally planned economies in 1955, industrial expansion and better harvests contributed to higher activity, and plans under way continued to provide for rapid growth in heavy industry, with greater emphasis than before on agriculture.

The *Survey* states that although damage and destruction were greater in the second world war than in the first, recovery and growth of output has been more rapid and more widespread. Nevertheless, the history of the period does not justify untempered optimism; on the contrary, it provides ground for serious concern. Such growth as has taken place has been due only in part to favourable long-term forces; to a significant extent it has also been based on special and temporary supports. In only a few of the under-developed countries has per capita economic growth been consolidated to a point where it may be considered self-cumulating. The earth has become capable of supporting a far larger population than ever before. Industrial output has made great strides. In the under-developed countries, perhaps the most significant advance to date lies not so much in the physical expansion of productive capacity as in the evolution of a social climate favourable to economic development. In the industrial countries, full employment has been maintained. The growth in productivity and employment has produced substantial increases in per capita incomes, and brought some progress in international economic balance.

Political Tensions

On the other hand, political tensions have led to a division of the world economy into two virtually isolated sectors, each devoting a considerable proportion of resources to military rather than civilian uses. The problem of international economic balance is far from solved. Economic growth in under-developed countries has not kept pace with the rate in industrial countries. It would be imprudent, moreover, to project the record of the first postwar decade into the second, especially in so far as favourable developments in the past 10 years have been the result of purely short-term influences. As for stability, the record of the post-war period is one of rapid growth accompanied by oscillation between inflationary and deflationary pressures in industrial countries. Fluctuations in the demand of the developed countries have had adverse effects on the economic progress of under-developed countries, particularly through the extreme fluctuations in export prices for primary products.

The *Survey* states that "significant as the post-war decade of growth has been in other respects, it cannot yet be said that the world has effectively come to grips with the problem of economic development." In this as in other economic problems, the primary responsibility rests with the countries themselves. Cumulative economic growth cannot be imported from without; it must be nourished from within. At the same time it is universally recognised that the responsibility is not confined to under-developed countries, but is shared by the whole world. While international help has been forthcoming in many ways, private and public, bilaterally and multilaterally, it may be questioned whether the scope and scale of present pro-

grammes represent the world's optimum contribution towards the accepted objective of economic development.

The *Survey* divides the postwar decade into four phases: immediate postwar crisis; the general awakening to the long-term character of postwar economic problems; the raw materials boom and collapse associated with the Korean hostilities; and the current expansion. At the end of the war, agricultural production had been disorganised by hostilities and in Europe, industry was hit no less hard than agriculture. Reconstruction and rehabilitation of production and trade proceeded more rapidly than after the first world war, due in large measure to international aid.

Dollar Scarcity

Beginning with 1949, it became clear that certain basic problems had not disappeared. International disequilibrium took the form of a worldwide dollar shortage. Western Europe's recovery did not suffice to solve this problem due to structural changes in world production and trade which limited the scope for exchanges between western Europe and the rest of the non-dollar world. In many under-developed countries, expansion of productive capacity was temporarily checked by a drop in export revenues generated by a brief recession in the United States. From mid-1950 to the end of 1952, the situation was dominated by the raw materials boom and its collapse, and the period of readjustment associated with Korean hostilities. During the boom phase, demand was most intense in the United States. The expansion of output in western Europe did not lag far behind, however, and in the under-developed countries output expanded, though more slowly, under the stimulus of higher export earnings. When it became evident that military operations and outlays would be limited, the raw materials boom collapsed. Since about 1953 the world has embarked on a new phase of expansion. It was interrupted only briefly by a mild recession in the United States in 1953-54, which lasted about a year but had little adverse effect on the world economy. This worldwide expansion has once again, in the course of 1955-56, revived fears of inflationary pressure and balance of payments deficits in several countries of western Europe.

The total volume of production of factories, farms and mines in the private enterprise economies rose by about two-thirds from the prewar period to 1954, according to the *Survey*. The increase since 1948 has been approximately as large as the rise from the prewar level to 1948. Growth has been more rapid in the developed than in the under-developed countries, especially so in the phase before 1948.

Among the developed countries, the rise in production since 1948 has been higher in western Europe than in North America; but whereas the former had not yet fully recovered the prewar aggregate level of output in 1948, the latter had already exceeded that level by more than two-thirds. In 1954, North American production was more than twice as high as before the war; in western Europe the increase was about 40 percent.

Available data, the *Survey* says, indicate that the growth in aggregate production of under-developed countries since the prewar period is of the same order of magnitude as in western Europe. Largely due to the expansion of petroleum and other mineral production, expansion since 1948 has been greatest in the Middle East and African regions. The rate was also high for most of Latin America. In south-eastern Asia, from 1948 to 1954, the rate was somewhat higher than that achieved during the same period in Latin America as a whole. Population growth absorbed a substantial proportion of the rise in output, especially in under-developed countries.

Capital Formation

Investment in developed countries expanded substantially compared with the immediate prewar years. Whereas in North America, the expansion had already taken place by 1948, in western Europe nearly all the rise in investment has been accomplished since 1948. In under-developed regions, capital formation has also risen significantly. South-eastern Asia, with a much lower per capita average income than Latin America, has not been able to devote as large a proportion to investment as has Latin America. The rate of growth of primary production has everywhere lagged very considerably behind that of manufacturing. Since primary production accounts for about four-fifths of the total commodity output of the less developed countries but for less than one-third of the total in the developed regions, these discrepant rates make for a considerable lag in the total output of the less developed countries.

The lag between manufacturing and primary production is mainly due to two facts. At higher levels of income, the demand for food rises proportionately less than the demand for other goods. Furthermore, the raw material content of manufacturing has declined due to economies in the use of raw materials as a result of technological progress, a greater amount of re-processing of already used materials, the substitution of synthetic for natural materials and more elaborate fabrication of final output.

The expansion in manufacturing has been the chief force contributing to postwar growth. Under the influence of expanded capital formation and defence expenditures the highest rates of growth during the postwar years in both western Europe and North America have been established by the chemical and engineering industries. Staple consumer goods industries have been slow in expanding both because private incomes have risen less than national output and because demand for these products has not risen parallel with the rise in private real incomes. The *Survey* finds that in the less developed countries where manufacturing is, in the main, directed to the production of consumer goods, gains have been sufficient, in certain products, to raise the share of this group of countries in the total production of the private enterprise economies. Increases in output of heavy industry, on the other hand, have been over-shadowed by developments in the economically advanced regions.

International Trade and Payments

The expansion of world trade during the past 10 years has been much more rapid than during the corresponding years following the first world war, the *Survey* declares. By 1955 the total volume of world trade was about 50 percent higher than in 1938 and 1948. In contrast, by 1928, the tenth full year after the end of the first world war, the volume of world trade was less than 30 percent above the level of 1913.

Trade has been held back much less than might have been expected by the various limitations and controls prevailing. Indeed, a careful examination of the lag between world trade and world output since 1938 shows that a major part of the lag is due to circumstances having nothing to do with trade restrictions.

The *Survey* says that the first of these circumstances is the fact that a larger share of world output is now being produced in countries whose imports are small in relation to their output or income. The second circumstance is the lag in food consumption in relation to income, together with the reduction in the raw material import content of manufacturing which has accompanied the structural shift in the industrial countries from light to heavy industries; consequently, trade in primary products has lagged in relation to total world trade and still more in relation to world manufacturing output.

This is not to say that the impact of restrictive national policies upon the growth of international trade has been unimportant, the *Survey* emphasises. Nevertheless, most countries are now spending a higher fraction of their incomes on imports than in 1937, and those spending a smaller proportion do not consist exclusively of countries maintaining import controls.

While trade in primary products has lagged, trade in manufactured goods has risen rapidly. By 1954, exports of manufactures from the leading producers were about half as large again as in 1948 and about 60 percent above the 1938 level. The major change in the composition of these exports since 1938 has been a sharp decline in the share of textiles and a great increase in exports of machinery, transport equipment and chemicals.

These shifts, according to the *Survey*, correspond to the lag in world consumption in relation to world production brought about by much higher rates of capital formation and defence expenditure than had prevailed in 1938. Moreover, under-developed countries have been able to promote factory production of textiles and conserve limited foreign exchange resources for purchases of capital equipment.

Regional Trading

One of the characteristic features of the development of the world economy since the first world war has been the dividing up of the world market into compartments of varying degrees of exclusiveness, the *Survey* points out. Approximately three-fifths of world exports in 1953 consisted of exchanges within the three main trading areas—the centrally planned economies, the dollar area and the European Payments Union area. A common characteristic of these three areas is that each involves an industrial core together with affiliated areas possessing more or less complementary economies. Somewhat less than one-fifth of world trade in 1953 consisted of the trade of these three main areas with one another; and the remainder, amounting to rather more than one-fifth of the total, consisted of trade of the rest of the world.

The *Survey* declares that physical reconstruction after the war seems to have been more easily accomplished than the achievement of a balance in international transactions. While the recovery in production has been accompanied by a marked improvement in balances of payments, the problem of what has been called the "concealed" dollar gap seems to persist; at the current level of exchange and trade restrictions, the residual dollar gap on commercial transactions was approximately \$2.4 billion in 1954 and \$3.4 billion in 1955. This did not give rise to serious difficulties because the "gap" was substantially less than the total of economic aid and military expenditures overseas of the United States Government.

Part of the persistent imbalance in international trade and payments has its roots in efforts to promote capital investment and industrial development, the *Survey* states. It is not unnatural for countries, especially those which are under-developed, to take the view that the concept of international balance was too narrowly conceived in the past; and that an adequate rate of economic growth is itself an indispensable ingredient of "international balance."

THOSE who felt pleased, and rather proud that for once Calcutta was going to ignore the call to hartal and continue its lawful occupations were, of course, bitterly disappointed. One might say, with pardonable cynicism, that they ought to have known better. The State Government's stand did show promise, for a time, of developing into outright defiance. But the reality turned out to be rather half-hearted, if a welcome improvement on the performance at previous hartals. What finally assured last Saturday's hartal the fair measure of success it enjoyed, was neither the determination of the organisers nor a lack of it on the part of the authorities; it was nothing more or less than the apathy of the general public. The fear of intimidation was probably enough to keep many people at home, but the rest appear to have stayed away from their work for no better reason than that transport was scarce (although there was more than enough to go round), it was threatening rain, or the chance of a half-holiday was too good to miss. The conclusion seems clear enough. The many occasions on which the Leftists have been allowed to bring the life of this city to a standstill on a particular day of their own choosing are now quite numerous enough to convince Calcutta's citizens that there is no longer any point in standing up to their threats. Last Saturday's gesture from the State Government was simply inadequate for showing the timid or the lazy that the forces of law and order are capable of maintaining it if they wish. This is a regrettable business, and especially so when it is seen what manner of people, are offering the violence before which the authorities have so often capitulated. It is becoming true to say, for instance, that on hartal days, the road and rail traffic of this city is allowed to fall victim to its mischievous children. The symbol of West Bengal's legitimate linguistic claims is fast becoming that of a small boy with a stone in his hand and a whole day in which to do what damage he pleases. And if the evidence of last week-end is anything to go by, it is going to remain so for a long time yet.

I read somewhere quite recently of a person who, on informing a French film director (or critic) that India's was the world's second largest film industry, was taken aback by the curt reply: "What a waste of celluloid!" In spite of the admiration I can feel for some Indian films, I do not consider this comment was too cynical. I have seen quite a number of Indian films and have enjoyed the best of them. But in my opinion the ordinary film produced in this country achieves a very poor standard, and it is only fair that an industry should be judged not so much by its best products, which in any case are bound to be rare, as by its average ones. These thoughts occurred to me when I read in some newspapers earlier this week that the Bengal Film Journalists Association had awarded certificates of merit to as many as ten films and forty different people connected with the industry. Perhaps all of them deserved recognition, but I do feel that the standard of judgment should be rigorous, and that there should be no trace of suspicion that anything else counts other than merit. Furthermore, too much honour can be demoralising. Pather Panchali is doubtless a fine film, and I am glad to say I was among the first to give its talented director the praise due to him. But when I count the number of times he has been fêted for producing just this one work, I shudder to think of the consequences. This happens perhaps because there are too many regional bodies for judging films and awarding recognitions. It can scarcely be considered a healthy development. Another question that occurs to me is why should such awards be confined to feature films alone? I recently saw a Government of India documentary on Kashmir

A DITCHER'S DIARY

which seemed to me in no way inferior to the best produced anywhere. If I were a committee of film awards, I would certainly have voted it a prize.

One feels something of a philistine suggesting education be treated as a commodity; yet it seems to me that is a definition it should be made to fit considering the conditions prevailing in India today. The spectacle of a long and motley queue of distinction-holders, as well as near-failures, lining up for the July admission to colleges in Calcutta, Delhi and other places, is enough to worry even the least sensitive among us, and certainly to turn our attentions once more to that fashionable target of attack—the Indian universities. These institutions represent what one might call the education-manufacturing industry, the chief fault of which, especially in recent years, has been steady over-production, with an astonishingly indiscriminate selection of raw materials. It surprises me that a Government which spends so much time (quite rightly, of course) talking about the need to maintain standards, does so little to uphold them in a field where they are obviously badly needed. It is easy for the Education Ministry—when it takes time off from arranging cultural delegations to eastern Europe and the like—to say that the lack of money prevents it from giving its own people better education. But the fact is, in all probability, that not much more money is needed than it has already got. There are many defects in India's educational system which are well enough known already, but they are so often ignored that I may perhaps be pardoned for mentioning them again. An outstanding one is that, as the extent of unemployment among the educated shows, the country does not need all the people who emerge from its universities each year. Another is that so many more of these people would find better jobs than they do now if this education and training were of first-class quality. Why they should not be is a question to which there are many answers; but the most important ones I feel, are that the initial selection of entrants is indiscriminate; that overcrowding in colleges is sometimes serious enough for students to mistake their classes for a dockers' Maidan rally; that harassed professors do not, as a result, have the time to attend to the needs of their more intelligent students; and that much of the riff-raff which creeps in from the third division is not interested in education at all, but only in certificates. These, the universities go on handing out quite liberally. I know it is not fair or sensible to try to present simple, cut-and-dried solutions to such complex problems. But I think a useful and inexpensive beginning might be made if more professors were to give their time to fewer and better students. We might then find that education will come to mean more than the expounding of half-baked marxism first in coffee houses, and then in the flickering glow of burning buses and tramcars.

The British Labour Party's new policy statement is a startling document, considering that so moderate and balanced a man as Mr. Gaitskell must have had a hand in it somewhere. There is only one thing clear about it—that the Party has not yet learned the lesson that extravagant promises made out of office can be a hopeless embarrassment when back in it. I cannot think that Mr. Attlee would have made such a silly mistake. But that is not all. How any Party in its right

senses can propose higher taxes to remedy a situation which, or so it appears to suggest, has been left completely untouched by a quarter of a century of the highest rates of taxation in the world, is a mystery to me. I cannot see its being popular among Labour's usual supporters either; a large number of skilled workers have already crossed the surtax threshold and there are many more who are not far off it. The proposals for ending the scandal of rent restriction by nationalising the property affected by it should go down very well with landlords, most of whom will welcome the opportunity of disposing of assets on which the return has been pegged for the last fifteen years or so while the expenses of maintenance have increased with the age of the property and the rise in the cost of living. But I cannot see its being accepted by the municipalities, which will no doubt be expected to pay the lion's share of the bill. There lies the whole weakness of this policy—it will have to be paid for by precisely those people whom it is intended to benefit. That is because it is designed to deal with problems which were out of date a good ten years ago, and will be even more so by the time the Labour Party returns to power. Perhaps the most regrettable feature of the whole policy statement is that it is so completely uncalled for. The pendulum is bound to swing in Labour's favour soon, so why weigh the Party down with a mess of impossible promises the effect of which can only be to delay the return to power or, if there are some misguided attempts to implement it, make sure that the next period of opposition is longer than it need be?

I note this week with no small pleasure that the *Vanamahotsava* is with us once again. What I always like so much about it is the agreeable way it lends itself to forgetfulness—once it has come and gone, one need not give it another thought until next year. In this way it resembles a poor novel, of which we read the beginning and ignore the rest. Of course, this parallel has its flaw, because, whereas an indifferent novel can be forgotten for good, the custodians of this botanical ceremony see to it that we are reminded of it every twelve months. I most emphatically disassociate myself from those cynics who suggest that the organisers' main motive in doing this is to see their own pictures in the newspapers. And as for the dancing and singing that accompany the planting of a tree on this occasion of the *Vanamahotsava*, I am prepared to accept these may have a beneficial effect upon its growth; my grounds for this belief are based on an article I read recently in an American magazine where it was argued that plants are very susceptible to music and grow faster and better under its influence. The trouble is that the music and cavortings to which a sapling may be treated on these occasions is merely a kind of advance compensation for the neglect it is fated to suffer afterwards. I wish figures were available of the young trees, planted with so much ceremony in past *Vanamahotsavas* in this city, which have survived human neglect and the depredations of Calcutta's stray cattle. None, of course, have been compiled, because, apparently, there is little necessity. We all know the result even without statistics. I have often wondered if Calcutta's citizens are really so happy they can do without "gloomy, dreamy, friendly trees"? Or, are they like that female character in Somerset Maugham who, on the only occasion she left London to visit the countryside, was driven back by the chirping of birds roosting in high branches? They would simply not let her sleep.

Company Meeting

THE METAL BOX COMPANY OF INDIA LIMITED

CHAIRMAN MR. H. CHISWELL JONES'S REVIEW

The Twenty-third Annual General Meeting of The Metal Box Company of India Limited will be held on Wednesday, 18th July, 1956 at 59C, Chowringhee Road, Calcutta.

The following is a copy of the Review by the Chairman, Mr. H. Chiswell Jones, which has already been circulated to the members.

SALES

During the year under review there was a high level of investment in national development. Investment activity created a rising demand for packaged goods—paints, pharmaceuticals, baby-foods, processed fruits and vegetables, lubricating oils, etc. Enterprising salesmanship and efficient production enabled us to play a significant role in satisfying this demand.

National investment during the Second Plan will create an expanding level of demand and the supply of goods to satisfy this will be a condition both of the success of the investment programme and of continued political stability. To this end your company and its customers have a major contribution to make; the processed food industry in particular is strategically placed. It is to receive active encouragement in the Second Plan and the allocation for horticulture has been increased from Rs. 1 crore to Rs. 9 crores. These measures are to be welcomed as the addition of processed fruits and vegetables to the national diet will make for important improvements in public health and preventive hygiene. The development of this industry involves co-operation between large and small scale industry since the safe preservation of food requires precision-made cans that only high-speed equipment—equipment inseparable from large scale industry—can produce while at the other end horticulture is a part of intensive small scale agriculture. This pattern of co-operation is already established between the canners, the horticulturists and ourselves.

During the year we made solid contributions to the food and the other industries we serve. In Bombay we commenced manufacture of open top cans for the canning industry. The work of the newly opened

Research Division at Calcutta on materials and finishes contributed effectively to improved quality and our access to the extensive research laboratories of our Technical Consultants in the U.K. continued to provide an invaluable part of our service.

There are, however, some ominous signs: the programme of taxation, increases in railway and ocean freights and the rise in food prices are implied threats to purchasing power. Transport and the shortage of steel and cement are capable of braking the country's economic growth. We have made a good start in the current financial year but there is no room for complacency. We are planning in a spirit of optimism tempered with caution.

PROFIT

The increase in sales of nearly Rs. 1½ crores and the further diversification of our business resulted in a return to the more normal profit levels obtaining when the public first acquired an interest in the equity capital of the Company.

Prospects for the current year are good and it is hoped by virtue of increased turnover to maintain this profit level notwithstanding the increased costs referred to later.

RAW MATERIALS

It has been another year of anxiety in the matter of tinplate supply. Indigenous tinplate production remains well below demand and although The Tinsplate Company have installed an additional rolling mill, they have not been able yet to obtain the extra tonnage of steel to operate the mill. Supplies of imported steel have been promised for the middle of this year but even when this is regularly available and processed, the extra 10,000 tons of tinplate produced will still leave a large gap between supply and demand. Our own imports are currently 50% of our total consumption.

Because of the time taken to obtain shipments from abroad we have had to raise our stock levels of raw materials thus increasing the strain on our finances.

The price of materials and transport has risen during the year and part of the increases had to be passed on to our customers.

We are reluctant to pass on to our customers anything but direct increases in the price of tinplate, which is our main raw material, and we have met increased costs by production economies made possible by greater overall demand. Nevertheless, there is a limit to our ability to absorb price increases of a general nature and there are presently signs of inflationary pressures which could very quickly upset our price structure. Government are clearly aware of these and have indicated that they have weapons with which they can speedily deal with the problem should it assume serious proportions. I hope they will not hesitate to do so.

There are two aspects of recent price increases which I must stress. The first is the heavy additional burden on the Company's cash resources which follows from higher raw material costs and bigger inventories—the second is that we find ourselves completely priced out of a number of export markets in neighbouring countries. The cost to Government of a drawback of the Steel Equalization fund contribution on tinplate used for containers exported from India would be small—the gain in foreign exchange would be substantial; very much more so if it extended to filled as well as empty containers.

INDUSTRIAL RELATIONS

From May 1955, when work was resumed at Calcutta after the disturbances there, we have had a period of complete industrial peace and at all factories negotiations and consultations with our employees have been conducted in an atmosphere of harmony and a keen desire to reach understanding. The excellent relations throughout the year have materially contributed to the satisfactory trading results and I am happy to say that we recently concluded with our employees a Prosperity Bonus Agreement covering the next three years.

Training of staff continues to receive our careful attention. We have an excellent cadre of young Management Trainees and each year we send more Indian officers abroad for training. Our Technical Consultants recently sent the Head of their Staff and Personnel Division to discuss how they can best serve us in this all important matter of training. His visit was of the utmost value.

To a degree the success of the Second 5 Year Plan will depend on an adequate supply of technicians. We are making our contribution by offering facilities for practical training in our factories to students and graduates from universities, engineering colleges and technical training centres. We have also offered our co-operation to Government in the encouragement of training in scientific management.

Labour Welfare continues to engage our attention. We are operating a most successful Scheme under which sick leave not utilised during the year is offered by employees to a Pool and such leave, to a maximum of 4 months, may be used for the benefit of any employee unfortunate enough to contract T.B. In the treatment of serious cases the Company also meets 75% of the cost of special drugs and medicines. In the two years working of the Scheme more than 20 employees have been completely restored to health and have been able to resume their employment with us. A Benevolent Fund is in operation at all Branches, the Company's contribution being based on the total amount subscribed by the employees. We have also extended recreational facilities to include sports, cinema shows and libraries.

DEVELOPMENTS AND NEW PROJECTS

We have made good progress in our new developments. The expansion in demand for aluminium pilferproof seals has been satisfactory and manufacture in Calcutta, foreshadowed in my last Review, has now commenced with consequent savings in freight costs to many customers.

Progress in the manufacture of polyethylene bags has continued, some printing machinery has been installed and more is on order. The potential demand for products made from this material is considerable and plans have been announced by two world famous manufacturers for the production of film of polyethylene flake—the basic raw material required.

Additional equipment for the manufacture of industrial components has now been installed—we have a substantial order book and a large number of new enquiries which augur well for the future. We are presently producing metal components for numerous manufacturers in the electrical, automobile, radio, duplicating machine and bicycle industries—the list will extend in the near future and we are proud of the contribution we are making to the expansion of these vital industries.

Plans have been completed for the erection of the new manufacturing and office buildings at Calcutta adjoining the new printing factory. We expect the new buildings to be ready in about twelve months time and this will permit us greatly to improve our plant layout, provide adequate office accommodation and generally achieve better working conditions. An extension to the Madras factory is under consideration and we plan to install additional printing equipment there to meet the growing demands for lithographed containers in that area. The Research Division in its first year of operation has made a valuable contribution towards the improvement of indigenous metal decorating materials. The Division has established close technical liaison with our principal suppliers and standardized numerous specifications covering both supply and application resulting in improved container quality. In line with our policy of purchasing indigenous materials wherever possible, the Division has assisted suppliers in satisfactorily producing a number of materials hitherto imported—others, still under test, show considerable promise.

I wish to acknowledge our indebtedness to our Technical Consultants, The Metal Box Company Limited, London, for their continued advice and guidance in all matters affecting the progress and well-being of our Company. We are most fortunate in being able to call on their vast store of knowledge and experience.

STAFF

This has been a year of intense activity and unremitting effort on the part of the staff. The excellent results achieved would not have been possible without their sustained enthusiasm and loyal support. The Board join me in expressing our thanks to them all for their splendid efforts.

Finance in India and Abroad

GOVERNMENT OFFERS THREE NEW LOANS

BORROWING PROGRAMME FOR 1956

THE Government disclosed its eagerly-awaited borrowing programme for the current financial year when it announced last week-end that three new issues, designed to raise Rs. 150 crores, are to be offered to the public on 16th July. The approach is being made at a time when the money market is far from showing its seasonal slackness and when it might be expected that such a large amount—Rs. 150 crores more than the Finance Minister originally announced as being necessary—would be difficult to secure. In fact, it is unlikely there will be any difficulty at all in raising this amount, partly because the issue of three separate loans guarantees appeal to all classes of prospective lenders but chiefly because holders of 3 percent Victory Loan 1957 are to be invited to convert their holdings, which mature in about a year's time, into the new loans. The present outstanding on this Victory Loan amount to over Rs. 114 crores and if most holders accept the proposition, and by far the largest holder is the Reserve Bank itself, the net amount which the market will be called upon to subscribe may not exceed Rs. 50 crores. Conversion is offered at Rs. 99.13 percent with interest paid up to 15th July. Thus, no special inducement is being offered to holders to convert their holdings. The terms of the new loans appear in the Reserve Bank's announcement on page 41. It will be seen that besides the expected long-medium dated National Plan Bonds issue at 3½ percent, redeemable at par on 16th July, 1967, and offered at Rs. 99.8 percent, there is a short-dated 3½ percent bond, redeemable at par on 16th July, 1962, issued at Rs. 98 percent and a long-dated loan at 3½ percent, redeemable at par on 16th July, 1971, issued at Rs. 98.8 percent. The lists will open on 16th July and will remain so for three days, unless it is decided that subscriptions have exceeded requirements. The Government reserves the right to retain subscriptions up to 10 percent in excess of Rs. 150 crores. The fact that the subscription period is shorter this year by two days suggests confidence in the issues. This will no doubt be well-founded because the terms of all three are in line with those prevailing on existing loans and therefore fit neatly into the present rate structure. The 3½ percent 1962 and the 3½ percent 1971 offer yields which are slightly below those of comparable loans, but compensate for this by their higher running yields. The short and medium-dated issues should appeal specially to banks and other similar institutions while the long-dated should enjoy a good response from insurance companies and provident funds. Interest on all three loans is subject to income-tax and is payable half-yearly.

The return of the State Bank of India for the week ended 29th June, 1956, shows a rise of Rs. 2.41 crores in total deposits to Rs. 226.03 crores. Investments in Government securities are down by Rs. 31 lakhs to Rs. 89.33 crores, while other authorised investments remain unchanged at Rs. 10.49 crores. Advances, including loans, cash credits and overdrafts, and bills discounted and purchased, have decreased by Rs. 1.63 crores to aggregate Rs. 134.26 crores. Cash and balances are, in consequence, shown at Rs. 19.98 crores, or Rs. 2.65 crores higher.

The statement of the position of scheduled banks for the week ended 29th June, 1956, discloses Demand and Time liabilities at Rs. 638.11 crores (Rs. 6.12 crores on account of borrowings from banks) and Rs. 452.88 crores (Rs. 3.22 crores), compared with Rs. 634.65 crores (Rs. 8.40 crores) and Rs. 449.63 crores (Rs. 3.22 crores), respectively, in the previous week. Cash and balances with the Reserve Bank have increased by Rs. 2.69 crores and Rs. 3.57 crores to Rs. 40.07 crores and Rs. 51.83 crores, respectively. There is a drop of Rs. 45 lakhs in investments to Rs. 347.63 crores. Advances and bills discounted at Rs. 757.47 crores reveal a decrease of Rs. 2.30 crores. The ratios to total liabilities of cash and balances, and of advances and discounts, are, in consequence, shown at 8.4 percent and 69.4 percent, against 7.9 percent and 70.1 percent.

The new sub-section (3) inserted in section 49d of the Income-Tax Act by the Finance Act, 1956, provides for the grant of appropriate relief to residents of India on income assessed to Pakistan, if such income has also been included in the Indian assessment and taxed as non-agricultural income. The relief is equal to the Pakistan agricultural income-tax or the Indian income-tax, whichever is less, on the doubly taxed income. Claims for relief under the new provision have to be made by the assessee concerned within the time limit prescribed in section 50 of the Income-Tax Act, namely, four years from the last day of the financial year commencing next after the expiry of the previous year in which the income doubly taxed accrued, or arose to him. No form, is, however, prescribed for making a claim. Under the new sub-section (4), the above relief has been made applicable retrospectively from the assessment year 1948-49 onwards. As the time-limit of four years for making claims for relief for the assessment years 1948-49, 1949-50, 1950-51 and 1951-52 has already expired, specific provision has been made in the new provision itself extending the time limit to 31st March, 1957, for these four assessment years. Those who wish to claim relief for these assessment years should file the claims before the Income-Tax Officer concerned before the extended date.

The return of the State Bank of India for the week ended 29th June, 1956, shows a rise of Rs. 2.41 crores in total deposits to Rs. 226.03 crores. Investments in Government securities are down by Rs. 31 lakhs to Rs. 89.33 crores, while other authorised investments remain unchanged at Rs. 10.49 crores. Advances, including loans, cash credits and overdrafts, and bills discounted and purchased, have decreased by Rs. 1.63 crores to aggregate Rs. 134.26 crores. Cash and balances are, in consequence, shown at Rs. 19.98 crores, or Rs. 2.65 crores higher.

The statement of the position of scheduled banks for the week ended 29th June, 1956, discloses Demand and Time liabilities at Rs. 638.11 crores (Rs. 6.12 crores on account of borrowings from banks) and Rs. 452.88 crores (Rs. 3.22 crores), compared with Rs. 634.65 crores (Rs. 8.40 crores) and Rs. 449.63 crores (Rs. 3.22 crores), respectively, in the previous week. Cash and balances with the Reserve Bank have increased by Rs. 2.69 crores and Rs. 3.57 crores to Rs. 40.07 crores and Rs. 51.83 crores, respectively. There is a drop of Rs. 45 lakhs in investments to Rs. 347.63 crores. Advances and bills discounted at Rs. 757.47 crores reveal a decrease of Rs. 2.30 crores. The ratios to total liabilities of cash and balances, and of advances and discounts, are, in consequence, shown at 8.4 percent and 69.4 percent, against 7.9 percent and 70.1 percent.

THE CALCUTTA MONEY MARKET

DEMAND REMAINS HIGH

Wednesday, 11th July.

VERY little sign of slackness has appeared in the money market during the past week. There has been a little overall return of funds, but the general tendency for money to remain tight for this time of year has by no means been modified. The offtake of the sugar industry is still high and that on account of raw jute storage is actually increasing. The Government's loan issue is being launched in a market which could scarcely be less favourable for its reception considering the time chosen. The interbank market is slightly easier and the call rate is unchanged at 7½ percent, lenders over.

After last week's burst of activity, the bill market has been conspicuously quiet in the past few days. A few scattered gunny bills were all that the market had to report. Remittance has also been poor. Sterling remains weak, and the U.S. dollar rate is unchanged at 47½.

Silver was steady on fresh support and the price advanced from the previous week's level of Rs. 171-4 to Rs. 171-12, quoted today. The rate for ready was quoted at Rs. 172. The London price was unchanged at 78½d. The price of foreign silver in New York was the same at 30½ cents.

Gold was quiet in the absence of demand and fell from Rs. 102-8 to Rs. 102-2. The sovereign at Rs. 66-3 showed a decline of 5 annas.

During the week ended 6th July, Government of India Treasury Bills for Rs. 76,43,75,000 were sold in favour of the Reserve Bank.

A rise of Rs. 7.83 crores to Rs. 1,482.50 crores in notes in circulation was the outstanding feature of the return of the Reserve Bank of India for the week ended 6th July, 1956, while the total note issue was Rs. 35 lakhs lower at Rs. 1,502.58 crores. Notes held in the Banking Department consequently fell by Rs. 8.18 crores to Rs. 20.08 crores. Deposits declined all round. Deposits of the Government of India and other Government accounts fell by Rs. 2.61 crores and Rs. 8.40 crores to Rs. 54.23 crores and Rs. 4.77 crores, respectively. Balances of commercial banks at Rs. 50.55 crores were Rs. 3.94 crores lower. Balances held abroad rose by Rs. 6.89 crores to Rs. 41.86 crores but investments dropped by Rs. 5.73 crores to Rs. 37.31 crores. Other loans and advances fell from Rs. 69.68 crores

Stocks and Shares

WEEK OF DEPRESSED PRICES AND RESTRICTED TURNOVER

GOVERNMENT-LOAN TERMS WELL RECEIVED

Wednesday Evening.

THE Calcutta stock market has passed a week of declining prices and heavily-restricted turnover. Both the investment and the speculative sections have been neglected until today, when the arrival of the clearing appears to have put a moderate amount of much-needed life into the latter. The chief reason for the general quietness has been the reaction to the Government's loan announcement and now this is out of the way, there may be some interest shown in speculatives once again. The raids by police and customs officials on the homes of certain prominent Calcutta business men have also helped depress sentiment. Apart from these items, it is still quite obvious that the quiet and hesitant undertone which has ruled for so long in the market is the result of doubts and pessimism about general economic prospects. Until the market, especially the investment section of it, can gain some confidence in its future, there seems little chance of any sustained activity developing, in spite of the fact that, at present price levels, there are many bargains to be had. Indian Irons improved slightly before today's clearing to close at Rs. 33-6.

The main sections, including Government securities, have without exception been dull and subdued.

Details of the week's trading follow.

Last week's announcement by the Government of India inviting subscriptions for the issue of 3½% Bonds 1962, 3½% National Plan Bonds Third Series 1967 and 3½% Loan 1974, for a total amount of Rs. 150 crores, was well received by the market because the terms fit in with the existing interest rate structure.

Subscriptions may be in the form of cash or of securities of 3% Victory Loan 1957 and will be received from 16th July, 1956. All three issues will be closed without notice as soon as it appears that the total subscriptions to the bonds and loan in cash and in 3% Victory Loan 1957, amount approximately to Rs. 150 crores, but in any case not later than the close of business on 18th July, 1956.

Details of the new issues are given below:

	Issue Price	Gross Yield	Gross Redemption Yield	Net Yield
3½% Loan 1962	98	3.32	3.61	2.74
3½% " 1967	98 8	3.55	3.67	2.74
3½% " 1974	98 8	3.81	3.87	2.87

Interest in existing Government loans has declined for the time being as fresh funds will naturally flow into the new issues which in some cases will have to be obtained by the sale of other securities. Three percent Conversion Loan ruled quiet and the price eased further to Rs. 77-1. Among short-dated loans 3% 1957 was steady at Rs. 99-13 but 3% 1958 was fractionally easier at Rs. 99-10. Among medium-dated loans 3% 1959-61 was taken at around Rs. 98-2-6 while 3% 1963-65 was marked at Rs. 95-2 and 3% 1964 at the same rate; 3½% 1960 had buyers up to Rs. 96-6-6 due to the approach of the half-yearly interest date (15th July), but 2½% 1952 was weak with sellers over at around Rs. 93-15. National Plan loans were dull with sellers of 3½% 1961 at Rs. 99-9 while both 3½% 1964 and 1965 were on offer at Rs. 98-12. Long-dated loans were easier with 3% 1963-65 quoted at Rs. 93-4 and 3% 1970-75 at Rs. 90-15.

State loans were extremely dull with retail business passing in 4% issues maturing in 1967.

Jute preference shares continued to be freely offered while there was a fair demand for selected miscellaneous issues. In jute, a small lot of Auckland was crossed at Rs. 90-8 and New Central were done at Rs. 106-8. Northbrook were placed at Rs. 86. Among miscellaneous issues, British India Corporation were taken at the higher rate of Rs. 128 and Duncan Brothers were marked at Rs. 64. Martin Burn changed hands at Rs. 104-8. Orient Paper 2nd Preference were crossed at Rs. 74-6 as were Richardson & Cruddas at Rs. 85-8. Rohtas Industries "B" Preference were offered at Rs. 64 and Titagur Paper 8% were taken at Rs. 140-8.

In the banking section, Bank of Bikaner were taken at the higher rate of Rs. 19-14 while Hind Bank were crossed at Rs. 34-8. Punjab National were slightly easier at Rs. 56-8, but United Commercial improved to Rs. 52-8. United Bank of India were crossed at Rs. 4-7.

In the railway section, Arrah-Sasaram were taken at Rs. 72. Dehri Rohtas changed hands at around Rs. 13-8 while Shahdara (Delhi) Saharanpur were freely offered at Rs. 125, without attracting buyers.

Cotton shares were dull and neglected although there were few price changes. Bengal Nagpur were unchanged at Rs. 9-6 as were Cawnpore Textiles at Rs. 8-15. Dunbar at Rs. 302 and Elgin at Rs. 288-12. Kesoram, however, met with selling pressure and were marked down further from Rs. 18-13

to Rs. 18-4. New Victoria were dealt in freely at around Rs. 2-10.

Coal shares came in for little business and in most cases closing quotations were below those prevailing at the beginning of the session. Here is a chart showing representative price movements.

	Opening 5-7-56 Rs.	Closing 11-7-56 Rs.
Amalgamated	22 8	22 4
Bengal	540	539
Burrakur	13 15	13 9
Central India	7 9	7 4
Equitable	30 2	29 14
Katras Jherriah	60 8	60
New Beerbhoom	19 8	19 4
Western Bengal	7	6 13

There was little or no trading in jute shares for yet another week and selling orders were almost impossible to execute. Here are the week's representative price movements.

	Opening 5-7-56 Rs.	Closing 11-7-56 Rs.
Agarpara	11 12	11 10
Alliance	125	120
Barnagore	132	128
Budge Budge	133	128
Chandpady	155	152
Chitavalsah	14 6	14
Kinnison	168	161
Howrah	22	21 8
National	23 8	22 8

Little interest was shown in electric supply shares, but there was no change in prices. Agra were dealt in at Rs. 159, Calcutta at Rs. 13-7 and Patna at Rs. 11-10.

A mere handful of sugar shares were dealt in during the week. Belsund changed hands at Rs. 11-11 and Cawnpore at Rs. 19-11. Ramnugger met with enquiry during the earlier part of the period under review and were at one time taken up to Rs. 29-8; subsequently sellers appeared and the shares closed easier at Rs. 28-14. Shree Krishna Gyanoday changed hands at around Rs. 13-4.

Engineering shares were subdued because of the weakness in Indian Iron & Steel which at one time were marked down to Rs. 34-14 against an opening quotation of Rs. 35-15; tonight's closing quotation is Rs. 35-6. Braithwaite & Co., were unchanged at Rs. 28 while Britannia Engineering were marked down from Rs. 18-12 to Rs. 18-4 and Burn were depressed further to Rs. 354. Richardson & Cruddas were marked back from Rs. 26-10 to Rs. 25-14 as were Jessop & Co., from Rs. 36-8 to

GOVERNMENT OF INDIA

3½ PER CENT. BONDS 1962. ISSUE PRICE Rs. 98
PER Rs. 100 (NOMINAL). REPAYABLE ON THE
16TH OF JULY 1962

UNCERTAIN CONDITIONS IN STOCK MARKETS

GILT-EDGED RISE ON NEW CONVERSION OFFER

London, 11th July.

THE general performance of the stock markets prior to the week-end was satisfactory, but uncertain conditions developed later. No definite trend developed as a whole, and business generally was at a low level. The favourable effects of the Chancellor of the Exchequer's moderately optimistic review of the economic situation soon wore off, and the continuing labour troubles in the motor and steel industries gained the upper hand as market factors. In addition, the holiday season is getting into its stride and conditions in the markets are usually quiet at this time of year. The main event in gilt-edged was the long-awaited announcement of the authorities' proposals for dealing with the £223 million National War 2½ percent bonds due for redemption next month. This uncertainty had been hanging over the market for some weeks, and the news that holders were being offered straight conversion into a new 4½ percent 1962 stock with no cash subscriptions invited removed it. The market responded accordingly and showed an all-round advance at the beginning of the week, particularly in short-dated stocks. The improvement was helped by the view in some quarters that gilt-edged were at, or not far short of, the bottom. The realisation that there were plenty more borrowers in the queue restrained the market and some reaction took place later. The strength of Japanese bonds, and to a lesser extent of Germans, provided the feature of the foreign bonds market, while in rails some issues went strongly ahead on dividend hopes, and on talks of a possible American bid. Dollar stocks moved up in response to Wall Street's advance. Business in industrials was small and selective, prices for the most part moving within narrow limits. The Financial Times Industrial Ordinary index was a point or so better compared with the previous level. Interest broadened in gold shares prior to the week-end and prices advanced, but there was no follow-through subsequently, and prices slipped back. The finance house and Free State issues were the chief beneficiaries. Diamonds improved but coppers fell back. Other base metals were well maintained. Oils recorded substantial gains in active dealings, and despite subsequent profit-taking, were considerably higher on the week. Shells were outstanding and the British-controlled Trinidad Petroleum shares were active on reports that an American bid is pending. Rubbers and teas held steady, with the former a few pence better where changed.

The Money Market

Following the turn of the half-year and the release of funds called in earlier, conditions in the money market throughout the past week were very comfortable. For the first two or three days, money was in abundant supply and the authorities worked in reverse to mop up the excess money. There was some contraction in the supply during the later part of the week, but not to the extent expected, this being partly due to a heavy buying of 2½ percent National War Bonds by the Treasury in front of the conversion offer announced on Friday. One feature during the week was a heavy demand for bills, which resulted in discount houses having their books greatly depleted. They made a strong bid at the week's tender to replace their lost holdings and raised their bid by 6d to secure a quota of 61 percent. The Treasury was able to borrow at the average rate of 10½ 1/8d, or 1s 7d less than a week ago. Applications for £280 million worth of 91-day Treasury bills totalled £452,390,000 and were allotted at an average rate of 10½ 1/8d, against 10½ 5/8d in the previous week. Offerings this week comprise £280 million worth of 91-day bills. The Bank of England return for the week ended 4th July showed that the bankers' deposits were £5 million lower at about £233 million while notes in circulation were £13 million higher at around £1,906 million.

Stock Market Prospects

The Investors' Chronicle market newsletter writes: Gilt-edged steadied after Monday's fall. Japanese and German bonds remain firm. After an

all-round decline on wage claims, industrials turned firmer with bear-covering among the steels and elsewhere. Kaffirs have been firm. Oils suffered profit-taking, but there is no evidence that their general up-trend has been reversed. Britain's credit squeeze is beginning to work and the Government shows no signs of relaxing it in any way. Perspective is required. Redundancy in the motor industry makes headlines but it is very small. The long-term outlook is hardly so bad as some yields on motor shares indicate. Earnings are bound to fall heavily, but prices are becoming attractive for long-term investors. Steels also have suffered a severe setback, but investors would do well to sit tight.

Hongkong Gold Firm

Linseed oil was featured by a sharp rise of over £10 a ton on strong Continental demand at rising prices. There are reports claiming that Russian buying is behind the current demand, but these are viewed with doubt by U.K. traders, while the rise is considered overdone. Most U.K. selling offers were withdrawn with nominal indications up to £129 c.i.f. compared with £118 prior to the week-end. U.K. buyers were rarely over £125 c.i.f., but Continental operators were paying a much higher rate. Canadian linseed oil was substantially higher. Edible oils improved with more enquiries circulating. Nigerian bulk groundnut oil was sold to the Continent at £130½ c.i.f., while the U.K. paid £135 c.i.f. for South African bulk oil over the week-end. Groundnuts were rarely mentioned by the Nigerian Board still reserved as sellers. Soyabean oil improved on higher advices from the origin. By contrast, coconut-oil was easier under the pressure of cheap offers of Philippine copra and increasing offers of Indonesian copra at a low level. Straits bulk oil was sold Rotterdam to £28 c.i.f., while Dutch oil, offered ex-tank Rotterdam, dipped to the parity of £25½ on the news of business in Philippine copra at \$169 to \$169½ c.i.f. August-September to north Europe.

Sharp Rise in Linseed Oil

The Hongkong gold market was very firm with increased activity, but caution was noticeable at the end of the week in the face of expected heavy arrivals from Macao and profit-taking. The firmness was attributed to the weakness of sterling, and the strength of American dollar in Hongkong, which broke through the six-dollar level. At the opening on Tuesday, prices advanced initially, then reacted slightly on Wednesday and rose again by Saturday. When the carry-over charges were fixed at 110 cents in favour of sellers, profit-taking ensued and the closing price was \$111.260½. Despite the local advance, forward contracts eased slightly to \$(U.S.)37.88. The official offtake was 3,810 tials and unofficial 15,560 tials. Arrivals from Macao during the week were expected to be around 50,000 ounces.

Thin Rubber Market

Prices moved erratically during past week in a thin and unsettled market. Demand for early shipment parcels contributed largely to a rising trend, but business was mostly of a technical nature. Factory demand was reported as small. The market frequently relapsed into quiet moods with sharp recessions. Dealers at times were reluctant to trade except when outlets were reasonably assured. The disappointing U.S. steel position and further cutbacks in U.S. car production militated against optimism, though at the close, values were about 3/6d higher on balance. An improved demand and scarcity of sole crepe on the spot made for a firmer market, and quotations were advanced to the basis of 40d a lb. for ½ inch smooth No. 1 on the spot.

U. K.-Pakistan Textile Trade

The Board of Trade has announced that the British and Pakistan Governments have agreed on arrangements supplementary to the U.K.-Pakistan agreement of 29th April, 1955 whereby \$5 million worth of cotton textiles were supplied by the U.K. to Pakistan with payment in the form of raw cotton made available by the U.S. Government as part of its aid-to-Pakistan programme. The announcement says that this is to be regarded as an emergency operation in which Britain has agreed to supply to take up certain balances of the original aid programme which have not been fulfilled by other textile suppliers, and in order to avoid disappointment and wasted effort, it is important that exporters be clear on the time limits which circumstances impose. Both the yarn and raw cotton must be shipped not later than 30th October.

BRITISH ECONOMIC EXPERTS INVITED TO INDIA

GOVERNMENT APPROACHES WRITERS AND JOURNALISTS

(FROM OUR NEW DELHI CORRESPONDENT)

London, 9th July.

A MIXED team of economists and financial editors may be visiting India during the next cold weather season. The Government of India, it is learnt, is inviting Mr. Donald Tyerman of the Economist, Mr. A. L. Burn, financial editor of The Times, Mr. Andrew Shonfield of the Financial Times, Mr. Richard Fry of the Manchester Guardian, Professor R. F. Kahn and Professor E. A. G. Robinson from Cambridge University, Professor W. Arthur Lewis from Manchester University, Mrs. Barbara Wootton and Mr. R. H. S. Crossman, Member of Parliament, to visit India. They are being asked to see things for themselves and advise on the implementation of the second five year plan. They may also advise their country, if they so wish, to make the maximum contribution to the success of the plan. Much of the credit for the move goes to the Indian Commerce and Industry Minister, Mr. T. T. Krishnamachari.

Project for Aero-Engine Factory

The Defence Secretary, Mr. M. K. Vellodi, who has been here, has finalised negotiations with the Bristol Aircraft Company for setting up an aero-engine factory and with the Folland Aircraft Company to assist in manufacture in India of a light-weight fighter.

Machine-Making Industries

An industrial mission sponsored by the Colombo Plan organisation and the Federation of British Industries will visit India during the next cold weather season to prepare blueprints for starting machine-making industries in India and assist in implementing the second five year plan. Sir Eric Coates, who led the steel delegation last year, is mentioned here as likely to head the new mission.

Cement and Boiler Machinery

Negotiations are nearing completion under which Vickers will assist in setting up in India plants for cement-making and boiler-manufacturing machinery. Vickers have also shown interest in undertaking the construction of a second ship-building yard.

Durgapur Steel Plant Tenders

The Indian Steelworks Construction Company, which has been commissioned to set up the Durgapur steel plant, has submitted tenders in their final form. They are being scrutinised. The Secretary to the Iron and Steel Ministry, Mr. S. Bhoothalingam, who is in Germany, is expected here later this month for final discussions before signing the agreement.

Floating Loans in Europe

The Joint Secretary to the Finance Ministry, Mr. B. K. Nehru, has been here appraising the climate for floating loans on the London money market. During his stay, he has also finalised the details of two loans, one from the British Government and the other from British banks, to finance the Durgapur steel project. During his visit to Belgium, Switzerland and other European countries, he will try to ascertain the prospects of raising loans to finance the second five year plan.

ELECTRICITY OUTPUT DURING MARCH

Power generation in India during March this year increased by 50.1 million kWh over that of February. During the month, 715 electricity undertakings produced 798.5 million kWh of power, of which 651.0 million kWh were sold to ultimate consumers. One generating undertaking at Vikarabad in Hyderabad, and a purchasing undertaking at Gowan in Bihar, were the new additions. The figures of output and sale of electricity for March 1955, are 696.1 million kWh and 568.3 million kWh and for March 1956, they were 200.4 million kWh and 165.7 million kWh respectively.

Bombay

SUBSTANTIAL PROGRESS IN COTTON-GROWING

OUTPUT OF LONG AND MEDIUM STAPLES INCREASING

(FROM OUR BOMBAY CORRESPONDENT)

THE annual report issued by the Indian Central Cotton Committee indicates that substantial progress has been made in cotton-growing in this country. The cotton year ended 31st August, 1955, was the best ever. A record quantity of 4,298 million bales was produced, against 3,965 million bales in the previous year. The area under cotton rose from 17.2 million acres in 1953-54 to 18.3 million acres last year, thus exceeding the target of 18 million acres set for the current season. The States of Bombay, Punjab, Saurashtra, P.E.P.S.U., Rajasthan and Mysore mainly contributed to the increase. The increase in the cotton area continues, encouraged by the present prices and favourable weather conditions at the time of sowing. The official all-India final estimate puts the current year's area at 20.23 million acres. Production, however, is expected to fall to 3,993 million bales because of unfavourable weather conditions later, notably in Madhya Pradesh, Hyderabad, P.E.P.S.U., Andhra, Uttar Pradesh, Mysore and Kutch.

The progress has been remarkable, considering that the cotton supply position after Partition was extremely serious. While 409 of the sub-continent's textile mills remained in India, 22 percent of the acreage under cotton, producing 38 percent of the total crop, fell within Pakistan. India was compelled to import approximately 1.1 million bales during the immediate post-Partition years at an annual cost of Rs. 100 crores of foreign exchange to keep her mills in full production. The position now is materially changed. Self-sufficiency in staple lengths of less than 1-1/16 inch has been achieved. The present cotton imports of about 600,000 bales a year relate to growths of staples of about 1-1/16 inch from the United States, Egypt, the Sudan and Africa. An increasing quantity of domestic cotton is being consumed within the country. The report observes that the offtake of Indian cotton has risen from 3.59 million bales in 1952-53 and 3.86 million bales in 1953-54 to 4.124 million bales last year. Although total consumption has also increased, the proportion of foreign cotton has decreased. This is all to the good since it helps save foreign exchange.

Long and Medium Staples

An encouraging feature is that the production of long and medium staples is increasing. The report observes: "It is noteworthy that the increase in the area and production of cotton in 1954-55 has been mostly in the long and medium staple varieties. The production under these groups in the year was 1,587 million bales and 1,886 million bales respectively, against 1,42 million bales and 1,662 million bales in the previous year. The percentages of production of long, medium and short staple cotton to the total in 1954-55 were 37, 44 and 19, against 36, 42 and 22 in 1953-54." This represents an improvement of approximately 14 percent in long staple growths since 1950-51. A considerable increase in the production of long staple cotton is necessary if India is to achieve complete self-sufficiency, but the report observes that the "evolution and acclimatisation of such cottons is a long process and the country will have to depend upon imports of these cottons for some more years." There has been an improvement in another direction also. The yield per acre has gone up from 93 lbs. in 1947-52 to 116 lbs. in 1954-55. Wide disparities, however, still persist. In the irrigated areas of Punjab, P.E.P.S.U. and Madras, the yield per acre is 200 to 250 lbs., while in the dry areas the yield is no more than 60 to 100 lbs. depending on the vagaries of the monsoon. Multi-purpose irrigation projects will no doubt help improve the situation but other steps are also being taken, such as the distribution of seed of improved varieties, the application of manure, the extension of irrigation facilities, the adoption of improved cultural practices and the control of insect pests and diseases.

Research Work Continues

The Committee reports that its research work is continuing, the major part of it being concerned with the improvement in quality and yield. The Technological Laboratory in Bombay continued to work on the problem of evolving new varieties. As many as 2,863 samples were received at the laboratory for testing during the year under review. In all, 46 research and 18 seed multiplication centres are functioning. As a result, the area under improved varieties has been steadily increasing and it is estimated that the total area covered by pure seeds was 6.9 million acres, and taking into account the natural spread of varieties, the area under improved varieties was 9.4 million acres. In addition to technological research, fundamental agricultural research is being conducted at the Institute of Plant Industry, Indore, and on inter-specific hybridisation in Surat. Applied research work is essentially concerned with particular conditions and as such is conducted on an individual basis in each cotton-growing State. In the main, most of these research schemes are financed entirely by the Committee while the cost of a few schemes is shared by the Committee and the State Governments concerned. The Government of

India too has made sizable grants from time to time to help meet the expenditure on research and extension. It is hoped that this valuable work will continue and India, already the second biggest producer of raw cotton in the free world, will achieve self-sufficiency in all varieties within the foreseeable future.

Cloth Markets More Active

Meanwhile, there has been some activity in the spot cotton market and prices have improved slightly because of renewed spinner interest. This is believed to be a reflection of a corresponding increase in activity in the cotton piecegoods market. Although there has been no increase in the actual turnover, there have been several enquiries from important upcountry consuming centres, particularly Punjab, Delhi and West Bengal. The export market remains dull. Total exports for the first half of this year are estimated at 389.41 million yards, against 449.57 million yards in the corresponding period of last year. Export conditions are likely to improve somewhat following the issue of limited import licences in Indonesia. East Africa too is showing renewed interest.

The cotton futures market has not improved in sympathy with the spot market. Prices have fluctuated within narrow limits, with the volume of business confined to about 10,000 bales a day. Most operators have adopted a cautious attitude pending further reports on the 1956-57 crop. Rain in all the major cotton-growing areas has led to the belief that the 1956-57 crop will be exceptionally good. Foreign cotton is equally dull and it is believed that the recent announcement about the import of American cotton relates to the triangular Indian-Burmese-American deal. Further clarification is awaited on the implication of this transaction, and the manner in which it is to be carried out.

INDUSTRIAL USES OF ATOMIC ENERGY

IN two broadsheets (*Atoms in Industry* I and II 2s 6d each) P.E.P. has brought together in convenient form a summary of the available material on the economics and organisation of the production of nuclear energy. The pamphlets deal with the industrial uses of nuclear energy, its contribution to the national economy and some of the international problems raised by its development. Every industrial innovation, the broadsheets point out, is different from anything that has gone be-

fore, but in a special sense this is true of the introduction of nuclear energy into British industry. For the first time a national monopoly in scientific research and technical "know-how" is being released to private industry, as a result of war and post-war concentration of effort on defence. It is possible that private industry, left to its own devices, would have developed peaceful uses of nuclear energy; it is certain that without the help and guidance, first of the Ministry of Supply, and later of the Atomic Energy Authority, this would have taken many more years.

The Atomic Energy Authority is a public research and development organisation but the large-scale implementation of nuclear power is a matter for private industry. Industry has played an important role in the building of Britain's first atomic power station at Calder Hall, and it is industry which will build power stations for the Electricity Authority. Discussion of the economics of nuclear power have not so far suggested the likelihood of any great revolution in power costs. The prospect of generating electricity for 0.3d a unit instead of the present 0.6d—that is halving the cost—is very pleasant, but should not lead to dreams of an era of plenty. In industry, isotopes are essentially tools for detecting, measuring, tracing and inspecting. In many cases, measuring instruments may be considered as electronic instruments which employ a radioisotope as a source of electrons. Versatility and range of application are the outstanding characteristics of isotopes. In many uses they are simple and cheap. This does not detract from their importance, but rather emphasises their value and potential.

Price of Isotopes

The calculation of the true economic cost of radioisotopes is even more difficult than that of nuclear power. In fact, these calculations are not very important because the price of isotopes is at present set by that ruling in U.S.A. This appears curious in view of Britain's leading position in world trade in isotopes, but is explained by the fact that the U.S.A. was originally ahead in the production and sale of isotopes, and have retained the position of price leaders. The development of atomic energy must be considered as one of the three most promising technological lines of industrial progress in the next half-century. It must take its place alongside the discovery and development of new materials, especially metals and plastics, and of new properties in old-established materials; and the engineering advances which are leading towards automatic control of manufacturing processes.

give these hands better light—at less cost!

A factory cannot afford faults—because faults mean hold-ups, unfulfilled quotas, reduced profits. That's why most modern factories have fluorescent lighting. Production experts have discovered that a good light reduces faults greatly... increases production.

Philips 'TL' Fluorescent Lamps give more than three times more light than filament lamps of the same current consumption! That's real economy! And the light is not harsh—it lights up the working bench evenly. The worker's eyes do not get tired easily if the lighting is well planned! He can do better work. Install Philips 'TL' Fluorescent Lighting and watch output go up... costs come down.

A Philips Fluorescent Lamp gives more than three times more light—lasts on an average 7,500 hours!

PHILIPS
'TL' FLUORESCENT LAMPS & FITTINGS
 —make light work for you!

Can we advise you? The Philips Lighting Service Bureau will be glad to show you how you can use fluorescent lighting in your factory—free of charge and without obligation. Please write to Philips Electrical Co. (India) Private Ltd.

U.K. PAYMENTS SURPLUS FOR FIRST HALF OF 1956

THE CHANCELLOR TO PURSUE CURRENT POLICY

(FROM OUR LONDON CORRESPONDENT)

THE Commons debate on the economic situation was a disappointment, though it furnished the Chancellor of the Exchequer with an opportunity to reaffirm his intention to maintain his present policy, which he contends is at last showing signs of results. In this connection he disclosed that there was a current payments surplus of "not less than £100 million" for the first half of this year, the outcome partly of a narrowing of the trade gap (with exports running 10 percent higher than last year—after allowing for the 1955 carry-over from the 1954 dock and rail strikes—and imports no more than 1½ percent higher) and partly of an improvement in net invisibles. With the second half of the year normally less favourable to the payments balance than the first, as witness last year's first half-year surplus of £15 million followed by a deficit of £118 million in the second half, there is little ground for undue optimism in this year's better showing, but at least it justifies Mr. Macmillan's claim that "it looks as if the economy is beginning to move towards the position of balance that we want." Investment in industry is still rising, and if only the labour now being rendered redundant in the motor industry—which was the Opposition's main point of attack—could be diverted to the other industries still crying out for labour, and more especially the mines and railways and the other engineering industries, costs could be held and our competitive position in world markets on delivery dates and the like considerably strengthened. The Government's expenditure cuts are a useful contribution.

The slight encouragement afforded by Mr. Macmillan's disclosures was offset by the somewhat poor impression made by the June gold and dollar figures, released earlier. As expected, they showed a fresh increase in the reserves, but the rise was only \$16 million, against the \$41 million increase in May. This surplus was arrived at after paying \$8 million in service of the Canadian loan, \$4 million on the Economic Co-operation Administration loan, and \$2 million on bilateral settlements with creditors in the European Payments Union. There were dollar receipts during the month of \$2 million as defence aid from the United States, and of \$16 million in respect of the surplus earned with the European Payments Union in the previous month. Last month's residual surplus, \$12 million, went against a comparable figure of \$11 million for May and of \$49 million in April. That position can, therefore, be said to have been fairly well maintained. On the other hand, the reappearance of a £9 million deficit with E.P.U., compared with the £3 million surplus in May, is disconcerting, even though much of it is probably attributable to the strength of the deutschmark. The indications are certainly that there will be a moderate reduction in the reserves during the period of autumn strain, and indeed the increase

could soon vanish if the overseas sterling countries ran into trouble later this year, as they well might.

Production Decline

In the first five months of 1956, the index of industrial production averaged 139, compared with 138 for the same months last year. Stagnant production was perhaps the best that could be expected at a time when a major adjustment of effort was being urged by Government policy and it has been consoling to see the adjustment actually being made. Consumer goods output, particularly durable consumer goods such as cars, has been falling, while output of capital goods has been rising. So far, one might have said, so good. But the preliminary figure for May is a shock. From information received so far, the index is expected to be 135 to 136, compared with 140 for May, 1955. The index in April dipped below its level of a year earlier, but that was because of the Easter holiday. For the first time the index is now, for May, appreciably lower than a year earlier over a comparable working period.

The ban on overtime by the maintenance men in the steel industry is one cause. For the first time for many years steel production in May was lower, by 1½ percent, than a year earlier. The heaviest fall is, of course, in passenger cars, output of these being 21 percent lower in May, 1956, than in May, 1955. The loss is not offset by a gain of 3 percent in commercial vehicles. Cotton yarn is down by 12 percent and man-made fibres are unchanged compared with a year previously. It is encouraging to find coal output so far this year running some 600,000 tons higher than for the same period of last year.

Four-Sided Talks

Sir Anthony Eden may propose that the next meeting between the Government and industrial leaders should be a four-sided one. Representatives of the Trades Union Congress, it is suggested, should be invited. With Ministers, chairmen of the nationalised industries and representatives of the Federation of British Industries and British Employers Federation, they would hammer out a procedure for placing redundant workers in vacant jobs in industries with export prospects. A meeting is already projected between Ministers, the chairmen of the nationalised industries and the private employers. Several Ministers now feel that this might suggest that the Government is "ganging up" with employers against organised labour. Labour's response, so far, has been uncompromising. Some leaders it is true, have warned the rank and file of the economic difficulties and the necessity for increased efficiency and production to accompany requests for increased wages, but resolutions favouring fresh demands form a feature of the agenda of most of the union conferences now being held, while the steel workers and car factory employees are both threatening strikes, which would have disastrous effects on the economy as a whole.

Textiles for "Aid" Cotton for Indonesia

Another triangular transaction under the American aid programme, similar to that arranged with Pakistan and Burma, has just been announced by the Board of Trade. Another market in Asia, Indonesia, will take cotton textiles from this country, which, in its turn, will take up raw cotton released for the purpose by the United States. The value of the cotton yarn and piece goods involved is in the region of £1,000,000. Lancashire traders wishing to participate in the transaction will have the benefit of the new, simplified import licensing arrangements for raw cotton originating in dollar countries which came into operation this week. The change has been made specifically to meet the difficulties which have arisen in earlier three-cornered transactions involving American dollar aid cotton. In place of the open general licence, open individual licences, valid for twelve months, will be issued for imports of raw cotton originating in dollar account countries and consigned from any country. These licences will permit unlimited imports. Dollar cotton not of U.S. origin and United States cotton shipped from third countries may be imported in the ordinary way under these licences at all times.

Indonesian imports of cotton piece goods fell from 626,480,000 yards in 1953 to 505,840,000 yards in 1954, and to 450,760,000 yards last year, the United Kingdom's share of the trade in those years being respectively 15,280,000 yards, 3,560,000 yards, and 6,520,000 yards. An assured market for a few million yards in the next few months would thus be no less welcome in Indonesia than in Pakistan or Burma. Under the new licensing arrangements, there are better grounds for hoping that the deal will be carried out smoothly and that all the textiles concerned will be sold and all the raw cotton bought. The many spinners (and raw cotton merchants) who have hitherto been slow to participate in these transactions will be obliged, if they wish to buy United States cotton, to make use of the American aid dollars, as one leading spinning combine has already done. As regards the other part of the transactions, both Indonesia and Burma have their own distinctive styles in cotton cloth, including fine goods and fancies. Orders for these cloths would give Lancashire traders much satisfaction, and it is to be hoped that they can be prepared for shipment within the stipulated periods.

Insurance Progress

Although the inflation of values has had a big effect on the volume of premiums, it is good to learn from the statement of Mr. J. A. Pollen to the annual general meeting of the British Assurance Association that the industry has shown real

growth following upon the remarkable activity of the postwar years in Britain, the United States and nearly all the major industrial countries. Total net premiums written by British insurance companies in 1955 rose from £1,021 million to a new record of £1,098.3 million. In the fire and accident departments premium receipts rose more rapidly than in any other year since 1952. Fire premiums were up from £213.7 million to £224.3 million and accident premiums from £307.9 million to £339.5 million. Even in the marine department the downward trend of the three preceding years was checked and premiums rose from £59 million to £61 million. Among the life companies business was also active last year. Ordinary life premiums rose from £310.6 million to £335.7 million and industrial life premiums moved up from £131.8 million to £138.4 million.

Mr. Pollen also presented to the meeting some revealing figures of insurance companies' investments. Holdings of British Government securities dropped last year from £1,269.4 million to £1,242.6 million. That total represents a proportion of only 28 percent, against 30.6 percent, of total investments. The proportion has continued to decline since 1947, a movement paralleled in the between-war years 1927-37. The explanation is that, during the second world war, as in the case of the first, insurance companies devoted practically all of their new money to the financing of the war through subscription to Government stocks. In times of peace the companies have devoted themselves rather to the financing of industry. They have assisted in the provision of homes through loans on mortgages to private individuals. Last year's figures show a continuation of both these trends. Mortgage loans jumped from £450.1 million to £531.8 million. Holdings of Ordinary stocks were up from £584.0 million to £679.8 million. The proportion of total investments now held in Ordinary stocks by British insurance companies, taken as a whole, is 15.4 percent. This compares with 14.1 percent in 1954, 10.6 percent in 1947, and as little as 3.4 percent as far back as 1927.

Capital Spending by Industry

The Board of Trade is to ask about 600 companies, including the largest in the country and a representative number of smaller ones, to make a forecast of their expected capital expenditure during 1957. It was agreed that discussions between the Board and the Federation of British Industries earlier this year that there was a particular need for the Government to have an indication as early as possible of the likely level of capital expenditure in 1957. The information which is now being sought is a longer forecast than is contained in industry's contribution to the Board's enquiry into capital spending, which was begun last year, and for which all the companies now being approached regularly supply information. They have already given forecasts of their likely expenditure under this head in 1956. The forecasts for 1957 will be asked for in the normal way at the end of September. In asking now for a preliminary estimate, the Board says that it is realised that this may present companies with some difficulty, but in view of the importance of the information it is hoped that they will be able to comply with the request, which has the full support of the F.B.I. It is pointed out that forecasts supplied in earlier years have proved valuable. As credit restrictions take some time to show their effects, it is essential to be able to look farther ahead and some indication of the expenditure expected in 1957 will be of great help in trying to assess future changes in the demand on resources.

First Quarter's Revenue

Treasury returns issued for the first quarter of the financial year disclose no surprises. They show, as is usual, a substantial excess of expenditure over revenue, which will doubtless be eliminated during the big tax-gathering season in the final quarter. Ordinary revenue at £982.6 million is nearly £61 million higher than in the corresponding quarter of last year. But ordinary expenditure, including self-balancing items and sinking funds, has risen from £1,042 million to £1,140.8 million. The result is an "above the line" deficit for the quarter of £158.2 million, compared with a deficit of £120.3 million a year ago.

The effects of the credit squeeze are discernible in the "below the line" position, which covers expenditure largely of a capital nature. Here the first quarter deficit, reflecting a sharp reduction in loans to local authorities, is down from £136.7 million to £49.2 million. This leaves the overall deficit, taking "above and below the line" items together, at £207.5 million, against £257.1 million at this time last year.

Reviews

Recent negotiations between the Mitsui Steamship Co. Ltd., Tokyo, and the Far Eastern Freight Conference for the admission of the Mitsui Line as members of the Conference have failed to produce any agreement. The Mitsui Company found that the terms proposed to them were unacceptable, and were rejected. The Mitsui Company will, therefore, continue to operate outside the Conference, and intend fully to maintain their services as hitherto.

The International Tin Agreement came into force this week. This was decided in London by representatives of Governments that have signed and ratified it.

The Governments of Singapore and Malaya have agreed in principle to establish a joint central bank for the two territories. Until the constitutional future becomes clear, a decision has been postponed on the form and organisation of the bank. There will be parallel banking laws in the two territories.

Madras

DAKSHINA PRADESH MOVE GETS LITTLE SUPPORT

DEMAND FOR MORE INDUSTRIES IN THE SOUTH

(FROM OUR MADRAS CORRESPONDENT)

THE Tamil Nad Congress Committee, in considering the issue of Dakshina Pradesh, did not approve of the agitation on a controversial matter. While being in favour of the Amritsar Congress resolution, the T.N.C.C. Executive at its meeting obliged Mr. Kamraj Nadar with a compromise resolution. Seven members, including Mr. Bhaktavatsalam, were absent. Mr. Nadar spoke rather firmly and pointed out that as the Bihar-West Bengal merger scheme had already been withdrawn, Tamil Nad should not commit itself on an issue which was controversial and unnecessary. A plea for Congress unity also came from him. The general view was summed up in advance of the T.N.C.C. meeting by Mr. T. T. Krishnamachari in his observation that Dakshina Pradesh is no longer a live issue.

Trouble in Mysore, where the Chief Minister's position has been shaken by the no-confidence move initiated by a majority of M.L.A.s, has undermined the position of those pleading for a merger on the model of the Andhra-Telangana combination. A visiting Hindu Mahasabha leader too was unenthusiastic about Dakshina Pradesh. It is clear that the agitation has failed. Of course, the Congress claim is that the elections are ahead and the T.N.C.C. must be able to take the field with one mind, though in the choice of candidates outside leaders will take a hand. The Congress in Madras city is asking for a drive for membership, and is backing the Government's campaign against street betting on cotton numbers and illicit distillation, complaining, incidentally, about the excessive issue of licenses for the sale of denatured spirit.

During his visit to Madras city, Lala Lakshmiapat Singhania, declared that co-operation between the private sector and the Government is essential. After the Industrial Policy Resolution, the former should not harbour doubts. At the same time, the Federation Committee at its Coimbatore meeting set down its views against the proposals of Mr. Kaldor. It pointed out that all enquiries into the tax system had overlooked the point that the proportion of tax receipts to the national income over last two decades had remained more or less constant, though the rates of taxation had been stepped up. The Federation rejected the charge that it had become a tool in the hand of the Government, and that it did not tell the facts to the Government. The charge was made at a party given by Mr. G. D. Nayudut but was flatly denied by Mr. Singhania. He urged that the policy of a democratic Government could not be disregarded by commercial organisations, which could only oppose by sending M.P.s to put forward their views. Whether the Federation will try to get in M.P.s who uphold its views is not clear, but the loyalty of Indian business men to the Government at present is plain. The criticism of the plan is over details, but not over the principles, and the Federation is getting ready with a committee to prepare projects for private enterprise.

Steel and Transport

The Hardware Merchants Association of Tuticorin heard Mr. Cleetus of Tatas describe the changes in the trade over the last 20 years. He said that the preference for foreign steel had disappeared, but profit margins were stationary while costs and prices were rising. He praised the Government's decision to set up three new steel works as bold and commendable, and agreed that large-scale imports were necessary. The shortage of railway transport and congestion at the ports were dealt with in Mr. Cleetus's review. He said that the economy required conversion of the existing metre-gauge lines into broad gauge lines, and was surprised that the Ernakulam-Quilon line was to be built as metre gauge. The preponderance of metre gauge railway lines in South India was unhelpful. With the coming of uniform prices for steel, it was possible, according to Mr. Cleetus, to increase the consumption of steel in the south. Fabrication rather than manufacture represented the line of development, and industrialists should grasp the opportunity presented by the additional power supply, once the Neiveli field got going. At the same conference, Mr. C. Subramaniam pointed to the difference between capital invested in West Bengal and that in Madras, and remarked that whatever industrial growth had taken place in the past was largely due to the British. Mr. S. Anantharamakrishnan, chairman of the Simpson Group, pleaded for development of the private sector by concerted efforts.

Aluminium Plant

The assurance that a big aluminium plant will be set up in Mettur by the Government has made an impression. The choice of Mettur is logical, though recurring power cuts must cause inconvenience. The seasonal shortage is almost out of the way, and when the Kundah scheme is ready, difficulties will not arise. As Mysore too suffers from occasional power shortage due to poor monsoons, the experience of Madras is not peculiar. Nevertheless, the textile industry feels that development of the weaving side is necessary and millowners, while meeting Mr. T. T. Krishnamachari in Madras,

argued that in allotting looms, the claims of Madras should be recognised. In the past, spinning mills were encouraged to make cloth also, and if new Government-owned spinning mills furnish yarn for handlooms in the future, South Indian mills will have to produce cloth for export. West Africa is still a promising market and prospects in Burma are likely to improve now that India is again the chief source of Burma's imports. Co-operative marketing is held to be a panacea for the handloom industry's ills, and the Government rebate is helping raise local consumption of handloom cloth. But it is the new high tax on mill cloth, including medium varieties, that is largely responsible for diverting consumers to handloom goods.

Development Problems

At the official talks on development, the Director of Agriculture noted that in community projects, the emphasis was not on agriculture, as in the N.E.S. areas which did more to raise output. While the plan hopes for an increase of 40 percent in food production, Madras officials expected only a 25 percent increase. Industry will need more raw materials and price stability is regarded as vital for the success of the plan, especially if exports have to be increased for earning foreign exchange and while at the same time meeting increased home demand for food. Small cultivators are entitled to more help in the future, according to the Chief Secretary who feels that in the past big landlords received more attention. The review called attention to the need for more fertilisers. The Indo-Agri factory in Avadi is going to increase its production of mixed fertiliser for sale in the south. The company, managed by a

well known concern in India has deputed an Indian officer for study of the latest methods.

Industries Department Report

The report of the Industries Department for the year ended March 1956, was scarcely noticed in the Press. Intensive geological survey continued and occurrences of mica in the Nilgiris were noted. The Department runs polytechnics at eight centres and new ones have sprung up this year. The institute of leather technology showed interest in the making of sports goods and arranged for demonstration of tanning. The department helped the cottage match industry to secure chlorate of potash and paper for litho presses. Experiments by Dr. B. B. Dey on the manufacture of strychnine from *nux vomica* seeds are described as being on a laboratory scale. The setting up of a pilot plant to ascertain costs is held to be necessary. A fall in potency and quality accompanied the rise in shark liver oil production. The Calicut plant set up during the war to counter the shortage of cod liver oil has been helping the chemists and better packing is contemplated. The soap factory in Calicut has been training soap makers. It helped the cottage industry while raising its own output and sale. The future of the institute is settled by the S.R.C. The Government has recently made it clear that no assets would be removed and the reports of elephants being withdrawn from plantations in Malabar and of immature teak trees being felled indiscriminately have been answered by a denial pointing out that nothing detrimental to Malabar is undertaken on the eve of the separation. Comments in certain newspapers led to a statement, asking officials to maintain the status quo in official property and assets.

You feel better, work better
—in an office cooled
by the NEW model

Unobtrusively smart, the new model 'CRYSTAL' fits into a window, a ventilator or a small space in the wall — blends with your office furniture

THERE'S no doubt about it — your efficiency is doubled when you work in a cool, clean office! And that's the atmosphere you get with the new model 'CRYSTAL', finest room air conditioner yet made for the Indian climate.

THE AIMS OF LAND REFORM IN INDIA

MORE PROSPERITY AND BETTER LIFE FOR THE FARMERS

(BY A SPECIAL CORRESPONDENT)

WITH the abolition of the zamindari system and of other intermediaries in land between the cultivators and the State, land reform measures in India have been regarded as an important method of increasing rural prosperity and agricultural production. The aim is not only to make agriculture more profitable for the farmers, but also to eliminate disparities and promote social and economic justice. The abolition of zamindari was an essential step for bringing the actual cultivator into direct relationship with the State, for the payment of land revenue and for inducing him to adopt efficient methods of farming with the assistance and advice offered by official agencies. Absentee landlordism was not conducive to maximising the use of land or its yield.

It was present not only in the zamindari system, but also in areas covered by the ryotwari system in Madras, Bombay and other States, where big landowners held lands directly from the State and got them cultivated by tenants or sub-tenants. Since there was no regulation of rents, wide disparities in rates and in methods of payment prevailed. The logical step was to follow up the abolition of zamindari with measures which would bring ryotwari areas to roughly the same level. Later on, further steps could be taken to bring into existence a class of peasant proprietors, who would own the land they cultivated or who would be able gradually to secure possession of it by paying compensation to owners.

Complicated Problems

A number of complicated problems have arisen in this process. One of these is to determine the criteria on which demarcations of family holdings and the extent of land which an owner may retain for his personal cultivation should be made, and to determine the principles according to which ceilings on holdings may be imposed. Other problems relate to the fixing of fair rents and removing the wide disparities (rents range from 10 per cent of the gross produce in Bombay to 80 per cent in the Tanjore district of Madras), and imposition of land taxes and water and other rates by States on an equitable basis. These problems have become more complex as many States lack authentic and proper land records. Few land surveys have been conducted, on the basis of which settlement of the different categories of land for purposes of levying land revenue, particularly in areas in which the zamindari system prevailed until recently, could be made. Despite these difficulties, the Planning Commission's attempt to formulate a set of basic principles is commendable. The Commission prescribes, for example, that personal cultivation should invariably provide for cultivation through servants or hired labour, but the principal elements in it are preparedness on the part of the owner to bear the risks, personal supervision of the work by him and contribution of his own labour. In other words, it should provide for the "entire risks of cultivation being borne by the owner and personal supervision exercised by the owner or a member of his family" by residing in the village through the larger part of the cultivation season.

The right to take back lands for personal cultivation by owners generally, and in particular by those serving in the defence services, is inalienable. Nevertheless, in view of the acknowledged principle that the tenant's rights in the land he cultivates should not be infringed and that in fact his rights to the ownership of such land under certain conditions and on the payment of compensation to the owner should be recognised, the exercise of the owner's right to take back leased lands for his own cultivation has to be circumscribed by restrictions, especially to prevent the arbitrary ejection of tenants and mala fide claims for return. An important method of doing this is to prescribe by law how much land can be returned to the land-

owner after taking into consideration the land he already has for his personal cultivation, and also to impose a time-limit within which, after the passage of legislation, firstly, an application can be made for return and, secondly, actual return can be effected. The Planning Commission has suggested that the extent of land returnable to the owner should, generally speaking, be the difference between area already in his possession and the limit of a family holding, as fixed by law within the State concerned. The time-limit for indicating intention to resume possession should be six months after the passage of the law, and for actual transfer, five years thereafter.

Equitable Rents

Two connected problems are the fixation of equitable rents and of ceilings on land holdings. The wide disparities in the former have already been referred to, but only some States have passed legislation. The Planning Commission, while asserting that "a rate of rent exceeding one-fourth or one-fifth of the produce should be regarded as requiring special justification", complains that "progress in the regulation of rents has been uneven and in several States legislation lags behind". Critics attribute the reluctance of State Governments to take action to political considerations; in any event, the second plan period should witness, as far as possible, fixation of rents at the rates suggested by the Planning Commission, and also appropriate measures providing for commutation of produce rents into cash rents, and fixation of maximum rent as a multiple of land revenue.

As for the imposition of ceilings on individual holdings of land, the Planning Commission draws special attention to the principle that "there should be an absolute limit to the amount of land which an individual may hold", which was commended in the first five year plan. It calls upon State Governments to take steps towards that end during the second plan period. The problem bristles with difficulties on account of such factors as local variations in the quality of land, disparities in the cost of agricultural operations, and the principles that should govern the determination of ceilings (for example, whether it should be on the basis of family holdings and, if so, what should be the extent of a family holding). While to prohibit the acquisition of land holdings beyond a prescribed limit by individuals is feasible, issues pertaining to ceilings on existing holdings and methods of enforcing the ceiling limits require careful consideration, as is shown by the wide disparities in the limits enforced in States such as Bombay, Hyderabad, West Bengal, Saurashtra and others where the reform has been attempted. The census of land holdings conducted in some States should help in the process, but as has regrettably been acknowledged by the Planning Commission, no serious thought has so far been given to the problem in a number of others. It is widely felt that ceilings on land holdings are justified both from the economic and social standpoints. But practical considerations impede its immediate implementation, and this is evident in the hesitancy displayed by State Governments. The Planning Commission itself has accepted the need to exempt certain categories of land from the ceiling rule, one of which is the necessity "to ensure that efficiently managed farms which fulfil certain conditions are not broken up", and another is exemption of plantation lands, which have necessarily to be large if they are to be economically run. There is also the overall need to take into account the effect of restricting farm sizes on food production. Altogether caution is called for in the implementation of reforms.

Co-operative Management

The scheme of land reforms formulated by the Planning Commission has to be viewed not only in the short-term context of bringing land tenures throughout the country into conformity with the broad objectives of national planning, namely, removal of glaring economic inequalities and promoting a socialist pattern of society, and transforming it into an instrument for making two blades of corn grow where only one grew before; but also in the long-term context of the need to reorganise rural life and promote efficient land management. The

Commission wishes to establish a rural economy in which the management of land would be on a co-operative basis, for the common good of all the landowning persons in a village, by organising co-operative farming societies. Co-operation has a number of enthusiastic supporters in India, despite a disappointing record of practical working in the past, and the democratic principle inherent in it is acknowledged. In recent years, there have been some notable achievements to its credit, particularly when multipurpose co-operative organisations came widely into existence in postwar years. But it is doubtful whether co-operation in large-scale farming would make rapid headway in this country.

The Planning Commission, in its second five year plan report, proposes the extension of co-operative farming throughout the country during the next ten years. Even if the need for the change is conceded, it is open to question whether the time-limit prescribed is realistic or practical, and whether it considers that the highly individualistic Indian farmer will require a good deal of convincing before he accepts the management of all aspects of cultivation in a village by a co-operative farming society. Ultimately, he will probably accept it when he realises that membership of a co-operative farming society ensures him an easy supply of his essential requirements of agricultural implements, equipment, seeds, fertilisers etcetera and that it also takes care of the marketing of his farm produce. A word of caution is however essential in implementing the recommendation so strongly made by the Planning Commission; State Governments should take particular care to see that the democratic process of securing the peasant proprietor's concurrence to co-operative land management is not departed from, lest it produce an adverse reaction and pave the way for some form of collective farming, which is popular with Communist régimes but obnoxious from the point of view of the sturdy, individualistic farmer everywhere.

Better Rural Life

Co-operative farming on the whole seems a useful aim for India. It would spread a system in which a number of small farmers in every village own manageable plots of land cultivated by themselves or with hired labour, wherever necessary. There would be common ownership of the instruments of cultivation and the other things needed to make agricultural farming profitable, thus giving a great advantage to the farmer unable to afford them by himself alone. It is also a system which facilitates other improvements, such as consolidation of holdings, equitable and fair sharing of irrigation sources and a better rural life. Although it is not as easy an ideal to attain as is being imagined, the ultimate goal is to entrust land management to a democratic and elected organisation like the village panchayat, which, while strengthening the co-operative basis of land organisation, would be the final arbiter in settling local disputes or claims to land. It could also look after the village common and ensure proper utilisation of vacant lands and other connected matters.

In considering the land reforms proposed in the second five year plan, it should be remembered that many of them are for the more distant future, while others are already in different stages of implementation by State Governments. The report of the Land Reforms Committee appointed by the Andhra Government, just published, illustrates how, while recognising the need and the rationale of the Planning Commission's scheme, the Committee feels the importance of compromises with local practices in Andhra, if public support is to be secured. One direction in which it considers such compromises essential relates to the continuance of the tenancy system, which permits the leasing of land to tenants for cultivation. The fundamental fact is that in no other sphere is the instinct of conservatism so strongly rooted as in the sphere of land ownership. Still, as land reforms are an essential and integral part of the plan for national progress, effective action in implementing them is needed and it is for the Planning Commission to see that it is forthcoming.

Jute

I. J. M. A. STOCK FIGURES AND ARGENTINE BUYING LIFT HESSIAN

SACKING RELATIVELY SUBDUED: SUBSTANTIAL BUSINESS IN RAW JUTE

EVENTS during the early part of the past week instilled some much-needed confidence into the Calcutta jute goods market. Several overseas buyers indicated their interest in forward shipment goods, and as these positions were already showing premiums, mills took advantage of the situation to unload fairly large quantities. For sacking, Australia was the main buyer, and its interest in cornsacks early in the week had a steadying influence. The entry of the Argentine for hessian pushed up rates in this section, and the bullish tendency persisted until immediately after the week-end, when it was announced that hessian stocks, for the first time this year, had recorded a drop. The stock figures had the reverse effect in sacking, where an increase of 10,000 tons nullified any advantage that overseas interest had created. Although the near delivery sections were comparatively neglected, they tended to remain firm, partly in sympathy with the forward section but mainly as a result of speculative activities, which, even though on a much reduced scale, were a decisive factor in the week's working.

Raw jute received considerable support from Calcutta mills, and business for at least 200,000 maunds was put through by one or two large groups. Most of it was done before the sale of gunnies, so it was not of a double nature. Delivery also was not for the same period as for gunnies, but was confined almost entirely to quick delivery jute, which in many cases carried with it a guaranteed delivery clause. This encouraged further speculation about mills' stocks of jute, and it was inevitable that stories of shortages should have circulated. The fact that mills were willing to pay full market rates in these transactions strengthened sellers' ideas, and prices became very firm. Large quantities of jute were taken up in Cossipore, and in spite of the improvement in imports, stocks showed very little change. In the agencies, imports also increased, but most arrivals were put to stock as the transport position was still uncertain and wagon allotments remained very small. Reports on recent arrivals of New Crop jute have not been very favourable; most of it is immature, due to early harvesting to prevent flood damage.

Large Increase in Jute Goods Stocks

It was announced on Monday that stocks of jute goods held by member mills of the I.J.M.A. had increased by 6,200 tons to 125,900 tons during June. The initial bearish tendency this announcement created was tempered by the fact that for the first time since December 1955, hessian stocks had fallen. The actual reduction was 3,100 tons and brought hessian stocks to 37,500 tons, or 29.8 per cent of the total. Sacking stocks increased by 10,300 tons; at 82,000 tons, they were the highest for 34 months and constituted 65 per cent of the total. Miscellaneous manufactures have shown a steady decrease since March, when they were higher than ever before and constituted 10 per cent of the total stocks. In June, they were only 6,400 tons, which was a little over 5 per cent of the total. It is thought that stocks are now at their peak, and with the cut in production taking effect from Monday next, the total should show a gradual decline.

THE JUTE MARKETS

Manufactured Goods: The jute goods markets had a decidedly bullish tendency on the opening last Thursday, brought on initially by the steady trend in fibre. Rates advanced by Re. 1 in heavy goods, for B Twills to be quoted at Rs. 104-10 for ready and Rs. 106 for October-December shipment. Hessian also rose under this influence and 40in. 10oz. gained 4 or 6 annas; the near positions stood at Rs. 38-7 and the forward positions at Rs. 38-10. Prices fluctuated narrowly throughout the day and showed a further improvement when news of overseas interest, mainly in sacking, was received. This was confined to forward shipment, and it is understood that fairly good business was done in cornsacks at full market rates for shipment to Australia over September-December. Speculative activity in the fatka market kept the ready section firm, and prices showed a 5-anna increase. Over the week-end, further business in the fibre markets influenced gunny prices, and continued overseas interest for both sacking and hessian caused heavy goods rates to jump 6 or 10 annas and hessians 2 or 5 annas. B Twills were quoted at Rs. 105-8 a 100 bags for ready shipment and Rs. 106 for October-December, while 40in. 10oz. hessian rose to Rs. 38-11 a 100 yards for ready shipment and showed a premium of 1 anna over forward shipment. During the day, this section received further support when it was announced that hessian stocks were down, and rates again advanced 2 or 4 annas. Sacking fell due to the large increase in stocks, and B Twill prices eased 4 or 6 annas.

At the close, quotations were as follows:

	July	August	September	Oct.-Dec.
Rs.	Rs.	Rs.	Rs.	Rs.
40in. 8oz.	31-12	31-8	31-6	31-2
40in. 10oz.	38-11	38-15	38-14	38-10
B Twills	104-4	104-8	104-8	104-10

Heavy Cees (Plain)	103	104	104-4	104-10
A Twills	125-8	127-8	128	128-12
Liverpools	116-8	117	117-8	118-8
Cornsacks	105-10	105-12	105-12	105-12

Raw Jute: Several Calcutta mills took up large quantities of raw jute last week. Prices were forced up and maintained by this activity. Interest was mainly centred on quick delivery jute, the maximum delivery period extending to one month. Many contracts incorporated a guaranteed delivery clause, and this brought storms of protest from some sellers, who objected to business of this nature being finalised, as it infringed the resolution passed by their Association banning such contracts. Quotations at the beginning of the week were 8 annas up on last week's closing rates, and were based on Assam jute at Rs. 28-3 a maund basis Bottoms for July-15th August shipment. Most of the business was concluded at this rate and it prevailed throughout the week. Mills' interest in quick delivery jute caused the majority of sellers to adopt a reserved attitude. Although the import position, both in the upcountry agencies and the local Cossipore markets, showed a decided improvement, operators persisted with these opinions and prevented prices from falling. After the week-end, mills' interest fell. Although no business was reported and the general tendency was quieter, there was no alteration in the quoted rates. Sellers showed a keenness to sell, however, and it was evident that with a bid in hand lower prices were possible. Buyers stayed completely out of the market, so the possibility was not tested.

Business reported during the week was about 250,000 maunds, and was mostly done at the full market rates. Dhubri-Northern white jute passed at Rs. 28 to Rs. 29 a maund basis Bottoms for one month's guaranteed shipment and ready bills of lading, and Assam Tossa at Rs. 28-8 to Rs. 29-4 a maund for the same shipment. Business in Local Northern jute was heavy and prices ranged from Rs. 28-8 to Rs. 29-8, according to the delivery period. The latter price was paid for Bottoms only quality. Some local packing (jungli) jute was bought at

Rs. 28 a maund basis Bottoms for July delivery. Small lots of Daissee Mesta changed hands at Rs. 26-8 to Rs. 27 a maund basis Bottoms for one month's shipment. A mill group early in the period purchased about 3,000 bales of cuttings on the basis of Rs. 132-8 a bale for D.T.C.'s and Rs. 130 a bale for N.C.'s for ready delivery.

New Crop jute was neglected. The only business recorded was Dhubri-Assam at Rs. 28 a maund for July-August shipment, and Rs. 29 for Old and/or New Crop jute for one month's shipment.

At the close, the market was easier and opening quotations on Wednesday morning were as follows:

Indian Jute (Old Crop Kutcha):	Landed at Mills Rs. a md. basis Bottoms	Shipment.
Lower Assam	28-8	July
Northern	28-8	"
Daissee ex Agency	29	"
Daissee ex Cossipore	28-8	"
Daissee Mesta	28	"
Local Packing (Northern)	28-8	"
Bimili	27	"

New Crop (Kutcha):
Lower Assam/Northern 27-8 July-August
Daissee (White) 27-8 "

Tossa is quoted at 8 annas to Re. 1 a maund above the price for white jute.

Pucca:	Rs. a bale	Shipment.
Mill Firsts 2/3	185	Aug. Sept.
Mill Lightnings 2/3	170	"
Mill Hearts 2/3	155	"
S. G. Daissee 2/3	175	Sept.-Oct.
L. G. Daissee 2/3	160	"

Pakistan Jute (New Crop Kutcha):	Landed at Mills Rs. a md. basis Bottoms	Shipment.
Jat	30-8	August-Sept.
District	30	"
Northern	29-8	"
Pucca:	Rs. a bale	Shipment.
Mill Firsts 2/3	200	Aug.-Sept.
Export Firsts 2/3	180	"
Export Lightnings 2/3	165	"
Jat Cuttings	122-8	July-Aug.

Imports into the local Cossipore markets have shown an improvement and last week, a total of 320 wagons arrived at the sidings. A fair amount of business has been done, and mills have paid high prices for quick delivery jute. Consequently, quotations have tended to rise in spite of the easier Calcutta markets, and at the close are based on Kishenganj jute at Rs. 28-12 a maund for garsat quality. This is about 8 annas higher than last week.

Mofussil: Upcountry agencies report that imports have increased rapidly over the past week

I.J.M.A. STOCK FIGURES FOR JUNE								
The Indian Jute Mills Association reports the total stocks of jute goods at the end of June 1956, as follows :								
Description	30th June 1956		31st May, 1956		Increase over (+) or decrease from (-) last month		30th June 1956	
	Lakh Yds.	000 Tons	Lakh Yds.	000 Tons	Lakh Yds.	000 Tons	Lakh Yds.	000 Tons
Hessian Cloth and Bag	14.10	37.5	15.16	40.6	-1.06	-3.1	18.54	48.6
Standard Hessian							15.96	42.5
(included in above)	10.49	28.2	10.39	28.1			8.24	36.0
Sacking Cloth and Bag	19.62	82.0	16.94	71.7	+2.68	+10.3		
Standard Sacking							5.55	27.7
(included in above)	15.76	64.2	13.49	55.7				3.0
Others		6.4		7.4		-1.0		
Grand Total		125.9		119.7		+ 6.2		87.6
(000 Tons only)								
N.B.—These figures are based on replies received and represent all members of the Association and Gagalbhairav with estimates for three non-member mills.								

and a fair amount of inter-seller covering has been done. Prices have eased, but are still above the parity of Calcutta rates. The movement of jute has shown little improvement, and large stocks are accumulating at the rail-heads. Quotations in Dhubri at the close are based on Rs. 25 a maund basis Bottoms for New Crop jute.

In Pakistan, imports into all agencies are increasing, and in Narayanganj have averaged about 35,000 maunds a day, mostly loose jute. Here again, covering business has been done on a fairly large scale, and at the close, quotations in Narayanganj are based on C Bottoms at Rs. 25-8 a maund.

GUNNY SHIPMENT STATISTICS

The following figures include coastal shipment relating to manufactured jute goods for shipment from the Port of Calcutta. These are gross figures based on shipping bills presented.

	Hessian Bags (Tons)	Cloth (Tons)	Total (Tons)
1st to 30th June, 1956	3,284.4	30,646.6	33,931.0
1st to 31st May, 1956	3,921.1	25,008.4	28,929.5
1st to 30th April, 1956	3,149.8	28,379.7	31,529.5
	Sacking		
1st to 30th June, 1956	27,982.6	2,071.3	30,053.9
1st to 31st May, 1956	37,747.1	2,877.0	40,624.1
1st to 30th April, 1956	39,950.6	1,734.7	41,685.3

PROSPECTS FOR PAKISTAN CROP

(FROM A CORRESPONDENT IN EAST PAKISTAN)

WEATHER conditions in the jute-growing areas of East Pakistan improved during the last ten days of June. In the northern areas, river levels dropped, although they remained high in most of the other districts and a certain amount of flooding was being experienced. It is thought that a fair percentage of the crop has been damaged

and estimates vary from 10 percent to 20 percent of the total sowings. Cutting continues in most districts and can so far be estimated at about five annas. In some lowland areas cutting has been completed, but it is proceeding in the midlands.

The jute year 1955-56 closed on 30th June on a favourable tone and saw the highest quantitative jute exports in the past three years. There was almost no carry-over at all. Exports of jute during the year ended 30th June, it is estimated, touched a record figure of well over 5.7 million bales. The total jute available during 1955-56 was estimated at over 6.7 million bales including a carry-over of more than a million bales from the 1954-55 crop. Fortunately, exports, combined with increased home consumption, have left almost no carry-over this year. The prices of jute in the home market, as well as export earnings, were boosted after the devaluation of the Pakistani rupee. The minimum export price of £80 a ton remained in force during the year, while the export duty, after devaluation, was raised from Rs. 15 to Rs. 20 a bale.

The prospects for the current year's jute crop are reported to be fair. World demand is expected to be steady, while the placing of raw jute exports on O.G.L. is expected to help speedy disposal. The requirements of the local jute industry have increased and may amount to over 11 million bales a year if the progress of the industry is maintained. Unofficial estimates put the 1956-57 jute crop at over 6.8 million bales.

THE FOREIGN JUTE MARKETS

FALL IN PRICES

(FROM OUR DUNDEE CORRESPONDENT)

AT the moment, the raw jute market is showing signs of breaking. This may be the result of the improvement in weather conditions in Pakistan, with fears of damage diminishing. Early shipment jute is still a bit above the minimum prices in the case of Mill Lightnings and Mill Hearts, but Mill Firsts can be bought at £91 any shipment, c.i.f. U.K. The position has been rather irregular lately. While Mill Hearts rose from £77 10s to £78 as the lowest quotations, the value of Mill Lightnings dropped from £82 10s to £82, August-September. For earlier shipment £2 to £3 a ton is still quoted for these two grades. On the other hand, dark jute is still offered quite freely at the minima of £91 for good marks of Daissee-2/3 and £81 for grade, with Tossa-2/3 at £100 and fours at £90 for grade marks, September-October. Old crop material is of little interest for shipment, but a few sales are taking place here in spot lots at around present shipment rates. In the early part of last week, the Pakistan jute mills were reported to be buying fair quantities of jute for quick despatch, as they had run short of supplies. Some Dundee spinners have also been interested in early shipment jute this season and have paid extra charges to obtain it. They are hopeful that the material will be available. Reports say that the crop is about one month earlier than normal, but that a big demand has been made for early jute because of the small carry-over from last season. Curtailment of production is still in vogue in the Dundee mills and factories, and there is still no sign of any betterment. It is thought, however, that the position will improve after the holidays are over in the first week of August. The trade here has come through one of the quietest spells it has seen for a long time. Prices for jute yarns and cloth are still firm and unchanged. Hessian yarns are at 14.19d for 8 lb. cops and 14.77d for 8 lb. spools. Hessians are quoted at 12.41d a yard for 40in. 10oz. and 10.20d for 8 oz. These rates are all less 3 per cent respectively, all f.o.b. Calcutta.

Calcutta goods have shown little change at 58s 3d for 40in. 10oz. and 45s for 7½oz., July, and 58s 9d and 44s 9d August, with B Twills at 160s and 160s 6d respectively, all f.o.b. Calcutta.

FRENCH JUTE GOODS PRODUCTION

Production of yarns and cloth by the French jute industry declined during April as compared with the previous month, reports the *Jute Bulletin* of the Indian Central Jute Committee. The spinning mills reported an output of 8,850 tons (provisional) against 9,846 tons (revised) in March, while the weavers produced 6,800 tons against 7,388 tons (revised). Production figures for the month of February, previously given as 8,900 tons of yarn and 6,700 tons of cloth, have been revised downward to 8,835 tons and 6,546 tons respectively. The output for the first four months of the current year aggregated 36,702 tons of yarns and 27,504 tons of fabrics against 34,816 tons and 27,733 tons for the first quarter of 1955.

Commodity Markets

COTTON INDUSTRY EXPANSION RESUMED

WORLD TRADE IN CLOTH SHOWS SLIGHT DECLINE

THE expansion in the rate of activity of the cotton industries of the non-Communist part of the world, which seemed to have come to a halt during 1955, appears to have been resumed in the first few months of 1956. This is disclosed in the Cotton Board's latest *Quarterly Statistical Review*, just released to members of the industry. In the first quarter of this year, cotton yarn output in those countries for which figures are available, including all the principal exporters of cotton textiles, was about 2 percent greater than in the first quarter of 1955. The greatest rate of expansion compared with a year ago appears to have been achieved by Germany, together with the relatively new industries of Pakistan, Hongkong and Egypt. The U.S.A., Canada, the Netherlands and Spain have also registered appreciable increases in yarn output in the course of the last twelve months, while there has been little change in Japanese, Indian and Belgian production. At the other end of the scale, the United Kingdom has suffered a more severe reduction in output than any other important cotton manufacturing country; cotton yarn production in France, Italy, Switzerland and Portugal also appears to have been appreciably lower in the first quarter of this year than it was twelve months previously.

World trade in cotton piece goods declined slightly, possibly seasonally, in the first quarter of this year; in total, the volume of trade was very little different from what it was in the corresponding quarter of 1955. Once again the most impressive export performance was that of Japan: shipments from that country expanded slightly once more to reach a new post-war record level. Exports from the United Kingdom and Hongkong declined again, and were well below the level of the first quarter of 1955. Shipments from both the U.S.A. and India are believed to have been slightly greater than in the preceding quarter, although rather less than in the first quarter of 1955. French exports declined again, and remain far below the level of a year ago. The trade of most of the other Western European countries in the first quarter of this year was greater than in the corresponding period of last year.

World trade in piece goods of man-made fibres declined rather sharply in the first quarter of this year; it remained at a very high level by any previous standards, the increase compared with the corresponding quarter of 1955 being about 7 percent. The main cause of the decline was a sharp drop in Japanese exports, the volume of which was still the second highest quarterly total on record. German and French exports of rayon and synthetic-fibre fabrics are also believed to have fallen rather steeply, but the U.K., the U.S.A. and Italy managed to expand their shipments slightly.

U.K. Still Losing Ground

Last autumn's modest recovery in the rate of activity of the United Kingdom cotton industry, occasioned primarily by a seasonal increase in orders from the home market, has not been maintained in 1956. The seasonal down-turn in home market demand in the first half of this year, together with renewed uncertainty about the prospective level of raw cotton prices, which has induced merchants to cut their commitments even further and to run down stocks as far as possible, have been sufficient to depress the level of activity again. Last autumn the daily rate of production climbed back to a level 14 percent below the previous peak in the case of spinning and 15 percent below in the case of weaving, compared with a low point almost 20 percent below the peak at the worst point of the recession. This level of output was not regained after the Christmas holidays; the latest figures show a drop in the daily rate of production of 17 percent below the peak in spinning (in May) and 18 percent in weaving (in April). What improvement there has been in output since the worst days of the recession has been virtually confined to the man-made fibres sector of the industry. Even in that section, however, output remains well below the level of two years ago, with the exception of one or two items such as cotton-spun rayon mixture yarns and purely synthetic fabrics. The recent decline in the production of tyre cord and fabric presumably reflects the difficulties being experienced by the motor-car industry.

Exports of cotton piece goods declined still further, from 129 million square yards in the fourth quarter of 1955 to 120 million in the first quarter of 1956. As yet there seems to be no prospect of any marked improvement in the level of trade: the April figure of shipments in fact totalled only 38 million square yards. The decrease in the first quarter is entirely accounted for by a sharp reduction in shipments to Britain and French West Africa: these markets took only half the quantity of cotton cloth from Britain that they had taken in the corresponding quarter of 1955. Shipments to Pakistan also dropped as deliveries under the American aid scheme were completed. Exports to Australia and New Zealand were virtually unchanged at the comparatively low level to which they had fallen in the preceding quarter, but shipments to South Africa and Rhodesia expanded fairly satisfactorily, and trade with the U.S.A. and India continued at a comparatively high level. There was, however, a slight expansion in exports of rayon and mixture piece goods during the first quarter of this year. Imports of cotton piecegoods increased sub-

stantially from 59 million square yards in the fourth quarter of 1944 to 75 million in the first quarter of 1956; in April they totalled 26 million square yards and in May 32 million. India, Hongkong and Japan all sent greater quantities in the first quarter. Imports of certain made-up articles, particularly shirts and towels, have also increased again to an alarming extent.

U.S. Boom Over

Latest reports from the United States suggest a slight weakening of the boom in the cotton industry. Cotton cloth output in the fourth quarter of 1955, the latest for which figures are available, was nearly 6 percent greater than in the corresponding period of the previous year, while in the first quarter of this year cotton consumption was about 4 percent greater than a year earlier. The increase compared with twelve months previously continued in the next two months, but the difference was much less than in earlier months. Stocks of cloth at the mills were still being reduced, in the first few months of the year, but the previous year and order books began to decline in consequence. The margin between the average price of cloth and that of cotton also began to narrow in February and March. More recently there have been reports of mills changing from a six-day to a five-day week, the impact of Japanese competition in the home market usually being one of the reasons given. The man-made fibres section of the industry seems to have suffered a setback in activity rather earlier than the cotton section. In the fourth quarter of 1955 output of fabrics of rayon and of synthetic fibres were still respectively 3 percent and 15 percent greater than in the corresponding period of the previous year, but in the first quarter of this year consumption of both rayon staple and synthetic staple by spinning mills was less than it was a year earlier.

Exports of cotton piece goods from the United States showed a further slight improvement in the first quarter of 1956, although the volume of trade remained below the level reached in the same period of last year. The main influence was a very sharp expansion in deliveries to Canada, which reached a very high level by the standard of recent years. In contrast, shipments to the Philippines were drastically reduced, and the trade with Indonesia dwindled still further. Exports of both rayon and synthetic fibre fabrics also expanded somewhat in the first quarter of this year. Imports of cotton piece goods increased once more to a level of 50 million square yards in the fourth quarter of 1955, and again to 25 million square yards in January, 1956, including 20 million square yards from Japan.

All-Round Improvement in Japan

The prolonged enforced curtailment of cotton yarn output in Japan finally succeeded in bringing stocks of finished products down to manageable proportions, and prices in consequence rose throughout the early months of the year. As a result the curtailment of cotton yarn output was relaxed from 12 percent of 1954 production to 8 percent in April and to 4 percent in May and June, and it is reported that it will be abandoned altogether after July. In the first quarter of this year, cotton yarn output was about the same as in the first quarter of last year, but cotton cloth output showed an increase of about 4 percent. There was a sharp increase in both yarn and cloth production in April as a consequence of the relaxation of the production curtailment. Meanwhile, output of yarns and fabrics of man-made fibres has continued to expand: in the first quarter of this year production of spun yarns was 22 percent greater than in the corresponding period of last year, while output of fabrics of rayon and synthetic fibres registered an increase of 23 percent. Plans for the extension of rayon staple capacity have already begun to raise fears of over-production.

In the first quarter of 1956 export shipments of cotton piece goods, at 363 million square yards, slightly exceeded even the preceding quarter's record post-war level; there was, however, a sharp drop in exports to 89 million square yards in April. Shipments to the United States in the first quarter were virtually unchanged at 48 million square yards, equivalent to annual rate well in excess of the export quota of 150 million square yards laid down by the Japanese Government. The main feature of the quarter's trade was a tremendous increase in shipments to Hongkong, which was Japan's largest single market during the quarter. Most of this cloth is believed to be destined for re-export to Indonesia, which itself took a greatly increased amount direct from Japan during the quarter. Exports to Burma also expanded notably as, to a lesser extent, did those to Indo-China and the Philippines. Shipments to most of Japan's other main markets contracted. This was particularly the case with Pakistan, where deliveries under the American aid scheme came to an end, and Siam, but the United Kingdom, British West Africa, Singapore, Australia, the Netherlands and Iraq all took smaller quantities of Japanese cloth. There was a sharp contraction in Japanese exports of rayon piece goods from 270 million square yards in the final quarter of 1955 to 236 million in the first quarter of 1956; shipments of 91 million square yards in April seem to indicate, however, that the former level has been regained. The main losses in the first quarter were in trade with British East Africa, Ceylon, Siam, the U.K., South Africa and the Philippines.

India Shows Some Recovery

Production of cotton yarn and mill-made cotton cloth in India declined more than seasonally in the first quarter of this year, principally because of the January riots in Bombay and a labour dispute in Nagpur. Nevertheless, output was slightly greater than in the first quarter of last year. Domestic

demand remains good, and stocks of cloth have been reduced to extremely low levels. Prices have been rising as a consequence of the small cotton crop. It is reported that the Government has licensed the establishment of 65 new spinning mills in South India, with a capacity of 700,000 spindles; presumably these will serve the handloom industry in that area. Sea-borne exports of cotton piece goods from India declined from 191 million square yards in the third quarter of 1955 to 171 million in the fourth quarter. It is believed that there was a slight increase in the first quarter of this year. The main cause of the fourth-quarter decline was a sharp reduction in shipments to British West Africa and Indonesia, while the United Kingdom, Aden and Burma also took rather less Indian cloth. On the other hand, exports to British East Africa, Ceylon, Australia and Ethiopia were well maintained, and there was some increase in trade with Singapore and the Sudan. The export duty on coarse and fine cloth has been removed, and it is understood that the establishment of an Export Credit Guarantee Scheme is under consideration by the Government in an effort to stimulate exports.

Western Europe Patchy

There are continuing signs of improvement in the rate of activity of the western European cotton industries. In the first quarter of this year, cotton yarn output in these countries considered as a whole may have been about 1 or 2 percent greater than in the corresponding periods of both 1954 and 1955. Western Germany continues to lead the way with a sizeable increase in production compared with a year ago. Yarn output in France seems to be recovering gradually, but output of cloth, especially of spun rayon fabrics, is still well below the first quarter 1955 level. Italian production of cotton yarn and cloth is also still well down compared with a year ago, but output of spun rayon and mixture yarns appears to be increasing rapidly. The rate of activity in the Dutch and Belgian industries seems to be fairly steady, the former at a level rather above and the latter slightly below that reached at the beginning of last year.

WHOLESALE PRICE INDEX HIGHER

THE official wholesale price index (base: year ended August 1939=100) rose by 0.1 percent to 401.4 during the week ended 23rd June, compared with 401.1(R) for the previous week. The index was 2.6 and 16.5 percent higher than in the corresponding weeks of the previous month and of last year. The index for Food Articles rose by 0.2 percent to 373.6, as a result of an advance in the price of tea for internal consumption (new crop) (+6%), coffee (+2%) and gum in Muzaffar nagar (+1%). Dal arhar (-3%), gram (-2%) and wheat in Hapur (-1%) showed declines. The effect of the higher prices of raw silk (+4%), gingelly seed in Jhansi and manganese ore (average export price) (+2% each), and rapeseed in Kanpur (+1%) was offset by the lower prices of gingelly seed in Bombay and lac (-3% each), castorseed in Bombay and linseed (-2% each) and rapeseed in Calcutta (-1%). Consequently, the index for Industrial Raw Materials remained unchanged at the previous week's level of 480.6 (revised). There was a fall of 0.5 percent to 395.0 in the index for the Semi-Manufactures group, mainly because of a decrease in the prices of zinc (-4%), mustard oil, linseed oil and gingelly cake (-3% each) and coconut oil in Cochin (-2%). The prices of castor oil in Calcutta and gingelly oil (+2% each) showed marked advances. The Manufactures group index remained unchanged at 377.9. The index for the Miscellaneous group rose by 1.9 percent to 522.6, due to a rise in the prices of bricks and tiles (+5%), chillies and tobacco leaf, both in Calcutta (+3% each), and cashewnuts (2%). There was a fall in the price of turmeric in Calcutta (-12%).

INDEX NUMBERS BY GROUPS AND SUB-GROUPS

(Base. Year ended August 1939=100)

"CAPITAL" STOCKS AND SHARES INDEX*

The Capital Stocks and Shares Index (Base: 1939) has now been brought up to May, 1956. Compared with April, the May index for government securities reveals a rise of 0.2 points, while that for preference shares discloses a drop of 1.1 points.

There were increases in banks 4.2 points, coals 4.0 points, jutes 6.0 points, minings and oils 1.5 points, cements 11.9 points, engineering 19.8 points, teas 3.0 points, papers 73.6 points, sugars 1.0 point and miscellaneous 2.1 points, while cottons decreased by 0.4 points.

Combining all the factors, the Capital variable yield securities index shows that the index for stock prices in the above classes of shares advanced by 8.3 points during May, 1956.

THE PROSPECTS FOR NORTH INDIAN TEA

CAUTIOUS OPTIMISM OVER OUTPUT AND DEMAND TRENDS

IN its annual report for 1955-56 on the north Indian tea markets, the Calcutta broking firm of Messrs. A. W. Figgis and Co. Private Ltd., says that some of the salient factors which may affect future market trends are as follows:

"First, there is the question of production. The past year saw the second record crop in successive seasons, and there seems little reason to doubt the capacity of the industry to complete the hat-trick this year, particularly in view of the heavy cropping conditions brought about by early monsoon conditions. This, of course, is a bearish factor, the only true antidote to which is the settlement of a new International Tea Agreement, which could only be to India's advantage. Unhappily, this still seems remote because of the preference of other producing countries to make tea while the sun shines rather than to endeavour to create a sound basis for the future of world trading. Naturally, under these conditions, India cannot be expected to impose a restriction policy of her own, but it is our hope that the wide gap in the past season's prices between good teas and poor teas, and in particular the uneconomic rates received for stalky residue types, will encourage producers in a quality rather than quantity plan and that commonsense will impose its own brake on a runaway policy of over-production.

"At the other end of the process is consumption. It is estimated that consumption within India has shown a welcome rise over the past season, and it is hoped that with the implementation of the Tea Board's plans for tea centres in the larger cities, and a stepping up of propaganda generally, this will be further expanded. Herein lies one of the most vital essentials for future prosperity.

Deliveries in U.K.

"In the U.K., still by far India's largest customer and likely to remain so, there is a moderate stock position which should augur favourable conditions for buyers to operate on this market. Deliveries have been steady at a satisfactory rate over the past year, and though the enormous advances made by other beverages cannot but be viewed with concern, the trade in the U.K. is well alive to this danger and will undoubtedly do everything in its power to combat it. These same competitors are met on an even greater scale in America and Canada, but here again intensive propaganda is being employed, particularly on the proper methods of preparing tea. Other countries show increases or decreases from year to year, but Indian tea appears to be holding its own in the majority, and rumours have been prevalent for some time that Russia may take as much as 20 million lbs. from the new season's production.

"Having considered the pictures of probable supply and demand, it is considered that a feeling of cautious optimism is justified. Nevertheless, the balance is extremely lightly poised, and any increase in an already high cost of production could have grave consequences. The Government has it in its power to afford some relief to the industry by modifying the present financial burdens it now has to bear, and it is felt that any move in this direction would go far towards restoring a measure of confidence now so sadly lacking and would assist in maintaining, or even more to the point, improving, India's position vis-à-vis other producing countries in the tea markets of the world."

RUBBER BOARD REPLANTING SCHEME DEFENDED

COMMITTEE TO DRAFT NEW COFFEE PRICE POLICY

(FROM A SOUTH INDIAN CORRESPONDENT)

THE twenty-second meeting of the Rubber Board was held in Cochin on 12th June. The chairman, in his introductory speech, defended the replanting scheme sponsored by the Board. His main argument in its favour was that the replacement of the present aged and worn-out rubber trees with high-yielding strains would help produce natural rubber at a competitive price with synthetic products. One serious objection to that there will be a loss of production during the replanting period and to this the chairman's answer was that by subjecting the area selected for replanting to yield stimulants and slaughter-tapping, a loss in production could be averted. Besides, new areas will come into bearing year after year and this will partly offset the loss in production that will result from replanting. The chairman strongly expressed himself against giving preference to new planting and the main point he raised in support of this view was the lack of suitable land for rubber growing. The Board has nevertheless decided to recommend the inclusion of a scheme for the expansion of the rubber area by 100,000 acres. Viewed against the need for higher production to attain self-sufficiency, the Board's decision to explore the possibility of rubber cultivation in the Andamans and to appoint a sufficient number of field staff to give advice to growers is welcome.

Rising Coffee Production

The chairman of the Coffee Board, observed at the Board's (already partly reported in 28th June issue of Capital) half-yearly meeting held on 22nd June in Bangalore that the coffee industry in South

India was now getting into a period when a crop of over 80,000 tons would be just normal. The 1955-56 season's crop had set a record with pool receipts so far exceeding 33,175 tons. In the Board's opinion, next year's crop prospects were equally bright, and it estimated production at about 33,000 tons.

After reviewing the crop and stock position, the Board has decided to recommend the export of 3,700 tons over and above the 4,100 tons exported already. Despite surplus production, the Board is still holding on to its old policy of keeping a heavy buffer stock, to the tune of over 5,000 tons. In the planters' opinion the holding of such a buffer stock is merely being over-cautious and it is unnecessary in the conditions now prevailing. In this connection, it may be recalled, the chairman of the Coorg Planters Association said that the holding of a large buffer stock would in effect mean the locking up of a considerable quantity of coffee, which, if released before the onset of the monsoon, could earn very high prices in the export market. He also pointed out that if the surplus coffee was released for export at the end of the season, with the quality deteriorated in storage and with the new crop arriving, it could be sold only at reduced prices. Sales during March and April, 1956, were marked by fairly high prices, but since then the prices have been falling.

Internal Consumption

The Board's earlier estimate of internal consumption did not materialise during the first five months of the year, the average monthly off-take being 1,825 tons. At this rate, the total requirements of the internal market may not exceed 22,000 tons during 1956, as against the Board's estimate of 23,000 to 24,000 tons. The Coffee Board however has been taking steps to increase home consumption in view of the steady production increase. Coffee consumption in the South has already reached a fairly high level. It would therefore not be advisable for the Coffee Board to shift the emphasis of its propaganda campaign from the South to the North which it proposes to do.

According to the latest decision of the Coffee Board, the planters will get another 2 annas 8 pies a point, making a total payment of Rs. 2-6-8 a point for the 1954-55 season's crop. The Board has resolved to pay a bonus of 4 points for Robusta coffee. This will come to about Rs. 9 a cwt. Another welcome decision of the Board is its appointment of a Committee to draft a new price fixing policy that will be more acceptable to growers and others concerned.

LONDON TEA SALES

AT last week's London tea sales, the 44,535 packages on offer realised an average price of 3s 10.68d a lb. against 3s 11.38d in the previous sale and 3s 8.36d a year ago. Plain broken pekoe was quoted at 2s 10½d a lb. nominal; in the previous sale, 2s 11½d nominal. Prices obtained by some of the companies are given below:

No. of packages	Average per lb.
Anglo-American	444
Assam Frontier	872
Bogawantalawa	390
Budla Beta	494
Buxa Doars	264
Central Provinces	594
Ceylon Land & Produce	192
Ceylon Tea Plantations	138
Consolidated Estates	450
Cons. Tea and Lands	108
Doors	919
Eastern Produce	1,344
Imperial Company	761
Kanan Devan	246
Lethenty	168
Lunava	1,158
Malayalam	1,068
Ouvul	426
Ragalla	138
Singlo	525
Standard	510
Tea Corporation	331
Travancore	576
United Planters	546

U.K. Tea Stocks

U. K. tea stocks in London and provincial warehouses on 29th June, amounted to 107,335,250 lbs. against 106,403,990 lbs. in the previous week. Total amount to be landed on 29th June, was 12,145,540 lbs. Deliveries during the week totalled 9,944,880 lbs. Landings during the same period were 10,876,140 lbs. Total afloat on 29th June was 33,516,143 lbs. including 19,386,860 lbs. from Calcutta.

COCHIN TEA SALES

At Sale No. 19, 1,500,000 lbs of tea were on offer. There was a much better all-round demand. Prices were unchanged except for Black Leaf and best liquoring types which were dearer.

NORTH INDIAN TEA CROP REPORTS

The following summary of crop and weather telegrams has been received from different districts for the month of June 1956.

Upper Assam: Weather generally wet and seasonable but cool and unseasonable in Panitola; immediate prospects fair to good; outturn last month normal to good; floods have damaged communications in Dibrugarh.

Central Assam: Weather generally wet and dull but hot in Golaghat; outturn last month about normal; immediate prospects fair to good; trunk road at Khowang breached by floods and contact with Dibrugarh restricted; very little pest and disease left in Jorhat.

Lower Assam: Immediate prospects fair to good; rainfall for the month has been excessive; outturn last month poor to normal; looper severe on some gardens but is now lifting.

North Cachar: Immediate prospects fair; unusually heavy rain with floods reported throughout the district; wet weather is interfering with outturn; outturn to date slightly under last year; black rot prevalent in some districts; red spider blight lifting in North Cachar.

South Cachar: Immediate prospects fair; outturn last month normal to good; unusually heavy rain with floods reported from portions of the district; floods have interrupted communications at Hallakandi and despatch of crop will be considerably delayed; red spider

Engineering and Transport

EXPANSION PLANS OF U.K. STEEL INDUSTRY

BID TO BECOME THIRD LARGEST IN THE WORLD

AT a time when Britain's share in the big new development projects abroad is perturbing officials in London, it is interesting to glance at Britain's own steel industry—especially at its new show-piece in Velindre, South Wales. The plant at Velindre, on which work was started in 1953, and whose cold-rolling mill (to prepare hot-rolled strip for tinning) is beginning to operate this July, will be, when fully operating, the biggest producer of electrolytic tinplate in Britain. It is the newest, but not the last, unit in the vast complex of the Steel Company of Wales; and this company comprises already the biggest industrial unit in all British industry. (As companies, Imperial Chemical Industries, Unilever and others are much bigger, but they are looser organisations, not coherent producing units.) The British steel industry has been seriously troubled in recent weeks by a dispute between managements and maintenance men, in consequence of which the latter have refused to work overtime and maintenance has had to be done during production shifts. Such disputes are unusual in this industry, where relations between management and labour are normally very harmonious. The effects (represented by a reduction of output of crude steel by almost 6 percent in May, compared with April, to a level slightly below that of May last year) emphasise the importance of key workers in modern industry.

Cheapest Steel Producer

In general, however, this is one of the most dynamic industries in Britain, and its various units have in hand big plans for expansion. Some units began their expansion early and undertook the greater part of it while costs were relatively low; others assessed the potential demand more tardily and will in future bear the costs of heavier capital commitments. But on the whole, despite rises in the costs of fuel and raw materials and transport, the industry remains one of the cheaper steel-producers in the world. As such, it is of inestimable benefit to the metal-using industries. The annual rate of output of crude steel in Britain has now comfortably surpassed 20 million tons, and there is keen rivalry between this country and Western Germany for the position of the world's third producer (after the U.S.A. and Russia). The Iron and Steel Board estimated recently that production would increase 1½ million tons this year (compared with 1½ million tons last year) to 21½ million tons, the prospective increase being mainly in sheet and tinplate. Longer-term estimates envisage an expansion of demand to the region of 28 million tons annually, which the industry plans to satisfy.

However, since these estimates were made, some months ago, doubt has arisen whether in fact British industry will need as much steel as had been supposed. The recession of demand for motor-cars,

refrigerators, and other steel-using goods, has already perceptibly affected the demand for steel. New capacity is coming into production. New methods of preserving steel (of which an appalling quantity is wasted every year by rust) promise that in due time, the replacement demand will be much reduced. The industry is not at present troubled by the recession of demand, for an important marginal supply has been provided in recent years by imports. From the viewpoint of the British economy as a whole, this is a very important consideration. Last year, for instance, at least one-third of the deterioration of the trading position with the dollar area was attributable to imports of steel from North America. These imports have been severely reduced this year—at a very opportune time, when imports of grain have been accelerated by last year's poor harvest and when payments for oil and tobacco are, if not abnormally large, at least abnormally early.

Rising Consumption

Further expansion of the British steel industry is, however, in the nature of an act of faith. It is true that when the huge projects in South Wales and elsewhere were planned soon after the end of the war even experts doubted whether, at the costs then prevailing, they could be justified by future demand—abroad as well as at home—and that such doubts were proved groundless. On the contrary, it can now be seen that the need for steel has been at least underestimated since the war, and consistently underestimated since the decade of the decade are not necessarily a true guide to the future. Estimates of demand for goods in general, not only for goods which are made of steel, but also for other goods which, if required in larger quantities, will involve additions to their producers' fixed assets. As steel is wanted for export as well as at home, and as steel-producing capacity is increasing abroad, these estimates of demand must be so complex that they may be wildly inaccurate. It is wise to focus attention on the main steel-using industries and on the trend of demand for capital goods.

It is no secret that the severe troubles of the British motor industry have raised doubts in company board-rooms whether the plans for expanding aggregate output by some 50 percent over the next few years are realistic. This leading steel consumer will probably need much less steel than was assumed last year. The capital industries (including shipbuilding and industrial construction) have enough work on hand to keep them busy for a considerable time; but industrialists and economists agree that the rate of new orders will probably be much reduced a few months hence. Stocks of steel were accumulating in Britain earlier this year, and it may be that, despite the labour troubles, the long-lasting scarcity of steel will be overcome this year. Such a development would strengthen the country's whole economic position, on the one hand saving precious dollars and on the other, enabling export orders to be executed more promptly. The full benefits of the steel industry's efficiency (the techniques of South Wales are at present attracting American attention) would then be realised.

THE NEW PATTERN OF OUTER AIR DEFENCE

MIXED POWER-PLANT FIGHTERS BEING BUILT

MACH 2 fighter aircraft climbing vertically at 350 m.p.h., powered by turbojet and rocket engines, armed with missiles which "lock on" to enemy bombers at a range of several miles—that is tomorrow's pattern of outer air defence which will be supplemented by ground-launched guided weapons over home territory. The British aircraft industry is actively engaged in developing aircraft and engines to fill these requirements and, although security prevents the publication of details, a certain amount of information has been released. Avro and Saunders-Roe are at present building mixed power-plant fighters, the 720 and S.P.53. The make and type of engines to be used are secret. A number of engine manufacturers are engaged in rocket-engine development, one of the first to be announced being the Armstrong Siddeley Snarler. The same company makes the Screamer, while de Havilland are soon to start flight trials with the Spectre.

The need for the mixed power-plant fighter has been brought about by the formidable performance of modern bombers. Today, high sub-sonic speeds at above 50,000 feet are commonplace and soon speeds of 900 m.p.h. or more in the stratosphere can be expected. Such a bomber would approach its target at 15 miles a minute, thus making fighter aircraft that can reach, perhaps, 60,000 to 70,000 feet in a very few minutes, a vital necessity. An turbojet-engine loses power at altitude. An engine which gives 20,000 lbs. thrust at sea level will develop only 7,000 lbs. at 60,000 feet and has a practical limit of 70,000 feet. A rocket-engine, on the other hand, operates independently of the surrounding atmosphere as it carries its own oxidant. But its fuel consumption is heavy. A typical rocket motor would consume about 50 tons of fuel an hour if run at full throttle—an unlikely event. Fuel weight is compensated to a certain extent by very low engine weight. The Snarler weighed only 215 lbs. for its thrust of 2,000 lbs.

Two Approaches

There are two approaches to designing mixed power-plant fighters. One, typified by the French Trident, advocates the use of rocket engines as the main power units with a relatively small turbojet for cruising. The other school of thought, with de Havilland as its sponsor, maintains that a large turbojet engine should provide most of the power, using rocket-engines as boosters. This manufacturer has published a flight plan for an interceptor powered by a Gyron and two Spectres. For take-off and initial climb, Gyron with re-heat is used, to be augmented by Spectres to maintain the rate of climb at high altitudes and to accelerate prior to "locking on" to the target. Gyron with re-heat is used when approaching the target, augmented by rocket power for manoeuvring in combat. For return to base, turbojet without re-heat is used.

