Inter-State Sales Tax.—In the course of a communication addressed to the appropriate department of the Union Ministry of Finance, the Federation of Indian Chambers of Commerce and Industry has raised a number of points on the Central Bill on inter-State sales tax now being considered by Parliament. The Federation's suggestions have been backed by arguments well grounded in the legal and economic aspects of the issue. It complains that the Bill does not look at the problem as a whole, and on its enactment, the legislation might well result in hindering the smooth and free flow of inter-State transactions which, it is supposed, is the ultimate objective of the proposed legislation. The system of double or multiple taxation of a commodity when moving from one State to another will still remain. The best solution would be to do away with the tax altogether, but if it is to be levied for collecting taxes which might, in some cases, be evaded, registered dealers who cannot avoid paying the tax should be exempted. On the question of taxing goods which are entering the country's foreign trade, the Federation suggests that the last purchase for export and the first sale after import should be excluded from the scope of the tax, because such transactions are properly "in the course of import and export". Of the goods that have been specified in the Bills as of special importance in inter-State trade or commerce, such as coal, iron and steel, cotton, hides and skins, jute, oil and oilseeds, the Federation says that as suggested by the Taxation Enquiry Commission, these goods, once taxed under the Central law, should not be taxed again by either the importing or the exporting State. Besides, considering the price trends in the country and the Central Government's overall responsibility in this matter, the list should be further expanded, and the Centre should pursue a positive tax policy on the consumption of other goods considered essential for the community. Merging the sales tax with some other levies, such as excise, has also been suggested as a measure that would make for greater administrative convenience.

Jardines and Braithwaites.—At the annual general meeting of the shareholders of Jardine Henderson Ltd. on 29th November, the chairman, Sir George Mackinlay, announced that, subject to the receipt by the vendors of certain necessary consents, Jardine Henderson Ltd. had recently purchased from Braithwaite and Co. Engineers Ltd., London, a substantial block of shares in Braithwaite and Co. (India) Ltd. On completion of the sale, the latter company would cease to be a subsidiary of the London company. It is understood that the management of Braithwaite and Co.

(India) Ltd. will continue on the same lines as hitherto, and Braithwaite and Co. Engineers Ltd. will still retain a large holding in their Indian company. The chief interests of Jardine Henderson Ltd. have so far been confined to the jute, tea and coal industries, and this represents their first incursion into the expanding engineering industry. The company recently relinquished the managing agency of the Bally Jute Co. Ltd.

Development in Andhra Pradesh.—Regretting the poor industrial development in Andhra Pradesh, the Chief Minister, Mr. Neelam Sanjiva Reddy, has appealed to local business men and industrialists to come forward and participate more fully in the development of the newly-formed state. The Chief Minister was speaking at a reception given by the Hyderabad Federation of Commerce and Industries, for him and for other Cabinet Ministers of the new State, and for Mr. B. Ramarishna Rao, Chief Minister of the dismembered Hyderabad State, and Governor-designate of Kerala. Mr. Reddy assured industrialists of the whole-hearted co-operation and assistance of the Government in achieving this object. He pointed out that the development of the country was not a Government monopoly; it was as much the responsibility of the business community. The Chief Minister also deplored the fact that the second five year plan was silent on the question of industrial development of Andhra Pradesh. He surmised that the poor industrial development in this part of the country was due in large measure to the fact that little attention had been paid to the development of power resources in the past. He expressed the hope that the Government, with the full co-operation of all concerned, would be able to provide electricity in the near future. As regards the second plan, Mr. Reddy disclosed that he and his colleague, the Development Minister, had tried to get some of the major industries earmarked for Andhra Pradesh, but unfortunately, the Central Government did not agree to any of their proposals, except for a few cement and sugar factories. Hopes of a fertiliser factory being erected in the State have been disappointed. The Centre thought that the Andhras should be contented with a ship-building yard, but seemed to overlook the fact that the yard had been started decades ago, and the second plan had nothing to do with it. He was aware that the members of the Federation of Commerce and Industries had resources, and called on them to invest a larger percentage in building up industries. Mr. Ramkrishna Rao, who also spoke on the occasion, made mention of some of the uncompleted schemes and projects of the former State Government, including the ambitious plan of converting the Mancherial area into the "Manchester" of Hyderabad by harnessing the resources of the Ghodavari Valley. He hoped that the new Government of Andhra Pradesh would implement these schemes and do everything possible to harness the vast resources of the State.

German Trade Fairs.—Special arrangements for business men from the Near, Middle and Far East to the 1957 German trade fairs are already being organised in anticipation of a record number of visitors and exhibitors from these areas. With the 1956 fairs in Cologne, Frankfurt, Hanover, Munich, Nuremberg and Offenbach recently completed, officials have disclosed that overseas exhibitors increased from 3,003 in 1955 to 3,240, while the number of foreign visitors rose from 175,000 to 190,000. Next year the upward trend will be even stronger, trade fair headquarters in Cologne have predicted. Realising that a visit to a fair in a foreign country, although stimulating and worthwhile, may also be tiring, the German trade fair organisers have attempted to relieve visitors from abroad of all inconvenience. A business man or tourist from India, interested in having more information about the fairs, which cover the whole range of producer and consumer goods, should get in touch with the Consulate of the German Federal Republic in Delhi. In cases where an authorisation to enter Germany is still necessary, the visitor will receive it free of charge from the Consulate. Discounts on travel expenses also facilitate the voyage, which by air takes only 24 hours from Bombay. Busy executives and merchants will appreciate the tight scheduling which permits them to cover several fairs during the short trip. By train, only five hours are required to travel between the two most widely spread fairs. The Offenbach Leather Goods Fair and the international Frankfurt Fair are closest together. Special fair to fair buses make the trip in only 20 minutes, at half-hourly intervals. A directory of buyers and sellers gives a complete, rapid answer to the two basic questions: Who sells what I'm looking for? and Who buys what I'm selling?

Financial Corporation for Andhra.—The Andhra and Hyderabad Financial Corporations have been integrated into the Andhra Pradesh Financial Corporation under the recently passed State Financial Corporation Act. A new board of directors has been set up with Mr. Bakkani Venkatram as chairman. The integrated Corporation was inaugurated last week by Mr. V. B. Raju, Minister

for Industries and Commerce in Andhra Pradesh. Mr. Raju pointed out that caution was important and investments should be regulated. He stressed the need for accelerating the pace of investment and industrial development. Referring to the fact that the integrated Corporation had boards for assisting small and medium industries as well as for cottage and handloom industries, he said that something must be done to canalise the flow of finance. The Corporation's functions should not be confined to providing money for industries, but should extend to giving expert advice to the Government and undertaking industrial surveys. Mr. Kala Venkatrao, Finance Minister, who spoke next, said that the integrated Corporation had substantial funds for expansion, but there was not enough enthusiasm for industrialisation in the Andhra areas. This, he said, was because the people in these areas, being essentially agricultural in character, were interested more in improving agriculture than in industrialisation. But he believed that small and medium industries should still be encouraged. It was necessary to avoid being too conservative in granting loans, for "only risked capital can bring out locked capital." When the Government floated loans, he declared, the response was quick and satisfactory. But this was in large measure due to "the deception practised by brokers, who later threw back Government securities on the market." This, he said, tended to dislocate the economy. The chairman, Mr. Venkatram, stated that the combined resources of the integrated Corporation in paid-up capital and reserves exceeded Rs. 150 lakhs, while the total advances hardly amounted to Rs. 40 lakhs.

THE STANDARD OF VALUE

THE recent Presidential election, towards which the eyes of the whole world have been for some time somewhat anxiously turned, was fought upon the field of what has been erroneously called the battle of the standards. The real question which was involved was, "Shall America discard the world's standard of value?" The result of the poll has proved that its citizens have answered the question in the negative. Mr. Shipman in the *Sun of New York*, in a very able article upon the question, has treated the matter very fully to prove that bullion is, and can only be, the only true and universal standard of value. What then is the world's standard of value is the question which we intend, if possible, to answer. A standard of value, in the words of Turgot, results "from the nature and force of things." It is not a mere measure of value, as every commodity measures value. It is not a mere medium of exchange, as every more or other commodities is a medium of exchange. A standard of value then is something more than merely a measure of value and a medium of exchange. What then is it? The answer is not far to seek. A standard of any quantity measures every quantity of the same kind. A standard of length measures length, weight, weight, and so on. A standard of value, therefore, measures everything of value, and must not be measured by anything of value, of length must have length or of weight, weight. A standard of value is a universal measure of value. What is not a standard of value everywhere is not a standard of value anywhere. In fine, a standard of value is the standard of value. Every nation adjusts her foreign balances by a universal measure of value or by the commodities it measures, and there cannot, in the natural course of events, be two measures. Every nation that has commercial dealings with any other nation must regulate her standard of value at home with that to which she conforms abroad, unless she wishes to undergo a continual sacrifice in all her transactions being measured by the difference between the market value and full value of her currency.

DISMISSING AN EMPLOYEE FOR ALLEGED THEFT

CONSEQUENCES IF LAW COURT ACQUITS HIM

(FROM OUR LEGAL CORRESPONDENT)

"I HATE that bastard verdict 'Not proven', the Caledonian medium quid. One who is not proved guilty is innocent in the eyes of the law." This was the pronouncement made almost exactly 150 years ago by a minor Scottish judge, the sheriff-depute and sessions judge of Selkirkshire. But as this particular sheriff-depute was, through the aid of his judicial salary of £1,600 a year, able to convert himself into Scotland's greatest poet (Burns by no means excepted) and novelist, we will make the forthright dictum the text for some reflections on the Indian Industrial Disputes Act. "Innocent in the eyes of the law," said His Honour, Judge Sir Walter Scott, Bart. But what about the eyes of his employer? Can you dispense with the services of an employee to whom the Act applies, who has been tried criminally for dishonesty, theft, let us say, in your employment, but who has been acquitted—not "discharged" mind you which is the equivalent roughly to the Scottish "not proven"—but actually found "not guilty," that is, innocent

and acquitted? Your point of view is: "I had nothing to do with the prosecution of the man; that was a matter for the police. True it is he was acquitted. But I have fully investigated the matter and have obtained evidence which was not available to the court. I have a strong suspicion founded on reasonable grounds that, though innocent in the eyes of the law, he is in actual fact guilty and I shall sack him." Can you lawfully do so.

"Certainly not" would, and did, say Judge Scott, in the far harsher days for labour of 1806, and for the further 25 years during which he continued to administer judicial functions. And "certainly not" says the common law of India today: "To afford a valid ground for dismissal, the conduct held to be dishonest must be brought home to the servant, for there is no valid ground for dismissal where the master is merely in possession of facts or of information leading him to no more than a strong suspicion of dishonest conduct on the part of his servant." "Certainly not," probably also says the reader, relying on his sense of natural justice and fair play. But, remember, we are dealing not with the common law, but with the Industrial Disputes Act; and under that Act, it has been held time and again in unmistakable terms that an industrial tribunal is not fettered by limitations of ordinary law, and its function is not merely to interpret the terms of contract of employment between an employer and an employee. Adjudication by an industrial tribunal does not mean adjudication according to the strict

law of master and servant. The award of the industrial tribunal may contain provisions for the settlement of a dispute which no court could order if it was bound by ordinary law, but the industrial tribunal is not fettered in any way by this limitation.

We all know by this time the truth, for good or ill, of the position as stated in the foregoing sentence. What we are apt to forget is that the removal of the "fetters," as the common law, the laborious work of generations of wise and learned men, is described, may cut both ways. That it does so only occasionally is due to the fact that too many tribunals—not, most certainly, the Appellate Tribunal of India—still seem to work on the timorous principle that they must give something to the allegedly aggrieved workman or workmen concerned. Appeasement in excelsis. Here we have a refreshing instance of the "unfettering" process being used in reverse for once in a way to demonstrate that, whatever the ordinary law may be, it is unreasonable and impracticable to compel an employer to retain in his employment an employee, whether acquitted or not, against whom there is or has been strong suspicion of dishonesty.

These are the relevant facts, about which let us say at once that it is not suggested for one moment that the employee concerned was not totally innocent of the offence with which he was charged. The man was suspected of the theft of 8 lbs of lead types belonging to his employers. On 13th May, he was (we copy under protest the horrible modern so-called word) "charge-sheeted" and called upon to show cause why he should not be dismissed. The police also prosecuted the man for the alleged offence. The lawyers defending the employee wrote to the employers protesting against the disciplinary proceedings while the prosecution was pending before a magistrate. The employers, however, being of the opinion that they were within their rights in proceeding with their disciplinary action notwithstanding any prosecution by the police, did proceed with it. As a result of their subsequent enquiry, which the employee, though invited to be present, and no doubt, acting on legal advice, did not attend, the manager found that the employee "can be reasonably suspected to have committed theft...." and passed orders dismissing the appellant. This was on 7th June, and the order of dismissal was with retrospective effect from 8th May. Meanwhile, the prosecution of the employee, now ex-employee, dragged on, and on 6th September the court acquitted him. So the position then was: 7th June, dismissed on account of being "reasonably suspected" of theft; 6th September, acquitted of the charge of theft.

The Government of West Bengal referred the subsequent dispute for adjudication by the Industrial Tribunal, the two issues being (1) whether the dismissal was justified on the charge of theft; and (2) whether the employee was entitled to reinstatement on being acquitted by the law court, or whether he was entitled to any other relief. Before we come to these two issues we will make passing reference to a finding by the Appellate Tribunal before whom the matter eventually came on another point of some interest. "We are not aware," said the Appellate Tribunal, "of any law which requires disciplinary proceedings to await the result of proceedings in a criminal court. The scope and purpose of the two are entirely different and one need not wait for the other, in our view." That is very useful information, but we pass it on with considerable reserve as regards its general application. "We are not aware of any law...." Quite so. But the Tribunals are not "fettered" by the law. They can act on principles of natural justice and fair play actually inconsistent with the law. They can and they do. And, this particular case apart where no hardship accrued, we can easily visualise circumstances in which real and substantial hardship might accrue if a man against whom a criminal charge is pending, in which he may be reserving his defence in court, is compelled to disclose it before, perhaps, the prosecution is closed, at a prior disciplinary enquiry, to avoid dismissal by his employers. His defence might be seriously prejudiced by its premature disclosure.

The Appellate Tribunal agreed with the Industrial Tribunal that the workman, notwithstanding his acquittal, should not be reinstated. Says the headnote to the report: "Even though the man is acquitted on the charge of theft by the criminal court, and even though the charge of theft was not proved to the hilt by the employer, the concerned workman should not be given the relief of reinstatement. There is no rule of law which prescribes reinstatement as the sole or normal relief when the dismissal is found to be unjustified. It is a matter for judicial discretion of the tribunal, to be exercised with reference to the facts and circumstances of the case. It is a matter of expediency in the interest of peaceful settlement of each industrial dispute, and a decision must be arrived at after taking into consideration the interests both of the employee and the employer. The employer having grave suspicion that the concerned workman committed theft, it would not be conducive to industrial peace or harmonious relationship to order reinstatement of the concerned workman." Nevertheless, while upholding the tribunal in refusing to order reinstatement of the workman, the Appellate Tribunal had regard to his 27 years' service with his employers; and, substituting "discharge" for "dismissal," allowed him one month's wages and D.A. and six months' basic wages for loss of employment.

I was not invited to the Czechoslovakian exhibition, but nothing short of a ban on all "representatives of the dirty, reactionary, capitalist Press" would have kept me away. The effort required to push through the crowds of admirers, appraisers, or just gapers, was certainly worth it. The display of machine tools was impressive, although not being an engineer and having to work with them, I just had to take their quality for granted. One or two of the printing machines I seemed to have seen before, with other makers' names on them; and they were by no means up-to-date. But the tractors seemed modern enough, and when I can find out why the wheels, especially the rear ones, of the large "TATRA" truck are set at such an angle, I think I could like that too. It was the display of consumer goods which impressed me most—unfavourably. If Czechoslovakia is indeed the fifth most industrialised country in the world (I should like to know on what basis of assessment) these are little short of pitiful. Apart from the styles being anything up to ten years behind the times, the conception is clumsy and the finish *kutcha*. The Czechs have obviously been isolated from American and west European markets for too long. I liked the glassware and ceramics, but I remember seeing some of the objects for the first time on my grandmother's "what-not" when I was a very small boy. As for some of the furniture and household goods—well the less said about them the better, except that I guarantee one could find articles of the same vintage in most of the lumber rooms and jumble sales of Britain or the United States. What I did approve most about the show was that somebody had gone to the trouble of getting it there at all. Let us make no mistake about it, this is first-class advertising and public relations. It should pay off a hundred-fold. Other nations who claim to be eager to sell to India would do well to note, and to copy. I would back, say, an exhibition of British goods against this one any day. But the point is that no such display is available for comparison, and if last year's Delhi exhibition is anything to go by, we are not likely ever to see one in India.

I read with some surprise the ambulance driver's account of the Hiranya Kanti Ghosh Dastidar incident. It seems the word "incident" is the right one to use now, for this is what it has become. A body had to be left lying in the street because no police photographer was available. What typifies the casual attitude which exists in this city towards death on the road better than that? A fair question would seem to be: why was there no photographer? And why did it take so long to get one, because from all accounts the body had to wait a considerable time before removal? Public indifference to human corpses is nothing unusual in Calcutta, but there is every right to expect more concern on the part of the police. This was not, however, the worst feature of the affair. Although one of the vehicles involved (early reports said there were two) was traced a few days later, neither of the drivers apparently thought it safe to stop and find out what damage had been done. This again is surely the fault of the police. It is well known that a driver can expect short shrift if he stops to help a person he has knocked down outside the city area. There, lynch law prevails and not much can be done about it. But Mr. Ghosh was hit on Calcutta's main and best-lit thoroughfare and the nearest policeman could not have been two hundred yards away. Yet neither car stopped and nobody who has seen a driver being manhandled by a furious crowd will blame them. And the temptation not to report the matter when an escape has

A DITCHER'S DIARY

been made good, is human enough no matter how reprehensible. Until the police can guarantee the safety of any driver who turns back after hitting a pedestrian, few will, and Calcutta must experience re-occurrences of this sort of scandal. I suspect magistrates are no less to blame; although one of them appeared to take the loss of a human life rather casually some short time ago when a minor girl, driving without a licence, knocked a man down and killed him, the usual attitude towards a driver is that he is always to blame. It is my contention that when drivers are treated like other citizens and presumed by public opinion to be innocent until they are proved guilty, they will continue to take what measures experience has taught them to be necessary for their own safety.

The premature death of Manik Bhandopadhyay has removed a notable and, I believe, somewhat controversial figure from the sphere of Bengali letters. He was fortunate to have made a hit, even when at college, with his very first story—a fact which almost immediately decided him, a promising science student, to opt for a literary career. It is generally admitted that his subsequent achievements justified this bold decision on the part of a boy just passed his teens, who could not possibly have been unaware of the risk he was taking in trying to live by literature alone. But—and here comes the controversial point—many feel that his development was sadly restricted by his ideological devotion to communism, and that after his indoctrination his output steadily tapered off in both quantity and quality. His earlier works, especially, the short story *Pragatishahik* (The Primitive), shows a power for conceiving more than life-size characters which at once puts him in the company of the literary giants. It is regrettable that he failed to repeat triumphs like these towards the end. He was still in his middle forties when he died, an age at which a creative artist has usually reached the peak of his powers. But Bhandopadhyay's inspiration had seemingly already run dry. This brings me to the question of the relation between ideology and creation. In Bengal critics complain that servility to a political doctrine has frozen the genial currents of many literary souls, and I believe this true of other countries as well. I would not, of course, say that communist writers have produced no really first-rate work. They undoubtedly have, but only in moments of crisis. What are these? In the first place, the birth of the Soviet régime in Russia, when Gorki and his companions raised a rich literary crop. Then, the second world war, when writers like Ilya Ehrenburg and Wanda Wassilewska were writing *The Fall of Paris* and *The Rainbow*. When the crisis passed, they relapsed into propaganda and the common journalistic rut, where they are apparently still floundering.

Round about this time every year, I usually find myself writing something on Calcutta's concert season. The problems of the School of Music and the Symphony Orchestra, like our own, never appear to get any less, and consequently, I find myself every year searching for a way of dressing the same theme in different garb. I have arrived at the stage where I think it is better to be blunt than boring, so may I say, quite simply—your financial and moral support are needed. The season opened on Tuesday. Mr. Jacob and the orchestra were in good form and Mr. Richard Farrell's

playing of the Grieg A minor concerto was a stimulating aperitif for his recital on Thursday. Other visiting soloists are Miss Vera Benson, Mr. Raffi Petrossian, and Mr. Julius Katchen; Calcutta's own pianist, Miss Liesl Stary, will also play. Those are, of course, first-class attractions and their support can be taken for granted. It is the ordinary concert which needs its patrons, and deserves them no less. I am fully aware that income nowadays requires most careful allocation. But for music lovers, expenditure on this season's concerts seems to me to promise that much sought-after goal of all economists—optimum satisfaction.

I see that the Programme Commission of U.N.E.S.C.O.'s general conference in Delhi has approved an Uruguayan resolution on the publication of a book about Mahatma Gandhi. It sounds a laudable project, but I wonder how it will turn out. "A book" the report says, and no more. A biography? A history? A collection of tributes? A symposium? We are not told, and one can only hope it will not be a biography. Why? Because, official "lives" in several volumes, as is too well-known, tend to be pompous affairs meant to serve no other purpose than to decorate libraries, where they are usually allowed to sleep undisturbed in the dusty silence of lower shelves. An elaborately produced biography, even if it be of Mahatma Gandhi, cannot be expected to escape this fate. How many, I often ask myself, have waded through Dr. Tendulkar's monumental work? His best biographies, to my mind, have already been written by his followers and associates, for they alone were in a position to bring in little revealing anecdotes and touches which rarely find a place in chaste and heavy-going chronicles made to order. Take Mr. Louis Fisher's book, for instance. It is throughout salted with personal reminiscences and stories I would, therefore, humbly suggest that U.N.E.S.C.O. give us a symposium of articles dealing with the many aspects of the life and work of Gandhiji, including a few on the oddities and angularities of which he had such a bagful and which, in fact, made him so human and lovable.

The depressing lesson drawn from last year's contributions to Capital's Christmas Toy Fund was that it is a dying institution. My appeals brought a few more rupees, and therefore a good deal more happiness, but not enough to compare with the year before. I shrugged my shoulders and put it down to the 1955 Budget; that alone was enough to account for a hardening of the usual generosity. But the trend does not appear to have been reversed. The latest figures for this year's donations show an even larger fall on those of 1955 than did that year's on 1954. This is a serious state of affairs, especially when last time the position was relieved by a large gift in kind which may not be repeated. If there is no improvement soon, many poor children will find their Christmas just that much bleaker. I know that asking for money is even less popular now than it used to be. But the trouble is the Welfare State has not yet brought any decrease in needs. The poor are still with us and however inconvenient it may be, the children are like others in wanting a little joy in their lives occasionally. It is not yet too late to help, but there are only two more weeks left. To those who have already sent their donation, I say many thanks. To those who have still to send it, I say please hurry. To those who have no such intention, may I make one last appeal? It only takes a few rupees to give a poor child a day of happiness, and Mr. Krishnamachari must have left you those.

CENTRIFUGAL PUMPS

Every known type of centrifugal pump in use today can be supplied from specialized firms in the German Democratic Republic, of these many are series-built standard types. Available also, of course, are special types made from the appropriate material in accordance with the intended purpose of application and, like the standard models, distinguished for a high degree of efficiency.

The standard types have delivery currents ranging from 1 to 16,000 m.3 per hour, with maximum pressure up to 160 gauge atmospheres.

We offer

*

HARD-PORCELAIN CENTRIFUGAL PUMPS

FOR ACIDS AND CORROSIVE LIQUIDS

*

DUPLEX STEAM PUMPS JK

*

HIGH PRESSURE BOILER FEEDING CENTRIFUGAL PUMPS HG

*

SELF-SUCKING CENTRIFUGAL PUMPS FOR FUEL HANDLING, TYPE SH

*

PROBLEMS OF CO-OPERATIVE FARMING

IMPROVING MANAGEMENT AND CREDIT FACILITIES

(By V. V. R. Sharma)

EXPERIMENTS in co-operative farming have yielded excellent results in many parts of the world. But although they have been tried in several areas in India, they have not always benefited farmers much, and several societies have ended in failure. The All-India Rural Credit Survey Committee, which closely examined the problem, concluded that the co-operative movement in this country had failed. But "co-operation must succeed" was the slogan it issued, saying that no better alternative had been found for the promotion of agricultural credit and development in the villages. The Government was quick to act, and much stress has been laid on co-operation in the second five year plan. Apart from other forms of co-operation, such as the creation of a strong, integrated structure for credit, marketing and warehousing, as recommended by the Rural Credit Survey Committee, co-operative farming has acquired a special significance under official patronage. As such, it has tended to change the very meaning of the term peasant-proprietor, making him a partner and not necessarily the owner of the land he cultivates.

During the first plan, efforts were made to encourage and assist medium and small farmers to form co-operative farming societies, with a view to stepping up agricultural production and adopting better methods. More than 1,000 such societies were formed, but most of them had to encounter practical difficulties for which no ready-made solutions could immediately be found. The field survey conducted by the Programme Evaluation Organisation of the Planning Commission, in 23 co-operative farming societies in 13 different States, offered several reasons why many had ended in confusion and why the people's response to co-operative farming had been poor. Despite this response, however, the planners have decided to give co-operative farming a fair trial, especially since it is reported that it has revolutionised China's agrarian economy. Conditions in China are said to be very similar to those in India, so it is hoped that here too co-operation will yield similar results.

Aims of Economic Policy

It has been accepted that a "socialist pattern of society" and a "co-operative form of association in the villages" will be among the major aims of the Indian economic policy. With this in view, the Government sent a delegation led by Mr. R. K. Patil, a former member of the Planning Commission and a former Food Commissioner of the Central Government, to China, to study the working and progress of the agrarian co-operatives there. The recommendations of the delegation, it is hoped, will be useful in formulating a detailed programme and fixing targets for the number of societies that should be started. The second conference of State Ministers, held in Mussoorie some time ago, welcomed the introduction of co-operative farming as a timely step towards raising the economic status of the villagers. It recommended setting up one such society in each of the National Extension Service blocks during the plan period. Tentatively, the conference has fixed the target of 500 co-operatives to start with, to be completed in the current year in National Extension Service blocks spread all over the country. After the delegation to China submits its recommendations, new targets may be fixed.

Another delegation led by the Union Deputy Food Minister, after visiting China, expressed its opinion on the working of agrarian co-operatives there. Mr. P. N. Thapar, Secretary to the Ministry of Agriculture and a member of the delegation, in an interim report submitted to the Government, warmly praised the Chinese efforts. He, however, urged a rather cautious approach towards the introduction of co-operatives in India on the Chinese model. He suggested setting up such farming societies merely as an "experiment," and going ahead only if the experiments proved a success and the co-operation of the people was spontaneous. Whether or not there is a vast scope for farming on a co-operative basis in India, it should not allow the practical difficulties to be ignored. It is also not desirable to base judgments on the results achieved elsewhere. The objects of co-operative farming have varied in different countries, depending on the conditions prevailing, and it is not feasible to draw easy similarities between the collective farms of, say, Russia and the co-operative farms of, say, Denmark. The advantage which a typical small peasant gets out of a co-operative farming society should be precisely assessed.

Extent of Co-operation

Co-operative farming means co-operation among farmers for the purposes of agricultural production. It may involve their coming together for certain operations, such as pooling cattle, owning common irrigation sources, implements and machinery, or purchasing tractors and fertilisers. This kind of co-operation has been traditionally developed, particularly among the smaller farmers, in Indian villages. It may be compared with what is called a "mutual aid team" in China, where a few farming families get together and pool their cattle, tools, fertilisers, etcetera. There is no pooling of land, which is managed individually by the participating farmers. Chinese land policy was based on the distribution of land among the peasants and the they got from the State. But the land holdings

reforms, which were mainly completed in 1953, enabled the peasants to settle as owners of the land were so small that it became difficult for them to practise intensive methods of cultivation and increase crop yields. So, in their own interest, they had to agree on mutual aid with their neighbours. But a better method was considered necessary, and this led to the evolution of agricultural producers' co-operatives, which constituted the land into bigger units and combined the labour and resources of the participating members. In these, the peasant is technically still the owner of his land. The societies are smaller in size and are made up of say 40 or 50, or at any rate less than 100, farmers. They have common property and they enable the member-peasants to adopt modern methods of cultivation. The earnings are distributed on the basis of the land and labour contributed. It is on the lines of these agricultural producers' societies that the Government of India, is trying to introduce co-operative farming.

This kind of co-operation is not new to India. There are, for instance, certain non-registered co-operative farming societies called *phads* still functioning in Kolhapur, on more or less the same lines as the Chinese co-operatives. Neighbouring farmers pool their lands and under joint management raise sugarcane. Since good irrigation is essential for growing sugarcane, they get together to set up pumps in river beds to obtain water for their lands. Each society has a leader whose job it is to provide facilities for drawing water, raise funds and arrange for the manufacture of jaggery and its sale in the market. The rights of the owners of the land are hardly affected and each member gets his share in the joint farming society, to the extent of the value of the land, labour and other implements he contributes. These societies are a great success and work on the initiative of the farmers themselves. The co-operatives are purely voluntary and they function on the principle of equality and mutual benefit.

Remarkable Results

The agricultural producers' co-operatives in China, it is claimed, have secured remarkable results. Almost all peasants have been brought within their scope. But the ultimate objective of the Chinese structure of co-operatives is the creation of fully socialist or collective farms, where the land is owned jointly and the individual ceases to exercise any control over it. Chen Han-seng, an

authority on Chinese co-operatives, in a pamphlet entitled *First Unknown Co-operative Farms*, deals with the Chinese method of co-operative farming in its various stages and calculates that by the spring of 1958, immediately after the completion of the first five year plan, semi-socialist co-operative farming will have a dominant position in rural China. In 1960, large-scale transformation to fully socialist farming will commence. By the end of the third five year plan, in 1967, agriculture will be fundamentally socialist. Russia has already completed this process, and today collectivisation of the peasant farms is an integral part of the Soviet economic system. Thus, co-operative farming, in a particular context, implies State control over land owned by farmers. It is evident that the Chinese are following the Russian method of collective farming which, in the ultimate analysis, is bound to reduce the status of the peasant to that of a mere wage-earner.

Relevance to Indian Conditions

The economic and political systems of China and India differ fundamentally. China is following a totalitarian method of planning, where there is little scope for individual freedom and democratic ways. But India is wedded to democracy, and as such will need to examine carefully the implications of co-operative and of socialist collective farming. It is, however, gratifying to note that the Prime Minister, Mr. Nehru, has said: "We are encouraging agrarian co-operatives, but we are not thinking of collective farming." But, addressing the National Co-operative Development and Warehousing Board, he added: "If we are not successful in our experiment with the agrarian co-operatives, it is possible, though we may not like it, certain forces might then lead us to that." As 80 percent of the population is living in the villages, the economic revolution in India can find its emphasis only in the agrarian sector. For some decades, the Congress, first under the guidance of Mahatma Gandhi and later under Mr. Nehru's leadership, has been asking landed interests to give up their large holdings. Expectations among landless labourers that their emancipation is in sight have risen. The Congress Governments, both at the Centre and in the States, are committed to a thorough-going programme of land reform. The transition from a backward to a socialist agricultural economy has commenced, and one stage of this transition, namely, the abolition of intermediary interests such as the zamindars has already

been accomplished to a considerable extent in most States.

Need for Reforms

The need to replace the complicated and feudal types of land tenures prevailing in several parts of the country by a simple and democratic system of peasant-proprietorship, under which the land belongs to the actual cultivator, has, in principle, been accepted. It is hoped thereby to assure the peasant of his right of ownership; to remove absentee-landlordism and rack-renting; to remove other disabilities and provide the incentives necessary for land improvement and efficient production; to create the basis for an equitable system of rural credit; and to arrange for the improvement of irrigation and other public works in areas which have been neglected. Any programme of co-operation in agriculture should be formulated in terms of these objectives. Too much stress has been laid on the smallest of land holdings and this seems to prompt the Government to encourage co-operative farming. But whether it will be of any real benefit to the small farmer remains to be seen; there is no proof yet that a larger farm will produce more than the smaller holdings—which go to form a bigger unit—yield when cultivated separately. Co-operative farming bristles with several practical difficulties for which solutions have still to be found.

The average Indian peasant is intelligent and industrious, and understands his interests clearly. However small and uneconomic his holding may be, the land is carefully husbanded by him and his family members, with the tools and methods of his ancestors. He is jealous of his proprietary rights over the small plot of inherited land, which he will not barter or part with, except under the worst circumstances. He depends on agriculture for his livelihood and his only anxiety is to raise the best crop possible. He uses local fertilisers, dung, night-soil and compost, which yield good results under favourable climatic conditions. In addition, he takes to some other form of employment, usually a craft, to keep himself busy during the off-season.

The small peasant suffers from certain basic disabilities such as the shortages of credit, livestock, manure, good seeds and proper irrigation facilities. If he could adopt newer techniques, his productive capacity would increase. This is one reason why he may think of joining a co-operative farm. But he does not cease to think of his ownership rights, so he approaches the society with some sort of suspicion. Consider the case of the farmer who, in his anxiety to reap the benefits of large-scale farming, develops the social outlook and group spirit, and surrenders his land, cattle, implements and the labour of his family to the co-operative, retaining of course his title to the land. He becomes a full-fledged member of the society,

which is formed with several such small farmers under the management of a central authority. In the nature of things, the society may have to employ paid managers. Individual opinions may not count and the voice of the management may prevail, while vital decisions affecting the interests of the members are taken on such matters as raising crops, taking loans and marketing the produce. If some of these decisions turn out to be wrong and bring losses, then who will bear the risks? The paid manager has little to lose and he may have no personal stake in the society. A managerial committee, after all, cannot take decisions on day-to-day matters and execute them; even it may make mistakes. In such cases, what is the protection or safeguard for the small farmer who is made to pay for the faults of others? As an individual, he takes the risks himself and mortgages his land for a crop loan or credit loan. But it is not so in a co-operative society, where any loss arising out of an injudicious experiment by the Government will have to be shared by all. Simply because the risk is shared by others, the small farmer does not escape its consequences; he could even sometimes lose his property, the land. The question also arises whether the member-farmer who, for domestic or other reasons, wishes to dispose of the land or withdraw from the society, is at full liberty to do so.

Common care of equipment is a major problem in a co-operative farm. The equipment is common property, and so are the livestock and land. How will the society account for the safety or proper maintenance of each of these items? Everything naturally depends on whether the management is efficient or not. This is the most important factor in deciding the success of a co-operative farm, and experience has shown that, in most cases, bad and inefficient management has been responsible for failure. Many cases are quoted in which feudalist landlords have come to manage societies. In certain cases, communal and political elements have also attempted to wield economic power through them. In the result, the co-operatives become weak, uneconomic, ill-managed and practically ineffective.

Security of Capital

The most glaring weakness in the working of co-operative farming societies, which gives rise to several complicated legal problems, concerns the security of capital investment. Credit on easy terms is considered necessary for rural progress. From the investment point of view, co-operative farming may be of real benefit to small farmers. But it is here that the problem of security for loans comes in. In the case of an individual, he mortgages his land for a short or medium loan from the land mortgage bank, which can always depend on the land for recovering the loan. Where the land is owned by the members and is pooled in a co-operative society for joint agricultural operations, what will be the security for the loan advanced by any

credit institution to the society? Naturally, the land is the security; but in case of default, the bank should be in a position to take some plots and sell them in the market. Under the new land policy of the Government, after a co-operative society has been formed by pooling the land of several members under joint management for large-scale farming, is it allowed to take away certain plots of pooled land and sell them for clearing off loans? If it is so allowed, what will happen to the principle underlying co-operation and what will be the justification for forming such a society? How are the interests of the creditors to be safeguarded? It is here that the Government can step in to save the society from liquidation, by advancing the money, to pay off the loan. If it undertakes this responsibility, then the question of security does not arise. For all practical purposes, it will amount to the Government providing long-term or short-term credit to the societies. But is it prepared to undertake this responsibility?

Other Handicaps

There are some defects inherent in the organisation of co-operative farming societies, which relate to management, incentives for work, taking of risks and, above all, the security for capital investment. These are in addition to the handicaps such as caste and community differences, unequal status of men and lack of the co-operative and group spirit in village life, which hamper the smooth functioning of the co-operatives. All these lead to the basic point that co-operative farming should be considered not from a theoretical point of view, but from a realistic angle, namely, meeting the requirements of the people for certain specific purposes as they arise. There may be no need to pool land, to have joint management and so on, if positive measures of a different kind are taken, keeping in view the need to intensify production in small holdings with modest capital expenditure. The benefits of large-scale farming can be extended to small farmers, without any pressure being put on them to form themselves into co-operative farming societies, which may be experimented on reclaimed lands and lands collected by way of *Bhoodan*. The small farmer may be offered credit on easy terms and such other facilities as proper irrigation, improved drainage, good seeds and fertilisers. This would enable him to secure a large increase in production. This is what is done in Holland and Denmark. The individual peasant is assisted by the co-operative organisation in all agricultural operations, except actual farming. The advantages of large-scale operation are given him through the co-operative organisation in the use of costly modern machinery, expert advice, purchase of raw materials and the sale of the produce, without any hindrance to individual farming. This is the sure way to make the small Indian peasant prosperous, and at the same time help the co-operative movement take a firm foothold in the country.

Finance in India and Abroad

THE CALCUTTA MONEY MARKET

STERLING IMPROVES

Wednesday, 5th December.

DEMAND has continued to increase in the money market this week. The cotton industry has been leading the way, with a large expansion in its requirements for storage of the raw material. The sugar crushing season is now under way and the mills have been coming to the market on an increasing scale. The needs of the jute industry have also increased in the past few days. The interbank market continued easier, and it is reported funds are plentiful at the unchanged call rate of 3½ percent.

A fair quantity of export documents has passed this week. The main feature was gunny bills. Remittance has been about normal. In spite of the announcement that the gold and dollar reserves of the sterling area have fallen below the \$2,000-million mark, sterling improved today. The reason is probably short-covering encouraged by Mr. Macmillan's reassurances that every measure will be taken to protect the pound. Having remained at the support levels for some weeks, sterling is now slightly above these, and the forward position quoted in terms of dollars and Continental currencies has improved fractionally.

Silver was easier on rumours of imports of the Tibetan metal. The price declined slightly from the previous week's level of Rs. 172.4 to Rs. 172, quoted today. The rate for ready silver was quoted at Rs. 172.6. The London and New York prices were unchanged.

In sympathy with silver, gold was easy and the price was quoted at Rs. 105.12. The sovereign was transacted at Rs. 70.

During the week ended 30th November, Government of India Treasury Bills for Rs. 5,00,000 were sold in favour of the Reserve Bank.

An increase of Rs. 2.95 crores to Rs. 1,465.74 crores in the total note issue was a notable feature of the return of the Reserve Bank of India for the week ended 30th November, 1956, while active notes declined by Rs. 1.07 crores to Rs. 1,438.54 crores. The currency expansion was covered by increasing rupee coin by an equivalent amount to Rs. 125.27 crores. Deposits of the Government of India declined by Rs. 4.70 crores to Rs. 49.99 crores, but other Government accounts increased by Rs. 3.22 crores to Rs. 15.94 crores. Balances of commercial banks at Rs. 51.07 crores were Rs. 97 lakhs lower. Balances held abroad diminished by Rs. 5.34 crores to Rs. 79.29 crores and investments by Rs. 1.52 crores to Rs. 59.61 crores. Other loans and advances declined from Rs. 83.48 crores to Rs. 80.84 crores, of which advances to scheduled banks against usance bills amounted to Rs. 43.34 crores (Rs. 45.34 crores). These advances totalled Rs. 377.37 crores since 1st January, 1956. Ways and means advances stood at Rs. 2.96 crores (Rs. 1.80 crores).

A statement of the position of scheduled banks for the week ended 23rd November, 1956, shows Demand and Time liabilities at Rs. 647.03 crores (Rs. 12.34 crores on account of borrowings from banks) and Rs. 458.52 crores (Rs. 2.51 crores), compared with Rs. 650.80 crores (Rs. 12.63 crores) and Rs. 457.79 crores (Rs. 2.11 crores), respectively, in the previous week. Cash and balances with the Reserve Bank have declined by Rs. 1.23 crores and Rs. 17 lakhs to Rs. 35.89 crores and Rs. 50.80 crores, respectively. There is a drop of Rs. 2 lakhs in investments to Rs. 365.50 crores. Advances and bills discounted, at Rs. 762.31 crores, show a rise of Rs. 1.04 crores. The ratios to total liabilities of cash and balances, and of advances and discounts, are, in consequence, shown at 7.8 percent and 69.0 percent against 7.9 percent and 68.7 percent.

The return of the State Bank of India for the week ended 23rd November, 1956, shows a rise of Rs. 2.15 crores in total deposits to Rs. 232.80 crores. Investments in Government securities and other authorised investments are up by Rs. 1 lakh each to Rs. 95.58 crores and Rs. 11.04 crores, respectively. Advances, including loans, cash credits and overdrafts, and bills discounted and purchased, have decreased by Rs. 94 lakhs to Rs. 127.43 crores. Cash and balances are, in consequence, shown at Rs. 16.15 crores or Rs. 39 lakhs less.

According to the landborne trade returns received in the Department of Commercial Intelligence and Statistics, the provisional figures of total value of foreign trade of India by land with Pakistan, Afghanistan, Iran and Burma during October, 1956 are as follows (in lakhs of rupees):

	Imports	Exports
East Pakistan	147	27
West Pakistan	8	13
Other Countries	69	7
	224	47

Total trade amounted to Rs. 271 lakhs. Re-exports and trade in treasure were negligible. There was thus an adverse balance of trade amounting to Rs. 177 lakhs.

GENERAL RECOVERY IN STOCK MARKETS

U.S. OIL-FOR-EUROPE PLAN HELPS LIFT RATES

London, 5th December.

THERE has been a general recovery in the stock markets following a renewed heavy fall during the past week. The international situation and a number of other adverse factors combined to bring about the fall, but the improvement in the situation that followed was mainly due to American developments which brought a sharp response from the operators. The recovery was caused by the U.S. statement supporting the Baghdad Pact countries, and was extended following the news of the U.S. oil-for-Europe plan, and Mr. Dulles's favourable remarks on the Middle East situation. The news that the Anglo-French forces were to withdraw from Egypt had little effect as it had been expected. Business in most sections remained limited, and the size of gains reflected bear-covering and a little "cheap" buying on a narrow market. The recovery in Wall Street also contributed to the advance in London. Gilt-edged securities were throughout subdued and losses ranged to about one point at one time. Most of these losses were regained when the market later rallied. An all-round fall was sustained in the industrial market, but the recovery which later developed, substantially reduced losses or eliminated them altogether. Imperial Chemicals went ahead following the details of their expected issue. Turner and Newall were strong, because their results were better than had been anticipated. Oil shares recovered smartly from their earlier losses and British Petroleum were around 12s after being down to about 110s. Forced selling of gold shares brought sharp losses, but a recovery was staged with the rest of the market. Coppers and other base metals rallied after losing ground. Rubbers were subdued. Teas became quiet after their recent advance, but prices were fairly well held.

The Money Market

Credit conditions were comfortable at the beginning of the past week, but later there was a deterioration. This happened due to the end-of-month influences and on Thursday, when weekly revenue transfers took place, the market paid for a large number of bills and the position became acute. The authorities, however, gave sufficient help. Friday proved a little more comfortable, but credit continued

short. The cost of fresh overnight accommodation generally ruled at 4½ percent with 5 percent paid for money created by the authorities. Bill rates were firm with Februarys changing hands at 4-15/16 percent and under pressure, at 4-31/32 percent. Tight credit conditions were attributed to an exodus of foreign money from London and a movement of domestic funds into national savings certificates and premium bonds, as these exerted a downward pressure on bank deposits. Applications for £220 million worth of 91-day Treasury bills totalled £325,720,000 and all were allotted at the average rate of 100s 4/69d percent against 100s 3/34d percent in the previous week. Applications for £70 million worth of 63-day bills totalled £77,585,000, and £60 million were allotted at the average rate of 100s 10/79d percent against 100s 10/83d percent in the previous week. This week £280 million worth of bills are on offer, comprising £220 million worth of 91-day bills and £60 million worth of 63-day bills. The Bank of England return for the week ended 28th November showed that notes in circulation were about £12 million higher at around £1,906 million, while bankers' deposits were about £19 million lower at around £220 million.

Activity on Wall Street

At the outset, treasury issues slumped sharply on Wall Street in light trading, but later recouped most of the losses. Elsewhere in the bond market, railroads generally continued under pressure in light trading. Most corporate debt securities also gave ground while most privilege share issues weakened in sympathy with the stock market. In the foreign section, Berlin City Electric 6½ per cent slipped 13 points to 127 on only two sales. German Nationals were also somewhat lower in light turnover. Greek issues, after being up slightly earlier, slipped back as the week progressed. Japanese issues were mixed in slow dealings, while South American issues turned lower in restricted business.

Hongkong Gold Slumps

The Hongkong gold market slumped during the past week, following the daily improvement in the sterling switch rate, together with heavy carry-over charges favouring sellers. The market slipped persistently from the opening and in the final session recorded the week's low to close around 10 points down. The official offtake was 1,950 tael and the unofficial was 17,500 tael. Arrivals were 45,000 ounces, while forward contracts were done at 37/70 cents c.i.f. Macao. Carry-over charges were 510 cents a 10 taels in favour of sellers.

Vegetable Oils Up

Although oilseeds prices have made further gains during the past week, a large part of this improvement was due to the higher freight rates prevailing. Demand was mainly for early shipments where they were obtainable, but there was an increasing desire to move into positions well into the new year. Offers of Canadian linseed were almost unobtainable and although the later trend in Winnipeg was lower, this was offset by higher freights and the adverse movement of sterling exchange. Moderate to good business was put through, however, for January and February shipments at around £62 c.i.f. Castorseed was firm still, but buyers were not inclined to repeat the previous week's activity. British East African for November-December to Italy was, it was reported, sold up to £524. In groundnuts, initial demand for early positions by France helped keep a very firm tone and for various grades, December to early February shipment, up to £94 was paid. Linseed oil, spot and nearby deliveries, made further price gains, but little enthusiasm was shown for deliveries ahead and these finished without much change from a week ago. Castor oil made another upward surge of £15 a ton for shipment. Among edible oils, groundnut oil was again outstanding and for January-February, £167 was said to have been bid. For February-March up to £161 was paid.

Further Rise in Rubber

For the most part, the London rubber market was slow to follow the advancing trend in Singapore and during the early part of the week to 29th November, there was insufficient demand to put values up to their eastern parity. Towards the close a further sharp rise in Singapore and New York on the U.S. decision to make no change at present in the stockpile policy caused values to be advanced again. Renewed buying of early shipments to the U.K., coupled with covering orders, consolidated the higher level, but the full advance was not maintained. Traders described the situation as "difficult" with the market being very thin. Finally, quotations were about 2d a lb. higher on the week, but the tendency was uncertain. Delays in arrivals of sole crepe shipments aggravated the already tight position. Supplies remained short of trade requirements, and sellers advanced their quotations to the basis of 48d a lb. for ½ inch smooth No. 1. on the spot.

Hides and Skins Firm

Madras shippers are still very firm in their quotations for kips but the further increases they have been asking are meeting with considerable consumer resistance, according to a leading London firm of kips merchants. U.K. leather dressers have not been able to obtain the necessary increase in the price of their finished leathers to permit them to pay the prices now being asked from Madras. There is, therefore, a lull in the trade. New season's buffalo calves have been offered at considerably increased prices, and so far practically none have been sold to normal buffalo buyers who can not pay the increased price. Cow calves are still scarce and dear. There is little interest in buffaloes.

Stocks and Shares

SPECULATIVES TUMBLE ON LATEST TAX ANNOUNCEMENT

SELLING PRESSURE RESTRICTED AMONG INVESTMENT SCRIP

Wednesday Evening.

THE stock market sustained a severe blow from the new tax proposals announced last Friday. Investment shares held up fairly well, but speculatives tumbled and Indian Irons went as low as Rs. 29-13, after being quoted earlier at Rs. 33-5. The full significance of the proposals is not yet clear to either operators or investors, and that may be the chief reason why shares not on the forward list have lost only slightly. It is reported that buying orders are difficult to execute because shareholders are unwilling to sell at present levels, preferring instead to wait and see if any reliefs are announced. The market reacted sharply after hours this evening to the news that a delegation from the Federation of Indian Chambers of Commerce and Industry had just returned from Delhi after talks with the Finance Minister and its leader has expressed himself well satisfied with the results. If this news is true, the market might look up a little, although business even before the new tax proposals was announced was a mere trickle.

One of the most unfortunate features of the new proposals was that, like the decision to nationalise the life insurance companies, they were known in outline by certain prominent operators before they were announced to the Lok Sabha. The heavy selling which accompanied the Finance Minister's speech prompted the Stock Exchange Committee to declare an emergency clearing last Saturday and fix a nominal quotation for Indian Irons at Rs. 31. It was feared that defaults would ensue and that the market could look forward to a situation similar to that which followed the nationalisation of the life companies last January. Yesterday's settlement went off successfully, however, and if there is no further heavy selling in the market, it should be out of the wood by now.

The Hindustan Lever issue closed this afternoon at 3 p.m. and is reported to have been heavily over-subscribed. A number of cancellations were received after the new dividend surcharge was announced, but most arrived too late to be accepted.

Details of the week's trading follow.

There was a further small improvement in the Government securities market and prices appear to have stabilised. The main reason for the recovery was the appearance of the Reserve Bank of India as a buyer of long-dated loans and indications that it would also consider offers of non-terminable issues. Three percent Conversion Loan 1986 recovered by two annas to Rs. 73-1, as did 3% Non-terminable to Rs. 73. In short-dated loans, 3% 1957 continued in demand at Rs. 99-12 and 3% 1958 was taken at Rs. 99-9. Among medium-dated loans, 3% 1959-61 had buyers at Rs. 97-15 and 3% 1963-65 improved further to Rs. 94-7 cum-voucher, being later done at Rs. 94-5 ex-voucher; 3% 1964 turned buyers at Rs. 98-5 as did 3% 1965 at Rs. 98-7. In contrast, 3% 1967 continued on offer at Rs. 98-6. In long-dated issues, 3% 1966-68 was steady at Rs. 92-6 and 3% 1970-75 recovered slightly to Rs. 86-15; 3% 1974 changed hands at around Rs. 98-8.

State loans were also better and prices were marked up fractionally. Both 4% Madras and U.P. 1968 were higher at Rs. 98 while 4% M.P. 1968 was asked for at the same price without attracting sellers. Four percent Orissa 1968 changed hands at Rs. 97-11 and 4% Behar 1968 was traded at around Rs. 97-12. Four percent West Bengal 1968, however, eased further to Rs. 99 and 4% Bombay 1970 was offered at Rs. 99-10.

A solitary transaction was reported in jute preference shares, namely Auckland 2nd at Rs. 62. Among miscellaneous issues, Burn & Co. 6% were taken at Rs. 112 and Indian Iron & Steel at Rs. 100. Duncan Brothers were offered at Rs. 60 and Gillanders Arbuthnot at Rs. 60-12. Calcutta Electric changed hands at Rs. 10-12 and Calcutta Tramways at Rs. 8-6. New Victoria Cotton were depressed at Rs. 5 and Rohtas Industries "B" Preference were reported at Rs. 65-4.

In the banking section, Punjab National were marked down from Rs. 51 to Rs. 49-8 and United Commercial from Rs. 55 to Rs. 54-8 without any business passing. United Bank of India "D" shares changed hands at Rs. 4-6.

In railways, Burdwan Cutwa were crossed at Rs. 58 and Dehri Rohtas were done at Rs. 13.

In cotton, Cawnpore Textiles reacted from Rs. 9-2 to Rs. 8-12 and Elgin Mills from Rs. 23-10 to Rs. 27. Jayshree were offered at Rs. 6-8 and Kesoram, after being sold down to Rs. 15-4, recovered at the close to Rs. 16. New Victoria were marked down from Rs. 2-5 to Rs. 2.

Coal shares moved in sympathy with the general trend and prices were marked down further. Here is a chart showing representative price movements.

	Opening 29-11-56 Rs.	Closing 5-12-56 Rs.
Bengal	485 0	455 0
Central India	7 0	6 12

East Indian	31 0	30 8
New Beerbhoom	17 8	16 0
South Karanpura	10 8	10 4

Burrakur were taken to a new high of Rs. 22-12 before the announcement of the taxation proposals, but later reacted to Rs. 19-12; covering at the close brought a recovery to Rs. 20-4.

Jute shares continued their downward trend and in some cases sales had to be made at sacrifice prices. Here is a chart showing price movements of a representative list of shares.

	Opening 29-11-56 Rs.	Closing 5-12-56 Rs.
Agarpara	10 7	10 4
Anglo-India	155 0	150 0
Birla	15 10	15 0
Delta	152 0	135 0
Howrah	21 8	20 12
India	125 0	115 0
Kankannarah	85 0	82 0
Megna	78 0	65 0
New Central	14 1	13 10
Northbrook	23 8	21 8

Only two shares changed hands in the electric supply section, namely Calcutta at the lower rate of Rs. 13 and Patna at the previous quotation of Rs. 11-13.

In sugar, Belsund were crossed at Rs. 11-10 and Durbhanga were marked back from Rs. 21-12 to Rs. 20-14. There was a small enquiry for Dyer Meakin Breweries at Rs. 5-8 ex-dividend. Ramnugger reacted sharply from Rs. 26 to Rs. 24-8.

In the engineering section, Indian Iron & Steel dropped heavily from Rs. 33-5 to Rs. 29-14 following the announcement of the taxation proposals, but bear covering at the close helped the shares to recover to Rs. 30-3. All other engineering issues were marked down in sympathy, as will be seen from the following table.

	Opening 29-11-56 Rs.	Closing 5-12-56 Rs.
Bhartia Steel	17 4	16 12
Braithwaite & Co.	27 8	26 0
Burn & Co.	345 0 x.d.	320 0
Jessop & Co.	34 10	31 0
Richardson & Cruddas	25 10	23 7
Textile Machinery	22 7	20 7

Among paper shares, India Paper Pulp were depressed from Rs. 23-10 to Rs. 22-13 and Orient Paper fell heavily from 35-10 to Rs. 33-2. Titaghur were quiet, in sympathy, at Rs. 37 ex-dividend.

In cement, Sone Valley were marked down from Rs. 8-14 to Rs. 8-6 and Dalmia from Rs. 13-5 to Rs. 13. Ashoka were quoted at Rs. 11-12 and Orissa at Rs. 13-4.

No business was reported in insurance shares. In shipping, India Steamship initially reacted from Rs. 10 to Rs. 9-5, but replacement buying at the close brought the price up to Rs. 9-9. India General Navigation dropped from Rs. 90 to Rs. 84 and Port Shipping from Rs. 16 to Rs. 15-12.

Despite the announcement of a dividend of 8 annas by the Aluminium Corporation of India Ltd., the shares reacted from Rs. 11-14 to Rs. 11-7. Bengal Chemical were placed at Rs. 100 and Bengal Flour were lower at Rs. 34. British India Corporation met with selling pressure and were marked down from Rs. 10-6 to Rs. 9-10. Clive Row were easier at Rs. 10-12 as were Dunlop Rubber at Rs. 25-8. Hindustan Motors were at one time sold at Rs. 8-2 but later recovered to Rs. 8-9. Indian Aluminium were easier at Rs. 14-15 ex-dividend as were Imperial Tobacco at Rs. 14-13 and Indo-Burma Petroleum at Rs. 38. Jardine Henderson eased from Rs. 93 to Rs. 92 and Martin Burn from Rs. 25-6 to Rs. 24-8. National Carbon met with selling pressure and reacted from Rs. 26-14 to Rs. 25-8. National Insulated Cables were subdued at Rs. 26-4 after being done earlier in the week up to Rs. 28-6. After a long lapse, business was reported in Sodopore Glass at Rs. 2-8.

In the mining group, Indian Copper suffered heavily and from an opening price of Rs. 4-4 were at one time hammered down to Rs. 3-5; towards the close, however, there was a mild recovery to Rs. 3-8. Burma Mines were easier at Rs. 2-10 and Western Stockholders Investment were shaded at 12 annas. Contrary to the general trend, Orissa Minerals recovered from Rs. 20 to Rs. 21-4. Metal Corporation were very quiet at Rs. 8-15.