Calcutta Markets

STRONG GENERAL DEMAND AT TEA EXPORT SALE

BETTER SUPPORT FOR QUALITY DUSTS

AT Sale No. 5, held on 9th and 10th July, export offerings consisted of 23,000 packages, for which there was a very strong and general demand, and all descriptions sold at dearer rates. The best C.T.C. teas were in very strong demand and were sometimes as much as Re. 1 a lb. dearer, while the more ordinary sorts of this description were also in good demand and were often several annas dearer. Medium Assams with quality liquors were a strong feature and these were generally 4 to 8 annas dearer. Dooars and low medium Assams were 1 to 1½ annas dearer and there was more demand for the plain and thin liquoring types which were about 1 anna dearer. Whole leaf grades sold at slightly higher rates and the more flavoury Darjeelings sold well. Tippy teas were also a strong feature.

Quotations

	1956 Rs.	1955 Rs.
Clean Black Pekoe	1 14 to 1 15 0	3 2 0
Plain B.P.	1 9	2 7 6
Medium Assam B.P.	2 4 to 2 6 0	2 9 0 to 2 10 0
Best CTC Assam B.P.	4 0 to 5 0 0	3 0 0 to 3 2 0

At the Internal Sale, Dust offerings were 11,050 chests, consisting of 7,950 chests of New Season's and 3,100 chests of Old Season's teas. There was a better demand. Black leaf teas suitable for the Middle East and the best C.T.C. Assams were the strongest feature, and generally advanced by 4 to 8 annas. Once again, poor liquoring commons and low mediums were a weak feature and declined by 1 to 2 annas, while medium Assams and Darjeelings received good support and were 1 to 2 annas dearer and sometimes more. Residue types received fair support and sold at about last rates.

Quotations

	1956 Rs.	1955 Rs.
Medium Dooars Dust	1 6 0 to 1 7 0	2 7 to 2 8
Medium Assam Grained Dust	1 12 0	2 9 to 2 11
Best Assam CTC Dust	3 4 0 to 3 8 0	3 1 to 3 2

Leaf offerings consisted of 232 chests of New Season's tea and 184 chests of Old Season's tea, for which there was a fair demand at dearer rates. The green teas on offer, however, received very little support, and were mostly withdrawn.

FREIGHT MARKET FIXTURES

THE recent rumours about the release of "mothball" ships have now been partially confirmed by a Washington announcement that eight such vessels have been released to the Isbrandtsen Company for the carriage of coal on French account for one year up to 15th July, 1957. It is understood that applications for 70 more are still pending, 30 of which are for I.C.A. programmes. Some strength was imparted to the North American trades with the announcement that German charterers will be in the market for 300,000 tons of grain, split over North America, St. Lawrence and the River Plate, with shipments over July-September. Tonnage is still sought for 200,000 tons of sugar Cuba-India commencing August-September. In the Indian ore trades, Mormugao-Japan paid 12½ f.i.o. for September loading and there are rumours of Chinese-operated tonnage fixed to Eastern Germany. Rice from Rangoon to Chittagong was arranged at 77s 6d f.i.o. and North Pacific-Karachi wheat was done at \$(U.S.)24 A 10,000-ton oilburner accepted 36s for the voyage out of India, via Poland, with delivery U.K.

SUGAR MARKET

During the week ended 11th July, sugar sales in the Calcutta market averaged 3,000 bags daily. Arrivals a day were 5,000 bags and stocks totalled 25,000 bags. Rates for ready sugar ex-Kantapur delivery were Rs. 32-2 for ordinary grain and Rs. 33-8 for big grain. Ex-mill delivery rates for ordinary and big grain sugar were Rs. 28-8 and Rs. 29-4 respectively. The market was quietly easy.

LINSEED

After a weak opening and further losses during the early part of the past week, prices have rallied, and a better sentiment has prevailed. Seeds have been in short supply and crushing has taken place on a very limited scale, with accumulated stocks of oil still in the hands of a few crushers. The improvement in the oil section has been stimulated by better advices from London and reports of a bid from Russia for about 3,000 tons of Indian linseed oil. Latest quotations are as follows:

Ready Rs. 21-6 a maund; July-August Rs. 21-4 a maund.

HIDES AND SKINS QUIETLY STEADY

The market ruled quietly steady. Stocks were less than in the previous week.

Bazaar Sales

(Between 3rd July and 9th July, 1956)
Cowhides: Wet Salted (ord.) 17,000 pcs. on the basis of Rs. 4-12 to Rs. 7; Wet Salted (slaughtered) 19,500 pcs. on the basis of Rs. 12 to Rs. 20.

Goatskins: Wet Salted (Daissee, killed) 63,400 pcs. on the basis of Rs. 150, Rs. 235 to Rs. 275, Rs. 270 to Rs. 300 and Rs. 345 to Rs. 355; Assam-Dinajpur-Jalpaiguri 15,200 pcs. on the basis of Rs. 235 to Rs. 245; Fakur-Patna 8,400 pcs. on the basis of Rs. 180.

Bazaar Stocks

(9th July, 1956)

Cowhides: Wet Salted 1,95,000 pcs.

Goatskins: Wet Salted (Daissee, killed) 54,500 pcs.; Assam-Dinajpur-Jalpaiguri 48,000 pcs.; Muzafferpore-Patna-Pakur-Purneah-Kissenganj 2,16,000 pcs.

SHELLAC MARKET DULL

During the week ended 10th July, the market was quiet at the beginning, steady at mid-week and dull at the end. The range of quotations was as follows:

Pure Buttonlac	Rs. 142 value, 144 done, 145, 144 buyers.
Lemon No. 1 Shellac	Rs. 142, 144, 143 buyers.
Lemon No. 2 Shellac	Rs. 138/139 done and buyers, 138 buyers.
F.O. Std. 1 Shellac	Rs. 133-8 buyers, 135 done and buyers, 136 buyers, 135 done.
Pure TN Shellac	Rs. 128 buyers, 129 basis done and buyers 127-8 buyers.
4% I.T.N. Shellac	Rs. 120-8, 122-8, 120-8 buyers.
No. 1 Kusmi Seedlac	Rs. 127-8, 128-8 value.
No. 2 Kusmi Seedlac	Rs. 123-8 value, 125 buyers, 124 value.
Fine Bysaky Seedlac (Manbhumi)	Rs. 120-8 buyers, 122 done and buyers.
Fine Bysaky Seedlac (C.P.)	Rs. 119/120 buyers, 119 done and buyers.
Ordinary Bysaky Seedlac (C.P.) under 5%	Rs. 113-8 buyers, 114 done and buyers, 114-8, 114 buyers.
Ordinary Bysaky Seedlac (C.P.)	Rs. 109, 110, 109-8 buyers.
Kireelac	Rs. 55, 56, 55 buyers.

Shipments during July until the 6th were 5,115 packages comprising shellac 2,893 packages, seedlac 1,228 packages, buttonlac 272 packages and others 722 packages.

Books and Publications

PLATITUDES ON MANAGEMENT

The Essence of Management. By Mary Cushing Niles. (Orient Longmans Private Ltd. 460 pages. Price Rs. 12).

Mrs. Niles's book contains some interesting information and useful suggestions, but these are hidden in a pile of platitudinous and elementary stuff which, one imagines, most individuals with average intelligence and common sense must already be aware of. "Good" or "scientific" management, she says, "achieves a social objective with the best use of human and material energy and time, and with satisfaction for the participants and the public". The first few pages are devoted to explaining the need for good management and to definitions of management concepts, and the rest to describing what is good management and how it can be achieved. There are a few useful chapters, such as the one on methods of securing work improvement, but in contrast there are bits like the one describing a supervisor's responsibilities. This presents the vacuous conclusion that a supervisor should be able to plan his work, handle problems and see that the work runs smoothly; he should not bother his superior unnecessarily, but should promptly refer to him matters requiring his attention. Or, to take another example, Mrs. Niles makes the exciting discovery that the prerequisites for an order to be accepted are: (a) it should be understood by the person (it is explained that an order given in Turkish cannot be understood unless the person knows the language); (b) the person must be able to do it; and (c) he must be willing to do it or at least not be actively unwilling.

It is doubtful whether a person can learn good management merely by reading books, especially books such as Mrs. Niles's. The training of a manager is a very complicated affair. As Lord Heyworth said in his address to the annual general meeting of shareholders of Unilever Limited in London this year, "there is no general scheme of training into which every one will fit, no universal and all-embracing sausage-machine into one end of which you can put in a trainee and expect a trained manager to emerge at the other". Books have some value in that they focus the attention of the reader on certain fundamental aspects which he is likely to overlook in common day-to-day routine. But they can never be detailed guides on how to be a good manager. One cannot become a good manager by reading and memorising meaningless stuff saying sub-division and specialisation is a good thing, but over-specialisation and over-sub-division should be avoided. No book can tell what exactly is the correct degree of sub-division and specialisation. Mrs. Niles's book may be interesting if read selectively, but it would be at once brave and useless to go through it from cover to cover.

SPECIALLY FOR INVESTORS

Calcutta Stock Exchange Official Year Book, 1956. Edited and compiled by A. K. Sur. (Published by the Calcutta Stock Exchange Association Committee. Price Rs. 12-8. Pages 524).

The 1956 edition of the Calcutta Stock Exchange Year Book maintains its usually good standard as a reference book for the investing public. It is up to date in every respect and the range of information provided is extensively wide.

The Investor's India Year-Book, 1956. Compiled by Place, Siddons and Gough. (Published by Orient Longmans, Calcutta. Price Rs. 20. Pages 393).

This is the forty-second edition of Messrs. Place, Siddons and Gough's *Year-Book* which has established itself as a good guide for the investor. The production of the Year Book is of the usually high standard.

Investors Encyclopaedia, 1955-56. Compiled by Kothari and Sons. (Published by them at Armenian Street, G.T., Madras. Price Rs. 20. Pages 1,540).

This impressive publication covers practically every Indian joint stock company whose shares are quoted on leading stock exchanges. Few things however remain to be desired. The article of Mr. Shantilal Mangaldas, former president of the Federation of the Indian Chambers of Commerce and Industry, on the new Company Law was written while the legislation was still a Bill, and the compilers would have done well to have the article revised after it was passed into law. In the jute section, the compilers say that "India enjoys a monopoly in jute produce and manufacture". That may have been true a few decades ago, but it is farthest from the truth today. This serious factual error could have been easily avoided. Barring these, it lives up to its name as an investors' encyclopaedia, and for all the information contained in this monumental volume, it will give good value for the buyer's money.

BOOK RECEIVED

Indian Non-Ferrous Metals Directory and Handbook (1956). (Published by the Indian Non-Ferrous Metals Manufacturers' Association, India Exchange, Calcutta. Price Rs. 10; pages 260.)

COMPANY AND PUBLIC NOTICES

SAUGOR ELECTRICITY SUPPLY COMPANY LTD.

NOTICE is hereby given that an Annual General Meeting within the meaning of the Companies Act, 1956 (being the forty-ninth Ordinary General Meeting of the Company) of the above-named Company will be held at its Registered Office No. 12, Mission Row, Calcutta on Thursday, the 16th August, 1956 at 11-10 a.m. for the following purposes:—

1. To consider and pass the audited Accounts for the half-year ended 31st December, 1955 and the Balance Sheet as at that date and to adopt and receive the Reports of the Board of Directors and the Auditors thereon.

2. To declare a Dividend.

3. To appoint Directors in place of those retiring. And, in this connection, Special Notice as required by Sections 261 and 281 of the Companies Act, 1956, is hereby given that at the meeting the following resolution will be proposed as a Special Resolution, namely:—

"That Mr. P. N. Banerjee, who is an associate of the Managing Agents of the Company and who has attained the age of 65 years, be and is hereby appointed a Director of the Company, and that the age limit prescribed by Section 280 of the Companies Act, shall not apply to him."

4. To consider, and if thought fit, to pass with or without modification the following resolution, namely:—

"Resolved that with effect from the commencement of the Companies Act, 1956, the consent of the Company be and is hereby accorded to the Board of Directors borrowing and continuing to borrow monies for and on behalf of the Company in excess of the aggregate of the Paid Up Capital of the Company and its free Reserves, that is to say, reserves not set aside for any specific purpose, and that such borrowing shall be exclusive of temporary loans obtained or from time to time to be obtained from the Company's Bankers in the ordinary course of business."

5. To appoint Auditors and fix their remuneration.

The Register of ordinary shareholders of the Company and the Transfer Books will be closed from the 10th August, 1956 to the 16th August, 1956, both days inclusive.

A member entitled to attend and vote at the meeting is entitled to appoint a Proxy who need not be a member, to attend and vote instead of himself.

By Order of the Board,

MARTIN BURN LTD.,

S. N. MUKERJEE,

Managing Director,

Managing Agents.

12, Mission Row,

Calcutta.

The 9th July, 1956.

Explanatory Statement.

1. In connection with item No. 3 of the above Notice Mr. P. N. Banerjee, whose first appointment as a Director of this Company dates as far back as 1931, falls within the definition of the Companies Act, of an associate of the Managing Agents. Consequently it will be necessary in accordance with Section 261 of the Companies Act, 1956 for a Special Resolution to be passed to cover his appointment as a Director of the Company. In addition since he is now of the age of 72 years it will be necessary under Section 281 of the Act for the resolution re-appointing him as a Director to declare that the age limit provided under Section 280 shall not apply to him. Special Notice of the intention to move this resolution, as required by both Section 261 and Section 280 of the Act, has been received by the Company.

2. The Resolution under item No. 4 of the above Notice is self explanatory and, when passed, will provide the authority required under Section 293(1)(d) of the Companies Act, 1956.

THE EQUITABLE COAL CO., LTD.

O.—Ordinary Dividend. In—Interim Dividend.
P—Preference Dividend. f—Less Income Tax.
P.O.—Preferred Ordinary Dividend. f—Final Dividend.
D.—Deferred Dividend. Cm.—Cumulative.
f Less Tax at 85 6d in the £

THE INDIAN TUBE COMPANY
(1953) LIMITED

A TATA-STEWARTS AND LLOYDS ENTERPRISE

General Services Screwed and Socketed Tubes, Class 'A', 'B' & 'C' (Galvanised and black) to B.S. 1387, upto and including 6" n.b., and Pipe Fittings.

Power Cold drawn, Hot finished and Electric Resistance Weld Boiler Tubes.

Poles Tramway, Transmission, Lighting.

Public Services Air, Gas, Water and Sewage Mains.

Mechanical Seamless and Electric Resistance Weld Tubes for Rollers, Conveyors and other mechanical purposes.

Steel Strip High Tensile Steel Box strapping and Cold Rolled Steel Strip for manufacturing purposes.

Enquiries and Orders for Screwed and Socketed Tubes and fittings ex-stock should be addressed direct to our Warehouse Offices.

Head Office: 41, Chowringhee Road, P.O. Box 270, Calcutta.

Telephone: 44-5224 (5 lines)

Branch Offices and Warehouses:

18, Fosberry Road, 39, Hide Road, Sewree, Kidderpore, Bombay-15, Calcutta.

Telephone: 45-4561.

Works: Jamshedpur, Bihar.

STEWARTS AND LLOYDS OF INDIA,
PRIVATE LIMITED

Fabrication and Erection of complete pipework installations for Steam, Gas, Compressed Air, Fuel Oil, etc.

Coils for Refrigeration and other industrial uses. Light Structures of Tubular construction. Water Well Casing. Oil Country Goods.

Head Office: 41, Chowringhee Road, P.O. Box 270, Calcutta.

Wednesday 11th July, 1956.

RESERVE BANK REPORTS ON THE INDIAN ECONOMY

PROGRESS UNDER FIRST PLAN: REAL INDICATORS OF INVESTOR CONFIDENCE

THE latest annual Report on Currency and Finance, published by the Reserve Bank of India yesterday, offers a reassuring view of the development of the Indian economy during 1955-56 against the background of the first five year plan. As an almost entirely factual survey, it has little new to offer by way of comment, interpretation or opinion. In that sense, it follows the tradition of its predecessors—a tradition which many may regret as the country's central banking institution comes to play an increasingly positive rôle in the direction and management of its monetary affairs. As an assembly of facts which have hitherto achieved only scattered prominence elsewhere, the Report is nevertheless useful for its illustration of the general theme that the momentum of progress in the Indian economy has been increasing. This progress has accompanied a stability which, in itself, is no small tribute to the managers of the nation's finances, the Reserve Bank included. In part, it owes to extraneous circumstances such as the smooth transition to another year of remarkable prosperity in the free world—a prosperity which has naturally been of major benefit to the primary-producing and under-developed economies of Asia and Africa. The chief credit for the steady expansion in India's case, however, goes to the determined encouragement given under the five year plans.

Summarising the achievements of the first plan, the Report points out that national income has risen by 18 percent, industrial production is 25 or 30 percent more, and agricultural output about 20 percent higher. A 10 percent rise in the money supply has been accompanied by a 13 percent decline in wholesale prices. The budgetary deficits of the Centre and the States have totalled about Rs. 400 crores, while a modest balance of payments deficit has brought down the foreign exchange reserves by Rs. 121 crores. The tempo of investment and economic activity generally has shown a notable increase during the final year of the plan, but signs of strain have been appearing towards the close, which, the Report says with understandable emphasis, will need to be closely watched. Among the more notable of these signs are the rising trends in commodity prices and the cost of living, which, if they continue much longer, might well prove to be the first symptoms of a considerable inflation. The analysis of price trends given in the Report is particularly noteworthy in the present situation, since the rise has been fairly steep over the past couple of months. It is pointed out that the price increase started about thirteen months ago, probably as a corrective to the earlier fall. Its continuance thereafter indicated certain changes in the demand-supply situation arising from a smaller cereal output in 1954-55, and fears of lower production of particular commodities during the latter year due to drought and floods. Higher consumption and inventory build-ups necessitated by increased industrial production may also have had some influence.

*

The Report is probably correct in suggesting that the expansion in money supply and bank credit had relatively little to do with the price increase; it was necessary to meet requirements arising from a growth in economic activity. But with indications of heavier deficit financing, an inflationary psychology has developed and is persisting. It has been induced chiefly by discussions on the second five year plan, which proposes to finance nearly one quarter of the public sector's outlay by printing extra currency notes. The Report reviews the financial implications of the plan, and does well to stress: "It is of the utmost importance that the considerable inflationary potential....of development expenditure in the public sector (along with substantial investment in the private sector, estimated at Rs. 2,400 crores).

and deficit financing should be held in restraint." Unfortunately, the list of restrictive measures is not very impressive. It is perhaps impressive enough as far as the control over the commercial banking system is concerned, but the fear is that the Reserve Bank may become an instrument in the Government's hands for boldly inflating the note currency while at the same time corking down bank credit. This would amount to a back-door diversion of monetary resources which would harm the interests of private business and industry, and ultimately of the whole economy.

*

Considerable cheerfulness is expressed in the Report on the relative buoyancy of the capital market after its prolonged dullness for several years. It is true that there have been signs of greater investment confidence, based primarily on the prospects of rapid economic expansion under the second plan. But it is unfortunate that the Report should mislead in saying that "the declaration of the Government's policy for the establishment of a socialist pattern of society did not appear to produce, except temporarily, any significant adverse effects on investment psychology." In fact, the concept of a socialist society has probably bred greater reluctance than any other single factor among those who have the savings, to invest them in productive enterprise. If stock and share prices have risen despite talk in official circles about socialism, nationalisation and the like, it does not show that it has had no "significant" effect; it merely shows that, for the time being, the Indian investor is laying greater emphasis on the beneficial aspects of increased economic prosperity than on the damaging influences of current trends in politico-economic thinking. His judgment may be correct, but the fact still remains that political intrusions into what are fundamentally matters of economic decision have done considerable harm.

There is good reason to believe that if the Government had not created fresh uncertainties, Indian investors would have shown considerably greater faith and confidence in devoting their savings to economic expansion. To say that the nationalisation of insurance, or soak-the-rich budgets, have hardly any adverse effects since stock markets recovered after a temporary shock, is not reasonable; memories of a shock last much longer than the shock itself, and continue to influence investment psychology for a considerable time afterwards. The policy under which life insurance was nationalised six months ago has not been revoked or amended; as such, it continues to deter the investors without whom a capital-hungry country cannot progress. One has only to look at industries which are periodically threatened with nationalisation or declined guarantees against it (such as road transport in many States, and the coal industry), to realise the extent of the malaise which beset

Without Prejudice

A WITNESS TO MURDER
EVIDENCE OF A RUNAWAY
DHOBI BOY
(FROM OUR LEGAL CORRESPONDENT)

HERE we have an interesting example of the Communist interpretation of the meaning of one of the party's favourite slogans and a practical demonstration of the same in active—very active one might say—operation. Not a slogan, perhaps really. A doctrine and an ideal. "Peaceful co-existence." There were some 25 to 30 of these idealists assembled and met together in comradely fashion on this particular January evening, visiting for the purpose of putting their ideals into practice the village of Maturpeta, Hyderabad, where some differences had arisen between the local Communist and Congress parties. They met, according to the prosecution, the representatives of the local Congress party, the latter headed by a local Congress leader, one Venkatakrishna Shastry, and their grievance, which related to the arrest at the instance, so they claimed, of Mr. Shastry, of a Communist leader, was successfully ironed out. Also ironed out was the co-existence and indeed the existence in any capacity of Mr. Shastry. To the student of crime it is interesting to note the extraordinary, apparently purely coincidental manner in which events like this eventually come into the light of day. Had it not been for the misbehaviour of a small boy incurring in his father's house, a few days earlier, the displeasure of his parents, nothing would in all human probability have ever been definitely and demonstrably known as to what became of Mr. Shastry. This boy, Gopai by name, was a dhoobi boy, a dhoobi apprentice you might say, to his father. He was not, it seems, an industrious apprentice and after incurring the parental and maternal wrath on that and other counts, he did, what many a small boy has done before him and will do again. He ran away from home. While wandering aimlessly in the jungles he was picked up by the Communists only three days before the events related later. They took him on as their servant, promising him in return to give him food. His main duty was to go with the group carrying their bundles of clothes on his head.

On this particular evening the two groups met. The Congress party peacefully returning from an evening stroll, the Communist one and all armed to the teeth with guns and swords. The boy Gopai brought up the rear. In what followed he

did nothing and said nothing. He just watched, petrified. The Communist party then demanded who and where was Venkatakrishna Shastry. He stepped forward and in the words of Chandrasekhara J., in the Supreme Court later, "was singled out for terrific punishment, while the others were let off with a good thrashing." It was proposed to murder the whole lot of the Congress group but, with the exception of Mr. Shastry, they were merely "badly beaten up before being released from impending death at the merciful intervention of some one of them." They were quite defenceless, having been tied up with rope and their own clothes. It is one of the tragedies of communism, and what, perhaps more than anything else, makes its followers so dangerous is that they seem to have literally no sense of humour or irony. It is barely believable, but before being driven off, and knowing instinctively what was in store for their leader, these men, after being savagely beaten up, were addressed on the advantages of communism and were exhorted by pious "admonitions that they should give up their Congress affiliations."

As has been said, Mr. Shastry was kept behind. He was tied with rope and taken off in an easterly direction by the Communist group. After a short halt at a village where some food was taken, the party went towards a mango tope near a brook, four or five miles away leading Mr. Shastry as the captive, who, with some of the accused, remained on the bank of the brooklet. Gopai, the dhoobi boy, was, it seems, unnoticed. But he was there a few yards away, still with his bundle of clothes on his head. The rest of the group went a little beyond and one of them came back with orders that Shastry should be fetched. He was accordingly taken along. The boy followed a little way behind the grim procession, fascinated. This is what he saw. When the moon was at the meridian the rope with which Mr. Shastry was led was tied round his neck into a noose, "and two of the accused pulled one end of the rope and two others at the other end in opposite directions. Venkatakrishna Shastry was thus strangled to death. A hole was dug and the body of Venkatakrishna Shastry was buried in the river bed. The boy saw all this, from a distance of twenty yards in clear moonlight." Two or three days later, after the party of assassins had wandered about the jungle and mountain dens, the boy Gopai managed to get away from his masters and to rejoin his parents.

Now we most of us know (though whether a village lad would know is another matter), and the defence made a lot of the point later, that it

is the duty of any one of us who witnesses a crime to report the occurrence to the proper authority. If we do not, we risk being charged as an accomplice or an accessory after the fact. Gopai did not do so. But he did divulge what he had seen to his father, who, no doubt felt worse befell, appears to have taken no steps either. So, though the Congress group which had been beaten up promptly reported the abduction of Mr. Shastry, it was not until some three weeks after the crime, that the presence hovering over and on the river bed of an unusually large number of vultures led to the discovery there of some bones of a human body. It was almost unidentifiable. All that the inquest officer could report was that "it appears that this dead body is that of a Hindu Brahmin." So it was argued "with great force that identification must have been impossible and that the witnesses who speak to the same should be disbelieved." But there were the form, outline, contour, build of the body and the appearance of such of the limbs as were available to see. The dhoobi with its violet border and the "janjam" or holy thread, were identified, and most important, of all was the identification of the rope which was still round what remained of the neck of the corpse.

Thus there was the evidence of the dead Congress leader's co-sufferers as to the beating up and abduction, the evidence of an independent witness, Yesot, who was watching his jawar crop on the night in question in a neighbouring field and had seen Mr. Shastry being dragged along, and the complete identification of the noose by numerous witnesses with proof, even, of the house from which the Communist gang had brought it.

But not a single eyewitness of the actual murder except one small boy. Of course his evidence was mercilessly attacked by the defence counsel who described him as an unmitigated liar and asked the Supreme Court not even to look at his evidence given in the Trial Court. The learned counsel urged that the lad was an accomplice and "that if a man sees the perpetration of a crime and does not give information of it he might well be regarded as an accomplice and that he could be put in the dock with the actual criminals."

Six persons were charged with the murder of the Congress leader, all of whom very nearly got off scot free.

Four of them were convicted by the Sessions Judge and sentenced, subject to confirmation by the High Court, to death. The learned judge acquitted the other two on what the Supreme Court later referred to as "the astounding ground that no overt acts were proved against them." "Astounding" or not these two gentlemen are now free to pass and repass on their lawful occasions. The four convicted men appealed to the High Court where the two judges disagreed. One judge held that the appellants were not guilty and acquitted them; the other held that they were guilty and confirmed the convictions. Owing to this disagreement, the matter was referred to a third judge who confirmed the convictions, but for the death sentences substituted those of imprisonment for life. The four men then obtained special leave to appeal to the Supreme Court. Everything substantially turned on whether the dhoobi boy was to be believed or not, as the only eyewitness. The Supreme Court held that he was neither a liar nor an accomplice nor an accessory. He spoke whereof he knew and of what he had seen. As the Communists' servant, said Aiyar J., "he was not only able to see the abduction of the deceased but also to witness the actual murder. He took no part whatever in the commission of the offence or in any active or passive preparations for the same. He was not a *particeps criminis*. After securing his release from his temporary masters he went back with his father to the village. It is true he did not divulge the secret of the murder to anyone else except his own father. Who would in view of the atrocities and terrorism that prevailed in that region? It required a very courageous man to have proclaimed the truth heedless of the consequences to himself and we cannot credit the dhoobi boy with so much fearlessness."

Their lordships of the Supreme Court confirmed the convictions with the sardonic observations that "For this gruesome and revolting murder the appellants have got only imprisonment for life, for which they must be thankful to the difference of opinion that arose among the learned judges of the High Court."

(43.A.I.R., S.C., 379.)

IRON AND MANGANESE ORE EXPORTS

In compliance with the Supreme Court's interim stay order dated 13th July, 1956, the Control authorities at the ports have been instructed by the Government not to allow any quota to the State Trading Corporation and not to take any other step by way of allotting export quotas or allocating transport to implement the policy outlined in the Press note dated 22nd June. In order, however, to minimise inconvenience to mine owners and shippers, buyers and ship-owners, says a Press note, port control authorities are being advised to issue, until further instructions, on shipping bills, *ad hoc* permission to export iron ore and manganese ore within a ceiling of 25 percent of the allotment or actual performance, whichever is higher, during the period July-December, 1955. The Transport authorities are being advised to allocate transport to the extent practicable on a similar basis. The quantities exported or moved under these interim instructions will be adjusted against such allotments as are eventually fixed for the current half-year in accordance with the decision of the Supreme Court on the application before them.

AMONG the regular items in Calcutta's calendar—along with the Merchant's Cup and the Monsoon Meeting—is the stern announcement, which appears every six months or so, that a new tightening is about to take place in the city's traffic regulations. And one of the few things that can really be relied upon in this home of the broken promise and the missed appointment is that nothing whatever will come of it. The last one was made a few weeks back, and having narrowly missed being cut off in my prime that very morning by a charging bus duly equipped with lunatic driver and arm-waving conductor, I decided that this time I would watch carefully for even the slightest sign of improvement. But, of course, it has not been forthcoming; in fact the same fate almost overtook me again last evening. In time, perhaps, I could get used to this daily flirting with death at the hands of Calcutta's bus drivers if it were not for the insult which is always added to injury by the inevitable conductor whose insolent wave obviously expresses a deep inner conviction that no other vehicle has any right to exist at all. Of all Calcutta's road hazards—which range freely from suicidal pedestrians to the homicidal drivers, I find this the worst. It is not confined to bus conductors either. The amount of faith which Calcutta's road-users appear to have in their own hand signals, both familiar and otherwise, is a most impressive thing. There is, for instance, the old lady who shuffles fearlessly across a wet and greasy surface with only her raised hand to protect her from the oncoming traffic, and the rickshaw puller who, on a night when it is too dark to pick out a white dhoti at a hundred paces, confidently extends one black hand to indicate the direction he intends to go. So far as the police are concerned, I have no doubt there are traffic problems more urgent than these. I might recommend, for example, the cyclist without rearlight or reflector; wandering cattle; the vehicle which should have been on the scrap heap twenty years ago; the sauntering youths who appear to have as much faith in the approaching motorist's brakes as in his willingness to risk the lives of himself, his passengers and every other pedestrian within swerving distance in order to keep them alive; the baby car which hogs the centre of the road at twenty miles an hour and its counterpart, the perambulating penthouse which overtakes on the inside at fifty. There are others, of course, such as the driver who switches off his engine at traffic lights, the one who takes a wide sweep to the right before turning left, the taxi which stops dead in a stream of traffic to drop a fare, the over-confident Jehu and the teetering zebra-crosser, but it would take too long to list every one. Perhaps the police are too busy to attend to them all. They certainly seem to be; it is not a week since my driver got a summons for a paltry traffic offence he committed last January.

Early last week a poor man died in a Calcutta hospital. The death of a poor man in any of the city's hospitals is a common enough occurrence, and this one would have passed unnoticed but for its attendant circumstances. Mr. Broja Hari Pal—this was the unfortunate's name—disappeared from his bed one midnight, and when his wife came to the hospital next morning, he was still untraced. Her anxious enquiries met with the suggestion from the nursing staff, so it is alleged, that she had better look for her man in the nearby tank, or consult an astrologer. The first half of this remarkable piece of medical advice turned out to be excellent clairvoyance because, in fact, her husband's corpse was discovered in that same tank some three days later. Now I cannot myself understand why a poor man should not be contented with being just dead, but must, in addition, raise a large number of complications for his betters. A committee of

A DITCHER'S DIARY

enquiry will have to investigate the whole affair and quite a few doctors and nurses subjected to the irritations of cross-examination. It is, of course, not possible to foretell the consequences of it all, but, I am afraid, some of the hospital staff may be reprimanded, whereas, in my view, those who reportedly made the correct prediction that Mr. Pal might be found in the tank, deserve a public acclamation, if not for their medical prowess, at least for their prophetic one. Last year, when a Calcutta newspaper launched an energetic campaign aimed at improving the city's hospital service, it was followed at a somewhat longish interval by a Government Press note purporting to say that things were not as bad as they were made to appear. I do not think many people were surprised by that document since it was so completely in character with the general attitude towards administration in this city: things will go wrong and there is no great harm in letting them continue to do so, and when there is criticism, just brush it aside. I wonder if Mr. Pal's death will help bring about a change—I doubt it.

Wherever there is a free Press there is rarely any shortage of good excuses for muzzling it. One that is always readily available is its occasional habit of offending good taste; after all, for every *Times* and *Guardian* there has to be a *Mirror* and a *News of the World*. That is why the British Press often appears to be asking for the kind of regulation provided in the Bill which Lord Selborne has just put before the House of Lords. But it is sincerely to be hoped it does not get it. Like the many other forms of control which are always in great demand from those who rank propriety and conformity about the benefits of freedom, the cure is worse than the disease. Nobody is going to justify all the treatment the Royal Family, for example, receives at the hands of the Press. But one of the prices which must be paid for the convenience of maintaining a medieval institution in a modern democracy is that its doings should at all times be represented so as to appeal to the people's feelings of loyalty and personal sympathy. In the twentieth century, monarchies cannot exist behind a curtain of discreet secrecy. If they did, they would soon degenerate into remote symbols, handy constitutionally, but meaningless to the man in the street. Another newspaper habit which is often rightly deplored is that of intruding into people's private lives in search of the sentimental or the sensational. It is pointless to deny that this is done, but the fault is not entirely that of the newspapers. There are exceptions, but as any reporter will testify, the way in which ordinary folk, no matter how great their bereavement or deep their personal shame, court publicity is often a source of amazement to the most hardened news hawk. I would be the last one to say that newspapers should not have standards, but I still have enough of the old-fashioned liberal in me to think that these should come from within the profession itself and not be enforced from outside by people, however well-meaning, who have only their sense of propriety to guide them. No, this is a righteous Bill, the outcome of righteous indignation, but it is a dangerous one for all that. At best it would degenerate into the irritating, humiliating Mrs. Grundyism of the Lord Chamberlain; at worst, it is the thin end of a wedge which could separate the Press from anything inconvenient, political, religious, or social.

The Poznan riots may have done more harm than good. They have been a clear enough lesson to the rest of the world—or at least that part

of it which is prepared to learn—that the price of Soviet paramountcy is misery and starvation. But unfortunately they arrived before the trends towards greater liberalism in the communist world might be said to have reached the point of no return. There is little evidence yet that the die-hard opposition has in fact been strengthened, but so precarious is the present balance that the risk is certainly there. Nobody could have expected the workers of Poznan to bear that point in mind before they allowed their desperation to get the better of their caution. The really surprising thing is that they should have taken action at all knowing what the results would be. And how any group of key workers can find themselves living on the verge of starvation in a fairly modern and predominantly agricultural country, is not easy to appreciate either. It can only be yet another tribute to the determination of communist-satellite governments to pile on their people's shoulders whatever burdens are necessary in order that they may fulfil their obligations to the Soviet war machine. It has been said that the Poznan affair will not be allowed to affect the progress to greater liberalism and, in fact, there has been a number of concessions to the workers' claims. But there have also been mass arrests and, as usual, nobody knows what has happened to the victims. The fact which Poznan must have impressed on the Soviet leaders is that once Russian tanks are withdrawn from the streets, the end of their empire is likely to be swift and violent. There is no sign that they are prepared to pay this price yet, but sooner or later they are going to have to back up their new-found piety with some action. If Poznan has convinced them that to shake the reins loose will be to invite the deluge, then hesitation seems inevitable. Not that eventual freedom must be completely ruled out on that account; it will merely be postponed and is likely to be more violent when it does come.

A rather unlikely book recently came my way, and I might have passed it had not my attention been arrested by the name of the author, Dr. Edith Summerskill. Its title is *The Ignoble Art* and it deals with boxing, a subject which revolts as many people as it interests, and I must admit to being one of them. To me, nose-busting, jaw-wrecking and the effort to knock one's opponent out of shape and consciousness does not constitute a sport befitting civilised men. Boxing, especially in its professional form, I have always regarded as a brutal and sadistic sport, without any object more worthy than that of making money for promoters, gamblers and hangers-on. No aesthetic, moral or practical purpose informs professional pugilism, as it should all noble forms of sport. I am glad that my views are, on the whole, supported by a former Minister for National Insurance in Britain's last Labour Government. She points out that repeated blows on the head frequently cause what is called "punch-drunkness" or traumatic encephalitis, and among retired professional boxers it is not uncommon to find partial or total incapacitation, blindness or insanity. For example, "Cast-iron" Casey, the Sunderland middleweight, is now in a mental hospital. It is exactly for this reason that I was glad to note some time ago that Ewart Potgeiter, the South African heavyweight, had decided to turn his back on the ring and the fortune he might have made there. One other condemnation of boxing, I consider, is that it has produced remarkably little literature. Outside of Ernest Hemingway's *Fifty Grand* I scarcely know of any. Even bull-fighting has done better. Think of Hemingway's *The Undefeated*, or those fine passages in Byron's *Childe Harold*.

THE DITCHER.

INDIA'S
NEW STEELWORKS

For the new integrated iron and steel plant to be built at Durgapur to produce 1½ million ingot tons per annum Simon-Carves will be responsible for the complete coal washing, blending and handling plant, the three coke oven batteries and coke handling plant, the by-product plant and sulphuric acid plant, and the steam-generating plant for the entire works.

The £15-million contribution of Simon-Carves to this great enterprise is characteristic of their close association of nearly half a century with the Indian iron and steel industry.

Company Meeting

BOMBAY GAS COMPANY LIMITED

CHAIRMAN'S SURVEY OF POSITION AT THE ANNUAL GENERAL MEETING

The Annual General Meeting of the Bombay Gas Company Limited was held on 11th July, 1956. The Speech was read out by the representative of the Chairman, Shri B. L. Jalan, who was not present in person at the meeting.

Since we assembled here last, several developments of profound import have sought to change the directions of the future course of our national and economic history.

The First Five-Year Plan closed last March with an air of unimpaired success. The national income is estimated to have increased by 18% from Rs. 9,170 crores in 1950-51 to Rs. 10,800 crores in 1955-56. The First Plan envisaged an increase of 11% only. Further, the increase has been well spread over in the various sectors of the economy. We can say it with a sense of pride that the sector to which your company belongs, namely, factory establishments, has recorded the most phenomenal progress. What is, however, more significant is that the success of the Plan was secured in spite of a substantial shortfall in the projected outlay. It may be interesting to note incidentally, that the investment programme in the private sector was fully successful.

Second Five-Year Plan

Prompted by the success thus achieved, the Government have rightly planned for a bold Second Five-Year Plan and they deserve the gratitude of the people. The bold social approach of the current Plan is characterised by doubling of the rate of investment, estimated increase in the national income by 25% and in the employment potential by 8 million new jobs, heavy outlay on industry and particularly heavy industry, provision of an expenditure of Rs. 4,800 crores in the public sector, dependence on deficit financing to the extent of 25% of the outlay in the State Sector and leaving an unbridged gap of Rs. 400 crores. Welcome as some of these features are, a pause is necessary. I am afraid the investment potentialities and needs of the country have been exaggerated; the outlay in the public sector is far too excessive; and some real risks involved in the heavy doses of deficit financing have been ignored.

In the First Five-Year Plan, a total investment roughly of the order of Rs. 3,100 crores was made. This secured an increase of 18% in the national income of the country. The Second Plan has provided for an estimated investment of Rs. 6,200 crores leaving aside about Rs. 1,000 crores of current developmental outlay in the public sector. On the basis of our experience of the investment-income ratio during the First Plan, the 25% increase in the national income will have been secured only by an investment around Rs. 5,200 crores.

The higher level of investment has necessitated too much reliance on the public sector. The private investment during the last five years was maintained around 50% of the aggregate investment. In the present Plan this share has been reduced to 33%. A major part of this outlay is principally a matter of guess work, and one should not be surprised if the real investment in this sector may be substantially less. Thus the provision for construction, agriculture, village and small scale industries and stocks has been put at Rs. 1,700 crores or over 70% of the outlay in the private sector, ignoring for a while the long term risks implied in the rapid expansion of the public sector the impractical character of this appropriation should be noted. This does not take account of the adverse impact of the proposed additional taxation, the likelihood that the inflow of external aid may be much less than proposed, and the unbridled gap. Some type of inflationary tendencies have been already generated in the country. The official wholesale price index touched the level of 390 during May 1956, which was more than 12% above the level a year ago. There is no doubt that prudent fiscal and monetary policies of the country shall have to reckon with this development and not permit our efforts to build our country to be wrecked against organisational rocks. Physical planning knows its own limitations. It is a good servant but a bad master.

State Nationalisation

New economic outlook is also reflected in the various policies adopted by the State such as the nationalisation of the Imperial Bank and the Life Insurance. The spirit behind the new Companies Act is similar. The executive has taken some far-reaching powers in the regulation of the industrial and commercial enterprises in the country; some embarrassing restrictions have been placed on the smooth operations of these enterprises and avoidable secretarial work has increased beyond measure. The managements have begun to feel the pinch. We should, however, record it with satisfaction that the administration has shown a sense of accommodation and sympathy and I have no doubt that assured of such a treatment the rigours of the new piece of legislation will be very much mitigated in the course of its implementation. Indeed, I should hope that the Government will keep an open mind in the matter and if real difficulties are faced by the industrial units without advantage they will not hesitate to remedy the new provisions of the Company Law. I suggest that the old and the new Companies Acts should be studied in this perspective.

Industrial Policy

As regards the industrial policies, since the restate-ment of the earlier policy was called for on account of several reasons, the principal among them being, certainly, it was certainly welcome, but the new policy has extensively widened the sphere of State-owned industry. Seventeen key industries are now listed in the schedule of industries for whose development the State will be exclusively responsible, and twelve in the schedule of those which will be progressively State-owned. The previous policy had only three industries as the exclusive monopolies of the State sector. Whereas some uncertainty has yet been left by the room allowed for over-lapping, we should note it with satisfaction that the Prime Minister declared that as much freedom as is consistent with the targets and objectives of the National Plan will be allowed to

private industrial undertakings and that fair and non-discriminatory treatment will be accorded in cases where both sectors exist in the same industry.

State Trading Corporation

The talk of State Trading Corporation has been in the air for some time past, and although the Government vacillated for some time, a Corporation has been established and started functioning. At this stage, we can only hope that this Corporation will not spread its tentacles beyond its legitimate sphere and the Government would allow free trade to operate in internal and external trade. However, the Government will do well to announce its definite policy in respect of the commodities to be covered by this new institution so that uncertainty may not hamper the development of our international trade relations. In the modern industrial economies, a growing foreign trade is an essential aspect of a healthy economy and on it depends the exchange resources, the industrial and business activity, the employment potential and the level of the economy in the country. Availability of adequate exchange resources is a prime necessity also for the development of heavy industry and largely the success of the National Plan.

Labour Front

Before closing this survey, we would wish to refer to another ominous shift. We have witnessed in the recent past some instances of militant activities on the labour front. These have been rightly denounced by all peace-loving sections of the country including our Prime Minister, other spokesmen of the Government and parliamentarians. Accidentally perhaps these happenings took place in the public sector of industry but they clearly indicate that such and other problems are common to all sectors of the economy and it is not advisable at this stage to think in terms of separate public and private or industrial or agricultural. There is one and only one National Sector and all others are integral parts of it. The future pattern of our economic organisation has to be viewed in this atmosphere and our thoughts and policies should be dictated and outlined by one paramount objective of national life, that is, we have to attain an increasing rate of industrialisation for the economic growth of the country and a substantial rise in the standard of living of the masses. A vigilance has, however, to be exercised so that our efforts in this direction do not undermine or jeopardise our basic values of political, social and moral life.

Trading Profits

Now coming to the affairs of the company, as you will have noticed from the accounts, the trading profits for the year under review are more or less the same as those for the year 1954. You will also notice that in spite of the decrease in the revenue of the company from Rs. 82,79,546 in 1954 to Rs. 82,41,293 in 1955 the profits have shown an increase of Rs. 50,961/- and this increase has been possible owing to the strict supervision maintained over the expenditure during the year. The gross profits for the year was Rs. 10,98,667/- against Rs. 10,47,706/- in the previous year and after making provision for Income-Tax and Super-Tax in India and U.K. to the extent of Rs. 7,57,506/- and providing a further sum of Rs. 1,00,000/- for gratuity and after adjustments, the net profit for the year comes to Rs. 4,55,641/- as against the corresponding figure of Rs. 5,49,639/- at the end of the previous year. After adding the net profit, the balance brought forward from the last year we have Rs. 7,10,667/- available for distribution, out of which your Directors have recommended a tax-free dividend of 12½% as in the previous year.

The sale of gas showed an increase of 8,507,000 cubic feet from 1,320,048,600 cubic feet in 1954 to 1,337,555,600 cubic feet in 1955 which comes to 64% over the previous year.

Ever since the management took over the company, we have been making our best endeavour to increase production and serve the consumers to our best. The production has steadily increased from year to year as was reported to you last year. This increase was well maintained also during the year under review. Thus whereas the company increased its production by 13.5% in 1949, 21.2% in 1951 and 30.6% in 1953, it increased the production by 35.5% in 1955 over 1954.

The demand for additional supplies of gas continues but we were unable to take on additional consumers during the year. The production, purification, storage and distribution units were being worked under conditions of constant overload and in spite of adequate maintenance, there were increasing signs of the effects of this overload on the plant and machinery. A disturbing feature of the year under review was the inadequate and erratic nature of the coal supplies, which resulted at one time in the restriction of coal gas production.

Expansion Scheme

Schemes of expansion both major and minor, such as the utilisation of municipal sludge gas, a second water gas plant oil gasification, etc., were examined. It is gratifying to be able to record that the Directors were pleased to sanction late in 1955 the extension of the present retort house by five more retort beds complete with additional coal handling, charging and gas cooling equipment. An increase in production of about 200 million cubic feet per year is possible with appropriate expansion of the purifier, holder and mains capacity. This extra gas could satisfy the needs of 2,500 new consumers.

The scheme for the expansion of the retort house by five more beds has been taken in hand and extra supplies on completion of the same will be available by the end of 1956.

During the year 1956, though the total gas sales could not be improved upon appreciably due to lack of production capacity, carbonisation efficiencies have been improved upon. The gas qualities and pressures were further improved to the growing satisfaction of the consumers. The production and sale of all the by-products have registered an increase.

6. Shri Vishnu Hari Dalmia.
7. Shri Nihar Chandra Roy, (Technical Director).

MANAGING AGENTS:

Messrs. Dalmia Agencies Private Limited.

AUDITORS:

Messrs. V. Sankar Aiyar & Co.,
Chartered Accountants.

BANKERS:

National Bank of India Limited.

The Company had issued 10,00,000 Ordinary shares of Rs. 10/- each in the beginning, out of which 6,78,650 shares were subscribed. At that time as more subscription was not felt very necessary, no efforts were made for getting further Capital subscribed. Now fresh consent from the Controller of Capital Issues has been obtained to get subscribed the balance issued and unsubscribed 3,21,350 Ordinary shares of Rs. 10/- each at par, a complete copy of which is open to public inspection at the Head Office of the Company at Rajgangpur. IT MUST BE DISTINCTLY UNDERSTOOD THAT IN GIVING CONSENT THE GOVERNMENT OF INDIA DO NOT TAKE ANY RESPONSIBILITY FOR THE FINANCIAL SOUNDNESS OF ANY SCHEME OR FOR THE CORRECTNESS OF ANY OF THE STATEMENTS MADE OR OPINION EXPRESSED WITH REGARD TO THIS.

The Company's Cement Works at Rajgangpur has a daily production capacity of 500 tons. The Cement Works is under extension by a further daily capacity of 600 tons, which is likely to go into production by the end of this year. Besides, the Company has also undertaken putting up of a modern refractory works of an annual capacity of 80,000 tons of firebricks of various kinds including basic bricks in collaboration with German experts for technical advice on royalty basis, the construction of which has sufficiently advanced. The refractory works at Rajgangpur is also expected to go into production before the middle of the year 1957. Further, the Company has also sponsored jointly with Messrs. Dalmia Cement (Bharat) Ltd. an iron and steel foundry in Calcutta under a separate company—Dalmia Iron & Steel Ltd. (with Registered Office at Rajgangpur in Orissa) by subscribing to its capital, which in collaboration with Belgium experts, will manufacture special heat

resisting and wear resisting machinery parts for the Cement industry.

The Industrial Finance Corporation of India has sanctioned a loan to the Company to the tune of Rupees One Crore for above referred schemes of cement factory expansion and refractory works undertaken by the Company. The further expenses for capital cost and working capital will be met out of the Company's savings made during the last years and out of the present proposed subscription.

The Government of Orissa at the time of floatation of the Company, besides subscribing to the preference share capital of the company to the tune of Rs. 40 lakhs, had advanced a sum of Rs. 50 lakhs to the Company free of interest for purchase of 4 lakh tons of Cement out of which Rs. 44,35,227/8/- have been paid back and/or adjusted by the end of June, 1956 at the rate of Rs. 12/8/- per ton of Cement supplied out of the contract quantity. The balance amount is expected to be cleared very shortly.

The Company had contracted with the Government of Orissa to supply 4 lakh tons of Cement as stated above for the Hirakud Dam Project at Rs. 7/- per ton less over the contracted rates of the Indian Stores Department of the Government of India. Out of this 3,54,818 tons 4 cwt. have been supplied by the end of June 1956 and the balance quantity would be completed shortly. After that, this special rebate of Rs. 7/- per ton would be further saving to the Company.

The Company's working results for the first four years working are given below:—

Year	Gross Block at cost	Cement Production	Gross profits earned before providing depreciation and Managing Agents' Commission	Depreciation provided	Dividend on Ordinary Shares
	Rs.	Tons	Rs.	Rs.	
1952	1,67,77,676	1,32,711	24,93,933	63,87,124	—
1953	1,72,86,319	1,31,273	30,43,423	27,30,259	—
1954	1,75,23,216	2,02,723	59,47,485	21,04,179	7½%
1955	1,83,18,049	1,90,033	59,60,680	9,77,629	—

The figures of the year 1955 are subject to audit. The Managing Agents propose to suggest to the Board of Directors to recommend 12½% dividend on ordinary shares for the accounting year 1955.

The present issue in the first instance is being offered to the existing registered Ordinary Shareholders whose names appear in Register of Mem-

bers at the close of Share Transfer Register on 3rd September, 1956, at par in the ratio of one share for each two shares held. The present issued number of shares falls short by 17,975 shares if all the shareholders exercise their option to take right shares fully. In such events, the Managing Agents and their Directors and members have agreed to reduce their allotment to the extent as may be necessary to meet the requirement of other shareholders. The time limit for exercising the option to take right shares is upto 31st October, 1956.

The Letters of Right to be issued to the shareholders are renounceable in favour of any person and the shareholders can get them split up from the Registered Office of the Company to any denomination free of charge. If splitted Letters of Right are required by registered post, the applicant should remit eight annas to cover registration postage charges. Any shareholder holding big lot of shares in the Company, if desirous to have the Letters of Right splitted from the very beginning, he should write as such to the Company in advance, stating the denomination of each splitted Letter of Right. The shareholders have also the option to apply for extra shares over their right quota but the allotment of such extra shares within the proposed issue would depend on the availability thereof after satisfaction of the application of Right Shares and will be at the absolute discretion of the directors.

The shareholders, who do not receive circular dated 14th July, 1956 in this respect latest by 21st July, 1956 are requested to refer the matter to the Registered Office of the Company stating their correct address, so that they receive their another

INDUSTRIAL TRENDS IN THE UNITED KINGDOM

RECESSION IN MOTOR INDUSTRY CAUSES ANXIETY

(FROM A SPECIAL CORRESPONDENT)

THE predominant subject of discussion in industrial circles has been whether the redundancy of employees now evident in British motor manufacturing ought to be regarded as the first sign of an approaching general trade recession, or can be calmly treated as something likely to be localised. In a sense, there can be no saying thus far and no further; for various industries sub-contracting to the motor trade, or supplying semi-finished materials, are bound to be affected, as are also those concerned in the trading or distribution of motors and their accessories. But, after this reservation is made, it can be stated that, at the time of writing, activity continues to be strongly manifested in the majority of industries. That being so, most business men have drawn the comforting conclusion that no pronounced setback to British industry as a whole is imminent. Certainly, the latest official information upon the nation's economic and financial state of affairs lends support to this view. The increase in the nation's gold reserves, small although it admittedly is, nevertheless constitutes an advance. More positive are the well-filled order books in all branches of the engineering industry, and the fact that, although capital is difficult to obtain in some directions under the credit squeeze, new enterprises are being developed on a substantial scale. But it remains that, in comparison with two years ago, the area of new factory buildings shows a sharp decline and that the hire-purchase interests, though ingeniously dealing with the restrictions imposed upon them, cannot altogether conceal the sound of tremors in their midst. There is, too, the unpleasant fact that exports of cotton piece-goods for the five months to 31st May were only 199 million square yards, compared with 256 million square yards for the corresponding period of 1955. Obviously, therefore, some slowing down of business is taking place. How much should be regarded as a welcome diminution of feverish over-activity and what proportion as a loss which Britain would rather not forgo has still to be discovered. One would imagine, however, that no contraction in textiles is palatable.

Fall in Textile Profits

Meanwhile, it is noteworthy that some of the most progressive textile and allied companies feel that they are unlikely to maintain hitherto ordinary activities at their former levels, and are entering into new fields which they would not have considered a few years ago. Thus the Bleachers' Association states that it has derived financial benefit during the past year from subsidiaries operating outside the textile industry, and that cultivation of such extraneous interests has become an integral part of the Association's long-term policy. The British Cotton and Wool Dyers Association has altered its memorandum of association so as to be able in future to engage in the electrical, leather, rubber and other industries, and also to trade in any goods "which can be conveniently dealt with by the company." Annual reports issued during the past month show that while a few textile concerns have held their ground, numerous cotton and rayon companies, including even the most powerful, have felt the effects of severe competition. For example, Fine Spinners and Doublers' net profit has declined by £637,000 in comparison with that of the previous year, British Celanese's by £895,000 and Courtauld's by £1,415,000.

The announcement by the Chemstrand Corporation, a U.S. concern, that it intends to spend £3½ million for the erection of a factory in Northern Ireland to manufacture its fibre Acrlan is of importance. Acrlan is a member of the group of acrylic fibres at present manufactured by half a dozen companies in the U.S., five in Germany and by a few in other countries. The sole producer in Britain is Courtauld's, and this is at present by only a pilot plant. Large-scale production is expected to be reached in 1957. Acrylic fibres are made from acrylonitrile, derived from air and natural gas forming ammonia, hydrocyanic acid and acetylene. They are recognised as being among the most important of the synthetic fibres—some claim that they are the most important measured by their properties—not excluding Terylene and nylon. Their resistance to deterioration and attacks by outside agents, such as chemicals and bacteria is impressive, and it appeared initially that their chief outlet would be for industrial fabrics. But the virtues of its warm handling have gained prominence latterly, and the fibre is becoming much sought after by the hosiery and knitwear industries. It can be processed on the cotton system, and can be used either individually or for blending.

Russian Purchase of Textile Machinery

Large orders from overseas continue to be received by textile machinists, and several of these have orders in hand to occupy them two years. Russia figures prominently in this buying. The chairman of Platt Brothers has remarked that the factory set up by National Machinery Manufacturers in Bombay (in which concern Platt's has a considerable interest) has made satisfactory progress and the production of ring spinning frames has already reached 20 a month. He has also observed that the Raper Auto leveller, whose use enables substantial processing advances to be made in the woollen, worsted and synthetic textile industries, is now established in 20 countries and 1,900 of these units are in operation. The automa-

tic production of oil-in-water emulsions gains ground in the jute manufacturing industry. These machines do away with the necessity of storing large quantities of emulsion, enable changes in the proportions of oil and water to be immediately effective and are very compact.

News of the progress of automation includes an item that the Imperial Chemical Industries is pressing on with the completion of the first nitroglycerine plant in the world to be remotely controlled with the aid of a closed circuit television system. "Remotely controlled" has a special significance in this instance. Control will be exercised from a separate building, well away from the one containing the plant—which will be in the second largest explosive factory in Great Britain. It is hoped that through the early registration of any irregularities on the control panel, untoward developments will be arrested at an early stage, but should these precautionary measures fail for any reason, automatic control can still play its part by deluging the explosives with water.

The plastics industry is on the eve of a fresh development through an agreement entered into by Greenwich Plastics with a German firm. The full implications of this agreement have not been disclosed, but it has been announced that it renders possible the manufacture of a new type of plastic film not produced in Great Britain so far. Although the use of film for packaging purposes has been criticised as being overdone—it seems to be considered desirable to clothe everything from braces to carrots in cellophane or its equivalent—the practice still extends. If the movement has, to the film maker's advantage, caused a certain amount of faddism, the hygienic gain is undeniable and the washable shopping bags of plastic material are an immense boon. Transparency and tensile strength have been much improved in the latest packaging films and the print upon them rendered more legible.

Education in Technology

The Government has now said all that it has to say, in the absence of some fresh development, upon the subject of technological education. It was, for some reason, left to Mr. Butler, the Lord Privy Seal, to utter the last words. Some of them seemed to be rather extravagant, as when he claimed that the "stupendous" amount of £4.5 mil-

lion will be spent by the Government "for building, not only for engineering and other technologies, but for basic science, physics, and chemistry, in which technologists require to be well grounded." One need not make a comparison with the Government's expenditure on armaments (or even on flying missiles alone) to see how ridiculously inadequate this sum is. Fortunately, however, finance for technological education is coming also from other directions than the Government. A touch of absurdity has been added to what is really a serious subject by the failure to find a satisfactory verbal distinction for those who pass certain tests in technical proficiency. It was officially stated that no new degree could be created; to do so would have been to tread on the toes of the universities, which have a monopoly of this kind of thing. So the idea of widening the scope of B.Sc. and adding "Tech." in brackets was rejected as an infringement of privilege and "Dip. Tech." proposed instead. But it was soon evident that "Dip." could easily be interpreted by the wit as an abbreviation for dipsomaniac and so "Dip. Tech." has been banished from the scene. Its—or his—successor has yet to be found.

The unfortunate "side" effects of some of the antibiotics upon patients has decreased chemical manufacturing activity in some directions, but on the whole, the production of fine chemicals is fully maintained. The formerly exclusive pharmaceutical manufacturers now add numerous industrial chemicals to their catalogues, and veterinary and agricultural chemicals also. It is surprising that this development did not occur many years ago; for plainly these different chemical fields are closely interrelated. Indeed, it is only by being broadly based, and deriving revenue from every possible source, that the modern chemical company can bear the great financial outlays that continued progress in materials and methods demands. As the chairman of Boots Pure Drug Co. Ltd. has commented, the procedures used for the manufacture of some chemicals today, cortisone and other members of this group, for instance, are very advanced and represent a large-scale utilisation of chemical reactions and materials previously unknown to the conventional manufacturer. It also demands a delicate and yet very close collaboration between research scientists, and development, engineering and production units.

nance in India and Abroad

HE CALCUTTA MONEY MARKET

INTERBANK DEMAND EASIER

Wednesday, 18th July.

HERE has been a small but discernible all-round easing in the money market this week. particular source of demand has shown a sizeably-large decline, but all appear to be down small amounts. The sugar industry's advances are returning slowly and those of the jute mills have begun to fall. There has been some urn of funds from upcountry areas. The inter-bank market is rather easier and all respective growers have been accommodated at the un-anged rate of 3½ percent.

The bill market has shown a little more life this week, with a fair amount of gunny and some tea cements coming to hand. Remittance has been satisfactory. Sterling remains weak, but there has been a very slight improvement in the dollar rate, sstibly due to short-covering in New York, and it now quoting Rs. 48½.

Silver was steady on bull support and advanced om the previous week's level of Rs. 171-12 to s. 172-4, quoted yesterday, the market being osed today. The rate for ready was quoted at s. 172-8. The London price was unchanged at s. 172-8. The price of foreign silver in New York as the same at 90½ cents.

Gold rose in sympathy with silver from s. 102-2 to Rs. 102-6. The sovereign at Rs. 66-4 as 2 annas higher.

During the week ended 13th July, Government f India Treasury Bills for Rs. 64,49,75,000 were old in favour of the Reserve Bank.

A fall of Rs. 7.91 crores to Rs. 1,474.59 crores in otes in circulation was the outstanding feature f the return of the Reserve Bank of India for the week ended 13th July, 1956. The total note issue as Rs. 1.38 crores higher at Rs. 1,503.96 crores. The expansion in currency was adjusted by in-creasing rupee securities by Rs. 10 crores to Rs. 728.56 crores and reducing foreign securities by Rs. 10 crores to Rs. 626.67 crores. In the Banking Department deposits of the Government of India fell by Rs. 2.20 crores to Rs. 52.03 crores, while other Government accounts rose by Rs. 2.16 crores to Rs. 6.93 crores. Balances of commercial banks at Rs. 52.65 crores were Rs. 2.10 crores higher. Other loans and advances declined from Rs. 61.08 crores to Rs. 55.49 crores, of which advances to scheduled banks against usance bills totalled Rs. 33.96 crores (Rs. 33.68 crores). These advances amounted to Rs. 187.31 crores since 1st January, 1956. Ways and means advances rose from Rs. 2.94 crores to Rs. 3.31 crores. Other features showed little change.

The statement of the position of scheduled banks for the week ended 6th July, 1956, discloses Demand and Time liabilities at Rs. 639.35 crores (Rs. 9.95 crores on account of borrowings from banks) and Rs. 454.97 crores (Rs. 3.22 crores), compared with Rs. 638.11 crores (Rs. 6.12 crores) and Rs. 452.88 crores (Rs. 3.22 crores), respectively, in the previous week. Cash and balances with the Reserve Bank have diminished by Rs. 2.60 crores and Rs. 1.85 crores to aggregate Rs. 37.47 crores and Rs. 49.98 crores, respectively. There is a drop of Rs. 73 lakhs in investments to Rs. 346.90 crores. Advances and bills discounted at Rs. 756.44 crores show a fall of Rs. 1.03 crores. The ratios to total liabilities of cash and balances, and of advances and discounts, are, in consequence, shown at 8.0 percent and 69.1 percent, against 8.4 percent and 69.4 percent.

The return of the State Bank of India for the week ended 6th July, 1956, shows a drop of Rs. 3.18 crores in total deposits to Rs. 222.85 crores. Investments in Government Securities are down by Rs. 39 lakhs to Rs. 89.44 crores, while other authorised investments are up by Rs. 24 lakhs to Rs. 10.73 crores. Advances, including loans, cash credits and overdrafts, and bills discounted and purchased have decreased by Rs. 18 lakhs to aggregate Rs. 134.08 crores. Cash and balances are, in consequence, shown at Rs. 15.81 crores or Rs. 4.17 crores less.

The profit of the BANK OF BARODA LTD. for the half-year ended 30th June, 1956 amounted to Rs. 18,01,604-4-8, including Rs. 3,35,546-4-9 brought in. The directors have resolved to declare an interim dividend of 6 percent, which will absorb Rs. 6,00,000. The carry-forward is Rs. 12,01,604.

The net profit of the CENTRAL BANK OF INDIA, LIMITED for the half-year ended 30th June, 1956, including Rs. 18,40,358-8-6 brought in, amounts to Rs. 62,75,514-4-10. The directors have resolved to pay an interim dividend of 6 percent, which will absorb Rs. 18,87,255. The carry-forward is Rs. 43,88,259-4-10.

According to the returns received in the Department of Commercial Intelligence and Statistics, the total gross sea and land customs revenue collected in the Indian Union during May 1956, amounted to Rs. 1,372 lakhs as compared with Rs. 1,275 lakhs in the corresponding month of the previous year. The comparison in the following should be taken to refer to that of the current figures with those of the corresponding period of the preceding year. Of the total customs revenue collections, import duties accounted for Rs. 1,149 lakhs as against Rs. 1,016 lakhs, export duties for

Rs. 192 lakhs as against Rs. 245 lakhs and land customs and miscellaneous for Rs. 31 lakhs as against Rs. 14 lakhs. The total gross collection of Union excise duties amounted to Rs. 1,437 lakhs as compared with Rs. 1,169 lakhs. During the two months, April and May, 1956, the grand total of gross customs and Union excise revenue realised was Rs. 5,227 lakhs as compared with Rs. 4,757 lakhs during the corresponding period of the preceding year. Of this amount, import duties accounted for Rs. 2,191 lakhs as against 1,979 lakhs, export duties for Rs. 364 lakhs as against Rs. 475 lakhs, land customs and miscellaneous for Rs. 43 lakhs as against Rs. 38 lakhs and Union excise duties for Rs. 2,629 lakhs as against Rs. 2,265 lakhs.

RETENTION PRICES FOR MYSORE IRON AND STEEL WORKS FIXED

The Government of India has, on the recommendation of the Tariff Commission, decided to fix the ex-works retention price of steel payable to the Mysore Iron and Steel Works at Rs. 405 a ton from 1st April, 1955, to 31st March, 1959. The retention price for pig iron payable to the factory during the same period will be Rs. 195 a ton. On the Commission's recommendation, the Government has fixed the price of steel payable to the factory from 1st April, 1954, to 31st March, 1955, at Rs. 392 a ton. The price of pig iron for the period 14th November, 1953, to 31st March, 1954, has been fixed at Rs. 178-8 a ton and from 1st April, 1954, to 31st March, 1955, at Rs. 197 a ton.

Certain schemes for the expansion of the Mysore Iron and Steel Works are under consideration and if these are completed by 1959, the production in 1959-60 will be higher and costs may be materially different. It has, therefore, been decided to apply the prices given above for the present up to the end of March, 1959. Thereafter in the light of the circumstances then prevailing, the prices may either be continued or the matter may, if necessary, be referred to the Tariff Commission again.

Stocks and Shares

SHARE MARKET RELAPSES ON TOTAL LACK OF INVESTOR SUPPORT

NEW LOANS FULLY SUBSCRIBED: LISTS CLOSED

Wednesday Evening.

AFTER a modest burst of speculative activity last week round about the clearing time, the Calcutta stock market has sunk back into its—by now—customary lethargy. This week has seen a general decline in speculative quotations and a continued absence of business among investment scrip. Indian Irons, after touching Rs. 36-6, have fallen to Rs. 35-12. The only one among the sections which has shown any signs of life at all has been the miscellaneous, and here National Carbon, Imperial Tobacco and Metal Box shares have enjoyed some support. The undertone is now weak.

This continued stagnation, coming after the more cheerful conditions of last week, has been partly due to the fears aroused by the passing of the Security Contracts (Regulation) Bill through the Lok Sabha. But the underlying reason is still the lack of anything which will encourage investors to risk their money in equity shares. The general feeling among operators is that Government policy now leaves no room for private industry to flourish and that the future holds little hope of any improvement.

The new Government loans opened for subscription at 10 a.m. on Monday and closed at 11 a.m. today. It is reported that the size of the cash subscription is Rs. 40 crores and that of the conversion, Rs. 110 crores. The proportions of these amounts which went to each loan is not yet known.

Details of the week's trading follow.

* * * * *

Extremely dull conditions obtained in the gilt-edged market and business was on a very poor scale. Investible funds have been channelled into the new loans, the subscription lists for which closed at 11 a.m. today. Public subscriptions amounted to Rs. 100 crores. Existing issues, in the absence of support, were marked down in price, the worst sufferer being 3% Conversion Loan 1986 which was marked back from Rs. 77-1 to Rs. 76-11 with sellers over. In short-dated issues, 3% 1957 and 1958 were steady at Rs. 99-13 and Rs. 99-10 in view of the fact that the Reserve Bank of India is still supporting both loans. Among medium-dated issues, 3% 1959-61 came back to Rs. 98-2 while both 3% 1963-65 and 1964 were on offer at Rs. 95-2; 2½% 1961 was taken around Rs. 93-9 while 2½% 1960 was marked at Rs. 96-6 ex-voucher. In National Plan loans, 3½% 1961 was unchanged at around Rs. 99-9 but both 3½% 1964 and 1965 met with selling pressure and were quoted lower at the close at Rs. 98-11 and Rs. 98-10 respectively. Long-dated loans were unchanged with 3% 1966-68 quoted at Rs. 93-3 and 3% 1970-75 at Rs. 90-6. State loans were quotably unchanged.

Among miscellaneous preference shares, a small lot of Aluminium Corporation was crossed at Rs. 92-8. Bharat Collieries were done at around Rs. 55-12 and British India Corporation were steady at Rs. 128. Calcutta Electric Supply were crossed at Rs. 11-8. A solitary transaction was reported in Calcutta Tramways at Rs. 9 and Dalmia Cement fully-paid were marked at Rs. 100. Indian Iron & Steel changed hands on several occasions at around Rs. 108-8 and Indo-Burma Petroleum were crossed at Rs. 108-4. National Tobacco were done at Rs. 78 and New Victoria Cotton at Rs. 5. Orient Paper 1st Preference changed hands at Rs. 99-12 and the 2nd at Rs. 74. Rohtas Industries "B" were shaded at Rs. 63-12. Very small business was transacted in jute shares. Only two transactions were reported, namely, in Anglo-India at Rs. 111, and Gouropore at Rs. 99-8.

In the banking section, United Commercial were very steady and improved from Rs. 52-8 to Rs. 54. Punjab National were one point better at Rs. 53 while Hind Bank were unchanged at Rs. 24-4 and United Bank of India "D" shares at Rs. 4-6.

In railways, Arrah Sasaram were taken at Rs. 72 and Dehri Rohtas were crossed at Rs. 13-15. Howrah Amta were marked at Rs. 59-8.

Cotton shares were featureless and only three scrip were dealt in during the week, namely, Jayashree at Rs. 7, Kesoram at Rs. 18-8 and New Victoria at Rs. 2-10. There was some enquiry for Bowreah and the quotation was marked up from Rs. 168 to Rs. 172 without any business materialising.

Business in coal shares was of a retail nature and prices showed little variation as will be seen from the following table:

	Closing 12-7-56	Opening 18-7-56
Amalgamated	22 4	22 8
Bengal	539	538
Burrakur	13 12	13 8
East Indian	30 12 x.d.	30 12
Equitable	29 14	29 12
New Beerbhoom	19 4	19
South Karanpura	9 12	9 8

Contrary to the general trend, Raneeungee was steady and improved from Rs. 13 to Rs. 13-6.

Jute shares continued to be neglected with the exception of Northbrook which improved from

Rs. 22-9 to Rs. 23. Here is a chart showing representative price movements.

	Closing 12-7-56	Opening 18-7-56
Rs.	Rs.	Rs.
Anglo-India	158	158
Barnagore	128	128
Chandpary	152	152
Ganges	63 8	63 8
Howrah	21 6	21 4
Kinnison	161	161
New Central	17 6	17
National	22 13	22 11

Prices of electric supply shares were unchanged. Agra was crossed at Rs. 159 and Muttra at Rs. 9-8. Bareilly were placed at Rs. 14-8. Patna at Rs. 11-8 and Upper Jumna Valley at Rs. 20. Calcutta changed hands freely at around Rs. 13-7.

There was no change in the position of sugar shares and idle conditions continued to prevail. Balmampur were quoted at Rs. 9-10, Belsund at Rs. 11-10 and Carew at Rs. 9. Cawnpore changed hands at Rs. 19-11 and Dyer Meakin Breweries at Rs. 5-8. Rummugger were fairly steady at Rs. 28-14 and United Provinces were marked on an ex-dividend basis at Rs. 19-8. Shree Krishna Gyanoday were transacted freely around Rs. 13-5.

In the engineering section, Indian Iron & Steel fluctuated between Rs. 36-6 and Rs. 35-12 to close at the latter rate. Burn & Co. were slightly better at Rs. 356 while Braithwaite and Britannia Engineering were unchanged at Rs. 28 and Rs. 18-4 respectively. Indian Standard Wagon were marked at Rs. 178 and Jessop & Co. were steady at Rs. 36. Richardson & Cruddas improved from Rs. 25-14 to Rs. 26-3 and Saran Engineering recovered from Rs. 7-12 to Rs. 8. Textile Machinery, however, were subdued at Rs. 22-7.

In paper, India Paper Pulp met with investment enquiry at Rs. 25-8 while both Orient Paper and

AMPLIFIER
MADE IN INDIA

After many years of research, Philips designed this amplifier which is now being manufactured in India. This amplifier, especially built for tropical conditions, has been placed in the market only after it has passed the severest tests for reliable, trouble-free operation.

EL 6611 C/00 for 6 volts and A. C.

EL 6611 C/01 for 12 volts and A. C.

- Features**
- Suitable for A. C. Mains and car-battery operation.
 - Specially designed for mobile installations and out-door use.
 - Capable of withstanding heavy shocks and vibrations.
 - High sensitivity. • Treble control.
 - Separate adjustable inputs (1) for microphone (2) for pick-up, radio or tape recorder.
 - Facility for mixing the two input signals.
 - Extremely low battery and mains consumption.

STEADY PROGRESS IN STOCK MARKETS

OILS IN DEMAND: LEADING INDUSTRIALS MOVE UP

London, 18th July.

DESPITE the usual seasonal contraction in Stock Exchange activity and the general reluctance to extend commitments in view of the strained U.K. economic situation, the stock markets have been able to make steady progress over the past week. Sentiment has to some extent been stimulated by the persistent advance on Wall Street, and by the mild optimism of Mr. Macmillan over the economic outlook provided the various restrictions are maintained for the time being. Interest has moreover been centred on one or two markets, and oil shares have claimed most of the attention. Much Press comment has been given to the potentialities of this industry and buying has invariably exceeded the supply of shares, so that prices have sometimes advanced rather out of proportion to the volume of business transacted. Shell shares have been outstanding. Certain sections of the industrials market have claimed a good deal of attention and shipping shares show some price gains. P. and O. and Furness Withy have been well in the lead. Steel shares have responded to favourable comment and leading varieties of electrical equipment have been favoured, while most of the other blue chips have edged ahead. After the response to the big conversion operation, interest in gilt-edged has subsided and prices have drifted rather aimlessly on the possibility of further new issues coming on the market, which tends to keep buyers away. The feature of the foreign bond market has again been the strength of Japanese issues. Germans have joined in the rise while an interesting development elsewhere has been the rise in Greek bonds following the successful High Court case. In rails, dividend optimism has continued to assist Antofagasta stocks and there has been vague talk of a possible bid for the company. Dorada Railway shares, which have been in demand recently on the take-over talk, fell sharply on the news that the company had been sold to the Colombian Government. Gold shares have tended to see-saw and the June quarterly reports have left the market undecided. Copper reflect the fluctuations in the metal price, and generally speaking, lack a decided trend, but lead and zinc issues have made a fairly satisfactory

showing. More interest has been shown in rubbers and a number of leaders have registered useful gains. Teas have been neglected. The advance of Wall Street has brought daily upward adjustments in dollar stocks.

The Money Market

Easy credit conditions continued to prevail in the London money market throughout the past week, with funds seeming to be in unlimited supply. A big bill business was effected, while money ruled at cheap levels with the rate for most part never much above 3½ percent, and balances during very easy spells were as low as 3 percent. However, the end-of-week saw signs of some contraction in the volume of credit, and this week some £30 million of extra money has to be found for financing the Government's short-term borrowing of Treasury bills. Once again having sold large amounts of bills to the banks, the discount houses, intent on securing as many bills as possible, raised their tender bid at the week's offer of Treasury bills to bring about a further reduction in the Treasury bill rate of approximately 1/16 percent to 9s 9.87d. Only £270 million worth of 91-day bills were allotted of the week's total offering of £280 million and the applications which totalled £433,925,000, were allotted at an average rate of 91s 9.87d against 101s 1.84d in the previous week. Offerings this week will comprise £270 million worth of 91-day bills. The Bank of England return for week ended 11th July showed that bankers' deposits were about £4 million lower at £229 million, while notes in circulation were £16 million higher at around £1,906 million.

Activity on Wall Street

The market for investment quality corporate bonds in the past week was dominated by the offer of \$250 million of new 3½ percent American Telephone and Telegraph debentures. The issue met with a good reception and this had a favourable effect on the market, although business elsewhere was restricted. Convertible issues were marked up in sympathy with the rise in industrial shares on the stock market, but eased when the stock market faltered. Rails were generally dull. U.S. Government obligations eased in quiet dealings. Foreign bonds were slow. German nationals moved erratically, while a number of municipals scored good gains. Italians were mixed. Denmark 4½ percent of 1962 and Norway 4½ percent of 1965 eased. Greeks were unchanged.

U.S. Federal Reserve Return

The U.S. Federal Reserve return for the week ended 11th July shows that gold stocks rose by \$3 million to \$21,827 million. Foreign deposits rose

by \$35 million to \$326 million, while foreign investments fell to \$3,626 million. The Federal Reserve sold \$190 million worth of bills; it also sold a further \$22 million worth of bills under repurchase agreements. Total discounts and advances rose by \$83 million to \$653 million, while aggregate excess reserves of member banks fell by \$177 million to \$365 million. Daily average excess reserves of member banks rose by \$290 million to \$763 million, while daily average borrowings rose by \$236 million to \$879 million. Business loans of the New York City banks fell by \$154 million to \$10,072 million compared with a rise of \$10 million to \$7,969 million in the corresponding week a year ago.

Stock Market Prospects

The Investors' Chronicle market newsletter writes: "British industrial shares had an uninspiring rally and will probably drift until the labour situation clarifies. Kaffirs have paused to consolidate. Wall Street industrials have rallied strongly, but rails are affected by the steel strike while the firmness of utilities indicates a defensive mentality. It is difficult to see any early stimulus for British securities. Sterling's disappointing display and the general tone militate against any real strength in gilts. Industrials are clouded by the labour situation and the international economic prospect. Many observers think a climax on the labour front is nearing and may overshadow the market for some time. At present the most promising candidate for investment interest may be Kaffirs."

Quicksilver Uncertain

The London price of quicksilver is now indicated at £34½ to £35 a flask, against £35 previously. The undertone of the market is uncertain, according to some trade quarters, who add that the Board of Trade's intention to sell 1,000 flasks will almost certainly depress prices. In this connection, it is believed that all the Board's metal involved was bought some years ago at prices lower than at present. A possibility exists of the Board accepting some discount from the present market price to dispose of the metal quickly.

U.K. Purchase of Quicksilver

The Board of Trade is inviting tenders for the purchase of 1,000 flasks of quicksilver, presumably for its strategic holdings, according to trade sources. It is understood that applications have to be in by the end of this month. The London ex-warehouse price eased further and now stands at £85 a flask against £85½ to £86 a flask previously. Some quarters suggest that the Board of Trade is in part responsible for the latest price-cut, in that it has come at a time when the market was generally very unresponsive to additional supplies.

Hongkong Gold Fluctuates Widely

Hongkong gold prices fluctuated widely with traders closely watching sterling abroad. Activity increased with some sources attributing this to idle capital from abroad being used for speculation. The opening period was easier, receding to \$(H)257½. Later, the market turned steady with rates climbing to \$(H)263 when the week-end profit-taking forced values down to \$(H)260½. There was a slight improvement to \$(H)261½ by the close. Bullion traders thought that the market was likely to remain steady for some time, as the general view in the market circles here is that sterling is very likely to deteriorate more. Carry-over charges dropped to 16 cents in sellers' favour. The official offtake was 3,190 ounces and unofficial 15,000 ounces. Arrivals at Macao totalled 60,000 ounces which affected the market sentiment.

Recovery in Rubber

During the week ended 12th July, the market was frequently as thin as at any time recently, but the tendency of prices was upwards. Although the turnover was reported as small, there was not much pressure to sell. Some traders attributed the upturn largely to technical considerations, especially in regard to early shipments of No. 1 R.S.S. It was felt too that the Study Group's figures of consumption and production being better than expected helped to tip the scale, despite the bearish background of U.S. and U.K. car and tyre production cutbacks. At the close, values were from 1 to 1d a lb higher on the week. Scarcity of offers of sole crepe and a fair demand kept prices very steady on the basis of 40d a lb for 4th inch smooth No. 1 on the spot.

Disposal of U.K. Stockpile Shellac

The London Shellac Trade Association reports that agents have now been appointed by the U.K. Board of Trade to dispose of the Government's stockpile of shellac. The total quantity is officially announced as being 1,000 tons. The agents expect to be able to start negotiations during the coming week. Sales will only be made through normal trade channels, and it is emphasised that it is the Government's intention to market these stocks in an orderly manner. It is prepared to spread the sales over 12 months or more, if necessary.

Liverpool Cotton Market

The members of the Liverpool Cotton Association recently approved the new American-type cotton futures contract. Dealings commenced on 16th July. Cotton from the United States, Mexico, East Africa, Nigeria and Syria are tenderable against this contract. The new contract has been designed to reflect the world value of American and American-type contract cotton, and it is hoped, will provide a hedge medium not only for those growers of cotton which are tenderable, but also for all related growths.

Bombay

A NEGATIVE DEFENCE OF AMBAR CHARKHA

SENTIMENT VERSUS RATIONALITY
(FROM OUR BOMBAY CORRESPONDENT)

AT a recent meeting of the All-India Khadi and Village Industries Board, held in Ahmedabad, Mr. V. L. Mehta, chairman, negatively defended the Ambar Charkha programme envisaged under the second five year plan. Mr. Mehta challenged the oft-repeated criticism that the Ambar Charkha was an uneconomic proposition which would not survive once State subsidies were withdrawn. In stating his case, he attacked the organised large-scale mill industry and enumerated the various benefits and advantages conferred on the industry from time to time by the State and the consumer. Mr. Mehta estimated that the country had spent Rs. 1,176 crores over a period of 21 years in subsidising textile mills. This represents an average burden of Rs. 56 crores a year in real terms. He compared this figure with the relatively modest sum of Rs. 20 crores required by the Ambar Charkha programme and argued that on this basis alone, it would seem to be an attractive proposition. In addition, Mr. Mehta referred to the indirect forms of protection extended to the mill industry, namely, the beneficial effects of the Swadeshi movement in the pre-Independence years; the stimulus provided by the two world wars and the advantages of price control measures to sub-marginal units during the second world war. As an added justification, Mr. Mehta said that there was no large-scale industry in India which had not depended on protection and national subsidies at some stage of its development. He strongly urged the extension of this principle to the Ambar Charkha industry.

The secondary forms of protection mentioned by Mr. Mehta have now ceased to exist and they need not therefore enter into the discussion. The fact remains that the mill industry has reached a certain stage of development and has come to play a vital role in the national economy. The issue now is whether the mill industry is to follow its logical course of development in circumstances of increased demand or whether it must fall into stagnation and leave it to the small-scale industry to bridge the widening gap between production and consumption. Admittedly, most large-scale industries have received protection which is a perfectly legitimate method of development. It is, however, a means to an end and a necessary condition of protection is that the industry will function on an economic basis in due course. The fact that the mill industry still needs assistance indicates that it needs a radical overhaul and does not in itself negative the principle of protection. The indications are that if an adequate measure of rationalisation is introduced and the industry rehabilitated, it will once again be competitive and make its full contribution in terms of economic output and foreign exchange earnings.

Expenditure on Ambar Charkha

The problem of the Ambar Charkha and the hand or small-scale power looms is a different matter altogether. There is first of all the question of initial investment. An initial outlay of over Rs. 3 crores is envisaged in the immediate future in terms of grants, loans and expenditure on the manufacture of 75,000 Ambar Charkha sets. The complete programme lays down the manufacture of 125 million sets to produce 75 million pound of yarn for an output of 300 million yards of cloth by the small-scale industry. It is estimated that the total investment would amount to Rs. 19.8 crores and the net value added each year would be a little over Rs. 3 crores. The significant point is that approximately Rs. 9 crores would be withdrawn from the national surplus available for investment in order to meet the subsidy bill at the rate of Rs. 1-4 a lb. of yarn. On the other hand, if the same quantity of yarn were to be produced by the mills, the total investment would not exceed Rs. 6 crores for an equivalent quantum of added value in terms of money. It follows, therefore, that the immediate wastage involved would consist of about Rs. 24 crores in excess investment and about Rs. 9 crores in terms of subsidies. This does not take into account the loss of the investible surplus which might have been created by the rational investment of this capital. There is the added burden of the investment on powerlooms and the expenditure involved in training workers. The actual outlay in implementing the overall small-scale textile programme runs to a very considerable figure.

This investment would be justified if it were to lead to the economic production of cloth, but no such claim is made. It is conceded that the consumer would have to pay more for the cloth produced by the cottage industry. Further, it is frankly admitted that the sole object of this programme is to provide employment within the quickest possible time for large numbers of unemployed and under-employed workers. But such a method of employment is an extremely dangerous one, because it does not result in the creation of a surplus which would be available for further investment, neither does it afford the worker an opportunity of increased wages on the industrial level linked with the cost of living. On the contrary, it perpetuates a level of subsistence earnings and siphons off the investible surplus created by other industries. Logically, this means that less and less

capital will be available for future investment resulting in fewer employment opportunities. The Ambar Charkha programmes could defeat its own purpose and could lead to repercussions over a field wider than the textile industry.

Mr. Mehta's Arguments

Mr. Mehta also referred to the large amounts of money spent on the cultivation of long-staple cotton through the Indian Central Cotton Committee and implied that such an expenditure would have been unnecessary but for the need to bolster up the mill industry. This is an extraordinary claim which denies the benefits that have accrued to cultivators in the form of increased earnings because of the higher prices of superior cotton and from the larger areas of land which have been brought under cultivation, in addition to the areas which would have remained under less remunerative crops. Equally astonishing is Mr. Mehta's claim that the export earning capacity of the mill industry which has averaged Rs. 43 crores a year over the period 1942-1955, cannot be considered a net contribution. Mr. Mehta contended that the handloom industry had a flourishing export trade before the mill industry came into existence, and the unfettered development of the handloom in-

dustry probably would have resulted in the growth of similar large-scale exports. It is difficult to follow the line of this argument. It is forgotten that the handloom product has a sentimental appeal for a people. In bulk markets, the price factor alone determines the volume of exports and it is impossible to conceive that the handloom product could compete in world markets with the mass-produced cheap goods offered by Japan and now by the Communist countries. Mr. Mehta's contention that the localisation of textile mills results in the growth of slums and the development of social, moral and other evils associated with urbanisation is hardly tenable. On this basis, the development of all large-scale industry which involves a concentration of labour is an evil. Moreover, it is within the competence of an elected Parliament of a welfare State to enact legislation which would make the existence of slums an impossibility. Basically, the choice lies between developing industry on a sound rational footing which would enable India to take her place among the technologically advanced nations of the world, and a steadily increasing prosperity at home, or a policy aiming at short-term results which must eventually result in a further fall in domestic living standards.

EFFECT OF OVERSEAS TRADE
FIGURES IN JUNECREDIT RESTRICTION PASSES
ITS PEAK

(FROM OUR LONDON CORRESPONDENT)

THE overseas trade returns for June serve to correct, as the Board of Trade warned us to expect, any undue optimism created by the unusually satisfactory achievement in May. Exports in June at £276.1 million are still being maintained at a high level (though this figure stands second to May's all-time record of £283.8 million). Unfortunately, so far as the credit squeeze's effect on imports is concerned, it would appear its maximum restrictive effort has passed or at least is passing, for imports in June rose by £11 million over their value in May to total £340.3 million—the second highest monthly total this year and the fourth highest on record. As a result, over the month the trade "gap" against us has widened by as much as £20 million to £52 million. Another sobering aspect of the June figures is that exports to North America, which touched a record total of £47 million in May, dropped by £9.5 million in the succeeding month to £37.6 million, which included £2.5 million of silver bullion returned to America—what is known as an "unrequited export."

Taking the first half of 1956 with the same period of 1955, the picture is not too disappointing, for exports are 14 percent up in value whereas imports are only 4 percent higher. As a result of this, the adverse trade "gap" averages £51.7 million a month this year against last year's figures of £76 million, but one must not forget that the returns for May and June in 1955 were not "true" figures because of the rail and dock strikes, which had a particularly adverse effect on imports. We must take satisfaction in the fact that we have done better and that the crisis, which was threatening earlier has at least been staved off for the

time being. On the other hand, we are still far short of what may be regarded as a safe balance for the economic health of the country.

Bank Advances

Nor do the latest bank returns, with the figures for the Midland Bank still to come, suggest that credit restriction is working quite as effectively now as it did earlier after the Chancellor's repeated requests for advances to be cut. During the six weeks from 16th May to 30th June, in fact, the clearing banks' advances rose quite substantially. Following the £13 million increase to £380 million disclosed by Barclays, the Westminster Bank's loans are now shown to have risen by £10.5 million to £207.1 million. Advances of the National Provincial are up by £11.1 million to £278.5 million. For these three members of the "Big Five" there was thus a re-expansion of nearly £35 million. At first sight this may suggest some relaxation of the credit squeeze, but in all probability it represents no more than the resumption of borrowing by the nationalised industries and the expanding needs of the export trade. The true picture is almost certainly that there has been no increase in the facilities afforded to personal borrowers, hire-purchase companies and for non-essential business purposes. The new financing arrangements for the nationalised industries will help to correct the apparent increase shown above once the Finance Bill, which completed its Committee stage this week without any alterations other than those accepted by the Government, is finally passed through its third reading and comes into force.

The uncertain factor in the situation is undoubtedly labour's response to our economic difficulties. Apart from unanimity on the fact that there can be no wage restraint while living costs rise and the economy goes uncontrolled, the T.U.C. chiefs are apparently in two minds as to what they should suggest as a solution for the Brighton Congress to endorse in September. By contrast, it is understood that the Federation of British Industries is prepared to urge manufacturing firms to do everything in their power to hold costs and that a major policy statement is

now under preparation. The Government's further plans for the three-sided approach to this vexed question will no doubt await developments.

Cotton Futures Contracts

The Liverpool Cotton Association is distributing copies of a booklet containing details of its new American-type futures contract and explanations of how and why it differs from the contracts used hitherto. The new contract represents a determined attempt to find a basis for trading in futures which is adapted to current conditions as regards both the circumstances of world trade in raw cotton and the course of cotton consumption in this country. On the first point it has been necessary to take into account the interference with free price mechanisms by Government action—support prices, export taxes, subsidies and quotas, and exchange restrictions—in the cotton-growing countries. On the second the reduction in the total volume of cotton imported into the United Kingdom, and the wider variety of the growths and qualities used, have called for changes. Both have necessitated the introduction of greater complexity into futures contracts, and the experiment will be watched with great interest in cotton markets. Trading in the new contract will start on 16th July.

More Aid Cotton for Pakistan

The Governments of the United Kingdom and Pakistan have agreed on arrangements supplementary to the United Kingdom-Pakistan agreement of 19th April, 1955. Under that agreement \$5 million worth of cotton textiles were supplied by the United Kingdom to Pakistan with payment in the form of raw cotton to an equivalent value made available by the United States Government as part of its programme of aid to Pakistan. Under the supplementary arrangements further quantities of cotton yarn up to a maximum value of approximately \$1 million may be supplied by the United Kingdom to Pakistan with payment as before in United States raw cotton. This is to be regarded, the Board of Trade states, as an emergency operation in which the United Kingdom has agreed to try to take up certain balances of the original aid programme which were not fulfilled by other textile suppliers, and it is important that exporters should be clear on the very tight time limits which the circumstances impose. Both the yarn and the raw cotton must be shipped not later than 30th September. The business will be conducted on lines broadly similar to those under the original agreement.

The start of the scheme must await completion of the placing of contracts for the remainder of the raw cotton which has still to be imported to balance the \$5 million worth of textiles exported under the original agreement. Contracts for this cotton are now being placed at a fairly rapid rate, but there can be no certainty about how soon the outstanding balance will be fully taken up so that new business may begin.

Dumping Charge Against Pakistan

While Lancashire worries on the score of the duty-free imports of cheap Indian and Hongkong cotton textiles, Sheffield has discovered a threat to its cutlery industry from what are described as "dumping" tactics of certain Pakistani interests. The question was ventilated in a speech by the secretary of the National Cutlery Union, Alderman H. Slack, at Sheffield this week. He said that there had been "a definite fall in business" in the city, and forty people had been laid off work, as a result of what he described as "dumping" of finished goods in this country from Pakistan. Alderman Slack produced a pair of nail scissors and a pair of cuticle scissors stamped "Empire forged steel." These scissors, he said, are made of Sheffield steel with a good carbon content and are comparable in quality with Sheffield-made scissors, but cost only a seventh of the price of Sheffield scissors. The worker in Pakistan, he added, was paid approximately 2s. 6d. a day of eleven hours, and a great part of the work was done by home workers. A million pairs of these scissors had been imported into this country this year, and that, together with the fact that the scissors were sold at such a low wholesale price, made one think that dumping of surplus production must be taking place.

Brevities

The *Ponnya* and *Padashin*, both 200 tons, which will operate on the Irrawaddy river, are being towed from the Clyde to Rangoon by the tug *Maritima*, 392 tons.

A new Royal Charter has been conferred on the Chartered Bank of India, Australia and China, enlarging certain powers and privileges that have been enjoyed since 1853. Among the changes effected is the abolition of stockholders' reserve liability. It tidies up some other anomalies as well, such as establishing branches or agencies all over the world, a change of name if considered expedient and wider powers of extending its business activities etc.

Holland has established an extensive "transferable guilders zone" with effect from 10th July, it is reported from The Hague. Transfers of guilder balances from payments agreements and held with banks in Holland will now be permitted between all European Payments Union countries except Turkey and to a number of non-E.P.U. countries with whom there is no monetary agreement.

The Burmese Government has withdrawn its proposals for joint operation of the mines owned by Consolidated Tin of Burma. The directors are now considering widening the scope of operations.

Uttar Pradesh

RATIONALISATION OF U.P.
TEXTILE MILLSGRADUAL PROCESS RECOMMENDED
BY ENQUIRY COMMITTEE

(FROM OUR LUCKNOW CORRESPONDENT)

THE Rationalisation Committee for the textile mills in Kanpur, presided over by Mr. Justice Bind Basni Prasad, is expected to submit its final report to the Government by the end of August. Meanwhile, the chairman has circulated among the members a draft of interim recommendations. The Committee, it may be recalled, was appointed after the 84-day strike in Kanpur last year on the rationalisation issue. The tentative report begins with an analysis of the circumstances which had led to the strike and concludes with the unanimous decision of the members, and mandatory views of the chairman on points on which unanimity could not be reached.

The Committee has recommended that rationalisation should be gradual and introduced in three stages. The first to be retrenched would be the substitutes working in permanent vacancies. Their number is estimated at about 1,500 in Kanpur. Voluntary retirement on payment of a gratuity of about Rs. 1,000 has been suggested as the second method of getting machines vacated for the purpose of rationalisation. Super-annuation and natural wastage would account for the rest. There are some 25,000 textile workers in Kanpur, and if the Committee's proposals are implemented about 8,000 will be retrenched. The gradualness and easy stages by which rationalisation is to be introduced should, in the Committee's opinion, minimise any hardship that may be caused.

There is unanimity among the members that the rationalisation of such machines should be permitted as have been approved by a proper authority, the authority suggested being an Industrial Committee consisting of the representatives of employers and labour, besides efficiency experts. On the question of workload increase, there is a difference of opinion between employers and labour. Mr. Justice Bind Basni Prasad has recommended that a weaver should work on four looms and the spinners on 500 or more spindles. The average number of spindles on which the spinners worked before were 250, though in some mills, it was up to 350. The operations calculated per hour for both the categories are 96. The employers, however, are insisting on a minimum of 120 operations an hour, while labour does not wish to go beyond 80. Labour is said to be fortified in its demand by an agreement, reported to have been reached between the millowners and the I.N.T.U.C. in Bombay, for only 84 operations. The dispute is whether a worker can perform three operations a minute or three and a half. In the chairman's opinion, with technical improvements it should not be difficult to have 96 operations an hour. His basis of calculation is that a worker should get 12 percent of time as leisure, 44 percent for patrolling and supervision and the remaining 44 percent for operations.

Controversial Point

Perhaps the most controversial point in the report is the proportion which the increased emoluments to labour should bear to the increased workload. The draft report has suggested that wage rates should be so adjusted that a worker is able to earn between Rs. 115 and Rs. 125 a month. At present, workers employed on a rationalised basis earn between Rs. 105 and Rs. 110. The employers are of the view that this is fair enough, especially when compared with the Rs. 90 which workers are earning on the old basis. Labour, on the other hand, has pitched its claim very high and demands the same wage level as obtains in Bombay and Ahmedabad for workers employed on a rationalised basis, namely, Rs. 140. This claim, however, is slightly weakened by the contention of representatives of the Bombay and Ahmedabad labour that difference in working conditions being what they are it is impossible to expect the same workload in Kanpur as in Bombay. The representatives of Kanpur labour argue that when with the most favourable conditions, it has been found possible to fix wages in Bombay and Ahmedabad on the basis of 84 operations an hour, there is no reason why a higher figure of operations should be insisted upon in Kanpur.

Irrespective of the merits of the Committee's recommendations, the professional jealousies of the rival trade union organisations in Kanpur may stand in the way of a smooth introduction of rationalisation. According to one section, the scheme can be implemented successfully only if one union gets sole representation on the mill and industrial committees. The Suti Mill Mazdoor Sabha holds that the union which gets more than 75 percent of the votes in Kanpur from workers should have the exclusive right of representation. The Sabha is confident that it can get this required percentage of support. In Bombay, it is said, the I.N.T.U.C. was given the right of exclusive representation on the basis of 15 percent votes only. The Sabha is opposed to representation for both the unions on the ground that there are bound to be disputes between them and that millowners may take advantage of the situation.

Spokesmen of the Sabha have already started complaining that the Committee's terms of reference should not have been as limited as they are. For instance, rationalisation in management is ex-

cluded from the purview of the enquiry. Also only seven out of the ten textile mills are covered by the enquiry. The draft report is confined to three out of seven categories of workers, and the Committee would continue its work on the rationalisation of other categories, only if the Government asks it to do so. The categories covered by the report are spinners, weavers and doffers in spinning. They comprise nearly 60 percent of Kanpur's textile workers.

It is understood that among the technical improvements recommended by the draft report, are the fixing up of pneumophil in spinning and warp-stop motion in weaving. The cost of this innovation being tried, it is believed for the first time in this country, is expected to be about Rs. 1 crore. Employers represented in the Committee have suggested that this sum should be given to the mills by the Government as subsidy or loan, as the mills themselves are not in a position to install the machinery themselves. The technical improvements demanded by the representatives of labour number about a dozen. It is stated that if the Committee's recommendations are given a fair trial, it should reduce the period for completing rationalisation to three years from five.

Industrial Estates

Plans have been finalised for the setting up of two industrial estates in Kanpur and Agra at a cost of Rs. 50 lakhs each. The Kanpur estates will be situated in the factory area on the Kalpi road and cover 37.7 acres. In Agra, it will be established

near the village of Naunahi, across the Jumna, on an area of 50 acres. These two estates will have 120 to 150 units of small-scale industries. Some 60 percent of the units will be small, 20 percent medium and 20 percent big. For items like heat treatment and electric furnaces, which small units cannot afford to have on their own, common workshops will be set up by the Government. A Government-appointed manager, having the status of a P.W.D. Executive Engineer, will look after each estate. To give technical advice and assistance, the Small-scale Industries Service Institute for Northern India which has its headquarters in Delhi will establish branches in Agra and Allahabad.

Women and Children Workers

The number of women, children and adolescents employed in factories in U.P. has been steadily falling since 1940. The percentage of women employed in factories has come down from 2.4 to 1.4. There were 27 children employed in 1954 against 886 in 1940. The number of adolescents came down from 1,170 to 496 and of women from 4,276 to 2,838. The number of factories employing more than 10 persons went up from 1,480 in 1952 to 1,572 in 1954, but the number of employees came down from 206,832 to 205,294. More than 2 million man-days were lost in 1955 due to lock-outs and strikes. There were 95 strikes and lock-outs involving 6,906 men and resulting in a loss of 2,059,436 man-days. The peak figure of factory employment in the State was achieved in 1944 when 278,238 persons were employed. During the 12 years since then, the number has decreased by about 70,000.

Oil from abroad costs valuable foreign exchange. Oil from inside India saves it. And we must have ever-increasing quantities to cope with the expansion of industry and agriculture.

Scientists and engineers are keeping Assam's oil industry working at full pressure to produce as much oil as possible from our own oilfields. Additional wells are constantly being drilled, yet even in an established area they are not always productive; in spite of modern knowledge and equipment, successful drilling still remains something of a gamble.

But no effort is spared to find oil and turn it into the fuel, lubricants and by-products which are so vital to the progress and prosperity of India.

does it all

FORUM OF FREE ENTERPRISE

A MANIFESTO

WE BELIEVE that democracy is an essential element in the Indian way of life. Free Enterprise is an integral part of it and as such it should be permitted to play its legitimate role in our national life.

WE BELIEVE that today the case for Free Enterprise is going by default. In recent years it has been the target of sustained and unjustified attacks. The contribution which it has made to national progress has not been given the recognition that is due to it. There is urgent need to educate public opinion on the fundamentals of Free Enterprise and on the contribution which it can make to national welfare. That is why this Forum has come into being.

WE BELIEVE that the beginning of intelligent living is the beginning of Free Enterprise. It is not something new: it is as old as man. The man who first discovered fire was a Free Enterpriser as also the man who invented the locomotive. Today, the man who builds up industries is a Free Enterpriser; so also is the small trader. The shopkeeper and the merchant, the farmer and the artisan, the salesman and the company director—all these are Free Enterprisers.

WE BELIEVE that it is the legitimate expectation of reward for honest, productive effort which motivates Free Enterprise. This expectation of reward for endeavour is inherent in human nature. The desire to earn a fair wage or to make a legitimate profit is necessary and healthy, and is in sharp distinction to profiteering which is anti-social and evil.

WE BELIEVE that Free Enterprise is a natural phenomenon and has been responsible for the progress of mankind. In our own country, the development of the steel, textile, sugar and cement industries as well as those of shipping, banking and insurance, despite the handicaps under which they have laboured, stand as testimony to the qualities of Free Enterprise. The fact that Free Enterprise has the capacity to fulfil its responsibilities is proved by its record in the first Five-Year Plan during which a number of industries exceeded the targets allotted to them.

WE BELIEVE that Free Enterprise must and can operate only within the framework of values and principles of a democratic society. Within this framework it moves as a well-balanced wheel satisfying the needs of the consumer, worker and investor. Under this system, only those goods and services can be produced which the consumer is prepared to accept. Free Enterprise has, therefore, to be competitive and to carry on constant research to win a widening circle of consumers by providing better and cheaper goods and services. As with the consumers, so also with the workers. They have the freedom to choose alternative employment; they have the right to

demand higher wages; and they have the right to deny their labour. The investors, having risked their savings to start and develop industries, have the right to ensure that these industries are efficiently run and so earn for them a fair return. Free Enterprise is thus economic democracy in action. Unless it is allowed to play its part, the entire fabric of democratic society would be in jeopardy.

WE BELIEVE that in the circumstances prevailing in our country today, there is ample room for State enterprise to function alongside of Free Enterprise in the service of the people. Monopoly of any kind, whether State or private, is undesirable. Should any single organisation arrogate to itself the right to do everything, it would upset the delicate mechanism of a free and democratic social order. Under monopoly conditions, the consumer would be forced to buy only that which is offered to him; the worker would find himself gradually deprived of his right to choose his job, to demand higher wages, and to deny his labour; the investor and the entrepreneur would be denied the opportunity to promote the development of industries of their choice.

WE BELIEVE that despite our basic democratic character, there have of late been many dangerous trends. The latest example is the displacement of normal trade channels by the intrusion of State trading. This process can result in depriving the country's individual traders, large and small, of their livelihood, concentrating at the same time a dangerous amount of power and patronage in a few hands. We have to guard against such tendencies if our traditional way of life is not to be destroyed.

WE BELIEVE that Free Enterprise must have clean hands. We realise that within its fold, as in that of every system, there are black sheep, and it will be our constant endeavour to develop and foster healthy traditions within Free Enterprise. We also accept, without reservation, our obligations towards the community as embodied in regulation by a democratic government.

WE BELIEVE that Free Enterprise is your enterprise and contributes to your prosperity. It is the lifebreath of a free society. It is not a creed; it is a way of life which all who cherish freedom must safeguard.

The Forum of Free Enterprise is a non-political and non-partisan organisation. The Forum will disseminate authoritative information to educate public opinion. It will bring to public notice the achievements of Free Enterprise in this country and the manner in which it can make its contribution to the economic development of India in order to raise the standard of living.

We invite all those who believe in the values of voluntary enterprise, whether they be in service, profession, agriculture, trade or industry, to join us in developing the activities of the Forum.

Jute

LOWER U. S. CONSUMPTION PULLS HESSIAN DOWN

RAW JUTE FAIRLY STEADY: MORE FAVOURABLE REPORTS ON NEW CROP

OVERSEAS buyers showed much less interest in the Calcutta jute goods markets during the past week, so the general effect was one of a gradual decline. Speculative activity enabled the near position to regain some lost ground, but even so July shipment B Twills and 10oz. hessian remained at a discount on all deliveries up to the end of the year. This was not the case with 9 porter hessian or cornsacks and Cubans, but similar ratios existed in all other fabrics. In the absence of business, price movements were limited, the two factors having the most effect being covering by local shippers against previous contracts, and reports of a fall in burlap consumption in the United States. These tended to cancel each other out, the former gave the market a temporarily bullish tendency, while the latter was bearish.

In spite of the fact that the gunny market was weak, the fibre markets tended to remain fairly steady. The volume of business was not on the same scale as in the previous week, but it affected the market to an equal degree because negotiations were finalised daily. The main interest through brokers was for New Crop jute for delivery mainly during July and/or August. Offers in this category were fairly plentiful, although there was usually an 8-anna difference in the prices quoted by sellers and buyers. A large percentage of the business was once again transacted in the Cossipore markets, where mills' representatives bid against each other for quick delivery jute. This resulted in a steady market despite the increase in imports, and prices paid were in many cases up to 8 annas a maund higher than those quoted in the Calcutta markets.

New Crop reports have been more favourable, except those from the Daissee growing areas. River levels in northern Bengal and Assam have stopped rising. Harvesting of the lowland crop has been almost completed in most districts, while in the midlands it is well in hand. In the Daissee areas, there has been excessive rain and a long period of sunshine is required to promote growth. The harvesting of the Daissee white crop is almost complete, and fairly large quantities are expected to be on the market by the end of the month. Initial reports on New Crop samples from all parts so far have been disappointing, although upcountry agencies have reported that current arrivals show a big improvement.

The final jute arrival figures for the season, July 1955-June 1956, have now been announced. They show that total arrivals, compared with last season, are up by 686,500 bales. This is because of an increase of 225,870 bales in arrivals from Pakistan and an increase of 460,630 bales in arrivals from India. Actual arrivals for the season are 1,467,184 bales from Pakistan and 4,888,505 bales from India, making a total of 6,355,689 bales. Although arrivals from Pakistan are much larger than last year, it is interesting to note that they are still about 15,000 bales short of those in 1953-54 and 362,000 bales short of the record 1951-52 figure. The current trend of trade between India and Pakistan is very obvious when we make a closer study of arrivals from Pakistan in the last three months of the season. In spite of the large increase in the season just completed, arrivals during April, May and June 1956 were 100,000 bales less than during the same three months of 1955, a period when total arrivals from Pakistan were the lowest since separate records were introduced. This indicates the difficulties that may lie ahead in the coming season if present restrictions on the export of jute to India instituted recently by the Pakistan Government are allowed to continue. The arrival figures from India are most encouraging, and at 4,888,500 bales are the highest ever. The grand total is satisfactory from the trade's point of view, and more or less covers the estimated consumption of the industry.

THE JUTE MARKETS

Manufactured Goods: Prices showed very little change at the opening of the jute goods market last Thursday, and in most sections were slightly lower. The ready B Twill position recorded an 8-anna rise under the influence of speculative activity and was quoted at Rs. 104-12 a 100 bags. The January-March position stood at Rs. 103-12, which was 4 annas less than on the previous day. Hessian showed a drop of 2 annas in all fabrics and deliveries; 40in. 10oz. ruled at Rs. 38-9 a 100 yards for July shipment and Rs. 38-8 for January-March for July shipment. Local shippers covering at the lower levels, especially in near delivery hessian, brought about a small upward tendency, so the previous day's losses were made up by Friday morning. Mills were very inactive at this stage and were not interested. So dull conditions prevailed and no price alterations were recorded. Over the week-end, the news of a drop in American burlap consumption had a bearish influence on jute goods, and hessians dropped to Rs. 38-7 for 40in. 10oz., while B Twills lost 8 annas to Rs. 103-12. But the undertone of the market was unchanged as the steady

fibre markets prevented prices from falling further. Later, heavy selling pressure by a prominent fatka operator brought about the largest price movement of the week in heavy goods. B Twills dropped 12 annas to open on Tuesday morning at Rs. 103 for both the near and forward positions.

Opening quotations on Wednesday morning were as follows:

	July	August	Sept.	Oct.-Dec.	Jan.-Mar.
	Rs.	Rs.	Rs.	Rs.	Rs.
40in. 8oz.	31-8	31-4	31-4	31	30-10
40in. 10oz.	38-7	38-10	38-10	38-9	38-6
B Twills	103-4	103-10	103-10	104	103-8
Heavy Cees					
(Plain)	102-8	103-12	103-12	104	103
A Twills	126	126-12	127-3	128	127-8
Liverpools	115-8	116-8	117	118	117-8
Cornsacks	105-8	107	105	105	104-8

Raw Jute: The raw jute markets were steady throughout the week. Calcutta mills showed almost daily interest, and although the total quantity purchased fell short of the previous week, the market showed the same reaction to the activity. Several mills appeared to be short of jute, as the demand for quick delivery continued, and high prices were paid for all types of fibre provided it could be in the mill within five or ten days. This state of affairs naturally caused sellers to be reserved and although they were keen for business, and increased the quantity of jute on offer, they were unwilling to accept any indications below the full market rate. The mills' main interest through brokers was for new crop jute, but only for shipment in the July-August period, as they held bearish sentiments for delivery towards the end of the year. Old Crop purchases were confined to the Cossipore market, where delivery rather than price was the criterion. Quotations throughout the week were based on Rs. 27-8 a maund basis Bottoms for Upper Assam New Crop jute for July-August shipment, and most of the transactions were put through on this basis.

New Crop business was mainly for Dhubri-Raha-Northern quality, and prices ranged from Rs. 27 to Rs. 28 a maund basis Bottoms for July-August shipment. Some of the contracts in this category carried a sellers' option for the delivery of Old and/or New Crop jute. Small business was put through for jungle jute and prices varied between Rs. 25 and Rs. 25-8 a maund for August-September shipment. Fair quantities of Daissee white jute were purchased at Rs. 27 to Rs. 28 a maund basis Bottoms for full August shipment. Old Crop Purnea jute was sold at Rs. 27-8 a maund for one month's shipment, and local Northern and Assam at Rs. 28 to Rs. 28-6 a maund for deliveries ranging from one to three weeks. In the pucca bale section, business was done in Mill Firsts and Lightnings at 150 and Rs. 175 a bale respectively for Old/New Crop, half July half 15th August shipment. There were no reports of any business in Pakistan jute.

At the close, the market was unchanged and opening quotations on Wednesday morning were as follows:

Indian Jute	Landed at Mills	Shipment.
(New Crop Kutch):	Rs. a md basis	
	Bottoms	
Lower Assam	27-8	July-Aug.
Northern	27-8	
Murshidabad (White)	26	Aug.-Sept.
Daissee White	27-8	July-Aug.
Old Crop:		
Local Northern	28-8	15 days.
Daissee	29	One month
Daissee Mesta	27	"
Bimil	27 for F.A.Q.	"

Tossa is quoted at 8 annas to Re. 1 a maund above the price of white jute.

Pucca Bales	Rs. a bale.	Shipment.
(New Crop):		
Mill Firsts 2/3	185	July-Aug.
Mill Lightnings 2/3	170	"
Mill Hearts 2/3	155	"
S. G. Daissee 2/3	175	Sept.-Oct.
L. G. Daissee 2/3	160	"
Pakistan Jute	Landed at Mills	Shipment.
(New Crop Kutch):	Rs. a md basis	
	Bottoms	
Jat	30-8	August-Sept.
District	30	"
Northern	29-8	"
Pucca:	Rs. a bale	Shipment.
Mill Firsts 2/3	200	Aug.-Sept.
Export Firsts 2/3	180	"
Export Lightnings 2/3	165	"
Jat Cuttings	120	"

There was a slight improvement in wagon arrivals in Cossipore during the past week. A total of 450 reached the sidings. All imports found ready buyers and high prices were paid for quick delivery jute. Mills' representatives were again busy, and although prices were lower than last week, the general undertone was steady. At the close, quotations were based on Rs. 28-4 a maund for garsat quality.

Mofussil: Imports into all upcountry agencies in India have again shown an improvement, and quality reports are more favourable than last week. The condition of all arrivals is very poor, and the heavy moisture content has put off many buyers. In spite of this, fair covering business has been transacted and prices, although lower than last week, have been maintained at a fairly high level. At the close, quotations in Dhubri were based on Rs. 24-4 a maund for Bottoms.

Raw Jute Consumption

The consumption of raw jute by mills reporting to the I.J.M.A. was 576,600 bales during June 1956—a 206-hour working month. This was 16,310 bales less than in May, when working hours amounted to 212. The total consumption for the season just completed July 1955 to June 1956, was therefore 6,380,250 bales. In June 1955, consumption was 499,650 bales, and the total for the 1954-55 season was 5,848,810 bales. Therefore, total consumption in the 1955-56 season was 531,440 bales more than in 1954-55.

THE FOREIGN JUTE MARKETS

BUSINESS DULL AGAIN

(FROM OUR DUNDEE CORRESPONDENT)

SELLERS of jute trade commodities are having considerable difficulty in effecting sales, and the industry is falling into a state of depression. On the Continent, spinners and manufacturers are very worried about the position, and are likely to be in Belgium unless matters improve. Of course, it must be remembered that Pakistan entered into the producing side of jute goods several years ago when there was an ever-increasing output to get rid of. This must be adversely affecting other centres. In addition, there is the keen competition from paper and other commodities, which can take the place of jute. Pakistan is able to dispose of all the raw jute available and, therefore, is in a position to dictate terms to the industry. It is useless, therefore, to expect any concession on the minimum prices for the fibre and the only manner in which values of goods could be cheaper to consumers is by producers concentrating on cheapening the costs of spinning and weaving. There is so little business being done in the fibre here that shippers are apparently becoming tired of offering. With no interest in Mill Firsts, the price continues unchanged at the minimum of £91, but Mill Lightnings are still £1 above the minimum at £92 for August-September and Mill Hearts are lowest at £78, against £71 minimum, same shipment, c.i.f. U.K. A month earlier shipment of Lightnings and Hearts is £1 more, but a month later is £1 less. Good Daissee-2/3 at £91 and grade at £91 is unchanged and grade Tossa-2/3 is still at £100 and fours at £90, September-October, c.i.f.

Quotations for Calcutta goods have fluctuated more than usually of late without getting very far away from 58s 6d for 40in. 10oz. and 44s 9d for 7oz. July and August, while B Twills are round about 159s to 161s for shipment to the end of the

I.J.M.A. PRODUCTION FIGURES FOR JUNE

The Indian Jute Mills Association reports the total production of jute goods during the month of June 1956 as follows:

Description	Quantity
1. Twist and Yarn	
(a) For Sale	1,996 tons
(b) All others including that used in sewing bags	1,328 tons
2. Canvas	239 tons

ANOTHER DEFICIT FOR INDIAN AIRLINES

CORPORATION TO ASK FOR HIGHER CHARGES

DURING the financial year 1954-55 the Indian Airlines Corporation incurred a loss of Rs. 90.15 lakhs, according to its second annual report recently submitted to the Government. This amount is inclusive of a provision of Rs. 40.63 lakhs for depreciation, which has not been funded. Thus, the cash loss sustained amounts to Rs. 49.52 lakhs. A comparison between the figures for the preceding year and the year under review can only be approximate as the former cover, following nationalisation, an operating period of eight months only. The average monthly revenue in 1954-55 was Rs. 57.70 lakhs against the corresponding average of Rs. 54.30 lakhs in 1953-54. Compared with this, the average monthly expenditure in 1954-55 was Rs. 65.22 lakhs and that in 1953-54 Rs. 64.22 lakhs. Thus, there was an increase of Rs. 1.00 lakh in the monthly expenditure. Financial results on the whole show an improvement over those of the year preceding.

The main causes of the deficit are loss of petrol rebate, new taxes imposed on petrol by State Governments and the sharp rise in the wage bill on account of the introduction of the revised conditions of service. The contribution of the Indian Airlines Corporation to public revenues during the year by way of excise and sales tax duties of petrol was Rs. 77.64 lakhs and Rs. 16.88 lakhs respectively. At the time of nationalisation the Corporation had taken over not only the assets and liabilities of the eight airlines but also their different systems of accounts, wide disparity in the wage structure and lack of uniformity in conditions of employment and labour management. The problem of integration and rationalisation thus became a "must" without which further progress was not possible. The line system of administration which had continued in the first year of the Corporation's working was reorganised and replaced by an integrated pattern with unified control over all branches of administration. In April, 1954, a headquarters organisation consisting of various departmental heads was established. The entire territory was divided into three administrative-cum-operational-cum-traffic zones. Except as regards the maintenance-side of engineering, the administrative and technical control as well as accounting and financing of engineering bases was made independent of regional administration and centralised within an engineering manager at headquarters.

The work of assessment of compensation payable to the Companies whose undertakings vested in the Corporation, was completed in 1954-55. The Companies were not satisfied with the offer made by the Corporation but a compromise was ultimately reached and, as a result, the compensation was increased by Rs. 16,52,934 to a figure of Rs. 31,84,303. With the exception of certain sums impounded by the Income Tax authorities, the entire compensation was paid out during the year.

Operations and Traffic

The scheduled services operated by the Corporation covered an unduplicated mileage of about 14,500 miles on 31st March, 1955, and the network of route mileage extended to over 22,670 miles. The route pattern inherited by the Corporation was revised with a view to eliminating wastage and meeting public convenience. This yielded slightly higher utilisation, especially in the case of Dakotas. A comparison of the data for the year under review with that for the year before, after averaging the results for a 12-month period shows that with fewer aircraft, more traffic was carried and that there was an all-round improvement under every head. The overall revenue load factor achieved was 60.7 percent, while the break-even load factor continued to be 82.00 percent, aircraft utilization during the year was:

Dakota	1,371 hrs.
Viking	1,510 "
Skymaster	1,010 "

Average 1,378 hours per annum

A division of costs under objective heads shows that the "salaries and allowances" account for 27.1 percent, fuel and oil for 39.5 percent, consumption of material and outside repairs for 8.7 percent depreciation 5.2 percent, insurance costs for 2.5 percent, interest 1.4 percent and sales, publicity and miscellaneous services for 15.6 percent.

During the following year, i.e. 1955-56, the operational results show even further improvement. The route pattern as well as the fare structure have been rationalised. A number of new routes have been opened up with Herons. Night air mail services are operated with Skymasters. There has been a distinct improvement in aircraft utilisation and better load factors have been achieved. The number of passengers carried, which numbers over 500,000, is the highest on record and there is an appreciable improvement in the carriage of freight. In the sphere of non-scheduled operations, the Nepal operations, were taken over completely by the Corporation.

Future Trends

The first year following nationalisation was one of exceptional difficulty as the Corporation was in the course of discovering problems which it had inherited. The Heron Services have not

yet acquired full momentum on account of shortage of crew. The Skymaster services at night have proved popular and continue to attract traffic. There is an all-round improvement in the load factors achieved, and the earnings during the course of 1955-56 are expected to be the highest on record. The expenditure has, however, risen proportionately, largely on account of the increase in the wage bill and in the maintenance of new aircraft, but a large part of it is expected to be covered by the increased earnings. It is, however, not likely that the gap between the expenditure and revenue will be appreciably narrowed during the coming years.

The Corporation is in a phase of expansion and five Viscounts, which are on order, will be received sometime in late 1957 for operation on the main trunk routes. More new routes will be opened up with Herons and alternative uses found for the Skymasters. It will inevitably take time to sell the additional capacity built up and till then the operating costs are bound to be high. Nevertheless, if the present trend in traffic is maintained and the costs of operation brought down as a result of certain contemplated economies the prospects for the future appear to be reasonably reassuring. It is noteworthy, however, that the higher operation costs are not yet reflected in rates and fares and this will have to be taken into account at some stage. At present, the Air Transport Advisory Council is engaged in examining the problem and will shortly be making its recommendations to the Government.

TRANSPORT PROBLEMS OF SECOND PLAN

NEW OFFICIAL COMMITTEE FOR CO-ORDINATION

THE Union Deputy Minister for Transport, Mr. O. V. Alagesan, inaugurating the reconstituted Standing Committee of the Central Board of Transport, stressed the imperative need for planning and co-ordinating the transport system to cope with the huge imports of machinery and capital goods, iron and steel and cement, locomotives and wagons, for the development projects in the second five year plan. The problems of transport include the timely availability of shipping space, the gearing of the capacity of the ports to receive the imports and the co-ordination of rail-road and other means of internal transport for the despatch of the goods to the projects and centres where they are needed.

On a suggestion from the chairman, Mr. N. M. Ayyar, Secretary, Union Transport Ministry, the Committee decided that, initially, the question of phasing and staggering imports, so as to avoid pressure on available shipping space and the bunching of ships at ports, might be studied. For this purpose, the Committee agreed, all necessary data should be collected immediately. The problem arises principally for the proposed heavy imports from the western European countries and the United Kingdom. The committee felt that there was the necessity to keep the ports informed in advance of the cargoes expected. Similarly, the railways had to be informed of the types and quantities of cargo they would be called upon to handle so that they could plan, in advance, the numbers and types of wagons required. The Committee decided to meet the representatives of the shipping interests on 30th July, 1956 so as to have discussions with them on the basis of which detailed plans could be formulated.

High-powered Committee

The new Standing Committee of the Central Board of Transport, which has since met, has been set up as a high-powered committee with enlarged membership to study the various problems of co-ordination and to ensure long-term planning on the steps to be taken to cope with the additional strain on the transport system. Mr. N. M. Ayyar, Union Transport Secretary, is the chairman. The new Committee also has representatives at the Secretary/Joint Secretary level of the Ministries of Railways, Production, Commerce and Industry, Food and Agriculture, Defence, Works, Housing and Supply, Iron and Steel, Finance and the Planning Commission. The Committee, which is expected to meet every month, has the power to co-opt other members when considered necessary. It may, if necessary, invite chairmen of the major Port Trusts and the Special Officer of the Railway Board, recently appointed in Calcutta, to co-ordinate the movement of steel, cement and machinery, to attend its meetings. The Standing Committee of the Central Board of Transport has been reconstituted according to the announcement made by Mr. Lal Bahadur Shastri, Union Minister for Transport and Railways, in the Lok Sabha on 23rd March this year.

FINANCIAL RESULTS OF PAN AMERICAN

Pan American World Airways reported recently a new profit of \$2,221,000 for the first quarter of 1956 as compared with a net profit of \$621,000 for the first quarter of 1955. The profit per share was 36 cents as compared with 10 cents in the previous year. Gross operating revenues were \$59,571,000, an increase of 22.7 percent over 1955. Operating expenses rose 19.5 percent over the same period of last year. In the first quarter of the year, the Company incurred a net operating loss of \$772,000. This compares with a net operating loss of \$1,941,000 in 1955, an improvement of \$1,169,000. Net non-operating income was \$4,056,000 for the first quarter as compared with \$3,305,000 for that of 1955.

CALCUTTA TEA AUCTIONS DURING JUNE

MARKED PREFERENCE FOR QUALITY TEAS

THE final Sale of the 1955-56 Season's Export crop consisting of 5,300 packages was held on 4th June. There was little demand from the main export buyers for the very few better teas on offer, but internal buyers competed keenly for the poorer kinds which sold at irregular rates and often considerably below valuations. Nearly all lots offered were, however, disposed of, say Messrs. Carrith Moran & Co. Private Ltd., in their monthly tea market review. Sale No. 1 consisting of 24,759 packages of New Season's teas from all districts was held on 11th June. There was a good demand for the few Doars teas showing useful first flush quality, but later invoices showed a marked decline and for these and also for the bulk of the offerings from Cachar and Assam which carried plain liquors, buyers showed little interest and withdrawals were heavy. Stylish leaf grades and flavoury Darjeelings were fairly well supported. In Sale No. 2, flavoury Darjeelings, bright liquoring Doars and any Assams showing an improvement in quality met with a good demand, but plain and medium broken and whole leaf grades, except for the most stylish kinds, met with a limited demand and were 1 to 2 annas lower. In Sale No. 3, there was a very strong and general demand for the comparatively few best liquoring C.T.C. teas on offer and these were selling at prices up to Re. 1 or more over valuations. Good liquoring medium Assams were also a strong feature and these sold well at dearer rates, but plain and low medium teas were again a weak feature and were 1 to 2 annas lower. A few lines of tippy teas in Sale Nos. 2 and 3 realised high prices.

Darjeeling leaf appearance was of a high standard and a number of attractive tippy grades were on offer. Due to adverse climatic conditions, cup quality was disappointing and only a limited number of invoices had really attractive flavour. Assam offerings were very small and consisted for the most part of very ordinary first flush teas, although a few brighter liquoring C.T.C. invoices were included in Sale No. 3. Doars leaf appearance has been rather below average, and the lower grades contained too much stalk and fibre. The first two sales contained a number of useful bright liquoring invoices, but cup quality showed a marked decline in Sale No. 3. The small quantity on offer from Cachar was of a satisfactory standard, particularly as regards leaf appearance which was generally black and free from stalk.

Quotations	1956-57	1955-56

Sale No. 1 Plain B.P.	not quoted	1 14 0
Sale No. 2 " "	1 9 0	1 14 6
Sale No. 3 " "	1 7 6	2 0 0

Internal Market

Leaf offerings for the four sales held in June amounted to only 1,525 packages. Selection was poor and catalogues consisted mainly of stalky and fibrous residue grades. The sales met with a fair enquiry at rather irregular rates. Dust offerings amounted to 84,579 chests. Selection was generally rather limited and although appearance was usually well maintained, cup quality showed a noticeable decline. The first sale in June met with a fair demand at generally easier rates apart from Black Leaf Exportable types which were keenly competed for at dearer rates throughout the month. Demand improved in later sales however, and prices ruled fairly firm to dearer, the poorer residue types often being an irregular 2 annas dearer. In the last sale of the month, there was again a good general demand at prices which were about steady apart from poor liquoring kinds which were 1 to 2 annas easier and fibrous residue grades which were irregularly easier.

Quotations	1956	1955
	Rs.As.P.	Rs.As.P.
Sale No. 50 Clean Common Dust	1 5 0	not quoted
Sale No. 1 " " "	1 5 3	1 11 9
Sale No. 2 " " "	1 6 3	1 14 6
Sale No. 3 " " "	1 5 6	1 14 6

Export sales up to and including No. 3 totalled 52,006 chests at an average price of Rs. 2-4-11 compared with 71,639 chests at an average price of Rs. 2-2-3 a year ago. Internal sales at 309 chests of Leaf and 1,831 chests of Dust (Rs. 1-5-0 and Rs. 2-0-0) go against 2,519, chests of Leaf and 10,305 chests of Dust (Rs. 1-9-5 and Rs. 1-15-9) in the corresponding period of last year.