Tea shares were weak in sympathy with the rest of the market but the falls appeared to have been overdone as prices steadied up slightly towards the close. Baghmari changed hands at Rs. 27-12 and Bishnauth Old and New were marked back to Rs. 23-10 and Rs. 21-2 respectively. Brahmputra had sellers at Rs. 8-4 and Brooke Bond, after being sold down to Rs. 19-10, had buyers at Rs. 20. Dessai and Parbutia came to business at Rs. 408, as did Dhelakhat at Rs. 21-14, East India at Rs. 23-12 and Ledo at Rs. 23. Grob "A" and "B" were marked at Rs. 37 and Rs. 19-2 respectively while Kotamullai and Methoni came to business at Rs. 34 and Rs. 21-12 respectively. Seajuli were marked at Rs. 34-6

Carrying coal to the country

History of EIR, it was once said, was the history of coal. The Eastern Railway carries forward that tradition. Nearly 80% of the annual production of 38 million tons come from the Bengal-Bihar coal regions; 76% is carried by Eastern Railway in 2,500 wagons a day. During the second Plan the production in the country will increase by 22 million tons—of which 13 million tons will be from the fields on the Eastern Railway. That means loading 1,625 wagons a day more. Helping carry coal to every nook and corner...to provide motive power for the wheels of industry to move...to feed all the ovens, furnaces and boilers...is the day-and-night job for us.

EASTERN RAILWAY WILL
DELIVER THE NATION'S COAL

EASTERN RAILWAY

and Tezpur came to business at Rs. 23-6. Birpara had sold at Rs. 160, as did Choonabhatti at Rs. 311, Hantapara at Rs. 203, Hasimara at Rs. 30 and Killcott at Rs. 23-2. Nagasiree were easier at Rs. 190 as were New Dooars at Rs. 284. A small lot of Phaskowa changed hands at Rs. 131 against the previous nominal rate of Rs. 120 and Rajabhat were in demand at Rs. 25-4. Mim found buyers at Rs. 280 as did Central Cachar at Rs. 78 and Pathamara at Rs. 11-8. Dauracherra were easier at Rs. 13-4 and a small lot of Patrakola were sold down to Rs. 205. Kornafuli came to hand at Rs. 12-8.

The NATIONAL INSULATED CABLE COMPANY has earned a net profit of Rs. 32.72 lakhs for the year ended last March. Providing Rs. 1.90 lakhs for depreciation, Rs. 28 lakhs for taxation and making other adjustments, there is an available balance of Rs. 32,94,443, including Rs. 2,22,283 brought in. General reserve absorbs Rs. 124 lakhs, dividend equalisation fund Rs. 5 lakhs and expansion reserve Rs. 6 lakhs. The ordinary dividend has been increased by 5 percent to 20 percent, leaving a carry-forward of Rs. 1,44,443. The directors say that after obtaining the consent of the Controller of Capital Issues and the assent of the debenture holders, the mortgage debentures of the company which were due for repayment on 15th July, 1955, have been extended for a further period of five years up to 15th July, 1960, with an option to redeem them either in whole or in part at any time after 15th July, 1958. The rate of interest on the debentures has been increased to 5½ percent.

The results are published below for two tea companies in the Jardine Henderson Group. The profit of the BARADICHI TEA COMPANY has declined by Rs. 10.77 lakhs to Rs. 3.18 lakhs for the year ended last December. Bringing in Rs. 53,496, there is a balance of Rs. 3,71,029. The dividend is cut from 65 percent to 30 percent. Taxation absorbs Rs. 89,000 (Rs. 3.92 lakhs) and taxation equalisation reserve gets Rs. 59,000 (Rs. 46,000), leaving a carry-forward of Rs. 43,029. The crop amounted to 18,263 maunds, against 17,728 maunds, and the average sale price declined from Rs. 2-11-7 to Rs. 2-0-1 a lb. Estimates for 1956 have been made for a crop of 17,500 maunds. There is a decline from Rs. 26.17 lakhs to Rs. 9.32 lakhs in the profit of the RYDAK TEA SYNDICATE for the year ended last December. Bringing in Rs. 83,985, there is a balance of Rs. 10,16,212. The dividend has been reduced from 100 percent to 50 percent. Taxation provision gets Rs. 3,32 lakhs (Rs. 8.10 lakhs) and reserve account is allocated Rs. 11 lakhs against Rs. 8 lakhs, leaving Rs. 3,73,200 to be carried forward. Rydak produced 17,637 maunds (17,168 maunds) and Kartick 8,209 maunds (8,707 maunds). Their respective average prices amounted to Rs. 2-5-7 and Rs. 2-0-8 a lb. against Rs. 3-6-7 and Rs. 2-10-6 a lb. Estimates for Rydak and Kartick for the current year have been framed for crops of 17,500 maunds and 7,500 maunds. The directors of both the Rydak and Eardighi companies say that permission from the Government of India for a one-for-one scrip issue has been obtained. But considering the penal taxation provisions imposed by the Finance Act, 1956. In this respect, they have decided that it would not be in the interests of members to proceed meantime with the proposal to issue bonus shares.

The profit of the HANTAPARA TEA COMPANY has declined from Rs. 41.36 lakhs to Rs. 3.39 lakhs. The ordinary dividend has been cut from 60 percent to 6 percent, but the ordinary capital has meanwhile been increased by the issue of 12,000 bonus shares of Rs. 100 each. Revenue reserve gets Rs. 1 lakh (Rs. 8 lakhs), leaving a carry-forward of Rs. 1,75,497 (Rs. 2,96,019). Hantapara produced 19,862 maunds (21,809 maunds) and Dumchipara 14,900 maunds (16,801 maunds). Their respective average sale prices amounted to Rs. 1-13-5 (Rs. 2-15-5) and Rs. 1-12-5 (Rs. 2-12-8) a lb. Estimates for 1956 have been made for a crop of 39,000 maunds at a cost of Rs. 47.01 lakhs.

There is a decline of Rs. 87,000 to Rs. 9,29 lakhs in the profit of the ANGLO-INDIA JUTE MILLS COMPANY for the half-year ended last March. Providing Rs. 5.25 lakhs (Rs. 5 lakhs) for depreciation, there is Rs. 5,24,416, including Rs. 3 lakhs transferred from contingencies reserve and Rs. 1,23,973 brought in. The ordinary dividend has been maintained at 3½ percent, leaving a carry-forward of Rs. 3,12,224. The directors say that the erection of the new machinery and electrical equipment at the Middle mill is being carried out speedily and it is hoped that it will be completed shortly. Investigations are being made for finding suitable new uses for the building and facilities of the Jagatdal mill.

SOUTH EASTERN RAILWAY

TENDERS.

The General Manager, Garden Reach, Calcutta-23 invites tender No. GM23/56/295(B)/56 for supply of 3338 Pans I. G. Lathine with tray as per CE's drg. 10103. Tender Forms are obtainable from the Controller of Stores, Garden Reach, Calcutta-23 on remittance of Rs. 5/- per copy (not refundable) by Money Order to him direct in the case of outside firms and on production of cash receipt from the Chief Cashier, Garden Reach by local firms. Closing date 24. 12. 56 at 12 noon. Firms not on the Railway's list of approved contractors must enclose a valid Income Tax Clearance Certificate with the tender.

Bombay Market

HEAVY SELLING AFTER NEW TAX ANNOUNCEMENT

OPERATORS AWAIT FURTHER NEWS

Wednesday Evening. EQUITY values on the Bombay stock market fell sharply last week on the new tax proposals introduced by the Finance Minister Mr. T. T. Krishnamachari, in the Lok Sabha last Friday. Operators were scared, and there was a spate of selling pressure. The most disturbing feature of the new proposals is that companies will be obliged to deposit with the Government of India, or with the Reserve Bank, a certain percentage of the past accumulated profits and reserves, and 50 percent of current profits after taxation and distribution of dividends over Rs. 1 lakh. The increased dividend supertax, it is feared, will serve the purpose of dividend limitation in a number of companies.

Towards the close, selling pressure seems to have abated on second thoughts and there is a general inclination to await further details of the Finance Bills. Whatever recovery has taken place has been due mainly to short-covering, and it is generally believed that no worthwhile improvement is likely to be seen for some time. Meanwhile, there has been some excitement in the news, especially from miscellaneous industries. The Hindustan Lever issue is reported to have been well over-subscribed and the price has been unofficially quoted around Rs. 18 a share.

Tata Steels recovered to Rs. 181-10, as did Indian Iron to Rs. 31-4 on support from Lyons Range. Conspicuous among other engineering scrip were Tata Locomotive on declaring a maiden ordinary dividend of Rs. 6 a share. The company has produced excellent results and its expansion programme is making satisfactory progress. The price was quoted at Rs. 163. Alcock Ashdown were available at Rs. 302-8 and Premier Construction came to hand at Rs. 194-8. Hindustan Motor were freely offered at Rs. 8-11, while Premier Automobiles were taken at Rs. 108.

The mill group was dotted with losses on a broad front, although closing levels showed a slight improvement on short-covering. Bombay Dyeing closed at Rs. 69-14, and Simplex at Rs. 187-8. Kohinoor were transacted at Rs. 332-4, and Century at Rs. 515. Svadeshi realised Rs. 241-3 and India United Ordinary were done at Rs. 11-14. Rumours of a downward revision of the excise duty, coupled with increased exports over the past couple of months, helped sentiment in this section at the close.

Miscellaneous industrials fell in sympathy with the general trend and buyers were extremely cautious. Associated Cement declined to Rs. 188 and Digvijay were available at Rs. 154. Belapur Sugar were done at Rs. 250-8 and Walchandnagar Industries were quoted around Rs. 272-8. National Rayon slumped to Rs. 250-4 on the proposal of a heavy excise duty on artificial silk yarn, and Gwalior Rayon declined to Rs. 15-2 in spite of excellent working results. The company is reported to have finalised an ambitious scheme of expansion. Mining shares were depressed, with Indian Copper declining to Rs. 3-9. Bombay-Burma were settling at the lower levels of Rs. 652-8 on optimism about the capital reconstruction of the company.

Banking shares received scattered interest, and Bank of India were done at Rs. 148. Central Bank were on offer at Rs. 53. There was no interest in insurance shares, which were freely offered at lower levels.

THE WEEK'S TRANSACTIONS

In the following list of stocks and shares in which transactions have taken place during the past week the figures indicate Opening Quotations, Highest for the week, Lowest for the week, Closing Quotations—Quotation for the Corresponding Closing Date a Year Ago, the last named being shown in parenthesis and will not be given where such a quotation is not available.

New Delhi

BACKGROUND TO THE NEW TAXATION PROPOSALS

SECOND PLAN ENLARGED: DOMESTIC PRICE AND FOREIGN EXCHANGE WORRIES

(FROM OUR NEW DELHI CORRESPONDENT)

TO the Finance Minister, Mr. T. T. Krishnamachari, a stable price level is an essential condition for the implementation of the plan. He appears to have been watching prices carefully since he took over the Finance portfolio. Introducing two Finance Bills in Parliament last week, he explained: "In the last session of Parliament, the excise duty on cloth was raised with a view to checking a situation of developing scarcity and consequent windfall profits for the producers or traders. The time has now come for some increase in direct taxation which will, on the one hand, restrain non-priority spending, and, on the other, afford some corrective to inequalities of income and wealth. This is the two-fold objective behind the proposals now being made."

"The outlay required for carrying through the development programmes incorporated in the plan will, it is now estimated, require Rs. 400 crores to Rs. 500 crores more than the total of Rs. 4,800 crores envisaged in the plan document. This is partly because some of the financial provisions in the plan were inadequate; partly, the higher estimate reflects the increased cost on account of higher domestic or external prices. The domestic effort for raising resources will, in consequence, have to be larger."

Elasticity of Tax System

"The Indian tax system has got into a settled groove. It does not bring into the public Exchequer even a constant proportion of national income. If a development programme of the dimensions we have in hand is to be carried through successfully, the tax system has to be made more elastic. It is hardly possible to do this by stepping up any further the rates of direct taxation, which has now reached a stage when a straightforward increase in the rates would yield poor results. It is necessary now to increase the coverage of taxation by reaching a class of incomes which has hitherto been kept out of the purview of the income taxation—I mean capital gains. Capital gains are an important factor in aggravating economic inequalities, and there is no justification for regarding capital gains as a species of income not liable to taxation. This is a lacuna in the tax system of most countries, a lacuna, one dare say, they will have to rectify in due course. For a developing economy like ours, it is necessary to take early action as the implementation of our programmes is certain to create conditions in which assets of all kinds will appreciate. It is only fair that the Exchequer should get a proportion of these incomes when realised in the form of capital gains."

Capital Gains Tax

Dealing first with direct taxation, the Finance Minister said that his proposal "is to impose a tax on capital gains made on or after 1st April, 1956. As honourable members are aware, a tax on capital gains forms part of our existing Income Tax Act, but it was in operation only for a short period, that is, in respect of capital gains which arose during the period 1st April, 1946 to 31st March, 1948. In the present Bill, I have somewhat altered the existing provisions. The definition of capital gains remains unchanged, but some of the existing exemptions are proposed to be withdrawn. These are capital gains arising on transfers of property on compulsory acquisition, capital gains arising on distribution of assets on dissolution of partnerships or on liquidation of companies, capital gains arising on the sale of residential property possessed by the taxpayer for seven years, etcetera. Such gains will now be subjected to tax."

"Under the existing law, capital gains up to Rs. 15,000 are not subject to tax in the case of individuals. This limit is proposed to be reduced to Rs. 5,000, but an additional concession is proposed to be given to persons in the lower income groups in that no capital gains tax would be chargeable if the total income, including the capital gains, does not exceed Rs. 10,000. I am also considering some concession for small people making gains by the sale of small and medium sized houses. Under the existing law, gains are to be taxed on the basis of slab rates. This, however, bears no relation to the other income of the person making the gains. It is now proposed that the rate of tax to be charged on capital gains should be the income-tax rate applicable to the other taxable income of the assessee, increased by one-third of the capital gains he makes in the relevant year. In the case of companies, the rates of tax will be the usual income-tax rate. Another important change is that the assessee has the option to have his gains worked out either on the basis of original cost or on the basis of its value on 1st January, 1954."

Higher Dividend Super-tax

"My second proposal is to increase the rates of super-tax payable by companies which declare divi-

dends in excess of 6 percent of paid-up capital. For the current financial year, such super-tax is 2 annas and 3 annas in the rupee in respect of dividends declared between 6 percent and 10 percent, and above 10 percent, respectively. I propose that for the financial year 1957-58, the rates of super-tax should be 2 annas a rupee for dividends between 6 percent and

company. The penal provisions of the Bill will make it liable to tax on the sum of Rs. 2 lakhs set aside for depreciation, unless the sum of Rs. 2,66,000 is deposited with the Government. The deposit will be repayable to finance objects within the framework of the business of the company.

Yield from Extra Taxation

The first Finance Act this year was intended to raise Rs. 35 crores a year in additional taxation, or Rs. 175 crores in the five years ended March 1961. The excise duty on cloth, levied during the last session of Parliament, should yield another Rs. 30 crores a year, or Rs. 150 crores in five years. The yield from the additional taxation measures announced last week is placed at Rs. 4 crores in 1956-57, and thereafter at the rate of Rs. 16 crores a year, or Rs. 68 crores in five years. The additional taxation levied in the first year of the plan should thus yield Rs. 393 crores by 1961. The Planning Commission's target for the plan period is Rs. 850 crores of additional taxation, both Central and States. Since then, the Finance Minister has indicated additions to the plan outlay by Rs. 500 crores, thereby raising the target for additional taxation to Rs. 1,350 crores in five years. The Finance Minister has almost shut the door against deficit financing. He has also shut the door against a reduction in the size of the plan. This leaves only one choice, namely, more and more new taxation in coming years.

Wage Claims

While on this subject, reference may be made to the I.N.T.U.C. ultimatum demanding a 25 per cent rise in wages in certain industries, which was referred to in these columns in the last issue of Capital. It seems that the Finance Minister's taxation proposals, which aim to mop up surplus money and the I.N.T.U.C. demand, which would provide 25 per cent more money to certain workers, are opposed to each other. Apart from the inflationary aspects of the I.N.T.U.C. suggestion, it is worth considering whether it will be equality of sacrifice if the wages of certain categories of labour are increased by 25 per cent, while the income of an equally large body of small investors is almost frozen by taxing heavily dividends of more than 6 per cent.

Another Credit Expected from Russia

Another credit accommodation, the third of its kind on a long-term basis, is expected from Soviet Russia. The first one was to finance the foreign exchange portion of the one million ton Bhilai steel plant and amounted to Rs. 60 crores. The Production Minister, Mr. K. C. Reddy, was able to secure a second accommodation amounting to Rs. 60 crores, and a third one for another Rs. 60 crores now appears to be in the offing. All of them carry 2½ per cent interest, and are repayable in ten years.

Commercial Vehicles Project

A proposal to manufacture commercial vehicles with Ford chassis, and Perkins engines is being considered by the Government of India. Perkins engines are already manufactured in India and the Government's sanction for the scheme, if given, would lead to the manufacture of chassis with Ford's collaboration. Latest estimates place India's requirements of commercial vehicles by 1961 at 40,000 units a year. The Government's present policy is not to create additional manufacturing units in the country, but to render all possible assistance to the existing six units to expand their capacity so as to reach the target of 40,000 commercial vehicles by 1961. With this end in view, the Government has invited schemes from the existing manufacturing units. As the manufacture of Perkins engines is already an established undertaking in India, permission to undertake the manufacture of Ford chassis is not regarded as a material departure from the policy. For one thing, the existing units may not be able to expand their capacity to the target of 40,000 units by 1961. Since 1950, the production of trucks in India has been as follows:

1950	8,015
1951	9,885
1952	8,339
1953	8,990
1954	9,027
1955	12,818
1956 (up to September)	13,284

Another point is that the increased production may not bring down the prices of commercial vehicles, which is essential for the expansion of the market. That is why the project is being examined. An early decision is expected.

Second Letter from World Bank President

The reply of the Finance Minister, Mr. Krishnamachari, to a second letter from the World Bank President, Mr. Eugene Black, is now being drafted and is likely to be despatched shortly. Following discussions with the Indian mission headed by Mr. P. C. Bhattacharyya and Mr. B. K. Nehru, Mr. Black wrote a fresh letter to Mr. Krishnamachari appreciating India's viewpoint on the mixed economy and the co-existence of the public and private sectors. The Bhattacharyya-B. K. Nehru mission returned here last week, with optimism about the prospects of assistance from the Bank, which may cover the entire foreign exchange gap in the second five year plan. A new World Bank mission will arrive here early in January to appraise the specific requirements of the railways. In addition, Mr. Sherman Cooper, the former U.S. Ambassador to India, who arrived here last week, is to hold discussions with the Finance Minister, the subject being aid in the form of a \$500 million credit to India. Mr. Krishnamachari has created a foreign exchange cell in his Ministry, which will examine all schemes involving the expenditure of foreign exchange.

India's trade pattern has been rapidly changing since independence. One feature of this change is an increase in her trade with Communist countries,

as is evident from the following figures covering the first four months of each financial year, that is, the four months ended 31st July.

	1955 Rs.	Imports	1956 Rs.	1955 Rs.	Exports	1956 Rs.
Russia	82,17,113		4,35,87,514	83,91,378		2,67,59,386
Finland	83,49,454		73,12,801	12,21,503		16,86,715
Poland	11,91,307		37,13,454	8,11,796		41,20,860
Eastern Germany	11,94,616		9,86,764	1,66,942		75,412
Czechoslovakia	40,81,598		2,01,24,355	31,98,994		92,61,853
Hungary	1,82,925		19,82,912	17,79,232		6,35,155
Yugoslavia	5,01,476		70,77,763	6,86,386		11,07,315
Bulgaria	1,51,332		19,07,887	50,815		3,14,654
Rumania	8,25,221		16,47,120	11,16,861		10,12,587
China	61,73,353		2,59,10,299	1,24,77,246		96,65,797

India's trade with non-Commonwealth countries, particularly the Scandinavian ones, has also shown a marked improvement, as is evident from the fol-

lowing figures covering the four months ended 31st July:

	1955 Rs.	Imports	1956 Rs.	1955 Rs.	Exports	1956 Rs.
Sweden	2,19,79,406		4,11,38,460	31,89,244		44,78,269
Norway	1,05,69,736		1,15,27,327	29,12,967		11,00,422
Denmark	1,21,20,888		1,81,89,480	68,04,136		62,20,868
Western Germany	16,86,94,287		24,37,94,407	5,88,91,309		3,95,10,066
Austria	71,06,793		1,38,77,466	17,79,232		6,35,155
France	4,61,91,680		7,04,32,300	2,30,58,167		2,02,10,204
Belgium	3,47,15,450		8,33,71,533	3,17,06,227		2,05,01,188
Switzerland	3,64,45,742		5,58,79,188	26,18,246		23,31,351
Italy	5,15,92,901		9,95,74,582	2,07,20,572		1,93,01,264
Japan	7,88,60,671		13,52,83,362	6,84,86,965		9,34,74,326
Saudi Arabia	1,72,35,306		2,80,84,997	1,91,78,454		2,12,68,112
Lebanon	6,67,723		12,26,503	8,28,486		17,09,362

The State Trading Corporation, it is reported, is playing a leading rôle in expanding trade with Communist countries. The total value of the firm contracts entered into by the Corporation since it

came into being is Rs. 17,36,71,207, of which contracts worth Rs. 1,03,10,933 have so far been fulfilled. The following are the details:

IMPORT CONTRACTS

Commodity	Country of Origin	Quantity Tons	Total Value Rs.
Cement	Rumania	25,000	29,66,644
	Rumania	45,000	51,90,000
	Yugoslavia	28,000	32,29,333
	Russia	25,000	29,83,333
	Japan	5,000	5,83,334
	Poland	100,000	1,10,00,000
Soda ash (light)	Western Germany	50,000	55,33,334
	Spain	100,000	1,10,66,668
	Pakistan	105,000	1,03,95,000
	China	15,000	33,40,000
Caustic soda	Eastern Germany	10,000	22,26,666
	U.K.	15,000	66,14,999
Ammonium sulphate	Eastern Germany	425	1,63,867
	Eastern Germany	28,000	63,79,333
	Eastern Germany	6,520	14,95,254
Chilean nitrate	U.S.A.	70,000	1,30,00,000
	Chile	8,200	23,78,000
Gypsum	Pakistan	1,50,000	19,50,000
			8,74,95,765

EXPORT CONTRACTS

Commodity	Country of Destination	Quantity Tons	Total Value Rs.
Iron ore	Poland	125,000	81,16,667
	Japan	460,000	2,57,26,667
	Italy	75,000	43,50,000
	Hungary	15,000	8,00,000
	Czechoslovakia	500,000	1,32,50,000
	Holland	15,000	36,28,750
Manganese ore	Japan	67,000	1,12,84,916
	U.S.A.	10,825	18,27,301
	Belgium	2,000	4,14,141
			6,93,98,442
Coffee	Russia	500	41,22,000
Shoes	Russia	500,000 pairs	1,18,05,000
Handicraft products	Russia		8,50,000
			8,61,75,442

No Russian Planes for I.A.C. Yet

No aeroplanes have been purchased from Russia so far for the Indian Airlines Corporation, as the full technical data has yet to be received, it was stated in Parliament last week.

Factory for High-Tension Insulators

The scheme of the Bihar Government for setting up a factory to manufacture 2,000 tons of high tension insulators has been approved, but the location of the plant has not yet been decided, the Minister for Heavy Industries, Mr. Manubhai Shah, told Parliament.

Primary Organic Chemicals

The following additional annual capacity is expected to become available for certain primary organic chemicals:

	Production in 1955	Additional quantity by 1960-61
Benzene	254,626 glns.	8,543,000 glns.
Toluene	83,102 glns.	1,162,400 glns.
Xylene	5,646 glns.	500,000 glns.
Phenol		1,832 glns.
Napthalene	891 glns.	5,050 glns.

It is proposed to produce phenol as part of the south Arcot lignite project in Neiveli. The capacity proposed is 1,032 tons a year. About 800 tons

a year of phenol will also be produced in Bhilai. It is expected that 500,000 gallons of xylene will be available annually from various coke-oven plants.

German Consultant on Fertilisers

Bochako of Western Germany has been appointed as the consultant for submitting a project report and preparing tender specifications for the fertiliser plant to be set up near the Rourkela steel works.

Raw Rubber Production

Production of raw rubber at the end of the second plan is estimated at 29,000 tons a year. The contributions of various States to the total output is expected to be as follows: Kerala 91.3 per cent; Madras 6.9 per cent; Mysore 1.7 per cent; and the Andaman Islands 0.1 per cent.

Amalgamating Small Collieries

The main recommendations of the expert committee appointed to examine the question of amalgamating small collieries are:

1. Collieries producing less than 10,000 tons or having an area of less than 100 acres should be amalgamated.
2. Central legislation should be undertaken to deal with all aspects of amalgamation.

3. A statutory commission should be set up to draw up a scheme of amalgamation.

4. A committee of three technical officers should be appointed to examine proposals for voluntary amalgamation pending the appointment of the commission.

The report is being examined.

Rice from China and Burma

The first shipment of rice under the Sino-Indian agreement signed in Peking in August, 1956, has arrived in Bombay. It amounts to 6,530 metric tons. The total quantity to be shipped under the agreement is 60,000 tons. Five more ships with rice from China are now on their way to India.

It is expected that 300,000 tons of rice will be received this year out of the two million tons negotiated for import from Burma under the five year arrangement. About 245,432 tons have already been despatched from that country and arrangements to ship 24,700 tons have been made. It is expected that by the end of the year, the remaining 30,000 tons will have also been shipped. It is understood that the Burmese Government has been approached to settle the details of next year's import programme, under which 500,000 tons will be taken by India at a cost of £33 a ton, against this year's price of £34 a ton.

Report of German Industrial Mission

The report is now available of a "goodwill mission" representing German industry which visited India early this year. The report says: "The delegation was particularly impressed by the determination of all countries visited to industrialise, namely, to catch up with the present industrial States as quickly as possible. The delegation welcomed this fact in all its statements. Although industrialisation will bring about a change in the market structure, this also means expansion and hence improvement of economic relations. It is no mere contingency that the Federal Republic's best trade partners are the highly industrialised countries of western Europe. The trip confirmed most emphatically that it is both advantageous and necessary for the Federal Republic not only to improve trade relations with the countries of east Asia but also to co-operate in a fair measure in bringing about the industrialisation of that area. Trade and industrialisation are largely complementary.

"These considerations are corroborated by the following. The internal affairs of the various countries in the Far East are becoming consolidated. Law and order have in most cases been fully restored; wherever this is not the case, great progress has been made in this direction. Economic development—and in particular industrialisation—is proceeding systematically, according to the principles of a planned economy. The fact that the planning of industrialisation is predominantly in the hands of the State is frequently explained by the fact that the formation of private capital, which is and has long been practised, say, in Europe, is not possible there. However, these differences between east Asia's and our conditions should not form an obstacle in the path of fruitful co-operation. The history, the mentality, the habits, the views on life in general, are in many respects different from ours. We should not only respect this; we also have much to learn from these nations with their old civilisations. Yet another factor speaking in favour of co-operation is the great amount of goodwill towards Germany prevailing throughout Asia. Wherever the delegation went, it was received in a hospitable and friendly manner which went to the heart. Discussions with leading personalities in the various capitals were therefore particularly valuable. The delegation not only encountered interest but also expectancy and confidence.

Attitude to Foreign Trade

"The attitude towards foreign trade differed in the various countries in line with the different systems of Government and views held on international questions. Several countries, such as Pakistan and Thailand, have stronger ties with the West, while others avoid binding themselves and wish to keep the door open on all sides. It is most important to know this in order to gain a clear picture of international competition in east Asia. Not only is western competition fierce; it has recently become evident that also the eastern bloc, with its increasingly concentrated economic leadership, is appearing on the scene, in particular in the capital goods market, offering 10 or 20 year credits at 2 per cent to 2½ per cent interest. These endeavours should definitely not be under-estimated. The delegation discovered that the consulting engineer enterprises are highly appreciated in under-developed countries."

Orders for Rourkela Equipment

Orders have now been placed for practically all equipment for the Rourkela steel works. Last summer, orders were placed for the coke oven plant on Dr. Otto and Comp., the blast furnace plant on G.H.H. and the gas cleaning plant on Lurgi, all West German firms. The value, f.o.b., of equipment for these three departments comes to about 104 million deutschmarks (about Rs. 11.7 crores). As a result of the negotiations which the Indian steel mission held in Western Germany, orders worth approximately 647 million deutschmarks (about Rs. 72.7 crores) have been placed for the remaining sections of the plant. The principal orders are as follows (value in millions of deutschmarks): steel melting shop, Krupp-Voest, 80; strip mill, Demag, 47; blooming mill, Sack, 19; heavy plate mill, Krupp, 17; plate finishing equipment, Schoemann, 42; electrical equipment for rolling mills, A. E. G., Siemens 59, and Brown Boveri 15, totalling 119; power plant, Siemens, 47; water and gas systems, Mannesmann-Seiffert, 36; steel structures, German consortium, 52; and by-product plant, Koppers, 50.

London

FURTHER FISCAL MEASURES ON THE WAY

NOVEMBER GOLD AND DOLLAR

RESERVE LOSSES HEAVY

(FROM OUR LONDON CORRESPONDENT)

THE more serious repercussions of the Middle East situation will become more apparent in the coming week with the release of the gold and dollar reserve figures for November. The loss in that month is expected to have been heavy, about £100 million, and in December the American and Canadian loan repayments fall due, and in present circumstances we may not feel inclined to claim postponement of interest payments as provided for in the Agreement. With sterling under pressure and the possibility of our dollar expenditure rising with the need to import oil from American sources, a new significance is being attached to Mr. Macmillan's remarks on 12th November, when he spoke of "very substantial reinforcements behind the reserves" during the economic debate in the House of Commons. It is understood the Chancellor of the Exchequer is considering further measures to stabilise the economic situation and especially to check the drain on our gold and dollar reserve, and these may be announced before this despatch is published. Three steps are open to him in the way of emergency action to produce quick results, namely, to draw out up to £116 million a year in dollars from the International Monetary Fund, apply for an additional "stand-by" credit from the fund, or sell off some of the dollar securities held by the Government. Import controls and other measures would take longer to make their effects felt.

Meantime, the City has taken its "view" of the Middle East outlook for trade and industry and has decided it is none too good. Expedients to counter oil and petrol rationing are being adopted wherever possible, but short-time working is already spreading and production must also decline increasingly as the shortages continue or become more severe. There may be some reaction from the revised attitudes apparent at the close of the week, but again the time factor comes into play before their translation into physical effects.

Mr. Cobbold Visits America

The Governor of the Bank of England, Mr. Cameron Cobbold, has left by air for Ottawa accompanied by Mr. J. S. J. Margeson, also of the Bank of England. From Ottawa he intends to go to Washington and then to New York. The Governor usually makes a trip to Canada and the United States at this time of year for the purpose of keeping in touch with his colleagues at the Bank of Canada, the Federal Reserve Board in Washington, and the Federal Reserve Bank of New York. His present journey, however, comes at an opportune moment. Sterling is under pressure in the world's exchange markets. It would be useful to the Chancellor of the Exchequer to get some idea of what dollar assistance might possibly be available to the United Kingdom if the situation should deteriorate; and the Governor will be well placed to provide just such an estimate.

Production Index Lower

The provisional index number of industrial production for October is expected to be 143 to 144 compared with 146 in October, 1955. The revised figure for September is 140 in both years. Corrected for seasonal variations, the October figure is 136.37 (last year 139) and for September 137 (last year 138). For the last three months the adjusted figure, which reflects the trend more truly, has been running a point or two below the level of a year ago. The drop would have been heavier but for the increased output of the utilities—gas, electricity and water. At least until September (the October figure is not yet sub-divided) the manufacturing index had fallen more heavily than the index for industrial production as a whole. If August and September are taken together, this year's figure of 259 compares with 267 for the same two months of last year. In the first ten months of 1956 the general index has averaged 136, compared with 135 in the corresponding period of 1955, but the relative position has lately deteriorated.

Machine Tools Orders Down

There was a sharp fall in orders for machine tools in August, according to the Machine Tools Trade Association, both from abroad and from home markets. This follows a good month in July and a poor one in June. It now seems that the trend this year is definitely lower and that the good July figure was due to the number of orders taken at the Machine Tools Trade Association Exhibition held in London in May. The fall in the August orders was heaviest in the home market. At £4.5 million they were at the lowest for over eighteen months. Foreign orders at £1.9 million fell less. Deliveries in August were also well below the July level and were even slightly below the June figures. But the order-book of the industry is as big as ever. There was a slight change in its composition in August, with home orders falling nearly £400,000 and exports rising over £200,000, but the total remained unchanged at £1,046 million. At the present rate of output this represents about fifteen months' capacity. Chances of working some of this large total off must now be less than they might have been, for transport difficulties will probably keep deliveries down during the next month or so.

Engineering Wage Claim

The engineering employers have at last informed the engineering unions that their claim for an

all-round increase of 10 per cent in the wages of some three million workers has been refused "outright" by "an overwhelming vote." The announcement was made at a joint meeting of the employers' spokesmen not only appealed to the unions' representatives for co-operation in achieving a period of stability but also gave a detailed reply to the unions' claim, quoting facts and figures demonstrating how Britain has lost ground in export markets, how wages and earnings had risen faster than retail prices, the extent to which workers had participated in higher productivity and how the majority worked overtime and had high earnings whereas profits were now showing a declining trend and recent developments in the motor car industry were a warning of the dangers of creeping inflation. The Confederation of Shipbuilding and Engineering Unions has not accepted the employers' answer and the situation is to be considered by a meeting of all the unions. Strike action is favoured by some of the more militant union leaders.

More than 12 million workers received pay increases in the first ten months of this year. The Ministry of Labour Gazette says that 12,031,503 employees received weekly increases amounting to £6,333,600, or about 10s. 6d. each. In the corresponding period last year 11,505,000 workers shared increases amounting to £4,712,000 a week. The index of wage rates in October (June, 1947=100) was 165, compared with 153 a year ago. In the first ten months of this year there were 2,284 disputes involving 473,100 workers, which lost 1,973,000 working days. In the corresponding period last year there were 2,045 disputes involving 614,900 workers, which lost 3,382,000 working days.

Cotton Delegation's Visit Postponed

The visit to India by a delegation from the Lancashire cotton industry, which was to have been made at the end of November, has been postponed until the middle of January. A statement issued by the Cotton Board in Manchester said that because of ship diversions all the representatives of the Indian industry could not be assembled to meet the delegation until later than the date first planned. The purpose of the visit is to discuss the difficulties which unlimited imports of Indian textiles have created for the Lancashire industry and to explore the possibility of an agreement between the industries of the two countries on a mutually acceptable upper-limit on these exports.

Whether the delegation will have any greater success with leaders of the Indian industry than Lancashire has hitherto had in persuading the Government to adopt restrictive measures remains to be seen. The British Government's views on the matter are still unchanged. In reply to a question by Mr. Ernest Thornton, M.P. for Farnworth, in Parliament recently, the President of the Board of Trade showed that he still thought that other Lancashire industries might lose more than the cotton industry would gain from a revision of the trade agreement with India which provided for the duty-free importation of Indian cotton goods into the United Kingdom. The Minister of State to the Board of Trade said on 26th November that the Government's anti-dumping bill was not intended to deal with price control in the case of Indian textiles. On 1st November, moreover, in reply to a question in the Commons, Mr. Thorneycroft, said that he was not prepared to set up an import Board to restrict cotton cloth imports from India and Hongkong to their present level.

Anti-Dumping Bill

The text of the Government's Customs Duties Bill, to give the Board of Trade power to deal with dumping and subsidies, clarifies the Government's intentions in this respect. Clause 1 provides that goods are to be regarded as dumped if their "export price" from the country of origin is less than their "fair market price" in that country. If this condition is satisfied, the Board will have powers to impose and vary Customs duties. "Export price" is defined broadly as the price charged to the United Kingdom importer, less insurance and freight and other post-exportation charges. "Fair market price" is defined by reference to the price at which similar goods are sold for home consumption in the country of origin in the ordinary course of trade. The Board is to be empowered to determine this itself in certain cases, if necessary by referring to the cost of production.

Tea Prices

So keen has been the demand for common teas at the Mincing Lane auctions recently that the price has doubled in the past four months. There was a slight check towards the second half of this week, but even so the price of plain broken sorts, which form the basis of most popular blends and are the yardstick for common tea prices, is still around 5s. 4d. a lb. after having touched 5s. 8½d. As recently as last July this kind of tea was going begging at around 2s. 10d. a lb. But on the Stock Exchange there is no corresponding boom in tea producers' shares. Investors have learnt better. One swallow no longer makes a summer for them. It is felt that the policies of the Indian and Pakistan Governments have become so hostile to British tea-growing interests that few investors are inclined to risk much money in the industry. So while tea prices shoot up, tea share prices only move up sluggishly from their very low level.

Bombay

EXPORT DEMAND FOR TEXTILES IMPROVES

VEGETABLE OILS AND SEEDS MARKET ACTIVE

(FROM OUR BOMBAY CORRESPONDENT)

THE textile market continues to be dull. There has been only moderate demand in coarse varieties like *dhotis*, *saris* and *deecuti*. Similarly, the medium varieties such as shirtings, gadlapat, poplins have been in fair demand. Mulls, voils and shirtings under the category are in enquiry, while there is a moderate demand in superfine voils and *dhotis*. There is a slight reduction in prices to the extent of 2 to 3 percent in *dhotis*, *saris*, striped shirtings and poplins in all the categories, except in coarse varieties, prices of which are steady. On the whole, the domestic sector was not as bright as it ought to have been, in spite of this being an active buying season. The price range has been almost stationary, except for the slight reduction here and there. Mills continue to quote higher prices, particularly for the superfine varieties, due to the increased price of cotton and the difficulties of securing supplies of Egyptian cotton. In spite of the indifferent trading conditions, trade expects better conditions soon, in view of the ensuing marriage season and also because of the low stocks held in the consuming centres.

On the export side, there have been enquiries from Hongkong for grey sheetings medium, although on a small scale, which in the past week resulted in a limited turnover. Satisfactory business has been reported for Singapore in grey sheetings, bleached longcloth, dyed drills, cheaper varieties of poplins, while Ceylon has booked small business in the varieties of usual interest. Regular enquiries are reported from Burma in a wide range of varieties like printed chintz, mulls, mosquito nettings, coatings, poplins, tussore, shirtings and towels, although on a diminishing scale, because, in many cases, of the expiry of the import licences issued. With the lifting of the ban imposed on the import of cotton textiles by the Indonesian authorities a few months ago, satisfactory business has been reported from that country in grey sheetings, gadlapat, dyed drills. Normal business will, therefore, be possible for Indonesia in future. Due to limited import licences issued in Australia, business passed for has been only on a limited scale in varieties such as grey drills and, bed tickings. From New Zealand small business has been reported in the usual varieties. Enquiries from West Africa have been reported for grey bafts, and dyed and bleached drills resulting in a moderate turnover.

The U.K. has been interested in medium greys. Due, however, to the disparity in prices, the offtake has been rather moderate. Enquiries from Canada are restricted to bedtickings and only a limited business has been reported. From Iraq, enquiries have been reported for bleached longcloth resulting in a small offtake, while the other Persian Gulf destinations booked small quantities of their usual interest such as bleached longcloth, bleached and black dyed mulls and coatings. Due to restrictions imposed by the Saudi Arabian authorities by banning imports without establishing letters of credit, business has been hampered to some extent. It is, however, understood that the importers have since been able to secure import licences and establish credits and thus a limited turnover in the usual qualities of interest was reported for this destination. From East Africa the demand has been moderate, particularly from Mombasa for grey sheetings, drills, coatings and leparats, resulting in fair business. Enquiries from Dar-es-Salaam have, however, been meagre. From Ethiopia enquiries were only on a limited scale and restricted to qualities such as grey sheetings, khaki drills, mulls. Larger business for these territories will soon be possible, now that the buying season has commenced. The Sudan has been interested in grey sheetings, villaya, T. cloth, voils, mulls, and gadlapat, which has resulted in business on a moderate scale. If better banking facilities could be made available in this area there is a possibility of improved business. According to information, the trade there expects a very satisfactory trading season during the year. There has been a heavy demand from Aden after several months of dull trading. The qualities of interest were grey sheetings and other varieties of usual interest, and substantial business has been booked. This is, however, mainly due to the political developments in the Middle East and also to a shortage of ready supplies. Sassoon sheetings were quoted there between Rs. 23 and Rs. 23-4.

Reasonable Prices

On the whole, the export sector has recorded fair progress during the last six or seven weeks, partly due to the war psychosis and partly to the availability of goods at reasonable prices. If the present trend is to be maintained and exports are to be further promoted, the industry has to extend its fullest co-operation to the trade by quoting fair and reasonable prices. Otherwise, it will retard whatever progress has been made during the last few weeks. Reports from Japan indicate a brisk demand from various south-east Asian countries and from the Continent as well. The market there is maintained firm. Japanese cotton textile exports are expected to be much over the target for the current year.

Jarilla cotton March delivery moved between Rs. 629-8 and Rs. 647, while Vijay April closed the week around Rs. 744-8 in the past week against the previous week's Rs. 745. In spite of the absence of quotas or other stimulants, the trend in the cotton market continued steady. The general feeling is that futures prices are still low compared with the spot prices. Therefore, there is good support at lower levels and operators are hesitant to go short. The market believes that quotas cannot be delayed long and that an announcement allowing exports of 2 lakh bales will be made soon. Shippers are reported to have already booked large quantities of permissible varieties. Japan and Hongkong, it is said, are the prominent buyers while China is fairly active. In the import section, there has been very good enquiry for Americans against the recent quotas allowed. The trend is on the high side because of the firmness of the American market. Because of favourable prices, mills were active in the spot section and a fairly large volume of business, it said, passed in all the popular varieties. Some of the leading cotton firms, it is said, are seeking a revision of the terms in order to correct the bearish bias of the present contract. Revision brings to one's mind by-law 55 of the East India Cotton Association which provides for tendering differences on the basis of hedge contract rates. Again it is said there is a need to amend by-law 61. The working of two contracts, as at present, it was thought provided the right answer by doing away with disparity between the spot and hedge prices. But this has not been so. Some marketmen are of the opinion that tendering differences should be fixed on the basis of spot rates. If the provision for the invoicing back of cotton at the hedge contract rate as contained in by-law 61 is so amended as to have invoicing back at the spot rate, it is said that much of the defects in the prevailing hedge contract will disappear. While it is believed the E.I.C.A. will favour a revision, there are some in the market who suggest that further trading be stopped for March and April deliveries and only liquidation of these contracts allowed, and trading started afresh in these contracts on the revised basis either for subsequent deliveries or even for the delivery periods traded in at present. Another suggestion is the changing of the basic staple of the Jarilla contract to 13/6 inch instead of 25/32 inch with a tolerance of 1/32 inch in order to ensure a fair price to the grower.

Castor Futures Fluctuate

Castor futures in the past week fluctuated erratically in a wide range on alternate spells of bull liquidation and short covering as well as replacement buying. The May contract continued to be on the high side and the highest of the week at Rs. 175 was a further record level. The volume of business was very good, averaging about 25,000 candelies to 30,000 candelies a day. It may be pointed out that the firmness in castor futures is due to the inherent strength of the market. The factors are favourable to a rise. Being the tail-end of the season, stocks are low and demand, particularly from overseas, is on the increase. Unless the Government brings in one of its price checking devices, there is nothing to disturb the firm tendency in castor. Towards the end of the week, however, reports that the United States would release a considerable quantity of oil from its stockpile induced an easier tendency and the week closed with a small gain at around Rs. 169-8. The U.K. and the Continent continue to be India's main customers. The U.K., it is said, has paid up to £178 for the B.S.S. oil in drums and business for about 200 tons is said to have passed. The price for the commercial variety was around £173 which was the highest for the week. The U.S.A. is hesitant, but might enter the market if prices ease to more favourable levels. With the Brazilian crop likely to be smaller and the uncertain international situation, there is no likelihood of the price coming down considerably.

Groundnuts Active

Groundnuts continued to be active during the week. At Rs. 148-10 at the end of the week, the February contract showed a sizeable improvement over the previous week's closing level. Although this is the heaviest season and prices should be quiet the improvement during the week was attributed among other things to poor arrivals in the upcountry centres. It is said that usually about 15,000 bags arrive daily in the big towns of Hyderabad and Saurashtra, but last week, arrivals were said to have averaged no more than 5,000 bags. Among delivery contracts, December-January maintained a firm trend due to good demand. Groundnut oil was dull because of slack demand, as the mills were interested only at lower levels, their requirements having been already met. Groundnut oil touched Rs. 19-3, but after mid-week, declined to Rs. 18-7.

Linseeds were also active. Good enquiry from Australia was reported, but buyers were not interested at the prevailing rates. Business was, however, done at £141 a ton, but the rate later fell to £137. During the week, about 1,100 tons of oil were sold on overseas account at prices ranging between £137 and £141 a ton. Domestic offtake has been good in linseeds, millers and export houses being active. Kardi seeds, too, were in good demand during the week. Business for about 600 tons to 800 tons is said to have passed. Kardi oil was in demand both by local buyers as well as export houses. Foreign business was reported to be small and the price was £151 a ton of kardi oil. The main customer was the U.K. Representations have been made by the trade for extending the shipment period up to April. The new crop comes only in February-March, but the policy holds good only until February.

Madras

REACTION TO FRESH TAXATION PROPOSALS

ADVERSE EFFECT ON PRIVATE SECTOR FEARED

(FROM OUR MADRAS CORRESPONDENT)

MADRAS comments on the Union Supplementary Budget leave no doubt as to the rigour of taxation that will hit the investors. It is felt that the private sector will be hamstrung and the resources for expansion drastically curtailed by the curbs on dividends. The stock exchange president pleaded that a tax on capital gains coming along with a stiff profits tax, will push down share values and intensify the depression attributable to the recent plantation award. The higher tax on scooters and motor cycles is regarded inexpedient, as the local manufacturing programme has just commenced. That the new excise duty on rayon will help the handloom industry is virtually ignored. In the light of the A.I.C.C. decisions in Calcutta, the Budget is regarded in some quarters as logical, while some see in it a device to "sell" socialism to the voters before the coming elections.

Meadows Diesel Engines

The visit of Mr. Lawrence Robson to Madras helped make it known how A.B.O.E. is setting about the manufacture of Meadows diesel engines in collaboration with the Automobile Products of India. Mr. Robson told the Press that by the end of 1959, all parts of the engine would be made in Bhandup mainly through the work put in by Sir T. G. Russell on the project for producing small power plants to replace automobile engines. In 1957, Meadows will ship 3,000 diesels to India for meeting the immediate needs. The replacement of the petrol by diesel engines in the older buses is already familiar and the vogue of diesel with transport operators will grow because the preferred heavier trucks are designed for diesel.

Better Lot for Shopworkers

An administration report, running to three pages only deals with the working of the Shops and Establishments Act during the past year. The Act has been extended to cantonments by the Commissioner of Labour, and it is proposed to re-enact it on the lines of the Union Government's Bill. It is claimed that the lot of employees has improved in the past seven years and the weekly holiday with pay has been a boon. Co-operative societies were exempted for three years in order to give them time to alter their bye-laws. But as many have failed to do so, the Act now applies to them. The statistics in the report reveal that after Madras city, it is Coimbatore which has the largest number of shops, but the number of restaurants is the largest in Malabar with the number of tea shops running high. The highest number of shop assistants are found in Madras, which has also the largest number employed in theatres. Breaches of the law were noted more in the mofussil than in towns.

Municipal Chairmen Meet

Comment on the proposals for reform of local self-government made in last September has been offered by the Chamber of Municipalities at its conference last week. The Government, while leaving the legislature free to examine its White Paper on the matter, has reached conclusions in favour of strengthening the powers and resources of *panchayats*, making a distinction between town and village *panchayats*, and retaining district boards for five years. No decision as to the revival of Taluk boards has been taken, so the grant for additional funds for local development has not been made. The requirements and needs of municipalities were set out in full. The chairmen are convinced that finance for improvements can come only from extra government grants and subsidies rather than taxes. As fully elected bodies, resting on adult suffrage, municipalities are conscious of needs calling for local expenditure. Their views are based on the conclusions reached by their September conference in Ooty as well as the Wattal Committee's report of 1951.

The municipalities have claimed additional toll compensation to meet the needs of road development in and around towns. Though the performance of municipalities is uneven, their view is that (a 10 percent share in sales tax being out of reach) they are entitled to get a bigger share in M. V. tax revenue. A desire to collect a terminal tax on goods as well as passengers is common to corporations as well as municipalities. The Madras Corporation by persistent representations has secured an extra grant for road maintenance since last year, chiefly on the score that the Government must meet part of the bill for repairs. The municipal chairmen, in spite of the Government's rising expenses, put forward two more claims. They asked to be relieved of the liability for hospitals and dispensaries. They also suggested that elementary education become the exclusive concern of the Government. The collection of a pilgrim tax, or rather a terminal tax, on all passengers coming by rail or road is expected to help municipalities in their slum clearance work more than ad hoc grants. A result of the war is the growth of slums in small towns and increasingly bigger grants for entertainment tax and stamp duty have not helped much.

Rebate for Taxpayers

Rebates to ratepayers for prompt payment of taxes were advocated at the conference. The Gov-

ernment may not approve of it. But the municipalities have got to improve tax collection, collect water tax and increase licence fees and to step up expenditure for education. The municipal chairmen again suggested that Commissioners appointed by the Government do not exercise all the powers of chairmen who should have some executive functions. The special advisory committee appointed in 1949 reported three years later in favour of extra power for town councils and their elected heads, on the ground that the principle of appointing Commissioners, who as permanent officials are responsible to an outside authority, is not consistent with democracy. The Government however insists that the system in Madras city where the Commissioner is responsible to the City Council over which the Mayor presides, is the correct model for municipalities, and the present grading of municipalities according to population and revenue, is quite compatible with the efficiency for which elected representatives plead.

The municipal chairmen's conference made it clear that the Congress majority in most councils do not differ with others on the issue of extra powers and funds for elected councils. The argument that the second plan does not give enough for local bodies was put forward again, but there is yet no indication of financial health in municipalities, although some may appear to be well placed because of levies such as the pilgrim tax and a profession tax. The levy of a tax on carts using the town's roads and stands found favour

with the chairmen who presented their comments on the White Paper not in the form of a list of demands, but as a review of the existing defects mainly due to the inadequate revenues. The regular revision of property assessments by an independent official seems to be a suitable remedy, and the ratepayers will have to meet the extra charges for amenities in the form of a betterment levy or a tax on unearned increment in the case of unbuilt sites. The urban propertied classes are at a disadvantage. Labour charges are also likely to keep on rising. As large employers, town councils, too, have been exposed to labour trouble in recent years, so they are on the look out for some enterprise to find more revenue. It is impossible for town councils to run buses or cold storage plants, but they feel free to collect a duty on timber.

The Union Government's lack of interest in local self-governing bodies was deplored, but it may be pointed out that community projects offer all the improvements now desired. The town councils should seek the help of the community project administration in their slum clearance and town planning work. At the conference, the chairmen only discussed requirements, and no solutions were offered to the problems which have arisen in the wake of increased urbanisation and due to the fact that a majority of inhabitants do not pay municipal taxes at present. The tax burden is unevenly distributed and most ratepayers do not get any benefit from the welfare services run by the municipalities.

"Hydrated Magnesium Silicate..."

...a fibrous mineral possessing resistive properties to combustion, corrosive liquids and other chemical and physical phenomena. ...or just asbestos...one of the most useful minerals known to man. It is made up of millions of tough, thin, tightly-compressed fibres, and is acid and fire-resistant.

PLM

GIVE YOUR WARE PACK LABEL MARK CARE...

Crores of rupees are paid by the Railways every year to meet claims for damaged or lost consignments. This colossal drain on our National Exchequer can be easily and almost wholly prevented if only you, as a consignor, help the Railways by taking a little care.

Ensure that your consignment is always securely packed, properly labelled and correctly marked, to prevent losses to our Railways.....to guarantee your goods reaching the destination on time.....to avoid all the unnecessary trouble involved in claims cases.

THIS IS HOW YOU CAN HELP

- Pack the goods in strong cases. Nail properly and securely.
- Enclose a spare label.
- Remove all traces of old markings.
- Line the case with shock-absorbing and water-proof material.
- Mark correctly.
- Address neatly, boldly & indelibly.
- Indicate the nature of goods consigned.

Engineering and Transport

T.E.L.C.O. LOCOMOTIVES AND BOILERS

TARIFF COMMISSION RECOMMENDS FAIR PRICE

THE Government of India requested the Tariff Commission in October, 1955, to conduct an enquiry into the cost of locomotives and boilers manufactured by the Tata Locomotive and Engineering Company Limited, (T.E.L.C.O.), since February, 1954 and recommend what should be the fair prices for them. Under an agreement between the Railway Board and the Tata Sons Limited, T.E.L.C.O. undertook to manufacture locomotives and boilers in Tatanagar for sale to the Railway Board. The agreement came into force for a period of 16 years from 1st June, 1945, and provided that during the initial or development period, payments to T.E.L.C.O. were to be based on the actual cost of production.

The development period ended by mutual agreement on 31st January, 1954 in the case of boilers, and on 30th June, 1954 in the case of locomotives. From that period onwards, fixed prices mutually agreed, were to be paid. The prices quoted by the Company covering the period 1st February, 1954 to 31st March, 1955 and from 1st April, 1955 to 31st March, 1956 were considerably higher than those quoted by foreign firms and were considered excessive by the Railway Board. T.E.L.C.O. pleaded inability to quote lower prices and maintained that their prices were based on their actual cost of production.

The matter was, therefore, referred to the Tariff Commission for an enquiry. The Commission submitted its report in September, 1956. The Government has accepted the Commission's recommendation that in the first period, i.e. 1st February, 1954 to 31st March, 1955, for boilers, and 1st July, 1954 to 31st March, 1955, for locomotives, the following prices should be paid to the Company as against the prices quoted by it:

	Price recommended by Commission a unit by Telco a unit	
	Rs.	Rs.
YP Locos	6,90,105	7,20,396
XC Boilers	3,40,908	3,68,098
YD Boilers	1,75,512	2,08,272

Second Period Delivery

For deliveries in the second price period, i.e. 1st April, 1955 to 31st March, 1956, for both locomotives and boilers, the Commission has recommended that for a YP locomotive, the price should be Rs. 6,37,829, against Rs. 6,63,028 quoted by T.E.L.C.O. For a YD boiler, the price in the Com-

mission's opinion should be Rs. 1,63,216 against Rs. 2,08,272. Similarly, reduced prices have been recommended by the Commission for other types of boilers. These recommendations have been accepted by the Government.

For deliveries in the third price period, i.e. 1st April, 1956 to 31st March, 1958, T.E.L.C.O. has not yet quoted any price. The Commission has recommended prices to be paid for locos as well as for boilers during this period which are substantially lower than those recommended for the two earlier periods. The Commission has also recommended that the prices payable during this period may be adjusted from time to time to the extent that the Government is satisfied that manufacturing costs have altered. The Government has accepted the recommendations on prices in the third period. It has also accepted the Commission's recommendation that a cost investigation should be made before prices are fixed for any price period beyond 31st March, 1958. The Commission's recommendation that T.E.L.C.O. should so maintain its costs as to be able to provide a breakdown into about 40 groups of sub-assemblies and that the costs of certain items selected should be separately recorded is being brought to the notice of the Company.

NEW BRITISH HEAVY-WATER REACTOR

Britain's powerful new heavy-water reactor "Dido," officially opened in Harwell, Berkshire, on 21st November by Sir Cyril Hinshelwood, president of the Royal Society, will reduce the time needed to test components of atomic power stations of the future from years to weeks. This new scientific tool is of tremendous importance to Britain's atomic energy development programme, including, of course, her future export of complete reactors. Its secret is its ability to produce a neutron intensity 40 times that hitherto available in Britain. Using highly enriched uranium fuels, it is, in fact, the most powerful experimental reactor in western Europe. Dido was shown for the first time to pressmen before the opening ceremony. With its aid, scientists will be able to study, at comparatively low cost, the effects of radiation of materials, including the behaviour of reactor fuel elements; make fundamental measurements in nuclear physics; and experiment with fuels and coolant systems. Another important function of Dido will be to produce radioactive isotopes, and its output will swell considerably the volume of isotopes which the U.K. is using, as well as exporting to more than 50 countries, for medical and industrial purposes. It will also play its part in the field of food and drug sterilisation. The heat output of Dido is in the region of 10 MW. It uses about 10 tons of heavy water as coolant and moderator. Building of the reactor took two and a half years, and cost some £1,500,000. A reactor of similar design is now being built at the Australian Atomic Energy Commission's research establishment in Lucas Heights, near Sydney.

Commodity Markets

WHOLESALE PRICE INDEX RISES

THE official wholesale price index (base: year ended August, 1939=100) advanced further by 0.9 percent to 430.4 during the week ended 17th November, 1956, compared with 428.4 for the previous week. The index was higher by 2.8 percent and 18.4 percent respectively, when compared with the corresponding weeks of last month and of a year ago. The index for Food Articles advanced sharply by 1.8 percent to 418.3 as a result of an increase in the prices of tea (+11%), bajra (+7%), salt in Calcutta (+5%), wheat in Hapur and Jabalpur, gur in Ahmednagar and dal arhar (+4% each) and gram (+1%), although prices of gur in Muzaffarnagar (-4%) and wheat in Amritsar (-3%) witnessed declines. The index for Industrial Raw Materials moved up by 2.8 percent to 518.3 due to a rise in the prices of castorseed in Bombay (+14%), raw cotton due to the re-appearance of price quotations for Umr cotton in Amravati market at a higher level (+7%), linseed and copra (+5% each), lac (+4%), raw jute (+3%), gingelly seed in Bombay and rapeseed (+2% each) and raw silk (+1%); prices of gingellyseed at Jhansi and manganese ore (average export price) (-5% each) were marked down. The index for Semi-Manufactures also went up by 0.7 percent to 418.9. Items which exhibited significant changes were: linseed oil (+9%), copra cake (+7%), coconut oil and mustard oil (+4% each), gingelly cake (+3%), groundnut oil in Bombay, copper ingots in Calcutta, buffalo hides, gingelly oil and zinc (+2% each), groundnut oil in Madras and copper (sheets) in Bombay (-2% each). A fall in the prices of cotton manufactures (-2%) and glass (-1%) brought down the Manufactures group index by 0.8 percent to 386.1 in spite of a rise in the prices of jute manufactures and chemicals (+1% each). An increase in the price of tobacco leaf (+2%) was almost neutralised by a decline in the prices of chillies in Calcutta (-10%), cashewnuts (-2%) and black pepper (-1%) and the index for the Miscellaneous group worked out to 589.1, compared with 588.8 for the previous week.

INDEX NUMBERS BY GROUPS AND SUB-GROUPS

EXPORT QUOTA FOR RAW COTTON

The Government of India has reviewed the export policy for raw cotton and has decided to re-lease a quota of 50,000 bales of Bengal Deshi and 150,000 bales of other exportable varieties of short staple cotton of 3 inches staple and below for export. It has been further decided that the export duty on Bengal Deshi should be raised from Rs. 50 a bale to Rs. 100 a bale.

EXPORT POLICY FOR VEGETABLE OILS AND COTTON

The Government of India has reviewed the export policy for certain agricultural commodities. It has been decided to allow exports of nigerseed oil, kardiseed oil, groundnut oilcake and coconut oilcake freely within a ceiling up to the end of February, 1957. Against shipments effected of nigerseeds and kardiseed oils, the exporters will be permitted to export an equal quantity of nigerseed. The question of groundnut oil export has also been considered. The export of this important food article at all times has to be considered with great care, and now particularly so in view of the high ruling prices. After considering all the relevant factors, the Government has decided not to announce any export quotas.

Jute

SHORTAGE OF RAILWAY WAGONS FOR TRANSPORTING JUTE

REOPENING THE BHAGIRATHI RIVER ROUTE

IN the years between the two wars, if there were complaints of scarcity of wagons for bringing jute to the mills, the railways used to retort that the fault lay with the trade in not planning the movement of jute so that it was evenly spread over the whole year. That excuse had some validity in those days, for the trade was then very seasonal. In the harvest months, large quantities of jute were brought forward for sale, because the growers had little holding power and had to market their crop early in the season to pay off loans and land rents and get money before the Pujahs. Then the "busy season" for the movement of jute was over by the end of October, and there was a definite "slack season" from January to June. For a variety of reasons, all that is changed now. The growers are better off and there is not the same selling pressure in the harvest months. The mills are worse off and do not have the money to invest in six or eight months' stocks of raw jute as they used to do. The demand for wagons is, therefore, spread much more evenly over the whole year. In spite of that, there appears to be a chronic scarcity of wagons for the transport of jute to mills. From practically every station come reports that wagons are not available for booking jute to mills. On the other hand, there seems to be no scarcity of wagons for Cossipore. In fact, in recent weeks, the arrivals in Cossipore have been almost up to its handling capacity. It is believed that the reason for this is that the railways find it convenient to make up complete rakes for one destination, this enables them to get a quicker turn-round of wagons than if a rake were composed of wagons for, say, ten different mills. The lack of wagons for mills, however, places them at a disadvantage, for they are unable to get the jute contracted for delivered in time and are forced to pay premium prices for ready jute in Cossipore.

Road Transport

These difficulties raise some anxiety as to what may happen when the second five year plan gets well under way. Is the jute industry to be starved of wagons? Are the mills to be forced to buy their jute in ways which they dislike and at extra cost? In other words, are the railways for the service of industry or industry for the service of the railways? It has been suggested in the Lok Sabha recently that more goods must be moved by road. That is a development which is already in progress in the jute trade. Fibre is now being brought by lorry from the central and north Bengal districts, and even from Purnea, but there will have to be a big improvement in the road system. Some new bridges are being built, but more will be needed. The roads will have to be widened and given better surfaces, suitable especially for the rainy season. Another snag about lorry traffic is that it is not possible to check from where a lorry brings its load of jute. It would be an advantage if there were check or toll posts, from which certificates of origin could be issued.

The best way to improve transport facilities for raw jute would be to open the Bhagirathi river route. The matter has been referred to in these columns from time to time over many years and its importance is sufficient reason for reiterating the proposal. Why should jute from north Bengal and Bihar have to be transported hundreds of miles through Pakistan simply because the direct river route has been neglected and allowed to silt up? An attempt was made to get this project included in the first five year plan, but it was turned down by the Government of India. Another attempt was made when the second plan was being formulated, but it was rejected by the Planning Commission. Then the West Bengal Government said that it would take up the project, whereupon the Government of India stepped in and said that it would do it. Since then, nothing more has been heard, but the idea is of such importance to the jute trade and industry, and to the economy of West Bengal, that it would be regrettable if it was forgotten. The Government of India doubts the ability of the railways, even with the expansion planned for them, to cope with the additional traffic expected under the plan. It has suggested the increased use of roads, but the real solution, as far as West Bengal is concerned, is the opening of the Bhagirathi river route, and the jute industry should be pressing for that now.

Amendment of Standard Contract Form

A meeting of the Bengal Jute Dealers Association has decided to protest to the I.J.M.A. against a proposal which, it is said, the latter has made to introduce a penalty clause for late delivery in contracts for Indian jute. Such a clause is already incorporated in the contract for Pakistani jute. It will be recalled that early this season, some mills wanted to have the "unavoidable delay" clause deleted from their contracts, because its provisions had been abused by sellers. The members of the Bengal Jute Dealers Association refused to accept such contracts. The reported move of the I.J.M.A. to introduce a penalty clause

is obviously intended to ensure that deliveries are made within the time stipulated in the contracts. It is considered necessary that some such provision be made because of the growing habit of delaying deliveries when the market has risen above the price at which sales have been made. Sellers, of course, use the pretext that wagons are not available but although there is a shortage of wagons, it is a known fact that sellers take advantage of this to delay deliveries against contracts made at lower prices and use the wagons allotted to them for the despatch of jute against later contracts at higher prices. Mills are thus frequently forced into buying jute at higher prices when they would not have had to do so if the contracts they had already made had been implemented. It is felt that some provision must be made in the contract to protect buyers against this unfair practice among unscrupulous sellers, and if the B.J.D.A. cannot agree to "guaranteed deliveries" or "penalty clauses", it should suggest some other way of dealing with the malpractice.

THE JUTE MARKETS

BOTH the raw jute market and the market for jute manufactures have been quieter during the past week than they have been for some time. It was not to be expected, of course, that the activity of the past few weeks would continue indefinitely, as it was based largely on precautionary buying induced by the Middle East crisis. That has probably been satisfied for the time being, though it is likely that consumers will want to maintain the position they have now built up. The critical period has passed, but it will probably take a long time to reach a permanent settlement and some months to clear the Canal. Until the latter task has been completed, it seems unlikely that users of jute goods will contemplate any reduction of their stocks, spot or afloat. The same applies to raw jute and though that does not directly concern India, conditions in the raw jute market in Pakistan have a powerful influence on the Indian jute market. The time will come, of course, and it may come earlier than we expect, when consumers, both of raw jute and of jute manufactures, will make up their minds that the danger is past and that they need not go on paying the present high prices. When that time comes and price levels are again determined by normal supply and demand, the dominant factor in India seems likely to be the quantity of Indian jute available; even before the recent rise, the price of Pakistan jute was too high to be an economic proposition for Indian mills. The weight of opinion at present is that there is not enough Indian jute for there to be any serious fall in price; that will be a powerful factor, though not by any means the sole one, in determining the price of jute manufactures.

Manufactured Goods : On Wednesday last week, 40in. 10oz. hessian was quoted at Rs. 46-1 for December delivery and it continued around that figure all the week. B Twills were quoted at Rs. 120-14, and likewise showed little change, but the fatka market fluctuated in a wider range and was at times subjected to fairly heavy bear pressure, especially on Monday. No large business was reported, but mills are said to have been able to sell moderate quantities of hessian for deliveries up to March. The volume of shipping bills reported up to 25th November shows substantial increases for both hessian and sacking over the figures for the corresponding periods in September and October, which indicates that stocks of manufactures held by mills at the end of November will show a reduction. In spite of that, quotations dropped on Tuesday afternoon under bear pressure, especially in hessian.

Quotations on Wednesday morning were as follows:

	Ready	Dec.	Jan.-Mar.	April-June
40in. 8oz.	36-12	36-12	36	36-8
40in. 10oz.	45-9	45-10	44-11	44-2
B Twills	120	120-10	120-12	119-8
Heavy Ceers (Plain)	120-8	120-8	120-12	119-8
A Twills	142-8	143-4	143-8	142
Liverpools	133-8	134-4	134-12	133-8
Cornsacks	120-8	120-8	120-12	119-8

Raw Jute : Throughout the week, there has been moderate day-to-day business. There have always been buyers at slightly below sellers' quotations, and when the gunny fatka has dropped, sellers have taken business at the buyers' prices. But buyers have also from time to time paid sellers' prices in order to get the jute they wanted. Business was reported in Assam and Northern at Rs. 31-8 to Rs. 32, Northern ex Calcutta at Rs. 31, Local Packing at Rs. 30-4, Daissee at Rs. 31-4 to Rs. 32-8, and Daissee Mesta at Rs. 28-8 to Rs. 29, all basis Bottoms. Bimbi was done at Rs. 28-8 F.A.Q. Murshidabad Tossa at Rs. 31 basis Bottoms, and Pakistan NC-TC-MC Cuttings at Rs. 135.

Quotations on Wednesday morning were as follows:

Indian Jute :	Landed at Mills Rs. a md. basis		Shipment.
	Bottoms.		
Upper Assam	31-8		Dec.-Jan.

Northern	35-8		"
Pucca :	Rs. a bale.		Shipment.
Export Firsts	240		Dec.-Jan.
Export Lightnings	220		"
Cuttings	135		"

Arrivals in Cossipore during the week up to 4th December were heavy, 877 wagons being reported, most of them from western jungli districts. The quality is poor and moisture heavy. Demand from mills and mill suppliers has remained good but there has been a slight decline in prices.

Mofussil : In Assam and northern Bengal, fresh imports are small due to paddy harvesting, but in Purnea, especially in the jungli districts, good imports are arriving.

THE FOREIGN JUTE MARKETS

BRISK BUSINESS IN PROGRESS

(FROM OUR DUNDEE CORRESPONDENT)

JUTE spinners and manufacturers here are very busy and they are well booked up over the next three months. Imports of jute goods from India are slow in coming and the big buyers are said to have been purchasing fairly freely, leaving little of some widths and weights for the smaller firms. There are plenty of goods in this country, sufficient to meet all requirements, but delivery of certain makes cannot be obtained from the Jute Control until January. This has pushed some buyers on to purchasing local manufactures and in many cases nothing can be done for the buyers who have delayed so long. The cargoes having to come round by the Cape of course affects the position. Raw jute seems to move in accordance with the trends of the international situation from day to day. On the whole there has been little change recently, apart from an easy tendency on the opening days. Mill Firsts are being offered at £125 to £130 and Mill Lightnings from £109 to £113. Mill Hearts from £105 and grade Hearts from £100, with good marks of Daissee-2/3 from £110 and grade from £107, also grade Tossa-2/3 from £117 to £120 and grade fours from £109, December-January, c.i.f. U.K. and Continent.

There are reports of the intentions of the Indian Government re-imposing export taxes on jute goods. When these were finally abolished early in August, 1955, they stood at £2 a ton on hessian and £6 on sacking. What the effects of this step would be on Pakistan one cannot imagine, but, unless a similar tax is put on their jute goods for export, India will be up against strong competition. After a firmer market the day before, the position from Calcutta was easier again on 29th November at 69s 3d for 40in. 10oz. and 51s 3d for 70oz., December and 69s and 51s January, with B Twills quoted at 182s 6d and 182s respectively, f.o.b. Calcutta. Jute yarns are very firm here with a steady business passing for delivery several months ahead at 16.50d a lb. for common 8lb. cops and 17.08d for 8lb. spoils. Jute cloth and bags are in good request yet and prices rule very firm on the basis of 13.94d for 40in. 10oz. and 11.42d for 8oz.

THAI RESTRICTIONS ON GUNNY BAG IMPORTS

The Thai Government has again revised its decision on gunny bag imports. According to the new regulations announced by the Foreign Trade Department, Government of Thailand, the Thai importer has to purchase one gunny bag of local manufacture for every five bags imported by him. Under the previous arrangement, importers had to purchase at least one-third of their requirements from domestic sources.

GUNNY SHIPMENT STATISTICS

The following figures include coastal shipment relating to manufactured jute goods for shipment from the port of Calcutta. These are gross figures based on shipping bills presented :

	Hessian Bags (Tons)	Cloth (Tons)	Total (Tons)
1st to 25th November, 1956	4,635.9	27,583.4	32,219.3
1st to 25th October, 1956	3,710.5	20,322.6	24,033.1
1st to 25th September, 1956	1,376.3	22,044.4	23,421.2
Sacking			
1st to 25th November, 1956	31,199.8	1,160.5	32,360.3
1st to 25th October, 1956	27,216.6	983.1	28,199.7
1st to 25th September, 1956	16,820.5	1,479.2	18,299.7

RECORD OF ACHIEVEMENT

Sound underwriting and outstanding service to Policyholders are reflected in the rapid progress made by the ORIENTAL FIRE. Transacting Fire, Marine, Motor, Accident and all other classes of non-life business in the best ORIENTAL tradition, ORIENTAL FIRE also offers specialized cover against Machinery Erection and Breakdown and Boiler Explosion risks.

U.K. Tea Stocks

U.K. stocks of tea on 23rd November amounted to 95.4 million lbs. against 109.8 million lbs. a year ago (converted at 110 lbs. a package).

COCHIN TEA SALES

At Dust Sale X, 475,000 lbs of tea were on offer. There was a strong and general demand, particularly for the lowest and medium sorts. The market advanced irregularly by 2 annas except for the best teas which were about steady.

EXPORT DUTY ON TEA RAISED

The Government of India has decided that the export duty on tea during the month of December, 1956 should be 8 annas a lb.

TEA STATISTICS FOR PRINCIPAL PRODUCING COUNTRIES

India has the largest acreage under tea totalling 774,621 acres; Ceylon with 574,250 acres comes next. India's annual tea production of 588,733,000 lbs is also higher than that of any other country, the production in Ceylon being 343,034,000 lbs. The other big tea producing countries are Indonesia, Japan and Pakistan with areas equalling 191,420 acres; 79,973 acres and 74,362 acres respectively; their respective production figures are 80,669,000 lbs, 98,374,000 lbs and 54,151,000 lbs. India is not only the largest producer of tea, but is also an equally good consumer with an annual consumption of 175,000,000 lbs. The figures for Ceylon and Indonesia are not available. Japan has an annual consumption of only 70,400,000 lbs. These facts and other important data relating to the number and acreage of plantations and employment are given in the publication *Tea in India*, issued by the Directorate of Economics and Statistics, Union Ministry of Agriculture. About 74 per cent of the total area under tea in India lies in Assam and West Bengal. Madras and Travancore-Cochin rank next in importance and they together account for about 21 per cent of the total area. The production of tea in India increased from the prewar average (1935-39) of 389,000,000 lbs to about 589,000,000 lbs in 1953.

COLOMBO RUBBER PRICES

The following prices have been issued by Rubber Board of India from the weekly market report published by the Colombo Brokers Association:

Closing prices on 23-11-56 (Rupees a lb.)

Average for the period (Rupees a lb.)

Sheet:

No. 1 1.41 1.41

No. 2 1.38 1.38

No. 3 1.35 1.35

No. 4 1.11 1.11

No. 5 1.06 1.06

Sheet Cuttings 1 1.05

Sheet Cuttings 2 1.00

Cream:

Water White 1.60/63 1.63 1/2

R.M.A. No. 1X 1.56/60 1.59 1/2

R.M.A. No. 1 1.56/60 1.59 1/2

Cream No. 2 1.51 1/2

Cream No. 3 1.36 1/2

Scrap Cream:

Sc. Cream No. 1 1.05 Nom 1.06

Sc. Cream No. 3 35/95 .91

Flat Bark 80/82 .82 1/2

Sc. Cream 3X .96

To arrive at f.o.b. Colombo prices, add 53.45 cents a lb. for cream other than scrap cream and 31.45 cents for scrap cream, to the above market prices.

Calcutta Markets

GOOD GENERAL DEMAND AT TEA EXPORT SALE

MIXED TREND IN DUSTS

At Sale No. 24, held on 3rd, 4th and 5th December, 1956, offerings at the Export auction consisted of 65,275 packages. The market opened with a fairly good general demand which strengthened as the Sale progressed, although most kinds were selling at lower rates. C.T.C. teas received more support than in recent weeks and were firm to occasionally dearer. The better orthodox Assams and non-withers Doars were about 2 annas lower, while Medium, Low Medium and Plain Fannings were selling at 1 to 2 annas below last rates. Whole Leaf grades were irregular, although a few of the cheaper lines were slightly dearer. Darjeelings met with a fair demand, but were irregular although a few selected invoices sold well.

Quotations

	1956	1955
Clean Black Pekoe	2 6 0	2 7 0 to 2 8 0
Plain B.P.	2 5 0	1 12 0 to 1 12 6
Medium Assam B.P.	2 1 0	1 14 0 to 1 14 6
Best C.T.C. Assam B.P.	3 0 0 to 3 2 0	2 14 0

At the Internal Sale, Dust offerings amounted to 23,068 chests for which there was a good general demand. The strongest feature of the Sale were the black leafy Dusts from all districts, which were 4 annas to 5 annas dearer, while the large grainy C.T.C. Assams were also well supported and were fully 2 annas dearer. The remaining C.T.C.s were in good demand and sold well. Commons, Doars and orthodox Assams, all showed an irregular decline of about 1 anna and non-withers Doars were also 1 anna easier.

Quotations

	1956	1955
Medium Doars Dust	1 15 0	1 9 0
Medium Assam Grainy Dust	2 5 0	1 10 0 to 1 10 6
Medium Assam C.T.C. Dust	2 8 0	
Best Assam C.T.C. Dust	2 13 0	2 9 0 to 2 11 6

A total of 2,223 chests of Leaf were on offer, and there was a fair demand for teas with a clear leaf appearance, although prices were generally about 2 annas below last rates. Residue descriptions were well supported and were firm and sometimes dearer, while the green teas on offer received fair demand at about last rates.

COAL FREIGHT RATES AT NEW HIGH

AS predicted some weeks ago, the Transatlantic coal rate last week rose to 100s, but it did not stop there, and a December loader eventually secured 105s 6d for Hampton Roads-Antwerp-Rotterdam-Amsterdam, which is the highest rate ever paid for this trade, and surpasses rates paid during the Korean war period. Elsewhere markets were very firm and representative figures included Mormugao-Genoa at 182s 6d, Vizagapatam to Dunkirk at 217s 6d, both for ore cargoes. In the time charter section an 8,400-ton oilburner, 91-10 on 23/24 tons, was fixed at 55s 6d a d.w. ton, delivery Aden, redelivery Japan, and a fast 10,000-ton motorship secured 70s for delivery Japan, redelivery Bombay-Madras via U.S. Pacific. An interesting feature of last week's activities was the report that French charterers had taken 17 bareboat ships for 12 months' consecutive voyages at \$(U.S.) 11.75 basis Antwerp-Rotterdam. It is probable that these are vessels recently released from the "Mothball" fleet to the American Coal Shipping Inc., the new concern which aims at assuring the American coal trade of overseas markets in the face of rising freight rates.

HIDES AND SKINS STEADY

The market ruled quietly steady. Stocks were less than in the previous week.

Bazaar Sales

(Between 27th November and 3rd December, 1956)
Cowhides: Wet salted (ord.) 3,600 pcs. on the basis of Rs. 7 to Rs. 10.8; Wet salted (slaughtered) 16,500 pcs. on the basis of Rs. 12.8 to Rs. 22.

Goatskins: Wet salted (Daissee, Killed) 91,880 pcs. on the basis of Rs. 270. Rs. 280 to Rs. 300, and Rs. 370 to Rs. 390; Assam-Dinajpur-Murshidabad 50,100 pcs. on the basis of Rs. 245 to Rs. 280; Purneah-Kissenganj 9,500 pcs. on the basis of Rs. 289 to Rs. 315; Pakur-Patna (ord.) 2,000 pcs. on the basis of Rs. 245; Muzafferpore (killed) 8,000 pcs. on the basis of Rs. 355.

Bazaar Stocks

(3rd December, 1956)

Cowhides: Wet salted 46,500 pcs.

Goatskins: Wet salted (Daissee, killed) 15,000 pcs.; Assam-Dinajpur-Murshidabad 78,000 pcs.; Muzafferpore - Patna - Pakur - Purneah - Kissenganj 1,67,000 pcs.

SUGAR MARKET DULL

During the week ended 5th December, sugar sales in the Calcutta market averaged 3,000 bags daily. Arrivals a day were 1,500 bags and stocks totalled 95,000 bags. Rates for ready sugar ex-

Kantapur delivery were Rs. 31-6 for ordinary grain and Rs. 32-12 for big grain. The market was dull.

LINSEED STEADY

Conditions have been steady during the past week, although trading has been on a small scale. Arrivals have been very poor, and sellers have been rather reserved except at more attractive rates; buyers have been disinclined to pay higher prices due to a decline in the price of linseed oil-cake, and enquiries for oil have been less keen. In the oil section, following a small decline in U.K. prices, buyers have been holding out for slightly lower prices. Latest quotations were as follows: November-December Rs. 26-8-0 a maund and April-May Rs. 22-8-0 a maund.

SHELLAC MARKET STEADY

During the week ended 4th December, the market was firm at the beginning, quiet at mid-week and steady at the close. The range of quotations was as follows:

Pure Buttonlac	Rs. 129 to 125 value, 125 buyers
Lemon No. 1 shellac	Rs. 129-8 buyers, 128 done, 126-8 buyers.
Lemon No. 2 shellac	Rs. 125 done and buyers, 124 buyers.
F. O. Std. 1 shellac	Rs. 122-8 to 119-8 buyers.
Pure TN shellac	Rs. 120 to 117 basis done and buyers, 115-8, 115 buyers.
4% I.T.N. shellac	Rs. 109 to 106-8, 107 buyers.
No. 1 Kusmi Seedlac	Rs. 119-8 to 114-8 value.
No. 2 Kusmi Seedlac	Rs. 117 buyers, 113-8 to 110-8 value.
Fine Bysaky Seedlac (Manbhumi)	Rs. 109-8 to 105-8 buyers, 105 value, 105 buyers.
Fine Bysaky Seedlac (C.P.)	Rs. 105 to 101-8 buyers, 101 value, 101 buyers.
Ordinary Bysaky Seedlac (C.P.) under 5%.	Rs. 95-8 to 90 buyers.
Ordinary Bysaky Seedlac (C.P.)	Rs. 89-8 to 85, 85-8 buyers.
Kireelac	Rs. 37 to 36 buyers.

Shipments during November until the 30th were 41,869 packages comprising of shellac 29,246 packages, seedlac 8,000 packages, buttonlac 1,018 packages and others 3,605 packages.

COMPANY AND PUBLIC NOTICES

HINDUSTHAN HOUSING & LAND DEVELOPMENT TRUST LTD.

NOTICE is hereby given that the 12th Annual General Meeting of the shareholders of the Hindusthan Housing & Land Development Trust Ltd., will be held at the registered office of the Company at 36, Chowringhee Road, Calcutta-16 on Friday, the 28th December, 1956 at 4 P.M. to transact the following business:—

- To receive and pass the Audited Balance Sheet of the Company and of Hindusthan Financing Corporation as at 31st March, 1956 and the Revenue and Profit and Loss Accounts and Directors' Report for the year ending the same date.
- To declare dividend for the year ended 31st March, 1956.
- To elect directors in place of Sri S. A. Basil and Sri P. C. Bhagat. As a special business to pass the following resolution as a special Resolution for which a special notice has been received from a shareholder of the Company.

"Resolved that Sri P. C. Bhagat who is entitled to a share in the remuneration payable by the Company to Messrs. Jainarain Ramchand, The Managing Agents of the Company, and who is also a relative of Sri B. P. Poddar, a partner of said Managing Agents and a Director of the Company is hereby re-appointed as a Director of the Company."

Explanatory Notes:—

Since Articles of Association of the Company authorize the Managing Agents of the Company to nominate Directors to the Board and they have nominated Sri A. L. Poddar and Sri B. P. Poddar under such powers. Due to Sri P. C. Bhagat's relation with Sri B. P. Poddar and a share in Managing Agency remuneration as stated in the resolution, a special resolution is required to be passed for his re-appointment as Director under Section 261 of the Companies Act 1956. Managing Agents and Directors of the Company are interested in the resolution in the manner stated in the resolution.

- To appoint Auditors for the current year and fix their remuneration.
- To transact any other business that may be brought forward.

Note:—1. The share transfer register will be closed from 18th December, 1956 to 28th December, 1956 both days inclusive.
2. A member entitled to attend and vote at the meeting is entitled to appoint a proxy to attend and vote on poll instead of himself, & a proxy need not be a member of the Company; proxies must be received by the Company not less than 48 hours before the time of meeting to be held.

By Order of the Board,

JAINARAIN RAMCHANDER,

Managing Agents.

36, Chowringhee Road,
Calcutta-16,
1st December, 1956

THE KALITI TEA COMPANY, LIMITED

The Annual Ordinary General Meeting of the Shareholders will be held at the Registered Office of the Company, No. 14, Old Court House Street, Calcutta, on Saturday, the 29th day of December, 1956, at 12 noon, for the following purposes:—

- To receive and adopt the Directors' Report and the audited Accounts for the year ended 31st December, 1955.
- To elect a Director in place of the retiring Director.
- To elect Auditors for the ensuing year, and to fix their remuneration.
- To consider and if thought fit to pass the following resolution, namely:—
"That the Books, Registers and other documents required to be kept by the Company and referred to in Sections

49, 144, 163, 196, 301, 304, 307 and 372 of the Companies Act, 1956, shall be available for inspection at the Registered Office of the Company, by the persons respectively referred to in those Sections as being entitled to inspection, between the hours of 10 a.m. and 12 noon on each business day, upon twenty-four hours' written notice of intention to inspect, such notice indicating what books, documents and registers are intended to be inspected."

The Share Transfer Book of the Company will be closed from 22nd December, 1956 to 29th December, 1956, both days inclusive.

OCTAVIUS STEEL & CO. LTD.,

A. H. GALLOWAY,

Managing Director,

Managing Agents.

Calcutta, 5th December, 1956.

NOTE:—A member of the Company entitled to attend and vote at the meeting is entitled to appoint a proxy to attend and on a poll to vote instead of himself and the proxy need not be a member.

EXPLANATORY STATEMENT.

With reference to the resolution relating to inspection of Books, Registers and other documents, referred to in the accompanying notice, the Companies Act, 1956 provides that the Company may impose reasonable restrictions on such inspection but so that not less than two hours in each day are allowed for inspection, and the resolution is being moved in order to comply accordingly with the Act.

THE PATNA ELECTRIC SUPPLY CO. LTD.

NOTICE is hereby given that the Annual General Meeting of the Company will be held at its Registered Office, No. 14, Old Court House Street, Calcutta on Friday the 28th day of December, 1956 at 3-40 P.M. for the following purposes:—

- To receive and adopt the Directors' Report and the audited Accounts for the year ended 31st December, 1955 and the Balance Sheet as at that date.
- To declare a Dividend.
- To appoint auditors and fix their remuneration.
- To appoint Directors in place of those retiring.

And in this connection, Special Notice as required by Section 281 of the Companies Act, 1956, is hereby given that at the meeting the following resolution will be proposed, as an Ordinary Resolution, namely:—

"That Pandit G. M. Misra who has attained, the age of 69 years, be and is hereby re-appointed a Director of the Company, and that the age limit prescribed by Section 280 of the Companies Act shall not apply to him."

UPPER JUMNA VALLEY ELECTRICITY SUPPLY CO. LTD.

NOTICE is hereby given that an Annual General Meeting within the meaning of the Companies Act, 1956 (being the fifty-second Ordinary General Meeting of the Company) of the abovenamed Company will be held at its Registered Office, No. 12, Mission Row, Calcutta, on Saturday, the 29th December, 1956, at 11 a.m. for the following purposes:—

1. To receive and adopt the Audited Accounts for the year ended 31st March, 1956, and the Directors' and the Auditors' Reports thereon.
2. To declare a Dividend.
3. To appoint Directors in place of those retiring. And, in this connection, Special Notice as required by Sections 261 and 281 of the Companies Act, 1956, is hereby given that at the meeting the following resolution will be proposed as a Special Resolution, namely:—
"That Mr. P. N. Banerjee, who is an associate of the Managing Agents of the Company and who has attained the age of 73 years, be and is hereby re-appointed a Director of the Company, and that the age limit prescribed by Section 280 of the Companies Act, shall not apply to him."
4. To appoint Auditors and fix their remuneration.

The Register of ordinary shareholders of the Company and the Transfer Books will be closed from the 24th December, 1956 to the 29th December, 1956, both days inclusive.

A member entitled to attend and vote at the meeting is entitled to appoint a Proxy who need not be a member, to attend, and on a poll, to vote instead of himself.

By Order of the Board,
MARTIN BURN LTD.,
S. N. MUKERJEE,
Managing Director,

12, Mission Row,
Calcutta 1.
The 5th December, 1956.

THE BISHNAUTH TEA COMPANY, LIMITED.

NOTICE is hereby given that the Annual General Meeting of the Members of The Bishnauth Tea Co., Ltd., will be held at the Registered Office, at No. 4, Mangoe Lane, Calcutta, on Friday, the 28th December, 1956, at 12-30 P.M., for the following purposes:—

- (1) To consider and adopt the Revenue and Profit and Loss Accounts for the year ended 31st December, 1955 and the Balance Sheet at that date and the Reports of the Directors and Auditors and to declare a Dividend.
- (2) To reappoint a director retiring by rotation.
- (3) To appoint Auditors and to fix their remuneration.

AS SPECIAL BUSINESS

To consider and, if thought fit to pass, with or without modification, the following resolutions:—

"Resolved that Williamson Magor & Co., Ltd., the Secretaries of the Company and any associate or associates of theirs (as defined in sub-section (3) of Section 2 of the Companies Act, 1956) be and are hereby authorised to retain any commission or other remuneration earned or to be earned by them as Managing Agents, Secretaries and Treasurers, Secretaries, Managers, Agents, or as Selling or Buying Agents of any firm, body corporate or other concern in respect of any goods, power, freight, repairs or other services including insurance for the sale, purchase, supply or rendering of which a contract has been or is to be entered into by such firm, body corporate or concern with the Company provided that the prices or amounts charged to or received by the Company are at rates which are not less favourable to the Company than the market rates or which are otherwise reasonable."

- (5) "Resolved that where under the provisions of the Companies Act, 1956, any person, whether a Member of the Company or not, is entitled to inspect any document required to be kept or maintained by the Company, the person so entitled to inspection shall be permitted to inspect the same between the hours of 11 o'clock in the forenoon and 1 o'clock in the afternoon on such business days as the Act requires them to be kept open for inspection."

As a Special Resolution

- (6) "Resolved that consent be and is hereby accorded to Messrs. Geo. Williamson & Company, a partnership firm, who maintain an office at 21, Mincing Lane, London, E.C.3, England (for the purposes of their business of management and administration of seventeen Sterling Tea Companies of which they are appointed Secretaries), acting and continuing, with effect from the date of commencement of the Companies Act, 1956, to act as Agents for the purchase in the U.K. of goods from time to time required by the Company at a remuneration by way of commission at the rate of two percent on the invoiced price of such goods; that no further sums, whether by way of reimbursement of expenses or otherwise, be paid to them as such Agents as aforesaid; and, that this appointment may be terminated by either party giving to the other not less than one month's previous notice in writing of intention so to do."

ing Tea Companies of which they are appointed Secretaries), acting and continuing, with effect from the date of commencement of the Companies Act, 1956, until the 1st April, 1961, to act as Agents for the sale at the London Tea Auctions of teas produced by the Company at a remuneration by way of commission at the rate of two percent on the sale prices obtained; that no further sums, whether by way of reimbursement of expenses or otherwise, be paid to them as such Agents as aforesaid; and, that this appointment may be terminated by either party giving to the other not less than one month's previous notice in writing of intention so to do."

As a Special Resolution

- (7) "Resolved that consent be and is hereby accorded to Messrs. Geo. Williamson & Company, a partnership firm, who maintain an office at 21, Mincing Lane, London, E.C.3, England (for the purposes of their business of management and administration of seventeen Sterling Tea Companies of which they are appointed Secretaries), acting and continuing, with effect from the date of commencement of the Companies Act, 1956, until the 1st April, 1959, to act as Agents for the purchase in the U.K. of goods from time to time required by the Company at a remuneration by way of commission at the rate of two percent on the invoiced price of such goods; that no further sums, whether by way of reimbursement of expenses or otherwise, be paid to them as such Agents as aforesaid; and, that this appointment may be terminated by either party giving to the other not less than one month's previous notice in writing of intention so to do. The expenses incurred by Messrs. Geo. Williamson & Company in maintaining their London Office are in the nature of salaries and wages of personnel, insurance, rates and taxes, fuel, light, maintenance and repair of the premises, office furniture and equipment and items incidental thereto, of which one-sixty-fifth part represents the proportion which may reasonably be attributed to the services rendered and work done on behalf of the Company as such Agents as aforesaid."

As a Special Resolution

- (8) "Resolved that the Company hereby accords consent to J. Thomas & Co., Private Ltd., acting and continuing, with effect from the date of commencement of the Companies Act, 1956, to act as Brokers of the teas produced by the Company and further consents to Mr. J. H. Methold, a Director and Member of the Company, who is also a Director of J. Thomas & Co., Private Limited, acting and continuing, with effect from the date of commencement of the Companies Act, 1956, to act as a Director of the Company."

The Share Transfer Books and Register of Members of the Company will be closed from the 21st December to the 28th December, 1956, both days inclusive.

THE BOR PUKHURI TEA COMPANY, LIMITED.

NOTICE is hereby given that the Annual General Meeting of the Members of The Bor Pukhuri Tea Co., Ltd., will be held at the Registered Office at No. 4, Mangoe Lane, Calcutta, on Thursday, 27th December, 1956, at 11-00 A.M., for the following purposes:—

- (1) To consider and adopt the Revenue and Profit and Loss Accounts for the year ended 31st December, 1955 and the Balance Sheet at that date and the Reports of the Directors and Auditors and to declare a Dividend.
- (2) To appoint Auditors and to fix their remuneration.

AS SPECIAL BUSINESS

To consider and, if thought fit to pass, with or without modification, the following resolutions:—

- (3) "Resolved that Williamson Magor & Co., Ltd., the Managing Agents of the Company and any associate or associates of theirs (as defined in sub-section (3) of Section 2 of the Companies Act, 1956) be and are hereby authorised to retain any Commission or other remuneration earned or to be earned by them as Managing Agents, Secretaries and Treasurers, Agents, or as Selling or Buying Agents of any firm, body corporate or other concern in respect of any goods, power, freight, repairs or other services including insurance for the sale, purchase, supply or rendering of which a contract has been or is to be entered into by such firm, body corporate or concern with the Company provided that the prices or amounts charged to or received by the Company are at rates which are not less favourable to the Company than the market rates or which are otherwise reasonable."

- (4) "Resolved that where under the provisions of the Companies Act, 1956, any person, whether a Member of the Company or not, is entitled to inspect any document required to be kept or maintained by the Company, the person so entitled to inspection shall be permitted to inspect the same between the hours of 11 o'clock in the forenoon and 1 o'clock in the afternoon on such business days as the Act requires them to be kept open for inspection."

As a Special Resolution

- (5) "Resolved that consent be and is hereby accorded to Messrs. Geo. Williamson & Company, a partnership firm, who maintain an office at 21, Mincing Lane, London, E.C.3, England (for the purposes of their business of management and administration of seventeen Sterling Tea Companies of which they are appointed Secretaries), acting and continuing, with effect from the date of commencement of the Companies Act, 1956, until the 1st April, 1961, to act as Agents for the sale at the London Tea Auctions of teas produced by the Company at a remuneration by way of commission at the rate of two percent on the sale prices obtained; that no further sums, whether by way of reimbursement of expenses or otherwise, be paid to them as such Agents as aforesaid; and, that this appointment may be terminated by either party giving to the other not less than one month's previous notice in writing of intention so to do."

As a Special Resolution

- (6) "Resolved that consent be and is hereby accorded to Messrs. Geo. Williamson & Company, a partnership firm, who maintain an office at 21, Mincing Lane, London, E.C.3, England (for the purposes of their business of management and administration of seventeen Sterling Tea Companies of which they are appointed Secretaries), acting and continuing, with effect from the date of commencement of the Companies Act, 1956, until the 1st April, 1959, to act as Agents for the purchase in the U.K. of goods from time to time required by the Company at a remuneration by way of commission at the rate of two percent on the invoiced price of such goods; that no further sums, whether by way of reimbursement of expenses or otherwise, be paid to them as such Agents as aforesaid; and, that this appointment may be terminated by either party giving to the other not less than one month's previous notice in writing of intention so to do. The expenses incurred by Messrs. Geo. Williamson & Company in maintaining their London Office are in the nature of salaries and wages of personnel, insurance, rates and taxes, fuel, light, maintenance and repair of the premises, office furniture and equipment and items incidental thereto, of which one-sixty-fifth part represents the proportion which may reasonably be attributed to the services rendered and work done on behalf of the Company as such Agents as aforesaid."

As a Special Resolution

- (7) "Resolved that the Company hereby accords consent to J. Thomas & Co. Private Ltd., acting and continuing, with effect from the date of commencement of the Companies Act, 1956, to act as Brokers of the teas produced by the Company and further consents to Mr. J. H. Methold, a Director and Member of the Company, who is also a Director of J. Thomas & Co. Private Limited, acting and continuing, with effect from the date of commencement of the Companies Act, 1956, to act as a Director of the Company."

As Ordinary Business

- (8) "To consider and if thought fit to pass the following resolution which will be proposed as a Special Resolution:—

"That Mr. J. H. Methold is hereby appointed a Director of the Company."

Special Notice dated 2nd November, 1956 of intention to propose the foregoing resolution as a Special Resolution has been received by the Company wherein it is stated that the notice is given to satisfy the requirements of Sections 190 and 261 (1) (c), (2) and (3) of the Companies Act, 1956, for the reason that Mr. J. H. Methold a Director of the Company, who retires by rotation of Directors at this meeting, is a Director of J. Thomas & Co. Private Limited which customarily acts as Brokers of the teas produced by the Company which may be construed as an office or place of profit under the Company. Having regard to the fact that the Managing Agents have a right to appoint a Director to the Company, and to the provisions of Sections 261 and 314 of the Act, a special resolution re-appointing him as a Director of the Company is considered requisite.

The Share Transfer Books and Register of Members of the Company will be closed from the 20th December to the 27th December, 1956, both days inclusive.

THE NILPUR TEA COMPANY, LIMITED.

NOTICE is hereby given that the Annual General Meeting of the Members of The Nilpur Tea Co. Ltd., will be held at the Registered Office at No. 4, Mangoe Lane, Calcutta, on Friday, 28th December, 1956, at 12 o'clock noon for the following purposes:—

- (1) To consider and adopt the Revenue and Profit and Loss Accounts for the year ended 31st December, 1955, and the Balance Sheet at that date and the Reports of the Directors and Auditors and to declare a Dividend.
- (2) To reappoint a Director retiring by rotation
- (3) To appoint Auditors and to fix their remuneration.

AS SPECIAL BUSINESS

To consider and, if thought fit to pass, with or without modification, the following resolutions:—

- (4) "Resolved that Williamson Magor & Co., Ltd., the Managing Agents of the Company and any associate or associates of theirs (as defined in sub-section (3) of Section 2 of the Companies Act, 1956) be and are hereby authorised to retain any Commission or other remuneration earned or to be earned by them as Managing Agents, Secretaries and Treasurers, Agents, or as Selling or Buying Agents of any firm, body corporate or other concern in respect of any goods, power, freight, repairs or other services including insurance for the sale, purchase, supply or rendering of which a contract has been or is to be entered into by such firm, body corporate or concern with the Company provided that the prices or amounts charged to or received by the Company are at rates which are not less favourable to the Company than the market rates or which are otherwise reasonable."

- (5) "Resolved that where under the provisions of the Companies Act, 1956, any person, whether a Member of the Company or not, is entitled to inspect any document required to be kept or maintained by the Company, the person so entitled to inspection shall be permitted to inspect the same between the hours of 11 o'clock in the forenoon and 1 o'clock in the afternoon on such business days

as the Act requires them to be kept open for inspection."

As a Special Resolution

- (6) "Resolved that the Company hereby accords consent to J. Thomas & Co. Private Limited, acting and continuing, with effect from the date of commencement of the Companies Act, 1956, to act as Brokers of the teas produced by the Company and further consents to Mr. A. B. Kingsley, a Director and Member of the Company, who is also a Director and Member of J. Thomas & Co. Private Limited, acting and continuing, with effect from the date of commencement of the Companies Act, 1956, to act as a Director of the Company."

A. H. GALLOWAY,
Managing Director,
Managing Agents.

Calcutta, 28th November, 1956.

NOTE.—A member of the Company entitled to attend and vote at the meeting is entitled to appoint a proxy to attend and, on a poll, to vote instead of himself and the proxy need not be a member.

EXPLANATORY STATEMENT.

With reference to the resolution relating to inspection of Books, Registers and other documents, referred to in the accompanying notice, the Companies Act, 1956 provides that the Company may impose reasonable restrictions on such inspection but so that less than two hours in each day are allowed for inspection, and the resolution is being moved in order to comply accordingly with the Act.

THE BISRA STONE LIME COMPANY LIMITED

THE Board of Directors has decided to recommend to the forthcoming General Meeting of Shareholders a dividend of annas -14/- per share without any deduction in respect of taxation payable by the Company for the half-year ended 31st March, 1956.

By Order of the Board,
BIRD & CO. (PRIVATE) LIMITED,
Managing Agents.

Chartered Bank Buildings,
Calcutta, 29th November, 1956.

THE OODLABARI CO., LTD.

A Dividend of 12½% for Season 1955 without any deduction for Income Tax paid by the Company has been declared payable to the shareholders.

OCTAVIUS STEEL & CO., LTD.,
Managing Agents.

Calcutta, 28th November, 1956.

THE GOHPUR TEA COMPANY, LIMITED.

NOTICE is hereby given that the Annual General Meeting of the Members of The Gohpur Tea Co., Ltd. will be held at the Registered Office at No. 4, Mangoe Lane, Calcutta, on Thursday, the 27th December, 1956 at 11-15 A.M. for the following purposes:—

- (1) To consider and adopt the Revenue and Profit and Loss Accounts for the year ended 31st December, 1955 and the Balance Sheet at that date and the Reports of the Directors and Auditors and to declare a Dividend.
- (2) To reappoint a Director who retires.
- (3) To appoint Auditors and to fix their remuneration.

AS SPECIAL BUSINESS

To consider and, if thought fit to pass, with or without modification, the following resolutions:—

- (4) "Resolved that Williamson Magor & Co., Ltd., the Managing Agents of the Company and any associate or associates of theirs (as defined in sub-section (3) of Section 2 of the Companies Act, 1956) be and are hereby authorised to retain any Commission or other remuneration earned or to be earned by them as Managing Agents, Secretaries and Treasurers, Agents, or as Selling or Buying Agents of any firm, body corporate or other concern in respect of any goods, power, freight, repairs or other services including insurance for the sale, purchase, supply or rendering of which a contract has been or is to be entered into by such firm, body corporate or concern with the Company provided that the prices or amounts charged to or received by the Company are at rates which are not less favourable to the Company than the market rates or which are otherwise reasonable."

- (5) "Resolved that where under the provisions of the Companies Act, 1956, any person, whether a Member of the Company or not, is entitled to inspect any document required to be kept or maintained by the Company, the person so entitled to inspection shall be permitted to inspect the same between the hours of 11 o'clock in the forenoon and 1 o'clock in the afternoon on such business days as the Act requires them to be kept open for inspection."

As a Special Resolution

- (6) "Resolved that consent be and is hereby accorded to Messrs. Geo. Williamson & Company, a partnership firm, who maintain an office at 21, Mincing Lane, London, E.C.3, England (for the purposes of their business of management and administration of seventeen Sterling Tea Companies of which they are appointed Secretaries), acting and continuing, with effect from the date of commencement of the Companies Act, 1956, until the 1st April, 1961, to act as Agents for the sale at the London Tea Auctions of teas produced by the Company at a remuneration by way of commission at the rate of two percent on the sale prices obtained; that no further sums, whether by way of reimbursement of expenses or otherwise, be paid to them as such Agents as aforesaid; and, that this appointment may be terminated by either party giving to the other not less than one month's previous notice in writing of intention so to do."

As a Special Resolution

- (7) "Resolved that consent be and is hereby accorded to Messrs. Geo. Williamson & Company, a partnership firm, who maintain an office at 21, Mincing Lane, London, E.C.3, England (for the purposes of their business of management and administration of seventeen Sterling Tea Companies of which they are appointed Secretaries), acting and continuing, with effect from the date of commencement of the Companies Act, 1956, until the 1st April, 1959, to act as Agents for the purchase in the U.K. of goods from time to time required by the Company at a remuneration by way of commission at the rate of two percent on the invoiced price of such goods; that no further sums, whether by way of reimbursement of expenses or otherwise, be paid to them as such Agents as aforesaid; and, that this appointment may be terminated by either party giving to the other not less than one month's previous notice in writing of intention so to do. The expenses incurred by Messrs. Geo. Williamson & Company in maintaining their London Office are in the nature of salaries and wages of personnel, insurance, rates and taxes, fuel, light, maintenance and repair of the premises, office furniture and equipment and items incidental thereto, of which one-sixty-fifth part represents the proportion which may reasonably be attributed to the services rendered and work done on behalf of

the Company as such Agents as aforesaid."

As a Special Resolution

- (8) "Resolved that the Company hereby accords consent to J. Thomas & Co. Private Ltd. acting and continuing, with effect from the date of commencement of the Companies Act, 1956, to act as Brokers of the teas produced by the Company and further consents to Mr. J. H. Methold, a Director and Member of the Company, who is also a Director of J. Thomas & Co. Private Ltd. acting and continuing, with effect from the 25th July, 1956, being the date he was appointed an additional Director of the Company, to act as a Director of the Company."

As a Special Resolution

- (9) "That Mr. J. H. Methold is hereby appointed a Director of the Company." Special Notice dated 2nd November, 1956 of intention to propose the foregoing resolution as a Special Resolution has been received by the Company wherein it is stated that the notice is given to satisfy the requirements of Sections 190 and 261 (1) (c), (2) and (3) of the Companies Act, 1956, for the reason that Mr. J. H. Methold a Director of the Company (who having been appointed an additional director during the year and holds office until the next Annual General Meeting) is a Director of J. Thomas & Co. Private Ltd., which customarily acts as Brokers for the teas produced by the Company which may be construed as an office or place of profit under the Company. Having regard to the fact that the Managing Agents have a right to appoint a Director to the Company, and to the provisions of Sections 261 and 314 of the Act, a special resolution re-appointing him as a Director of the Company is considered requisite.

The Share Transfer Books and Register of Members of the Company will be closed from the 20th December to the 27th December, 1956, both days inclusive.

Managing Director.

Calcutta, 28th November, 1956.

Note.—A member entitled to attend and vote at the meeting is entitled to appoint a proxy to attend and vote in his stead. A proxy need not be a member of the Company.

THE DIMAKUSI TEA COMPANY, LIMITED.

NOTICE is hereby given that the Annual General Meeting of the Members of The Dimakusi Tea Co. Ltd. will be held at the Registered Office at No. 4, Mangoe Lane, Calcutta, on Thursday, 27th December, 1956, at 11-30 A.M., for the following purposes:—

- (1) To consider and adopt the Revenue and Profit and Loss Accounts for the year ended 31st December, 1955, and the Balance Sheet at that date and the Reports of the Directors and Auditors and to declare Dividends.
- (2) To reappoint a Director retiring by rotation.
- (3) To appoint Auditors and to fix their remuneration.

AS SPECIAL BUSINESS

To consider and, if thought fit to pass, with or without modification, the following resolutions:—

- (4) "Resolved that Williamson Magor & Co., Ltd., the Managing Agents of the Company and any associate or associates of theirs (as defined in sub-section (3) of Section 2 of the Companies Act, 1956) be and are hereby authorised to retain any Commission or other remuneration earned or to be earned by them as Managing Agents, Secretaries and Treasurers, Agents, or as Selling or Buying Agents of any firm, body corporate or other concern in respect of any goods, power, freight, repairs or other services including insurance for the sale, purchase, supply or rendering of which a contract has been or is to be entered into by such firm, body corporate or concern with the Company provided that the prices or amounts charged to or received by the Company are at rates which are not less favourable to the Company than the market rates or which are otherwise reasonable."

- (5) "Resolved that where under the provisions of the Companies Act, 1956, any person, whether a Member of the Company or not, is entitled to inspect any document required to be kept or maintained by the Company, the person so entitled to inspection shall be permitted to inspect the same between the hours

of 11 o'clock in the forenoon and 1 o'clock in the afternoon on such business days as the Act requires them to be kept open for inspection."

As a Special Resolution

- (6) "Resolved that consent be and is hereby accorded to Messrs. Geo. Williamson & Company, a partnership firm, who maintain an office at 21, Mincing Lane, London, E.C.3, England (for the purposes of their business of management and administration of seventeen Sterling Tea Companies of which they are appointed Secretaries), acting and continuing, with effect from the date of commencement of the Companies Act, 1956, until the 1st April, 1961, to act as Agents for the sale at the London Tea Auctions of teas produced by the Company at a remuneration by way of commission at the rate of two percent on the sale prices obtained; that no further sums, whether by way of reimbursement of expenses or otherwise, be paid to them as such Agents as aforesaid; and, that this appointment may be terminated by either party giving to the other not less than one month's previous notice in writing of intention so to do."

As a Special Resolution

- (7) "Resolved that consent be and is hereby accorded to Messrs. Geo. Williamson & Company, a partnership firm, who maintain an office at 21, Mincing Lane, London, E.C.3, England (for the purposes of their business of management and administration of seventeen Sterling Tea Companies of which they are appointed Secretaries), acting and continuing, with effect from the date of commencement of the Companies Act, 1956, until the 1st April, 1959, to act as Agents for the purchase in the U.K. of goods from time to time required by the Company at a remuneration by way of commission at the rate of two percent on the invoiced price of such goods; that no further sums, whether by way of reimbursement of expenses or otherwise, be paid to them as such Agents as aforesaid; and, that this appointment may be terminated by either party giving to the other not less than one month's previous notice in writing of intention so to do. The expenses incurred by Messrs. Geo. Williamson & Company in maintaining their London Office are in the nature of salaries and wages of personnel, insurance, rates and taxes, fuel, light, maintenance and repair of the premises, office furniture and equipment and items incidental thereto, of which one-sixty-fifth part represents the proportion which may reasonably be attributed to the services rendered and work done on behalf of the Company as such agents as aforesaid."

As a Special Resolution

- (8) "Resolved that the Company hereby accords consent to Carritt Moran & Co. Private Ltd. acting and continuing, with effect from the date of commencement of the Companies Act, 1956, to act as Brokers of the teas produced by the Company."

The Share Transfer Books and Register of Members of the Company will be closed from the 20th December, 1956 to the 27th December, 1956, both days inclusive.

THE CALCUTTA TRAMWAYS COMPANY LIMITED

(Incorporated in England)

NOTICE is hereby given that the Preference Share Transfer Books will be closed from the 17th to the 21st December, 1956, (both days inclusive) for the preparation of Dividend Warrants in respect of the Final Dividend of 2½%, less Income-tax payable on the 1st January, 1957, on account of the profits for the year ending 31st December, 1956.

By Order of the Board,

A. C. T. BLEASE,

Agent.

P-4, Mission Row Extension,

Calcutta-1.

Dated, 4th December, 1956.

THE CALCUTTA STEAM NAVIGATION CO., LTD.

NOTICE is hereby given that the 148th Annual General Meeting of the members of the above-named Company will be held at the Registered Office, No. 5, Fairlie Place, Calcutta, on Thursday, the 27th Dec., at 11-30 a.m. to transact the following business:—

1. To consider and adopt the Profit & Loss Account for the half-year ended 30th June 1956, together with the Balance Sheet as at that date and the Reports of the Board of Directors and Auditors.

2. To declare a dividend.

3. To appoint Directors.

4. To appoint Auditors and to fix their remuneration.

Special Business.

5. To consider and if thought fit, to pass, with or without amendment the following resolution which will be proposed as an Ordinary Resolution:—

"Resolved that the Capital of the Company, divided into 12,600 fully paid up Ordinary Shares of Rs. 100/- each, be subdivided into 1,26,000 Ordinary Shares of Rs. 10/- each and shall henceforth be numbered from No. 1 to 1,26,000 inclusive so that the former Share No. 1 shall now be represented by 10 shares numbered 1-10 inclusive and so on."

6. To consider and if thought fit, to pass, with or without amendment the following Resolution which will be proposed as a Special Resolution:—

"Resolved that the Articles of Association of the Company be altered in the following manner:—

Article (4) shall be deleted and the following new Article substituted therefor:—

The Capital of the Company is Rs. 12,60,000/- divided into 1,26,000 Ordinary Shares of Rs. 10/- each.

The Share Transfer Books of the Company will be closed from the 12th December to 27th December, 1956 both days inclusive.

By Order of the Board,

HOARE MILLER & CO., LTD.,

Managing Agents.

5, Fairlie Place,

Calcutta,

Dated 4th December, 1956.

Note:—A member entitled to attend and vote at this Meeting is entitled to appoint a Proxy to attend and vote in his stead. A Proxy need not be a member of the Company.

EXPLANATORY STATEMENT.

Items 5 and 6. In response to requests from a number of shareholders and as it is undoubtedly in accordance with the modern trend and will lead to greater convenience in registering share transfers, and as your Company are empowered under Article 60 of the Company's Articles of Association to sub-divide the shares, your Directors have decided to recommend to members in General Meeting by an Ordinary and by a Special Resolution respectively that the shares of Rs. 100/- each should be sub-divided into Rs. 10/- shares and that the Articles be amended to give effect to such recommendation. The Directors and Managing Agents are interested in these resolutions only as Shareholders of the Company.

THE TINNEVELLY-TUTICORIN ELECTRIC SUPPLY COMPANY LIMITED.

NOTICE is hereby given that the Annual Ordinary General Meeting of the Shareholders will be held at the Registered Office of the Company, No. 14, Old Court House Street, Calcutta, on Friday, the 28th day of December, 1956 at 3-25 P.M. for the following purposes:—

1. To receive and pass the Directors' Report and the audited Accounts for the year ended 31st March, 1956.

2. To declare a Dividend.

3. To elect a Director in place of the retiring Director.

4. To elect Auditors for the ensuing year, and to fix their remuneration.

The Share Register of the Company will be closed from 21st December, 1956 to 28th December, 1956, both days inclusive.

By Order of the Board,

OCTAVIUS STEEL & CO. LTD.,

A. H. GALLOWAY,

Managing Director,

Managing Agents.

Calcutta, 5th December, 1956.

NOTE: A member of the Company entitled to attend and vote at the meeting is entitled to appoint a proxy to attend and on a poll, to vote instead of himself and the proxy need not be a member.

THE LINGIA TEA COMPANY, LIMITED.

NOTICE is hereby given that the Annual General Meeting of the Members of The Lingia Tea Co., Ltd., will be held at the Registered Office, at No. 4, Mangoe Lane, Calcutta, on Friday, the 28th December, 1956, at 11-15 A.M., for the following purposes:—

- (1) To consider and adopt the Revenue and Profit and Loss Accounts for the year ended 31st December, 1955, and the Balance Sheet as at that date and the Reports of the Directors and Auditors and to declare Dividends.
- (2) To reappoint a Director retiring by rotation.
- (3) To appoint Auditors and to fix their remuneration.