The price of Special Export Licence showed a steady decline throughout the month from 7 pies a lb. to 1 pie a lb. In the last four days of the month it rose, however, to 5 pies a lb. The validity of Special Licences expired on 30th June. Non-transferable Shipping Licence changed hands at between 1 and 4 pies a lb., the rise also occurring in the last days of the month. At the beginning of the month, the market opened for New Season's Quota at 36 pies a lb., declining gradually to 30 pies a lb. Prices rose slightly, however, towards the end of the month, and some business was transacted at 33 pies a lb., at the close.

The estimated North India crop to the end of May 1956 was 53,980,269 lb., as compared with 51,800,089 lb. to the same date of last year. The average figure at this date for the three years 1953-1955 was 52,854,812 lb.

The Government of India has issued a notification fixing the price of tea for the purpose of de-

termining the export duty at Rs. 2-13-11 a lb. as against Rs. 3-5-0 a lb. in force from 1st June, 1956. The export duty, therefore, remains unchanged at 6 annas a lb.

Arrivals (in chests) in Calcutta warehouses during the period 24th May to 23rd June, 1956, with the corresponding figures of the previous year in parentheses, were as follows: by rail 43,906 (29,910), by steamer 90,395 (128,131) and by air 7,851 (12,552), making a total of 142,152 (169,623) chests. Since the beginning of the season, 1st April, 1956 to 23rd June, 1956, arrivals have been: by steamer 118,863 (155,324), by rail 76,532 (59,682) and by air 18,225 (26,998), making a total of 213,620 (242,004) chests.

INCREASED INTERNAL CONSUMPTION OF TEA

The consumption of tea in India increased from 175 million lbs. in 1952-53 to 183 million lbs. in 1954-55. This was stated recently in a written reply to a question in the Lok Sabha by the Minister for Commerce and Industry, Mr. T. T. Krishnamachari. The area under tea cultivation increased from 787,378 acres in 1952-53 to 789,471 acres in 1954-55.

COCHIN TEA SALES

At Sale No. 20, 1,300,000 lbs. of tea were on offer. There was a useful demand, but the commonest kinds were easier. Low and low medium Broken were firm and best liquorings were dearer. A very strong enquiry was evident for all Fannings grades which advanced. Whole Leafs were strong for which there was a demand at better prices.

LONDON TEA SALES

AT last week's London tea sales, the 48,556 packages on offer realised an average price of 3s 9.53d a lb., against 3s 10.68d in the previous sale and 3s 10.42d a year ago. Plain broken pekoe was quoted at 2s 10½d a lb., in the previous sale, same. Prices obtained by some of the companies are given below:

	No. of packages	Average a lb.
Amalgamated	228	4/6½
Badulipar	668	3/11½
Consolidated Estates	348	4/10
Darjeeling	475	4/0½

United Planters	546	5/2

TEA CONSUMER SURVEY IN BRITAIN

Is consumer resistance to tea on the increase? The thought is inspired by the remark that "a dangerous growth in what might be called the 'anti-one-for-the-pot' mentality" is reported in the Tea Bureau's survey of the findings of its recent consumer survey among British housewives. The percentage of housewives using only one teaspoonful in making tea for two people has risen since 1953 from 10 percent to 17 percent, the survey shows, while over the same period the percentage using four to five teaspoonfuls to make tea for four has dropped from a maximum of 38 percent to 28 percent. There is, apparently, no evidence that these "dramatic" figures have affected total tea consumption but, the report says, "they certainly give ground for serious thought." The average weekly consumption of a household has remained almost static, at roughly eleven ounces. The report suggests also that "the consumption of coffee tends to have an upper- and middle-class bias," although in all types of household coffee closely rivals tea as the favourite drink for the "elevenses." The drop in tea prices is reflected in the fact that most people bought tea at 1s. 8d. or 1s. 8½d. a quarter in 1956, whereas in the previous year the popular price was 3d. more a quarter. "The price paid for tea," the report notes, "correlates closely with social class" and "the cheapest teas are most widely purchased in Scotland." It appears, however, that price is not the housewife's main guide in choosing the sort of tea she buys. Under the heading: "Things liked about present quality of tea," 41 percent of those interviewed wrote comments such as "fine flavour" and only 19 percent opted for "economical; goes a long way."

COFFEE EXPORT QUOTA RELEASE

It has been decided to release for export a further quantity of 4,000 tons of coffee out of the 1955-56 Indian crop. Out of this crop, 4,100 tons had already been released for export in the months of February and March 1956, thus making a total of 8,100 tons now. The Government of India, in the course of a Press note, refers in this connection to certain misleading reports in the Press about the stocks of coffee in the country and the quan-

ties that could be made available for export. "It is hinted in these reports," says the Government, that there are large surpluses available for export and that the Coffee Board and the Government have been dilatory in releasing export quotas. These reports display a lack of understanding of the whole problem. It is not easy to make a reliable estimate of the coffee crop well in advance—a factor which applies to most agricultural commodities—and it is only towards the end of the season that a correct assessment is possible. In October 1955, for instance, the estimate of the coffee crop was 27,740 tons. The latest estimate is about 33,400 tons. Export quotas have necessarily to be made in instalments, taking note of the actual crop that has been delivered into the coffee pool. It is necessary further to make provision for the carry-over at the end of the season. It has been stated in the reports referred to, that after taking into account the coffee required for internal consumption, there may be a surplus of 11,000 tons. But out of such surplus, provision has to be made for the carry-over to the next season of about 5,000 tons, and it is only the balance that would be available for export.

"It is further asserted that the Coffee Board is carrying unduly large stocks and a reference has been made to the fact that in April 1956, this was as much as 27,000 tons. This again is a misleading statement. There is nothing unusual in such large stocks at that time of year, for it is during the months of January to March that over 80 percent of the total coffee produced in the country, is delivered into the pool. Coffee has also to be cured before it is put in the market and out of the stock of 27,000 tons, nearly 13,000 tons were uncured coffee. The process of curing may take anything between two and three months and it is only after this is done, that the stocks can be liquidated by the sale of coffee.

TOBACCO ACREAGE AND PRODUCTION RISE

The all-India third estimate of tobacco, 1955-56 puts the current year's area and production at 893,000 acres and 249,000 tons as against the adjusted third estimate of 824,000 acres and 235,000 tons for 1954-55, according to the Directorate of Economics and Statistics, Union Ministry of Food and Agriculture. This shows an increase of 69,000 acres or 8.4 percent in area and 14,000 tons or 6.0 percent in production during the current year over last year. The increase in area and production of tobacco during the current year has been reported by almost all the States and is marked in the case of Bombay. The increase in area and production is attributed to better climatic conditions during the current year as compared with last year. This estimate does not contain information on the late variety of the crop grown in U.P. It also does not give information about the final position of the crop in Punjab, Mysore, P.E.P.S.U., Rajasthan, Coorg, Delhi, Tripura, Himachal Pradesh and Vindhya Pradesh. The above information will be included in the final estimate only. Crop-cutting surveys on tobacco are in progress in Mehasana, Ahmedabad, Kairu, Panch Mahals, Broach, Satara, South Kolhapur, Belgawan and Dharwar districts of Bombay State. Production estimates for 1954-55 and 1955-56 for these districts included in the Bombay State estimate are based on the results of these surveys. Past experience has shown that the final estimate figures are slightly higher than those of the third estimate.

COLOMBO RUBBER PRICES

The following prices have been issued by the Rubber Board of India from the weekly market report published by the Colombo Brokers' Association:

	Closing prices on 6-7-1956 (Rupees a lb.)	Average for the period (Rupees a lb.)
Sheet:		
No. 1	1.41	1.41
No. 2	1.38	1.38
No. 3	1.35	1.35
No. 4	1.11	1.11
No. 5	1.06	1.06
Sheet Cuttings 1	.86	
Sheet Cuttings 2	.81	

Crape:		
Water White	—	—
R.M.A. No. 1X	1.34/35	1.31½
R.M.A. No. 1	1.32/33	1.29½
Crape No. 2	—	1.25½
Crape No. 3	—	1.18½

Scrap Cresses:		
Sc. Crape No. 1	.90 Nom.	.88
Sc. Crape No. 2	.83/86	.82½
Sc. Crape No. 3	.77/82	.77
Flat Bark	.70/75	.71½
Scrap Crape 3X		.80

To arrive at f.o.b. Colombo prices add 55.45 cents a lb. in respect of rubber other than scrap crape and 31.45 cents in respect of scrap crape to the above market prices.

LONDON INSURANCE LETTER RISE IN PREMIUM INCOME CONTINUES

By Air Mail.

EXACTLY in the middle of 1956 appeared the full details of premium income in 1955. Compared with 1954, the total increased by £75 million to £1,098 million. Thus the momentum of expansion continued; for the increase was £57 million in 1954 and £40 million in 1953. Within these totals, however, there are some rather surprising changes. Previously it was the life department that made the running. Last year the non-life branches—accident, fire, marine—achieved the greater part of the advance. Life business—both ordinary and industrial—continued to expand, net premiums reaching £474 million, compared with £442 million in 1954; but this increase was rather less than that of 1954. Non-life premiums, on the other hand, advanced from £581 million to £624 million; and this increase was more than double that of 1954.

The big increase in registrations of motor-cars in the postwar era assures first place to the accident branch in the non-life group. Indeed, its premium income of £338½ million last year was a few million more than that of ordinary life assurance. In absolute terms, it shows the biggest increase—more than £30 million. But the increases in the fire and marine branches, though smaller, are in a sense more notable, because in the two preceding years fire premiums had increased only slightly and marine premiums had declined. Last year's fire premiums of £224 million increased by £10½ million, and marine premiums of £61½ million were increased by £2½ million. Mr. J. A. Pollen, who announced the figures at the annual general meeting of the British Insurance Association, attributed the overall growth to the further expansion of industrial activity that characterised all the industrial countries last year. It must be doubted whether the rate of

growth can be sustained this year, for industrial activity is more hesitant. Wages and prices are still tending upwards in Britain; but nearly half of the member companies' business is written abroad.

Invested Funds

Not less interesting are the composite figures of invested assets, also provided by Mr. Pollen at the meeting. Their outstanding feature is a further decline, absolute and proportional, in investments in British Government stocks, compared with 1954, from £1,269 million to £1,243 million, from 30.6 percent to 28.0 percent of the total; the total itself increasing from £4,146 million to £4,430 million. The converse of the change was an increase in, notably, debenture stocks and preference shares from 20.6 percent to 21.2 percent, ordinary shares from 14.1 percent to 15.4 percent, mortgages from 10.9 percent to 12.0 percent, real property from 7.8 percent to 8.1 percent. These figures mean that the savings channelled into insurance have been made available increasingly to industry and to home-owners. The reaction from governmental financing does not necessarily—though it does partly in fact—represent a change of policy; it would be in any case a normal adjustment after the abnormal circumstances of the war. In the last world war, as in the preceding one, almost all new money was invested in Government stocks to finance the war; the proportion of gilt-edged stocks rose almost to 40 percent. The reduction to 28 percent corresponds with a similar movement after the first world war. It is worth noting that this movement continued, broadly well into the 1930s. At the end of 1937 the proportion of funds in gilt-edged stocks was little more than 22 percent. It is evident from the lethargy of the gilt-edged market this year that the companies are not investing there on a large scale. On the other hand, they are now very cautious of industrial ordinary shares, the prices of which have declined much more than those of Government stocks in recent weeks. The mort-

gage business is still active, and probably increasing its proportion; but it is likely that there will soon be a shift of emphasis, even if temporary, in favour of Government stocks, as they offer now reasonable security of capital with uncommonly attractive yields.

Preparing to Receive More

It is much too early to judge the effect on insurance savings of the changes announced by the Chancellor of the Exchequer when presenting his Budget in April. The debates on the Finance Bill continue for many weeks; and in the course of these debates the Government's proposals were somewhat modified. In particular, Mr. Macmillan is granting increases in the percentage limit and in the maximum limit of tax relief on premiums payable by older people. The life offices lost no time in preparing draft plans for retirement policies for the self-employed and for relief of tax on the capital repayment element in life annuities, but these plans could not be finalised until the Government's intentions took statutory form. An alternative to deferred annuity policies, which will qualify for full relief from income-tax and surtax, is an ordinary with-profits endowment assurance, with which, on maturity, pension annuities can be purchased. Such endowment policies will not qualify for full tax relief, but the annuities, when paid, will be only partly taxed. In some individual circumstances, this alternative will be the more advantageous to the policyholder. As the forms of annuity become more varied, the obligations of the life offices increase. Competition is keen, and each company will try to evolve an attractive policy for as many individual circumstances as possible. But many prospective policyholders are unskilled in these matters and will find the diversity confusing. It will be the more necessary to set out the respective advantages as clearly as possible and to explain them as simply as possible to the uninitiated. The special characteristic of the new plan is that it brings within the orbit of this kind of saving many people who could not afford it on the former basis of taxation.

Commodity Markets

BRITISH TEXTILE REVIEW AUSTRALIAN IMPORT CUTS DEPRESS LANCASHIRE

THE cotton industry's dirge of gloom was louder than usual after the announcement of Australia's cuts in imports, which followed closely the announcement of India's ambitious plans for producing more cotton goods for export. Australia is the U.K. cotton industry's principal market, and the U.K. is the Indian cotton industry's principal market; so the combination of circumstances seemed peculiarly unfortunate. The reason for the wool industry's resentment at the Australian cuts is not immediately so obvious. Australia has lately been absorbing about one-seventh of U.K. exports of cotton piecegoods, and if the Australian trade is being cut by one-sixth, the whole export trade will evidently be reduced by 2½ percent on this account alone—when it is already declining more rapidly for other reasons. For the wool industry, however, the Australian market is relatively much less important, taking less than 2 percent of total exports—though if mixtures are included, the proportion is probably larger. This industry's resentment is a question of principle rather than of the practical effects of the cuts. Yorkshire feels that as the main consumer of Australia's raw material it should not be subjected to restrictions on its sales to Australia.

The cotton industry's troubles, though sometimes exaggerated, are certainly not imaginary. It is much less successful than the wool industry in export trade, and at the same time, much more afflicted than the wool industry by competing imports. Subsidised Italian competition in wool goods in this market is not underestimated; nor is the decline in the proportion of British wool goods in some export markets (even though the volume of sales may be expanding) overlooked. Each Yorkshire suffers no sense of deterioration such as has afflicted Lancashire in recent years. Lancashire's home trade was assisted last year by the fine summer, and there is not much evidence that it will be repeated. Another favourable development, later last year, was the revision of purchase-tax, but its effects on the higher-quality trade have been less than many people expected. The Cotton Board showed in its statistical review published late in June that in the first quarter of 1955, the U.K. cotton industry's output was reduced more than that of any other important cotton-manufacturing country. U.K. exports of cotton cloth declined from 129 million square yards in the first quarter of 1955, to 120 million square yards in the first quarter of 1956, and there has been a more marked decline subsequently.

More Aggressive Policies

Mr. Cyril Lord, a colourful and successful cotton magnate who is conducting a personal campaign for protection of the cotton industry "in the interests of commonsense, our own country, the Empire, and the people in his organisation", puts forward as a practical solution of the problem the admission of Indian and Hong-kong cloth duty-free only for re-export to the Commonwealth markets, to the detriment of Japan. But such an arrangement would still be protective, so far as the U.K.'s internal trade was concerned. There are still people in Lancashire who believe that manufacturing efficiency and progressive technique are the only correct solution of the industry's problem. At a time when so many firms are diverting their energies from apparel-textiles to industrial textiles or quite different products, it is interesting to observe the contrary trend in the Smith and Nephew group. This group's main interests are in surgical dressings and drugs, but it is achieving outstanding successes with light clothing and nightwear, also industrial protective clothing.

Smith and Nephew is now undertaking one of the most ambitious modernisation schemes ever planned in Lancashire. It is at present operating spinning and weaving mills and a bleach works. Its machinery, including automatic looms, is very modern, and it was one of the first to introduce three-shift working in the mills, so that the equipment could be used to full advantage. But the operations are dispersed. The new plan is intended to concentrate nearly all of them in a single new factory, integrated "vertically" from raw materials to finished products. Such a plant, the chairman, Mr. G. E. Leavey, said, "would be the most modern production unit in the country—equal to any in the world." Accelerated development of new products is another method of competing—applicable, of course, to other textiles than cotton. Another cotton-textile leader, Mr. Percy Rosen, introducing fabrics with a new stain-resistant finish, has said: "It is what you put on the cloth that sells it, both design and finish." Bradford Dyers Association has turned its attention to non-woven fabrics. Bondina (B.D.A.) Ltd. has been formed as a separate enterprise and will be producing a few months hence fabrics made without spindles or looms, bonded by chemical and physical means. As there is in this country plenty of technical knowledge for such processing, the new plant, near Halifax, will probably be the forerunner of others.

Cross-sectional View

Many big textile companies have lately issued their reports, and all have emphasised their efforts to adapt themselves to generally difficult conditions—though companies such as Patons and

Baldwins (knitting wool and hosiery yarn) and J. and P. Coats (thread) are able to show substantially increased profits. The adaptations cover, of course, changes from traditional to newer fibres: even Coats, generally associated with cotton, is now using synthetics such as nylon and terylene; and Courtaulds (whose interest in British Nylon Spinners is proving very profitable) is spreading further from the field of rayon into production of acrylic fibres. But Mr. W. T. Winterbottom, chairman of Fine Spinners and Doublers, seemed wary of a shift from cotton to man-made fibres due only to instability of the value of cotton. Another aspect that the reports have emphasised this year even more than usual is progress abroad. Coats is, perhaps, unique in holding 80 percent of its assets abroad and in exporting more than 70 percent (by value) of the output of its mills at home; it is certainly significant that its last trading profit (increased from less than £8½ million to more than £10½ million) was outstandingly good. Courtaulds (last profit reduced from just over £20 million to rather more than £18 million) is experiencing some difficulty at home and in direct export trade, but the chairman, Sir John Hanbury-Williams, has been able to report favourably on manufacturing developments in the United States (with some qualifications), Canada, Australia, South Africa (on a longer view), and Europe. It seems that the extension of manufacturing abroad is the only permanent solution of the textile industries export problems.

PROGRAMME TO POPULARISE AMBAR CHARKHA

The Government of India has sanctioned over Rs. 3.26 crores for implementing the *Ambar Charkha* programme for the current financial year, as recommended by the *Ambar Charkha* Committee. As against this amount, a sum of Rs. 20 lakhs as grant and Rs. 46 lakhs as loan are being released immediately. Further funds are to be released later in suitable instalments on the basis of the progress of expenditure incurred in the implementation of the programme. The programme envisages the manufacture of 75,000 *Ambar Charkha* sets. Also 15 more *Vidyalayas* (training centres) and 100 more *Parishramalayas* (production-cum-training centres) are to be opened this year. Already there are 15 training centres, 100 production-cum-training centres and six functional offices. Another 100 production-cum-training centres were sanctioned earlier under the interim *Ambar Charkha* programme. Fifty workshops and five main production centres and ten sub-centres for production will also be set up.

A sum of Rs. 12.75 lakhs as grant is for the opening of 100 additional production-cum-training centres, and Rs. 4.66 lakhs for the opening of 15 additional training centres. For the establishment of 50 workshops, a grant of Rs. 8.90 lakhs has been given while a sum of Rs. 2.75 lakhs, is for the setting up of the five main and ten sub-centres for production. Of the 75,000 *Ambar Charkha* sets to be manufactured this year, sanction has already been given under the interim programme for the manufacture of 10,000 *Ambar Charkha* sets. The amount sanctioned now is for the introduction of the balance of 65,000 *Ambar Charkha* sets in the country. For the manufacture of 64,500 *Ambar Charkhas*, a sum of Rs. 38.40 lakhs as grant and an equal amount as loan have been provided. For the supply of 500 *Charkhas* to training institutions, a grant of Rs. 60,000 has been given. Fifty *Ambar Charkha* sets are to be supplied to each production-cum-training centre and training centre.

For providing rebate on the sale of Khadi at the rate of 4 annas in a rupee, a grant of Rs. 30 lakhs has been sanctioned. Another grant of Rs. 50 lakhs has been given for providing revolving credit for the production and sale of *Ambar yarn* and cloth. A loan of Rs. 1 crore is to be utilised for providing working capital for the production of *Ambar yarn* and cloth. A non-recoupable advance of Rs. 40 lakhs is to be given as loan for the seasonal purchase of cotton. The programme will be implemented by the All-India Khadi and Village Industries Board through its own agency or through the agency of Sarva Seva Sangh and/or State Governments or registered bodies to be selected by the Board. Loans for the manufacture of *Ambar Charkha* will be given to registered institutions, co-operative societies and State statutory boards.

ESTIMATED INCREASE IN LINSEED ACREAGE AND OUTPUT

The all-India final estimate of linseed, 1955-56 puts the current year's area and production at 3,424,000 acres and 376,000 tons, against the partially revised estimates of 3,254,000 acres and 382,000 tons for 1954-55, according to the Directorate of Economics and Statistics, Ministry of Food and Agriculture. This shows an increase of 70,000 acres or 2.1 percent in area and 6,000 tons or 1.6 percent in production over last year. The increase in acreage during the current year has been shared mainly by Vindhya Pradesh, Hyderabad and Madhya Pradesh and is attributed generally to favourable climatic conditions at the sowing time. The increase in acreage has, however, been offset to some extent by decreases registered in U.P. and Bihar. Despite an increase in acreage, the overall production of linseed has declined mainly in U.P. and to a lesser extent in Rajasthan and Hyderabad, and has been attributed to unfavourable climatic conditions during the

growing period. In U.P., the crop was damaged by hail frost and strong winds during March 1956. The production estimates for 1954-55 and 1955-56 for West Bengal except for Darjeeling district are based on the results of random sample crop cutting survey.

WHOLESALE PRICE INDEX RISES

THE official wholesale price index (base: year ended August 1939=100) advanced further by 0.1 percent to 402.3 during the week ended 30th June, 1956 as compared with 401.7 (revised) for the previous week. The index was higher by 2.7 percent and 14.9 percent respectively as compared with those of a month back and a year ago. The average for the month of June 1956 worked out to 398.0 as against 390.2 for May 1956 and 342.5 for June 1955. The index for Food Articles receded by 0.2 percent to 374.0, as compared with 374.6 (revised) for the previous week, due to a fall in the prices of tea for internal consumption (−6%), dal arhar (−2%), and gur at Muzaffarnagar (−1%) although prices of salt in Calcutta (+2%), and rice in Calcutta, gram at Hapur and coffee (+1% each) showed advances. The index for Industrial Raw Materials moved up by 0.4 percent to 482.6 as a result of higher prices of raw jute and gingellyseed (+3% each), castorseed (+2%) and raw silk, groundnuts, lac and rapeseed at Calcutta (+1% each). The prices of manganese ore (average export price) (−32%), rapeseed in Bombay (+17%) and copra (−1%) were, however, marked down. The index for the Semi-Manufactures group stood at 395.5 during the week as compared with 395.6 (revised) for the previous week. Items which recorded noticeable fluctuations in this group were: gingelly oil in Bombay and gingelly cake (+5% each), mustard oil at Kanpur (+3%), castor oil at Madras and groundnut cake (+2% each), castor oil in Calcutta and linseed oil (−4% each) and cowhides, and groundnut oil in Calcutta (−2% each). Lower prices of jute manufactures (−2%) brought down the index for Manufactures by 0.2 percent to 377.0 during the week. The Miscellaneous group index advanced further by 4.8 percent to 545.4, as compared with 520.5 (revised) for the previous week due to a rise in the prices of tobacco leaf (+12%) and chillies (+6%) despite declines in the prices of turmeric (−9%), and black pepper (−1%).

INDEX NUMBERS BY GROUPS AND SUB-GROUPS (Base Year Ended August 1939=100)

SAVED...
Rs. 21,000
a year on
LUBRICATION
COSTS alone!

A PROMINENT textile mill in Ahmedabad is saving Rs 21,000 a year—because its management asked for our free advice!

After careful study, our lubrication expert found that the mill was over-lubricating its machinery—with the wrong grades of oil. Now, every month, the mill uses three thousand pounds fewer; thirty-six thousand pounds of industrial lubricants saved every year!

Choosing the right grade
Our experts are backed by the world's greatest lubrication experience, 90 years of it. Besides, they have the right oils to work with—a full range of MOBIL Industrial Lubricants! No wonder they can give you correct lubrication, with the right grade of oil.
MOBIL Lubricants have been developed over many years of scientific research, and they are constantly being improved. When our expert says: "Use MOBIL Lubricants," he is offering your machinery the finest protection that science can devise, or money can buy.

Correct lubrication is a matter for experts. Our advisory service is free—why not ask us to help you?

Calcutta Markets

STRONG DEMAND CONTINUES
AT TEA EXPORT SALEGOOD GENERAL SUPPORT
FOR DUSTS

AT Sale No. 6, held on 16th and 17th July, export offerings consisted of 27,900 chests for which there was a strong and general demand. The best C.T.C. teas were again a very strong feature and realised high prices, while the more ordinary sorts of this description were also well supported. Medium Assams with quality, and tippy teas sold well, while good liquoring teas of all descriptions were fully firm to dearer. Small black Fannings suitable for the Middle East were several annas dearer, but the more ordinary kinds were a full 1 anna lower. Low mediums and the plainer kinds were about half to 1 anna easier, while Darjeelings met with a good demand and the most flavoury kinds were often dearer. Whole leaf grades were fully firm to dearer.

	Quotations			1955	
	Rs.			Rs.	
Clean Black Pekoe	1 15	0 to 2 0 0	3 4 0		
Plain B.P.	1 8 0	to 1 8 6	2 8 0 to 2 8 6		
Medium Assam B.P.	2 2 0	to 2 4 0	2 11 0 to 2 11 6		
Best CTC Assam B.P.	4 0 0	to 5 0 0	3 3 0 to 3 4 0		

At the Internal Sale Dust offerings amounted to 11,728 chests which included only 804 chests of Old Season's teas. There was a good general demand and once again, Middle East types and C.T.C. Assams were the strongest feature. Medium teas with good liquors were fully firm while the small powdery Assam types received good demand at 2 to 3 annas above last rates. The remaining offerings were rather irregular and declined by 1 to 2 annas, many of the plainer sorts being withdrawn.

	Quotations			1955	
	Rs.			Rs.	
Medium Doona Dust	1 6 0		2 6 0 to 2 6 6		
Medium Assam Grainy					
Dust	1 12 0		2 9 0 to 2 9 6		
Best Assam CTC Dust	3 6 0	to 3 10 0	3 0 0 to 3 2 0		

Leaf offerings comprised 341 chests of New Season's and 317 chests of Old Season's teas for which there was a fair demand at irregular rates.

SHARP INCREASE IN GRAIN
FREIGHTS

GRAIN bookings were the feature of operations last week, and sharp increases were registered. A November ship was fixed at 87s 6d St. Lawrence-U.K., compared with 77s 6d paid for July, and later in the week, the rate advanced to 98s. It is understood that a contract has been arranged for ore trading over three and a half years from Mormugao to the Continent, but details are lacking. Further vessels were chartered from the North Pacific to Karachi at the unchanged rate of \$(U.S.)24 and rice cargoes were done from Rangoon to Chittagong-Chalna at 75s to 77s 6d. Calcutta-Karachi coal has been done again at 78s and further tonnage is required for this trade. Another fixture to Alexandria was reported at 140s. Chinwangtao-Karachi, coals, is reported at 67s 6d. f.i.o. for two Japanese ships.

HIDES AND SKINS DULL

The market ruled dull and quiet. Prices showed a downward tendency. Stocks were higher than in the previous week.

Bazaar Sales

(Between 10th July and 16th July, 1956)
Cowhides: Wet salted (Ord.) 26,000 pcs. on the basis of Rs. 4-12 to Rs. 7; Wet salted (Slaughtered) 18,500 pcs. on the basis of Rs. 11-8 to Rs. 20.

Goatskins: Wet salted (Daissee, Killed) 80,800 pcs. on the basis of Rs. 150, Rs. 230 to Rs. 280 and Rs. 335 to Rs. 350; Assam-Dinajpur-Jalpaiguri 11,600 pcs. on the basis of Rs. 215 to Rs. 240; Pakur-Patna 4,100 pcs.

Bazaar Stocks
(16th July, 1956)

Cowhides: Wet salted 85,900 pcs.
Goatskins: Wet salted (Daissee, Killed) 46,000 pcs.; Assam-Dinajpur-Jalpaiguri 50,500 pcs.; Muzaffarpore - Patna - Pakur - Purneah - Kishanganj 2,24,000 pcs.

SUGAR MARKET

During the week ended 18th July, sugar sales in the Calcutta market averaged 3,000 bags daily. Arrivals a day were 3,000 bags and stocks totalled 70,000 bags. Rates for ready sugar ex-Kantapur delivery were Rs. 33-8 for ordinary grain and

Rs. 31-12 for big grain. Ex-mill delivery rates were Rs. 29-12 and Rs. 28-8 for big and small grain varieties respectively. The market tended to ease.

LINSEED IMPROVES

With better demand from crushers, chiefly for the near positions, prices have improved during the past week. Due to the very poor arrivals from various centres and the prevailing scarcity of supplies, the turnover has been very poor, although buyers have been showing some interest chiefly for the near positions. The oil section, while displaying a somewhat better tone, remained rather dull and no parity existed between local and overseas prices. Latest quotations were as follows: Ready Rs. 21-12 a maund and July-August Rs. 22 a maund.

SHELLAC MARKET STEADY

During the week ended 17th July, the market was quiet at the beginning, and steady at the close. The range of quotations was as follows:

Pure Buttonlac	Rs. 142 value, 138 buyers, 139 done.
Lemon No. 1 Shellac	Rs. 140 buyers, 140 done, 138 buyers, 140 buyers.
Lemon No. 2 Shellac	Rs. 137 done, 135, 133, 135 buyers.
F. O. Std. 1 Shellac	Rs. 122-8, 123-8, 130 buyers.
Pure TN Shellac	Rs. 128, 123, 125 basis, done and buyers.
4% I.T.N. Shellac	Rs. 119-8, 116-8, 118-8 buyers.
No. 1 Kusmi Seedlac	Rs. 126-8, 123-8, 127 value.
No. 2 Kusmi Seedlac	Rs. 122-8, 119, 122-8 value.
Fine Bysaky Seedlac (Manbhumi)	Rs. 120 done, 116 buyers, 117/119 done and buyers.
Fine Bysaky Seedlac (C.P.)	Rs. 117, 114, 116-8 buyers.
Ordinary Bysaky Seedlac (C.P.) under 5%	Rs. 113 done and buyers, 109, 110-8 buyers.
Ordinary Bysaky Seedlac (C.P.)	Rs. 110 done and buyers, 105-8, 106-8 buyers.
Kireelac	Rs. 54-8 to 52 value, 50 buyers.

Shipment during July until the 14th were 12,990 packages comprising shellac 8,715 packages, seedlac 2,401 packages, buttonlac 497 packages and others 1,377 packages.

NOTICE.

NOTICE is hereby given that the Share Transfer Books of the Bank will be closed from Monday the 6th August, 1956 to Thursday the 23rd August, 1956, (both days inclusive).

By Order of the Board,
N. K. KARANJIA,
General Manager.

Bombay, 16th July, 1956.

N.B.—Warrants for the Ad-Interim Dividend for the half-year ended 30th June, 1956 on both Ordinary and Ordinary 'A' Shares will be posted to the Shareholders to their registered addresses on and after the 24th August, 1956. Intimation of any change of address should be given to the Bank immediately.

THE SAMNUGUR JUTE FACTORY,
COMPANY, LIMITED

THE Directors of this Company regret that they are unable to recommend payment of an interim dividend on ordinary shares for the year ended 31st December, 1956. The Directors have declared on the preference shares the dividend at the rate of 6% per annum for the half-year ended 30th June, 1956. This dividend will be paid on 1st August, 1956 less income tax at 8/6d per £ and the Transfer Register will be closed from 21st July to 1st August, 1956, both days inclusive.

P. WILLIAMS,
Secretary.

Dundee, 13th July, 1956.

THE TITAGHUR JUTE FACTORY COMPANY,
LIMITED

THE Directors of this Company regret that they are unable to recommend payment of an interim dividend on ordinary shares for the year ended 31st December, 1956. The Directors have declared on the preference shares the dividend at the rate of 6% per annum for the half-year ended 30th June, 1956. This dividend will be paid on 1st August, 1956 less income tax at 8/6d per £ and the Transfer Register will be closed from 21st July to 1st August, 1956, both days inclusive.

P. WILLIAMS,
Secretary.

Dundee, 13th July, 1956.

THE CALCUTTA ELECTRIC SUPPLY
CORPORATION LIMITED
(Incorporated in England)

NOTICE is hereby given that the Board of Directors of this Company have declared payment of an Interim Dividend on the Company's Preference Stock at the rate of £2-3-9 per cent net for the year ended 31st December, 1956. Payment will be made on 15th August, 1956 to those stockholders whose names are registered in the Company's Stock Register on 3rd August, 1956.

Applications for transfers received in this office before 12 O'clock noon on Friday, the 3rd August, 1956, will, if otherwise satisfactory, be registered at that date for the purpose of participation in the above Dividend.

By Order of the Board,
F. W. ACHESON,
Actg. Agent.

Victoria House,
Calcutta, 10th July, 1956.

THE VICTORIA JUTE COMPANY, LIMITED

THE Directors of this Company regret that they are unable to recommend payment of an interim dividend on ordinary shares for the year ended 31st December, 1956. The Directors have declared on the preference shares the dividend at the rate of 6% per annum for the half-year ended 30th June, 1956. This dividend will be paid on 1st August, 1956 less income tax at 8/6d per £ and the Transfer Register will be closed from 21st July to 1st August, 1956, both days inclusive.

P. WILLIAMS,
Secretary.

Dundee, 13th July, 1956.

Internationally famous British Company of enamelled holloware manufacturers invite enquiries from interested concerns of sound financial position for setting up a modern mass production factory in India to produce enamelled ware using their own unique method. Please reply Box No. 4785, C/o Capital (Private) Ltd., Post Box No. 14, Calcutta-1.

LIGNITE DEPOSITS IN WESTERN KUTCH

The Geological Survey of India has struck lignite in western Kutch, according to reports. Total lignite reserves in this region are estimated at 22 million tons. Deposits have been located at Barandra, Jhulrai, Umarsar and Lefri. In the Umarsar-Lefri region, lignite seams are said to extend over a six-mile area. Official investigating teams are still carrying out boring operations at Umarsar and Lefri.

CAPITAL

Founded in 1888, is India's oldest and most widely read financial newspaper. It gives its readers in all parts of the world the most up-to-date service in Indian economic intelligence and information of any newspaper in the daily or weekly field, and includes a complete list of all shares and securities dealt in on the Calcutta Stock Exchange, together with full details of latest balance sheets.

The Research & Statistical Department undertakes research into industrial and financial problems and numbers among its clients, Government departments, railway administrations, chambers of commerce and industrial associations.

Published every Thursday.

STATE OF THE POUND STERLING

WIDER SIGNIFICANCE OF BRITAIN'S ECONOMIC TROUBLES

STERLING has weakened steadily during the past few months and the arrival of Britain's season for big dollar disbursements means that the pressure is unlikely to decrease between now and the end of the year. A favourable balance of payments throughout this period, if sufficiently large, would certainly ease the strain. But the improvement in Britain's trading position is slow, although, by now, it has become perceptible. In the meantime, all that stands between sterling and the accumulation of speculative sales which precipitated the devaluation of 1949, are the British Government's assurances that it is prepared to take any measures, however difficult and unpopular, which may be required to maintain the present value. There is no question of its being possible to keep this promise if the determination is strong enough. And if it is not, there is the example of France to convince any sceptic that there are even ways of reconciling fixed exchange rates with political timidity. The main difficulty will not be to maintain the value of sterling, but to preserve its "status". This is the fact which is of greatest importance for the future of the sterling area and will be most significant for Britain herself in the long run. There is no intrinsic merit in sticking to a parity which is unrealistic, once it has clearly become so. The consequences which can follow if this fact is forgotten have recently been shown by the approach Germany's Minister for Economic Affairs, Dr. Ludwig Erhard, has made to Britain suggesting that the present state of Europe's exchange rates be revised. The solution to the difficulties which Dr. Erhard has in mind—his own country's extreme creditor position—lies with Germany herself rather than with her European trading partners. But the fact that any country which is holding sterling in the quantities Germany must be doing, can have such scanty faith in the ability of Britain, along with other European debtors, to correct her present deficit position, is not without its significance for the future of the pound.

The worthy doctor is not alone in his doubts about sterling's future. There are signs that some members of the sterling area, especially those who are at the dollar-earning apex of the trading triangle, might be wondering whether continued participation in the system is really going to be in their interests if the post-war distortions of the British economy should defeat the efforts which are at present being made to eliminate them. Crises have occurred before, some not unlike the present one, and have subsided without great damage to the sterling area. But this was at a time when no other currency enjoyed the international prestige of the pound. That is no longer true. Sterling must now maintain its reputation in the face of the growing importance of the deutschmark and the guilders, among others. Bearing in mind the deteriorating significance of the London capital market and the growing inability of Britain's manufactured exports to face world competition, it would be surprising if the sterling area were not subject to severe strains in the next few years.

*

It is the object of the British Conservative Government's policy to correct the present over-inflation of the home economy. This is unlikely to be enough. Nothing short of a complete reshaping of the economy will serve to rehabilitate sterling in face of its formidable competitors. The fact has been recognised. But whether the Eden Government is prepared to put the country through the necessarily long and painful process, and incur the temporary unpopularity which is bound to follow, is another matter. The British electorate is renowned for its appreciation of political courage, and there have been times when it has shown signs of wishing to repair the damage done by too much socialism, but the post-war prejudice for more money for less work, guaranteed jobs

and all the remaining trappings of the welfare State, will not be easy to master. All successive post-war governments have limited themselves to the message treatment; none has yet attempted a kill-or-cure surgical operation. The Macmillan prescription has come the nearest so far. After Mr. Butler's reluctance to employ any corrective method other than the theoretically attractive and practically useless one of bank rate, the present Chancellor's apparent determination to do anything which promises to be effective, is more reassuring. Up to now, the sum total of results from the entire efforts of these two Ministers has been a small, but critical, improvement in the balance of payments, the temporary eclipse of London as the world's capital market, the appearance of a few unemployed and a larger number of strikers in the motor-car industry and the loss of the average six-per-cent increment in the nation's post-war output. By no stretch of imagination can this yet be considered a policy adequate to the radical results expected of it.

*

That is not to say that Mr. Macmillan will not succeed where the Chancellors before him have failed, if only because world conditions may come to Britain's rescue as they have so often done before. There is no doubt, for instance, that Germany's economic honeymoon is drawing to its close. That country now has two ways of dealing with its creditor problems. It can readjust the value of the deutschmark or inflate internal demand by allowing wage levels to rise. The former it may be reluctant to do, while the latter would undermine the basis of hard work and restraint on which the present prosperity is founded. Either way, Britain stands to benefit. There is a good chance that the "rolling adjustment" through which the United States has been passing, will be over by the autumn and Britain, along with other members of the sterling area, will enjoy a revival in the demand for her exports. With France out of the picture as a trade competitor, Japan and Italy already probably working at full stretch, and the Soviet bloc not yet seriously in the running, there is a fair chance that Mr. Macmillan will find it unnecessary eventually to press the more unpopular of his methods. Although this might be a bad thing for the long-term interests of the British economy, because it would leave the underlying distortion largely uncorrected for another few years, no government which has

THE AMBITIOUS OCTOPUS

THE Government of India's bania, the State Trading Corporation, seems well on the way to becoming the most prosperous business prodigy in the country. For an organisation which is yet barely ten weeks old, this is no mean achievement. In fields where others have laboured for years to build a modest prosperity, and many have failed, the Cor-

poration is forging ahead in all the glory of its infant enthusiasm. But such success, present and prospective, owes little to the commercial acumen of the Corporation itself, evidence of which is still lacking. It owes much more to the monopolistic instincts shared with a needy and manipulating father—with a Government which believes that confidence in the infallibility of itself and its progeny is entirely compatible with the aims of a free and democratic society. The moves which have recently been afoot to give the Corporation progressively a monopoly stranglehold over the export of iron and manganese ores, and to enable its encroachment into cement distribution, are of serious consequence. They are serious not merely for the particular trades and industries directly concerned; in their broader aspect, they are even more serious as indicating a new trend in the Government's economic thinking: iron ore today, what tomorrow?

We are not here at all concerned with the legalities of the question whether the State Trading Corporation has a right to displace a host of smaller traders, and establish in their stead its own powerful monopoly propped up by nothing apart from the arbitrary power of the Government. Our purpose is merely to examine the economic impli-

cations of such a move. The first is that it would be presumptuous to imagine that the Government normally knows its own mind. It is not three months since Mr. Nehru suggested that the Industrial Policy Statement he had just announced was precise and comprehensive enough to enable the private sector to know exactly where it stood; recent developments confirm that the Statement is full of escape clauses, loopholes and gaps large enough for both mice and men to get through. As such, private entrepreneurs must wait for their morning newspapers to know whether they have been given another day of respite. The Industrial Policy Statement offered no indication that it was intended to funnel iron ore and manganese ore exports through a State body; and when the State Trading Corporation itself was constituted, it was clearly indicated that its purpose would be to supplement, not to usurp, the functions of the private trade.

The second implication of recent trends towards extending State trading monopolies is no less disturbing than the first. According to informed Press reports from New Delhi, one of the more prominent official arguments offered in favour of letting the State Trading Corporation handle certain ore exports is that this will enable such ores to secure higher priority in railway wagon allotments than they do now. It is well known that India's ore exports have suffered quite seriously because the railways have not been providing enough carrying capacity to move them from the mines to the ports; and, further, because the ports have not had the facilities for the smooth and steady passage of these ores on to ships. It is difficult to foresee how the mere entry of the State Trading Corporation is likely to improve railway and port facilities beyond what has already been planned for. There have been distinct hints, in Press reports, that the Corporation, by virtue of its ownership, intends to push the railways into allotting more wagons for the movement of ores. If that is in fact what is intended, the implications are serious for any producer or trader who today depends mainly on the railways for bringing him his raw materials and taking away his finished products. Briefly stated, the implications are: one, the railways will be used openly and unashamedly to favour their State-owned brethren against private users; two, as the inadequacy of railway transport facilities becomes an excuse for the State Trading Corporation's interference, more and more enterprises will qualify for it as Mr. Lalbahadur Shastri's forecasts of growing inadequacy on the railways come true; and three, no major industry will henceforth know where it stands in relation to the Corporation, since there is no major industry today which is unaffected by the wagon shortage. Urgent clarification seems necessary, before the concept that State organisations should like each other more than anybody else comes to be accepted as a matter of deliberate official policy.

An official Press Note issued just over a month ago dropped some coy hints about malpractices in the ore export trade. Vague suggestions were made about contracts not being fulfilled due to circumstances sometimes within and sometimes outside the control of the Indian exporters. To the extent that this was offered as justification for a State Trading Corporation monopoly, it is far from convincing. If traders default on contracts, the Government has every right to take action against them, unless it is itself responsible for wagon diversions which make the fulfilment of those contracts impossible. But to penalise those who have been fair and honest in their dealings, along with those who have not, suggests that the Government cares equally little for either. A policy of throwing the baby out with the bath-water, despite its gaining popularity since the nationalisation of life insurance, can hardly pay in the long run. Suggestions have also been made in official quarters that it is necessary to canalise certain ore exports through the Corporation in order to ensure that India earns more foreign exchange. To these have been appended dark hints to the effect that contracts with foreign buyers have been negotiated "below market prices"—whatever that might mean. The fact is that ore export prices are not determined by India; if an exporter secures business by offering goods at a little below the world price prevailing at a particular time that is a tribute to his competitive enterprise rather than a moral failing. Ever since some tea and gunny experts gave the Government the idea that foreign buyers can be pushed around without their taking their custom elsewhere, it seems to have become a favourite pastime in New Delhi to look for export commodities where some such pushing around can be done. But the fact is that India has hardly any which lend themselves to arbitrary official treatment. It may be possible to make domestic producers, traders and consumers pay for the whimsical expansion of a State Trading Corporation, but it is sheer blindness to push the foreign buyer abroad. When the foreign exchange comes to be earned, it is he that will count for most.

NO CAUSE FOR ALARM

THE Reserve Bank Amendment Bill is a measure over which there should at least be broad agreement in principle. In the context of the country's developing economy, it is probably a necessary precaution. Its contents, as should by now be well known, provide for a reduction in the statutory reserve of foreign securities and gold as backing against the country's note issue so that the currency expansion contemplated under the second plan can be undertaken without hindrance. And secondly, while Rs. 1,200 crores of deficit financing is being undertaken, it seeks to avoid any inflationary expansion of bank credit which might result from the extra money in circulation. The Bill provides for other measures as well, but these two are the main, almost interlinked, objectives, which have caused some misgivings in the private sector. These are not without foundation, and it is not merely the puritanical conscience of the orthodox school clinging fast to its ideas of "sound finance" that is disturbed. There is a genuine fear that the enactment of this Bill will vest future Governments with drastic powers which they may not use wisely, and may even use recklessly to serve their own doctrinaire purposes. This fear seems to be based on too narrow an appreciation of facts. If the present Government has the powers to amend the Reserve Bank Act to expand the country's currency, any other Government, democratic or otherwise, would have the same powers. So it is not the enactment of the Bill that is important, but the object behind it.

The purpose of this piece of legislation was defended by the Government's spokesman, Mr. A. C. Guha, in the Lok Sabha debate which followed the introduction of the Bill. His explanation was based on familiar grounds, and substantially already contained in the text. But the case is nevertheless valid that while a development plan designed to raise the national income by 25 percent has been launched, its increasing need for currency will have to be met by expanding the note issue. This can scarcely be done if the statutory provisions of increasing the foreign security and gold reserves to the static proportion of 40 percent have to be complied with. Moreover, the very idea of maintaining these reserves as backing to national currencies has changed radically in a changing world, and Mr. Guha gave the example of several countries which do not maintain any reserves at all, and are none the worse for it.

The controversy over whether the minimum reserve should always be 40 percent of the total note issue, or Rs. 515 crores (Rs. 400 crores of foreign exchange and Rs. 115 crores of gold after revaluation) has been already overdone. The ultimate test of the wisdom of this legislation will lie in the benefits the economy will receive from the huge deficit financing proposed. There is now a welcome realisation among planners that the inflationary potential of this expenditure is dangerously high, and it is hoped that nothing will be done, taking advantage of such enabling measures as the one under discussion, that will unleash galloping inflation on the economy of the country. The Indian Merchants Chamber of Bombay, an influential body of business men, has opposed the Bill for reasons which have been discussed in the foregoing paragraphs. But it is only fair that the measure should be seen in the perspective of current Indian planning. The Bill can only be opposed if the magnitude and purpose of the plan are opposed. This piece of legislation merely represents a decision that must follow the economic policy the plan stands for.

On the other objective of introducing the variable reserve system (the Bill provides for raising the reserves to 20 percent and 8 percent respectively of the demand and time deposits of scheduled banks, against the present 5 percent and 2 percent), Mr. Guha takes his stand on the necessity of maintaining a stable price level in a period of high developmental spending. Theoretically, the Government's case can be supported. But there is no guarantee that the law will always be used wisely by the central monetary authority. The Merchants Chamber, which represents the view of the private sector as a whole, suggests that there should be safeguards against misuse. This suggestion will find wide support, particularly when the Reserve Bank has already enough powers to curb bank advances for speculative purposes, and when the Bank has not yet gained enough experience of qualitative credit control. Prudence and common sense would suggest that in the matter of credit control, when the proportion of the reserve which the scheduled banks will be required to keep with the central bank has to be so drastically high, there is always need to proceed cautiously. Otherwise, disastrous dislocations will occur which will harm all concerned, including the country.

CURRENT COIN

Index of Industrial Activity.—Corrected for seasonal fluctuations, Capital's Index of Indian Industrial Activity shows a rise of 9.1 points during February 1956. Mainly contributing to this were increases in cotton consumption, jute manufactures, paper and electricity. Cheque clearances and notes in circulation also rose.

Producing More Cement.—The cement industry enjoys an unsatisfied and expanding market; whether its own expansion will be rapid enough to satisfy the entire domestic demand in the near future seems doubtful. It is proposed to raise the target for cement production under the second five year plan from 12.5 million tons a year to 20 million tons a year. But, according to the figures quoted by Mr. J. Dalmia in his address from the chair at last Friday's annual general meeting of Dalmia Cement (Bharat) Ltd. in Dalmiapuram, Madras, the new target seems remarkably ambitious. Cement production last year totalled about 4.5 million tons. This year, it is expected to be around 5 million tons, although with the expansion schemes now under way, installed capacity will reach 6.3 million tons by the end of 1956. Output during 1957, it is estimated, will amount to nearly 6.3 million tons, and installed capacity by the end of that year will be nearly 6.8 million tons. The gap between the estimated end-1957 production of 6.3 million tons, and the 1960-61 target of 20 million tons—in other words, a trebling of output in not much over three years—is large enough for many eyebrows to be raised. Nevertheless, the effort seems well worth while. At present, much foreign exchange is being spent on importing cement at prices considerably higher than those of the Indian product. The price differentials between domestic and imported cement are wide enough to suggest that should India need to export the commodity as her own production expands, foreign markets will not be difficult to find. Pakistan is already indulging in the expensive boast of offering cement to foreigners which her own people cannot get for love nor money; but there will be no need for India to follow her example for many years yet. Mr. Dalmia does well to emphasise that the distribution of the commodity needs to be rationalised, and the transport system must be improved. He seems to under-estimate the effects of the intrusion of the State Trading Corporation into cement distribution, and ascribes the intrusion to lack of agreement within the industry.

Mr. Shastri's Nerves.—The season for departmental wranglings over the financial allotments in the second five year plan is not yet over. But that is not necessarily a bad thing, as long as the two Ministries which are pressing their cases most vigorously are Food and Agriculture, and the Railways. That the former's achievements should at least correspond to targets is essential for the success of a plan which offers a distinct possibility of general inflation. The latter's achievements too will in all likelihood have to exceed substantially the present targets if the creation of a series of inflationary pockets is to be avoided. The Railway Minister, Mr. Lalbahadur Shastri, made another strong criticism of the plan allocation of Rs. 1,125 crores for the railways before the National Railway Users Consultative Council in New Delhi last week in saying that he was getting quite "nervous" about the way the transport situation was developing. And the Council clearly endorsed the criticism by passing unanimously a resolution which urged the Planning Commission to provide "at least Rs. 1,500 crores" for railway development. Mr. Shastri is justified in raising the point whether the sanction of a larger expansion plan for the railways should be allowed to await the annual reviews which the Commission proposes to make for the whole five year plan. Delays now in sanctioning money, and therefore in placing orders for rolling stock and other equipment, would mean corresponding delays in the expansion of the railways' capacity. "It is clear," Mr. Shastri said, "that the railways must be enabled to make commitments immediately for rolling stock and line capacity to become available in the fourth and fifth years of the plan." There are a number of sound reasons why the railways' case for greater expansion deserves more urgent consideration than the others'. The first is that it is in this sphere that the fact of a present shortage, and the prospect of a worse one in the future, are clearest. The second is that, with the boom in engineering industries, delivery dates are long enough to justify the early placing of orders. The third is that even if further expansion is sanctioned in other sectors of the economy, the full benefits of that expansion will not be felt unless the railways can move raw materials and finished products quickly enough. For this reason, even the Food and Agriculture Ministry's plea for money to raise its own production targets may be of subsidiary importance; if the extra food cannot be moved, there may not be much

point in giving a larger allocation to produce it. It is encouraging to note that the railways' traditional hostility to other forms of transport is decreasing. This attitude is no doubt a logical consequence of their confessed inability to handle all the traffic they are offered. According to Press reports, the Consultative Council was told that the railways had "gladly agreed to a substantial relaxation in conditions for issue of road transport permits." It is unfortunately not clear who has suggested the "substantial relaxation"; if the suggestion has come from an impotent Centre, without assent from the marauding nationalists of States wallowing in budgetary deficits, it may be of little practical significance. As experience shows, whenever proposals to cut down the crippling restrictions on road transport which prevail today have been mooted, they have invariably been sabotaged in State capitals. Unless New Delhi is now prepared to take a firm stand in the broader interests of the country, a different result can hardly be foreseen. It is to be hoped that the intransigence of vested interests will not be allowed to hamper the expansion of any form of transport, provided this expansion is justified on grounds of economy and efficiency—as it is in the case of the roads.

Danger to the Banks.—The Indian Income-Tax Act, after the amendment to Section 37, poses a danger to banking business in the country, because it requires the banks, under certain circumstances, to divulge the secrets of their customers. All Indian bankers naturally view this development with concern, and even consternation. A veteran banker, Mr. C. B. Bhabha, in his speech at the golden jubilee celebrations of the Canara Bank, Bangalore, voiced their doubts in strong, but accurate terms. Mr. Bhabha pointed out that a banker was in "honour bound to maintain the secrecy of his customer's business with him." This is the fundamental basis of banking. But the amended Income-Tax Act has threatened that foundation. The law compels the banks to divulge the secrets "under certain circumstances" which procedure, in Mr. Bhabha's opinion, was tantamount to "spying indirectly on the customer's business transactions". It is a strong charge, but is entirely understandable when it is considered that the amended Act is not only a serious threat to banking, but can spell danger to the democratic liberties of citizens as well. This is one of the many complaints which Mr. Bhabha had against the undue restrictions and controls that are at present being imposed on banking enterprise in this country. The nationalisation of the Imperial Bank was a rude shock from which the industry has hardly recovered. And now with so many of the new restrictive laws coming along, the outlook for the healthy development of banking in India is extremely obscure. The Government. Mr. Bhabha said, is motivated by political reasons in extending its control over the banks, and this can only serve to arrest their healthy and sound growth.

The Lausanne National Fair.—This trade fair will be opening in Lausanne from 8th to 23rd September, 1956. Some 2,300 exhibitors will be displaying their products in the 22 halls of the Fair's premises, which cover more than 1,200,000 square feet and each year attract more than 800,000 visitors. The Lausanne Fair is basically national in character. It nevertheless practises a certain liberalism by inviting each year one foreign country to participate as its guest of honour. This year Canada will be exhibiting her main resources in an official pavilion, placed under the aegis of the Canadian Embassy in Berne and organised by the Government in Ottawa, more particularly the Ministry of Trade and Industry. Prospectus and identity cards can be obtained from the Swiss Trade Commissioner, Gresham Assurance House, Sir Phiroozshah Mehta Road, P. O. Box No. 102, Bombay 1.

Insuring Atomic Plant.—Lloyd's underwriters and members of the British Insurance Association have been asked to consider how far they can afford to go in underwriting risks relative to future atom power stations. This move follows a survey by a joint committee. The committee has recommended strongly in favour of insuring the British Central Electricity Authority's first nuclear power station as fully as possible. Visits were made to several establishments, including the atomic energy research establishment in Harwell and the industrial headquarters of the Atomic Energy Authority in Risley in Lancashire. The nuclear power station nearing completion in Calder Hall, in Cumberland, was also visited. The committee says that "atomic energy power stations under construction do not represent any catastrophic hazards about which British insurers need be unduly concerned." The report is a preliminary one which has been hastened in anticipation of enquiries. The recommendation that business should now be

accepted is based on a number of assurances from the Atomic Energy Authority. One is that anything in the nature of a nuclear explosion is impossible.

Two-Price Sales of Cotton Condemned.—The International Federation of Cotton and Allied Textile Industries met in Munich recently and considered a great many of the present unfavourable aspects of the world markets for raw cotton and cotton goods. Great concern was expressed about rumours that offers of Egyptian cotton had been made on Western European markets by representatives from Eastern European countries at considerable discounts under Alexandria prices. The uncertainty about the United States policy as regards prices and exports, it was pointed out, was affecting unfavourably the total consumption of cotton and prejudicing the trade position of raw cotton merchants, spinners and manufacturers. It was resolved that practices by the Governments of cotton-growing countries which, by limiting exports of raw cotton, by price control, by subsidies, or other artificial means, cause their raw cotton to be supplied below world prices to their own textile industries for export after manufacture, are prejudicial to good relations in world trade and justify the countries to which the exports are sent in taking measures to offset the special advantages enjoyed by the manufacturers concerned. What is required as soon as possible, the official statement says, is "a return to a realistic price level and the complete avoidance of any type of two-price system or other form of action which seriously jeopardises the operation of spot, c.i.f., and futures markets."

"Covering" Hire-Purchase Risks.—The U.K. insurance industry is nothing if it is not go-ahead and enterprising. It was natural that the vast growth of hire-purchase business would attract its interest. One company which specialises in this field has just brought out a new scheme which is meeting with great success in Britain. In effect it is offering to cover the dealers' risks. At present, the finance houses and industrial bankers who lend their money are covered and so are a small number of the actual customers, but most of the dealers, who are in the middle, are not. This accounts for one of the weakest points in the structure of hire-purchase debts. The average contract for a car or a refrigerator is between the customer and the finance company putting up the money. But the dealer who makes the original sale comes in indirectly. He is usually made responsible for the contract by the finance house (as a condition of their financing his sale). If the customer defaults on his payments to the finance house, they go straight to the dealer for the balance owing to them. He repossesses the car or whatever it is and may be able to recoup his loss by selling it, or again he may not, and several defaults could well put him out of business. The finance houses are usually protected against this and in any case they are stronger than the dealers. The new scheme is designed to cover this enormous contingent liability which the dealers are at present carrying. The finance houses are being offered an insurance policy to cover the dealers they are trading with. Under the policy a dealer who was forced by a defaulting customer to pay the outstanding balance on a hire-purchase contract would be able to claim back, through the finance company, any loss sustained (allowing for the resale of the repossessed goods if that is possible). Already one of the biggest of the finance houses has taken out this kind of policy and others are believed to be interested. There is no doubt that it is proving extremely popular with the dealers. One radio company, which does its own hire-purchase financing, sent out a circular recently to its 3,000 or so dealers, offering them cover if they wanted it. Acceptances have been flooding in since.

MORE EQUAL THAN THE OTHER

SOME years ago a fine clipper ship was lying in the London Docks, and the mate looking over the side noticed a dirty mud barge in rather close proximity to his newly-painted vessel. "Get out of that," he shouted to the man in the barge. "Are you the captain of that vessel?" retorted the bargee. "No; the Chief Officer," replied the irate mate. "Then send your Captain here," said the bargee. "I like to talk to my equals." We are reminded of this story by seeing it stated that the President of the United States has remonstrated with the President of the Venezuela Republic, and stated that his conduct in regard to the arrest of British officials has hampered the benevolent action of the United States. Evidently, the captain of the clipper ship did attend to the request of the captain of the mud barge.

"The well-known trade name 'Sirocco' has been synonymous with tea machinery for the proverbial three-score years and ten, and with fan engineering for over half a century. Coupled with the name of Davidson & Co., Ltd., Sirocco Engineering Works, Belfast, 'Sirocco' has become a hall-mark of quality throughout the world for the wide range of products manufactured by this old-established and progressive firm. There is a 'Sirocco' machine for every stage in the preparation of the tea leaf."

Without Prejudice

INTERPRETING THE WORKMEN'S
COMPENSATION ACTTHE LEGAL DEFINITION OF AN
"ACCIDENT"

(FROM OUR LEGAL CORRESPONDENT)

IT is the humble submission of the writer that with the possible exception of the Income-tax Acts, the Act most productive of misunderstanding, and consequently of litigation in India, and almost throughout the Commonwealth, is the Workmen's Compensation Act; and one remembers vividly many years ago that eminent jurist, Dr. Blake Odgers, K.C., in one of his lively lectures on commercial law, giving what he considered to be the reason for this. It was, said Dr. Odgers, because the Act was the work, unaided by any lawyer, of one business man, alert, intelligent, essentially practical, but without any knowledge of legal draftsmanship. The man was the Right Honourable Joseph Chamberlain, greater father of two great sons; and Brummagem Joe, as he was affectionately styled, is said to have marched down to the House, proudly flourishing his Bill, and in introducing the measure, claimed that from thenceforth all that the British workman had to do was to have his accident and receive his compensation. But what is an "accident"? Or, putting it more correctly in the words of the Act itself, what is "an accident arising out of and in the course of his employment?" Those twelve words collectively, and as to each separate word almost every single one of them, have since 1906 caused more litigation and confusion than any other phrase in the English language. The confusion and litigation

still exist and continue to increase. No one can define with any certainty what such an accident is, though throughout Britain no County Court Judge can open his monthly rota without dealing with one, or what is claimed to be one, and usually with several. What we can say with certainty is that the word has been completely distorted, by generations of learned judges, out of its plain dictionary colloquial grammatical meaning in favour of the workman. Indeed you may say with accuracy that there need be nothing accidental about an accident. There need be nothing in the nature of chance about it, nothing unexpectedly fortuitous, nothing constituting an event without apparent cause, none, in short, of those elements which you may wrongly think are essential to the meaning and nature of the word "accident". For this now irremediable state of things, we are indebted, in order of demerit, to: (1) the great Joe himself, (2) Lord Halsbury and his *Laws of England* and (3) the late Judge Ruegg, author of the first authoritative commentary on and exposition of the Act. These three great men were followed by successive learned judges who, more or less reluctantly, felt compelled to perch themselves on the rickety bandwagon, so started us on the slippery slope which has landed us in a morass of words which have entirely lost their original meaning, but the muddled interpretation of which, in the form of judicial decisions, modern judges today have no alternative but to follow.

For example, let us say that in your walks abroad in conditions and in a temperature to which thousands of your fellow pedestrians are also subject, you sustain a heat stroke. Can you correctly describe that as an accident? Or is it not merely a condition of being ill, a sickness, an illness with nothing accidental about it arising from a clear and apparent cause, the heat of the sun?

In the latest case on the subject, one Joaquim Fernandez was in the employment of B. P. (India) Ltd., Bombay, as a scullion on the s.s. *British Chemist*. His duties were: (1) to wash the dishes, utensils and crockery; (2) to convey food from the kitchen to the pantry; and (3) to assist in serving morning tea to the officers in their cabins. While he was performing these duties on a day in late July when the ship was near Bahrain, he suffered from a heat stroke and collapsed. The atmospheric temperature on that day could not be said to be excessive. It was 101 degrees. But Fernandez went into a coma. His temperature rose to 110 degrees. He was removed to the ice room, artificial respiration was tried, but he died. The applicant's mother's contention was that the heat stroke which resulted in the death of her son occurred when he was "in the course of his employment," and it arose "out of the said employment," and that therefore the employers were liable to pay compensation under the Workmen's Compensation Act.

We will stop here for a moment while you, with an average knowledge of the English language, the meaning and interpretation thereof, and the ordinary equipment of commonsense will consider these three requisites, every one of which must exist before a claim can arise: (1) accident; (2) in the course of his employment; and (3) arising out of his employment. You may think, unaided by any judicial precedents, that two of these requisites did not exist, and one of them only was present, and therefore the claim must fail.

(1) Was it an accident? You will say (unless you are a lawyer or insurance expert) "no". It was an illness, an ordinary visitation of sickness, occasioned by a definite ascertainable cause, the very reverse of an accident. (2) Did it occur "in the course of" his employment? Yes, undoubtedly. (3) Did it "arise out of his employment"? You will say "no" to that one too, one thinks. The heat stroke might have occurred while the man was playing deck tennis. It was an ordinary event such as everyone working or existing in a temperature of 101 degrees, including the nine officers and 47 other members of the crew, had to risk, in greater or less degree, some, e.g., the men in the engine room, more than others.

That was the view taken by the learned Commissioner for Workmen's Compensation. He held that there was no evidence to show that the work of the deceased scullion exposed him to special risk of heat stroke. His Honour held also that the man worked under cover, that he was not exposed to the rays of the sun, or the heat of the engine room or the heat of the kitchen, and that the character of his employment "was not such as to create or intensify the risks that arise from extraordinary natural causes." He came to the conclusion that the employment of the deceased did not expose him "to some peculiar or extraordinary danger," and therefore it could not be said that he died of an injury by accident. In his view, "the death of the deceased was not due to injury by accident arising out of and in the course of his employment." The learned arbitrator accepted the employers' contention that the atmospheric temperature on that day being 101 degrees, this could not be called an excessively high temperature, that the duties of the scullion involved only occasional visits to the kitchen of short duration, and that in those circumstances it could not be said that the deceased was exposed to any peril in the course of his employment, as a result of which he suffered from heat stroke and died. On the other hand, the heat stroke might have been the result of the general weather conditions to which everybody on the ship was subject alike. Accordingly the mother's application was dismissed. She appealed to the High Court.

You may agree with the writer that His Honour's view is absolutely sound, regarded as plain commonsense. Nevertheless, regarded as law it is at least some 40 years out of date. As long ago as 1917, Lord Shaw in the House of Lords (*Simpson v Sinclair*) coined the dangerous phrase that we have to apply "the broad words of the statute," whereas one would have thought that to apply the exact words would be more appropriate. Some years later, Lord Halsbury's *Laws of England* went one better on the "broad" way which leadeth to destruction of clear logical thinking and interpretation, by coining the expression "locality risk" under which we get the rule—upon which, never having been able to understand the same, we will not dilate—that where the injury is due to a locality risk, the fact that the risk itself arose from the operation of a natural force is immaterial and it is not necessary to prove special exposure to such risks. In the course of his duty, the dead man had to visit on occasions the ice room, to take food from cold storage and return with it to the temperature outside, thus exposing himself to sudden variations of temperature. For that matter, so did the ship's engineers when they came into and out of the engine room, the skipper when he left the bridge for the coolness of his cabin, every member of the crew in greater or less degree, and you and I every day when we emerge from an air-conditioned office into the outer air. The High Court held, and on the long-established authorities there seems little doubt that it was a sound decision, that this sudden exposure to varying degrees of temperature constituted a "locality risk," and that the injury (a heat stroke) was caused by "accident arising out of and in the course of" the dead man's employment. The mother's appeal was allowed with costs.

[Mrs. Santan Fernandez v. B. P. (India) Ltd., Bombay, 11. L.L.J. (July) 1956.]

A DITCHER'S DIARY

daily as its inability to sustain the enthusiasm of those it already has. What free enterprise in India needs every bit as much as the trust of the people is the constant renewal of its faith in itself.

While I am on the subject of free enterprise and how it serves free men it will not be out of place to quote an outstanding example. The other day, a copy of the latest annual report of Tata Industries' Department of Industrial Health appeared on my desk and its perusal has left me impressed by, among other things, the extent of the interest which a privately-owned group—though admittedly a big one—is capable of showing in the welfare of its workers. Of course, welfare pays. But not necessarily in full to those who have sponsored it, and that is often used as an excuse for leaving it to the other fellow or going in for as little as public opinion permits one to get away with. The report outlines the 1955 experience in five of Tata's factories of an integrated programme of medical aid, environmental hygiene, mental hygiene, welfare activities and research. I especially enjoyed reading the section dealing with mental hygiene—a term suggesting the "brain-washing" indulged in by some countries which do not believe in private enterprise, but in fact meaning nothing of the kind. The value of such a study to industry generally I found summed up in the words quoted from F. J. Roethlisberger's *Management and Morale*: "output is a form of social behaviour (and).....material goods, output, wages, hours of work and so on.....must be interpreted as carriers of social value." Does that not explain why some nations or communities are able to perform miracles of progress while others, often blessed with better initial advantages, merely stagnate? The mental side of industry is fast emerging as the most important one of all. A man's peptic ulcer may cause his absence from work. But what causes his peptic ulcer? The answer may be nothing more than his dislike for the manager he has to work under. If he is moved to another department his ulcer will go, his absenteeism end and his output double—it can be as simple as that. The trouble is, as the report points out, these "industrial neuroses" are hard to diagnose and almost impossible for the patient himself to recognise, and if told about, to accept. The easy way is to brand him as a malingerer, so making a bad situation worse and increasing the loss all round. In the report's concluding observations I came across a rather sobering thought for the future. It refers to automation which "replaces not only the worker, but also work, and work alone can feed man's body, mind and spirit". I may be wrong, but I thought machines changed only the form of work, without eliminating it altogether. I must think some more about the problem. But in the meantime I feel indebted to Tata's for suggesting it to me. They did not have to, of course; but contrary to some ideas abroad in India today, free enterprise is capable of a higher social aim than that of lining the pockets of its proprietors.

It was a good thing that the Tilak centenary was celebrated earlier this week in a fitting manner. Great man that Lokamanya Bal Gangadhar Tilak was, it is the first time that official note has been taken of his contribution to the country by issuing a new series of stamps and declaring his birthday a holiday. He was the first

all-India leader to infuse a new revolutionary urge into the then moderate Congress, and yet it must be said to his abiding credit that he never countenanced violence as a political method. Historically, therefore, he was a link between his compatriot, the late G. K. Gokhale and Mahatma Gandhi. It is a true measure of his patriotism that although, like President Masaryk of Czechoslovakia, he was made primarily to shine in other spheres, he was drawn into his vortex of politics, like that great man again, from an overwhelming sense of personal responsibility. In his tribute to Tilak, Dr. Radhakrishnan has quoted an incident which lights up a side of his greatness. When once asked what portfolio he would like to hold under *swaraj*, Tilak replied quite characteristically, "Under *swaraj*, I will become a Professor of Mathematics...I detest politics...I still want to write a book on differential calculus". I wonder how many among India's present-day leaders would think of a reply like this if asked a similar question. As for the self-sacrifice of one of the most important of them, the Union Finance Minister, Mr. C. D. Deshmukh, another Maharashtrian by the way, it does not seem to me to resemble in the least Tilak's attitude of self-denial. That old leader always took an all-India view of things, whereas Mr. Deshmukh, apparently, thinks that a part is more than the whole. He knows too, if anyone does, the country's appalling lack of talent and that the second plan will miss him.

The poor and the backward of India stand to lose a great deal if the recommendations of the Christian Missionary Activities Inquiry Committee of the Madhya Pradesh Government are ever implemented. So will this country's well-deserved reputation for tolerant commonsense in religious matters. None but the more fanatical Christians—and there are probably more of those than in most religions—would excuse political interference. I personally doubt that there is much of it, whatever the Madhya Pradesh Government seems to think. As for proselytisation, a man is bound to develop an interest in a religion whose representatives help him when he is in trouble, treat him and his family when they are sick, give his children schooling and help his wife supplement the family income with her needle. If it is this kind of attraction to Christianity which the Madhya Pradesh Government objects to, then it must condemn all Christian missions however financed. Such a step would, of course, be neither humane nor expedient without some effort to replace the good work they are doing. I cannot myself see how the country suffers politically by permitting these activities; unrelieved poverty, ignorance and disease are surely much greater menaces to stable government. There is no denying that there are opportunities for the pursuit of what the Committee calls "extra-religious ends". But to let suspicion fall on the entire missionary fraternity rather than name the guilty parties is not only unjust, but as we saw the other day from the words of Mr. W. X. Mascarenhas, Chief Executive Engineer of the Bombay Government, and Mr. N. C. Chatterjee, President of the All-India Hindu Mahasabha, can be positively dangerous. That is why the advice of Cardinal Gracias, that these allegations "must be proved", seems such a fair solution. Religious intolerance is growing in some parts of the sub-continent; it would be a pity if it were given official support in India. Besides, the poor, the sick, the aged and the outcast need their missionaries.

Company Meeting

DALMIA CEMENT (Bharat) LIMITED

MR. J. DALMIA'S REVIEW

Speech of the Chairman, Mr. J. Dalmia, delivered at the Fourth Annual General Meeting of the Company, held on Friday, the 20th July, 1956, at the Registered Office of the Company at Dalmiapuram (Madras).

Gentlemen, I have great pleasure in meeting you and welcoming you to the Fourth Annual General Meeting of your Company. The Audited Accounts for the year 1955 along with the Directors' Report thereon have been in your hands for some time. With your permission I shall take them as read.

I hope you are satisfied with the results of the working of your Company for the year 1955 which have been quite good and compare favourably with others. They have been due to the vigilant care of your Managing Agents, the able guidance, supervision and control of your Directors and the co-operation of the Officers, who have been working as a team and not least to the reasonably peaceful atmosphere maintained by all the employees and workers.

In their Report the Directors have recommended that those ordinary and deferred shareholders who so desire may be given ordinary shares of Orissa Cement Limited at par (which are quoted in the market at premium) in lieu of the dividend for the accounting year 1955 up to the extent of 75% of their ordinary and deferred dividend. The preference dividend was proposed to be excluded from the option as the preference shareholders are entitled to only fixed cumulative dividend.

Certain Preference Shareholders objected to the exclusion and threatened legal proceedings. The matter was therefore placed before legal advisers who have advised against giving the shares in lieu of the dividend. I therefore regret that it has been decided by the Directors to request this Meeting not to take into consideration the recommendation of the Directors with regard to payment of the dividend in SPECIE. I apologise on behalf of the Board to those who have sent in their option forms asking for shares in lieu of the dividend, for the inconvenience and the disappointment.

To overcome the difficulty arising out of the circumstances, I suggest to the Meeting that the dividend

recommended by the Directors in respect of ordinary and deferred shares may be approved and declared by the members as interim dividend payable fully in cash for the accounting year 1955 for the time being and the balance surplus may be left unallocated for the present. The Board of Directors will consult the Stock Exchanges where these shares are quoted and recommend to declare some further dividend if deemed desirable and/or necessary. Allocation of the surplus will also be decided at that time. If any further dividend is recommended and declared, the same would be payable to only those registered shareholders of the Company whose names appear in the Register of Members on today's date.

Production Target

You must have learnt from the newspapers, that the target of Cement production is being further raised for the Second Five Year Plan from 125 lakh tons to 200 lakh tons per year, to avoid the scarcity already felt on account of the increased demand for various development works and the people getting more and more cement-minded. To meet the immediate needs, the Government is importing good quantity of cement from foreign countries. Foreign cement is very costly. But to do justice to the common man and the ordinary consumer, who cannot obtain low-cost indigenous cement, the Government had decided to pool together high-cost imported and low-cost indigenous cement and distribute it at an equalised price at all railheads through the State Trading Corporation established by the Government and the existing channels of distributors and stockists. These measures have necessitated a slight increase in the price of cement. The State Trading Corporation has introduced rationalisation in movement of cement. All foreign cement will be mostly consumed at the ports and indigenous cement will be supplied to the consuming centres as far as possible from the nearest source of supply.

The Tariff Commission, while submitting its report to the Government in the year 1953 for revision of the price of cement, recommended, after thorough investigation, the desirability of equating the high and low cost cement of new and old factories respectively and also rationalising the movement of cement in order to reduce the strain on rail transport. But the Government did not see its way to accept that

recommendation at that time. Your Directors too have been impressing upon the Government since the National Government took over the reins, when late Dr. Shyama Prasad Mukherjee was in charge of the Ministry of Industry, the desirability of rationalising the transport of cement and equalising the price of cement throughout India or fix zonal prices. But nothing could be done as the industry was a house divided within itself. Even now when the Cement industry is a highly organised one with centralised direction, it is unable to form an Association of its own to represent and discuss matters of common interest and solve problems which affect all equally. All efforts to sit together to settle common questions have failed so far. That is why the Government has to introduce State Trading to achieve the object. If the industry continues to be incapable of union, sacrificing individual interest for the common interest of the industry and the country, I am afraid, the Government may have to interfere much more than they are doing today.

Expansion

The Cement industry must realise the great opportunities it has for expanding itself and increasing its service to the country. The cement production in the country during the year 1955 has been about 45 lakhs tons. The present annual installed capacity which may be put at about 50 lakhs tons taking into account the Units which have gone into production by the middle of the year 1956 will be increased by the end of 1956 to about 63 lakhs tons. But the total production of cement during the year 1956 is expected to be near about or little more than 50 lakhs tons. During the year 1957 the capacity of units expected to go into production would be about 4 to 5 lakhs tons. By the end of 1957 the annual installed capacity of the cement industry in the country is expected to be about 67 to 68 lakhs tons and the production of cement in 1957 is likely to be near about 62 to 63 lakhs tons. The benefits of such increase cannot be reaped in full unless the distribution has a high degree of rationalisation and the efficiency of the transport system is maintained at a high pitch.

A good deal of development has taken place in the country as a result of First Five Year planning. And a good deal more is envisaged for the next five years. The success of the second five year plan would be more assured and more impressive but for the differences on States Reorganisation which have shaken the solidarity of the country and tried the wisdom and patriotism of the people and the leaders. Let us pray that good sense will prevail and we will continue to make more and more progress casting aside the petty-mindedness of provincialism and making ourselves so strong that no force in the world will be able to divide us.

With your permission now, I beg to move that the agenda of the meeting be taken up serially for consideration, discussion and decisions as the members consider fit.

Finance in India and Abroad

THE CALCUTTA MONEY MARKET

FUNDS EASIER ALL-ROUND

Wednesday, 25th July.

DEMAND in the money market has slackened during the past week. The main reason has been the return of funds from the sugar industry which is now taking place. The requirements on account of both late and tea have also been easier, while funds continue to return from upcountry areas. The closing of the Government's loan issue may be partly responsible for this week's easiness. The interbank market is steady, and, at the unchanged call rate of 3½ percent, all borrowers appear to be satisfied.

There has been very little activity in the bill market in the past week due partly to the incidence of two holidays during the period. Only a few scattered tea and gunny bills have come to hand. Remittance has been poor. Sterling is unchanged, and the dollar quotation has remained at Rs. 47½.

Silver was quiet on profit-taking and declined from the previous week's level of Rs. 172-4 to Rs. 170-2, quoted today. The rate for forward delivery was quoted at Rs. 168-12. The London price was unchanged at 78½d. The price of foreign silver in New York was the same at 90½ cents.

Gold ruled firm on demand following marriage ceremonies, and the price advanced from Rs. 102-6 to Rs. 102-15. The sovereign at Rs. 66-8 showed a gain of 4 annas.

During the week ended 20th July, Government of India Treasury Bills for Rs. 36,47,50,000 were sold in favour of the Reserve Bank.

Declines of Rs. 18.75 crores and Rs. 14.58 crores in the total note issue and notes in circulation to Rs. 1,485.21 crores and Rs. 1,460.01 crores were outstanding features of the return of the Reserve Bank of India for the week ended 20th July, 1956. The currency contraction was covered by reducing foreign securities and rupee securities by Rs. 10 crores each to Rs. 616.67 crores and Rs. 718.56 crores respectively. In the Banking Department, balances held abroad increased by Rs. 6.32 crores to Rs. 47.95 crores probably as a result. Deposits showed an all round increase. Deposits of the Government of India and investments rose by Rs. 31.39 crores and Rs. 21.88 crores to Rs. 23.43 crores and Rs. 59.18 crores due to the subscriptions to the Central loan. Other Government accounts improved by Rs. 6.75 crores to Rs. 13.68 crores and balances of commercial banks were Rs. 36 lakhs higher at Rs. 53.01 crores. Other loans and advances increased from Rs. 55.49 crores to Rs. 71.62 crores, of which advances to scheduled banks against usance bills amounted to Rs. 38.29 crores against Rs. 33.96 crores. These advances aggregated Rs. 198.13 crores since 1st January, 1956. Ways and means advances to Governments stood at Rs. 4.63 crores (Rs. 3.31 crores).

The return of the State Bank of India for the week ended 13th July, 1956, shows a rise of Rs. 31 lakhs in total deposits to Rs. 223.16 crores. Investments in Government securities are down by Rs. 6 lakhs to Rs. 89.38 crores, while other authorised investments are up by Rs. 17 lakhs to Rs. 10.90 crores. Advances including loans, cash credits and overdrafts, and bills discounted and purchased, have decreased by Rs. 3.05 crores to aggregate Rs. 131.03 crores. Cash and balances are, in consequence, shown at Rs. 18.35 crores or Rs. 2.54 crores higher.

The statement of the position of scheduled banks for the week ended 13th July, 1956, discloses Demand and Time liabilities at Rs. 644.30 crores (Rs. 13.13 crores on accounts of borrowings from banks) and Rs. 456.43 crores (Rs. 3.22 crores) compared with Rs. 639.35 crores (Rs. 9.95 crores) and Rs. 454.97 crores (Rs. 3.22 crores) respectively in the previous week. Cash has decreased by Rs. 21 lakhs to Rs. 37.26 crores, while balances with the Reserve Bank have increased by Rs. 3 lakhs to Rs. 50.01 crores. There is a fall of Rs. 92 lakhs in investments to Rs. 345.98 crores. Advances and bills discounted at Rs. 747.96 crores show a drop of Rs. 8.48 crores. The ratios to total liabilities of cash and balances, and of advances and discounts, are, in consequence, shown at 7.9 percent and 68.0 percent, against 8.0 percent and 69.1 percent.

Provisional figures of foreign sea and airborne trade of India on private and Government accounts during June 1956, according to data so far available in the Department of Commercial Intelligence and Statistics, Calcutta, are as follows: Merchandise, excluding transit trade of Pakistan but including that of other land frontier countries: Exports Rs. 4,481 lakhs, re-exports Rs. 102 lakhs (transit trade Rs. 1 lakh); Imports Rs. 6,317 lakhs (transit trade Rs. 4 lakhs); Total trade Rs. 10,900 lakhs. Treasure: Exports of currency notes Rs. 9 lakhs; others nil. Imports of gold Rs. 3 lakhs; currency notes Rs. 181 lakhs; others nil. Balance of Trade: The merchandise import figures are exclusive of the value of certain consignments of Government stores awaiting adjustment. Subject to this deficiency in import figures and to the exclusion of figures for transit trade the total value of exports (including re-exports) of merchandise, gold and silver fell short of imports by Rs. 1,734 lakhs.

LLOYDS BANK LIMITED

LONDON FINANCIAL LETTER
GREATER FLEXIBILITY FOR
EXCHANGE RATES

By Air Mail.

THE City of London was fully in agreement with the Chancellor of the Exchequer when he rejected the proposal of the West German Minister of Economic Affairs that European exchange rates should be discussed at the meeting of the O.E.E.C. in Paris in mid-July. Britain has no intention of allowing sterling to drift into a *de facto* devaluation (however moderate), which was the implication of Dr. Erhard's suggestion that rates should be flexible within 5 percent on either side of parity. Nothing could be more damaging to Britain's new policy of internal price stability than a cheapening of sterling. The British authorities are not equally hostile to the idea of a formal revaluation of the Deutschmark—contrasted with the informal raising of its value that was also implicit in Dr. Erhard's suggestion. There is certainly some truth in the idea that relative price changes in recent years have put the European currencies out of alignment, and Western Germany's creditor position is sufficient evidence that the mark is undervalued. On the other hand, the British authorities, though hardly in a position to criticise a policy that has prevented prices in another country from rising, feel that Western Germany's deflation has been carried too far, and that the freeing of the latter's imports has not been enough to constitute a "good-creditor policy". They feel, in short, that it is Western Germany, not the rest of Europe, that has been out of step, and that it is she who should adjust herself.

To say that sterling would immediately depreciate if permitted to do so is to present a one-

sided idea of the currency's position. In terms of European currencies, it has lately been artificially depressed by the strong flow of money into Western Germany, and by deferment of this country's purchases of goods, in expectation of a revaluation of the mark. (Even against currencies other than the mark, this position has been somewhat adverse effect on sterling, as currencies which were as cheap as the limits permitted in terms of marks were forced to rise when the mark rose.) In terms of the U.S. dollar—which is still the basic standard of comparison—sterling appears to be in approximate equilibrium, taking one season with another. There is no good reason to disturb the existing parities or margins, and Mr. Macmillan performed a useful service in rejecting the ideas of revision so promptly.

Pointers in Bank Statements

The half-yearly statements of the London clearing banks have revived doubts whether the credit squeeze is still working effectively. The aggregate of loans at the half-year, £1,975 million, was £211 million less than a year earlier, but £124 million more than six months earlier; so, on paper, the progress of restriction in the second half of last year was reversed in the first half of this year. But this is a superficial interpretation of the figures. It is already known that the nationalised industries were largely responsible for the growth of advances; seasonal demands, especially by agriculture, are heavy in the first half-year; the expansion of exports requires more finance. A policy that forced credit to contract continuously would be dangerously inflexible. Nonetheless, the apparent easing of the banks' restraints has caused some anxious questioning, and various proposals have been made for the modification of the policy. They focus generally on the banks' liquidity. It is argued that the directive to the banks a year ago to make deliberate cuts in their advances imposed on these institutions a responsibility which is not proper to banking: they had to select among their customers those whose activities were most useful to the nation's recovery. If, however, the banks' liquidity were curtailed, so that their liquidity ratios declined to the conventional limit of 30 percent of deposits, they would restrict, or cut back, lending as an act of normal banking practice. Moreover, "open-market operations" in the money market would be much more effective if the banks' liquidity was tight. One suggested method of tightening the position is a short-dated bond that the banks could be "invited" to take in exchange for Treasury bills—for such a bond would not, as Treasury bills, qualify as a liquid asset. Another sugges-

tion is that the liquidity ratio itself should be obligatory and variable. The Chancellor considered, and temporarily rejected, this idea some months ago, but the raising of the banks' ratios to levels well above 30 percent is interpreted in some quarters as a precaution against a compulsory rise.

Government Stocks

The long-awaited funding operation to deal with the War Stock due for repayment in mid-August has been undertaken this month. It is a straight offer of conversion of the £224 million of maturing stock, with no accompanying cash issue to provide funds for repayment of the unconverted portion. As Government departments had previously acquired a large proportion of the maturing stock, and would, of course, convert automatically, and as the banks were liquid enough to be tempted to take up a six-year bond rather than take cash, the operation could not be an obvious failure. Nor, however, could it cut a slice off the floating debt: on the contrary, it adds to that debt, as cash must be provided by means of Treasury bills for any unconverted stock. Indeed, those who convert receive a cash payment of 1½ percent as an inducement to take a 4½ percent six-year stock at par. The merits and defects of this operation will become apparent only gradually, as it works out its effects in the monetary system. But works out to have the operation (the largest ever, apart from the £2,000 million conversion of 5 percent War Loan in 1932) completed will mean that the authorities and the banks can see their way more clearly. Some observers believe that the banks and other institutional investors will resume steady investment in the gilt-edged market—though on a modest scale at first—to take advantage of exceptionally favourable yields, around 5 percent, obtainable on long-dated securities. The reduction of the banks' investment portfolios in the past year—the end-June figure of £1,958 million was £58 million less than six months earlier, £41 million less than a year earlier—was a precaution against a further rise in Bank rate and a fall in gilt-edged prices; whereas the deduction before a year ago reflected the banks' efforts to provide liquid resources for lending—until the authorities explained that this evasion of the credit-squeeze was not permissible. Few people believe now that bank rate will be further raised, or that for any other reason values of Government securities will decline appreciably further. In their present state, the banks have no need to worry about their liquidity. So the way seems to be clear for some institutional buying of gilt-edged stocks.

Stocks and Shares

SHORT TRADING WEEK ENDS ON DULL NOTE

CONSIDERABLE CONTRACTION IN TURNOVER

Wednesday Evening.

IT has been another week of stagnation in the Calcutta share market. Prices have remained generally unchanged or have tended to sink lower, while turnover has been negligible throughout the market. Indian Irons have declined gradually over the period from Rs. 35-12 to today's closing quotation of Rs. 35-9. There has been enquiry for National Carbon and Metal Box, both shares in the miscellaneous section, but otherwise this week's limited dealings have been featureless. The gilt-edged section has also been dull. The present undertone is distinctly weak.

The continued inactivity in the Calcutta market, in contrast with the fair support which is still enjoyed in Bombay, is drawing comments from various quarters. The general lack of investor support is being attributed partly to the fact that Calcutta has not yet had the good fortune to be favoured with the attentions of the nationalised-insurance investors and partly to the doubts which are being felt over the prospects facing the jute and coal industries. The lack of speculative interest may have some connection with the police raids which have been made lately on the homes of certain prominent operators and which, so it is rumoured, are still going on.

Details of the week's trading follow.

Business in the gilt-edged section was at a low ebb and sellers predominated except in the case of short-dated issues. Offerings, however, were not on a large scale. Three percent Conversion Loan 1986 continued its downward trend and closed at Rs. 76-9 sellers, while 3½ Non-terminable Loan was quoted nominally at Rs. 77. In short-dated loans, 3½ 1957 was steady at Rs. 99-13 while 3½ 1958 had buyers at Rs. 99-10. Among medium-dated loans 3½ 1959-61 was on offer at Rs. 98-2 while 3½ 1963-65 and 1964 were both traded at around Rs. 95-2; 2½ 1961 had buyers at around Rs. 93-9 while 2½ 1960 was quoted at Rs. 96-6 ex-voucher. In National Plan issues, 3½ 1961 eased by one anna to Rs. 99-8 while 3½ 1964 was also taken lower to Rs. 98-11 as was 3½ 1965 at Rs. 98-10. Long-dated loans were unchanged with 3½ 1966-68 at Rs. 93-3 and 3½ 1970-75 at Rs. 90-6. The three new loans had sellers at issue prices.

In provincials, there was a small enquiry for 4½ issues but very little business was reported in the absence of sellers. Four percent U.P. 1967 was in demand at Rs. 99-13 while 4½ Madras 1967 was traded at the same rate. Four percent Bihar 1963 was asked for at Rs. 100-2 without attracting sellers.

Very little business was reported in preference shares due to the fact that the market was only open for three days during the period under review, namely 20th, 24th and 25th July. In jute, Anglo India were reported at Rs. 109 and Hukumchand were offered at Rs. 108-8. Among miscellaneous issues, Bharat Collieries were placed at Rs. 55-4 and Burrakur 1st at Rs. 111. Calcutta Electric changed hands at Rs. 11-7 and a small lot of Carew at Rs. 100. Dalmia Cement Rs. 100 paid-up shares were marked at Rs. 100-4 and a small lot of Godfrey Phillips at Rs. 68-4. Martin Burn were crossed at Rs. 105 and New Victoria were taken at Rs. 5-1. Rohtas Industries "B" were crossed at Rs. 64-6, Titagur Paper 1st were taken at Rs. 145 and the 2nd at Rs. 95.

In the banking section, Bank of Bikaner came to hand at Rs. 19 and both Punjab National and United Commercial improved to Rs. 60-4 and Rs. 55-4 respectively. United Bank of India "D" shares came to hand at Rs. 4-7.

Among railways, only one share was mentioned, namely Dehri Rohtas at Rs. 13-10.

In cotton, there were few price changes and business was on a small scale. Among the shares which changed hands were Cawnpore Textiles at Rs. 9, Elgin Mills at Rs. 18-8, Kesoram at Rs. 18-2 and New Victoria at Rs. 2-10. Swadeshi Cotton Preferred Ordinary reported business at Rs. 11-12.

Although business in coal shares was of a retail nature, prices kept fairly steady and in fact some shares moved up. Amalgamated rose from Rs. 22-8 to Rs. 23 and Bengal from Rs. 535 to Rs. 538. Burrakur were depressed at Rs. 13-4. East Indian were done at Rs. 30-10 and Karanpura Collieries met with some enquiry at Rs. 116, as did Ranee-gummet at Rs. 13-2. Borrea were taken at Rs. 23.

A few bargain hunters were attracted by the low level of prices in the jute section and, as a result, a few scrip recorded gains as will be seen from the following table of prices:

	Opening 20-7-56	Closing 26-7-56
Anglo India	158	165
Budge Budge	123	124
Barnagore	128	130
Chandany	152	154
Ganges	62	64
Howrah	21 2	21 12
National	23 1	23 2
Samnugger	9 8	10

The outstanding feature was Union which rose

smartly from Rs. 126 to Rs. 140 on interested buying.

Only one share was dealt in in the electric supply section, namely, Calcutta Electric at Rs. 13-8.

Sugar shares spent a dull week, although prices showed little variation. Belsund were marked at Rs. 11-14, Carew at Rs. 9-2 and there was a small enquiry for Cawnpore at Rs. 19-4. Dyer Meakin Breweries were crossed at Rs. 5-14, Ramnugger Cane were easier at Rs. 28 and Shree Krishna Gyanoday were dealt in freely at around Rs. 13-4.

There were no features in the engineering section and prices more or less stagnated at around last week's levels. Braithwaite were subbed at Rs. 27-13 as were Burn & Co. at Rs. 355 and Indian Standard Wagon at Rs. 178. Jessops were easier at Rs. 35-8 while Richardson & Cruddas were unchanged at Rs. 26. Textile Machinery were marked down to Rs. 22-2 and Marshalls were offered at Rs. 6. Business in Indian Iron and Steel shares was on a much reduced scale with the price fluctuating narrowly around Rs. 35-8; tonight's closing quotation is Rs. 35-9.

Paper shares were depressed, particularly Titagur, which were marked down to Rs. 40-2. Orient Paper were quoted at Rs. 38-4 while Indian Paper Pulp were fairly steady around Rs. 25-6. Bengal Paper were a nominal market at Rs. 121.

In cement, Assam Bengal were offered at Rs. 7-9 without attracting buyers while both Ashoka and Orissa were steady at Rs. 12-4 and Rs. 15-8. Sone Valley met with interested buying and improved further to Rs. 9-10. Dalmia Cement were unchanged at Rs. 15-14. In insurance, a small odd lot of New Asiatic changed hands at Rs. 3-8. In shipping, India Steamship were steady at Rs. 9-6 as were India General Navigation at around Rs. 110. Port Shipping were marked at Rs. 15-4 against a previous quotation of Rs. 15-7.

There was a sharp reduction in turnover in the miscellaneous section and prices on the whole tended to lower levels. Associated Hotels were marked at Rs. 7-8 and Aluminium Corporation were unchanged at Rs. 10-5. Angelo Brothers were easier at Rs. 22-2 while Balmer Lawrie were steady at Rs. 185. Britannia Biscuit recovered to Rs. 15-2

Communications by Standard

One of the largest telecommunication engineering organisations in the British Commonwealth Standard Telephones and Cables Limited is engaged in the research, development, manufacture and installation of all types of communication and control systems. Concerned with every aspect of telecommunication engineering, the Company is in an unrivalled position to undertake, within its own organisation, the co-ordinated systems-planning of complete communication projects involving inter-dependent systems of various types.

'Standard' productions include:—

- Telecommunication Line Transmission Equipment
- Radio Broadcasting Equipment
- Radio Communication Equipment
- Air Radio Navigational Aids
- Supervisory and Remote Control Systems
- Railway Communication Apparatus
- Railway Control Equipments
- Telephone Cable
- Sound-Reinforcement Systems
- Public and Private Telephone Systems

"Standard" telecommunication systems serve society on land, at sea, and in the air. In the realm of aviation, "Standard" radio equipment flies in many of the world's leading aircraft, including the Vickers Viscount illustrated above.

STOCK MARKETS FOLLOW WALL STREET TREND

U.K. MOTOR STRIKE DEPRESSES SENTIMENT

London, 25th July.
MOVEMENTS in the stock markets have continued to be dictated largely by events on Wall Street during the past week. News on the home front has been anything but encouraging and few people hold any hope of a relaxation of the credit squeeze in the near future. The new account which started last Wednesday promised brighter things, and with Wall Street in a buoyant mood, prices made substantial headway. However, the Wall Street advance came to a halt, and with American interest in U.K. industrialists subsiding, generally quieter conditions followed. Since then, sentiment has come under the influence of the strike at the British Motor Corporation factories. There has been a steady drift to lower levels, especially in shares with an American following. Imperial Chemicals have turned dull and British aluminium shares have lost a good deal of the ground gained earlier. A firm feature has been provided by de Havillands on reports of big American orders for the new Comet. There have been attempts to put gilt-edged prices on a better level and the success of the conversion offer was helpful, but the appearance of the £5 million Agricultural mortgage loan brought renewed dullness. Japanese bonds have continued to make headway with Germans joining in later. There has been little movement in rails. Interest in Kaffirs has ebbed, so prices have drifted lower, although at one time Free State Geduld were a firm market after the quarterly report. Dominion Reefs have picked up following the new uranium taxation ruling. There has been little to help coppers, and with the commodity continuing to ease, share prices have followed the trend despite bouts of strength on Wall Street. Bancrofts have been an active market, however, and reflected optimism over the forthcoming quarterly report. Although active conditions have continued in the oil share market, there has been a good deal of profit-taking and most prices are now well below their recent peaks. Rubbers have continued to enjoy a quiet demand on account of satisfactory dividend statements, but the overall trend of teas has been undecided.

The Money Market

There was a gradual tightening up of the credit situation on the London money market during the past week, marking the end of the easy-money phase which had obtained since the beginning of the half year. The week opened quite comfortably following the disbursement of money, but subsequently, with the preparation of mid-monthly balance sheets which called for withdrawal of funds, conditions became less comfortable and remained so for rest of the week. Borrowers had to pay more for their requirements with 4½ percent as the prevailing rate, while up to 4½ percent was conceded on occasions. The contraction in the supply of funds naturally affected demand for bills, and kept rates firm with October date at 4-20/32 percent and those maturing in late August at 4½ percent. In expectation that future monetary conditions would be more stringent, the discount houses lowered their tender bid for the week's offering of Treasury bills which resulted in the average rate coming out approximately at 1/32 percent higher. Applications for £270 million worth of 91-day bills totalled £418,395,000 and were allotted at the average rate of 100s 3.82d. Offerings this week comprise £260 million worth of 91-day bills. The Bank of England return for week ended 18th July showed that bankers' deposits were about £22 million lower at £207 mil-

lion, while notes in circulation were £18 million higher at around £1,940 million.

Activity on Wall Street

U.S. Government obligations eased during the past week. Part of the fall was ascribed to investors switching into newer higher-yielding corporates, including the \$250 million American Telephone and Telegraph offering placed on the market last week. Convertibles and high quality corporates were mixed. Trading in speculative rails was slow. In the foreign department, Australians accounted for a good part of the limited activity, with prices unchanged to a shade higher. Italians scored small gains on a modest volume, while German Nationals were mixed. Greeks advanced by fractions to a point. Japanese issues were steady in a small volume of business.

U.S. Federal Reserve Return

The U.S. Federal Reserve return for the week ended 18th July shows that gold stock rose by \$1 million to \$21,923 million. Foreign deposits fell by \$201 million to \$452 million, while the aggregate excess reserves of member banks rose by \$139 million to \$504 million. The daily average excess reserves of member banks fell by \$141 million to \$622 million, while their daily average borrowings fell by \$30 million to \$849 million. Business loans of the New York city banks fell by \$39 million to \$7,939 million.

Stock Market Prospects

The Investors' Chronicle market newsletter writes: "Gilt-edged securities appear to have formed a strong base along the June-July lows. They should now be able to respond to any demand. The main restraining influence is the possibility of domestic labour troubles. Gold shares, after pausing to consolidate, have ignored the past week's Johannesburg failure. Wall Street's rally on President Eisenhower's political return has been the main cause of the better tone on the London Stock Exchange. The undertone has been strengthened. Oils are buoyant, led by Shell. The strength of freight rates has caused a boomlet in shippings. Industrialists have behaved well, but there is no real steam and no sign yet of any major factor to galvanise the markets in the short run. The lead or a strong revival will probably come from the gilt-edged which would not need much to start rising. In recent years, many tea companies have considered it wise to revalue their estates, which, after many years of conservative financing, were standing in balance sheets at very low capitalisations. Sometimes these were followed by scrip issues. The Finlay group have revalued their estates, but they have made no scrip issues so far, and their reserves now stand very high. These revaluations may have been intended to guard against local interests. On current values of first-class tea estates, the present share prices leave large margins. The current prices of two Finlay companies are more than covered by their net liquid assets alone. While political uncertainties affect the value of Indian shares in foreign hands, there will always be a strong incentive for bids from local groups, particularly where the local buyer can offer well over the current share price and still get the plantation for virtually nothing. It is doubtful whether the British interests will really fight against attractive take-over offers."

Mixed Trend in Hongkong Gold

Trading in Hongkong gold showed a mixed trend during the past week. The week opened with easier prices, which then rallied, only to fall back again, but they ended slightly higher on balance. The market closely followed the tendency of sterling abroad. Carry-over charges were 168 cents in favour of sellers. This was also a factor for the bearish trend. The official offshore was 1,010 taels and unofficial 10,600 taels. There were no arrivals from Macao. Forward contracts were done at \$37.87.

Bombay

THE BASIC PROBLEMS OF VANASPATI PRODUCERS

PROSPECTS FOR GROUNDNUT CROP

(FROM OUR BOMBAY CORRESPONDENT)

THE vanaspati industry is maintaining the high level of production it achieved last year. In 1955, the all-India output amounted to 260,800 tons, a record figure for any year, and the first six months of the current year have shown an equally satisfactory level of production at 139,000 tons. There is, however, no certainty that the present production rate will continue during the remainder of the year. The record-breaking performance of last year was possible because of a combination of favourable circumstances. Weather conditions were unusually satisfactory. 13,548,000 acres were sown, yielding a bumper groundnut crop of 4,128,000 tons in terms of unshelled seeds. Groundnut prices steadily dropped, and this enabled the industry to reduce the price of vanaspati in an expanding market. In spite of the announcement of export quotas for the raw material, groundnut oil prices were maintained at a relatively low level, and adequate supplies were available.

These conditions have now changed. Because of the low price level at the end of last season, the acreage under groundnuts has decreased to 12,553,000 acres. Weather conditions too have been unfavourable. Late rains in Saurashtra, Khandesh and Hyderabad have affected the crop, and the output this season is estimated at approximately 3,804,000 tons. Uncertainty over the 1955-56 crop has led to wide fluctuations in the price of groundnut oil. In October 1955, oil was being quoted at Rs. 200 a ton, but then, because of a price rise in world markets and a comfortable supply position in a depressed market at home, the Government of India announced an export quota of 100,000 tons in terms of seeds and oils. This, together with the uncertainty over the new crop, acted as a spur and the local price of groundnut oil shot up to Rs. 1,550 a ton towards the end of May this year. Although the price has dropped somewhat since then in anticipation of the new crop and has recently averaged Rs. 1,400 a ton, it is not clear how the market will react when final reports are known. It is believed, however, that the price of groundnut oil will remain well above last year's level with a lesser quantity offered for sale.

Likely Fall in Production

In these circumstances, it is likely that the production of vanaspati will fall, and it is equally likely that the increased price of oil will be reflected in the price of the finished product. The fortunes of the vanaspati industry are, therefore, intimately linked with the state of agricultural prices in general. Such a dependence is not peculiar to the vanaspati industry alone. The sugar industry, for instance, is similarly placed for its cane supplies. The production of sugarcane depends on the prices of alternative crops. Again, the quantity of cane available to the factories for crushing depends on the relationship between the minimum price fixed for cane and the prevailing price of gur. The textile industry too leans heavily on the agricultural sector for raw cotton, and the same general uncertainties come into play. But there is a difference between the vanaspati industry and the other major industries that depend on agricultural production or their raw materials. No serious attempt has been made either to improve the quality of groundnut seed or to step up the yield per acre. There are no price safeguards and cultivation is largely a matter which rests with the agriculturist. No effort is made to link production with the needs of the industry. The vanaspati industry consumes approximately one-third of the oil produced in the country, and in normal circumstances, should act as a stabilising factor, but internal prices are often influenced by world markets and the export policy of the Government of India which, in this case, is governed more by the prospect of foreign exchange earnings than by the requirements of the home industry.

Excise Levy on Industry

In addition, the industry has other problems. For instance, it is required to pay an excise duty of Rs. 140 a ton on the finished product and it now seems that a further Rs. 70 a ton will have to be paid in excise on raw oil. Normally, industrial consumers of excisable products are exempt from the payment of such duty, but the vanaspati industry has been singled out for discriminatory treatment. Whether this new excise duty will be payable by vanaspati manufacturers or by oil crushers depends on the outcome of a legal action now pending before the Punjab High Court. Further discouraging features are the high incidence of octroi and terminal taxes and sales tax. In some instances, municipalities levy an octroi duty of 1 anna a lb. on vanaspati against 4 annas a Bengal maund of 82 lbs. on ghee. The same wide disparity exists in sales tax. Vanaspati is taxed at the rate of 1 anna in the rupee against half the amount on other oils.

There seems to be an unreasonable prejudice against the vanaspati industry. Perhaps the opposition is partly based on a preference for pure ghee. A chemical analysis claims that vanaspati is not in any manner inferior to ghee in terms of food value. The law compels vanaspati manufacturers to incorporate a prescribed quantity of vitamin A

so as to bring their product on par with ghee. The production of vanaspati can be strictly controlled from the point of view of quality, and periodic checks can ensure that the consumer is offered a standardised product with a constant food value. It is impossible similarly to control the quality of ghee. The preference for ghee assumes ridiculous proportions when comparative prices are considered. Most brands of vanaspati sell at an average price of 14 annas a lb. whereas the price of ghee in the Bombay market today stands at Rs. 3 a lb. and there is no guarantee that the ghee offered at this fantastic price is a pure or wholesome food product.

Nutritional Value

The vanaspati industry can play an important rôle in solving the nutritional problems of the country, and also in keeping the food bill low once the unwanted prejudice is removed. There is every reason to believe that further economies can be effected in the production of vanaspati if the Government takes a hand in organising the cultivation of groundnuts, and also affords some relief to the industry by reducing some of the taxes now levied. The other main objection to vanaspati arises from the mistaken notion that the organised industry adversely affects the interests of the milk producing section of the village community. The fact is that it is actually uneconomical for the village community to produce ghee. In Anand, Bombay's main milk producing centre, milk sells at a wholesale price of 3 annas a lb. Co-operative societies purchase all the milk tendered at this price. A little more than 16 lb. of milk are required to produce 1 lb. of ghee for which the producer gets well below Rs. 3. It is, therefore, more profitable to sell milk. It is precisely this fact which leads to the adulteration of ghee.

Surely in view of the acute shortage of milk and the low level of milk consumption in the country, it would be logical to discourage its uneconomical uses, particularly when a suitable substitute for ghee is available at an economic price. There is considerable scope too for increased production of cream and cheese which would be more remunerative than ghee to the small-scale producer. The vanaspati industry qualifies for sympathetic consideration on other grounds also. Last year, the industry earned Rs. 2 crores in terms of foreign exchange by exporting vanaspati to the Middle East. This was possible because Holland, the main exporting country, suddenly became uncompetitive. If the Indian industry is given adequate assistance, there is no reason why this market should not be permanently retained, and other markets developed at a time when the country

urgently needs to step up its exports. In any case it is far better to export an industrially finished product rather than the raw oil which is subject to violent price fluctuations and irregular demand.

DETAILS OF STEEL PLANTS BEING FINALISED

BHOOTHALINGAM TEAM VISITING LONDON

(FROM OUR NEW DELHI CORRESPONDENT)

Dusseldorf, 23rd July.

THE Secretary to the Iron and Steel Ministry, Mr. S. Bhoothalingam, has left for London to finalise the Indo-British deal for setting up a one-million ton steel plant at Durgapur, for which the Indian Steelworks Construction Company submitted tenders. Mr. Bhoothalingam was here for some weeks with his team of experts, which included a financial adviser and a steel consultant. During that time, he visited the works which are to assist in building the Indian Government's one-million ton steel plant in Rourkela. He also visited Austria to see the working of the L. D. process of steel-making, which will be used in the Rourkela plant, commissioned in partnership with the German combine of Krupp-Demag. Enquiries show that tentative decisions have been reached to accept the tenders of Guta Hoffnungs Hütte for a blast furnace, of Doctor Otto for coke oven batteries, and of Krupp, Demag Schloemann, Siemens and Sack for setting up a steel rolling mill. Tenders are being scrutinised for a steel melting shop and an electric plant. An early decision is expected. Considering its long experience, a tender from Krupp for a steel melting shop may be preferred, it is gathered.

Similar processing of the British tenders will be done while Mr. Bhoothalingam and his team of experts are in London. Mr. Bhoothalingam is expected to visit Russia next October in connection with the one million ton steel plant which is to be built in Bilal in collaboration with the Russian Government.

IMPORTS OF CEMENT

India has so far imported 13,300 tons of cement this year. Of this quantity, 10,300 tons have come from Rumania and the rest from Pakistan.

O.E.E.C. MEETINGS IN SESSION IN PARIS

FREE MARKET PROPOSAL FOR WESTERN EUROPE

(FROM OUR LONDON CORRESPONDENT)

THE Cabinet this week, although economic affairs must have figured on the agenda, has had to do without the guidance of Mr. Macmillan and Mr. Thorneycroft. The Chancellor of the Exchequer and the President of the Board of Trade have been tackling almost equally important problems at the meetings in Paris of the Council of Ministers to O.E.E.C. Ordinarily, this is a more or less routine meeting, but this year it has taken on an added importance because of Germany's anxiety to correct her over-creditor position in E.P.U., the pressure from the low-tariff countries to secure additional liberalisation of trade despite the objections of the high-tariff countries such as Britain, Western Germany and France, and finally, by the putting forward of a "free market" proposal for Western Europe which would extend the present iron and steel pool procedure to more or less all inter-European trade. Mr. Macmillan has already turned down a direct approach from the German Finance Minister for an exchange readjustment of the mark and the pound, and our Commonwealth commitments make acceptance of the other two ideas virtually impossible. But if the "free market" proposal were to founder merely on our refusal to participate, the repercussions might be most unfortunate. This week-end will produce details of how our representatives have overcome these difficulties, and at what cost. On the home front, little progress appears to have been made in finding a solution of the threat of a strike in the various factories of the British Motor Corporation, but it is to be noted that redundancies elsewhere in the motor industry are being dealt with on the basis of prior consultation. B.M.C., with declining export markets and large stocks available, might not look entirely askance at a short stoppage of work, but the effect on labour

generally and the Government's efforts to secure better understanding and closer co-operation in the wider economic interests of the country as a whole could be disastrous.

Business Stocks

The Board of Trade's enquiry into stocks and work in progress shows that their value at the end of March, 1956, was about 10 percent higher than a year before, partly because of higher prices. The index number is 117, against 106. During the first quarter of 1956, the stocks of manufacturing industry increased in value by 4 percent, compared with an average quarterly increase of about 3 percent in 1955. The Board of Trade points out that the rise was due largely to increases in stocks of finished goods and work in progress, particularly the former. The chief rise took place in the metal-using trades and the food, drink and tobacco group. Outside manufacturing industry, stocks of raw materials held by merchants and Government agencies dropped in the first quarter by nearly 10 percent (at constant prices), largely owing to a fall in importers' stocks of timber and sales from Government trading stocks of non-ferrous metals. The disposal of these stocks does not seem to have led to a corresponding increase in manufacturers' holdings.

It is interesting to compare this official statistical evidence of gradually falling raw material stocks with the latest quarterly report of the Purchasing Officers' Association, which reflects the day-to-day experience of buyers, mainly in the engineering field. The Association has not yet noticed any marked improvement in supplies, particularly in the mechanical and electrical industries. "In consequence, in spite of pressure from board rooms, inventories have not been cut down to any appreciable extent." And again: "The credit squeeze is having some effect but stocks as yet are only marginally affected. The unbalanced supply situation prevents an all-round clamping down on stock levels." Fear of shortages is apparently still dominating the attitude to the amount of stock it is necessary to hold.

First Quarter Expenditure

A heavy consumption of drink and of tobacco is the most notable feature of consumers' expenditure in this country in the first quarter of 1956. The figures are revalued at 1948 prices so as to eliminate the monetary inflation. Consumption of alcohol, other than beer, was £22 million compared with £74 million in the first quarter of 1955. Beer consumption had also increased—from £110 million to £114 million. Tobacco is up to £200 million from £191 million. The falls in expenditure compared with a year earlier are, as expected, in durable goods and motor-cars. Expenditure on household goods was £192 million in the first quarter of 1956, against £219 million in the same quarter a year earlier. Expenditure on travel was £76 million, against £77 million. Under this heading are included both public transport and private motoring and, since expenditure on public transport has in fact been rising, the net result underestimates the fall in private motoring. The overall result is that consumer expenditure was a little higher in the first quarter of 1956 than in the first quarter of 1955. The rise had been slowed, but not halted.

Cotton Import Licences

Some confusion about the change in import licensing arrangements for dollar cotton, which came into operation on 4th July, is threatening to affect adversely the securing of the fullest advantage from the triangular deals with Pakistan, Burma and Indonesia. The position is further clarified by the Board of Trade and is that the open general licence for raw cotton imports now excludes cotton originating in or consigned from dollar-account countries. Open individual licences permitting unlimited imports of such cotton, however, are available to merchants, spinners and other importers subject to their giving an undertaking to comply with the appropriate procedure in respect of all their imports of U.S. cotton from the U.S. whenever the U.S. Government funds are available. Such funds may become available through American aid to the U.K. under the Mutual Security Act, or through the Agricultural Trade Development and Assistance Act as part of triangular deals in cotton textiles entered into between the Governments of the U.K., the U.S., and third countries such as Pakistan, Burma and Indonesia. Whenever no such funds are available, however, importers will be free to import U.S. cotton under their own licences in the ordinary way. Imports of cotton originating in dollar-account countries other than the U.S., and of U.S. cotton shipped from third countries are not affected by the licensing change and may at all times be made in the ordinary way.

Steel Supply Problems

The ban on overtime by maintenance workers in the steel industry reduced production in June to the rate of 379,700 tons a week against an average of 412,700 tons a week in the preceding five months of the year. Production in June was, nevertheless, higher than in the corresponding month last year when affected by the railway strike. Then it was at the rate of 364,200 tons a week. The threatened strike of the 14,000 maintenance men in the industry has been called off and a Ministry of Labour Court of Enquiry is to examine their claim, but the overtime ban continues and about 4,000 men are involved in local strikes, so output targets for the year may not be achieved. Steel production in June was at the annual rate of 19,744,000 tons, compared with 20,612,000 tons in May, an average of 21,196,000 tons for the first half of the year, and 18,938,000 tons in June last year. This year's output aim is 21 million tons against a record output last year of 19,791,000 tons. The demand for steel is still high, especially for plates, joists and heavy sections, but that for lighter products for use in the manufacture of durable consumer goods has eased off. It is some consolation to note marked improvement in the industry's stocks of raw materials. Stocks of imported iron ore in mid-1956 are 40 percent higher than a year ago. They have now recovered from the cut in supplies in the earlier months of this year when the Baltic froze and political unrest interfered with supplies from North Africa. Stocks of pig iron and of scrap are also considerably above the level of mid-1955.

June Wholesale Prices

Wholesale prices of the basic materials used in British industry continue to show a remarkable steadiness. For June the Board of Trade index number (30th June, 1949=100) moved down from 155.9 percent to 155.2 percent, a drop of 0.4 percent. The lowest point reached this year was in January, when the index stood at 154.9. Last month's fall resulted mainly from lower prices for copper (down 10.5 percent), raw rubber (down 5.3 percent), linseed oil which fell 11.7 percent, and hides and skins, which were 2 percent lower. Among the materials which rose in price in June were raw wool, 3 percent higher, and lead, up 1.5 percent. Various lubricants also cost more.

Brevities

The raising of the company rate of income tax by 5 percent to 39 percent in the Ceylon Budget should not entail any additional burden on the earnings of British-registered companies operating in Ceylon. Income-tax paid abroad ranks for relief against assessment to U.K. tax.

The official retail index price was 102 on 12th June, compared with 103 at 15th May. The Ministry of Labour, announcing this, said that the fall was due mainly to reductions in the average prices of potatoes and some other vegetables. These reductions were partly offset by increases in the average prices of household coal, eggs, bacon and butter.

Madras

INCREASE IN RICE PRICES CONTINUES THERMAL STATION NEAR NEIVELI PROPOSED

(FROM OUR MADRAS CORRESPONDENT)

IN spite of a favourable season, the price of rice continues to rise. Official warnings and credit restrictions reinforced the promise that the Government would sell imported rice in deficit areas at a low price. But the demand from West Bengal for Andhra rice and Travancore's buying of Tanjore rice have had the natural result of forcing up prices, especially when stocks are running low and two lean months are ahead. The futility of official statements is proved by the trend in Tanjore where prices continue to rise as in Coimbatore and Malabar. This disturbing trend has led to pleas for more transport facilities from the trade, which has recently complained against the use of open wagons for bringing pulses and grain from the north to Madras. The trade's view is that when prices in Andhra go up, prices in consumer markets must also go up and local demonstrations of discontent against high prices can make no impression. The Government hopes for the best through regular arrivals of Burma rice, but its effect on all commodity prices cannot be overlooked. The middle class is the hardest hit, and women are being forced to work to supplement the family's income.

Thermal Station Experiments

The Union Government's intention to start a thermal station promptly near Neiveli follows Mr. Haya's declaration that pumping tests have proved satisfactory. The experiments undertaken in May are still going on and official statements on them are reassuring. The aluminium project depends on cheap power, but Mettur is a good site. The bauxite ore from the Shevroys is to be examined in the U.S.A. and the Government intends to send five tons to the U.S.A. for the purpose. The development of Vercaud as a full station is bound up with the success of the aluminium project which may be comparable with the Hiraakud smelter scheme in course of time. Geologists have been instructed to go on with the investigation of bauxite ores, but less is now heard of iron ore. On the other hand, magnesite is still a useful proposition, and the mining industry in Salem has got a fresh lease of life. It looks as if State trading did not affect magnesite, and the Japanese interests who are interested in the working of the Salem magnesite deposits are not out on a limit. The aluminium industry in Alwaye will become secondary when Mettur is developed, but aluminium wares will hardly be able to displace stainless steel. The high cost of silver has made steel an acceptable substitute, and the dazzling variety of wares has made steel a rival of tin, which is both expensive and not as strong. The practice of applying tin to brass vessels is dying out, and tinkers have lost much of their occupation because of the strength of steel and its power to resist corrosion. The advent of Bombay factories making utensils has affected local competition and the small establishments using sheets and circles concentrate on design and finish. Copper is also out of favour, and the brittle pure bell metal has yielded to stainless steel in the kitchen. Most Indian restaurants use tableware made of steel, and it is only Muslim tea shops that still stick to porcelain.

Mr. Nadar's Future

Mr. Bhaktavatsalam's return last week does not portend any political disturbance. The T.N.C.C. is thinking only of the coming elections, and the Chief Minister is in the deep south explaining the need for industrial peace to support the evolution of socialism in our time; while Mr. E. V. R. Naicker declares that Mr. Nadar's future is bound up with that of a Tamil-speaking State which would uphold communal justice. The Vaniyas, a backward class, staged a meeting last week and the presence of Mr. Padayachi indicated new political appreciations. In 1952, the Vaniyas set up their candidates against the Congress, and the result was discouraging. But now though only ex-criminal Vaniyas are held eligible for special concessions and reliefs, the Congress does not fail to court them all. Incidentally, the conference made a plea for Palar water. The investigation and the award have not gone in favour of Madras as expected, and the Vaniyas asked that water should be conserved for the benefit of south Arcot. The conference also pleaded for the abolition of land revenue on holdings below five acres.

Andhra-Telangana Merger

The merger of Andhra with Telangana is almost complete. Officials have been busy and the non-gazetted ones have advanced their demands. Whether the High Court will be bifurcated is still in doubt. But guarantees have been given. The introduction of Prohibition in Telangana will be delayed as the development of the area requires the retention of excise. There will be a wet region when the rest of Andhra Pradesh is dry. The shortage of coal causes anxiety to tobacco-growers who find that the U.K. is buying more Rhodesian tobacco this year. How to get new markets for Virginia tobacco is a problem for flue-curers. Financial aid for them has been given by the State Financial Corporation, but the trade is in the doldrums. Lack of markets for onions is also causing anxiety; and Andhra growers feel that licensing should be liberal in future.

THE FOREIGN JUTE MARKETS

MILLS CLOSE DOWN

(FROM OUR DUNDEE CORRESPONDENT)

ALL the jute mills and factories in Dundee and district closed down on 20th July and will not resume until 6th August. There are few employers who are not glad of the stoppage, as business has been so bad during the past month that it has been difficult for both spinners and manufacturers to keep going. Unfortunately for the jute industry, it is the firms who are consumers of jute goods and yarns who are experiencing dull times and it may be a month or two yet before there are signs of any improvement. Judging by the prolonged spell of quiet trading, stocks must be running down to very low levels and there is bound to be renewal in the not too distant future. Improvement cannot come too soon to obviate further curtailment of production. The raw jute market has ruled quiet and there has been a tendency for prices to decline for shipment in the early periods, say July and August. In this position good business has already been done and claims under Clause 3 are being made by some shippers, i.e. for the month's free extension of contract. For August-September shipment some grades are lower, such as Mill Lightnings are at £81 10s (minimum £81) and Mill Hearts are down £1 to £77 (minimum £71), with Mill Firsts of little or no interest at £91, c.i.f. U.K. Some Continental business has again been reported. Good Daisies-2/3 is lowest at £91 and grade at £81, grade Tossa-3 at £100 and grade £90, c.i.f. September-October, all at minima. Jute yarns and cloth are still very quiet, but there is no suggestion of anything less than the fixed prices being taken. Calcutta goods have shown slight weakness at 58s 3d for 40in. 10oz. and 44s 6d for 74oz. July, 58s 6d and 44s 3d August, 58s and 44s September, and 58s and 44s October-December, with B Twills at 157s 6d, 158s 3d and 158s respectively, all f.o.b. Calcutta. The Jute Control has bought very little lately.

At a meeting of the Samnuggur Jute Co., Ltd., held on 17th July a shareholder, Mr. Graham F.

Paterson, said they should get rid of the shares or liquidate the company voluntarily. So far as he could see the break-up value of the company's shares was about 35s, or four times the present market price. "The political situation in India positively stinks", he said. There is a strong leaning towards Communism, and if that gets a grip, there will be confiscation. "Was there any hope of getting the Company sold and had the directors tried to sell?" The chairman, Mr. George A. Mason, assured him that no one was more concerned about the present price of the shares than the directors. But he could not touch on the question of liquidation or the political situation. No move had been made to sell the Company. Mr. Paterson also asked about the agreement with Thomas Duff and Co. as managing agents. He wanted to know how long it had to run and if their remuneration was still 24 percent of the turnover. The chairman said the 20-year agreement would continue until 1963. The remuneration had remained unchanged. Mr. Paterson said he could see reason in it if the remuneration were 2 percent of the profit, but, as it was, Thomas Duff and Co. got their whack, win or lose. Last week, the boards of directors of all three companies intimated that they were unable to recommend any interim dividend on the Ordinary shares, but the usual interim on the Preference 6 percent shares will be paid for the past six months on 1st August, less 8s 6d in the £.

U.S. BURLAP CONSUMPTION AND STOCKS

U.S. burlap consumption during June at an estimated 62 million yards was 17 percent below that of June a year ago. Sales of burlap bags in the month, however, were reported to be quite good, but for the most part they will not be reflected in consumption figures until later. For the first six months of this year, consumption was 6 million yards or about 13 percent higher than for the same period last year. U.S. burlap stocks declined by 7 million yards in June. The figures included 143 million yards spots and 97 million yards afloats. Appearing below are two tables

which include the June figures—(1) based on member reports to the Textile Bag Manufacturers Association and the Burlap and Jute Association and (2) projected to represent the estimated consumption and stocks for the entire industry:

Several hundred million years ago oil was first formed. Little fish and other creatures died and turned into oil.

Then, fishermen discovered the fish that had the oil and now you can get cod liver oil, which I hate. Still, cod liver oil makes a naughty child good and many mothers seem to think that without it children would not grow. And if children did not grow the world would be full of infants, and there would be no progress.

The oil business spells progress which anyone knows means

WHOLESALE PRICE INDEX RISES

THE official wholesale price index (base: year ended August, 1939=100) advanced further by 1.5 percent to 408.3 during the week ended 7th July, 1956, as compared with 402.2 (revised) for the previous week. The index was higher by 3.9 and 15.1 percent respectively when compared with the corresponding weeks of the previous month of last year. The index for Food Articles rose by 1.5 percent to 379.5 as a result of an advance in the prices of sugar (+9%), wheat and gram (+3% each) and rice and dal arhar (+1% each), although tea for internal consumption (-5%), salt in Calcutta (-4%) and bajra (-2%) showed declines. The index for Industrial Raw Materials also moved up by 1.9 percent to 490.9 as compared with 481.8 (revised) for the previous week because of an increase in the prices of coal (+18%), raw jute (+13%), groundnuts at Cuddalore and linseed at Bombay (+2% each) as reported at Calcutta and Bombay and raw silk (+1% each). The prices of manganese ore (average export price) (-10%), gingellyseed (-8%), groundnuts at Bombay (-4%), rapeseed at Kanpur and linseed at Calcutta (-2% each) and lac (-1%) were, however, marked down. The index for the Semi-Manufactures group stood at 395.1 as compared with 395.5 for the previous week. Items which recorded noticeable fluctuations in this group were: copper (-5%), gingelly oil (-3%), groundnut oil, linseed oil in Calcutta and zinc (-2% each), groundnut cake (+3%) and castor oil in Calcutta (+2%). A rise of 2.1 percent to 385.1 in the index for the Manufactures group was brought about by an increase in the prices of cement (+15%), machinery (+7%), cotton manufactures and glass (+3% each) and jute manufactures (+1%). The Miscellaneous group index advanced further by 2.6 percent to 560.8 because of a rise in the price of tobacco (+9%) in spite of declines in the price of tumeric (-5%), vanaspathi Dalda (-3%) and black pepper (-1%).

INDEX NUMBERS BY GROUPS AND SUB-GROUPS (Base: Year ended August 1939=100)

NEW SERIES OF WHOLESALE PRICE INDICES

THE present series of wholesale price indices has the year ended August 1939 as base. It is desirable to adopt a later year as base, and the question of the appropriate base period is under examination. Meanwhile, an interim series with 1952-53 as base is being issued. The series with 1939 as base will also continue to be published. The number of commodities or commodity groups has been increased from 78 to about 110 and the number of individual price quotations from 215 to more than 550. Quotations have been selected for foodgrains on the basis of the Thapar Committee's report. A committee has been established to examine the selection of quotations for non-agricultural items, and the interim index will be revised on the basis of the Committee's recommendations. The weights attached to various commodities are on the basis of value marketed in 1948-49. For May 1956, the value of the new index is 100.9 while the old index stood at 102.5. The classification into major groups has been modified and group indices are not strictly comparable. The food group in particular has much wider coverage than before.

TEXTILE INDUSTRY IN THE RUSSIAN UKRAINE

Under the sixth five year plan, the textile industry of the Ukraine is due to raise output by more than 160 percent, says a special issue of the Tass bulletin. Steps have been taken to promote the widest application of new machinery, to rationalise the use of existing equipment and broaden the assortment of goods. Here is what Mr. I. Yesipenko, Minister of the Textile Industry of the

Ukrainian S.S.R., told a Tass correspondent in the course of an interview: The output of cotton fabrics is to be raised in the republic in 1960 to 8.5 times the 1955 volume, production of silks is to increase almost threefold and production of woollen goods is to be doubled. A substantial increase is to be effected in the output of rayons. An extension of production facilities is essential for a further increase in the output of textiles. Since the beginning of this year, the cotton mills of Kherson received an additional 20,000 spindles and 300 automatic looms. Preparations are under way for commissioning new dyeing and finishing mills. Output is due to rise by 350 percent, as compared with last year. The cotton spinning mill at Poltava has received since the beginning of this year an addition of 26 spiral spinning machines of continuous action. Antiquated machines will be completely replaced at the Lvov cotton spinning mill; as a result of this, the production capacity of the mill

is expected to rise by 25 percent. Equipment is to be modernised at the textile mills in Chernovtsy, Korostyshev, Steblev and elsewhere.

"Woollen and silk mills are also being modernised. A highly efficient unit for finishing pure wool fabrics has been installed at the woollen mills in Kharkov. The woollen mill at Voroshilovgrad will receive a substantial addition to its automatic looms. A weaving mill will be commissioned this year at the Darnitsa silk mills. It will have 1,220 looms for the production of silks and tapestry. Considerable funds are allocated in the new quinquennium for financing the construction of textile mills. New woollen mills will go into operation at Chernigov, the second section will be started at the Kherson cotton mills, and the cocoon processing mill will go into operation at Zaporozhye. It is planned to build rayon mills at Chernigov and Cherkassy, mills for the production of draperies at Chernovtsy, cotton and linen mills at Zhitomir."

MIDDLE CLASS COST OF LIVING INDEX NUMBER FOR CALCUTTA

(Base: August, 1939)

THE Middle Class Cost of Living Indices, by groups, have now been brought up to June 1956. As compared with May, the June Index for Food reveals a rise of 5 points, while those for clothing, miscellaneous, and Fuel and Lighting

remain unchanged at 526, 283 and 239 points, respectively.

Correlating all the factors, the Middle Class Cost of Living Index for Calcutta shows that the cost of living increased by 3 points during June 1956.

Middle Class Cost of Living Index Number for Calcutta. Prices in August, 1939=100

PRICE OF POORER SOUTH INDIAN TEAS FALLS

RUBBER OUTPUT LOWER: PROBLEMS OF CASHEW INDUSTRY

(FROM A SOUTH INDIAN CORRESPONDENT)

SOUTH India harvested a heavy tea crop of 20 million lbs during May, bringing the total for the first five months of 1956 to 53 million lbs, as against 53.5 million lbs in the corresponding period of 1955. During the earlier months of the year, production was lagging behind that of last year on account of drought; towards the end of April, the shortfall was about 3½ million lbs. The May harvest has almost made it up. Unattractive rush tea forms the larger proportion of what is now offered in the Cochin market. Consequently, there has been a steep fall in prices over the past few weeks. The average price realised at the Export sale of 3rd July was Rs. 1-11-4 a lb, which shows a fall of 5 annas and 3 pies a lb from the corresponding average of last year. Plain and medium teas were sold at prices which are considered below the cost of production.

Pilfering on Rubber Estates

Pilfering of rubber from estates now poses a major problem for the plantation industry. This is most wide-spread in central Travancore. While speaking at the annual conference of the Munda-kayam Planters Association held a few days ago, its chairman, Mr. K. L. Kershaw, expressed great concern and apportioned the blame among dealers, plantation workers and their relatives. The Rubber Board has recently constituted an ad hoc committee to devise means to check rubber thefts, and a meeting of this Committee was held a few days ago. The Board's energetic drive last year to register producers and to licence dealers should have placed it in full control over the production and movement of rubber. Unfortunately, it does not seem to have gained command. The reason may be that it was not very keen to scrutinise the dealers' credentials in its haste to get them registered. However, it is felt that tightening control over dealers and over the movement of rubber will check the menace.

Weather conditions have affected the production of rubber. Since the second half of May, there has been heavy rain in the rubber districts with the result that tapping in many estates had to be suspended temporarily. On account of the vagaries of the climate, raw rubber production fell in May by over 100 tons compared with the production in the corresponding month of 1955. Similar losses are also likely in June and July, unless some compensating factors supervene. The rubber market is tight with limited supplies, and buyers are reported to be paying a premium for what they can procure.

The Rubber Board's subsidy scheme for replanting has been announced. It provides for financial assistance at varying rates for replanting in 70,000 acres in ten years' time at the rate of 7,000 acres a year. A subsidy of Rs. 400 will be granted for the first five acres and Rs. 250 an acre for over 50 acres on a slab basis. No financial assistance will be given for replanting less than one acre. About 80 percent of India's rubber area of over 200,000 acres is under unselected low-yielding strains, planted from 1902 onwards, and more than half of these have outlived their normal economic life.

Raw Cashew-nut Supply

Within a month or so, the cashew-processing factories on the west coast, numbering over 150, will be closed on account of a total lack of raw nut supply. This will mean unemployment for about 80,000 workers for the rest of the year. The cashew nut production in India this year is extremely poor. The production of kernels in 1956 may not exceed 1,100,000 cases as against last year's estimated output of about 1,400,000 cases. The demand from the United States, which is the principal customer for India's cashew kernels, has also been very poor for some months, so prices have fallen by a few cents to 45 cents a lb. The Russian purchase of 20,000 cases gave a boost to the market, and prices picked up by 2½ cents a lb. But, it is reported, some 250,000 cases of the year's possible production are unsold. The industry is waiting for orders from the U.S.A., which should require more to cover the usual peak demand in September-December.

The need for raising the indigenous production of cashew nuts is now keenly felt. The Agricultural Ministers conference, held recently in Mussoorie, suggested that cashew nut production should be raised to meet the full requirements of the local processing industry. The Travancore-Cochin Government has recently approved, on the advice of the Indian Council of Agricultural Research, a scheme for planting cashew trees on 27,000 acres and for starting three cashew nurseries. A provision of Rs. 38 lakhs has been made for this purpose.

pose in the State's second five year plan. Travancore-Cochin now has over 85,000 acres under cashew, and they yield more than 43,000 tons. Under the proposed scheme, waste lands suitable only for cashew planting will be acquired by the Government and leased out as five-acre plots to private growers on favourable terms for a period of 20 years. If private parties do not come forward, the Government will itself undertake planting in 27,000 acres. It is stated that the I.C.A.R. has plans for bringing nearly 50,000 acres on the west coast and 60,000 acres on the east coast of the Madras State under cashew cultivation. The scheme is now awaiting the Madras Government's approval.

There is a demand from the workers' side that the cashew-processing industry should be declared non-seasonal. As it is, the industry employs about 80,000 workers, for seven to eight months, for a total raw-nut supply of 120,000 tons. To provide full employment for this labour force, a nut supply of 200,000 tons will be necessary.

COCHIN TEA SALES

At Sale No. 21, 1,500,000 lbs of tea were on offer. There was a good general demand which was stronger at the bottom, with improved quality Low Mediums rather higher. Medium B.O.P.s were difficult to sell. Few best liquorings on offer met with a keen competition and whole leaves were dearer.

LONDON TEA SALES

At last week's London tea sales, the 44,064 packages on offer realised an average price of 3s 8.10d a lb, against 3s 9.53d in the previous sale and 4s 1.19d a year ago. Plain old season's Indian broken pekoe was quoted at 2s 8d a lb nominal. Prices obtained by some of the companies are given below:

	No. of packages	Average a lb.
Anglo-American	428	4/0½
Assam Doars	720	4/4½
Assam Estates	204	4/6
Badulipar	551	3/4
Cons. Tea and Lands	2,228	3/1½
Darjeeling	286	5/4
Eastern Produce	1,518	4/4½
Empire of India	1,241	3/7½
Jetinga Valley	252	2/8½
Jhazie	220	3/9½
Jokai	1,302	3/9½
Jorehaut	117	3/7
Kanan Devan	270	4/7
Leesh River	599	3/9½
Longai Valley	594	2/6½
Lunuvu	714	4/7½
Nedem	440	2/10
Pathini	462	2/6½
Rajawella	977	4/8½
Scottish Tea and Lands	1,050	4/10½
Single	767	3/3½
Standard	690	5/3½
United Planters	626	4/11½

U.K. Tea Stocks

U.K. stocks of tea on 13th July amounted to 126.0 million lbs. against 139.3 million lbs. a year ago.

COLOMBO RUBBER PRICES

The following prices have been issued by the Rubber Board of India from the weekly market report published by the Colombo Brokers' Association:

	Closing prices on 13-7-56 (Rupees a lb.)	Average for the period (Rupees a lb.)
Sheet :		
No. 1	1.41	1.41
No. 2	1.38	1.38
No. 3	1.35	1.35
No. 4	1.11	1.11
No. 5	1.06	1.06
Sheet Cuttings	1	.90
do	2	.85
Crape :		
Water White	—	—
R.M.A. No. 1X	1.47/48	1.41½
R.M.A. No. 1	1.43/46	1.38½
do	Crape No. 2	1.33
do	No. 3	1.24
Scrap Cresses :		
Sc. Crape No. 1	.95 Nom.	.92½
Sc. Crape No. 2	.85/90	.84½
Sc. Crape No. 3	.80/85	.80
Flat Bark	.75/80	.75
do	Sc. Crape 3X	.82

To arrive at f.o.b. Colombo prices, add 53.45 cents a lb for rubber other than scrap crape and 31.45 cents for scrap crape to the above market prices.

INDIAN RUBBER PRODUCTION AND CONSUMPTION IN JUNE

Indian rubber output in June was 1,484 tons, according to the Rubber Board of India. Exports were 3 tons and 2,163 lbs, while imports were 809 tons. Consumption by manufacturers was 2,401 tons. Stocks with estates and dealers on the last day of June were 2,900 tons including 730 tons in transit. Stocks with manufacturers at the end of the month amounted to 2,701 tons. Manufacturers also consumed 314 tons of reclaimed rubber of which they held a month-end stock of 516 tons, and used 192 tons of synthetic rubber, their month-end of which was 710 tons.

Engineering and Transport

URANIUM AS A SOURCE OF ENERGY

WORLD DEMAND AND SUPPLY PROSPECTS

THE RIO TINTO Company is one of the few mining groups that sponsor uranium-mining (in Australia and Canada) for its own sake and not only as an adjunct to gold-mining. At the company's recent annual meeting in London, the chairman, Mr. Gerald Coke, made some tentative assessments of the future demand for uranium. Mr. Coke surmised that the essential requirements for purely military purposes, now 10,000 to 15,000 tons of uranium metal annually, would be satisfied before long, and added that it was impossible to guess the subsequent demand for stockpiling and for existing weapons. For generating power, he pointed out, the main demand would be for the initial charge (which technologists are hoping to reduce); replacement demand would be limited, the more so as breeding reactors came into operation. Demand would therefore depend on expansion of electricity-generating capacity rather than on existing capacity.

On the basis of the probable increase in generating capacity, and allowing for the probable economy of consumption per megawatt, Mr. Coke suggested that demand for uranium metal for generating electricity might rise to some 10,000 tons a year over the next 20 years, and he concluded that, even if military demands were reduced, total demands could substantially exceed present production. The shift from military to civil use might, he thought, "produce a situation in which uranium can be bought and sold through more normal commercial channels". Whether, when supplies have increased, the free market will maintain present contract prices is uncertain. Such estimates of future demand for uranium are necessarily based on the assumption that nuclear energy itself will be derived from the processes of fission of heavy elements. But there has been in recent months a remarkable development of interest in possible techniques of fusing the nuclei of light elements. If these techniques were evolved, and could be applied on a commercial scale, much of the demand for uranium would presumably be transferred to hydrogen.

Russian Experiment

At the U.K. Atomic Energy Research Establishment at Harwell in April, British scientists heard from Dr. I. V. Kurchatov, a leading nuclear scientist from Russia, an account of his country's experiments in controlling the process of fusing nuclei—which is already familiar in its uncontrolled form in the hydrogen-bomb. At the same establishment in June, British scientists and technicians discussed (in strict secrecy) the problems of controlling fusion and the best ways of approaching those problems. It is a curious thought that we know now more about Russia's than about any other country's work on nuclear fusion. It seems that British scientists—two of whom, Sir John Cockcroft and Professor E. T. S. Walton (to give them their present titles), were the first to produce a thermo-nuclear reaction in the laboratory at Cambridge in 1932—believe that they are still in advance of their colleagues abroad, but no significant information of their activities has leaked through the wall of secrecy surrounding them.

It appears from Dr. Kurchatov's account that on several occasions, for periods of a few seconds, the Russians have brought about the conditions for fusing nuclei of hydrogen in a controllable manner, though they have not, apparently, even momentarily, brought about fusion itself. They have generated the fantastic temperature, one million degrees Centigrade, required to cause nuclei of heavy hydrogen (deuterium) to fuse together; and they have partly solved the problem of containing such heat so that it does not melt everything within its normal range (one million degrees being hundreds of times the temperature at which any known material melts). The methods used came near enough to success to show that controlled fusion was almost certainly possible; and experiments on other lines are now in progress. The intense efforts of various countries to discover a method of fusing nuclei so that the energy thereby released can be used for creative purposes are the outstanding scientific phenomena of our time. Yet in the cold light of economics, these efforts do not seem entirely rational. It may be agreed that fusion is the more natural process, as it occurs in the sun and provides heat for the universe, but in the sun the temperatures are always immense. At earthly temperatures fusion is artificial. Fission of nuclei does not occur freely in nature, but in our conditions it can be brought about much more easily than fusion, on a useful scale. The difference is that fission occurs when neutrons (not electrically charged) penetrate into a nucleus, whereas fusion occurs when nuclei are forced to merge; in the one case, there is no electrical resistance to overcome, whereas in the other, the nuclei are violently repellent because they are all positively charged.

Practical Disadvantages

The practical disadvantage of fusion is that it is achieved by acceleration of particles at relatively low temperatures, it requires more energy than it releases and if achieved "thermally"—at very high temperatures—the heat is difficult both to generate (otherwise than by a fission-bomb) and to control. The theoretical advantage of fusion is that, based on hydrogen, it has available limitless reserves of

"fuel" in the oceans. But fusion, even if technically possible, will remain uneconomic if its processes require enormous capital expenditure to overcome the difficulty of reproducing on the earth the physical changes that occur in the suns. In any case, it seems at this stage doubtful if thermo-nuclear energy, even if controlled for generating electricity, could be applied to individual power-units such as are envisaged for aircraft and ships. They could provide a large and permanent market for uranium. And it may be that fission of uranium or of another heavy element will be required to initiate the fusion process on an industrial scale. So it is unlikely that uranium will revert to its former limited uses (in ceramics, for instance) even if the scientists realise our dream of inexhaustible energy from the oceans.

LONDON EXHIBITION ON AUTOMATION AND ELECTRONICS

Industrial organisations in Britain are combining to stage an exhibition covering the field of electronics, automation, and instrumentation at Olympia, London, from 7th to 17th May next year. The exhibition, it is announced in London, will be held at the same time as the British Industries Fair in Birmingham, and will illustrate the growing use of electronics with progress in the development of laboratory and industrial instruments. In conjunction with the exhibition, a programme of conferences, lectures and meetings is to be arranged to discuss fully the many problems arising from the rapidly changing pattern of industrial development and the use of new techniques in industry. The rapid growth of new scientific and technological achievements in nuclear energy and process control has created a demand for new instruments and techniques and has brought the British instrument-making industry to the forefront of manufacturing progress.

IMPORTS OF AUTOMOBILE TYRES TO BE ALLOWED

The Government of India has reviewed the supply position of automobile tyres and has decided to allow substantial imports of the following sizes of tyres, the demand for which has exceeded indigenous production: 700—20/32; 750—20/34; 825—20; 900—20.

The number of tyres of each size to be imported will be such as to eliminate the scarcity now prevailing. The imported tyres are expected to be on the market within a short period. The imports will be handled by the following firms: Firestone Tyre Rubber Company, Bombay; Messrs. Dunlop Rubber Co. (India), Calcutta; Messrs. Goodyear Tyre Rubber Co., Ltd., Calcutta; and Messrs. India Tyre and Rubber Co., Bombay. These companies will sell the imported and indigenous tyres of the sizes mentioned above at a uniform price from 1st September, 1956.

BRITISH TRACTOR TO BE MADE IN INDIA

Negotiations have now been completed with the Indian Ministry of Commerce and Industry as a result of which the Ferguson tractor is to be progressively manufactured in India. Standard Motor Products of India Ltd., an associate company of the Standard Motor Company, will undertake production at their Madras plant. The Ferguson tractor has already played its part in the modernisation of Indian agriculture, and the 10,000th of these tractors to be imported into India, since they were first introduced in the country in 1949, is now on its way. During the last seven years, deliveries to India of this make of British tractor have been maintained at approximately 50 percent of all wheeled tractors imported. Massey-Harris-Ferguson (India) Ltd. state that they intend to concentrate on the development, design, and indigenous manufacture of the agricultural machinery best suited to Indian requirements. Attention has already been given to specialised agricultural implements for paddy cultivation, as well as to trailers, water haulers, and irrigation pumps, all of which are now being manufactured by the company in India.

FLOATING ROOF TANKS FOR BURMAH-SHELL REFINERY

Erection work is proceeding on the Burmah-Shell refinery site in Trombay on six tanks of the latest type equipped with floating roofs. Three tanks of this type of 4,000 tons capacity each are already in use and two more of 5,000 tons capacity are nearing completion. Four additional tanks for crude oil storage, of capacities ranging between 16,000 and 20,000 tons each, are under construction and are expected to be completed by the end of 1956. The largest measures 128 feet in diameter and 54 feet in height. The advantage of this type of construction is that the roof floats on the surface of the liquid stored and together with the special flexible seal against the side walls of the tanks, eliminates the vapour losses caused by variation in atmospheric temperature. The design of such roofs is more complex than that of the fixed roof type of tank, and supports or "legs" are provided to carry the weight of the roof when the tank is empty. Facilities also have to be installed to drain off rain water by means of special piping passing through the body of the liquid in the tank.

Calcutta Markets

SELECTIVE DEMAND AT TEA EXPORT SALE

MIXED TREND IN DUSTS

At Sale No. 7, held on 24th and 25th July, offerings at the Export auction consisted of 28,500 chests which included a large quantity of bright liquoring Assams, and these realised very satisfactory prices, especially those with Second Flush quality. Whole Leaf grades were about 1 anna easier, while clean plain broken were fully firm to dearer. Thin liquoring low medium kinds were easier, but clean black exportable Fannings were again a strong feature of the Sale. The more ordinary Fannings grades were often 1 to 1½ annas lower. There was less demand for tip, but Darjeelings generally sold well for the most flavoury kinds of which there was keen competition.

	1956 Rs.	1955 Rs.
Clean Black Pekoe	1 14 0 to 1 15 0	3 2 0 to 3 4 0
Plain B.P.	1 8 0 to 1 9 0	2 7 0 to 2 7 6
Medium Assam B.P.	2 2 0 to 2 4 0	2 4 0 to 2 9 6
Best CTC ASSAM B.P.	4 0 0 to 5 0 0	3 3 0 to 3 4 0

At the Internal Sale, Dust offerings consisted of 13,802 chests of which 845 chests were of Old Season's teas. There was a fair general demand, with black leaf tea suitable for the Middle East being again the strongest feature of the sale and selling at dearer rates. CTC Assams, however, received much less support than in earlier sales and were generally a full 4 annas below last rates. Clean Commons, Doars and good liquoring medium Assams were well supported and were firm to dearer, but the poor liquoring types were generally ½ to 1 anna easier. The few flavoury Darjeelings on offer sold well.

	1956 Rs.	1955 Rs.
Medium Doars Dust	1 6 0 to 1 7 0	2 5 0 to 2 5 6
Medium Assam Grainy Dust	1 12 0	2 7 6 to 2 8 6
Best Assam CTC Dust	3 2 0 to 3 8 0	2 14 0 to 3 0 0

Leaf offerings consisted of 933 chests for which there was a fair demand at irregular rates. The few Green teas on offer were 2 annas easier.

EXCHANGES FAIRLY EVEN IN FREIGHT MARKETS

EXCHANGES were fairly even in the freight markets last week, and grain fixtures were the feature. A number of vessels were fixed from Australia to India and although the rate declined to 130s 6d at one stage, a recovery to 133s was eventually made for September-October shipment. One ship secured 95s from Churchill to U.K., but this rate soon declined to 87s 6d. River Plate, U.K. was done at 145s and Australia-U.K. at 150s. The American coal market was irregular, between 7s 6d and 7s 6½, but no further fixtures were reported in the Indian coal trade, although owners, it was rumoured, were on the point of fixing at 7s to Karachi for September. A 14,800 tonner, 14 knots on 40 tons oil, is reported to have been fixed for five years' time charter at \$(U.S.)5.15 with delivery the Continent, October.

SUGAR MARKET

During the week ended 25th July, sugar sales in the Calcutta market averaged 4,000 bags daily. Arrivals a day were 9,000 bags and stocks totalled 100,000 bags. Rates for ready sugar ex-Kantapur delivery were Rs. 31-8 for ordinary grain and Rs. 33-9 for big grain. Demand has been poor, so the prices have eased further.

LINSEED

Prices remained almost unchanged last week, and a scarcity of supplies continued to be an important factor in the market. Small enquiries have been noted chiefly for ready goods, but the poor offtake of oil was a discouraging feature. The oil section was generally dull with shippers showing little or no interest because of the lack of parity between local and overseas prices. Latest quotations were as follows: Ready Rs. 22 a maund; July-August Rs. 22 a maund.

HIDES AND SKINS EASIER

The market continued easier. Stocks were higher than in the previous week.

Bazaar Sales

(Between 17th July and 23rd July, 1956)

Cowhides: Wet salted (Ord.) 75,000 pcs. on the basis of Rs. 5 to Rs. 7; Wet salted (Slaughtered) 11,600 pcs. on the basis of Rs. 12 to Rs. 20.

Goatskins: Wet salted (Daissee, Killed) 18,000 pcs. on the basis of Rs. 235 to Rs. 270 and Rs. 235 to Rs. 250; Purneah-Kissanganj 6,500 pcs. on the basis of Rs. 215; M. zafferpore 46,000 pcs. on the basis of Rs. 215 to Rs. 216-8.

Bazaar Stocks

(23rd July 1956)

Cowhides: Wet salted 2,24,500 pcs.

Goatskins: Wet salted (Daissee, Killed) 64,000 pcs.; Assam-Dinajpur-Jalpaiguri 90,500 pcs.; M. zafferpore - Patna - Pakur - Purneah - Kissanganj 2,20,000 pcs.

TEA COMPANIES

O. Po. and Dd indicate Ordinary, Preferred Ordinary and Deferred Shares, respectively. P next to the name of the company indicates that the Company also has Preference Shares. Figures in "accounts closed" column indicate the months of the calendar year in which accounts are closed. For Managing Agents refer to the Key (last page) under the numbers indicated.

THE LAND OF OPPORTUNITY

BRITISH PROSPECTS IN INDIA

A substantial increase in British investment and business activity in India would benefit both countries. That is why the survey prepared by Mr. Stephen Garvin, a former I.C.S. officer, and published by the Federation of British Industries, should repay careful study in London and New Delhi. It is the outcome of Mr. Garvin's visit here early this year and is, therefore, based on up-to-date facts judged against a background of considerable experience of India and her problems. The survey is intended as a guide to the British investor, but it succeeds also in providing an opportunity for this country to judge for itself the impression it is creating abroad. Abroad is perhaps the wrong term to use—in Britain would be better, because there are certain differences about Mr. Garvin's approach which nobody can fail to notice who reads this pamphlet alongside the series of articles which another recent foreign visitor, Dr. F. E. Aschinger, Swiss economist and journalist, has published recently in the Continental Press. Both observers give an expert and balanced picture of the direction India is taking and her prospects for the future. Where Mr. Garvin's account differs from the sharper outline Dr. Aschinger has drawn is in its deeper appreciation of India's historical background and the sympathy shown for the motives and aspirations which have emerged from it. Dr. Aschinger has judged India with all the respect for academic theory and down-to-earth fact of the Continental intellectual. Mr. Garvin surveys his subject from the rather more empirical and sentimental angle of the Englishman who knows and likes his India. It would be wrong, therefore, to take Mr. Garvin's views as being typical of all foreign opinion. It would also be incorrect to accept them as representing, completely, the impressions of those British investors who already have money in India and must contend with day-to-day conditions as they exist here. These reservations apart, the survey is a valuable contribution to the task of clarifying for the prospective British investor the impressions of post-Independence India which he is likely to have gleaned from his newspapers.

*

One of the more unfortunate aspects of India's development is that it should require such careful explanation in the first place. When a country has decided on rapid industrialisation under a democratic form of government, its attractions for the foreign capitalist would seem to follow without question. This is not, of course, the case and the reason is India's aim of a "socialist pattern of society", which is even more difficult to understand abroad than it is in this country. Mr. Garvin has decided it means a "mixed economy", one in which "State enterprise and private enterprise will co-exist, in some cases competing with one another, the State sphere consisting broadly of those industries which are of basic and strategic importance, or in the nature of public utility services, or which require investment on a scale which in India only the State has the resources to provide, the private enterprise sphere consisting of the rest." This should be enough to satisfy the prospective British investor that he would be working in an environment not much different from the one he has become used to. But there must be few already in India who will confirm that it is as simple as all that. This is not necessarily due to lack of adaptability or unwillingness to co-operate in the changed circumstances. It is rather because the facts of life for all private enterprise in India have already fallen some distance behind Mr. Garvin's theory and often show promise of deviating further. British capital is in no worse position than Indian. But this is no consolation for the investor who sends out his money, or keeps here what he already has, only to find that Mr. Garvin has been premature in deciding for India in which direction she is in fact trying to go.

No attempt has been made in the survey to minimise the hazards British investment has to face. The uncertainties caused by the Fourth Amendment to the Constitution, the complications of the new Companies Act, the dangers which a

single-party system represents for the future of democracy and therefore free enterprise and, above all, the hopelessly damaging and often unjust weight of personal taxation, are all clearly stated. The idea is obviously to represent India as a challenge to the vigorous and the farsighted, not as a bed of roses for the unenterprising and the lazy. But that has not prevented Mr. Garvin from glossing over a number of important psychological factors. He is scarcely justified, for instance, in dismissing the issue of nationalisation in India as "very much of a red herring". It is true the Imperial Bank was taken over after an exhaustive survey of the country's requirements of agricultural credit. But it is debatable whether "it offered the most direct way towards an adequate system", and certainly no explanation of the circumstances is complete without some reference to the politics behind them. To say the reason for taking life insurance into the fold was not "because the Government wanted power over the investment funds" seems to contradict the justifications given at the time by Mr. Deshmukh himself. To point to the Centre's opposition to the Mysore Government's grabbing the Kolar Gold Fields, ignores the fact that the move has gone through all the same and that any State Government which feels so inclined towards the property of British investors need not be deterred for one moment from following suit. Mr. Garvin mentions the "common-sense and pragmatism in individual cases" of which the Government of India has shown itself capable, but neglects to say how many times this approach

In that same realism. This is the place to record, with satisfaction, that New Delhi, where there is no dearth of idealism, has firmly resisted, as on several other occasions in the past, the temptation to be carried away by emotion, the chief ingredient of unofficial opinion.

Let it be stated at once that President Nasser's decision was a political one. Egypt's undeniable poverty, the dividends the Suez Canal Company has been paying, the desperate urgency of the Aswan Dam for Egypt's survival—all these have come in handy in defending a decision reached on purely political grounds, not all of them unjustified. But to bring those irrelevancies into the discussion now is to confuse it. It is arguable that the U.S. State Department could have been more considerate of Egypt's needs and feelings and of its own unstated promises; what is important is that the ham-handedness of one country has led to high-handedness in another, and in consequence a dangerous measure of uncertainty now surrounds the world's most indispensable trade route. The causes of the crisis and their rights and wrongs may be controversial; the fact of the crisis is not, and this is receiving altogether too little attention even in countries vitally interested in the Suez remaining permanently open to all shipping.

India's interest in the continued navigability of the Suez is as great as any other country's on either side of the canal, and New Delhi's silence may be indicative of the concern felt at the recent turn of events. Indeed, there may be more to read in this silence than in the hasty statements made by a thousand other spokesmen of various interests and governments. It may be assumed that New Delhi regrets the manner in which the Western Powers missed an opportunity of meeting the Soviet economic offensive in the Middle East; it may yet turn out to be one of the State Department's more unfortunate strokes of diplomacy. The manner apart, the United States may be sadly misguided in attempting to put a political price on economic aid even if it is only that Egypt should not plan for a war against Israel; it is the sadder because the munificence of the United States is a matter of fact, unmatched by anything the Soviet Union has done to date. India might well see in the U.S. decision on the Aswan Dam a portent of what may be done later to other recipients of American aid, and India's disquiet should be appreciated in Washington.

On the other hand, India is not among the countries which hastily congratulated President Nasser on his Alexandria announcement. That India is in sympathy with many of Egypt's aspirations admits of no doubt. At least equally doubtless, surely, is her active membership of the Commonwealth. New Delhi is thus placed between two loyalties, but by no means torn. The difficulty is not in arriving at firm judgments, guided as much by idealism as by self-interest, but chiefly in expressing them. Nor need that be considered a serious misfortune, for more harm has been done to the cause of peace by loud proclamations on points of principle than by much-denounced secret negotiations conducted by uncommunicative diplomats. If there is a fault to be found with New Delhi it is only in its failure to educate unofficial opinion on international affairs in the lessons which admirably inform its policies on most matters affecting India's interests, of which the Suez is not the least important.

It is too early to say these things, but if India advances as all patriots must wish, she may one day come to possess overseas interests of her own. In the laws governing dispossession she may then show more than an academic interest. Whatever the provocation, and there has been some, President Nasser has resorted to a method of taking over the Suez Canal Company which is more courageous than consistent with current concepts of what international behaviour in commerce should be; it may some day be applied to other countries. Far more immediate than these considerations, however, is whether the Suez Canal, the most vital link in Commonwealth and world communications, is to remain available to the world's maritime nations, India among them. Sir Anthony Eden told the House of Commons on Monday that Britain could not accept the Canal being left under the unfettered control of a single power. It is also reported that Britain, France and the United States may try to persuade President Nasser to agree on an international authority to run the Suez. To free so vital an international link from the unpredictable vagaries of a country which has yet to evolve dependable political stability would indeed be the first requirement in ensuring the future of this international waterway. And it does not appear to have been pointed out in many places that the formula now suggested by the three powers is, in essence, very close to what Mr. Nehru said on the subject some time back. It may be out of date to assert that Britain and France are entitled to a say in the fate of the Canal because one owned it and the other dug it; it would be fatal to forget that in an important sense the Suez Canal should be long at least as much to the world as it does to Egypt.

NOTHING NEW ON LABOUR APPELLATE TRIBUNALS TO GO

THE Industrial Disputes (Amendment and Miscellaneous Provisions) Bill passed by the Lok Sabha a few days ago seems unlikely to go very far towards fulfilling the need for a labour policy conducive to the achievement of the second five year plan. In a field as complex as industrial relations, codes and legal enactments matter least; what really counts is the spirit which guides the potential disputants. Legislation may serve a useful purpose where it encourages a tendency towards fairness and compromise, and in so far as it reflects the socio-economic needs of the times. But where it does little more than to provide the means for the expression of personal and political quarrels and frustrations, it is clearly damaging. The labour laws which have mushroomed in India during recent years have, in practice, served the latter purpose liberally; the new Bill promises little change. For years, ministers have paid lip service to the idea that conciliation rather than adjudication should be the basis for the settlement of industrial disputes; yet, in practice, official measures have tended to work in the opposite direction—by enabling more and more workers to take action in such a way as to necessitate a reference to the labour courts. Mr. Khandubhai Desai, Central Labour Minister, himself told the Lok Sabha last week with thinly disguised satisfaction that "the number of adjudications in 1952 and 1955 were 1,712 and 2,804 respectively, mostly ordered by the State or Central Governments at the request of the workers themselves."

The new Bill does little to reduce the scope for prolonged disputes over trivial matters. If there are to be fewer disputes, one of the first essentials is that its provisions should be clear, and not open to differing interpretations. Many of the clauses hardly conform to this purpose. The Government may say, with some justification, that closely

detailed legislation is not always possible to cover the vast variety of situations which might arise; but it is a moot point whether a measure which prescribes vague treatment in vague circumstances serves much purpose either. One of the most far-reaching of the Bill's innovations is the one which proposes to abolish the Labour Appellate Tribunals. These have served a highly useful purpose in bringing about a measure of uniformity in the interpretation of the laws. In recent years, there have been many cases of conflicting industrial tribunal decisions resulting in varying awards on the same matters being given in different parts of the country. The abolition of the Appellate Tribunals makes it the more essential, firstly, that clear guiding principles and norms should be laid down for industrial tribunals to follow in giving equitable and consistent awards; and secondly, that highly qualified and trained officers be chosen to preside over them. Considerable doubts exist over the clause which seeks to revise the definition of "workmen" so as to include in it supervisory personnel getting emoluments of up to Rs. 500 a month and also certain technical personnel. The combination of ordinary workmen and such supervisory and technical staff in a single category could have serious repercussions on discipline and efficiency. It is unfortunate that the Lok Sabha has done nothing to revise the clause in order to exclude specifically members of the intermediate management.

Much was said in the Lok Sabha debate about the multiplicity of trade unions, but some may regret that the causes were not more fully discussed. If they had been, one of the outstanding impediments in the formulation of a rational labour relations policy might have been recognised. In India, a major reason why there are too many trade unions within single industries, sometimes even within single enterprises, is the extensive interference of political parties. The aim of such interference, generally, is not to secure better working conditions for labour but to further the

ambitions of the politicians. The latter care little for the workers, and less for the industry; it suits them to do harm to both, as well as to the country, provided their own narrow personal and parochial strivings are fulfilled. An outstanding example of this was the closure in the works of the Indian Iron and Steel Co. Ltd. a few years ago; but lesser ones are still common. Where politicians set up test-tube unions, and then seek to nourish them with a series of inflated demands upon employers, industrial peace can hardly be assured. This is the fundamental problem which, while the Statute Book bulges with new laws, the Government has singularly failed to tackle.

CURRENT COIN

Alcock Ashdown Expanding.—The progress of the engineering industry is partially reflected in the review for 1955 presented by Mr. W. A. Wiles, chairman, at the annual general meeting of Alcock Ashdown and Co. Ltd. in Bombay (a fuller report appears on a later page). Except for the structural shop, all departments of the company were steadily employed throughout the year. The points and crossings department handled more work, and in view of the railways' expansion plans, is likely to continue operating to capacity "for virtually an indefinite period." The foundry was also kept fully occupied. The galvanising department was busy processing components of towers for the Hirakud dam project, but "during the latter part of the year, the amount of large orders fell off and the prospects for the future are still uncertain." The improvement in ship repair work at the end of 1954 continued only for the first quarter of 1955, after which no repairs of major importance were procured. But a very large number of running repairs were done to ships visiting Bombay, and for this reason satisfactory results were maintained. The structural department seems to have been the company's chief worry. It is the most competitive line of activity, and Mr. Wiles said that "without taking the risk of piling on quotations to a dangerous level, it is difficult in times of keen competition like last year to procure orders which leave a reasonable margin of profit." But the company is expanding its activities into Saurashtra. It has acquired a lease for land in the Bhavnagar port area on favourable terms, where it plans to construct first a boat-building shed equipped for the production of barges and for the fabrication of mild steel pipelines. Later, it intends to build steel tugs and launches there. After this preliminary phase, it is proposed to erect and equip a structural steel works within the next 18 months to fabricate all kinds of steel work, such as buildings, bridges, water and oil fuel tanks. The works will have a monthly outturn of about 300 tons. Mr. Wiles expressed anxiety over the steel and transport shortages, which, he said, could seriously hamper the expansion of the engineering industry.

Prospects for Gunnies.—One of the more puzzling developments of recent years is that although world capacity for the production of jute goods has been well in excess of demand, manufacturing industries as a whole have continued to grow. The most outstanding expansion has been in Pakistan, where there may have been some economic justification for it in the light of her troubled political relations with India. But elsewhere, too, mills have been established or expanded during temporary phases of scarcity whose economic soundness is now becoming increasingly doubtful as world trade in jute goods becomes more competitive. Mr. Vishwanath More, president, told the Gunny Trades Association in Calcutta on Friday that Mauritius's only factory for sack manufacture has been closed. Six jute mills were shut down in Italy last year and other "casualties" are likely this year. Mills in Europe and in Japan are already feeling the effects of strong competition from India. Meanwhile, in India itself, production has been increased. Mr. More therefore warned industrialists abroad that "if they, without proper thought, set up jute mills, they would burn their fingers in the long run." Their biggest worry is likely to arise from the fact that for them Pakistan is the only source of raw jute, and she has not failed to exploit her monopoly whenever she could. Furthermore, the Indian mills have the advantage of "long experience, low investments, recent modernisation and, above all, of a compact organisation named the Indian Jute Mills Association." Discussing futures trading in Calcutta, Mr. More expressed the hope that it would start "within a few months' time"; he emphasised once again the need to distinguish between forward business and futures business in framing regulations. Mr. More felt that something should be done to use the Indian jute mills' idle capacity. At present, he said, about 4,800 looms were not being worked; an expert committee should be appointed to examine whether they could be used for the manufacture of such things as coarse cotton

fabrics, blankets and crossblended jute materials. Mr. More's suggestion about "some sort of co-federation of the jute industries of India and Pakistan" appears to be impractical, and betrays an unjustified nervousness.

Rail-Road Transport Controversy.—A controversy has been started on the economic case for expanding road transport as against the railways just when there should be greater co-operation between the two, keeping in view the larger interests of the country. It has started with an article by Mr. K. B. Mathur, Member (Transportation), Railway Board, written for the Press. In this, Mr. Mathur has made the following points against expanding road transport: (a) it is unsuitable for carrying the extra traffic which will result from the second plan activities, as 38 million of that traffic's 60.8 million tons will be raw products and coal; (b) investments needed for carrying one million tons of goods by a comparative expansion of both are Rs. 4 crores for the railways (except where extensive improvement in line capacity works is required), and Rs. 11.6 crores for road transport; (c) freight each ton-mile is six annas by road, but only 1½ to 3½ annas by rail; (d) initial investment in road transport is higher, and the renewal costs are heavy, amounting to a serious drain on foreign exchange reserves; (e) road transport carries only 10 percent of the total goods traffic in the U.S.A., where it is most highly developed, and (f) road transport by its nature is suitable only for short-distance traffic. As this view has received powerful support from the Central Government and some members of the Planning Commission, the road transport interests have answered each point in turn, their spokesman being Mr. B. V. Vagh, vice-president of the Indian Roads and Transport Development Association. Some of the more effective parts of Mr. Vagh's counter-case are: (a) on the basis of Rs. 540 crores allocated in the railway plan for handling 47 million tons of goods, it works out to an investment of Rs. 11.5 crores for lifting one million tons by the railway (including line capacity), plus the cost of extra wagons and other categories of rolling stock required at the rate of Rs. 4½ crores; (b) comparative costs for carrying the same amount of goods by road transport can be kept down to Rs. 4½ crores and the cost for each mile of suitable road, according to current estimates, is nearly one-eighth of that of railway track; (c) a road transport undertaking in the south is already carrying goods at the rate of three annas a ton-mile; (d) replacement and renewal is far more expensive in the case of the railways; (e) no foreign exchange is required in road materials and the foreign exchange needed for the acquisition of trucks (which again can provide a great fillip to the indigenous automobile industry) is "very small" compared with the Rs. 425 crores provided for the railways; (f) the railways will require much more steel than road transport; (g) road transport is far more labour-intensive and fits well with the employment objective of the plan and (h) the volume of goods carried in the U.S.A. is 20 percent of the total; that the volume has increased proportionately very much faster in recent years than that carried by the railways, and the modern trend is to expand road transport in preference to railways. Thus both sides have made substantial points in putting forward their respective views, but, on balance, the case for expanding road transport seems to be the stronger. Since it is obvious that the railways cannot lift all the goods that will have to be carried during the next five years, an alternative means of transport is clearly necessary, and among the inland transport services, the roads are the only alternative.

Textile Expansion in the South.—Recent company reports give some idea of the expansion of south Indian textile mills, and additions to spindle-leage partly explain the improved results for 1955. Though post-war expansion was temporarily halted in recent years, the expansion of spinning units has continued with the official efforts to aid the handloom industry. Further expansion is to be financed out of reserves and current earnings, and capitalisation per spindle will be lower than in the new units started under co-operative auspices. The expansion programmes have induced support for textile shares in recent months. The appreciation in values has been steady and substantial so that a newly listed share like Adoni is at a premium though the mill got its power supply and started work only in April. The success of the Lakshmi Mills which in 1939 had 40,672 spindles, but in 1955 had 85,908 spindles and 201 looms, is notable. The report for year ended March 1956 shows a profit of Rs. 39.14 lakhs, and the dividend has been maintained at 25 percent. In 1955-56 the mill added 16,200 spindles. The company is setting up another spinning mill with 25,200 spindles. It owns a gin and press in Virudhunagar, bought in 1954 from Rallis India Ltd. As the free reserves stand at Rs. 43 lakhs against a paid-up capital of Rs. 53.4 lakhs, market hopes are that the results for 1956-57 will permit a higher dividend, and the shares have

risen over the last fortnight from Rs. 220 to Rs. 246. The Premier Mills, Coimbatore, has declared a dividend of 15 percent, absorbing Rs. 1,87,500 out of the net profit of Rs. 5,76,256. The company will add 12,000 spindles within two months. The shares, which quoted Rs. 177 last year, have risen to Rs. 240 since the report was published recently. A similar improvement in Loyal Textiles is based on the proposal to add 12,000 spindles this year to the previous capacity of 24,242 spindles and 224 looms. The last dividend was 5 percent and the shares have risen to Rs. 53. The improvement in the shares of the Sri Krishna Rajendra Mills this year is partly due to the increase in the dividend from 10 percent to 14 percent for the year ended March 1956; and partly to the directors' proposal to add 12,180 spindles to the existing installation of 31,663 spindles. The results of the four companies indicate that power cuts did not hamper growth seriously and resources for expansion have been secured partly from current revenues. The favourable effects of decontrol and the stability of yarn prices underlie the improvement in earnings. The Madras stock market has welcomed plans for expansion by pushing up textile shares. Mettur with its 42½ percent dividend has recorded the biggest rise so far, but others have also met with strong investment support.

Personnel for Co-operatives.—India's co-operative movement has several deficiencies, but the most serious is the shortage of trained personnel to run its far-flung branches. Noticing this deficiency from the time it started taking an active interest in co-operation, the Reserve Bank sponsored an all-India scheme for training in 1952. Under the scheme, two types of courses were organised at the Co-operative Training College, Poona, which is run by the Bombay Provincial Co-operative Institute. One, with a duration of six months, was meant for the superior grades; and the other, for the lower categories, took double the time. Since then, these courses have continued, turning out trained staff to serve in all parts of the country. The Reserve Bank's efforts were reinforced when the Government of India appointed in 1953 the Central Committee for Co-operative Training, with Mr. V. L. Mehta as chairman, and with officers of the Reserve Bank, of the Planning Commission and the Registrars of Co-operative Societies of several States as members. This body is responsible to both the Government of India and the Reserve Bank, and operates through the latter's Agricultural Credit Department. According to the Government resolution appointing the Committee, its function is to "formulate plans and to organise and direct arrangements in regard to the training of the personnel employed or to be employed in the co-operative departments and institutions in the several States." This function the Committee has been discharging well, considering the limitations under which it has to work. Regional training centres have been opened in Poona, Madras, Ranchi, Meerut and Indore. An appropriate classification has been made of the various categories of workers to be trained, such as (a) higher, covering those responsible for direction and control at district or divisional levels; (b) subordinate, such as auditors, supervisors, clerks, salesmen and accountants and others of the lowest cadres; and (c) intermediate, covering the rest. The three courses are conducted according to prescribed syllabi, and several workers have already been trained. The first five year plan provided Rs. 10 lakhs for the purpose, and a bigger provision has been made in the second.

JUSTICE FOR THE POOR

AFTER dragging its weary length along for three months the wretched Stewart-Culloden case is at last over. The time that this miserable trial has occupied, the irrelevant side issues introduced into it, and the expense inflicted on the parties by the failure of the Magistrate to understand what we should call the simple law of evidence, are nothing less than a public scandal; and if a good reason were wanted to discredit Mr. M. Ghose's proposal that the judicial should be separated from the executive service, it is supplied by the conduct of the legally trained Magistrate in this case. The issue to be tried was the simple one of alibi, and an ordinary London Magistrate would have disposed of the case in one morning; but since the introduction by Mr. Justice Pigot of the procedure of customary slow despatch in the High Court, the lesser legal luminaries seem to consider that adjournment upon adjournment is quite the correct thing, and that to prolong a case that should have occupied three hours to three months is the height of jurisprudence. If the High Court should be appealed to in this matter, we trust the Judge before whom the case is brought will speak with no uncertain sound of the way in which this case has been conducted. The procedure at present in the Calcutta Police Court simply amounts to a denial of justice to a poor person—a state of things that is a scandal and a disgrace to any civilised country.

PUNJAB HIGH COURT ALLOWS

APPEAL

(FROM OUR LEGAL CORRESPONDENT)

THIS is an interesting point in banking law, about which there has been hitherto a certain amount of judicial and legal difference of opinion. It is a decision of the Punjab High Court (Falschaw and Kapur JJ.) in Delhi, sitting in appeal. The plaintiff-respondent had a cash credit account with the defendant-appellant, the Bharat Bank Ltd., in Rawalpindi prior to the year 1947. He had pledged as security 988 shares of the Rawalpindi Electric Supply Company Ltd. On 11th August, 1947, the Bank gave notice to the plaintiff demanding payment of the debt due from the plaintiff by 18th August, 1947, and intimating that if the amount was not paid the shares would be sold without any reference to the debtor and at his risk and responsibility. It was not clear when this letter reached the plaintiff but,

anyway, no reply was sent to this letter of demand. On 20th August, 1948, the shares were sold at Rs. 10 a share. The plaintiff, on 31st January, 1949, gave a lawyer's notice to the Bank claiming Rs. 9,000 on account of the surplus which would have accrued had the shares been sold by the middle of September 1947 when the price was Rs. 19-12 a share. The Bank replied on 6th February, 1949, saying that it was not bound to sell the shares in September 1947, and could sell them at any time after the expiration of the period mentioned in the notice sent by it in August 1947. The Bank also claimed Rs. 2,172-12-6 after giving credit for the sale proceeds of the shares, and called upon the plaintiff to pay that amount.

On 9th March, 1949, the plaintiff filed a suit against the Bank for the recovery of Rs. 9,000, being the surplus after deducting the amount due from the plaintiff to the defendant in the cash credit account calculated at the value of the shares pledged at Rs. 10-12. The plaintiff also alleged that the Bank was bound to sell and must be deemed to have sold the shares on or about 18th August, 1947, and, if due to the want of diligence on the part of the Bank to sell the shares on 18th August, 1947, there was any fall in the price of the shares, the liability was on the Bank. The material pleas of the Bank in defence were that

it could not function after August 1947, or within a reasonable time thereafter, and that after giving credit for the price of the shares, which amounted to Rs. 9,880 at the rate of Rs. 10 a share, a sum of Rs. 2,322-12-6 was due to the Bank from the plaintiff on the ground—and this is the interesting point with which we are concerned—that the Bank was not bound to sell on 18th August, 1947, or within a reasonable time thereafter.

The trial court stated the following issues:

1. Whether the defendant Bank was entitled to sell the shares on the day and at the rate which it actually sold them?

2. What was the price of the shares on 18th August, 1947, or thereabouts?

3. Whether the plaintiff is entitled to recover the difference? If so, how much?

4. Relief.

The court found for the plaintiff. It held that as a pawnee the Bank should have sold the shares within a reasonable time of 18th August, 1947, and that it was not entitled to sell in August 1948 even though it gave subsequent notice in the newspapers calling upon the plaintiff to pay within 15 days, in default of which the pledged shares would be sold. It was also held that the price in August 1947 was Rs. 19-8 a share, which was also the price in September 1947, and therefore the shares should have been sold at that price, and therefore, further, the plaintiff was entitled to recover the surplus after paying off his debt to the Bank. From this adverse decision the Bank appealed.

The Bank's case was that it was under no obligation to sell either in August 1947 or within a reasonable time thereafter. The Bank was a pawnee for these shares and the rights of a pawnee in case of default of payment by the pawnor are given in Section 176 of the Contract Act. That section provides that on a default being made, the pawnee may bring a suit for the recovery of his debt or he may sell the goods pledged on giving the pawnor reasonable notice of the sale, and if the sale proceeds are less than the amount due, the pawnor is still liable to pay the balance.

It will be observed that as to whether there is any duty for a bank to study its customer's interests in the date of sale of the pledge, whether in affixing a date of sale of, e.g., perishable articles, goods which will deteriorate or lessen in value, or shares, the bank will be liable for neglect of such precautions as "a reasonably prudent and careful man may fairly be expected to take of his own property of the like description" (Giblin v McMullen), we obtain no specific guidance at all from Section 176. It is silent on the point. A bank holding goods, whether shares, plate or *objets d'art* as a bailee, whether gratuitous or rewarded, would no doubt be liable for negligence if it omitted to take such precautions. But here we are concerned with the position of a bank not in its capacity as a bailee but as a pawnee. At first sight, one might incline to the opinion that even in that event there is a duty on the bank to take reasonable care and affix a time profitable to the pawnor, who is also its customer for the date of sale. But if that were the law, there would be no difficulty at all, for the simple reason that there would have been no sale on any date and no pawning; for the sufficient reason that if a banker has cast upon him the duty of scrutinising the stock and share lists every day with a view to ascertaining what would be the date most profitable to the pawnor upon which to sell shares pledged to the bank and if the bank is to be liable for negligence if he selects a date of sale when the shares are less valuable than they were at some previous time or became at some time subsequent to the sale, no bank would accept shares on pawn at all and the situation could not arise. That seems commonsense. We will now investigate the law.

In *Kesarimal's case* (1928. Mad. 1022), the power of sale conferred on the pawnee was held to be for his benefit, to be exercised according to his discretion, and all that was required of the pawnee was to give reasonable notice of the intended sale. Note "reasonable notice", not a word about "at a reasonable date" to be notified then or later. Another Bombay case in 1937, *Cooverji's case*, was even more specific. It was there held that a pawnee has the power of sale expressly conferred upon him for his benefit according to his discretion, and all that is required of him to perfect his right to sell the pledged goods is to give notice of the sale, and it is open to him to effect the sale at any time or at any date thereafter, and all that is necessary is that the notice, i.e., of intention to sell, shall be reasonable. And a Nagpur High Court decision in 1951 in *Suraimal v Fulchand* takes the same view in even stronger terms, holding that a pawnee who has given a reasonable notice of sale under Section 176 of the Contract Act, can sell at any time, and is not bound to sell within a reasonable time, after the expiry of the period mentioned in the notice. The court, therefore, in the present case held that the sale of the shares by the Bank could not be assailed on the ground that it did not take place within a reasonable time after the notice of 11th August, 1947. The Bank's appeal was allowed, the decree of the trial court set aside, and the plaintiff's suit dismissed with costs throughout.

[A.I.R. (1956). July (Punjab). 195.]

A TOWER OF STRENGTH in India's Economy

The Americas and the Middle East are not the only places with oilfields! Oil is produced here in India, too, and derricks are a familiar part of the landscape at Digboi in Upper Assam. The Assam Oil Company has been operating this oilfield for over fifty years, producing some 300,000 gallons of high quality petroleum products daily.

Everyone in the country benefits from this flow of home-produced oil. It speeds food production. Keeps factories running smoothly. Keeps goods moving by rail, road, sea and air. Takes people to work and provides work for them—as well as saving precious foreign currency.

The Assam Oil Company itself employs over 8,000 'oil men'. It spends much time and money in looking ahead. Not only in training technicians and executives, but also in finding new sources of oil and new methods of processing it into the much-needed petroleum products which are so vital to India's expanding economy.

A DITCHER'S DIARY

Government is now in the sorry position of having to take over the entire distribution system itself, extend its punishments to those who are understandably refusing to carry even their normal stocks for fear they will incur a whipping, or simply admitting defeat.

Oh, to be a millionaire. How one can become obsessed with the idea if, as a teen-ager, one pores avidly over American success stories. It seems at that age that the only possible destiny of an American boy, whether a dish-washer or a cobbler's assistant, is to end up a tycoon, owning banks, stock exchanges, blocks of skyscrapers and fleets of pleasure yachts well-stocked with chewing gum. Books like *From Log Cabin to White House* are apt to leave the impression that when an American boy is lucky enough to be born in a wooden hut he need never have a care in the world; his address, in due course, is bound to be the White House, Washington. Later on, of course, maturity usually makes an end of such beautiful illusions. But for those who still have any, Mr. C. Wright Mills's *The Power Elite*, with its angry denunciation of the American social structure, is just the right thing to read. This new book claims to be an analytical study of American sociology, and sets out to show how a powerful, strongly-integrated, social oligarchy controls finance and politics throughout the land. I fear there is a touch of polemical exaggeration about Mr. Mills's attacks on the upper-class American. Even so, it cannot be denied that he brings considerable mastery to his task and presents a fairly coherent case. American life, he says, is dominated by a ruling class composed of executives, Service chiefs and "political outsiders". Dispersed throughout the country, they remain socially integrated by an almost exclusive system of private education. A representative member of the Power Elite has gone to Choate, Groton or some other private school and probably completed his education at Harvard or Yale. He usually marries a girl with a similar educational background. Mr. Mills shows that the newsboy-turned-millionaire is now an extreme rarity. Ninety-three percent of the rich, according to him, were born so. The same is true of seven out of ten of the very rich, while only one came into the world humble. "It is not by industry but by finance, not by management but by promotion and speculation that they typically become enriched. Those who have risen into the very rich have been economic politicians and members of important cliques," says Mr. Mills.

Those who have read Slavomir Rawicz's *The Long Walk* will confirm that it is among the best accounts of wartime adventure that has yet been written. The trouble is that it may be nothing more than a four-thousand-mile sleep walk, fabricated for reasons which only the author himself can give. The book has raised a good deal of controversy in Britain, where Mr. Rawicz has not yet been able to satisfy his critics of its authenticity. The book describes the escape of Mr. Rawicz and six other inmates from a Russian prison camp in north-eastern Siberia and their trek across outer Mongolia, the Gobi Desert, Tibet and the Himalayas into India. The journey took a year. Strix of the *Spectator* has pointed out a number of suspicious gaps in the story. The party must have crossed the important Lanchow highway, but Mr. Rawicz could not remember it, or the telegraph poles situated along its length. He could not even recall the

twenty-thousand foot mountain climb to the Tibetan plateau and he appears to have crossed this far-from-empty expanse without seeing a single lama or monastery. There are many other curious lapses of memory which require more than the unquestionable hardships of such a journey to explain away. But the best verdict on the story is probably to be found right here in Calcutta where the four survivors are supposed to have been brought for convalescence after they were picked up by a British patrol on the southern slopes of the Himalayas. Not one of Mr. Rawicz's three companions has come forward, but they might be dead. No single member of the British patrol has been located, but by now it will have been scattered over the face of the globe. What is most significant is that none of the doctors or nurses who tended the party (he does not say in which hospital), many of whom will certainly be here in Calcutta still, appears to have remembered this strange incident. The final test of Mr. Rawicz's story may be at the end where he claims to have been taken by bus from the hospital here to a transit camp "to await a troopship to the Middle East", which he eventually reached a month or so later. The time was somewhere between March and August 1942. The question is: did any troopers leave Calcutta for the Middle East during that period? It is not very likely. Somebody in Calcutta can no doubt say quite conclusively whether Mr. Rawicz is telling the truth.

Perhaps I shall be accused of being both blind and deaf if I say I notice in this country—certainly in this State—a lamentable tendency to ignore or underrate the truly great sons of the soil. The fact of the numerous holidays and periodic celebrations on the birth anniversaries of patriots and, occasionally, religious leaders will no doubt be flung in my face. But I shall still maintain my ground; and this because, though Pandit Ishwar Chandra Vidyasagar has been dead for sixty-five years, it is only now that West Bengal has thought of remembering the anniversary in anything like an adequate manner. It can be argued that for historical reasons the patriots, the fighters for independence, have had to be given preference over the leaders in the fields of culture and social reform. But when it is recalled that India has been free for nearly a decade in an age that moves at break-neck speed, and that in international affairs she is already beginning to behave like a fully mature nation, the argument falls flat. And just consider Madras and Andhra. These States, too, produced many fighters for independence, and yet they have always shown, comparatively speaking, a due regard for their intellectual leaders, poets, scholars and artists. It is, however, good to note that the Vidyasagar anniversary celebrated in West Bengal last week was not an entirely perfunctory affair. For the first time a serious step has been taken by instituting a lectureship in Calcutta University in honour of this great man; and, what is equally important, a live man of letters with an excellent research background, instead of the usual ponderous academician with only a Ph.D. to lift him above the average, has been appointed to it. I understand that Vidyasagar still lacks a definitive biography. Perhaps this will soon be undertaken. Few deserve it more than he who, though born in incredible poverty, rose to be a power in the land and lent himself so unstintedly to its service. In an age when social prejudices reigned supreme, he fought against them, built up educational institutions, wrote text-books as well as classics, tried to give the Hindu widow the right to remarry; and when it came to personal charity, never recked how small was his purse.

Company Meeting

ALCOCK ASHDOWN & COMPANY LIMITED

CHAIRMAN, MR. W. A. WILES, ANNOUNCES EXPANSION PLANS

Presiding over the 73rd Annual General Meeting of the shareholders of Messrs. Alcock Ashdown & Co., Ltd., Bombay, Mr. W. A. Wiles, Chairman, announcing the new expansion plans of the Company, said :—

Last year your Chairman, although hopeful that the 1955 results would continue on the path of improvement which our 1954 results showed over the preceding year, forecast the possibility that they might not be as profitable. However, I am pleased to report that this is not so and the results for the year show that the improvement has been maintained.

The figure of Sales & Work Done as revealed in the Profit & Loss Account for the year is approximately Rs. 14 lakhs more than the corresponding figure for 1954, though when adjusted by the opening and closing figures of Work-in-Progress in order to arrive at the actual value of the work processed during the year, the figure for 1955 works out to Rs. 121.3 lakhs compared to Rs. 132.4 lakhs worth of work processed in 1954. In view of this, the increase in the Gross Profit of 1955 over that of 1954, amounting to Rs. 4,15,372/- indicates a noticeable improvement in the ratio of Gross Profit to total work processed, which together with an improvement in the ratio of net overheads and expenses to gross profits over the same period goes to show that we have been working more efficiently, and hence more profitably in 1955 than in the previous year.

After providing Rs. 4,75,000/- for taxation, there remains a balance of Rs. 4,68,581/- of which Rs. 72,288/- has been transferred to General Reserve, raising this Reserve to Rs. 24,50,000/- and leaving a balance of profit of Rs. 3,96,295/- to which must be added the figure of profit of Rs. 1,35,820/- brought forward from 1954 making a total of Rs. 5,32,115/- available for disposal. As you will have seen from the Directors' Report, your Directors recommend that a dividend of 12½% be declared, the same as last year, leaving a balance of Rs. 1,14,340/- to be carried forward to 1956.

With the exception of the Structural Shop which I will return shortly, all Departments were steadily employed throughout the year.

In our Points & Crossings Department where we manufacture requirements for the railways, there was a notable increase in the quantity of work handled, and there is hardly need to mention that, with the expansion required by the railways in the Second Five-Year Plan, their requirements are likely to keep our Department busy to capacity for virtually an indefinite period.

The Foundry, which is not normally a busy Department, was also kept fully occupied by a steady flow of orders.

The Galvanizing Department was employed for the greater portion of the year galvanizing components of towers for the Hirakud Dam Project, and I am pleased to report the continued high standard of work achieved, which resulted in no rejections at all on this large contract. During the latter part of the year, the amount of large orders fell off, and the prospects for the future are still uncertain.

The improvement in ship-repairs noted at the end of 1954 continued only for the first quarter of the year, and since March last year no repairs of major importance were procured. This, however, was to a certain extent counter-balanced by a very large number of running repairs to ships visiting this port, including ships of the Indian Navy, which has enabled us to maintain satisfactory results.

I come now to the work of the Structural Shop which, with the conclusion of certain large Projects,

and in the absence of any contracts of major importance, has had a disappointing year being dependent largely upon small local jobs. You will understand that the nature of the work, which this Department handles, has been the most highly competitive of all, and without taking the risk of paring our quotations to a dangerous level, it is difficult in times of keen competition like last year, to procure orders which leave a reasonable margin of profit.

A contributory factor to our comparatively high base cost in our Structural Department is the handling of the material in the very cramped space available at our Works, which were not originally designed to cope with the kind of work to which we now aspire. This limitation of space places us at a disadvantage with our competitors possessing a more spacious and economic lay-out and it is partly with these considerations in mind that we have this year embarked upon a scheme of which I shall take this opportunity to apprise you.

New Factory in Bhavnagar

With the active support and encouragement of the Government of Saurashtra we have already obtained the necessary Licence to expand the operation of your Company to that State. We have acquired a plot of land of approximately 28 acres, very favourably situated in the Bhavnagar Port area, and we have applied for a lease of 30 years at a very low rental of Rs. 125 per acre per annum, that is to say, about Rs. 3,500 a year for the whole plot. This lease may be extended for a similar period with Government's option to increase the rental by not more than 50%. To give you an idea of the satisfactory terms of this lease, I will mention that the rental of that portion of your Works in Mazagon, 64 acres only of which is leased from the Bombay Port Trust, is the equivalent of over Rs. 75,000 a year. This Lease expires in 1958 and the Bombay Port Trust have announced a very considerable increase in rent. This factor gave an additional spur to our search for economic breathing space which we feel we have been fortunate to find in Saurashtra where already other large industrial schemes are in process of development, in which we hope to play a major part. We propose in the early stages to erect a small boat-building shed equipped for building barges and for the fabrication of mild steel pipe-lines, for both of which we understand there is a considerable demand in Saurashtra. At a later date, after our workmen have acquired experience in the manufacture of barges, we propose to undertake the building of steel tugs and launches in the same shed, and with the same equipment. We anticipate being ready for production within the next month and we have already secured an order from Government for two large oil barges, with the probability of several additional dry-cargo barges, which should give a good preliminary start to our project.

Following this preliminary phase, we propose, within the next 18 months, to erect and equip a Structural Steel Works capable of undertaking the fabrication of steel work of all descriptions, such as buildings, bridges, water and oil fuel tanks, etc., with a monthly output of about 300 tons.

We hope that this project, which has been sanctioned by the Government of India and has the encouragement of the Government of Saurashtra, will prove a small but worthy contribution to the vast industrial expansion envisaged in the Second Five-Year Plan, and be able to demonstrate, when given the opportunity and the materials, what we in the private sector are able to achieve in co-operation with and as a necessary supplement to the Public Sector. To this end we have also already received large orders for steel fabrication for the new Steel Mills being

erected by Government at Bhilai and Rourkela, which work we shall carry out in Bombay.

You have already been advised of the closing down of our Establishment in Pakistan and, although there have been many obstacles to overcome in the implementation of our Sale Agreement, we are pleased to say that this has now been satisfactorily concluded and, with the remittance of the sale proceeds to India, which we have been permitted as an exceptional case, and which we are informed is one of the only examples of repatriation of capital permitted from Pakistan to India, we hope to turn the capital to more profitable use both in rehabilitating some of the more outdated machinery of your Bombay Works, and also in our new venture in Bhavnagar.

At this point, however, I must strike a note of warning. Our path of progress in this scheme of expansion is not smooth or straight or lined with roses. Now that the Government of India have made it abundantly clear that the emphasis in the Second Five-Year Plan is on industrial expansion, and that the engineering industry will be called upon to play an important role in national development, there are four essential requirements that must be met before this industrial embarkment, with any hope of success, can be attempted. These are: (i) raw materials, transport and skilled labour. As far as our venture is concerned, I am confident that, possibly with your help at a later date, the first requirement will be adequately looked after, but nowadays it is often easier to raise the capital than to procure the materials which it buys. Easier too, to procure the work than the material, the tools and the skills to complete it.

Shortage of Steel

There is to-day a serious shortage of steel which is not limited only to indigenous supplies, and full requirements of this commodity for industry cannot be expected to be obtained from Government-owned units before at least 1959-60. The success of the Second Five-Year Plan, and, therefore, the success of our part in it, must depend, to a large extent, on imports of steel and machinery, of which little surplus of the former is available even from the Continent, and although we have sufficient steel in our own limited stocks to fabricate and erect the two small boat-building sheds for the first phase of our Bhavnagar Project, it would indeed have unfortunate results on this venture if, as I fear we had to sit idle waiting for the steel with which to build the barges, even though this is a Government job, to be built with steel from Government quotas.

Similarly, although we plan to start the fabrication and erection of our new Structural Shop during the early part of next year, there is no guarantee that the schedule of our whole scheme might not have to be postponed if we are unable to procure the necessary steel for which we have already placed our orders with Government. As an example of how our work has been held up during the first half of this year when our Structural Shop has not been fully employed, we have about Rs. 38 lakhs worth of orders on hand on which work either cannot be started, or completed through lack of necessary steel. Nevertheless, strenuous efforts have been made and will continue to be made by us to ensure that all necessary supplies, both of machinery and the raw materials necessary, are obtained so as to circumvent, as far as is humanly practicable, any unprofitable delays to the venture.

Transport

The third factor so vital to our success is transport. Even when machinery and the steel can be obtained, this has to be transported from the area of supply, whether in India or from abroad, to our factory site. The Railway Minister, Shri Lal Bahadur Shastri, has already indicated that the railways carrying-capacity is now short of requirements by about 5 million tons a year, and this shortage is likely to be multiplied many times as the Second Five-Year Plan proceeds. Similarly, congestion is increasing in every major port, which is aggravated as imports outstrip transport's ability to clear it to the interior.

Labour

Finally, we come to labour. There is still in this country to-day an acute shortage of skilled labour and experienced personnel, and on a number of occasions during the year, our ship-repair department has been in difficulties in carrying out the work when the necessary skilled workmen were not available. The scarcity is most apparent in the category of fitters caused by the demand for such men in newly-opened factories and in such establishments as the Oil Refineries at Trombay. Similarly, in the vital category of Supervisors and Foremen, in spite of the great opportunities offered, few of these have risen from the ranks, and thus the intimate knowledge of the working conditions of labour, which help so much in harmonious and sympathetic relationship, is often lacking. Nonetheless, I am pleased to report this year a distinct improvement in relations with our workmen, which can be attributed in no small degree to the valuable efforts of our own Works Committee on which the representatives of the Management and the workmen have the opportunity for friendly discussion on matters of mutual interest. As an additional facility a new and spacious Canteen has been built and recently opened for our workmen at the cost of Rs. 2,00,000.

We have today sub-judice Adjudication in which we are associated with other engineering concerns regarding the future wage scale of our workmen, and it would be a most foolish man who ventured to forecast any downward revision of our present scales resulting therefrom, or in any closing of the gap between the output per man and the labour costs per ton.

It would be ungracious, at this opportunity, if I did not ask you to join with me in expressing our thanks to all the men, both skilled and unskilled, who have contributed to last year's successful progress, as well as to the General Manager, Mr. Campbell, and his Supervisory and Clerical Staff. I express the hope that their efforts will succeed in fostering that harmony between Management and Labour so essential for the results we expect from our particular endeavours in India's plans for industrial development, and that Labour, with a greater sense of responsibility for their own part in India's industrial progress, will in return realise that, in order to achieve any lasting improvement in their standard of living, the burden of financing this objective in the form of higher wages and greater employment can only be met by a higher standard of work and a greater productive capacity leading to the greater prosperity of their Company.

Finance in India and Abroad

THE CALCUTTA MONEY MARKET STERLING WEAKENS ON CANAL NEWS

Wednesday, 1st August.

THE position in the money market is easier, chiefly because sugar funds are now returning gradually to the banks. The requirements of the jute industry are declining, and accommodation against grains and seeds is now on a diminishing scale. The interbank market has remained steady throughout the week and equilibrium is being maintained at the unchanged call rate of 3½ percent. Rather more activity has been reported from the bill market this week, with a number of tea and gunny documents coming to hand. Remittance has been good. Reaction to the Suez Canal dispute on the world's currency market has caused a sharp deterioration in the pound sterling this week. The American dollar is now quoting Rs. 2 higher at Rs. 480½.

Silver was steady on renewed buying and advanced from the previous week's level of Rs. 169.2 to Rs. 170.4, quoted today. The price for ready was quoted at Rs. 171.2. The London rate was unchanged at 78-1/8d. The price of foreign silver in New York was the same at 90-1/8 cents.

Gold was firm in sympathy with silver and the price rose from Rs. 102-15 to Rs. 103-14. The sovereign at Rs. 66-12 showed a gain of 4 annas,

During the week ended 27th July, Government of India Treasury Bills for Rs. 19,12,00,000 were sold in favour of the Reserve Bank.

Declines of Rs. 15.73 crores and Rs. 7.94 crores in notes in circulation and the total note issue to Rs. 1,444.28 crores and Rs. 1,477.27 crores were the notable features of the return of the Reserve Bank of India for the week ended 27th July, 1956. The currency contraction was adjusted by reducing rupee securities by Rs. 9.94 crores to Rs. 708.62 crores, and by raising rupee coin from Rs. 109.96 crores to Rs. 111.96 crores. Deposits of the Government of India and other Government accounts declined by Rs. 7.26 crores and Rs. 6.86 crores to Rs. 76.16 crores and Rs. 6.83 crores, respectively, while balances of commercial banks at Rs. 53.35 crores showed a gain of Rs. 34 lakhs. Balances held abroad dropped by Rs. 5.21 crores to Rs. 42.75 crores, as did investments by Rs. 9.80 crores to Rs. 49.39 crores. Other loans and advances fell from Rs. 71.62 crores to Rs. 65.54 crores, of which advances to scheduled banks against usance bills declined from Rs. 38.29 crores to Rs. 34.85 crores. These advances amounted to Rs. 202.25 crores since 1st January, 1956. Ways and means advances stood at Rs. 5.15 crores (Rs. 4.63 crores).

The return of the State Bank of India for the week ended 20th July, 1956, shows a fall of Rs. 2.45 crores in total deposits to Rs. 220.71 crores. Investments in Government securities are down by Rs. 11 lakhs to Rs. 89.27 crores, while other authorised investments are up by Rs. 40 lakhs to Rs. 11.30 crores. Advances, including loans, cash credits and overdrafts, and bills discounted and purchased, have decreased by Rs. 72 lakhs to Rs. 130.31 crores. Cash and balances are, in consequence, shown at Rs. 16.57 crores or Rs. 1.78 crores less.

The statement of the position of scheduled banks for the week ended 20th July, 1956, discloses Demand and Time liabilities at Rs. 633.57 crores (Rs. 9.26 crores on account of borrowings from banks) and Rs. 454.87 crores (Rs. 3.35 crores), compared with Rs. 644.30 crores (Rs. 13.13 crores) and Rs. 456.43 crores (Rs. 3.22 crores) respectively in the previous week. Cash has increased by Rs. 1.15 crores to Rs. 38.41 crores, while balances with the Reserve Bank have decreased by Rs. 63 lakhs to Rs. 49.38 crores. There is a rise of Rs. 5.25 crores in investments to Rs. 351.23 crores. Advances and bills discounted at Rs. 744.70 crores show a drop of Rs. 3.26 crores. The ratios to total liabilities of cash and balances, and of advances and discounts, are, in consequence, shown at 8.1 percent and 68.4 percent, against 7.9 percent and 68.0 percent.

The net profit of the DEVKARAN NANJEE BANKING Co. Ltd. for the half-year ended 30th June, 1956, after making the usual provisions for contingencies and including Rs. 1,76,386 brought in, amounts to Rs. 7,97,682. The directors have resolved to pay an interim dividend at 2½ percent to absorb Rs. 1,25,000, leaving a carry-forward of Rs. 6,72,682.

The working of the INDIAN BANK LTD. for the half-year ended last June has resulted in a net profit of Rs. 22,42,505. The directors have resolved to pay an interim dividend of 5 percent and a bonus of 1½ percent to absorb Rs. 3,91,300. Reserve fund is allocated Rs. 5,00,000; non-statutory reserve fund gets Rs. 1,00,000; sinking fund receives Rs. 1,00,000 and the taxation provision is Rs. 10,50,000. The carry-forward is Rs. 2,26,344.

The net profit of the INDIAN OVERSEAS BANK has amounted to Rs. 17,21,271, including the amount brought in, for the half-year ended last June.

The Law Commission has taken up the revision of the Presidency Towns and Provincial Insolvency Acts and will make recommendations as to the lines on which these Acts should be amended, revised, consolidated or otherwise brought up to date. The Commission has invited individuals and organisations interested in the subject to send their views to the Under Secretary (Statute Revision), Law Commission, 5, Jor Bagh, New Delhi by 30th September.

NEW FINANCE COMMISSION'S TERMS OF REFERENCE

REVENUE DISTRIBUTION BETWEEN UNION AND STATES

ACCORDING to an official Press note, the Finance Commission has been asked to make recommendations on the following matters: (i) the distribution of the net proceeds of income-tax between the Union and the States and the allocation of the States' share among the States; (ii) the distribution of other divisible Central taxes such as Union excise duties; (iii) the amounts to be paid to the States of Assam, Bihar, Orissa and West Bengal in lieu of the assignment of any share of the export duty on jute and jute products; (iv) the principles which should govern the grants-in-aid of the revenues of the States out of the Consolidated Fund of India; (v) the States which are in need of assistance by way of grants-in-aid of the revenues of those States and the sums to be paid to those States, having regard, among other considerations, to the requirements of the second five year plan and the efforts made by those States to raise additional revenue from the sources available to them; (vi) the principles which should govern the distribution of the net proceeds of the estate duty on property other than agricultural land and (vii) the modifications, if any, in the rates of interest and the terms of repayment of the loans made to the various States by the Government of India between 15th August, 1947, and 31st March, 1956.

Existing Allocations to States

At present 55 percent of the divisible net proceeds of income-tax (other than corporation tax) is assigned to the States and distributed among them in the following percentage ratios (given within brackets): Andhra (5.49), Assam (2.25), Bihar (9.75), Bombay (17.50), Hyderabad (4.50), Madhya Bharat (1.75), Madhya Pradesh (5.25), Madras (6.56), Mysore (2.45), Orissa (3.50), P.P.S.U. (0.75), Punjab (3.25), Rajasthan (3.50), Saurashtra (1.00), Travancore-Cochin (2.50), Uttar Pradesh (15.75) and West Bengal (11.25).

The shares of the States have to be fixed again as a result of the impending reorganisation and new percentages recommended for the reorganised States. The share to be retained by the Centre also has to be determined. The present allocation is broadly worked out on the basis of 80 percent by population and 20 percent by collection. The basis of distribution of income-tax has always been a matter of controversy. Various bases has been suggested for allocating income-tax, they being: (i) the collection of income-tax in the various States; (ii) the amount of income-tax realised in respect of income, wherever earned, of individuals resident in the different States; (iii) the collection of income-tax in the various States adjusted with reference to the origin of the income; (iv) the relative population of each State; (v) the relative volume of industrial labour in each State; (vi) the needs of the different States according to various criteria; and (vii) different combinations of the above factors.

Three Union duties of excise, namely those on matches, tobacco and vegetable products, are now divisible between the Centre and the States and 40 percent of the net proceeds are distributed among the States on the basis of population. The quantum of the taxes to be transferred to the States, the excises to be continued or made divisible and the basis of distribution will have to be considered by the Commission.

Grants-in-Aid

The first Finance Commission recommended that the grants-in-aid of Rs. 75 lakhs each to Assam and Bihar, Rs. 15 lakhs to Orissa, and Rs. 150 lakhs to West Bengal be paid each year in lieu of the assignment of a share of the export duty on jute. The Commission has to consider whether any change in the figures suggested by the first Commission and accepted by the Government is necessary. In Chapter VII of its Report, the last Commission formulated certain principles to govern the payment of grants-in-aid to the States which it had applied in making recommendations. This Commission will re-examine these principles in the light of subsequent developments and the changes in the practice in other countries and indicate any changes necessary in them.

The Commission has to make recommendations on the States in need of assistance and the sums to be prescribed as grants-in-aid of the revenues of such States. At present Assam, Mysore, Orissa, Punjab, Saurashtra, Travancore-Cochin and West Bengal receive general grants-in-aid as a result of the recommendations of the last Commission. This Commission will re-examine the financial position of all the States. A large variety of considerations may enter into the determination of the needs of the States and these may differ from State to State. The Commission will also consider the nature of the grants-in-aid such as whether they should be fixed or progressive, general or specific, conditional or unconditional. In addition to the general grants-in-aid which some of them may be receiving, Bihar, Hyderabad, Madhya Bharat, Madhya Pradesh, Orissa, Patiala and East Punjab States Union,

Punjab and Rajasthan receive special grants-in-aid for the expansion of primary education. The Commission will assess the results achieved by the specific grants given to these States.

Estate Duty

The net proceeds of the estate duty on property other than on agricultural land is now being provisionally distributed among the States in the same way as the States' share of the net proceeds of taxes on income other than corporation tax. In other words, it is being distributed by the percentage ratios fixed for the States for income tax except that the Centre does not retain any portion of the receipts except those attributable to the Part C States. A more permanent basis of distribution has to be formulated by law of Parliament. An important issue, in this connection, will be whether the duty should be distributed on the basis of percentage ratios, whether arrived at on the basis of the percentage ratios prescribed for the distribution of income tax or otherwise, or the distribution should be on the basis of assessments, the location of the property taxed, the residence of the assessee, etc.

Central loans have been given to the States for a variety of purposes ranging from the construction of big irrigation and multipurpose projects to the construction of minor irrigation works, grow-more-food schemes, famine works, rehabilitation of displaced persons, etc. Some of them have also been given loans to cover budgetary deficits. The terms of interest and repayment of these loans vary for different categories of loans. These will be reviewed and any changes necessary in the interests of sound finance indicated.

The Finance Commission has invited the views of those who are interested in and have made a study of these questions, and such views should be sent in the form of a self-contained memorandum to the Secretary, Finance Commission, before 30th November, 1956.

I.C.I. TO PARTICIPATE IN U.S. PLASTICS PROJECT

Imperial Chemical Industries, Ltd., and Hercules Powder Company of the U.S.A., are to build an \$11 million plant in Missouri for the manufacture of methyl methacrylate. The U. K. Treasury sanction for I.C.I. to participate in this project has been obtained. Methyl methacrylate is a chemical with many applications, although it is most commonly known today in polymeric form as polymethyl methacrylate. This is a glass-like plastic widely used in sheet form in aircraft, motor cars, and illuminated signs, and for many other purposes. I.C.I.'s trade mark for polymethyl methacrylate sheet is "Perspex". The new plant, with an annual capacity of 34,000,000 lbs., will be built on a 20-acre site in Louisiana, Missouri, adjoining the Missouri Ammonia Works owned and operated by Hercules Powder Company. The new Company will make and sell both monomer and polymer in various forms.

Imperial Chemical Industries, Ltd., was the pioneer of the process used throughout the world for the synthesis of methyl methacrylate monomer. I.C.I. will bring to the new company its production, research and technical sales service experience, developed over 20 years, as a major manufacturer of methyl methacrylate in all its forms. Hercules will bring to the new company a technical organisation experienced in U.S. production methods, and an established position in U.S. markets, plus the advantages of a site where the basic raw materials are available. Ammonia and methanol are produced at the Missouri plant, and natural gas is available in unlimited quantities from an adjacent pipeline from Texas gas fields. Hercules produces a fourth raw material, acetone, at one of its newest chemical plants in Gibbstown, New Jersey. Methyl methacrylate is made on a large scale by only two other companies in the United States and at present, its main application is as a plastic polymer. In this form, its unique combination of properties, such as fine appearance, durability, weather-resistance, light-transmission and ease of forming, make it particularly suitable for many and diverse large-volume uses. U.S. consumption has doubled between 1949 and 1955 and is expected to double again in the next five or six years. In addition, there are growing outlets for the monomer as a raw material for products used as protective coatings, lubricating oil additives, and other applications.

COAL MINES PROVIDENT FUND RULES

The Government of India has decided to amend the Coal Mines Provident Fund Scheme in order to liberalise, for the benefit of workers, the scales of forfeiture of the employer's contributions to the Fund in certain contingencies, as envisaged under the Act. According to the old provisions in the Scheme, the full amount of the employer's contribution along with interest was forfeited to the Fund if a member withdrew his accumulations before attaining the age of 50 and during a period which was less than 10 years of his membership. If the period of membership was more than 10 years but less than 25 years, half of the employer's contribution was liable to be forfeited.

According to the amended scheme, the proportion of the employer's contribution and interest thereon to be forfeited to the Fund will be 75 percent if the period of membership is less than three years; 50 percent in case it is three years or more but less than 10 years; 25 percent in five years or more but less than 10 years; 10 percent in 10 years or more but less than 15 years and there would be no forfeiture in cases where membership extends to 15 years and above.

STOCK PRICES FALL ON SUEZ NEWS

OIL SHARES WORST HIT

London, 1st August.

THE stock markets held fairly steady until the news of Egypt's nationalisation of the Suez Canal went round. This bombshell caused a marking down of prices in all sections, particularly in the oil share market which is vulnerable to events in the Middle East. Prior to this news, the strike in the motor industry and the weakness of sterling in foreign exchanges were disturbing influences, but the market held up reasonably well in the face of these, and even the Chancellor's statement that the credit squeeze will be resolutely pursued had only a very limited effect. Prices in all sections dipped on Friday on the Suez Canal news, and further losses were sustained subsequently, although a steadier tendency developed later. The chief sufferers were oil shares, which recorded very substantial losses on the week. British Petroleum sustained the biggest fall in view of their very large interest in the Middle East and their dependence on transport through the Canal. The gilt-edged market held fairly steady in spite of the weakness of sterling and the failure of the Agricultural Mortgage issue, most of which was left with underwriters and which opened at a substantial discount when dealings started on Monday. The feature of foreign bonds was a sustained advance in Japanese and German issues which held most of their gains in spite of the Suez developments. Antofagasta issues were firm in rails on the payment of arrears of the final interest on preference shares. A little interest developed in industrials prior to the Suez Canal news, but after this, prices were marked down on a broad front, although some of the falls were recovered later in the absence of any considerable selling pressure. Gold shares moved downwards in sympathy with the rest of the market following the Suez news, and coppers also reacted. Rubbers and teas moved irregularly, and generally within narrow limits.

Stock Market Prospects

The *Investors' Chronicle* market newsletter writes: The gilt-edged have been affected by the labour situation and the counter attraction of the new Agricultural Mortgage stock. After failing to surpass the resistance levels of last May, the rally in London industrials was slowed by the labour news and Wall Street's pause. Gold shares appear to be picking up again after a minor reaction. Wall Street's volume remains small, but rails are strong on the hope of the steel strike settlement. The pause in London industrials is not surprising as there was little news to sustain the recent remarkable buoyancy. The markets are likely to be uncertain, but with bright spots. Gold share investors may notice the pressure to buy gold in London.

The Money Market

Money was rather more stringent in the London money market during the past week; under keener demand, the rate for day-to-day loans was pushed up to 4½ percent. Government borrowing again required an extra £30 million of money from the banking system. This tended to upset the balance between supply and demand. Shortage at any one time, however, was never extensive and was generally smoothed out by official operations. There was a drop in the Treasury bill rate during the week following the raising of the tender bid by the discount houses. As there was a fall in outside applications, the market secured a quota of 73 percent. Applications for £260 million worth of 91-day bills totalled £381,045,000 and were allotted at an average rate of 99s 6.39d against 100s 3.82d in the previous week. Offerings this week consist of £270 million worth of 91-day bills. The Bank of England return for the week ended 25th July showed that bankers' deposits were about £8 million higher at £215 million, while notes in circulation were £23 million higher at around £1,963 million.

Chancellor's Talk with Bankers

The Chancellor of the Exchequer's extraordinary meeting with London bankers on Tuesday has been well received on the Stock Exchange. His purpose was to reaffirm in the most solemn fashion that the credit squeeze and other disinflationary measures are beginning to succeed, that the Government does not intend to retreat from them merely because they are succeeding rather too well in the Midland car industry, but that on the contrary, it intends to press on with them and expects them to be increasingly effective as this year goes on. A particular reason for addressing these statements to the banks is that bank liquidity has been the least successful sector. The squeeze has worked well in several physical sectors and in restraining the total value of money, but the actual and prospective expansion of the Government's floating debt (the Treasury bill issue) automatically enhances bank liquidity and enables the banks to expand credit instead of restricting it as the Government wishes. So, bank credit has tended to re-expand in the last couple of months and banks will have the money to expand it further in the coming months. The Chancellor's appeal to them to hold the reserve will undoubtedly be heeded by all banks operating here, overseas banks as well as British. Nevertheless, voluntary restraint by bankers when they have excess liquidity is invidious. If it proves inadequate, the Chancellor can enforce his request by mopping up the excess liquidity.

dity. The normal way of doing it by funding operations is temporarily precluded by the credit squeeze itself—through its effect on the gilt-edged market. Other ways such as variable liquidity ratios and secondary reserve requirements, which are used in nearly all other countries, are contrary to London's traditions. Yet the Chancellor pointedly reminded the banks that, in principle, the Government does not exclude even physical controls. Probably, the banks will voluntarily "fund" some of their excess liquidity by buying gilt-edged securities or by subscribing to some new funding issue if needed. Anyway, the Chancellor is determined to press on.

Activity on Wall Street

U.S. Government obligations continued to ease during the past week under the lead of long-term securities, the prices of which were at the lowest levels of the year. The decline took place on a relatively small volume of business and reflected a lack of buying interest, investors having turned to the higher yielding issues recently placed on the market. The investment quality corporates eased in sympathy with the continued weakness of Treasury bonds. Convertibles and rail lines were generally mixed. Bethlehem Steel 3½ percents were most active and advanced by fractions to \$1. In a slow moving market for foreign bonds, German Nationals improved. Italians eased slightly, as did Norway 4½ percents of 1965. Australians were mostly slightly higher, but Japanese were lower. South Americans were largely neglected.

U.S. Federal Reserve Return

The U.S. Federal Reserve return for the week ended 25th July shows that gold stocks rose by \$1 million to \$21,829 million. Foreign deposits fell by \$28 million to \$261 million, while foreign investments rose by \$1 million to \$3,696 million. The Federal Reserve sold \$117 million worth of bills. Total discounts and advances rose by \$9 million to \$461 million, while aggregate excess reserves of member banks fell by \$373 million to \$131 million. The daily average excess reserves of member banks fell by \$89 million to \$533 million, while their daily average borrowings fell by \$276 million to \$573 million. Business loans of the New York city banks rose by \$11 million to \$10,044 million compared with an increase of \$60 million to \$7,999 million in the corresponding week a year ago.

London Gold Squeeze

The minor squeeze in the London gold market shows signs of abating. It occurred because buying for France (on the weakness of the French franc) and also Swiss buying (suspected to be partly for the German authorities) coincided with the unexplained and apparently accidental reduction in the Bank of England's offerings of newly-mined gold. While it lasted, the squeeze raised gold's sterling price disproportionately compared with the easiness of sterling. After holding for months at slightly over \$34.98, the dollar equivalent of the London price reached a peak of \$35.03 nominal, on Tuesday morning. Thereafter, the Bank of England offered rather more freely and the dollar equivalent fell back. The reasons for the incident, though it is minor, are obscure, because by withholding gold (of which it has plenty) the Bank of England unnecessarily depresses sterling. Oddly, the German authorities, overloaded with foreign exchange, apparently buy gold which yields nothing, while refraining from buying their own external bonds which yield up to 8 percent and more.

Hongkong Gold Market Nervous

The Hongkong market for U.S. notes and gold showed nervousness at the opening on Saturday morning, following the latest depreciation of sterling against the dollar and the Suez Canal news. U.S. notes closed on Friday at \$(H)5.99½. At the next opening, keen buyers appeared at \$(H)6.01½ and within 10 minutes, the rate advanced to \$(H)6.03½. Gold closed at \$(H)260½ on Friday night, and opened on Saturday at \$(H)260 reaching a high of \$(H)262½. One leading operator said that the market was generally expecting further firmness and many large traders expect a further depreciation of sterling. They felt the Suez question could become an international affair, and Egypt would very soon raise the question of sterling held by Britain on Egyptian account which is thought to be sizable.

Falling Demand for Quicksilver

The London ex-warehouse price of quicksilver is now indicated at £84 10s a flask compared with £84 10s to £84 15s a flask recently. Demand which has been falling for some time now, was further reduced by the holiday period, according to dealers. Meanwhile, it is understood that buyers have made applications against the Board of Trade's recent offer of 1,000 flasks of stockpile quicksilver. But it remains to be seen if the Board will announce the allocations to various buyers. If not, it will take some time before the trade can find out how the metal is disposed of and at what price.

Easy Trend in Rubber

Liquidation in Singapore induced an easy trend in prices at the start of last week, but there was no marked pressure to sell. Values moved erratically in a listless market, but near the close of the period, increased interest developed. Orders from Europe and covering against them aided a rallying movement. Finally a good demand for forward landed positions, attributed largely to New York account, extended the improvement which amounted to about 3d on balance. The sole crepe market was firm throughout with buyers paying the full quoted rates due to a scarcity of offers. No. 1, ½th inch smooth was maintained at 41d a lb.

Stocks and Shares

STOCK MARKET BRIGHTER ON CANAL NEWS

SPECULATIVES BETTER BUT LITTLE INVESTMENT SUPPORT

Wednesday Evening.

A more cheerful feeling has crept into this week's market dealings, especially where speculative scrip are concerned. The reason for the improvement is Egypt's nationalisation of the Suez Canal. Operators have taken this news bullishly and among the shares of industries which have no connection with either export or import business, a good deal of benefit has been felt. Indian Coppers have improved with the price of the metal on the world's market and the expectation that present international difficulties will encourage stockpiling. Indian Irons have touched Rs. 36-13 after hours this evening on today's announcement that the British Government has called a large number of reservists to the colours.

There has been little investor support in the market this week, although a good deal of buying has gone on in the shares of National Carbon, which at one time touched Rs. 29-8, but are now meeting with selling pressure at Rs. 28-12. There has been some enquiry for jute shares at the present bargain prices. Engineering and miscellaneous counters have been more active, but teas are subdued. The Government-security rules quiet and depressed.

Details of the week's trading follow.

The gilt-edged market remained quiet and there was a further fall in prices; sellers continued to predominate and the volume of business was small. Three percent Conversion Loan 1946-86 continued its downward trend and closed six annas lower at Rs. 76-3. Three percent Non-terminable Loan was marked back to Rs. 76-8 nominal. Short-dated loans had small buyers but prices were unchanged with 3½, 1957 at Rs. 99-13 and 3½, 1958 at Rs. 98-10. In medium-dated loans, 3½, 1959-61 was taken at Rs. 98-2, but 3½, 1963-65 was easier at Rs. 95-1. 2½, 1961 changed hands at Rs. 93-9 cum-voucher and was later quoted at Rs. 93-7 ex-voucher while 2½, 1960 was lower at Rs. 96-5.

National Plan loans continued on offer with 3½, 1961 quoted at Rs. 99-8 and 3½, 1964 at Rs. 98-11-6; 3½, 1965 had sellers over at Rs. 98-10 and 3½, 1967 (New Loan) was quoted at Rs. 98-7-6, i.e. half an anna below the issue price. In long-dated loans, 3½, 1966-68 had buyers up to Rs. 93-3-6 but 3½, 1970-75 was quoted lower at Rs. 90-5. The new 3½, 1974 issue was traded at Rs. 98-7-6.

State loans were also quiet and more sellers were in evidence. Very little business was reported and prices were more or less unchanged. It would appear that operators in this section are waiting for details of the amount and terms of the new State loans which are expected to be announced shortly.

Little interest was shown in preference shares during the week under review and jute scrip in particular were difficult to sell. In jute, Belvedere were marked at Rs. 111 and Budget Budget at Rs. 109-8. Gourepore were offered at Rs. 98 and Howrah "A" at Rs. 110-8. Lawrence were done at Rs. 111. In the miscellaneous group, there was a small enquiry for Alkali & Chemical at Rs. 105 and Aluminium Corporation 5½ and 6½ issues came to hand at Rs. 95 and Rs. 111. Brooke Bond were taken at Rs. 86-8, Dalmia Cement Rs. 100 paid-up at Rs. 100 and the Rs. 40 paid-up at Rs. 39-8. Indian Iron & Steel changed hands at Rs. 109. Kumardhubi Engineering met with some enquiry at Rs. 103 while Rohtas Industries changed hands freely around Rs. 64. Titagur Paper 2nd were marked at Rs. 91.

In the banking section, Hind Bank met with keen enquiry and improved from Rs. 34-4 to Rs. 35-12 as did United Commercial from Rs. 56 to Rs. 57-8. Punjab National were shaded at Rs. 60-8.

The only share dealt in the railway section was Dehri Rohtas which improved from Rs. 13-10 to Rs. 14-1.

The solitary feature in the cotton textile section was Kesoram which improved from Rs. 18-2 to Rs. 18-14. Other issues were neglected and transactions were few and far between. Basanti were done at Rs. 6-14, Cawnpore Textiles at Rs. 8-15 and Jayshree at Rs. 6-14. New Victoria were unchanged at Rs. 2-10.

Coal shares spent a quiet week and prices showed little variation. Amalgamated eased from Rs. 23 to Rs. 22-10 while Bengal were a shade better at Rs. 54-0. Borra were unchanged at Rs. 23 as were East Indian at Rs. 30-14. Equitable improved today from Rs. 29-12 to Rs. 30-4. Karanpura Collieries were well maintained at Rs. 115 as were New Beerbloom at Rs. 19. New Manbloom were marked down from Rs. 11-4 to Rs. 10-8 as were Raneeunge m Rs. 13-2 to Rs. 12-14. Burrakur fluctuated rowly around Rs. 13-5 to close at Rs. 13-7.

Jute shares met with mild enquiry and a few price gains were recorded as will be seen from the following table:

	Opening 26-7-56 Rs.	Closing 1-8-56 Rs.
Bally	132	134
Birla	17 4	17 10
Champdany	154	156
Gourepore	224	226
National	23	24 2
Howrah	22	22 2
New Central	17 1	17 2

In electric supply there was some enquiry for Agra at Rs. 158 and U.P. at Rs. 148. Calcutta recovered from Rs. 13-8 to Rs. 14. Benares were placed at Rs. 17-5, Patna at Rs. 11-8 and Jubbulpore at Rs. 14-2.

Sugar shares were dull with the exception of Purtabpore which improved from Rs. 15-6 to Rs. 16-8. Cawnpore were easier at Rs. 19-10 as were Champaran at Rs. 26-8 and Ramnagar at Rs. 27-8. Carew were unchanged at Rs. 9-2 and Belsund at Rs. 11-14. Dyer Meakin Breweries were done at Rs. 5-13.

Following the news of Egypt's decision to nationalise the Suez Canal Company there was a marked improvement in market sentiment and speculators took up the price of Indian Iron & Steel from Rs. 35-10 to Rs. 36-9. Braithwaite rose from Rs. 27-15 to Rs. 29 while Burn & Company were unchanged at Rs. 355. Indian Galvanizing eased from Rs. 21-8 to Rs. 21-2 as did Jessop & Company from Rs. 34 to Rs. 34-12 and Richardson & Cruddas from Rs. 25-6 to Rs. 26. Textile Machinery recovered from Rs. 22-1 to Rs. 22-8. Marshalls were very quiet at Rs. 5-15.

In paper, Bengal were quoted nominally at Rs. 110 against a quotation of Rs. 121 a fortnight ago. India Paper Pulp met with investment enquiry and improved from Rs. 25-4 to Rs. 25-8

know-how, too,

Following disappointing dividend announcements by a number of companies managed by

The profit of the RAJNAGAR TEA COMPANY amounted to Rs. 2.82 lakhs for the year ended last December, after bringing in Rs. 7,132, against Rs. 4.90 lakhs (Rs. 6,137 brought in). Taxation absorbs Rs. 65,834,

The Company Law Administration, Ministry of Finance, has addressed a circular to all Chambers of Commerce requesting them to bring it to the notice of all companies that applications made to the Central Government under the Capital Issues (Control) Act, 1947, for consent to the issue of capital to the public, should also be accompanied by copies of the draft prospectus. It has been pointed out by the Company Law Administration that although the draft prospectus might require several changes before it is finally filed with the Registrar, what the Controller of Capital Issues requires for his purpose is that the prospectus should contain a fair statement to the public of the terms and conditions of the new issue together with all other material particulars. When the prospectus is ready for the time of submission of the application, a rough draft containing all material particulars is proposed to incorporate in the prospectus, should be furnished along with the application, and a copy of the final draft sent to the Controller as soon as it is ready. Scrutiny of the draft prospectus by the Controller

CENTRE DECLINES U.P. REQUEST
ON LOANS FOR INDUSTRY

EXPERTS REPORT ON SUGAR MILL

RATIONALISATION

(FROM OUR LUCKNOW CORRESPONDENT)

THE State Government's request to the Centre for an allocation of Rs. 30 crores to lend to private industry in U.P. has been rejected. This issue, it is understood, was the main topic of the discussions between Mr. C. B. Gupta, the State's Planning and Industries Minister, and Mr. Manu-
bhai Shah, Union Minister for Heavy Industries, during the latter's three-day visit to Lucknow last week. The Government of India appears to be of the view that a race among States to entice private industrialists into their territories by attractive offers is undesirable. Mr. Shah it is reported, assured the State Government that the private sector in U.P. need not worry about finance as aid will always be available from the various industrial credit and finance corporations set up by the Government.

The Union Minister also placed before the State Government proposals for reorganising the Department of Industries on certain well-defined lines. Similar proposals have been forwarded to

other State Governments for their consideration. The proposals envisage the appointment by the Department of a panel of experts to act as guides for both the private and the public sectors of industry. The Department will also establish fact-finding committees for different industries, consisting of representatives of the Government and industrialists. The committees will submit district-wise project reports on the basis of which future decisions will be taken. As a result of Mr. Shah's discussions with the State Government, official circles here believe that the Centre will soon give its final approval to the location of a synthetic rubber factory in Bareilly, and an aluminium factory in the Mirzapur district in the private sector.

Sugar Industry Rationalisation

The production efficiency experts appointed by the U.P. Government to report on rationalisation in the sugar industry have, it is learnt, framed certain tentative proposals. These proposals it is reported, seek to standardise the strength of a factory, taking into account the capacity of each plant, the machinery employed and the lay-out of the factory. The number of workers needed for each process in each factory is to be fixed. On this basis, about 17 percent of the 80,000 workers employed in the State's 68 factories would be deemed surplus. No recommendation for the retrenchment of surplus labour has, however, been made. Natural wastage alone, in the experts' opinion, would be sufficient to eliminate the surplus. The natural wastage at present, because of

superannuation or retirement due to disability, is estimated at 3 percent a year, and at this rate, full rationalisation could be introduced at the end of six years.

Improvements in the lay-out of factories and the modernisation of machinery before rationalisation is introduced have also been proposed. The experts have further prepared a scheme for fixing the grades of wages for all categories of workers, skilled and unskilled. At present, there are no grades and the minimum wage of Rs. 55 is also often the maximum. The proposed wage scales are intended to ensure regular annual increments without any efficiency bars. If the proposals are accepted by the Government, the contract system of labour will be totally abolished in the factories. This is not the first time that the Government has considered the question of rationalising the sugar industry. It has already in hand the report of a standardisation committee set up under the chairmanship of Mr. M. C. Pant, Deputy Labour Commissioner, and another prepared by a private firm of efficiency experts. But it does not seem to be in a hurry to introduce rationalisation in the sugar industry; it is probably waiting for the implications of rationalisation in Kanpur's textile mills to become clear.

Bigger Sugar Output

Meanwhile, according to figures officially released, U.P.'s sugar production this year has increased by over 20,00,000 maunds as compared with that of the previous year. While production in 1954-55 was 250,40,000 maunds, in 1955-56 it went up to 270,50,000 maunds. The increase is the result of longer crushing by the sugar mills, taking advantage of a bigger cane production. The area under cane during the year rose from 1,33,00,000 acres to 1,73,00,000 acres. The sugar industry is not in favour of having longer crushing seasons, because in the earlier and later stages, the sugar recovery is less. In spite of a longer crushing season and the increased output, the industry points out that the overall recovery from cane this year has been 9 percent as against 9.6 percent last year when the season was shorter.

Official Control of Co-operatives

A drive for "de-officialisation" of co-operatives in the State has been launched by the Co-operative Department, which has issued an order throwing open the offices of the secretaryship of district co-operative federations to non-officials. To streamline the organisation of the district co-operative banks, the Department has plans to create a cadre of co-operative bank managers. The State's co-operative credit at present meets only 41 percent of the rural needs. Co-operative farming, the Chief Minister, Dr. Sampurnanand, has stated, is not suited to this country, at any rate not to this State. He pointed particularly to the example of the ex-servicemen's settlements in the Terai areas. While allotting land to them, they were told that loan facilities and fertilisers would be given only through co-operative societies. Thus, they joined under a sort of indirect pressure. Later it was found that they were all working individually. The State Government has no desire to repeat this experiment again. Dr. Sampurnanand is of the view that under Indian conditions, only co-operative marketing of goods and the distribution of agricultural implements can be successfully undertaken.

Industrial Dispute

The Lucknow Bench of the Allahabad High Court has quashed the order of the Labour Appellate Tribunal in a case arising out of a dispute between the Bhopendra Cement Workers Union, Patiala, and the Patiala Cement Company. The dispute arose by the Company's seeking permission from the Industrial Tribunal to discharge certain workers for indiscipline, slogging and going on an illegal strike. The Tribunal withheld its permission on the ground that none of the charges had been proved, that shouting of slogans did not take place within the factory or during working hours, and that there was no concerted strike action. Upon this, the Company appealed to the Appellate Tribunal which held that cessation of work even for a short time amounted to a strike. It also found that the conduct of the workers involved amounted to indiscipline and granted leave to the Company to discharge them. The High Court, in quashing this order, held that the Appellate Tribunal did not indicate on what material it had come to the conclusion for giving permission for the workers' discharge and why it felt necessary to differ from the findings of the Industrial Tribunal. Under the circumstances, the Court held that the Appellate Tribunal had acted in excess of its jurisdiction.

Agent's Commission

An important ruling on the imposition of sales tax on goods in certain transactions has been given by the Allahabad High Court in a reference made by the revising authority under the U.P. Sales Tax Act against a petition filed by a Kanpur dealer. The Court held that the purchase of goods on behalf of his principal, and on which transaction the agent did not make any profit but received only a commission, did not amount to a sale as defined in the Sales of Goods Act. Their Lordships said: "A commission agent, when he agrees to work for his principal as the latter's agent and to obtain for his principal the goods which the latter wants, undertakes a duty which he is to discharge by purchasing the goods required and supplying them to his principal. The transfer of goods purchased by him to his customer is an act done in the discharge of his duty as an agent. The contract between the principal and the commission agent is not, in our opinion, one of sale, but of agency, and the transfer of property in the goods is not a sale within the meaning of the Sales of Goods Act."

SERVICE IN INDUSTRY

The Law Relating to Service in India. Vol. II. (Service in Industry). By N. Barwell and S. S. Kar. (Published by Orient Longmans Ltd., 17, Chittaranjan Avenue, Calcutta. Pages 995. Price Rs. 37-8.)

This, with its companion volume on the general law of Master and Servant, is the most important and informative work on the subject with which it deals, published in India. Mr. S. S. Kar begins this second volume by dedicating it in moving terms to "the revered memory of Mr. Barwell," to whom he attributes most of the credit and most of the actual work. Mr. Kar does himself much less than justice. Mr. Barwell, no doubt, prepared the general scheme and wrote most of the first volume, and to him also is due the deliberate avoidance of technical phraseology and law terms, thereby rendering the work as intelligible to the ordinary commercial man as it is to the lawyer. But, in this second volume, it is easy to detect almost the precise place, at which the failing hand of the older man laid down the pen and his friend and colleague took over. The respective styles are so different. Mr. Barwell wrote as he spoke. Scholarly, didactic, witty, a little too diffuse, as, for instance, when carried away by his lively interest in everything he discusses, he wanders off into a grave investigation as to whether a master mariner is legally entitled to be styled "captain". On the other hand, Mr. Kar is terse, brief, informative, and will not stray a hair's breadth from the point. Each style is equally effective in its way. In the one case, we feel we are having a useful chat; in the other, listening to a formal lecture.

However that may be in these two volumes, the first giving us the general principles of the law and the second embracing the subject matter of all Parliament's industrial statutes, we have everything the commercial employer needs to deal with the bewildering legal problems of the law of service which press on him day by day. These two volumes, plus native commonsense, Workmen's Compensation, Factories Act, Mines Act, Plantations Labour Act, Dock Workers' Regulations, Industrial Disputes Act—a wonderful example, that last, of the remedy worse than the disease—Trade Unions Act, Payment of Wages Act and many more. All are there printed in full, with practical commentaries, and the latest judicial decisions set out in colloquial language. The work of about a thousand pages is exceptionally well got-up and printed.

ANNOUNCING Firestone NEW DeLuxe Champion TUBELESS TYRES

BLOWOUT AND
PUNCTURE PROTECTION

No tube to pinch or burst—damage which might cause a blowout in a conventional tyre merely causes a slow leak—and if a sharp object should penetrate the extra-tough cord body, the Safety-Liner prevents loss of air thereby minimizing the danger and annoying delay of punctures.

SILENT RUNNING AND
SKID PROTECTION

Tests have proved that the new silent Safety-Grip tread runs quietly and refuses to squeal even on the sharpest turns. It gives greater protection against skidding and greater traction than any other tyre.

MORE COMFORTABLE
RIDING

Never before such riding comfort, never before such steering ease. The Firestone New DeLuxe Champion Tubeless Tyre absorbs bumps and road shocks. It provides a super-soft cushion of rubber and air which smooths out even the roughest roads.

WHOLESALE PRICE INDEX RISES

THE official wholesale price index (base: year ended August, 1939=100) advanced further by 0.1 percent to 407.2 during the week ended 14th July, 1956 as compared with 406.8 (revised) for the previous week. The index was higher by 1.4 percent and 13.5 percent respectively when compared with the corresponding weeks of the previous month and of last year. Higher prices of gram at Hapur and salt in Calcutta (+4% each), rice at Vijayawada (+3%), gur (+2%) and wheat, dal arhar and sugar (+1% each) raised the index for Food Articles by 1.0 percent to 378.7 as compared with 374.9 (revised) for the previous week; the price of tea for internal consumption, however, declined by 3 percent. The index for Industrial Raw Materials declined by 0.6 percent to 487.8 because of a fall in the prices of groundnuts (-5%), castorseed (-4%), rapeseed in Bombay and raw silk and lac (-3% each) and linseed in Bombay (-2%) in spite of an increase in the prices of manganese ore (average export price) (+60%), gingellyseed (+4%), linseed in Calcutta and rapeseed at Kanpur (+2% each) and raw jute and copra (+1% each). The index for Semi-Manufactures moved down by 0.4 percent to 393.4. Items which showed significant changes were: gingelly cake (-8%), groundnut oil (-3%), buff hides and mustard oil (-2% each), groundnut cake (+3%) and linseed oil in Calcutta, brass in Bombay and copper (+2% each). Prices of jute manufactures advanced by 1 percent while those of glass went down by 2 percent and in consequence the index for Manufactures went up by 0.1 percent to 365.4. Lower prices of betelnuts (-4%), turmeric in Calcutta (-3%) and black pepper (-1%) brought down the index for the Miscellaneous group by 0.6 percent to 557.7; the price of chillies, however, rose by 1 percent.

NEW EXPORT POLICY FOR IRON AND MANGANESE ORE

In conformity with the Supreme Court's order dated 24th July, 1956, and in supersession of the orders contained in the Press notes dated 22nd June, 12th July, and 16th July, 1956, the Government of India has decided to regulate the export of iron ore and manganese ore during the period July-December, 1956 on the following basis: (a) Export quotas will be granted separately for each of the ports through which exports are effected. Separate quotas will thus be granted for the ports of Calcutta, Vizagapatnam, Masulipatam, Kakinada, Madras, Redi, Bombay, Bhavanagar and Kandla; (b) Export quotas will be granted to shippers and mine-owners on the basis of two-thirds of the quotas allotted to them for the half-year July-

December, 1955; (c) Shippers and mine-owners who effected export during the half-year July-December, 1955 otherwise than against quotas will be granted quotas on the basis of actual performance. Quotas will be allotted to them equal to three-fourths of the total quantity exported through the port concerned from 1st July, 1955, to 31st December, 1955, less such quantity as might have been exported by them against quotas which had been allotted to them during July-December, 1955. Shippers and mine-owners are advised to give along with their application a statement, duly supported by an affidavit, giving quantities exported by them against quotas issued during July-December, 1955; and (d) Wagons will be allotted by the Railway authorities on a pro rata basis to mine-owners on the lines on which the mines of the quota-holders are situated and to shippers on the lines which have been used by them during the period July-December, 1955. Applicants have been advised to file an affidavit along with their applications giving the lines on which they have moved their ores in July-December, 1955, and stating the quantity for which they would like movement facilities on each of these lines.

Quotas will be issued separately for iron and manganese ores and allotment of wagon space will be made separately for the quotas issued for these ores. Quotas will not ordinarily be interchangeable, but if the quota-holder desires to move and ship manganese ore against the quota for iron ore, his request will be considered by the Export Control authorities at the ports sympathetically. The new policy comes into effect at once. Applicants have been advised to submit their applications to the Export Trade Control authorities at the ports with the minimum possible delay. Applications received after 7th August will not be entertained. Export Trade Control authorities have, however, been advised to deal with applications as they come in. They have also been instructed that until quota slips are issued by them, exports should be licensed on an ad hoc basis to prospective quota-holders and wagons should be allotted on the existing basis. Exports made from 16th July onwards will, however, be adjusted against these quotas. This announcement does not cover parties who had no performance or quota to their credit during the period July-December, 1955. The issue of licences in such cases and the basis on which they are to be issued is under consideration and will be announced shortly.

STATE GOVERNMENTS PLAN TO INSTALL POWERLOOMS

A number of State Governments have already indicated their desire to install about 35,000 powerlooms in the handloom sector of the textile industry. This is the number of powerlooms which the Government of India recently decided to install during 1956-57 and 1957-58. This information was available at the recent meeting of the State Directors of Industries, convened by the Ministry of Commerce and Industry in New Delhi, to consider measures for a speedy implementation of the decision to install powerlooms, and also to review the progress of handloom schemes. The Union Minister for Consumer Industries, Mr. Nityanand Kanungo, guided the deliberations. At the meeting, steps were considered to render financial and technical assistance to weavers who will work powerlooms. The Centre is to give loans up to 87% percent of the share capital for each weaver in a powerloom co-operative society. The Centre will also give loans to meet the entire cost of powerlooms as well as electric motors, and provide working capital on loan. Financial assistance will also be given for capital expenditure for preparatory and processing plants and workshops, and recurring expenditure for the servicing of the looms and technical instruction. In addition, the Centre is to provide help to meet the cost of transporting powerlooms from the factory and for power connection for the looms. The cost for the first year of training the staff required to help in the installation of powerlooms will also be met by it.

It was stressed at the meeting that the provision for working capital should be raised to about Rs. 1,000 a loom. On the power supply for the looms, it was felt that the supply should be subsidised by the Government to make power available to the weaver at As. 1-6 a unit. A similar subsidy is already being given by the Government to make cheap power available to small industries. The setting up of demonstration-cum-training units of 10 or more powerlooms in certain selected places was also recommended. The meeting considered measures for further technological improvement of handlooms. It was felt that frame-looms, an improved type of handloom, and other technical equipment like take-up motion attachments, which increase the productivity of the loom, should be supplied to weavers and financial assistance given for the purpose. At present, the Government provides financial assistance for such technological improvements as an outright grant. The need for setting up workshops in different States for the manufacture of improved looms and other equipment to meet the requirements during the second five year plan was stressed. Already one workshop, to be established in Madras State, for the manufacture of frame-looms and take-up motion attachments, healds, etc., has been sanctioned. The recent decision for the registration of handlooms was supported at the meeting which was of the view that it was in the interest of the weavers themselves that they should register their looms as early as possible to enable the Government to collect the necessary data for developing the handloom industry.

LONDON TEA SALES

AT last week's London tea sales, the 28,455 packages on offer realised an average price of 3s 11.78d a lb, against 3s 8.10d in the previous sale and 4s 2.66d a year ago. Plain old season's broken pekoe was quoted at 2s 9½d a lb nominal. Prices obtained by some of the companies are given below:

	No. of packages	Average per lb
Adams Peak	115	5/11
Anglo-Ceylon & General	204	4/4
Assam Dooars	479	4/6½
Badulipar	78	4/1
Bandarapola	126	4/5
Central Provinces	24	3/8½
Ceylon Amalgamated	300	3/5½
Chulsa	197	4/8½
Demodera	288	5/31
Devitural	108	3/11½
Dickwella	120	5/7½
Dimbulla Valley	184	4/0½
Doom Dooma	1,020	4/1
Eastern Produce	66	4/8½
Highland	138	3/11½
Imperial Ceylon	498	5/11
Imperial Company	150	3/5½
Jetanga	1,116	4/4½
Kanan Devan	1,128	4/2½
Lunuvu	66	4/11½
Muyfield	90	5/4½
Nuwara Eliya	29	3/8
Pabbojan	858	4/9
Rajawella	254	4/3½
Scottish Ceylon	174	4/10½
Scottish Tea & Lands	548	3/6

U.K. Tea Stocks

U.K. stocks of tea on 20th July amounted to 125.2 million lbs, against 134.5 million lbs a year ago.

SHARP INCREASE IN U.K. TEA IMPORTS DURING MAY

The statistical summary issued this month by the International Tea Committee in London reveals that in May the United Kingdom imported two-and-a-half times the quantity of tea it did during the same month last year. The quantities (given in thousand lbs) for May 1956 and May 1955 were: from India, 26,607 and 7,981; Ceylon, 11,456 and 5,703; Africa, 7,461 and 4,607; Pakistan, 1,225 and 22; Indonesia, 563 and 495; the Netherlands, 502 and 511; Japan, 477 and 115; China, 107 and 141; Hongkong, 40 and 26; Formosa, 0 and 4; total imports, 49,221 and 20,706.

COCHIN TEA SALES

At Sale No. 22, 1,150,000 lbs. of tea were on offer. There was a good demand, particularly for best liquors. Low Mediums were dearer. Mediums were irregular and often easier, while Whole Leafs were very strong.

TEA EXPORT DUTY UNCHANGED

The Government of India has issued a notification naming the price of tea, for the purpose of fixing the export duty, at Rs. 2-8-5 a lb. This compares with Rs. 2-13-11 a lb. determined on 1st July, 1956. There is no change in the existing rate of duty of six annas a lb.

COLOMBO RUBBER PRICES

The following prices have been issued by the Rubber Board of India from the weekly market report published by the Colombo Brokers Association:

	Closing prices on 20-7-56 (Rupees a lb.)	Average for the period (Rupees a lb.)
Sheet :		
No. 1	1.41	1.41
No. 2	1.38	1.38
No. 3	1.35	1.35
No. 4	1.11	1.11
No. 5	1.06	1.06
	Sheet Cuttings 1	-.95
	Sheet Cuttings 2	-.90
Crepe :		
Water White	—	—
R.M.A. No. IX	1.48/49	1.48½
R.M.A. No. 1	1.35/45	1.43
	Crepe No. 2	1.32½
	Crepe No. 3	1.17½
Scrap Crepes :		
Sc. Crepe No. 1	.85 Nom.	.85
Sc. Crepe No. 2	.77/81	.79½
Sc. Crepe No. 3	.75/77	.76
Flat Bark	.70/73	.71½
	Sc. Crepe 3X	.78

To arrive at f.o.b. Colombo prices add 53.45 cents a lb. in respect of rubber other than scrap crepe and 31.45 cents in respect of scrap crepe to the above market prices.

Jute

IMPORTANCE OF GANGA BARRAGE TO THE JUTE TRADE

TRANSPORT AND IRRIGATION FACILITIES LIKELY TO IMPROVE

IN the West Bengal Legislative Assembly last week, Dr. B. C. Roy announced that the Government of India had decided to take up the construction of the Ganga Barrage as a Central project. That is very satisfactory if it does not involve a delay in its execution. An attempt was made to have this project included in the first five year plan but the proposal was turned down by the Central Government. A further attempt was made to have it included in the second plan, but the Planning Commission rejected the proposal. The Government of West Bengal then decided to proceed with the work as a State project and now the Government of India has decided to carry it out itself. In the interests of West Bengal and of Bihar, it is essential that there should be no unnecessary delay in undertaking the work, but we fear that its importance to these two States and to the problem of transport in general is not widely appreciated.

It is nearly a quarter of a century since Capital first proposed that this work should be undertaken. The main object put forward was to relieve traffic bottlenecks on the railways which hampered the movement of jute to Calcutta, but it was also pointed out that electricity could be produced, large areas could be irrigated and flood control could also be included in the project. Unfortunately, the proposal did not find favour with the authorities then in power. The chief opposition came from the railways, which feared a loss of traffic, and from the Calcutta Port Commissioners, who thought that the re-opening of the Bhagirathi river would affect the navigation channels in the Hooghly. The main interest of the jute industry in the project is, of course, because of transport difficulties. The railways have shown that they are incapable of transporting, without inordinate delays, even the meagre quantity of jute being offered at present. If the wagon position does not improve in the very near future, when much larger quantities of jute will be awaiting despatch, the position of the mills, whose stocks are very low, will be critical. But, apart from the supply of wagons, the railways are unable to handle the wagons already allotted and jute from Bihar is having to be sent by rail through Pakistan, a roundabout and expensive route.

The Bhagirathi Route

People still alive can remember the days when inland vessels of up to about 600 tons used to go up the Hooghly and the Bhagirathi rivers into the Ganges and as far as Patna. The Bhagirathi was, however, allowed to silt up, either through negligence or as a matter of policy in order to divert traffic to the railways. When it became un-navigable, it was necessary to divert river traffic from places in Bihar and West Bengal by the long route down the Ganges to the Padma and through the Sunderbans, thus increasing the steamer journey by some 300 miles. This involves more fuel consumption and longer time, which in turn necessitate higher freight rates. When the second five year plan gets under way, there will be greater demand for fuel and for transport, and anything that can be done to economise on both is of the utmost importance. If the Ganga Barrage were completed, it would effect such economies, for less fuel would be consumed and the vessels now engaged would be able to do more voyages per annum and so transport more goods. We have dealt mainly with the advantage to the jute trade of better transport conditions which would result from the building of the barrage. There would also be other advantages. The area which could be irrigated by waters from the Ganges is one where water for jute-growing and jute-retting is not plentiful, and the output and quality of the jute grown are below standard. If that area had an assured supply of water, both could be improved and it would be another step towards making India independent of supplies of jute from Pakistan. Parts of these areas, though normally inadequately supplied with water, are also subject to sudden flooding, and flood control would be part of the barrage scheme. The advantages of the project are so obvious and so urgent that it is surprising that there has been so much delay in getting it accepted. Now that it has been accepted, it ought to be given priority so that these benefits may be made available to the jute industry, and to the people of West Bengal and Bihar in general, as soon as possible.

THE JUTE MARKETS

FOR the second consecutive week, Calcutta markets were dominated by the activity in fibre. Early in the period, mills made almost daily purchases, and interest was centred mainly on quick delivery jute. High prices were paid for almost anything provided the delivery period was short, so the bulk of the business was transacted in the local Cossipore markets. This was due to the very unsatisfactory transport position in most upcountry agencies, where wagons were extremely short. Although sellers have very little control over this, the initial blame can probably be put on them. It has nearly always been their practice, when indenting for wagons, to ask for more than they need, knowing full well that the station

masters at the booking stations will automatically cut their applications considerably before passing them on to the higher authorities. Unfortunately, this is only the first cut of a series, as each authority reduces the application before passing it on. When the allocation is finally given to the booking station, it has been whittled down to about a quarter of the original application and there are not nearly enough wagons to lift the jute available. In this way, a considerable backlog has been built up at most of the stations, so mills have had to seek alternative sources of supply nearer home.

Towards the end of the week, however, the situation greatly improved. Jute began to flow more freely in the agencies, and wagon arrivals, both in the Cossipore markets and at mills' sidings, increased. Having replenished their stocks adequately from the local markets to tide them over the difficult period, buyers were now in a position to sit back. One or two Indian groups, however, continued their search for jute, and were the main supporters of the market, as had been the case throughout the week. Sellers, on hopes of more business, kept prices up, and were most reluctant to accept any offers below the full market rates. But towards the close, a definitely easier tendency began to creep in and business came to a standstill.

There was practically no activity in the jute goods markets. The minor fluctuations in heavy goods were the direct result of speculative activity, as overseas buyers showed no interest. The easier tendency in hessian, which showed a gradual decline throughout the week, was brought about by reports of a further fall in world hessian consumption. Calcutta mills displayed little interest in the ruling prices due to the high price of raw jute, and although business was put up to them they refused to entertain it at these rates. Bazaar activity was on a very restricted scale, and local shippers even found difficulty in covering their small requirements.

In raw jute, New Crop reports continue to be encouraging. Favourable weather conditions in most of the Assam and northern Bengal districts have been beneficial, and it is expected that if the present conditions continue, a start may be made in harvesting the highland crop in the very near future. In spite of heavy rain in Assam, river levels are normal or below normal for the time of the year, but floods can do very little damage now as the lowland crop is all harvested. In Pakistan, similar conditions are reported, and new crop arrivals in Narayanganj are heavy.

Manufactured Goods : Heavy goods were slightly better at the opening last Thursday, and B Twills showed an improvement of 4 or 6 annas. Quotations were based on July shipment at Rs. 103-10 and Jan.-March shipment at Rs. 104-8 a 100 bags. Hessian however showed a weaker tendency; 40in 10oz. lost 2 annas in the near position to Rs. 38-6 and 4 annas for Jan.-March shipment, which was quoted at the same price. Rates advanced slightly in the morning under speculative buying in fatka, but later, due to lack of support, prices fell back. The only delivery figuring in these activities was the sacking near position. On Friday morning, while all other deliveries and fabrics ruled unchanged, June shipment B Twills lost 6 annas to Rs. 103-4. No business was reported. The general lack of interest, both from local sources and overseas buyers, added to the weak conditions, and throughout the day the market showed a gradual decline. By Saturday morning, heavy goods showed a drop of 6 or 8 annas and hessian 2 annas, but the latter was only in the near positions, forward hessian remaining fairly steady. These conditions prevailed throughout the week-end with no business transacted. After the closure, prices were unchanged, except that ready B Twills moved up to Rs 103-6. This proved to be only a temporary rise, as during the day prices moved slowly downwards. On Tuesday morning, all sacking fabrics showed a loss of 4 annas, making ready B Twills Rs. 103-2 and Jan.-March shipment Rs. 103-12. The movement in hessian was less pronounced and 40in 10oz. fell by 1 anna to Rs. 38-3 a 100 yards for the near positions. At the close, the goods market was easier and opening quotations on Wednesday morning were as follows:

	Ready	August	Sept.	Oct.-Dec.	Jan.-Mar.
	Rs.	Rs.	Rs.	Rs.	Rs.
40in. 8oz.	31-5	31-4	31-2	31	30-12
40in. 10oz.	38-2	38-5	38-6	38-6	38-4
B Twills	102-10	103-4	103-6	103-12	103-12
Heavy Cees					
(Plain)	101-12	103-4	103-8	103-12	103-12
A Twills	126-4	127-4	127-12	128-4	127-12
Liverpools	115-4	116-4	117-4	117-12	117-4
Cornsacks	104-12	104-12	104-12	104-12	104-12

Raw Jute : Calcutta mills once again kept the raw jute markets steady by their continuous demand for quick shipment. All available supplies were taken up at rising prices, and along with the small quantities of shipment jute reported, it was estimated that total purchases were not less than about 400,000 maunds. Sellers naturally were very reserved and were not interested in counterbids

at anything below the full market rate, so during the week raw jute prices advanced from Rs. 28 a maund to Rs. 28-8 a maund basis Bottoms for Dhubri-Northern jute for August shipment. Towards the end of the week, raw jute arrivals in Cossipore and at mill sidings and jetties improved, so buying interest waned. Quotations however remained firm and sellers showed no sign of reducing their prices.

The main business was for quick delivery jute from the Cossipore markets, and prices paid for local Northern and Assam jute ranged from Rs. 27-8 to Rs. 29 a maund for ready, 15 days' and one month's delivery. Karimpore tossa was also bought at Rs. 29 a maund for one month's delivery. This was mainly Old Crop jute, but all other purchases carried the option of Old and/or New Crop. These consisted of Dhubri-Northern at Rs. 27-8 to Rs. 28-8 a maund basis Bottoms for July-August shipment and Rs. 29 for 15th August shipment. Jungli jute also passed at Rs. 26 a maund for 25 percent August/75 percent September shipment. Some small lots of Daissee white were reported at Rs. 28 to Rs. 28-8 a maund for August shipment. In pucca bales, business was confined to cuttings, and prices ranged from Rs. 119 for September shipment to Rs. 134 for 15th August shipment.

At the close, the market was easier, and opening quotations on Wednesday morning were as follows:

Indian Jute (New Crop Kutcha Bales):	Landed at Mills Rs. a md. basis Bottoms.	Shipment. August-Sept.
Lower Assam	27-8	"
Northern	27-8	"
Murshidabad White	27	"
Daissee White	28	"
Old Crop :		
Local Northern	29	15 days.
Daissee	29	"
Daissee Mesta	28	"
Bimil	27-4 for F.A.Q.	"

Tossa is quoted at 8 annas to Re. 1 a maund above the price of white jute.

Pucca Bales (New Crop):	Rs. a bale.	Shipment. August-Sept.
Mill Firsts 2/3	185	"
Mill Lightnings 2/3	170	"
Mill Hearts 2/3	155	"
S. G. Daissee	175	Sept.-Oct.
L. G. Daissee	160	"
Pakistan Jute (New Crop Kutcha):	Rs. a md. basis Bottoms.	Shipment. August-Sept.
Jat	31	August-Sept.
District	30-8	"
Northern	30	"
Pucca :	Rs. a bale	Shipment. August-Sept.
Mill Firsts 2/3	195	"
Export Firsts 2/3	175	"
Export Lightnings 2/3	160	"
Jat Cuttings	120	Sept.-Oct.

Imports into the local Cossipore markets improved rapidly towards the close, and brought the total arrivals over the week to 520 wagons. This had very little effect on prices, as demand for quick delivery jute continued and sellers persisted with their bullish ideas. At the close, Kishanganj jute was quoted at Rs. 29 a maund for garsat quality.

Mofussil : Indian upcountry markets, although quieter towards the close, rose by about 8 annas over the week, keeping their parity of about 8 or 12 annas over Calcutta rates. Imports in Dhubri have fallen slightly and last week averaged about 3,000 maunds a day. This is less than half the figure reported last year at this time, and is due to the river levels being lower, which has cut down the amount of steeping water available. Sellers are reserved, and quotations in Dhubri towards the close were based on Rs. 25-4 a maund for Bottoms.