AS SPECIAL BUSINESS

To consider and, if thought fit to pass, with or without modification, the following resolutions:—

- (4) "Resolved that Williamson Magor & Co., Ltd., the Managers of the Company and any associate or associates of theirs (as defined in Sub-Section (3) of Section 2 of the Companies Act, 1956) be and are hereby authorised to retain any commission or other remuneration earned or to be earned by them as Managing Agents, Secretaries and Treasurers, Secretaries, Managers, Agents, or as Selling or Buying Agents of any firm, body corporate or otherwise in respect of any goods, power, freight, repairs or other services including insurance for the sale, purchase, supply or rendering of which a contract has been or is to be entered into by such firm, body corporate or concern with the Company provided that the prices or amounts charged to or received by the Company are at rates which are not less favourable to the Company than the market rates or which are otherwise reasonable."
- (5) "Resolved that where under the provisions of the Companies Act, 1956, any person, whether a Member of the Company or not, is entitled to inspect any document required to be kept or maintained by the Company, the person so entitled to inspection shall be permitted to inspect the same between the hours of 11 o'clock in the forenoon and 1 o'clock in the afternoon on such business days as the Act requires them to be kept open for inspection."

As a Special Resolution

- (6) "Resolved that consent be and is hereby accorded to Messrs. Geo. Williamson & Company, a partnership firm, who maintain an office at 21, Mincing Lane, London, E.C.3, England (for the purposes of their business of management and administration of seventeen Sterling Tea Companies of which they are appointed Secretaries), acting and continuing, with effect from the date of commencement of the Companies Act, 1956, until the 1st April, 1961, to act as Agents for the sale at the London Tea Auctions of teas produced by the Company at a remuneration by way of commission at the rate of two percent on the sale prices obtained; that no further sums, whether by way of reimbursement of expenses or otherwise, be paid to them as such Agents as aforesaid; and, that this appointment may be terminated by either party giving to the other not less than one month's previous notice in writing of intention so to do."

As a Special Resolution

- (7) "Resolved that consent be and is hereby accorded to Messrs. Geo. Williamson & Company, a partnership firm, who maintain an office at 21, Mincing Lane, London, E.C.3, England (for the purposes of their business of management and administration of seventeen Sterling Tea Companies of which they are appointed Secretaries), acting and continuing, with effect from the date of commencement of the Companies Act, 1956, until the 1st April, 1959, to act as Agents for the purchase in the U.K. of goods from time to time required by the Company at a remuneration by way of commission at the rate of two percent on the invoiced price of such goods; that no further sums, whether by way of reimbursement of expenses or otherwise, be paid to them as such Agents as aforesaid; and, that this appointment may be terminated by either party giving to the other not less than one month's previous notice in writing of intention so to do. The expenses incurred by Messrs. Geo. Williamson & Company in maintaining their London Office are in the nature of salaries and wages of personnel, insurance, rates and taxes, fuel, light, maintenance and repair of the premises, office furniture and equipment and items incidental thereto, of which one-sixty-fifth part represents the proportion which may reasonably be attributed to the services rendered and work done on behalf of

the Company as such Agents as aforesaid."

As a Special Resolution

- (8) "Resolved that the Company hereby accords consent to Carritt Moran & Co., Private Ltd., acting and continuing, with effect from the date of commencement of the Companies Act, 1956, to act as Brokers of the teas produced by the Company and further consents to Mr. P. Banyard, a Director and Member of the Company, who is also a Director and Member of Carritt Moran & Co., Private Limited, acting and continuing, with effect from the date of commencement of the Companies Act, 1956, to act as a Director of the Company."

As Ordinary Business

- (9) "To consider and, if thought fit to pass, with or without modification, the following resolution which will be proposed as a Special Resolution:—

"That Mr. P. Banyard is hereby appointed a Director of the Company."

Special Notice dated the 2nd November, 1956, of intention to propose the foregoing resolution as a Special Resolution has been received by the Company, wherein it is stated that the notice is given to satisfy the requirements of Sections 190 and 261 (1) (c), (2) and (3) of the Companies Act, 1956, for the reason that Mr. P. Banyard a Director and Member of the Company, who retires by rotation of Directors at this meeting is a Director and Member of, Carritt Moran & Co. Private Limited, which customarily acts, as Brokers of the teas produced by the Company which may be construed as an office or place of profit under the Company. Having regard to the fact that the Managers who must be deemed to be Managing Agents of the Company within the meaning of the Act, have a right to appoint a Director to the Company, and to the provisions of Section 261 and 314 of the Act, a special resolution reappointing him as a Director of the Company is considered requisite.

The Share Transfer Books and Register of Members of the Company will be closed from the 21st December, 1956 to the 28th December, 1956, both days inclusive.

THE LINGIA TEA COMPANY, LIMITED,

By Order of the Board,

WILLIAMSON MAGOR & CO., LTD.,

Managers.

C. C. SANDYS-LUMSDAINE,

Managing Director.

Calcutta, 28th November, 1956.

Note.—A member entitled to attend and vote at the meeting is entitled to appoint a proxy to attend and vote in his stead. A proxy need not be a member of the Company.

THE CHAMONG TEA COMPANY, LIMITED.

NOTICE is hereby given that the Annual General Meeting of the Members of The Chamong Tea Co. Ltd., will be held at the Registered Office at No. 4, Mangoe Lane, Calcutta, on Thursday, 27th December, 1956, at 12 o'clock noon, for the following purposes:—

- (1) To consider and adopt the Revenue and Profit and Loss Accounts for the year ended 31st December, 1955, and the Balance Sheet at that date and the Reports of the Directors and Auditors.
- (2) To reappoint a Director retiring by rotation.
- (3) To appoint Auditors and to fix their remuneration.

AS SPECIAL BUSINESS

To consider and, if thought fit to pass, with or without modification, the following resolutions:—

- (4) "Resolved that Williamson Magor & Co. Ltd., the Managing Agents of the Company and any associate or associates of theirs (as defined in Sub-Section (3) of Section 2 of the Companies Act, 1956) be and are hereby authorised to retain any commission or other remuneration earned or to be earned by them as Managing Agents, Secretaries, and Treasurers, Secretaries, Managers, Agents, or as Selling or Buying Agents of any firm, body corporate or otherwise in respect of any goods, power, freight, repairs or other services including insurance for the sale, purchase, supply or rendering of which a contract has been or is to be entered into by such firm, body corporate or concern with the Company provided that the prices or amounts charged to or received by the Company are at rates which are not less favourable to the Company than the market rates or which are otherwise reasonable."

- (5) "Resolved that where under the provisions of the Companies Act, 1956, any person, whether a Member of the Company or not, is entitled to inspect any document required to be kept or main-

tained by the Company, the person so entitled to inspection shall be permitted to inspect the same between the hours of 11 o'clock in the forenoon and 1 o'clock in the afternoon on such business days as the Act requires them to be kept open for inspection."

As a Special Resolution

- (6) "Resolved that consent be and is hereby accorded to Messrs. Geo. Williamson & Company, a partnership firm, who maintain an office at 21, Mincing Lane, London, E.C.3, England (for the purposes of their business of management and administration of seventeen Sterling Tea Companies of which they are appointed Secretaries), acting and continuing, with effect from the date of commencement of the Companies Act, 1956, until the 1st April, 1961, to act as Agents for the sale at the London Tea Auctions of teas produced by the Company at a remuneration by way of commission at the rate of two percent on the sale prices obtained; that no further sums, whether by way of reimbursement of expenses or otherwise, be paid to them as such Agents as aforesaid; and, that this appointment may be terminated by either party giving to the other not less than one month's previous notice in writing of intention so to do."

As a Special Resolution

- (7) "Resolved that consent be and is hereby accorded to Messrs. Geo. Williamson & Company, a partnership firm, who maintain an office at 21, Mincing Lane, London, E.C.3, England (for the purposes of their business of management and administration of seventeen Sterling Tea Companies of which they are appointed Secretaries), acting and continuing, with effect from the date of commencement of the Companies Act, 1956, until the 1st April, 1959, to act as Agents for the purchase in the U.K. of goods from time to time required by the Company at a remuneration by way of commission at the rate of two percent on the invoiced price of such goods; that no further sums, whether by way of reimbursement of expenses or otherwise, be paid to them as such Agents as aforesaid; and, that this appointment may be terminated by either party giving to the other not less than one month's previous notice in writing of intention so to do. The expenses incurred by Messrs. Geo. Williamson & Company, in maintaining their London Office, are in the nature of salaries and wages of personnel, insurance, rates and taxes, fuel, light, maintenance and repair of the premises, office furniture and equipment and items incidental thereto, of which one-sixty-fifth part represents the proportion which may reasonably be attributed to the services rendered and work done on behalf of the Company as such Agents as aforesaid."

As a Special Resolution

- (8) "Resolved that the Company hereby accords consent to J. Thomas & Co. Private Ltd., acting and continuing, with effect from the date of commencement of the Companies Act, 1956, to act as Brokers of the teas produced by the Company and further consents to Mr. J. H. Methold, a Director and Member of the Company, who is also a Director of J. Thomas & Co. Private Limited, acting and continuing, with effect from the date of commencement of the Companies Act, 1956, to act as a Director of the Company."

The Share Transfer Books and Register of Members of the Company will be closed from the 20th December to the 27th December, 1956, both days inclusive.

JOINT STOCK COMPANIES PREFERENCE SHARES

Dividends are cumulative and shares carry a preferential claim on the property for the payment of capital and on the profits for dividend except in case of companies marked otherwise. Months against names of companies indicate approximately times of payment of dividends.

PAVING THE ROAD TO PROGRESS

THE FINANCE MINISTER'S GOOD INTENTIONS

THIS year's ASSOCHAM general meeting was an altogether more cheerful affair. That is perhaps why the impression Mr. Krishnamachari's words conveyed appears to have been so favourable. But a mere exchange of pleasantries does not express the genuine anxiety of the business community, especially the British section of it, any more than it can explain the true significance of the difficulty under which the Government must work. There was much solid substance in both the President's Mr. O. T. Jenkins, and the Finance Minister's speeches. That little of it is now new stuff no doubt explains why it came across so much better when expressed in a rather more light-hearted fashion than usual. But this need not obscure the fact that it is a serious matter which is under discussion; one on which the whole future of established and responsible private enterprise in this country depends. Mr. Krishnamachari was reassuring about intentions, but it is the reality which will decide in the end. Mr. Jenkins was almost debonair in his approach to private industry's difficulties, but the ultimate progress of the concerns he represents will be regulated by hard-headed thinking based on the facts as they are, not as the Government would like them to be.

The Finance Minister was firm on one point, the plan must be fulfilled. So far as the efforts of private industry are concerned, there need be no differences with him on that score. The aim is a socialist pattern of society. Here again, this is something which business men have accepted, their prejudices notwithstanding, even if not all economic thinkers can. What deviation of views there is on the point centres on whether socialism really is the quickest and easiest way of increasing wealth and keeping the electorate contented—we have just seen that it has not proved the best way in Hungary. It is fairly true to say that what makes the consumer happy in the long run will make the business man too. The real anxieties do not devolve on the question whether or not socialism, but on how the system is to work in practice and how it is to be prevented from slipping into something more extreme when the present leaders with their moderate opinions have passed from the scene: after all, a responsible business man must look well beyond the next election. Here Mr. Krishnamachari does his case no good at all by referring to the example of Britain. It is no wonder that private enterprise in India is apprehensive if it must look forward to the muddle, the shortages, the chronic labour unrest, the dwindling

Without Prejudice

THE OBLIGATION TO FULFIL
CONTRACTSDOCTRINE OF FRUSTRATION
OF THE ADVENTURE

(FROM OUR LEGAL CORRESPONDENT)

THE reader is invited to consider the meaning of the word "impossible" in relation to what the law terms the doctrine of "frustration of the adventure" in the matter of contracts and the liability of performance attached to the parties. In considering the word, we have to bear in mind a fundamental principle. The business of the law is to give effect, as far as possible, to the intention of the parties, and all the rules for interpreting contracts go back to that fundamental principle and are controlled by it. The business is not an easy one by any means, since, although it is for the court to interpret the meaning of what people say, the same people do not always say what they mean, or they say it obscurely. People often express themselves in such a way as to leave large parts of their intentions unexpressed or, worse still, have not formed any definite intention at all as to what is to be done in certain events, the occurrence of which is so unlikely that no consideration has been given to it at all. So, quite often the law has to fill gaps in contracts by judicial conjecture or guess-work, in which, nevertheless, there is a guiding principle, namely, the consideration of what either party has given the other reasonable cause to expect of him.

The court aims not at imposing terms on the parties to the contract but at fixing the terms left blank, as the parties would or reasonably might have fixed them if all the possibilities had been clearly before their minds. For this purpose resort must be had to various tests: the court may look to the analogy of what the parties have expressly provided in case of other specified events, to the constant or general usage of persons engaged in similar business, and ultimately to the court's own sense of what is just and expedient. This sense of what is just and expedient is embodied in English law in the doctrine "frustration of the adventure" and in India by statute, i.e., the Contract Act, and it brings us to the word with which we began this note—"impossible". The doctrine is

this: Where the fulfilment of a contract according to the true intention is rendered impossible by emergent facts not within the control or contemplation of the parties, the courts will treat the contract as if it had been conditional and hold performance excused. Performance of the contract is frustrated by some external cause not due to the promisor's own fault, and the law will assume that the parties cannot have seriously meant to create a liability in such an event.

"Impossible". Please consider that word in relation to the actual case set out below. What is its meaning? Do not assume off-hand, as one is inclined to do, that the answer is obvious, that it means necessarily something that cannot conceivably happen or be done. True, that is one meaning and the general one. But the law interprets words, as we do ourselves, in their ordinary colloquial meaning. Even the austere Oxford Dictionary gives as an alternative meaning "difficult". We refer quite rightly to "a practical impossibility" as distinct from a "total impossibility". We talk of X as an "impossible" person, meaning only that he is an extremely difficult person. General Weygand, invited to succeed General Gamelin in 1940, when he said: "You have set me an 'impossible' task, to win a battle which is already lost", showed by accepting the command that he meant that the chance of success was not totally impossible but infinitely small.

And that brings us to the latest case on the word. The plaintiff, who was the General Manager, Government Distilleries, Hyderabad, filed a suit for damages for breach of contract alleging that the defendant, one Habibullah Garwar, had agreed to transport coal from the Hyderabad railway station to the Narayanguda Distillery, and this contract was entered into for the year 1st October, 1947, to 30th September, 1948. The plaintiff further stated that from 19th May, 1948, to the end of September, 1948, the defendant failed to transport the coal according to the terms of the contract, in consequence of which other arrangements had to be made for transporting coal for which the plaintiff had to incur expenditure, wherefore he claimed damages.

The defendant, while admitting the agreement and also the fact that he had stopped transport, alleged that the contract was for the transport of coal by lorry and that the plaintiff had undertaken

to supply coupons for petrol or alcohol for being utilised in the lorry, and inasmuch as the plaintiff had failed to supply the coupons, he was unable to use the lorry and therefore it became "impossible" for him to transport the coal. He urged that inasmuch as the plaintiff had not performed his part of the agreement in that he failed to supply the coupons, no damages could be recovered from him, as the breach of contract did not occur on account of him. There were other defences, but we are here concerned only with this defence of "frustration of the adventure" on trial court held on the merits that there had been no breach of agreement on the part of the plaintiff and awarded damages. The defendant appealed in revision to the High Court.

In the High Court, as in the court below, the main and foremost argument of the defendant-appellant's counsel was that the case was governed by Section 56, Contract Act, and that there was no obligation on the part of the defendant to carry out the terms of the contract because petrol became unavailable, the coupons not having been furnished. Upon this argument, the High Court made some useful and informative observations of general application. "The principle underlying the doctrine under Section 56, Contract Act, may be stated as follows. Where the law casts a duty on a man which, through no fault of his, he is unable to perform, he is excused for non-performance. It has to be noted that a party to a contract can always guard against unforeseen contingencies by express stipulation, but if he voluntarily undertakes an absolute and unconditional obligation, he cannot complain merely because events have turned out to his disadvantage."

Sometimes, though there may not be a term absolving one of the parties to a contract from performance of his part of the contract, the court can infer from the nature of the contract and the surrounding circumstances that a condition which was not express, was the foundation upon which the parties contracted, and relieve the party from the obligation to perform the contract if that condition cannot be fulfilled. The test therefore in this case would be as to whether the transport of coal by lorry alone was the foundation of the contract or whether the contract was only for the transport of coal by any vehicle whatsoever. In this case it could not be said that the transport of coal was only to be by lorry and that that was the foundation of the contract. It can be gathered from the evidence that the defendant only undertook to transport coal to the plaintiff from Nampalli station to the distilleries in Narayanguda. There was no further condition attached to it."

And that brings us back to our original question. What does "impossible" mean in such a connection as this. The transport of the coal other than by lorry would no doubt have involved the defendant in abnormal and prohibitive expense; and it may be conceded that he could not reasonably have foreseen the petrol shortage. Do these circumstances absolve him? In other words, does the word "impossible" connote the meaning of virtual impracticability or total impossibility? The High Court supplied the answer and it is a useful one to remember. Said Srinivasachari J.: "More difficulty or the need to pay abnormal prices cannot exonerate a party from carrying out his part of the contract and such a case would not be governed by Section 56, Contract Act. For the law will allow discharge of a contract if the act to be performed is rendered illegal or impossible of performance. (But) there should be a total impossibility. As has been observed above, none of these things could be found in this case. At the worst, it could be said that the defendant would have had to incur heavy charges in transporting the coal. The test would be, had the events which happened subsequently, in this case the paucity of petrol, made the contract impossible of performance? If not, it could not be said that there has been a frustration of the contract. I hold that it was open to the defendant to have arranged for the coal being transported to the distilleries by other means, though the transport charges may have been prohibitive. A clear line of distinction should be drawn between cases of physical or legal impossibility and mere difficulty in carrying out the contract."

The judgment of the lower court awarding damages for breach of contract was affirmed and the appeal dismissed.

[Habibullah v G. M. Government Distilleries. 43 A.I.R. (1956. Nov.) (Hyderabad). 190.]

ELECTRICITY OUTPUT IN INDIA

Electricity output in India increased by 1,600,000 kWh (kilowatt hours) during July, 1956, compared with June. Public electricity supply undertakings numbering 724 generated 796,500,000 kWh, of which 656,200,000 kWh were sold to ultimate consumers. Four diesel generating stations in Botad and Valabhipur in Saurashtra, and Contai and Old Malda in Dhuri in P.E.P.S.U., Robertsganj in Uttar Pradesh and Alipurduar, Bhagwangola, Galsi, Plassy, Sainthia, Saktigar, Memari, and Rasulpur in West Bengal were the new additions during the month. Power production and sale during July, 1955, were 722,200,000 kWh and 583,300,000 kWh and during July, 1954, 209,800,000 kWh and 174,300,000 kWh respectively.

IF this year's ASSOCHAM general meeting was no more exciting than usual, that was certainly no fault of the President, Mr. O. T. Jenkins. I thought his speech a refreshing departure from the normal, although I wonder whether it would add much to the importance of this annual event if the same approach were repeated year after year. But at least for the first meeting of the second plan, the attitude of *quo vadis* is probably an improvement on the usual cheerless chronicle of moans and scoldings. The "production"—if one dare use the word about anything so business-like—of the whole "show" was better too. For once, it was possible to see the main speakers as well as hear them. And the absence of a crowd of officials and committee members round the table left the impression that some thought had been given to the organisation of the meeting for a change. So did the position of the Press, which this time had much the same facilities as the members—perhaps a wise precaution after last year's walk-out. I must congratulate Mr. Jenkins on putting a new tool in the hands of economists. If the "Isotax" line is not his own invention, I for one have not heard of it before. There are great possibilities in this notion, especially if we can take the example further and plot "Isoprogress" lines as well. It would take time, but for those who are prepared to recognise evidence when they see it, there is a method here of proving what everybody knows exists—a relationship between economic growth and the burden of taxation. What material that would be for a future President's speech. In the meantime, Mr. Jenkins's meteorological analogy of talent moving from a high to a low-pressure tax area should illustrate the problem well enough. After the happenings of the last fortnight in the taxation field it must have been satisfying for some to have heard Mr. Krishnamachari if only in jest, being called a burglar. I have heard worse names used recently, and expect to again when he starts to implement the capital gains tax he says has come to stay. Perhaps the rôle of Robin Hood does suit him better, although that particular bandit was supposed to rob the rich to give to the poor while the whole point of the criticism of Mr. Krishnamachari is that his method of robbing the rich—quite the wrong word to use here of course—does not benefit the poor to the extent it might. If we must go back to legend and fable, Mr. Krishnamachari is more like the man who killed the goose that laid the golden eggs.

Just how much does confidence count in economic affairs? For round about everything I would say, and that is not confined to capitalist countries either. To prove the point, I am going to quote the authority of this month's *Pick's World Currency Report* which describes the effect the Suez crisis and the events in Poland and Hungary have had on the "Ruble Area". The adjective used is "tottering". There has been a sharp rise in black market activities and a consistent flight from national currencies into "hard" banknotes and gold throughout the whole region, with the exception of China. In the free market, the Bulgarian Lev, the Czechoslovak Koruna, the Hungarian Forint and the Polish Zloty have dropped to historic lows. The Forint has suffered most; compared with the dollar it has declined in value by about 78 percent. The Zloty comes next with a fall of about 45 percent, while the ruble itself shows a drop of 39 percent. Rumours are rife that Poland is preparing to devalue and that Hungary is planning a currency reform. So, in spite of controls and regimentation the feelings of ordinary people do count for something even in communist economies. No doubt a combination of cooked statistics and ruthless politics will succeed

A DITCHER'S DIARY

in sweeping the dirt under the carpet. But the truth remains; communist prosperity is as much a function of confidence as is the capitalist variety.

Controversy, which attended almost every phase of Dr. Ambedkar's career and in which with great gusto he always gave as much as he took, could not altogether be kept out of the obituary tributes paid from almost every quarter of India's public life. He would not have minded one bit of it. That he was a great champion of the untouchables, for whom in one way and another he did as much as any single individual goes without saying, but that may well have been only one of his passions. Not only was Dr. Ambedkar ever torn between the prizes he could easily have secured by compromise and the cause he had chosen for himself, his whole life had been rendered the more restless perhaps by a deeper dichotomy—that between a scholar and a politician, and he was both. His early works on the problem of the rupee are known to students of Indian economics, and while his achievements in the political sphere were by no means inconsiderable, the consequent loss to the world of economic scholarship was not a small price to pay. It is idle to speculate whether single-minded devotion to the study of economics would have been a better way of serving the country Dr. Ambedkar loved so dearly. The fact perhaps is that some men—of whom he was certainly one—just cannot help fighting a sea of trouble or inviting the slings and arrows of outrageous fortune. Such men suffer in consequence, as did Dr. Ambedkar; but the world would have been a poorer place without their striving.

Personally, I felt the effects of the Suez trouble for the first time just about a month ago when I asked for a copy of the latest Aldous Huxley and was referred rather sharply to this unhappy incident. Only now has my book-seller been able to supply me and on going through *Adonis and the Alphabet* and *Other Essays* I see once again that Mr. Huxley is what I have always considered him—an encyclopaedia in trousers. I confess I am no great admirer of his novels, brilliant though they are. *The Genius* and *The Goddess* struck me, despite its fine characterisation and dry cynicism, as no more than a shoddy tale of common adultery made to look solemn by Mr. Huxley's usual trick of talking through his pseudo-scientific hat. But his essays and discussions are a different matter altogether. I can think of no contemporary British author, other than Bertrand Russell himself, who can match their range and quality. In this book of some dozen essays, Mr. Huxley ranges from the sadism of St. Dominic to canned fish. He is invariably exciting, except perhaps when he gives us an overdose of mysticism. Or, perhaps my mind is unfavourably constructed to receive such stuff. But when one comes to think of it, it's the "drama" of his thinking that constitutes the main appeal of Huxley's writing. Just take an example. In the essay entitled "Canned Fish" he first describes his visit to an American cannery, and then suddenly but quite naturally takes off into strange and rich ricks of thought: the meaning of work ("Etymologically, work is the equivalent of torture"), automation, the movement of fish, the revolution in the earth's atmosphere "which is changing the climate of the northern hemisphere and is likely to affect profoundly the course of human history during the next few generations or even centuries." In the essay, obvi-

ously, we have advanced a good deal from the days of Lamb, when wit and fancy rather than thought were considered enough to embroider a subject.

If Mr. Chou En-lai is really out to make a favourable impression on the United States, I think he is going the right way about it. After the Bulganin-Khrushchev circus, it was a pleasure to watch the Chinese Prime Minister's progress round India. No exaggerated gestures, no exhibition of brash emotion; just a quiet, dignified self-assurance. He did not obviously try to say all the right things, and even admitted in public that there were differences between some of his ideas and those of Mr. Nehru. There is surely no better way to convince the world of one's sincerity and peaceful intentions. Naturally, there was no question of being objective about colonialism; and the favourite whipping boy of all Asian nations these days, the British, collected their usual share of disapprobation. But on the whole, Mr. Chou gave the impression of being a man who wants something and is not prepared to go to war to get it. Only his stand on Hungary was the usual tiresome stuff; it is quite clear that genocide presents him with no problems of conscience. If it was good to see a communist behave like a human being for once, it was even better to see him being welcomed like one. Calcutta did not wear the same festive air it did for Messrs. B and K, and one can scarcely blame it. How many of the people who restrained their enthusiasm over Mr. Chou, I wonder, did so because they felt the peace and friendship they expressed towards the former visitors had been used to sustain the slaughter of Hungarians. Once bitten—? I see the Chinese Premier is now in Burma. I suspect his reception there will be tinged with even more realism than it was in Calcutta. But Mr. Chou is a lucky man. It is not many of us who get the opportunity of proving our good intentions so soon after protesting them. If there was ever a chance to practise the spirit of *Panch Shila*, this is it. But then, Burma is a small country, as Mr. Chou himself pointed out so significantly a few weeks ago, and it is not so necessary there to match deeds with fine words.

I read Irving Stone's *Lust for Life* several years ago and was immediately convinced that it must be one of the greatest documentary novels of all time. Its increasing popularity over the years shows that I was not wrong. Mr. Stone has since written other books in the same genre, and although all of them are excellent, none has quite reached the level of his Van Gogh story. It was, therefore, with very high hopes that I went to see the screen version now running in Calcutta, and I must say I feel amply rewarded. Kirk Douglas in the rôle of Van Gogh, with an extremely able supporting cast, gives a faithful rendering of an ill-starred life whose main ingredients were genius, poverty and neglect. Van Gogh, it will be recalled, managed to sell by the time of his death only one work, and that for a few dollars. Yet today his best canvases are worth anything between fifty and one hundred thousand dollars each. During the decade of his most mature production he painted six hundred oils and made over eight hundred drawings. The film does not attempt to portray everything that the book contains—that would obviously be absurd to expect—but it shows all the major events of the painter's life, at least everything that was needed to bring out the power and pathos of an existence dominated by an uncrushable creative impulse. Herein, to my mind, lies its success.

THE DITCHER.

INDIA'S
NEW STEELWORKS

For the new integrated iron and steel plant to be built at Durgapur to produce 1½ million ingot tons per annum Simon-Carves will be responsible for the complete coal washing, blending and handling plant, the three coke oven batteries and coke handling plant, the by-product plant and sulphuric acid plant, and the steam-generating plant for the entire works.

The £15-million contribution of Simon-Carves to this great enterprise is characteristic of their close association of nearly half a century with the Indian iron and steel industry.

THE GREAT EASTERN SHIPPING COMPANY LIMITED

CHAIRMAN MR. A. H. BHIWANDIWALLA'S REVIEW

The following is the speech delivered by Mr. A. H. Bhiwandiwalla, Chairman of The Great Eastern Shipping Company Limited, at the Eighth Annual General Meeting of the Company held on 6th December, 1956.

Gentlemen,

It is my annual pleasure to welcome you at this meeting and speak to you on the shipping industry in general and the working of your Company in particular.

The Directors' Report and Accounts of the Company have been in your hands for sometime now and with your permission I shall take them as read. The results, as you know, are satisfactory. The Report and Accounts contain a mass of statistics on the working of the Company, and I do not propose to inflict them on you here again.

The good results derive largely from our tramp activity and the expansion of our agency business. The year under report also saw the epoch-making acquisition by the Company of the first-ever tanker purchased by Indians. Another noteworthy feature of the Company's activities is its contractual commitment to carry 70,000 tons of rice from Burma to India on Government account. After the end of the financial year and in less than six months, the Company's ships have carried almost the entire 70,000 tons of rice.

Tramping Activity

Your Company has taken active interest in tramping right from its commencement. The adventurous and enterprising spirit with which shipowners have been imbued from the dawn of history attains its high-water mark in tramping. Your Company had to face competition of an international character from well-established foreign shipowners; this is an implicit challenge in tramping business. Owing to the ignorance and apathy on the part of Indian shipowners, as well as the Government in this country, about the importance of tramping business and its requirements, we had to face not only lack of co-operation, but actual hostility and obstruction, in the form of numerous restrictions that were placed on our "freedom of the high seas." The position has improved with the Government's recognition of the role of tramping in the country's economic life. I am, however, sorry to say that the majority of Indian shipowners interested in the liner trade have not yet, to say the least, appreciated its significance. Liners and tramps are like two wings, each equally indispensable to the life and growth of India's shipping industry.

In view of this prevalent bias against tramp shipping, the Government has been influenced and swayed by the liner interests and prejudices, and conditions for the creation and growth of the tramp fleet in this country have not been established. It is hoped that the Government will consider the matter dispassionately and allow the freedom of operation to tramp-owners in this country as is enjoyed by successful tramp-owners in other maritime countries.

There is a lot of confusion and far from clear thinking about the economics of shipping in this country. In normal peace times and in the absence of emergencies, the maximum operational efficiency and the optimum utilisation of tonnage should guide and govern the employment of ships. There is nothing sacrosanct about the carriage of India's exports or imports in Indian ships. What matters is the rapid growth and development of Indian tonnage plying on the high seas. This can only be brought about if the Government does not interfere with the employment of vessels and permits tramp operators to follow considerations of operational efficiency and gainful employment which will assist the rapid expansion of the merchant fleet. If some of the Indian ships do not carry part of India's imports or exports, the country will no doubt have to pay the freight charges in foreign currencies. But the Indian ships, which are more gainfully employed in other trades, will earn more foreign exchange than will be paid to foreign ships for carrying part of India's imports and exports. It is the net difference in foreign exchange that matters. The astonishingly rapid progress made by Norwegian and Greek shipowners in recent years would not have been possible if the Governments of those countries had imposed the restrictions which are fettering the Indian tramp operators at present.

The Government restrictions on letting out Indian ships on time-charter to foreigners have acted as a restrictive influence on expansion of Indian tonnage and foreign exchange earning without doing an iota of good to the country. If an Indian shipping company wants to expand rapidly it must make sure of gainful employment of at least some of her ships for a period of time. Time-chartering out of ships provides this sort of employment for an assured period and makes the shipowner immune from the risks of fluctuations in the freight market. With such a hedge he can afford to take the risks of the freight market by building and/or purchasing more ships at the prevailing high level of prices in the place of those chartered out. Moreover, tramp operators have to judge the freight market and at times to cushion on the risks of a fall in the market by letting out some of their vessels on time-charter. The only difference between letting out a ship on a time basis and fixing her for a voyage is the difference between the wholesale selling of freight and the retailing of freight. Whilst the Government has no objection to the retailing of freight, it has prohibited wholesale selling of freight to the great detriment of the shipping industry. May I earnestly appeal to those in authority to examine this question dispassionately and exempt at least tramp operators from the restriction on letting out of their vessels on a time basis?

We ploughed a lonely furrow and persevered when the sun was not shining so brightly on the tramp trades. We carried wheat in bulk from West Australia to India at 35 shillings per ton as compared with today's rate of 140 shillings. Our shipowner friends

then said, "Tramps are a dying breed." What do we find today? Tramps are flourishing at present more than liners. The post-war development of shipping proves that countries which stuck to liner services only have increased their tonnage at a slower pace than the countries engaged in tramping. My appeal and judgment on the comparative usefulness and importance of tramps and liners. Both tramps as well as liners have their respective roles to play in the development of shipping and tramps are far from being either a dying or a useless breed.

I am pleased to inform you that from occasional tramping we have advanced a stage further and have formed a permanent nucleus of ships for our tramp activities. Our present tramp fleet, consisting of s.s. "Jag Vijay", m.v. "Jag Lakshmi" and s.s. "Jag Shanti", m.v. "Jag Lakshmi" is considerably strengthened by the addition, in February 1957, of the largest cargo ship on the Indian registry, viz., m.v. "Jag Lakshmi" of 12,080 tons deadweight, which will be completed and delivered to us by a Japanese shipyard. The earnings from tramping have contributed a good deal to the satisfactory results achieved during the year under report.

Let me, however, utter a word of caution. Tramping is very susceptible to trade cycles. Booms and depressions alternate much more intensively in this line of shipping. It is therefore most important that a tramp operator should consolidate and strengthen his position in good days in order that he comes out unscathed in bad days which inevitably follow in their wake. It is hoped that the Government will create a suitable climate in which tramping as well as liners can flourish side by side and accelerate the development of Indian shipping. May I reiterate that I have nothing against my friends in the liner trades and it is my conviction that both liners and tramps must understand each other and live together.

Agency Business

With the securing of the agency of the Hellenic Lines Ltd. of Piraeus and New York, your Company's agency business has grown considerably. During the calendar year 1956 we shall have handled more than 100 ships as agents at Indian ports. The vessels of the Hellenic Lines with their sailings from Indian ports to the U.S.A. ports, the vessels of the Yamashita Line and a number of other tramp operators have brought considerable revenue to the Company and have added to the earnings for the year under report. The growing tendency on the part of foreign shipowners to entrust their agencies in India to nationals of this country is a welcome development. Your Company being a shipowner itself, is ideally placed to look after the interests of foreign shipowners at Indian ports, and render first-class service. This has not only meant better business and full satisfaction to these principals, but has also ensured improved returns to you. This agency business has also enabled your Company to establish valuable contacts and cement mutually remunerative business relationships, besides providing valuable experience in new trades and lines.

Tanker "Jag Jyoti"

The 12th of April 1956 will rank as a memorable and eventful date in the history of Indian shipping, because it was on this day that the first-ever Indian-owned tanker was acquired by your Company. The Transport Minister's recognition of this pioneering will have heartened and thrilled you. The tanker has been chartered out to the Standard-Vacuum Oil Company for carrying refined petroleum products on the coast. The teething troubles have been overcome and your Company is gaining very valuable experience in this new line.

In fact, your Company wanted to purchase a second tanker. Instead the Government has acquired a second tanker for their Shipping Corporation. With the acquisition of these two tankers, I am glad to say the country has just made a beginning in this vital branch of shipping. With increasing industrialisation and mechanisation of agriculture and the rise in the standards of living, the demand for oil is bound to grow up considerably. The country will therefore need a sizable fleet of tankers for the carriage of crude oil from oil-producing countries to India and distribution of refined products on the coast. A good beginning in the carriage of crude oil to India can be made by the building and acquisition of two super-tankers of 36,000 tons deadweight each. Although it is announced that the Government proposes to acquire and operate further tankers in the public sector, I for one cannot believe that it is the Government's unalterable intention to exclude private enterprise from the task of nation-building in this important field. I therefore request the Government to dispel the doubts and declare categorically that it will change its policy towards acquisition of tankers or super-tankers by Indian shipping companies. The building up of a tanker fleet will require considerable funds and I hope that the Transport Minister will be successful in his endeavours to secure additional allocation of finance for shipping.

Carriage of Rice from Burma to India

With the rise in the international freight market, the Burma-India Conference, which was catering to this trade and which included some foreign shipping companies, folded up its tent and declared its inability to cover this berth except at fantastic freight rates. It was the same Conference which had prevented in the past young Indian companies, like ours, from participating in this trade monopolised by their members on the pretext that the berth was adequately covered by the U.S. Liners. It is also clear that they would not allow outsiders to participate in this trade. When the members of the Conference declined to lift this vital movement of rice from Burma to India, your Company approached the Government and assured them of our willingness to co-operate in the essential movement of rice from Burma to India at reasonable

freight rates. Subsequently, I am glad to say, Indian shipping companies undertook to lift 3 lakh tons of rice from Burma to India in six months at freight rates which were 20 to 25 per cent. lower than those indicated by the members of the Conference. Your Company has almost fulfilled its commitment for the carriage of 70,000 tons of rice ahead of others and has thus established its claim to a 25 per cent. share in this trade.

Coastal Trade

It will please you to learn that the fulfilment of your Company's commitment to carry Burma rice did not adversely affect the liftings on the coast. Unlike others, your Company chartered outside tonnage and ensured that the carriage of coastal cargoes in the Company's vessels was not adversely affected. In fact, our coastal liftings amount to a quantity which could only have been lifted by the engagement of all our owned vessels in the unremunerative coastal trade. It is a creditable achievement especially because your Company, like other companies, could well have diverted some of its coastal tonnage to the Burma-India rice trade without bothering to charter additional tonnage at the present high charter rates. In view of the uneconomic freight rates on the coast, any diversion from the coast brings in some sorely needed relief. However, your Company resisted this common temptation and has continued to maintain its coastal liftings.

The uneconomic coastal freight structure can be evidenced from, among other things, the extremely slow growth in coastal tonnage as compared with overseas tonnage. In fact, no one can afford to buy, for coastal operation, ships at today's very high level of prices and high costs of operation and run them at low and uneconomic freight rates. The Government's persistent refusal to permit a commensurate rise in the coastal freight rates has administered a setback to the cause of Indian shipping. If the Government had conceded economic freight rates in time, shipping companies would have acquired additional tonnage for coastal operation at reasonable prices at the most opportune time. It is no use now crying over spilt milk and let us hope that the Rail-Sea Co-ordination Committee which has examined this question thoroughly will recommend to the Government the necessary increase in the coastal freight rates, so as to bring them to an economic level.

The inadequacy of the coastal tonnage in relation to the cargo offering for coastal movement will be greatly aggravated with the progressive execution of the Second Five-Year Plan and enormous increase in the quantum of cargo that is expected to be moved by coastal vessels. We feel sure that the rising tempo of various schemes and projects under the Second Five-Year Plan will bring about a transport bottleneck in the country. The railway and road transport will not be able to handle all the increased traffic and the coastal movement by sea may be expected to increase progressively from 3 million tons to about 5 million tons per annum. Meanwhile a number of old coastal vessels may have to be scrapped. The problem of replacement and expansion of coastal tonnage therefore assumes great urgency and importance.

Your Company was among the first to be seized of this problem. The freight rates on the coast, even allowing for an increase that may be recommended by the Rail-Sea Co-ordination Committee and accepted by the Government, cannot bear the extremely high cost of new or second-hand tonnage. This is because in the ultimate analysis the coastal freight structure is bound to be influenced by the railway tariff. The railways carry an overwhelmingly large proportion of the country's internal traffic and the coastal freight rates therefore cannot be far out of step with the railway rates. The shipyards of the world are fully booked and delivery of new ships cannot be expected under three or four years. Second-hand tonnage is extremely scarce and the very few ships that are offered are quoted at fantastic prices.

My colleague on the Board, Mr. Vasant J. Sheth, toured the U.K., the U.S.A., Europe and Japan to see if any way could be found out of the prevailing tonnage crisis. He found that the only country which could assist India is the U.S.A. with her merchant fleet and her generous tradition of assistance to underdeveloped countries. On his return to India, the Company decided to pursue the matter earnestly and deputed the Company's former General Manager, Dr. Sen, to the U.S.A. For four months Dr. Sen persisted in his skilful advocacy of India's dire need for ships, which could only be met by the release of Liberty ships from the merchant fleet of the U.S.A. The Government of India and the Indian Ambassador in America, Mr. G. L. Mehta, lent their weighty support and made their good offices available to Dr. Sen. After protracted negotiations and conferences with various Executive Departments of the U.S. Government, Dr. Sen felt confident of their support of enactment of suitable legislation for the release of Liberties from the merchant fleet to India. However, because of the impending elections in that country, it was too late to introduce the necessary legislation. Now that the Administration has emerged successful in the elections, I have every hope that the necessary legislation will be passed shortly and that at least 12 Liberties will be released to our country.

These second-hand Liberty ships which, though ageing, are kept in good condition, are urgently required to augment our coastal tonnage in the transitory period and to avert a transport crisis. By releasing them now the U.S. Government would have helped us before these ships run out their useful life and become obsolete in their stables. With the progress of the Second Five-Year Plan there is bound to be a very severe tonnage crisis on the coast. These ships will just help us tide over the crisis in our transport system and thereby assure the success of our Second Five-Year Plan. If the U.S.A. Government requires an undertaking that these ships would only be used for our coastal trade and not for competition with the U.S. Liners, this may be given on a Government-to-Government level. It cannot be regarded as an unreasonable demand in view of the U.S. Government's legitimate concern to safeguard their own interests. What is most important is that we must get going and save ourselves from being engulfed by a transport crisis. It is also clear that these ships could be utilised for the coastal trade only if they are released at the usual prices and not at the international level of prices. The coastal trade with its low freight-rate structure will not be able to bear the incidence of the high international price level of ships.

In the conditions as they exist in the world today, we are sure that it is only the U.S. Government which can assist a young country endeavouring to build and consolidate a democracy on foundations of unregimented economic planning and well-being. Other powers are in no position to assist our country in this direction. Our Prime Minister is visiting the United States and perhaps during his visit the release of U.S. Liberties could be arranged. If the Government desire to pursue this vital matter we are prepared to send our representative to the States in order that he may be available on the spot for necessary consultations.

Your Company took the initiative and have put in considerable efforts for the release of Liberties from the merchant fleet of the U.S.A. Out of 12 Liberties proposed to be released to our country, we can legitimately claim an allotment of six Liberties for our coastal fleet. Three or four Liberties will serve as timely replacements for the three or four coastal time-charters which will be expiring shortly and the remaining two or three Liberties will be a welcome addition to our coastal fleet. Your Company is prepared to finance up to 50 per cent. of the cost of these ships from its own resources.

Port Facilities and Dock Labour

The progressive implementation of the Second Five-Year Plan would not only bring about an increase in the coastal movement by sea but will also increase the foreign imports of capital goods, machinery and raw materials into the country. The present port facilities in the country are woefully inadequate. Congestion at ports and delays to ships which are common even at present are on the increase. It will therefore be an impossible task to handle the enormously increased coastal and overseas traffic at the ports without a speedy and commensurate improvement and expansion of port facilities. Otherwise, I am afraid, we shall not only be unable to handle the increased traffic, but would also pay heavily for the limited traffic in terms of increased transport costs and waste of national tonnage as a result of idleness and congestion at the ports. The Government would therefore be well advised to accord topmost priority to the improvement and expansion of port facilities.

The introduction of the piece-rates in Bombay has had a salutary effect on the output and earnings of dock labour. It is essential that the piece-rate system should be extended to all the ports. It is hoped that increasing co-operation between employers and dock labour will improve the turnaround of ships and will enable them to carry more efficiently the increased overseas and coastal traffic.

Fleet Expansion

Your Company started its operations in 1948 with one Liberty ship which was acquired for about Rs. 22 lakhs. At present the Company owns eight ships worth Rs. 3.25 crores at cost and much more at market value. The three new ships which are on order will cost a further sum of Rs. 3.75 crores. By the time this young Company of yours is 11 years only, we shall have invested as much as seven crores of rupees in the shipping industry and become owners of 11 vessels—a steady accretion of one vessel each year.

I have taken into account only the committed expansion programme of the Company. The allotment of Liberties from the U.S. merchant fleet and part of the expansion programme submitted by us to the Government in pursuance of the Second Five-Year Plan, have not been taken into account. We are still awaiting the Government's decision on our expansion plan submitted to them in February 1956.

Capital Structure

The initial paid-up capital of the Company in 1948 was a modest figure of Rs. 20 lakhs. Since then your Company issued bonus shares twice, issued new equity shares of Rs. 20 lakhs and preference shares of Rs. 25 lakhs. The paid-up capital of your Company thus stood on 30th June 1956 at Rs. 85 lakhs, out of which Rs. 60 lakhs was equity share capital and Rs. 25 lakhs preference share capital. With the present issue of Rs. 60 lakhs in equity shares, your total subscribed capital will rise to Rs. 1.45 crores, of which Rs. 1.20 crores will be equity capital. Your Directors took the decision to increase the capital not only because your Company was undercapitalised in relation to the cost of the fleet, but also because they wish to maintain a healthy ratio between the risk-bearing capital and loan liability of the Company to the Government.

Prospects

Our tramps are doing very well. The m.v. "Jag Lakshmi", which is expected to be delivered in February 1957, will operate for four months in the current year. The earnings from the operation of the tanker, agency business, Burma-India rice trade and four months' trading of m.v. "Jag Lakshmi" will also be reflected in the current year's results. Subject to unforeseen circumstances, therefore, I visualise a bright future for your Company in the current year.

In the five months ending 30th November 1956, the gross freight earnings have been Rs. 144 lakhs as compared with Rs. 96 lakhs for the corresponding period during the year under report. If the remaining seven months maintain the promise of the first five months of the year, the gross freight earnings should reach the target of Rs. 3 crores, as compared with Rs. 2.11 crores for the year under report. On this assumption and in the absence of any unexpected setbacks or deterioration in trading conditions, it may be possible to maintain the dividend on the increased capital.

Government Assistance

I have time and again criticised those policies and actions of the Government which, in my opinion, are retarding the development of shipping. By and large, however, the Government is endeavouring its level best to develop Indian shipping by grant of generous loans and many other measures of assistance. The Transport Minister, the Transport Secretary, officials of the Transport Ministry, the Director-General of Shipping and his staff have all continued to assist and promote the cause of Indian shipping. Your Company owes a deep debt of gratitude to them all. It is a rare

experience that Government departments go out of their way and take the initiative in conveying useful information and providing valuable guidance to companies even on the telephone. With such assistance from Government, I am sure, your Company will march forward to new milestones of progress and play its rightful part in what our Prime Minister aptly called "the mighty adventure of building a new India."

The news about the resignation of Shri Lal Bahadur Shastri as Transport Minister has been received with great regret by all and especially those who have first-hand knowledge of his sincerity and devotion to the cause of Indian Shipping. It is hoped that his qualities will be utilised in some responsible capacity for the good of the country.

You will, gentlemen, undoubtedly wish me to extend a cordial welcome to Shri P. R. Subramanian, Senior Deputy Director-General of Shipping, who has recently joined the Board of your Company as a Government Director. Mr. Subramanian is an able officer with long experience of shipping problems. His association will therefore be of great benefit to your Company.

Gentlemen, I am sure you will join me in expressing our well-deserved appreciation and thanks to the staff, both afloat and ashore, for their devotion to duty and the way in which they have shouldered increasing responsibilities as a result of the rapid expansion in the activities of the Company.

I thank you, gentlemen, for giving me a patient hearing.

May I now move that the Report and the Accounts for the year ended 30th June 1956 be and are hereby adopted?

Note: This does not purport to be a record of the proceedings of the Annual General Meeting.

THE INDIAN IRON & STEEL COMPANY LIMITED

CHAIRMAN MR. T. LESLIE MARTIN'S REVIEW

At the Annual General Meeting of the Shareholders of The Indian Iron & Steel Company Limited, held in Calcutta on 30th November, 1956, Mr. T. Leslie Martin, the Chairman, dealing with the year ended 31st March, 1956, said:—

Gentlemen,

In my address to you last year I stated that it was extremely unlikely that the production and trading results of that year would be repeated and that the large increase in the revenue and consequent profits could only be regarded as a windfall. Happily, my prognostications have proved entirely wrong and very wide off the mark. From the Report and Accounts for the year 1955-1956, which have been in your hands for some days, you will have seen that the results of the previous year have actually been exceeded. Today I do not intend to make any forecast but will confine my remarks, in the main, to facts and will explain to you, briefly, the factors that have contributed to this happy position.

Production

The Company's total production of 7,06,986 tons of iron fell short of the figure of the previous year by less than 9,000 tons. The output, however, of your Burnpur Blast Furnaces which provide the hot iron for steel making fell from 5,17,899 tons to 4,73,172 tons. This was due to the fact that No. 2 Furnace was off production for periodical re-lining. The loss of production on this account, however, proved to be much less than had originally been envisaged as, by improved re-lining technique, the work was completed in a very much shorter period than on any previous occasion.

With the change over of two of the Steel Melting Furnaces from Producer Gas Fuel to tar firing we were able, and are now in a position, to utilise a greater proportion of steel scrap in our furnaces than was formerly the case. As an offset to the inevitable drop in the availability of iron for steel making resulting from the closure and re-lining of No. 2 Blast Furnace, an intensive drive for the procurement of steel scrap from local sources was launched and carried out with such success that it was possible to make good the anticipated deficit and even to surpass last year's

production tonnage of ingot steel by some three thousand tons. A further benefit was received by reason of the fact that the Rolling Mills were able to produce a larger proportion of the output in the form of finished steel commanding a larger margin of profit than semi-finished steel such as billets, blooms and slabs.

The production of iron from your Kulti Blast Furnace was 233,814 tons as against 197,702 tons in 1954-55, since both Furnaces were in full production throughout the year. In addition to the benefit of the consequent increased availability in the sale of pig iron, full advantage was taken of a larger allotment of iron, sanctioned by Government, for use in the Kulti foundries. This enabled an increase in the production tonnage of Spun Pipes and General Castings of some sixteen thousand tons which, again, had a marked effect on the satisfactory trading for the year under review.

Profit

Taking these factors into account an increase in profits of some Rs. 70,00,000/- has been realised for the year. From this amount we are required, in accordance with the terms of the Agreement entered into with Government (to which reference is made in your Directors' Report) to set aside Rs. 29,47,838/- to a Special Fund to be utilised solely for the purpose of our expansion programme.

As to the future, I can only say, in view of the excellent results for the year 1955-56, that despite the many difficulties encountered your Burnpur Works have worked to full capacity and that until this capacity is augmented by the extensions now in progress, which will gradually come into operation, no appreciable increase in output can justifiably be looked for. Also, it must be remembered that it is not unlikely we may have to contend with increasing difficulties in the operation of the existing plant owing to the disorganisation caused by the expansion works in progress. I would, therefore, ask you to bear this in mind when forecasting possible results over the next year or so.

In this connection I should like to take the opportunity to pay tribute to the very efficient manner in which the task of the Planning and Co-ordination of

the extensions works is being carried out by your Consulting Engineers, the International Construction Co., Ltd., and to the spirit of co-operation between them and the Works Management which has enabled all difficulties encountered to be smoothed over with the minimum of inconvenience to either side.

Finance

So far as the financial figures for the year under review are concerned there can, I think, be few points on which you will require further enlightenment. The Accounts as drawn up in conformity with the provisions of the new Companies Act 1956 give even fuller particulars than the previous very full disclosure it has always been the practice of your Board to make. There is, however, one item on which I might perhaps remark. You will notice that the Accounts show the transfer of a sum of Rs. 7,00,000/- to General Development Reserve. You may feel some doubt on the necessity for this transfer, having regard to the very large amounts set aside on the other extensions reserves. I would, therefore, like to explain that the sum in question represents the approximate reduction in the normal taxation liability for the year by reason of the Development Rebate allowed by Government on exemption of 25% of the cost of the new plant and machinery installed. The consideration underlying this concession is that the saving in tax should be set aside for development purposes. We count to a large extent on the continuance of this rebate for financing both the 1953 and 1955 extensions and it is very desirable that this position should be recognised by the immediate institution of a General Development Reserve as a separate item of the reserves.

Dividends

In view of the substantial increase in the amount of profits earned your Directors had naturally wished to mark the position by some increased distribution to the Ordinary share capital. Every endeavour was accordingly made to obtain the approval of Government to the admission of the shareholders to an increased participation in the profits, but as reported in the Board's Circular Letter of the 1st October, 1956, Government have found themselves again unable to agree at this stage to an increase in the rate of dividend. Though the position is disappointing to us all and is one which your Directors greatly regret, as I advised you under similar circumstances last year, the orders of Government cannot be ignored nor their legality challenged without serious detriment to the interest of the Company. It is incumbent on us, therefore, to accept the decision of Government with good grace. To the extent that profits earned are retained in the business the finance of the expansion programme and the ultimate repayment of the loans that are being incurred is facilitated. Also, we may derive such consolation, as we may, for the present restriction of dividend from the assurance that has been given by Government in their letter dated 22nd September, 1956. It has been stated in that letter that the mobilisation of the available resources for the completion of the expansion programme is in the long term in the interests of the shareholders "as ultimately they will have their full share of the increased profits".

1953 Extensions

You will, I trust, have a full appreciation of the progress made with the 1953 extensions programme from the descriptive booklet which has been issued as a supplement to the Report of your Directors and will have noted that the programme is scheduled to be brought to completion by the end of 1958 in two stages.

Further Extensions

Particulars of the further expansion to an annual output capacity of 800,000 tons of saleable steel which at the request of Government, has been agreed to, have been given in the Board's Circular Letter of the 5th November, 1956. In my speech to you last year I explained that no decision as to the undertaking of this further expansion could be arrived at until the revised sales retention prices of steel, to be operative as from the 1st April, 1955, had been notified by Government and we had thereby been enabled to forecast with some reasonable degree of accuracy the future financial position of the Company. The revised retention prices were communicated to the Company in February, 1956, and were fixed at a satisfactory level. The further expansion was, therefore, approved by your Board and the necessary financial negotiations for securing the finance to cover the cost put in hand. As you are aware, this programme provides mainly for an increase in the finishing mills capacity. It is scheduled for completion under normal conditions early in the second half of 1959.

The outline of the general financial arrangements in this connection, which has been shown in the Board's Circular Letter, will be placed before you for formal consideration at the Extraordinary General Meeting to be held tomorrow. I will, therefore, not comment on this occasion other than to express our great appreciation of the full understanding and sympathetic consideration that has been shown by Government in the fixation of the current sales retention prices of steel and at all stages of the subsequent negotiations even though it did not prove possible for them to see eye to eye with your Board on the question of the price at which the proposed rights offer of additional Ordinary share capital should be made.

International Situation

All that I have said on your immediate and future prospects and the completion of both the extension schemes must be judged in the light of the rapid developments which are taking place in the entire international sphere. No one can tell what ultimate direction these may take but it would seem that world-wide impact on almost every national activity may result, which could seriously upset the implementation of all important schemes dependent upon sea transport, foreign exchange, the manufacture and delivery of imported plant and machinery together with the thousand and one other national requirements for industrial or other developments.

In conclusion I should like on your behalf to express our appreciation of the services rendered by your General Manager, Mr. J. McCracken, and by all the staff and workers whose able and willing combined efforts have made possible the very satisfactory results that have been achieved.

NOTE: This does not purport to be a report of the proceedings of the Annual General Meeting, which will be sent to shareholders in due course.

MEETING OF ASSOCIATED CHAMBERS TEXT OF RESOLUTIONS ADOPTED

AT the annual general meeting of the Associated Chambers of Commerce in Calcutta this week, the following eight resolutions were adopted unanimously.

Ports and Transport.—Bombay Chamber of Commerce and Industry. The Associated Chambers of Commerce of India are gravely perturbed by existing transport difficulties and re-assert their conviction that a massive expansion of the country's transport system is a vital necessity for the success of the second five year plan. They urge that greater weight should be attached to a speedy improvement and expansion of transport facilities, and in particular that:

(1) Urgent efforts should be made to remove the present congestion at the major ports by the provision of additional mechanical equipment and the introduction of incentive schemes for labour. Since no improvement will be effective unless there are adequate facilities for clearing goods to internal destinations the communications serving the ports should be concurrently expanded to cope with a greater volume of incoming traffic.

(2) To supplement the capacity of Bombay, the development of Kandla and Bhavnagar should be hastened, while the strain on Madras should be relieved by a more extensive use of the minor ports. To that end, the minor ports themselves, as also their internal communications, should be improved to enable them to play their full part.

(3) Rail, road and inland waterway transport require even greater expansion than that already contemplated and require further a closer integration which will enable them effectively to supplement each other.

Finance.—Bengal Chamber of Commerce and Industry. The Associated Chambers of Commerce of India are concerned at the shortage of finance which is already being acutely felt in the country, both for working capital and for long-term development, and they earnestly commend to the Government the importance of adopting every sound financial measure for alleviating this shortage.

The Companies Act, 1956.—Madras Chamber of Commerce. This Association wishes to draw attention to the difficulties which many companies have experienced in the working of the Companies Act, 1956. Although defects were inseparable from the introduction of a complicated piece of legislation of this nature, the Association recommends that the Act having been in force for only a comparatively short time, the Government should avoid undue haste in effecting amendments, and should ensure that the experience of this and similar Associations is fully consulted before amendments are finally drafted. With this in mind, the Association is at present collecting detailed information from its constituents with regard to their experience of the Act and its working.

Labour.—Punjab and Delhi Chamber of Commerce. In fulfilment of the general objects of labour policy laid down in the second five year plan, the Associated Chambers of Commerce of India are anxious to see the adoption of realistic and practical measures which will contribute materially towards achieving the economic targets set by the plan and will at the same time reduce the possibility of large-scale dislocation caused by industrial strife. For these purposes, they consider that detailed and practical policies should be evolved in the following two main directions:

(1) A realistic and progressive wage policy should be drawn up which, while ensuring a fair reward to labour and a fair share in the country's increasing prosperity, will provide positive incentives by linking wages with productivity and will be consistent with the Government's overall financial policies and with the limitations of the economy as a whole. It is the responsibility of employers to provide a lead in the evolution of such a policy and the Government, as the largest employer in the country, should itself play a leading rôle.

(2) With the disappearance of the revisionary power hitherto exercised by the Labour Appellate Tribunal, it has become urgently necessary to provide a code of fair labour practices and conventions for the guidance of Industrial Tribunals. Such a code of basic principles would assist in avoiding conflicting or arbitrary decisions by individual Tribunals and would at the same time go far to remove many issues, such as bonus, from the area of uncertainty and dispute.

The Second Five Year Plan: Private Enterprise and Foreign Investment.—Bombay Chamber of Commerce and Industry. This Association, having already welcomed the second five year plan and having assured the Government of India of its full co-operation in the plan, earnestly hopes that the Government for its part will find it possible to accept as vital the rôle that private enterprise and organised industry and commerce have to play in the fulfilment of the plan's targets, and will take all practical steps to assist these sectors of the economy in their appointed tasks.

(2) This Association, while realising the limitations imposed by the Government's policy statements, is encouraged by the Government's pragmatic approach to individual propositions and re-asserts its belief that the Government of India will do all in its power to foster and accelerate sound plans of expansion and sound new industrial projects put forward by private enterprise.

(3) This Association holds that if this pragmatic approach becomes more widely demonstrated by decisions of the Government of India, it will have a profoundly good effect on the volume and variety of foreign investments likely to be offered on terms mutually acceptable to the Government of India and to the intending investors.

The Cotton Textile Industry.—Upper India Chamber of Commerce. This Association urges the Government of India to allow a reasonable expansion in the productive capacity of the cotton mills sector, so as to counteract the present shortages of cloth in the hands of the consumer and also to ensure that sufficient cloth is available at economic prices to meet the increased demand expected by the end of the second five year plan period.

Taxes on Commodities.—Bengal Chamber of Commerce and Industry. This Association reiterates its opposition to taxes imposed on the movement of a number of economically important commodities by State Governments under the terms of the Assam Taxation (on goods carried by roads or inland waterways) Act and the West Bengal Taxes on Entry of Goods in Local Areas Act. It strongly recommends the withdrawal of these taxes on the grounds that they constitute an unwarranted form of taxation which completely disregards the economics of production and the incidence of other taxation, and, in particular, that at the present time they are contributing materially to a deterioration in the economy of the tea industry.

Sales Tax.—Bengal Chamber of Commerce and Industry. This Association wishes to record its serious concern at the difficulties which continue to be experienced in the levy of sales tax, at the interference with business activities arising from sales tax legislation and at the burdensome cost of collection as reflected in the unproductive labour involved in its assessment. Inasmuch as all efforts to simplify sales tax administration have hitherto failed, and since the present problems have been aggravated by the changes in State boundaries effected under the States Reorganisation Act, the Associated Chambers of Commerce consider that this field of taxation should be rationalised by the introduction of a uniform Centrally-administered tax, even if this involves a further amendment of the Constitution.

DISCUSSION ON ASSOCHAM RESOLUTIONS

THE resolutions adopted at this week's annual general meeting of the Associated Chambers of Commerce in Calcutta reflect some of the top priorities in the business worries of the year. The shortage of finance for short-term and long-term needs is emphasised in two. One outlines the transport difficulties which are expected to grow as the second five year plan gains momentum; and two others criticise taxation measures. The remainder deal with the Companies Act, 1956, labour policy, and the Government's attitude to the expansion of the cotton textile industry.

Introducing the resolution on ports and transport, Mr. A. J. C. Hoskyns-Abrahall (Bombay Chamber) warned that congestion in the ports was likely to grow. It seemed that the operation of major ports would have to be put on an emergency footing; a co-ordinator, or co-ordinating committee, might have to be appointed in each, and given wide powers to ensure the smooth and speedy movement of goods. It was necessary to extend the piece-rate system of paying dock labour to all cargoes; other needs were more efficient stacking, better servicing and maintenance of mechanical equipments, and a higher calibre of officers to handle labour problems. Mr. J. R. Galloway (Madras Chamber), who seconded the resolution, pointed to the heavy losses suffered when ships were delayed by port congestion. He said that 84 vessels which sailed from Madras during October and November this year spent a total of 650 days idle waiting for berths; on a conservative estimate, the time lost by these vessels cost over Rs. 36 lakhs.

Mr. W. H. S. Michelmore (Bengal Chamber), moving the resolution on finance, said that most companies in the private sector today had inadequate reserves of working capital for their normal operations. It was impossible to float any equity capital except on terms which were artificially biased in favour of the subscriber. The market for debentures had almost become dead since the nationalisation of life insurance, and the private individual investor was being eliminated by the socialist pattern of society. Mr. Michelmore offered a number of reasons for the financial stringency, such as taxation, the adverse balance of trade, rising inventory and wage costs, and the utilisation of former surpluses of working capital for expansion or modernisation. He emphasised the need to mobilise savings, extend banking facilities and habits, and depend on indirect taxation for a larger proportion of the Government's revenue. The resolution was seconded by Mr. E. Parker (Bombay Chamber), who urged that strenuous efforts be made to attract foreign capital.

Mr. J. R. Galloway (Madras Chamber) introduced the resolution on the Companies Act, 1956, and quoted a Bombay High Court criticism of the lack of clarity and precision in its wording. He urged the Government to use fully the experience of the business and professional community when amending the Act. This experience would be readily placed at its disposal. Mr. N. D. Harris (Bengal Chamber) seconded the resolution.

Moving the resolution on labour policy, Mr. F. C. Badhwar (Punjab and Delhi Chamber) declared that it was inappropriate in an industrial or commercial unit to base the emoluments of workers on attendance only and to dissociate them from actual output. Human nature being what it was, this usually reduced incentives and interest; it appealed only to those who wanted to do just enough to avoid adverse criticism or penalties. Mr. H. M. L. Williams (Bengal Chamber), seconding the resolution, said that healthy trade unions run by practical men who understood industrial problems could promote the growth of the economy.

Mr. J. F. Sinclair (Bombay Chamber), moving the resolution on the five year plan, urged a practical approach to the problems of investment. Referring particularly to foreign capital, he said that there was appreciation of the size and difficulties of the programmes of the economic expansion on which India had embarked. There was also a somewhat tardy but growing recognition that, given fair and reasonable terms, this was a country which from the investment point of view, no international industrialist could afford to neglect. Mr. G. N. Noel Tod (Madras Chamber) seconded the resolution, and pointed to certain unrealistic aspects of the Government's sugar, cotton textile and plantation policies.

The resolution on the cotton textile industry was moved by Mr. R. L. Powell (Upper India Chamber). He said that the demand for cloth was expected to go on increasing. It could be either suppressed by such measures as controls and heavy excise duties, or met by increasing production. It was doubtful whether the demand for one of the necessities of life could be suppressed indefinitely without creating economic, social and political stresses. The resolution was seconded by Mr. E. Parker (Bombay Chamber).

Mr. J. H. P. Bent (Bengal Chamber), moving the resolution on commodity taxes, criticised the Assam levy on the carriage of goods by roads and inland waterways, and the West Bengal tax on the entry of goods into local areas. These, he declared, had imposed a particularly heavy burden on the tea industry. It was quite wrong in principle that an article which already bore a Central Government excise and export duty should have imposed upon it by individual States additional commodity taxes, which in their nature and effect were practically similar to an excise duty. The resolution was seconded by Mr. J. R. Galloway (Madras Chamber).

Introducing the resolution on sales tax, Mr. G. H. Clarke (Bengal Chamber) stated that an easily administered sales tax levied by the Centre at a low and uniform rate on all taxable commodities, without exception, would not only ensure adequate revenue but would discourage evasion. Traders had suffered much harassment under the prevailing system of sales tax administration; it was essential that it should be rationalised. Mr. J. R. Galloway (Madras Chamber) seconded the resolution.

The Great Sphinx

Largest of all the Sphinxes, The Great Sphinx at Giza, near Cairo, is undoubtedly the most famous. Its origin is shrouded in mystery, although it is known to be so old that in these modern times it has become a symbol of durability.

And in this matter of durability the Sphinx could almost symbolize S.T.C., whose systems and equipments for communications and control are a by-word amongst those whose responsibility it is to plan for the future. S.T.C. is a world wide organisation. Its immense resources for research and manufacture are constantly producing new and yet more efficient methods of communication and control, and its engineers are always available for consultation.

The world still awaits the adventure of Wireless... it's the age of the horse-drawn carriage. And people who talk of flying aren't airmen as yet; they're poets.

Calcutta is India's capital, and at one of its busy wharves, there's a picturesque mailboat from England, self-conscious in its new power of Steam. Look away for a moment to something else that is new. There! In those crates... the first few cakes of a new soap: *Sunlight*. The crates say: 'Made in England by Lever Brothers.'

Bobbing away on porters' heads, the cakes go off to some obscure bazaar of old Calcutta and from there... on to journey's end: the homes for which Levers have made the soap.

That's how it was one summer day of 1888. Lever Brothers (then, a three-year old British enterprise) thought the world of *Sunlight*. Soon, thousands of bazaars were stocking 'the tablet that foamed'—and families became converts for good.

Little by little, the motor car arrived (the model with the turkey-croak hooter); then the telephone began to jangle in Indian homes. And in those homes, time wasn't standing still either. People were asking for new and varied products to meet their changing needs. So, Levers—developing in step with them—produced for the home such things as *Lifebuoy*... *Vim*... and *Lux Toilet Soap*. This is becoming a story of familiar names, isn't it?

In 1922, Levers started making soaps in Calcutta—encouraged as they were by the increasing demand for their products. In 1934, a second factory went up in Bombay.

In 1926 came Dalda Vanaspati from Holland. And, with it, there started a revolution in India's nutrition—the use of a hardened vegetable oil for cooking. To manufacture *Dalda* in India, a new Lever Company was born in 1932: 'HVM'—the Hindustan Vanaspati Manufacturing Company Limited.

And still the Indian home called for newer and 'different' products. And so there came to India *Pears Soap*, *Erasmic* and *Gibbs* products, *Himalaya Bouquet* toiletries, *Rexona Soap*—familiar members of the Lever family. Marketing of these products led to the formation of yet another Lever Company in 1935: 'UTL'—United Traders Limited.

Now, you can't separate the tale of these products from the tale unfolding within Levers. The people in their factories and offices were changing, for one thing. Foreign experts were joined by the young men of India and today over four-fifths of Levers' executives are Indians.

Meanwhile, Levers were buying all the raw materials that India could offer. These purchases grew as manufacture expanded—till, in 1955, about 88 per cent of the oils and fats that Levers needed was supplied by India's fields and coconut groves.

An international partnership—that's what soon grew up in Levers. Foreign technical and marketing experience linked up with the talents and resources of India. Result? The Indian housewife today is supplied with products that are among the world's best.

Today, we are sixty-nine years from the crate of soap that, almost unnoticed, started Levers in India. Today, a new chapter in our story has opened with the association of Indian and foreign capital in Levers. Indian and British Directors work together on the Board, too. Here's a joint venture that serves the nation and advances with it.

Yes, the future arrives with each tick of the clock. And Levers face that future with a new name: 'HINDUSTAN LEVER LIMITED.' So the stories of HVM and UTL end, in a sense—because they've merged with 'Lever Brothers' to form Hindustan Lever.

But the Lever story goes on. For India's story goes on, and Levers have grown with India's needs and progress. As it has done for sixty-nine years, Hindustan Lever will continue to serve the Indian home.

Finance in India and Abroad

CAPITAL GAINS, DEPOSITS AND COMPANY TAXES

PROVISIONS OF NEW FINANCE BILL

THE Finance (No. 3) Bill, 1956, which was introduced in the Lok Sabha recently, proposes to revive, with some modifications, the scheme which was in existence for the taxation of gains resulting from the sale, exchange or transfer of capital assets during the period 1st April, 1946 to 31st March, 1948. The new scheme will apply to capital gains arising on or after 1st April, 1956. The important points on which the new scheme differs from the old may be outlined as follows. In computing the amount of capital gains, the assessee was given the option to adopt, instead of the actual cost of the asset, its fair market value as on 1st January, 1939. Now the assessee is to be given the option to adopt, instead of the actual cost of the asset, its fair market value as on 1st January, 1954. In the case of non-company assessee, only the excess of capital gains over Rs. 15,000 was subjected to tax. Now it is proposed not to levy a tax on capital gains if (i) the capital gains do not exceed Rs. 5,000 or (ii) the total income, including the capital gains, does not exceed Rs. 10,000. Formerly, in the case of non-company assessee, special rates of tax were prescribed for capital gains, ranging from one anna in the rupee to five annas. The rates of tax were thus not related to the total income of the assessee. Under the new Bill, it is proposed to relate the rate of tax on capital gains to the other income of the assessee. One-third of the capital gains will be added to the other income, and the income-tax rate applicable to the sum so arrived at will be the rate at which the whole of the capital gains will be charged to tax. In the case of companies, tax was not charged if the amount of capital gains did not exceed Rs. 15,000. But where the gains exceeded Rs. 15,000, the whole amount was taxed. It is now proposed to tax the full amount of capital gains. In the case of companies, the rate of tax for capital gains was the ordinary income-tax rate applicable to a company. No change is proposed in this respect.

Some Exemptions Dropped

The following gains were exempt from the tax, but the exemption will now be dropped: gains arising on the transfer of property on compulsory acquisition for public purposes; gains arising on the distribution of assets on the dissolution of a firm or association of persons or on the liquidation of a company; gains arising on the sale of residential property possessed by assessee or his parent for seven years or more; gains arising on the sale of building, plant and machinery belonging to a business, invested in the purchase of a new building plant or machinery within a specified period; and gains on the transfer of assets to an irrevocable trust. The exemptions it is proposed to retain are: gains arising on the distribution of assets on the total or partial partition of a Hindu undivided family; gains arising on the transfer of assets by will, bequest or gift; gains arising on the transfer by a parent company of its assets to a 100 per cent Indian subsidiary; and gains arising on the sale of residential property which had been occupied by the assessee or his parent for two years, the gains being invested in the purchase of new property within one year.

As before, capital losses now can be set off only against capital gains. Formerly, the capital losses of any year which could not wholly be wiped off by the capital gains of that year could be carried forward for a period of six years for set-off against capital gains in the later years. To permit such carry-forward, the capital loss sustained in any 'previous year' was to have exceeded Rs. 15,000 in the case of non-company assessee. Now it is proposed that the capital losses of any year which cannot wholly be wiped off by the capital gains of that year may be carried forward indefinitely for set-off against future capital gains. To permit such carry-forward, the capital loss sustained in any 'previous year' must exceed Rs. 5,000 in the case of non-company assessee. These provisions are covered by Clauses 2, 4, 5 and 7.

Under Clause 3, it is proposed that in the case of companies, the depreciation allowances and development rebates allowed should be added as an item of income, unless the company deposits with the Central Government before the 30th June of the relevant assessment year a prescribed amount depending on its undistributed profits and reserves. The amount deposited will consist of two parts. The first part is a prescribed percentage of the amount by which the available profits of the year (i.e., profits before deduction of depreciation or development rebate less taxes payable less dividends declared) exceeds the sum of Rs. 1 lakh. The second part is a prescribed percentage of so much of the accumulated profits and reserves as are not represented by fixed assets in the business. The percentages referred to above will be prescribed by the Central Government and notified from year to year, but will not exceed 75 per cent for the first part and 25 per cent for the second part of the deposit. The deposit will carry interest at the rate prescribed by the Government and be refundable wholly or in part where the Government is satisfied that the amount refunded will be used in the business for a purpose approved by it. Rules for these and other connected matters will be issued by the Central Government.

Rates of Supertax

Under Clause 8 the effective basic rates of supertax applicable to companies for the financial

year 1957-58 will be the same as are applicable for the current financial year 1956-57, namely:

- For companies which have made the prescribed arrangements for the declaration and payment in India of dividends and for deduction of supertax from dividends paid to shareholders not resident in India:
 - For companies referred to in Section 23A(9) of the Income-tax Act (i.e., companies in which the public are substantially interested) with total income not exceeding Rs. 25,000 ... 1 anna 9 pies
 - Other companies ... 2 annas 9 pies
- Public companies not included in (1), (e.g. foreign public companies):
 - on income other than dividends from a subsidiary Indian company ... 5 annas 9 pies
 - on dividends from a subsidiary Indian company ... 3 annas 3 pies
- Private companies not included in (1), (e.g. foreign private companies):
 - Income other than dividends from subsidiary Indian company ... 5 annas 9 pies
 - on dividends from a subsidiary Indian company ... 3 annas 3 pies

In addition to the basic supertax payable by a company, a special supertax was levied for the financial year 1956-57 on dividends distributed by it in excess of 6 per cent of its paid-up capital. It is proposed to continue this special supertax on dividends in excess of 6 per cent of the paid-up

The QUALITY that Endures

Three hundred years of history have helped to shape the character of Lloyds Bank. An unwritten charter of confidence has been fashioned from the experience of generations of customers whom it has faithfully served.

capital for the financial year 1957-58 with an alteration in the rates. The rates of special supertax applicable for the year 1956-57 and the proposed rates for the year 1957-58 are as under:

	Present rates a rupee	Proposed rates a rupee
(a) On the amount of dividends in excess of 8 percent but not more than 10 percent of the paid-up capital ...	2 annas	2 annas
(b) On the amount of dividends in excess of 10 percent but not more than 18 percent of the paid-up capital ...	3 annas	4 annas
(c) On the amount of dividends in excess of 18 percent of the paid-up capital ...	3 annas	6 annas

The extra supertax at 2 annas in the rupee for certain companies on the face value of bonus shares issued by them which was levied during the financial year 1956-57, will be continued for the financial year 1957-58 also in respect of bonus shares issued during the relevant previous year. Provision has been made for carrying forward to the financial year 1957-58, the quantum of bonus shares and excess dividends which could not be subjected

to additional supertax during the financial year 1956-57 for want of adequate total income.

Section 23A Companies

Under Section 23A of the Income-tax Act, if a company in which the public is not substantially interested does not distribute to its shareholders as dividends at least 60 percent of its distributable profits within one year from the close of the relevant accounting year, it will have to pay a special additional supertax on the whole amount of its undistributed profits of the year. At present, this additional supertax is payable at the rate of 8 annas in the rupee in the case of an investment company, and at the rate of 4 annas in the case of other companies. It is now proposed to increase the rate for non-investment companies from 4 annas to 6 annas. The rate for investment companies will continue to be 8 annas as at present. Companies engaged in an industrial activity and other companies stand at present on the same footing as regards the minimum distribution of dividends and the rate of additional supertax payable on undistributed profits. It is now proposed that while for other companies the additional supertax will be levied if the distribution is less than 60 percent, such additional tax will not be levied on industrial companies unless the distribution falls short of 50 percent. These proposals are embodied in Clause 6.

All the amendments proposed in the Bill, including the changes in the rates of supertax and additional supertax on companies, will come into force on 1st April, 1957.

THE CALCUTTA MONEY MARKET

I. M. F. PURCHASES SUPPORT STERLING

Wednesday, 12th December.

THE upward trend in demand for advances has persisted in the market this week. The requirements of the cotton and sugar industries are both expanded and the needs of the jute industry remain at a high level. The interbank market has ruled quiet, and it is reported that all demands have been met at the unchanged call rate of 3½ percent.

A steady flow of export documents has been reported from the bill market this week. Turnover has been satisfactory, but probably rather below the level witnessed in the previous week. Remittance has been good. Sterling continues to show a steady improvement, especially in the forward position. A good deal of covering has followed the announcement that the International Monetary Fund is buying sterling against Britain's £1,300 million deposit. The improvement of sterling has taken place in terms of all currencies.

Bullion was quiet on profit-taking. Silver declined from the previous week's level of Rs. 172 to Rs. 171-4, quoted today. The rate for ready delivery was quoted at Rs. 171-10. The London and New York prices have remained unchanged.

In sympathy with silver, gold was quiet and the price fell from Rs. 106 to Rs. 105-12. The sovereign at Rs. 69-8 showed a loss of 8 annas.

During the week ended 7th December, Government of India Treasury bills for Rs. 32,57,50,000 were sold in favour of the Reserve Bank.

Increases of Rs. 25.54 crores and Rs. 8.05 crores to Rs. 1464.08 crores and Rs. 1473.79 crores in active notes and the total note issue, respectively, were notable features of the return of the Reserve Bank of India for the week ended 7th December, 1956. The currency expansion was covered by reducing foreign securities by Rs. 9.94 crores to Rs. 447.30 crores and by increasing rupee securities by Rs. 19.88 crores to Rs. 785.35 crores. Deposits of the Government of India increased by Rs. 2.37 crores to Rs. 52.36 crores, while other Government accounts fell by Rs. 1.90 crores to Rs. 14.04 crores. Balances of commercial banks, at Rs. 51.46 crores, were Rs. 39 lakhs higher. Balances held abroad increased

THE CHARTERED BANK

With effect from 6th December, 1956, the name of the Chartered Bank of India, Australia and China, has been shortened to the Chartered Bank, and this is the name in which its business will now be conducted.

By Rs. 12.72 crores to Rs. 91.01 crores, presumably due to a transfer from the Issue Department. Investments increased by Rs. 57 lakhs to Rs. 60.19 crores. Other loans and advances increased from Rs. 80.84 crores to Rs. 84.57 crores, of which advances to scheduled banks against usance bills stood at Rs. 44.65 crores (Rs. 43.34 crores). These advances amounted to Rs. 389.84 crores since 1st January, 1956. Ways and means advances stood at Rs. 5.20 crores against Rs. 2.96 crores.

The return of the State Bank of India for the week ended 30th November, 1956, shows a rise of Rs. 2.10 crores in total deposits to Rs. 234.90 crores. Investments in Government securities are down by Rs. 2 lakhs to Rs. 95.56 crores, while other authorised investments remain unchanged at Rs. 11.04 crores. Advances, including loans, cash credits and overdrafts, and bills discounted and purchased, have increased by Rs. 1.68 crores to Rs. 129.11 crores. Cash and balances are, in consequence, shown at Rs. 16.63 crores, or Rs. 48 lakhs higher.

The statement of the position of scheduled banks for the week ended 30th November, 1956, shows Demand and Time liabilities at Rs. 650.91 crores (Rs. 11.69 crores on account of borrowings from banks) and Rs. 458.91 crores (Rs. 2.71 crores), against Rs. 647.03 crores (Rs. 12.34 crores) and Rs. 453.52 crores (Rs. 2.51 crores), respectively, in the previous week. Cash has remained unchanged at Rs. 35.89 crores, while balances with the Reserve Bank have increased by Rs. 4 lakhs to Rs. 50.84 crores. There is a drop of Rs. 4 lakhs in investments to Rs. 365.46 crores. Advances and bills discounted, at Rs. 766.33 crores, show a rise of Rs. 4.02 crores. The ratios to total liabilities of cash and balances, and of advances and discounts, are, in consequence, shown at 7.8 percent and 69.0 percent, against 7.8 percent and 69.0 percent.

The following is a statement of the cash balances of the Central Government on the last day of August, 1956:

	Rs.
(1) At the Reserve Bank of India in India	57,69,58,000
(2) At treasuries in India	2,23,32,000
(3) In England (Sterling converted at 18d. the Rupee)	1,53,96,000
Total	61,46,86,000

More than 2,00,000 miles

- and this LEYLAND 'COMET'

runs smoothly as ever!

Forward-controlled chassis, designed specially to combine large body space with easy handling; 6-cylinder vertical direct-injection compression ignition engine; average payload 7½ tons

It's the only 7½-ton payload chassis made in India!

Mr. Jagadeeshwariah, well-known Secunderabad operator, bought his first Leyland 'Comet' five years ago. "This chassis has now covered over 2 lakh miles and it has proved to be extremely reliable and economical. I unhesitatingly recommend that there is no finer vehicle obtainable today," he says. Mr. Jagadeeshwariah now has four 'Comets', and is thinking of buying a fifth 'Comet' to add to his fleet!

The Leyland 'Comet' passenger chassis offers extra reliability and safety. Special springs for more comfortable riding. Choice of two models. Widely used by State Governments, Municipalities and leading firms and organisations.

All over the world, all the time, people are on the move. They may have to cross continents or just take vegetables to the village markets a mile away. They may fly by modern airliner, travel swiftly in a railway train, or sway on a bullock cart. They all need transport.

Oil is playing an important part wherever man and machine are on the move. Whether it is on the farm, where machinery helps produce good harvests, or in throbbing factories, which turn out goods needed by the community; whether it is in tea factories that produce tea for the millions at home and abroad, or in hydro-electric projects bringing electricity to more and more homes... in fact everywhere, oil is the prime mover — limitless in performance and possibility. It is helping man and machine to move ahead, to progress. A constant supply of our petroleum products, so vital to such endeavours, is fundamental to progress.

MARKET CONFIDENCE BADLY SHAKEN

DOWNWARD TREND CONTINUES IN ALL SECTIONS

Wednesday Evening.

THE share market has been quiet and depressed throughout the week. The rather more cheerful tone of the Finance Minister's speech produced scarcely a ripple in a price level which had fallen sharply following the announcement that provisions for the control of senior appointments in banking are to be introduced into the Banking Companies Act. The price of Indian Irons moved narrowly around Rs. 30-9, but fell heavily today on lower Bombay advices and the news that the affairs of the Dalmia-Jain group of companies are to be investigated. The lowest level touched by Irons was Rs. 29-10 in unofficial trading; subsequently this price improved to Rs. 30. The undertone of the market is very uncertain.

Most investment sections of the market have been depressed this week. There is little trading to report among coal shares, with the exception of Burrakur which have risen to Rs. 21-14 on continued interested buying. Jutes have been neglected. Engineering shares have been generally easier in sympathy with Indian Irons, but miscellaneous counters have tended lower. Tea shares have been neglected and prices are lower. Government securities show little change.

Details of the week's trading follow.

The Government security market ruled quietly steady and a fair volume of business was reported. Three percent Conversion Loan was fractionally easier at Rs. 73 and non-terminable paper was quoted at the same rate. In short-dated loans 3% 1957 was taken at Rs. 99-12 as was 3% 1958 at around Rs. 99-9. Among medium-dated issues, 3% 1959-61 changed hands at Rs. 97-15 and 3% 1963-65 was better at Rs. 94-6; 2½% 1961 was asked for at Rs. 93-7 and 3% 1964 had strong buyers up to Rs. 94-6 due to the approach of the interest payment date (15th December). In National Plan issues, 3½% Loan 1961 had sellers at around Rs. 99-5 and 3½% 1964 continued on offer at around Rs. 98-5; 3½% 1965 was marked up further to Rs. 98-8 and 3½% 1967 changed hands at around Rs. 98-6. In long-dated loans, 3% 1966-68 was marked at Rs. 92-6 and 3% 1970-75 had buyers up to Rs. 86-15-6; 3½% 1974 was traded at around Rs. 98-8.

There was a substantial turnover in State loans, but once again business was confined to the new issues. Four percent Madras Loan 1963 had buyers at Rs. 98, but 4% U.P. 1963 were fractionally easier at Rs. 97-15-6 sellers. Four percent Orissa 1963 improved to Rs. 97-12 but 4% Bihar was marked lower at Rs. 97-11. Four percent West Bengal 1967 had small buyers at Rs. 99-10 and 4% West Bengal 1968 was traded at Rs. 99.

Business in preference shares was once again on a very small scale and a mere handful of transactions was reported. No business was reported in jute shares. In the miscellaneous group, Burn & Co., 7% came to hand at Rs. 123 and Calcutta Electric were quoted at Rs. 10-10. Dalmia Cement were marked at Rs. 99 and Elgin Mills "B" Preference at Rs. 9-6. Indian Aluminium were taken at Rs. 79 and Indian Iron & Steel were crossed at Rs. 100-8.

In the banking section, Punjab National were slightly better at Rs. 50 and United Bank of India "D" shares were done at Rs. 4-6.

In railways, Bankura Damodar were placed at Rs. 58-12 and Dehri Rohtas, on rumours of a one-for-three bonus issue, were in demand at the higher rate of Rs. 13-8.

Among cotton shares, Dunbar were marked down sharply from Rs. 232 to Rs. 210 but Kesoram recovered from Rs. 15-12 to Rs. 16-4. New Victoria were quiet at Rs. 1-15 and Jayshree were reported at Rs. 6-4.

In coal, Burrakur continued to meet with special support and improved further to Rs. 21-14. Most other coal shares were unchanged and business was on a reduced scale. Bengal were unchanged at Rs. 448 and Bharat Collieries were marked at Rs. 6-12. A few transactions were reported in Bokaro & Ramgur at around Rs. 12 and Central India changed hands at Rs. 6-13. Equitable was slightly lower at Rs. 26-12 as were South Karanpura at Rs. 10. New Beerbhoom were done at the previous rate of Rs. 16.

Trading in jute shares was extremely narrow and selling orders were difficult to execute. There were, however, a few enquiries for selected shares and in such cases prices showed some improvement. Here is a chart showing representative price movement:

	Opening 6-12-56 Rs.	Closing 12-12-56 Rs.
Anglo-India	150 0	158 0
Birla	15 0	14 11
Bally	165 0	155 0
Delta	130 0	127 0
Ganges	51 0	53 0
Howrah	20 12	21 4
Megna	67 0	70 0
Northbrook	21 8	22 0

New Central Jute, on rumours of a one-for-two bonus issue, improved from Rs. 13-10 to Rs. 14 with few declared sellers.

Only one transaction was reported in electric supply shares, namely in Calcutta Electric, which were crossed at Rs. 13.

In sugar, Belsund were easier at Rs. 11-4 and Balrampur were done at Rs. 5-12. Durbhanga were quoted at Rs. 20-14 and Shree Krishna Gyano-day were marked at Rs. 10-14.

In the engineering section, Indian Iron & Steel shares fluctuated between Rs. 31-3 and Rs. 30-3 to close at the latter rate. Bhartia Steel were better at Rs. 17-1 as were Braithwaite at Rs. 26-7 and Burn & Co. at Rs. 320. Britannia Engineering attracted interest and improved from Rs. 13-14 to Rs. 14-8. Richardson & Cruddas eased from Rs. 23-8 to Rs. 22-8 while Textile Machinery recovered from Rs. 20-12 to Rs. 21-9.

In paper, India Paper Pulp were unchanged at Rs. 22-12 while Titaghur were better at Rs. 37-10 and Orient improved from Rs. 33-7 to Rs. 34.

In cement, Ashoka were placed at Rs. 12. Assam Bengal Cement Ordinary at Rs. 7 and the Deferred at Rs. 1-6. Dalmia Cement were depressed at Rs. 13 as were Orissa at Rs. 13-4. Sone Valley were unchanged at Rs. 8-8.

In insurance, Concord of India were taken at Rs. 11-12 and Ruby General were placed at Rs. 6-2. In shipping, India Steamship were taken at Rs. 9-9 while India General Navigation were unchanged at Rs. 78. Port Shipping changed hands at Rs. 15-12.

In the miscellaneous group, Alkali & Chemical Corporation were unchanged at Rs. 18-12 while Balmer Lawrie were depressed to Rs. 152. Dunlop Rubber recovered from Rs. 25-12 to Rs. 26-4 and Hindustan Motors were offered at Rs. 8-8. Imperial Tobacco were fairly steady at Rs. 14-5 and Indian Aluminium improved from Rs. 15-2 to Rs. 15-10. Indo-Burma Petroleum were easier at Rs. 37-4. Metal Box were better at Rs. 27-8 as were

RECOVERY ON STOCK MARKETS CONTINUES

CONSIDERABLE GAIN IN OIL SHARES

London, 12th December. ALTHOUGH the Suez question and the situation in the whole of the Middle East are far from settled, there has been a good deal over the past week to help the London stock markets from the international political angle. With the speculative position almost eliminated by the slump since the Suez crisis started, it was assumed that prices would soon respond to any favourable news; the jobbers had kept their books level and little of the good class stock was available. The news of the U.S. oil-for-Europe Plan touched off a recovery, and buyers became bolder when the Anglo-French decision to withdraw from Port Said was announced. This was followed by a vote of confidence in the Conservative Government on its Suez policy, and although there was some hesitancy following Mr. Macmillan's picture of the economic situation, his measures to meet the emergency was accepted as the sign of the Government's determination to weather the storm and prices were soon on the upward move. Perhaps the most important factor responsible for the recovery has been a marked improvement in Anglo-U.S. relations and the U.S. efforts to help Europe. Oil shares gained considerable benefit from the changed atmosphere and prices were substantially higher. The industrial market has been the hunting ground of cheap buyers, but better class issues have been pushed ahead daily. Nuclear power shares have been highlighted by the Government's decision to hasten the atomic power programme, while many other leading equities moved higher. Gilt-edged securities tended to lag behind until the last day or two, when senti-

ment was helped by the November trade figure showing a sharp contraction in the "gap", and the welcome recovery in sterling. The feature of foreign bonds has been a persistent advance in Japanese issues with the stocks offer. Earlier fears that sterling might be devalued again brought in buyers for gold shares, but as the danger receded the market was deserted, and prices steadily deteriorated. Base metals have made a mixed showing with coppers going strongly ahead at one time, only to relapse into quietude when the commodity price lost its firm trend. The rubber and tea shares were quiet, but prices where changed moved in holders' favour.

The Money Market

Reflecting the uncertainties of the U.K. economy due to the closure of the Suez Canal and the disruption of oil supplies, short-loan conditions in the London money market during the past week remained difficult. In view of the unpromising outlook, discount houses revised their bids at the week's tender which resulted in the rates for mixed Treasury bills advancing by approximately 1/32 percent. The higher rate for bills was also a reflection of the 4 1/2 percent cost of money during the 91-day Treasury bills for £220 million worth of 91-day Treasury bills at an average rate of 100s 10.28d percent against 100s 4.69d percent in the previous week. Applications for £60 million worth of 63-day bills totalled £65,550,000 and all were allotted at the average rate of 101s 4.37d percent against 100s 10.79d percent in the week before. This week £290 million worth of bills are on offer, comprising £230 million worth of 91-day bills and £60 million worth of 63-day bills. The Bank of England return for the week ended 5th December showed that notes in circulation were about £31 million higher at around £1,937 million, while

bankers' deposits were unchanged at around £220 million.

Hongkong Gold Soft

After initial steadiness, the Hongkong gold market has continued soft throughout the past week. Contributory factors were the improved international situation, comparative steadiness of switch sterling and the belief that the U.K. has temporarily overcome its dollar shortage. Leading bullion dealers, however, opine that the long-term view is still bearish. After opening at \$(H)273 3/4 a tael, the market improved to \$(H)274 1/4 on the same day, later declining to close at \$(H)271 1/4. Carry-over charges were 400 cents a 10 taels in favour of sellers. The official offtake was 5,390 taels and the unofficial 17,300 taels. Arrivals in Macao were 35,000 ounces, while forward contracts were done at \$(U.S.)37.70 an ounce, c.i.f., Macao.

London Silver Prices Fall

Silver prices took rather a sharp fall in London during the past week. The disruption in supplies caused by the Suez Canal situation had created an artificial rise in the spot which had risen well above the New York level. Another factor tending to affect the market was that supplies bought in New York could not be shipped to the U.K. due to the dock strike on the east and Gulf coasts of America. But supplies arrived from Australia last week which exceeded demand, and caused a reaction in the spot price of 3d on Wednesday. With the prospect of New York supplies being available soon, there was a further price slip on Thursday of 1d so that the total decline on the week was 3d to 801d an ounce. The forward position weakened by 1d to 801d an ounce.

Quicksilver Improves

A slightly harder tone is currently seen in the quicksilver market, according to most dealers, and a price of about £24 a flask ex-warehouse London, is indicated, compared with £23 1/2 previously. This is the first upward price move of the metal since late in August. Prior to that, the price had been declining for some time. Spot supplies are, it is reported, less plentiful than they were and sellers are more reserved, especially in view of the general expectation that not much metal would be arriving from Spain and Italy for the time being, because of good sales in the international market. Moreover, U.K. exports of quicksilver have recently been sizeable.

Vegetable Oil Market Inactive

Trading was slow to get under way in most sections of the vegetable oil market with forward shipments inclined to be softer as sellers were testing for a trading level. Good interest was still noted for early shipments of groundnut oil, but no offers of any quantity were available. However, February-March shipment of Nigerian oil was more freely offered at the lower level of £162 1/2 and March-April at £161 c.i.f., but buyers were holding off. Coconut oil was generally neglected with reselling done at a sizeable discount under original levels. Copra was barely steady, with January-February Philippines traded at \$188 1/2 c.i.f. Linsed oil lacked features with prices admitting little movement from the pre-week-end levels. Castor oil continued to weaken and castorseed suffered a further setback in the virtual absence of buying support. Groundnuts maintained a steady background with offers still small and mainly confined to resale parcels. Linsed and soyabean lacked features, while palm kernels tended lower on an increase in the selling pressure.

Rubber Market Softens

During the week ended 6th December, the London rubber market was unsettled by the international political situation and was reluctant to follow the higher levels ruling in Singapore. Prices eased under Continental selling, but they were marked up sharply on an unexpected upturn in Singapore. After the placing of covering orders at a higher level, values sagged. The expectations of a further reduction in European car and tyre output because of the petrol shortage tended to keep factories off the market as trade buyers were unwilling to book at current levels. Trading was often a matter of strict negotiation, especially so far as December shipments were concerned, as the eastern prices were up to 3d a lb. over the London parity. The scarcity of shipping space also added to trading difficulties. After wide fluctuations, values at the close were about 3d a lb. lower for near positions, while distant were about 3d lower on balance. The sole crepe market was still very short of supplies and prices advanced to a basis of 48 1/2d a lb. for 1 1/2 inch smooth No. 1 on the spot.

Royal Dutch Shell Results

The results of the Royal Dutch Shell group for the third quarter of 1956, subject to audit, show sales proceeds and other incomes at £591,177,000 against £537,949,000 for the third quarter of 1955, making £1,686,334,000 for the nine months to September this year against £1,520,573,000. The net income for the third quarter, after allowing for depreciation, depletion, exploration costs, interest and minority interests and including dividend income, was £48,164,000 against £42,730,000 last year; for nine months it was £132,208,000 against £113,459,000. The company reminds shareholders that the period covered by these figures was prior to the closure of the Suez Canal and of the Iraq Petroleum Company's pipeline to the Mediterranean, the effects of which have been to reduce the quantity of oil available for distribution and to increase costs.

New Delhi

WORLD BANK LOAN PROSPECTS IMPROVE

PARTICULAR PROJECTS FOR WHICH ASSISTANCE WILL BE CONSIDERED

(FROM OUR NEW DELHI CORRESPONDENT)

THE prospects of India getting loans from the World Bank has definitely improved since the exchange of a second series of letters between the President of the Bank, Mr. Eugene R. Black, and India's Finance Minister, Mr. T. T. Krishnamachari. The following is the full text of the letters:

Mr. Black wrote to Mr. Krishnamachari: "Thank you for your letter of 16th September, 1956. As you probably will have learned from Mr. B. K. Nehru directly, we have had several general discussions with him about the second five year plan and the problems connected with the financing of the foreign exchange gap. During these discussions, we have also reviewed the Bank's present operations in India and our possible further contribution to the financing of the plan. I am glad to say that the discussions were conducted in an atmosphere of mutual confidence and frankness. It was a pleasure for us to renew our long-standing association with Mr. B. K. Nehru and with Mr. P. C. Bhattacharyya, and to meet the excellent team of Indian railway experts who came to discuss the railways' investment programme.

Specific Steps

"The present round of discussions has drawn to a close. In my letter to you of 5th September, 1956, I stated that the Bank would 'hope and expect to play an important rôle in providing external financing for your development effort.' Perhaps it would be useful if I now gave to you a brief outline of the specific steps which we are contemplating for the immediate future, provided there are no unduly adverse developments in the general situation. The projects which we have selected, in consultation with your representatives, for early consideration by the Bank include: (a) the second expansion programme of I.S.C.O.; (b) an initial loan in support of the railway investment programme; (c) such additional projects in the field of transportation, notably ports and shipping, as may upon further investigation prove suitable for Bank consideration; and (d) the Koyana and Rihand hydro-electric projects, the two new projects of the Damodar Valley Corporation, and the expansion of the Trombay steam plant.

"As you already know, we have invited the representative of the I.S.C.O. to come to Washington and negotiate a loan for an amount of about \$20 million for the company's expansion programme. Under the arrangements made with our consultants on railways—Coverdale and Colpitts—they will visit India early in January to advise us on some aspects of the operations of the Indian railways. Their report should provide a basis for a first railway loan under the second five year plan. In addition to this immediate programme, we have informed Mr. Nehru that we contemplate making a survey of the development plans in all fields of surface transportation. This survey would give consideration to the long-range problems of transport in India and would indicate whether, in considering further Bank operations in the transportation sector, any specific technical studies would have to be undertaken. The appraisal of specific projects in the transportation sector, such as ports and shipping, will be, of course, carried out in the meantime on the basis of comprehensive project reports which we are now awaiting. When we have completed here our current review of the transportation investment plan, and of any additional information which we may ask for in the meantime, we will inform you about the timing of our survey mission and of its scope. At this time, we are planning to send such a mission in the spring of 1957.

Koyana Project

"Two of our engineers are now in Bombay making a field study of the Koyana hydro-electric project; when their report is completed, we will inform you about our views on that project. We have also made arrangements for two of our engineers to go to New Delhi for discussions with the representatives of the Government of India and of the Damodar Valley Corporation on the implementation of the recommendations contained in the Bank's report on the Damodar Valley Corporation dated 22nd August, 1956.

"We have received from Mr. B. K. Nehru a preliminary report on the Rihand hydro-electric project, and he has asked us to study the two new projects of the Damodar Valley Corporation. We intend to assign the study of all three projects to one group of our experts who could, at the appropriate time, make on-the-spot investigations of these projects. Finally, I should mention that Mr. Narahari Rao has informed us that the Tata Hydro-Electric (Private) Ltd. intends to apply to us for a loan of about \$9 million to finance the third thermal unit for the Trombay plant and that the Government has agreed to guarantee this loan. We will give consideration to this project; at the moment, we are awaiting the technical report on the project. In closing this letter, I would like to send you once more my best wishes for the successful discharge of your most important and difficult

task, and to express the hope that I would have an opportunity of meeting you in the near future."

Reply of Mr. Krishnamachari

Mr. Krishnamachari has replied: "I thank you for your letter of 15th November, 1956, containing the list of projects which the Bank has selected for early consideration and an outline of the programme proposed for the implementation of the financing of these projects. Both the list and the specific steps proposed are perfectly acceptable to me. I would, however, express the hope that the various studies, which have necessarily to be carried out by the Bank before loan negotiations can commence on any of the projects, will be carried out as soon as may be possible. As you are aware, the second five year plan has now been in operation for seven months and has been causing a very considerable drain on our foreign exchange resources. This makes it essential for the flow of funds from the Bank to commence at the earliest practicable date. I should like to express my deep appreciation of the spirit of co-operation and understanding to which your letter bears witness. I need hardly assure you that the possibility of the Bank providing external finance on the scale envisaged will greatly lighten my burden, and will facilitate the economic development of India, in which I know you are greatly interested."

European Free Trade Area

India's first reaction to the plan for the formation of a European free trade area, was favourable, said Mr. Krishnamachari, Finance Minister, in Parliament last week. The main features of the proposal at present, he added, were that it was to be an outer ring of a free trade area around the Customs Union of the six countries of the European Coal and Steel Community; that with the area, tariffs were to be gradually eliminated, but the freedom of levying and varying tariffs on trade with outsiders was to be preserved for each country, and that agricultural products in general, and foodstuffs, feedstuffs, drink and tobacco in particular, were to be excluded from its scope. The proposal was still in a tentative form and fuller details had yet to be worked out. The U.K. Government was in consultation with Commonwealth countries, including India.

Double Tax Avoidance Pact

Replying to another question, the Finance Minister said that the Governments of India and Ceylon had not yet ratified the agreement on the avoidance of double taxation on income. The agreement would become effective after the necessary resolution had been passed by the Ceylon Senate (a similar resolution had already been passed by the House of Representatives of Ceylon), and a notification had been made in the Government of India Gazette as required by Section 49A of the Indian Income-tax Act.

Reinsurance Corporation

The Finance Minister outlined the main features of the Reinsurance Corporation in the Lok Sabha. Preliminary moves are being completed. The registered office of the Corporation will be in Bombay, and its authorised capital will be Rs. 10 crores, divided into 100,000 shares of Rs. 1,000 each. The issued capital will be Rs. 2 1/2 crores, of which 80 percent will be subscribed by Indian insurers carrying on general insurance business, according to the size of each insurer. The number of directors will be 12, of which two will represent foreign insurance interests. Every member will compulsorily cede to the Corporation an agreed percentage of its direct premium income in India during the year.

Russian Credit Terms

The Production Minister, Mr. K. C. Reddy, in a statement to the Lok Sabha said: "The Government of the U.S.S.R. offered to supply industrial equipment for projects, as may be agreed upon, up to a total value of 500 million roubles over a period of three years from 1959-61, on a long-term credit basis. The offer has been accepted by the Government of India. The credit terms offered are (including the period of repayment, rate of interest, etcetera) similar to those for the Bhilai steel plant. According to these terms, the credit raised shall be repaid in 12 equal annual instalments, payable on or before 15th March each year following the year in which each such credit is raised. Interest will accrue at 2 1/2 percent per annum from the date on which each particular credit is raised and will be similarly paid on or before 15th March of the following year."

Constructing Ships in India

Mr. Reddy also told Parliament that the Government had accepted the recommendation of a special committee consisting of the representatives of shipowners on the standard types of ships for construction in India. The broad features of the three standard types of ships are:

1. For overseas trade, a 9,500-tonner open shelter decker (with scantlings for a 11,000-tonner

closed shelter decker), with a speed of about 12 to 17 knots.

2. For coastal trade, a 8,000-tonner open shelter decker (with scantlings for 59,500-tonner closed shelter decker), with a speed of about 12 knots.

3. A 5,000-tonner open shelter decker (with scantlings for a 6,000-tonner closed shelter decker), with a speed of about 13 knots, also for the coastal trade.

Taldih Iron Ore Mines

The project report submitted by an American firm on the development of the iron ore mines in Taldih is being considered by the Government. The preliminary development work, construction of access roads, bridges, etcetera, has already commenced. Work on the mining township and mine installations is scheduled to start early next year. The annual output of these mines is estimated at three million tons.

Ferro-Manganese Production

Seven firms have been licensed to produce ferro-manganese, the estimated installed capacity being 133,800 tons a year. One went into production in April 1956, and was producing about 150 tons a month. The Tata Iron and Steel Company produces ferro-manganese in its blast furnaces for its own use.

Heavy Castings and Forgings Project

An integrated unit for the manufacture of heavy castings of iron and steel, as well as heavy forgings, will be set up by the National Development Corporation, it is officially announced. Competitive quotations, together with detailed project reports, are awaited from three foreign firms—British, German and Czechoslovakian. A final decision will be taken when these have been received. The National Industrial Development Corporation will also set up capacity for fabricating certain categories of structural near the steel plants. Details of the schemes submitted to the Government are being examined.

Manufacture of Calcium Carbide

Licences have been granted to erect plants for the manufacture of calcium carbide during the current year to the Travancore-Electro Chemicals Industries Ltd., Travancore-Cochin; the Industrial Chemical Ltd., Madras; and the Birla Jute Manufacturing Co. Ltd., Calcutta.

Sulphur Requirements

The estimated requirements of sulphur (in tons) during the second plan period are as follows:

1956-57	78,000
1957-58	90,000
1958-59	120,000
1959-60	160,000
1960-61	206,000

At present, no sulphur is produced in India. Although elemental sulphur is not available here, the question of the economic exploitation of some of the combined forms of sulphur, such as iron pyrites and gypsum, is engaging the attention of the Government.

More Money Wanted for Ships

Subject to the availability of foreign exchange, the Ministry of Transport, has asked for a further provision of Rs. 45 crores for buying new ships. It is explained that, as a result of his recent visit to Europe, the Director-General of Shipping has been able to secure offers for ships at reasonable prices for delivery which may go beyond the second plan period. The transport Ministry thus wants more of a commitment rather than an actual payment of money during the plan period. As against the target of one million tons, India has been able to add 600,000 tons of shipping during the first plan. According to reports, 90,000 tons of existing shipping needs replacement. Orders have been placed for 32 ships, 14 in the public and 18 in the private sector. These will have a carrying capacity of 180,000 tons, and will cost Rs 32 crores—the entire provision in the second plan. The gap to be made up is 390,000 G.R.T.

Steel Imports

A question which is being discussed here is whether steel imports are contributing to inflation. In one sense, they may be; by making development possible, they lead to the pumping in of money in various projects, which may help inflation. Alternative was no development. Another view is that steel imports have had an anti-inflationary effect, as they have mopped up money from the market and helped check the rise in prices, not of steel (the price of which is already controlled) but of steel products. India's screened demand for steel is placed at 3.2 million tons, against a home production of 1.2 million tons, leaving a gap of two million tons. To meet this demand 925,000 tons were imported until 31st October, 1956. Of this, 155,000 tons were for rolling mills, 145,000 tons consisted of commercial products, such as pipes, etcetera, and 575,000 tons were imported on purely Government account. Orders have been placed for 1,175,000 tons for delivery during the remainder of 1956. Orders have also been placed for the delivery of 450,000 tons during 1957 and of 120,000 tons during 1958.

Completely at ease in one of Pan American's Super Stratocruisers to the U.S.A.

RELAX—you're on the World's Most Experienced Airline

Enjoy yourself. You're surrounded by comforts and services unmatched anywhere in the air. Luxuries that are solidly backed by an unequalled record of air pioneering and accomplishment.

You're flying with the only airline that has made over 60,000 Atlantic crossings, over 40,000 Pacific crossings and over 2,700 Round-the-World flights.

Pan American has carried 13 million passengers overseas in dependable speed and comfort—has flown over one billion miles overseas—and has 1200 pilots who have flown over one million miles each, 100 who have flown over three million miles.

This record is unmatched by any airline anywhere. So next time, choose Pan American—the only airline that gives you the priceless advantage of Round-the-World experience on every Tourist and First-class flight.

Let your Travel Agent arrange your trip—his services are free. Or call Pan American in:

F.I.C.C.I. Criticises New Taxes

In a memorandum submitted to the Government on the latest taxation proposals, the Federation of Indian Chambers of Commerce and Industry has urged that "the need for deficit financing should not be under-estimated." In the view of the Committee of the Federation, the recent price increase is not primarily due to the policy of deficit financing as such. While the money supply in the hands of the public has increased by over Rs. 143 crores over the last 12 months, there has been a greater rise in production. The index of industrial production, based on 1951=100, was 151.4 for July, 1956, as compared with 121.9 for October, 1955. Yet the rise in prices has continued. The index number of wholesale prices has risen from 365 for November, 1955, to over 430 for the week ended 17th November, 1956—an increase of about 18 percent in only one year. The reason for the rise in prices, it is stated, is that production has not increased as fast as the increase in demand.

The only effective remedy, which is also consistent with the aims of the second five year plan, is to provide a much-needed stimulus for an increase in home production. Generally, production follows demand, and it is necessary that the demand for various products should be maintained and stimulated to the level of the targets, and should even exceed them. The task of fiscal policy at this juncture should be to concentrate attention on some specific excesses. Similarly, on the monetary

front, greater emphasis should be laid on allowing credit to expand with the increase in economic activity. Here, again, monetary policy should, if deemed necessary, concentrate on selective controls rather than overall controls which would aggravate the monetary stringency.

Equally important from the point of view of the economy as a whole is the need to check a rise in the costs of production. Inflation generated by excess of demand can easily turn itself into a rising wage-cost-price spiral. The Committee is perturbed to find that while dividend limitation has come to be given pride of place, the demand for wage increases and other benefits for the workers continues unchecked. If, in the interests of the country, controls have to be tightened, it is only fair that any factor that adds to costs should be kept in check. A responsible wage policy should therefore be given high priority.

Additional Revenue

The Committee cannot help feeling that the main object of the taxation proposals seems to be to raise additional revenue for the Exchequer. Under cover of wanting to meet the foreign exchange gap, a considerable additional tax burden is imposed on the business community and the individual taxpayer. The pegging of dividends which the present tax measures imply will further impair the incentive for risk-taking, and divert funds away from equity capital to safer kinds of investments which may not fall within the purview of the plan. If the capital market is to be developed and made broad-based, there should always be created conditions in which fresh issues can thrive and attract the small savings of the investor, who naturally looks not only to safety and regularity in yields, but also to a progressive increase in them along with an appreciation in the value of his investment. This is confirmed by recent trends in the capital market, which show that investors prefer equity participation to preference shares mainly in the hope of getting better dividends. If this trend is reversed, the Committee apprehends that industrial development will suffer.

The capital gains tax will further aggravate the position. Quite apart from the fact that no immediate justification has been given for the introduction of the tax in the present form, the proposals, both in terms of the rates as well as coverage, go much beyond the previous capital gains tax which was levied for two years from 1946. It is not necessary to go into the details of the kind of repercussions which a capital gains tax will have not only on the investors' psychology, but also on the day-to-day transactions. The levy of a tax, which in the immediate future is not likely to yield a very large revenue (it will be recalled that the total yield of the tax in the two years of its operation between 1946 and 1948 was only Rs. 6 crores) or to act as a check on a rise in prices or a fall in foreign exchange resources, can be justified only on political and ideological grounds. The Committee submits that the proposal should be reconsidered in the light of its economic effects. The reaction of the foreign investor reflecting the attractions of investment in India cannot be ignored. The Government itself wants foreign investments of all kinds to take place. The capital gains tax, along with dividend limitation, will greatly discourage new foreign investors.

On the provision in the Finance Bill relating to deposits, the Committee has urged that the "free" reserves of a company, whether industrial or non-industrial, constituted a regular flow. "It will be wrong to assume that they are lying there idle and without being utilised in the way they should be. Even now the working of companies is subject to and regulated by various provisions of the Companies Act and of the Industries (Development and Regulation) Act. The governmental machinery being what it is, the funds may not be available to the company when it is badly in need of them. With the regulations governing companies in many other matters, this is one more which will seriously interfere with the administration and carrying on of business. There may be difficulty in ascertaining the exact amount which is to be deposited with the Government. The amount will depend on the depreciation and other allowances to be granted to the company and the amount of income-tax and supertax payable. There will be a considerable difference of opinion on them between the assessee and the income-tax officer. It may be that the amount of tax or depreciation allowance is the subject matter of appeal. So the amount to be deposited with the company will also not be an easily determinable amount. It should not be forgotten that the working funds of a company form a major part of its total resources, it is stated.

Status of Indian Rupee

Slowly but surely, the Indian rupee is acquiring an international status. For the first time, Indian rupee traveller's cheques can be cashed in Egypt. Egyptians do not accept payment in pound sterling, but they readily exchange the Indian rupee.

Trade Delegations

As many as seven trade delegations are expected here this winter. Following Mr. H. V. R. Iengar's visit to Scandinavia last summer, trade missions are expected from Sweden, Finland and Denmark. Indo-Sudanese trade has improved recently and a Sudanese mission is due here next month. A Pakistani trade delegation is also expected to negotiate the renewal of the agreement, which is due to expire shortly. A trade mission from Australia is expected in April next. A Deputy Minister of Czechoslovakia is here to renew the expiring trade agreement.

London

MR. MACMILLAN'S MEASURES TO MAINTAIN THE ECONOMY

GOLD AND DOLLAR RESERVES FALL HEAVIER THAN EXPECTED

(FROM OUR LONDON CORRESPONDENT)

IT was generally expected that the drain on the sterling area's gold and dollar reserves in November would be heavy, but the worst anticipations were exceeded by the Chancellor of the Exchequer's disclosure that it amounted to as much as \$279 million, or £100 million, to reduce the total to £700 million. With the heavy December demand (\$24 million deficit with E.P.U. and the U.S. and Canadian loan repayments) ahead, it was obvious that the time had arrived when Mr. Macmillan would have to face taking "further measures" to avert what could develop into a serious threat to the economy. For the present he is taking the obvious steps, namely, claiming a waiver of interest on the dollar loans (\$104 million), selling for cash or using as collateral for loans our holdings of American securities (\$30 million worth had already been sold and a like amount would soon be realised) which he revealed, amounted to between \$750 and \$1,000 million, approaching the International Monetary Fund so as to draw on Britain's quota (a sum of as much as \$650 million would be available from this source without much difficulty), and maintaining credit restrictions here and even strengthening them if necessary. Most important of all, however, the Chancellor reaffirmed that the exchange rate for the pound sterling will be maintained at its present parity of \$2.80, announced his determination "to strengthen the internal economy" and, besides imposing an additional 1s. a gallon in the Customs duty on petrol to counter the loss of revenue from this source, hinted that income-tax might also be raised next April. The Suez crisis is to cost us dearly, but Mr. Macmillan approached the problem with realism and his measures have been well received generally.