GUNNY SHIPMENT STATISTICS

The following figures include coastal shipment relating to manufactured jute goods for shipment from the port of Calcutta. These are gross figures based on the shipping bills presented.

	Hessian Bags (Tons)	Cloth (Tons)	Total (Tons)
1st to 25th July, 1956	1,571.6	16,024.2	17,595.8
1st to 25th June, 1956	1,702.3	19,718.2	21,420.5
1st to 25th May, 1956	2,416.7	18,282.5	20,699.2
	Sacking		
1st to 25th July, 1956	16,368.0	1,021.8	17,389.8
1st to 25th June, 1956	17,255.8	1,616.6	18,872.4
1st to 25th May, 1956	21,117.6	2,299.6	23,417.2

GUNNY SHIPMENT STATISTICS FOR JUNE

The following are the total nett figures of manufactured jute goods shipped from Calcutta during the month of June, 1956 after providing for short shipments. These figures include shipments to coastal ports.

	Hessian Bags (Tons)	Cloth (Tons

"CAPITAL" STOCKS AND SHARES INDEX *

The Capital Stocks and Shares Index (Base 1939) has now been brought up to June, 1956. Compared with May, the June index for preference shares increased by 1.3 points, while that for government securities remained unchanged at 98.2 points.

There were decreases in banks 2.3 points, cottons 12.8 points, coals 3.5 points, jutes 4.8 points, cements 8.6 points, engineering 30.3 points and papers 28.5 points, while increases occurred in minings and oils 4.9 points, teas 13.5 points, sugars 6.0

points and miscellaneous 15.5 points.

Correlating all the factors, the Capital variable yield securities index shows that the index for stock prices in the above classes of shares declined by 7.9 points during June, 1956.

Engineering and Transport

BRITISH FAILURE TO WIN THE KARIBA GORGE TENDER COMPLAINTS OF UNFAIR ITALIAN COMPETITION

THE failure of British firms to win a major contract in the Kariba Gorge hydro-electric project has had at least one good effect; it has compelled the British contracting industry to investigate its position thoroughly. The industry is not very confident that such failures can be prevented in the future, because they are not entirely—probably not mainly—a result of its own failings. But the authorities, as well as the contractors themselves, have been seriously disturbed by this development, and it is not unlikely that official policy will be adapted to it. The purpose of this particular project, it may be recalled, is to harness some of the energy of the River Zambezi at a point between Northern and Southern Rhodesia where the Kariba Gorge provides great potentialities for hydro-electric power. The first stage of the project will require about £80 million, which is being contributed from various sources—more than £28½ million from the International Bank for Reconstruction and Development, £18 million from the United Kingdom (mostly from the Colonial Development Corporation), various amounts from the Government of the Central African Federation, the big copper companies (as much as £20 million), and the local banks.

One cause of resentment in Britain is that when so much British money is being invested in the scheme, the main contracts have been awarded to Italian firms (though parts of them will be subcontracted to British firms). The explanation is, of course, in the above-quoted figure representing the International Bank's participation: a project for which the Bank lends capital must be open to competitive international tendering. But of that figure of some £28 million as much as £10 million will be made available from the U.K.'s subscription to the Bank. Thus Britain is in effect providing £28 million to finance the first stage of the project, and it appears that counterbalancing purchases of equipment and services in the U.K. will amount to little more than one-third of this sum.

In a letter to *The Times* Sir Richard Costain, chairman of the council of the Export Group for the Constructional Industries, has questioned the whole principle of such financial arrangements. "In the postwar period, United Kingdom Governments have consistently proclaimed the lack of adequate funds for overseas investment. At present in the United Kingdom, we are struggling with balance of payment difficulties and industry is subjected to the dislocations of a credit squeeze. At such a time vast sums are being found from British sources which will be used to provide employment for foreign competitors and enable them to establish a bridgehead from which to mount further assaults on British trading interests." Sir Richard is not much impressed by the arguments for competitive tendering in such a case. (Time seems to be of the utmost importance at Kariba, if only to harmonise the supply of power with the copper-producers' plans; yet international tendering has caused much delay.) But if this system is adopted, he argues, why should not the country of the successful bidder provide the funds needed in excess of those forthcoming from the International Bank or locally? Then scarce resources would be available to finance other projects.

Uneconomic Tendering

There is, however, another aspect of the matter that distresses some observers still more. The plain fact is that in international competition, the British tenders were much higher than the Italian. Must it be assumed that, with no special privileges, the British are unable to compete successfully? In a letter to the *Financial Times*, Mr. R. W. Stanton, managing director of Group One Ltd. (an association of companies designed to give comprehensive technical assistance for development schemes abroad), has hinted that the Italians were so anxious to get the contracts that their tenders did not take all the risks into account. "British competitors who have endeavoured in their tender to take every factor into account will be most interested to see, in due course, what the ultimate cost and the ultimate construction time of the Kariba Dam will be." In other words, British competitors are not convinced that they were outbid on normal commercial terms. It has to be recognised, however, that uneconomic tendering has become a characteristic of this strongly competitive business of developing underdeveloped countries. Communist nations especially regard the profit on such work as only one, and not necessarily the most important, element in it. The Americans, too and the Germans, though more conventionally businesslike than the Russians, are well aware of the political (and, therefore, the ultimate commercial) value of penetration of developing regions. The British are not unaware of it; but they are hampered more than others by finance.

Insufficiency of Credit

In many cases, this restriction takes the form of inadequate credit, and credit is a vital factor in any development project involving years of work and tens of millions of pounds of capital. But this impediment is itself a direct consequence of the scarcity of capital for investment abroad. And the difficulty of obtaining materials and personnel enough to guarantee completion of a job within the specified time and at stable cost is a direct consequence of inflation. The problems of

British contractors arise from the problems of the British economy in general, and they cannot be completely solved apart from them. The various firms, each with its special functions and knowledge, are willing now to engage in flexible associations, so that they can offer comprehensive plans for any project, however big or intricate. (Mr. Stanton, above-quoted, dismissed the idea that there was inadequate experience and skill to support the co-ordinated British tender for Kariba.) But in this all-important sector of international affairs, the development of underdeveloped countries, they cannot hope to be entirely successful until the whole British economy has been strengthened. They wish that in the meantime loans of British money to develop the Commonwealth could be conditional on the placing of contracts with British firms; but the Government has specifically rejected a proposal to that effect.

U.K. PRODUCTION OF NUCLEAR ENERGY

RAPID IMPROVEMENT IN TECHNIQUES

THE report of the U.K. Atomic Energy Authority for the year ended March last has raised some interesting questions concerning the problem of power in general, in the U.K. primarily, but also, by implication, in the world as a whole. The essential fact is that nuclear energy is developing much more rapidly than the experts surmised even a few months ago. Therefore, the prospective deficiency of energy which has so alarmed the economic statisticians may be much less than they have supposed. And the probability of ultimate abundance has become now almost a certainty. Britain's problem, which is shared by other European countries, is the need to import large quantities of coal and oil in the period between ample production of coal and adequate generation of electricity by nuclear means—whether by fission or by fusion. It is worth noting—for it is an important factor in the current balance of payments—that Britain has been importing coal this year at little more than half the rate of last year's imports, as production at home, which has been virtually static in recent years, has turned upward. But it is generally assumed that the shortage of primary power will become more acute during the next decade and that it will be necessary to import much more oil to make good the deficiency. In the geological conditions of Europe, which produces much coal but not much oil, such a situation can have disturbing consequences.

Estimates of Power Needs

It must be admitted that there is no scientific basis for the estimates of power that will be needed years and decades hence. It is unwise to assume that industrial production will continue to increase at the same rate as in the past decade, as it has been accelerated since the end of the war by the delays and destructions of the wartime. Nor should we assume that if industry doubled its output, it would need twice as much fuel and power; it could, and should, use available resources more efficiently. Resources can be planned, within reasonable limits, and estimates of future supplies of energy may therefore be more accurate. But that Britain has lately been able to double the estimate of the amount of nuclear energy that she will be producing by 1965—because a power-station will be twice as efficient as had been supposed—shows that the effects of technological progress may be underestimated. A widely-accepted estimate of Britain's maximum requirement of fuel in 1965 is a coal-equivalent of some 330 million tons, compared with a coal-equivalent of some 270 million tons in 1954. In recent years Britain has produced rather more than 220 million tons of coal a year; the latest plan envisages an output of 240 million tons in 1965—and it is a more realistic plan than its predecessor. On this reckoning, it seems that the gap to be filled by oil and by nuclear energy, (hydro-electric energy is not, unfortunately, a very serious proposition in Britain as a whole, though it is being developed in Scotland), will increase from less than 50 million tons coal-equivalent in 1954 to approximately 90 million tons coal-equivalent in 1965.

The latest estimates suggest that by 1965, nuclear energy will provide about 12 million tons coal-equivalent in the U.K. (where nuclear energy is being developed for immediate purposes more actively than anywhere else); so that oil must provide not much less than 80 million tons coal-equivalent. In 1954, oil provided less than 40 million tons coal-equivalent; so it appears that in the next decade or so, a large increase in consumption of oil must be envisaged. Even so, this increase, on the revised basis of calculation, is not so large as some authorities envisaged even a few months ago; whereas in the meantime still further expansion of the oil industry has been announced. Moreover, recent experience shows that it is impossible to limit the prospective contribution of nuclear energy, because nuclear technique is advancing so rapidly that estimates may be outdated within a year. (This progress can be demonstrated with figures. The power-stations at Calder Hall, Cumberland, the first of which will be inaugurated in October, will have a capacity of 92 megawatts, but the power-stations planned to operate in 1964-65 will be designed to produce at least 400 megawatts, even if there are no important technological developments in the meantime.) It is possible, therefore, that the oil industry will be required to contribute much less power than is at present envisaged. The position of the oil industry from 1965 onward is even more uncertain. The Central Electricity Authority's estimate of the U.K.'s requirement about that time is 132,500 million units of electricity, including an "imported" element,

from uranium and oil, of 25,500 million units. It was assumed until recently that this "imported" element would comprise nuclear energy and oil in approximately equal proportions; but if output of nuclear energy is being effectively doubled, there will evidently be no place for oil as a generator of electricity 10 years hence.

Hypothetical Calculations

All these calculations are hypothetical, if only because they cannot take proper account of relative changes in cost. As a prime source of energy, oil is at present rather dearer than coal, and nuclear electricity, generated by the most advanced techniques, is—in countries such as Britain—fully competitive with either. A few years hence, when techniques have advanced further, nuclear energy will probably be the cheapest in any country which is not liberally endowed with cheap coal or oil or water-power. For countries such as Britain, therefore, the question seems to be simply how fast nuclear power-stations can be built. All plans for nuclear energy are at present, of course, based on known techniques of nuclear fission, but there are in the background the possibilities of abundant energy from nuclear fusion. The U.K. Atomic Energy Authority's report states frankly that "many problems have to be solved before a practicable fusion reactor will be possible"; yet its report on researches is unexpectedly hopeful. So it may be that the pattern for the future is the energetic development of coal and oil for only a few years, of nuclear fission for, perhaps, a few decades, and of nuclear fusion indefinitely.

SYMPOSIUM ON NUCLEAR METALLURGY

The close inter-relation developing between metallurgy and the production of atomic energy is demonstrated by the literature abstracted in the July issue of the *Nickel Bulletin*, which includes references to papers presented at a symposium on metallurgy in the nuclear power field and to items of the proceedings of the international conference on the "Peaceful Uses of Atomic Energy." High-temperature engineering in the aircraft gas-turbine and related fields is represented by a series of papers dealing with the properties of metallic materials for use at temperatures above 1600°F. (870°C.). Attention is also directed to two comprehensive summaries of information on corrosion problems arising in the petroleum industry, and to papers concerned with the welding of heat and corrosion-resisting materials, including clad steels. The *Nickel Bulletin* is issued monthly and supplied free of charge, on request, by the Mond Nickel Company, Ltd., Technical Office, 1, Forbes Street, Fort, Bombay 1.

AIR-INDIA INTERNATIONAL SINCE NATIONALISATION

Air-India International Corporation's third anniversary since nationalisation fell on 1st August, 1956; the airline itself completed eight years of working recently. A Press release issued by the Corporation says that it has always endeavoured to foster a spirit of camaraderie among the rank and file. As an incentive to promote initiative and creative abilities, the management has instituted a scheme to

Calcutta Markets

GOOD GENERAL DEMAND AT
TEA EXPORT SALE

POOR ENQUIRY FOR DUSTS

AT Sale No. 8, held on 30th and 31st July, offerings at the Export auction, consisted of 31,600 packages for which there was a good general demand, and any teas with useful liquors were often dearer. Bright liquoring Assams of orthodox manufacture sold well, while C.T.C. teas were well supported and satisfactory prices were generally realised for the best kinds. There was more demand this week for the ordinary kinds, particularly Fannings and these were 1 to 2 annas dearer, while clean plain descriptions were 1 to 1 anna dearer. Medium and Low Medium breakers shared in the general advance and were sometimes 2 annas or more dearer depending on quality. There was very good demand for Darjeelings and these sold very well, while there was much more demand for stylish leaf grades. The only teas to show a decline were the tippiest sorts, which were often 4 to 8 annas easier.

Quotations

	1956	1955
Clean Black Pekoe	1 15 0 to 2 0 0	3 2 0 to 3 4 0
Plain B.P.	1 9 0 to 1 9 6	2 7 0 to 2 7 6
Medium Assam B.P.	2 4 0 to 2 6 0	2 9 0 to 2 9 6
Best CTC Assam B.P.	4 0 0 to 5 0 0	3 3 0 to 3 4 0

At the Internal Sale, Dust offerings consisted of 13,241 packages which included 522 chests of Old Season's teas. There was a poor general demand, with black exportable types being the weakest feature of the sale, and these showed a decline of 4 annas and sometimes more, while withdrawals in this category were heavy. There was also less demand for C.T.C. Assams which were 2 to 4 annas easier. Mediums were 2 to 4 annas easier, while Darjeelings shared in the general decline. Common sorts were generally firm, while the commonest kinds were well supported and were 2 annas and sometimes more dearer.

Quotations

	1956	1955
Medium Doonars Dust	1 7 0 to 1 8 0	2 5 0 to 2 5 6
Medium Assam Grainy Dust	1 9 0 to 1 10 0	2 7 0 to 2 8 6
Best Assam CTC Dust	3 0 0 to 3 4 0	2 14 0 to 3 0 0

Leaf offerings amounted to only 312 packages for which there was a poor enquiry at lower rates.

SUGAR MARKET EASY

During the week ended 1st August, sales in the Calcutta market averaged 3,000 bags daily. Arrivals a day were 7,000 bags and stocks totalled 160,000 bags. Rates for ready sugar, ex-Kantapukur delivery, were Rs. 31-6 for ordinary grain and Rs. 33-8 for big grain. The market went dull and prices eased by Rs. 1-3 to Rs. 1-12.

LINSEED

Generally firm conditions prevailed last week, and prices advanced appreciably. Fairly good enquiries have been noted, but trading has been rather poor because of an acute shortage of ready goods and very firm advices from the centres. Prices in the oil section have displayed a noticeable advance in sympathy with mustard oil. There was however little chance of fresh export business. Local enquiries have been good. Latest quotations were as follows:—Ready-August Rs. 22-12 a maund.

HIDES AND SKINS DULL

The market was dull. Stocks were higher than in the previous week.

Bazaar Sales

(Between 24th July and 30th July, 1956)

Cowhides: Wet salted (Ord.) 25,000 pcs. on the basis of Rs. 5-4 to Rs. 7; Wet salted (Slaughtered) 17,500 pcs. on the basis of Rs. 11-8 to Rs. 20.

Goatskins: Wet salted (Daissee, Killed) 39,500 pcs. on the basis of Rs. 205, Rs. 230 to Rs. 250 and Rs. 330 to Rs. 340; Purneah-Kissenganj-Maldah 5,600 pcs. on the basis of Rs. 170 to Rs. 250; Pakur-Patna 12,000 pcs. on the basis of Rs. 167-8 to Rs. 167-8.

Bazaar Stocks

(30th July 1956)

Cowhides: Wet salted 1,70,000 pcs.
Goatskins: Wet salted (Daissee, Killed) 40,500 pcs.; Assam-Dinajpur-Jalpaiguri 75,000 pcs.; Muzafferpore - Patna - Pakur - Purneah - Kissenganj - Maldah 206,000 pcs.

COMPANY AND PUBLIC NOTICES

KUMARDHUBI ENGINEERING WORKS,
LIMITED.

NOTICE is hereby given that the Twelfth Ordinary General Meeting of KUMARDHUBI ENGINEERING WORKS, LIMITED, will be held at the Registered Office of the Company, Chartered Bank Buildings, Calcutta, on Friday, the 31st day of August, 1956, at 2-30 P.M., for the purpose of receiving the Directors' Report, passing the Audited Accounts for the year ended 30th November, 1955, declaring the Dividends recommended by the Directors, electing a Director and appointing Auditors.

The Share Registers of the Company will be closed from the 16th August to the 31st August, 1956, both days inclusive.

By Order of the Board,
BIRD & CO. (PRIVATE) LIMITED,
Managing Agents.

Chartered Bank Bldgs.,
Calcutta, 28th July, 1956.

NOTE—

1. A member entitled to attend and vote at this meeting is entitled to appoint a proxy to attend and vote in his stead. Such proxy need not be a member of the Company.
2. The Dividends, if sanctioned, will be paid on or after 10th September, 1956, to those Shareholders so entitled whose names appear in the Company's books on the 31st August, 1956, or to their mandates. No application for Dividend Warrants will be necessary.

THE KARANPURA DEVELOPMENT COMPANY
LIMITED.

NOTICE is hereby given to the members of the abovenamed Company that an Annual General Meeting within the meaning of the Companies Act, 1956, (being the Seventieth Ordinary General Meeting of the Company) will be held at the Registered Office of the Company, Chartered Bank Buildings, Calcutta, on Saturday, the 4th August, 1956, at 10 A.M. for the purpose of receiving the Report of the Directors, passing the Audited Accounts for the half-year ended 31st December, 1955, declaring the Dividends recommended by the Directors, electing Directors and Auditors and for transacting any other ordinary business of the Company.

The Share Registers of the Company will be closed from the 21st July to the 4th August, 1956, both days inclusive.

By Order of the Board,
BIRD & CO. (PRIVATE) LIMITED,
Managing Agents.

Calcutta, 3rd July, 1956.

NOTE: 1. A member entitled to attend and vote at this meeting is entitled to appoint a proxy to attend and vote in his stead. Such proxy need not be a member of the Company.

2. The Dividends, if sanctioned, will be paid on or after 11th August, 1956, to those shareholders so entitled whose names appear in the Company's books on the 4th August, 1956 or to their mandates. No application for Dividend Warrants will be necessary.

THE PUNJAB NATIONAL BANK LTD.
'SHREE NIWAS', 8, UNDERHILL ROAD, DELHI.

Notice of Interim Dividend.

THE Directors of the Punjab National Bank Limited, Delhi, have decided to pay an Interim Dividend @ Rs. 2/- per share, free of Income-tax, for the current year, at the Registered Office of the Bank at Delhi on or after the 1st September, 1956, to the shareholders whose names stand on the Register of Members of the Bank as on 27th August, 1956.

The Transfer Books and Register of Members of the Bank will remain closed from 28th August, 1956 to 31st August, 1956 (both days inclusive).

By Order of the General Board of Directors,
R. L. TULL,
Offg. General Manager.

Delhi, 19th July, 1956.

DISHERGARH POWER SUPPLY CO. LTD.

THE Board of Directors has today decided to recommend to the forthcoming General Meeting of the Shareholders the following Dividends without any deduction in respect of Taxation payable by the Company for the year ended 31st March, 1956.

At the rate of Rs. 5/- per share on the "A" Pref. Shares.

At the rate of Rs. 4/8/- per share on the "B" Pref. Shares.

At the rate of Rs. 6/- per share on the Ordinary Shares.

By Order of the Board,
ANDREW YULE & CO., LTD.,
Managing Agents.

Calcutta, 28th July, 1956.

ALLIANCE JUTE MILLS COMPANY, LIMITED.

NOTICE is hereby given that the One Hundred and Twenty-second Annual General Meeting of the Shareholders of ALLIANCE JUTE MILLS COMPANY, LIMITED, will be held at McLeod House, No. 3, Netaji Subhas Road, Calcutta, the Registered Office of the Company, on Tuesday, the 28th August, 1956, at 3 P.M., for the following purposes:—

- (1) To receive and adopt the Directors' and Auditors' Reports and to pass the Accounts for the half-year ended 31st December, 1955.
- (2) To declare a Dividend on the Preference Shares.
- (3) To appoint a Director in place of Mr. H. J. Silverston who retires by rotation, but who is eligible for re-appointment.

And, in this connection, to consider, and if thought fit, to pass the following resolution as a Special Resolution of which Special Notice as required by Section 261 of the Companies Act, 1956, has been received by the Company and the relative explanatory statement concerning which, as required by Section 173 of the said Act, is annexed hereto.

To be proposed as a Special Resolution.

"That Mr. H. J. Silverston an Associate of McLeod & Co. Ltd., the Managing Agents of the Company who retires by rotation be and is hereby re-appointed a Director of the Company."

- (4) To consider, and if thought fit, to pass the following ordinary Resolution pursuant to Section 293(1) (d) of the Companies Act, 1956, the relative explanatory statement, as required by Section 173 of the said Act, being annexed hereto:—

"That the Board of Directors be and is hereby permitted with effect from the commencement of the Companies Act, 1956, to borrow moneys from time to time for the carrying on of the business of the Company notwithstanding that the moneys to be borrowed, together with the moneys already borrowed by the Company (apart from temporary loans obtained from the Company's Bankers in the ordinary course of business) will exceed the aggregate of the paid-up Capital of the Company and its free reserves, that is to say, reserves not set apart for any specific purpose."

- (5) To appoint Auditors for the year 1956 and to fix their remuneration.

A member entitled to attend and vote at the Meeting is entitled to appoint a proxy to attend and vote in his stead. A proxy need not be a member.

The Share Transfer Books of the Company will be closed from 6th August '56 to 28th August '56, both days inclusive.

By Order of the Board,
MCLEOD & CO. LTD.,
A. T. DOIG,
Managing Director,
Managing Agents.

3, Netaji Subhas Road,
Calcutta, 26th July, 1956.

NOTE:—Payment of the proposed dividend, if declared, will be made on or after 28th August, 1956, only to those members whose names are registered in the Books of the Company on the 28th August, 1956, or to their Mandates.

No application for Warrants will be necessary. Claims on behalf of holders of shares on blank transfer will not be entertained.

EXPLANATORY STATEMENTS.

1. In the Special Notice given to the Company of the resolution under item No. 3 of the above Notice, it has been pointed out that Mr. H. J. Silverston is an Associate of the Managing Agents and, in view thereof, it will be necessary for the Shareholders to pass a Special Resolution in accordance with Section 261 of the Companies Act, 1956, if they decide to re-appoint him as a Director of the Company.

2. The resolution under item No. 4 of the above Notice is intended to provide the Board of Directors with the necessary authority to enable them to borrow moneys from time to time for the Company's business in excess of the paid-up capital of the Company and its free reserves pursuant to Section 293(1)(d) of the Companies Act, 1956.

TIDE WATER OIL CO. (INDIA) LTD.

THE Board of Directors has today declared an interim dividend for the half-year ended 30th April, 1956 of -/8/- per share without any deduction in respect of taxation payable by the Company.

By Order of the Board,
ANDREW YULE & CO. LTD.,
Managing Agents.

Calcutta, 25th July, 1956.

THE HOOGHLY FLOUR MILLS COMPANY, LTD.

NOTICE is hereby given that the Annual General Meeting of the Members will be held at the Registered Office of the Company, No. 4, Bankshall Street, Calcutta, at 4 P.M. on Thursday, the 30th August, 1956, for the following purposes:—

- (1) To receive and adopt the Directors' Report and the Audited Accounts for the half-year ended 31st December, 1955.
- (2) To declare a Dividend.
- (3) To elect a Director.
- (4) To appoint Auditors and to fix their Remuneration.
- (5) To consider and if thought fit to pass the following Resolution as a Special Resolution:—

"Resolved that the appointment of Messrs. Chaudri & Co., as Sole Banians of the Company on the terms and conditions set out in an Agreement dated 27th March, 1945, for the period 1st January, 1945 to 31st December, 1959, be and is hereby approved.

- (6) To consider and if thought fit to pass the following Resolution as a Special Resolution:—

"Resolved that an Agreement be entered into between the Company and Messrs. Shaw Wallace & Co. for a period of 5 years from 1st April, 1956, whereby the Company will purchase from Shaw Wallace & Co., and Shaw Wallace & Co. will sell to the Company, goods of the description and quantities set out hereunder at the prices hereunder described, delivery of such goods to be as mutually agreed, such Agreement not to impose any obligation upon either Shaw Wallace & Co., or the Company for the former to sell or the latter to purchase more than the maximum quantities as specified below, but all purchases of goods in excess of such maximum quantities hereunder specified shall be purchased and sold under and in pursuance of the terms of the Agreement above referred to."

Description of Goods.	Maximum Quantity.	Price.
New Gunny Bags	3,00,000 per annum	Market price prevailing at dates of orders.

The Transfer Register will be closed from the 23rd August, 1956 to 30th August, 1956, both days inclusive.

N.B.—A Member entitled to attend and vote at the Meeting is entitled to appoint a Proxy who need not be a Shareholder of the Company. If it is desired to use a Proxy, the same should be completed in the manner described by Section 176(5) of the Companies Act, 1956, and delivered at the Registered Office of the Company at least 48 hours before the time fixed for the Meeting.

By Order of the Board,
SHAW WALLACE & COMPANY LTD.,
Managing Agents.

Calcutta, 25th July, 1956.

Explanatory Statement for Item No. 5 above. Under the provisions of Section 294 of the Companies Act, 1956, the appointment of Sole Selling Agents prior to the 15th February, 1955, requires to be confirmed by the Members in General Meeting.

Chaudri & Co. have been actively associated with the Company since its inception and the prosperity of the Company is in no small measure due to their Industry, energy and foresight. They have acted as Sole Banians for the Company for very many years and an Agreement, officially appointing them as such for 15 years as and from the 1st January, 1945, was entered into on the 27th March, 1945. The remuneration currently payable to the Sole Banians under this Agreement is as follows:—

- (1) Commission of 1% on all sales of Wheat Products with an additional 1% on all sales guaranteed by the Banians.
- (2) Commission of 1% on all sales of old gunnies, refractions and waste products.

The Agreement is open to inspection by any Member of the Company at the Registered Office on any working day during normal office hours.

Explanatory Statement for Item No. 6 above. Under the provisions of Section 360 of the Companies Act, 1956, a special resolution is required to approve a contract between a Company and its Managing Agents, or an Associate of its Managing Agents, for inter alia, the sale, purchase or supply of any property, movable or immovable.

For very many years, the Company has obtained its requirements of Gunny Bags from Messrs. Shaw Wallace & Co., who, as one of the leading Calcutta shippers of Gunnies, are in a position to obtain the Company's supplies for it on favourable terms. It is therefore considered that the Company will benefit by a continuance of this arrangement.

Since the Managing Agents are a Partner in the firm of Shaw Wallace & Co., the latter might be held to be an associate of the Managing Agents within the meaning of the Companies Act, 1956, and this resolution is required to regularise this arrangement and authorise its continuance.

Mr. C. I. M. Arnold, a Director, is an employee of Shaw Wallace & Co. Ltd., and is to that extent interested in the above Agreement.

THE BHULANBARAREE COAL COMPANY,
LIMITED

NOTICE is hereby given to the members of the abovenamed Company that an Annual General Meeting within the meaning of the Companies Act, 1956, (being the Ninety-ninth Ordinary General Meeting of the Company) will be held at the Registered Office of the Company, Chartered Bank Buildings, Calcutta, on Tuesday, the 28th August, 1956, at 10-30 A.M., for the purpose of receiving the Report of the Directors, passing the Audited Accounts for the half-year ended 31st December, 1955, electing Directors and Auditors and for transacting any other ordinary business of the Company.

The Share Register of the Company will be closed from the 14th to the 28th August, 1956, both days inclusive.

By Order of the Board,
F. W. HEILGERS & CO. (PRIVATE) LIMITED,
Managing Agents.

Calcutta, 26th July, 1956.

NOTE—A member entitled to attend and vote at this meeting is entitled to appoint a proxy to attend and vote in his stead. Such proxy need not be a member of the Company.

INDIAN COPPER CORPORATION LIMITED.

The following are the returns for the quarter ended 30th June, 1956:—

Ore treated	S/Tons.	101093
Average value of ore treated		2.171
Refined Copper produced	L/Tons.	1901
Refined Copper issued to Mine		2
Rolled Brass Produced		1596
Rolled Brass issued to Mine		.08
Y. M. Circles Produced		109
Rolled Copper Produced		62

The results of development work carried out on the properties of the Corporation during the quarter under review are as follows:—

	Footage developed.	Footage sampled.	Footage payable.

Badia	137	137	39.5

By Order of the Board,
GILLANDERS ARBUTHNOT & COMPANY LIMITED,
Managing Agents.

Clive Buildings,
Netaji-Subhas Road,
Calcutta, 17th July, 1956.

THE MIM TEA COMPANY LTD.

THE Board of Directors has decided to recommend to the forthcoming Annual General Meeting of Shareholders a dividend of Rs. 15/- per share in respect of the year ended 31st December, 1955, without any deduction in respect of taxation payable by the Company.

By Order of the Board,
ANDREW YULE & CO. LTD.,
Managing Agents.

Dated
Calcutta the 25th July, 1956.

RAJGARH TEA COMPANY LTD.

THE Board of Directors has decided to recommend to the forthcoming Annual General Meeting of Shareholders a dividend of Rs. 2/8/- per share in respect of the year ended 31st December, 1955, without any deduction in respect of taxation payable by the Company.

By Order of the Board,
ANDREW YULE & COMPANY LTD.,
Managing Agents.

Dated
Calcutta the 25th July, 1956.

CHOONABHUTTI TEA COMPANY LTD.

THE Board of Directors has decided to recommend to the forthcoming Annual General Meeting of Shareholders a dividend of Rs. 6/8/- per Share on the Preference Shares and a dividend of Rs. 20/- per Share on the Ordinary Shares, in respect of the year ended 31st December, 1955, without any deduction in respect of taxation payable by the Company.

By Order of the Board,
ANDREW YULE & COMPANY LTD.,
Managing Agents.

Dated
Calcutta, 26th July, 1956.

THE MURPHULANI (ASSAM) TEA CO. LTD.

THE Board of Directors has decided to recommend to the forthcoming Annual General Meeting of Shareholders dividends of Rs. 1/12/- per share on the preference ordinary shares and Rs. 1/4/- per share on the ordinary shares, in respect of the year ended 31st December, 1955, without any deduction in respect of taxation payable by the Company.

By Order of the Board,
ANDREW YULE & COMPANY LTD.,
Managing Agents.

Dated
Calcutta the 25th July, 1956.

KUMARDHUBI ENGINEERING WORKS,
LIMITED.

THE Board of Directors have recommended the payment of the following Dividends for the year ended 30th November, 1955.

On Preference Shares at the rate of 5 per cent per annum without any deduction for Income Tax paid by the Company.

On Ordinary Shares at Eight Annas per share without any deduction for Income Tax paid by the Company.

By Order of the Board,
BIRD & CO. (PRIVATE) LIMITED,
Managing Agents.

Chartered Bank Buildings,
Calcutta, 27th July, 1956.

Mr. Eugene R. Black, president of the World Bank, has announced the formation of the International Finance Corporation, and the appointment by its board of directors of Mr. Robert L. Garner as president of the Corporation. The I.F.C. is now established as an affiliate of the World Bank with the purpose of encouraging the growth of productive private enterprise, particularly in the less developed areas of the world. Mr. Black has made this announcement in his capacity as chairman of the board of directors of the Corporation.

A £300,000 contract to build a sugar factory in India has been obtained by a Glasgow firm. The factory is to be built for a Calcutta company, and will be located in Ahmedpur, West Bengal.

Ship, Marine, General Engineering
and Foundry work of all descriptions

(V) May be redeemed at par on 30-6-56 or any subsequent interest date on one month's notice.

transfer deeds.

JOINT STOCK COMPANIES PREFERENCE SHARES

Dividends are cumulative and shares carry a preferential claim on the property for the payment of capital and on the profits for dividend except in case of companies marked otherwise. Months against names of companies indicate approximately times of payment of dividends.

COAL COMPANIES

O. Po. F. and Dd. indicate Ordinary Preferred Ordinary Founders' and Deferred shares respectively. P. next to the name of the company indicates that the company also has Preference Shares. Figures in "accounts closed" column indicate the months of the calendar year in which accounts are closed. For Managing Agents refer to the Key (last page) under the numbers indicated.

WORLD BANK MISSION ON THE SECOND PLAN

REVISION OF RAIL CHARGES URGED

THE report of the recent World Bank mission to India, excerpts from which are featured in this week's New Delhi letter on page 183, appears to be a most important document. For some reason, it has not previously been made available to the public except through the entirely unofficial medium of a daily newspaper—the *Hindu* of Madras. The delay is perhaps understandable because there is, it seems, much in the report which the Government will no doubt wish to take its time over. Expressing as it does the expert opinion of an independent international agency on the second five year plan, the survey deserves careful study by all sections of the community and the sooner they have access to it the better. The mission, which has a background of considerable experience of developing economies on which it can draw, says a good deal with which the public must already be familiar and which should strengthen its faith in the good sense of the more sober among India's newspapers. But a number of the remaining comments touch on subjects which have not previously come in for serious discussion and which must now be considered to qualify for it.

The more general comments on the plan approximate to those already made by other independent observers, by organised business and through the columns of the Press. There is no reason to suspect that the Government and the general public are not already acquainted with them; the opinion of so authoritative a body as the World Bank should simply provide some much-needed weight on the points of maximum controversy. The mission considers, for example, that the plan is too large and is able to avoid the charge of indifference to the country's obvious needs by pointing out, with all its impartial authority behind the contention, that the psychological effect of failure may be even more dangerous. The inadequacy of the priority given to transport is stressed, so are the risks of leaving too large a proportion of the supply of indispensable consumer goods to untended cottage and hand industries. The feasibility of the Government's textile policy comes under critical scrutiny and the need for a more healthy climate for private investment is reaffirmed. Considering the number of features in the plan of which the realism is doubted, it is scarcely surprising that the report should welcome one of the few concessions which have been made to hard thinking—that is the maintenance of flexibility. Annual reviews are certainly a necessity in a project of this size, but from the way the mission urges the importance of handling carefully, and only after prior planning, the changes which are likely to be necessary, it is disappointingly obvious that it is expected that these will be radical. It might have been better to have listened to more cautious counsel in the first place, than to be running the risks which the report appears to consider India is at present taking. But if it is now too late to redraw the plan on more practical lines, there is still time to take valuable advice of the kind given in this survey.

has advocated. An excellent case can no doubt be put for revising railway rates, but it might be easier on the industrial cost structure to restrict it to passenger fares and, especially, amenities, some of which are now becoming quite unrealistic. The report also offers suggestions for improving the efficiency of the transport system in general. Those concerning road haulage have often been mentioned in public discussion. The obstacle remains chiefly, perhaps, the attitude of the railways, which have a monopoly and intend to keep it. Progress made in road transport continues to be one of the more disappointing features of India's economic development. The trouble is so obvious that the only acceptable conclusion is that this is the deliberate aim of Government policy. But for all that, it is no less a candidate for immediate reform. The report suggests special wagons for the movement of coal and ore and the establishment of fully mechanised handling facilities to reduce the waste involved when ships and railway wagons have to be immobilised. These, and the proposal for change in the present system of allocating coal wagons on a day-to-day basis, are too obvious to need comment.

The mission's advice on incentives for the private sector can usefully be borne in mind when drawing up each of the next four annual Budgets. The present level of personal taxation in this country has, of course, not been determined on economic considerations alone. This may have been a necessary hostage of political expediency, but so long as the private sector is to be held responsible, as the report points out, for the major part of the country's increase in wealth, it seems only sensible to avoid discouraging its efforts by ensuring that they are no longer worthwhile. Recent Government economic measures have gone well beyond the boundaries of "co-existence" with the private sector. The damage to confidence and the will to expand is clear enough for all who are prepared to see it. Perhaps the explanation of this unaccountable disregard for the most important of private enterprise's needs—its confidence—is to be found in the suspicion the mission has expressed that in India "the importance of private business has not yet been sufficiently recognised and publi-

THE RISK OF RISING PRICES

MUCH concern is being expressed over the fairly sharp rise in prices which has occurred in recent months—a rise which in its latest phase has sent the official wholesale price index (base: year ended August 1939=100) bouncing up to 409.1, compared with 356 or so a year ago. The movement began around the middle of 1955 as a corrective to an earlier fall, but now appears to be becoming distinctly inflationary; official recogni-

</

million tons, which might prove to be an optimistic estimate in view of the large-scale smuggling which has been going on into East Pakistan. Periodic shortages, both severe and mild, have been reported in other sectors also, such as cotton, jute and oilseeds; in some cases, these are due to a decline in production, while in others they reflect the failure of agriculture to keep pace with the increase in activity of industries whose primary materials it supplies. The more serious shortcomings, from the viewpoint of general economic development, however, are in the case of food rather than cash crops, and the Government has been making welcome efforts to get over them, for the time being at least, by stockpile releases and increased imports. It cannot claim to have had much success yet; food has played its customary fundamental rôle in the movement of wholesale prices generally, and since the beginning of this year, the food index alone has risen from 327.4 to 381.1.

At a time when agricultural targets and allocations are still being debated, the trend is of major immediate significance. For the Government and its plan, it is important because the whole progress of economic development depends on a relative stability in prices, and that means first of all food prices. As more and more money is pumped into an economy where living standards are already deplorably low, the largest proportion of the increase will be devoted to buying extra food. For some time, the inclination in official circles was to suggest that food had become dearer because of speculation and hoarding; but recent Ministerial statements indicate a welcome realisation that this is not the whole story. The Reserve Bank's efforts may, as Mr. A. P. Jain claimed, have caused the disgoring of Rs. 10-crores worth of paddy and rice from hoarders' godowns, but the fact is that rice is still not much cheaper in the free markets now than it was three months ago when those efforts were first inaugurated. A generalisation which comes nearest the truth would probably be that food is dear partly because production has been smaller while consumption has increased; the prospect of its becoming still more expensive has induced hoarding, which in turn has accentuated the upturn in prices.

All this is of considerable importance not only for the Government, nor merely for the consumer, but for industry as well. The entrepreneur knows that an inflation which starts with food cannot fail to affect him ultimately, for it will push up his costs. Labour unrest is accentuated, and has to be assuaged by conceding the demands of workers who find their pay-packets worth less in real terms than they used to be. As long as the markets for finished products are competitive, as they are today, these cost increases cannot be immediately offset by price adjustments; the upward movement in the latter lags far behind that in the former, and the inevitable result is that profit margins are squeezed. There is evidence to show that this process has been at work in the economy during the past few months. Since the beginning of this year, the official price index for food has risen by 53.7 points to 381.1; for industrial raw materials by 52.1 points to 490.4; and for semi-manufactures by 48.3 points to 394.9. But the index for manufactures, having fluctuated narrowly around 376 over the first half of the year, has only now moved up to 386. There is reason to believe that the last of these increases is cost-induced—a belated effort by industry to salvage something of its narrowing profit-margins. How much will ultimately be salvaged is difficult to say; only company reports appearing many months hence will be able to give a rough idea of the impact of higher railway freight rates from April, and of dearer steel, cement and coal (price increases whose reversal cannot be foreseen in the near future). Expanding enterprises may be able to whitewash the effects by showing increased turnover, but not many of the remainder could offer the same consolation.

The cost-price problem assumes a special importance in the light of the country's foreign trade ambitions. Here, stated in its simplest terms, the difficulty is that inflation will tend to restrict exports by pricing Indian goods out of foreign markets (world trade in four of India's biggest exports, jute manufactures, tea, cotton textiles and ores, is highly competitive). At home, it will tend to increase the demand for food (among other essentials), which in the short term at least can be satisfied only by sharply increasing imports. The healthy foreign trade position India has built in the last two or three years is a major factor which has enabled her to boost the tempo of import licensing for capital goods in recent months. If exports cannot be increased, or if foreign exchange has to be spent on food for an inflated domestic economy, it is clear that development plans will suffer. That is only one of many good reasons why today's price trends are of vital importance for the future.

CURRENT COIN

Bombay's Electricity Needs.—The electric power shortage has been an important factor retarding industrial expansion in the Bombay region, but the address of Mr. K. G. Milne, chairman, to shareholders of the Bombay Suburban Electric Supply Ltd. last Thursday gives an encouraging indication that needs are likely to be better satisfied in the next few years. (A fuller report on the address appears on a later page.) This is partly because of the bold development plans his own company has implemented, which have enabled it, over the past year alone, to increase sales by 20 percent to over 60 million units. Partly, it is due to the two new thermal plants with a capacity of 50 mWs each which are being set up in Trombay; the first of these is expected to come into commercial use at the end of this year, and the other six or nine months later. As a result, says Mr. Milne, "within the next 12 months, the power position in the Bombay region will become extremely favourable, and we hope it will continue to remain so till around 1959." Thereafter, much depends on the progress of the Koyna project; and many share Mr. Milne's frank scepticism whether much power will be available from it before 1961-62. He feels that it is necessary to make arrangements now to expand plant capacity either in Bhira or in Trombay if a shortage is to be avoided. The extent of potential demand is such that there seems to be a good case for expansion already. When the Government invited applications for industrial loads to be sanctioned after the Trombay station is commissioned, no less than 400 of them were received for loads aggregating about 25,000 kWs. It is unfortunate that the expansion of a vital industry such as electricity supply has been hampered by the statutory fixation of the "standard rate" of return at 5 percent. Mr. Milne expresses a widespread doubt when he suggests that the pressure of work in Parliament might delay the passage of the Electricity Supply (Amendment) Bill, under which the "standard rate" would be raised to 5½ percent (2 percent above Bank rate, which now stands at 3½ percent). The measure is urgent enough to deserve higher priority, as its early enactment would enable producers to frame their expansion plans with greater speed and assurance. Under the present law, Bombay Suburban has been placed in the extraordinary position that although it has earned more than enough to maintain the 7 percent dividend, because of the appropriations it has to make to statutory reserves it has once again had to draw something from the dividend equalisation reserve to pay the distribution. Mr. Milne emphasises that as long as the "standard rate" of return is limited to 5 percent, companies which expand are handicapped more than those which do not.

Nationalising Kolar Gold.—The chairman's speech to shareholders of the Kolar gold mining companies in Oorgaum on 2nd August (extracts from which appear on a later page) outlines the evolution of the Mysore Government's proposal to nationalise the companies. It points to the political origins of the dispute, and then traces the irrational attitude adopted by the State Government in subsequent discussions on whether or not the companies had violated the Agreement signed in 1949. The main issue now is what compensation shareholders are likely to be offered if the nationalisation of the companies is finally decided upon. The question is of wider interest than just to Kolar gold shareholders; there is a large foreign investment in the companies, and if the compensation is as blatantly unfair as the Mysore Government intends, India's prospects of attracting capital from abroad will suffer. That is probably why the Central Government has intervened to try to suggest reason to the Mysore nationalists, though it is regrettable that efforts to have the entire nationalisation idea dropped have not been noticeably successful. The Mysore Government originally intended to fix compensation on the basis of the market quotations of the shares. But at a meeting with a committee of three Central Government officers in June, "the companies' representatives strongly opposed this, and took the opportunity to repeat that to take drastic measures, as the Mysore Government had done, that debilitated and crippled the enterprise and brought down the share prices, and then to use the depressed, and restricted market quotations as the basis for fixing compensation, is to inflict a double injury on shareholders. Detailed statements were submitted of the valuations of assets and liabilities made by an expert firm of valuers of international standing, as well as of the present position of each company, its future prospects, etc." But the companies have apparently not been informed officially of what has happened since. The Mysore Government however made an announcement a few days ago, which was published in the Press, that it had agreed to the Central Government's suggestion to pay Rs. 119 lakhs as net compensation to the three companies. The chairman says that this figure is "unreasonably low and totally unac-

ceptable." He hopes that the compensation will not be unjustly or arbitrarily fixed, and that the companies' claims will be heard by an independent tribunal.

Mukand Iron and Steel.—At the annual general meeting of the Mukand Iron and Steel Works Ltd in Bombay on Monday, Mr. K. Bajaj, chairman, emphasised the need to ensure adequate steel supplies for the steel-processing industries. (A fuller report on the speech appears on a later page.) Re-rolling mills, he said, were suffering from the acute shortage of billets; production had fallen and stagnation had set in. Until the steel plants could supply more billets, imports should be increased. The company was making progress with the manufacture of steel castings. The demand for these had increased in recent years, and was likely to rise further. Plans had therefore been framed to expand the company's steel re-rolling and steel casting capacity, and to improve the plant and lay-out. Efforts were also being made to secure foreign technical collaboration in these schemes. Among the difficulties which Mr. Bajaj stressed was the shortage of power in the Bombay region. The company's application for additional power supply had been pending for a long time, but he hoped that as more power became available the requirements of the steel-processing industries would be given proper consideration. Electricity rates, he urged, should be kept as low as possible, and the provision of railway sidings for heavy industries should be facilitated. Mr. Bajaj emphasised the need for a steady and long-term price structure for rolled steel as applicable to the steel re-rolling mills; this would facilitate their progress by enabling them to know to what extent they could finance development programmes from their own resources. The Government's proposals for setting up a new steel foundry to make heavy castings and forgings were welcomed, but the chairman hoped that "care will be taken to avoid overlapping with the private sector." The directors have recommended the payment of all dividend arrears for the six years preceding 1955-56, as well as the dividend for 1955-56, on the cumulative preference shares.

Expansion in Engineering.—In spite of many difficulties, such as a critical shortage of vital raw materials and of skilled personnel, the engineering industry in this country has been maintaining a dynamic rate of progress. In his inaugural speech to the tenth annual general meeting of the Bombay branch of the Engineering Association of India, the Union Minister for Heavy Industries, Mr. M. M. Shah, referred to the happy state of affairs in engineering, an industry which occupies a pivotal position in the country's industrial structure. "As far as estimated production in the general engineering and electrical engineering industries is concerned", said Mr. Shah, the Government of India hoped, that "the targets laid down for the second five year plan" would be outstripped, "if possible within the first three years". He assured his listeners that the Government was always ready to help if the industry kept up its endeavour to reach the targets as early as possible. The Government's anxiety to help the industry along is doubtless genuine, because on its progress will depend the success of the country's industrialisation programme, and the Government recognises this. Mr. Shah's statement contained evidence of the fact: "The engineering industries form one of the most vital and essential components of India's economy, because from heavy industries, particularly engineering industries, flow large-scale industries, big enterprises, medium-sized industries and other important and widespread ancillary and feeder small-scale cottage industries." But this realisation has yet to be backed by vigorous efforts on the Government's part to remove those difficulties which at present balk the industry's progress. The leading article in *Capital* of 5th April drew pointed attention to the most important of the engineering industries' difficulties and the dangers which would follow the failure to find a speedy solution. Those problems—an acute shortage of steel, inadequate transport facilities and the shortage of personnel in the higher-skilled categories—are still with the industry, as is clear from the speech of Mr. S. G. Shah, the Association's president. The Union Minister explained at length the steps which the Government has been taking to remove each of them, but it is also obvious that the efforts have fallen far short of what is required, and a more vigorous drive is clearly called for.

Joint Consultation in Industry.—To Tatas, the pioneers in many a field of industrial enterprise in the past, must now go the credit for being the first to introduce joint consultation in Indian industry, through an agreement with the workers of their Jamshedpur steel works. In January this year, the agreement was signed between the management and workers, committing formally to paper an idea that had been working in practice for the

previous ten years. But the written agreement in itself has assumed an extra importance, in that it is the more clear-cut and definite expression of the idea. It will be for other industries to draw such lessons from this experiment as it may eventually provide. The January agreement was essentially a broad statement of the principles of joint consultation in industry; the supplemental agreement of 4th August lays down a detailed scheme for working them. The scheme provides for a three-tiered organisation, at the base of which will be joint departmental councils, one for each department of the works. Above these will be a Joint Works Council for the entire plant and parallel to this, there will be a Joint Town Council to deal with matters relating to the company's town, medical, health and education departments. Co-ordinating the activities of them all will be a Joint Consultative Council of Management. The existing machinery of joint consultation will be reorganised, bringing within the scope of the Joint Works Council's functions such matters as workers' welfare, general safety and the workers' Benefit Fund Trust, which hitherto have been looked after by the management only. The happiest feature of this agreement is that an important function of the joint councils will be the study of operational results and production problems and the giving of advice on "steps necessary to promote and rationalise production, improve productivity and discipline, and economise costs." The experiment will have fully justified itself if these objectives are constantly pursued. It has been stated that these councils are purely advisory; they should not be otherwise. Any attempt to impose advice, on the management, particularly when the benefit to be derived from it will accrue to one side only, would clearly go against the spirit and letter of this agreement.

Hooghly Changes Hands.—Gillanders Arbuthnot and Co. Ltd. have announced their intention, with the approval of the Central Government, to relinquish the managing agency of the Hooghly Jute Mills Co. Ltd. The group of shareholders which has succeeded in securing a majority interest in the company has offered to pay Rs. 35 for any share which it does not already hold. The decision of the managing agents follows their success in persuading the Government to invalidate all decisions made at an extraordinary general meeting of the company in May, by the directors appointed to represent the controlling group, on the grounds that not all the nominees were suitably qualified for managing a company of this kind. Their objection has now been dropped by Gillanders Arbuthnot because the opportunity which the shareholders have for disposing of their holdings at an approved price can be considered adequately to safeguard their interests. The managing agents have insisted on the shareholders' rights throughout the negotiations, and at one time turned down an offer from the group of Rs. 40 for each of their shares, numbering about 46,000, because the same terms had been extended to other shareholders. The Hooghly Jute Mills Co. Ltd. will now be managed by a board of directors.

India's Tobacco Prospects.—The Tobacco Export Committee visited Madras last week after visits to Cochin and Coimbatore where tobacco interests pleaded for tax relief and asked for adjustment of excise. The Andhra Chamber of Commerce in its memorandum informed the committee that of the total yield of 98,800 tons in Andhra, which produces one-third of India's tobacco, virginia accounts for 55 percent and that the tobacco trade is now, to a great extent, dependent on exports. Although Indian tobacco is not equal to American in quality, the cigarette manufacturer does rely on it, taking 125-130 million lbs. a year. The cess plus sales tax levied on exports up to 7½ pies in the rupee has raised the price for the foreign buyer. Country tobacco also finds a market abroad, but domestic consumption in Andhra is not high. Prices realised are unremunerative. Only the best type fetches a good price and the grower runs many risks, though crop output may exceed 600 lbs. an acre. Beedi manufacturers continue to buy tobacco from Gujarat and the wrapper leaves from Madhya Pradesh. The high excise duty of 14 annas a lb. makes it necessary to buy superior tobacco from Gujarat and blend it with Andhra tobacco. A cut in duty to 8 annas a lb. on tobacco sold for beedi manufacture is deemed necessary, and to offset any loss of revenue the Chamber has suggested the levy of a flat rate of 8 annas or 9 annas a lb. on Indian-grown tobacco. Although tea and coffee are subject to excise, the importance of developing tobacco exports along with manufactures makes it necessary to think of tax relief, especially when consumption at home is rising. Since sales tax on tobacco has been stepped up in most States and the beedi industry has lost its market in Pakistan, the case for tax relief is strong. The manufacture of cigars, although long established, is not flourishing, but Madras has a big trade in snuff and produces a

large quantity for export to many places, including Calcutta. The U.K. is still the main market for Indian tobacco, but last year the Andhra Chamber devoted attention to a study of Eastern markets. In the last two years China and Indonesia have emerged as important customers for Indian tobacco and trade with Hongkong has improved. Japan, with a State monopoly, has also been taking Indian tobacco, most of which has been shipped from southern ports. But China has increased her cultivation and the cigarette manufacturer, as in Japan, is relying more on home production. Whether tax relief comes or not, the grower's view has been made plain to the Committee now reviewing the system of taxation.

End of the Steel Strike.—The U.S. steel strike is being settled, but its effects will be felt for many weeks to come. About 85 percent of the industry's capacity has been closed down for more than four weeks, resulting in the loss of over 10 million tons of ingot production. Strikers forfeited over a quarter of a billion dollars in wages, and additional millions of dollars in wages and profits were lost to companies doing business with the steel mills. Further losses will be suffered before the dislocations caused by the strike are eliminated. At this price, the union has won an improved version of the original offer by the steel companies. The three-year no-strike agreement provides for increases in wages and fringe benefits estimated by the union as equivalent to 20.3 cents an hour in the first year and 45.6 cents by the third. In an about-face from its stand in previous contract negotiations, the union demanded and was granted a cost-of-living escalator clause—tacit recognition perhaps that the union members need protection against the wage-price spiral which these substantial wage boosts might well touch off. The steel industry is expected to offset the increase in labour costs by raising steel prices, probably by \$10 or so a ton. The end of the strike is only the beginning of a long process of reheating coke ovens, blast furnaces, and open hearths, bringing them back into production, and finishing steel to customers' specifications. Repairs necessitated by the shut-down will delay full-scale production, but ingot output may reach a relatively high level in a couple of weeks. Officials of steel companies say it may be anywhere from a few weeks to several months before the quantity and quality of steel flowing from the mills is fully restored to pre-strike levels. The impact of the strike upon the economy was cushioned by widespread vacation shutdowns at metal-fabricating plants in early July and by inventories of steel accumulated during the first half as a hedge against price increases and shortages. Reports of plants closing for lack of steel have been scattered and relatively minor. Most firms have been able to dip into steel stocks to maintain business as usual. The automobile industry, in fact, assembled more passenger cars in July than in June and boosted weekly output to the highest rate since late April. Altogether, the Federal Reserve Board estimated in mid-July that industrial activity had been cut about 4 percent by the strike—equivalent to a drop in the production index to 135 or 136 in July from 141 in June. A rebound is indicated for August as steel mills, coal mines, and other allied industries get back into production. The strike also hit heavy construction projects, railroads, and other forms of transport. Retail sales, however, appear to have been maintained close to the record June level.

VALUE OF CAPITAL

THERE has been considerable buying of preference shares in our local companies during the last few months, and prices have advanced to about the parity of a 5 percent dividend. There is no doubt that in the great bulk of our manufacturing companies, a preference share is a safe and desirable investment. But we think that we ought to draw attention to a little cloud on the horizon, which may forebode a coming storm for preference shareholders. We refer to the present craze for transferring Indian companies to London. Of course, if the shareholders in a concern, the shares of which are not readily saleable, are offered a price very much beyond that which has been obtaining in the market, the first instinct is to close and take the profit; while speculators "in the know" who have been loading themselves up with stock for the rise naturally wish to quit the shares as soon as the profit is assured. But the question for the investor is, what is he to do with his money if he is to sell all his good stocks, and of what benefit is the increase in his capital, if the interest thereon does not keep pace with it? We are, therefore, strongly of opinion that these transfers of good dividend-paying concerns to London can be overdone. In the first place, capitalists here lose a good investment, and in the second place, the good investment consequent on the watering of its capital by the company-promoter becomes a very ordinary affair.

MAINTAINING BRITISH ASSETS ABROAD

SHORTAGE OF DEVELOPMENT FINANCE

THE dispute on the American acquisition of the Trinidad Oil Company may be concluded, but discussion on the implications of this distressing episode has only begun. It may be that the Texas Company is not interested primarily in Trinidad's oil, the Trinidad Company's interests in refining in Trinidad and in refining and marketing in Britain being, doubtless, more important to the buyer. But Trinidad Oil's interest in the American offer is simply explained by the lack of British capital for development in Trinidad. This is not a problem specific to the company or to Trinidad, nor even to private finance as against public finance. It is a problem of the whole British economy, and it shows itself increasingly in the development of the Commonwealth. Just before the formal parliamentary debate on the oil deal (which itself followed a much more spirited informal debate), the Chancellor of the Exchequer announced an important change of policy relevant to such problems. He assured the House of Commons that in next year's Finance Bill, he would provide relief (retroactive to the beginning of the current fiscal

year) for British companies undertaking new development in the Commonwealth, and that he would if possible grant tax-concessions to all overseas trading corporations, as such, that were managed in the U.K.

This statement showed that the Treasury had reacted in the only intelligent manner to the impending loss of the Trinidad oil business. Many people who understood the implications of the sale of an important group of sterling assets to America had demanded that the deal should be prevented. The Government had perceived that (apart from the risk of retaliation) such action would be futile, because it would merely cover up one symptom of a disease and leave the disease itself uncured. The Government left the symptom, diagnosed the disease, and proceeded to prepare a cure. To assume that there was no further cause for anxiety would be very premature. Taxation of overseas earnings is an important cause of the lack of capital for development, but it is not the only cause. Moreover, the major tax-concession which the Chancellor has promised to make if possible is by no means assured for next year: it depends on a favourable position in the Budget and in the balance of payments, and strengthening the latter is a slow process. However, important as the time-factor may be at this late stage, what matters most is the emergence of a new policy.

The Problem of High Taxes

This policy is a belated reaction to circumstances that were appreciated years ago. When the Conservatives gained power in 1951, Mr. Butler went to the Treasury with the clear idea that something ought to be done about taxation of profits earned abroad, and very soon after becoming Chancellor he asked the Royal Commission on Taxation to treat the problem as urgent. It was not, however, until the middle of 1955 that the Commission published its recommendations. They were drastic, and in Mr. Butler's supplementary Budget in October, and again in Mr. Macmillan's normal Budget in April, they were ignored. The anomaly that Mr. Macmillan has now promised to correct is the frustration of "pioneer industries concessions", and of special depletion allowances for mines granted abroad to assist development. Under the present system, the tax that British companies save abroad accrues, in effect, to the British Exchequer; which denies the intended benefits to the British companies and is unfair to the governments abroad. In future, the concessions will be retained by the companies. That was one recommendation of the Royal Commission on Taxation. A much more important one was that a new category of business should be recognised, the "overseas trading corporation", which would be entirely exempt from U.K. taxation of profits up to the point where they were distributed as dividends. The Commission did not envisage these corporations as entirely new enterprises only, but also as separate overseas sections of companies that operated also in the U.K. This was a complex proposal, involving separate negotiations with governments abroad as well as a considerable sacrifice of revenue by the British Exchequer, and the Chancellor does not seem very optimistic that it will soon be put into effect. At least, however, he has conceded that the change must be made as soon as practicable.

Taxation of Overseas Earnings

Trinidad Oil will not be the first British company to withdraw from its British domicile, primarily because British taxation leaves too little finance for development. A company may migrate without radically changing its ownership, or it may—as in the case of Trinidad Oil—be bought by a foreign company which can develop it on a more liberal basis of taxation. Until British taxation as a whole can be appreciably reduced, tax-concessions on overseas earnings are urgently needed if the loss of physical assets is to be stopped. Payment of "hard dollars" for these assets is only partial compensation for a country which "ate" its Argentine railways—using the proceeds of the sale of those assets to pay for current deliveries of meat. These proposed technical changes, important though they are, should not obscure the underlying problem that only more radical changes can solve the absolute deficiency of resources for investment abroad. The simple fact is that on her own account, Britain invested in the rest of the Commonwealth last year almost no capital at all, other than the local investments of British companies operating in the Commonwealth. Almost all of the current surplus of transactions with the rest of the sterling area (£215 million, which might appear to be available for investment, was in fact absorbed in sterling countries' withdrawals from balances in London or exchanged for sterling countries' non-sterling currencies—mostly the latter. Such investment as was made from Britain in other sterling countries (estimated at £100 million) was counterbalanced by new short-term lending by other sterling countries to Britain. How can Britain hope to keep her assets abroad if she cannot finance their development?

Mr. Lalithchandra C. Devkar Nanjee has been appointed chairman of the Devkar Nanjee Banking Co. Ltd., in the place of the late Mr. Pramod Devkar Nanjee. Mr. Lalithchandra Nanjee has been vice-chairman of the Bank for several years, chairman of another Devkar Nanjee companies, and a director of a number of industrial and other concerns.

DEATH came suddenly and unexpectedly to the Governor of West Bengal, Dr. H. C. Mookerjee, on Tuesday afternoon. He was seventy-nine and had, I suppose, long exceeded the psalmist's allowance of years. But he was still indefatigable in the service of the poor and the sick, besides, of course, of the State he was called upon to serve as Governor so late in life. I met him at various functions, and was always impressed with how perfectly he seemed to fit the Indian conception of a *rajarsi*, or royal saint. A man so utterly simple, so completely oblivious of the pomp and circumstance of office and yet so full of a kindly good humour, is rare anywhere. I still recall the pictures that appeared in the Press on the day of his appointment to the Governorship; these showed him smoking a hubble bubble, sitting bare-bodied in his Dehi-Serampore home. When he went to Darjeeling, which was often, in connection with the establishment of a sanatorium at the house of the late Deshabandhu C. R. Das or other welfare activities, he was as readily accessible to the public as he was here. The story of his personal charities and donations has always struck me as quite remarkable. Starting life as a humble college lecturer on something like a hundred rupees a month and rising to an income of no more than, perhaps, one thousand rupees as Inspector of Colleges, he was, nevertheless, able to donate to Calcutta University quite a few lakhs. He kept up this habit of noble thrift all through his days as Governor, his total donations amounting, or so I believe, to something in the region of fifteen lakhs of rupees. It is common knowledge that he did not touch a pie of the salary he received in his high office, but instead gave it all away. Such a man is bound to leave behind him a sense of irreparable loss.

India's stand in the present Suez Canal dispute is clearly a difficult one. It might be summed up as a conflict between the obvious dictates of self-interest, which require that the Canal remains permanently open to all shipping, and concern that Egypt's sovereignty should not be impaired. The claim of Britain, France and the United States for international control has not found wholehearted favour here because President Nasser is denouncing it as interference in Egypt's internal affairs. But the principle of international control over the world's important waterways has been established, and apparently accepted as perfectly respectable, for the last hundred years at least. And, although the nations concerned have been every bit as jealous about their independence and pride as Egypt, disputes on these grounds, except in times of war, have been remarkably few and far between. The nearest parallel to the present problem is, perhaps, the international control of the Dardanelles, from which Russia, who is at present the most outspoken supporter of President Nasser's case, has been the chief gainer. This has been maintained by a number of agreements of which the latest is the 1936 Montreux Convention. Turkey has full rights in time of war, but otherwise the movement of merchant shipping is subject only to the payment of agreed servicing charges. The free navigation of the Danube has been the subject of various forms of international control since 1857, although they are now in abeyance thanks to the intransigence of the Soviet bloc. The much fought-over River Rhine, an excellent subject for the "sovereignty" red herring if ever there was one, has been under international control since the signing of the Convention of Mannheim in 1863. The passage of the Kattegat, the entrance to the Baltic, first came under international agreement in 1857, and here again, Russia must rank as one of the chief beneficiaries. The common features of these agreements

A DITCHER'S DIARY

are that the principle of unimpeded commercial use by all nations has largely withstood the periodic changes of Europe's national politics, that they have been reasonably effective except in time of war and that, on the whole, no nation has regarded the principle as a serious infringement of its sovereignty. President Nasser is citing the case of the Panama Canal in support of his claim to full control over the Suez. But this waterway was built for avowedly strategic purposes, whereas not even President Nasser has claimed that the Suez Canal is essential to Egypt's military security, and the United States nowadays pays handsomely for the perpetual lease she holds. Unimpeded traffic is certainly maintained through the Panama without international control, but to the question, if the United States why not Egypt, there seems to be only one answer—if not one word: Israel.

The new Trombay atomic reactor provided stimulating news for an otherwise dull week-end, and the tales of top scientists spending sleepless nights feeding in enriched uranium and all agog for the moment when the reactor would become "critical", added an admirably warm human touch. To ordinary folk atoms spell annihilation or prolonged and painful diseases, especially when they recall the tales of Hiroshima and Nagasaki, and men like Professor Haldane are succeeding in making our flesh creep by reminding us that India, with its poor housing and intermittent rain, is more easily exposed to the dangers of atomic radiation than countries like Britain. Indeed, in a world feverishly racing for more and more atomic power, the only ray of hope seems to be that the leading nations are so far feeling the need for a *modus vivendi* that the present series of talks on disarmament has not yet been given up as a bad job. It is interesting to note that the U.S. Army has already devised a radiation process for the instantaneous ripening of fruit. The method, it is said, permits the packing and shipment of green fruits and vegetables which, on reaching their destination, can be ripened by being bombarded with high-energy electrons. So far as I can see, there is everything to be said for this kind of peaceful application of atomic energy except perhaps that it might prove to be a killer of poetry. The fully-developed atomic era may no longer need a Keats apostrophising the autumn as the season that fills "all fruit with ripeness to the core" or "swells the gourd, and plumps the hazel shells with a sweet kernel". I for one cannot picture a poet composing an ode to a reactor. I was very young when G. K. Chesterton said that the scientists had vulgarised the stars. I did not understand him then. Now I think I do.

Publicity pays—or so they say, because it does not appear to have paid Sir Bernard Docker. In spite of his television appeal and the public explanations about the size of his wife's dress bills, he has still not been able to retrieve his seat on the Board of the Birmingham Small Arms Company. In fact, it may well be the publicity he and his wife have received during the past few years which accounts for his defeat; it does seem that the shareholders' final verdict was made not so much on the skimpy evidence put forward by Sir Bernard's fellow directors, as on the impression that no man allegedly guilty of such personal extravagances could possibly be a fit person to handle their property. That may only be evidence of the narrow middle-class puritanical prejudices on which English social life is based, but Sir Ber-

nard might have done better if he had taken the trouble to show them a little more respect. I wonder how many of the shareholders who crowded the extraordinary general meeting at the Grosvenor House Hotel last week were impressed as much by the apparently unsatisfactory evidence of the company's working, as by the fact that Sir Bernard could not give convincing answers to the personal charges levelled against him. Why, for instance, should the leader of Sir Bernard's renegade colleagues on the Board, Mr. J. Y. Sangster, refer to Lady Docker's dress bills with what he claimed to be "the greatest reluctance"—but which, in fact, turned out to be the greatest relish, if not on a shrewd hunch about what would really move his audience. Sir Bernard's attempt to explain the visit to the Monte Carlo wedding as a bid to increase the company's prestige in the dollar markets fell flat—as well it might. So did his answer to the accusations about his wife's extravagant taste in dress and motor cars being made a charge on the company. The implied contention that because the firm benefited from the publicity Lady Docker's social activities always incur, therefore it should pay for the dresses she wears, might have a certain logical appeal, but is unlikely to find much support in these austere times. The Dockers have not hesitated to make a public spectacle of themselves, even to the extent of buying television time at several hundred pounds a minute, to increase the dramatic quality of the fight they have been putting up. Sir Bernard has only himself to blame if his shareholders now no longer take him seriously as a hardworking and steadfast captain of industry.

I had the pleasure of attending the Schumann death centenary celebration at the German Consulate earlier this week. It was an excellent function opening with a few able talks by Drs. Alfred Rabe, Suniti Kumar Chatterjee and G. Schynoll, followed by a concert of some of Schumann's selected works, including the *Manfred Overture*, some piano variations, songs from the cycle *Frauenliebe und Leben* and the *3rd Symphony*. All these were greatly enjoyed by the audience, although a few among it appeared not to know when exactly a piece was ending. My own knowledge of music is not encyclopaedic, but I have always had the feeling that Schumann's status as a composer is still a controversial matter. His Dusseldorf conductorship is, for example, generally recognised to have been a failure, chiefly through his absent-mindedness and lack of personality. Many authorities share the view that he was greater as a discoverer of musical talents than as a composer. He worked indefatigably through his *Music Journal* to popularise Mendelssohn, and it was he who first spotted genius in Johannes Brahms and did his utmost to nurse it. This brings me to another great poet and composer whose death anniversary was also observed this week, namely, Rabindranath Tagore. He is, of course, known throughout the world as a great poet, but comparatively few know how great was his achievement as a composer. It is surprising to learn that he not only wrote about two thousand wonderfully-worded songs, but set most of them to music as well. His *Jana gana mana* has been heard by millions of people who may not have been fortunate enough to hear any other of his works, but this one alone is enough to convey the quality of the composer. And before I leave the musical mood, I note that the new Bosendorfer Grand Piano of the Calcutta School of Music is to make its debut at the New Empire theatre Sunday week. The premiere recital is to be given by Liesl Stary.

BOMBAY SUBURBAN ELECTRIC SUPPLY LIMITED

CHAIRMAN MR. K. G. MILNE'S REVIEW

Addressing the Twenty-seventh Ordinary General Meeting of the Bombay Suburban Electric Supply, Ltd., held in Bombay on Thursday, the 2nd August, 1956, the Chairman, Mr. K. G. Milne, said:—

This time last year I told you how the Company's expansion during its 1948/54 development plan was bearing fruit and how our capacity for taking on new loads was ahead of load releases by the authorities. While the latter position still remains, we have during this year further consolidated on our own distribution network and as a result our sales of energy, exceeding 60 million units, have registered an increase of 20% over the sales of the previous year. At the end of the year the total number of consumers connected to our Mains reached the figure of 46,478. A further cause for satisfaction is the indication of the potential demand brought to light by the response to the Government Press Note inviting applications for industrial loads to be sanctioned after the Trombay Thermal Station is commissioned. No less than 400 applications were received for loads aggregating about 25,000 kW. While it should be borne in mind that even where an unrestricted supply is available there is usually a fairly large gap between the load applied for and that ultimately connected, we can look forward with confidence to the potential growth of load in this Company's area of supply in the immediate future.

It is necessary to ensure, however, that there will not be a repetition of the over-cautious attitude shown by the Power Shortage Board during the past year or two as the result of which Industries in the Bombay region were deprived of millions of units due to freezing of potential power which has remained unutilized. This caution was the result of excessive optimism on the part of the Authorities of the Public Sector as to their ability to absorb electric power for certain new ventures which, in actual fact, did not materialise. It has now been officially stated that the first 50 MW Set at Trombay will be brought into commercial use at the end of this year and a second similar Set about six or nine months later. In view of this anticipated accretion of some 100 MW of thermal plant within the next 12 months, the power position in the Bombay region will become extremely favourable, and we hope it will continue to remain so till around 1959. Thereafter there is again danger of a shortage of power unless arrangements are set in train now for augmenting plant capacity either at Bhira or at Trombay, entirely independent of Koyana power which I do not anticipate, despite all assurances to the contrary, will become available in Bombay before 1961/62.

I am taking this opportunity to bring this matter prominently to attention at the outset of my speech to you this year in view of the contemplated changes in the reorganisation of the Bombay State and in the hope that the Authorities concerned may promptly take the necessary steps to ensure that Bombay is not starved of urgently-needed power during the country's Second Five-Year Development Plan. We have already had bitter experience of this in the past and a repetition during the next five years would be calamitous.

Thermal Surcharge

The Tata Hydro Companies increased their Thermal Surcharge from 15% to 24½% from 1st January, 1956. You will appreciate that this surcharge primarily results from the inclusion of the Thermal Station erected by Government at Chola in the inter-connected system. While the addition of this 54 MW of capacity is most welcome in partly relieving the power shortage, from a purely economic view-point the addition is something of a weight, which will be relieved to some extent only when the greatly more efficient Tata Trombay Plant comes into full commission, leaving Chola merely as a standby or peaking station.

Despite the increased cost of electricity to the Company which I have just mentioned, and the ever-rising spiral of prices generally of which you are all only too well aware, your Board have decided to give effect to a substantial downward revision in the Company's tariff rates to residential consumers for Lights & Fans and Domestic purposes. Details of

the reductions about to be made will be made known to consumers by means of a circular at an early date. The result of the revision will be to bring the rates of supply for residential purposes in the Suburbs still closer to the rates obtaining in Bombay City, which is an area far more favourably placed on account of its compact nature and high concentration of industrial and residential load, to offer more favourable rates than your Company. It may be kept in mind that we supply energy in an area several times the area of Bombay City and with loads scattered over vast distances interspersed by hills, woodland and marshes.

Our ability to make a downward revision of rates at times when almost every other household necessity is increasing in price is due in great measure to the bold policy adopted by your Board in embarking on the Six-Year Plan already referred to for providing a vast distribution network in anticipation of release of load from the inter-connected system. Your Directors and Agents have always attached considerable importance to a progressive policy, feeling that unless a spirit of initiative is maintained, stagnation may all too easily invade the scene. The increased revenues that are now forthcoming are the fruit of such prudent and judicious planning. Although this development has yielded considerable benefit to the community at large, as well as to the Company in the form of increased earnings, it is this very expansion which, strange as it may seem, has reacted to penalise the investor. I have explained this ingratful phenomenon on several occasions in the past, but will do so again later in this speech as there seems to be a good deal of genuine, and perhaps some deliberate, misunderstanding about it.

The Future

We are still in the dark as to the future of the Bombay State Electricity Board which at present administers its affairs in the whole of Bombay State. The retention of one Board on a regional basis has much to commend it, for that Board will then be in the best position to continue to co-ordinate the efforts to provide adequate power in the whole of this part of India. However, this should not be construed to mean that the Electric Supply Industry in the Bombay region has been entirely satisfied with the attitude of the present Board since its inception in November 1944. We had been warned by pessimists that the retention of the Board might result in increasing the difficulties of the Electric Supply Industry in the State, which is already subject in certain directions to the control of the Public Works Department. While on the one hand the Board has received practically no assistance from the Board by way of loans or materials, there has been a continual pressure amounting almost to harassment at times as regards the rates charged to consumers by the Licensees in the State. Constant threats of Rating Committees appear to have become a feature of the Board's administration, and it has become painful necessary for the Association of Electrical Undertakings, Bombay, to have to draw the attention of the Board to the fact that the scheme of the Electricity (Supply) Act is to allow Licensees full freedom to formulate their rates of supply so long as they do not violate the provisions of the Sixth Schedule to the Act. The Board has increasingly tended towards interference in the day to day operations of the Licensees, not only of the relatively small and recent ones but even of those larger ones which have rendered such yeoman service to the communities in the State over a period of many decades. As one who had something to do with the drafting of the original Electricity (Supply) Bill, I can say with confidence that it was never the intention of the Act that Electricity Boards should hamstring Licensees to the extent that they should be deprived of their legitimate initiative in formulating their financial policies. If Electricity Boards, taking advantage of the weakness of the smaller Licensees especially, seek to put them in a financial straight jacket, they will certainly be defeating a good part of the purpose for which these Boards were formed.

Import Licences

Although I have recently dealt at some length in my speech delivered at the Annual General Meeting of one of your sister Companies, with the vexed

question of Import Licences for transformers and meters, I must repeat this important fact that, in the interests not only of the Electric Supply Industry but also of many other industries dependent on it for their power supplies, our programmes of expansion should not be impeded by undue restrictions in the import of transformers and meters and other equipment until and unless indigenous sources are able to afford reasonable deliveries. You will perhaps be interested to know that during the last year your Company placed orders for 12-250 KVA transformers with a local manufacturer, but so far only two units have been received, though at the time the order was placed favourable delivery periods were quoted by the suppliers. Of an order for 2,600 meters placed 8 months ago, only 300 have so far been received, and prospects of future deliveries are equally bleak. As it has turned out, the indigenous manufacturers are not only unable to fulfil their commitments, but unwittingly come in the way of the industry obtaining its requirements from elsewhere. While those indigenous manufacturers who are striving hard to maintain a reasonably high standard in their products deserve every encouragement, there seems to be no justification in adopting a dog-in-the-manger policy with regard to the question of allowing a reasonable volume of imports of transformers and meters in order to fill the gap. If the Electric Supply Industry is to play its part effectively in achieving the target set before it in the matter of power development under the Second Five-Year Plan, it is absolutely essential that the Central Government should adopt a more realistic policy in the imports of transformers and meters from abroad.

While we have had a satisfactory year from the revenue producing angle, and have earned more than sufficient to pay a 7½% dividend, you will note that we have once again had to withdraw an amount, small though this may be, from the Equalisation of Dividends Reserve in order to maintain that same modest rate as in the past. I will now explain in some detail how this extraordinary state of things comes about because, as I have said, there seems to be misconception about the reason and about who is to blame. As you are already aware, under the Electricity (Supply) Act, the standard of permissible return has been fixed at 5% of the Capital Base, which is, broadly speaking, the Capital employed in the business. Thus our ability to distribute a dividend in excess of 5% is essentially limited by the Capital structure, and the more fresh money which has been brought into the equity capital of a concern the nearer to unity will be the ratio of the Capital Base to the Paid-up Share Capital. Therefore, to this extent and so long as the return is limited to 5%, your Company like yours are handicapped more than those other Companies which, for whatever reason, do not expand greatly. In fact your Company has almost sextupled its equity capital in the last decade alone in the course of fulfilling its role in the country's economy and in accordance with the terms of the legal obligation to return which we are being allowed on our money in the result is not, and for some years past has not been, enough to cover the moderate dividend rate of 7% per annum to which we have been accustomed.

Act Amendments

With the passing of proposed amendments to the Electricity (Supply) Act, for which we have so long waited, the position in our case should be somewhat improved, because with the Bank Rate standing at its present level the permissible return would be slightly enhanced. However we still have no news that time can be found for Parliament to take even the preliminary step of referring the amending legislation to a Select Committee.

Anyhow, the position is, and will remain, that any profit earned above the statutory maximum from time to time has to be dealt with in the statutory manner, and thus no blame can attach to anyone, other than our law-makers, if in these circumstances the resulting amount left for the benefit of investors is considered to be disappointing.

It is because of our legal obligations that we have had to appropriate from the balance of profit this year a sum of Rs. 70,466 to each of the two Statutory Reserves, namely the Tariffs & Dividends Control Reserve and the Consumers' Benefit Reserve, thereby finally leaving a deficit of approximately Rs. 12,000 between the amount at the Company's disposal for the year and the requirements for a 7% dividend. We are thus, as on previous occasions, left with the choice of lowering the dividend or making a withdrawal from the Reserve whose name implies such use, that is the Dividends Equalisation Reserve. So long as there is hope, and there is hope, that some day the law may allow us that extra which we need, and so long as there is money enough left in the Reserve which can be used, I have no doubt in my mind that what your Board have proposed to do is in your best interests and will receive your wholehearted approval.

There are some people I believe who urge that solution to the difficulty lies in increasing the profit

by cutting down expenditure. Apart from the fact that the Company could not cut down expenditure without sacrificing efficiency and goodwill, it will be apparent from an intelligent reading of the law that it is the net earnings which are limited by the Statute irrespective of what the expenditure is. The more profit we earn in the circumstances the more would have to go to the two Statutory Reserves I have referred to, leaving the final balance available to shareholders unaltered at its legal ceiling. I would therefore reiterate that the level of divisible profits in your Company results at present entirely from the two factors I have just mentioned, namely the inadequacy of the standard allowed at its present rate of 5% and the legal ingenuity displayed towards extremely rapid expansion.

Another subject which I am sure has been agitating your minds is the question of "grossing up" of dividends to entitle you to a refund of Income Tax. I have already explained to you in the past how an expanding Company like yours being entitled to considerable Income Tax Depreciation Allowances, including the recently announced Development Rebate, has had no assessable income for Income Tax purposes, although the Company itself has to pay Accounts which are based on the Depreciation laid down under the Electricity (Supply) Act. In spite of all efforts made to convince the Income Tax Authorities that the effect of the accelerated depreciation allowances under the Income Tax Act is only to defer and not to eliminate the tax, they have held the view that where no tax is leviable in the hands of a Company for a year of account, the shareholders of the Company are to be denied the "grossing up" of dividends in their hands for that year. In fact no one is more affected by this denial of "gross up" than your Company itself, and it is only testing a test case on the subject. In addition the Association of Electrical Undertakings, Bombay, and the Federation of Electricity Undertakings of India, in the activities of both of which your management takes a prominent part, have been representing the injustice to shareholders in this context at the highest level possible.

Linked with the above problem is that of Additional Income Tax for which, as you will see from one of the footnotes to the Balance Sheet, we have a contingent liability. High hopes were entertained recently that this note would no longer be required with the Company's freedom from the Tax definitely established when the High Court pronounced its decision in favour of a Company whose position was similar to ours. However, the Income-tax Department have gone in appeal to the Supreme Court with the inevitable delay and uncertainty which this entails. With the enactment of the Finance Act, 1956, Additional Income Tax in its past from relative to dividend has been abolished, but a Tax applicable to Dividends distributed in excess of 6% has been introduced. This latter, however, of comparatively small significance to Companies like yours whose dividends now inevitably cannot be much in excess of the 6% which has been adopted as a base for the tax.

I am glad to say that our relations with the Greater Bombay Municipality on Street Lighting matters have been of the most cordial nature, and that the reference which I made last year to the great need for extension of street lighting in the Suburbs has borne fruit, as can be seen from the increase in the number of street lights from 6,559 to 7,295. In addition, a number of conversions to brighter lights are taking place and a number of mercury vapour lamps have been installed among the main thoroughfares. Another significant move is the gradual elimination of half-night lamps which are uneconomic both from the point of view of the Company and the Street Lighting Authority.

While the terms on which we render street lighting service have been found acceptable by the Greater Bombay Municipality, the Municipalities of Kanpur and Borivli have thought otherwise and resorted to arbitration for determining the rates charged for street lighting. The Arbitrator's Award published on the 18th August, 1955, upheld the Company's existing rates which are prevailing since March 1953.

During the year the Staff Union went to arbitration in the matter of several demands dealing with service conditions and bonuses for the years 1950/51, 1951/52 and 1952/53. The Award of the Industrial Court was given in December, 1955, but the Union chose to go in appeal. A fresh demand for bonuses for 1953/54 and 1954/55 has been referred to the Industrial Court for arbitration. Although your Agents have been in the forefront in recognising and safeguarding the legitimate rights of the workers in the Companies under their control, we are being compelled nowadays to expend more time than ever in Courts on industrial matters. So long as Labour Unions can go to Court on the slightest pretext, this state of affairs is likely to continue. Another tendency which appears to be becoming all too prevalent is the use of the cloak of Labour Union activities to achieve political objectives and without any real heed for the true interests of the workers.

Apart from the withdrawal of Rs. 12,000 this year from the Equalisation of Dividends Reserve, on reasons for which I have already commented, the only other special reference to the Accounts which I feel I need make concerns the appropriation of Employees' Retiring Gratuities Reserve of Rs. 4,26,649. This appropriation, made at the express wish of our Auditors, now brings this Reserve to the full amount of our present accrued liability in this regard and thereby relieves shareholders and consumers alike in respect of necessary contributions to meet this obligation. I am sure you will agree as to the wisdom of this step. Otherwise, I think there is nothing particular for me to add in respect of the Accounts, which are straight-forward, and which together with the notes appended are sufficiently informative.

The first effects of the Indian Companies Act, 1956, are reflected in the Notice convening this Meeting, covering inter alia the retirement and re-election of five of your Directors. I need not enlarge on the necessity for these Resolutions as the Notice itself is entirely self-explanatory. All five gentlemen have been properly proposed by shareholders for re-appointment. As from next year, the Accounts will be presented to you in the form laid down in the Companies Act, 1956, insofar as it is applicable to Electricity Companies, and I trust you will not find merely confusing the changes which that may necessitate.

THE CHAMPION REEF GOLD MINES OF INDIA (KGF) LIMITED, NUNDYDROOG MINES (KGF) LIMITED, OORGAUM, KOLAR GOLD FIELD.

Extract from the Chairman's Speech at the Fifth Annual General Meeting held at Oorgaum on 2nd August 1956:—

At the last meeting I dealt at some length with the events leading up to the proposal of the Mysore Government to nationalise the K. G. F. Mining Companies. A circular issued on the 15th June this year gave you a brief account of the position up to that date. In my speech last year, I told you how highly critical the Government of Mysore that assumed office in 1952 had been of the agreement entered into in 1949 by its immediate predecessor in office. It is regrettable that a tendency developed in the State in the last few years of dragging the Kolar Gold Mining Companies into the arena of provincial party factions where they were made the sport of group rivalries. It is now more widely known that this unfortunate circumstance has been the root cause of most of the trouble and misunderstanding your Company and its sister Companies in the Kolar Gold Field have had to live through during the past few years.

Your Directors and Managers have patiently and painstakingly striven to remove doubts and to clear up misunderstandings. You will recall that in reply to the unjust accusation made by the Mysore Government that the Agreement had been violated, the Companies requested that the question may be referred to arbitration, as specifically provided in the Agreement itself. The Mysore Government rejected this request—and expressed its preference for legislation. It was also represented that if the Government of Mysore were dissatisfied with the terms of the 1949 Agreement the Companies would be ready and willing to discuss a new agreement mutually acceptable to their anxiety to end all controversies, and smooth out differences and see cordial and harmonious relations restored, your Directors did also suggest, in more than one context, that the Government may be pleased to appoint an impartial expert committee of eminent and high-ranking personalities in the fields of Justice, (such as a retired Chief Judge of the Supreme Court of India), Finance, and Administration, to whom all the charges and differences may be referred for examination. It was also submitted that if nationalisation was decided upon, the question of fixing the compensation should also be referred to such an independent committee.

None of these requests has so far been heeded by the State Government.

The Companies have reason to be grateful to the Central Government at New Delhi for the calm, detached and sympathetic consideration they have given to our representations.

In response to a call from the Ministry of Natural Resources and Scientific Research, Government of India, representatives of the Companies met a Committee of three officers of the Government of India at New Delhi between the 11th and the 16th June, 1956

and placed before that Committee the Companies' views on statements relating to the claim for compensation in the event of nationalisation. During the discussions, the Companies' representatives were informed of the Mysore Government's intention to fix compensation on the basis of market quotations of the shares. The Companies' representatives strongly opposed this and took the opportunity to repeat that to take drastic measures, as the Mysore Government had done, that debilitated and crippled the enterprise and brought down the share prices, and then to use the depressed and restricted market quotations as the basis for fixing compensation is to inflict a double injury on the shareholders. Detailed statements were submitted of the valuations of assets and liabilities made by an expert firm of valuers of international standing, as well as of the present position of each Company, its future prospects, etc. Following this meeting and discussions, the Companies wrote to the Hon'ble Minister for Natural Resources and Scientific Research, Government of India, submitting the views and claims of the Companies and requesting that the Companies be given a further hearing before any final decision is taken. No communication on this subject has since been received either from the Central Government or the State Government.

Neither the findings nor the recommendations of the officers were made known to the Companies; nor are the Companies aware of the advice conveyed to the Government of Mysore.

Union Government's Suggestion

On the 31st July the concerned Minister of the Mysore Government made an announcement which was published in the Press to the effect that the Government of Mysore had agreed to the Government of India's suggestion for the payment of 119 lakhs of rupees as net compensation to the three Companies. If this news report is correct it is not known how this unreasonably low and totally unacceptable figure was arrived at. The announcement said that the Draft Nationalisation Bill, embodying certain modifications suggested by the Centre, had been sent to the Government of India for their approval and the Mysore Government were now anxious to pass the Bill as early as possible. He is stated to have added that the Government's proposal was, to quote the report, "now reduced to a formality".

As I said, the Companies have received no communication to this effect so far from the Government of India or the Government of Mysore, and considering the uncertainty and speculation caused by such reports and announcements bearing on the basis and quantum of compensation I would refrain from dilating on this subject at this stage. I would only reiterate your Directors' earnest and assured hope that, if nationalisation of the Companies is decided upon, compensation will not be unjustly or arbitrarily fixed, and that the Companies' submissions and claims will be heard before an independent tribunal.

Serving Industry—which Serves Mankind

1901—the birth of Monsanto starting with practically sweet nothing—the manufacture of a single chemical—Saccharin. Today, Monsanto ranks among the greatest names in chemicals and plastics, serving industry which serves mankind. Today—hundreds of industries rely on Monsanto: Agriculture—Automotive—Aviation—Beverages—Ceramics—Chemical Processing—Cosmetics—Perfumes—Dental—Dyeing—Electrical—Foods—Insecticides—Leather—Tanning—Lumber—Machinery—Mining—Packaging—Paint, Varnish, Lacquer—Petroleum—Pharmaceutical—Pulp, Paper—Plastics—Printing Ink—Radio—Rayon—Refrigeration—Rubber—Soaps and Detergents—Textiles.

To those of you who are concerned with any operation in any of these industries, we extend a personal invitation—"Come and consult us". We shall help you increase production...improve products...decrease operating costs...and increase your sales.

MUKAND IRON & STEEL WORKS LIMITED

CHAIRMAN MR. KAMALNAYAN BAJAJ'S REVIEW

Speech delivered by the Chairman, Mr. Kamalnayan Bajaj, at the Annual General Meeting of the Company held at Bombay on 6th August, 1956.

Ladies and Gentlemen,

We are meeting at a time when important political and economic developments are taking place both in this country and outside. On the question of States Reorganization, I may express my hope, which indeed is the hope of every citizen of this country, that the rich heritage of our great languages will be utilized towards strengthening the bonds of unity of the 360 million people of diverse creed and religion inhabiting this ancient land and not for weakening the same. Everyone should in his or her own little sphere strive to promote that unity, without which, whatever the plans and however ambitious they may be, no progress is ever possible.

Our great Prime Minister, who more than anybody else has been responsible for raising India's prestige high among the nations of the world, has returned only a few days back after visiting several foreign countries. It should be the duty of all sections of the

people to strengthen his hands in the paramount task of preserving and strengthening the unity of India.

The First Five-year Plan rightly laid stress on development of agriculture and essential raw materials for the industries. The Second Five-year Plan has laid greater emphasis on industrialisation of the country with a view to minimise unemployment and bring about more rapid increase in the earnings of the people. It does not, of course, mean that with our growing population, production of food could be neglected. We cannot afford to spend large sums of money in procuring food from outside. We have to utilise our limited foreign exchange resources in the best possible manner, more particularly in the import of things which will lead to higher production.

Steel is one of the major items in the import of which foreign exchange is being expended today. The important gap in our economy, which was left out in the First Five-year Plan is now sought to be filled in by increasing steel production during the next five years. The existing main steel producers are expanding their plants and besides them, three new major steel plants are being installed in the public sector.

Co-ordination

While these steps are essential, the question of co-ordination of these large plants with smaller producers of iron and steel who depend for the supply of their essential raw materials on the main producers, requires to be successfully tackled. The Second Five-year Plan has laid stress on regional development so as to meet a part of the regional needs and to afford employment to as large a section of the population as possible. Now it is known that big iron and steel plants can be installed only at places which are fortunate in having coal and iron ore close at hand which in this country are located only in a few tracts. Hence in the interests of regional development, a special responsibility is attached to these plants to supply semi-finished steel or billets to steel producers in other regions for the purposes of processing and meeting part of the regional needs, more particularly in the matter of steel sections not produced by the main steel works or cannot be economically produced by them in their large plants, which are more suited for production of heavier sections.

The importance of steel re-rolling industry in fulfilling the above important role of regional development and meeting regional demands, was recognised in the First Five-year Plan. Unfortunately, the recommendations made by the Planning Commission in the First Five-year Plan to supply sufficient quantity of billets to the re-rolling industry, if necessary by imports from abroad, were not fully carried out in practice and the industry had to continue to suffer from acute shortage of billets, resulting in low production and consequently stagnation.

The above drawback is now sought to be removed during the next five years by providing additional billet producing capacity in the main steel plants both in the public and the private sectors for supplying the same to the steel re-rolling industry, and in the interim period that is still sufficient indigenous supply of billets is available, by importing substantial quantities from abroad. These proposals however require to be stated in more precise and clear terms in the main body of the Second Five-year Plan itself so that the industry can go ahead with confidence in the task of fulfilling the role assigned to it in the national economy.

Progress

As you may have read in the Directors' Report, the other activity of the company, viz. manufacture of steel castings is also making progress. Requirements of steel castings have increased considerably in recent years and are expected to increase further with the growing industrialisation of the country and increased transport requirements for goods and passengers.

Our steel re-rolling and steel casting capacities, both require expansion and further improvement in plant and layout, for which applications for grant of sanction have already been made by your company to the Government, under the Industries Development & Regulation Act. In fact this matter has been engaging the attention of your directors since some time past and efforts are being made to secure foreign technical collaboration. Recently when I was in U.K. and the Continent, I had an opportunity to discuss these matters with the representatives of the firms who had shown interest in such collaboration and Shri V. J. Shah, our Chief Executive (Finance & Development) is at present there for pursuing these matters.

The Government have recently appointed a Committee of six members, three officials and three non-officials including Shri R. M. Agrawal, the General Manager of your Works at Bombay, to study the raw material requirements of the existing electric furnaces, foundries and re-rolling mills and assess the kind of expansion that is possible. It will also suggest ways and means of improving the efficiency of existing units and recommend steps that should be taken to make them economic and independent of any form of price subsidy for raw materials. The additional capacity required to be set up for these industries will also be assessed by this Committee, which has been directed to pay regard to the importance of regional development and other relevant considerations like transport facilities and supplies of raw materials.

It will not be out of place if I mention here some of our difficulties:

(1) Power Supply: The Government of Bombay have taken steps to increase availability of power. Our application for additional power supply is pending with them since long. While I do not minimise the difficulties of the Government in meeting all demands, the needs of the existing industries, particularly in respect of production of steel which is the basis for development in many spheres of economic activities, require adequate consideration. I trust the Government of Bombay would remove this difficulty of ours at the time of distributing additional power which will shortly be available.

(2) Rates of electricity: Electricity is a major item of cost in our line of production of steel. The rates of electricity which only a few years back compared favourably with our competitors in Calcutta, have been raised so high that they now exceed the electricity rates of concerns manufacturing similar goods in Calcutta area. The entire policy of regional development will receive a set back if electricity rates are raised unduly high as that impairs the competitive capacity of the industry.

(3) Railway Siding: Heavy industries require railway siding facilities. We have approached the Central Railway authorities for extending to us this facility. Certain technical difficulties are coming in the way. I, however, trust that these will be solved by the authorities concerned in such a way as would not impose unduly high financial burden on the company.

(4) Necessity for steady and long term price structure for steel as a case of re-rolling industry: The existing conversion cost arrangement in respect of rolling of steel bars and rods by registered steel re-rolling mills was fixed by the Government on the recommendation of the Tariff Commission with effect from 1st January 1953 for a period of three years and was subsequently extended by the Government for one year more, that is, up to 31st December 1956. During this period the Government have recognised the necessity of allowing substantial amounts for meeting a part of the rehabilitation and expansion needs of the various steel plants and have accordingly sanctioned increased retention prices to the existing main producers of steel. The steel re-rolling industry has also been recognised by the Planning Commission as an integral part of the steel industry of the country and as such similar considerations should be made by the Government for the smaller producers of steel as well, in regard to their needs of rehabilitation and expansion, so that they may make their full contribution to the economy of the country. Further as in the case of the main producers, it is necessary that the retention price arrangement should be for a minimum period of five years, so that like the main producers, the steel re-rollers may know, to what extent, they would be able to finance their development programmes from their own resources. This would assist in accelerating the pace of proper development of the industry.

Steel Foundry

Regarding steel foundry industry, one important matter deserves consideration. In the public sector, in addition to the steel foundry at Chittaranjan Locomotive Works, Government have decided to have another large steel foundry for making heavy castings and forgings. While such a foundry for making heavy steel castings is necessary, it is hoped that care will be taken to avoid overlapping with the private sector with a view to utilize the resources of the country in the best possible manner.

It is a matter of satisfaction to me and your Board that it has been possible to recommend payment of dividend on cumulative preference shares not only in respect of the year 1955-56 but also of arrears of dividend in respect of the preceding six years. Out of seven years' dividend including the year 1955-56, it has been proposed to make payment of Rs. 1,00,000/- for two years' dividend in the report and the balance of Rs. 2,50,000/- has been recommended to be carried to Dividend Equalisation Fund. The consent of the Industrial Finance Corporation has now been received for distribution of this balance amount.

An extraordinary General Meeting of the shareholders has been called on 22nd August, 1956 to make necessary amendment in the article concerned and to declare payment of the above dividend amount on cumulative preference shares in respect of five years, 1951-52 to 1955-56, from out of the dividend equalisation fund.

Our Director, Shri Lalji Mehrotra has been appointed by the Government of India as Ambassador to Burma. He will leave India shortly for taking charge of this high office. This will necessitate his resignation from the directorship of the Company. Shri Lalji Mehrotra has been associated with the Bachhra Group of concerns for nearly 30 years and has been a director of this company also for many years. He has rendered very valuable services to the company. His absence will be very much felt by the Board and the void that will be caused by his resignation will be difficult to fill. His selection to this high office is a tribute to his great abilities and devotion to the cause of the nation. I am confident that he will further cement the existing friendship between the two neighbour countries. We all wish him success in his new assignment in the service of the nation.

Staff Relations

I am glad to report that our relations with employees are cordial and a spirit of co-operation exists between them and the management. Unfortunately, for a few months, workers were misled into slowing down of production but after some time the situation improved and normal production was restored.

Rehabilitation of this company after loss of its Lahore factory, which was its major production unit, involved more than ordinary strain on the management of the company and I on behalf of the Board of Directors as well as on your behalf, offer to officers and other employees of the company, our grateful thanks for the work which they have done so far and trust that they will continue to work with zeal and enthusiasm as it is only by making success of the work each one does, that the nation as a whole can prosper.

After the notice of the Meeting and Auditors' Report were read, Resolutions adopting the audited accounts and Directors' Report for the year ended 31-3-1956 and declaration of dividends on Preference Shares for the years 1950-51, and 1951-52 were unanimously passed. The retiring Directors Shri Lalji Mehrotra and Shri Keshavdeo Nevatia and Shri Kamalnayan Bajaj were unanimously reappointed as Directors. The retiring Auditors Messrs. Dalal & Shah were also unanimously reappointed, as Auditors of the Company for the current year. The resolution authorising the Board of Directors for borrowing in excess of the Paid-Up Capital and free Reserves was also unanimously passed.

Finance in India and Abroad

THE CALCUTTA MONEY MARKET

EASIER CONDITIONS PERSIST

Tuesday, 7th August.

THE money market has shown little change in the past seven days. The larger borrowers are reducing their commitments slowly and there are slight decreases to be noted in the requirements of the sugar and jute industries and against grains and seeds. The interbank market is steady and the call rate is unchanged at 3½ percent.

Activity in the market for export documents continues to be rather brighter. A fair showing of tea bills has been reported and a number on account of gunnies shipment has come to hand. Remittance has been normal for the time of year. Last week's sharp fall in the value of sterling due to the sudden deterioration of the international situation has not been continued during the past few days. The American dollar is unchanged on last week's quotation of Rs. 49½.

Bullion was steady. Silver improved to Rs. 170-12 on bear-covering. Gold was firm due to scarcity of supply and the price rose to Rs. 104-8.

During the week ended 3rd August, Government of India Treasury Bills for Rs. 8,80,00,000 were sold in favour of the Reserve Bank.

Rises of Rs. 2.87 crores and Rs. 16 lakhs to Rs. 1,447.15 crores and Rs. 1,477.43 crores were the outstanding features of the return of the Reserve Bank of India for the week ended 3rd August, 1956. Notes held in the Banking Departments consequently decreased by Rs. 2.71 crores to Rs. 30.28 crores. Deposits of the Government of India and other Government accounts declined by Rs. 15.11 crores and Rs. 96 lakhs to Rs. 61.05 crores and Rs. 5.86 crores. Balances of commercial banks were Rs. 5.45 crores lower at Rs. 47.90 crores. Balances held abroad fell by Rs. 5.96 crores to Rs. 36.79 crores. Other loans and advances declined from Rs. 65.54 crores to Rs. 55.37 crores, of which advances to scheduled banks against usance bills amounted to Rs. 25.34 crores (Rs. 34.85 crores). These advances totalled Rs. 207.83 crores since 1st January, 1956. Other items showed little change.

The return of the State Bank of India for the week ended 27th July, 1956, shows a rise of Rs. 60 lakhs in total deposits to Rs. 221.31 crores. Investments in Government securities are down by Rs. 5 lakhs to Rs. 89.22 crores, while other authorised investments remain unchanged at Rs. 11.30 crores. Advances, including loans, cash credits and overdrafts, and bills discounted and purchased have declined by Rs. 3.87 crores to Rs. 126.44 crores. Cash and balances are, in consequence, shown at Rs. 18.33 crores or Rs. 1.76 crores higher.

The statement of the position of scheduled banks for the week ended 27th July, 1956, shows Demand and Time liabilities at Rs. 639.68 crores (Rs. 11.66 crores on account of borrowings from banks) and Rs. 456.97 crores (Rs. 3.56 crores), compared with Rs. 633.57 crores (Rs. 9.26 crores) and Rs. 454.87 crores (Rs. 3.35 crores) respectively in the previous week. Cash has decreased by Rs. 50 lakhs to Rs. 37.91 crores, while balances with the Reserve Bank have increased by Rs. 1 lakh to Rs. 50.38 crores. There is a rise of Rs. 2.16 crores in investments to Rs. 353.39 crores. Advances and bills discounted at Rs. 740.32 crores show a fall of Rs. 4.28 crores. The ratios to total liabilities of cash and balances, and of advances and discounts, are, in consequence, shown at 8.1 percent and 67.5 percent, against 8.1 percent and 68.4 percent.

Government Promissory Notes of the following loans (Central and State Governments) interest on which falls due for payment during the months of September and October, 1956, will be accepted by the Public Debt Office, Reserve Bank of India, Calcutta for preparation of interest warrants from 15th August to 15th September, 1956.

Interest falling due in September: 2½% 1976; 4% 1960-70; 3% Con. Loan 1946; 3% V.L. 1957; 3% U.P. 1961-66 & 1960; 3% M.P. 1964; 4% W.B. 1967; 4% Bihar 1967; 4% Bombay 1967; 4% M.P. 1967; 4% Saurashtra 1967; 3% Madras 1960; 3½% West Bengal 1962; 3½% U.P. 1962; 3½% Madras 1962; 3½% Bombay State Dev. 1962; 3½% Madhya Pradesh 1962; 2½% U.P. 1961; 2½% Madras 1961; 4% Hyderabad 1967; 4% U.P. 1967; 4% Madras 1967; 4% Andhra 1967; 4% Mysore 1967.

Interest falling due in October: 3% 1966-68; 3% 1970-75; 3½% N.P. Loan 1964; 4% Hyderabad State Dev. 1963.

Holders of the loans are advised to lodge their holdings well in advance to facilitate delivery of the securities and interest warrants on the due dates. In view of the heavy work involved, the

period for delivering securities tendered for payment of interest on the above loans may be extended to five clear working days.

Stocks and Shares

SHARE MARKET IN MORE CHEERFUL MOOD

EQUITY PRICES WELL MAINTAINED: GOVERNMENT SECURITIES WEAKER

THE moderate optimism which followed last Tuesday Evening. The week's deterioration in the international situation has persisted throughout the past few days. The Calcutta market has improved slightly, mostly taking its cue from the better sentiment apparent in Bombay now that the State reorganisation issue appears to be nearing a solution. Speculative generally have increased fractionally in price, with the possible exception of Indian Irons which have encountered profit-taking off and on throughout the past few days. Irons are now moving narrowly at about the level ruling this time last week. Investment interest remains at a low ebb, although the volume of transactions has increased slightly since the beginning of the month. Business in investment shares is considerably below the normal for this time of year and a number of stockbroking firms in Calcutta are complaining that July was the quietest month experienced in the past few years.

There has been small enquiry for jute shares at present bargain levels, but the number changing hands has not been large. Engineering and miscellaneous scrip have accounted for most of the remaining business in the market. Coal and tea shares have ruled dull and neglected and there has been scarcely any activity worth mentioning among Government securities. The undertone of the market is fairly steady, although operators appear to be having second thoughts about the possible consequences of trouble in the Middle East.

Details of the week's trading follow.

The Government security market ruled extremely quiet and once again prices were marked down. Three percent 1986 was particularly weak with the quotation falling by As. 11 to Rs. 75-8 sellers. This is the lowest price touched since the loan was issued in 1946. Non-terminable Paper was marked back in sympathy to Rs. 76-10 without business passing. In short-dated loans, 3% 1957 was unchanged at Rs. 99-13 while 3% 1958 was asked for at Rs. 99-10. In the medium-dated group, 3% 1959-61 met with enquiry at Rs. 98-2 due to the approach of the interest payment date (15th August) but 3% 1963-65 was on offer at the lower rate of Rs. 95 and 3% 1964 was easier at Rs. 95-1; 2½% 1961 was traded at Rs. 93-7 and 2½% 1960 was quoted at Rs. 96-6. In National Plan loans, 3½% 1961 was easier at Rs. 99-7, but 3½% 1964 had small buyers at Rs. 98-11; 3½% 1965 had sellers at Rs. 98-10, as did 3½% 1967 at Rs. 98-7-6. In long-dated loans, 3% 1968-68 was slightly firmer at Rs. 93-4 but 3% 1970-75 and 3½% 1974 were on offer at Rs. 90-8 and Rs. 98-7-6 respectively.

Provincial loans were also quiet and there was an almost complete absence of buyers, due to the news that the States will again be in the market with new medium-dated loans. Practically no business was reported with sellers at last quotations.

In the banking section, United Commercial improved to Rs. 59 on good enquiry, as did Hind Bank, which were also better at Rs. 37-4. Punjab National Bank met with some profit-taking at the higher level of Rs. 61, to close at Rs. 60-8.

Business in coal shares was on a reduced scale, though prices showed little variation, as will be seen from the following table:

	Opening	Closing
	2-8-1956	7-8-1956
	Rs. As.	Rs. As.
Amalgamated	22 10	23
Bengal	540	540
Burrakur	13 7	13 9
East Indian	30 14	31 4
Katras Jherriah	58	59
New Beerbhoom	19	19 12
Raneegunge	12 14	13 1
South Karanpura	9 6	9

The solitary feature in the cotton section was Kesoram which were actively traded and improved from Rs. 18-14 to Rs. 19-4. New Victoria were slightly better at Rs. 2-12, but Dunbar were marked back from Rs. 300 to Rs. 295.

In electric, Calcutta were dealt in freely at the previous level of Rs. 13-15, while U.P. were taken two points higher to Rs. 150. Benares changed hands at Rs. 17-8, while Jubbulpore were marked at Rs. 14-4.

In the engineering section, Indian Iron fluctuated narrowly between Rs. 36-8 and Rs. 36-14 to close at Rs. 36-12. Braithwaite were scarce at the higher rate of Rs. 29-4, while Burn and Co. were slightly better at Rs. 357. Indian Standard Wagon rose from Rs. 177 to Rs. 180 but Jessops were shaded at Rs. 34-15. Textile Machinery rallied smartly from Rs. 22-8 to Rs. 23-8.

There was a fair enquiry for selected jute shares and prices improved in certain cases. In contrast to the general trend, there was a sharp fall in from Rs. 1,300 to Rs. 1,000, and Naskar-

para dropped Re. 1 to Rs. 17. Here is a chart showing representative price movements.

	Opening	Closing
	2-8-1956	7-8-1956
	Rs. As.	Rs. As.
Agarpara	11 5	12
Alliance	120	127
Anglo India	164	171
Barnagore	131	139
Birla	17 10	19 4
Budge Budge	123	133
Gourepore	226	232
India	130	142
Kinnison	161	178
Megha	72 8	84
National	24 1	24 15
Nuddea	38 8	41 8
Union	141	157

Sugar shares tended to lower levels with sellers predominating. Balrampur eased from Rs. 7-12 to Rs. 7-8, Carew from Rs. 9-4 to Rs. 9-2, Darbhanga from Rs. 23 to Rs. 22-10 and Ramnugger from Rs. 27-8 to Rs. 27.

In shipping, Port Shipping were active and rose from Rs. 16-4 to Rs. 17-8, while India Steamship were unchanged at Rs. 9-3. I.G.N. were better at Rs. 11-4 and Calcutta Landing were taken at the higher rate of Rs. 16.

In insurance, Concord were a shade better at Rs. 11-12, but Ruby General shed As. 6 to close at Rs. 5-14.

Paper shares were again in the limelight under the leadership of Orient, which improved from Rs. 39-13 to Rs. 40-9. Titagur were better at Rs. 41-2 and Bengal Paper after a considerable period jumped Rs. 10 to Rs. 120.

Among miscellaneous industrials, Angelo Brothers were Re. 1 better at Rs. 23-9 following the

A copy a minute!

Save time and money by using the Agfa Copyrapid Process to get photo-copies of anything from typed or handwritten letters and documents to intricate drawings, maps and plans.

Copyrapid Process is an Agfa invention and Agfa Copyrapid papers will give you Flash copies—a copy a minute—yet they can be handled in average room light; no dark-room is necessary for taking bright, clean, sharp copies. So simple is the process that even an office boy can do all your

10 TIMES FASTER THAN COPY TYPING

and dead accurate too!

Agfa-Copyrapid paper Saves time and money!

For full particulars contact:—

AGFA INDIA PRIVATE LTD.

199, JAMSHEDJI TATA ROAD, BOMBAY-1.

Agfa Copyrapid Papers and Chemicals with their special photo-copying equipment are supplied by the following firms:—

1. M/s. Voltas Limited, (Bombay). 2. M/s. Remington Rand of India Ltd., (Calcutta). 3. M/s. Latham Abercrombie & Co. Private Ltd., (Bombay). 4. M/s. H. L. Prince & Son (Bombay). 5. M/s. Mahomed Ibrahim & Co. (Private) Ltd., (Madras). 6. M/s. Blackwoods India Ltd., (Calcutta).

improvement in the shellac market. Alkali and Chemical were slightly higher at Rs. 21-3. Balmer Lawrie changed hands at Rs. 172-8 ex-dividend and Birds Investments were taken higher at Rs. 17-10. Clive Row were subbed at Rs. 11-4. Dalmia Cement recovered to Rs. 15-10 and Sone Valley to Rs. 9. Dunlop Rubber met with some enquiries at Rs. 29-12 and Indian Rubber had buyers at Rs. 16. Imperial Tobacco went from strength to strength with buyers up to Rs. 16-10. Indian Aluminium were well supported from Rs. 22-3 to Rs. 22-14. Hindustan Motors met with special buying and improved from Rs. 10 to Rs. 10-10. Indo-Burma Petroleum recovered to Rs. 41 and Metal Box changed hands around Rs. 30. National Carbon met with some selling pressure at around Rs. 29. N.I. Cables were steady at Rs. 26-4, as were Indian Cables at Rs. 35. Martin Burn were quiet at Rs. 24-2, as were Shaw Wallace at Rs. 13-9 and Jardine Henderson at Rs. 99. Rohas Industries were marked around Rs. 22-14 and Tide Water Oil changed hands at Rs. 14-8 ex-dividend.

Among mining issues, Indian Copper were well maintained at Rs. 6-12 and Orissa Minerals were better at Rs. 27, as were Karanpura Development at Rs. 21. Burma Mines were done at around Rs. 3-4 and Chrestien Mica Industries were easier at Rs. 16.

Tea shares continued to be neglected, and in the absence of support prices were marked back as will be seen from the following representative table:

	Opening 2-8-1956	Closing 7-8-1956
	Rs. As.	Rs. As.
Banarhat	332	325
Bishnauth	24 12	24 2
Brooke Bond	23	22 8
Dhelahtat	23 9	22 8
Hantapara	200	186
Hasimara	34 4	32
Tezpur	24 8	24

Including Rs. 3,12,630 brought in, the profit of the BIRLA JUTE MANUFACTURING CO. LTD. amounted to Rs. 33,01 lakhs for the year ended last March, against Rs. 33,31 lakhs (Rs. 1,27 lakhs). Providing

Rs. 8,44 lakhs (Rs. 7,75 lakhs) for depreciation and Rs. 9 lakhs (Rs. 5 lakhs) for taxation, there is a balance of Rs. 15,56,672. The ordinary dividend is the same at Re. 1 a share, leaving a carry-forward of Rs. 4,37,393. The directors say that the calcium carbide factory attained full production during the year under report. They have now applied to the Central Government for permission to increase the present installed capacity of the plant from 10 tons to 20 tons a day. The working results of the factory have shown a loss of Rs. 27,701, after providing Rs. 5,14,151 for depreciation. The directors have decided to install a cement factory in Satna, Vinidya Pradesh. Orders have been placed for plant and machinery with a capacity to produce 800 tons of cement a day. They have also decided to put up a staple fibre spinning plant in Birlapur. Machinery for this plant has been ordered and the factory is expected to go into production from March 1957. On account of the additional finance required for these projects, the authorised capital of the company was increased from Rs. 145 lakhs to Rs. 4 crores by the creation of 800,000 additional ordinary shares of Rs. 10 each and 175,000 second preference shares of Rs. 100 each. Out of this, second preference shares worth Rs. 75 lakhs were issued and fully subscribed.

The ALLIANCE JUTE MILLS CO. LTD. incurred a loss of Rs. 7,470 for the half-year ended last December, against the previous half-year's profit of Rs. 1,15 lakhs. Bringing in Rs. 48,280, transferring Rs. 4,25 lakhs from general reserve and making other adjustments, there is a balance of Rs. 68,103. There is no distribution (6%), leaving Rs. 45,000 to be carried forward.

Transferring Rs. 3,28 crores (Rs. 1 crore) to plant rehabilitation and development, Rs. 3,45 crores (Rs. 2,40 crores) for taxation, Rs. 78 lakhs (Rs. 10 lakhs) for development rebate and Rs. 2,39 crores (Rs. 2,40 crores) for depreciation, there is a balance of Rs. 2,77 crores for the TATA IRON AND STEEL CO. LTD. for the year ended last March, against Rs. 3,19 crores. Profit-sharing bonus absorbs Rs. 1,02 crores (Rs. 1,06 crores).

Bringing in Rs. 5,52,548, there is an available balance of Rs. 1,95,42,882. The ordinary dividend is the same at Rs. 10-8 a share, leaving a carry-forward of Rs. 4,04,945. The directors state that the most important event during the year under report was the decision made, in consultation with the Government of India, to expand the company's output beyond the target of 1.3 million tons of steel ingots, fixed under the current modernisation and expansion programme, to 2 million ingot tons at an estimated cost of Rs. 75 crores. The company, with the approval of the Government of India, concluded an agreement with Kaiser Engineers for the provision by them of the engineering, procurement, supervision and construction services necessary for the execution of the main part of the 2 million ton programme, estimated to cost Rs. 62 crores. The Kaiser organisation has undertaken to complete the entire project by 31st May, 1958. In order to meet part of the finance required for this project, the company executed an agreement with the International Bank for Reconstruction and Development for a loan of Rs. 36 crores, at 4% interest, for a period of 15 years, repayable in instalments commencing from 1960. The first instalment of Rs. 2,355,000, due in 1960, has been taken over by three commercial banks in the U.S.A. at an interest rate of 4%.

Including Rs. 28,521 brought in, the profit of the REWA COALFIELDS LTD. amounted to Rs. 5,25,296 for the half-year ended last December. Taxation absorbs Rs. 2,55 lakhs (Rs. 1,35 lakhs). Development reserve is allocated Rs. 75,000 (Rs. 50,000). The dividend has been increased from 8% to 12% percent, leaving a carry-forward of Rs. 26,029. Raisings increased from 164,865 tons to 183,555 tons, and despatches from 162,787 tons to 186,060 tons.

Messrs. TATA INDUSTRIES PRIVATE LTD., managing agents for the TATA IRON AND STEEL CO. LTD., report that the total approximate production of iron and steel at the steel works in Jamshedpur during July 1956 was: pig iron 94,400 tons; steel ingots 91,300 tons; semi-finished steel for sale 19,600 tons; and finished steel 45,900 tons.

PRICES IMPROVE IN BOMBAY MARKET

T. I. S. C. O. RESULTS WELL RECEIVED

Wednesday Noon.

CHEERFUL conditions prevailed on the Bombay stock market last week and brisk activity took place on a broad front at rising prices. Anxiety felt over the crisis in the Suez Canal situation was more than offset by excellent corporate news. Operators seem to be optimistic about prospects of increased distribution and fresh bonus issues in the coming months. The report of the Tata Iron and Steel Company for the year ended last March was well received and the future prospects of the company were considered bright. Profit-taking in the textile group following fears of an increase in the excise duty was absorbed without difficulty, and replacement buying lifted values on excellent prospects for the cloth market during the coming Puja festival.

Renewed bouts of buying raised Tata Ordinary to Rs. 208-12. Indian Irons firmed up to Rs. 36-14 on short-covering, coupled with strong support from Calcutta interests. Larsen and Toubro rose smartly to Rs. 19 and Tata Locomotive were concerned by brisk trading, with the price increasing to Rs. 164-8. Alcock Ashdown improved to Rs. 362-8, as did Premier Construction to Rs. 205-8.

The mill group was dotted with numerous rises. Tata Mills and Swadeshi jumped to Rs. 60 and Rs. 264-12, respectively, on rumours of amalgamation. Professional support took the price of Kohinoor to Rs. 393. Bombay Dyeing were taken at Rs. 674-6 and Century changed hands at Rs. 591-8. Simplex were done at Rs. 216 and India United Ordinary were fractionally higher at Rs. 13-15.

Miscellaneous industrials took the pride of place and a number of smart rises were registered. Tata Chemicals improved to Rs. 20-11 on the expectation of a maiden distribution and National Rayon were taken higher to Rs. 268-12 on reports of advance sales of yarn. Gwalior Rayon increased to Rs. 18-1 on replacement buying. Cement shares were steady, with Associated Cements rising to Rs. 196-14. Sugar shares were favoured on the prospects of increased earnings and Belapur were absorbed at Rs. 254-8. Automobile shares experienced a flurry of activity, and Hindustan Motors were done higher at Rs. 10-7. Bombay-Burmah were better at Rs. 736-4. There was little interest in steamship companies and Scindia Steam were subbed at Rs. 19. Mining shares lacked interest and Sivraj Syndicate were on offer at Rs. 90. Indian Copper, however, improved to Rs. 6-12 on bear-covering and better metal prices.

Banking shares were steady on investment support. Bank of India were absorbed at Rs. 172-8, as were Central Bank of India at Rs. 55. Selected insurance shares showed gains on balance. New India came to hand at Rs. 49-8 and Oriental were done at Rs. 3,820.

Routine turnover took place in electricity supply shares, with Ahmedabad coming to hand at Rs. 100. Tata Hydro were quoted around Rs. 128-8.

THE WEEK'S TRANSACTIONS

(In the following list of stocks and shares in which transactions have taken place during the past week the figures indicate, Opening Quotations, Highest for the week, Lowest for the week, Closing Quotations—Quotation for the Corresponding Closing Date a Year Ago, the last named being shown in parenthesis and will not be given where such a quotation is not available).

DOWNWARD TREND IN STOCK MARKETS

INFLUENCE OF WALL STREET AND SUEZ DEVELOPMENTS

London, 8th August.

THE Suez Canal developments have dominated the stock markets during the past week, and prices have moved erratically throughout. The markets generally held fairly steady after recording an initial sharp fall immediately following the Suez news, but declined again after the holiday week-end. The renewed fall followed a sharp setback on Wall Street on Monday when the London Stock Exchange was closed. Oils particularly were affected and sustained heavy losses after the week-end. Business was highly selective, but a number of good features developed. Other adverse influences in addition to the Suez situation included the weakness of sterling after the Suez news. Gilt-edged securities remained out of favour throughout, and with business at a very low level, prices lost ground to record losses on balance, ranging to about half a point. The new Agricultural Mortgage loan remained at a substantial discount. The recent activity in the Japanese bond market subsided, but prices were fairly well maintained. By contrast, Chinese issues lost some of their recent gains. In rails, a feature was provided by Antofagasta ordinary which went ahead on dividend hopes now that the preference arrears have been cleared off. American dollar stocks advanced earlier under Wall Street's influence, and a feature of the overseas issues was the strong advance in Canadian stocks following investment and speculative buying. Some reaction was however recorded after the week-end in sympathy with the reaction on Wall Street. Interest in industrials was selective and a fair number of good features developed prior to the week-end, mostly among shares with an American following. Some of the gains, however, were lost after the week-end. Generally, industrials lost ground and most prices were lower compared with previous levels. Gold shares receded in the absence of interest and support, but coppers and other base metals were firm, although they eased after the

week-end. Oils recorded substantial losses on balance, the heavy fall in oil shares on Wall Street contributing to the trend. Rubbers were firm, but tea shares attracted little attention and generally recorded little change compared with the previous levels.

The Money Market

Stringent credit conditions prevailed throughout the past week in the London money market, and borrowers had to pay fairly dearly. Two factors which worked against the market were an excessive number of new Treasury bills and a fall in company profits as a result of the continuing credit squeeze. However, the gap between supply and demand did not cause any undue disturbance and was smoothed out by official operations. The cost of the day-to-day loans ruled on a firm basis of $\frac{1}{4}$ percent, and $\frac{1}{2}$ percent was paid during the worst phases. Overall bill business was moderate with October bills sold at 4-15/16 percent. In view of these conditions, discount houses dropped their tender bid by 3d for the week's Treasury bill offer, and rates came out higher at 100s 3/79d. Applications for £270 million worth of 91-day bills totalled £399,125,100, and were allotted at an average rate of 100s and 3/79d against 99s 6/39d in the previous week. Offerings for this week comprise £280 million worth of 91-day bills. The Bank of England return for the week ended 1st August showed that bankers' deposits were about £15 million lower at £215 million, while notes in circulation were £16 million higher at around £1,979 million.

Activity on Wall Street

U.S. Government obligations continued to decline in the past week under the lead of long-term securities. Dealings were quiet with the decline largely reflecting a lack of investment demand. Some traders, it was reported, were offering Treasury bonds to purchase other securities. Business in investment quality corporates also was limited with prices slightly easier. Bethlehem Steel $\frac{3}{4}$ percents were in demand among convertibles and scored a good advance. Rails generally eased in quiet trading. In foreigners, Australians improved slightly, while Germans and Italians were mixed. Greek and Polish issues eased. Japanese issues showed mostly small changes, although Shinyets Electric Power $\frac{6}{8}$ percent of 1952 advanced quite sharply on a single sale.

Chile 3 percents held steady, while Brazilian issues tended to improve.

Quicksilver Falls

The ex-warehouse price of quicksilver continues to edge lower with dealers indicating £84 a flask, compared with £84½ a flask previously. Demand is still limited, not only because of seasonal reasons, but also because buyers have been holding back pending more news of the Board of Trade's recent offer of 1,000 flasks from its stocks.

U.K. Official Cadmium Stocks

The U.K. Board of Trade is to release an undisclosed amount of cadmium, according to trade sources. But so far as it can be ascertained, the method of disposal has not yet been settled. One of the major problems is that in Britain, the supply and demand position is rather finely balanced and any surplus could be embarrassing. If, on the other hand, efforts are made to export the metal, some difficulty may well be experienced because of the looser supply position abroad and the lower price prevailing on the Continent. The price of Commonwealth and home-produced cadmium is 12s a lb.

Vegetable Oil Market

The tempo was inclined to slacken in vegetable oils prior to the holiday recess, but a moderate undercurrent of demand was noted in major sections. Coconut oil was marked higher on initial selling reserve, but Continental resellers were more prominent later in the day, and values were inclined to sag at the close. Philippine coconut oil was offered at \$245 c.i.f., but the best bid was put at \$241. Copra was quiet after a subsequent flutter, and prices were virtually repeated. Lined oil also showed little change in quiet trading. About £130 c.i.f. was reported to have been paid for a small quantity of South African bulk groundnut oil. Further sellers were cautious. Nigerian bulk groundnut oil was holding around £126 c.i.f. September-October with a near bid likely to be successful. American cotton and soyabean oils ruled steady, while Dutch soyabean oil was sold at 128 florins a 100 kilos ex-tank Rotterdam. Groundnuts were steady with resellers of Nigerian not prepared to go much below the Board's price of £68 c.i.f. October-December. Only a small quantity of British East African was circulating in the region of £66½ c.i.f. September-October. Other varieties lacked features in the pre-holiday trading.

World Sugar Markets

The International Sugar Council, managing body of the international sugar agreement, held a two-day extraordinary meeting in London from 30th July to consider the present supply and demand conditions in the world sugar trade. The Council would not have normally met until next September, but, sugar trade sources in London say, the meeting had to be called because of the tightening of sugar supplies since the Council made its last estimate of the free world requirements in November, 1955. The Council's estimate then put the free world requirements at about 4,500,000 tons in 1956. Since then, however, demand has been estimated by some quarters to be running at the rate of about 5 million tons a month. One of the reasons given for this is that East European countries, which have an export quota of over 660,000 tons, have not begun selling sugar and have in fact been net importers. Export quotas for the year were based on the November estimate, and informed circles believe that the question of shipment after August was on the agenda for the meeting. It is probable that countries which have been unable to fill their quotas have been asked to put their "deficits" into a pool for reallocation among other members who may be able to increase their exports. It is also possible, according to trade quarters, that the overall readjustment of the quota figures now operating might have been considered. These moves, they say, would help increase available supplies of sugar on world markets.

Price Cut in Lancashire Yarn

Sharp cuts in the prices of Lancashire yarns, made of American cotton, were effected on 1st August to meet world competition. Trade sources said that the amounts varied according to the mixing of cotton in the yarns, but the average price cut was probably about 3d a lb. The move followed reductions in the trade's agreed minimum yarn prices due to the release of American surplus cotton, and a change in the Yarn Spinners Association's price fixing arrangements by which it will now base yarn prices on the Liverpool October cotton futures contract, instead of that for the current month. Colonel J. B. Whitehead, Managing Director of the Lancashire Cotton Corporation, said that the reduction in cloth made of American cotton would be about 3d a yard. It would not bridge the difference in the price of cloth imported from India, but it would help Lancashire's competitive position.

Price Restraint by I.C.I.

The Board of Imperial Chemical Industries has announced in London that it has decided to make no further increases in home trade prices of chemical dyestuffs, explosives, fertilisers, fibres, paints, pharmaceuticals and plastics between now and 30th June next year, provided no unexpected or exceptional factors intervene and the company does not incur any major increase in freight or fuel costs in the interval. The Board adds, however, that production costs of certain products depend mainly on raw materials and for these, the Board is unable to promise more than a continuation of the present policy of price restraint.

New Delhi

REPERCUSSIONS OF SUEZ DISPUTE ON THE INDIAN ECONOMY

WORLD BANK MISSION DESCRIBES FIVE YEAR PLAN AS TOO AMBITIOUS

(FROM OUR NEW DELHI CORRESPONDENT)

THE nationalisation of the Suez Canal Company, the future of Bombay and the second five year plan have been the main subjects of interest this week in New Delhi. The mission believes that the Suez Canal might have far-reaching effects on India's economy and the five year plan. As matters stand, most of India's trade is with western countries. Any curtailment of traffic through the Suez Canal, or any change in the freight structure following the nationalisation dispute, could have serious repercussions.

Report of World Bank Mission

Capital's views on the second five year plan have been vindicated by the report recently submitted by the special mission of the World Bank to the Finance Minister. The mission believes that the plan is "somewhat too ambitious". It realises that the size of the plan must be such as to capture the popular imagination and to challenge the country to greater efforts. But it holds that targets must at the same time be sufficiently realistic to avoid the adverse psychological effects which would result from a marked failure to accomplish them. The plan seems too large in relation both to administrative and technical resources, and to the financial resources likely to be available on even the most sanguine assumptions. Having, however, now committed itself to the plan and the targets in it, the Government must henceforth concentrate on widening the administrative, technical and financial bottlenecks on the one hand, and prepare itself to make such timely adjustments in the programme as circumstances may require.

In the financial sphere, the mission urges: (a) considerable caution in resorting to deficit financing; (b) greater emphasis on raising more revenues through the adoption of more realistic pricing policies for the services and benefits rendered by the Government to the people; and (c) care in raising the additional taxation required to avoid such increases as might seriously impair the incentives of, and the resources available to, private business. While it is recognised that a certain measure of deficit financing may well be necessary to make the money supply fully responsive to the needs of an expanding economy, the measure of such financing proposed in the plan will produce an expansion of money supply considerably exceeding the requirements. Quite apart from the possibility of raising more tax revenue, the mission believes that there is still considerable scope for increasing Government income by raising railway rates, charges for power and water, and, in some cases, port charges. In view of the need to capture a considerable portion of the rise in national income for reinvestment, it is necessary to make certain Government enterprises, particularly those in the field of power, irrigation and transport, earn larger surpluses. In raising more taxes, the mission thinks it important that the Government should avoid an all-out effort to increase direct taxation just for the purpose of achieving public investment targets, if this can be accomplished only at the risk of substantially impairing the resources and incentives of the private sector, for the latter is still expected to contribute the lion's share of the rise in national income.

Transport Difficulties

The mission is deeply concerned about the transport situation, particularly the inability of the railways to cope with the existing traffic, and the congestion in the ports. While the plan contemplates a substantial increase in railway investment, and port congestion is being relieved to some extent by the expansion of physical facilities and the introduction of incentive schemes for stevedoring labour, it is not fully assured of the adequacy of these measures. It urges the Government to review its whole transport policy and the programme with a view to maximising transport by all available means—by rail, roads, coastal shipping and inland waterways. The mission urges that the level and structure of railway rates be revised promptly, so as to provide more incentives for the utilisation of other means of transport.

Other suggestions to overcome transport difficulties are: (a) to remove State and inter-State restrictions on road transport and to reduce tax rates bearing on road transport; (b) to lay greater emphasis on the use of special wagons for the movement of coal and ore, and on the establishment of fully mechanised loading and unloading facilities in order to reduce the time during which such capital-intensive facilities as railway wagons are kept immobilised; (c) to investigate the possibility of changes in the present system of allocating coal wagons to collieries on a day-to-day basis; (d) to examine the feasibility of a fully mechanised coal and ore port on the west bank of the lower Hooghly in order to relieve congestion in Calcutta and as a possible alternative to the plan for the expansion of ore exports through Vishakhapatnam; and (e) at least for a time, to prohibit the chartering of coastal vessels, so as to increase the carrying capacity of the coastal fleet. Above all, the mission urges that every effort be

made to improve the operating efficiency of the railways, for which there is apparently still considerable scope. While it is tempting to meet the developing railway bottleneck by still greater investment, the prospective shortage of resources makes it imperative to resist this temptation as far as possible and to exhaust all possible means of improving efficiency, especially in view of the railway programme.

Cottage and Small-scale Industries

The mission has substantial doubts about some parts of the Government's programme for cottage and small-scale industries. But it fully endorses the effort to raise efficiency and standards in these industries, and sympathises with the Government's concern to increase employment opportunities. It also understands the practical necessity of providing moderate subsidies to enable these industries to compete with factory enterprise, at least until modern industrialisation has made greater advances in India. In particular, the programme for the promotion of small-scale industries, as distinct from village (or hand) industries, is considered to be sound and calculated in the long run to encourage a healthy dispersal of industrial ownership. At the same time, the mission thinks that the difficulties inherent in an effective expansion of small enterprise are considerably underestimated, the impact of the programme will be slow in manifesting itself, and therefore, the contribution to national income expected from small-scale and village industries under the plan is probably substantially over-estimated. Above all, it questions the wisdom of insisting on the so-called "common production programme", whereby the required increase in output of more or less essential consumer goods is allocated between the factory and the non-factory sectors, thus involving excessive reliance on the unproved ability of non-factory industries to meet the demand.

The mission has expressed "serious misgivings" about the recently announced compromise for meeting the expected increase in demand for cotton textiles. It believes that the compromise will prove largely unworkable. The Government's decision greatly under-estimates the practical difficulties of installing and getting into operation the requisite number of *Ambar Charkhas* and powerlooms on a decentralised basis. The mission questions the feasibility of making the installation of automatic looms in the mill sector conditional on the allocation of the output of these looms to exports, and of making failure to meet this condition subject to a penalty, the nature of which appears to be unspecified. It is even inclined to doubt whether there is enough incentive to install the additional spindles necessary to supply a much greater quantity of yarn to the handloom sector, in view of the uncertainty whether the handloom sector will really be capable of producing the increased production expected of it.

Quota for Spindles

The fact that the existing quota for spindles has apparently not been taken up in full, it says, appears to bear out its misgivings. It understands that the Government is prepared to review this programme, if experience indicates that the hand-spinning and decentralised weaving sector does not live up to expectations, but it fears that the necessary remedial action might come too late in view of the time required to procure and install mill machinery and to reach a consensus of opinion that the programme has really been a failure. The mission, therefore, believes that the current programme will either jeopardise the supply of an essential consumer item at reasonable prices on the domestic market or bring about a serious curtailment of exports at a time when prospective export earnings appear already far short of what is required. It understands the need for Government measures to support the production of *khadi* and handloom cloth by various measures, but it believes that any such measures should leave the mill sector free to expand in the light of its own judgment of markets.

Foreign Capital

The mission feels unconvinced that sufficient attention has been paid in the plan to the promotion of exports. Cotton textiles and tea are mentioned in particular for the Government's attention. It is thought that the Government has not always used its influence in the way best calculated to foster the competitive power of this vital export industry. It has also urged that greater emphasis be placed on the production of other cash crops for export, particularly of vegetable oils and cotton. The policy of imposing restrictions on exports of commodities such as groundnut oil in order to conserve supplies for domestic consumption, is generally a misguided one.

The mission adds one final observation about private foreign enterprise and capital. "At this stage of development, India certainly needs the contribution which can be made by foreign tech-

nology, private capital and management. The plan itself counts on private foreign investment to an amount of Rs. 100 crores. It is evident, however, that this target is impossible of attainment, unless positive measures are taken to encourage and facilitate foreign investment and enterprise. At present, the attitude of both the Government and Indian business towards foreign capital and management is too negative and grudging, and can at best be regarded as tolerating rather than encouraging foreign participation. In the postwar expansion of many countries, there are striking examples of the constructive contribution which foreign capital and enterprise have made to national welfare. In India, foreign or joint Indian-foreign ventures can have a useful leavening effect on the economy. In our opinion, Indian business has in recent years been excessively shielded against competition from abroad and from foreign-managed ventures capable of operating in the Indian market. More competition from both sources is likely to improve the quality of Indian manufactures, which in many respects is still too low, and to inculcate in Indian business an attitude which will put more emphasis on expanding output at lower unit-costs and profits. There is evidence that foreign enterprise will be attracted to invest in a large expanding market, provided the investment climate is made more favourable. In our opinion, the Indian Government should make a determined effort to enlist foreign capital and management for new ventures."

Publicity Organisation

The mission urges that a single agency or department be made responsible for publicising the opportunities for participation by foreign capital, and for expediting all necessary approvals and clearances for foreign investors. The National Industrial Development Corporation, which has been established to fill the "gaps" in India's industrial structure, should also make every effort to invite foreign as well as Indian private capital and management in any new venture which it considers feasible. In this connection, further consideration will need to be given to the whole question of the taxation of foreigners working in India, particularly to their perquisites. The Government has given sympathetic consideration to representations made by the foreign business community following the 1955 Budget, and certain concessions have been made, for instance, over passages. The mission is aware also of the three-year tax exemption granted to foreign technicians. But it doubts whether these concessions go far enough to make a career in India reasonably attractive to the senior staff of foreign firms and, unless firms can find members of their staff ready to work in the country, full opportunities for foreign investment may not be realised.

The mission sympathises with the desire of the Government to have joint Indian-foreign ventures rather than wholly foreign-owned enterprises. But it believes that this desire should not be pushed so far as to deprive the foreign investor of an effective share in the management of the enterprise, without which he is unlikely to risk his capital. It would be a mistake, for example, to insist on such a measure of Government participation in the exploitation and development of oil resources as to discourage foreign oil ventures and saddle the Indian economy, which is already short of capital, with the excessive burden of finding the large amounts of capital which are necessary for an effective programme in this field.

Prices and the Plan

The index number for food articles rose from 314.8 on 23rd July, 1955, to 381.1 on 21st July, 1956. That for cereals increased from 364 to 484. After the Labour Tribunal's award, the prices of coal and coke were increased. This is expected to affect the freight structure of the railways and of steamer companies, and the cost structure of undertakings using coal. The price of cement has also been increased to Rs. 102-8 a ton. The question asked here is whether, and to what extent, the plan outlay will be affected by these increases. The increase in the price of coal will affect the price of bricks, and that in the price of cement will affect the estimates of all building projects.

Additions are continuously being made to the total outlay of the plan. The Education Ministry has already made an addition by its subsidy on teachers' salaries. The *Ambar Charkha* has made another addition to the plan outlay. A decision is now awaited on setting up a State-owned synthetic drug plant at an estimated cost of Rs. 20 crores in collaboration with the Russians. The search for oil and its extraction and refining in collaboration with the Assam Oil Company will need money which has not been accounted for in the plan. It is, however, doubtful whether any adjustments will be made until the next general elections are over. For the present, the emphasis is on the employment potential.

Purchase of Russian Planes

The Union Communications Minister recently told Parliament that the Government proposed to buy some *Ilyushin 14s* from Russia for use by the Indian Airlines Corporation. These aircraft were designed two years ago, and even the Russians are not sure of their life. The Minister indicated that it was proposed to replace the nine *Dakotas* lost during the last few years with the Russian planes. Apart from the fact that India will be rendering a useful service to Russia by testing the durability of the aircraft, the purchase of *Ilyushin 14s* will require the storage of a variety of new spares and new equipment, and involve new training for its personnel. The Indian Airlines Corporation fleet now consists of eight *Heron*s, 67 *Dakotas*, 12 *Vikings*

no hit
or miss
here!

There is no 'hit or miss' policy in the supply of Dunlop conveyor belts for your installation. Dunlop's world-wide experience and research are applied to the specific problems of Indian climate and conditions in the manufacture of conveyor belts at Sahajanj.

Each belt is tailor-made to give you the optimum balance between various constructional features as best suited to your installation. Rigorous factory tests ensure top quality in supplies to the customer. Splicing at site is carried out by a Mobile Splicing team, an aspect of a thorough after-sales service in the field.

DUNLOP
conveyor belts

and six *Skymasters*. Viscounts will shortly be added to it.

Government Patronage to Khadi

In a signed article, published in the latest issue of the *A.I.C.C. Economic Review*, Mr. Shriman Narayan has conceded the point that "it may be difficult to prevent the installation of new spindles completely in view of the definite signs of inflationary trends." He also admits that "unless the people are prepared to pay a little more for *khadi* in the interests of the nation, it will not be possible to go full steam ahead with the (*Ambar Charkha*) scheme." It is probably because of the public apathy to *khadi* that Congressmen have been forcing the Government to impose it on its various departments. This should be evident from the fact that purchases of *khadi* by the Union Government rose from Rs. 28.78 lakhs in 1954-55 to Rs. 117 lakhs in 1955-56. Purchases in 1956-57, it is expected, will be even bigger.

New Oil Refinery

The establishment of three rupee companies to handle freshly tapped oil in Assam is being considered here. The first, in which the Government of India's holding will be limited to 33½ percent and the remainder of the capital will be contributed by the Assam Oil Company, will be engaged in oil exploration and extraction in Assam. The second, in which the Government of India will hold a majority of shares, will be in charge of refining oil. A committee of experts is being set up to determine the location of the refinery, Calcutta being one possible site and the oil belt in Assam another. The third company, in which the Government of India will also hold a majority share, will handle the transport of oil from oilfields to the refinery, the pipeline being one channel of transport. Representatives of the Assam Oil Company, who were here to negotiate an agreement with the Government of India, have now returned to Britain to secure its ratification by their principals.

Machine Tool Manufacture

The broad principles of the proposed amendment of the agreement with Oerlikon Machine Tool Works, Buehrle and Company of Zurich, Switzerland, have now been approved. The revised agreement, it is expected, will be signed soon. Buehrle and Company, it may be recalled, entered into a partnership contract on Hindustan Machine Tools Limited, to set up a machine-tool factory in Bangalore, south India. The agreement provided for the manufacture of a limited range of products, but the Government now wants a wider and more diversified programme, covering the production of larger lathes, milling and shaping machines, radial drills and grinders. The revised agreement will enable the Government to seek the participation of undertakings other than Buehrle and Company in the manufacture of machine tools which are outside the latter's capacity.

Second Rail Coach Factory

The Government of India has decided to set up a factory for metre-gauge railway coaches in Bareilly, Uttar Pradesh. Mr. J. Matthan has been appointed Project Officer. The broad-gauge coach-building factory in Perambur, near Madras, has already been commissioned.

Divisions in Finance Ministry

The Department of Revenue and Expenditure in the Union Ministry of Finance has been divided into the Department of Revenue with Mr. A. K. Roy as its First Secretary, and the Department of Expenditure with Mr. P. C. Bhattacharyya as its Secretary. Thus, the Ministry of Finance will henceforth have four departments—the Department of Economic Affairs with Mr. H. M. Patel as Secretary, the Department of Expenditure with Mr. P. C. Bhattacharyya as Secretary, the Department of Revenue with Mr. A. K. Roy as Secretary, and the Department of Company Law with Mr. D. L. Mazumdar as Secretary.

London

SUEZ IS THE DOMINANT ISSUE OF THE DAY

STOPPING INSURANCE COVER FOR EGYPT-BOUND GOODS

(FROM OUR LONDON CORRESPONDENT)

NOT surprisingly, the Suez Canal situation and the developments following upon Colonel Nasser's precipitate action have dominated both the political and economic scene over the past few days. From the City's point of view these have occasioned a new cautiousness in almost every direction of activity, mainly because it has been virtually impossible to secure any firm directives about procedure in different business transactions. Clarification will no doubt take some time. Meantime, although the Government is arming itself with emergency powers over a wide field, these will not be put into effect until absolutely necessary. The Export Credits Guarantee Department, however, has told holders of its policies that no new insurance cover can be granted for the time being on shipments to Egypt, though as it has so far been functioning normally it may well run into some small losses on recent business, especially where goods have already been shipped but payment cannot be realised on account of the importers' sterling accounts being blocked. In most cases goods have either been held back or the signing of contracts postponed until the outlook is clearer. The shipping industry has been warned that vessels might have to be requisitioned, but in general, precipitate action is being avoided as far as is practicable and even the freezing of funds and exchange restrictions are being administered so as to cause the least inconvenience and ill-will.

Steadying Prices

The Government's efforts to achieve Mr. Macmillan's hopes of a "prices plateau" reached their climax last week when Sir Anthony Eden and his principal Ministers had further separate meetings with representatives of the trade unions, private industry, and the nationalised industries. "Real progress" towards stabilising prices was reported, but it was also made clear that the national interest can be served only by a continual effort to keep prices steady and, if possible, to reduce them, even where this process would affect profits and dividends. "All those responsible for wages questions should show similar recognition of the national needs" a subsequent statement pointed out, and promised that the Government would go on trying to limit its own demands on the economy. It is significant that this is the first time the Government has called so bluntly for dividend as well as wage restraint, realising no doubt that unless it did there would be no chance of union co-operation. The industrialists, for their part, have not been slow in following up the lead of the nationalised industries in fixing prices for some time ahead, with influential new recruits joining the plateau campaign each day. Only the unions are still uncommitted, and it remains to be seen whether recent developments will finally influence the views at the various annual conferences which will start next month. The repercussions of the latest 6s. a week wage increase awarded to agricultural workers, adding some £10 million per annum to the industry's wage bill, will also be watched with some anxiety.

The main basis for the "real progress" claim rests on the recent showing of the gold and dollar reserves position and the maintenance of our exports of certain goods. It was anticipated that the reserves would begin to reflect the normal autumn pressure in July, and the latest international developments suggested that this drain would even be accentuated. In point of fact, the reserves actually improved by a further \$20 million against the June rise of \$16 million, to raise the total to

\$2,405 million. Allowing, on the one hand, for U.S. defence aid of \$16 million and, on the other, for \$19 million paid to the European Payments Union in settlement of the June deficit and for \$9 million paid to E.P.U. creditors in bilateral settlements, last month's residual surplus worked out at \$32 million, against only \$12 million in June. The difference between 1956 and 1955 is even more marked. In the first six months of this year the reserves rose by \$265 million, to which July's surplus of \$20 million must be added to more than cover the Chancellor's anticipation of a £100 million increase for the half-year. In 1955, however, the first six months produced a deficit of \$82 million, and the month of July raised that adverse result by no less than £136 million. That the adverse pressure is just around the corner is evident from the sharp increase from £9 million in June to £24 million in July in the sterling area's deficit with E.P.U., which will involve a gold payment of \$50 million from the reserves later this month. Tourist expenditure, now around its peak, is probably mainly responsible for this, but a contributory factor could have been the transfer of funds to Germany in view of the continued strength of the deutschemark against the weakness of sterling.

Economic Planning

The availability of accurate and up-to-date information of a statistical nature is essential if an economy such as ours is to be kept in reasonable balance, and it is safe to say that the lack of this has been largely responsible for much of the mismanagement which has led up to the crises through which we have passed from time to time. The Treasury's intention to improve matters was foreshadowed in the Budget, and Mr. Macmillan has now given some details as to how this is to be done. Some important industries will be asked to supply monthly statistics of production and orders. An annual sample enquiry is to be made into fixed investment and stocks in the distribution and service trades, about which so little is known. Information about new contracts in the building and civil engineering industries is to be regularly collected, thus helping to establish the notoriously volatile trend of building activity. The most intriguing novelty will be an "invitation" to a number of companies to provide quarterly estimates of profits confidentially to the Inland Revenue. The individual figures will be kept secret even from the Chancellor himself, but the general trend of profits should be traceable from the summary figures. Then the statistics of capital movements in and out of the country, which are at present extremely nebulous, are to be overhauled. Finally, the income and expenditure of private households is to be regularly followed through a continuing sample enquiry. Taken as a whole, the Treasury's plan seems to be along the right lines to make a rapid diagnosis of national trends easier, and if it leads to the publication of quarterly estimates, as the Chancellor of the Exchequer has promised, the results should be of considerable benefit both to business and to the Government. The Restrictive Trade Practices Act received the Royal Assent this week, and Mr. Thorneycroft lost no time in putting it to work. An order from the Board of Trade appeared almost simultaneously calling for the registration of a wide range of restrictive agreements, including those for level tendering. This order requires Parliamentary approval and will not come into force till the end of November.

Financing Industrial Expansion

Lord Bruce, chairman of the Finance Corporation for Industry, has always had something of interest as well as value to contribute to economic thinking in his speeches to the annual meetings. This year he has dealt with the inflationary danger and its effects on our exports. He views the economic situation with alarm, and in discussing how it is to be dealt with urges important changes in banking policy and the appointment of a new "Macmillan Committee." Describing as "valuable" the monetary measures in which the Government has put much of its trust, Lord Bruce said that a diminution in public spending and the switching of goods for export would not provide a solution. He uttered the warning that the difficulties in the motor and cotton industries may be followed by recession elsewhere unless steps are now taken to meet the situation. Representatives of all shades of thought should be appointed to examine and report on the financial problems confronting Britain. The best brains available must be employed. One matter, in Lord Bruce's view, brooks no delay: the need to finance industrial expansion and development, and this can only be done by the banks, who alone command the necessary resources. They must examine the possibility of granting fixed-term loans to vital industry, up to a given proportion of their total advances.

Bank Advances and Investment

This advice, to some extent at least, rather contradicts the purposes to gain which Government policy is aimed, for the credit squeeze is directed specifically against both bank advances of other than essential needs and the prevention of capital expenditure not governed by a similar qualification. In both respects, moreover, the evidence continues to accumulate that results are at last being achieved. From the latest statements of the "Big Five" banks, it is apparent that in the three weeks from 30th June to 18th July the trend of rising advances has been sharply reversed. Following the falls shown by Lloyds and Barclays, the Midland now discloses advances down by £8.3 million at £412.3 million, the Westminster, by £11.9 million at £258.2 million, and the National

Provincial, by £7.4 million at £271.1 million. Not too much emphasis should be laid on the month-by-month movements, but these figures would confirm that the steady rise in advances in the first six months of the year was due to exceptional factors rather than to any relaxation of the squeeze on borrowing for non-essential purposes.

At the same time, the pressure of demand for new industrial buildings has at last begun to slacken. New schemes approved by the Board of Trade in the second quarter of the year were for a total floor area of 14.4 million square feet, the lowest figure for any quarter in the past two years. It was much less than the 21.7 million square feet approved in the second quarter of 1955. But the decline will not affect the actual building of new factories for many months to come. During the calendar year 1955, 40,000,000 square feet of factory space were completed. At the end of March, 1956, the Board of Trade had notice of over 94,000,000 square feet under construction, more than all the "approvals" granted during 1955 as a whole. Building "starts" (which are reported slowly and incompletely) had declined somewhat in the last quarter of 1955, but expanded again in the first quarter of 1956. At any rate, the Board of Trade believes that, on past experience, the figure of 13,200,000 square feet so far reported as having been started in the first three months of this year will turn out to have been at least 15,000,000 square feet. That is a little less than the quarterly average of 16,000,000 square feet for the year 1955, but the fall is too small to indicate a trend.

A Production Plateau

While the price plateau is still precarious, though the Government is continuing its discussions with both sides of industry and many leading firms, notably I.C.L., have undertaken to hold prices for the next twelve months in response to the F.B.I. appeal, a plateau of industrial production appears to have been established. Between January and June the Treasury index of production averaged 139, compared with 133 in the same six months of 1955. This year started with production running higher than a year earlier, the index for January, 1956, being 139 against 135 for January, 1955. Gradually the lead fell away, the lowest point being in May with an index five points below that for May, 1955. In June there seems to have been some recovery. Returns so far point to a figure of 139.14 for June, which is better than the 137 of June, 1955. The average for the whole six months, however, is just one point up on the first half of 1955. One could surmise that this small gain will be lost in July as a result of the motor strike. Unless there is a spurt in the autumn, the year as a whole may fail even to equal its predecessor.

Brevities

The partnership agreement between the Burmese Government and Anglo-Burma Tin for the working of tin mines in the Tavoy district has been signed. The joint venture will have a working capital of about £168,000, of which the Government will hold 51 percent.

In competition with Krupp of Germany, Pegsons, the civil engineering plant makers and contracting subsidiary of Bentley Engineering, have secured a £200,000 contract. The order is for the complete crushing and screening plant for a new dam to be built near Bombay. The actual construction is being undertaken by German and Indian contractors.

The interest rate for new loans by the Agricultural Mortgage Corporation has been raised from 5½ percent to 5½ percent. Existing loans and those offered but not completed are not affected. The Corporation lends money to farmers secured by mortgage on their land.

London insurers have paid \$11 million, about £4 million, on the *Andrea Doria*, the Italian liner which sank after a collision with the Swedish ship *Stockholm*, off Nantucket Island recently. This represents 11/16 of the loss. The balance is insured in the United States and elsewhere. Settlement of such a heavy loss within five days of the occurrence provides a striking example of the prompt claims service which has earned Lloyd's underwriters and the companies comprising the London Insurance market their high reputation overseas.

The Treasury is blocking up one of the loopholes, which a few companies have been using to avoid the control of the Capital Issues Committee. Under an amendment to the Control of Borrowing Order, issues of securities against transfers of property will only be possible with Treasury consent. The type of transaction which this is aimed at is where a company sets up a subsidiary and sells it some of its property in exchange for securities. The subsidiary creates debentures, say, and uses these to "pay" for the property. The main company then sells the securities with which it has been paid and thus ends up with extra cash. The only exceptions to the new Order will be where companies issue shares in the course of amalgamating with other companies and where they are being issued as a result of the conversion of a partnership into a company.

In answer to a Parliamentary question, Mr. Macmillan, Chancellor of the Exchequer, said that he would make a statement in the House concerning the proposed improvement of the Government's economic statistical services. One of the most important improvements Mr. Macmillan is expected to announce is the speeding up of the Census of Production, the publication of which has hitherto involved such a long delay that the important statistical material has been almost worthless for shaping economic policies or business decisions.

Bombay

ECONOMIC PROBLEMS OF THE RAYON INDUSTRY

HIGH PRODUCTION COSTS AND EXCESSIVE IMPORT LEVIES

(FROM OUR BOMBAY CORRESPONDENT)

THE rayon piecegoods industry is somewhat uncertain of its future prospects. On the basis of its performance last year, it did seem at first sight that the industry was well on its way to progress and prosperity. Production increased by approximately 30 million yards to about 190 million yards. The internal offtake has been unusually satisfactory, and had adequate supplies of yarn been available, the actual output and consumption of piecegoods might have been still higher. But this apparent improvement conceals the industry's fundamental difficulties, and obscures the fact that drastic steps will have to be taken if the industry is to survive economically.

The main difficulty relates to the price and supply position of yarn—the single most important factor, and it is the vital raw material that accounts for most of the cost of production of the finished fabric. Indian mills consume approximately 60 million lbs. of yarn a year and a very considerable percentage of this quantity is imported from abroad to make up for the shortfall in domestic production which is still in its initial stages. It is not the fact of yarn imports itself which makes for the present instability within the piecegoods industry, but the circumstances of such imports, however, impose a crushing burden on the weaving mills. Although the Silk and Art Silk Mills Association in Bombay, which is a fully representative body, is consulted by the Government on yarn imports, the foreign exchange position has had to be taken into account in the past in determining the actual licensing policy. This has led to spasmodic shortages and increased prices which, in turn, have been reflected in the rising costs of production and restricted output. In spite of the present liberal import policy for raw materials, the supply position of yarn continues to be unsatisfactory.

Conflicting Interests

The position is still further complicated by the fact that in addition to the manufacturers, import licences are also issued to purely merchanting houses. Supplies, restricted to the overall import ceiling, are therefore divided between two distinct groups with conflicting interests. The merchants are frankly concerned with the maximum possible profits and are quick to take advantage of any shortage that may occur with the mills. Speculative activity has led to preposterous variations in prices to the detriment of the mill industry. It is true that a forward yarn market is in operation, but it does not provide adequate hedge facilities because there is no provision for the rigid enforcement of delivery contracts. It is difficult to see what useful purpose this market serves when it contributes practically nothing towards maintaining a reasonably stable price level. The entire supply system needs to be re-organised in the larger interests of the industry. It would perhaps be unfair to eliminate the middleman entirely, but it should be possible to work out a compromise formula which would ensure a reasonable ceiling on the margin of profit for the merchant importer, and at the same time, prevent speculative activity altogether.

Another aspect which needs immediate attention is the question of import duty on yarn. Normally, an import duty of 36½ percent *ad valorem* is levied, and this rate is applied at all Indian ports with the exception of Bombay. For some unknown reason, the import duty in Bombay port is not calculated on the invoiced value but on the market price prevailing in the city at the time of the arrival of the consignment. This is an extraordinary procedure and causes immense harm to the industry. It means that if the market price stands at a particularly high level because of speculative operations or a temporary scarcity, the mills have to pay excessive import duty which bears no relation to the actual cost of the material. It has happened that weavers have had to pay duty on an exaggerated market value which has worked out to an *ad valorem* rate of 50 percent to 60 percent. Moreover, the market value is a factor which varies beyond normal limits, and it is impossible to forecast what it will be on the day any particular consignment arrives. This means that the mills can never compute their cost of production in advance, and the normal procedure of forward sales becomes a hazardous venture.

Import Duty

Clearly, no industry can flourish if the supply and the price of its essential raw material are subject to violent fluctuations at short intervals and often without warning. It would seem that the present method of assessing duty is entirely unjustified except perhaps for revenue purposes, but it is absurd that such a consideration should be allowed to impede the progress of a growing industry. Although the abolition of this system under which the import duty is levied on the market value would afford great relief to the industry, the fact still remains that the basic *ad valorem* rate of 36½ percent is excessive. This industry claims that this is the highest rate of duty levied in any yarn-importing country of the world. Obviously, therefore, a case exists for a revision, and indeed it may

be argued that the import duty on yarn should be abolished entirely on the ground that it is an essential raw material of industry. A precedent already exists in the case of raw cotton which is exempt from import duty. In these circumstances, the plea of the rayon piecegoods industry for similar treatment for its raw material seems reasonable.

A permanent and a desirable solution, of course, is the development of the rayon yarn industry within the country. A beginning has already been made in this direction, but a great deal more remains to be accomplished to achieve self-sufficiency. There is an urgent need to supplement the production of the existing factories, and the Association took the initiative some time ago by negotiating with the Seta Viscosa group of Italy to set up a yarn production plant in this country. The original proposal envisaged an initial investment of Rs. 6 crores for the ultimate production of 10 tons of rayon and 10 tons of staple fibre a day. But the scheme has been held in abeyance because the Association has not been able to find the necessary funds. The main difficulty is that most of the mills are small units, which find it difficult to contribute their quota of the investment for a co-operative venture of this type. The biggest unit controls 600 looms and the smallest has 25 looms. Their approximate annual turnover amounts to a little over Rs. 1 crore and Rs. 6 lakhs respectively. Their difficulty in incurring a large outlay is therefore understandable. The industry hopes that financial assistance will be forthcoming either directly from the Government or through one of the industrial finance institutions sponsored by the State.

Plant Rehabilitation

Another major problem is the question of the rehabilitation of plant. Most of the present equipment was installed as far back as 1937 when the industry first came into existence, and it was even then not new. Millowners complain that they are compelled to purchase locally manufactured spare parts which do not conform to international specifications. This is an allegation which needs to be investigated and steps taken to exercise strict control over the domestic engineering industry, or perhaps to permit the import of foreign manufactured parts until such time as the required technical efficiency is achieved by the home industry.

Case for Assistance

It will be a grave error to underestimate the importance of the rayon industry. The demand for synthetic fabrics is steadily growing throughout the world and man-made fibres are today challenging the supremacy of cotton. The earning capacity of this industry in terms of the domestic and export markets is considerable. Fortunately, the Indian rayon piecegoods industry has not assumed such unwieldy proportions as the cotton mill industry has and, therefore, its complete overhaul and rationalisation should prove a comparatively simple task. The industry itself has shown initiative and has taken several progressive steps within its means which are commendable considering the limited resources of its individual units. The setting up of a centre for fundamental scientific research is one of such measures. This industry deserves full support and assistance from the Government.

Madras

MR. T. T. KRISHNAMACHARI'S
ELECTIONEERING VISIT
CO-OPERATIVES TO HELP
STATE TRADING

(FROM OUR MADRAS CORRESPONDENT)

THE visit of Mr. T. T. Krishnamachari to Madras was apparently in connection with the election plans of the Congress. He declared that States re-organisation could not be put off, so Congressmen should not engage in further controversy. He pointed out how employment would increase; the three new steel plants alone would employ 3,500 engineers. The production of pig iron in the south is contemplated on a fairly wide scale, and larger imports of steel in return for mineral ores would give relief to consumers, especially when prices had been made uniform. Madras is to carry out a search for minerals, and the location of the new gypsum deposits is expected to help fertiliser production. But it is asked whether the proposed break-up of holdings and the prospective reduction in the landlords' incomes would make for a bigger market for fertilisers, in spite of the offer of credit facilities.

When on Saturday the Industries Minister went to the Standard Motor plant to watch the 10,000th Ferguson tractor come out, he expressed his doubts about the possibility of large-scale mechanical cultivation especially when land reform aimed at the fragmentation of holdings. Congressmen see the dilemma, but the Fair Rent Bill is taken to be the minimum measure necessary. In spite of the minutes of dissent, the Select Committee has only varied the proportions of the produce given as the landlord's share. It has not exempted holdings of six acres or below from the scope of the Bill, though it has offered the landlord a share in the catch crop. It treats cash advances for manure as the first charge on the crop raised. It has been suggested that rents in cash can be fixed, as against grain rents. The idea that compensation could be paid to owners in the way of bonds bearings 5 per cent interest has been accepted by some spokesmen for landlords. That the Bill is a political measure is widely accepted, though it is urged that ceilings on land should be put off as protection of tenants, if extended to the whole State, would promote rural contentment. Co-operation is considered an ideal way for the rural economy, and the outstanding success of the co-operative store in Chandrasekarapuram, near Kumbakonam, has been held up as an example. The store is a co-operative marketing society, and Mr. Krishnamachari indicated that such societies would be appointed agents to the State Trading Corporation.

Textile Mill Prospects

The Ranga Vilas Spinning and Weaving Mills, in its 38th annual report, calls attention to the need for renovating the plant, since most of the spindles are old. The company has machinery replacement reserve of Rs. 7.5 lakhs, to which Rs. 2 lakhs has been added from the 1955 profits. There is a general reserve of Rs. 6.7 lakhs. The dividend for 1955 has been raised to 16 per cent, and the market price of its shares is Rs. 115 c.d. The report has excited little enthusiasm as compared with that of the Lakshmi Mills, which quote Rs. 268 c.d. Ranga Vilas also issued bonus shares by capitalising reserves in November, 1947. Coimbatore Spinning and Weaving, taken over from Stanes and Company with old equipment after a long depression, has more looms and its shares (face value Rs. 50) rose last week to Rs. 122, mainly on the hope that the dividend for 1955 might be 20 per cent against 12 per cent paid last year. It is noteworthy that while Madras has been stagnant, other mill shares are fancied by investors who appear to bank on the new textile policy.

Investment in Coffee Estates

Coffee expansion plans in India depend not only on the availability of land and an expanding home market, but on a stable export market as well; the outlook for the industry is encouraging at present. Long before the Government announced its schemes to promote coffee cultivation and raise the output by 9,000 tons a year, a leading managing agency firm had sent circulars to shareholders of coffee companies, stressing the need to raise output in spite of the growing tax burden and the restrictive measures adopted by the Coffee Board. The preponderance of small-growers in Mysore may not help expansion, but some tea estates are now going in for coffee. Last week, Neelamalai Estates announced that the company (which had a big cash balance for investment) had acquired about 400 acres, which served to lift its market quotation from Rs. 7-14 to Rs. 8-4 within a week. The high rating of Stanes Amalgamated and Kil Kotagiri shares is due to the size of the coffee crop grown on their estates. The latter, though a relative newcomer, became prominent with its amalgamation with Nilgiri Neerugundi, primarily a coffee producer, and that is why despite its last dividend of only 20 per cent the shares have shot up to Rs. 8-12.

Piecegoods Trade in Madras

At the recent annual meeting of the Piecegoods Merchants Association here, the trade's views on the new textile policy and the cloth supply position were given. The expansion of mill production, although mainly for export, requires no defence, but Mr. J. Rangiah Chetty, president, doubted whether handloom output could be raised

by 1,000 million yards. Objections to the change-over to powerlooms persist, and it remains to be seen whether *Ambar Charkha* yarn will help handloom output, as is expected. Subsidies to weavers in experimental centres as in Narayanavaram, have been given, but the weavers have found that the *Ambar Charkha* yarn is not up to the standard of the mill yarn and that cloth from the former may not be easy to sell. Encouragement of powerlooms appears necessary to the trade, which insists that more food and cloth must be available to hold prices down. The higher excise duty and the new sales tax on cloth since March 1956 account for the price rise in cloth. The States, in the name of aiding the weaver, have penalised the consumer and the trade is also demoralised. In the city, some retail shops have closed and the wholesale trade is also smaller in spite of the rising local output. The revival of textile business after decontrol has been arrested, and business has been lost not only by those handling imported piecegoods, but also by those acting as agents for mills.

Victoria Technical Institute

The Victoria Technical Institute has been encouraging handicrafts during its 70 years of existence. Its new premises on Mount Road, opened recently, have a distinctive architecture, and the window display for wares has been attempted with real success. Since it was set up in 1889 with a Government grant to encourage technical instruction, it has instituted a system of prizes and scholarships for artistic ability. It is now more than an emporium for cottage industries. In the year ended June 1955, the Institute bought articles for Rs. 5.21 lakhs. Needlework and lace made by village women are encouraged in the Institute, which also offers a permanent showplace for ivory and other objects of art. An export trade with the U.S.A., has been built up over the past few years, and it is claimed by the Secretary that advice to producers has led to better designs and finish for indigenous articles.

Engineering and Transport

SELLING INDIAN FANS, CYCLES
AND BATTERIES IN CEYLON

THE marketing possibilities of electric fans, Indian cycles and their parts and batteries in Ceylon have been discussed in a Press communique issued by the Engineering Export Promotion Council. There is very good market, it says, for electric fans of every variety in Ceylon. Due to the humid climate, the high standard of living and availability of electricity, the use of fans is a necessity rather than a luxury. Fans are not manufactured in Ceylon and all her requirements are met by imports from abroad. The maximum number of fans is imported from the U.K. India comes second. However, Indian fans of all varieties have not been given proper publicity and except for two, no other manufacturer has made efforts to introduce his product into Ceylon. In spite of the price factor in favour of India, imports from the U.K. are the highest. This is due to lack of publicity and propaganda in that country. It is essential that the manufacturers should jointly do propaganda through the medium of the Press, radio, and the film. Current is mostly A.C. The ceiling fans are normally marketable with the light fitting arrangements in the centre, while one oscillating type is preferred in table and pedestal varieties. There are no restrictions on imports from the sterling area including India. The duty on imports of electric fans is 17½ per cent ad valorem preferential, and 27½ per cent ad valorem, general. Indian fans compare well in quality with the British fans and there is no reason why they should not do better in Ceylon.

Ceylon does not manufacture cycles or cycle accessories. She is dependent on imports from abroad to meet her requirements, estimated at 45,000 cycles a year. The U.K. supplies more than 99 per cent of the Island's requirements. The steady decline in cycle imports is due to the release of large army-surplus stocks in the market. Licences are not required for importing bicycles from the sterling area including India. For imports from Germany and Japan, licences are issued only to Ceylonese nationals.

Ceylon imports every year about 3,000 cars and about 200 motor lorries and buses. In the absence of any local production of motor vehicle spare parts and batteries, Ceylon has to meet all her requirements from abroad. India has been a small supplier. Indian manufacturers will have to do a considerable amount of spawwork before a substantial market for Indian batteries can be secured in Ceylon. Little or no publicity has been done for Indian batteries. It is essential that Indian manufacturers should study the local market by personal contacts, appoint local agents for their products and maintain service stations for repairs. With these efforts, Indian batteries can find an expanding market in Ceylon.

CANADIAN FINANCIAL AID FOR INDIAN
PROJECTS

Canada will contribute a maximum of \$20 million towards the construction of a new hydro-electric project on the Kundah river in Madras, according to a copyrighted story in the current issue of the *McGraw-Hill American Letter* (Indian Edition). Assistance is to be provided under the Colombo Plan. The contribution will include turbines, generators and other power-house equipment,

as well as sub-station transmission equipment. Canadian construction engineers will supervise some of the work. The first stage of the project will be completed by 1960, the *McGraw-Hill American Letter* story goes on to say. It will entail construction of three dams on the Emerald, Avalanche and upper Bhavani rivers and two power-stations on the Kundah river. Facilities will add 145,000 kWh to Madras electricity resources.

CHANGES IN CALCUTTA PORT
ADMINISTRATION

To cope with the increased volume of second plan traffic, the Commissioners for the Port of Calcutta have made certain administrative changes at the Calcutta Port. An additional post of a Deputy Dock Manager has been created, and the duties of Deputy Dock Manager have been redistributed on a zonal basis. With immediate effect, one Deputy Dock Manager will hold charge of the Kidderpore Docks Nos. I and II, and another of the King George's Docks and Garden Reach Jetties. The Superintendent of Jetties and Wharves will continue to be in overall charge of control and supervision of the Calcutta Jetties. The zonal dock officers will be relieved of a good deal of their desk work, so that they can devote more attention to the operational side. The Deputy Dock Manager (Shipping) and the Deputy Dock Manager (Labour) will continue to perform their usual functions as hitherto. The present Deputy Dock Manager (Commercial) will be responsible for all commercial work, and work relating to the sidings. This arrangement, it is hoped, will ensure prompt clearance of cargo, quick turn-round of vessels, better supervision and co-ordination of work.

MANUFACTURE OF HEAVY MACHINERY
IN INDIA

The Government of India has agreed to receive a technical mission under the joint auspices of the Colombo Plan and the Federation of British Industries, to advise it on the development of heavy machinery and engineering industries in the country. This was stated recently in the Lok Sabha by the Minister for Heavy Industries, Mr. M. M. Shah. He also stated that the report of the committee on the machine tool industry had been finalised and would be available to the Government soon.

CHEAP TIMBER SUBSTITUTE FROM
BAGASSE

Presses, under the name of Bartrev presses, for a continuous production of cheap lardboard are now being manufactured at the Vere Engineering Company's factory in Marks Tey in Essex, Russia is among the countries which have bought these presses. One press is operated in Marks Tey for demonstrations, development, and for commercial production of board. The raw materials are wood shavings, or bagasse fibre, cemented with synthetic resin. The physical properties of the board can be varied at will by alterations to the density and resin content. The board can be used as a cheap timber substitute for concrete shuttering, walls, ceilings, floors, partitions, doors, and furniture, packing cases, film scenery, and others. It can be drilled, nailed, screwed, and even dovetailed, like timber. The unusual feature of the Bartrev press is that the board is rolled out in a continuous sheet, four feet wide, varying from 1 inch to 2 inch thickness as desired, and with a length only limited by transport facilities.

Dried wood shavings or bagasse fibre are completely coated with liquid thermo-setting synthetic resin and hardener, and fed on to a horizontal moving stainless steel belt over four feet wide. The belt, with its carpet of material, passes through a high frequency heater and then enters the press. Here another steel belt comes down above the carpet, and the two belts with the material between, are subjected to heat, and a pressure of up to 500 lbs. a square inch, while passing slowly through the press. On emerging from the press the resin has set; the edges of the board are automatically trimmed, and two automatic saws cut the board to the exact lengths required while it is still moving.

The press is designed to operate with the fewest possible interruptions for maintenance and adjustments, and is expected to operate for well over 300 days a year manned by shifts of workers, and 96 per cent operational efficiency has been attained. The production depends to some extent on the thickness and density of the product desired, but it is in the range of 13,000 to 19,000 tons a year. The total cost of the board a square foot has recently been calculated to be about half that of timber planks of comparable quality under Indian conditions, and using bagasse as the main raw material.

Indian sugar mills in the 1955-56 season produced about 3,000,000 tons of bagasse, bone dry weight, almost all of which was burned under the mill boilers. As the bagasse has at present few other outlets, little attempt is made to reach a high thermal efficiency in Indian mills, as the bagasse cannot be allowed to accumulate indefinitely. The fuel consumptions, in terms of B.T.U.s per ton of cane sugar, compare very unfavourably with beet sugar mills which burn coal which has to be paid for, even after allowing for the extra power required to mill the cane and certain minor differences in the process. A cane sugar factory should be able to save a quarter of its bagasse if it had a use for it.

Jute

DELIVERIES OF RAW JUTE TO MILLS DELAYED

SELLERS OFFERING DEARER SUPPLIES FROM
COSSIPORE MARKET

SOMETHING of a minor crisis affecting raw jute supplies to mills has been developing over the past month or so. It has arisen not from a shortage of fibre, but from a lack of railway wagons, and has been accentuated by the unscrupulous activities of a large number of merchants who have taken advantage of the wagon position, with the result that mills are not getting delivery of the jute which they purchased a long time ago and which should be reaching them now. Briefly, the position is this. When the transport shortage developed, some merchants—not all—having got allotments of wagons, instead of despatching the jute they had contracted for, consigned it to themselves or to agents in Cossipore. Mills which had been expecting to get delivery of the purchased jute in the period contracted for found that it was not coming forward, so as all mills' stocks are somewhat exiguous at present, they were forced into buying ready jute from the Cossipore market at premium prices or buying ready railway receipts, also at premium prices. Meanwhile, the same jute suppliers were applying for extensions of time for delivery on the plea that wagons were not available. A similar practice was adopted by jute sellers in the case of river transport, although there has not at any time this season been a shortage of flats at steamer stations. In fact, the steamer companies are only too anxious to get cargo.

These tactics on the part of sellers have created a shortage which is not real but is forcing mills to pay high prices for ready jute, while they have on their books contracts for jute at much lower prices which are not being fulfilled. A similar position developed last year and in order to protect themselves against such deplorable practices, mills began to demand guaranteed deliveries. That meant the deletion from the standard contract of a clause which was intended to protect sellers against a genuine lack of transport facilities. One of the sellers' associations thereupon passed a resolution that its members would not accept contracts on that basis. In the meantime, the crisis of last year was tided over and the resolution was forgotten until, in similar circumstances this year, mills again called for guaranteed deliveries. Many sellers were prepared to do business on this basis but, after considerable business had been done, their association decided to enforce the terms of the resolution passed last year. The result is a position analogous to that of last year. Contracts for deliveries in July have not been implemented on the pretext of scarcity of wagons and shipping space, while the same sellers have been offering ready railway receipts and ready bills of lading at prices higher than those of the jute which they had contracted to deliver. Some sellers have even had the effrontery to offer ready documents to the same buyers with whom they already have contracts for deliveries in the ordinary course.

As mentioned above, the clause in question was inserted in the contract to protect sellers against being treated as defaulters when there was a genuine shortage of transport. It is now being used to enable unscrupulous parties to gain an illicit profit. Not all sellers have adopted these tactics but the number who have done so is so considerable that it has created an artificial market to the detriment of the mills.

THE JUTE MARKETS

FOR the first time in many weeks, the Calcutta jute goods market showed signs of life and prices recorded a steady rise. Speculators played a large part in this revival and full use was made of the situation in the Middle East to boost rates, as also of the three-Power talks in London. Operators lost interest in this, however, when another bullish factor appeared in the form of availability of space in a steamer for West Africa. This took the market by surprise, and resulted in local shorts making frantic efforts to cover before bookings closed. Thus heavy goods prices, especially near delivery B Twills, were forced up on strong buying, but the bazaar was able to absorb nearly all the 5,000 tons required, and very little fresh business was reported. Having pushed the market up so far, speculators now sought other methods of keeping it there and were not long in producing a rumour to the effect that the I.J.M.A. had approached the Government of India with a proposal to re-seal more looms. Prices in all sections were raised to their highest level for nearly a month. Thus, over the week-end and immediately afterwards, very steady conditions prevailed in the jute goods market, and the trend was even more firmly established by the rising fibre markets.

The rumours about the re-sealing of looms received some substance when it was revealed on Tuesday that mills' stocks of jute goods in July showed a further increase of 8,800 tons. The market reaction was immediate, and prices eased while business in both goods and fibre came to a standstill. The latest increase brought mills' stocks up to 135,800 tons. This has happened in

spite of the fact that 2½ per cent of the Association's loomage was sealed on 16th July.

Raw Jute Remains Firm

Mills continued their search for quick delivery jute. Local markets were swamped with orders, and in spite of the increase in arrivals at the Cossipore sidings, demand far exceeded supply. Consequently, prices over the week advanced by up to Re. 1 a maund. Towards the close, business was done at the top market rates for seven to 15 days' delivery, which again caused much speculation about mills' stocks of jute. It is estimated that over the past month, stocks in Cossipore have dropped to about 200,000 maunds due to the large offtake by mills. Business concluded for delivery during August of Old and/or New Crop jute from local markets amounts to about 400,000 to 500,000 maunds, and of this total, about half is for 15th August delivery. Even with imports at their present high level, it seems impossible for this figure to be attained, so many buyers may be disappointed. Another cause for concern, this time for sellers, arises from New Crop contracts concluded with mills early in the season. Many of these contracts call for delivery in August or early September, and are low-priced transactions at prices around Rs. 24 to Rs. 25 a maund. Current uncountry prices are Rs. 4 to Rs. 5 higher than this rate, landed in Calcutta, so some sellers are faced with serious losses right at the beginning of the season if they are to deliver. A few mills have already been approached with alternative proposals, but with the present tight jute position these have not received a very sympathetic hearing. Imports uncountry are reported to be very small at present, and with demand at its height, there is little likelihood of prices falling back to a profitable level on these contracts.

Manufactured Goods: There was an all-round improvement in the Calcutta jute goods markets last Thursday, prompted mainly by speculation over the Middle East situation. Heavy goods and

hessian advanced by 4 or 8 annas. Ready B Twills opened at Rs. 103-2 a 100 bags, with January-March shipment at a premium of 14 annas, while 40:n. 10oz. hessian stood at Rs. 38-5 a 100 yards in the near position and Rs. 38-6 for forward shipment. Speculative activity kept prices firm during the day, but the ready sacking position received a boost on Friday morning when a steamer for West African ports was placed. This resulted in a squeeze for ready B Twills, which rose by 10 annas, and other deliveries followed up in sympathy. The bullish trend continued on Saturday under speculative influences and all sections of the market recorded substantial increases, aided by the very steady fibre markets. After the week-end, rumours of a further cut in mills' production brought the near B Twill position up to Rs. 105-2, which was within 2 annas of forward shipment, but hessian remained unchanged at Rs. 38-10, with forward shipment at a similar premium. A 4-anna increase on Tuesday morning saw B Twills rise to their highest rate since 10th July, but this did not last long; markets in general weakened shortly after the opening with the announcement of the 8,800-ton increase in mills' stocks of jute goods during July. Prices fell rapidly and business was brought virtually to a standstill.

The markets were closed on Wednesday, but nominal quotations were as follows:

	August	September	Oct.-Dec.	Jan.-Mar.
	Rs.	Rs.	Rs.	Rs.
40in. 8oz.	31-4	31-2	31	30-12
40in. 10oz.	38-10	38-12	38-14	38-8
B Twills	105-4	105-6	106	105
Heavy Cees				
(Plain)	104	105-6	106	105
A Twills	128	128-8	129-4	128-8
Liverpools	118	118-12	119	118-8
Cornsacks	106	106	106	106

Raw Jute: The Calcutta raw jute markets continued to rule steady at the opening last Thursday under the influence of buying interest in Cossipore. Shipment jute from the agencies was again neglected in favour of quick delivery, and local prices were pushed up. Opening quotations were based on Dhubri-Northern jute at Rs. 27-8 a maund basis bottoms for August-September shipment, but this soon rose 8 annas maund. Sellers, with large quantities of jute still to deliver this month, most of it by 15th August, were very reserved and not inclined to do business. But when rates improved again immediately after the week-end, they had second thoughts and once again a fair quantity of jute was transacted for short delivery periods. Although imports into the Cossipore markets showed a marked improvement over the past few days, supplies were totally inadequate to meet the current demand so prices

'Paludrine' is the easy, safe way for fighting absence. Introduce 'Paludrine' into your establishment now. Special rates for bulk purchases are available.

L.J.M.A. STOCK FIGURES FOR JULY

The Indian Jute Mills Association reports the total stocks of jute goods at the end of July, 1956, as follows:

Description	31st July, 1956		30th June, 1956		Increase over (+) or decrease over (-) last month		31st July, 1955	
	Lakh Yds.	000 Tons	Lakh Yds.	000 Tons	Lakh Yds.	000 Tons	Lakh Yds.	000 Tons
Hessian Cloth and Bag (included in above)	14.33	38.5	14.09	37.5	+24	+1.0	13.69	35.8
Sacking Cloth and Bag (included in above)	21.55	91.1	19.79	83.0	+1.76	+8.1	8.49	36.5
Standard Sacking (included in above)	17.55	72.2	15.67	64.3			6.93	29.0
Others		6.2		6.5		-0.3		2.9
Grand Total (000 Tons only)		135.8		127.0		+8.8		81.5

N.B.—These figures are based on replies received and represent all members of the Association and Gagalbhai with estimates for three non-member mills.

were forced up to even more uneconomic levels. Upcountry rates also showed signs of increasing in spite of the lack of interest. This was due to the meagre imports at most receiving centres, which were far from adequate to meet August New Crop contract sales. Sellers were having difficulty in meeting their obligations, and were worried because most of the contracts were low-priced. The improvement in gunny rates over the week prompted many buyers to enter the market, but towards the close, when support for gunnies was reduced, interest in both sections of the market waned, and business came to a standstill.

The bulk of business transacted during the week consisted of quick delivery jute from the local markets. Dhubri-Northern-Assam was done, at prices ranging from Rs. 28-8 a maund at the beginning of the week to Rs. 29-4 a maund towards the close, all for seven to 15 days' delivery and ready bills of lading. Western area jute was also done at Rs. 28 to Rs. 28-8 a maund for the same delivery. Tossa and Daissee came in for some interest towards the close and business passed at Rs. 30 a maund basis Bottoms for 15 days' shipment and at Rs. 32-4 to Rs. 32-8 a maund for Middles only for the same shipment. Small business was done in forward shipment Murshidabad Tossa at Rs. 27-3 a maund for September-October shipment. Pakistan Cuttings were contracted for at Rs. 130 a bale for ready delivery ex-Calcutta, and Rs. 125 to Rs. 128 a bale for August-September shipment.

On Wednesday, all markets were closed because of the death of the West Bengal Governor and nominal quotations were as follows:

Indian Jute (New Crop):	Landed at Mills Rs. a md. basis Bottoms.		Shipment.
	Rs. a md.	Bottoms.	
Lower Assam	28-8		August-Sept.
Northern	28-8		Sept.-Oct.
Murshidabad White	27-8		August-Sept.
Daissee White	28-8		Sept.-Oct.
Daissee	28-8		August
Daissee Mesta (Old)	28		
Bimil (Old)	28		

Tossa is quoted at 8 annas to Re. 1 a maund above the price of white jute.

Fucca Bales (New Crop):	Rs. a bale.		Shipment.
	Rs. a bale.	Bottoms.	
Mill Firsts 2/3	185		August-Sept.
Mill Lightnings 2/3	170		"
Mill Hearts 2/3	155		Sept.-Oct.
S.G. Daissee	175		"
L.G. Daissee	160		"

Yataderia	120	4/01

FIVE YEAR PLAN TO INCREASE INDIAN COFFEE PRODUCTION

The Government of India has approved a five year plan for increasing coffee production in the country by over 9,000 tons a year. The programme, estimated to cost about Rs. 2.95 crores, will be implemented by the Indian Coffee Board. The present average annual production of coffee in India is about 26,000 tons. The increase in production is to be achieved by a number of measures which include intensive cultivation, extension of the acreage under coffee, supply of improved seeds and manures and the setting up of pulping units and demonstration plots. It is expected that intensive cultivation measures will be adopted over an area of about 140,000 acres. Loans amounting to Rs. 1.35 crores will be given to coffee growers for this purpose over the five year period. Measures for intensive cultivation will include the use of manure, better cultivating practices and better plant protection. The new acreage to be brought under coffee cultivation is expected to be 23,700. Coffee cultivation will be extended to areas, which were originally under coffee but where coffee growing was abandoned later, as well as to virgin lands. Loans will be given to growers to extend cultivation. Under the programme, 40 pulping units will be established in the coffee growing areas to enable small growers to produce arabica parchment coffee which has a better market. At the same time, 320 demonstration plots, of two acres each, will be set up to educate planters to adopt better methods of cultivation, use of manures and plant protection practices. Considerable amounts of money will also be spent on research and extending its results to the cultivators. Of the total cost of the programme, Rs. 2,61,42,500 to be given as loans to cultivators, will be lent to the Coffee Board by the Government of India. The remainder, which amounts to Rs. 33,25 lakhs is not recoverable. Loans will be given by the Coffee Board to planters having plots between five and 50 acres. The bigger growers will be helped by higher advances against the value of the crop.

COLOMBO RUBBER PRICES

The following prices have been issued by the Rubber Board of India from the weekly market report published by the Colombo Brokers Association:

	Closing prices on 20-7-1956 (Rupees a lb.)	Average for the period (Rupees a lb.)
Sheet:		
No. 1	1.41	1.41
No. 2	1.38	1.38
No. 3	1.35	1.35
No. 4	1.11	1.11
No. 5	1.06	1.06
Sheet Cuttings 1	.95	
Sheet Cuttings 2	.90	
Crape:		
Water white	—	—
R.M.A. No. 1X	1.48/49	1.481
R.M.A. No. 1	1.45/47	1.441
Crape No. 2	1.35	1.35
Crape No. 3	1.15	1.15
Scrap Crape:		
Sc. Crape No. 1	82 Nom.	.81
Sc. Crape No. 2	.76/80	.771
Sc. Crape No. 3	.72/75	.721
Flat Bark	.66/70	.67
Sc. Crape 3X	.75	

To arrive at f.o.b. Colombo prices add 53.45 cents a lb. for rubber other than scrap crape, and 31.45 cents for scrap crape to the above market prices.

Commodity Markets

WHOLESALE PRICE INDEX RISES

THE official wholesale price index (base year ended August, 1939 = 100) advanced further by 0.6 percent to 409.1 during the week ended 21st July, 1956, compared with 406.8 (revised) for the previous week. The index was higher by 1.8 and 14.5 percent respectively when compared with the corresponding week of last month and that of a year ago. The index for Food Articles moved up by 1.0 percent to 381.1 as against 377.3 (revised) for the previous week, because of an increase in the prices of tea for internal consumption (+11%), gram (+5%), dal arhar (+3%), and wheat (+1%); the prices of rice in Calcutta and coffee, however, went down by 1.0 percent each. A rise of 0.5 percent to 490.4 in the index for Industrial Raw Materials was brought about by higher prices of manganese ore (average export prices) (+7%), groundnut and castorseed (+3% each), linseed and gingellyseed (+2% each) and raw wool and lac (+1% each), although the price of raw jute was marked down by 1.0 percent. Prices of gingelly-cake (+8%), coconut oil in Bombay, castor oil in Calcutta and groundnut oil (+3% each), copper in Calcutta and linseed oil (+2% each) and buff hides, mustard oil and zinc (+1% each) advanced while those of castor oil in Madras (-4%), groundnut cake (-3%), copper in Bombay (-2%) and coconut oil in Calcutta and brass (-1%) each declined, and the index for Semi-Manufactures rose by 0.4 percent to 394.5. The index for Manufactures moved up by 0.1 percent to 386.0 as compared with 385.5 (revised) for the previous week due to a rise in the price of rayon and silk manufactures (+4%); the price of jute manufactures, however, fell by 1.0 percent. Higher prices of bricks and tiles (+4%) raised the Miscellaneous group index by 0.6 percent to 560.8, although the price of chillies declined by 2.0 percent.

INDEX NUMBERS BY GROUPS AND SUB-GROUPS (Base: Year ended August 1939=100)

Groups and Sub-Groups	21-7-56	14-7-56	23-6-56	23-7-55

INDIAN EXPORT AND IMPORT OF COMMODITIES

The office of the Joint Chief Controller of Imports and exports, Government of India, Calcutta has announced that stocks of Pashmina wool, inspected and sealed in Amritsar by the Director of Industries, Punjab, up to 31st July, 1956, will be allowed to be exported up to the end of August, 1956. Jute goods licensed for shipment during July 1956 were: Hessian 37,398 tons; Sacking 33,884 tons and other 7,253 tons. A limited quota has been earmarked for the Calcutta port for the export of imported antibiotics, which have been revalued in India, to all permissible destinations. Exports will be licensed against this quota on shipping bill only and to such parties as are engaged in the bottling of penicillin. The licensing policy for textile machinery items, covered by the Capital Goods Licensing Scheme, for the current half-year has been explained. Applications for the import of licensable stores should be sent to the Joint Chief Controller of Imports and Exports, Bombay, in the prescribed form on or before 1st October, 1956.

DEVELOPMENT PLAN FOR SUGAR INDUSTRY

Details of a comprehensive development programme for sugarcane as well as for the sugar industry for the second plan period were considered by the Development Council for Sugar Industry when it met in New Delhi on 31st July. Mr. T. C. Puri, Joint Secretary, Ministry of Food and Agriculture, and chairman of the Council, presided. The programme, which is based on the broad outlines of the second five year plan relating to sugar, has been drawn up by a joint committee consisting of representatives of the Development Council and the Indian Central Sugarcane Committee. The joint committee has indicated the various concrete steps needed for the development of the industry with a view to achieving the plan targets. The Council also discussed a

report submitted by the joint committee on devising a system for making payment for sugarcane on the basis of its quality. The recommendations made by the sugar delegation which visited Australia and Indonesia last year will also come up before the meeting for consideration. Other subjects on the agenda included the question of grants to certain research schemes and problems concerning the sugar industry.

EXPORT OF IRON AND MANGANESE ORES

The decision to regulate the export of iron ore and manganese ore during July-December, 1956, on the basis of the quota held or exports effected during the period July-December, 1955, was announced in a Press note issued on 27th July. This announcement did not cover parties who had no performance or quota to their credit during July-December, 1955. It has since been decided that quotas may also be issued to such parties to the extent already announced, on the basis of the quotas held by them or their performance during the period January-June, 1956. Quotas for the State Trading Corporation for these ores will be issued by the Chief Controller of Imports and Exports within a ceiling of one-third of the total quantity to be allowed for export during this period.

MEETING TO DISCUSS STATE TRADING AND CANALISATION OF IMPORTS

The Federation of Indian Chambers of Commerce and Industry has convened a meeting in its office in New Delhi on 24th and 25th August to consider questions arising from the Government's announcements on State trading in iron and manganese ore and cement. The meeting will also consider the reported proposal for State trading in oils and other commodities. With the establishment of a State Trading Corporation in May, various problems—administrative or otherwise—have come to the fore. The Federation has decided to take up all outstanding issues with the Government, so that Government policy is so operated that minimum hindrance is caused to the interests of industry and trade. The setting up of fully representative advisory committees for specific commodities will also be urged. Another item on the agenda that will be discussed on 25th August concerns the Government's policy to canalise imports of raw silk, soda ash, caustic soda and other commodities through specified channels. Besides the members of the Federation, the meeting is open to others.

CANADIAN TERMS FOR SELLING WHEAT TO INDIA

Reports from Winnipeg indicate that the Canadian Wheat Board does not propose to sell wheat to India below the current price, according to a copyrighted story in the current issue of the McGraw-Hill American Letter (Indian Edition). India has indicated interest in buying Canadian wheat, but she is not prepared to offer more than about 25 percent below the present market price. Ottawa believes that it cannot operate a two-price system and will maintain its customers in Britain and elsewhere. Canada is disturbed by U.S. efforts to sell India 100,000 tons of wheat for the local currency. The Egyptian decision to acquire American wheat on same basis has also affected Canadian sales. The growing surplus may force the Wheat Board to reconsider its present price policy.

PROTECTED IN TRAYOPHANE

Moisture - proof Film

Boiled sweets and toffees retain their original flavour and freshness in Trayophane. Trayophane also keeps them clean, provides a shining decorative wrap. Whatever you wrap—sweets, biscuits, tea, coffee, cigarettes—Trayophane keeps the goodness in—shuts the weather out!

Trayophane moisture-proof film can be heat-sealed—just run a hot iron along the seam! You can print your name on its bright, shiny surface! And Trayophane is stronger and cheaper than any other packaging material. Ask for our free samples folder.

LONDON INSURANCE LETTER

BIG AND VARIED CLAIMS

SOME peculiarly large actual or potential claims on British insurance have arisen in the past month. July this year was the worst month for weather for any July on record; severe storms earlier in the month were followed later by the worst summer storms ever experienced, and rain was not only exceptionally heavy, but unusually persistent. Insurance of commercial and residential properties and their contents against storm perils has increased in recent years, and heavy claims are, therefore, under negotiation; and many outside events insured against rain have involved claims under "Pluvius" policies. A half of the \$16 million of main insurances on the *Andrea Dore*, which sank off the U.S. coast late in July, was written by Lloyd's and company underwriters in London, plus \$4 million of subsidiary insurances. The biggest and most daring jewel robbery ever committed in London, involving diamonds insured for £100,000 (and believed to be worth nearly double as much) occurred near Hatton Garden (the diamond centre) in the same month, and at the time of writing, the stones have not been recovered, though some men have been apprehended. These diamonds were snatched from a car, but there have been many robberies recently in which modern science has been used to outwit the de-

signers of strongroom equipment. Last month in Glasgow, the first permanent showroom in Britain for displaying equipment protecting against fire, accident and burglary was planned, and the showroom will be opened shortly in a building with 140,000 square feet of floor-space. However, the more elaborate anti-burglary equipment cannot be so publicised, as its effectiveness would be diminished by exposing it to the criminal community for inspection. Much depends, however, on the use of special materials and devices—special steels to make safe-walls resistant to blowlamps, anti-explosive devices that will keep the safe-door closed even if the lock is destroyed. The safemaker's problem is to keep his technique always ahead of the advancing technique of the burglar.

Fire Losses Reduced

The latest figures of fire damage at home, published in August relate to a period before the above-mentioned events and are comparatively satisfactory. The estimate of direct damage in June is £1.6 million, compared with £3.4 million in the same month last year, and the reduction has helped bring the half-year's total well below that of 1955. However, the second-quarter total was almost the same in both years; it was a sharp reduction of the first-quarter total this year that reduced the half-year total from £16.3 million to £14.7 million. It is too early yet to say that the menace of fire is under control. Last year's experience was particularly bad in the first six months, and this year's losses still show a substantial increase compared with the more normal first half of 1954, for which losses of £12.9 million were returned. Experience in North America this year is reported as showing a decidedly less favourable trend. A pamphlet circulated by a stock exchange firm has reminded us how important this side of the business is to the British companies. It lists 21 companies whose aggregate business in the U.S.A. makes up most of the British total there, and shows that the assets of those companies increased last year by about \$100 million to \$1,550 million, while capital and surplus increased by about \$70 million to \$631 million. (These figures take clearer shape when viewed against a gold and dollar reserve for the sterling area ranging between \$2,000 million and \$2,500 million). Expansion does not, however, mean bigger profits. Though net premiums written increased by some \$20 million to \$658 million, the underwriting profit fell by nearly \$8 million to slightly less than \$10 million. However, remittances to home offices increased by \$3 million to rather more than \$12 million, thus demonstrating that, tough as the American market is, it is still valuable to the U.K.'s balance of payments.

Lloyd's Growth Checked

The accounts of Lloyd's Underwriters for 1955 are somewhat puzzling. In spite of the rising trend of freight rates and commodity prices, marine premiums, at £62 million, were only a trifle higher last year than in 1954. Only motor premiums (reflecting activity at home) showed an appreciably proportionate rise, to £71 million. The "all other" category, which includes accident, fire, and general contingencies, was appreciably reduced, to £69 million. The result of these various movements was a decline in premiums on new policies for the first time since the war—from £148 million, to £144 million. One year's accounting is not to be taken too seriously, as Lloyd's works on a three-year basis. Thus every year includes the beginning of one account, the middle of a second, and the end of a third. The completed three-year account, 1953-55, was profitable in all main categories. Marine premiums of £951 million covered claims of £813 million; motor premiums of £691 million covered claims of £51 million; "other" premiums of £1153 million covered claims of £1001 million. The balance for the three-year account increased by more than £3 million nearly to £25 million. Yet the trend of first-year premiums in the 1955-57 account is disquieting. As premiums are normally heaviest in the first year (while claims are heaviest in the last year), the reduction suggests a change of trend; in a downward direction, when most insurance business is still tending upward. The numbers of Lloyd's members and syndicates have increased: the 1953-55 account was transacted by 3,232 members comprising 163 syndicates, the first year's business of the 1955-57 account by 3,697 members comprising 175 syndicates. Yet Lloyd's appears to be losing ground in competition with the composite companies at home and with companies and underwriters abroad.

The Man from the Pru

"The man from the Pru" has become a household phrase because the Prudential organises much of the door-to-door collecting of "industrial" life premiums. He has been in the headlines this month—in the august person of Mr. Leslie Brown, secretary and chief investment manager—as the man who swayed the vote against Sir Bernard Docker, the too-obviously wealthy industrialist, in a dispute with the Birmingham Small Arms company, which dismissed him. The occasion was not pleasant for the Prudential, which adheres strictly to the rule that it shall not control any company in which it invests. But an organisation that has about £1 million a week to invest must acquire substantial holdings, and the Prudential, though with only 4 per cent of the shares, had become B.S.A.'s biggest shareholder. There are occasions when, in the interests of policyholders, the power that comes from such a position must be used.

Calcutta Markets

GOOD GENERAL DEMAND AT TEA EXPORT SALE

ALL-ROUND INCREASE IN DUSTS

AT Sale No. 9, held on 6th and 7th August, offerings at the Export auction consisted of 44,000 packages for which there was a good general demand. C.T.C. Assams showed an easier tendency, particularly where quality showed a decline, while orthodox Assams with quality and any bright liquoring Dooars sold at dearer rates. Non-wither Dooars teas received more support than in earlier sales, and were often several annas dearer, while clean black Fannings with good liquors were often 2 to 4 annas dearer. Low Mediums and Plain Broken were about 1 to 1 anna lower, while stylish leaf grades were again well supported, and there was a rather better demand for the ordinary kinds. Flavoury Darjeelings once again realised very high prices.

	1956	1955
Rs.	Rs.	Rs.
Clean Black Pekoe	1 15 0 to 2 0 0	2 15 0
Plain B. P.	1 8 6 to 1 9 0	2 0 6
Medium Assam B. P.	2 6 0 to 2 8 6	2 4 0
Best C.T.C. Assam B.P.	4 0 0 to 5 0 0	3 0 0

At the Internal Sale, offerings consisted of 12,477 packages which included 281 chests of Old Season's teas. There was a good general demand, and grainy C.T.C. Assams with good liquors were the strongest feature of the Sale and were 4 to 8 annas dearer, while medium C.T.C. Assams opened at irregularly easier rates, but were firm to dearer at the close of the Sale. There was an improved demand for black leaf types suitable for the Middle East, while Commons, Dooars and good Mediums shared in the general advance and were 1 to 1 annas dearer with the powdery Assam types sometimes more. Poor liquoring types were very irregular, but were generally firm at about last rates.

	1956	1955
Rs.	Rs.	Rs.
Medium Dooars Dust	1 8 0 to 1 9 0	2 2 6 to 2 3 0
Medium Assam Grainy	1 11 0	2 4 6 to 2 5 6
Dust	2 10 0 to 2 14 0	2 11 0 to 2 13 0
Best Assam C.T.C. Dust	3 10 0 to 3 14 0	

Leaf offerings consisted of 1,479 chests which included 234 chests of green teas. There was a good demand for the green teas on offer with the top grades selling at dearer rates, while the remainder were irregularly easier. The few black teas on offer were very irregular.

RISE IN FREIGHT RATES TO INDIA FEARED

THE quiet spell in the freight markets during the past two weeks has been broken by the news of Egypt's nationalisation of the Suez Canal Company. Consequent upon measures adopted by the U.K. Government, some 35 vessels in the 10,000-ton class have been requisitioned. This, together with the threat of increasing freight rates, and with a large volume of imports arriving from European countries under the second five year plan, India will be seriously affected. Mean-time, grain fixtures were the centre of activity in most markets. U.S. Gulf to Antwerp-Hamburg range paid 100s for August shipment and River Plate to the same destination, 147s 6d for September loading, while West Australia-India repeated 133s for November and 130s 6d for December, all heavy grain. Whampoa-Chittagong rice was done at 80s f.i.o.s., August loading and Shanghai-Chittagong or Chalna 80s for early September. Burma-Colombo showed an increase at 76s 3d for September. In the local coal market, two fixtures to Karachi were declared at about 78s and tonnage is still required for this destination and for Chittagong.

LINSEED

Very firm conditions have prevailed during the past week and activity has been on a very small scale. Prices have displayed a notable rise. Sellers have been very reserved because of the lack of selling advices from upcountry for all positions, and despite good enquiries from crushers, the turnover has been very small. The oil market is firm; a good local demand, combined with the prevailing high price of mustard oil, has appreciably raised price levels. Indications from overseas were considerably lower in parity. Latest quotations were as follows: Ready-August Rs. 23-12 a maund.

HIDES AND SKINS QUIET

The market ruled quiet. Stocks were higher than in the previous week.

Bazaar Sales

(Between 31st July and 6th August, 1956)

Cowhides: Wet salted (Ord.) 35,000 pcs. on the basis of Rs. 5-8 to Rs. 7-4; Wet salted (Slaughtered) 18,500 pcs. on the basis of Rs. 10-8 to Rs. 20.

Goatskins: Wet salted (Daissee, Killed) 59,100 pcs. on the basis of Rs. 135 to Rs. 180, Rs. 220 to

Rs. 240 and Rs. 320 to Rs. 330; Assam-Dinajpur 4,500 pcs. on the basis of Rs. 220; Patna-Pakur 4,600 pcs. on the basis of Rs. 120 to Rs. 165; Muzafferpore 12,000 pcs. on the basis of Rs. 205 to Rs. 215.

Bazaar Stocks

(6th August, 1956)

Cowhides: Wet salted (Ord.) 1,98,000 pcs.

Goatskins: Wet salted (Daissee, Killed) 60,000 pcs.; Assam-Dinajpur-Jalpaiguri 80,100 pcs.; Muzafferpore-Patna-Pakur-Purneah-Kissanganj 1,65,000 pcs.

BRITISH INTERNATIONAL PLASTICS EXHIBITION

Since the announcement that the next British Plastics Exhibition—to be held from 10th to 20th July, 1957—is to become an international event, and will therefore include exhibits from other countries, so many requests for stand space have been received that the National Hall has been booked in addition to the Grand Hall in Olympia. This now gives a total floor area of 250,000 square feet, compared with 90,000 square feet in 1955. The exhibition is held every other year. Only a very limited amount of vacant stand space remains, for which application should be made without delay to the organiser, Mr. J. L. Wood, British Plastics Exhibition, Dorset House, Stamford Street, London, S.E.1.

Overseas manufacturers who have already applied for space include firms in the U.S.A., Ger-

many, France, Italy, Switzerland and Czechoslovakia. The Exhibition, which will represent all sections of the industry, will show raw materials, moulding powders, synthetic resins, laminated, reinforced and fabricated plastics, compression and injection moulding machines, extruders, and other equipment, as well as an all-embracing range of finished products from cable coverings to caravans, and from swizzlesticks to sun-glasses. A Convention will be run concurrently, for which full details will be announced later. The Exhibition and Convention is being organised by British Plastics, a leading trade journal, with the full co-operation of the British Plastics Federation.

CONTROLLER OF IMPORTS AND EXPORTS IN VISAKHAPATNAM

The Government of India has decided to open a trade control office in Visakhapatnam under the charge of a Controller of Imports and Exports. This office will be under the administrative control of the Joint Chief Controller of Imports and Exports, Madras, and will start functioning from 9th August. The jurisdiction of the trade office in Visakhapatnam will extend to the State of Andhra excluding the districts of Nellore, Chittoor, Cuddapah, Anantpur, Bellary and Kurnool. Applicants for import licences from this area, and also applicants for licences for export from the ports within this area, are advised to submit their applications to the Controller of Imports and Exports in Visakhapatnam, and not to the Madras office.

Cool filtered water for office or factory

'Tushar' WATER COOLERS

—by the makers of the famous 'Crystal' air conditioner

A 'Tushar' water cooler increases staff efficiency, helps to improve quality of work — quickly pays for itself in goodwill

- **Instantaneous cooling:** Continuous supply of instantly cooled water at the touch of a button — no unhygienic refilling or storing

WORLD'S MOST EXPERIENCED AIRLINE

PAN AMERICAN

COMPANY AND PUBLIC NOTICES

BENARES ELECTRIC LIGHT & POWER COMPANY LIMITED.

NOTICE is hereby given that an Annual General Meeting within the meaning of the Companies Act, 1956 (being the Fifty-sixth Ordinary General Meeting of the Company) of the above-named Company will be held at its Registered Office No. 12, Mission Row, Calcutta, on Monday, the 10th September, 1956, at 11-0 a.m. for the following purposes:

- To consider and pass the audited Accounts for the half-year ended 31st December, 1955, and the Balance Sheet as at that date and to adopt and receive the Reports of the Board of Directors and the Auditors thereon.
- To declare a Dividend.

To appoint Directors in place of those retiring. And, in this connection, Special Notice as required by Sections 261 and 281 of the Companies Act, 1956, is hereby given that at the meeting the following resolution will be proposed as a Special Resolution, namely:—

"That Mr. P. N. Banerjee, who is an associate of the Managing Agents of the Company and who has attained the age of 65 years, be and is hereby appointed a Director of the Company, and that the age limit prescribed by Section 280 of the Companies Act, shall not apply to him."

- To consider, and if thought fit, to pass with or without modification the following resolution, namely:—

"Resolved that with effect from the commencement of the Companies Act, 1956, the consent of the Company be and is hereby accorded to the Board of Directors borrowing and continuing to borrow monies for and on behalf of the Company in excess of the aggregate of the paid-up capital of the Company and its free reserves, that is to say, reserves not set aside for any specific purpose, and that such borrowing shall be exclusive of temporary loans obtained or from time to time to be obtained from the Company's Bankers in the ordinary course of business."

- To appoint Auditors and fix their remuneration.

The Register of ordinary shareholders of the Company and the Transfer Books will be closed from the 4th September, 1956 to the 10th September, 1956, both days inclusive.

A member entitled to attend and vote at the meeting is entitled to appoint a Proxy who need not be a member, to attend and vote instead of himself.

By Order of the Board,
MARTIN BURN LTD.,
S. N. MUKERJEE,
Managing Director,
Managing Agents.

12, Mission Row,
Calcutta 1.

The 7th August, 1956.

Explanatory Statement

1. In connection with item No. 3 of the above Notice Mr. P. N. Banerjee, whose first appointment as a Director of the Company dates as far back as 1931, falls within the definition of the Companies Act, of an associate of the Managing Agents. Consequently it will be necessary in accordance with Section 261 of the Companies Act, 1956, for a Special Resolution to be passed to cover his appointment as a Director of the Company. In addition since he is now of the age of 72 years it will be necessary under Section 281 of the Act for the resolution re-appointing him as a Director to declare that the age limit provided under Section 280 shall not apply to him. Special Notice of the intention to move this resolution, as required by both Section 261 and Section 280 of the Act, has been received by the Company.

2. The Resolution under item No. 4 of the above Notice is self explanatory and, when passed, will provide the authority required under Section 293 (1) (d) of the Companies Act, 1956.

ASSOCIATED HOTELS OF INDIA LIMITED.
Managing Agents—Oberoi Hotels (India) Private Ltd.
THE Board of Directors reviewed the accounts for the year ended 31st March, 1956. The accounts showing the Capital Expenditure revealed that the Company has spent nearly 20 lacs of rupees for improvements in the hotels during the last six years.

In pursuance of the policy laid down in the Chairman's speech during the last Annual General Meeting, the Directors decided that an ad-interim dividend of 6% (subject to tax) to be declared on the Ordinary Shares. The Share Transfer Registers of the Company will remain closed from 10th August to 17th August, 1956. The Dividend Warrants will be posted on or before the 18th of August, 1956.

S. S. REEN,
Secretary.

JAGATJIT COTTON TEXTILE MILLS LIMITED.

NOTICE is hereby given that an Extra-ordinary General Meeting of the Members of the Company will be held on Friday, 24th August, 1956 at 11-15 A.M., at the Registered Office of the Company at 5, Royal Exchange Place, Calcutta, with or without modification:—

I. As Special Resolution:—

"RESOLVED that the Articles contained in the printed documents submitted to the Meeting and for the purpose of identification signed by the Chairman be and are hereby adopted as Articles of the Company in substitution for and to the exclusion of all the existing Articles of Association of the Company."

II. As Special Resolution:—

"RESOLVED that with effect from the date of Commencement of the Companies Act, 1956 and in compliance with section 294 of the Companies Act, 1956, the Company doth hereby approve and consent to the appointment of M/s. Beni Prasad Krishna Gopal who are at present working as Sole Selling Agents of the Company and doth hereby authorise the Directors to renew the Agreement for a further period of four years on such terms and conditions as they may think proper."

III. As Special Resolution (Under section 360 of the Companies Act, 1956).

(b) "RESOLVED that an Agreement be entered into between the Company and Messrs. Karam Chand Thapar & Bros. (Coal Sales) Ltd., for a period of five years from 1st of April, 1956 whereby the Company will purchase from the said Messrs. Karam Chand Thapar & Bros. (Coal Sales) Ltd., coals in quantity and description as set out hereunder and at the prices hereunder detailed, with option to the Company to purchase more than the maximum quantity as specified below, on terms and conditions as per the above referred to agreement:—

Note: The terms and conditions are open for inspection at the Registered Office of the Company during business hours.

By Order of the Board,

CAPITAL

Founded in 1888, is India's oldest and most widely read financial newspaper. It gives its readers in all parts of the world the most up-to-date service in Indian economic intelligence and information of any newspaper in the daily or weekly field, and includes a complete list of all shares and securities dealt in on the Calcutta Stock Exchange, together with full details of latest balance sheets.

The Research & Statistical Department undertakes research into industrial and financial problems and numbers among its clients, Government departments, railway administrations, chambers of commerce and industrial associations.

Published every Thursday.

JOINT STOCK COMPANIES PREFERENCE SHARES

Dividends are cumulative and shares carry a preferential claim on the property for the payment of capital and on the profits for dividend except in case of companies marked otherwise. Months against names of companies indicate approximately times of payment of dividends.

FINDING FACTS FOR PLANNERS

PLACE OF MARKET RESEARCH IN AN EXPANDING ECONOMY

"MARKET research" is an economic vogue that has spread from the United States to many other countries. It has even, through the dynamic personality of Mr. Mikoyan, spread to Soviet Russia. It resembles two earlier American business vogues—"human relations" and "productivity" research—in that it can be readily exploited by charlatans who like to dress up in learned mumbo-jumbo what every business man knows from experience. Like them too, it forms the subject of a passing fad among a type of employer who comforts himself for his bad balance sheet by saying that at least he is "progressive". But these exaggerations and mystifications should not blind us to the fact that under the fashionable flourishes there is a core of sound commonsense, which becomes science, not by wrapping itself in jargon, but by being systematic. The science of market research seeks principally to systematise practices which have been applied spasmodically by many efficient businesses. It is not an uncommon experience to delve into the science of dietetics only to make the discovery that under the talk of calories and vitamins there is nothing that we did not learn from our mothers—to drink our milk and eat our greens. But that does not dispose of the science of nutrition, any more than M. Jourdain's discovery that he had been talking prose all his life without knowing it, disposed of the science of grammar. So the business man who wants to learn something of market research must be prepared to encounter many obvious truisms hidden under the imposing gobbledegook beloved of all American economists. But he can hope too to find consistent, rational guidance in handling problems where empirical commonsense sometimes fails.

The best defence of market research is simply that it is practised by firms in the United States and Europe which are, on every other test, among the most efficient and modern. Similarly in Russia, as soon as Stalin's oppressive stupidity was out of the way, market research was one of the first American techniques to be taken up enthusiastically by the most "capitalist-minded" of all the Russian leaders, Mr. Mikoyan (who is an Armenian as well as a Communist). Finally, in India, a beginning has been made in this field precisely by our biggest and most experienced industrial concerns, led by the jute mills. A technique should need no better credentials than these to commend itself to business men.

The basic principle of market research is that if you want to sell more of your goods or if you want to sell something new then you have to know who buys such things and why, and how much more they can be expected to buy in the foreseeable future. Surely, it might be asked, no producer has ever overlooked such an obvious truth? Well, as a matter of fact, producers often have—and we have examples right here in Calcutta in the jute and tea industries. One must be careful not to exaggerate, but it is probably not too strong to say that many jute mill managers had only the vaguest notion of what happened to their cloth and bags after they left the mill. That mysterious entity, the "Bazaar", looked after that side of the business—until the day came when the Bazaar did not look after it, and stocks began to accumulate. As for tea, it went to Mincing Lane. Who drank it, and why they did not drink more, and why some people did not drink it at all—these were mysteries too deep to be fathomed by men who were busy enough growing the stuff. Those days are gone, and both these industries are now spending money and energy on what is in fact market research even when it goes by other names. These cases are mentioned in order to point the moral that if the biggest and best can make mistakes, everybody else can too.

Some producers might draw from these instances the comforting conclusion that market research is important only when business is bad, so

meantime they need not worry about it. Did not the jute mills begin market studies only when consumption fell disastrously, and the tea industry only both about markets when prices slumped? As for the Americans, well everyone knows it is difficult to sell goods in the United States. But here in India, the land of limitless opportunity, where needs are infinite and production totally inadequate, the producer can count on selling anything he makes if only the Tariff Commission will give him a high enough protective barrier—so do not waste time worrying about the quirks of consumers, send a director to Delhi. The experiences of the post-Korean slump showed how mistaken this attitude was. Industries which had received the most generous tariff protection had gone ahead producing without any reference to their markets, and found themselves in an awkward plight. The fact that an economy is expanding merely guarantees that goods in general will find an outlet, but it does not ensure that the particular goods you are producing will be sold—at least of all in the quantities and at the prices you have expected. And even when offtake is up to expectations, this is no guarantee that it will remain so or will increase. Investment programmes are based not on past records so much as on estimates of the future, and here market research is a valuable guide in an uncertain world. One of the most progressive firms in India lately undertook market research in the north-east to discover why its goods were selling so well there—a commendable instance of curiosity that paid dividends in other regions. So market studies are not an expression of anxiety suitable only for depressed or highly competitive economies. Any business man who wants to know where he is going has some use for them.

In fact it is precisely in the industrialisation of an Asian economy that market research

private producers and advertisers, but such parties will always require to undertake special studies of their own. In so far as they cannot do this alone, even with the aid of a specially trained officer, they can draw on the investigation services of private consumer research firms and public opinion polls; some such already exist in India now although by their nature they cannot provide the general scientific information the whole country requires nor the special and continuous knowledge of its markets that any big firm needs.

TEA AND THE SUEZ PROSPECTS FOR INDIA'S EXPORTS

SOME measure of uncertainty still prevails in the tea markets; although the undertone was much better at this week's auctions, optimism about the future is not yet widespread. Buyers have until recently been restrained in making purchases, the main factor in mind apparently being that supplies are likely to be fully adequate to meet their requirements. This may not be so in the case of the better-quality teas, but for commons and mediums the expectations are of a surplus (perhaps only a small one) at the end of the season. The latest statistics show that production is running slightly ahead of last year in the main exporting countries. Until the end of June, output in north India, south India, Pakistan and Ceylon, plus the Indonesian output until end-May, totalled 445.8 million lbs this year, against 444.8 million lbs in the corresponding periods of 1955. Last month's crop in north India, at 80.6 million lbs, has now turned out to be one million lbs more than in July 1955, so it is calculated that crops in major producing countries, taken together, are running 2 million lbs ahead of last year. North India is mainly responsible for this increase; her output until end-July, at 205.6 million lbs, is 10.7 million lbs ahead. Pakistan, a small producer has also reported a bigger crop, but south India, Ceylon and Indonesia have all reported smaller ones so far.

Production in the east, and the stocking policies of credit-squeezed traders in the west, have been the dominant factors in market trends so far. But the developing situation in the Suez, it is thought, could have far-reaching consequences. There have been some distinct reactions so far, although the general inclination is to wait and see, and a number of possibilities are being discussed on the hypothesis that traffic through the Suez Canal might be interrupted. A foretaste of what might happen was the sharp fall in the price of the black grainy dusts, which Egypt normally buys, at the Calcutta auctions a fortnight ago; this fall was based on the belief that Cairo might run short of foreign exchange, and would then have to cut her tea purchases; but the prices of these dusts have now largely recovered and Egypt is in fact reported to have turned a strong buyer. More important, for Indian tea, are the possible repercussions on its major customer, Britain. The Suez situation is being watched even more anxiously in that country than it is in India, for U.K. tea stocks are at a very low level and have to be replenished quickly if interruption of traffic through the Canal becomes likely. This might give (as it seemed to this week) a temporary boost to the eastern tea markets, but, however welcome it may be in a phase of uncertainty, it would be a lot less so on the longer view. As the experience of the Korean war showed, emergency stock-piling induced by the prospect of transport dislocations brings producers benefits that are mainly temporary. The hangover which follows a heady buying spree is sometimes enough later to remove a few of them from the running altogether. For tea, the Suez dispute is of more than ordinary importance. Competing beverages, such as cocoa and coffee, hardly use the Canal, and could comfortably encroach into its markets should the Suez alone be responsible for a tea boom. The threat from cocoa at the moment is perhaps less severe than from coffee. Consumption of the former, it is believed, has increased more than production, so prices have risen. But the world's coffee markets are showing a fairly steady trend; in this case, it seems that consumption, although higher, has not kept pace with the harvesting of the big Brazilian crop. In two of the most important markets for Indian tea, Britain and the United States, this is a matter of considerable significance. North America is well placed geographically to get all the coffee she needs; and in Britain, the continuing epidemic of espresso bars has not failed to disturb those who normally have sound commercial reasons for gloating over the Englishman's remarkable addiction to tea.

Tea, and gunnies, are the biggest two of India's exports concerned in Suez traffic. They are also the mainstays of the export trade generally, the future of which is of vital importance as the country's disturbing shortage of foreign exchange gradually reveals itself. Our New Delhi correspondent reports on a later page today the speed at which the sterling balances and other reserves abroad seem likely to be run down. Expenditure threatens to be especially heavy over the next two or three years, which makes it the more neces-

sary that vigorous political efforts be made to maintain the even flow of international sea traffic. It is not only exports which would suffer should the Suez situation deteriorate. The consequences would probably be even more damaging for imports, especially for the capital goods, including three steel plants, which are coming from Communist and non-Communist Europe. If costs of production, and of transport, increase, India would find herself in the embarrassing position of getting less, and paying more, for the equipment she badly needs for her development plans.

A GUARANTEE FOR ROAD TRANSPORT

THERE is promise of better road transport for the second five year plan in the statement which Mr. O. V. Alagesan, Deputy Minister of Railways and Transport, made in the Lok Sabha last Saturday. The first step towards any expansion of private goods haulage by road is a guarantee that anybody who commits his capital to it can rely on a reasonable period of uninterrupted working. This is what now appears to have been given. Five years' freedom from nationalisation is not as good as ten, but it is better than none at all. Medium-sized concerns of the kind that do well in this industry, should now become a practical possibility. Contractors ought to be able to establish their business on what is, for road goods transport, a reasonably long-term basis. This step has not been taken too early if the roads are to make up for the deficiencies which the railways are bound to show in the next five years.

The guarantee which Mr. Alagesan has offered the carriers has a number of interesting features. It is, for example, the first to be given openly to any industry since the Fourth Amendment to the Constitution was passed, and is, therefore, the first unmistakable acknowledgement from the Government that its present attitude towards nationalisation generally is harming the expansion of industry. If the same had been done for the private coal mines, for example, the morale in that industry would be better than it is today and the country's development plans would be the gainers. It also raises the question whether in fact a Central Government Ministry is in a position to give such an undertaking. Road transport is the concern of the States. These will usually follow closely the recommendations of the Central Government, but there is nothing forcing them to do so. If some strong political reason prompts a State Government to defy the wishes of the Centre on nationalisation, there seems to be nothing to stand in its way. The example of the Kolar Gold Fields has shown what can happen when a State Government is determined to follow its own dictates. After the next election, there may be others which will have no hesitation in defying Central advice even as with the Kolar Gold Fields, at heavy cost to the national interest. There remains the question of compensation at the end of the five years. This is not perhaps of great importance for the road transport industry because its assets can usually be amortised well within five years. But it may mean that fleets will fall progressively into worse disrepair as the end of the period of grace approaches unless operators have some reasonable assurance that their vehicles will be bought from them at prices which bear some relation to their market value.

Even with the nationalisation threat out of the way for the time being, private operators will be able to do the job expected of them only if they have the co-operation of the State Governments. Progress will be facilitated if the present tangle of licence restrictions is cleared away speedily and the numerous handicaps under which carriers must work, especially those concerned with operations across State boundaries, are removed without delay. The size and nature of the units in this industry are such that they lend themselves easily to victimisation by unscrupulous and corrupt Government and police officials. A drive to remove the many petty regulations which provide scope for this kind of exploitation would improve the industry's health. The Motor Vehicles (Amendment) Bill, which the Deputy Minister was moving for reference to a Select Committee when he made his statement provides, among other things, for uniformity in the law governing the nationalisation of road transport services. It should be a further important contribution towards a more settled state of mind among operators.

This is, of course, merely one example of the attempt which appears to have been made in the Bill to clear up the tangled state in which the industry at present finds itself. Another concern, the hours of work of drivers. This is one which is essential to any well run road transport system. A lorry driver is in a special position among transport workers. His skill is not in short supply and he is, therefore, an easy target for the kind of exploitation which the essentially small or medium-scale character of the industry often

involves. This is something which it is worth taking trouble to guard against. An over-worked driver is a liability not only to himself, but to every road user. An under-paid one is no less a menace. The protection of drivers is protection of the community generally, not to mention a safeguard of the goods they carry. Much the same can be said for the vehicles. There is no doubt that many of those on the road today have no right to be there. If the road transport industry is to enjoy the expansion which Mr. Alagesan hopes for, these are matters which should command attention during the next five years.

CURRENT COIN

Vazir Sultan Preferences.—Subscription lists will open next Thursday for an attractive public offer of 22,745 7 percent (taxable) cumulative redeemable preference shares in the Vazir Sultan Tobacco Co. Ltd. at the par value of Rs. 100 each. (Fuller details of the offer are published on a later page.) The preference shares are redeemable at Rs. 101 each on or after 1st April, 1968, in whole or in part. The dividend on them is payable half-yearly on 1st April and 1st October: the first on the present issue will be paid on 1st October, 1956. These shares qualify as "approved investments" under section 27A(1)(i) of the Insurance Act, 1938. The company's present authorised capital is Rs. 155 crores, consisting of 1,250,000 ordinary shares of Rs. 10 each and 30,000 7 percent cumulative redeemable preference shares of Rs. 100 each. One million of the ordinary shares, and 7,255 preference shares, have been issued and fully paid. All the other preference shares are now being offered. These shares were part of a rights offer which was originally made to ordinary stockholders. The Raleigh Investment Co. Ltd., which is the biggest ordinary shareholder in Vazir Sultan, has decided to forgo its preferential right of subscription so that the Indian public may acquire a larger interest in the company. The money from the issue is to be used for a three-year modernisation programme estimated to cost Rs. 31.35 lakhs. The company was incorporated as a public company in Hyderabad in 1930 to manufacture cigarettes, and it acquired the cigarette factory owned by Vazir Sultan and Sons. By 1933, a new factory was built, which has since been expanded. Vazir Sultan has for many years been associated with Imperial Tobacco in the marketing of their respective brands. The former's sales have shown an impressive increase—from Rs. 2.80 crores during the year ended September 1951 to Rs. 3.64 crores during the year ended September 1955. Over the same period, its profit before taxation has increased from Rs. 27.93 lakhs to Rs. 42.56 lakhs. The ordinary dividend has been maintained at 10 percent during the years ended September 1954 and September 1955.

States to Borrow.—Fifteen State Governments will line up in public on 3rd September for loans totalling Rs. 64 crores. They will stay there until 10th September, or earlier if their requirements are met before then. The Governments and the amounts they seek are Madras (Rs. 12.5 crores), Uttar Pradesh (Rs. 8 crores), Bombay (Rs. 7.5 crores), West Bengal (Rs. 7 crores), Andhra (Rs. 6 crores), Mysore (Rs. 4 crores), Orissa (Rs. 3 crores), Rajasthan (Rs. 3 crores), Saurashtra (Rs. 2.5 crores), Bihar (Rs. 2 crores), Hyderabad (Rs. 2 crores), Punjab (Rs. 2 crores), Travancore-Cochin (Rs. 2 crores) Madhya Pradesh (Rs. 1.5 crores) and Madhya Bharat (Rs. 1 crore). All the States reserve the right to retain subscriptions up to 10 percent in excess of the notified amount, assuming that they get so much. Four of them have offered to accept their own maturing loans at par for conversion—the 3 percent Bombay 1956, the 3 percent Madhya Pradesh 1956, the 3 percent Madras 1956, and the 3 percent Travancore 1956. The new State Government loans all carry an interest of 4 percent; they will all be repaid at par on 3rd September, 1968, except Bombay's which will be repaid exactly two years after that date. Issue prices are Rs. 100 percent for Bombay and West Bengal; Rs. 99-12 percent for Madras; Rs. 99-8 percent for Andhra, Hyderabad, Mysore, Rajasthan, Saurashtra, and Uttar Pradesh; and Rs. 99-4 for Bihar, Madhya Bharat, Madhya Pradesh, Orissa, Punjab and Travancore-Cochin. Investors' interest now centres on the prospects of success for these loans. Here an important point to note is that the total amount States seek to borrow is much more than the market had expected. Vigorous canvassing will be necessary if all of it is to be raised. The state of the gilt-edged market does not offer much reason for cheerfulness; comparable securities are available in plenty, and even the recent Central Government issues are at a discount. Money conditions also are tight, as the slack season has turned out to be a lot less slack this year. Last year, ten State Governments asked the market for Rs. 48.5 crores and met with a favourable response; but now it can hardly be expected that the bigger sum will be readily available. Two big classes of investors

which have a keen interest in State Government loans are insurance companies and provident funds. What resources they have to spare is not easy to assess. The Bombay, West Bengal and Madras Governments are well placed in this respect, and may have less to worry about than their counterparts which are not as fortunate in the size of their resources. The official announcement about the loans is published on page 212.

Oil in the Bengal Basin.—Oil exploration as a commercial undertaking is not only highly expensive, but also extremely risky. In it the chances of failure usually outnumber those of success by nine to one, and in the regions where knowledge of geological conditions is totally inadequate, which is now the case with the Bengal basin, the ratio of failure to success is placed by experts at 20 to one. Yet it is gratifying to learn that the Standard-Vacuum Oil Company of the U.S.A. has been continuing its explorations here—which it started in the early part of 1954, in accordance with its agreement with the Government of India. Mr. T. T. Conger, General Manager of the Producing Division of the company, who gave an account to the Press last week of Standard-Vacuum's efforts in the field, said preliminary reconnaissance gravity metre surveys started in May 1954, and seismic surveys the following December. The seismic survey, for mileage covered, compared favourably with any in the world. This was accomplished without the benefit of good roads—a fact of which Mr. Conger was justifiably proud. In spite of these efforts, however, the preliminary surveys, he stated, had not revealed the "probable existence of outstanding geological features where oil might be found." More extensive and detailed investigations have therefore become necessary, and the company, at present, is doing just this. A drilling rig of the latest design has been ordered and is now being assembled in the United States. As Mr. Conger described it, "the rig will be tailor-made to meet the specific needs of the area." A site will be selected in the near future in West Bengal to start actual drilling. The Company has already incurred an expenditure of Rs. 1.25 crores on preliminary surveys, and a heavier investment will be needed when drilling operations start. An important aspect of Standard-Vacuum's policy in carrying out this project is to employ as many Indian engineers and other personnel as possible, and obtain a part of the equipment and supplies from Indian sources. A redeeming feature of oil prospecting in the Bengal basin is that the Gravity Party cost here is below the average of what is normally incurred in a venture of this sort,—that is, Rs. 80,000 a month, though this figure varies from country to country and even within a country.

Indian Banking Trends.—Some time ago, the Reserve Bank of India published its usual annual review of the country's banking trends during 1955. It has now published detailed statistical tables on the same subject and covering the same year. Together, these two publications provide a comprehensive picture of Indian banking enterprise and the progress it has achieved during 1955. According to the tables, both deposits and advances of the banks rose by Rs. 92 crores each during the year under review, which has been interpreted as a reflection of the rising level of economic activity in the country. The rise of Rs. 92 crores in total deposits came largely from the scheduled banks (Rs. 87 crores), non-scheduled banks providing the rest. Total deposits of Indian scheduled banks, both within and outside the Indian Union, rose by Rs. 70 crores to Rs. 887 crores. The expansion in deposits in 1955 was not larger than that in 1954, but in certain directions there was a marked difference. In 1954, current deposits had shown a larger rise (Rs. 38 crores) than fixed deposits (Rs. 34 crores), whereas, in the year under review, the expansion of fixed deposits by Rs. 53 crores was substantially higher than that of current deposits (Rs. 22 crores). Deposits of co-operative banks, having paid-up capital and reserves of Rs. 1 lakh and over, maintained the up-trend and rose by Rs. 16 crores, the rise being significantly greater than that in the deposits of non-scheduled banks. The rise in bank credit at Rs. 92 crores equalled that in deposits. The investment portfolio of the joint stock banks was strengthened by Rs. 42 crores, of which more than Rs. 39 crores represented investments in Government securities. The additional gilt-edged investment was entirely accounted for by the Indian scheduled banks. The number of offices of Indian joint stock banks recorded a significant increase of 63, compared with 21 in 1954, in spite of a fall of 24 in the total number of banks. The offices of co-operative banks, and their number, rose during the year, continuing the trend of expansion in co-operative banking. There was one office for every 11,121 of the population served by banks, and on an average, there was one banking office for about 70,000 of the total population. About 54 percent of the scheduled bank offices were concentrated in the larger towns having a population of over 50,000, whereas the corresponding proportion in the case of non-scheduled banks was hardly 33 percent. Offices of Indian joint stock

CURIOUS LEGISLATORS

WE are very glad to see that the *Indian Mirror*, one of our leading Indian contemporaries, has spoken in plain and unmistakable terms regarding the abuse of interpellation in the Bengal Council, as it truly says, the right of interpellation was not obtained till after a severe and prolonged struggle. Having won the concession, it should clearly have been used with the greatest discretion and moderation, but there has been a singular want of tact on the part of the members of Council in this matter. Questions upon question on all conceivable subjects were asked, until the public were perfectly disgusted and the officials ceased to treat the matter seriously. We trust that after this unmistakable expression of opinion from one of their best friends and advocates, the members concerned in the Bengal Council will in future keep their zeal for knowledge well within the bounds of discretion.

FROM

CAPITAL

18th August, 1896.

Consent of the Central Government has been obtained to this issue by an order of which a complete copy is open to public inspection at the Head Office of the Company. It must be distinctly understood that this consent of the Government of India does not take any responsibility for the financial soundness of any schemes or for the correctness of any of the statements made or opinions expressed with regard to them.

A copy of the Prospectus has been delivered to the Registrar of Companies Hyderabad, for registration.

Application has been made for the market price of the 7% (Taxable) Cumulative Redeemable Preference Shares to be quoted in the list issued by the Hyderabad Stock Exchange.

The subscription list will open at 10-30 a.m. on the 23rd day of August, 1956 and will close on the 27th day of August, 1956 or earlier, or later, as the Directors may decide.

THE VAZIR SULTAN TOBACCO COMPANY LIMITED

(Incorporated on 10th November 1936 under the Hyderabad Companies Act No. IV of 1932 Fasil; now subject to the Companies Act, 1956).

OFFER

OF

22,745 7% (Taxable) Cumulative Redeemable Preference Shares of Rs 100 each at par payable in full on Application.

Applications must be for a minimum of 5 Shares or for multiples of 5 Shares

The 7% (Taxable) Cumulative Redeemable Preference Shares now being offered confer upon the holder the following rights—

Dividend: A fixed cumulative preferential dividend at the rate of 7% per annum (subject to income tax) on the capital for the time being paid thereon. It is intended that the dividend will be payable half yearly on the 1st day of April and the 1st day of October the first dividend being paid on the 1st October 1956 and will be calculated on the full par value of the shares from the date of allotment up to 30th September 1956.

Capital: In a winding up whether voluntary or otherwise repayment of the capital paid up thereon together with a premium of rupees one per cent and a sum equal to any arrears of the fixed dividend whether declared or not calculated to the date of the commencement of the winding up (subject to income tax) in priority to the ordinary shares but shall not entitle the holders thereof to any further participation in the profits or assets of the Company.

Redemption: Subject to the provisions of the Companies Act 1956 redemption on or after the 1st April 1968 in whole or in part to be selected by drawings at the option of the Company acting through its Directors on not less than three months notice given by advertisement in some newspaper circulating in Hyderabad (Deccan) at the price of Rs. 101 for each share together with the dividend due to the date of redemption.

The Company will not pay interest on unclaimed redemption money.

Votes: The right to receive notice of and to attend at General Meetings of the Company but to vote thereat only in accordance with the provisions of Section 87 of the Companies Act 1956 namely—

(a) on resolutions placed before the Company which directly affect the rights attached to such preference shares as stated in Section 87 (2) (a) and the explanation thereto;

(b) on every resolution placed before the Company at any meeting if the dividend or any part thereof due on such preference shares has remained unpaid in respect of an aggregate period of not less than two years preceding the date of commencement of the Meeting.

On all resolutions upon which holders of the preference shares now being offered are entitled to vote such shares will on a show of hands give such holder present in person one vote and will carry the right on a poll to ten votes for each share.

The rights attaching to the preference shares now being offered may be varied from time to time in accordance with the provisions of the Company's Articles of Association and of the Companies Act, 1956 or any amendment or modification thereto and in particular under the following Articles.

Increase of Capital: Any of the shares for the time being unissued and any new shares from time to time to be created may from time to time be issued with any such right of preference in respect of dividend and of repayment of capital as may be conferred by the holders of the shares of that class or with the sanction of a special resolution passed at a separate general meeting of the holders of the shares of that class and all the provisions of these Articles relating to general meetings shall *mutatis mutandis* apply but so that the necessary quorum shall be two persons at least holding or representing by proxy one third of the issued shares of the class in question. This Article is without prejudice to the power of the Company under Article 46 hereof and the Company's right to increase its Capital and the rights conferred upon the holders of the shares of any class issued with preferred or other rights shall not, unless otherwise expressly provided by the terms of issue of the shares of that class be deemed to be varied by the creation or issue of further shares ranking pari passu therewith.

Modification of class rights: If at any time the share capital is divided into different classes of shares the rights attached to any class (unless otherwise provided by the terms of issue of the shares of that class) may from time to time be varied or amended by the holders of the shares of that class or with the sanction of a special resolution passed at a separate general meeting of the holders of the shares of that class and all the provisions of these Articles relating to general meetings shall *mutatis mutandis* apply but so that the necessary quorum shall be two persons at least holding or representing by proxy one third of the issued shares of the class in question. This Article is without prejudice to the power of the Company under Article 46 hereof and the Company's right to increase its Capital and the rights conferred upon the holders of the shares of any class issued with preferred or other rights shall not, unless otherwise expressly provided by the terms of issue of the shares of that class be deemed to be varied by the creation or issue of further shares ranking pari passu therewith.

The ordinary shares carry the right (i) to such dividend as may from time to time be declared on those shares subject to the prior payment of all accrued dividends and dividends in arrears on the cumulative preference shares (ii) to any balance of assets available for distribution in a winding up after payment of all amounts due to the preference shareholders as defined above and (iii) at General Meetings on a show of hands one vote for each holder present in person and on a poll one vote for each share on all resolutions.

The Company is advised that these Preference Shares are "approved investments" within Section 27A (1) (i) of the Insurance Act, 1938 as dividends have been paid on the Company's Ordinary Shares for the last five years.

The market price of the Ordinary Shares of the Company is quoted in the list issued by the Hyderabad Stock Exchange.

The shares subject to this offer form part of an issue of 30,00,000 shares which were first offered to the Ordinary Shareholders at par in proportion to their holdings in accordance with the requirements of the Companies Act. The Raleigh Investment Company Limited, the holder of the majority of the Ordinary Shares decided to forego its preferential right of subscription as it wished the public in India to have the opportunity to apply for such shares and obtain thereby an increased interest in the Company.

PARTICULARS

History and Business: The Company was incorporated as a Public Company in Hyderabad, Deccan, in 1936 under the Hyderabad Companies Act No. IV of 1932 Fasil for the purpose of manufacturing cigarettes in Hyderabad State and acquired the cigarette factory owned by the firm of Vazir Sultan & Sons. The Company was incorporated with an authorised capital of O.S. Rs. 10,00,000 and commenced manufacturing in that factory. In 1933 manufacture was transferred to the present factory which the Company had built in the then newly developed industrial area of Azamabad on the outskirts of Hyderabad City. Various additions have been made to this factory during the years.

and in 1948 further land was acquired on which additional buildings were constructed.

The Company has actively encouraged the growth of suitable types of tobacco for cigarette manufacture in Hyderabad State by advice to farmers on better methods of cultivation fertilisation and harvesting and by the use of considerable quantities of such tobacco in the Company's products.

The Company has for many years been associated with The Imperial Tobacco Company of India Limited in the marketing of their respective T-ands. These arrangements have been subject to amendment from time to time and the two Companies have now entered into agreements dated 12th June 1956 in which The Imperial Tobacco Company of India Limited is with effect from 1st November 1956 appointed sole distributor of this Company's brands of cigarettes certain areas of the Union of India and is authorised to manufacture those brands on the terms and conditions therein contained.

Purpose of Issue: Additional capital is required to modernize the Company's factory and to install modern machinery and equipment in order to meet the growing demand for and to maintain the quality of the Company's products.

FINANCIAL INFORMATION

Auditors' Report: The following is a copy of the report of the Company's Auditors, Messrs. Lovelock & Lewes—

LOVELOCK & LEWES,
Chartered Accountants.

Mercantile Bank Buildings,
Post Box No. 1720,
First Line Beach,
Madras 1.
11th June 1956.

The Directors.
The Vazir Sultan Tobacco Company Limited,
Post Box No. 123,
Hyderabad, Deccan.

Gentlemen.

We have audited the accounts of The Vazir Sultan Tobacco Company Limited for the five years ended 30th September, 1955 and in accordance with the provisions of Clause 24 of Part II of Schedule II of the Companies Act 1956 report as follows—

The profits of the Company for these years as set out hereunder and have been arrived at after charging all expenses of working and management and after making such adjustments as are in our opinion necessary.

THE VAZIR SULTAN TOBACCO COMPANY LIMITED—Cont'd.

THE VAZIR SULTAN TOBACCO COMPANY LIMITED

	1951	1952	1953	1954	1955
Income—	Rs.	Rs.	Rs.	Rs.	Rs.

	2,83,456	3,36,251	3,33,562	3,53,294	3,66,754
Expenditure—					
Cost of Sales	2,21,09,224	2,67,09,848	2,56,06,820	2,80,72,164	2,71,25,440
Salaries and Wages	23,72,354	30,73,201	33,12,448	36,05,408	36,16,470
Expenses	6,30,406	6,17,519	6,71,546	4,78,670	3,44,611
Interest	9,130	76,915	2,80,085	1,54,521	89,675
Depreciation as charged by the Company	3,46,475	2,89,448	4,64,357	5,29,354	5,83,839
Loss on Sale and Revaluation of Investments	—	540	—	—	125
	2,55,48,789	3,09,20,472	3,03,37,866	3,98,40,717	3,23,20,62
Profit before providing for Taxation	27,93,174	27,42,043	30,18,097	44,88,376	42,50,641
Taxation	11,82,725	12,43,337	10,08,813	19,49,828	18,87,997
	16,10,449	14,98,706	20,09,794	25,38,548	23,68,533
Balance of Profit and Loss Account from previous year as per audited accounts	59,34,635	52,84,177	8,74,181	13,74,720	15,74,464
	66,45,064	67,82,863	28,83,975	39,13,268	39,43,017
Transfer to General Reserve	12,85,715	30,00,000	13,10,714	14,75,000	13,00,000
Transfer to Fixed Asset Replacement Reserve	—	20,705	7,637	2,010	17,653
Transfer to Fixed Asset Realisation Surplus	—	—	—	—	54
	12,85,715	30,20,705	13,18,351	14,77,010	13,17,713
Balance	53,59,368	37,62,178	15,65,624	24,36,258	26,25,304

The profits, etc., set out above have been arrived at after making the following adjustments to the figures disclosed in the published accounts:—

	1951	1952	1953	1954	1955
Taxation	Increase	Decrease	Increase	Decrease	Increase
Salaries and Wages	4,33,119	5,93,976	9,124	4,824	192
General Reserve	2,03,062	2,77,410	12,85,714	1,09,526	1,040
					14,75,000

These adjustments were in our opinion necessary—

(a) in order to substitute the Company's actual tax liability for the provisions made in the published accounts in respect of those years where the assessments have been completed;

(b) in order to provide for the increased charges for salaries and wages which became payable in terms of a Labour Tribunal Award published in 1953 and which were charged in the accounts for that year;

(c) so that transfers to General Reserve are related to the years out of the profits of which they were appropriated.

We further report that the Dividends paid by The Vazir Sultan Tobacco Company Limited in respect of the five years ended 30th September, 1955, on its issued Share Capital were as follows:—

Year Ended	Issued Share Capital	Rate	Amount Rs.
30th September 1951	5,00,000 Ordinary Shares of Rs. 8-9-2 each	10%	8,571 143
30th September 1952	10,00,000 Ordinary Shares of Rs. 8-9-2 each	10%	8,571 143
30th September 1953	10,00,000 Ordinary Shares of Rs. 8-9-2 each	10%	8,571 143
30th September 1954	10,00,000 Ordinary Shares of Rs. 10/- each	10%	10,00,000
30th September 1955	10,00,000 Ordinary Shares of Rs. 10/- each	10%	10,00,000

The above dividends were paid without any deduction of tax paid by the Company and were paid out of current profits.

The Net Assets of the Company as at 30th September, 1955, based on the audited Balance Sheet at that date were as follows:—

	Original Cost	Depreciation provided to 30th September, 1955	Net
Goodwill	5,79,429	—	5,79,429
Fixed Capital Expenditure—			
Land & Buildings	23,21,219	7,38,519	15,82,700
Plant, Machinery and Fixtures	36,32,194	3,85,094	32,47,100
Other Fixed Assets	8,42,668	3,77,811	4,64,857
	44,26,533	39,13,424	5,13,109
Investments at Cost	—	—	17,676

The Net Assets of Rs. 1,50,58,195 shown above are represented by:—			
Issued Share Capital 10,00,000 Ordinary Shares of Rs. 10/- each	—	—	1,00,00,000
Capital Reserve	—	—	48,023
Fixed Asset Replacement Reserve	—	—	54
Fixed Asset Realisation Surplus	—	—	48,00,000
General Reserve	—	—	60,579
Other Revenue Reserves	—	—	1,49,525
Profit and Loss Appropriation Account—balance carried forward	—	—	1,50,58,195

The Company is one to which the provisions of Section 23A of the Indian Income Tax Act 1922 apply. Application has been made to the Commissioner of Income Tax in terms of Section 23A(1) of the Act, for relief from the liability to super tax on undistributed income for the year ended 30th September, 1954 and a further application is expected to be made in due course in respect of the year ended 30th September, 1955. No order has yet been made by the Commissioner. At 30th September, 1955, therefore, there is a contingent liability in respect of super tax on undistributed income amounting to Rs. 7,42,000 approximately.

No accounts of the Company have been made up for any period subsequent to 30th September 1955.

The accounts of the Company for the years ended 30th September, 1951 and 30th September, 1952 were maintained in Osmania Sica rupees and these accounts have been converted into I.G. rupees for the purposes of this report at the rate of Exchange of O.S. Rs. 116-15-2 per I.G. Rs. 100/-.

We are, Gentlemen,
Yours faithfully,
LOVELOCK & LEWES.

Messrs. Lovelock & Lewes have given their written consent to the inclusion of the above Report and have not withdrawn such consent.

Capitalisation of Reserves and Undivided Profits: Since the inception of the Company the following undivided profits standing to the credit of the Company's Reserve Funds have been capitalised and applied in payment up in full of ordinary shares of equivalent amount.

Year	O.S. Rs.	I.G. Rs.
1935	3,94,390	4,96,220
1944	—	5,18,700
1945	—	12,50,000
1947	—	12,50,000
1951	—	12,50,000
1952	—	50,00,000
1954	—	I.G. Rs. 14,28,571

Capital Cover: The value of the net assets of the Company as at 30th September, 1955 as shown by the Auditors' Report included in this Prospectus is sufficient to cover the principal amount of this issue more than five times.

Prospects: The popularity of the Company's brands, particularly CHARMANAR SPECIALS, has steadily increased over the 25 years since the Company's formation and present turnover is in excess of Rs. 31 crores per annum. Although the cigarette market is very competitive one, the Directors consider that with the proposed modernization and re-equipment of the factory the Company should be able to meet the increased demand for its products and to maintain its reputation for the quality of its products.

As the result of this modernization programme, some further increase in turnover can be expected, which should enable the Company to continue to earn a satisfactory return on the capital invested in spite of increasing costs of production.

A contingent liability for additional super tax of approximately Rs. 3,84,000 and Rs. 3,58,000 exists under Section 23A of the Income Tax Act, 1922 (as amended by the Finance Act, 1955) in respect of undistributed profits for the years ended 30th September, 1954 and 30th September, 1955 respectively. In respect of the former year an application has been made to the Commissioner for relief from this liability on the grounds that the funds need to be retained for the business. Further applications are expected to be made as necessary in respect of the year to 30th September, 1955 and subsequent years in so far as

funds are required to be retained in the business in order to finance the Company's development.

STATUTORY AND GENERAL INFORMATION

Miscellaneous: The Company has not issued nor agreed to issue within the two years preceding the date hereof any shares or debentures either for cash or as fully or partly paid up otherwise than in cash.

The Company has not entered into nor does it propose at present to enter into any contract or arrangement whereby any option or preferential right has been given or is to be given to any person to subscribe for any share or debenture of the Company other than the prior offer to the ordinary shareholders of the shares now being issued in proportion to their holdings of ordinary shares as mentioned above.

The Company has not within the two years preceding the date hereof issued nor does it intend at present to issue any shares at a premium.

The Company has paid no sums within the two years preceding the date hereof nor are any payable as commission for subscribing or agreeing to subscribe or procuring or agreeing to procure subscriptions for any shares in or debentures of the Company or as discount in respect thereof nor is it intended that any should be paid in respect of the present issue. This issue has not been underwritten but brokerage will be paid by the Company as indicated below.

The amount of benefit has been paid to any promoter or officer within the two years preceding the date hereof nor is it intended that such should be paid.

Directors: The Articles provide that the qualification of each Director shall be the holding of ten ordinary shares of the Company.

The Articles provide that unless otherwise determined by the Company in general meeting, each Director other than a whole-time Director, of which there are at present two, shall be paid remuneration of Rs. 150 for each board meeting attended and that the whole-time Directors shall be subject to the sanction of the Central

IE VAZIR SULTAN TOBACCO COMPANY LIMITED—Cont'd.

preceding the date hereof or in the machinery and plant and equipment that will be purchased out of the proceeds of this issue.

Subscription: The amount being raised by this issue and by the preference shares already issued is required as additional working capital to finance the proposed modernisation programme which could otherwise only be financed by such reserves as could be set up over a period out of future profits within the restrictive limits imposed by Section 23A of the Income Tax Act. Although the full modernisation programme is estimated to cost Rs. 31,35,000 over a period of 3 years, the Directors consider that the minimum subscription upon which they can proceed to allotment is Rs. 15,00,000 of which Rs. 7,25,500 has already been subscribed by the present shareholders. The balance of the expenditure will, if necessary, be provided by the Company from its future resources. No other property is being purchased out of the proceeds of the issue, nor is there any uncompleted purchase or acquisition of property at the date hereof.

Borrowing Powers: The Articles provide that the Directors may from time to time raise or borrow for the purpose of the Company or secure the payment of any sums of money, such powers being restricted under the Companies Act, 1956 to an amount not exceeding the aggregate of the paid-up capital and free reserves of the Company.

Restrictions on Right to Transfer and Vote: The Articles of Association contain no restriction on the transfer of fully paid up shares.

The Directors may decline to register a transfer of any partly-paid up shares to a person of whom they do not approve and may also decline to register a transfer of partly-paid up shares on which the Company has a lien.

No member shall, unless the Directors otherwise determine, be entitled to vote at any general meeting, either personally or by proxy, or to exercise any privileges as a member unless all calls or other sums presently payable by him in respect of shares in the Company have been paid.

Contracts: The following contracts, not being contracts in the ordinary course of business, which are or

may be material have been entered into by the Company during the two years preceding the date hereof—

1. Agreement dated 12th June, 1956 between this Company, The Raleigh Investment Company Limited and The Imperial Tobacco Company of India Limited in which The Raleigh Investment Company Limited is granted the right to nominate any Company as the sole customer of this Company's brands of cigarettes outside the Union of India and this Company agrees not to carry on business outside the Union of India except under the terms of this Agreement.

2. Agreement dated 12th June, 1956 between this Company and The Imperial Tobacco Company of India Limited in which The Imperial Tobacco Company of India Limited is with effect from 1st November, 1956 appointed sole distributor of this Company's brands of cigarettes in certain areas of the Union of India and is authorised to manufacture those brands on the terms and conditions therein contained.

Documents: Copies of the Memorandum and Articles of Association of the Company, the original Consent Order of the Controller of Capital Issues, copy of the Contracts referred to above, the original of the Auditors' Report set out in this Prospectus and the Balance Sheet and Profit & Loss Accounts on which it was based can be inspected at any time from the date hereof until the subscription list is closed during the usual business hours at the Registered Office of the Company.

Application and Acceptance: Applications, which must be for 5 shares or multiples of 5 shares, must be made on the accompanying official form and will be refused if not so made. The application form, together with a remittance of the full amount payable on application, should be sent to the branch of the Hyderabad State Bank at Gunfoundry, Abid Road, Hyderabad, Deccan or to the branches of that Bank either at Secunderabad, Bombay or Madras, or to the branch of the State Bank of India at Sultan Bazaar, Hyderabad, Deccan or to the branches of that Bank either at Secunderabad, Bombay, Calcutta, Madras, Guntur, Kurnool, Vizakhapat-

nam or Vijayawada, the addresses of the branches of such Banks being shown on the reverse of the application form. The remittance if not made in cash should be made by cheque or draft drawn either upon the branch of the Bank to which the application form is being sent or upon a Bank situated in the same town provided that an application form being sent to the branch of the Hyderabad State Bank at Hyderabad, Deccan, may be accompanied by a cheque or draft drawn upon any branch of that Bank situated within the State of Hyderabad. Application forms sent with cheques or drafts drawn on Banks other than those stated above may be refused.

Cheques or drafts should be made payable either to the Hyderabad State Bank or the State Bank of India as the case may be for the credit of "The Vazir Sultan Tobacco Company Limited Account Preference Issue" and should for the applicant's protection be crossed "A/c Payee Only". A separate cheque or draft must accompany each application form.

Acceptance will be notified by the despatch of an Allotment Letter but the Directors reserve the full and uncontrolled right of accepting or rejecting any application in whole or in part. Where an application is rejected or not accepted in full, the whole or any balance of the application money received will be refunded to the applicant, in which event bank's commission, if any, will be payable by the applicant. Share Certificates will be available for issue in exchange for Letters of Allotment on or after 15th October, 1956, and each successful applicant for more than 25 shares will receive Share Certificates in lots of 25 shares, and such smaller denominations as may be required to complete the total number of shares allotted except when the applicants request Share Certificates in larger denominations. Such Allotment Letters and Share Certificates will be despatched by registered post at the applicants' risk.

Brokerage: Brokerage at the rate of Re. 1 per Share will be paid by the Company on acceptances made in respect of applications bearing the stamp of a recognised stockbroker.

Copies of this Prospectus and forms of application may be obtained from the Registered Office of the Company at Azamabad, Hyderabad, Deccan or from—

Dated 16th August, 1956.

I AGREE that today's London Conference will be the first great trial Indian statesmanship has yet had to face. I also share the view of responsible circles, both here and abroad, that India's part in this critical international drama is being handled splendidly. It is, perhaps, easier for a country which is not a party to a dispute, to take an objective view of it. But being in a similar position has not prevented other nations from losing sight of the real issues. It is a tribute to Mr. Nehru's sound commonsense that India now has her eyes fixed firmly on what are, for her, the two essentials—world peace and the maintenance of her own long-term interests. These days, of course, it is not only a country's statesmen who decide its policy; democracy means that the general public, through the Press, must have its say too. It was not to be expected that all India's newspapers, especially the so-called "popular" ones, would show the same objectivity; history is against it and the man in the street likes his politics presented in simple black and white. Only a mere handful of papers has really faced the choice between responsibility and asininity, and it is to their credit that so many have chosen the former. Many of the leading articles published by the better newspapers have been a credit to their objectivity and fairmindedness and a joy to read whichever side one's sympathies happen to be on. The same praise is, due to the work of India's correspondents and political commentators both here and abroad. But there have been exceptions and sometimes in places where they are least excusable. It is bad enough that, in certain places, personal prejudices and an inadequate grasp of the subject should be distorting what are being presented as responsible reports, but it is infinitely worse when the writer is using his opportunities to curry favour in high places. A balanced view of the London Conference is essential, but it will not be easy to obtain if the reports appearing in some of our best newspapers are to be used for the expression of the correspondent's own personality, and in one notable case for furthering his extra-journalistic ambitions as well. Such behaviour is not only unprofessional, at a time like this it is positively damaging to international relations.

As Mr. Nehru reminded India's cartoonists the other day, all capitalists are not pot-bellied, any more than all artists are long-haired. But a certain naïveté persists in the popular notion of "types" so I was, therefore, interested to see, in that very well-made film *The Man in the Gray Flannel Suit* that Mr. Fredric March, the big boss, does not bark his orders at his subordinates. There is something phoney, however, in the message of the film, which Mr. Robert Bingham sums up in that excellent American magazine *The Reporter* as: Be glad you are a drone. Contrary though it may be to everyone's notion of the American tycoon, of what is called the American philosophy of life, I would set it down as my belief that nowhere else in the world is failure so worshipped. And, let me hasten to add, this is slightly more revolting than the Americans' more famous *pujah* at the altar of success. What does Tom Rath, the hero in the gray flannel suit, do in the film? Admittedly, he quits a job on seven thousand dollars a year to take up another on nine thousand. Is he then set on the highway to success? No, sir; although success could be his for the asking, for he had won the heart of the boss by telling him (you'd be surprised) just how childish wrong he could be. Is Mr. Rath, said to be a typical American, dedicated to his job? Wrong again; he is, in the words of Mr. Bingham, "a family man at heart...will render grudgingly unto the bitch goddess no more than the hours nine to

A DITCHER'S DIARY

five." This is the other myth about existence in America and, even if this be a useful corrective to the high-pressed life there, the miseries of which are easily exaggerated, I can see this glorification of failure doing distinct harm here in India. Failure, let us admit it, is a beastly thing, and there is no truth whatever in the thesis that success, by its very nature, is a bad one.