Whether these measures will achieve success or not remains to be seen, but it is obvious several difficult months lie ahead when there will have to be a lot of revising of ideas. Mr. Macmillan has promised for his part to do all he can to maintain industrial production and increase exports and to expand the volume of world trade. On the other hand, prices are already showing a rising tendency as a result of the increased cost of road transport and labour will probably react with fresh wage claims, even though the pattern for these would appear to have been settled with the Tribunal award of an increase around 6 percent in the case of the loco-men, which could set the pattern if short-time working or even unemployment were to become more widespread. There are indications from the statistics that we are moving that way. The T.U.C. is to consider the question next week, and it is to be hoped will advise restraint. The lack of this in the past has contributed to the recent pressure on sterling, which became too much to bear with the closing of the Suez Canal and the fear of war in the Middle East.

Rise in Private Borrowing

Of the £19.5 million increase in the clearing banks' advances during November, only £5.7 million went to the nationalised industries, available for Treasury loans under this year's Finance Act. The balance represents additional credit extended to the private sector of the economy. The Treasury's latest statement shows that total bank overdrafts of the seven authorities concerned at 21st November, the balancing date, were £95.2 million, against £90.4 million at 17th October, a rise of £4.8 million. Of the November total, £87.9 million was due to the clearing banks and £7.3 million to the Scottish banks. In October the figures were £82.2 and £3.2 million, respectively. Exchequer advances totalling £26.9 million were made to the nationalised industries on 17th November. Their total debt, therefore, appears to have increased by £31.7 million. Last month's increase in the clearing banks' total loans contrast with a decline of £51.5 million registered in November, 1955. But the total of advances, now £1,881.9 million, is still £31.6 million below what it was at this time last year. The fall of £71.6 million, to £1,745.5 million, in the clearing banks' Treasury bill holdings reflects the success of the Government's savings campaign, including the premium bonds.

Record Shipping Freights

Tanker and general cargo freights show no signs of easing. In Transatlantic coal and grain new peaks are being established almost every day, and prices of second-hand ships have also risen sharply. The world-wide shortage of shipping resulting from the closing of the Suez Canal has more than outweighed the release of "mothball" ships by the United States and the de-requisition of 40 vessels by the British Government. The Transatlantic rate for coal has gone up by more than a half since the end of October.

Owners are wondering if the rise will continue and there has recently been an increase in time charter business. This suggests that some "hedging" is taking place. In tanker freights, the advance has tapered off over the past two weeks and British charterers have succeeded to some extent in stabilising the market. The trend of freight markets will depend largely on progress made in clearing the Suez Canal. But the success of this operation would not necessarily lead to a fall. If a channel were to be cleared for

small tankers only, the voyage rate for such vessels might rise and that for large tankers might decline until, of course, a complete clearance had been effected.

Triangular Deals Business

The full effects on Lancashire's business of the triangular deals organised under American aid schemes with Pakistan, Burma and Indonesia have not yet been recorded in the overseas trade returns, for some transactions are still being negotiated and shipments are likely to continue for some months. The latest Monthly Record of the Manchester Chamber of Commerce, however, offers a sort of progress report by surveying the present position. There seems to be no doubt that many Lancashire traders have benefited from these schemes, more especially as in recent years they have not only come up against severe competition from Japan in these markets, but have met with many other difficulties, with the result that trade has been most irregular. The position is illustrated in the following table:

BRITISH EXPORTS OF COTTON GOODS

	1956 Jan./Oct. £	(000's omitted) 1955 £	1954 £	1953 £
Pakistan :				
Yarn	449	391	226	297
Thread	87	213	59	173
Piece Goods	455	689	651	446
Total	991	1,293	936	916
Burma :				
Yarn	404	194	64	312
Thread	189	370	259	353
Piece Goods	383	613	1,466	1,977
Total	979	1,177	1,789	2,642
Indonesia :				
Yarn	193	171	167	101
Thread	684	525	524	423
Piece Goods	384	348	408	921
Total	1,261	1,044	1,099	1,445

The final results for 1956 will make interesting reading, for it certainly looks as though exports to Pakistan and Indonesia will show substantial improvement even though those to Burma may not record much change. The Chamber's survey reports that under the scheme for Burma "some hundreds of individual transactions" have been made in yarn and cloth for shipment between September, 1956, and January, 1957, while the amount of raw cotton contracts arranged exceeded \$1,000,000. Many import licences have been issued in Djakarta for yarn and cloth under the scheme for Indonesia, which covers textiles to the value of \$3,000,000, and there is growing interest in the transactions in raw cotton for which provision is made. The survey mentions negotiations for a possible further block of export business in textiles to be supplied by the U.K. to Pakistan on terms similar to those of the earlier schemes for that country.

Rayon Yarn for India

India's decision to increase the duty on imported rayon yarns as a means of conserving her reserves of foreign currency has not caused as much consternation among Lancashire traders as might have been expected seeing that it will probably increase the price of imported rayon yarn in India by approximately 1s. 6d. a pound. They do not feel, according to inquiries conducted by the Manchester Guardian, that it will serve as a deterrent. India is, next to Australia, Britain's largest overseas buyer of rayon filament yarn, taking 4.41 million lb. in 1955, which was valued at £800,000. This year it is running at an even higher level: 4.56 million lb. being exported in the period January to September. While exports in 1955 formed 16.4 percent of the total by weight, they were only 7.1 percent by value, suggesting that, unlike exports to Australia, much of the yarn was of lower quality. The new specific duty will prove beneficial in one way because it will replace the system which has operated for many years in Bombay, whereby the duty was calculated at the market price prevailing at the time of arrival of the consignment. The resale value was the market value as recorded daily on the Bombay Exchange. Now, however, the import duty will be levied uniformly at all

Indian ports, and the scarcity premiums in Bombay will disappear.

The effect of the increased duty on rayon imports, while being far from clear at present, is not likely to be one of sharp curtailment. Hitherto the allocation of import licences has been well below the demand for them, and the increase in duty is unlikely to reverse this tendency. India is not an important export market for British staple rayon and mixture yarns but its takings of staple fibres have risen again this year. Exports of staples to India rose from 2.51 million lb. in 1953 to 3.55 million lb. in 1954, but they fell to 1.29 million lb. last year. In the nine months ended September this year, however, they were 3.79 million lb. or almost ten times as large as in the corresponding period of 1955. This increase made India once more second in the list of overseas buyers of British staple fibres, as it had been in 1954. The United States remains first in the list, and this year Canada comes third.

Commonwealth Trade

The Commonwealth had a slightly bigger share of world trade last year, thanks mainly to a striking recovery in United States imports, amounting to £177 million, which more than compensated for losses in other principal markets. As a result, the Commonwealth's proportion of the world's exports rose from 26.8 percent to 27 percent. Imports rose from 30.4 percent to 30.9 percent. These facts and figures are shown by the Commonwealth Economic Committee in a report just published, *Commonwealth Trade, 1955-56*. Britain was again the largest market for almost every Commonwealth country, imports increasing by £160 million. But as Britain's total imports rose even more steeply, the Commonwealth's share accordingly showed a slight percentage reduction. It was, nevertheless, still little less than half, amounting to £1,791 million, out of a total of £3,886 million. This is an increase of £160 million from the Commonwealth's share of a total increase of £312 million. British exports to the Commonwealth rose by £98 million, to £1,415 million out of a total to all countries of £2,995 million. The increase here was £231 million. The Commonwealth supplied more than one-third of the record imports into western Europe. Its goods accounted for £1,950 million, an increase of £200 million out of a total of £5,500 million. The trade balance of Britain and Europe deteriorated sharply as a result of much heavier imports. On the other hand, a substantial surplus was earned by the Colonial territories, whose imports from Europe rose only moderately.

The report also discloses that textiles are still the biggest dollar earner in the sterling area. Textile exports from the U.K. earned \$220 million in 1955. The runner-up was Malaysian rubber, which earned \$156 million. The textile total compares with \$191 million in 1954, while the rubber total compares with only \$89 million in 1954. Other big dollar earners were U.K. vehicles (\$113 million), Malaysian tin (\$97 million), Indian jute (\$92 million), U.K. spirits (\$80 million) and U.K. machinery (\$80 million). The major disappointment of last year was cocoa. Gold Coast cocoa earned only £1 million, against \$50 million in 1954, and Nigerian cocoa earned only \$16 million, against \$35 million.

Brevities

Brooke Bond's offer of 3,000,000 "B" Ordinary 5s. shares at 12s. 6d. each was accepted to the extent of a little over 97 percent. Applications for up to 25 excess shares received allotment in full, but larger applicants were scaled down.

In the last financial year there were total settlements of over £22 million, including £3 million in penalties, from investigations of tax under-assessment resulting from fraud and evasion, according to the report of the Board of Inland Revenue. Of these, the special fraud branch dealt with 534 cases, involving over £7 million in settlements.

The Government has decided to prolong the suspension of import duties on a wide range of iron and steel products until 18th September, 1957. The duties on tinplate and terne plate, however, will be restored after 18th March. The suspension of duty on blast-furnace ferro-manganese and colliery roof-support arches will also continue until 18th September.

We know the drill-----

for saving
India's
foreign currency

Oil from abroad costs valuable foreign exchange. Oil from inside India saves it. And we must have ever-increasing quantities to cope with the expansion of industry and agriculture.

Scientists and engineers are keeping Assam's oil industry working at full pressure to produce as much oil as possible from our own oilfields. Additional wells are constantly being drilled, yet even in an established area they are not always productive; in spite of modern knowledge and equipment, successful drilling still remains something of a gamble.

But no effort is spared to find oil and turn it into the fuel, lubricants and by-products which are so vital to the progress and prosperity of India.

A Member of the Burmah Group of Oil Companies.

BUSINESS CRITICISM OF NEW TAX PROPOSALS

MINISTERIAL SUPPORT FOR WAGE DEMANDS DEPLORED

(FROM OUR BOMBAY CORRESPONDENT)

A **HIGHLY** critical view has been expressed by a local business interests of the new taxation proposals. The demand for wage increases against a background of rising food prices has also been deplored. The Committee of the Indian Merchants Chamber, Bombay, has stated that the Finance Minister's tax proposals will lead to surprising and far-reaching alterations in the structure and level of taxation. The measures, it says, will have an adverse psychological effect on investment, exercise an upward pressure on costs and prices, intensify the demand for higher wages, and increase the tightness in the supply of money. The capital gains tax will prove a definite disincentive to the small investor, and the scheme of a graduated increase in the rates of super-tax payable by companies declaring dividends in excess of 6 percent of the paid-up capital, will likewise prove harmful to investment.

The Committee's statement further says: "While readjustment of the rates of taxation from time to time to meet the particular exigencies of the changing situation can be understood, steps in the direction of bringing about radical changes in the structure and levels of taxation, as part of a programme of readjusting the budgetary resources of the country, should necessarily be confined to the occasion of the presentation of the annual Budget." Taxation proposals as part of the annual Budget, naturally, are framed and justified on the basis of the overall Budgetary requirements, and in terms of the normal Budgetary procedure, the proposals for additional revenue are voted only if the estimates of the needs and requirements are approved. On the present occasion, there has not been an attempt to place a Supplementary Budget indicating the overall position and, on that basis, justifying the need for additional resources. It, therefore, takes exception to the procedure of mid-year changes in the structure and level of taxation, designed mainly for securing additional revenue resources, without placing before Parliament and the country at the same time a full picture of the overall Budgetary background.

"In his Statement before Parliament," the statement goes on, "while introducing the Finance Bills embodying the taxation changes, the Finance Minister explained the main considerations justifying the step for mobilising additional resources through fresh or increased taxation. He pointed out that the plan outlay would, in the altered context, require Rs. 400 crores to Rs. 500 crores more than the total envisaged in the earlier estimates, partly because of the inadequacy of the earlier provisions, and partly because of the increased cost on account of higher domestic or external prices. The Committee of the Chamber are not aware of any re-evaluation of the needs and requirements of the plan and a consequent re-assessment of the targets and the expenditure therefor. Without such a formal review of the plan

as a whole, it is extremely inappropriate to decide upon the needs on the matter of the additional resources required and to proceed to tax for those resources."

Taxing Capital Gains

"Investors have reacted sharply and discouragingly" the Committee points out. "The heavy losses suffered by them by a fall in the value of their holdings will necessarily cause a definite setback in any future effort to generate enthusiasm in the middle-class population for investments in joint-stock enterprise. In the sphere of indirect taxes, while increased coverage in future through indirect taxation may be considered unavoidable, the operation of the levies and the changes proposed cannot but exercise an upward pressure both on the costs of manufacture and, consequently, on the price levels and the cost of living, thereby increasing the pressure of the demand for higher wage. Coming to the taxation proposals, in deciding to revive the capital gains tax the Finance Minister has ignored the considered views and conclusion of the Taxation Enquiry Commission. In fact, the tax was abolished in 1949, because it was found to have an adverse psychological effect on investment and had hampered the free movement of stocks and shares. The need is for promoting a better climate for investment today, and, therefore, the revival of this tax at this juncture is extremely unfortunate. A tax of this character will bring about a distortion of the transactions of the capital assets, because, in a period of capital gains, there will be resistance to sell and, when there are losses, the inducement to avail of the consequent set-off would act as a stimulus to sell.

"Referring to the increase in Customs duties, the Finance Minister has classified them under two groups, viz., duties on articles ordinarily used by the more well-to-do sections of the population, and duties on articles on which the existing level of duties is low. The levies on both the types will inevitably exercise an upward pressure both on costs and on the price structure. Where the dutiable articles enter into a process of manufacture of articles of daily necessity, the incidence of the increase will prove to be really burdensome. The assessment made by the Finance Minister of the position of the art silk fabric industry for example, is divorced from the actual realities of the situation and as consumers of such fabrics are drawn from the lower middle-class sections of the community, the consequent increase in price may perhaps result in a regression in demand and inflict hardship on the industry.

"The increases proposed in the rates of stamp duty on bills of exchange are abnormal. The bills of exchange are documents of common use in commercial transactions, and the heavy incidence of the increased rates will prove to be a check on the facility of day-to-day dealings for business requirements covered by bills of exchange. The stringency of credit conditions has resulted in pushing up the interest rates, and enhanced stamp charges would be a further indirect addition to the burden of interest charges. Ultimately, the stamp charges have to be fully borne by the borrower. These charges would amount to an increase equivalent to as much as 1 percent in the rate of interest, not per annum but for the duration of the bill."

The President of the Indian Merchants Cham-

ber, Mr. Murarji J. Vaidya, while addressing the third quarterly general meeting of the Chamber said: "If it is the policy of the Government to try to secure all the financial resources required from the public sector for the second five year plan by taxation measures, it is difficult to estimate the repercussions that such a policy will ultimately have on the trade, industry and capital resources of the country. One can only conclude that the rate at which the Government is attempting to absorb all available resources for the public sector in the country is far in excess of the rate at which development of these resources can ever take place."

The Working Committee of the All-India Manufacturers Organisation, in a statement released on the new taxation proposals, has urged the abandonment of what it has described as a "negative policy". It has stressed the view point that expansion of production, along desirable lines, should be actively helped by the Government—not only by tax relief, but by means of tax exemptions for a specified period, if the profits are to be ploughed back into industry.

Stringency in Money Market

The vice-president of the Chamber, Mr. Naval H. Tata, speaking on the labour situation in the country, observed "that a new wave of militancy is sweeping the trade union movement." Agitation for a general increase in wages is "quite unjustified," as the whole problem is currently being considered at the top level. "To make a public demand for an immediate blanket increase in wages as the price for labour's co-operation in the second five year plan" Mr. Tata said, "may well be a smart piece of political strategy, but it certainly is not a sign of responsible trade unionism." The tightness in the money market, he added, was due not only to the normal seasonal demands, but also to the tremendous expansion in the industrial field. There had been strikingly larger imports of steel and capital goods in the past six months as part of the increasing tempo in developmental activity. Mr. Tata urged immediate corrective measures for the current stringency in the money market. All restrictive policies of an ideological nature hampering the expansion of capacity and production by organised factory units should be given up, it demands. Although the Committee is pleased with the considerable emphasis the Finance Minister has placed on the need for "stepping up as much as we can the rate of savings in the economy in order to match it with the investments we are undertaking," it has pointed out that no action has been taken as yet by the Government on the recommendation of the Taxation Enquiry Commission for granting a tax holiday.

Stock Exchanges Protest

In a joint telegram to the Finance Minister, the stock exchanges of Bombay, Madras and Calcutta have criticised the tax proposals and stressed that the proposed taxes will destroy all chances of an "effective contribution of the private sector to the second five year plan." The telegram concludes: "The cumulative effect of these drastic proposals at the time of acute financial stringency and declining stock market prices will be most injurious to investment confidence, will destroy incentive and initiative and jeopardise effective contribution of the private sector to the second five year plan."

Another telegram has been sent by the Bombay Shareholders Association to the Union Finance Minister on the same issue expressing the deep concern of the Association about the imposition of the capital gains tax. The increase in the dividend tax will adversely affect the flow of equity capital. The dividend tax should be levied, it suggests, on the basis of employed capital so as to include capital plus reserves. The proposal to deposit depreciation reserves with the Reserve Bank requires amendment so as to avoid financial hardship to industry.

Wage Claims

The President of the Employers Federation of India, Sir Homi Mody, has deplored the support given by two Central Government Ministers to the I.N.T.U.C. demand for an "adequate" wage increase for workers in seven major industries. Sir Homi says: "I have read the statement made by Mr. Khandubhai Desai, Minister for Labour, and Mr. Gulzarilal Nanda, Minister for Planning, in Ahmedabad at a rally of the textile workers of the city. They have categorically declared that the demand recently put forward by the I.N.T.U.C. for an increase in wages is reasonable, and Mr. Khandubhai has also uttered a sort of admonition to employers in this connection. It is amazing that such a pronouncement should be made by Ministers of Government at this stage. The trade unions have not yet presented their case in any detail and the employers have had no opportunity of examining the questions at issue. Ultimately, if there is no agreement between the parties, the matter would have to go before the wage boards which are about to be constituted. Before any such steps are taken, the two Ministers have lent the weight of their high authority to the demand put forward by the I.N.T.U.C. If this is the way in which important issues concerning labour and industry are to be decided, then the best thing would be to do away with whatever machinery exists for the consideration of the disputes or differences which arise from time to time. Let the trade unions be allowed, in effect, to decide them. If the Ministers have not been correctly reported, or if their statements do not carry any such meaning as an ordinary person would read into them, I hope they will take a very early opportunity of clarifying the position."

Uttar Pradesh

RATIONALISATION OF KANPUR TEXTILE MILLS

OFFICIAL COMMITTEE AGAINST EXTENSION AT PRESENT

(FROM OUR LUCKNOW CORRESPONDENT)

THE Kanpur Textile Mills Rationalisation Committee, of which Mr. Bind Basni Prasad is chairman, has suggested that at present, there should be "no extension of rationalisation or reduction in job requirements" due to certain deficiencies in the physical working conditions and defects in machines. The Committee was appointed by the State Government last year following a strike involving 45,000 workers. It has in view a total eventual reduction of 1,713 to 2,147 workers in the categories of weavers, ring piecers and ring doffers in seven units on the introduction of full rationalisation. Except in the case of ring doffers, the Committee has recommended for the rest the application of the Bombay wage rates, holding that the increase in wages will be well within the gains brought about by rationalisation.

According to the Committee, Kanpur, which is the third largest textile manufacturing centre in India, has both advantages and disadvantages. Among the advantages are its location in the heart of a consuming area, lower dearness allowance, lower wages of skilled and semi-skilled operatives and clerks, cheaper coal and the working of additional shifts. Among the disadvantages, compared with Bombay and Ahmedabad, are higher electricity rates, reduced margins in export cloth, higher insurance rates, higher price for cotton, personal wages to workers, additional railway freight, insurance and octroi on spare parts, etcetera. The committee has unanimously recommended that electricity charges be lowered as it believes that if this is done the advantages and disadvantages may balance each other.

The Committee's main report of 471 pages is increased to 629 pages if the three minutes of dissent and appendices are taken into account. On 21st July, 1955, the agreed date for reckoning the labour strength in the seven mills under review, there was a total working force of 37,717. The total number of looms and frames in the seven mills was 8,153 and 866 respectively. Of these, 29.13 percent of the loomage and 48.6 percent of the frames were already working on a rationalised basis in July, 1955. Rationalisation has been claimed by employers on 95.1 percent of the looms and 85.8 percent of the ring frames. The Committee has found that rationalisation is possible on 66.8 percent of the looms and 41.4 percent of the ring frames after the deficiencies in them have been rectified. One month has been allowed for making good the deficiencies on the already rationalised machines, and extension in others, it has been suggested, should not be permitted without the deficiencies being first removed. The Committee has also rejected the contention of labour that rationalisation should be confined exclusively to new machines.

Work-load and Basic Wages

Dealing with the work-load, the Committee remarks that the notion that the work-load is in direct proportion to the machines to be handled by a worker is misconceived. It holds that the work-load depends on the number of operations which a worker has to perform, patrol and supervision and other miscellaneous duties. If with the allocation of more machines to a worker, the number of operations is reduced, the increase of work involved in patrol and supervision, and miscellaneous duties can be offset. It has unanimously allowed 20 percent of time for relaxation and personal needs, and fixes work-load on the basis of 48 minutes working on one loom.

As the basis of wages in the various mills of Kanpur at present is not uniform, the benefit of the rationalised rates recommended by the Committee will be different from mill to mill. A two-loom weaver is likely to have an increase in his basic wage of between Rs. 37 and Rs. 23, as his present basic wage varies from Rs. 41 to Rs. 55. A weaver already working on four looms in Kanpur earns from Rs. 64 to Rs. 72. He is likely to gain by Rs. 6 to Rs. 14 a month. A ring piecer's wage depends on the number of spindles he looks after. At present, the basic wage of a piecer supervising a single side ranges from Rs. 31.5 to Rs. 36. When going on double sides, the increase in wages will vary between Rs. 12.9 and Rs. 23. The increase in the wages of a piecer already working on double sides will vary from Rs. 4.7 to Rs. 11.11 a month. A ring doffer at other textile centres gets a fixed wage not exceeding Rs. 30. As his basic wage here has been related to work-load, he is likely to gain from nil to Rs. 10.10 a month, according to the spindle doffs done by him. As the wages recommended by the Committee are related to work-load, there is an element of incentive in it. The Committee has recommended "fall-back" wages also.

Dealing with the question of substitutes, the Committee has accepted the demand of labour that "temporaries" who have worked for at least 90 days in two preceding years should be regarded as substitutes. It has, however, rejected labour's claim that substitutes should be given a training allowance. Other recommendations made by the Committee are the repeal of standing order 20(G) which provides for the termination of services of substitutes without assigning any reason and the

widening of the definition of "workman" in the Industrial Disputes Act so as to include substitutes. In its view, substitutes are a necessary second line of defence in the industry. The Committee recommends that there be only one class of clerks, divided into four grades. It has also recommended the abolition of the distinction between non-matriculates and those with higher educational qualifications. The starting salary for a graduate clerk and a stenographer has been suggested as Rs. 76.

Soil Conservation

The Soil Conservation Society of India last week held its annual session in Lucknow. Dr. J. C. Ghosh, member of the Planning Commission, presided. He put forward the interesting proposition that soil conservation in the long run is more profitable than irrigation. He was fortified in his belief by the observations of Mr. Morarji Desai, whom he quoted as follows: "Experiments have shown that bunding increases the yield of rain-fed crops by 25 percent. It also leads to the raising of the subsoil water level in wells. Thus soil conservation is not only important for preserving the gift of nature, but also for immediately increasing food production." Mr. Desai's estimate is that about 25 million acres of cultivable land in Bombay, which are in urgent need of soil conservation, will require Rs. 150 crores or Rs. 60 an acre. Dr. Ghosh suggested that if with an expenditure of Rs. 60 an acre, soil conservation can increase crop production by 25 percent, it is more economical than irrigation works which cost rarely less than Rs. 300 an acre. In U.P., soil erosion has destroyed the fertility of 3 million acres of

land mainly by the ravines of the Yamuna, the Chambal, the Betwa and the Gomati. Erosion has advanced in another 4.5 million acres, reducing fertility by half. According to the State's Agriculture Minister, U.P. loses every year about 2 million tons of foodgrains valued at Rs. 60 crores.

Conference of Statisticians

A joint conference of Central and State statisticians was held in Lucknow last week at which Professor P. C. Mahalanobis stressed the need for training more technicians. The annual output of engineers in India, he said, was 3,000, against 60,000 in Russia and 24,000 in the United States. Dr. Sampurnanand, who inaugurated the conference, was emphatic that the State departments of statistics should remain entirely under the control of State Governments. The conference, which lasted four days, made a number of recommendations relating to the statistics of the second five year plan, the estimation of State incomes, the training of statistical personnel, a common statistical year for the assembling of statistics, compilation of data for the small-scale and village industries, the preparation of district statistical manuals and a revision of the basic statistics of reorganised States. Priority has been given to this last item in the programme of work chalked out for 1957-58. Other priorities include the preparation of economic activity indices, and the evolution of other economic indicators, and the further examination by the State Statistical Bureaux of their experience in implementing the sanctions of the Government of India for State statistical schemes.

Would the top blow off?

It might...if there was an acute shortage of CAF (compressed asbestos fibre) Jointing. Not only would many engineers "hit the ceiling", but there would be "blown" gaskets everywhere, with disastrous results. But thanks to the new AM & FM factory at Ghatkopar, Bombay, the chances of this happening are remote. We make this vital material in sufficient quantities to meet the entire demand of Indian Industry.

CAF Jointing is used wherever a good, strong, efficient seal is needed—sealing flanged joints in pipe-lines, making cylinder head gaskets, boiler joints, etc. This jointing holds fast and remains leak-proof against steam, water and oil at varying temperatures and pressures.

This is just one of the many unobtrusive but important parts that this versatile raw material—asbestos—plays in our daily lives. We at AM & FM make a wide range of technical asbestos products to meet the varying needs of India's industry. The increasing use of asbestos is an index to India's industrial progress.

Where There's Industry
There's Asbestos

Carried any
elephants lately?

WE transport some pretty fascinating stuff about the globe... take the case of the lovesick elephant that had an urgent date with a Zoo or someone in London. Then there was the ripe Gorgonzola, the film star wanted in a hurry, we were as keen to deliver it; you know how noisy a cheese can get! And of course, we're forever rushing merchandise from place to place — to make sure our customers get on the market before the other man does.

By the way, have you any cargo for any place? There are a thousand good reasons for sending it by Air-India International.

CARGO BY AIR is quick, convenient, saves money on transit insurance, gets you on the market first, brings you the goods when you want them, enables you to fulfil urgent contracts... we're out of breath, but you get the idea!

LONDON TEA SALES

AT last week's London tea sales the 61,350 packages on offer realised an average price of 6s 3.61d a lb, against 6s 3.43d in the previous sale and 4s 11.00d a year ago. Plain broken pekoe was quoted at 5s 4.1d a lb, against 5s 4d in the previous sale. Prices obtained by some of the companies are given below:

	No. of packages	Average a lb.
Amgoorie	551	7/3
Anglo-American	426	6/22
Assam	2,023	6/31
Assam Cons.	630	6/2
Assam Frontier	1,119	6/91
Attaree Khat	625	6/13
Borelli	774	6/01
Budla Beta	2,672	7/01
Chubwa	750	6/51
Cons. Tea and Lands	2,041	5/111
Doom Dooma	1,025	6/101
Eastern Assam	671	6/8
Eastern Produce	612	6/8

U.K. Tea Stocks

U.K. stocks of tea on 30th November amounted to 88.8 million lbs, against 119.6 million, lbs a year ago (converted at 110 lbs a package).

NORTH INDIAN TEA CROP REPORTS

The following is the summary of crop and weather telegrams received for the month of November.

Upper Assam: Weather reasonable; the cold weather has set in and the season has closed; plucking stopped on 20th November; outturn last month good.

Central Assam: Weather generally reasonable; cold weather has set in and the season has closed; drought conditions in evidence in Jorhat; plucking stopped on 20th November; despatches seriously retarded in Moran.

Lower Assam: Cold weather has set in and the season has closed; plucking stopped on 20th November; outturn to date slightly over last year in Bishnauth, but less in Mangaldai.

North Cachar: Cold weather has set in and the season has closed; outturn last month normal to good; despatch delayed by rivers drying up; blight not so severe in Lakhimpur; helopeltis prevalent in Happy Valley.

South Cachar: Cold weather has set in and the season has practically closed; outturn last month about normal; outturn to date over last year in Chutlabheel and Hailakandi; despatch delayed by rivers drying up; helopeltis prevalent in Chargola.

Eastern Doars: Weather generally favourable; with few exceptions the season has closed since 20th November; outturn to date considerably over last year; blight negligible.

Central Doars: Season has closed; plucking stopped on 20th November; outturn last month normal; helopeltis prevalent in some districts; blight blight prevalent in some districts.

Western Doars: Weather reasonable; season has closed; outturn last month good.

Darjeeling: The season has closed.

Terai: Weather reasonable; outturn last month normal; cold weather has set in; helopeltis prevalent; blight blight prevalent.

Jute

TOWARDS A BIGGER RAW JUTE CROP

GOODS STOCKS FALL IN NOVEMBER

IN the Indian Central Jute Committee's bulletin for October there is a brief report of the Committee's annual meeting. In his opening address the Union Minister for Agriculture, Dr. Deshmukh, expressed satisfaction at the increased crop which was produced in 1955-56, but went on to say that the scope for increasing output by expansion of acreage was limited by lack of price incentive. He said that "we were not able to give growers economic prices." That is a matter which is open to question. There is general agreement in the trade that the growers are better off than they have ever been and that is borne out by the fact that they have now more holding power and are not forced to market all their crop in the early part of the season as they used to have to do. In fact, to some extent, they are able to dictate prices for, if the price of jute were in accordance with the parity of the world prices obtainable for jute manufactures, it would be considerably lower than it has been for two or three years.

He congratulated the Committee on its successful experiments to improve production of good quality jute and to reduce costs. More important, he stressed the necessity of a concerted drive to get improved methods of cultivation and retting adopted by the growers. That is a matter which was emphasised in these columns some months ago. He also emphasised the need for increasing the yield of jute from each acre by adopting improved methods of cultivation.

In the same issue of the bulletin there is a photograph of part of a crop of jute which had been sown on the line-sowing system and treated with fertiliser. This crop gave a yield of 31.52 maunds an acre compared with 22.05 maunds an acre on the control plot. In its way that was satisfactory, but the satisfaction is very largely offset by the fact that this increase means also an increase of 140 maunds of waste matter to each acre which involves a waste of labour and fertilisers. Of course, the production of waste matter cannot be entirely eliminated in any agricultural crop, but it can be reduced, as has been proved with other crops, by the development of varieties giving a greater yield of usable produce from each plant. That gives the grower a greater weight of merchantable produce from each acre, reduces his costs and so provides the price incentive which Dr. Deshmukh says is lacking. Unfortunately, the Indian Central Jute Committee seems still to be indifferent to this side of research work which, if successful, would enable a bigger crop to be produced without taking land away from other crops. It would thus improve the lot of the cultivator and benefit the country generally. Meantime, it is reported that some progress has been made in this direction in Pakistan. It is also said that Pakistan has developed a hybrid plant suitable for cultivation in dry areas such as Sind. Such a plant would be useful in some of the areas in India where no very successful attempts to produce jute have been made, but the development of the plant leaves unsolved the problem of water for retting.

I.J.M.A. Stocks of Manufactures

At the end of November the total stocks of manufactured goods held by members of the I.J.M.A. and other mills reporting to the Association showed a reduction of 14,800 tons compared with those at the end of October. This makes a total reduction of 25,100 tons since 1st July. Hessian stocks at the end of November were 24,600 tons, a drop of 6,200 tons or 20.1 percent compared with those at the end of October, while sacking stocks at 67,500 tons were down by 9,800 tons or 12.6 percent. On the other hand, there was an increase of 1,200 tons in the stocks of other manufactures. The total stocks are now lower than they have been since March, 1956, but higher by 38,900 tons than they were at the end of November, 1955.

THE JUTE MARKETS

There has been no outstanding feature in the markets during the past week. Overseas enquiry for manufactured goods has been on a reduced scale and, consequently, has not provided the mills with any incentive to buy jute in large quantity. Mills cannot, however, in present circumstances, stay long out of the raw jute market and there has been steady day-to-day buying. We are now in a period of the year when there is normally less jute coming forward for sale in the upcountry markets and that has tended to keep jute sellers in a bullish frame of mind while the continued rise in prices in London and in Pakistan has also encouraged them to expect higher prices in Calcutta. Towards the end of the week under review there has been an easier tendency in the market for manufactures and that has resulted in some easing of jute prices. Most jute sellers are now holding stocks and any lowering of prices in the speculative gunny market brings out offers of jute from weak holders who are nervous and afraid to hold on but, in spite of that there is an underlying feeling of steadiness.

Manufactured Goods: In spite of diminished enquiry from abroad, the fatka markets have shown little change during the week. Hessians, because of covering operations in the bazaar, have maintained more steadiness than sacking. There

was rather a sharp rise on Friday when the I.J.M.A. stock figures became known, but it was not maintained and on Monday and Tuesday prices tended to slip down.

Quotations on Wednesday morning were as under:

	Dec. Rs.	Jan.-Mar. Rs.	April-June. Rs.
40" 8oz.	37	36-4	35-10
40" 10oz.	46-4	45-4	44-10
B Twills	121-14	122	122
Heavy C's (Plain)	121	121-8	121
A Twills	144-4	144-12	144-4
Liverpools	134-8	135-4	134-8
Cornacks	123-8	123-4	122

Raw Jute: Mills bought moderate quantities daily throughout the week, but their interest tended to sag on Monday and Tuesday when the manufactured goods market eased off. Business was reported in Northern and Assam jute at Rs. 31-4 to Rs. 32 basis Bottoms. Daissee was done in fair quantity at from Rs. 32 to Rs. 32-8 basis Bottoms according to the district and Murshidabad Tossa at Rs. 31-8 to Rs. 32. Mesta found buyers at Rs. 28 for jungli and at Rs. 29 for Murshidabad qualities but later on Murshidabad Mesta was done at Rs. 28-8. Local packing was bought at Rs. 31-8 basis Bottoms for Northern and at Rs. 31-4 for Jungli Middles. Biml was sold at Rs. 29 F.A.Q. Pakistani Cuttings were sold at Rs. 135.

Quotations on Wednesday are as under:

Indian Jute:	Landed at Mills Rs. a md. basis Bottoms.	Shipment. Dec. '56-Jan. '57.
Upper Assam	32	"
Lower Assam	32	"
Northern	32	"
Murshidabad Tossa	31-8	"
Daissee	33	"
Daissee Mesta	29-8	"
Local Northern	31-8	"
Biml	F.A.Q. 29	"

Tossa is quoted at 8 annas a maund above the price of White jute.

Pakistani Jute:	Rs. a md.	Shipment. Dec. '56-Jan. '57.
Jat	37	"
District	36-8	"
Northern	36	"

Pucca:	Rs. a bale.	Shipment.
Export Firsts	250	Dec. '56-Jan. '57
Export Lightnings	230	"
Cuttings	136	"

Arrivals in Cossipore during the week were 86 wagons. There has been good demand but prices have begun to ease in sympathy with the gunny fatka. The condition of imports and stocks is very unsatisfactory.

Mofussil: In Assam and Northern Bengal imports are small and prices steady. In Bihar and further west imports are in good quantity and are eagerly bought up for despatch to Cossipore.

I.J.M.A. PRODUCTION FIGURES FOR NOVEMBER

The Indian Jute Mills Association reports the total production of jute goods for the month of November, as follows:

Description	Quantity
1. Gunny Bags	
(a) Hessian	4,595 tons
	1,31.1 lakh yds.
(b) Sacking	87.8 lakh Nos.
	40,898 tons
	9,45.1 lakh yds.
	3,89.8 lakh Nos.
2. Gunny Cloth	
(a) Hessian	32,249 tons
	12,56.8 lakh yds.
(b) Sacking	851 tons
	21.2 lakh yds.
3. Other manufactures	5,219 tons
4. Total production (above figures combined)	
(a) All kinds	83,812 tons
(b) Hessian (both bags and cloth)	13,87.9 lakh yds.
(c) Sacking (both bags and cloth)	9,66.3 lakh yds.

Summary	(00,000 Yds.)	(000 Tons)
	Nov. 1956	Nov. 1955
Hessian	13.88	13.17
Sacking	9.66	9.50
Others	11.99	11.99
	41.8	46.5
	5.2	5.2
	6.0	6.0
Grand Total	83.8	80.4
Hours worked	209.0	203.5
	209.0	

N.B.—These statistics are based on replies received and represent all members of the Association and Gagalbhai with estimates for three non-member mills.

Others		9.8	77.3	4.3
			8.6	
Grand Total (000 Tons only)	101.9	116.7	-14.8	63.0

N.B.—These figures are based on replies received and represent all members of the Association and Gagalbhai with estimates for three non-member mills.

PAKISTANI JUTE PRICES RISE IN NOVEMBER

OFFICIAL MOVE TO SET UP FIBRE MARKETING CORPORATION

(FROM A CORRESPONDENT IN EAST PAKISTAN)

NOVEMBER opened on a dull note with an air of uncertainty in the local jute market. The news of the U.N. resolution asking the U.K., France and Israel to withdraw behind the armistice line in Egypt acted as a damper on the Narayan-ganj market, although prices ruled firm. By the middle of the month, a great deal of activity developed and the prices of pucca bales increased in some instances by Rs. 15 a bale. Apart from balers, local mills bought jute, which throws some light on the shortage of kutcha bales and loose jute. Kutcha bale prices advanced, although only small business was finalised. Imports of loose jute were small and only about 15,000 maunds daily arrived in the Narayan-ganj market.

The following prices were paid f.o.b. Narayan-ganj on 17th November, 1956:

Mill Firsts Rs. 215 a bale.
Export Firsts Rs. 180 to Rs. 190 a bale.

Export Lightnings Rs. 170 to Rs. 175 a bale.
Export Hearts Rs. 160 to Rs. 165 a bale.
Dacca Tossa 6 Rs. 185 a bale.
Dundee Tossa 4 Rs. 185 a bale.
Dundee Tossa 2/3 Rs. 175 a bale.

A number of reasons led to hectic activity mainly in the ready section. A sharp reaction in the Calcutta jute goods market, low arrivals, covering against the China and Poland commitments and the bright outlook for Calcutta demand due to the military developments in Egypt, imparted a bullish tone. Calcutta reacted sharply to the developments in the Middle East due mainly to speculation. It was expected that the stockpiling of jute goods would increase. Cuttings went up to Rs. 130 a bale, and raw jute was very firm. Low arrivals were a contributory factor which further strengthened the market. Cultivators were, it was reported, concentrating more on paddy harvesting which would at present fetch them a better return than some time later when prices usually decline. Late harvesting in jute, on the other hand, would pay a higher return.

Recent deals in the region of 30,000 bales of raw jute with China and Poland were also responsible for the bullish developments in the market. Shippers continued to cover against

those commitments even at higher prices. The overseas market, moreover, was very firm and encouraged buying at exorbitant prices. Shipment rates also continued very firm, presumably due to the closure of the Suez Canal. Export Firsts closed the week at £100 a ton, while Export Lightnings and Export Hearts ended the week at £95 and £90 respectively. During the third week of November, the jute market in Narayan-ganj touched this season's record prices.

Fall in Supply

Apart from the other factors responsible not only for the firm tone of the jute market, but also for raising it to unexpectedly high levels, it should be borne in mind that the supply this season is likely to be less than what was earlier expected. By this time in the preceding two years, daily arrivals from the interior into the baling centres used to be 25,000 maunds on an average. This year for the last several weeks, imports have been at the rate of only 15,000 maunds a day.

On 24th November, the following prices were paid f.o.b. Narayan-ganj:

Mill Firsts Rs. 215 to Rs. 225 a bale.
Export Firsts Rs. 190 to Rs. 210 a bale.
Export Lightnings Rs. 175 to Rs. 195 a bale.
Export Hearts Rs. 165 to Rs. 185 a bale.
N. C.'s Rs. 110 to Rs. 120 a bale.

On the whole, overseas buyers did not follow the rise in prices and only restricted business was finalised. There has been a big hold-up in the shipping position and an acute shortage of tonnage is expected this month and in January, 1957. Shippers are, it is reported, already 400,000 bales behind with shipments against sales.

Towards the end of the month, overseas spinners purchased fair quantities, the main buyers being Poland and South America. The following prices have been paid basis c.i.f. U.K.-Continent during the last week of the month:

Mill Firsts £125 a ton.
Export Firsts £112 to £109 a ton.
Export Lightnings £107 to £104 a ton.
Export Hearts £102 to £99 a ton.
Dundee Tossa £109 a ton.

Price Support Proposals

During the month the East Pakistan Government considered proposals for setting up an Internal Jute Marketing Corporation with the complete monopoly of purchase and sale of jute in the internal market. This is with the basic idea of ensuring fair prices to the growers and to stabilise raw jute and jute goods prices in the internal markets. The Government, it is learnt, is also considering the setting up of an Export Control Board to look into the details of raw jute and jute goods exports. The East Pakistan Jute Advisory Board, formed recently with the Chief Minister as its chairman, recommended to the Government a tentative programme envisaging the expansion of the jute market abroad, particularly in eastern countries. The Board has also suggested to the Government that all necessary steps should be taken to increase the present production of jute in the province and the Government, it is understood, has decided to bring another 100,000 acres under jute cultivation in addition to the present stipulated area of 1,500,000 acres (production area being 45 bales). The Board at its recent meeting discussed all aspects of jute cultivation and trade and was of the opinion that by embarking on a programme to increase production, the Government would be able to expand the market. The Board is also reported to be working on a scheme to lift jute from the border areas at the proper time to prevent smuggling.

THE FOREIGN JUTE MARKETS

PRICES UP AGAIN

(FROM OUR DUNDEE CORRESPONDENT)

IT was thought that raw jute prices might decline now that there has been better news of the situation in the Suez Canal area, and the trade was surprised when it was intimated that values of the fibre had been raised by £1 to £2 a ton last week. There has been a quieter tone of late, but no indication of weakness in prices. The strength of the Calcutta goods market, caused by Australia being in the market for a considerable quantity of heavy goods, may have had something to do with the firmer trend of raw jute terms. The failure of shippers to send jute to spinners here and on the Continent is still causing much heart-burning and the Indian mills are also suffering from delay in deliveries of Pakistani jute to them. Spinners here are losing much money by having to cover in their jute ex-spot or affect parcels at well above the shipment rates. If the Pakistani authorities are to increase their sowings of jute next season, they will have to be prepared to keep the prices down to the minimum levels. Offers are not being so freely made for shipment at the higher terms now quoted. Mill Firsts rule from £126 to £131 and Mill Lightnings from £112 to £115, with Mill Hearts from £107 to £110 and Continental Hearts from £101 to £104, and good marks of Daissee-2/3 have been raised to £111 and grade to £108, and grade Tossa-2/3 to £120 and grade fours to £111 lowest, c.i.f. U.K. and Continent, December-January shipment. Spinners are buying very little jute in the meantime, preferring to wait further developments in the hope of a reversion to lower levels.

Business in jute yarns has gone off again, but not before buyers have satisfied their requirements over the next few months. Prices rule very firm at 16.50d a lb. for common 8lb. cops and 17.08d for 8lb. spools. Cloth also is much quieter, but prices are very firmly maintained, as manufacturers' order books are healthy.

Engineering and Transport

FARE COMPETITION IN WORLD AIR TRAFFIC

LACK OF RUNWAYS IN INDIA FOR BOEING PLANES

(FROM OUR NEW DELHI CORRESPONDENT)

A RECENT advertisement in some Indian newspapers has caused a considerable flutter among airlines operating on international routes. The advertisement offers air journeys from Amritsar, Punjab, to London at Rs. 1,212. The route is Amritsar-Kabul-Tashkent-Moscow-Praha-Berlin-Paris-London. This includes 24 hours' free stay in Kabul and overnight free stay in Tashkent. The journey from Amritsar to Kabul will be by the Afghan Airline, Aryana, from Kabul to Moscow by the Russian Airline, Airfloat, and from Moscow to London by the planes of Scandinavian Airlines, Luftanza, or Air France. The fare entitles a passenger to carry 60 pounds of luggage. The normal off-season tourist class fare to London from New Delhi is Rs. 1,414, and during season Rs. 1,747.

The success of this service is likely to affect traffic for other airlines, and particularly for Air India International. It may be added that the Russian Airline, Airfloat, is not yet a member of the international organisation for civil aviation. It is also interesting to note that the Indian Airlines Corporation has recently entered into an agreement with the Russian Airline, Airfloat, for booking through-traffic from New Delhi to Moscow via Kabul.

Service to China

Air Ceylon International, which has a tie-up with K.L.M. proposes to extend its service to China, Colombo-Shanghai and Peking, it is learnt. India-China air agreement, it may be added, is yet to be finalised. The main issue is that of traffic. Will there be traffic enough to pay for an India-Peking service? Enquiries indicate that the Chinese Government does not favour an Indian air-link with Peking. India already has a service up to Canton from where passengers are picked up by the Chinese airlines for the interior. In any case, China cannot deny India what it concedes to Ceylon, that is, an air link with Peking.

Indian Order for Boeings

Air-India International has placed orders for three Boeing jet planes for its India-U.K., or India-Japan, or India-Australia services. The total cost of the planes, together with spares, is placed at Rs. 115 crores. This purchase should remind one of the U.N.E.S.C.O. session, which concluded here during the past week. The Ministry of Education last year invited the U.N.E.S.C.O. to hold this session in New Delhi. The invitation was readily accepted. It was at that stage that the Government discovered that there was neither a conference hall to hold the session nor was there adequate residential accommodation to house the delegates. A conference hall was built. So were Asoka and Janpath hotels. They cost approximately Rs. 3 crores. In the same style, three Boeings have been ordered. They will be delivered by 1960. And just as it was in the case of the U.N.E.S.C.O. session, there might then be no suitable aerodromes to operate these giant aircraft, which will need a very long runway.

As already reported, the battle over the Palam airport is still on. It is not yet known whether it will be controlled by the Indian Air Force or the Directorate of Civil Aviation. Nor a decision has yet been reached to develop Calcutta and Bombay airports, or any of the two. Above all, there is the overall issue of finances. The Planning Commission has made a certain allocation in the second five year plan for the development of aerodromes in India. It is adverse to increasing the allotment. It would like the Ministry of Communications to make adjustments from its own allocations.

It may be that the Boeings, when acquired, will be operated from foreign airports. But will this solve the problem? Almost every international airline has decided to introduce the Boeing type aircraft on international routes. India will have to modernise its aerodromes in order to make them suitable for the new type of aircraft or be removed from the map of international air traffic. The Planning Commission's primary function is to accord priorities. It will have to take a decision whether a national museum and a national theatre should have a higher priority over the creation of an international airport in India. Can a building for a national theatre wait till 1960, when Boeings will be put into service? This is an interesting issue. The theatre will cost at least a couple of crores of rupees.

B.O.A.C. Investment in New Planes

Investment in aircraft by B.O.A.C. when current orders are fulfilled—including the recent application for 15 American Boeings—will amount to over £180 million. This estimate, given by the Government in the Commons, took the combined cost of the Boeings and the new de Havilland jet, airliner, D.H. 118, to B.O.A.C. to be about £100 million. All capital needs, including buildings and equipment would make a total of £200 million. But internal financing would reduce the net requirements below £160 million.

During the next five years, B.E.A. expected to place orders for helicopters, and possibly a small number of jet aircraft for longer routes. The estimated borrowing need of B.E.A. might reach £60 million in the next five years. In addition to

the 33 Britannias, 22 Comets and 14 Viscounts on order, the Corporations had to place new orders for 15 Boeings and a substantial number of the D.H. 118. The Aircraft Corporation Bill, which raises the borrowing limits of the two State airways, and enlarges B.O.A.C.'s borrowing powers, received an unopposed second reading after Ministers had made these points.

Purchases—The two corporations must have the best and most up-to-date aircraft. But there is no real break in the "Buy British" policy where the British planes are fully competitive.

Britannia—It is hoped that the Britannia will go into service very early next year, properly modified, perfectly safe to fly and as a world-beating aircraft.

D.H. 118—The Government looks upon the D.H. 118 as suitable for the U.K.'s needs for a fine and versatile aircraft for the middle years of the 1960's.

Obsolescent aircraft—There were some difficulties in disposing of the 12 Constellations and the light Stratocruisers, which had been bought to replace the Comet, because there was an obligation to sell these for dollars. There was the possibility of a part exchange deal involving the Boeings.

Flying boats—It will be quite wrong to leave unused what might be a very great aircraft.

The bill totals £160 million, B.O.A.C.'s borrowing powers have been raised from £35 million to £60 million. Those of B.E.A. has also been widened. It also makes it possible for B.O.A.C. to borrow from the International Bank for Reconstruction and Development, or from the Export-Import Bank. For the Boeing aircraft, for instance, it will be necessary to pay an advance of possibly a third of their total cost before delivery. In order to minimise the drain on the U.K. dollar reserves and in order to tide over the period before the aircraft started earning dollars, it might be desirable to borrow dollars.

Crisis for European Airlines

The economic crises of the U.K. and France, and to a lesser degree of other European countries,

expected for next 12 months, will hit airline traffic seriously. With austerity conditions in France and Britain, no motoring, etcetera the North Atlantic tourist traffic is bound to recede, as indeed will all tourist business centring on Europe from South Africa, Australia, the east and to a smaller extent Latin America, which has hitherto provided a predominant proportion of business passengers. The Central and South American countries, the Caribbean and Canada may be expected to gain from Europe's loss. It may pay certain European carriers to re-orientate their 1957 schedules to allow for probable changes in the traffic movement.

The economic effects on all carriers engaged in trade with Europe will be serious. As the biggest volume carriers in the North Atlantic trade, P.A.A. will be hardest hit. In Europe, B.E.A. might suffer the worst, since it is the biggest tourist carrier, and apart from the setback to its extra-European passenger business, almost certainly the British balance of payments will be so serious by next summer that the British resident tourist allowance will be cut, and even discontinued. The recession of American tourist trade to Europe during 1957 will seriously affect the main dollar earning business of all European countries, just at the time when they most need the dollars to buy dollar oil.

British Staff of Arab Airways

The British pilots of all Arab airways have had their contracts terminated and the same kind of difficulty will be faced in every Arab country because none of them will allow British pilots to fly over their territory. For a long time, B.O.A.C. held a technical advisory contract with Iraqi Airways, but now the British staff have been discharged, the chief engineer had to leave without notice.

Cyprus Airways operations have been curtailed where they served Arab territories and Aden Airways are in even more difficult straits with so many of their routes overlying what is now hostile country. U.S. companies are likely to fill the gaps. T.W.A.'s advisory and operational group in

Saudi Arabia could extend its activities in neighbouring countries and the same may happen with Transocean Airlines group in Teheran running the technical side of Iranian Airways.

NEW OIL FIND IN NIGERIA

An exploration well near Afam, 20 miles east of Port Harcourt, Nigeria, has encountered oil and gas during the first stages of testing, it is announced in London by the Shell Petroleum Company. So far only the lowest prospective sand layer in the well has been tested, and until tests of further layers higher up take place, the full potentialities of the well will not be known. "However, preliminary results indicate that the discovery may be worth appraising by further drilling, and a location for a second well is now being prepared about three-quarters of a mile north of the first." The Shell statement concludes by announcing that the second well will be drilled on completion of testing at the first well if results continue to be encouraging.

INDIAN INSTITUTE OF SCIENCE DEVELOPS ELECTRONIC MULTI-TESTER PROCESS

For testing A.C. meters and relays, engineering firms and utility companies are at present employing expensive rotating machinery. A portable electronic multi-tester which permits testing and calibration of watt-meters, watt-hour meters, power factor meters and relays at line frequencies of 40 to 60 cycles a second, has been developed. The design is based on the principle of phantom loading, the test loads being stimulated by applying rated voltages to the potential coils and variable current leads to the current coils. A two-stage phase shifting network provides smooth control of the phase angle between the current and the voltage vectors, particularly in the zero and the unity power factor regions. The equipment is likely to be of use to engineering colleges, meter and relay testing departments of electricity supply undertakings and in research laboratories. The equipment which can normally be operated on 220 volts, 50 cycles commercial supply can also be operated on 110 volts AC by providing a tap on the in-put

transformer. The tester can be manufactured in any general purpose workshop having a small lathe, an engraving machine, a drilling machine and usual tools for sheet metal and soldering work. The essential components for its manufacture are valves, resistors, capacitors, transformers of small rating, panel meters and wiring materials, etcetera. Parties interested in undertaking commercial production according to this method should write for further details to the Secretary, National Research Development Corporation of India, Mandi House, Lytton Road, New Delhi-1.

INCREASE IN EXPORTS OF U.K. AIRCRAFT INDUSTRY

The British aircraft industry's exports have increased by 137 percent during the past five years. In 1952, the annual total amounted to just over £45 million, while this year's total, based on the January-October average, is estimated at more than £107 million. Since 1954, when the aircraft industry exported £56.1 million, exports have risen by 91 percent, a figure which surpasses the performances of other engineering industries by substantial margins. The export of ships and boats, next on the list, has risen 68 percent in the same period of three years, followed by radio and television equipment (28 percent), scientific instruments (19 percent), railway locomotives and rolling stock (5 percent). The 1956 export total for cars is expected to be about the same as in 1954. September labour figures just issued show that the aircraft industry's heavy commitments abroad are backed by the largest ever peace-time force, no fewer than 257,300 men and women being employed in the "manufacture and repair" of aircraft. This is 2,500 more than in August, the previous record month.

DIRECT RADIO-TELEPHONE SERVICE BETWEEN INDIA AND ETHIOPIA

A direct radio-telephone service between India and Ethiopia has been opened, bringing the total number of countries with which India is so linked to 19. The new service was opened by an inaugural call between the Union Communications

Minister, Mr. Jagjivan Ram, and Mr. Fitaurari Tafassa Haptmical, Ethiopian Minister of Posts, Telegraphs and Telephones. An indirect radio-telephone service between India and Ethiopia, via London, was opened on 26th October during the visit of the Emperor to this country. Tests had since then been conducted in order to establish a direct service. The opening of the new service marks yet another step in the rapid development of the Overseas Communications Service since independence. Before independence, India had only one direct radio-telephone service—to London. This country is now linked by direct radio-telephone services to Indonesia, Iran, Japan, Hongkong, Bahrain, Malaya, Aden, China, Burma, Saigon, Egypt, the U.K., East Africa, Switzerland, Soviet Russia, Poland, Australia, France and Ethiopia. Similar rapid progress has been made in radio-telegraph and radio-photo services. Direct radio-telegraph services are now available to 16 countries as against four at the time of independence and direct radio-photo services to five countries, against none before. The service with Ethiopia would be available to the public between 9.30 p.m. and 10.30 p.m. daily excepting Sundays. The rates will be Rs. 40 for the first three minutes and Rs. 13.5 for each additional minute, besides a report charge of Rs. 2.11 a call.

NEW BRITISH SHIPS FOR ASIAN TRADE

The Peninsular and Oriental Steam Navigation Co.'s new cargo motorship *Salmaria*, of 8,400 tons, was recently put through her trials on the River Clyde, in Scotland, by the builders, John Brown and Company. This is the second ship the firm has completed this year for Peninsular and Oriental (P & O). It is also announced that Scott's Shipbuilding and Engineering Company of Greenock, Scotland, are to put the British India Steam Navigation Company's new turbine steamer *Nyanza* through her trials. This firm has a long association with the British India (B.I.) line, and also has a contract for the building of two tankers, each of 18,000 tons, under the oil-carrying programme of the P. & O group, which includes B.I. B.I. also recently took delivery of the cargo steamer *Nardana*, built for it by Barclay, Curle and Company, on the Clyde. The same shipbuilders are to launch soon the *Woodarra*, another B.I. ship. The five latest cargo ships for the Asian trade, each of 6,500 tons, already announced, are also being built on the Clyde at the Govan (Glasgow) shipyards of Harland and Wolff.

OUTPUT OF T.I.S.CO. WHEEL, TYRE AND AXLE PLANT

The T. I. S. Co.'s wheel, tyre and axle plant completed 15 years of its existence on 28th November. Still the only plant in the country manufacturing these railway requirements, it has turned out to date about 48,350 wheels, 67,850 axles and 357,000 steel tyres, together with 91,500 wheel sets—two wheels ready-mounted on an axle. The present capacity of the plant is about 22,000 tons a year. With the completion of the Company's Rs. 110-crore expansion programme, work on which is already under way, this capacity will be stepped up to 30,000 tons. During the second plan, another wheel, tyre and axle plant will come into operation at the new steel works in Durgapur. It is hoped that these two units will make the country self-sufficient in these important rolling-stock components.

INDIAN PROGRAMME TO PRODUCE BRITISH LIGHTWEIGHT FIGHTER PLANE

A tribute to the faith of the Government of India in the development and capabilities of the Gnat lightweight fighter plane was paid by the Folland Aircraft Company's chairman, Mr. C. L. Hill, in his report to the firm's annual general meeting in Hamble, Southampton. After referring to the Indian Government's decision to place an order for 25 English-built Gnats and a contract for the assembly of a further 15 planes at the Hindustan Aircraft factory, Bangalore and, later, the complete manufacture of the Gnat under licence, Mr. Hill said that these negotiations had been continuing for more than 18 months and had proved very complex. "But the significant thing," Mr. Hill added, "is that eventually, the Government of India decided to re-equip its air force and launch its industry in the production of the light fighter, thus placing its faith in a concept which the Folland Aircraft Company has been pioneering for several years." Mentioning that the value, initially, of these contracts with the Indian Government was nearly £3 million, Mr. Hill added that substantially increased orders should derive from the production of spare parts for the Indian Government and from the provision of parts and components to enable the Indian Government to manufacture its own Gnat fighter planes in India.

In another part of the report Mr. Hill said that, in addition to the interest in the Gnat shown by the Indian and other governments, it was very likely that Folland would shortly be in a position to announce at least one further contract for the Gnat supersonic fighter plane. He explained that the signing of contracts with the Indian and other governments would necessitate a complete review of the company's capital requirements, in view of the production expansion involved. The directors, therefore, proposed to make a "rights issue" to shareholders of half-a-million 10s shares at a price to be settled. At the same time, 50,000 shares are to be offered to Folland's employees.

Commodity Markets

WHOLESALE PRICE INDEX RISES

THE official wholesale price index (base year ended August, 1939=100) advanced by 0.6 percent to 433.2 during the week ended 24th November, 1956, compared with 430.5 (revised) for the previous week. The index was higher by 3.9 percent and 18.7 percent respectively when compared with the corresponding weeks of the previous month and of a year ago. The average index for November, 1956 worked out to 427.5, compared with 417.8 for October, 1956, and 365.0 for November, 1955. Higher prices of gram in Patna (+8%), wheat in Amritsar (+6%), gur in Ahmednagar (+4%), tea (+3%), rice (+2%) and bajra and sugar (+1% each) raised the index for Food Articles by 0.8 percent to 421.7 despite a decline in the prices of gur in Muzaffarnagar (-14%), salt in Calcutta (-7%), gram and dal arhar (-2% each) and wheat (-1%) all the three in Hapur. The index for Industrial Raw Materials moved up by 2.0 percent to 529.7, compared with 519.2 (revised) for the previous week as a result of an increase in the prices of manganese ore (average export price) (+11%), linseed in Calcutta (+8%), raw jute and copra (+6% each) castorseed in Bombay (+5%), rapeseed (+4%) and raw cotton in Bombay (+2%); prices of lac (-4%), groundnuts (-3%), raw silk in Bangalore (-2%) and ginglyseed in Bombay (-1%) were marked down. The index for Semi-Manufactures also advanced by 0.2 percent to 419.4, compared with 418.6 (revised) for the previous week. Items which showed noticeable variations were: Coconut oil (+5%), copra cake (+4%), coir yarn (+3%), linseed oil in Calcutta and mustard oil (+2% each), gingly cake (-5%), groundnut oil in Bombay and Calcutta, and copper in Calcutta (-3% each). An increase in the price of jute manufactures (+2%) raised the index for Manufactures from 386.1 to 386.3. The index for cotton manufactures, however, witnessed a slight fall. Because of a decline in the prices of turmeric (-%) and chillies (-4%) the index for the Miscellaneous group moved down by 0.4 percent to 586.6 although prices of cashewnuts (+2%) and black pepper (+1%) showed advances.

AREA UNDER COTTON INCREASES

The all-India second estimate of cotton for 1956-57 puts the current year's area at 15,955,000 acres, against the corresponding adjusted estimate of 15,422,000 acres for 1955-56, according to the Directorate of Economics and Statistics, Union Ministry of Agriculture. This shows an increase of 513,000 acres or 3.3 percent in area during the current year, over that of last year. Details according to (i) trade description and (ii) staple lengths of current and previous year's estimates are given below :

Staple	Area (Thousand acres)			Increase (+) or decrease (-) of Col. (2) over Col. (3)
	1956-57 (Second Estimate)	1955-56 (Adjusted Second Estimate)		
	(1)	(2)	(3)	(4)
Long Staple	5,002	4,767		(+) 235
Medium Staple	7,695	7,296		(+) 399
Short Staple	3,258	3,379		(-) 121
Total	15,955	15,442		(+) 513

The overall increase in acreage during the current year has been shared mainly by Hyderabad, Bombay, Madhya Pradesh and Punjab, and to a lesser extent by Saurashtra, U.P., Pepsu, Ajmer and Rajasthan. The increase has been attributed generally to favourable weather conditions at the sowing time and to efforts made under the cotton extension scheme. The increase has, however, been offset to some extent by decreases reported by Madhya Bharat, Andhra, Kutch, Bhopal and Bihar. As between different varieties of cotton, the increase in area has occurred mostly in Jarilla (including Virnar), American and Broach-Vijay. Decrease in acreage has, however, been reported mostly in Malvi and Omras varieties. In staple lengths, increases have been shared by medium and long staple cotton.

The information given in this estimate generally relates to the period up to the end of September, 1956. Till then, the condition of the crop, it was reported, was on the whole, satisfactory except in parts of Hyderabad, Bombay, Madhya Pradesh and Bhopal, where the crop was adversely affected by excessive rain and attack of insects and pests. This estimate does not cover the entire area sown in this crop during 1956-57. Past experience has shown that the area at the second estimate stage

forms roughly 75 percent of the area under the crop finally reported. The information given in this estimate antedates the re-organisation of the States.

FORWARD TRADING IN NON-FERROUS METALS

The Forward Markets Commission has examined the question of regulating futures trading in copper, zinc, lead and tin and has recommended that forward trading in these metals be permitted throughout India under Section 15 of the Forward Contracts (Regulation) Act, 1952. The Commission has further recommended that the Bombay Metal Exchange Limited, Bombay, granted be recognition for conducting futures trading in these metals throughout India for a period of three years, on the exchange carrying out modifications in its Articles of Association and bye-laws to the satisfaction of the Commission. The Government of India has considered the Commission's recommendations and has decided to give effect to them for a period of three years in the first instance. Recognition to the Bombay Metal Exchange Limited will be granted as soon as it has carried out the necessary modifications. The Government proposes to review the position after one year from the date of the grant of recognition in the light of the working of the forward market and other developments.

INCREASED PRODUCTION OF SUGAR

The production and despatches of sugar from indigenous factories amounted to 42,000 and 63,000 tons up to 15th November, in the current season, against 34,000 tons and 64,000 tons respectively, in the corresponding period of last year. The stocks with the factories on the same date stood at 503,000 tons, compared with 381,000 tons last year.

INSURANCE ON DURGAPUR STEEL WORKS

One of the largest contractors' all-risks insurances ever placed has just been arranged for the British project for the supply and erection of an integrated steelworks in Durgapur, West Bengal, according to agency reports. The insurance cover totals £100 million. The consortium (the Indian Steelworks Construction Co. Ltd.), jointly with the Government of India, has taken out this insurance, in which many British insurance companies, including Lloyd's, and Indian insurers are participating.

INVEST WISELY AND WELL

You may be prudent enough to save a portion of your income, but perhaps you are hesitant to decide on a safe investment.

Let this not disturb you. Your Bank is in touch with the leading brokers and will make their expert advice available to you quickly and without charge.

Your Bank will also keep your investments in safe custody and collect and credit to your account interest and dividends as and when they fall due.

It does not matter where you reside—the State Bank of India has a net-work of offices through which it offers to place these and other services at your disposal.

Why not talk things over with your nearest Bank Agent or write for information?

INDIA'S LEADING BANK

The State Bank's local head office at Calcutta, one of more than five hundred offices waiting to serve you throughout India.

METAL NEEDS PROTECTION

Whatever the nature of the metal surface, it can be protected indefinitely against corrosion by the use of a specific Shalimar Paint Product.

... That's because only Shalimar Paint Products are backed by over 55 years of manufacturing experience in India. The extensive paint research, constant progress, and development carried out is a guarantee that Shalimar Paint Products will stand up to the difficult and extreme climatic conditions in India.

Whatever the need, specify the purpose when you order

SHALIMAR
PAINT PRODUCTS

Write to P.B. 68, Calcutta-1, for the Shalimar Ready Reference leaflet which will introduce you to the complete range of our products.

"CAPITAL" STOCKS AND SHARES INDEX*

The Capital Stocks and Shares Index (Base: 1939) has now been brought up to October, 1956. Compared with September, the October index for Government securities shows a drop of 0.4 points, while that for preference shares indicates a rise of 0.2 points.

There were decreases in banks 0.3 points, cottons 7.0 points, coals 0.6 points, jutes 6.4 points, minings and oils 6.5 points, cements 5.6 points, engineering 19.5 points, papers 35.2 points, sugars 12.7 points and Miscellaneous 11.9 points, while teas increased by 14.3 points.

Combining all the factors, the Capital variable yield securities index shows that the index for stock prices in these classes of shares declined by 10.0 points during October, 1956.

Calcutta Markets

MIXED PRICE TREND AT TEA EXPORT SALE

DUST PRICES DECLINE

AT Sale No. 25, held on 10th and 12th December, offerings at the export auction consisted of 60,656 packages. The market opened with an easier tendency, but the demand improved as the Sale progressed. Doars and Assams with good cup quality and clean appearance were keenly competed for and were from 1 to 2 annas dearer, especially the Fannings grades. The poorer liquoring sorts on offer, however, were 1 anna easier and the higher priced medium B.O.P.s and O.F.s. were generally up to 2 annas easier. C.T.C. teas were in good demand at lower rates, a few selected invoices being fully firm, but the majority were 2 annas easier. Stylish Whole Leaf grades were a strong feature of the Sale and were up to 2 annas dearer, while well made B.P.s also received good support and were fully firm. A few selected lines of Darjeeling teas sold well, but the majority from this district were 2 annas to 4 annas easier and tippy teas also showed a decline of about 4 annas.

Quotations

	1956	1955
Clean Black Pekoe	Rs. 2 7 0	Rs. 2 4 0
Plain B.P.	2 4 0	1 9 0
Medium Assam B.P.	2 6 0	1 11 0 to 1 11 6
Best C.T.C. Assam B.P.	3 0 0	2 10 0 to 2 14 0

At the Internal Sale, Dust offerings consisted of 25,216 packages. There was a quieter tone in the room than in recent weeks. Demand eased as the Sale progressed, and the majority of the offerings sold at lower rates. The clean black exportable types received much less support and were often as much as 3 annas easier. The greater number of C.T.C. Assams on offer met with less demand and were up to 2½ annas easier, while the remainder including Commons, Doars and Orthodox Assams were 2 annas lower at the commencement of the Sale, but at the close were 2½ annas easier.

For the other grades offered amounting to 2,427 chests, there was a fairly good general demand at about 1 to 1½ annas below last rates.

Quotations

	1956	1955
Medium Doars Dust	Rs. 1 13 6 to 1 14 0	Rs. 1 6 6 to 1 7 0
Medium Assam Grainy Dust	1 14 6 to 1 15 0	1 7 6 to 1 8 0
Medium Assam CTC Dust	2 6 0	2 3 0 to 2 7 0
Best Assam CTC Dust	2 16 0 to 2 11 0	2 3 0 to 2 7 0

FREIGHT RATES CONTINUE TO RISE

THE American coal trade was again the market pointer last week, with \$(U.S.)16.75, i.e. 120s paid for December and January loading. Other markets moved up in sympathy, and Cuban sugar to the U.K. paid 220s which compares with 157s 6d paid only two weeks ago for the same business. Grain rates soared to 152s 6d for U.S. Gulf-U.K., \$(U.S.)34 Gulf-Karachi and 200s Pacific Coast-Bombay. Vizagapatnam-Northern Range was fixed at \$(U.S.)29 for ore and Koilthottam-Sayreville at \$(U.S.)26.50. Bulk sulphur was arranged from Port Sulphur to Cochin-Madras-Cuddalore and/or Calcutta at 250s. Fertilisers Antwerp-Colombo paid 200s f.i.o. The time charter section was firm with a 10,000 ton oil burner obtaining 70s for the trip out to Port Sudan with delivery the U.K. in December. In the sale and purchase market, an 11,000-ton coal burner sold in 1950 for £41,500, resold in 1952 for £202,000, has just changed hands again for the remarkable figure of £337,500.

SUGAR MARKET STEADY

During the week ended 12th December, sugar sales in the Calcutta market averaged 3,000 bags daily. Arrivals a day were 1,000 bags and stocks totalled 110,000 bags. Rates for ready sugar, ex-Kantapur delivery, were Rs. 31-6 for ordinary grain and Rs. 32-12 for big grain. The market was steady.

HIDES AND SKINS STEADY

The market in skins was steady. Stocks were higher than in the previous week.

Bazaar Sales

(Between 4th December and 10th December, 1956)

Cowhides: Wet salted (Ord.) 28,000 pcs. on the basis of annas 11-3; Wet salted (Ord.) 12,000 pcs. on the basis of Rs. 7-8 to Rs. 10; Wet salted (Slaughtered) 17,800 pcs. on the basis of Rs. 13-8 to Rs. 21.

Goatskins: Wet salted (Daissee, Killed) 49,600 pcs. on the basis of Rs. 260 to Rs. 275, Rs. 280 to Rs. 300 and Rs. 375 to Rs. 385; Purneah-Kissenganj 31,800 pcs. on the basis of Rs. 247-8 to Rs. 270; Muzafferpore-Patna 56,600 pcs. on the basis of Rs. 280 to Rs. 312-8; Muzafferpore (killed) 5,700 pcs. on the basis of Rs. 355.

Bazaar Stocks

(10th December, 1956)

Cowhides: Wet salted 2,24,000 pcs.
Goatskins: Wet salted (Daissee, Killed) 28,000 pcs.; Assam-Dinajpur-Murshidabad 49,000 pcs.; Muzafferpore-Pakur-Purneah-Kissenganj 441,000 pcs.

LINSEED STEADY

A slight reaction to the previous week's firm trend was observed early in the past week and values displayed a small decline; a general steadiness has since been in evidence, although trading has been only on a small scale. Ready goods were very scarce and buyers and sellers alike have been cautious. In the oil section, buyers were more reserved following a decline in overseas values. Local prices have been maintained by purchases for ready shipment by a leading Calcutta shipper. Latest quotations were as follows: November-December Rs. 26-2 a maund; April-May Rs. 22-4 a maund.

SHELLAC MARKET DULL

During the week ended 11th December, the market was dull. The range of quotations was as follows:

Pure Buttonlac	Rs. 125 buyers, 125 to 123 value.
Lemon No. 1 Shellac	Rs. 126-8 to 124 buyers.
Lemon No. 2 Shellac	Rs. 124 to 119 buyers.
F. O. Std. 1 Shellac	Rs. 120 to 116 buyers.
Pure TN Shellac	Rs. 116 basis done and buyers, 114, 112-8 buyers, 111 basis done and buyers.
4% I. T. N. Shellac	Rs. 107 to 102-8 buyers.
No. 1 Kusmi Seedlac	Rs. 114-8 to 111-8 value.
No. 2 Kusmi Seedlac	Rs. 111 buyers, 110 to 106-8 value.
Fine Bysaky Seedlac (Manbhum)	Rs. 105 buyers, 105 value, 104 to 100 buyers.
Fine Bysaky Seedlac (C.P.)	Rs. 101 buyers, 100-8 value, 101 to 95 buyers.
Ordinary Bysaky Seedlac (C.P.) under 5%	Rs. 90 to 82-8 buyers.
Ordinary Bysaky Seedlac (C.P.)	Rs. 85-8 to 78 buyers.
Kireelac	Rs. 36-8 to 36 buyers.

Shipments during December until the 7th were 4,736 packages comprising shellac 3,671 packages, seedlac 345 packages, buttonlac 228 packages and others 492 packages.

THE INDIAN IRON & STEEL CO., LTD.

AT the adjourned Annual General Meeting of the Indian Iron & Steel Co., Ltd., held on Friday, the 7th December, 1956, the following resolution was passed:

"That a dividend of Re. 1/- per share without deduction of Income Tax be declared in respect of each of the Company's 51,83,708 Ordinary shares of Rs. 10/- each and that such dividend (other than that retained by the Company under the agreement dated 6th December, 1952, relative to the shares held on Investment Realisation A/c.) be paid on or after the 17th December, 1956, to Ordinary shareholders whose names appear on the Company's Register on the 30th day of November, 1956, or to their mandatees."

The Shareholders added a rider to the above resolution that they wish to place on record that they passed the dividend resolution under protest and without prejudice, to their case to be put forward by a representative deputation of shareholders which will shortly present itself to Government in Delhi for the purpose of fully explaining their views.

COAL COMPANIES

O. P. F. and Dd. indicate Ordinary Preferred Ordinary Founders' and Deferred shares respectively. P. next to the name of the company indicates that the company also has Preference Shares. Figures in "accounts closed" column indicate the months of the calendar year in which accounts are closed. For Managing Agents refer to the Key (last page) under the numbers indicated.

THE ROAD BACK FOR BRITAIN

REPAIRING THE ECONOMIC DAMAGE OF THE SUEZ CRISIS

ONLY history can decide whether the Egyptian adventure was in fact a wise attempt to preserve world peace in line with the experience of the 'thirties, but it requires no great powers of prediction to decide that it is going to have serious consequences for the United Kingdom economy. These go further than the immediate embarrassments of an oil famine and a short-term threat to the pound sterling. They involve the entire future of Britain as a great power, as the world's leading trader and as a nation with a growing economy and a rising standard of living. Emergency measures have already been announced to deal with the consequences of a blocked Suez Canal and a flight from sterling. Some are sound, others are doubtful. But they will need to be followed by more permanent adjustments if the British economy is not to slip back to the vulnerable position in which the Suez incident found it. With the Canal in the hands of a dictator like Nasser, the world's economy, and that of Britain in particular, may have many hazards to face before the lessons are learned and this vital waterway taken from his hands. If Russian influence is allowed to continue its progress in the Middle East, it may even be necessary eventually to do without the Canal altogether. It will be Mr. Macmillan's job in the next few months to see that the British economy is put through a process of adaptation, or at least that the necessary conditions are created for it. That will not be easy for a Chancellor whose Government has been accused of causing the damage in the first place. But Britain's economic weakness dates from long before the Suez crisis. If the Conservatives are interested in justifying themselves before history as well as the electorate, they will show the same courage as they claim to have used in Egypt and will set to work on the economy—the source from which all modern political power flows.

The two main factors which have called for immediate attention are the pressure on sterling and the shortage of oil. The first has not proved as difficult as might have been expected. The sharp run on the pound which took place last month seems to have ceased; the gold and dollar reserve figures for December may even show that it has been reversed. The reason for this is that confidence has reacted sharply to Mr. Macmillan's promise to maintain present parties whatever happens. The loan raised from the International Monetary Fund to finance dollar oil imports has also helped. But what has probably influenced speculators' thinking more than anything else is the absence of inflation as the predominant factor in this particular crisis. It is not going to be the high price of sterling which will prevent British goods from being sold abroad, it will be a shortage of ships to carry them. Not that this situation, together with the need to import oil against dollars, is any less of a long-term threat to the pound as an international currency. But it does mean that devaluation is not at present a satisfactory answer to the problem and that Britain, whether she likes it or not, will have to find other solutions.

With devaluation ruled out completely for the time being and emergency oil imports secured against a substantial I.M.F. dollar loan, Mr. Macmillan has imposed one new tax on petrol, threatened another on income, invoked the waiver provisions on Britain's American and Canadian loans and borrowed from the Export-Import Bank. Significantly, he has not raised bank rate. The increased petrol tax is probably a mistake, even if it proves as temporary as has been promised. To raise transport costs at the moment is likely further to curb industrial output and increase the price of exports: even if the main problem is the shortage of shipping and not an over-valued pound, Britain cannot afford to do that. Whether this tax proves deflationary, as the Government appears to hope, or inflationary through its effect on the price level and therefore the thinking of the trade unions, remains to be seen. What it has done already is

to persuade the Continental speculator that the internal situation is more inflationary than it is in fact and to antagonise the British public when solid support for the Government—any Government—is what is now most needed in the national interest. The only thing that can be said in its favour is that it may help to curb demand for petrol and therefore economise on newly-borrowed dollars. Also mistaken is the decision to use the waiver. Britain's credit, and therefore the prestige of sterling, depends on her ability to meet existing debts. The small saving gained from postponing these obligations may well be lost many times over if the country's reputation for prompt and steady repayment is thereby damaged.

The absence of any bank rate adjustment from the array of measures taken raises some interesting points. It is reasonable to assume that the Conservative Government is by now impressed with the fact which many economists recognised some time ago—that bank rate has long since ceased to be an efficient method of economic regulation. But it is unlikely that it has abandoned it altogether as a weapon against inflation and, more important, as a means of attracting funds to the London money market. That the Government still considers the main danger to the economy an inflationary one is proved by the increased taxes. The neglect of bank rate must therefore be accounted for by a decline in its popularity as a means of attracting short-term funds from abroad. It is clear why this should be so. Interest rates are high throughout western Europe and even the United States at the moment. It would take a large jump in Britain's bank rate to persuade capital to move in any significant scale, and an increase of that size would almost certainly send the economy into a recession whether the present tendencies are still inflationary or not. One important fact which must have weighed with the Chancellor in deciding against an adjustment of bank rate is the effect it would have on the price of the floating debt and the payments to existing foreign holders of sterling assets. On the whole, Mr. Macmillan has acted wisely in ignoring this instrument.

been made in a section of the Press of the fact there were points in common between Indian and U.S. reactions to Anglo-French action in Egypt. That there have been unfortunate breaches in the Anglo-American alliance is true enough, and that certain Commonwealth countries, including India, have seriously misunderstood, with some reason, the British action in Egypt is also true. But those who have proceeded to see in these facts the beginnings of fundamental changes have obviously attached far too little significance to Mr. Dulles's anxiety to repair the western alliance as early as possible and Mr. Nehru's welcome iteration of his faith in the Commonwealth. The task for statesmanship today is not to emphasise and thus accentuate occasional differences among the democracies but to strengthen the existing bonds, and both Mr. Nehru and President Eisenhower can be trusted to address themselves to it with all the power of the one and all the prestige of the other.

It should not have been necessary to make these obvious points over again except for a specious thesis which has been current in Europe for some time and has now reached this country. It is that concurrently with de-Stalinisation in Communist Europe the United States is now engaged in an operation called de-Trumanisation, implying that America's need for military alliances is now less urgent and so, having put an end to the cold war, both America and Russia will now begin to woo Asia. The thesis is the more dangerous because it conforms to the unstated wishes of some Asian nations, who may be eager to accept the proposition without scrutiny. Closer examination will certainly reveal the many gaps in the argument, and whilst, given peace for some years, Asia can confidently look forward to her place being assured in the international scheme of things, its being achieved through a relegation of western Europe to a position of unimportance seems unlikely. More, this would not perhaps be in the best interests of India, even of America. None but the Soviet Union can look upon a weakened western Europe with satisfaction, and both Mr. Nehru and President Eisenhower are too conscious of the Communist menace to countenance any such proposition.

In spite, therefore, of stresses and strains—and, let us face it, there have been many in the recent past—in what we still like to call the free world, it is premature to conclude that the world is going to look a very different place on the morrow of Mr. Nehru's departure from Washington. Coming then to the particular problems the two leaders may have discussed, there is reason to hope that a good deal may in fact have been achieved. Even if India thinks that military alliances do not do anybody any good, America is unlikely to dismantle hers in the near future. Mr. Nehru's reluctance to accept that position is capable of exaggeration, and he will certainly welcome the additional assurances the U.S. President may have given him on the permissible uses of American arms by their recipients, one of them a neighbour of India. On China it would be naive to expect an early reversal of the well-known American stand, for, as Mr. Walter Lippmann has recently pointed out, America has vital strategic interests in the Far East, and their continuance as they are depends not a little on the continuance of much else in the area. It is unnecessary to catalogue those interests, or their conditions for existence, to make the point that expectations of fundamental changes should be restrained—however strong the theoretical arguments may be in favour of Red China's inclusion in the United Nations.

The crisis in the Middle East will assuredly have figured prominently in this week's talks between the U.S. President and the Indian Prime Minister, and this is neither surprising nor sad. Both have much to contribute to an early ending of the tension in that explosive part of the world, on which the Soviet Union is not pouring much water. Indeed, it can be argued that the crisis in west Asia might not have arisen at all if all the Powers concerned had given the region the attention it cried for ever since the coming of Colonel Nasser to power and especially after his seizure of the Suez Canal. What is the picture of west Asia Mr. Nehru and President Eisenhower have in mind? Again, in seeking an answer to the question, it will be as well to reject the thesis of de-Trumanisation we have discussed above. There is not, and there will not be for a long time, that basic identity of purpose between the U.S.A. and Soviet Russia which this thesis takes for granted. An additional contribution to realism in the discussion must have been India's own dependence on the Suez Canal, a fact New Delhi can never have forgotten in spite of its denunciation of what some others have done in an attempt to keep it open for international navigation. The extent of New Delhi's influence on Cairo is unknowable, but it will be surprising if Mr. Nehru does not exercise such influence as he has with that one end in view, namely the continued freedom of the Canal from the political stresses of a single country. President Eisenhower can assist the Indian Prime Minister's efforts in this behalf by bringing into

play his own authority and his country's ability to render economic help.

Both America and India are countries in which there is a long tradition of idealism, and it will cause very little disappointment in either if the results of the latest talks turn out to be no more specific, concrete or substantial than has been outlined in the foregoing. Indeed, there is in both countries an innate preference for abstractions; and in this field, hard to define but a most useful background against which to discuss particular problems, the talks may well have achieved something worthwhile for both countries. America's former rigidity of attitude towards neutralism deprived her of valuable friends in Asia, India included, and if Washington can now be made to see less immorality in the Indian view of world affairs it will be a service to democracy itself in Asia. If, on the other side of the account, Mr. Nehru leaves the United States with a firmer conviction that the democracy he is striving so nobly to entrench in this continent can gather greater strength only from other democratic countries, and not from those totalitarian, that will be a considerable gain too for the free world. It is now for these two great democracies to assist other democracies in the world—in Asia and in Europe—and not to undermine them. Not as though we entertain the slightest doubt that either Mr. Nehru or President Eisenhower is ever capable of acting otherwise.

CURRENT COIN

Index of Industrial Activity.—Corrected for seasonal fluctuations, *Capital's* Index of Indian Industrial Activity shows a decrease of 1.4 points during July, 1956. Mainly contributing to the decline were cotton consumption, jute manufactures, cement and electricity. Notes in circulation dropped.

Transport of Coal.—The presidential speech of Mr. D. C. Driver at the annual general meeting of the Coal Consumers Association in Calcutta last Friday indicated some interesting possibilities of relieving the shortage of transport for coal. According to him, speedier electrification of the railways is ultimately the only solution to the problem, and schemes for it should anticipate rather than follow the growth of traffic. Electric locomotives have many advantages over steam ones, and an important consideration is that inferior grades of coal can be used for the production of electricity.

The D.V.C.'s Durgapur Canal, Mr. Driver said, would take time to complete, and being mainly an irrigation canal, its construction and operation would have to be adjusted if it was to carry coal speedily to Calcutta. The D.V.C. authorities, he suggested, should consult some expert body about whether the Canal could be used for carrying large cargoes of steel, coal, bricks, etcetera, by the beginning of the third five year plan; and also whether there might be economic justification for constructing another broader canal from the Asansol area through Durgapur to Calcutta. In a representation to the Railway Board, the Association had pointed out that the cost of coal transported from the Raniganj coalfield to the Madras and Saurashtra areas by the rail-cum-sea route was nearly double the cost of the coal sent direct by rail. It had suggested that a subsidy of Rs. 30 a ton be given on the 150,000 tons of coal moved annually for industrial purposes by the rail-cum-sea route. The subsidy would cost the Railway Board Rs. 45 lakhs, but it would save Rs. 10 lakhs by not having to use locomotive and wagon capacity for such long-distance and uneconomic coal traffic. The net cost of the subsidy would therefore be only Rs. 35 lakhs. The matter had been referred to the Rail-Sea Co-ordination Committee. Discussing the transport of coal by diesel trucks, Mr. Driver said that the only important coalfield and coal consuming centre to consider at present were the Raniganj field and the Durgapur industrial area. The best of the Raniganj coals, the Laikidih and the Dishergarh types, were available about 75 miles away

from the Durgapur area. Their importance would be greatly increased by the industrial development proposed in this area; and also by the discovery that these coals, either blended among themselves or with Jharia coal, could provide good metallurgical coke for the Durgapur steel works. With the increase in railway charges for short-distance traffic, the use of diesel trucks would become more attractive. At present, an important handicap was that trucks were not allowed to carry more than five tons of coal, and the condition of the roads in the Raniganj-Durgapur area was bad. Mr. Driver felt that since the West Bengal Government was preoccupied with floods and refugees, the Centre should encourage road transport in the area by strengthening roads, and culverts, removing restrictions on the weight of coal carried by a truck, and arranging with manufacturers the provision of modern trucks equipped with suitable loading and unloading facilities.

More Vessels for India Steamship.—Sir A. Ramaswami Mudaliar, chairman, told shareholders of the India Steamship Co. Ltd. in Calcutta last week that the company had earned more freight during the year ended last March because new ships were added to the fleet and the turn-round of vessels took slightly less time. (A fuller version of the speech appears on a later page.) The delay in ports, however, had not materially decreased. Most of the recommendations made by the Vast Committee about dock labour had been implemented. In Bombay, the piece-rate system of payment had been introduced and was stated to be working fairly satisfactorily. But the system has yet to be introduced in Calcutta and Madras. In addition to the unsatisfactory working of dock labour, difficulties are being faced in getting berths for ships. The capacity of the ports for handling freight and for berthing ships is limited. There is an urgent need for more mechanical equipment, railway sidings, mobile and electric crane facilities for the mechanical handling of certain types of cargo, and berths. Sir Ramaswami pointed out that there were now 12 ships in the company's fleet; one was added in March this year and another in June, while an old one had been sold. The aim is to have 18 ships operating on the India-U.K.-Continent route before 1960, so orders have been placed for the construction of six more ships which are to be delivered at the rate of two a year over the next three years. An order has also been placed with the Hindustan Shipyard Ltd. for a vessel of 5,500 tons, which could be used in either the coastal or the overseas trade. Since March this year, the company has undertaken to put two of its ships regularly on the India-Black Sea route to carry cargoes to and from Russia, especially the large quantity of plant, machinery and materials required for the Bhilai steel plant. This has reduced the number of ships available for the India-U.K.-Continent trade. Referring to the Suez crisis, Sir Ramaswami spoke of problems connected with the readjustment of sailing schedules, insurance, and the obtaining of bunkers and water at new ports of calls on the route via the Cape of Good Hope. But these problems were being dealt with satisfactorily.

Greater Optimism in Electricity.—Mr. K. G. Milne's presidential address at last week's meeting of the Federation of Electricity Undertakings of India (a fuller report of which appears on a later page) reflects the greater optimism now prevailing among electricity producers. The main reason for the optimism is that the Electricity Supply (Amendment) Bill, 1956, is about to become law. Under the Bill, the standard rate of return for electric supply undertakings is to rise from 5 percent to 5½ percent on the capital base (after allowing for taxation). Actually, the Bill fixes the standard rate at 2 percent above Bank rate (which at present is 3½ percent); but, as Mr. Milne pointed out, there seems to be no great likelihood of Bank rate being reduced. If it is, the reduction would affect the value of all other investments equally; on the other hand, if Bank rate is raised, not every industry will be able to increase its return correspondingly, although electric supply concerns would do so. The amending Bill also provides for the electric supply industry to retain the tax savings resulting from the development rebate which was given as a concession to assist companies in expanding their business. Previously, in its case, these tax savings misaccrued to consumers. The new provision will not enable electricity concerns to earn any more on their investors' money, apart from the ½ percent allowed as a sort of handling fee on the amount of the resulting development reserve. Nor will the development reserve itself be permitted to add to the ultimate property of the investor. But Mr. Milne thought that the change should help the industry to some extent in its task of raising the additional Rs. 70 crores or Rs. 80 crores which it will need to complete its programme during the second plan. Referring to investors' fears that electricity supply might be nationalised, he said: "It appears evident to me that the Central Government has now no such intention. The whole scheme of the Electricity (Supply) Act is directed towards harmonious co-existence of electric supply undertakings owned by the

State and operated by electricity boards on the one hand, and electric supply undertakings owned and operated by constituents of the Federation on the other."

Cost of Living Index for Gauhati.—The lack of any satisfactory middle-class cost of living index for industrialised areas in Assam has been rectified, by the statistical department of *Capital*. A middle-class cost of living index has been constructed based on the retail prices of commodities bought in Gauhati by clerical employees of mercantile firms, Government departments and by other similar middle-class people. It covers families with incomes between Rs. 100 and Rs. 500 a month. The index is based on survey conducted in August, 1956. The budget enquiry schedules were filled in by a random sample of middle-class employees. Filled-up forms were scrutinised for possible discrepancies and wrong entries. A small number of schedules were rejected due to unexplained disparities between family income and expenditure. Family budgets were classified according to the expenditure level for each adult equivalent in eight groups ranging from Rs. 50 a month to Rs. 171 and above a month, with an interval of Rs. 20 for each group. The scale for calculating adult equivalent is a modification of a similar scale prepared at the Nutrition Research Laboratory, Coonoor, by Dr. Akroyd to suit Indian climatic and dietetic conditions. The scale is given as: men above 14=1, women above 14=8, men between 5 and 14=6, women between 5 and 14=5 and children under 5=3. The average expenditure pattern was then calculated for each group of families by adding together the expenditure for all families in a group on a particular item. Weighted averages of group averages of percentage expenditure on each item have been obtained. These weighted averages represent the average expenditure pattern of all groups taken together (generally for middle-class families with monthly expenditures between Rs. 100 and Rs. 500) and they have been used as weights in the calculation of the cost of living index. The table of the results is published on page 864 of this issue of *Capital*. In November the combined middle-class cost of living index stood at 107 compared with its highest level of 118 in August (Base 1954=100). The largest falls have been in the food item, from 129 to 113, and in fuel and lighting from 103 to 87.

Outlook for Tea.—Addressing the 70th annual general meeting of the Calcutta Tea Traders Association, held last week, Mr. K. Ghosh, chairman, reviewed the conditions of the tea trade and industry during the current season. The trend of this year's market, said Mr. Ghosh, had shown how uncertain and unpredictable the trade could be, subject as it was to numerous influences which were not only economic but also political in nature. Referring to the present price recovery from the uneconomic levels of 1955, he said that very little tea was now selling below Rs. 1-12 a lb. The reason for this was possibly the fear of shortage which the restriction on the north-east Indian crop and the closure of the Suez Canal had created in some of the outmarkets. Nevertheless, added Mr. Ghosh, the price which the producers of common teas, and even of teas in general, have been receiving is low by modern standards of cost, tax and duty. Speaking about the ceiling prescribed by the Government on the export of unsold teas to London auctions, Mr. Ghosh recalled that the ceiling fixed in the 1955-56 season was 140 million lbs which, however, was lifted in February, 1956. But at the beginning of the following September, the Government announced a ceiling again restricting such exports to 160 million lbs. This fact, together with the estimated large increase in the Assam and Doar crops "will certainly have considerable effect on the attitude of overseas buyers," while it was not clear to what extent the present crop restriction and the political situation in the Middle East would "counteract those influences." So the outlook remains uncertain. Mr. Ghosh noted with some disappointment that the two States—West Bengal and Assam—which have been receiving most benefits from the tea industry on account of the employment provided for the local population, should have chosen to impose many burdensome levies irrespective of the industry's economic condition. He reminded the West Bengal Government of its promise made during the last Budget session of the Legislature to remove its sales tax after the entry tax had been enforced. Dealing with the Central export duty, Mr. Ghosh said that the present policy of linking this to the London average price (on which the existing slab system of the duty is based) was creating a "grave uncertainty." Mr. Ghosh observed that a slab system with as big a gap as four annas could give rise to occasions "when a possible rise or fall in the export duty can upset the stability of the whole of the tea market." He suggested therefore that the basis of the system be changed so as to take into account "the prices which the bulk of the crop is obtaining in Calcutta and Cochin."

Problems of Oil Mills.—The growing importance to the Indian economy of the oilseeds crushing

industry was stressed at some length by Rai Bahadur G. V. Swaika, president of the Bengal Oil Mills Association, at its recent annual general meeting. As the present lack of modern plant and equipment constitutes serious handicaps for the industry, he suggested that the West Bengal State Finance Corporation grant loans to oil mills to help rectify the matter. His other suggestions related to the case for the Association securing its representation on the Export Advisory Council and the Indian Central Oilseeds Committee, and the need for an export promotion council for this industry. He complained about the wayward course of the Government's vegetable oils export policy. This policy, he said, had "prevented the industry from making any long-term programme whether for production or for exports"; the vacillating policy also affected the foreign buyer's confidence, ultimately leading to a setback in exports. He therefore urged that a stable policy relating to the export of vegetable oils and oilcakes be laid down on a long-term basis. The Rai Bahadur thought that the imports of palm and tung oil were harming the indigenous producers' interests, so suggested that these be completely stopped. He also pleaded for the total abolition of export duty on all oils. The import of mustard seed should be allowed without any duty levied on it, and this would enable oil mills "to supply mustard oil to the consumers at a fair price."

Sales Tax in Andhra.—In view of the fact that the provisions in the enactments regulating sales or purchase taxes in the Andhra and Telengana regions of Andhra Pradesh differ in many respects, including those relating to rates, mode of levy, (i.e., single-point or multi-point), minimum taxable turn-over, etcetera, the Government of Andhra has announced its intention to unify these laws. The Government has received representations pointing out that because there are at present two different sets of tax laws in force in the two regions, some concessions should be granted on the levy of sales or purchase tax in the new State from 1st November. After considering these representations, the Government has decided to grant, pending unification of the sales tax laws of the two regions, the following concessions. In the case of commodities on which a single-point sales

NOTICE

There will be no issue of **CAPITAL** on 27th December, 1956, due to the markets being closed for the Christmas holidays. The first issue of the New Year will be published on Thursday, 3rd January, 1957.

or purchase tax is leviable under the old Hyderabad Act, the first purchase or sale, as the case may be, of goods in the Telengana area after 1st November will be exempted from the tax, provided the goods have already borne the sales or purchase tax in the composite Hyderabad State prior to 1st November. This exemption is to be valid up to 31st December only. Again for goods on which a single-point sales or purchase tax is leviable in both regions under the respective Acts applicable to those areas, there shall not be levied in either of the areas any further tax when a single-point sales or purchase tax has already been levied. It may be mentioned in this context that after the formation of Andhra Pradesh, the Madras General Sales Tax Act of 1939, the Andhra General Purchase Tax Act of 1956, and the Madras Tobacco (Taxation of Sales Registration) Act of 1953 apply to the levy of sales tax and purchase tax in the Andhra area, while the Hyderabad General Sales Tax Act continues to apply in the Telengana area. It may also be recalled that there had been considerable agitation in the composite Hyderabad State against the levy of a multi-point sales tax. The Hyderabad (Deccan) Chamber of Commerce and Industries made a strong representation to the Central Finance Minister requesting him to bring about uniformity in the application of sales tax throughout India in order to keep the incidence as low as possible. It stated that the cumulative effect of the sales tax and excise duties, etcetera, had adversely affected trade as there had been no corresponding increase in purchasing power.

Non-voting Shares Again.—There is to be no veto by the London Stock Exchange on the much discussed and growing practice of issuing non-voting shares. This is made plain in an article on this thorny topic in a recent issue of the Stock Exchange's quarterly journal which reflects the Council's views. The case against drastic action by the Stock Exchange, such as the withdrawal of quotations from all equity shares without voting rights, is argued with great cogency. As the Stock Exchange authorities point out, there would have to be many exceptions and a policy of veto would inevitably involve "severe headaches." They also give a reminder that nothing, short of an amendment to the Companies Act, could remedy

SOUTH EASTERN RAILWAY TENDERS
The Controller of Stores, Garden Reach, Calcutta-23 invites tender No. CS22/56/117/52TLR (56) for supply of 580 plywood seat moulding 5 Ply. 1" thick x 6"-6" long. Tender forms are obtainable from his office (I. B. Section) on remittance of Rs. 2/- per copy (not refundable) by Money Order to him direct in the case of outside firms and on production of Cash Receipt from the Chief Cashier, Garden Reach by local firms. Closing date is 8-1-1957 at 12 noon. Firms not on the Railway's list of approved contractors must enclose a valid Income Tax Clearance Certificate with the tender.

SOUTH EASTERN RAILWAY TENDERS
The Controller of Stores, Garden Reach, Calcutta-23 invites tender No. CS20/56/KG/39 (57) for undertaking various types of repairs to approximately 2000 Cast Steel Carriage and Wagon Axle Boxes during 1957 on Rate Contract basis. Tender forms are obtainable from his office (I. B. Section) on remittance of Rs. 2/- per copy (not refundable) by Money Order to him direct in the case of outside firms and on production of Cash Receipt from the Chief Cashier, Garden Reach by local firms. Closing date is 8.1.1957 at 12 noon. Firms not on the Railway's list of approved contractors must enclose a valid Income Tax clearance certificate with the tender.

THE Finance (No. 3) Bill, 1956, which was introduced in the Lok Sabha recently, proposes to revive, with some modifications, the scheme which was in existence for the taxation of gains resulting from the sale, exchange or transfer of capital assets during the period 1st April, 1946 to 31st March, 1948. The new scheme will apply to capital gains arising on or after 1st April, 1956. The important points on which the new scheme differs from the old may be outlined as follows. In computing the amount of capital gains, the assessee was given the option to adopt, instead of the actual cost of the asset, its fair market value as on 1st January, 1939. Now the assessee is to be given the option to adopt, instead of the actual cost of the asset, its fair market value as on 1st January, 1954. In the case of non-company assessee, only the excess of capital gains over Rs. 15,000 was subjected to tax. Now it is proposed not to levy a tax on capital gains if (i) the capital gains do not exceed Rs. 5,000 or (ii) the total income, including the capital gains, does not exceed Rs. 10,000. Formerly, in the case of non-company assessee, special rates of tax were prescribed for capital gains, ranging from one anna in the rupee to five annas. The rates of tax were thus not related to the total income of the assessee. Under the new Bill, it is proposed to relate the rate of tax on capital gains to the other income of the assessee. One-third of the capital gains will be added to the other income, and the income-tax rate applicable to the sum so arrived at will be the rate at which the whole of the capital gains will be charged to tax. In the case of companies, tax was not charged if the amount of capital gains did not exceed Rs. 15,000. But where the gains exceeded Rs. 15,000, the whole amount was taxed. It is now proposed to tax the full amount of capital gains. In the case of companies, the rate of tax for capital gains was the ordinary income-tax rate applicable to a company. No change is proposed in this respect.

Some Exemptions Dropped

The following gains were exempt from the tax, but the exemption will now be dropped: gains arising on the transfer of property on compulsory acquisition for public purposes; gains arising on the distribution of assets on the dissolution of a firm or association of persons or on the liquidation of a company; gains arising on the sale of residential property possessed by assessee or his parent for seven years or more; gains arising on the sale of building, plant and machinery belonging to a business, invested in the purchase of a new building plant or machinery within a specified period; and gains on the transfer of assets to an irrevocable trust. The exemptions it is proposed to retain are: gains arising on the distribution of assets on the total or partial partition of a Hindu undivided family; gains arising on the transfer of assets by will, bequest or gift; gains arising on the transfer by a parent company of its assets to a 100 percent Indian subsidiary; and gains arising on the sale of residential property which had been occupied by the assessee or his parent for two years, the gains being invested in the purchase of new property within one year.

As before, capital losses now can be set off only against capital gains. Formerly, the capital losses of any year which could not wholly be wiped off by the capital gains of that year could be carried forward for a period of six years for set-off against capital gains in the later years. To permit such carry-forward, the capital loss sustained in any "previous year" was to have exceeded Rs. 15,000 in the case of non-company assessee. Now it is proposed that the capital losses of any year which cannot wholly be wiped off by the capital gains of that year may be carried forward indefinitely for set-off against future capital gains. To permit such carry-forward, the capital loss sustained in any "previous year" must exceed Rs. 5,000 in the case of non-company assessee. These provisions are covered by Clauses 2, 4, 5 and 7.

Under Clause 3, it is proposed that in the case of companies, the depreciation allowances and development rebates allowed should be added as an item of income, unless the company deposits with the Central Government before the 30th June of the relevant assessment year a prescribed amount depending on its undistributed profits and reserves. The amount deposited will consist of two parts. The first part is a prescribed percentage of the amount by which the available profits of the year (i.e., profits before deduction of depreciation or development rebate less taxes payable less dividends declared) exceeds the sum of Rs. 1 lakh. The second part is a prescribed percentage of so much of the accumulated profits and reserves as are not represented by fixed assets in the business. The percentages referred to above will be prescribed by the Central Government and notified from year to year, but will not exceed 75 percent for the first part and 25 percent for the second part of the deposit. The deposit will carry interest at the rate prescribed by the Government and be refundable wholly or in part where the Government is satisfied that the amount refunded will be used in the business for a purpose approved by it. Rules for these and other connected matters will be issued by the Central Government.

Rates of Supertax

Under Clause 8, the effective basic rates of supertax applicable to companies for the financial

pliers and retailers have been busy completing plans to defeat widespread price-cutting of proprietary goods when the collective enforcement of resale prices became unlawful under the Act and the use of "stop lists" and boycotts of dealers were prohibited and private trade courts banned. Insurers, individual manufacturers have the power to seek injunctions in the civil courts against traders knowingly infringing price conditions. Manufacturers of most banned commodities have already made it clear to traders that the power will be used. Retailers generally support price maintenance as "an orderly system of trading." As a result of the Act, however, some trade associations have been wound up while others have altered their constitutions so as to end agreements which gave them their collective powers. Mr. R. L. Sich, Registrar of Restrictive Trading Agreements, has made regulations specifying which documents must be sent to him to enable him to register agreements for which justification is claimed, and bring them before the Restrictive Practices Court, which has not yet been set up. The onus will be on the parties to agreements to satisfy the court, which will have High Court status, that they are not contrary to the public interest. Papers to be submitted include the agreement, any document forming part of it, a memorandum setting out its terms and the names of any parties associated with it. The Four copies of each will be required, one for the Registrar and the others for registers in London, Edinburgh and Belfast. They must be sent in by 28th February but a register will not be prepared until a substantial number has been examined. It will be open to public inspection on payment of a small fee.

Cotton Fashions for 1957.—The periodic displays of trends in cotton cloth manufactures arranged by the Cotton Board Colour Design and Style Centre are of great interest both to manufacturers as well as users of these products. The latest of these took the form of two fabric walls at the sixth National Fabric Fair held at the Albert Hall in London. They comprised nearly a hundred new cotton dress fabrics chosen to illustrate cotton's range in the dress field and to draw attention to new design themes, finishes and fabric types which will be important in dress ranges and in piecegoods departments next year. All those who are concerned will find much of interest in the following technical description of this display: Two print themes stand out, illustrated in a wide variety of ways and representing a strong feeling for richness in design. First, there is "the oil painted look". These prints frequently use many tones of the same colour to produce an effect of depth, of light and shade. Flowers are often a motif but are subsidiary to the printed effect of richness with texture. Colours here tend to follow the established yellow-gold-orange-tan range, often with a sharp green, or to develop the new strong feeling for several reds in combination. Many of the effects are very sombre indeed. Brown and greys frequently provide the dark background against which smaller, brilliant flashes of colour appear. Second comes "the Oriental look" reflected most strongly in Paisley motifs of all sizes; sometimes these are printed in stripes or border effects while other fabrics are given an Eastern character by the choice of colour or the use of gold. A return to clear, delicate colours in both prints and weaves counterbalances these sombre, rich effects. Large-scale abstract stripes in pastel shades are important in prints, and large-scale stripes and checks of colour in both weaves and prints. Pink predominates in combination with blue, green and white. Woven designs follow closely the trends set by the prints as, for example, the pastel coloured stripe effects. There are suggestions, too, of Eastern themes in the choice of woven motifs, for example, no-iron embroidered lawn and a white formal patterned black cotton. Peasant style weaves in sombre colours are new. Grey ground Jacquard weaves, peasant-style "embroidered" black and white border weaves and tiny dobby woven, stylised floral stripes are part of this theme. Mix and Match is new in weaves too. A pair of blue striped white cottons with dobby woven motifs are shown in two sizes to be used together. There are more suit-weight cottons and cotton mixtures. The new cloths include two 50/50 cotton and wool mixtures; one a light tropical weight check, the second a cotton ground wool and cotton pile square cut velvet. A crease-resistant, lightweight needle corduroy is also new. New finishing techniques have become increasingly important in print. Schreiner finishes to give lustre, finishes have been used for dirt and stain repellency, water-resistant finishes, like non-shrink finishes, are now almost universal.

Marine Insurance in Ceylon.—The report of the Colombo Marine Insurance Agents' Association gives each year a useful picture of the problems of marine insurance in that island. The insurance of the export tea shipments makes up a large

part of the business of marine insurers in Ceylon. The tariff of rates on W.A. and F.P.A. conditions on tea shipments has been abandoned since lower rates on fuller cover on tea were being quoted at some destinations. In particular this occurred in Australia after the Australian Government's bulk buying was abandoned. In order to protect local underwriters, the Association has decided to follow the example adopted when similar circumstances arose with rubber shipments, and consequently tea insurances are now, like rubber, non-tariff. The report adds that local insurers have thus maintained the bulk of their established business without adverse effects on their underwriting. This information does suggest that possibly their tariff rates have become out-moded, always a danger when tariffs are in force. The incident also suggests that the "catastrophe" rate, both for hull and cargo insurances, is now definitely lower. Owing to its sensitivity, a free market quickly adjusts itself to such changes even if the reason is not immediately appreciated, but in a tariff-ridden one changes are not made so easily and may be made too late. The Ceylon Association has apparently, however, acted in time. The theft and pilferage record in the port of Colombo has been very bad and is still bad, even though slightly improved. A predominant cause is, in the view of underwriters and surveyors, the fact that discharging into lighters is necessary, which, together with lack of godown space, gives considerable opportunity for thieves to operate. Congestion has been a feature of Colombo for years, and is still, though the construction of new quays, now in progress, may reduce this to some extent. These difficulties, the prevalence of pilferage and the growth of congestion, aggravated by governmental priority for its own bulk imports, are typical of many ports. Though intensely annoying to those concerned, they must be regarded as symptoms of a growth in trade and of a desire for the satisfying of increased needs, which suggests that, wisely handled, the island's economy may continue to expand.

"CAPITAL" CHRISTMAS TOY FUND

Total Rs. 345-4-0

Grand Total Rs. 3,802-11-3.

Previously acknowledged Rs. 3,457-7-3

We also acknowledge with thanks the receipt of a collection of toys from L.M.F.

A TEA AMALGAMATION

WE observe that Messrs. McLeod & Co. of this city have issued a circular which we print in the usual column, suggesting the amalgamation of 14 tea companies with gardens situated in Darjeeling, the Terai, Duars, Sylhet, Cachar and Assam into one London Company with a capital of £1,000,000. The area of the gardens is 37,386 acres of which 8,768 acres are under plant, and 2,360 acres are estimated to have been put out in 1896, making a total planted area of 11,128 acres. The circular puts the matter very clearly before the shareholders, and the scheme seems to us an excellent one. The price to be paid for these gardens is £473,820, which works out a trifle over £42-10 per acre under plant and varies from £20 to £60 acre under plant. The capital is to be divided into 25,000 cumulative 5 per cent Preference Shares of £10 each, and 75,000 Ordinary Shares of the same amount. It is intended to reserve one-third of the Preference and Ordinary Shares for the vendor companies, the balance being offered to the public so as to obtain a Stock Exchange quotation but such of these shares as are not taken up by the public will be allotted to the vendors, and individual shareholders can apply for as many as they want. The scheme should materially improve the shares of the various companies interested, and we wish it every success.

FROM

CAPITAL

23rd December, 1896.

AFTER all I have said in the past few weeks about the ways of Calcutta's traffic jungle, it would be ungracious of me not to applaud the spirit behind the Safety First and Courtesy Week now in progress. But that does not mean I attach much importance to it. Nobody who has been run into the curb by a State bus or forced to give way to a speeding taxi crossing from the left will accuse me of being cynical if I say that penalties and their enforcement are likely to be more effective than exhortation. What I would like to see is a "vehicle" week. By that is meant a week in which all contraptions using Calcutta's highways are examined and their road-worthiness pronounced upon. I know this would be an open invitation to some owners to keep their vehicles off the road for that period. That is why a further proposal to extend the time to a year might be considered. The present state of India's motor-cars, especially the new ones, being what it is, the tests would not have to be too severe. But it is time there was an end to the dawdling rattle-trap which breaks down at every traffic light and the pounding lorry with only half its back wheels on the ground. I can foresee in this idea infinite possibilities for obstruction, harassment, corruption, or even civil commotion after the unhappy incident on the Grand Trunk Road a few months ago. But I hope to avoid the charge of inciting public violence when I submit that it is time something was done about the taxis, lorries, buses and private cars which should not be on the road at all. It is not just a question of reliable brakes and efficient horns; the other day I witnessed the sorry spectacle of a car being forced to swerve into oncoming traffic to avoid a mudguard which had fallen off the lorry in front because the string holding it had broken. Tyres are another problem, and one which lends itself to quick and in-expert inspection. If no vehicle were allowed on the road without a recognisable tread on all its tyres, that in itself would probably make a bigger contribution to improving things than all the Safety First and Courtesy Weeks we can find time for.

Not being either a Benjamin Franklin or a Paraday I find the ways of electricity quite mysterious, and when on the rare occasions I have had to call in the services of an electrical mistri, and he has done his job without being electrocuted, I have tended to regard him as nothing short of a monster of ingenuity. My previous experiences of power failure in this city, however, were nothing like the one we had on Monday. In the affected area, in which my own office is inevitably located, it lasted throughout working hours, and for a spell we were all back in the age of candles and kerosene lamps which, of course, are still the rule in most Indian villages today. For the first thirty minutes or so it was not too bad. But soon afterwards it began to tell on my eyes and nerves as well, and the situation did not improve when million-tongued rumour, for which Calcutta always provides such a fertile ground, got down to work. A caller brought me the frightening story that the Prinsep Street sub-station had been bombed by a pack of goondas and that a new and unaccountable wave of terrorism was sweeping the neighbourhood. A mere telephonic enquiry at the Electricity Corporation's head office, of course, was enough to discredit such a wild story. As I was returning home, earlier than usual, I noticed with some surprise that quite a few buildings on Bentinck Street were shining like little islands of light amid the surrounding gloom. How was it? Had the tenants of the adjacent ones forgotten to switch on their lights? In the Tuesday morning papers I found the answer:

A DITCHER'S DIARY

power was returning gradually. But, I must confess, the incident has not helped me get over my feeling of mystery towards electricity.

I see Dr. Keskar had his way with the Rajya Sabha over the question of referring the Press Council Bill to a select committee. And by a superb exercise of prevarication he also succeeded in depriving journalists of their right to anonymity. He thus dealt one of the severest blows which democracy in this country has sustained so far. To say that the powers to demand sources of information will only be used in "exceptional" circumstances is simply begging the question. Just what circumstances are likely to be regarded as exceptional by a body whose chairman will be a Government nominee and which will depend for its existence on public funds? Journalism is not the only profession possessing principles which experience has taught are necessary to its proper functioning. It is easy enough for an exasperated official to decide he is being obstructed when a newspaper man refuses to divulge his sources. But the convenience of one man, or even one Government for that matter, is not to be confused with the long-term public interest. That is best served by a strong and independent journalistic profession—although of course, one fully versed in its own responsibilities—not a body of men who go in fear of the code under which they work being violated whenever the Government finds it convenient to do so. That is not the way to encourage the growth of a free and healthy Press in India. Perhaps this is only one aspect of a wider problem which is fast developing—the tendency of the Government of the day to accumulate extraordinary powers on the pretext that it intends to use them only when some undefined emergency warrants it. The fourth amendment to the Constitution is the classical example. Before the trend goes too far it would be as well to give some thought to its consequences and if the Party in power is not impressed by considerations of what might be in the country's long-term interests, no doubt it will be for what are obviously in its own. The powers the Government is busy taking unto itself will some day, given the normal process of democratic change, pass to one of another colour. To take this attempt to intimidate the Press for example (and that is what it amounts to), what will be the chances of the Congress Party ever regaining power if a ruthless successor Government should use such a weapon against it?