I have never been one of those *blase* people who can read in an aeroplane—I prefer to look out of the windows. And one of the many things I do not like about air travel is that I can so seldom do so. That is why the movement which is growing in West Germany to risk another experiment with the Zeppelins, has its appeal for me. One of the big advantages of an airship is the uninterrupted view one can get from an armchair seat in the cabin; high speeds are not practical anyway so the small windows which go with high altitudes and pressurisation are simply not necessary. Another point in favour is extra room. For those who are impressed by statistics, an airship such as the one which is being tentatively planned at Friedrichshafen could provide thirty cubic metres of space for each passenger compared with the mere two available in the modern airliner. Better still, each traveller can have a separate cubicle. The main drawback is, of course, the time taken compared with present-day jet-propelled standards. An airship would take up to five times as long to make any given journey as one of the new jet airliners which will soon be in service. But it will do it at prices perhaps one-third the usual tourist fare. This is because the original cost of a dirigible is so much less than that of its heavier-than-air competitors, and it does not need expensive installations—a simple mooring mast in an ordinary field is all the landing equipment required. Airships have a bad record for safety, but their present-day enthusiasts claim that there is no need for the mistakes which caused the disasters of the thirties. A dirigible powered by diesel engines and filled with helium gas is, so they say, completely safe. They also point out, and I find this quite startling after the series of disasters we remember from twenty-odd years ago, that apart from the thirty-three lives lost on the LZ Hindenburg at Lakehurst in 1937, no passenger on a Zeppelin has ever met with a serious accident. It seems to me airships might have a place in modern transport, especially of the growing tourist kind where speed comes second to cheapness and a good view of what is going on. It may not be long before there is a real "see-the-world-by-Zeppelin" service. Large portions of the Zeppelin Foundation managed to survive the war so that some money is available, although not enough to rebuild a full-scale transatlantic airship service. The promoters of the plan hope that more funds will be raised if they are able to convince the world there is a future in this kind of travel. In the interest of larger windows and a better view of the earth below, all I can say is, in the words of a famous film cartoon character when asked to contribute towards a moon-rocket; "Here's my two bits".

I have a feeling the average man takes little interest in United Nations affairs. It is always "so far away", and the organisation has not yet evolved any adequate means of putting its activities over with the masses. For example, although in this city the U.N.I.C.E.F. frequently distributes milk powder and other infant foods, the beneficiaries scarcely ever know where they come from,

and all the credit is appropriated by the local agencies through which distribution is made. I believe this happens in most other cities and countries. If every distributing agency took care to tell the public that the supplies originate from a U.N. body, then the organisation would not be so remote; it might, eventually, be credited with concerning itself over matters not always politically utopian. These thoughts are prompted by the news that under the auspices of the U.N.E.S.C.O., the International Convention for the protection of cultural property in the event of the outbreak of an armed conflict, came into effect last week-end. I was rather surprised to note that most newspapers missed this important matter altogether, while the rest, with one or two exceptions, published it in inconspicuous corners. This seems to show that the Press itself often displays a regrettable apathy towards the U.N. The Convention is described as a kind of "cultural red-cross" among whose forty-four signatories are India, the U.K., the U.S.A., the Soviet Union, France, the German Federal Republic and Japan. It provides that in time of war works of art, monuments and historic buildings will get the same amount of consideration and protection as are accorded hospitals, ambulances and medical personnel—which is often disgracefully little. An international emblem, a flag with a blue and white shield, has been devised to mark property claiming immunity from attack, and an international register listing such property will be prepared under the auspices of the U.N.E.S.C.O. so that the signatory countries can take various measures for its protection. The idea is a good one, but it seems to me that hydrogen bombs are unlikely to be persuaded to respect works of art any more than they will the human beings who are trying to protect them.

My admiration for Mr. Mihir Sen is unbounded. It is not merely that he comes from Calcutta, but— and this is a much more important reason—he seems to know exceedingly well the art of taking the sting out of failure. There must be few under the sun who have got from success as much as he has from his lack of it. Since he failed to swim the English Channel last time he has had nothing but bouquets from the Press, or at least a large section of it. Mr. Sen, we are told, is now under training for his next attempt and he has already started giving his talks to Press representatives. I hope he will have better luck this time, but I wonder if he will gain more from success than he is used to doing from failure. If he succeeds, the story will be published in the newspapers only once and no more; whereas, if he fails he will no doubt go on getting himself written-up. Besides, possessing a mercurial temperament such as he appears to, he may console himself in the manner of the lover in Browning who, having scoured the mansion in search of his beloved and failed to find her, exclaims, "What chambers have I travelled through!" Connected with Mr. Sen's training is a fact which, I think, calls for comment. Mr. Billy Butlin, the organiser of the international cross-Channel swimming race, has banned the Egyptian contingent from participating in this year's event. The ground? The Suez Canal trouble. This seems quite fantastic and I am glad to note that the leading sports journals in Britain have pilloried Mr. Butlin for his stupidity. The ban has had the incidental effect of depriving Mr. Sen of the services of his Egyptian trainer. Such are the follies of rabid nationalism. Perhaps Mr. Butlin can be persuaded to do his country the honour of refraining from making her look ridiculous in the eyes of the world. It is to be hoped so—and quickly too.

All the State Governments reserve the right to retain subscriptions upto ten per cent in excess of the notified amount.

All the above loans will be repaid at par on 3rd September, 1968 except that of the Government of Bombay which will be repaid at par on 3rd September, 1970.

THE LOANS WILL OPEN FOR SUBSCRIPTION ON 3RD SEPTEMBER, 1956 AND CLOSE ON 10TH SEPTEMBER, 1956 OR EARLIER WITHOUT NOTICE AS SOON AS SUBSCRIPTIONS APPROXIMATE TO THE AMOUNT OF EACH ISSUE.

All the loans will bear interest from 3rd September, 1956.

Subscriptions may be in the form of CASH/CHEQUE in respect of all the loans. 3% BOMBAY GOVERNMENT LOAN 1956, 3% MADHYA PRADESH LOAN, 1956 and 3% MADRAS GOVERNMENT LOAN 1956 will be accepted AT PAR for conversion into the new loan of the Government concerned; interest on the securities of the respective loans tendered for conversion will be paid upto and including 2nd September, 1956.

3½% TRAVANCORE GOVERNMENT LOAN, 1956 will be accepted AT PAR for conversion into the new loan of that Government. In addition to the interest due on securities of that loan tendered for conversion, tenderers will be paid interest at the rate of 4 per cent per annum on the amount of the principal of such securities from 16th August, 1956 to 2nd September, 1956 inclusive.

APPLICATIONS FOR ALL THE LOANS WILL BE RECEIVED AT THE OFFICES OF THE RESERVE BANK OF INDIA AT BOMBAY, CALCUTTA, DELHI, MADRAS AND BANGALORE.

APPLICATIONS will also be received at PLACES WITHIN THE RESPECTIVE STATES as follows:—

(i) At the branches of the State Bank of India and at Treasuries and Sub-treasuries in the case of Andhra, Bihar, Bombay, Madhya Pradesh, Madras, Orissa, Punjab, Rajasthan, Saurashtra and Uttar Pradesh loans.

(ii) At the branches of the State Bank of India in the case of West Bengal loan.

(iii) At the branches of the State Bank of India and at District Treasuries only in the case of Madhya Bharat loan.

(iv) At the branches and treasury pay offices of the Hyderabad State Bank and at Treasuries and Sub-treasuries in the Hyderabad State in the case of Hyderabad loan.

(v) At the branches of the Bank of Mysore Ltd., in the Mysore State except at Bangalore and at Taluk Treasuries in the Mysore State at places where there is no branch of the Bank of Mysore Ltd., in the case of Mysore loan.

(vi) At Treasuries and Sub-treasuries only in the case of Travancore-Cochin loan.

Copies of Notifications and Application Forms may be obtained at any Receiving Office.

Our City Cable

UNCERTAIN MOOD IN STOCK MARKETS

ANXIETY OVER SUEZ ISSUE

London, 14th August. BUSINESS in the London Stock Exchange has been at a very low level during the past week. The markets continue to be overshadowed by the Suez Canal developments. Virtually all sections have lost ground with oils the chief sufferers. Share losses have been recorded in oils, but falls elsewhere have not been heavy. Oils suffered from heavy selling prior to the week-end, although this subsided subsequently and the prices then held fairly steady. Canadian issues also were a very active market, following investment and speculative buying. But buying tapered off later, particularly following the sales of U.S. Treasury bonds by the British Government, and the increase in the Canadian bank rate. Gilt-edged securities attracted modest demand prior to the week-end, but small gains were lost later when the support dried up and prices recorded little change on balance. Suggestions that there may be an autumn Budget did not help matters. Foreign bonds were subdued, and generally little changed on balance. Industrial equities attracted little attention although there was selective interest in American favourites such as Borax and a number of other issues. Prices in the industrial market were mostly lower, but falls usually were small. Gold shares drifted lower with the rest of the market, but coppers advanced before reacting and losing some of their gains in sympathy with the reaction in Wall Street. Other base metals moved uncertainly. Rubbers moved within narrow limits and similar conditions prevailed in tea shares, although the tendency in teas was slightly easier.

The Money Market

The market experienced a rather harrowing week. A heavy drain on the bank's cash resources due to revenue payments, created an acute shortage of funds against which the discount houses had to pay for a large volume of new bills in a shorter working week. Under the stress of demand for money, up to 5½ percent was paid for loans during the most difficult phase. The real crisis developed on Wednesday when credit supplies were so short, with no official assistance available, that most of the discount houses were forced to borrow a fairly large amount from the Bank of England for the week. This was due to a planned non-intervention by the authorities to assist the market during the following week when the banking system following the repayment of the non-assented portion of the National War Bonds, 1954-56, due for redemption on 15th August. Further penal borrowing had also to be undertaken on Thursday by a number of market houses, but on Friday, the situation took a comfortable turn with the volume of credit expanding sufficiently to balance with demand. In spite of the difficult week and high cost of money, the discount market made no change in its tender bid for the week's offer of Treasury bills and the average rate showed little change at 100s 5.84d percent. Applications for £280 million worth of 91-day bills totalled £409,905,000 and were allotted at an average rate of 100s 5.84d against 100s 3.79d in the previous week. Offerings this week comprise £280 million worth of 91-day bills. The Bank of England return for the week ended 8th August showed that bankers' deposits were about £11 million lower at £189 million, while notes in circulation were £2 million lower at around £1,977 million.

Rubber Market Irregular

In a nervous and unsettled market rubber prices moved erratically during the week ended 9th August and closed the period about 1d a lb lower on balance, having lost an interim gain of 2d. The market was virtually dominated by the Suez situation with prices moving unduly under the weight of selling or buying orders. Normal market influences were largely disregarded. Traders reported only occasional demand from the factories. Sole crepe remained scarce, and although demand was small, the offerings available commanded a small premium over recent values with 44d paid for 1½ inch smooth No. 1 on the spot.

Platinum Steady

The platinum market was steady with both primary sellers and outside dealers quoting \$103 to \$105 an ounce. Supplies were adequate for current needs, but not enough for inventory building. Petroleum industry and other industrial users continued to be substantial consumers, while demand from jewellery trade was seasonably light. Offers from Europe to the United States remained limited.

U.S. Federal Reserve Return

The U.S. Federal Reserve Return for the week ended 8th August shows that gold stock rose by \$26 million to \$21,655 million and foreign deposits fell by \$19 million to \$277 million, while foreign investments rose by \$24 million to \$3,703 million. The Federal Reserve neither bought nor sold bills during the week. Total discounts and advances rose by \$25 million to \$717 million, while the aggregate excess reserves of member banks rose by \$4 million to \$242 million. The daily average excess reserves of member banks rose by \$85 million to \$570 million, while their daily average borrowings rose by \$227 million to \$917 million. Business loans of the New York city banks fell by \$30 million to \$10,062 million, compared with the rise of \$80 million to \$8,163 million in the corresponding week a year ago.

Finance in India and Abroad

THE CALCUTTA MONEY MARKET

LITTLE CHANGE IN DEMAND

Tuesday, 14th August.

CONDITIONS in the money market continue easier, but the rate at which funds are returning from the various sources of demand is still slow for the time of year. The sugar industry is gradually decreasing its commitments, and there has been some further contraction in advances on account of grains and seeds. The interbank market is easier, and it is reported there are lenders over at the unchanged call rate of 3½ percent.

Activity in the bill market continues to be well maintained. A fair number of gunny documents has been seen and a rather better showing of tea and shellac bills is reported. Remittance has been normal. Sterling has remained steady after its sharp fall a fortnight ago, although the last few days have seen a limited renewal of selling pressure. The American dollar remains steady at Rs. 480½.

The Reserve Bank of India has announced that dealings in U.S. and Canadian dollars may, from 3rd September, take place at rates to be decided by prevailing market conditions. Dealings will continue to be regulated by the terms and conditions laid down by the Exchange Banks Association and all transactions will have to take place at or between the Bank of England's official buying and selling rates. It is hoped that this move will provide greater flexibility of operations to the exchange banks and dealers in U.S. and Canadian dollars. A certain amount of competition can be expected to take place among banks and authorised dealers. The decision does not involve any change in the Foreign Exchange Control regulation governing these two currencies.

Silver was firm on renewed support and advanced from the previous week's level of Rs. 171 to Rs. 171½, quoted today. The ready metal was quoted at Rs. 172½. The London price increased from 78½d to 79d. The price of foreign silver in New York rose from 90½ to 90½ cents.

Gold was steady in sympathy with silver and the price rose from Rs. 103-12 to Rs. 104-2. The sovereign at Rs. 67-2 was 6 annas higher.

The return of the State Bank of India for the week ended 3rd August, 1956, shows a rise of Rs. 1.74 crores in total deposits to Rs. 223.05 crores. Investments in Government securities are up by Rs. 5.61 crores to Rs. 94.83 crores, while other authorised investments are down by Rs. 4 lakhs to Rs. 11.25 crores. Advances, including loans, cash credits and overdrafts, and bill discounted and purchased, have declined by Rs. 10 lakhs to Rs. 126.34 crores. Cash and balances are, in consequence, shown at Rs. 14.43 crores, or Rs. 3.90 crores less.

The statement of the position of scheduled banks for the week ended 3rd August, 1956, discloses Demand and Time liabilities at Rs. 636.08 crores (Rs. 12.82 crores on account of borrowings from banks) and Rs. 458.08 crores (Rs. 3.86 crores), compared with Rs. 639.68 crores (Rs. 11.66 crores) and Rs. 456.97 crores (Rs. 3.56 crores), respectively in the previous week. Cash and balances with the Reserve Bank have fallen by Rs. 1.80 crores and Rs. 82 lakhs to Rs. 36.01 crores and Rs. 49.56 crores respectively. There is a rise of Rs. 7.96 crores in investments to Rs. 361.35 crores. Advances and bills discounted at Rs. 739.09 crores show a drop of Rs. 1.23 crores. The ratios to total liabilities of cash and balances, and of advances and discounts, are, in consequence, shown at 7.8 percent and 67.5 percent against 8.1 percent and 67.5 percent.

Up to the end of June, 1956, the Rehabilitation Finance Administration disbursed about Rs. 1,023.32 lakhs by way of loans to displaced persons. The amounts given to D.P.s from West Pakistan and East Pakistan were Rs. 709.96 lakhs and Rs. 313.36 lakhs respectively. The total amount of loans sanctioned by the Administration was Rs. 1,254.32 lakhs. Of this, Rs. 816.60 lakhs was sanctioned to West Pakistan D.P.s and Rs. 364.84 lakhs to those from East Pakistan. An amount of Rs. 72.68 lakhs was granted on 6,870 fresh applications from East Pakistan refugees. The total number of applications for loans received by the Administration by the end of June, 1956 was 87,375 of which 72,617 were disposed of.

RECORD U.K. STEEL OUTPUT

Steel production in the U.K. in July was at the rate of 326,000 tons a week, compared with 307,000 tons a week in the corresponding period of 1955—a record for the month. Announcing this, the British Iron and Steel Board says that total production of steel for the first 30 weeks of this year was 11,900,000 tons, compared with 11,300,000 tons for the same period of 1955—an increase of 5.3 percent. Production in July was at an annual rate of 16,900,000 tons, but in May it was running at the rate of 20,600,000 tons a year. It seems likely that a considerable increase over the 1955 output will be recorded in the current quarter—and also that the annual target of 21,000,000 tons of crude steel will be brought well within reach.

Engineering and Transport

**BRITISH AIRCRAFT ON SHOW
MOST REPRESENTATIVE EXHIBITION
LIKELY THIS YEAR**

THE Society of British Aircraft Constructors' exhibition this year at the Royal Aircraft Establishment, Farnborough, will be the largest yet. Some 338 manufacturers—20 more than last year—will show aircraft, components and equipment ranging from complete aircraft and engines to wine glasses, tools, wireless, television and radar equipment, lamps, propellers, flight instruments and components manufactured from unfamiliar metals. Complete engines will be shown by several manufacturers and all the bits and pieces that comprise these engineering wonders will also be on view. Joseph Sankey who manufactures components for Armstrong-Siddeley, de Havilland and Blackburn engines will be showing many of their products—combustion chamber casings, flame tubes and other parts with highly technical names.

Joseph Lucas will be exhibiting a wide range of pumps, one of which is capable of delivering fuel to an engine at 1,600 gallons an hour. Henry Wiggin will be showing samples of Nimonic alloys—a metal evolved in recent years to stand

up to the fantastic temperatures common in gas-turbine engines. An intriguing ram air turbine will be on view on the Plessey stand. Engine failure in an aeroplane may also result in hydraulic power failure, so Plessey have devised a ram air turbine, effective at up to 750 m.p.h. at sea level, that can be swung out into the airstream, thus providing necessary emergency power. Units of this type weigh about 18 lbs. and are due to be installed in several new aircraft.

Engine Testing Equipment

Other aspects of engine operation will be provided by Cementation Ltd., who will show examples of Muffelite test house silencing—a vital factor when testing engines of many thousands of horse-power—and British Thomson-Houston who are exhibiting a new design of engine starter. This starter, which uses liquid fuel, can be easily re-charged through pipes—unlike the more usual cartridge starter—its position being of relatively minor importance. A Murex ground power unit will be used to start many of the aircraft taking part in the flying display. Metals with weird names will be on view on the Accles and Pollock stand—tubes manufactured in niobium, titanium and zirconium, metals of particular interest to designers of aeroplanes of the future. Tufnol will be showing a variety of ways in which the substance that bears its manufacturer's name is being used in the aircraft industry. Tufnol is half the weight of aluminium, yet is extremely hard-wearing. In sheet form, it can withstand loads of up to 22,000 lbs. a square inch. It is used for gear-wheels, bearings and similar components that have to withstand great stresses.

Airframe equipment and components form the greater part of the exhibition. S. G. Brown will be showing their new "master reference gyro" which, the manufacturer says, is in advance of all similar equipment. Propellers will be prominent on the Rotol stand as well as the undercarriage of the Britannia airliner. Fireproof tanks will be showing a crash-proof synthetic rubber fuel tank which looks like a bulbous cushion, while Battewell will have on view Perspex champagne glasses, plates, cups and jugs weighing a mere ounce or two.

London Airport Activity

More than 100,000 Aldis signal lamps have been manufactured and a new model, five times as brilliant as its predecessor, will be on view. Lockheed-Avery will be showing a high pressure coupling designed for working pressures of up to 5,000 lbs. a square inch. Normal air will have an ejector seat on their stand containing a dummy fitted with the latest pressure suit and helmet, including ventilation and breathing equipment. One of the more spectacular exhibits will be Marconi's televised picture of aircraft activity in London Airport. Another stand that should attract attention will be Fairey's which will feature, among other things, the movable nose section of the F.D.2, holder of the world's speed record for aircraft. This, it will be recalled, is lowered 10 degrees when landing in order to give the pilot a good view of the ground. Outside, in the "Equipment Park," the Martin Baker ejection seat mobile training tower will be pointing skywards, mounted on a "Caution 60 ft. long" chassis. This may well be many a visitor's last impression of the most representative exhibition yet staged by the British Aircraft Industry.

CONTACTLESS SELF-WINDING ELECTRIC CABLE REEL

The presence of fine particles of dust in the atmosphere, due to sieving, grading and similar processes in the tea industry, constitutes a threat to the health of the personnel. In many industries special precautions have to be taken to protect them from this danger. An aspect which is sometimes overlooked is the risk of fire or explosion wherever concentrations of dust occur. Such concentrations are liable to collect on window ledges, roof trusses and shelves, and remain unnoticed until a serious accident is caused. The use of dust-tight equipment suggests itself as a means of overcoming this problem, with the employment of dust-extracting plant as a secondary precaution.

After all possible care has been taken in preventing dust formations, the second step is to ensure that the temperature never rises to ignition point by open lights, fires or smoking. Even a spark from iron boot-nail on concrete has been known to start a fire and any electric plant, where there is this dust risk, must be of a type incapable of igniting the dust. In this connection, mention may be made of the use of the "Wayne" contactless self-winding electric cable reel which has been specially developed for use in such circumstances. The design is similar in appearance to the normal slip-ring equipped pattern, but the rubber cable is not broken between the points of contact with the machine which is being supplied with current and where it is connected to the electric supply point. The advantages are obvious where operating conditions are bad and where dust might easily penetrate to the contact surfaces of the slip-ring gear. There is also another interesting version in which the cable is paid off in opposite directions, i.e., double acting, but in this case, the "Wayne" trailer reel must move along the R.S.J. which carries the hoist. Otherwise the cable attached to the supply point would sag as it is paid off the drum. The cable reels are manufactured by Power House Components Ltd., of Wayne House, Nottingham, England, and carry the registered trade mark "P.H.C."

Stocks and Shares

**SPECULATORS THRIVE ON SUEZ CANAL
CRISIS**
**EQUITIES BUOYANT: GOVERNMENT SECURITIES
CONTINUE DULL**

THE stock market has enjoyed distinctly brighter conditions during the past week. Operators have been influenced by improved advices from Bombay and, even more important, by the developments in the international situation. It is considered, rather illogically, that India's industries and exports stand to benefit if the position deteriorates to the point where stockpiling will begin. Such speculative counters as Indian Copper have firmed on these expectations and this scrip was quoted at Rs. 7-1 after hours this evening. Indian Irons have strengthened to Rs. 37-8 and other speculative shares are better in sympathy.

One of the more promising features of this week's trading has been the improved volume of investor support. This is not yet large and it still has a great deal of leeway to make up after the stagnant conditions of the past month or two. Engineering and miscellaneous counters have attracted the most interest, although there has been a marked stickiness about the prices of shares in the Mundhra group, which usually enjoy considerable activity. Both coal and jute shares have attracted more attention, but tea scrip have remained dull and neglected. The undertone of the market is distinctly steady.

Details of the week's trading follow.

Extremely dull conditions obtained in the Government security market and the undertone was quiet with a further fall in prices. Three percent Conversion Loan continued its downward slide to close 7 annas lower at Rs. 75-1 while 3% Non-terminable Paper was marked back in sympathy to Rs. 75-3. There was a small enquiry for short-dated loans, but prices were unchanged with 3% 1957 at Rs. 99-13 and 3% 1958 at Rs. 99-10. In the medium-dated group, 3% 1959-61 continued in demand at Rs. 98-2 but 3% 1963-65 had sellers over at Rs. 94-15 and 3% 1964 was marked lower to Rs. 95; 2½% 1961 was taken at around Rs. 93-7 and 2½% 1960 was marked at Rs. 96-6. In National Plan loans, 3½% 1961 was easier at Rs. 99-7 while 3½% 1964 turned sellers at Rs. 98-11; 3½% 1965 was quoted lower at Rs. 98-9 and 3½% 1967 was on offer at Rs. 98-7. In long-dated loans 3% 1966-68 was unchanged at Rs. 93-4 but 3% 1970-75 shed two annas at Rs. 90-3 and 3½% 1974 was marked down fractionally to Rs. 98-7. Following the announcement of the new State loans, sellers predominated in this section of the market and practically no business was reported. Four percent Madras Loan 1967 turned sellers at Rs. 99-10 and 4% U.P. 1967 was on offer at Rs. 99-12. In contrast, 4% West Bengal 1967 was asked for at around Rs. 100-2 while 4% Bihar 1963 had small buyers at Rs. 100-3.

Very little business was reported in preference shares during the week. Among the miscellaneous group, Aluminium Corporation 5% were marked at Rs. 100, Bharat Collieries at Rs. 55 and Calcutta Electric at Rs. 11-8. Equitable Coal changed hands at around Rs. 103 and F. & C. Osler were placed at Rs. 53-8. A small lot of Indian Aluminium was done at Rs. 85-3 and Indian Iron & Steel were crossed at Rs. 108. Jardine Henderson were slightly better at Rs. 67 and there was a good enquiry for New Victoria which improved to Rs. 6-3. Pussimbin Tea came to hand at Rs. 94 and Sodepore Glass at Rs. 39. In jute, Bally were done at Rs. 105, Budge Budge at Rs. 111, Lansdowne at Rs. 101 and Lawrence at Rs. 105.

In the banking section, there was a good enquiry for Hind Bank which were taken at the higher rate of Rs. 38. United Commercial were better at Rs. 59-8 while Punjab National met with some profit-taking at around Rs. 59. United Bank of India "D" shares changed hands at Rs. 4-8.

A solitary transaction was reported in railway shares, namely, Dehri Rohtas at Rs. 14-6.

In the cotton textile section, Kesoram were firm at Rs. 20 as were New Victoria at Rs. 2-13. Elgin Mills were unchanged at Rs. 28-3 and Cawnpore Textiles at Rs. 9-9.

In the coal section, Amalgamated were marked at Rs. 23 and Bengal at Rs. 538. East Indian were unchanged at Rs. 31-4 as were Equitable at Rs. 30-4. Raneeunge were steady at Rs. 13-1 and Standard at Rs. 26-4. Central India and Western Bengal were active and closed slightly better at Rs. 7-5 and Rs. 6-15. Karanpura Collieries were placed at Rs. 115 and Pench Valley at Rs. 22-12. Seebpore came to hand at Rs. 29-2.

Jute shares continued to meet with mild enquiry and prices on the whole were fairly steady. Here is a chart showing important price movements.

	Opening	Closing
	9-8-56	14-9-56
Anglo-India	171	175

Tuesday Evening.

National	25 4	25 14
New Central	17	17 6
Union	156	155

In electrics, Calcutta were steady at Rs. 14 while Jubbulpore were shaded at Rs. 14-4. Agra were unchanged at Rs. 158 as were United Provinces at Rs. 151.

The only feature in the sugar section was Purtabpore which improved from Rs. 16-8 to Rs. 17. Carew were subdued at Rs. 9 as were Bel-sund at Rs. 12 and Balrampur at Rs. 7-4. Ram-nugger were easier at Rs. 26-10.

Engineering shares were active under the leadership of Indian Iron & Steel which improved steadily to Rs. 37-8 under the influence of bull support motivated by the Suez Canal crisis. Braithwaites were steady at Rs. 29 as were Indian Standard Wagon at Rs. 187 and Textile Machinery at Rs. 24. Jessop recovered from Rs. 34-6 to Rs. 34-14 and Richardson & Cruddas from Rs. 24-4 to Rs. 25-6. Hooghly Docking met with keen enquiry at around Rs. 135-8.

In paper, India Paper Pulp were steady at Rs. 25-6 and Titagur were better at Rs. 42. Orient were enquired for at the higher rate of Rs. 40-15. Shree Gopal were crossed at Rs. 18-12. In cement, Dalmia were unchanged at Rs. 15-6 as were Sone Valley at Rs. 9 and Orissa at Rs. 15-6.

In insurance, General Assurance Society were dealt in after a considerable period at Rs. 25, New Asiatic were marked at Rs. 4-3 and Ruby General at Rs. 6. In shipping shares, India General Navigation were unchanged at Rs. 113 while India Steamship were quiet at Rs. 9-3. Port Shipping were shaded at Rs. 17-2.

Among miscellaneous industrials, Alkali & Chemical were marked at Rs. 21-10 while Aluminium Corporation met with good enquiry and

For every hour in the air, a Clipper receives two hours of maintenance on the ground.

**Every day Clippers must pass the world's
toughest fitness test**

Before and after each flight, a rigorous inspection is made of all operating parts. Even in flight, the state of a Clipper's* health is under constant scrutiny—through the electronic eyes of Pan Am's Engine Analyzer.

Every 11 weeks engines are taken down with critical interest. Instruments probe vital parts. From nose to tail each square inch is thoroughly inspected, every part replaced at the slightest drop from peak efficiency.

Exacting care like this is why experienced travellers will tell you, "Pan American knows how to run an airline!"

Let your Travel Agent arrange your trip—his services are free. Or call Pan American in:

improved from Rs. 11-1 to Rs. 11-12. Indian Aluminium moved up from Rs. 23 to Rs. 24-4. Anglo Brothers were well maintained at Rs. 24-10 and Airways (India) were done at Rs. 5-1. British Burmah Petroleum were unchanged at Rs. 4-5 as were Bengal Flour at Rs. 26-12 and Clive Row at Rs. 11-4. Assam Saws recovered from Rs. 3-14 to Rs. 4-8 on interested buying and business was reported in Dunlop Rubber at Rs. 29-12. Calcutta Tramways met with interested buying and were taken at the higher rate of Rs. 18. Hindustan Motors were fully steady at Rs. 10-8 while disappointment over the final dividend declared by the Imperial Tobacco Co. of India Ltd., brought the price of the shares back from Rs. 16-10 to Rs. 16-5. Indian Rubber Manufacturers were steady at Rs. 16-2 as were Indo-Burma Petroleum at Rs. 41-4 and Metal Box at Rs. 29-14. National Carbon were higher at Rs. 29-6 and Rallis were unchanged at Rs. 42. British India Corporation were quiet at Rs. 10-11. Electric Construction were done at Rs. 13-14. French Motor Car at Rs. 20 and Shaw Wallace at Rs. 13-8. Indian Cables were offered at Rs. 34-8 and National Insulated Cables at Rs. 25-12. Martin Burn and Jardine Henderson were unchanged at Rs. 24 and Rs. 99-8. National Tobacco met with good enquiry and were steady at Rs. 13-8.

In the mining group, Burma Mines were quoted at Rs. 3-5 and Western Stockholders changed hands at Re. 1. Indian Copper met with keen enquiry and improved to Rs. 6-15. Orissa Minerals were quoted unchanged at Rs. 27. Karanpura Development recovered from Rs. 21 to Rs. 21-6.

Tea shares presented an extremely dull market but there were small increases in prices of selected shares on account of bear covering. Mim were crossed at Rs. 296 and Tukvar eased to Rs. 13-8. Bishnauth Old changed hands at Rs. 24-4 and Brahmputra, after being sold down to Rs. 8-1, recovered to Rs. 8-5. Brooke Bond were fractionally better at Rs. 22-10 as were Dhelakhat at Rs. 22-12 and Grob "B" at Rs. 20. A small lot of Dessai and Parbutia were placed at Rs. 411. East India shed over a point to Rs. 23 while Jullibari were marked at Rs. 25-4, Methoni at Rs. 22-8 and Sapoi at Rs. 32. A small lot of Hoolungoree changed hands at Rs. 290 and Rajgarh were crossed at Rs. 42-12. Telojian were done at Rs. 27 and

Tezpor improved slightly to Rs. 24-6. Hantapara were marked up on bear covering to Rs. 197, as were Hasimara to Rs. 33. New Doars changed hands at Rs. 319.

Providing Rs. 2 lakhs (Rs. 2.85 lakhs) for taxation, Rs. 25,000 (nil) for general reserve, Rs. 67,500 (Rs. 72,500) for tax contingency reserve and Rs. 24,500 (Rs. 56,700) for development rebates reserve, there is a profit of Rs. 3,03,924 (Rs. 3,16,053) for the KUMARDHUBI ENGINEERING WORKS LTD. for the year ended last November. The ordinary dividend is the same at 8 annas a share, leaving a carry-forward of Rs. 21,425 (Rs. 32,501). The directors comment that following the publication of the second five year plan, it became obvious that the company's expansion plans would require revision and it was considered desirable to employ a consultant to devise means how best to expand. They are therefore considering proposals to expand the structural shop and the foundry.

Providing Rs. 51,573 for depreciation and Rs. 66,701 for the 1953 and 1954 labour bonus, there is a profit of Rs. 1,29,393 for the RAJGARH TEA COMPANY for the year ended last December. Bringing in Rs. 89,438, allowing Rs. 62,000 for taxation and transferring Rs. 75,000 to general reserve, there is Rs. 81,831. The dividend has been cut from Rs. 7-8 to Rs. 2-8 a share, leaving Rs. 31,831 to be carried forward. The crop increased from 4,767 maunds to 5,532 maunds but the average sale price fell from Rs. 34-11 a lb. to Rs. 2-2-8 a lb. Estimates for the current year have been made for a crop of 6,000 maunds at a cost of Rs. 7.57 lakhs.

The profit of the MURPHULANI (ASSAM) TEA COMPANY amounted to Rs. 2.58 lakhs for the year ended last December, after providing Rs. 16,277 for depreciation and Rs. 53,857 for the 1953 and 1954 labour bonus. Bringing in Rs. 50,536, providing Rs. 1.19 lakhs for taxation and transferring Rs. 1 lakh to general reserve, there is a balance of Rs. 90,276. The preferred ordinary dividend has been cut from Rs. 5 to Rs. 1-12 a share, and the ordinary dividend from Rs. 4-8 to Rs. 1-4 a share. The carry-forward is Rs. 33,401. Output increased from

4,497 maunds to 5,162 maunds. The average price fell from Rs. 2-11-1 a lb. to Rs. 2-7-7 a lb. Estimates for 1956 have been framed for a crop of 5,510 maunds at a cost of Rs. 6.86 lakhs.

Including Rs. 28,521 brought in, the profit of the REWA COALFIELDS, LTD. amounted to Rs. 5.25 lakhs for the half-year ended last December, against Rs. 3.32 lakhs (Rs. 22,975). Taxation absorbs Rs. 2.55 lakhs (Rs. 1.35 lakhs). Development reserve is allocated Rs. 75,000 (Rs. 50,000). The dividend has been raised from 8 pence to 12 pence, leaving a carry-forward of Rs. 26,029. Raisings increased from 164,865 tons to 183,555 tons, and despatches from 162,787 tons to 186,060 tons.

The SONE VALLEY PORTLAND CEMENT COMPANY LTD. raised its profit by Rs. 13,000 to 7.88 lakhs for the year ended last December. The taxation provision absorbs Rs. 2.35 lakhs (Rs. 3.18 lakhs). General reserve is allocated Rs. 1 lakh (Rs. 50,000). Rehabilitation of plant and machinery reserve costs Rs. 25,000 (Rs. 50,000). The dividend has been increased from 5 pence to 6 pence, to absorb Rs. 43 lakhs. The carry-forward is Rs. 41,941, against Rs. 88,454 brought in. Output declined from 196,910 tons to 195,000 tons, and despatches from 200,227 tons to 195,374 tons. Messrs. Martin Burn Ltd. resigned from the managing agency of the company at the end of July, and changes have taken place in the board of directors since then.

BOMBAY MARKET STEADY: GOOD CORPORATE PROSPECTS

STATE RIOTS CAUSE SOME HESITATION

Tuesday Evening.

TRADING on the Bombay Stock Exchange last week was interrupted by disturbances in Ahmedabad following the decision to establish a bigger bilingual Bombay State. As a result, working days were cut short, but the undertone nevertheless remained buoyant. Operators took an optimistic view of the bilingual State which, it is

believed, will ensure the smooth flow of commercial life. The stream of good company reports, higher dividend announcements and prospects of bonus issues helped to improve sentiment.

The textile group presented a steady appearance. A decline in exports of cloth during the first half of the year failed to discourage investors who took the view that the trade agreement between Burma and this country would result in greater offtake of Indian cloth. The internal market is expected to brighten up as soon as Pujā orders start coming in.

Tata Steels ended at Rs. 210-12 and profit-taking sales due to end-account considerations were absorbed without difficulty. Indian Iron shot up to Rs. 37-8 on firm buying support from Calcutta interests in the expectation that the company's results would show a substantial improvement for the year ended last March. Alcock Ashdown changed hands at Rs. 361-4, as did Premier Construction at Rs. 204-8. Tata Locomotive were maintained at Rs. 172 on investment support and Larsen and Toubro were steadily absorbed around Rs. 19.

Textile scrip closed with net gains on balance. Bombay Dyeing were taken at Rs. 696-14 and Century closed at Rs. 604 on strong professional support. Simplex changed hands at Rs. 216-8 and Swadeshi were transacted at Rs. 271. India United Ordinary were done at Rs. 14-5 and Tata Mills ended at Rs. 62.

Fluctuations in the miscellaneous group were irregular. Cement shares were steady, with Associated Cements coming to hand at Rs. 197 and Digvijay Cement at Rs. 201-8. Profit-taking took Tata Chemicals down to Rs. 20-8, but sugar shares were prominent on hopes of better working results.

Belapur were in demand at Rs. 254 and Walchandnagar Industries were absorbed at Rs. 273-12. Automobile shares were favoured, and Hindustan Motors improved to Rs. 10-8. There was little interest in shipping shares, and Scindia Steam Navigation were indicated at Rs. 19-4. There was a revival of interest in mining shares, and Indian Copper shot up to Rs. 7-5-6 on reports of increased metal prices. Sivrajpur Syndicate continued to be on offer at Rs. 90 following uncertainty about the mineral ores export policy. National Rayon were firm at Rs. 276 on strong professional interest. Sen-Raleigh, a newcomer on the list, improved to Rs. 14 on paying a maiden distribution.

Banking shares were steady, with Bank of Baroda making Rs. 105. Bank of India were transacted at Rs. 171-8. Insurance scrip lacked interest and routine business was done in New India around Rs. 49-8.

Electricity supply shares tended to be easier, and Ahmedabad lost at Rs. 98-12, while Tata Hydro were taken at Rs. 128-12.

THE WEEK'S TRANSACTIONS

(In the following list of stocks and shares in which transactions have taken place during the past week the figures indicate Opening Quotations. Highest for the week, Lowest for the week, Closing Quotations—Quotation for the Corresponding Closing Date a Year Ago, the last name being shown in parenthesis and will not be given where such a quotation is not available).

Commodity Markets

U. K. MAN-MADE FIBRES
INDUSTRY
PLACE IN THE ECONOMY

RECENT figures showing the increase in the production of man-made fibres in the U.K. are highlighted in a newly published booklet, entitled *Man-made Fibres*. It has been brought out by the Man-made Fibres Producers Committee. It is established that some £130 million of capital is employed in the production of man-made yarns and staples in the U.K., the booklet says. This represents about £2,250 for each of the 40,000 workers (including 10,000 women) who are engaged solely on operations directly related to the production of these goods. The gross value of production amounts to about £95 million a year. Last year exports of man-made fibres amounted to £50 million, while domestic consumption of the yarns and staples obviated the necessity for imports of natural fibres to a value of about £60 million. The cost of raw materials imported for the production of viscose and acetate rayons was £20 million, and there were imports of fibre, yarn, piecegoods, and apparel of a total value of £15 million. These imports and exports thus left a net contribution of £75 million to the balance of payments. It is also

noteworthy that the British man-made fibres industry spends an average of £3.5 million annually on research.

Broadened Range

Most of the firms producing man-made fibres also have other interests, including textile activities, such as yarn processing, weaving, knitting, dyeing, and finishing, while in addition, some are engaged in producing textile machinery, chemicals, transparent film and plastics. There are also indications that, especially among the smaller firms, the range of production is being broadened. The booklet says the position seems to be that on the basis of selling prices which have now been in force for five years, the production of standard types of rayon yarns for textile purposes is not considered to provide sufficiently attractive earnings. Efforts are being made, by increasing efficiency and by experimenting with improved processes, to gain more advantage from current prices, but there remains a strong incentive to seek other sources of revenue. Speciality yarns for ordinary textile purposes and yarns for industrial uses are being added to the range of production. Another activity is the processing of rayon and other man-made yarns to adapt them for knitters' or weavers' requirements. The booklet includes tables and charts which aid the reader to form a clear impression of the man-made fibre industry's place both in the national economy and in world trade.

WHOLESALE PRICE INDEX RISES

THE official wholesale price index (base: year ended August, 1939=100) advanced by 0.6 percent to 412.3 during the week ended 28th July, 1956, compared with 409.9 (revised) for the previous week. The index was higher by 2.6 percent and 15.4 percent respectively than those of the corresponding week of last month and a year ago. The average for July, 1956 worked out to 409.0 as against 397.9 (revised) for June, 1956 and 355.6 for July, 1955. Higher prices of tea (+9%) bajra (+8%); gur (+4%), and rice in Vijayawada (+1%) raised the index for Food Articles by 1.1 percent to 386.5 as against 382.3 (revised) for the previous week, although prices of wheat, gram at Hapur, dal arhar and salt (-1% each) showed declines. Prices of manganese ore (average export price) (+11%), groundnuts in Bombay (+4%), rapeseed and copra (+2% each) and raw jute, linseed, castorseed and lac (+1% each) moved up, while those of groundnuts at Cuddalore, gingellyseed and raw silk (-2% each) were marked down, and consequently the index for Industrial Raw Materials increased by 0.7 percent to 496.6 as compared with 493.2 (revised) for the previous week. The index for Semi-Manufactures advanced by 0.7 percent to 397.7. Items which exhibited significant variations were: gingelly cake (+8%), mustard oil (+4%), coconut oil at Cochin (+2%) and in Calcutta (-3%) and buff hides (-2%). The Manufacturers' index remained stationary at 386.0; the price of woollen manufactures, however, recorded a slight rise. The index for the Miscellaneous group moved up by 0.2 percent to 562.0 because of an increase in the price of betelnuts (+1%).

New Delhi

PROSPECTS OF RAISING LOANS IN WEST
EUROPEAN MONEY MARKETS

INCREASING RATE OF FOREIGN EXCHANGE EXPENDITURE

(FROM OUR NEW DELHI CORRESPONDENT)

THE Joint Secretary to the Finance Ministry, Mr. B. K. Nehru, has prepared a report on his recent visit to explore prospects of raising loans in the money markets of western Europe. During June and July, Mr. Nehru visited London, Paris, Brussels, Bonn, Zurich and other money centres to appraise the climate for floating loans to finance the second five year plan. According to reports, he found a large fund of sympathy and goodwill for India in the countries he visited. There is every hope that the talks he has initiated, if pursued, will yield definite results. There is reason to expect that part of the foreign exchange requirements for the second plan can be secured from those sources.

Originally, it was estimated that India would have enough foreign exchange to finance her development during the first three years of the plan. This was evident from the financial arrangements which were made in connection with the Durgapur steel plant. These arrangements, which Mr. Nehru finalised with the British Government and British banks in London, provide for loans in the third year of the plan. But expenditure of foreign exchange, it now seems, will be heavier than was originally estimated. From 1st April to 3rd August this year, India's drawings from the sterling balances amounted to Rs. 92 crores—an average of Rs. 23 crores a month, or Rs. 276 crores a year, against the plan estimate of Rs. 200 crores of drawings from the sterling balances over five years. It appears, therefore, that at the existing rate of spending, the non-currency reserve portion of the sterling balances may be exhausted by 1957, if not earlier. According to lobby reports, the Economic Secretaries of the Government of India have drawn up a memorandum on the foreign exchange position for the consideration of the Prime Minister. Negotiations for the purchase of U.S. agricultural surpluses—particularly wheat and cotton—on a long-term basis constitute one ray of hope in an otherwise gloomy situation. Agreement on this, if reached, should partially ease the difficulties.

Shortage of Port Facilities

Some more difficulties in implementing the second plan are now foreseen. A serious shortage of shipping is delaying the transport of machinery, railway material and other capital goods. If it continues, it might affect the pace of industrialisation and the speedy implementation of the railway plan. The inadequacy of port facilities, however, is an even bigger problem. Bombay's experience illustrates the point. The port there has a handling capacity of 30,000 tons a month for iron and steel. But arrivals were 47,000 tons in April, 52,412 tons in May and 53,314 tons in June. Iron and steel consignments awaiting clearance rose at one time to 49,000 tons. The situation eased slightly when about 35,000 tons were removed to another place—at a cost of about Rs. 12 a ton to the consumer. But the quantities awaiting clearance are still big, there being about 10,000 tons in the port and about the same at the dump. This gives an idea of the trouble which will arise when plant and machinery for new and expanding industries starts to arrive on a large scale. Calcutta, for instance, will have to handle the equipment for the Bokakata steel plant, the Durgapur steel plant and the expansion programme of Tatas and Indian Iron. The problem, therefore, is whether the plan provides for an adequate expansion of port facilities and whether there has been any serious effort to phase the import programme? As far as Bombay is concerned, the plan does not provide for an increase in its effective capacity. The Bombay port authorities have made it clear that they cannot handle more than 30,000 tons a month of iron and steel, but they are being called upon to handle 60,000 tons a month. These conditions are expected to continue for the next eight months at least.

The Transport Ministry has held the view that the broad aim of port development during the second plan should be the same as during the first plan—to render the existing capacity more effective by modernisation and replacement of obsolete equipment, without increasing the overall capacity. At the last session of the Federation of Indian Chambers of Commerce and Industry, it was pointed out that Indian ports were not in a position to handle the "millions of tons of machinery planned to be imported for industrialisation during the next few years." While the policy for port development was "improvements without effective expansion," payment for handling iron, steel and foodgrains was still made on the time-rate system, resulting in a very low standard of work. Shippers have submitted memoranda pointing to the organisational and other defects which delay the delivery of consignments after they have been cleared from a ship. The strength of a chain is limited by its weakest link, and it is feared that the whole plan might be wrecked, or might have to be curtailed, unless an expansion of port facilities and improvement in organisational methods are undertaken without delay. An enquiry into the need for port facilities in all its aspects has been suggested.

Securities Contracts Bill

The Securities Contracts (Regulation) Bill was passed by the Rajya Sabha last week and will be

come law soon. Stock exchange reform has a long history. Two committees, one presided over by Sir Wilfred Atlay, a former chairman of the London Stock Exchange, and the other by Mr. W. B. Morrison, who was also connected with the London Stock Exchange, carried out exhaustive enquiries into the affairs of the Bombay Stock Exchange in 1923 and 1937. After the war, the problem was examined by an Economic Adviser to the Ministry of Finance, and subsequently by an official committee consisting of representatives of the Government of India, the Reserve Bank and the Bombay Government in 1948. This committee was asked to examine specifically the desirability of prohibiting forward transactions in stock exchanges, of abolishing blank transfers, subject to certain exceptions, and of setting up clearing houses for the settlement of contracts—some of the major issues of stock exchange trading policy which have been the subject of much controversy. The committee made several recommendations, but took the general view that an essential pre-requisite for the introduction of reforms in stock exchange practice was a major reform of company law and practice. In 1951, another committee was informally set up to process the recommendations of the official committee and to prepare a draft Bill. Like its predecessor, this committee also considered it difficult to deal with the problem of blank transfers and other related issues of stock exchange trading policy, in the absence of certain conditions and institutional changes which it considered basic to any proposals for reform.

Another committee, under the chairmanship of Mr. A. D. Gorwala and including the presidents of the important stock exchanges, representatives of banking and insurance and of shareholders and accountants, was set up later in the year. It was asked to furnish a report on the recommendations of the informal committee of 1951 had prepared. The present Bill is largely based on the recommendations of the Gorwala committee and the draft Bill prepared by it. The report of this committee and the revised draft Bill were circulated to the principal stock exchanges, chambers of commerce and other interested associations and individuals. The comments they made were studied and analysed in the Finance Ministry, and were taken into account in the preparation of the Bill. The latter is thus based largely on the recommendations of the Gorwala committee and the draft Bill prepared by it, subject to modifications on a few important points for which the Government either considered it necessary to deviate from the recommendations of the committee or to defer action in the light of the comments and criticisms received.

General System of Control

A Bill was introduced and referred to a Joint Select Committee of both Houses in November, December 1955. The Rajya Sabha has now adopted this Bill, as amended by the Joint Select Committee. It is claimed that it does not provide for detailed or meticulous regulation of the day-to-day activities of the stock exchanges. Instead, it lays down a general system and apparatus of control, seeking to arm the Central Government with wide powers which will be exercised generally in consultation with the governing bodies of the stock exchanges, when the Government considers the use of such powers necessary either in the interests of legitimate business or in the public interest.

Clause 9 of the original Bill authorised a recognised stock exchange to make bye-laws for the regulation of contracts in securities, subject to the previous approval of the Central Government. The Select Committee has made three important additions to the matters enumerated under clause 9, for which the governing bodies of recognised stock exchanges may make bye-laws, subject to the approval of the Government. First, in sub-clause (2)(c) of clause 9, the Select Committee has provided for the publication, after each periodical settlement, of the following particulars relating to contracts in securities:

- (i) the total number of each category of security carried over from one settlement period to another;
- (ii) the total number of each category of security for which contracts have been squared up during the course of each settlement period;
- (iii) the total number of each category of security actually delivered at each clearing;
- (iv) the total amount paid as difference for each category of security.

Emergencies in Trading

The Select Committee suggested that the bye-laws relating to emergencies in trading should provide for such abnormal situations as might be created by the working of pools or syndicates, or by cornering or similar activities. It also provided for the making of bye-laws to separate the functions of jobbers and brokers. The object of the proposed publication of the trading statistics is to furnish an overall picture of the transactions in a stock exchange during a settlement period, which it was thought might be of help not only to the investing public but also to the Central Government in regulating trading activities in exchanges.

As for emergencies in trade, it was felt that it was desirable to provide specifically in the bye-laws for the manner in which situations created by the operation of pools or corners should be handled. The Committee also thought that, in the interests of the better organisation of stock exchanges, a beginning should be made in the bye-laws for separating the functions of jobbers and brokers, although it realised that, considering the present state of the exchanges and the volume of business in them, it might not be easy to separate these functions.

The most important amendments in the Bill made by the Select Committee were in the provisions relating to the licensing of dealers, in clauses 17 and 18 of the Bill. In the original Bill, spot delivery contracts would have been exempt from licensing provisions in areas where the Central Government had declared by notification in the official gazette that no dealings in securities should take place other than those between the members of the recognised stock exchange or through or with its members. But in areas covered by the notification under clause 13, all contracts, including spot delivery contracts, were to be subject to licensing. The Select Committee felt that this arrangement was discriminatory. Accordingly, it provided that ordinarily spot delivery contracts would be exempt from the provisions of the Bill, irrespective of whether such contracts were entered into in areas notified under clause 13 or not. But the Central Government would have the power to extend the licensing provisions of the Bill to such contracts—both in notified and non-notified areas—should it consider it necessary to do so in the interests of the trade or in the public interest.

Other Types of Dealings

As for other types of dealings in securities, they will be subject to licensing in areas notified under clause 17, namely, in areas where there is no recognised stock exchange; but even in these areas dealings in such contracts carried on by, or on behalf of, any member of the recognised stock exchange will be outside the scope of the licensing provisions of the Bill. The net effect of this provision is that spot delivery contracts, which will be free from any regulation, unless the Central Government considers it expedient to regulate such contracts in the interests of trade or in the public interest. Other types of contracts will, however, be subject to licensing, except in the notified areas, namely, in areas within the limits of the recognised stock exchanges, where the responsibility for regulating such contracts would necessarily be that of the governing body of these exchanges. As a corollary to these amendments, the Select Committee inserted a new clause 19 in the Bill, which prohibited the setting up or maintenance of non-recognised stock exchanges in any State or area except with the permission of the Central Government. Under the original Bill, there was a risk of non-recognised stock exchanges springing up in non-notified areas under the guise of licensed dealers or in places where provisions for recognition and/or licensing had not been made applicable.

Kerb Trading

The Select Committee elaborated the provisions of clause 23, the effect of which is to strengthen considerably the scheme of regulation envisaged in clauses 13 to 19 of the Bill. These amendments penalise "kerb" trading and/or touting by persons who are neither members of a recognised stock exchange nor licensed dealers nor their authorised agents. Similarly, the penalties contained in clause 23 have been extended to the owning or keeping of places used for the purpose of entering into contracts in securities in contravention of the provisions of the Act, as also to the managing, controlling or assisting in the keeping of such places. Another important amendment of the Bill relates to clause 27. The clause, as originally drafted, debarred holders of shares on blank transfers from claiming from the registered shareholders, after a prescribed limit of time, not only the dividends accruing on these shares but also any bonuses and other rights as might attach to them. The Select Committee recognised that the original draft was intended to act as a severe deterrent to the holding of shares on blank transfers for indefinite periods, but it felt that if the prohibition embodied in this clause were to extend beyond dividends to bonuses and other rights attaching to shares, it might in some cases involve the holders of such shares in heavy capital loss. In view of its positive recommendation that the life of blank transfers should be limited to a period of six months, the Committee felt that it was not necessary to impose such a disproportionately heavy penalty on the holders of such shares. Accordingly, it amended clause 27 so as to confine its application only to the receiving and retaining of dividends on such shares.

The Select Committee deliberately refrained from making any statutory provisions for those reforms in stock exchange trading methods and practices which were the subject of much controversy in the past, such as blank transfers, badlas or carry-over facilities, margins, clearing houses, etc. It has, however, made a suggestion to the effect that the currency of blank transfers should be limited by bye-laws to a period not exceeding six months. It will now be for the Government to pursue this suggestion, and to examine the other problems relating to trading methods and practices in consultation with the stock exchanges concerned.

Drug and Pharmaceutical Industries

An expert delegation consisting of 10 officials and non-officials will be leaving soon for Russia, Eastern and Western Germany, Switzerland and

Cool filtered water
for office or factory

'Tushar' WATER COOLERS

— by the makers of the famous 'Crystal' air conditioner

"Tushar" water cooler increases staff efficiency, helps to improve quality of work — quickly pays for itself in goodwill

- **Instantaneous cooling:** Continuous supply of instantly cooled water at the touch of a button — no unhygienic refilling or storing
- **Two models available:** Model R-10, capacity 10 gallons per hour (180 cupfuls per hour); and Model R-40, capacity 40 gallons per hour (720 cupfuls per hour)
- **Easy to install:** Needs only a water supply, a drainpipe and an electric plug point

- **Economical to run:** Cools to the temperature you choose, then switches off automatically

Silent working—Anti-splash construction—Handsome design

'Tushar' WATER COOLERS

VOLTAS

Italy to study the production techniques of the drug and allied industries, and to hold discussions with leading manufacturers on India's plans for developing these industries. A seven-man Russian team, which recently carried out an extensive survey of the pharmaceutical industry in India, has already submitted its report to the Government here. The team studied the question of manufacturing penicillin, streptomycin and other antibiotics, important vitamins, analgesics, anti-pyretics, anti-malarials, anti-T.B. drugs and glandular products.

The Russian experts consider that there is every scope for producing in India essential drugs of common use in adequate quantities for the population; this applies also to the intermediates required for the production of these drugs with mainly local raw materials. The production targets for essential drugs set in the second plan are not considered adequate. They have, therefore, sug-

gested higher targets, taking into consideration the future requirements arising from health measures. The following suggestions have been made to attain the targets they have recommended:

1. Expansion of the plants in Pimpri at a cost of Rs. 3.5 crores: (i) To step up the production of penicillin at the Hindustan Antibiotics factory from the present level of 15 million m.u. to 40 million m.u. a year; (ii) to build units within this factory for the production annually of 45 tons of streptomycin, 40 tons of tetracycline and 3 kg. of vitamin B12, (based on the quantity of waste products available); and (iii) to set up a unit at the plant in Pimpri for the production of vitamin D2 with a capacity of 1,000 kg. a year.

2. The establishment of a new antibiotics plant at a cost of Rs. 8.5 crores to produce the following: penicillin, 60 million m.u.; streptomycin, about 45 tons; new antibiotics, approximately 20 tons; vitamin B2, approximately 2 tons; and dextran, 500,000 litres.

3. The setting up of a new synthetic drug plant at a cost of Rs. 11 crores to produce the following: synthetic drugs 2,300 tons a year; and intermediates required in small quantities 2,300 tons a year.

4. For the production of endocrines: (i) to set up a plant for the production of endocrines at the new slaughter house being planned in Bombay. (A two-storeyed building with a total floor space of 1,600 metres and volume of 8,000 cubic metres has been suggested); (ii) the provision of the following facilities in slaughter houses of big cities is necessary: (a) cold storage with a capacity of 60 cubic metres (consisting of a freezing room at -25 to -30 deg. C.) and a storage room for glandular raw materials at -10 to -15 deg. C.; (b) refrigerator cars to transport glandular raw materials to centres of processing; (iii) as an immediate measure, to collect pituitary glands from the animals slaughtered in big slaughter houses, store and transport them in acetone in hermetically sealed containers, and to organise their processing to produce A.C.T.H. in the laboratories of the Haffkine Institute, Bombay. The Haffkine Institute has almost all the equipment necessary to carry out the technological processes, including biological standardisation.

Possible Savings

5. It has been suggested that savings from these schemes will result in the following ways: (i) by the construction of plants at a cost of Rs. 23 crores, it will be possible to produce the most essential drugs adequately to meet the demands of the population and to obviate the necessity of importing drugs to the tune of Rs. 27 crores a year, calculated on the basis of prices of 1955 imports; (ii) the plan for producing these drugs provides for bringing into commission the various units of production in suitable stages; (iii) tentative calculations made by the experts on the basis of data for the industry used in Russia show, that ex-factory costs of production will not be higher than the present imported prices, and in some cases they will even be considerably lower. The estimated cost of production of streptomycin is nearly half the imported price. In the case of P.A.S. and aspirin, the estimated prices are 20 percent and 17 percent lower than those of imports.

6. The construction of a special factory at a cost of Rs. 11.5 crores for the production of basic chemicals and intermediates on a large scale is suggested. The total output of this plant will be 94,000 tons a year, including 58,400 tons to be utilised within the factory for conversion into intermediates, 17,700 tons to be supplied to the chemical pharmaceutical factory, and 15,500 tons to be made available to the dyestuff, plastic and other industries. The construction of this factory should be carried out in two stages. In the first stage, 63,000 tons of chemicals and intermediates will be produced, 41,000 tons of which will be utilised in the factory itself, 10,400 tons supplied to the chemical pharmaceutical plant and 11,600 tons made available for other industries. The capital investment for the first stage of construction is estimated at about Rs. 8.5 crores. Tentative calculations made by the Russian experts show that the cost of intermediates in this factory, when it is in full production, will be Rs. 2.4 crores less annually than the value of those calculated at the existing price. Thus, after four or five years of working, the saving in the cost of production, when compared with the imported price, will completely make up for the capital investment. In addition, the availability of cheaper intermediates will ensure a further reduction in the cost of drugs.

Expansion of Other Industries

7. The following are the allied industries which will require expansion:

(i) **Chemical industry:** For the production of essential drugs, 33,400 tons of various other raw materials, besides the intermediates and basic chemicals made available from the intermediates plant, will be required. For the factory manufacturing intermediates, about 59,900 tons of basic chemical raw materials will be required. Thus, the total requirements of other raw materials to be supplied from other units in the country will be 93,300 tons a year. A preliminary study of the possibility of obtaining these raw materials shows that 69,000 tons a year, made up of 32 items, can be supplied from the existing plants. For the supply of 10,800 tons of raw materials, made up of 23 items, it is necessary to expand or install new capacities at the existing plants. The rest of the raw materials consisting of 29 items can be met by imports for the present. The volume of these imports will go down with the development of the domestic chemical industry.

(ii) **Engineering industry:** The expansion of the existing plants and the construction of new

ones will call for a considerable amount of extra equipment. A tentative calculation shows that the following equipment will be required: Hindustan Antibiotics, Pimpri, 1,000 tons; new antibiotics plant, 2,500 tons; and chemical pharmaceutical plant, 1,000 tons. For this equipment will be needed about 3,500 tons of mild steel, 700 tons of stainless steel, 700 tons of glass-lined equipment and about 2,500 tons of equipment provided with drives. It is difficult, at this stage, to estimate the amount of equipment required for the intermediates plants, for the expansion of the existing pharmaceutical units and for the required expansion of other industrial plants. But it will be more than that required for the plants producing drugs. A considerable amount of the equipment required is comparatively simple to construct and can be fabricated in India. The existing engineering works producing chemical plants do not produce standard equipment like vacuum drum filters, compressors, vacuum pumps, dryers, etc. Therefore, it may be necessary to include, in plans for the development of the engineering industry, adequate scope for the construction of a special factory for the production of chemical equipment also.

(iii) **Repair shops:** As the construction of engineering works will require considerable time, mechanical repair shops of adequate size should be planned at the pharmaceutical and intermediates units to carry out repairs and to produce such small-sized chemical equipment as may be required. These shops should be built prior to the construction of the main plants in the factories, so as to arrange to meet, partly at least, the requirements of simple equipment needed during the construction stage. The mechanical repair shop should have a special anti-corrosive department where equipment can be repaired and coated with corrosion-resisting material.

Project Reports on Dyestuffs and Raw Film

The Government of India feels that it is now on a strong wicket as far as the dyestuffs and the raw film industries are concerned. Project reports for the former have been received from Imperial Chemical Industries and from a West German firm, Bayers. Another report from an Italian company is expected soon. Project reports for the raw film industry have been received from an East German company. The Secretary of the Commerce and Industry Ministry, Mr. H. V. R. Iengar, held discussions while in Europe with the representatives of the companies which have submitted project reports. The reports are now being examined in order to reach final decisions.

Bicycle Manufacture

Permission has been accorded to manufacture 60,000 bicycles a year in collaboration with B.S.A. of the U.K. A company is being floated to take over the assets of the Hindustan Cycle Corporation and undertake the manufacturing programme.

New Aluminium Plants

Two aluminium plants with a capacity of 10,000 tons each—one for the south and the other for the north—have been planned in order to attain self-sufficiency in this metal. Mettur in Salem district, Madras, which has very high quality Bauxite, and Churk in Mirzapur district, Uttar Pradesh, have been selected for their location. Both the proposed plants are on the sites of hydro-electric projects—Rihand in the north and Pyar in the south. A 10,000-ton plant has been sanctioned for the Hirakud area in Orissa. The capacity of the Asansol plant is being doubled to 5,000 tons.

Indian Delegation to I.M.F. Meeting

India's delegation to the coming meetings of the International Monetary Fund and the World Bank will include the Governor of the Reserve Bank, Sir Rama Rau, the Joint Secretary of the Ministry of Finance, Mr. B. K. Nehru, and Mr. Venkatapayya of the Reserve Bank. The delegation will leave for Washington on 18th September.

State Trading

State trading is intended to promote consumer interests, it is claimed here. Foreign importers of manganese ore, for example, were so far at the mercy of the Indian exporters some of whom were speculators. Often, the latter, it is stated, could neither ensure timely delivery nor reasonable prices. In fact, the present prices of manganese ore are considered too high, and had State trading not been introduced, the Government would probably have levied an export duty. Now, efforts are being made through State trading to reduce prices to a reasonable level and to ensure regular supplies. State trading, it is explained, is not intended to supplant private trading, but to supplement it and give a fair deal to the consumer. The Federation of Indian Chambers of Commerce and Industry, which will be holding a special meeting on 25th August to discuss the issue, should also declare the steps it has taken to introduce healthy trading practices among its members. It is suggested here. One view is that the Government has had to step in because of the unwillingness of the Federation to take unpopular steps. The cases of soda ash and caustic soda are cited as examples. There were constant complaints of high prices and cornering before the Government intervened and canalised their import. Blackmarketing in cement is widespread. The Government, it is gathered, has decided to fight it out with vested interests in order to reintroduce healthy trading practices and to ensure for the consumer the prompt supply of certain commodities of recognised quality and quantity at reasonable prices.

London

CITY HOPES FOR PEACEFUL SUEZ SOLUTION

LABOUR OUTLOOK REMAINS UNCERTAIN

(FROM OUR LONDON CORRESPONDENT)

THERE is little or nothing to report on the economic front these days, for markets are still hesitant on account of the Suez Canal situation, but, and this may not be without its significance, not at all panicky. Indeed, if the reactions of the City can be taken as any guide, there would appear to be good prospects of the international conference achieving a peaceful settlement of the problem to the advantage of all the parties concerned. Meantime, however, it is appreciated that the military precautions which the British Government has felt it was essential to take in the circumstances may involve some postponement of the Chancellor of the Exchequer's planned economies in Government spending. It is understood, however, that the possible disorganisation of the programme is being kept down to the absolute minimum, and the effects of this might well be offset by the greater unanimity engendered on matters of national policy by the latest crisis, which is even more important from the economic than the political point of view.

The labour outlook, unfortunately, continues to be most uncertain, and is not likely to be greatly influenced by the decision of the Board of Triple Safety Glass Company to reduce its dividend in spite of higher profits in order to demonstrate "financial restraint", in response to the Prime Minister's recent appeal. Efforts to settle the British Motor Corporation dispute over compensation for redundant workers, despite protracted negotiations between the employers and trade union representatives, have not succeeded though they have not yet been abandoned. It is evident from the latest Ministry of Labour figures that so far as the credit squeeze was aimed at diverting labour to essential industries it is beginning to show some results. The number of unfilled work vacancies reported to employment exchanges at the end of June was 54,000 fewer than a year ago, and in the Midlands (where the car industry has been involved) the drop was 17,500, though there are still 38,828 jobs to be filled. Overall unemployment on 16th July was 238,137, or 1.1 percent of the estimated working population, compared with 1 percent on 11th June and 0.9 percent in July, 1955. The numbers temporarily stopped, however, were 45,437, 33,049 and 19,226, respectively. In the first six months of this year, compared with a year earlier, employment increased in shipbuilding, coal-mining, iron and steel melting, constructional engineering, railways, and telegraphic apparatus. On the other hand, employment fell in vehicles, furniture, wireless apparatus, valves and batteries, and china.

Coal and Steel Output

Coal and steel production figures are undoubtedly the most important pointers to our economic well-being, and on the whole these are being well maintained so far this year. To date this year coal production is more than three million tons higher than at the same time last year, with a labour force nearly 3,000 fewer. Output a man shift at the coal face is now 3.35 tons against 3.26 tons last year. Total distributed stocks on 28th July stood at 18,448,000 tons, against 14,278,000 tons at the same time in 1955.

Despite the trouble with the maintenance men, now over, steel production in July was again higher than the same month last year, with the average weekly output standing at 328,400 tons, an annual rate of 16,971,000 tons against 307,700 tons and an annual rate of only 16,002,000 tons. This falls a long way short, however, of this year's output aim of 21 million tons, which means that a real spurt will be needed in the remaining months. In view of this fact it is encouraging to learn that consumers' stocks of steel continued to grow in the second quarter, though not as fast as in the first quarter when there was an exceptional growth equal to 7.6 percent of stocks at the beginning of the year. There are still shortages of the heavier products, such as plates and sections, but imports of these have been almost doubled this year.

Industry's Capital Plans

The way in which the Government's restrictive measures have affected industrial capital expenditure plans can now be seen in more detail. According to the latest Board of Trade enquiry, about one-third of all companies operating in manufacturing industry have revised their estimates of capital outlay in 1956 upwards; one-quarter of these companies revised their estimates downwards. The revisions were made between the end of last year and the end of April, 1956. Among those who have reduced their estimates of 1956 expenditure on new plant, machinery and vehicles, and building work, was the motor industry. Firms in that industry indicated late in April that they expected to spend 22 percent more (instead of 30 percent more) this year than their estimates for 1955, which were supplied about a year ago. For all manufacturing industries, the 1956 capital outlay is expected to be 21 percent (instead of 17 percent) higher than the figure for 1955, established last summer. This shows that in the first four months of this year, when the credit squeeze was beginning to work, a fair number of industrial plans

were reduced. But it shows also that an even larger number of plans were enlarged during the same period. That is just what the action was meant to achieve, though whether the "right" kinds of plans were reduced and enlarged is anybody's guess. Actual expenditure for plant and equipment, etc., during the first quarter of 1956 was not yet affected by any doubts. It was 27 percent higher than in the first quarter of 1955—the same percentage rise as between the calendar years 1955 and 1954. Compared with the first quarter of 1955, manufacturers this year spent 23 percent more on plant and machinery, 9 percent more on vehicles, and 47 percent more on building work. There was a drop of 12 percent compared with the fourth quarter of 1955, but it might be misleading to take this as evidence of a declining trend, because many companies do not enter their expenditure into capital account until the end of their own financial year, and December sees a particular concentration of such entries.

Rubber Footwear Monopoly

Talks between members of the Rubber Footwear Manufacturers Association to fix prices for rubber boots and canvas shoes are condemned in the latest report by the Monopolies Commission. All except two of Britain's rubber footwear manufacturers (British Bata Shoe Co. and Future Rubber Co.) are members. The report also condemns as being against public interest the understanding among the Association members not to negotiate special prices with traders for large orders without notifying each other. It says the practice should stop. Another practice that should be discontinued, says the report, was that, resumed in 1952, of announcing prices for summer and winter seasons, then maintaining them unchanged through the seasons.

In 1954, the report says, nearly 11 million pairs of rubber boots and 27 million of canvas footwear, representing a £15 million turnover, were supplied to the British market. Of these, the Association members supplied about eight million pair of rubber boots and 15 million of canvas footwear. The other principal suppliers were importers, with 2½ million pair of rubber boots and seven million pair of canvas footwear, mainly from Hongkong. Dunlop was "by far the largest British manufacturer" of either type of rubber footwear. The Association argued strongly, says the report, that its price discussions did not restrict competition and that the absence of them would not result in a lower level of prices, nor make any difference to price uniformity in standard lines. The Commission's report states, in answer to this argument:

"We do not doubt that when there is one powerful producer other producers may be anxious to avoid price competition with him. But 'price leadership' in the sense the term is used by the Association means something different from the operation of perfect competition in a free market. What in fact it appears to mean in this context is a tacit agreement by 'competing' manufacturers to observe, irrespective of their own costs, prices set by Dunlop on most lines and North British for over-shoes."

Bank of England's Report

The increased use of sterling in international trade owes much to the re-establishment of London's traditional markets. The Bank of England's report for 1955 shows that in spite of all the difficulties of that year, more and more of the world's business was being done in sterling. There was a "substantial increase" in the turnover on the gold market and London is now "re-established in its former position as the leading world market for gold." Business in the foreign exchange markets continued to expand and the turnover in United States dollars rose by about 40 percent. In the commodity markets, the volume of business went up by about 30 percent from £299 million to £393 million. A large part of the increase was due to the extension of the sugar scheme to the American account area (so that Cuban sugar, for example, could be resold to Australia) and to the introduction of a copra market scheme in December, 1954. For the rest, higher prices and increased turnover in copper and rubber offset declines in cocoa and coffee. Meanwhile, the transferable account area was extended in July to include Turkey. Until the trouble over the Suez Canal and the consequent removal of Egypt from the transferable account status, it covered the whole non-sterling world outside the dollar area.

The Bank's report includes the usual estimates of the United Kingdom's overseas investments, but the figures are of limited use as they are in nominal values and up to the end of 1954 only. They show that during 1954 security holdings abroad went up by £111 million to £2,128 million. Most of this was due to capitalisation issues and only £26 million of new money is estimated to have been invested. For 1954 the total of interest and dividends received showed an appreciable increase at £186.4 million, compared with £161.7 million for 1953. Among the new figures contained in the report is last year's total of £176 million for United Kingdom merchanting transactions carried through on a sterling basis between non-sterling area countries. This figure compares with £163 million in 1954 and £142 million in 1953.

For those you leave behind

DO you realise that you expose those who depend on you to grave risks, by failing to make immediate arrangements for their welfare, when you are no longer there to look after them yourself?

If you haven't yet done so, please make a will — or execute a Trust in their favour — now!

The administration of estates is a highly complicated matter these days, and it would be difficult to find a better Executor or Trustee than a bank which is always accessible, and which can be depended on to act with prudence, sympathy and impartiality. A bank is human — but it never dies.

The State Bank of India accepts appointment as Executor and Trustee, solely or jointly with any other person — and its services are at your disposal.

Why not call on your nearest Bank Agent or send for a copy of the Bank's Booklet on Executor and Trustee business?

STATE BANK OF INDIA

Largest of the Indian Joint Stock Banks

NATIONALISATION AND LIBERTY

MR. M. R. MASANI STRESSES DANGER OF OVER-CENTRALISATION
(FROM OUR BOMBAY CORRESPONDENT)

IN an address to the Rotary Club recently, Mr. M. R. Masani of Tatas supported the concept of a mixed economy for India. Emphasising the dangers of indiscriminate nationalisation, he said: "If the balance of the mixed economy under which India has advanced during the past eight years is further upset and we drift to a situation where peasant proprietorship, free enterprise and the free trade unionism that stands or falls with it are destroyed, then, however noble the intentions of those who pursue those policies and however great their love of justice and freedom, a blow will have been struck at the free way of life that not even the Constitution of the Republic will be strong enough to avert." Mr. Masani challenged the assumption that a completely nationalised or socialised economy is compatible with the kind of political liberty the people of India enjoy today. Mahatma Gandhi had recognised this danger at an early stage and had warned against over-centralisation. Mr. Jaya Prakash Narain the Socialist leader, who could hardly be credited with pro-capitalist sentiments, had also said: "The welfare State, under the name of welfare, threatens as much to enslave man to the State as the totalitarian." Mr. Masani pointed to the dilemma facing the British Labour Party and quoted Mr. R. H. S. Crossman, a left-wing Labour M.P., as saying: "The State bureaucracy itself is one of those concentrations of power which threatens our freedom. If we increase its authority still further, shall we not be endangering the liberties which we are trying to defend?"

Public Opinion

In taking this stand, Mr. Masani fully endorsed the views of the Forum of Free Enterprise, which had undertaken the task of "educating public opinion". It is as well that public attention has

been drawn to the political implications of a completely or a predominantly socialised economy. The fact that those in power today are genuinely devoted to the cause of individual freedom does not exclude the possibility that in certain circumstances a different administration might easily become authoritarian. Such a situation could be a logical result of over-centralisation. Mr. Masani pointed out that restraint could be exercised only by a freely functioning Opposition. The existence of "countervailing power" could be assured if there were in society a number of relatively autonomous social forces, such as industrial management, trade, organised labour, the professions and peasant proprietors. These alone, said Mr. Masani, could provide the checks and balances necessary to curb power. In a free and competitive society, the worker has the right to choose and change his job and, if need be, to strike. Mr. Masani asked that if only one employing authority were left in the country, would the worker be allowed to shift at will from one job to another and would the State permit workers to go on strike and thus upset the national plan? Would the peasant, once he was persuaded to become a member of a collective or co-operative farm, be allowed, if he wished, to withdraw from it and have his original plot of land restored to him?

Consumer Supremacy

Today, the consumer was supreme. He was able to cast his vote as a citizen, and decide how much he would spend, on what he would spend and what he would save. Because of the law of the market—the law of supply and demand—and the discipline of the balance-sheet, it was the consumer who decided for the entrepreneur whether to produce and what to produce. Once, the law of the market ceased to operate, how, asked Mr. Masani, were those at the helm of the omnipotent State to determine what goods to produce and what priorities to establish? What yardstick would help in the exercise of these wide and arbitrary powers? Was it likely that a comprehensive order of values in which every one of the people's needs would be given proper priority could be democratically established through Parliamentary discussions? While Parliament may vote on a Bill clause by clause, would not Parliament voting and amending a comprehensive plan clause by clause make nonsense of it? In such a situation, Mr. Masani said, the so-called experts would be in a position to claim that they knew best, and would thus be able to impose their personal or group preferences on the community as a whole.

Changing Capitalism

Those who urge widespread nationalisation seem to ignore the fact that a profound change, has occurred within the capitalist system itself. The growth of the trade movement, for instance, has placed a formidable weapon in the hands of labour. Collective bargaining is not only possible, but is widely practised. Minimum wages related to the cost of living index, hours of work, bonus payments, leave rules and other amenities are factors which the modern industrial employer is compelled to consider. Exploitation of labour, such as took place in the early years of the Industrial Revolution, is almost impossible. The existence of industrial courts and wage tribunals ensures a square deal for the worker who is protected by a mass of labour legislation. Apart from the compulsory measures, an employer today is sufficiently enlightened to understand that labour relations are a vital factor in modern production. Many of the fundamental assumptions of Marxist theory have become invalid with the development of Parliamentary democracy based on adult franchise. It is within the competence of a fully elected legislature, returned by popular vote, to enact laws which ensure social justice. The most stringent supervision can be exercised over free enterprise by a wide cross-section of society without strangling it completely and handing over absolute economic power to a bureaucracy.

If the object of a socialised economy is the greatest good of the greatest number, then it is possible to bring about a welfare State without the drastic step of nationalisation.

Evils of State Capitalism

Mr. Masani said that there were many people in India, including some in office, who, while sharing a distaste for the system of State capitalism and State landlordism as developed in Russia and China, still wanted the country to press forward towards the socialisation of all large-scale industry and the establishment of co-operative farming. A Government delegation had been sent to communist China to study her so-called "co-operatives," which were nothing but collective farms on the Russian pattern. Recent encroachments by the State in various spheres, such as life insurance, the export of iron and manganese ore and the distribution of cement, raised the question where the process would stop, Mr. Masani said. Could one preserve political freedom while hacking away merrily at its economic foundations? While those in office, or in control of the ruling party, have no intention of imitating the Russians, it is open to question whether, by their support for certain policies actuated undoubtedly by the urge to ensure social justice, they were not in fact creating conditions whereby the liberties guaranteed by the Constitution may be imperilled.

The Burmah-Shell Loughborough College of Technology Scholarships for 1956 have been awarded to Mr. G. V. Mohan of the Banaras Hindu University and Mr. P. B. Jayakumar of the Mysore University. Both the selected candidates hold first class degrees in mechanical engineering.

Jute

I.J.M.A. TO SEAL 5 PERCENT OF LOOMAGE FROM MID-SEPTEMBER

FIBRE ARRIVALS IN COSSIPORE REMAIN AT HIGH LEVEL

THE Indian Jute Mills Association Committee proposed on Tuesday the sealing of 5 percent of the mills' total loomage from 17th September. The costly experiment of expanding production which began just over eight months ago is thus shortly to end. Exactly a month ago, the jute industry sealed 2½ percent of its loomage. That reduced the monthly rate of production by between 2,500 and 3,000 tons. The latest move, when it takes effect, will reduce it further by about 5,500 tons. Many jute mills have been suffering serious losses in recent months because fibre has been firm while gunnies have been weak. It is expected that the disparity between the prices of the two will be corrected by the latest production cut. It has for some time been clear that the industry has been producing jute goods well in excess of demand; stocks, mainly of sacking, have as a result been accumulating rapidly over the past few months. It is to be hoped that with smaller gunny stocks in mills' godowns, and cheaper fibre as the weight of the New Crops arrives in the markets, more profitable working will be restored to the industry. Production during July was maintained at a fairly high level in spite of part of the month being worked with 2½ percent of the loomage closed down; at 94,000 tons, it was about 5,000 tons less than in the previous month. Mills' stocks of jute goods, however, as reported previously, rose by 8,800 tons, which demonstrates the extent to which the industry has been over-producing.

The fibre markets, although dropping 8 annas a maund over the week, showed a steady undertone. Mill interest fell to a certain extent, but small imports in the agencies, and heavy covering in the local markets against recent quick delivery contracts, prevented prices from falling. In Cossipore, wagon arrivals were again maintained at a high level which appeared to belie the sellers' contention that there is a wagon shortage. Arrivals are well above those for the corresponding period of last year, and are only very slightly less than the maximum number that can be handled on any one day. Stocks, however, have not increased as all imports have found ready buyers, and total holdings in Cossipore are lower than normal for the time of the year. Imports into some upcountry Assam agencies have fallen, and prices have tended to increase rather than follow the Calcutta markets, so the disparity between the two has widened. Sellers have still a large number of low-priced contracts to deliver this month, but it seems most unlikely that these will be fulfilled with prices at the present level. In many cases, mills are depending on these supplies to see them through, and if they are let down again they will have no recourse but to turn to the local markets. The prospects have caused local sellers to hold very reserved and bullish ideas, and counter-bids from mills have met with very little success.

THE JUTE MARKETS

Manufactured Goods:—The only change in prices in the gunny market at the opening last Thursday was in near delivery heavy goods, where heavy speculative transactions caused August shipment B Twills to drop by 10 annas to Rs. 105-2 a 100 bales. Forward shipment was unchanged and was quoted at a premium of 6 annas over near deliveries. The only change in hessian was a loss of 1 anna in the near position which brought 40in. 100z. down to Rs. 38-13 a 100 yards for August shipment, this being 1 anna higher than January-March shipment. Overseas interest was negligible. In the absence of any real goods support, operators began to unload their holdings on the fatka market, which again depressed prices. By Friday, heavy goods had suffered a further setback of 6 annas in the ready position and 12 annas in forward shipment. Hessian did not respond to fatka promptings and the only reaction came from August 11 porter constructions which fell by 1 anna to the rate for forward shipment. Towards the evening, the market recovered as rumours about the re-sealing of looms gained ground. This was confined mainly to sacking, as hessian moved up on its own account on reports of big business with the U.K. Both near and forward shipment 100z. jumped by 4 annas, bringing prices to Rs. 39, which is the highest recorded for 3½ months. There was very little activity over the week-end, but a steady undertone developed in both sections due to speculative covering.

Towards the close, the jute goods market was very steady due to the loom sealing move and quotations on Tuesday morning were as follows:

	August	September	Oct.-Dec.	Jan.-Mar.
	Rs.	Rs.	Rs.	Rs.
40in. 80z.	32-4	32	31-12	31-10
40in. 100z.	39-5	39-7	39-8	39-4
B Twills	105-6	105-12	106-2	105-8
Heavy Cees (Plain)	104-8	105-12	106-2	105-8
A Twills	128-8	129-8	130-8	129-8
Liverpools	118	119	120-8	119-8
Cornacks	106-8	106-8	106-12	106-8

Raw Jute: There was very little activity in the fibre markets last week and quotations dropped by 8 annas a maund from the opening price of

Rs. 28-8 basis Bottoms for Assam jute. Sellers were not discounting rates, however, and several attempts to make them do so met with no success, as local markets were being kept up by continuous buying pressure from operators with quick delivery obligations to fulfil. Shipment jute from agencies was very slow in coming due to the high prices ruling upcountry. Mills were being flooded with requests to accept alternative, and very often inferior, types of fibre which sellers had shipped against contracts at prices within their range, rather than forgo their wagon allocations.

The main business was in ready bills of lading. Transactions of this nature passed for Dhubri, Northern and Assam jute at prices between Rs. 28 and Rs. 29-4 a maund basis Bottoms. Forbesganj and Purnea jute of Desal quality was also done at Rs. 28 to Rs. 28-8 a maund for 15 days' shipment. Small lots of Daissee white changed hands at Rs. 28-8 a maund for one month's shipment, and Daissee Mesta (Old Crop) at Rs. 27-8 to Rs. 28 a maund. In the pucca bale section, Pakistan Mill Firsts were bought at Rs. 192-8 to Rs. 195 a bale for one month's shipment after the date of the letter of authority, and ready bills of lading for Pakistan Cuttings were taken up at Rs. 130 a bale.

At the close, the raw jute markets were unchanged and quotations on Tuesday were as follows:

Indian Jute (New Crop):	Landed at Mills Rs. a md basis Bottoms.	Shipment.
Lower Assam	28	August-Sept.
Northern	28	"
Murshidabad White	28	"
Daissee White	28	Sept.-Oct.
Daissee	28	August
Local Northern (Old)	28	Sept.-Oct.
Bimal (New)	26-8	"
Tossa is quoted at 8 annas to Re. 1 a maund above the price of white jute.		
Pucca Bales (New Crop):	Rs. a bale.	Shipment.
Mill Firsts 2/3	185	August-Sept.
Mill Lightnings 2/3	170	"
Mill Hearts 2/3	155	"
S.G. Daissee	175	Sept.-Oct.
L.G. Daissee	160	"
Pakistan Jute (New Crop):	Rs. a md.	Shipment.
Jat	31	August-Sept.
District	30-8	"
Northern	31	"
Pucca Bales	Rs. a bale	Shipment.
Mill Firsts 2/3	195	August-Sept.
Export Firsts 2/3	175	"
Export Lightnings 2/3	160	"
Jat Cuttings	127-8	September.

In Cossipore, the markets are steady and although wagon arrivals have dropped slightly over the week to about 700, they are much higher than normal for the time of the year. All imports have been taken up immediately, as there is still a strong demand for quick delivery jute. As a result, prices have shown very little change, and at the close Kishenganj jute was quoted at Rs. 28-12 a maund for garsat quality.

Mofussil: Upcountry markets are unchanged. Imports into the main Assam agencies are negligible, but continue to improve in the western districts. Very little business has been reported, as current rates are too high for sellers to cover against existing contracts. At the close, quotations in Dhubri were based on Dhubri at Rs. 26 a maund basis Bottoms.

Raw Jute Consumption

The consumption of raw jute by mills reporting to the I.J.M.A. in July 1956, the first month of the new season, amounted to 548,603 bales for a 200-5-hour working month. This was 27,997 bales less than in the previous month, which had 206 working hours. In July 1955, consumption was 490,303 bales for a 200-5-hour working month.

I.J.M.A. PRODUCTION FIGURES FOR JULY

The Indian Jute Mills Association reports the total production of jute goods for the month of July, 1956, as follows:

Description	Quantity
1. Twist and Yarn	1,817 tons
(a) For Sale	
(b) All others—including that used in sewing bags	1,296 tons
2. Canvas	204 tons
	5.2 lakh yds.
3. Gunny Bags (Tonnage exclude sewing twist)	
(a) Hessian	4,626 tons
	1,697 lakh yds.
	80.4 lakh Nos.
(b) Sacking	51,518 tons
	12,204 lakh yds.
	5,363 lakh Nos.
4. Gunny Cloth	29,488 tons
(a) Hessian	11,550 lakh yds.
	1,330 tons
(b) Sacking	22.9 lakh yds.

5. Other manufactures (including ropes)	3,778 tons
6. Total production (above figures combined)	
(a) All kinds	94,057 tons
(b) Hessian (both bags and cloth)	13,20.4 lakh yds.
(c) Sacking (both bags and cloth)	12,53.3 lakh yds.
(d) Canvas (both bags and cloth)	5.2 lakh yds.

Summary

	(00,000 Yds.)			(000 Tons)		
	July, 1956	June, 1956	July, 1955	July, 1956	June, 1956	July, 1955
Hessian	13.26	13.79	12.97	34.3	35.0	34.3
Sacking	12.53	13.69	10.87	52.9	57.3	45.0
Others				6.9	6.6	4.8
Grand Total				94.1	98.9	84.1
Hours worked				200.5	206.0	200.5

N.B.—These statistics are based on replies received and represent all members of the Association and Gagalbhai with estimates for three non-member mills.

GUNNY SHIPMENT STATISTICS

The following figures include coastal shipment relating to manufactured jute goods for shipment from the port of Calcutta. These are gross figures based on shipping bills presented:

	Hessian		
	Bags (Tons)	Cloth (Tons)	Total (Tons)
1st to 5th August, 1956	1,065.3	10,330.8	11,396.1
1st to 5th July, 1956	664.8	8,406.1	9,070.9
1st to 5th June, 1956	814.6	11,053.2	11,867.8
	Sacking		
	(Tons)	(Tons)	(Tons)
1st to 5th August, 1956	7,714.1	932.5	8,646.6
1st to 5th July, 1956	8,156.1	766.0	8,922.1
1st to 5th June, 1956	5,786.4	374.7	6,161.1

THE FOREIGN JUTE MARKETS

BUSINESS BRIGHTENS UP

(FROM OUR DUNDEE CORRESPONDENT)

DUNDEE spinners and manufacturers have resumed business after the holidays under much brighter conditions than those prevailing a fortnight ago. No doubt the conditions surrounding the Suez Canal have influenced buyers of jute yarns and cloth to replenish their stocks, which they had allowed to fall to dangerously low levels. Hitherto there has been little or nothing to fear on the score of any increase in prices for productions, but this week the tendency of raw jute prices to advance has been steady and there is a rise of £2 to £3 a ton on white jute. Dark jute is not in demand and no change can be recorded in Daissee and Tossa grades. Spinners, though they have sold more yarns, are not inclined to follow the rise in prices for the fibre, as they are already hard put to it to make ends meet. There may be a change in the fixed minimum rates for yarns and cloth if the raw material goes up much further. Mill Firsts are quoted at £93 for August-September, Mill Lightnings at £85 and Mill Hearts at £80 a ton, c.i.f. U.K. There is not much offering for this early position and for September-October sellers would accept £1 less in each case. A good deal of jute was sold for shipment July-August, but it is evident that a lot of this material will be late in leaving Pakistan.

Calcutta goods have maintained their prices very well over the past two to three weeks. Little change is noticed in the quotations at 59s for 40in. 100z. Hessians and 45s for 71oz., August, 59s and 44s 9d September, and 59s 3d and 44s 3d October-December, with B Twills at 161s, 161s 9d and 162s for the respective positions of shipment, all f.o.b. Calcutta. Not until the holidays were nearly over did buyers of jute yarns and cloth show any real desire to purchase their requirements on a larger scale. In weaving yarns, there has been quite a brisk business done on the basis of 14.77d for 8lb. spools, and 14.19d for 8lb. cops. Twist has continued very quiet but firm, as are prices for all qualities of jute yarns. A large enquiry prevails in the market for cloth and considerable orders have been placed for common Hessians in various widths and weights at firm prices.

BAG SUPPLIES RISE IN HOLLAND

Prosperity in the potato trade has brought about a steep increase in the number of bags at present in circulation in the Netherlands. In the first quarter of 1956, compared with 4 million in the similar 1955 period. Consumption of bags during February and March totalled 9.4 million of which 5.4 million were new and 4 million used. Imports during the same period were 7.55 million made up of 2.95 million new and 4.6 million used bags. The Netherlands exported 55,000 new bags and 3.4 million used during February and March 1955.

CALCUTTA TEA AUCTIONS
IN JULYSTRONG GENERAL DEMAND: C. T. C.
TYPES OUTSTANDING

THERE was a strong and general demand throughout the month for all good liquoring teas, though plain and thin liquoring kinds received only limited support. C.T.C. teas were an outstandingly strong feature and met with keen buying competition at rates up to Rs. 5 a lb. and more for the best, say Messrs.

Messrs. Harrison & Crosfield Ltd., Quilon

Carritt Moran & Co. Private Ltd., in their monthly tea market review, Assam teas of standard manufacture with useful quality were also well supported at dearer rates as quality improved. Tippy teas continued to realise very high prices, although there was slightly less demand for these kinds towards the end of the month. Stylish whole leaf grades received strong support though the more ordinary kinds met with only a fair demand. Small black fannings with useful colour liquors were also a very strong feature, though the plain nondescript types were rather neglected until the last Sale of the month when they received a little more attention. Darjeelings enjoyed a good market and the most flavoury kinds realised very high prices.

Darjeeling Leaf appearance continued to be of a high standard and there has been quite a good show of tip in the high grades from a number of estates. Quite a number of invoices possessed very attractive flavour and cup quality generally was of a fair average standard. The increased offerings from Assam districts showed a marked improvement and included a useful selection of good liquoring second flush teas of both C.T.C. and standard manufacture. Tippy teas were also in plentiful supply. A further falling off in leaf appearance of Doors teas was in evidence during the month, particularly in the lower grades which were often dull in colour and open in make. The liquors, with a few exceptions, were rather plain and uninteresting. Leaf appearance continued to be well maintained, but the liquors from most estates were plain in character.

Internal Sales

During the month of July, five Leaf sales were held and offerings amounted to 2,058 packages of new season's and 801 packages of old season's manufacture. The selection was of a poor standard and consisted mainly of stalky and fibrous grades. Demand was very irregular and easier. Dust offerings totalled 56,550 chests of new season's and 12,621 of old season's manufacture. In the first Sale of the month, there was only a fair demand apart from black leaf types suitable for the Middle East and useful C.T.C. Assams which sold at dearer rates.

The remaining offerings were generally 2 annas easier and withdrawals for common teas were considerable. Over the next two sales, demand for Middle East types and C.T.C. Assams rose considerably and they were quotably dearer, but common and low mediums declined further. In Sale No. 7, there was a sudden decline for C.T.C. Assams and they were 4 annas easier, but the remaining offerings were well supported and were firm other than for the poor liquoring types. In the final Sale, there was a poor demand with very little support for Middle East types which were a full 4 annas lower with heavy withdrawals in this category. C.T.C. Assams also declined by 4 annas and mediums were 2 to 4 annas easier. Commons were however fully firm, and the commonest types were selling at dearer rates.

Quotations									
				Rs. As. P.			Rs. As. P.		
				1956			1955		
Sale No. 4	Clean	Common	Dust	1	6	0	2	3	9

Sale No. 6	"	"	"	1	5	0	2	6	3
Sale No. 7	"	"	"	1	6	3	2	5	6
Sale No. 8	"	"	"	1	6	9	2	5	3

Export sales up to No. 7 totalled 149,683 chests at an average price of Rs. 2-7-5 compared with 202,716 chests at an average price of Rs. 2-10-4 a year ago. Internal sales at 2,110 chests of Leaf and 34,543 chests of Dust (Rs. 1-9-11 and Rs. 2-1-7) go against 6,050 chests and 42,685 chests (Rs. 1-12-1 and Rs. 2-6-6), in the corresponding period of last year.

Business in Export Quota was transacted at the beginning of the month at 32 pies a lb. Prices rose slightly in the first week, however, to 36 pies a lb., but declined steadily thereafter to 27 pies a lb. at the close.

The estimated north India crop to the end of June, 1956 was 125,068,130 lb., as compared with 115,331,888 lbs. to the same date last year. The average figure at this date for the three years 1953-1955 was 113,233,907 lbs.

The Government of India has issued a notification fixing the price of tea for the purpose of determining the export duty at Rs. 2-4-5 a lb. as against Rs. 2-13-11 a lb. in force from 1st July, 1956. The export duty, therefore, still remains unchanged at 6 annas a lb.

Arrivals (in chests) in Calcutta warehouses during the period 24th June, 1956, to 23rd July, 1956, with the corresponding figures of the previous year in parentheses, were as follows: by steamer 251,218 (279,708), by rail 60,905 (66,736) and by air 11,147 (17,754), making a total of 323,270 (364,198) chests. Since the beginning of the season, 1st April, 1956, to 23rd July, 1956, arrivals have been: by steamer 362,108 (435,032), by rail 141,139 (126,418) and by air 32,207 (44,752), making a total of 535,454 (606,202) chests.

NORTH INDIAN TEA CROP REPORTS

The following is a summary of crop and weather telegrams received for the month of July, 1956:

Upper Assam: Weather generally seasonable but hot at Doom Dooma; unusually heavy rain with floods reported from Doom Dooma and Soma; outturn last month normal to good; immediate prospects fair to good; outturn to date slightly over last year at North Lakhimpur.

Central Assam: Exceptionally heavy rain and dull conditions reported; Moran Circle isolated by floods; severe damage on Sibsagar Road reported; outturn last month about normal; immediate prospects fair.

Lower Assam: Outturn last month about normal; immediate prospects fair to good; weather generally favourable, but rainfall deficient at Mangaldai; red slug light but looper attacks heavy at Borsola.

North Cachar: Weather seasonable at Lakhimpur, but otherwise unfavourable; outturn last month normal to good; crop prospects generally favourable; heavy rain with floods reported from North Cachar and Happy Valley; black rot and helopeltis prevalent in some districts, but blight less severe in Lakhimpur.

South Cachar: Weather generally favourable but wet at Longai; heavy rain with floods reported from Chutia; outturn last month about normal; immediate prospects fair; black rot prevalent throughout the district; red spider blight lifting in most districts.

Eastern Doors: Weather favourable but dry at Jainti; outturn last month normal to good; immediate prospects good; outturn to date slightly over last year.

Central Doors: Weather seasonable; outturn last month normal to good; crop prospects generally unfavourable at Binnaguri but good at Dalgao; outturn to date slightly over last year; helopeltis prevalent at Binnaguri.

Western Doors: Outturn last month normal to good; outturn to date is considerably over last year; black rot prevalent in some portions of the district; slight helopeltis at Chalsa; crop prospects generally favourable.

Darjeeling: Outturn last month good; immediate prospects fair; weather favourable; blight blight prevalent.

Total: Rainfall below normal; outturn to date above normal; crop prospects fair; helopeltis prevalent.

RAW RUBBER IMPORTS

Under the import policy for the current half-year, it had been announced that the import of raw rubber would be canalised on a basis to be specified later. The question has now been reviewed and the Government has decided that imports of the following grades of raw rubber will be licensed to actual users on an ad hoc basis: (a) Crepe rubber other than sole crepe; (b) sheet rubber; (c) scrap rubber; (d) latex; (e) synthetic rubber; and (f) reclaimed rubber. Import licenses will be given subject to the conditions which the licensing authority may impose. Applications from actual users for importing the above grades should be sent to the Chief Controller of Imports and Exports, New Delhi, before 10th November, 1956.

Calcutta Markets

DEMAND FOLLOWS QUALITY
AT TEA EXPORT SALE

STRONG SUPPORT FOR DUSTS

AT Sale No. 10, held on 13th and 14th August, offerings at the Export auction consisted of 50,000 packages for which there was a good demand, but buyers showed keen discrimination for quality. C.T.C. Assams showed a slight decline in quality and prices were up to 4 annas a lb. lower. The orthodox manufacture of Assams with quality liquors were well supported, and were fully firm, while Doors and clean plain broken were up to 2 annas dearer. A particularly strong feature of the Sale were clean black fannings, which were generally 2 to 4 annas dearer and sometimes more. Stylish whole leaf grades were 1 to 2 annas easier, while the more ordinary kinds were slightly easier. Darjeelings once again received good support, but there was less demand for tip.

Quotations	Rs.		
Clean Black Pekoe	1	15	0
Plain B.P.	1	10	0
Medium Assam B.P.	2	6	0 to 2 8 0
Best CTC Assam B.P.	4	0	0 to 4 8 0

At the Internal Sale, Dust offerings consisted of 15,000 packages for which there was a strong and active demand at generally dearer rates. Middle-East types were a very strong feature and advanced by 4 annas to 8 annas. C.T.C. Assams were well supported, especially the leafy types which were dearer, but the remainder in this category were easier. Medium Assams with useful liquors were 2 annas to 3 annas dearer while poor liquoring mediums were fully firm. Clean Cachar and Doors teas were 1 to 2 annas dearer, while there was a keen enquiry for residue types which sold at dearer rates.

	Quotations		Rs.	
Medium Doors Dust	1	10 0	to 1	10 6
Medium Assam Grainy Dust	1	12 0	to 1	13 0
Medium Assam C.T.C. Dust	2	10 0	to 2	14 0
Best Assam C.T.C. Dust	3	8 0	to 3	10 0

Leaf offerings consisted of 889 packages for which there was a fair demand. Clean teas were slightly dearer, but there was little demand for the grainy teas on offer.

SELECTIVE RISES IN FREIGHT
MARKETS

THERE were no important developments in the freight markets last week, although a few charterers had to pay up for ships to replace those recently requisitioned by the U.K. Government. Churchill-U.K. had to concede an increase of 10s at 97s 6d for grain to the U.K. and Cuba-Japan sugar was up 15s at 180s for a spot vessel. Owners' ideas for Calcutta-Karachi coal are now 88s, but charterers are still talking 76s to 77s, and are unlikely to concede more. Whampoa-Columbo repeated 80s f.i.o.s. for August shipment. The American coal trade was steady at 70s for Continental destinations and quieter conditions prevailed in the Indian ore trades due to the uncertainty over export quotas. Little interest was shown in the Time Charter section where a Liberty was fixed at 45s for an Indian round trip, delivery Rotterdam August.

SUGAR MARKET EASY

During the week ended 14th August, sugar sales in the Calcutta market averaged 3,500 bags daily. Arrivals a day were 5,000 bags and stocks totalled 175,000 bags. Rates for ready sugar ex-Kantapur delivery were Rs. 31-4 for ordinary grain and Rs. 33-2 for big grain. The market was quietly easy, the rates of big grain sugar having fallen by 4 annas to 8 annas.

LINSEED EASIER

After a very firm opening, conditions became slightly easier last week although prices were maintained. Supplies were still scarce and local crushers were fairly keen for the nearer positions despite the somewhat poorer offtake of oil. In the oil section, activity was small, with local consumers buying on a hand-to-mouth basis; overseas markets were very much out of line. Latest quotations were as follows: August-September Rs. 23-12 a maund.

HIDES AND SKINS DULL

The market continued dull. Stocks were higher than in the previous week.

Bazaar Sales

(Between 7th August and 13th August, 1956)

Cowhides: Wet salted (Ord.) 32,000 pcs. on the basis of Rs. 5-3 to Rs. 8-4; Wet salted (Slaughtered) 21,600 pcs. on the basis of Rs. 12-8 to Rs. 20.

Goatskins: Wet salted (Daisiee, Killed) 92,000 pcs. on the basis of Rs. 170 to Rs. 175. Rs. 215 to Rs. 250 and Rs. 315 to Rs. 325; Assam-Dinajpur 4,500 pcs. on the basis of Rs. 215 to Rs. 225; Purneah-Kissanganj 7,600 pcs. on the basis of Rs. 210 to Rs. 225; Patna (Ord.) 31,000 pcs. on the basis of Rs. 125 to Rs. 150; Patna 15,500 pcs. on the basis of Rs. 200 to Rs. 210.

Bazaar Stocks

(13th August, 1956)

Cowhides: Wet salted (Ord.) 172,000 pcs.

Goatskins: Wet salted (Daisiee, Killed) 45,000 pcs.; Assam-Dinajpur-Jalpaiguri 98,000 pcs.; Muzafferpore - Patna - Pakur - Purneah - Kissanganj 170,100 pcs.

COMPANY AND PUBLIC NOTICES

LODNA COLLIERY COMPANY (1920), LIMITED.

NOTICE is hereby given that the Thirty-fifth Ordinary General Meeting of the Members of LODNA COLLIERY COMPANY (1920), LIMITED, will be held at the Registered Office of the Company, No. 6, Lyons Range, Calcutta, on Monday, the 10th day of September, 1956, at 3 P.M., for the following purposes:—

- To receive and consider the Profit and Loss Account and Balance Sheet and the Reports of the Directors and of the Auditors,
- To declare a dividend in respect of the year ended 31st December, 1955,
- To elect Directors,
- To appoint Auditors and to fix their remuneration,
- To consider and if thought fit to pass the following resolutions:—

(a) "That by virtue of the discretion vested in the general meeting by section 228(1) of The Companies Act, 1956, it is hereby resolved that the accounts maintained at the collieries of the Company need not be audited by a qualified auditor, but the Board of Directors may in its discretion have these accounts audited by any qualified auditor or auditors as it may deem fit and may pay such remuneration therefore as it may decide."

(b) That the resolution of the Directors passed at the Board Meeting held on 25th May, 1956, and reading as follows be and is hereby confirmed—

"That with effect from 1st April, 1956, the Directors do forego the commission of 2 per cent. of the net profits of the Company and that each Director shall be paid by way of remuneration only the monthly sum of Rs. 100/- as provided in Article 113."

The Share Transfer Register of the Company will be closed from the 3rd September, 1956 to 10th September, 1956, both days inclusive.

Warrants for the Dividend when declared will be forwarded in accordance with the registered instructions, but if no such instructions have been received, to the registered address of the Shareholders whose names appear on the Company's Register at the date of declaration.

By Order of the Board,

For and on behalf of
TURNER, MORRISON & CO. PRIVATE LIMITED,
C. O. FOUNTAIN,
Director,
Managing Agents.
Calcutta, 17th August, 1956.

Note:—A member entitled to attend and vote at the meeting is entitled to appoint a proxy, who need not be a member of the Company, to attend and vote in his stead.

Explanatory Statement relating to items 5(a) and (b) of notice as required by section 173 of The Companies Act, 1956.

5. (a) Section 228 of The Companies Act, 1956, provides that the accounts of all branches of a company shall be audited by a qualified auditor unless the shareholders in General Meeting determine otherwise. Colliery Accounts which must be regarded as Branch Accounts for this purpose have not so far been audited other than internally and the management consider there is no need for an outside audit.

(b) The commission of 2% of net profits payable to Directors according to the terms of the Company's Articles of Association is contrary to the provisions of section 309 of The Companies Act, 1956 and consequently the Directors decided to waive this remuneration but to receive as usual monthly fees as provided for in Article 113.

KUMARDHUBI FIRECLAY & SILICA WORKS
LIMITED

THE Board of Directors has recommended the payment of the following Dividends for the year ended 31st December, 1955:—

- On Preference Shares @ 7% per annum without any deduction for Income Tax paid by the Company.
- On Redeemable Preference Shares @ 5½% per annum after deduction of Income Tax paid by the Company.
- On Ordinary Shares @ Rs. 1/8/- per Share without any deduction for Income Tax paid by the Company.

By Order of the Board,
BIRD & CO. (PRIVATE) LIMITED,
Managing Agents.

Chartered Bank Buildings,
Calcutta, 6th August, 1956.

THE IMPERIAL TOBACCO COMPANY OF INDIA
LIMITED

At a Meeting of the Directors held on the 9th August 1956, it was decided to recommend to the shareholders at the Annual General Meeting, which was fixed to be held on the 14th September 1956, the payment of a final dividend for the year ended 31st March 1956, of 4% (free of Income Tax) on the issued Ordinary shares, payable on the 25th September 1956.

The net profit for the year, after deducting all charges and expenses of management and providing for taxation, is Rs. 1,86,71,550.

Two interim dividends, each of 2% (free of Income Tax) amounting in total to Rs. 60,64,000 in respect of the year to 31st March 1956, were paid on the 17th October 1955 and the 28th March 1956 respectively.

After paying the final dividend amounting to Rs. 60,64,000 and allocating Rs. 50,000 to Capital Reserves, Rs. 35,00,000 to Fixed Asset and Stock Replacement Reserves and Rs. 30,00,000 to General Reserve, the amount carried forward will be Rs. 24,94,274.

The Directors also declared a first interim dividend of 2% (free of Income Tax) in respect of the year to 31st March 1957, payable on the 25th September 1956.

The final dividend, if approved, and the interim dividend will be paid to the shareholders whose names appear on the register on the 14th September 1956 and dividend warrants in respect thereof will be despatched to such shareholders or their mandatories on the 25th September 1956. The share transfer books of the Company will be closed from the 28th August to the 14th September, 1956, both days inclusive, and transfers received in order at the registered office of the Company up to the 27th August 1956 will be in time to be passed for the payment of the dividends to the transferees.

By Order of the Board,

B. GRANGER PEARSON,
Assistant Secretary.

Virginia House,
37, Chowringhee,
Calcutta.
10th August, 1956.

ORISSA CEMENT LIMITED
RAJGANGPUR.

NOTICE is hereby given that the Sixth Annual General Meeting of the Members of the Company will be held at the Registered Office of the Company at Rajgangpur on Saturday, the 29th September, 1956 at 11-45 A.M. to transact the following business:—

- To receive and adopt the audited Statement of Accounts for the year, ended 31st December, 1955,
- To receive and adopt the Directors' Report, approve appropriation, and declare dividend, which if declared will be payable on or after 1st October, 1956, to those shareholders whose names appear in the Register of Members on 29th September, 1956.

3. To elect Directors in place of the retiring Directors Shri Jaidayal Dalmia, Shri Mohanlal Goenka and Shri Nihar Chandra Roy, who are eligible for re-election.

4. To appoint Auditors for the current year and to fix their remuneration. Messrs. V. Sankar Aiyar & Co., the retiring Auditors, are eligible for re-appointment.

5. To consider the cancellation of 10,000 unsubscribed Preference shares out of the 50,000 issued Preference shares.

(Explanatory Note: Considering the present money market conditions, it is difficult to get subscribed 41% cumulative Preference shares. Therefore, the Directors propose that 10,000 unsubscribed Preference shares out of 50,000 issued shares be cancelled.)

6. Any other business that may ordinarily be transacted at an Annual General Meeting.

The Share Transfer Books of the Company will remain closed from 3rd September to 29th September, 1956, both days inclusive.

Every shareholder entitled to attend and vote is entitled to appoint a proxy to attend and vote instead of him/her and such proxy need not be a shareholder. The proxies should, however, be deposited at the Registered Office of the Company not later than 42 hours before the commencement of the meeting.

By Order of the Board of Directors,

For ORISSA CEMENT LIMITED,
J. DALMIA,
Director,
Managing Agents.

Rajgangpur,
dated, 30th July, 1956.

Tuesday 14th August, 1956.

GUARANTEES FOR EXPORTERS

A SCHEME TO HELP FOREIGN EXCHANGE EARNERS

THE need for some kind of export credit guarantees has been clear for a long time. Other large exporting countries have found them necessary for promoting their trade and it is only to be expected that as India's shipments to foreign markets become more diverse, they will stand to benefit by them also. The official Committee which began its examination of the problem early this year has now reported its findings and recommendations. It is not the first time the idea of export guarantee had been considered. The Government-appointed Export Promotion Committee declared against any such project as recently as 1949. It based its view on the fact that India's export trade was, at that time, largely in traditional lines where the contact between buyer and seller had become established through long and successful practice. It added the rider that further consideration of the idea would only divert attention from the more important factors in the problem of increasing exports—"reduction in price, use of good material and suitable workmanship." Although it would be wrong to reject this particular aspect of the 1949 Committee's attitude as being out-of-date, it is obvious that the changes which have already taken place in the pattern of India's exports, and those which can be expected soon, reveal this conclusion as being too limited for unqualified application to the realities of 1956. The country's traditional exports are bound, as time goes on, to decline in importance relative to the new ones, although their earning power, in absolute terms, may not necessarily be diminished. The newer trading items, especially manufactures, are likely to meet entirely unfamiliar conditions and risks. If these risks are left for the exporter to shoulder without assistance, trade will be slow in developing and the earnings of foreign exchange required for the second and subsequent plans will be restricted.

There is serious risk of the scheme foundering on this particular shoal. The Committee has declared against compulsion on the grounds that private business does not welcome it in any form. This conclusion is certainly correct and any attempt to force exporters into the scheme will be both unfair and damaging to their interests. But that must inevitably mean that the proposed insurance will be restricted to the newer or least reliable traders—what could, in fact, be regarded as bad risks. To subsidise these exporters out of the premiums paid by established trading interests would impose a strain on India's traditional exports which some would find difficult to bear in the present competitive state of the world's markets. The chances of the scheme being self-supporting, bearing these facts in mind, are therefore not promising. Although Mr. Roy's suggestion that compulsion be resorted to would create more problems than it would solve, the Government may, on present showing, be forced to shoulder the proposed corporation's losses itself, or, at least until India's export trade has increased to a more economic level, take Mr. Roy's advice and confine

The export credit guarantee scheme which this year's Export Committee has outlined differs little from those already operating in other countries, and especially in Britain. Its aims are to meet the growing credit requirements of exporters, even those dealing in traditional goods; to help the small and medium-sized firms which are coming into the export market for the first time and which have an important need for insurance; to ease the granting of finance facilities; to encourage the development of new markets; and to help exporters meet competition from other countries which already use this method of promoting their foreign trade. An Export Risks Insurance Corporation with a capital of Rs. 5 crores, to be owned completely by the State, is proposed. The necessary liaison between this body and the export trade should, it is suggested, be provided by an Advisory Council of not more than twenty-one members representing exporting interests, banks engaged in financing exports, Export Promotion Councils and Commodity Boards. The Committee agrees that cover should be provided over a field of commercial and political risks which are beyond the scope of existing private insurance facilities, and are not within the control of either the exporter or the buyers.

THE RISING TREND OF PRICES

THERE are good reasons for the growing concern which has been expressed recently over the steady rise in food prices. An increase of 6 points to 392.5 in the food index has pushed up the general index of wholesale prices by nearly two

points to 414.2 during the week ended 4th August. The major foodgrain markets have maintained a firm trend since, which suggests that the measures the Government has taken to stem the increase are not yet producing the results they were expected to. The general anxiety has been frequently expressed in Parliament of late, and the past few days have brought explicit ministerial admissions that the rising tempo of deficit financing and development expenditure generally have much to do with the fact of dearer food. The Food and Agriculture Minister, Mr. A. P. Jain, last week gave the Rajya Sabha five main reasons for the upturn in foodgrain prices: smaller output of kharif coarse grains, speculation, hoarding, "inflationary tendencies caused by deficit financing", "failure of rice crop in East Pakistan"—in other words, large-scale smuggling. This list of reasons may not necessarily reflect the true order of importance, but on the whole it is perhaps a fairly adequate analysis of the situation. A few days later, in the Lok Sabha, the Minister for Revenue and Defence Expenditure, Mr. A. C. Guha,

seemed at some pains to play down the importance of development expenditure, although he admitted that it was "one of the main reasons" for the increase in food prices. Deficit financing so far, he said, had probably been very small, since in the first four months of the current year there had been a budget surplus of Rs. 32 crores, as against a budget deficit of Rs. 32 crores in the corresponding period last year. But if these figures presumably refer to the revenue budget, they do not necessarily indicate that the impact of capital spending has been less.

In official circles, there is still a strong tendency to put most of the blame for the rise in food prices on speculators and hoarders. It is true that the activities of the latter have accentuated the weakness of the whole food supply system, but it is doubtful whether mere denunciations or the limited measures the Government has so far taken will suffice to curb these activities. The important point which does not seem to be properly appreciated is that bull speculation and hoarding are the inevitable by-products of an inflationary psychology—they are symptoms of a disease, not the disease itself. Those who have been holding back or buying up stocks in order to release them at a profit later have clearly been doing so on the calculation that before long there will be too much money chasing too little food. It is this calculation which the Government has not yet succeeded in upsetting. Its statistics show that agricultural production has declined over a period when consumer prosperity has increased considerably: smaller harvests of *khari* cereals have been mainly responsible for bringing down the index of agricultural output (base year 1949-50 equals 100) to 113.7 during 1955-56 from 118.4 in the previous year, and unfavourable weather has affected the early-1956 rabi crops as well. Various measures have been taken to increase market supplies so as to offset the decline in production, but they have as yet proved neither timely nor adequate. The export of rice and other foodgrains has been totally banned. The Government has stopped buying foodgrains in domestic markets. Rice and wheat are being distributed through fair price shops set up by State Governments. The Centre has been issuing supplies from its own stocks in important markets, and advances by scheduled banks against rice and paddy stocks have been restricted.

There are two spheres in which dearer food could have the most disturbing repercussions—the balance of payments and industrial costs. At a time when heavy orders for capital goods have been placed abroad, the need to import more food would seriously strain India's foreign exchange resources. A small example of what this might mean was available in the Lok Sabha this week, when supplementary demands for Rs. 80.48-crores worth of foodgrain imports had to be voted in order to rebuild buffer stocks which would help stem the rise in prices. Some relief might be forthcoming if the purchase of food on credit could be arranged with foreign countries; negotiations involving \$4-million worth of wheat, rice, flour and cotton from the United States have been going on for some months, and may be concluded shortly. Arrangements are also being made to get rice from Burma, and wheat from Australia and New Zealand. It would, however, be rash to assume that credit for food imports could be easily arranged; the main country which is in a position to extend it is the United States, but for all her generosity the fact remains that India's relations with her are not free of political complications. Nearly 80,000 tons of wheat have already arrived in Indian ports this month from Australia and the United States. Imports of rice from Burma, which began to arrive last month, have amounted so far to about 25,245 tons. By the end of August, further arrivals of foodgrains, including rice, are expected to total 128,000 tons. The schedule for the first three weeks of September is about 125,000 tons.

As far as industrial costs are concerned, the consequences of a rise in food prices would probably be far more damaging in the long run. Over the first half of this year, the working class cost-of-living index in Calcutta (base year: August 1939=100) has risen from 319 to 356; the main reason for this is the increase in the food index from 409 to 462. Similarly, between January and July 1956, the middle class cost-of-living index has moved up by 22 points to 418, its food component having increased by 34 points to 480. The trend is disturbing because of the relative inelasticity of India's industrial cost structure: labour costs move up easily enough, with or without an increase in living costs, but they rarely, if ever, move down as easily. Even if the rise in food prices were to prove merely temporary, the prospect cannot be looked upon with equanimity; for the wage and other concessions which have to be given when living becomes dearer cannot often be withdrawn, without industrial unrest, when it becomes cheaper. That is why price stability is an important and urgent need, not only for today, but also for tomorrow and the day after.

CAPITAL ACROSS THE BORDERS

THE net export of private long-term capital by U.S. and U.K. residents is estimated to have averaged about \$2.3 billion annually during the past several years, according to a report on recent international private capital movements issued by the United Nations. The net export of such capital from other countries would raise the total to "well above this figure", which includes the reinvested profits of foreign business enterprises. The report, entitled *The International Flow of Private Capital, 1953-1955*, points out that recent private capital exports, when adjusted for the postwar rise in prices, remain well below the volume of the 1920s and have lagged far behind the expansion in international trade, world industrial production and domestic investment. The low level of private investment is accounted for by the drop in foreign portfolio investments; there is no doubt, the study points out, that the annual postwar growth of direct investments controlled by foreign business enterprises has been larger than during the 1920's.

The study, prepared by the U.N. Bureau of Economic Affairs, supplies information on the international movement of private capital during the last few years and for comparative purposes, contains certain data on the export of public capital. It presents also a survey of recent trends in the "climate" for international investment, covering governmental measures and policies affecting the flow of private capital in both under-developed and developed countries. With certain exceptions, there has been a general trend in under-developed areas during the past several years towards measures aimed at encouraging private investment from abroad, the study finds. New policy developments in the major capital-exporting countries have been less striking, but in several European countries rising levels of savings and the improved payments position have led to relaxation of restrictions on capital exports. "It is not to be expected, however, that the action taken will exert a strong influence on the total volume of investment in the short run", the report states. "Many of the measures and policies adopted in capital-importing countries leave considerable room for administrative flexibility. Investment decisions usually depend on long-range calculations, and continuity of governmental policies affecting such investments is accordingly important; the full impact of changed policies is not likely to be felt for some time." Furthermore, the measures taken are concerned primarily with investments by foreign business enterprises; "the scope for specific governmental measures to stimulate private foreign portfolio investment, especially in government bonds, is fairly limited".

The United States has accounted for well over half of the world's private capital exports in recent years, with Canada the principal recipient. Considerable sums have also been absorbed by Latin America, western Europe, the Middle East—where investment has been chiefly in petroleum extraction—and by Africa for mineral development. U.K. private capital exports have gone principally to the sterling area. The private capital movements of continental European countries follow a complex and variable pattern. However, a substantial portion of the outflow from this area has gone to the dependent territories of the countries concerned. In addition to the United States and the United Kingdom, the report also contains estimates of capital exports from Switzerland, Belgium, western Germany, France and the Netherlands.

In a number of countries the rapid postwar growth of foreign business investments has reached a level which accounts for an "important share of total output, employment and gross capital formation", according to the report. This applies particularly to Canada, Venezuela, the oil-producing countries of the Middle East and several countries in Latin America and Africa that have attracted sizable investments in mining. The major part of the capital for the postwar expansion of manufacturing that has occurred in a number of less developed countries has been supplied locally, but recently this branch of activity, particularly in Latin America, has drawn increasingly on foreign capital and enterprise. "Foreign enterprises have been particularly active in less developed countries in manufacturing ventures requiring advanced technology in such fields as chemicals and pharmaceuticals, various types of consumer goods and, in a few countries, components of motor vehicles, electrical machinery, and similar products. In a number of cases, the foreign business enterprise has supplied a minor portion of the capital together with essential assistance in the form of patents, information on complex production processes and skilled personnel." The quantitative importance of foreign investments in the economy of the capital-importing country, the study asserts, is naturally not a full indication of their economic significance. "Foreign enterprises have contributed to increases in productivity through the transfer of modern technology, the training of local labour, the development of managerial techniques and the stimulation of local ancillary industries."

CURRENT COIN

Index of Industrial Activity.—Corrected for seasonal fluctuations, Capital's Index of Indian Industrial Activity shows a rise of 4.9 points during March, 1956. Mainly contributing to the increase were rises in jute manufactures, steel ingots, cement, paper, coal and electricity. Cheque clearances and notes in circulation also increased.

Lay-off Compensation.—Industrial employers in India view with concern the changes that have been made in the existing body of labour laws, and those which are in prospect. Only a few months ago, the Industrial Disputes (Amendment and Miscellaneous Provisions) Bill, 1955, was passed by Parliament creating for the employers a host of new problems, legal, financial and administrative—which many small concerns already find much too onerous to bear. One of those problems has been created by the new legal definition of "workman", which brings supervisory personnel drawing up to Rs. 500 a month within this category. It is no secret that even the top management executives of many small concerns draw salaries not exceeding this figure. While Parliament was considering the above Bill, business organisations had drawn the Government's attention to the practical difficulties that would follow, and had suggested that the definition be related to the work performed rather than to the salary drawn. Those representations were turned down. Now, private industry is facing the prospect of a far more serious problem in the shape of new labour laws on lay-off and retrenchment—the laws which are embodied in the Industrial Disputes (Amendment) Bill, 1956, at present under consideration by Parliament. According to the proposed legislation, which seeks to amend and clarify the existing provisions in the Industrial Disputes Act, 1947, lay-off compensation will have to be paid as long as a factory has its workers laid off. Under the existing agreement between employers and labour, the maximum lay-off compensation payable is for a period of 45 days. The proposed law has, therefore, made smaller concerns nervous, as such factories have very often to close through circumstances beyond their control, and as is inevitable in such circumstances, for a long period of time. The Labour Department of the Engineering Association of India has published a pamphlet on this matter analysing the disastrous effect such a piece of legislation is likely to have on small concerns. It takes the hypothetical example of a factory of 20 years' standing with a paid-up capital of Rs. 50 lakhs, employing 2,000 workers, and with a total monthly wage bill of Rs. 1,60,000. If this factory suspends its working for six months, the lay-off compensation will come to as high as Rs. 5 lakhs, that is, the equivalent of the workers' wages for three months. In case of permanent closure, the position will be infinitely worse. The pamphlet suggests that this amendment be dropped leaving the existing arrangement unaffected—a suggestion well worth thinking about. The amendment, if enacted, will most certainly put the clock back in the field of Indian small-scale enterprise which the planners so avidly desire to promote.

Bicycle Output and Imports.—The bicycle manufacturing industry has made rapid progress in recent years, and production has risen from 49,000 in 1949 to 510,000 last year. Mr. L. N. Birla, president, told the Cycle Manufacturers Association in Calcutta on Monday that the scope before the industry was "tremendous", assuming "proper encouragement from the Government and an effective import policy." There are about 18 units engaged in the manufacture and assembly of bicycles, and their rated capacity is estimated at 850,000. Domestic prices have been brought down considerably, and the country is on the way to near self-sufficiency. This is to some extent due to the protection the industry has received. In Mr. Birla's view, the "period of protection should be sufficiently long" and so it should, provided the manufacturers can hold out some promise of being able to compete with the imported products on the basis of price and quality. A number of them have already been able to do so, and it is their example which the less successful ones need to emulate. Mr. Birla referred to the Government's licensing policy for new bicycle units, and said that many "use more than 75 per cent of the imported parts for their cycles. Such a policy adversely affects the manufacture of cycles and encourages assembly of cycles in the country through imported parts. After all, when the industry is making all possible efforts to produce and develop all cycle components within the country, it is necessary that it should get an opportunity to maximise such production by discouraging imports of components from abroad. It is essential, therefore, that wherever licences for new units are granted, the Government ensures that such new concerns set up the manufacture of cycles and parts within a specified date." The manufacturers' attitude to assembly, one suspects, is very much the consumers' attitude to protection.

Just as some manufacturers would wish the mainly assembly units to start manufacture soon, consumers would wish protection to end soon. Mr. Birla referred to the need to co-ordinate the production of components and accessories by small-scale manufacturers with the activities of the bicycle producers. As a general rule, he said, "complicated cycle parts which can be produced economically by the cycle manufacturers in large scale should not be attempted on a small scale. But still there would be much scope for the cycle industry to obtain their requirements of a number of other parts and equipment from ancillary producers which they are doing at present."

Plans of New Central Jute.—Indications about the New Central Jute Mills Co Ltd's plans to modernise, expand and diversify activities are given in a circular issued by a Calcutta stock-broking firm. The company is the amalgamation of three mills—Albion, Lothian and New Central—and operates under the managing agency of Sahu Jain Ltd. A modernisation and electrification programme is being implemented in the jute manufacturing units, for which some of the latest equipment is to be installed. The company plans to undertake the manufacture of soda ash and ammonium chloride by a combined process. The demand for heavy soda ash is good, and is expected to rise further with the growth of the glass industry. Ammonium chloride is a useful nitrogenous fertiliser; it is claimed that when obtained as a by-product of soda ash manufacture, it will be cheaper. New Central's project is for the manufacture of 40,000 tons each of soda ash and ammonium chloride in U.P.; the Government of that State has granted financial assistance amounting to Rs. 1.45 crores for it. Machinery will begin to arrive early next year, and the plant will go into production early in 1958.

U.S. Aid for India.—The United States has just authorised India, Nepal and Egypt to purchase a total of nearly \$1 million worth of equipment and insecticides with U.S. Mutual Security funds. The International Co-operation Administration has also announced the foreign currency authorisation for Pakistan to purchase 10,000 tons of rice from Burma. The authorisations enable the recipient nations to use the allotments for specific purposes, agreed upon previously. According to those agreements, India can purchase on a world-wide basis \$680,000 worth of diesel motor-driven draglines. Nepal with \$296,000, has to use the aid to purchase insecticides, motor vehicles and parts, and other equipment. Egypt can buy \$18,117 worth of gasoline-driven pumping equipment and drilling machinery. Under the agreement concluded between the United States and Burma, 10,000 tons of rice for Pakistan will be purchased with Burmese currency held by the United States. The U.S.A. set aside \$1.1 million in its own currency to be used by Burma in hiring American technicians, and accepted Burmese currency in repayment which Pakistan will use. This enabled Burma, which is not receiving U.S. aid, to hire American technicians without drawing on its own dollar reserves.

Bulletin on Industrial Expansion.—India's Ministry of Commerce and Industry has decided to bring out from time to time bulletins giving a detailed picture of the development expected or desired in particular lines of production. The bulletins will be issued as supplements to the *Journal of Industry and Trade*. They will be published and circulated as and when they are ready, not necessarily once a month. The second five year plan has indicated the directions in which industrial development can most usefully take place over the next few years. It has been suggested to the Ministry of Commerce and Industry that it would be useful to present from time to time a more detailed picture of the scope for expansion in different directions. The industrial bulletin is being issued in response to this demand. The first issue of the bulletin deals with the development of pharmaceuticals and drugs.

Dutch Claim on Indonesia.—With reference to the Press report that Indonesia has unilaterally cancelled a debt of 3,661 million guilders it owed to the Netherlands, the Dutch Government states in a *communiqué* that it has not yet received an official communication from the Indonesian Government to that effect. The Netherlands *Chargé d'Affaires* in Djakarta has asked the Indonesian Government for a clarification. The Dutch Government further adds that it was stated in the Press report that the Indonesian debts to the Netherlands amounted to 3,661 million guilders, and to other countries to 420 million guilders. Of the debt to the Netherlands, 3,000 million guilders, it was said, arose out of military actions against the Indonesian Republic; only 661 million guilders was owed for reconstruction purposes. The former amount is to be wholly written off, and from the latter amount, the debt of 420 million guilders owed to other countries would be deducted. The

total of debts recognised is thus reduced to 240 million guilders which will not be repaid again because of the Dutch military operations against Indonesia. The question of the costs of military actions, the Dutch Government points out, was put before a commission of the Round Table Conference in which besides the Netherlands and Indonesia, the United Nations Commission for Indonesia was represented. After having given due consideration to every aspect of the question, the commission decided that the Netherlands should cancel two billion guilders on account of the military operations and the rest should be repaid by the Indonesian Republic. This decision of the commission Indonesia then accepted, and the total of debts accepted by it at the time of power transfer stood at 871 million guilders. At the end of July, 1956, the total was still standing at 649 million guilders.

British Productivity: A Warning.—British output per head remains the highest in Europe, in spite of the increases of other countries which have had so much more publicity. This statement will come as a surprise, but is made by the British Productivity Council in *Policy and Progress, 1955-56*, a review of its work since it was established in 1953. On the other hand, the review goes on to point out that Britain's productivity is not high enough to meet the vital need to increase exports as well as the increasing demand for consumer goods and new investments, with expenditure on armaments and public services. There remains a clear alternative. Either the country's standard of living can fall to the level warranted by her present productivity, or she can raise that productivity by the use of modern techniques to the point where it can support her demands. The Government's recent restrictive measures on spending and credit, taken to check inflation, have—with other factors—affected output per head. The annual rate of increase (2½ per cent) was about ½ per cent less in 1955 than in 1954 and 1953, but it is still 60 per cent greater than the average of the pre-war years. Although it has less than 45 per cent of the workers in civil employment, the manufacturing industry continues to lead in increasing productivity. The Council believes that the best firms in the United Kingdom are fully equal to, and in some cases in advance of, the best in the United States, but that the use of the latest methods and techniques is less widespread in Britain. Britain can enjoy a standard of living second to none if all her industries and services adopt the dynamic and progressive approach which now exists only in some.

Lancashire and Japan.—Surveying the progress made by Lancashire's competitors in his Chairman's report to the Boardman, Marden group, Mr. K. O. Boardman draws attention to the success achieved by Japan in Commonwealth markets. For the first time in her history, he points out, Japan now sends more textiles into the British Commonwealth than Lancashire. Last year she exported 450 million square yards of cotton piece-goods into these traditional British markets against Lancashire's 409 million yards during the same period. Figures published recently in Japan gave details of the advance into Commonwealth countries. The Japanese trade returns for the first three months of this year suggest that her hold on Commonwealth markets will be even stronger in a year's time than it is now. Her total cloth exports in the first quarter amounted to 363,004,000 square yards. This is 44.2 per cent higher than in the same period last year. In the case of almost every Commonwealth market the amount received so far has increased at least proportionately to the total increase.

PAPER CURRENCY EXPERIMENT

AS a rule the annual report upon the operations of the Paper Currency Department is one of the dullest bits of reading in that "dead-and-alive" periodical, the *Gazette of India*; but there are parts in this year's report which will be found well deserving of study by those who follow the progress of the Indian currency experiment. The officiating Head Commissioner of Paper Currency, Mr. A. F. Cox, has a happy knack of presenting statistics in their most interesting aspects; and in the report much fresh information is given regarding the great movements of coin in the country, and the progress made in relieving the redundancy of the rupee currency. We are still a far way from the end of the redundancy, but Mr. Cox is able to show, by the increase in the balance of foreign indebtedness as represented by Council Drafts, by the large expenditure upon Public Works, and by the movements of coin to the producing districts, that there has been a fair amount of currency absorbed during the year, and this view is confirmed by the statistics of the note circulation.

TAXING INCOME ASSESSEE DID NOT RECEIVE

A CASE CONCERNING DEDUCTION FROM ANNUITY PAYMENT (FROM OUR LEGAL CORRESPONDENT)

SOME 50 odd years ago, that great judge, Lord Macnaghten, found it necessary to observe sarcastically in a famous House of Lords judgment: "Income tax, if I may be pardoned for saying so, is a tax on income. It is not meant to be a tax on anything else."

But what is "income"? *Definitio periculosa* runs the slogan and on income-tax it is not only dangerous but impossible. "There is," says the standard Indian work on the law of income tax, "the authority of the English Court of Appeal for the proposition that in many cases the spin of a coin would decide the question of income and capital almost as satisfactorily as an attempt to find reasons," and equally high authority for the proposition that the Supreme Court is, in some of the cases, "the Court of ultimate conjecture." And the reason for this confusion is plainly stated in the preface to the same standard work. "It is passing strange," say Sir J. B. Kanga and Mr. N. A. Palkhivala, "that an Act which brings more revenue to the Government than any other and which makes a welfare State possible should be the most untidy Act on the Indian statute book. It is an Act exiled from Order and System. The bones of dead sections are scattered all over the Act...."

Hardly "dead," perhaps. "Can these dead bones live?" asks Ecclesiastes. Well, yes, they can and they do. Or rather, they can be jerked into mechanical action like marionettes by what is described by the learned Chief Justice of Bombay in the case we are to consider as "a legal fiction." The wire-puller is Parliament and the process is simple. Parliament is omnipotent. It can, and frequently does, enact that Black is White. It does so in modern legislation by the use of three words: "shall be deemed." "Be it enacted that 2+2 shall be deemed to be 5"; and it is so.

Only by appreciation of these legal fictions can we follow a host of useful judicial pronouncements like these: "What is taxed...is nothing that is real; it is the statutory income measured in a particular way; and many subjects are fully conscious of the fact that when the income-tax has been charged

against them it is upon an income which from a practical point of view is one that has never reached their own hands." (Lord Hanworth, Master of the Rolls). "It may seem hard that a concern should have to pay income-tax upon its profits when these profits are taken away from it and applied to a foreign purpose. But income-tax legislation knows nothing of hardship." (Lord Sands). "There is no equity about a tax." (Rowlatt J.). "If a person sought to be taxed comes within the letter of the law, he must be taxed however great the hardship...." (Lord Cairns). "Logic is out of place in these (income-tax) questions." (Lord Chancellor Buckmaster). "It would appear...that the burden of so-called double taxation falls upon the taxpayer notwithstanding the plain intention of the section to avert it. But this is a consideration which cannot be allowed to influence the clear interpretation of the section...." (Lord Simonds).

The above are only a few out of many similar judicial pronouncements. One can see clearly how uneasy and disquieted the judges are about their unpleasant rôle. But they have no alternative other than to administer and interpret the Act, or rather the innumerable Acts as they find them; nor have the income-tax officials any alternative either. And with "income" meaning "statutory income", hardship immaterial, equity not a consideration, and logic out of the way, both in Britain and India, there can be nothing surprising in a man who has in actual fact received £225, being deemed to have received £500.

That is in fact what happened to Sir Joseph Kay, who vigorously objected and carried the matter to the Bombay High Court (Chagla C.J. and Tendolkar J.), whose decision thereon has just been reported. These were the facts. Sir Joseph Kay, a resident of India, was assessed to tax in the assessment year 1952-53, and in his total income the income arising or accruing to him outside the taxable territories was also included. In this income was included a sum of £500 which the assessee was entitled to receive in the United Kingdom from three insurance companies, and the only dispute which was the subject matter of the reference to the Bombay High Court was whether the sum of £500 had been correctly included in the total income of the assessee or whether the correct amount that should have been included was £225.

In fact, the assessee had actually received from those three insurance companies £225, and the contention of his eminent counsel, Mr. N. A. Palkhivala, was that what was liable to tax was the amount actually received by the assessee, namely, £225, and not £500, which was the amount of

annuity which the insurance companies were liable to pay to the assessee. The charging section is Section 4(1)(b)(ii). The total income includes the income accruing or arising to the assessee without the taxable territories during the relevant year and the very short question that the High Court had to decide was, what was the income of the assessee in the accounting year on these annuity policies? Was the income £500, as contended by the Advocate-General on behalf of the Income-tax Department or was it, as contended by Mr. Palkhivala for the assessee, £225?

The reason why these insurance companies in the United Kingdom had paid only £225 to the assessee and not £500 was that they had no alternative. When an annuity is paid out of profits, the English law requires that the payer shall pay to the annuitant the amount due to him on the annuity less the income-tax payable on the annuity, and the law also provides that the amount of the annuity payable by the payer shall be deemed to be the income of the payer, and the payer will pay tax on that annuity. The idea that where X is under covenant to pay an annuity to Y, the annuity is the income of X and not of the annuitant Y may strike you as an excellent example of the magical process whereby Parliament can turn Black into White. Anyway, the substance of the matter is that, instead of the annuitant paying tax on £500, which tax admittedly amounted to £275, by reason of the method of taxation adopted by the British Parliament the payer of the annuity was required to pay the sum of £275; the English law also provides that, when the payer pays to the annuitant £225 instead of the covenanted £500, the annuitant must give a receipt to the payer in full discharge of the annuity; which again may strike you as a first-class exemplification of the power of the High Court of Parliament which on the same sound principle that it may make 2+2=5 can make £225=£500.

The income-tax authorities in India taxed Sir Joseph Kay *inter alia* on these annuities on the simple ground that, in substance and in fact, his income therefrom was £500; that it accrued to him outside the taxable territories; and that he, being a resident, was liable to pay tax on that amount. The assessee's views were different. The English rule (R.19) clearly provides that there shall be no assessment concerning the annuity upon the person receiving the annuity. It equally clearly provides that the annuity shall be deemed to be the income of the payer of the annuity, that the payer shall pay tax on that annuity, and that he is entitled to deduct from the annuity the amount of the tax which he is liable to pay. Then the second paragraph of R. 19(1) is important: "The person to whom such payment is made shall allow such deduction upon receipt of the residue of the same, and the person making such deduction shall be acquitted and discharged of so much money as is represented by the deduction, as if that sum had been actually paid."

"Therefore," commented Chagla C.J., "the payer receives a complete discharge as far as his debt to the annuitant is concerned when he pays not the full amount of the annuity but the amount of the annuity less the tax payable on that amount." It is a pity that considerations of space prevent us from quoting the judgment of the learned Chief Justice in full. It is most interesting and instructive. But we shall have to confine ourselves to one main point. It was urged by Mr. Palkhivala that under this English rule there was no liability upon Sir Joseph Kay to pay the tax. It was not his liability to pay the tax that was being discharged by the insurance companies. The law imposes a liability upon the payer himself and it was that liability, a substantive liability which was being discharged when the payer paid tax to the revenue authorities in England. The contention, therefore, was put forward that what Sir Joseph Kay was entitled to in view of this provision of the law was not £500 but only £225, that the only part of the annuity which became the income of Sir Joseph was £225 and not £500, that when the insurance companies deducted £275 they were not deducting the sum on his behalf in order that they should pay the tax on his behalf but they were deducting it because the English statute cast an obligation upon the insurance companies to retain that sum and it was by reason of this statutory obligation that that sum was being paid.

This and other contentions on behalf of the assessee were rejected by the High Court. "We must look at the substance of the matter from only one simple point of view," said the Chief Justice. "Whose income was this £275, which was retained by the insurance companies under R. 19? It is clear that the tax was payable on the annuity due to Sir Joseph Kay and it was by a legal fiction that the income of Sir Joseph Kay was deemed to be the income of the insurance companies. . . . But the legal fiction cannot possibly change the patent fact that the annuity is that of Sir Joseph Kay and the whole of the £500 is the income of Sir Joseph Kay and no part of it is the income of the insurance companies. . . . The annuity which he receives stands on the same footing as the dividend received by a shareholder. . . . (and) we are upholding the action of the income-tax authorities in taxing Sir Joseph Kay on the simple finding that, in substance and in fact, the income of Sir Joseph Kay was £500, that it accrued to him outside the taxable territories and that as he is a resident he is liable to pay tax on that amount."

A DITCHER'S DIARY

LET me get the personal equation out of the way first. It is possible, and no more, that if I were a D.V.C. employee confronted with the prospect of imminent retrenchment I would be viewing the whole question very differently—and not, I fear, as rationally as I am able to do now. But if it were possible for me to remain slightly detached even in face of a serious personal problem, I would certainly have seen much against the methods some leaders of the Union are now using on the Corporation. I would, I hope, have seen that while many of my countrymen had not had a job at all, I had got one, thanks to the Damodar Valley Corporation, against which the only complaint possible is that it had provided me with employment for sometime. The job done—of which I would have been proud, and the experience gained is mine too—the Corporation has no further use for me. Pity, but there are millions of others who are, if anything, worse off than I; they have neither my savings nor my experience. We are all, in the final analysis, a national problem, and to place the whole burden on the Damodar Valley Corporation is manifestly unfair. And then, with millions of others unemployed, it may be somewhat selfish to demand preferential treatment for oneself. The sort of security insisted on by the D.V.C. employees is denied to all but a few workers in this country.

It is this resort to a hunger-strike, which I find particularly distressing. If the matter were not so serious, and if lives were not involved, I would have said this was like committing suicide because someone had threatened murder. The D.V.C. employees' case, as I understand it, is that they are confronted with unemployment and hence maybe starvation. Is starving oneself in anticipation the best answer? I know there are honourable precedents; Mahatma Gandhi gave hunger-strike a distinction which, I still think, does not belong to it. Mr. Morarji Desai's adoption of the method this very week makes things worse; when men in authority use this weapon of coercion, Authority is robbed of its moral right to condemn its exploitation by others. Unpersuaded by the many available spiritual interpretations of the hunger-strike, I still think political and economic disputes are best kept at their own respective levels. Trade unionism in India is already bedevilled by party politics with the consequence that it has not yet become the healthy and mighty force it should be. With the introduction of spurious spiritual ideas, trade unionism can only be weaker than it is. And, of course, there is also the inexorable law of diminishing returns; those who are today moved to tears (poor grease for the wheels of action) by photographs of hunger-striking workers (or political leaders) will soon take no more notice of them than they now do of pictures of young men "proceeding to the U.K. for higher studies."

If I had a vote to cast in the United States Presidential election it would certainly go to Adlai Stevenson. That is not necessarily because I like the Democrats better than the Republicans—which I do; or because I think he will carry the poll, which I do not. The reason is simply that I like my politics, national and international, represented with elegance, humour and sound intellectual common sense. Of the two prospective Presidents to choose from, Nixon and Stevenson—I do not include Mr. Eisenhower because I cannot share the medical view that he is good for another

five years' full-time work—only Adlai Stevenson has those qualities. The Democratic Party's electioneering organs will do their best for the next few months to play down his brilliance and ascribe to him those politically-irrelevant qualities of piety and domesticity. He has to be made to appear "folksy" or, for some strange reason only a social psychologist could explain, he is unlikely to get any votes at all. His speeches too will be given a popular slant and that is a pity because some of those he made in 1952 were a joy to read. But that does not alter the fact that Adlai Stevenson is, at least in my opinion, the best candidate since Franklin D. Roosevelt. And I suspect, whatever his party touts make him out to be, the "eggheads" of America will agree with me. That does not, of course, guarantee him victory. The eggheads, as America calls its better educated citizens—and it has more of them than any other country in the world—do not decide elections in the United States any more than they do in India or Britain. More people are likely to be influenced by President Eisenhower's personal popularity than will be by Mr. Stevenson's intellect. But before I jump to the pessimistic conclusion that a good President is going to be wasted because Mr. Eisenhower is unbeatable and tradition rules out a twice-defeated candidate for good, I suppose I ought to recall the case of Mr. Truman. After all, he was a certain loser, too.

It seems I may have to revise my opinion that Asia's newly-independent nations are too preoccupied with unnecessary worries about western imperialism to notice the encroachments of their own neighbours. One country at least appears to be realising its danger, and that is Burma. When Mr. U Nu, who resigned his premiership last June to free himself for the truly Herculean task of cleaning up his party's Augean stables, says with such obvious feeling that man is a predatory being, it is significant that, for once, he is not specifying western man. And he is in a favourable, if unenviable, position to know what he is talking about. Burma's struggle to preserve her independence deserves to go down as one of the epics of this century. But it will serve her not at all if her large and ambitious communist neighbour continues its sabotage. It is a pity that Burma defined independence in too strict terms and decided it meant being independent of her friends too. She may live to regret the day she decided to leave the Commonwealth, especially when India had set such a sensible example by staying in. Certainly no country in Asia is, at present, more in need of the support of powerful and sympathetic friends than Burma. Neutrality and Panch Shila are both excellent doctrines on which to base relations with one's neighbours. But whether they are enough to preserve democratic independence when there is no strength to back them up is, it seems, a question which a luckless Burma is going to have the doubtful honour of deciding.

"Penguins" have come of age this year and to mark the anniversary, have produced a five-volume *Pelican Book of English Prose*. I have just finished fingering my set over an execrably wet week-end. My interest in it is two-fold. First, a prose anthology, unless it represents a single author or is a bedside book of trifles or moral texts, is a rarity. The only other comparable col-

lection I know of is *The London Book of Prose* compiled by Bonamy Dobrée and Herbert Read which, since its publication in 1932, has remained unrivalled. Even the present work does not claim to compete with it, for the two are designed on entirely different patterns. Second, the book is inexpensive. To be able to possess at a cost of only 17s 6d (plus sales tax, of course) five none-too-slender volumes containing more than 425,000 words of neatly printed text ranging from the Elizabethan Age to the Victorian, besides excellent individual introductions, comes within my definition of a bargain. Indeed, it is amazing to think what a tremendous contribution to the spread of knowledge and culture is being made by the modern paperbacks and other cheap editions, such as the American "Permagloss" series. These publications have in a very real way resuscitated the dead classics. For example, the old, heavy morocco-bound library editions of Tacitus or Boccaccio, hardly ever handled by or accessible to any but the academician or research scholar, are now available in popular avatars, and are, what is more, eagerly read. To return to the *Pelican Book*, its arrangement is both rational and convenient. Each volume has been divided into four sections, for example, the *Picture of the Age*, the *Movement of Ideas*, the *World of Imagination*, *Feeling and Comic Invention* and, finally, the *Criticism of the Arts*. This makes reference easy. It is interesting to recall that Mr. Krishna Menon, India's well-known diplomat, was the first editor of the *Pelican* series.

I am not surprised that Mr. A. K. Chanda, the Comptroller and Auditor-General, should take exception to the Appleby report. But whether he is justified in calling it "coloured" is another matter. A personal prejudice against the function of audit is an altogether healthy thing in an Administration, and it is one of the more serious comments on India's that there is so little of it. Perhaps that is because, as Dr. Appleby himself seems to think, it provides such a convenient shelter for the incompetent and unenterprising. It is easy to sympathise with Mr. Chanda's taking umbrage—any one of us might have done the same in his position, especially if we had taken as much trouble as he undoubtedly has, to execute such a "highly pedestrian function", as Dr. Appleby calls it, with imagination and foresight. But that should not be made the excuse for rejecting this feature of the report simply because it is unpleasant, and that unfortunately, is what the tendency will be. Audit is one of those things which are so necessary that it is difficult to be objective about them. But the proposed scale of government participation in economic affairs must give the Auditor-General a stranglehold on the country's economy unless his functions are placed in their true perspective. A timid, inefficient and unenterprising Administration is a bad thing in any country; in India it is nothing less than suicide. I think the point came out clearly in the Lok Sabha debates on life-insurance nationalisation when Mr. Deshmukh fought with such energy and conviction to keep Mr. Chanda at arm's length. It is going to be easy to defend Mr. Chanda and a good deal more difficult to do the same for Dr. Appleby. That is why it is important to remember, quite clearly, that in principle Dr. Appleby is right, and more especially so in India where already it has been decided, irrevocably to saddle a democratic government and its Administration with economic functions for which they are entirely unsuited.

nearly all the Treasury bills maturing on that date, while the discount houses had arranged to take up as much as possible of the new bills. Consequently, the discount houses paid about \$280 million for new bills and received almost nothing for old ones. Thus, the market's payments were nearly equal to the authorities' payments and the whole huge transaction was approximately balanced. A complicated transaction of this kind is not easily negotiated by the market; particularly, the compulsion to borrow at full bank rate can involve substantial losses. But it must be admitted that a very large outpayment was effectively neutralised.

Finance for State Industries

Another important event in mid-August was the beginning of the new arrangement for financing the nationalised industries, until, provisionally, March 1957. The purpose of this operation is to shift from the banks to the Exchequer the burden of satisfying the current deficit of the electricity and gas boards, and it is expected that about six months hence, the banks' advances to these bodies will be mainly of a short-term character. When the new arrangement was first announced in the Chancellor's budget statement in April, it was thought that this might be a major deflationary plan whereby the capital requirements of these industries might be financed by taxation, instead of by inflated bank credit. Then it appeared that the procedure might be more inflationary than bank credit, since the Treasury would be satisfying the industries' requirements by issuing Treasury bills, which would be largely taken up by the banks and would form the basis for potential new lending. The intention is, apparently, to enable the Treasury to control the money market more strictly. Even the previous system was potentially (and in fact) inflationary, since the advances from the banks were eventually repaid out of the proceeds of issues of long-term stock, and a considerable part of these issues had to be subscribed by Government departments

and financed, ultimately, by new Treasury bills. The question for the future is how promptly the Treasury will be able to convert the additional short-term debt into longer-dated stock—which will not be a liquid asset for the purpose of banking practice. In principle, at least, the Treasury will have a firmer control over the issue of Treasury bills, and, therefore, over the nation's finances. But it is evident that the short-term debt will become even more important than it has been hitherto, and that management of it has assumed a new significance.

New Circumstances

Such technical problems are no longer—if, indeed, they were previously—academic. If, as is surmised, the Government has changed its ideas on military strategy and spending, every method of controlling the nation's finances must be fully used. There is probably (in the absence of up-to-date statistics it is impossible to be certain) no room for manoeuvre in an economy which is struggling painfully towards solvency. The politicians may have responded promptly to the Egyptian crisis, but the managers of the nation's finances were certainly unprepared for it. Until that development (by implication costly), the indications were decidedly favourable. Financial strain at home had been relaxed, and the overseas trade returns showed that more goods were being made available for export while the pressure to import was moderated. The gold and dollar reserve was being gradually restored (not, however, without new additions to the quantity of money for the acquisitions have to be financed with sterling). The currency was approaching the most difficult period of the year in better shape than might have been expected. The Bank of England's report for last year has shown that the rehabilitation of sterling as an international currency has continued, and that the gold market has been re-established as "the leading world market for gold." It will be distressing if these tendencies must suffer a setback.

Stocks and Shares

BETTER DEMAND FOR JUTE SHARES

SPECULATIVES ACTIVE: MOST INVESTMENT SCRIP NEGLECTED

Wednesday Evening.

THERE has been continued support for speculative counters in the stock market this week. A small amount of investment buying has taken place, notably in jute shares, but once again the major part of the activity has been in speculatives. There has been a considerable turnover in Indian Irons in the past few days, but the price has moved only narrowly about the Rs. 37-6 level. Tonight's closing quotation was Rs. 37-7. Irons were being dealt in after hours this evening up to Rs. 37-11.

The interest in jute shares this week is due to the expectation of better working when the member mills of the I.J.M.A. seal a further 5 percent of their loomage next month. Coal and tea scrip have generally been neglected, but there has been the usual interest in engineering and miscellaneous counters. Government securities have remained quiet.

The undertone of the market is now distinctly steady, but the present conditions owe a good deal to the continued state of international tension over the Suez Canal question. Better advices from Bombay are also playing their part. There is still a depressing shortage of demand for all the best investment scrip and many good counters in all sections are quite unable to find buyers.

Details of the week's trading follow.

The Government security market continued quiet but a slightly better sentiment was noticeable and more buyers were in evidence. Three percent Conversion Loan was unchanged at around Rs. 75-1 but 3% Non-terminable Paper was slightly easier at Rs. 75-2. In short-dated loans, 3% 1957 were traded at Rs. 99-13 while 3% 1958, after being marked back to Rs. 99-9 ex-voucher, recovered to Rs. 99-10. In the medium-dated group, 3% loan 1959-61 was quoted lower at Rs. 98-1 ex-voucher and 3% 1963-65 was also easier at Rs. 94-14. 2½% loan 1961 had small buyers up to Rs. 93-7-6 and 2½% 1962 was marked at Rs. 93-15. In National Plan loans, 3½% 1961 was on offer at the lower rate of Rs. 99-6 but 3½% 1964 met with good enquiry at Rs. 98-11; 3½% 1965 had sellers at Rs. 98-9 as did 3½% 1967 at around Rs. 98-7. In long-dated loans, 3% 1966-68 was unchanged at Rs. 93-4 but 3% 1970-75 was quoted lower at Rs. 90-2 while 3½% 1974 met with enquiry at Rs. 98-7. Very little business was reported in State loans and most 4% issues continued on offer, but prices were unchanged.

Business in preference shares this week was once again on a small scale. Jute shares particularly were difficult to sell despite the fact that sellers were prepared to accept lower rates. In the miscellaneous group, Associated Hotels were steady at Rs. 78 and Alkali & Chemical were taken at Rs. 105-8. Bharat Collieries were placed at Rs. 55-4 and Dalmia Cement Rs. 100 paid-up at Rs. 101-8. Dunlop Rubber 2nd were done at Rs. 97-8 and a small lot of Indian Aluminium was crossed at the higher rate of Rs. 85. Indian Iron & Steel changed hands at Rs. 108 and Jardine Henderson were offered at Rs. 66-8. New Victoria were steady at Rs. 6 and business was reported in Osler Electric Lamp at around Rs. 76. Purtabpore Sugar were marked at Rs. 16 and Rohas Industries "B" were wanted at Rs. 64-8. Textile Machinery 1st were done at Rs. 101. In jute, Anglo-India were offered at Rs. 105 as were Caledonian at Rs. 106. New Central were placed at Rs. 103-8.

In the banking section, United Commercial were steady at Rs. 59 and there was a keen enquiry for Hindustan Commercial which improved from Rs. 12-8 to Rs. 14. Punjab National were crossed at Rs. 59-8 and changed hands later at Rs. 57 x.d. Hind Bank were steady at Rs. 38-4. United Bank of India "D" shares changed hands freely at around Rs. 4-8.

Among railways, Dehri Rohtas came to hand at Rs. 14-8 and transactions were reported in Futwah-Islampur at Rs. 54 and Kalighat-Falta at Rs. 59.

Cotton shares spent a dull week with Kesoram initially receding from Rs. 19-10 to Rs. 19-4; today however the shares recovered to Rs. 19-10. There were no other price changes of importance in this section.

Coal shares were dull with the exception of Borra which were enquired for at the higher rate of Rs. 23-4, East Indian at Rs. 31-15 and Karanpura Collieries at Rs. 118. Burrakur fluctuated narrowly around Rs. 13-14 but spurted today to Rs. 14-9 and Standard were offered at Rs. 26-4. Bengal were unchanged at Rs. 538 as were Equitable at Rs. 30. Among the smaller fry, Central India and Western Bengal changed hands at Rs. 7-6 and Rs. 7 respectively.

Jute shares ruled steady on reports that the current working of most companies had improved following the recent decision to seal a further 5% of the looms of jute mills in the I.J.M.A. group.

Widespread gains were recorded as will be seen from the following table of prices:

	Opening	Closing
	16-8-56	22-8-56
	Rs.	Rs.
Agarpara	11 12	12
Anglo-India	175	180
Barnagore	141	144
Cheviot	180	185
Gourepore	237	252
Howrah	22 8	23 12
Kelvin	223	231
New Central	17 8	17 12
Megna	83	91

Business in electric supply shares was on a restricted scale and prices showed little variation. Benares were reported at Rs. 17-12 and Calcutta were shaded at Rs. 13-14. Patna were crossed at Rs. 11-8.

Except for United Provinces and Carew which were steady at Rs. 20 and Rs. 9-2, Sugar shares were neglected. Purtabpore were unchanged at Rs. 17 as were Champaran at Rs. 26-5 and Durbhanga at Rs. 22-10. Ramnugger eased from Rs. 26-10 to Rs. 26-6. There was a small enquiry for Balrampur at around Rs. 7-4.

Indian Iron & Steel shares were well maintained at around Rs. 37-7, but turnover was much reduced. Braithwaites were better at Rs. 29-6 as were Burn at Rs. 357. Indian Standard Wagon were a good feature and spurted from Rs. 190 to Rs. 200. Jessop were easier at Rs. 34-4 as were Richardson & Cruddas at Rs. 24-12. Textile Machinery were subdued at Rs. 23-7. Marshalls, however, were steady at around Rs. 6-2.

In paper, Titagurh reacted again from Rs. 41-14 to Rs. 41-6 while India Paper Pulp were unchanged at Rs. 25-4. Orient, after being done up to Rs. 40-8,

We can solve your problem...

When your Queen is in danger and your King is in check
And your problem is getting you down;
It's not awfully good sport, to say you've just thought
Of an urgent appointment up-town.

BROAD RECOVERY IN STOCK MARKETS
GILT-EDGED AND OILS LEAD RISE

London, 22nd August.

THE stock markets took a distinct turn for the better during the past week on rising hopes of a satisfactory settlement of the Suez Canal issue, and an all-round advance was recorded in prices under the lead of gilt-edged securities and oil shares. While widespread and appreciable gains were recorded, prices were not always maintained at their best levels. A slightly easier tendency developed at the end of the account on Tuesday, when it appeared that the latest developments at the London Conference might make a settlement more difficult to achieve. With the Suez situation continuing to dominate the markets, the rest of the news had little effect either way. The July overseas trade figures had a moderately favourable influence on sentiment, but the somewhat erratic performance of Wall Street was without any notable effect. The outstanding feature was the sustained strength of gilt-edged securities which had their best week for a long time. Prices advanced steadily on persistent investment demand, partly due to the reinvestment

of the National War Bond 2½ percent redemption monies, and recorded appreciable gains, compared with the previous levels. Their prices continued to forge ahead on Tuesday when the rest of the market turned uncertain under the influence of the London Suez Conference; outside these securities, the main interest of course was centred in oil shares, which staged a substantial recovery against their heavy fall in recent weeks. Gains in the leaders extended to about 10s, although best prices were not held following a little selling at the end of the account. Foreign bonds were subdued, but Greeks moved up in response to the Cyprus truce proposal, while Germans tended higher. Antofagasta continued to be an active market in rails. Dollar stocks moved erratically in sympathy with Wall Street and Canadians were quieter, but they often scored gains. Industrials recorded extensive rises ranging up to 4s, with virtually all groups participating in the advance. Tobaccos were prominent following the increased interim dividend of B.A.T., while aircrafts were particularly firm. A revival of interest in the gold share market brought an all-round advance in prices. Copper shares were uncertain; other base metals were undecided. Rubbers recorded little change, while the underlying tendency in the tea share market was easier.

Stock Market Prospects

The *Investors' Chronicle* market newsletter writes: "Gilts are tending upwards, helped by favourable trade returns and the repayment of National War Bonds. Industrials showed a rally,

barring the new adverse Middle-East developments not already discounted. The drop in gold shares was not significant as business has sharply contracted. Johannesburg has taken most of the stocks from London and is optimistic for the present rally. Interest in Wall Street has diminished and the near-term outlook is uncertain as rails are lagging in face of the favourable industrial performance. The recent easing in London industrials was technical with little real selling. Gilts have resisted adverse news and seem technically strong. Industrials should also rally. Any international easing will immediately lead the market to recognise that many industrials are attractive. Blue chips yield nearly 6 percent covered 2.7 times. Some investors are seeking defensive stocks such as gilts, but there is likely to be more interest in the gold finance houses' shares which are actively defensive, both as regards their product and as hedge against economic recessions. But one should not be too defensive. There are still opportunities for profits in industrials."

The Money Market

The past week was an exceptional week in the London money market, with money in abundant supply following the pay-out of some £160 million, most of it due to the redemption of War Bonds, 1954-56. Forward and subsequent operations by authorities prevented a dislocation of the credit situation, and the disbursement of such large sums passed off fairly smoothly. Certainly on the day of the pay-out (Wednesday), there was a glut of money and with the intention of keeping the credit situation well within control, the authorities operated in a very big way and mopped up excess funds; by this means and through other channels, the flood of money was quickly withdrawn from circulation and by Friday, conditions were back to a more normal footing. Under the plethoric money conditions, there was a vast turnover in bills with "hots" and Novembers sold at 4 9/32 percent. Day-to-day loans were obtained at a basic minimum level of 3½ percent from the clearing banks and down to 3½ percent and lower was paid for money from other sources. In order to keep their quota of bills at a high level, the market raised its bid at the weekly tender by 1d to £98 15s, which reduced the average rates for bills by just over 3d to 100s 9.43d. Applications for £280 million worth of 91-day bills totalled £393,363,000 and were allotted at the average rate of 100s 0.43d against 100s 5.84d in the previous week. Offerings this week comprise £270 million worth of 91-day bills. The Bank of England returns for week ended 15th August showed that bankers' deposits were about £27 million higher at £216 million, while notes in circulation were £27 million lower at around £1,950 million.

Activity on Wall Street

Higher yields available for money brought U.S. Government obligations down to new low levels for the year with longer-term issues suffering the biggest declines. Trading was light. This high cost for money made some companies seeking funds turn to banks and institutional investors rather than enter the bond market. Ford Motor Company arranged to borrow \$250 million from life insurance firms, banking houses and pension funds. Despite easier stock markets, convertible bonds ruled fairly steady, but trading was light. In a slow-moving foreign bond market, some German issues moved slightly up. The holders of dollar bonds issued by four Hungarian institutes may file claims till 20th September with the Foreign Claims Settlement Commissioner.

Hongkong Gold Easy

The Hongkong gold market was easy during the past week due to an easing of the Suez tension, though the market attempted to rally in the final session. This bearishness was also attributed to increased supplies of the metal, totalling 72,000 ounces, from Macao. Carry-over charges were 670 cents in sellers' favour. The official offtake was 4,790 tael and the unofficial was 19,500 tael. Forward contracts were at \$ (U.S.) 37.85 c.i.f. Macao.

Vegetable Oil Market

Most vegetable oils and seeds were lacking attention, and trading was at reduced rates. Coconut oil was in quiet request with Straits bulk oil latterly offered down to £88½ c.i.f. There was a moderate consumer interest at 10s a ton less. The sellers of Ceylon oil were in the region of £93 c.i.f. with dealers prepared to quote a shade lower. Linseed oil came under pressure from isolated cheap sellers and the general rates for the British standard specification grade were around £1 a ton lower on the day. Edible oils lacked feature, and prices were scarcely changed apart from moderate adjustment in Americans. Malayan palm oil was not offered prior to December shipment at £98 c.i.f. Copra tended to be easier under Continental reselling pressure with the Philippine obtainable down to \$175 c.i.f. Groundnuts were rarely mentioned from the trading standpoint, with the original sellers of British East African seeking more, but sellers were rarely following. Castorseed continued to weaken and palm kernels tended lower without any constructive response from buyers. Sunflower seed was also cheaper, but apparently unwanted.

U.K. Rubber Statistics

Statistics issued by the International Rubber Study Group shows the rubber position in the U.K. for June as follows: consumption of natural rubber 16,146 long tons, imports of natural rubber 4,003 long tons and re-exports of natural rubber 10,967 long tons. Stocks of natural rubber held by manufacturers in warehouses (exclusive of U.K. Government stocks) at the end of the month were 33,548 long tons.

New Delhi

AGRICULTURAL TARGETS UNDER THE SECOND PLAN

RISE IN FOOD AND CLOTH PRICES

(FROM OUR NEW DELHI CORRESPONDENT)

THE second five year plan is having a rough passage although it is only six months since it was inaugurated. As the public memory is proverbially short, it may be worth mentioning that a member of the Planning Commission, Mr. K. C. Neogy, submitted a note some months ago pointing out its unrealistic nature. As a counterblast, the Deputy Chairman of the Planning Commission, Mr. V. T. Krishnamachari, also prepared a note asserting that the plan could be fully implemented, provided agricultural production was stepped up by 40 percent without raising the outlay, and the price level of the agricultural products was reduced by 20 percent. The Planning Commission thereafter addressed a letter to State Governments incorporating its Deputy Chairman's proposals. This was followed by the conference of State and Central Ministers of Agriculture in Mussorie towards the end of June.

The Union Minister for Agriculture, Mr. A. P. Jain, in his inaugural address refused to accept the Planning Commission's formula. He said: "It is not known what mechanism the Planning Commission has in mind for reducing agricultural prices by 20 percent. The remedy may be worse than the disease." The conference adopted a number of resolutions, including one on the scope for raising targets of agricultural production, which left no doubt that additional financial allocations would have to be made if the targets of increase for foodgrains were to be increased from 10 million tons to 16.4 million tons. The additional funds demanded were about Rs. 120 crores. The Union Minister for Planning, Mr. Gulzarilal Nanda, instead of backing his Deputy Chairman and the Planning Commission's letter to State Governments, told the conference that "if for the achievement of higher targets of agricultural production a price has to be paid and assistance has to be given, it should be paid and given."

Agricultural Prices

As for prices, the conference adopted the following resolution: "Recognising that the price policy for agricultural commodities has an important bearing on the incentive for achieving improved agricultural practices and higher production targets, and realising that the minimum prices of foodgrains already fixed are low, the conference recommends: (1) that reasonable minimum prices for important agricultural commodities should be ensured to the growers; (2) the Government of India should take early steps for achievements of the aforesaid objectives."

These issues, however, are still at the stage of speculation, discussion and finding of actual finances. For the immediate future, there is the question of the so-called surplus stock of sugar. It is intentionally described as "the so-called surplus" because two years ago, a surplus was similarly declared and the Ministry of Food and Agriculture worked out a plan to subsidise exports. A leading sugar industrialist advocated a surcharge on internal sales in order to make Indian sugar competitive in foreign markets. But within two months, the Ministry of Food and Agriculture suddenly discovered that internal consumption had mounted up, and that sugar industrialists were taking advantage of the Durga Puja and Dewali festivals to raise prices. Sugar had to be imported. Thus, judging from past experience, it may be too early to say that there is a glut in the sugar market. But if what Mr. T. C. Puri, Joint Secretary to the Ministry of Food and Agriculture, recently said—that India has asked for an export quota of 200,000 tons of sugar—is correct, there is a case for reducing prices in accordance with Mr. V. T. Krishnamachari's formula.

Checking Cloth Price Rises

The Minister for Consumer Industries, Mr. Nityananda Kanungo, has given details of the measures adopted by the Government to check the rise in cloth prices. "Under the second five year plan, the per capita consumption has been tentatively fixed at 18.5 yards. The Government has, therefore, decided that there should be an expansion in the spindleage by 2.1 million spindles to meet the additional requirements of yarn for producing an additional 1,700 million yards of cloth. Out of this, the handloom industry has been allotted, in addition to its present production, 1,000 million yards—700 million yards from mill yarn and 300 million yards from Ambar Charkha yarn. A further 200 million yards have been allotted for production from powerlooms to be introduced in the handloom sector." Considering his official position, Mr. Kanungo could not say that his Ministry had warned the Government about the very small domestic stocks of cloth, and had demanded an increase in the production of mill-made cloth. This demand was opposed by Congress leaders, particularly those from Gujarat. Among them were Mr. Gulzarilal Nanda, Mr. Khandhubhai Desai and Mr. Vaikunth Mehta. In a recent issue of the A.I.C.C. Economic Review, Mr. Shriman Narayan expressed his opposition even to the new textile policy. A rise in cloth prices, however, should

remove the need to subsidise khadi sales. With a cloth scarcity, people will be forced to purchase khadi even with the price handicap.

Reverting to the second five year plan, the Minister for Revenue and Defence Expenditure, Mr. Arun Chandra Guha, replying to questions in Parliament said that "the recent increase in prices had been confined mainly to agricultural commodities and was largely in the nature of a corrective to the earlier decline when prices were considered to be uneconomic for agricultural producers." But it was the earlier prices which Mr. V. T. Krishnamachari wanted to reduce by 40 percent. Replying to another question in Parliament, Mr. Guha said that there had been a rise in the prices of food, cloth and other consumer goods since April 1955, due to "somewhat smaller production of foodgrains, and the increased incomes and purchasing power resulting from the increased tempo of developmental expenditure in the country." The Union Food and Agriculture Minister, Mr. A. P. Jain, was more direct and unequivocal. He said that the rise in prices could be attributed to such factors as: (1) speculative activities of the traders; (2) inflationary tendencies caused by deficit financing; (3) hoarding of stocks by traders and producers; and (4) the failure of the rice crop in East Pakistan. Both Mr. Guha and Mr. Jain thus admit that deficit financing, even though it is moderate, is pushing up prices.

Deficit Financing

The general position may now be summarised. Firstly, it seems that the deficit financing were correct in suggesting that it would create inflation. Secondly, the present rise in prices has already affected the plan estimates, which even before were on the low side. The Planning Commission made a serious effort to prove that it was possible to eat one's cake and have it too. It reduced the financial allocations in order to keep to the plan outlay of Rs. 4,800 crores without reducing the performances envisaged in the plan. The eggs are now being hatched and various Ministries are demanding bigger allocations of money to implement the plan.

In this context, the following three paragraphs on pages 18, 19 and 56 of the report on the second five year plan may be worth quoting: "A five year plan has, therefore, to be broken up into annual plans or programmes, and performance must be judged more and more in terms of the tasks executed on an annual basis. This is not to say that there should be flexibility in the matter of taking on and seeing through programmes or projects, but this flexibility must be part of the annual plans themselves rather than in the nature of *ad hoc* adjustments. The Central and State Governments operate in terms of an annual budget, and this offers a natural opportunity for reviewing and adjusting the broad annual phasing indicated in the five year plan. But this review has to be undertaken by the planning authorities on a consideration of the overall needs of the economy and the experience in respect of the fulfilment of tasks for the year about to end."

Annual Plans

"The second five year plan has been conceived as a broad framework within which such annual plans will be made. A plan covering a five year period has to be regarded as flexible. The second five year plan, as presented in this document, indicates the magnitude and significance of the tasks to be undertaken, the order of benefits resulting from the developments proposed, and the means and techniques by which resources have to be mobilised and harnessed to the task to be taken in hand. The policy implications of the plan have also been brought out in broad terms. But, planning is not a once-for-all exercise for a five year period; it requires a continual watch on current or incipient trends, systematic observations of technical, economic and social data and adjustments of programmes in the light of new requirements. There are, naturally, uncertainties attached to the various estimates that can be made for a five year period. Some of the programmes set forth in the plan may take a little more time for completion. In a plan of the dimensions envisaged, experience may indicate fields where implementation can with advantage proceed ahead of schedule and others where progress may have to be inevitably slower. Moreover, India is not planning within a closed economy. Developments abroad, economic or political, may necessitate adjustments in the plan. It is in view of these considerations that the plan has to be regarded as a framework within which programmes for each year have to be worked out in detail and implemented."

"As has been mentioned earlier, the second plan is to be regarded as a framework within which detailed annual plans are worked out in the light of an examination of the financial and real resources available. The phasing of the plan has necessarily to be flexible. It is, however, necessary to have in readiness a well-worked out annual phasing of outlays from the start, as in many cases orders have

to be placed in advance for machinery and equipment and preliminary work commenced by way of setting up the necessary administrative and field staff."

It is time that information on "a well-worked-out annual phasing of outlays", as promised in the plan, is given to the public. The detailed annual plans of the Ministries of Education, Natural Resources, Communications and Iron and Steel will be keenly awaited.

Oil and Natural Gas Commission

An official announcement about setting up an Oil and Natural Gas Commission under the Ministry of Natural Resources was published last week. It read as follows: "In pursuance of the industrial policy statement of the Government, it has now been decided that the Central Government also should undertake exploration, exploitation and refining of oil in the country, and to create a special organisation for the adequate discharge of this responsibility, namely, the Oil and Natural Gas Commission under the Ministry of Natural Resources and Scientific Research. The functions of the Commission will include the following:

"(i) Advising the Central Government on matters relating to the exploration, exploitation and refining of the country's oil and natural gas resources;

"(ii) Subject to the general or specific instructions of the Government, (a) conducting geological and geophysical surveys for the exploration of oil; (b) conducting drilling and other prospecting operations independently or in conjunction with other Government or private organisations to prove and estimate the workable reserves of oil deposits; (c) establishing production of oil, including preliminary processing and storage; (d) administration and implementation of the agreements with oil companies for joint or participatory working, inspection of oil fields held by private concessionaires for ensuring the systematic development of oil, the elimination of waste, and the promotion of improved methods of recovery;

"(iii) Conduct of geological, chemical and other laboratory investigations in connection with the work of exploration, production or refining of oil;

"(iv) Collection and publication of statistics relating to oil and natural gas produced in the country and maintenance of information regarding world production, trade, mining rules and other related matters;

"(v) Publication of bulletins and monographs on investigations relating to oil and natural gas;

"(vi) Undertaking any other function entrusted to the Commission by the Government of India from time to time.

"The Commission will consist initially of a Chairman and two members, one of whom will be its financial adviser. It will be assisted by such administrative and technical staff as is necessary. The headquarters of the Commission will be in Dehra Dun."

Revoking Decisions

The first three members of the Commission are Mr. K. D. Malaviya, Minister for Natural Resources, Mr. A. M. N. Ghose, Director of the Oil and Natural Gas Directorate, and Mr. C. S. Menon, Joint Secretary to the Ministry of Finance. The Commission will absorb the Directorate of Oil and Natural Gas. The decision to set up the Oil and Natural Gas Commission seems final, at least for the time being. However, if there is any place where democracy is in action, it is in the Ministry of Natural Resources, where decisions are announced, and then replaced soon afterwards by other decisions. After mature consideration, the Directorate for Oil and Natural Gas was set up. Its director, on his appointment, gave an interview which was prominently featured in the national dailies, but while the Directorate was still in the process of being set up, it has been replaced by another organisation. The issue is whether the Directorate has been given a fair trial, and, if so, what are the results? What is the need to replace it by a Commission, unless the intention is to evade financial and other administrative control to which the Directorate might have been subject.

The same story of indecision is seen in the Ministry's efforts at oil exploration. It began with the demand to explore for oil in one locality. This was later extended to four localities, on the ground that failure at one place would have a demoralising effect and would create a hostile atmosphere in Parliament. The explorations are now going to be countrywide. It is said that one should not count the cheques until they are cashed. The Ministry's argument is that oil, if found in more places, would save much foreign exchange. That may be true, if and when the oil is found. Meanwhile, the country is being asked to pay so as to prevent any demoralisation of Parliament by the failure to strike oil.

Incidentally, according to lobby reports, the Assam Oil Company offered two alternatives for a substantial majority holding of the Government in roping companies to be floated in connection with the oil find in Assam. The Government was asked to choose between the oil refinery company and the oil extraction company for its majority holding. The Ministry opted for the refinery, of which there are already four in India and in which Indians have some technical knowledge.

Amending Company Law

With the exit of Mr. Chintaman Deshmukh from the Central Finance Ministry, a suggestion has been made here to convene a conference of leading industrialists and business men to discuss amendments to the company law. The Government, it is learned, would like to amend the company law

BRITISH OVERSEAS AIRWAYS CORPORATION

because it has been evaded from the very start. A case is now being examined in which three public companies have combined to form a private liability limited company with a capital structure which on paper would not accord a majority to any of the participants. Legal pundits have described the case as an example of evading the "irk-some" provisions of the Act.

Cement and Mining Machinery

The Government of India's permission has been asked for by the Associated Cement Companies Ltd. of India, and Vickers and Babcock and Wilcox of Britain, to float a private limited liability company to undertake the manufacture in India of cement and mining machinery and water tube boilers, and with the technical assistance of David Brown of Britain to manufacture gear-cutting machinery. The company will have an authorised capital of Rs. 20 crores and a working capital of Rs. 11½ crores, Rs. 7½ crores of which will be subscribed and the balance raised as a loan. Vickers and Babcock and Wilcox combined, and the Associated Cement Companies, will have 49½ percent each of the share capital, while the remaining one percent will be held by four companies Tatas, Killick Industries, F. E. Dinshaw Ltd. and Khataus Ltd. The company will have 11 directors, five representing A.C.C., four representing Vickers, and

Babcock and Wilcox, and two representing the holders of the one percent share capital.

India's requirements of mining machinery in the public sector during the second five year plan have been estimated as follows:

Purpose	Value
Raising of coal	Rs. 30 crores.
Mineral exploration	Rs. 44 lakhs.
Oil and natural gas exploration	Rs. 10.8 crores.

(including precision instruments)

In addition, the Geological Survey of India will need 26 drilling machines for prospecting. Similar information about coal mining in the private sector is not available. A large proportion of the requirements will have to be imported.

Coal Corporation to be Set Up

A coal corporation will be registered shortly as a private limited liability company to undertake coal production in the public sector. Output is to be raised from 3 million tons to 15 million tons by 1961. Mr. R. S. Krishnaswamy will be Managing Director of the Corporation. The Corporation will own all the collieries in the public sector other than lignite deposits, for which a separate private limi-

ted company will be floated. A Bill is being drafted to enable the Government to take over unworked portions of coalfields in the private sector and to define the terms of compensation. As already reported, under the compensation formula private colliery owners will get back whatever they have spent on those portions of their fields which may be taken over by the Government, plus some compensation in the form of interest with a ceiling that such interest charges will not exceed 50 percent of the amount of actual expenses claimed.

N.I.D.C. Projects

The following is a progress report on some of the important projects with which the National Industrial Development Corporation is dealing at present:

1. **Foundry project:** An outline of the project has been settled in consultation with the Technical Adviser appointed for the purpose, and three firms are being asked to prepare detailed project reports so that a final selection may be made.

2. **Steel structurals:** These are being planned along with the steel plants in the public sector in Durgapur and Rourkela.

3. **Intermediates for dyestuffs:** Foreign technicians were brought out to formulate a scheme for the manufacture of these intermediates which are also needed for the drugs, plastics and other organic industries. Three reports have been received and the fourth one is expected within a week. Final decisions will be taken thereafter.

4. **Wood pulp:** A foreign technical team has completed its survey and made a preliminary report. Samples of indigenous raw material are being sent abroad for testing and processing.

5. **Carbon black:** A foreign technical team came to India and its report is awaited.

6. **Sulphur from pyrites:** It has been decided not to proceed immediately with the project until the availability of adequate quantities of pyrites has been proved.

7. **Printing machinery:** A survey of the machinery installed in the country has been completed in order to determine the types of machinery which are most popular and in heaviest demand. On the basis of the data collected, the matter has been discussed with representatives of producers, consumers and importers of printing machinery.

8. **Air compressors and fractional H.P. motors:** Capacity for both these is increasing and the National Industrial Development Corporation will confine its attention to industrial air compressors only.

9. **Refractories:** Negotiations are in progress with some foreign firms.

Developing Small-Scale Industries

The three German experts, Messrs. Helmuth Vollrath, Herbert Riffa and Gustav A. Etter, have made the following important recommendations in their reports on the development of small-scale industries:

Messrs. Vollrath and Riffa.

1. The manufacture of machine tools should be licensed.

2. The licensed unit should submit to strict supervision and quality standards laid down by the Government.

3. The Government should arrange for the supply of suitable machinery and equipment for the manufacture of machine tools, raw materials and inspection equipment to the units licensed.

4. Certain leading and bona fide units should be converted into model enterprises at various machine tools manufacturing centres. Division of labour in the other units must be insisted upon to enable them to specialise in their respective production programmes or operations and master the techniques in their respective trades.

5. Likewise, foundries on modern lines and assembly shops should be set up in various centres.

6. The assembly shops should alone cater for heat treatment, precision grinding, electro-plating and painting groups under one roof or in one compound.

Mr. Etter.

1. Every effort should be made to improve the organisation and marketing of handloom products in order to increase productivity and cut down costs.

2. The handlooms should not compete with fabrics which are being produced much more cheaply in mills, such as plain cloth.

3. The maximum number of handlooms should be switched over for producing better varieties of fabrics which the mills cannot produce.

4. The application of take-up motion and let-off motion will increase the output of the handlooms.

5. "Throw shuttle" looms should be converted into "fly shuttle" looms.

6. The bulk of the handlooms should gradually be replaced by powerlooms.

7. A substantial number of Banaras handlooms and Texmaco looms should be installed in handloom centres for obtaining results on the suitability of these looms.

London

HOPES OF PRICE STABILITY JUSTIFIED

A SECTION OF LABOUR NON-CO-OPERATIVE

(FROM OUR LONDON CORRESPONDENT)

NOT everyone is prepared to admit the fact, but it is true nevertheless that there is a pause in the inflationary spiral. There is increasing evidence of stability in retail prices and the other economic indicators are sufficiently encouraging to justify the hope that Mr. Macmillan's hopes of a "plateau" can not only be achieved but even maintained long enough to avert most of the dangers with which we have been faced. That is not to say that the anti-inflationary fight is over. Far from it; and all those who can play a part in it—the Government, the employers, the workers, and the general public—must get further contributions to make. Indeed, it is the making of these contributions that success depends. If the Confederation of Shipbuilding and Engineering Unions really represents the labour point of view—it has just unanimously voted for a substantial increase in wages and a shorter working week, besides other benefits—then the outlook is gloomy, for it means that that section of the community is not prepared to play its part. Recent developments in the car industry, examples of increasing competition in world markets, the uncertainties of the Suez Canal situation, etc. might have been expected to give the Confederation food for thought, particularly as full employment must be one of the first victims of continued inflation. But, apparently, it remains influenced. The class struggle, with its political implications, seems to be of greater importance to labour than national interest or even long-term self-interest. It is to be hoped that the T.U.C. will display greater realism and give a more sensible lead to its members than the short-sighted selfish grabbing which appears to be the policy of the Confederation.

Problems for the Government

At the same time, the Government's problems, far from growing fewer despite the success which has attended many of its policies appear to grow. At the head of the list, of course, comes that of maintaining freedom of movement through the Suez Canal. The London conference has opened promisingly enough, but Egypt's intransigence over any compromise in favour of international control of the waterway has yet to be overcome. Besides, there are difficult domestic problems to be tackled. The Treasury, for instance, having lately carried out one of the largest financing operations seen in the City for some years—the payment of cash to the holders of the £167 million of National War Bonds who failed to convert—is now faced with repaying bank advances to the electricity and gas industries to the extent of about £150 million, besides itself providing the capital funds required by these nationalised industries. The repayment is to be spread at a rate of about £10 million a month, but the provision of new capital will have to be financed by issuing additional Treasury bills—not a pleasant thought with the floating debt already unduly high and the gilt edge market so dull that it is a long time since the Government was able to sell any stock of some length to genuine investors. In the circumstances, there is encouragement to be derived from the way in which the Bank of England "conditioned" the market for the operation so that it went off without a hitch. Money market technique has not only not been forgotten, but has even advanced, and no doubt an answer to the problem will be found in due course. For the moment, however, although savings are on the increase, particularly with the issue of the new Savings Certificates, the Government is faced with other problems such as the growth of spending power with the fall in production of goods, the threat of new wage demands, and the increase of overseas balances. Maintaining the squeeze in these circumstances will present quite a headache during the rest of the year.

July Trade Figures

Britain's adverse trade gap, measured by the excess of imports over exports, narrowed in July, which must be regarded as indicating that the improvement in the overseas balance continues, and, if it continues at this rate, it may well produce a balance of payments surplus for 1956 of well above £200 million. At £44.3 million the gap was £7.4 million smaller than in June. It was also £6½ million less than the monthly average in the first half of this year and nearly £28 million less than the monthly rate for the whole of last year. The July improvement was the result of a much steeper fall in imports than in exports. Britain's export sales in July at £266.3 million were £9.8 million lower than in June, but they were almost the same as the monthly average for the first half of this year and 10 percent above the average for 1955. The July import bill at £320.3 million was £19.6 million less than in June, 3 percent below the monthly average figure for the first half of this year and 3 percent less than the 1955 average. There is some evidence in the July total that the long-awaited reduction in the cost of imports following the credit squeeze has at last begun to develop.

Sales to the vital dollar markets were reasonably satisfactory last month. At £35.6 million they were £2 million less than in June, but excluding special items (especially, the repayment of lend-lease silver, which amounted to £9 million over the past four months) they were just above the monthly average rate for the first half of this year, which was £34 million, and that compared with

£24 million over the same period of 1955. Compared with the monthly rate for the whole of 1955, they showed an increase of nearly 23 percent. In July, exports to the United States at £20.5 million (excluding the silver shipments) were 18 percent above the average monthly rate for 1955, and exports to Canada, at £15.2 million, were no less than 29 percent above the 1955 average.

Commodity Price Stability

Industry's raw material costs have stopped going up and in these prices the plateau has been reached. Following a rise of 3.1 percent in the last six months of 1955, the Board of Trade's wholesale price index for basic materials fell by 0.1 percent in the first half of this year. In this period prices of copper, rubber, tin, zinc and a few other commodities fell, while cotton, wool, iron ore and steel scrap went up. Some of the fluctuations were violent: copper fell by 21.7 percent and rubber by 36.9 percent, and on the other side steel scrap rose by 30.5 percent. But, on balance the movements averaged out. In contrast to the aggregate stability of raw materials, producers' prices for their manufactured products have continued to rise. The index put on 2.3 percent between the end of 1955 and last June, for while materials were costing no more, wages rose in this period by 6½ percent which was five times as much as in the previous six months. The changes in the prices of manufactured products lag behind those of raw materials. As well as wages, the costs of plant and machinery have to be taken into account and these tend to be stable over fairly long periods. In any case, the sharp fluctuations in raw material prices give an exaggerated picture of what industry is actually paying. Considerable quantities of these materials are bought on long-term contracts (copper for example) or are purchased well ahead of when they are needed. Only small marginal amounts are ever purchased at the peak or bottom levels of the market.

Cotton Industry's Loss of Labour

More than 8,000 cotton operatives left the Lancashire mills for other work in the first six months of this year and the number employed in the industry has now fallen to fewer than a quarter of a million. Figures issued by the Cotton Board show that the labour force on 30th June this year was 247,900, compared with 256,080 on 31st December last year. In the first half of last year the industry lost more than 19,000 workers, and in the second half more than 11,000. Altogether, since the recession, attributed to growing imports of cheap cloth from Hongkong and India, began in 1954, about 39,000 operatives have left cotton, and workers are still leaving the industry at a rate of more than 1,000 a month. Output figures, issued by the Cotton Board, show that the weekly average production of cloth during June this year was 48.07 million yards. For October, 1954—just before the recession began—average weekly production was 58.17 million yards.

Woolen Exports Up

Although production in the wool textile industry in the first half of this year was a little lower than in the corresponding period of 1955, exports totalling £69.4 million were 7 percent up on last year. As exports in the first half of last year, however, showed the effects of the transport strikes, the increase is liable to overstate the underlying change. So far this year, according to Board of Trade figures, deliveries of woven fabrics, excluding blankets, were 4 percent lower than in the

first half of last year. This reduction has been mainly in woollen fabrics. There was a check in June to the downward trend in deliveries of blankets, now seasonally low, but in the first half deliveries were 17 percent lower than a year ago.

China Tea Again

For the first time since the war China tea is to be auctioned in Mincing Lane under a separate catalogue. More than 300 chests are to be offered early this week. The lots are mainly "China Blacks" and resemble Indian varieties rather than the traditional China teas with their smoky flavour. Small quantities of tea from Communist China have, however, been on offer on the London market fairly regularly over the past two years. Most of it has been used for blending with other varieties. Prices have been about on a par with the dearer sorts from other tea-producing countries. China's traditional teas have been out of public favour for some years and the market sees little prospect of their returning to popularity. As to the newer varieties, the present attitude is one of mild interest rather than enthusiasm.

Lascars in British Ports

Satisfaction has been evident in shipping circles here over the plan of the Pakistani Government to deal with desertions of seamen in British ports. This problem has continued to increase the difficulties of British shipowners who employ lascars crews, and applies equally to Indian seamen. The Pakistani Government's plan is to emphasise to the men that in their own interest they should not desert in foreign ports, to issue instructions that in cases of genuine difficulty or grievance the men should be able to get help from sailors' welfare officers, and to increase the number of such welfare officers and post them at all major British ports. Government officials in Karachi recently disclosed that there were 105 desertions by Pakistani seamen in Britain in March alone this year. It is hoped that the Indian Government will adopt similar measures about their seamen. Quite a number of British owners prefer to have lascars seamen on their vessels, but if these desertions continue at the present rate, then it is possible some of these owners will revert to all-European crews.

Brevities

Assam Frontier Tea Co. announce a dividend for 1955 of 15 percent, compared with payments totalling 25 percent in the previous year. After tax of £240,500, against £319,000, net profit is £55,417 lower at £226,018. This is before provision of labour bonus for 1954, amounting to £113,500. Provision for past year's bonus has been made in 1955 expenditure. Agreement has still to be reached as to the period when the 1954 bonus will be allowed for tax purposes.

British exporters to Egypt are, not unjustifiably, complaining of the anomalous position in which they are placed by the Board of Trade's latest announcement that payment is not being made out of blocked Egyptian sterling accounts for goods exported to Egypt other than for goods delivered or shipped on or before 27th July and for goods in respect of which confirmed bankers' credits were established on or before that date. But exports to Egypt are not prohibited except arms and ammunition, though export licences are required for certain kinds of goods. The exporter is in a quandary. If he makes delivery, he will not get paid. If he does not deliver, he may be liable for non-fulfilment of contract.

AN EDUCATION IN

Oil

This is not an abstract design in an Art Class. It is one of the chemist's symbols for the structure of hydrocarbons. And hydrocarbons are the most important ingredients in oil—that vital fluid on which India depends so much for the progress of industry, transport and agriculture.

In the Assam Oil Company, chemists, physicists and geologists are engaged all the time on research, helping to find new sources of oil, devising more efficient and more economical methods of refining oil and discovering new uses for oil.

The results of such research mean that more and more of the oil and oil products which are needed for our expanding economy come direct from India's own oilfields.

Bombay**RIISING PRODUCTION OF SOAP IN INDIA****T.O.M.C.O. PROPOSAL TO ISSUE BONUS SHARES**

(FROM OUR BOMBAY CORRESPONDENT)

AFTER four years of stagnation, the production of soap in the organised sectors rose during 1955 from 88,000 tons to nearly 100,000 tons, said Mr. J. R. D. Tata in his address from the chair to the annual general meeting of the Tata Oil Mills Co., Ltd., last week. Mr. Tata added that the aggregate production of the country, after taking into account the production of the cottage sector, approximates 220,000 tons, which exceeds the first five year plan target by 20,000 tons. As a result, the Planning Commission has revised its original target from 120,000 tons to 200,000 tons for the second plan period. Even this is well below the existing installed capacity, which illustrates the magnitude of the problem of idle capacity in the industry. The increase in T.O.M.C.O.'s sales of soap during 1955, as compared with the previous year, exceeded in percentage the increase for the organised industry as a whole. With an increased turnover and the absence of wide fluctuations in the price of all vegetable oils generally, excepting groundnut oil, the company's gross profits were higher than in the previous year by approximately Rs. 25 lakhs. On the basis of these higher profits, Rs. 11.75 lakhs was allocated to depreciation, of which Rs. 3 lakhs meets past arrears. The depreciation fund of the company now stands at over Rs. 117 lakhs against the block of over Rs. 192 lakhs. Appropriations have also been made to the reserves for bad and doubtful debts, sales promotion and development and deferred taxation, the

latter two reserves being of recent origin. The directors have recommended the payment of a bonus equivalent to 2½ months' basic wages or salary to all employees of the company, as compared with one month's basic wages paid for the previous year.

Bonus Shares

The board has also decided to issue 56,086 bonus shares in the ratio of one fully paid-up ordinary share for every five held, by capitalising a portion of the amount standing to the credit of the company's share premium account. Permission for this is being sought from the Government of India. Mr. Tata said that in 1943, the company had issued fully paid ordinary bonus shares which were allotted to shareholders in the proportion of one bonus share for every 20 ordinary shares held. Against holdings which were not multiples of 20, the company had to issue fractional certificates and the date for conversion of these certificates into fully paid shares was extended from year to year until 31st March, 1956. In spite of several extensions, 2,560 fractional certificates, equivalent to 128 ordinary shares, still remain unconverted. The directors have therefore decided to convert these outstanding fractional certificates into fully paid ordinary shares and to allot them to the managing agents who will hold them in trust for holders of the fractional certificates until 31st December, 1956. If no claim is made for these shares by that date, they will be sold in the open market and the proceeds realised will be credited to the company's general reserve fund in accordance with the terms of the allotment.

Bigger Expenditure on Publicity

Some shareholders have been critical in the past of the expenditure on publicity. Dealing with this criticism, Mr. Tata said: "While the increase has been substantial, I must point out that it still represents only a little more than 3 percent of the sales value of the products advertised and about 2.7 percent on total net sales. In terms of turnover, therefore, our publicity charges are, if anything, on a modest scale, which is far exceeded by our principal competitor. The substantial improvement in the sales of our brand products last year shows the importance of vigorous advertising in our line of business. In fact, I hope that our advertising budget will keep growing from year to year for that should mean a corresponding increase in our business and profits." The company has progressed in other directions also. He pointed out that as a result of recent visits paid by senior sales executives to the Middle East and Far East, T.O.M.C.O. products were slowly finding their way to these distant territories. Mr. Tata said that while the volume of foreign business was still quite small, the prospects for marketing Indian toilet soaps and hydrogenated oil abroad were promising, and rapid progress could be made if consumer goods such as soap, perfumery products and vanaspati were included in the trade agreements which the Government of India concluded with other Governments.

Indian Soap Consumption

It seems perhaps a bit premature to think in terms of a permanent export market for Indian soap. It is doubtful if Indian toilet soap could successfully compete for any length of time with foreign products. Apart from anything else, the Indian industry is at a disadvantage because it has to use vegetable oil instead of tallow which is used by foreign manufacturers and which is a far cheaper raw material. In view of the price disparity, Indian manufacturers can hope for no more than occasional overseas markets. On the other hand, an export market would be most desirable to use the idle capacity of the Indian industry until such time as the home market expands. The annual per capita consumption of soap in India works out to 14 ounces as against 3 to 4 lbs. in south-east Asia and 25 lbs. in Europe. A tremendous potential exists within the country, but so long as this remains latent, it seems the industry will continue to have its troubles. Mr. Tata announced the acquisition by the company of a soap factory in Calcutta which has been out of production for some time. Apart from the opportunity to increase production, said Mr. Tata, "the possibility of making despatches to markets in West Bengal, Assam and Bihar from a factory located in Calcutta will result in substantial economies in freight charges." The company also proposes to install a second solvent plant in the south for de-oiling oilseed cake. Plans are also in hand for modernising the crushing and oil expelling equipment in Bombay and Tatapuram.

Collaboration with Foreign Firm

A welcome disclosure was that the company is negotiating with a well-known foreign firm for collaboration in the formation of a new company for the manufacture of certain essential oils and aromatic chemicals in India. These negotiations, it is hoped, will assume concrete shape by the end of this year. This means the setting up of a new industry altogether which forms a very important part of the overall chemical industry. The production of essential oils has been so far on a very primitive basis, while the manufacture of aromatic chemicals is practically non-existent. The soap industry, however, needs special attention. It is curious that over 30 percent of soap production is accounted for by small-scale manufacturers working on a cottage industry basis. There are 3,000 to 4,000 such units scattered all over the country. Although they produce large quantities of washing soap which is often used for toilet purposes by the poorer sections of the community, they are subject to no supervision whatsoever. Their fortunes depend on an erratic market and if the supply of oil is scarce or the price too high, they close and wait for better times to come.

Uttar Pradesh**INDUSTRIALISATION OF UTTAR PRADESH****BIRLA COMMITTEE SUGGESTS NEW WAYS OF RAISING CAPITAL**

(FROM OUR LUCKNOW CORRESPONDENT)

THE Fact-finding Committee for Industries, set up last February by the State Government under the chairmanship of Mr. B. M. Birla, has submitted its report. There have been some unofficial indications of the Committee's broad recommendations. A concerted move by the State Government to secure an investment of Rs. 100 crores for the development of private industries during the second plan period, it is understood, is one of the Committee's suggestions. Governmental assistance to new industries, according to the Committee, should be stepped up to cover 50 percent of the total cost. The long list of industries, which in the Committee's opinion could be conveniently set up in the State, includes electrical goods, chemicals, fertilisers, pharmaceuticals, drugs, paints, distilleries, silk, glassware, leather goods, plywood, mill stores, agricultural implements, typewriters, rubber goods, yeast, etc. Special emphasis has been laid on the development of three major industries, namely, sugar, cotton, textiles and oils. In order to improve the sugar industry, the Committee, it is understood, has recommended a substantial reduction in the cane cess.

Multiplicity of Taxes

One of the factors hampering the growth of industry is the multiplicity of local taxes. The Committee, it is reported, has recommended the abolition of all such taxes and their replacement, by one terminal tax and a single-point sales tax. Rationalisation is also believed to have been strongly recommended by the Committee, which feels that labour laws in U.P. are much more stringent than in other States. The remedy is either to apply the Central Industrial Disputes Act or to bring the State legislation into line with the Central Act. To mitigate social evils and for more balanced development, future industrialisation should preferably be dispersed to places other than Kanpur. Employment for 150,000 people may be provided if the Committee's suggestions are implemented, it is stated.

The Committee, it is understood, is highly critical of the State Government's electricity pricing policy. An autonomous statutory board for electricity to regulate production, distribution and prices throughout the State has been suggested. Industry and trade should be adequately represented on the Board. The opening up of the southern regions of U.P. is considered indispensable for the proper exploitation of the mineral wealth on the Vindhya Pradesh border. Liberal road permits for private motor operators have also been recommended.

Zamindari Abolition Bonds

One of the ways which, it is understood, the Committee has suggested to stimulate capital investment in industry is the immediate redemption of the Zamindari Abolition Bonds, if their holders agree to invest a certain percentage of the money in industries. What happens to these bonds at present has been graphically described in a memorandum submitted by the President of the British Indian Association to the Chief Minister. Several private individuals have started a regular business for buying up these bonds at nominal prices from needy ex-intermediaries. The Government itself refuses to accept the bonds in full or part payment of agricultural income-tax, death duty, land revenue or other dues recoverable from the bondholders. The bonds are attached and sold by the Government to private operators at cheap bids. The Zamindari Abolition Bonds, according to the B.I.A. President, "have been issued by the Government and they are as good and valuable a property as any other property, and it is just and equitable that they should be accepted as good securities." If the Birla Committee's suggestion is accepted, the waste of resources resulting from unregulated transactions in the bonds could be prevented.

As it is, the State Government is hard put to it to find resources for financing the second plan. Addressing the Press Consultative Committee last week, the Chief Minister, Dr. Sampurnanand, said that the nationalisation of life insurance and the new formula for sharing small savings collections between the Centre and the States have created great difficulties. The share of the State in small savings collections, under the new formula, would be 25 percent of the average of the last three years' collections and 50 percent of the excess collected. Formerly, the State was entitled to the full collections in excess of the target.

New State Loan

The U.P. State loan of Rs. 8 crores is the second biggest of all the State loans announced by 15 Governments on 9th August. The loan is intended to finance the State's irrigation works, electricity projects and other development schemes. The issue price is Rs. 99-8. The loan will have a currency of 12 years from 3rd September, 1956, and will bear interest at the rate of 4 percent a year.

Employment Exchanges

The U.P. Government hopes to be able to take over the whole Employment Exchange organisation in the State next month—that is, two months

ahead of the deadline. All the 400 Central Government employees have been served by the Government of India with discharge notices, carrying the offer of re-employment by the State Government on fresh terms. The State Government; it is understood, has no intention of prejudicially revising the pay and emoluments which the staff is now receiving. But the salary scales of all employees will be brought down to the State level, and the excess that some employees are drawing will be set off against future increments.

State Cement Factory

The Minister for Industries, Mr. C. B. Gupta, has announced that the Government proposes to hold an enquiry shortly into the causes of the failure of the Government cement factory in Churk to reach its rated production capacity of 700 tons a day. The enquiry is to be conducted with the assistance of engineers, including engineers of the British firm which collaborated in the setting up of the factory. A suggestion that labour representatives should also be associated with the enquiry has been rejected. According to Mr. Gupta, the production of the factory in the first six months of its working was 69 percent of the rated capacity and between January and June this year it rose to 93 percent. If this is so, the shortfall would only appear to be 7 percent. But what has prompted inconvenient queries is the claim which the Finance Minister, Mr. Hafiz Muhammad Ibrahim, made in his Budget speech last February: "The Government cement factory in Churk went into production five months ago, and has already succeeded in reaching its full rated capacity of 700 tons a day." Replying to questions in the Legislative Assembly, the Industries Minister said that the

Cement Board had already gone into the question at some length, and it had been alleged that the kiln of the factory was faulty. If the experts thought that the kiln was not set up properly, he added, the company which erected it would be asked to remove the defects.

Labour Welfare Fund

A Bill for the creation of a labour welfare fund has been introduced in the Legislature by the Minister for Social Welfare, Acharya Jugul Kishore. Provision already exists in the Payment of Wages Act that the fines realised from workers should be applied for approved purposes, beneficial to them. But in addition to the fines, there were accumulations of unpaid wages, bonus, gratuity, etc., which now remain with employers without being put to any beneficial use. The Bill seeks to pool together all such amounts to be administered by a board. Voluntary donations, grants-in-aid from the State Government and other sundry receipts will also augment the fund.

Experiment on Fish-breeding

Some amusement has been caused by what may be called a "fishy" story put out by the U.P. Information Directorate that mirror-carp—a rare variety of fish brought from the Nilgiris—has been flourishing in the Bhim Tal lake in the Kumaon Hills. The Press release added that, encouraged by the Bhim Tal lake experiment, mirror-carp fingerlings would be stocked in the Naini Tal lake in September. Later somebody remembered that the Estimates Committee of the State Legislature had, in its report for 1954-55, pointed out that the mirror-carp experiment had proved a failure due to the hostility of the larger fishes, original denizens of the lake, which had eaten up the newcomers.

**The mariner and the marabou**

WE have nothing against the *Leptopilus Marabou*. In fact, we can't but admire his magnificent detachment from the world's worries, his ability—if not to rise above it—at least to look above it.

But let's face it—a marabou is not a packageable item. Catch him with both legs on the ground, and you have some hope. Grab him when he's contemplating and you're faced with a sort of isosceles triangle, topped off with a lot of (very pretty) cotton wool. So we gulped a little when a Japanese naval officer asked us to send his latest acquisition after him. (Marabous hate sea voyages—the horizon keeps moving up and down.)

Maybe you are thinking of sending something to Japan? If you are, don't forget we fly twice a week to Tokyo—and whatever you send takes just 24 hours to get there.

Marabous and mica, mangoes, mice and machinery—Air-India International's Cargo Department handles them all. Let's hear from you.

Cargo by air:

- * saves money on insurance
- * gets goods on the market quickly
- * involves less tied-up capital

Madras

PLANS TO IMPROVE FOREST WEALTH

HIDES AND SKINS TRADE IN DIFFICULTIES

(FROM OUR MADRAS CORRESPONDENT)

SINCE questions have been asked about the removal of assets from Malabar forests, the latest official report on forest administration for 1954-55 acquires a special interest. With the transfer of south Kanara and Malabar, the forest area will be reduced by about 1,500 square miles. The Ooty circle will have only the Nilgiris division, which unlike the others, does not show a surplus. The State will lose softwood and matchwood when Malabar is transferred. The Kollegal division also will go to Mysore. Talk of teak plantations in Tanjore is regarded as baseless. The department's report suggests that sandalwood resources will be unaffected by States reorganisation. The department's revenue will, however, decline. The restoration of the post of Forest Utilisation Officer in 1954-55 followed the increased demand for products from the railways and other consumers. Developing fuel plantations is still the main object of the department, but latterly it has been keen on producing materials for the proposed paper industry. The offer to private business men has not been yet accepted. The high capital cost has been a real obstacle. Increasing forest wealth is an accepted policy. Experiments on lac cultivation have also started. After zamindari abolition, private forests passed into Government control, but the claims of ryots to fuel and fodder are respected. Aborigi-

ginal uplift, too, is part of the department's work. Shifting cultivation in newly cleared areas is allowed on various conditions. As soil conservation is a new line of work, steep hill slopes are excluded from felling operations.

The report indicates that leases for cardamom and areca plantations are granted even in reserved forests. The official review suggests that working plans will be revised when there are only two forest circles in Madras. The appendix on live-stock shows that sales of calf elephants to foreign dealers and temples continue. The majority of elephants were used in the Malabar forests, but the particulars reveal that animals were transferred from one division to another while at the regular sales of young stock, auction prices fluctuated heavily. Age did not always guarantee a good price. The record of game shot is noteworthy for its omission of the cheetah. The true hunting leopard is extinct and even bears are hardly encountered. The biggest bag for the year shown is under hares (14) though it is clear that it is a ground game like the mongoose. The Game Associations in Ooty and Kodakanal get the department's support, but poaching is still prevalent.

Difficulties of U.K. Leather Trade

An important subject for Madras is the difficult conditions which now obtain in the U.K. leather trade. The depression in half-tanned E1 kips has hardly passed, and the official review suggests that the fall in the London prices for goat and sheep is due to poor quality and adulteration. Vegetable tanned leather from South America must be treated as a new rival. Both East and West Africa are building up a trade in tanned hides. The big trade in leather and manufactures between India and the U.K. was affected in 1955 by competition from Eire, Australia, Canada and Uruguay. Australian leather is said to be cheaper than Indian. Chrome leather from Pakistan creates a new problem for Indian exporters here. Though Russia bought goatskins in London, British tanners have asked for the abolition of preference on Indian hides and skins. Glove-makers are reluctant to buy Indian sheepskins because of adulteration. Synthetic rubber is also a rival to leather, and the U.K. footwear industry is getting anxious over its prospects. Strikes and the credit squeeze have affected U.K. buying of hides and skins in Madras which was forced to curtail output in the first quarter of 1956, and is alarmed over the high cost of raw hides and skins. The setting up of an export promotion council can afford little help, nor will new tanning extracts offer any assistance to an industry that has a large surplus capacity and still relies on the U.K. market for selling its output.

Transport Needs

When Mr. Balwantrao Mehta visited Madras a fortnight ago the transport needs of south India were impressed upon him so that it could be brought to the notice of the Congress Parliamentary sub-committee. Shorter hauls to the ports on the east coast are one way of reducing the strain on the railways, and the Andhra Chamber of Commerce, therefore, pleaded for the rehabilitation of minor ports. It argued that a provision of Rs. 5 crores for minor ports in the second plan will help Andhra. Visakhapatnam is the concern of the Railway Ministry, but other ports are under the State Government. Sailing vessels can help move coastal cargoes from one minor port to another, and trade licensing, too, can encourage the coastal trade. Dredging of open roadsteads is vital for ports like Masulipatam. The canals in the Kistna delta can help enhance the usefulness of the port. Improvements in the Buckingham Canal can promote transport along the coastal area, but boats using engines are required for quick and efficient operation. The Chamber has asked for the inclusion of Kakinada, which soon has to be made an all-weather port on the main railway line from Madras to Visakhapatnam, pointing out that Kakinada is the biggest port for ore shipments. The opening of a railway line from Bimilipatam to Visakhapatnam is considered to be another essential improvement. No doubt, improvements in Vijayawada will reduce transport delays, but the ports are considered more important. The minor ports fund can help only to some extent; Central grants are needed because road transport is often affected by floods in the Godavari delta. The theory that Nizampatnam in Nellore is in need of early improvement is not accepted, though it is said that country craft and small coastal vessels can be helped by uniform port dues and the provision of tugs and lighters.

Resources of Salem District

A note on the resources of Salem district by the local Secretary of A.I.M.O. calls attention to the chromite and magnesite deposits found there. The manufacture of refractories is easy with the fireclay available in south Arcot. The tariff protection given for abrasives accounts for the setting up of a factory near Omalur. The Planning Commission, in its recent programme for industrial development, suggests that Hindustan Abrasives in Salem is bigger and may develop more rapidly than the factory set up in Madras with foreign aid and skill. But the presence of corundum and emery has not helped the enterprise in Salem, as the local abrasives industry has made little progress. It is perhaps right to say that the Planning Commission's account of the abrasives industry relates to the future rather than to the present. The present state of the abrasives and grinding wheels industry in Bombay and Madras is unconnected with the development of small-scale manufacture of sand paper and allied goods.

Jute

STEADY RISE IN GUNNY PRICES SINCE SEALING ANNOUNCEMENT

RAW JUTE WELL MAINTAINED AS MILLS SEARCH FOR QUICK DELIVERY FIBRE

THE I.J.M.A.'s decision to re-seal a further 5 percent of the mills' loomage already appears to have had the desired result, although it does not come into effect until mid-September. Jute goods prices have recorded a steady rise since the announcement, both heavy goods and hessian having advanced by about Rs. 30 or Rs. 35 a ton. This has narrowed the disparity between fibre prices and those of finished goods; raw jute rates have remained constant, giving mills their first incentive to do business for a considerable time. The advantage gained, however, is still inadequate to give manufacturers a profit on simultaneous business, and only small transactions of this nature have been recorded. Sacking prices rose during the past week to their highest level for four months, and it is over five months since hessian was anywhere near its current level. Mills were unable to take full advantage of the higher prices as the rise caused overseas buyers to lose interest in the Calcutta markets. The bulk of the business was done by local shorts in the speculative market, and shippers also covered before prices became too high. The news that burlap consumption in the U.S.A. had dropped by 1 million yards during July failed to produce more than a temporary halt in hessian, and at 61 million yards was looked upon in some quarters as not bad. This view was based on the fact that consumption in July is normally low, while this year's offtake is 5 million yards more than July last year. Total American consumption to date is 11 million yards up on 1955, 39 million yards more than in 1954 and 34 million yards higher than in 1953. American stocks are also appreciably lower than last year, and as a result the sentiment in hessian is one of confidence.

While jute goods responded to the re-sealing of looms, the reaction in raw jute did not quite come up to expectations. It was thought that prices would show a gradual decline. The fact that this was not the case can be attributed in large measure to the latest raw jute arrival statistics. Although these show a total increase of 11,930 bales over imports in June, arrivals from Pakistan have fallen. At 28,000 bales, they are 17,700 bales less than in the previous month and the lowest figure recorded in just over three years. The increase of 29,830 bales from Indian stations compared with the previous month brought this figure to 284,100 bales, which is over 120,000 bales more than in July 1955. This in itself is very encouraging, but considering the dwindling arrivals from Pakistan the outlook is not so bright. It is the impression in many quarters, especially those connected with Pakistani sellers, that there will be no great improvement in the amount of jute shipped from Pakistan until drastic changes are made in the laws governing the export of jute to India. At present, there seems little likelihood of this taking place, and with India still a long way from self-sufficiency in raw jute in spite of the encouraging increases, the fibre markets have tended to remain steady. They have received support from the mills themselves, who continued their long search for quick delivery jute. Local Calcutta markets were hardly able to keep pace with the demands placed on them and prices became very firm. Upcountry agencies also reported steady conditions, but this was mainly due to the very poor imports on account of bad weather. Upcountry rates retained a premium over Calcutta quotations.

THE JUTE MARKETS

Manufactured Goods: The gunny markets continued to rise as a reaction to the re-sealing of looms. By the opening on Thursday morning, B Twills showed advances of Rs. 1-4 or Rs. 1-8. August shipment jumped to Rs. 106-10 a 100 bags and January-March shipment to Rs. 107, the undertone being very firm. Hessian also moved up and 40in. 100z. reached Rs. 39-13 a 100 yards for August shipment and Rs. 39-11 for January-March shipment. There was very little overseas interest at these prices but speculative interest throughout the day ensured a further rise of 4 or 8 annas in sacking. Reports of a drop in American burlap consumption put a temporary brake on the rise in hessian rates. They dropped by 1 anna, but reports of interest by the U.K. soon changed the situation, and this, combined with heavy speculative activity, forced up prices. Mills sold fair quantities on the rise but most of this was absorbed by the bazaar. After the week-end, heavy goods prices showed an improvement of about Re. 1. At Rs. 107-12 and Rs. 108-8 respectively for the near and forward positions, B Twills recorded their highest level in four months. Similarly, hessian jumped by 10 or 12 annas to reach its highest price since early March, and 40in. 100z. quotations stood at Rs. 40-7 and Rs. 40-6 for the August and January-March shipping periods. A quieter tone developed after this, but Tuesday's quotations showed very little change from the previous day.

At the close, the market was very firm on reports of good enquiries for hessian. Opening quo-

tations on Wednesday morning were as follows:

	August	September	Oct.-Dec.	Jan.-Mar.
	Rs.	Rs.	Rs.	Rs.
40in. 80z.	33-12	33-8	33-4	32-14
40in. 100z.	40-13	40-15	41-2	40-12
B Twills	108-8	109-8	110	109-8
Heavy Ceess				
(Blair)	107	110	110-4	109-8
A Twills	133	134	134-8	134
Liverpools	123-4	124	125	124-8
Cornsacks	109-8	109-12	110-4	110

Raw Jute: There was very little activity in the jute markets at the beginning of the past week, but interest increased as the price of gunnies rose and mills came into the market. The fibre markets opened on the basis of Rs. 28 a maund basis Bottoms for August-September shipment, and tended to remain steady in spite of a general feeling that prices should fall. This was due to the steady upcountry markets where imports were at a very low level because of the bad weather conditions. Mills' main interest was again shown in the local markets, although business was reported as far forward as October for Western fibre. They experienced some difficulty in obtaining jute at their prices in the latter transactions, as sellers were reluctant to meet the lower bids for forward shipment when they could sell large quantities at the higher prices offered for ready delivery. Imports into the local markets again improved, but demand absorbed all available supplies and the stock position was unaltered. Towards the close, business was again done for quick shipment jute, sentiment improved and quotations advanced by 8 annas a maund.

The bulk of the business reported during the week was transacted in the local markets. Dhurbi-Northern jute passed at Rs. 28-8 to Rs. 29 a maund basis Bottoms for 10 or 15 days' delivery, and also ready bills of lading. Other business was put through at Rs. 29 a maund for half August and Rs. 28-8 for half 10th September shipment. Fair quantities of Murshidabad white jute changed hands at Rs. 26-12 for half September-half October shipment. New Crop Daissee white jute also came in for attention and Rs. 28-8 a maund was paid for 15 days' shipment. Old Crop Daissee fetched Rs. 29-8 and Daissee Mesta Rs. 28-8 a maund for the same shipment. Small business was done in Pakistan cuttings at Rs. 128 to Rs. 130 a bale for ready bills of lading.

At the close, the market was very firm in sympathy with the goods market, and opening quotations on Wednesday morning were as follows:

Indian Jute (New Crop):	Landed at Mills Rs. a md basis Bottoms.	Shipment.
Lower Assam	28-8	August-Sept.
Northern	28-8	"
Murshidabad White	27-4	Sept.-Oct.
Daissee White	28	Aug.-Sept.
Daissee	28-8	Sept.-Oct.
Daissee Mesta	26-8	"
Local Northern (Old-New)	29	15 days
Bimil	26-8 for F.A.Q.	Sept.-Oct.

Tossa is quoted at 8 annas to Re. 1 a maund above the price of white jute.

Pucca Bales (New Crop):	Rs. a bale.	Shipment.
Mill Firsts 2/3	190	August-Sept.
Mill Lightnings 2/3	175	"
Mill Hearts 2/3	160	"
S. G. Daissee	185	Sept.-Oct.
L. G. Daissee	170	"
Pakistan Jute (New Crop):	Rs. a md.	Shipment.
Jat	31-8	Sept.-Oct.
District	30-8	"
Northern	30	"
Pucca:	Rs. a bale.	Shipment.
Mill Firsts 2/3	205	Sept.-Oct.
Export Firsts 2/3	185	"
Export Lightnings 2/3	170	"
Jat Cuttings	127-8	Sept.

The local Cossipore markets have been very steady throughout the week in spite of the rise in wagon arrivals to 800. Strong demand for ready jute has kept prices high and prevented stocks from increasing. At the close, quotations were based on Kishanganj jute at Rs. 28-12 a maund for garbat quality.

Mofussil: The recent rainy weather in the up-country regions has prevented any large movements of jute, and imports into all agencies have been very poor. All arrivals have found ready buyers and rates have been maintained at a high level. Reports of flooding have strengthened the market, and quotations in Dhurbi at the close were based on Rs. 26 a maund basis Bottoms.

GUNNY SHIPMENTS IN JULY

The following are the total net figures of manufactured jute goods shipped from Calcutta during the month of July, 1956 after providing for short

shipments. These figures include shipments to coastal ports.

	Hessian Bags (Tons)	Cloth (Tons)	Total (Tons)
Gross	2,896.2	31,027.9	33,924.1
Short Shipped	93.2	323.3	421.5
July 1956 (Net)	2,803.0	30,699.6	33,502.6
June 1956 (Net)	3,059.1	30,108.4	33,167.5
May 1956 (Net)	3,712.7	24,186.8	27,899.5
	Sacking		
Gross	31,171.4	1,596.3	32,867.7
Short Shipped	916.8	2.6	919.4
July 1956 (Net)	30,254.6	1,693.7	31,948.3
June 1956 (Net)	27,489.1	2,007.4	29,496.5
May 1956 (Net)	37,299.5	2,873.7	40,173.2

GUNNY SHIPMENT STATISTICS

The following figures include coastal shipment relating to manufactured jute goods for shipment from the port of Calcutta. These are gross figures based on shipping bills presented:

	Hessian Bags (Tons)	Cloth (Tons)	Total (Tons)
1st to 15th August 1956	1,829.8	18,483.7	20,318.5
1st to 15th July 1956	1,215.7	15,186.1	16,401.8
1st to 15th June 1956	1,334.2	15,525.9	16,860.1
	Sacking		
1st to 15th August 1956	23,915.5	2,046.9	25,962.4
1st to 15th July 1956	12,675.7	925.0	13,600.7
1st to 15th June 1956	13,425.0	768.8	14,193.8

THE FOREIGN JUTE MARKETS

UPWARD PRICE TRENDS

(FROM OUR DUNDEE CORRESPONDENT)

RAW jute prices have shown a tendency to advance further in Pakistan. Sellers were last week encouraged by Continental spinners buying Mill First quality and this has sent the rate up to £94 a ton, with Mill Lightnings up to £85 and Mill Hearts £81. September-October shipment, c.i.f. U. K. These are the lowest limits quoted here, but some sellers are asking as much as £98, £87 and £84 respectively. The whole position is very irregular, but there is no doubting the firmness of the raw jute market. The only change in the rates quoted for dark jute is that for grade Daissee-2/2, for which £82 is wanted, against the minimum of £81. All the other prices remain the same at £91 for good Daissee-2/3, £100 for grade Tossa-2/3 and £90 for Tossa-4, c.i.f. U.K., September-October. Spinners here have bought very little jute, as they say they cannot afford to pay the quoted rates due to the prices for yarns being pegged at 14.19d a lb. for common 8lb. cops and 14.77d for 8lb. spoils. Dundee spinners and manufacturers are

SCREWCRETE FOUNDATIONS.
FRANKI PILED FOUNDATIONS.

The Braithwaite Burn & Jessop Const. Co., Ltd.

P-13, MISSION ROW EXTENSION, CALCUTTA.

very unwilling to raise their terms for yarns and cloth, as there is already a wide enough gap between Calcutta goods and those manufactured locally. The shipment rates, f.o.b. Calcutta, are 60s 9d for 40in. 10oz. and 46s 6d for 7½ oz., August, and 60s 9d and 46s 3d September, and also October-December, with B Twills at 163s and 163s 6d for the respective positions of shipment. Allowing 10s a 100 yards of bessians for expenses of shipment, etc., the difference between Dundee and Calcutta 40in. 10oz., in 40 and 45in. widths, is about 3½d a yard.

The Calcutta market may improve now that the mills have decided to seal up all the looms they unseal at the beginning of the year. After 17th September, production of the mills will have returned to something like the quantity they can comfortably dispose of. Dundee spinners and manufacturers have entered a considerable amount of business lately and their prices for yarns and cloth are very firm. They are comfortably situated with orders for delivery over the next two months.

U.S. BURLAP CONSUMPTION AND STOCKS

U.S. burlap consumption during July was slightly lower than June, an improvement in bag cut-up being offset by a decline for industrial uses. Although burlap consumption for the first seven months of this year was 11 million yards more than during the same period last year, the total for June and July this year at 123 million yards is 8 million yards less than for the same two months of last year. The noticeably improved consumption earlier this year, therefore, is not being maintained. U.S. burlap stocks increased 4 million yards in the past month. At an estimated 244 million yards, 129 million yards were spots and 115 million yards were floats. Appearing below are two tables which include the July figures—(1) based on member reports to the Textile Bag Manufacturers Association and the Burlap and Jute Association and (2) projected to represent the estimated consumption and stocks for the entire industry:

NEW NAIROBI CIGARETTE FACTORY USES INDIAN TOBACCO

Indian tobacco leaf, together with Kenyan, Southern Rhodesian and other east African varieties and some from the United States, is being used in the new Nairobi factory of the East African Tobacco Company. This factory, which was formally opened by the Governor of Kenya, Sir Evelyn Baring, cost £1 million, and is one of the largest and most modern industrial buildings to be erected in Nairobi. More than 700 Africans are being employed in the manufacture of cigarettes and pipe tobacco, and the industry is providing work for 200 African women and a number of Asians. The European staff numbers only 25. The factory is a two-story building, housing some of the most modern cigarette-making machinery in the world. The machinery is all of British origin. Nine brands of cigarettes are being produced on the Nairobi plant's assembly lines. In performing the opening ceremony, Sir Evelyn Baring said that there was a great need in Kenya for the type of development of which the new tobacco manufactory was a part. The factory was also an example of a decision by a worldwide group with an international reputation that Kenya was sufficiently secure, with prospects of development, to justify an investment of more than £1 million.

Engineering and Transport

U.K. FLYING DISPLAY IN SEPTEMBER

SUPERSONIC FIGHTERS AMONG PLANES TO BE SHOWN

THE holder of the world's speed record for aeroplanes, supersonic fighters, significant new military and civil engines in flying test beds and the latest versions of some of this country's most successful gas-turbine airliners—these and many other aircraft of all sizes and configurations will be on view during the first full week of September at the Society of British Aircraft Constructors' seventeenth flying display. Already a great number of important representatives from many countries have accepted invitations to attend the display.

This year, visitors will see a flying display divided into five groups, three of them featuring several aircraft in the air at the same time for periods varying from four to seven minutes. There will also be a series of individual demonstrations and—a new departure—the opportunity for selected guests on the trade days to fly in certain aircraft. The display will begin with a troopship demonstration. A hundred troops will board the large Beverley transport, now in service with the R.A.F., which will take off and, on landing, demonstrate the speed with which troops can unload and get into "action". The next three aircraft will be flying test beds: the Sperrin fitted with two Gyrons—at 15,000 lbs. announced thrust the most powerful engine yet type tested; a Britannia with two turboprop Proteus 705s, one Proteus 755 (intended for later versions of Britannia) and one Orion, a new and very powerful "constant power" turboprop engine. Then a Canberra will fly, fitted with the new Scorpion rocket engine about which little has yet been released.

New Engines

These engines will play important rôles in British and, probably, foreign aviation in the next few years. The same applies to the Tyne turboprop engine fitted to a Lincoln test bed and the R.A. 29 installed in a Canberra. The former has been specified for the Vanguard airliner and the latter for the Comet IVs and IVAs ordered, so far, by B.O.A.C. and Capital Airlines. Sandwiched between the Britannia and the Lincoln, visitors will see two most successful aircraft in service in several foreign countries as well as at home—the Gannet used for anti-submarine patrolling and the Shackleton long-range maritime reconnaissance aeroplane which is fitted with bunks for the crew.

The last aircraft in the first group will be a Hunter fitted with reverse thrust—a device of great significance in these days of rising landing speeds. The next grounds will feature single and two-seater military and research aircraft ranging from the Aiglet and Jet Provost trainers to Gnat, various Marks of Javelins and Hunters—including the two-seater trainer and versions fitted with rockets and bombs. Two naval aircraft, the D.H. 110 and N. 113 carrier-borne fighters, both of which recently concluded successful deck-landing trials, will be followed by the supersonic P. 1 which, for security reasons, will not land at Farnborough. The last aircraft in this group will, for many people, provide the highlight of the display—the record breaking F.D. 2, the first aeroplane to raise the world speed record to more than 1,000 m.p.h. The three V-bombers, Vulcan, Victor and Valiant will head the third group. The latest Viscount, the larger 802, and long-nosed Britannia 301 will then show their paces—aircraft that are developments of their successful predecessors. They will doubtless be studied with great interest by overseas airline chiefs. Next, three types already giving excellent service in many parts of the world will perform—the Heron (more than 100 of which have been sold), the Pioneer (in service in Malaya) and the Sea Hawk (68 of which have just been ordered by Western Germany).

Wide Range of Helicopters

The helicopter group will include aircraft ranging in size from the tiny Ultra-Light to the 13-seat, twin rotor 173. The Sycamore, more than 100 of which have been built, will cavort with the 173: the Skeeter, just ordered by the Army and Western Germany, will be followed by the Widgeon and Whirlwind, both in service in many parts of the world. The Ultra-Light will conclude this section. Finally, a Britannia, Herald, Twin Pioneer and the new President (civil version of Pembroke), all aircraft with great overseas appeal, will be available to give certain guests the opportunity of experiencing for themselves the quality of the U.K.'s transport aircraft.

NEW MEDIUM-RANGE BRITANNIA AIRLINER DEVELOPED

A new medium-range version of the Bristol Britannia airliner, to seat 133 passengers and to be known as the 320 Series, is now being offered to the world's airline operators. Announcing this, the Bristol Aeroplane Company says that the aircraft has a guaranteed cruising speed of 400 miles an hour and is "substantially more economic to operate than any competitive airliner over sector distances ranging from 200 up to 2,600 statute miles. Over these ranges it can carry a maximum payload of 28,000 lbs. including up to 133 passengers, together with full reserves and allowances for fuel". The medium-range Britannia is a direct development of the Series 310 long-range Britannia, and embodies the experience gained in more than

5,000 hours of development flight-testing with earlier versions of the aircraft. Its Proteus-755 engines have behind them more than 40,000 hours of running. Bristol can guarantee delivery to operators early in 1958. A feature of the plane is its short take-off and landing run. It can operate from any existing first-class runway.

The Britannia 100, 15 of which have been ordered by British Overseas Airways Corporation (B.O.A.C.), is making a tour of the U.S.A. Before leaving London on 12th August, Mr. Peter Masefield, Bristol's managing director who is accompanying the plane, said a large number of American airlines were interested in the aircraft. "We are completely happy now about the Britannia. We have an aeroplane which is in advance of anything operating today", he added. It was announced from New York that the Britannia arrived there on 13th August, at 12:52 hours G.M.T. The Bristol Aeroplane Company stated that, despite head winds, the Britannia's time of 13 hours 41 minutes was two hours shorter than the fastest scheduled time for the route.

IMPROVING TURN-ROUND OF SHIPS IN CALCUTTA PORT

Further steps to cope with the second plan traffic have been taken by the Port Commissioners of Calcutta. Dumps have been created in the port area with a view to keeping the transit areas clear, and importers are being encouraged to have their own dumps. The handling of cargo is being speeded up as a result of progressive mechanisation with the installation of modern equipment. The working system is being streamlined to ensure quick turn-round of ships in the port. The trade in general and steel importers in particular have been requested by the Port Commissioners to co-operate in the achievement of this objective by taking delivery of their cargo from the transit areas with the least possible delay. They have been further advised to take advantage of the arrangements made for delivery by road, after the normal working hours and on holidays. The Commissioners stress the paramount importance of keeping the transit areas clear. They emphasise that once the quaysides and transit sheds and yards get congested, both loading and unloading of cargo is held up and ships detained to the considerable inconvenience and loss of all concerned. It is officially stated that where delivery is not promptly taken, the Commissioners will have no alternative but to remove the cargo to their own dumps at the importers' cost, and auction them under the Calcutta Port Act so that the discharge of other vessels coming to the port may be expedited.

INDUSTRIAL TRENDS IN THE UNITED KINGDOM

UNCERTAINTIES FACING PRODUCERS

(BY A SPECIAL CORRESPONDENT)

WITH the whole situation in the U.K. so much overclouded by the Suez Canal crisis, it is difficult to write on industrial trends with any considerable degree of definition. It is not that there has been any marked damping down of activity, but certainly, in some directions, what were once avowed aims have now taken on a rather general aspect, reflecting a disposition to wait upon events for a little time. Several important concerns, including the Imperial Chemical Industries, have promised that, provided unpleasant things do not happen, such as rises in freight or the cost of fuel, they will stabilise the prices of their products over the next 12 months. Shareholders have looked askance at these declarations, since the holding of the price line seems to foreshadow a stabilisation of dividends also, or it may even be a reduction in the rates—and many shareholders are suffering more acutely than are workers from the present high cost of living. Much will depend upon whether the companies in question are able to reduce their production costs by finding new ways of improving efficiency, and yet not displacing labour. This ability, in turn, cannot be separated from a number of unknowables, notably what is to be the future of wage payments. No guarantee has been forthcoming that these will be stabilised also; indeed the trade unions have made it plain that they regard themselves as having a completely free hand in this matter, whatever course their employers may take concerning the goods they sell. It may be recalled that companies which stabilised prices during the year ended 30th June last, have had to tide over some nasty experiences in fuel prices during the period. Hence the tendency for price

stabilisation promises to be more carefully worded than they were a year ago.

Textile Inventions

The Calico Printers Association has come out with a new light weight cloth by means of which it hopes greatly to expand its exports to tropical countries, and speaks even of completely ousting foreign competitors. No information has been given of the technical production, and reticence in the matter is understandable. The Association has, however, declared that the secrets of manufacture cannot be discovered by the Japanese. Whatever the merits of this cloth, this declaration seems to err on the side of optimism. There are few industrial secrets nowadays that can be kept permanently in the dark, and the nature of any product, which relies upon a novelty so accessible for study as weaving or finishing, will probably be revealed comparatively soon. But whatever else may be the outcome, the Calico Printers should have a good selling start, and it has rendered a service to the British textile industry by placing an emphasis upon the desirability of launching out with fresh enterprise and has thereby lessened, for the time being, the cry that more and more tariffs can alone save the cotton industry. Not that the advocates of the latter, granted their premises, find their case growing weaker; for the intrusion (or is it "infiltration") of foreign textiles is increasingly evident. Household textiles, which include towels, dusters and many others of the lower priced wares are being hard hit. Despite the capricious weather, the sales of apparel and piecegoods for making-up purposes have held their ground fairly well, and it is not surprising, in view of the record rainfall, that the sale of waterproofs, plastic and other kinds, has been exceptionally large. By the way, many companies are now stressing that their fabrics need not be ironed; some are more cautious and confine themselves to remarking that the very minimum of ironing will be required—whether the fabrics are cotton or linen. This is clearly an attempt to meet the challenge of "Terylene" and nylon, which have gained so many users through a similar claim. We are told that a revolutionary rayon fabric

having non-ironing qualities will be on the market early next year, and, as this statement is made by so conservative a firm as Tootal Broadhurst Lee, an innovation of distinct interest seems to be assured.

Progress of Automation

Instrument makers continue to report the receipt of orders for experimental purposes as a prelude to the carrying out of "automation" in real earnest; and the patent list of new inventions in this connexion is impressive. The inventions are particularly concerned with "data processing" and computation, and are said to enable the devising of entirely new industrial techniques. Among the consequences prophesied is the disappearance of many of the conventional types of valves. Large-scale orders by industrial companies for instruments have not been announced, but substantial contracts have been placed on behalf of the Forces, especially for use in aircraft. According to a lengthy review in a British journal, five types of advance have been secured so far in the application of radioisotopes to the textile industry. The first is in atmospheric ionisation, by means of which reductions of static electricity can be secured, thereby the measurement of properties (as, for example, the thickness of materials), thirdly the locating of substances (not very important in the textile industry as yet), fourthly for analytical work, and finally for the determination of a reaction or physical process. Several of these applications have found instrumental expression over the past four years and may now be said to meet the needs of routine procedures in research establishments. The fact that, to quote the writer of the article, there are a great many things which can be done in the textile industry (and others) with radioisotopes that cannot easily be done otherwise, if at all, points to their use becoming essential in the future drafting control of fibres and the production of yarns and fabrics.

A colliery disaster of a few years ago led the British Government to express concern at the use in mines of conveyor belts containing cotton, rubber and other inflammable materials. The substitution of belting using F.V.C. plastic was recommended, but it was found to have the drawback of building up static electricity. Endeavours have been made to remove this defect by the inclusion of surface agents, and considerable success is now claimed in this direction. The amount of the additive required is small, and is sold under various proprietary names by the Geigy Company and other well-known manufacturing chemists. These additives presumably rely chiefly upon tritoyl phosphate.

Publication on Asbestos

The Textile Institute promises for September a new and what should prove to be a standard work on asbestos, the price to be approximately 50s. The price looks rather heavy, and will probably seem onerous in India. But it has to be borne in mind that few textile books, however important, sell more than a few thousand copies, and the book production cost on this level runs high. Authors seldom get an adequate return out of writing technical books. Publishers fare better because they usually publish many technical books and clear something on each. When one hears of the "large demand" for technical books, one is liable to think Penguin-wise and visualise stupendous figures. Alas, the truth is far, very far from this. The publisher frequently tells the author of a technical book that he is being given the inestimable advantage of getting publicity. Once the book is out, he can then ask his present employer for a higher salary on the strength that his authority has been established by the written word. Or he can apply for a fresh and more remunerative job and the publisher will be glad to give him a free copy of his work for the purpose. There may be something in this, but the argument is, for some reason, less convincing than it was, and the publisher now finds himself having to offer a 15 percent royalty on a book instead of the hitherto time-honoured 10 percent.

However, lest too hard a view be taken of publishers, let it be added that they have their hard nuts to crack. The circulation of technical books and technical journals ought to be very much more than it is in the modern world (outside the United States, and, possibly, Russia). Technical books, in Britain at least, are too often left for the specialist libraries to purchase, and these are no by means "as thick as leaves in Vallambrosa". Technical journals suffer from the press-cutting agencies, which supply snippets from them on any specified subject, and also from the abstract services which supply summaries. Let us return from this digression to the book on asbestos. An up-to-date one is certainly needed. Asbestos is among the most important of materials today. The few books available on the subject give a good deal of space to mining operations, and little to industrial uses—where outstanding developments have occurred during the last 15 years. Asbestos still holds foremost place in protection from fire, although other materials have latterly come into prominence for this purpose, including glass fibres, metallised fabrics and also, to a lesser degree, certain plastic coated fabrics. The value of asbestos for insulation purposes is also well-known.

It is of interest that the largest British producers of asbestos (Turner and Newall) have now turned to the production of glass fibres as well. Combinations of asbestos and glass fibres were used in the manufacture of U.S. aeroplanes during the second world war and should find industrial uses also.

CASHEW INDUSTRY DECLARED NON-SEASONAL

NEED TO ENSURE BIGGER RAW NUT SUPPLIES

(FROM A SOUTH INDIAN CORRESPONDENT)

THE labour troubles in the cashew factories of Quilon and the subsequent developments have received wide publicity. They were discussed in Parliament, and still continue. The cashew industry is one of India's major dollar-earners. It is of recent origin and is confined to south India. Last year, the industry earned Rs. 12 crores in foreign exchange through the export of cashew kernel and cashew shell liquid. Its quick development during the past 30 years has been influenced by the U.S. demand for cashew kernels. India's cashew kernel exports to that country rose from 200 chests (50 lbs. each) in 1923 to 1,443,948 chests in 1955.

India has almost a monopoly in the cashew kernel trade. But she does not produce enough raw nuts for the processing establishment here. The annual production, on an average, amounts to 50,000 or 60,000 tons only and imports from Africa average 60,000 or 70,000 tons a year. This heavy dependence on imports has often put processors to difficulties. It is, therefore, felt that unless the indigenous production is raised to meet their full requirements, the industry cannot be put on a sound footing. It is gratifying to note that the expansion of cashew cultivation is now receiving the Government's attention. During the second five year plan, it is proposed to raise production by 20,000 tons. The Travancore-Cochin Government has recently sanctioned a scheme for expanding cashew cultivation at a cost of over Rs. 38 lakhs.

The Indian cashew crop is harvested during February-May, and the African crop arrives in India during December-August. As the trees in both India and Africa are scattered over large areas of waste lands, and the crop prospects largely depend on weather conditions, crop forecasts often prove inaccurate. For example, it was forecast that indigenous production this year would set up a new record, but the actual output has turned out to be below normal.

Closure of Factories

The processing industry has to depend almost wholly on manual labour. In Travancore-Cochin alone, it employs some 80,000 workers and about 2,500 supervisory staff. With the steady increase in foreign demand for cashew kernels, a number of new factories have sprung up. The processors usually recruit as many workers as they can to process the raw nuts available to them within the minimum time possible. As a result, the factories close as soon as the raw nut stocks are finished, and usually, the workers remain unemployed for three to four months in a year. This year particularly, the processors were compelled because of the raw nut shortage to close factories early.

The workers have put up a demand that the industry should be declared non-seasonal. The manufacturers of Quilon, represented by the South Indian Cashew Manufacturers Association, oppose it on the following grounds. There are about 150 cashew factories in Travancore-Cochin engaging about 80,000 workers. They work on a raw nut supply of 120,000 tons, including 70,000 tons imported from Africa. This is sufficient only for seven months' working, and for the rest of the year, the factories have to be closed. This cannot be avoided until indigenous production is increased to meet the entire demand of the processing industry, or the number of factories is reduced to 100 and the strength of the workers brought down to 55,000. The manufacturers' contention is that neither the workers nor the management will benefit from such a reduction and it will not be very easy to decide which of the factories should be closed or which section of labour should be thrown out. However, the manufacturers could not impress the Administrator's regime in Travancore-Cochin which has upheld the workers' contention in declaring the industry non-seasonal.

Legal Consequences

As a result of this declaration, Section 25 of the Industrial Disputes Act will be applicable to the cashew-processing industry. The workers will thus be entitled to lay-off compensation and some other benefits. They are also likely to raise some more demands. The South Indian Cashew Manufacturers Association, however, wants to contest the Government's verdict and is contemplating filing a petition against it.

In a non-seasonal industry, the factories have to work throughout the year. So will the cashew industry. Consequently, a reduction in the number of factories as well as in the strength of the workers will be unavoidable. There is no other alternative. The crux of the problem as has already been pointed out, is the inadequate supply of raw nuts. In spite of the Government's award and the workers' agitation, several factories have already been closed, because they have no raw material. Many others are likely to follow within a few weeks. It is difficult to see how the Government's attitude will help the industry at all, or even the unemployment problem. Ultimately, it may result in the flight of capital from this industry.

Complaint Against Exporters

As against this, the cashew market is brisk due to a shortage of cashew kernel stocks; overseas

demand is very keen with bigger orders from the United States whose peak demand period starts in September, and with rumours of a possible bulk purchase by Russia. Only a few months ago, a lack of enquiries from the U.S.A. sent prices down to less than 45 cents a lb. Now the price is somewhere in the region of 56 cents a lb., and as there is a scramble for the available supplies, prices may move up still further. A considerable proportion of the stocks remaining with the processors have been sold forward, contracts extending up to the end of this year. A disturbing feature of the trade at the moment is that far too many exporters have entered the field, besides the manufacturer-shippers. A recent statement of the Cashew Export Promotion Council confirms the allegation that a good deal of sub-standard and spoilt kernel is being exported, which is bound to harm the reputation of the country in the export market.

LONDON TEA SALES

AT last week's London tea sales, the 54,076 packages on offer realised an average price of 3s 11.77d a lb, against 4s 0.29d in the previous sale and 4s 3.96d a year ago. Plain old season's broken pekoe was quoted at 2s 9d a lb, nominal, against 2s 11d in the previous sale. Prices obtained by some of the companies are given below:

	No. of packages.	Average a lb.
Amalgamated	654	4/2½
Anglo-American	1,326	3/11½
Anglo-Indonesian	222	4/5
Assam Dooars	132	5/2
Baraoora	879	2/9½
Central Provinces	1,026	4/4½
Ceylon and Indian	402	4/10
Cons. Estates	695	4/11
Cons. Tea and Lands	1,976	3/2
Dickwella	330	5/9½
Dooars	1,887	3/4½
Eastern Produce	1,386	4/11½
Jetinga Valley	210	3/1
Kanan Devan	2,214	4/4½
Lanka Plants.	376	4/10
Lankapara	578	4/1
Lethenty	368	3/4½
Lungla	1,100	2/9½
Lunuva	1,302	4/7
Malayalam	2,358	3/4½
New Dimbula	396	4/6½
Rajawella	1,098	4/1½
Rangalla Cons.	228	4/10
Scottish Ceylon	588	4/5½
Scot. Tea and Lands	822	5/9½
Southern India	330	3/4
Telbedde	114	5/1½
Travancore	654	3/2½
United Planters	852	4/11½
Yataderia	180	4/0½

U.K. Tea Stocks

U.K. stocks of tea on 10th August amounted to 129.7 million lbs, against 128.4 million lbs a year ago.

COCHIN TEA SALES

At Sale No. 23, 750,000 lbs. of tea were on offer. There was a good general demand. Commons were about steady, Low Mediums improved and Mediums were dearer. Best liquorings were very strong, particularly fannings which were 3 to 4 annas dearer. There was more enquiry for Middle East Fannings at higher rates.

COLOMBO RUBBER PRICES

The following prices have been issued by the Rubber Board of India from the weekly market report published by the Colombo Brokers Association:

	Closing Prices on 10-8-56 (Rupees a lb.)	Average for the period (Rupees a lb.)
Sheet:		
No. 1	1.41	1.41
No. 2	1.38	1.38
No. 3	1.35	1.35
No. 4	1.11	1.11
No. 5	1.06	1.06
Sheet Cuttings 1	1.10	1.10
do 2	1.05	1.05
Crape:		
Water White	—	—
R.M.A. No. 1X	1.54/55	1.55½
R.M.A. No. 1	1.52/53	1.52½
Crape No. 2	1.43	1.43
" No. 3	1.25	1.25
Scrap Cresses:		
Sc. Crape No. 1	.95 Nom	.95
Sc. Crape No. 2	.85/88	.88½
Sc. Crape No. 3	.80/84	.83
Flat Bark	.75/80	.77½
Sc. Crape 3X	.85	.85

To arrive at f.o.b. Colombo prices add 53.45 cents a lb. in respect of rubber other than scrap crepe and 31.45 cents in respect of scrap crepe to the above market prices.

"CAPITAL" INDEX OF INDIAN INDUSTRIAL ACTIVITY **

The Capital Index of Indian Industrial Activity (Base: 1935) has now been brought up to March, 1956. Compared with the preceding month, there were increases in jute manufactures 5.6 points, steel ingots 10.1 points, cement 25.5 points, paper

1.3 points, coal 1.5 points, wagons loaded 10.4 points, and electricity 8.0 points, while cotton consumption and pig iron decreased by 3.3 points and 6.6 points respectively.

The indices for cheque clearances and notes in

circulation also showed rises of 4.2 points and 8.8 points.

Combining all the factors, the Capital Index of Indian Industrial Activity advanced by 4.9 points during March, 1956.

"CAPITAL" INDEX OF INDIAN INDUSTRIAL ACTIVITY (1935)

Commodity Markets

BRITISH TEXTILE REVIEW

PROMOTING WOOL SALES

BETWEEN the seasons, the wool industry has been able to take stock and has found the position favourable. The last series of London wool sales of the old season confirmed in July that the raw material had established itself on a firm basis, a slight excess of supplies early in the season having been absorbed due to the reduction of prices. Equally important, it is expected in the trade, that the stability will persist into the new season. Conditions are thus conducive to steady trading, which is, in fact, being done. The industry recognises, however, that the days of easy selling are long past and that it must help itself. Consumers in this country and elsewhere are not so readily, as in recent years, buying the durable consumer goods that cut deeply into the trade in textiles, but they have not noticeably diverted their demand to textiles. The wool industry believes that they can be persuaded to do so, at least to a moderate extent. At the conference of the International Wool Textile Organisation in Zurich a few weeks ago, it was stressed that more publicity as well as lower costs and better techniques were necessary to the sales drive.

Training is also important—especially as, in this country, labour is neither plentiful nor cheap. An interesting new method of training burlers and menders was described at the beginning of this month by the education director of the Allied Textile Employers' Council, Mr. Frank Hill. The trainees, he said, were shown pieces of cloth containing faults. At first their responses were slow, but by showing each faulty piece more and more quickly, they could be trained to observe a fault almost instantly. This method is evidently borrowed from the Royal Air Force, which shows the industry is willing to learn from any quarter.

Falling Cotton Textile Export

The cotton industry passed a milestone last month, but it signified retrogression, not advance. Its labour force passed the quarter-million mark on the way down. The number of workers has not been so small since the early postwar years, when labour for such purposes as textiles was extremely scarce. If labour is scarce now it is because operatives have lost faith in the industry. In fact, the main reason for the decline—from a peak above 320,000 at the end of 1951—is the dismissal of operatives who cannot be profitably employed. The contrast between the wool and the cotton industries is apparent in the export figures for the first half of 1956 compared with the same period of last year. While exports of wool yarns and fabrics increased from £41.2 million to £43.7 million, those of cotton yarns and fabrics decreased from £49.9 million to £44.7 million. That cotton is still—or was until very recently—even slightly ahead of wool in the export trade is a reminder of the fabulous position from which this great industry has declined: so elevated that even after decades of decline it is still a leading exporter. The popular idea that the industry is tottering into extinction is obviously premature. Nonetheless, the downward trend is there for all to see, and there is no sign that it is being arrested.

Examples of resistance to the prevailing pessimism have been given before. Another comes from Mr. Maurice Rosen, managing director of Rossendale Rayon Mills, this country's largest producer and exporter of medium-price printed fashion cottons. "In the medium-price bracket—which is by far the largest in demand—Lancashire can beat the world. We have quality goods at a reasonable price. We have the best technical resources; we have the best designers. Guaranteed prices and prompt delivery combined with these points will re-establish Lancashire in the world's markets." So Rossendale is the first company in the cotton industry to announce that it will not raise its prices in the coming twelvemonth, while holding its prices this year at last year's levels. Not everyone, however, will agree with Mr. Rosen that the trend of prices of cotton goods is upward. In many lines, it will not be enough to hold prices: it will be necessary to reduce them if lost trade is to be regained. At present many orders are deferred in the belief that raw cotton will decline in value, and Lancashire's troubles are thereby aggravated. At the beginning of August, the Yarn Spinners Association made reductions ranging between 1½d and 3½d a lb. in its minimum selling prices for American-type yarns, and experience suggests that the new minimum rates will in fact be the market rates. But it is unlikely that, in the prevailing mood, the reductions will effectively stimulate demand.

More Staple than Yarn

In the man-made fibre industries, staple fibre seems to have established its ascendancy over filament yarns. In neither category has the high level of output reached in March been fully held, but output of staple fibre has declined only slightly, that of yarn more seriously; and already in March more staple than yarn was being produced, whereas for many months previously, their outputs were very nearly equal. In June (figures for which are now available from the British Man-Made Fibres Federation, including all commercial man-made fibres) output of filament yarn was 19 million lbs., compared with 20.3 million lbs. a year previously, output of staple 22.5 million lbs., compared with 19.6 million lbs. a year ago. The increase in the latter is the more notable as exports of staple fibres (including tops) have been considerably below last

year's high level—17.8 million lbs. in the first half of 1956, compared with 23.4 million lbs. in the same period of 1955. The trend in favour of staple fibre is adversely affecting the smaller firms, none of which produces staple. Nor are the smaller firms concerned with such technical developments as triacetates. And more orthodox rayon suffers increasingly from the competition of "true" synthetics and of protein fibres. These smaller firms are operating (if they are still operating) in a trade that is contracting and at prices which, so far as standard viscose and acetate yarns are concerned, have not changed since the beginning of 1951, although basic costs have risen persistently. It is not surprising that some firms, which were prosperous and, by ordinary standards, quite large some years ago have gone out of business.

SUGAR PRODUCTION AND STOCKS

The production of indigenous sugar and despatches from Indian factories amounted to 1,853,000 and 1,268,000 tons up to 31st July, 1956, in the current season, as against 1,583,000 and 833,000 tons respectively in the corresponding period of last year. Stocks with the factories on 31st July, 1956 stood at 993,000 tons, compared with 788,000 tons on the same date last year.

MEASURING PROGRESS OF SECOND PLAN

WIDER STATISTICAL ENQUIRIES AND EVALUATION NEEDED

(BY A CORRESPONDENT)

INDIA'S second five year plan was launched with some well-known handicaps—the unfilled resources gap and the prospect of large-scale deficit financing—but it also started under a number of favourable signs. One item on the credit side is that, during the first five year plan, a strong and reasonably solid foundation has been laid for measures, which now help to formulate schemes on a soundly conceived basis. Of those measures one is the evolution of a structure of statistical and other information. Considerable labour and effort has gone into the collection of material on the various problems to be tackled in the second plan, such as the relative positions of agricultural and industrial production, methods and means of raising finances and rural and urban employment. Other issues, such as the computation of national income and the cost of living, the progress of the co-operative movement and the vital rôle it has to play in development, and the relationship that should subsist between small-scale and large-scale industries, were also subjects of intensive study and investigation by organisations and committees set up by the Planning Commission and the Government of India.

The Research Programmes Committee of the Planning Commission, for instance, organised a series of expert studies on various problems with the assistance of universities and some institutes

of research. They produced a considerable body of literature, which was of great use in the formulation of second plan schemes. The studies were on the prospective contribution that small savings could make to plan resources, the employment potential of small-scale industries, the effects of urbanisation on regional development, land reforms and co-operative management, the problems of social welfare of specific population groups and public administration. On land reforms, for instance, the studies of the Research Programmes Committee have been helpful in the enunciation of the broad lines of policies. They have been no less helpful in working out the details of those policies, such as devising uniform principles for implementing the reforms on a country-wide basis. Similarly, in formulating policies for small industries and the way they should work within an integrated scheme in which the spheres of their activities and those of large-scale industries have been defined and demarcated, and the relative prospects for employment offered by both, the statistical data collected earlier were of much use.

Internal Inconsistencies

Nevertheless, the problems of planning in a vast country such as India are immense. The internal conflicts and contradictions among the schemes included in the plan, are an ever-present factor. Development, as it proceeds, will have to be related to resources, personnel and other conditions prevailing at a particular time. Research into these problems will therefore have to be continuous if the pre-condition is to be fulfilled. Among those demanding continuous study and re-study, checking and rechecking of conclusions, the following are illustrative: resources for the plan and the problems of capital formation; personal and corporate taxation, mobilisation of small savings; urban and rural relationships; the effects of projects on employment in different regions; the problems of industrial decentralisation, the economics of house construction; the consequences of land reforms, agrarian legislation and community development and the socio-economic problems of a considerable section of the hitherto untouched social groups, the tribals.

Another similarly important group of problems consists of the demographic structure and the growth and incidence of population. This phenomenon of a rapidly growing population impinges and exercise a powerful impact on every other aspect of development. An important aspect of the population problem is the impact that recent socio-economic changes—through social legislation

and through the pressure of economic conditions—are making on the traditional joint family system. Its disintegration is among the more significant changes that this country has been witnessing in the last few decades. The effects on employment and on the mobilisation of human material for development work will require systematic study. As the machinery for collecting statistical data is being streamlined, the deficiencies in the methods of compiling vital statistics at the village level come prominently into focus. The traditional unsystematic methods followed by village officials leave significant gaps. A reform of the village administration has to be introduced if that limb of the official machinery is to fulfil its obligations efficiently.

Objectives of Planning

It should be constantly kept in mind that the two fundamental objectives of Indian planning are the achievement of full employment and the raising of the standard of living of the population by increasing the national income. For achieving these objectives a continuous investigation of the inter-relationship between population growth and economic development, between employment and the improvement in agricultural and industrial techniques, and also of the changing nature of urban-rural relationships will have to be carried on. The various organisations set up by the Planning Commission or by the Ministries of the Central Government for conducting surveys on these matters are performing a vital task.

Statistical material is the foundation on which a solid superstructure of national planning can be built. The dynamics of national development demand that as the plan schemes progress, and a continuous balancing of demand and supply of materials and labour of resources and investment should be ensured. There has, from this point of view, been a universal welcome to the proposal for annual assessments of the plan schemes, and also for long-range perspective planning. An uninterrupted flow of statistical information is postulated by this process. The Central Statistical Organisation has been carrying out a series of studies on some of these pressing problems. Its activities are being expanded with a view to co-ordinating the efforts of the Central and State Governments in this sphere. It has already been decided to establish State Statistical Bureau and district statistical units. In the interests of co-ordination of statistical information, it has also been decided to establish a joint committee of the representative of the Planning Commission, the Department of Economic Affairs, the Union Ministry of Finance, the Central Statistical Organisation and the Indian Statistical Institute.

In particular, special studies are called for in the three spheres; first, the problem of regional distribution of industries; second, the problems of decentralisation of the economy in the interests of efficient working of projects; third, the problems of deficit financing and the danger of inflation.

Economic Decentralisation

Regional planning of industries is intimately connected with the provision of larger employment facilities, and it is also related to the need for a balanced development of the country. The problem of decentralisation has a bearing on another objective of the second plan, namely, the marshalling of public support and co-operation for the plan. Decentralisation also assumes significance in the context of the need to improve administrative efficiency. Inflationary dangers arising out of deficit financing overshadow the entire framework of the plan, and unless adequate and satisfactory checks are provided, it is most likely to land the country in disastrous inflation.

Evaluation of Progress

Closely linked with research is the evaluation of the progress and effects of the schemes. Emphasis on results and targets is a necessary corollary to planning and a preliminary to the introduction of needed changes in the details. An annual revision of the schemes included in the second plan will serve an important purpose, besides providing an insurance against slackness or falling behind the schedules. The evaluation of the community projects and national extension service schemes, conducted so far by the Programme Evaluation Organisation, has demonstrated the valuable part that independent assessment can play in laying bare the weakness of projects. In the second plan period, the N.E.S. will embrace the entire country, as such it is going to be one the most extensive rural extension movements in the world. "It is of the utmost importance" says the Planning Commission, "that social and economic changes should be analysed objectively as they arise and the impact of economic development on different sections of the rural population observed at first hand." What applies to rural projects applies equally well to other plan schemes, including those for social welfare. It is gratifying to note that the Planning Commission proposes to devote special attention to evaluation work in the second plan period, by bringing within the scope of the evaluation process not only the rural development programmes in the Community Project and N.E.S. areas, but also the rural welfare schemes such as those carried on under the auspices of the Social Welfare Board. It is also gratifying that Parliament is taking a keen interest in the progress of schemes for irrigation, small-scale and large-scale industries, including those managed by public corporations, housing schemes and so on, and that it has set up a number of committees to conduct special investigations. Evaluation should thus go hand in hand with research and collection of statistical material, forming part of the essential processes in planning, and in the achievement of targets.