I have read in the papers that little Minou Drouet is causing a big flutter in the literary dovecots of France and England. This nine-year-old slip of a Breton girl is being credited with producing verse which, by reason of its mature feeling and technical virtuosity, can make critics in both Paris and London gape in wonder. In the first week of this month when she was in the latter capital launching the English translation of her first volume of poetry, the B.B.C. arranged for her to be viewed on T.V. And a profound impression she is reported to have made too. Obviously, an infant prodigy indeed. But I shall point out, even at the risk of appearing slightly cynical, that such creatures have rarely been known to go very far. Alexander Pope, of course, "lisped in numbers for the numbers came." His work certainly acquired a wonderful polish quite early in his career. But then, his medium was the heroic

couplet, a form of verse with only limited possibilities. The height of his achievement was a literary bivalve oyster containing either a core of truism or of biting sarcasm. Byron, Shelley and Keats, all of whom died young, were none of them a child prodigy, and the greatest figures in literature as well as the other arts—Shakespeare, Milton, Dante, Leonardo da Vinci, Michelangelo, Goethe, Tagore—ripened slowly like the heart of an oak. Perhaps only the sphere of music can be cited as an exception, for here there have been a few whose subsequent achievements have matched their early promise. Chopin, Mozart and Brahms, all come into this category. To mention a couple of literary freaks, John Stuart Mill is said to have learnt Greek between the ages of three and five, and Bankim Chatterjee to have mastered the Bengali alphabet in the course of a single day. As for Macaulay, his precocity is well-known. Before he was eight, he had prepared a compendium of "Universal History" from the Creation to his own time.

That outstanding example of Indo-British co-operation, The Bank of India Limited, is celebrating its golden jubilee this year. Congratulations are certainly in order because, in that short time, and pursuing a policy which is well known for its caution and soundness, the Bank has increased the Rs. 70-lakh working capital with which it started business, to nearly Rs. 100 crores today. Even allowing for price changes, this represents rapid growth indeed in the banking world. In the same period, a staff of fifty people has expanded to 2,500. These are no mean achievements, and they are not the only ones the Bank can boast, as I see from an illustrated brochure commemorating this fiftieth anniversary which has just arrived on my desk. The Bank has been fortunate in its choice of managers and general managers, of which there have been only four, including the present one, Mr. D. R. Thom, in the whole of its existence. The turnover in chairmen has been no less restricted. Counting the first, Sir Sassoon David, who held the office for twenty years, there have been just six including the present one, Sir Cowasjee Jehangir. If Mr. Ambalal Sarabhai, who held the post for only eight months, is excluded, that leaves five; surely we have no more reassuring indication of continuity in policy and standards of banking than this. There seems every chance things will stay that way. To quote the words of Sir Cowasjee Jehangir: "I hope that the guardians of the Bank's destinies will always see that its policy continues to be conservative, while serving in an adequate manner the best interests of commerce and industry in India." May I say I hope so too. But it is not going to be so easy in the next few years unless some permanent answer can be found to today's besetting problem of credit stringency.

I have not seen the Russian circus, but it brings to mind this story:

First the tightrope walker blindfolded his eyes. Then, with his eyes bandaged he rode along the rope on a bicycle. Then he did the same thing backwards. Then with eyes still blindfolded he rode backwards playing The Caprice Viennois by Kreisler on a violin.

An old lady bent forward and whispered to her husband, "All the same, you know, he's not as good as Menuhin."

INDIA STEAMSHIP COMPANY LIMITED

CHAIRMAN SIR A. RAMASWAMI MUDALIAR'S REVIEW

The Twenty-eighth Ordinary General Meeting of the Shareholders of the India Steamship Company Ltd., was held on Wednesday, the 12th December, at the Registered Office of the Company, 'India Steamship House', 21, Old Court House Street, Calcutta. Sir A. Ramaswami Mudaliar, KCSI, DCL (Oxon), Chairman, presided.

The proxies received for the meeting were placed on the table and the notice of the meeting was read by the Assistant Secretary. The Chairman delivered his Speech and thereafter asked the Shareholders whether they had any questions to put with reference to the Directors' Report and the Audited Balance Sheet and Profit and Loss Account for the year ended 31st March, 1956.

In answer to a question regarding the sale of the Company's vessel—the 'INDIAN IMPORTER', the Chairman said that as the vessel was built in 1929 and was due for special survey shortly, the Directors decided to sell this vessel. No loss was incurred by the sale.

Another shareholder wanted to have a statement of the tonnage carried by the vessels of the Company. This information was supplied and further reports will show both the tonnage and freight earnings.

Certain items in the Balance Sheet were referred to by one of the shareholders, who wanted information about these items which were furnished. The increase in the salaries and wages was referred to and this was explained, as due to the increase in the number of the vessels of the Company as also the revision of the salaries and wages of the staff and more amenities which had to be provided after negotiation with the Unions concerned.

The following resolutions were unanimously adopted—

The Directors' Report and the Audited Balance Sheet and Profit and Loss Account. The dividend of 5% tax free on Preference Shares and an interim dividend of Rs. -/8/- per share and a final dividend of a further Rs. -/8/- per share on the ordinary shares was adopted.

The Meeting adopted the resolution that Sir A. Ramaswami Mudaliar do continue as a Director of the Company and that the age limit under Section 280 of the Companies Act shall not apply to him.

It was also resolved that both Sir A. Ramaswami Mudaliar and Sir Bijoy Prasad Singh Roy who are Directors and members of the Managing Agency Company do continue as Directors of the India Steamship Company Ltd.

It was further resolved that the Maharajahdhiraj Sir Udaychand Mahatab Bahadur of Burdwan, Mr. S. C. Roy and Mr. R. K. Mitra, ICS., be elected Directors of the Company.

Messrs G. Basu & Co., and Messrs. Singhi & Co., Chartered Accountants, were appointed Auditors for the current year and their remuneration fixed.

The vote of thanks to the Chair and to the Managing Agents for their excellent management of the Company were adopted unanimously.

CHAIRMAN'S SPEECH.

The following is the text of the Chairman's Speech:—

Gentlemen,

The Audited Accounts and Directors' Report for the period ending March 31st, 1956, has been in your possession for some time. With your permission I shall take them as read.

Trading Experience

The Directors' Report shows that the freight earned during the year is Rs. 5,26,11,831/- against Rs. 4,01,00,132/- the freight earned in the previous year. The increase in freight is partly accounted for by the new ships which were added to the fleet by your Company and partly by the slightly less time taken in the turn-round of the ships. The delay in ports, however, has not materially decreased, a fact to which I shall make reference later. It must, therefore, be a matter of satisfaction to you that in spite of these handicaps the Company made a profit of Rs. 80,22,918/- before providing for depreciation and a net profit of Rs. 38,72,859/- after providing the full amount of depreciation of Rs. 41,50,059/-.

Delay in Ports

I referred in my Speech last year to the report of the Vaisit Committee which dealt with conditions of Dock Labour in the various ports in India and made certain recommendations to improve the position of Dock Labour and promote the better turn-round of ships in these ports. These recommendations were accepted by the Government of India and most of them have since been implemented. In the port of Bombay the piece-rate system has been introduced and is stated to be working fairly satisfactorily. This system has yet to be introduced in the ports of Calcutta and Madras. To the difficulty of getting a satisfactory out-turn of work from Dock Labour in these ports has been added the further difficulty of finding berths for ships both for import and for export. The capacity of these ports to handle freight and to berth ships is limited. The plans of the Government to increase industrialisation both in the public and in the private sector and to force the pace of progress in other directions has necessarily resulted in a greater volume of traffic which has to be handled at these ports and in a larger number of ships entering these ports for which the ports are not adequately equipped. It is a matter of some satisfaction that the Government has become aware of this aspect of the question and

that the Transport Department through its Secretary and other officers and through the Chairmen of the various Port Trusts is taking active steps to improve the capacity of these ports. Mechanical equipment, adequate railway sidings, mobile and electric crane facilities for mechanical handling of certain types of cargo and more berths in all the ports are urgently required and I trust that these will be provided for, at a very early date.

Labour at the ports, both Dock Labour and Port Labour have no doubt to be kept in a contented state and Shipping Companies have expressed their willingness more than once to make any reasonable contribution for the satisfaction of the legitimate demands of labour. It must, however, be regretfully pointed out that certain sections of labour are prone to put forward what should be considered as unreasonable demands and frequently their alarms and excursions to which the Shipping Companies are subjected have a detrimental effect on the international trade and commerce of the country. I do trust that Labour Leaders and those administrators in charge of labour both in the States and at the Centre will devote equal attention to securing the legitimate rights of Labour and enforcing their patent obligations.

Progress

At the last meeting I referred to the fact that the two ships which had been ordered in 1954 were on commission and were added to your fleet and that two more ships of the same class were under construction. These ships have now been delivered, one in March, 1956 and the other in May. The 'INDIAN IMPORTER' a second-hand ship of 1929 has been sold and the loan which was taken from the Government for the purchase of the Coastal vessel, the 'INDIAN COMMERCE' has been fully paid-up. There are, therefore, twelve ships including the 'INDIAN COMMERCE' in the Company's fleet. Your Directors aim at having a fleet of eighteen ships before 1960 all operating on the INDIA/U.K./CONTINENT route, and orders have been placed for the construction of six more ships which will be delivered at the rate of two per year during the next three years.

The Company has also placed an order with the Hindustan Shipyard Ltd., for a vessel of 5,500 tons which may be utilised either in the Coastal trade or in the trade Overseas.

The assistance which the Government of India has readily given by way of loan has enabled the Directors to plan this programme, and in a period where the shipbuilding yards in foreign countries are fully booked, to take advantage of the offer of the German shipbuilding yard of Howaldtswerke, to order these ships.

Since March, 1956, your Company has also undertaken at the instance of the Government to put two of your ships regularly on the India/Black Sea route to enable exports to and imports from the Soviet Union and in particular to afford shipping facilities for the large quantity of plant, machinery and material required for the Bhilai Steel Plant. This undertaking has naturally reduced the number of ships available for the INDIA/U.K./CONTINENT trade.

I should like to repeat that the Directors have kept the financial commitments of your Company, in regard to the loans taken from the Government, closely under review and are confident that there will be no difficulty in meeting these commitments provided of course there are no serious upsetting developments beyond our control.

The loans granted by the Government for the construction of ships overseas require exchange facilities for payment of instalments to the shipbuilding yards as they become due. I should like, however, to point out that ships of Indian companies engaged in Overseas trade earn and save enough foreign exchange to meet the requirements for transmission of the instalments due to the shipbuilding yards abroad. It is needless to add that this is a continuous source of foreign exchange earning and that, therefore, the sooner the tonnage of the Indian companies expand the greater will be the foreign exchange earned by them. These invisible earnings are a considerable factor for every maritime country in dealing with the exchange problem.

Public and Private Sector

The industrial policy statement of the Government of India declares that sea transport belongs to the second category of industries which will be developed both by private enterprise and by the State, so as to accelerate progress. The need for Indian Shipping to operate on various routes on which at present there are no Indian ships operating is unquestionable. The two Shipping Corporations that have been recently promoted in the public sector have, therefore, a free field in which they can operate without any way jeopardising the interests of the Shipping companies in the private sector. I am glad, therefore, to bring to your attention that the Hon'ble Minister for Transport has stated at the last Annual Meeting of the Indian National Steamship Owners' Association, as follows:—

"I may state it very clearly that it is not our intention that Shipping in the public sector should run in competition on routes in which existing private Shipping companies have established themselves."

I trust this categorical statement of the Hon'ble Minister will continue to be a basic policy in the expansion of Shipping in the public sector.

Suez Crisis

I feel bound to refer to the serious problem which has emerged during the last few weeks owing to the fact that the route through the Suez Canal is not now

available and will not be available for some considerable period. It will be inappropriate for me on this occasion to deal with the political and other aspects of the crisis which resulted in the closure of the Suez Canal. The Company has had, however, to face a series of problems of readjustment of the sailing schedules of your fleet, problems of insurance and of obtaining bunkers and water at new ports of call consequent on the diversion of your ships to the longer route via Africa. These problems, I am glad to state are being satisfactorily dealt with by your Company.

The policy of your Directors in providing a speed of 17 to 20 knots in the new ships has not only contributed considerably to increased freight earnings but has also enabled the Company to keep its sailing schedule in line with the requirements, a factor which is of so vital importance at a time like the present when the Company's vessels have to take a longer route on account of international developments.

The events which have led to the Suez Canal problem, the conferences that have been convened from time to time, to consider the issue, and the position that certain maritime countries have taken with reference to the Suez Canal, all emphasize the need for building up the country's fleet as rapidly as possible. Our status and our dignity as a maritime country seem to require possession of a sufficiently large mercantile fleet despite our position in the international trade of the world, if we desire to have a tangible share in the settlement of these grave problems.

I feel certain that the expanding policy which your Directors have adopted will be appreciated whereby there will be at least 18 ships on the INDIA/U.K./CONTINENT trade apart from the two ships earmarked for the Black Sea Trade by the end of 1960.

Government Loans

I have referred to the loans that have been sanctioned by the Government enabling us to launch on the expansion of your fleet. We are grateful to the Government for the assistance given so far and we trust that this assistance will continue in the same measure for a further and quicker expansion of the fleet of Indian companies. It is further hoped that some of the terms and conditions of these loans may be liberalised to a reasonable extent. I must take this opportunity of stating that the achievements of the Indian Mercantile Marine have been by no means inconsiderable. National Shipping has established itself in the Overseas trade, against heavy odds, by maintaining a high standard of efficiency and service and has in no small measure assisted the development of India's National Overseas trade.

In the matter of training Indian personnel as well, for key positions in the Mercantile Marine, the Indian companies have done their best and in the coming years the dearth of technical personnel I am sure, would not be so seriously felt in this industry. In these circumstances, I have no doubt that the development of National Shipping in the private sector will continue to be encouraged by the Government and any suggestions which would adversely affect such development will not be looked upon with favour by the authorities.

Earnings and Dividend

The earnings of the Company have been noted in the Directors' Report. I have had during the last two years the not very pleasant duty of informing the shareholders that the Directors were unable to declare dividends on Ordinary shares. It is, therefore, some relief and consolation to me that this year we are able to announce the payment of an interim dividend of Rs. -/8/- per share and are now proposing to pay a further final dividend of Rs. -/8/- per share on Ordinary shares.

I should like to take this opportunity of thanking the shippers both here and abroad for the very generous support that they have given to your Company. Thanks to the fast ships which form our fleet and to the courteous and prompt service which is forthcoming at all ports, the India Steamship Company holds a very high position in the esteem of shippers in different parts of the world. Our shippers have recognised this by their patronage.

Transport Minister's Resignation

I cannot conclude this Speech without reference to the resignation of Sri Lal Bahadur Shastri, Minister-in-charge of Railways and Transport. I do not wish to make any comments on the constitutional propriety which necessitated such resignation or on the parliamentary traditions which it is stated to have helped in building up. I can only refer to the deep regret which is felt almost universally in India at this resignation. The contribution which Sri Shastri has made to the cause of Indian Shipping, his earnest and enthusiastic support in expanding the Indian fleet and his deep understanding of the problems of Indian Shipping companies has been widely recognised. The personal characteristics of Sri Shastri, his modesty, unassuming manners and his desire to avoid publicity have been appreciated widely. I have no doubt that he will shortly be called upon to fill again high and important posts in the Cabinet of the Government of India. I should like to extend to him on your behalf our good wishes.

New Director

It gives me great pleasure to inform you that the Board has been strengthened by the addition of another Director Mr. R. K. Mitra, ICS., Chairman of the Commissioners for the Port of Calcutta. His knowledge of port working and its conditions has been of great help to the Board.

Tribute

The Company has been well served by all its officers afloat and ashore of all ranks and by its Agents and brokers. On your behalf and on behalf of the Directors I wish to convey our thanks to all of them for their good and enthusiastic work throughout the year.

It only remains for me now to thank you gentlemen for your attendance at this meeting and to join you in the hope that the Company will prosper in the years to come thanks to the good and enthusiastic work of our staff.

I shall be glad to answer any questions which shareholders may wish to ask regarding the Accounts.

THE FEDERATION OF ELECTRICITY UNDERTAKINGS OF INDIA

MR. K. G. MILNE'S SURVEY

The following is the speech of Mr. K. G. Milne, President of The Federation of Electricity Undertakings of India, at the Twelfth Ordinary General Meeting held on 12th December, 1956.

Gentlemen,

Once more it is my privilege to welcome you to the Annual General Meeting of this Federation and to thank particularly those who have come here from afar.

The thought uppermost in all our minds today is the progress which is being made in Parliament at this time with amendments to the Electricity (Supply) Act, 1948. Now at last the fruit which has been growing for the last six years upon the legislative tree appears ready to be picked. We have tended it through all this time with anxious care. Many journeys have been undertaken and many have been the letters and discussions between us and Government representatives as to what should be done for the best. Investors too will be eagerly watching to see whether, in the midst of their sore preoccupation with new and crushing loads of general taxation, they may yet once again find some solace here with us.

By and large investors have not much liked the look of us during the last few years and have progressively been diverting their attention to other directions. Investors were worried lest Government might finally decide towards the general nationalisation of the Electric Supply Industry, or that they might renege terms of compensation upon acquisition which might be of a confiscatory nature. They have been worried too that the maximum rate of return allowed to our industry was incommensurate with the risks involved and the opportunities afforded for investment in other countries. There had furthermore been signs of undue interference by State Governments and by Electricity Boards, with the day to day working of Undertakings, and in particular with their rate making policies.

What therefore can I tell you, and investors, about the ripe legislative fruit which is about to be picked? Is it fair and luscious and such that investors may be encouraged to come forward once again to enable our industry to maintain its rightful place at the base of all advancement of the living standards of the people? Or is it corrupt and maggoty and an object of despair?

Amendment Bill

From all I am able to gather—and a great deal has actually been happening during the last week—I am glad to be able to tell you that I believe the Electricity (Supply) Amendment Bill 1956 as it emerges from Parliament in the next few days is likely to meet most of the points which our Federation had desired. It is true that the new Standard Rate of permissible return which is proposed to be granted cannot be regarded as a matter of any great excitement. On the other hand a return, allowing for taxation, of 5½% upon the Capital Base of an Electric Supply Undertaking is not in my opinion a return which should be lightly regarded, or cast aside as completely unworthy. While it will be for the various undertakings within our membership to apply the new formula to their own financial structures in each case, I am under the impression that even allowing for the fact that certain previously available advantages under the law are being withdrawn, the final return to investors is likely to be somewhat improved under the new dispensation.

Besides the return to the Electric Supply Industry will now be linked with the Reserve Bank Rate. True this is not a very scientific basis for calculating the return upon an industrial investment, but at least I for one do not at present foresee any great likelihood of the Reserve Bank Rate being reduced, and even if it were so, the reduction must then affect the value of all other investments equally. Contrariwise, it is not every industry which will lay in a position, should the Bank Rate be raised, to follow it upwards with an enlarged return as will be the case with the Electric Supply Industry in the future. This is an element of the new situation which investors would I think do well to consider carefully.

The amended Act will, as I understand it, provide also for our industry to retain the tax savings resulting from the Development Rebate given by the Taxation Authorities as a concession to assist companies to expand their business. Previously in the case of this industry these tax savings were misaccruing to consumers. This new provision will not enable Electricity concerns to earn any more upon their investors' money, apart from 1 of one per cent as a sort of handling fee on the amount of the resulting Development Reserve, nor will the Development Reserve itself be permitted to add to the ultimate property of the investor. Nevertheless it should help the industry in some measure in its task of raising the additional Rs. 70 or 80 crores which it will require to complete its programme during the Second Five Year Plan.

Deferred Taxation Reserve

Here I must mention a maggot which I understand has just fallen out of our allegoric fruit, but which unfortunately will take with it a part of the fruit itself. I refer in fact to a permission to go into all the details here as to why a Deferred Taxation reserve was necessary in the case of our industry; I have been into it in almost every speech I have made bearing upon this industry's affairs for years. The point I am going to make here is that the Government were finally favourably disposed towards allowing the industry to do something about bringing this Reserve into being, but as the proposed permission clause emerged from Select Committee it was in a form which could have done tremendous harm to units of our industry. It was pointed out to Government that in our opinion the clause needed considerable redrafting to attain the precise objects in view. Since however time did not permit a full and proper consideration of the various points involved before the Lok

Sabha came to vote on the Bill, it has been proposed to drop the clause. This however does not mean to say that the Government will not be prepared ever to reopen the question. Indeed I am advised that Government will be only too willing to make sure that justice is ultimately done in this matter.

In the context of investors' fears about general nationalisation of this industry or confiscatory terms of acquisition, it appears evident to me that the Central Government has no such intentions. The whole scheme of the Electricity (Supply) Act is directed towards harmonious co-existence of Electric Supply Undertakings owned by the State and operated by Electricity Boards on the one hand, and Electric Supply Undertakings owned and operated by constituents of this Federation on the other. Indeed the reports are that the Central Government has been much distressed at the attitude of certain States of the Union who are unwilling to set up Electricity Boards to co-ordinate electrical development in their areas and who have spoken instead of local measures of nationalisation. It is, I firmly believe, the policy of the Centre to discourage such tendencies and to insist, with the fullest support of all constituents of this Federation, upon the desirability of setting up State Electricity Boards in all the States of the Union and fully to implement the policy for which the Electricity (Supply) Act was enacted. This policy is declared to be rationalisation, and certainly did not and does not include nationalisation.

The Central Government has made no attempt, nor do I believe it intends to make any attempt, to alter the general terms for acquisition of Electric Supply Undertakings, which remain as they were set out in the Electricity Act 1910; namely fair market value of assets at the time of expiration of the relevant Licenses.

A matter of particular alarm to investors during the last year was an attempt made by some State Governments to declare that dividends should be limited to 3% in certain circumstances, except with the State's sanction. I am glad to be able to say that the new amendments are taking care of this, and should make it quite clear, in case there was ever any real doubt, that State Governments have no powers to interfere with dividends.

I will only touch on one other amendment, also of major importance. This will ensure that State Government or Electricity Boards as the case may be, will in future have no powers to impose Rating Committees on Electricity Undertakings unless there has first been established a breach of the Electricity (Supply) Act regulations in regard to their financial obligations. Furthermore, if there is any dispute about whether or not there has been such a breach it must be referred to arbitration of the Authority before any Rating Committee can function. This amendment will do away with one of the greatest obstructions to financial viability in the case of Electrical Undertakings whose position required increases in rates. Now such Undertakings are to be enabled to increase their rates in accordance with law and without any improper interference. Of course if it is afterwards shown that they acted incorrectly, restitution will naturally have to be made to consumers, but that is very unlikely to happen.

Happy Outcome

Taken all in all I, therefore, think we may say that we are pleased with the outcome of our six years' effort; hard and worrying as this has been. We will, of course, not relinquish our endeavours to obtain a final fair settlement in regard to the major outstanding point of Deferred Taxation, but meantime I am hopeful that the principal law governing the well-being of the Electric Supply Industry may be said to have been cleared of its major obstacles.

Of course only the investors themselves can tell us, and the Government of India, whether the return which the amended law is now proposing to give will be sufficient to attract their money. If it is not, then it will inevitably mean that the Government of India must think again; for our industry can under no circumstances be allowed to stagnate if the country is to continue to grow forward.

I fear that a great deal too much emphasis is being placed upon taxation for the sake of financing the Public Sector. Probably few will be prepared to accept what I say. We are accustomed now to being unheard in such matters. I will only suggest with the remote hope that there may be those who are willing to agree, that we would do well to watch with great heed the rate of growth of demand for electricity in the country. This figure of demand for electricity is the index of progress here as elsewhere. It costs on the average between Rs. 4,000 and Rs. 10,000 invested in other plant and productive machinery to make use of 1 Kilowatt (just over 1 Horse Power) of electrical power. If all the people who have been planning to use the money in development are still able to do so then the demand for electricity will continue to grow. But if this money is diverted into the pockets of the State to too great an extent, the rising curve for demand for electricity must begin to fall. I pray that the country's plans may be so laid as to avoid so fateful a reversal of trend, and its dismal implications for the future of the people.

Before I conclude I must refer briefly to a few other matters of individual moment. The Bombay High Court has ruled, in suits before it during the year, that the levy of "additional income tax" on dividends was ultra vires, and the cases have been appealed to the Supreme Court. Meaning that there has not been any further progress in determining the legality of denial of dividend gross-up for tax relief purposes where a company has no income tax profit; and thus there continues this satanic reward to those who have done their duty to their countrymen by expanding fastest! To these problems, both stemming from the different depreciation allowances of the Electricity (Supply) Act and of the Income Tax Act, there

may now be added another in the latest requirement that the tax allowances be deposited with Government before they can be used for capital purposes. Constituents of the Federation not being allowed by their Act even to earn all the tax allowances, and having in any event to invest such depreciation allowances they do get as soon as they are earned, are thus in danger of again being caught, as it were, between God and Mammon. Which Act one may associate with God and which with Mammon in this context may perhaps best be left to the imagination! The Federation has of course strongly represented the special position of this industry to the Finance Ministry, and hopes for responsive action.

This industry is dependent upon a large volume of consumer goodwill; perhaps more than any other industry, and towards this end the Federation has given great attention and will continue to do so. Apart from our industry's own problems such as regulation and control we must, for the good of the country, make it electricity conscious and so that the benefits of this civilizing influence will enlarge as years go by.

Note: This does not purport to be a record of the proceedings of the Annual General Meeting which will be sent separately to Members.

New Topics

included in

The

Times of India

DIRECTORY

& YEAR BOOK

(incl. WHO'S WHO)

1956-57

THIS peerless reference book presents authoritative, comprehensive information about India, and Political, Administrative, Financial, Commercial, Agricultural, and Social Organisations activity in the country. Biographical notes and photographs of Indians of distinction are given in the WHO'S WHO section.

The new topics dealt with in the 1956-57 Directory include:

- 1 The S. R. C. Report and a summary of the draft States Reorganisation Bill
- 2 Brief statistical notes on the new States where available
- 3 Maps of new State formations, and an all-India map showing the reorganised States
- 4 A detailed summary of the Second Five-Year Plan.

Available from THE TIMES OF INDIA, Dr. D. Naoroji Road, Bombay 1; 10, Daryaganj, Delhi; 13/1 & 13/2, Govt. Place East, Calcutta; 4, Albemarle Street, London W. 1; and all good book-sellers and agents of The Illustrated Weekly of India.

Without Prejudice

CONVICTION FOR HOLDING
STOLEN GOODSHIGH COURT RESTORES SENTENCE
ON HAWKER

(FROM OUR LEGAL CORRESPONDENT)

PARKASH SINGH was, and (save for a temporary and unavoidable cessation of business for a period of six months, during which he was otherwise rigorously occupied) no doubt still is, a hawker carrying on his avocation in the district of Ambala; and Parkash Singh has stood upon his constitutional rights. He has done so before a magistrate, a sessions judge and a High Court, with the object of preserving his liberty as guaranteed to every citizen of India by Article 21 of the Constitution, which ordains that "no person shall be deprived of his life or personal liberty except according to procedure established by law." Incidentally, it may be noted that Article 21, with very slight textual variation, follows exactly Article XIV of the Constitution of the United States and that Article XIV is simply a presentment in writing of the common law of England. England, or perhaps one should say Britain, though Professors Dicey, Jaski, Finer and Bryce do not, is the only considerable country in the world, one believes, which does not possess a written constitution. It did have one once. It was in fact the agreement of the Parliamentary Army and Cromwell, and lasted 11 years, until in 1660 the "people" had had enough of it.

The Restoration put an end to written constitutions in England, and no one has ever contemplated their revival. A written constitution is essential in a federation of States such as India and the United States, but it has at least one disadvantage, and that is illustrated in the case of our pertinacious hawker. It results in a multiplicity of litigation in a country already notorious for the law's delays. In the index of the A.I.R. for one month, from which we unearthed the case of Parkash Singh, we find no less than about a hundred reports of cases cluttering up the Supreme Court and the High Courts, all turning on contested interpretations of various Articles in the Constitution. One believes that a condemned murderer in the United States also can delay his ultimate punishment for years while his lawyers involve his alleged constitutional rights in a succession of courts. The same citizen's conviction and final sentence would occupy a matter of three months and no more under the unwritten constitution of Great Britain. India has emerged into freedom as a new world power and a federal State, and, as such, it was obviously necessary that its citizens should have their charter in written form. All it is desired to emphasise here is that those citizens would possess the same personal rights in Britain, and that as long as liberty is secured, it matters nothing whether we say that individuals are free from arbitrary arrest because liberty is guaranteed by a written constitution or because such freedom is secured to him by the ordinary law of the land.

And that digression brings us back to Parkash

Singh and his stand upon the Constitution of India, upon which he relied to rescue him from the consequences of what to him, in his capacity of an innocent citizen of blameless rectitude, must have seemed a series of maleficent coincidences. To begin with, he was a hawker of high class and his stock in trade, with which he proposed rather hurriedly to catch the 3 p.m. train from Ambala station on a certain day, comprised goods of a character more usually found in substantial shops than in the equipment of a peripatetic pedlar. There were three thermos flasks, a large number of packets of Gold Flake and Scissors cigarettes (the latter popular among the military and often stocked in canteens), new vests and "most noteworthy of all", as Falshaw J. put it later, "two bottles of Scotch whisky on which, in addition to the ordinary labels, were also labels showing that they were only issued to the army and marked 'for canteen service only'."

Now, for the convenience of troops stationed in Beas, there was a canteen, and it was a further malignant coincidence that the manager thereof, on visiting the canteen on the morning of 20th August, 1954, found that it had been burgled. The burglary was reported to the O. C., Captain Anthony David, who the same afternoon gave information to the police with a list of the missing articles which, worst coincidence of all, included three thermos flasks, two bottles of Scotch whisky and various articles of clothing. Parkash Singh was arrested the next day in Ambala city railway station when a trunk in his possession was opened with a key taken from him. As for the contents of the trunk, their lordships of the High Court observed later: "There does not appear to be any doubt whatever that most of the contents were, in fact, property stolen from the canteen in Beas less than 48 hours before the apprehension of the accused in Ambala." "Not so," Parkash Singh had said before the Magistrate. "The articles were my stock in trade as a hawker. I have been falsely implicated by an unscrupulous head constable; and I am an honest man"; in support of which latter asseveration he called witnesses as to his virtuous conduct as a hawker.

The magistrate in Ambala was not impressed. He convicted Parkash Singh under Section 411, Penal Code, and sentenced him to six months' rigorous imprisonment; whereupon the hawker appealed from his conviction to the sessions judge on the ground that he had been deprived of his personal liberty in contravention of Article 21 of the Constitution of India: a ground, incidentally, which, if it were sustained, would mean that in probably seven cases out of ten, it would be impossible to secure a conviction on a charge of receiving goods well knowing them to have been stolen. Nevertheless, the ground was sustained and the sessions judge reversed the conviction and sentence of the magistrate, and acquitted the accused.

The acquittal involved the neat driving of a coach-and-four through Section 114 of the Indian Evidence Act, a performance which was duly executed, producing the dry comment later from Kapur J. that it rendered the matter one of "some importance." The State, being of a like opinion, appealed to the High Court against the acquittal, and asked that the conviction and sentence of the magistrate be restored. These were the grounds on which the learned sessions judge had set aside the conviction. Section 114 of the Evidence Act enacts, and, incidentally, has so enacted for well over 80 years before the written Constitution of India was drafted, that a man who is in possession of stolen goods soon after the theft, is either the thief or has received the goods knowing them to be stolen, unless he can account for his possession of them. A presumption, you will note, a presumption rebuttable by the possessor on his showing that his possession was innocent. The sessions judge held that this venerable statutory presumption contravenes the provisions of Section 21 of the Constitution, and that therefore Parkash Singh, having been unlawfully deprived of his personal liberty, must be freed.

"I must confess," said Falshaw J. (Kapur J. concurring) at the hearing of the State's appeal, "that I am entirely unable to understand this view. All that is laid down in Article 21 of the Constitution is that no person shall be deprived of his life or personal liberty, except according to procedure established by law. As far as I am able to understand it, all that is meant by this is that in order to be deprived of his liberty, a man has to be tried according to the provisions of the Code of Criminal Procedure on a charge relating to some offence specified in the Indian Penal Code, or some other statute containing penal provisions, and that the rules governing the evidence at his trial must be those laid down by the Indian Evidence Act. It seems to me that the view of the learned sessions judge would only be well founded if it had been specifically provided in the Constitution that no presumptions of any kind were to be drawn against any persons accused of an offence. I am, therefore, of the opinion that the reason given by the learned sessions judge for acquitting the accused is wholly unfounded in law, and since I am of the opinion that the evidence conclusively shows that the accused was found within 48 hours of the theft in possession of a considerable quantity of stolen property, for which I do not find his explanation at all satisfactory or convincing, I consider that he was properly convicted and sentenced under Section 411, Penal Code, by the learned trial magistrate." The appeal of the State was accepted, the order of acquittal set aside, and the magistrate's conviction and sentence restored.

[State v. Parkash Singh. 1956. 43. A.I.R. (Punjab). 224.]

At Hirakud in Orissa, Indian Aluminium Company is building a new 10,000 ton smelter. This will more than double the country's total production of aluminium and help meet the demand from numerous new industrial applications of this versatile metal.

The Canadian associates of the Company will play an important part in this venture, contributing their technical know-how and sharing in the costs of the project, to finance a part of which the Company proposes to issue new capital.

The Hirakud smelter will mark another milestone in the march of progress towards a new aluminium age.

LONDON INSURANCE LETTER

EFFECTS AND ADJUSTMENTS

By Air Mail.

THE decision of the Export Credits Guarantee Department to curtail further its insurance of business with Middle East caused no surprise. Cover for the Egyptian market was withdrawn at the beginning of August and has not, of course, been restored. In view of the aggravation of the crisis in November, the Department restricted its terms for new business with Israel, Jordan, Saudi Arabia, and Syria, so that the only transactions covered would be those backed by confirmed irrevocable letters of credit, and these terms are no longer easily arranged. However, to many exporters the problem seemed academic, for communication with customers in the area had become so difficult that little trade could be done anyway. The reaction of Lloyd's underwriters to the general situation was more surprising. They made the unusual decision that they would reduce from 12 months to three months the period over which they would insure vessels against war risks at a basic rate. The decision means that if a vessel is insured, for non-danger areas, for a period of 12 months the rate of premium will be reviewed at quarterly intervals. The previous arrangement protected underwriters against risk of war in specific areas, for 10 danger areas were excluded from it; otherwise a basic rate of 4s per £100 applied for a year. The change suggested that some underwriters had become apprehensive of a general war.

The troubles in the Canal itself have had surprisingly little effect on Lloyd's. The dozens of vessels sunk by the Egyptians could not be subjects of claims, if only because they belonged to the Canal Company, which bore its own insurance; in any case, claims arising from deliberate sinking would be strongly disputed. Claims on vessels immobilised in transit are not so obviously excluded, but no claims under hull war risks are admissible if the vessels are released within a reasonable time and undamaged. Anyway, no owners would want to abandon ships as total losses in the present state of the market. It might be thought that numerous claims would arise from insurance against the risk of diversion round the Cape, but in this matter the timing of the troubles was singularly fortunate for underwriters. The anxieties arising from President Nasser's nationalisation subsided before any substantial amount of cover had been arranged, and many of the policies that had been arranged had expired when the real crisis broke. When the Canal was actually closed, cover of this type—against the risk that it could not be used—became, of course, irrelevant.

Car Policies in Abeyance

At home, the most obvious difficulties arising from the troubles are in car insurance. Petrol became scarce so promptly that some motorists decided immediately to lay up their cars—a not uncommon practice in the winter anyway. If insurers are notified in advance of such an intention they will grant a rebate on the insurance premium for a minimum period of four weeks. This arrangement applies, of course, at any time, but it is usually brought into effect as a consequence of individual, not of national, or international, circumstances. This rebate applies only to accident insurance, while insurance against risks of fire and theft will remain in force. On the road, the number of accidents has already been reduced by the very noticeable thinning of traffic (due, of course, much more to economy of petrol than to withdrawal of cars from service), and the companies' experience this year may be, for this reason, more favourable than was expected. It is already suggested that the much-discussed increase in premium rates for motor insurance will be deferred until conditions are restored to their congested normal.

There is no clear sign of general improvement in the fire departments. At home, recent figures include what is believed to be the largest single loss on record fully covered by insurance, arising from a big fire at a refrigerator-manufacturing plant in Crewe, where damage estimated at £1.4 million occurred. (The nearest comparable figures are about £1 million each for a cycle-accessory warehouse in Birmingham last year and a cotton mill in Roshdale in 1952.) Abroad, the all-important American figures are still inflated by claims for additional risks, such as windstorms. How serious one fire can be is shown by the fact that the total U.K. damage in October was not very much more than that caused by the single fire in Crewe, which occurred in September. The estimated 10 months' total, at £22.4 million is not quite as large as the figure for the same period of 1955, £23.4 million, but it is appreciably more than that for the same period of 1954, £21.6 million. There is still a reasonable hope that this year's experience at home will be at least no worse than last year's.

In the United States, on the other hand, losses this year have exceeded last year's in almost every month, and the estimated total for the first three quarters of the year, at \$731.2 million, is considerably larger than the figure of \$668.4 million recorded for the same period of last year; which was almost the same as the corresponding figure for 1954. In other overseas countries there have also been substantial losses, and it does not appear that final figure for 1956 will show a general improvement in the trend. In a different field, however, the overseas departments can record one of the largest all-risks insurances ever written. It covers West Bengal's projected steel works in Durgapur, for a value of £100 million. This insurance is not, of course, exclusively a British undertaking, for Indian insurers are also important participants.

IRREGULAR TREND IN STOCK MARKETS

GOLD, RUBBER AND TEA SHARES IMPROVE

London, 19th December.

THE pace of the recent recovery in the stock markets has slowed down in the past week, and in fact, the markets as a whole have turned irregular as demand has contracted. The Middle East situation, coupled with the approaching holidays, has restrained further buying. As a result, prices have been generally little changed, compared with those prevailing a week ago. The main exception are gold shares which have recorded modest gains on the week. Gilt-edged securities have responded to the improvement of sterling in foreign exchanges, but the advance has proved short-lived, and prices have subsequently fluctuated within narrow limits to record little change on balance. Foreign bonds have been well maintained and have been occasionally better on balance. Dollar stocks have generally followed the downward trend of Wall Street. The recent recovery in industrials has been brought to a halt with the contraction in buying and with prices moving irregularly and within narrow limits generally, there has been little alteration in prices on the week. The Kafir section of uranium shares has been supported on the decision to release more information about atomic developments. Coppers and other base metals have weakened reflecting the fall in metal prices. Oils generally have lost some of their recent gains on profit-taking. A firm undertone has been maintained in rubbers and teas.

The Money Market

There was no improvement in the tight credit condition which has been a persistent feature of

the London money market during the past week. Seasonal factors kept the credit base restricted. Although the market requirements were lighter as a result of a small intake of 91-day Treasury bills, the amount of credit available fell short of the needs and the authorities had to provide a fair amount of help to cover the gap. Shortages during the past week were perhaps less distressing, and the high cost of money declined to 4½ percent from 4½ percent in the previous week. The failure of the money market to secure a reasonable quantity of 91-day Treasury bills at the previous week's tenders, was the cause for a sharp revision in its bid last week, which had the effect of pulling the average Treasury bill rate down by around 3/32 percent, while the market secured a much larger allotment of the bills. Applications for £230 million worth of 91-day Treasury bills totalled £361,850,000 and £220 million were allotted at the average rate of 98s 1.54d percent against 100s 10.28d percent in the previous week. Applications for £60 million 63-day bills totalled £63,005,000 and all were allotted at the average rate of 98s 11.65d percent against 101s 4.37d percent in the previous week.

Stock Market Prospects

The *Investor's Chronicle* market newsletter writes: The rally in the London gilt-edged market continues with improving demand. A strong technical rally in British industrials was helped by Wall Street, but may have some consolidation. Gold shares are consolidating after a brisk rally which took back all the pessimism since the end of September. Wall Street is coming under some selling pressure. In the past few days, British industrials have regained more than half of their losses incurred between the Suez nationalisation at the end of July and the year's low at the end of last month. Helpful factors have been the general shortage of stock and the easing of the international tension and a more benevolent U. S. attitude. Bear sales after the news of the big November drop in the reserves

proved unprofitable perhaps because of the Government's swift and bold plans to defend sterling. The arrangement for up to \$1,300 million from the International Monetary Fund is shrewd psychology. Even allowing for delayed imports, Britain's November trade figures were good with exports at record daily rates. There are grounds for feeling that the present troubles are being vigorously tackled and will be successfully overcome.

Hongkong Gold Active

The Hongkong gold market was very active during the early part of the week on heavy short selling and liquidation by tired longs. The sharp rise in carry-over charges in the early period also tempted short covering. At one stage, the market was working on the basis of a forecast by prominent dealers about next day's switch rates. Towards the week-end, bears' profit-taking and indications of the still serious Middle East situation helped the market recover some of its earlier losses. The carry-over charge was 260 cents in sellers' favour. The official offtake was 4,500 taels and the unofficial 15,300 taels. Arrivals from Macao totalled 50,000 ounces. Forward contracts were done at \$(U.S.) 37.70.

Vegetable Oils Featureless

The oilseeds market was generally featureless, but in spite of the lack of buying interest, sellers were less inclined to make price concessions. Coconut oil was fractionally steadier for Straits with hints of buyers around £93½ c.i.f. and resellers were reluctant to go below £93½. However, Ceylonese oil was completely neglected, and bids at sharply discounted levels for affoil oil were likely to be successful. Groundnut oil was scarcely mentioned on trading terms with the sellers of Nigerian generally repeating the recent rates and awaiting developments. Groundnuts were in a similar position, although sellers were more difficult to locate. Linseed oil received scant support, but due to the shortage of nearby oil, sellers were preferring not to talk the market lower. Original advices on castor oil were a shade firmer, but resellers were still numerous at discounted rates, claiming no response from buyers. Castorseed was less freely offered with sellers at the origin having generally withdrawn. However, North European interest was negligible. Palm kernels were generally 10s a ton cheaper on slow trading, while other items were lacking features.

Free Sugar Trade in U.K.

On 1st January, 1957, the sugar trade in the U.K. reverts from Government to private account under the Sugar Act of 1956. The Board of Trade announces that from that date, imports into Britain of raw and refined sugar from International Sugar Agreement countries will be allowed under open individual licences. These will be valid for one year without restrictions on quantity. Imports of refined and raw sugar from countries outside the Agreement will be allowed under a quota fixed in accordance with it. Imports of certain sugar-containing goods from the sterling area will be allowed under an open general licence.

London Raw Sugar Futures

Raw sugar futures trading in London will be resumed on 2nd January. It was suspended during the last war. The trading standard will be raw cane non-preferential sugar of 96 degrees polarisation. Trading will be January to October inclusive and December.

Operations of Turner and Newall

Sir Walter Shepherd, chairman of Turner and Newall Limited, in his annual statement said he expected that demand for the African grades of asbestos fibre of medium length which the company produced, would continue to increase. Studies were, therefore, being made with a view to expanding operations at some of the company's mines in South Africa. Trading conditions in overseas markets had become progressively more difficult. Nevertheless, the company's exports had increased in the past year, he added. Demand in India had greatly exceeded the capacity of the subsidiaries there. A new factory had been completed in Bombay which would help meet the growing demand. The factory would manufacture, among other things, clutch linings, compressed asbestos fibre jointing, certain asbestos textiles and magnesia insulation, he added.

Labour Shortage in Lancashire

Most textile producing countries are enjoying a trade revival in cotton goods but with most of them—including Lancashire—the revival is mainly the result of better demand from their own home markets. The review of the International Cotton Federation—whose headquarters are in Manchester—states that the prospects in Lancashire are somewhat brighter than for some time, except in the coarse section of the industry, where competition from imported textiles free from import duty continue to have a depressing effect. Lancashire has more textile machinery than any country in the world, and makes the least use of it. The review points out that the average number of hours worked by each national industry a week varied from 36.87 in the U. K. to 146.66 in Hongkong. This means that Hongkong mills run non-stop for six days a week, and that some of them put in a Sunday shift. Of the 313,000 looms in Lancashire, only 40,000 are automatic, whereas 72,000 of France's 136,000 looms are automatic. The U. K. is still the only country where the single shift system predominates. Although the trend towards double shifts is growing it is only fair to point out that there are not enough workers fully to staff the single shifts.

Finance in India and Abroad

THE CALCUTTA MONEY MARKET

Wednesday, 19th December.

THE seasonal increase in credit requirements is now in full swing and the offtake of most of the main industries has increased. Funds are still being required in large amounts by the sugar mills and on behalf of cotton and jute storage. The interbank market has been extremely tight this week on account of demand for money against quarterly tax payments. The call rate has increased to 4 percent.

There has been a good supply of export documents in the market this week. Tea bills have been most numerous, but a fair amount on account of gunny and ore shipments has also passed. Remittance has been fairly good. Spot sterling remains firm, but the weakness in the forward position has increased this week and the gap between the two has widened considerably. The improvement in the spot position appears to be due chiefly to the short-covering and speculative sales made in November and earlier this month. Sterling is stronger in terms of the American and Canadian dollars.

During the week ended 14th December, Government of India Treasury Bills for Rs. 43,96,25,000 were sold in favour of the Reserve Bank.

Bullion was steady on replacement buying. Silver advanced from the previous week's level of Rs. 171-4 to Rs. 172, quoted today. The rate for ready delivery was quoted at Rs. 172-4. The London price and the rate for foreign silver in New York remained unchanged.

Gold was steady in sympathy with silver and the price increased from Rs. 105-12 to Rs. 106. The sovereign, at Rs. 69-8, showed a gain of 2 annas.

An increase of Rs. 2.78 crores to Rs. 1,466.86 crores in active notes was the notable feature of the return of the Reserve Bank of India for the week ended 14th December, 1956, while the total note issue was Rs. 11 lakhs lower at Rs. 1,473.68 crores. Notes held in the Banking Department have, in consequence, declined by Rs. 2.89 crores to Rs. 6.82 crores. Deposits of the Government of India and other Government accounts declined by Rs. 67 lakhs and Rs. 2.84 crores to Rs. 51.69 crores and Rs. 11.20 crores, respectively, while balances of commercial banks, at Rs. 54.26 crores, showed a rise of Rs. 2.80 crores. Balances held abroad dropped by Rs. 5.38 crores to Rs. 85.63 crores. Investments increased by Rs. 34 lakhs to Rs. 60.53 crores. Other loans and advances increased from Rs. 84.57 crores to Rs. 89.44 crores, of which advances to scheduled banks amounted to Rs. 47.52 crores against Rs. 44.65 crores. These advances totalled Rs. 399.90 crores since 1st January, 1956. Ways and means advances stood at Rs. 8.09 crores (Rs. 5.20 crores).

The statement of the position of scheduled banks for the week ended 7th December, 1956, shows Demand and Time liabilities at Rs. 646.80 crores (Rs. 10.31 crores on account of borrowings from banks) and Rs. 461.69 crores (Rs. 3.11 crores), compared with Rs. 650.91 crores (Rs. 11.69 crores) and Rs. 458.91 crores (Rs. 2.71 crores), respectively in the previous week. Cash has increased by Rs. 76 lakhs to Rs. 36.65 crores, while balances with the Reserve Bank have decreased by Rs. 92 lakhs to Rs. 49.92 crores. There is a rise of Rs. 9 lakhs in investments to Rs. 465.55. Advances and bills discounted, at Rs. 771.99 crores, show an increase of Rs. 5.66 crores. The ratios to total liabilities of cash and balances, of advances and discounts, are, in consequence, shown at 7.8 percent and 69.0 percent, against 7.8 percent and 66.9 percent.

The return of the State Bank of India for the week ended 7th December, 1956, shows a drop of Rs. 43 lakhs in total deposits to Rs. 234.47 crores. Investments in Government securities are down by Rs. 9 lakhs to Rs. 95.47 crores, while other authorised investments are up by Rs. 37 lakhs to Rs. 11.41 crores. Advances, including loans, cash credits and overdrafts, and bills discounted and purchased, have risen by Rs. 3.52 crores to Rs. 132.63 crores. Cash and balances are, in consequence, shown at Rs. 16.08 crores, or Rs. 55 lakhs less.

According to the returns received in the Department of Commercial Intelligence and Statistics, the total gross sea and land customs revenue collected in the Indian Union during October, 1956, amounted to Rs. 1,489 lakhs, compared with Rs. 1,284 lakhs in the corresponding month of the previous year. The comparison in the following should be taken to refer to that of the current figures with those of the corresponding period of the preceding year. Of the total customs revenue collections, import duties accounted for Rs. 1,170 lakhs as against Rs. 968 lakhs, export duties for Rs. 280 lakhs as against Rs. 304 lakhs and land customs and miscellaneous for Rs. 39 lakhs as against Rs. 12 lakhs. The total gross collection of Union excise duties amounted to Rs. 1,615 lakhs as compared with Rs. 1,109 lakhs. During the seven months, April to October, 1956, the grand total of gross customs and Union excise revenue realised was Rs. 19,752 lakhs, compared with Rs. 17,789 lakhs during the corresponding period of the preceding year. Of this amount, import duties accounted for Rs. 7,815 lakhs as against Rs. 7,031 lakhs, export duties for Rs. 1,526 lakhs as against

Rs. 2,117 lakhs, land customs and miscellaneous for Rs. 203 lakhs as against Rs. 91 lakhs and Union excise duties for Rs. 10,208 lakhs as against Rs. 8,550 lakhs.

RIGHT APPROACH TO FISCAL AND MONETARY POLICY
ENCOURAGING THE USE OF BANKING FACILITIES

(By R. M. Mitra)

THE Finance Minister's recent speeches have reflected a sense of urgency and anxiety about the Indian economic situation. It has been implied that vested interests might try to obstruct his supposedly progressive measures of taxation. Regret has been expressed that bankers are unable to offer any constructive suggestions to deal effectively with the problems of money and credit. The taxation and other proposals contained in the two Finance Bills brought forward in Parliament on 30th November have caused much controversy. But it can hardly be said that "vested interests" have worked themselves into a state of frenzy where "emotion seems to dominate reason", as happens in the U.S.A. whenever the capital gains tax comes up for discussion. Again, it is doubtful whether any banker in India has echoed the statement made by the chairman of the City National Bank of Chicago in November, 1940, that "repeal or drastic reduction of the capital gains tax" was necessary "as the first step in unshackling private business." It is unfair to say as has been said, that bankers have failed to formulate practical measures for meeting economic problems in general, and monetary problems in particular, arising in the course of the five year plans. The report of the Committee on Finance for the Private Sector (popularly known as the Shroff Committee) published in April 1954, is clear proof of this.

It seems that the problems require fundamental remedies and not temporary palliatives. The reason why bankers seem incapable of practical suggestions, and also why they do not agree among themselves on the suggestions which are made, may be that there is no agreement on the character of the problems facing the country.

Premature Experiments with Taxation

One can readily agree with the Taxation Enquiry Commission that the proportion of Indian tax revenues to national income, at 7 or 8 percent, "is lower than in many other countries, including some in south-east Asia", that "there has been an increase in taxable capacity" in India; and that "there is justification for some increase in Indian taxation". However, the warning given by the Commission, that the premature imposition of a tax on capital gains may tend to defeat the "need

Can your car make a split-second stop?

As a responsible motorist you know that it should be able to. An emergency may arise any moment... it comes unannounced. So play safe. Among other things, see that you have a really reliable braking system.

Wise motorists all over the world have their brakes tested regularly and have them fitted with FERODO—the brake linings that make motoring safe. FERODO Brake Linings are made with asbestos because they have a tough job to do. In an emergency, their unflinching efficiency can prevent disaster.

There are FERODO Brake and Clutch Linings for every type of vehicle in the country—but these are only a part of the wide range of technical asbestos products which we make at AM & FM to meet the needs of Indian industry. The increasing use of asbestos is an index to India's industrial progress.

Where There's Industry There's Asbestos

steel brings you the news

Yes, that paper you are reading owes its existence to steel. It is steel that helped to manufacture the paper, did the printing and even helped to collect the news that it carries. There is hardly any facet of life where steel does not play a part in one way or another.

TATA STEEL
SERVES THE NATION

Steel, today, is very much to the fore in the nation's thinking. India's steel-making capacity is being rapidly enlarged to provide a sure and solid basis for the country's advancement.

for promoting a better climate for investment", has gone unnoticed. The warning applies equally to the combination of stiff rates for dividend super-tax and unappropriated profits tax. It should not be regarded as being merely obstructive to suggest that the situation of "continuously rising prices and profits and capital values," in which a capital gains tax was contemplated by the Taxation Enquiry Commission, has not yet arisen.

In spite of the rising trend of prices, profits have not reached proportions large enough to build the internal resources required by industrial concerns. The index number of industrial share prices in India, which stood at 69 in 1953 (base year, 1948), compared with 156 in the U.S.A. and 102 in the U.K., does not indicate the possibility of large capital gains. Although there has been an appreciable rise in share prices in India in 1955 they were only 31 percent above the 1953 level (when they were depressed). They rose by 67 percent in the U.S.A., and 55 percent in the U.K., from the already high levels of 1953. Therefore, though the capital gains tax is not expected to yield much revenue, it will introduce an unnecessary element of restraint in the equity market.

Value of Shares

The value of shares is based on dividend experience, and the funds employed in business include the undistributed profits on which shareholders can legitimately expect a fair return. Already the index of industrial share prices in India is much lower than in some important countries. The proposed increases in rates of dividend super-tax seem to be calculated to give a fresh jolt to security prices. The proper course would have been to await further developments, or at least to relate super-tax to the normal level (based on, say, a five-year average) of dividends paid by individual companies and not an arbitrary six percent, so that a further depreciation in the value of investments might have been prevented.

Similarly, it is reasonable to ask whether the requirement for companies to deposit with the authorities a specified portion of their profits, in excess of the prescribed minimum, may not further strain credit supplies, especially when profits in many cases are not reflected in a rise in cash holdings. It may, of course, be pointed out that there would be no increase in the credit demands of the public and private sectors taken together, as the deposit held by the Government or the Reserve Bank would be used in meeting the credit needs of the public sector and would thus help reduce the Government's need to borrow. But, as is well-known, the credit system (especially the organised banking system) responds differently to the differing needs of the public sector and the private sector. Direct participation by a bank in

a Government loan forms part of its liquid assets, whereas an indirect contribution to the Government's funds through a loan to a business concern in the private sector would be regarded as increasing the volume of its non-liquid assets which con- tains a potential threat to the stability of the sys- tem.

The increase in stamp duty is badly timed. Suggestions are being made to improve the bill market in India and to bring genuine trade bills within the purview of the Reserve Bank's bill market scheme. The growing volume of bills pur- chased and discounted by scheduled banks in India, which now constitute about 20 percent of the scheduled banks' total advances, would seem to provide a suitable opportunity for promoting a properly functioning bill market in India. But the heavier stamp duty will act as a handicap.

As for the higher Customs and excise duties, it is likely that in some cases the weight of "superfluous" profits will be neutralised and infla- tionary forces checked. But it is equally possible that, in many cases, the prices of goods will rise. This will not only defeat the attempt to check infla- tion, but also thwart the Government's efforts to find resources for development. Higher prices will tend to push up the estimates of financial requirements for the second plan beyond the al- ready revised total of Rs. 5,300 crores.

It is possible that conditions might arise when the measures contained in the two Finance Bills can be successfully operated in India. But it has to be realised that these measures produce different effects in different conditions of economic growth, monetary behaviour and psychological reactions. There is no machinery in India to measure and interpret these effects correctly. It seems, there- fore, not only premature but highly risky to in- crease further the rates of dividend super-tax, and to introduce a capital gains tax.

Taxation and Borrowing

Of course, money has to be found for the second plan. Taxation, borrowing and deficit financing have from time to time been examined in this con- nection. Deficit financing introduces new money, and may be justified as long as it is supported by new production. But securing the return of this money from circulation when the supporting pro- duction disappears in use or in consumption is difficult. Taxation and borrowing, when feasible, are, therefore, to be preferred to deficit financing. The orthodox view is that taxation should be used for current expenses and borrowing for develop- ment expenses. Development expenses create assets for future use, and a large part of their cost should, therefore, be met by future generations; the present generation should not be called upon to sacrifice the use of its money for their benefit.

But to the extent that present money is not enjoy- ed in consumption and the creation of new money is avoided, taxation and borrowing are equally effective. The only difference is that, in one case, the money-holder is deprived of all benefits of his money; in the other, he is assured of a future return since he refrains from present consumption.

As both borrowing and taxation serve anti- inflationary objectives, and as taxation, wrongly applied, could bring hardship to the poor or tend to disrupt investment and production, it seems that in the present conditions, when the machinery for studying the results of fiscal measures is imper- fectly developed, the better method would be to promote the monetisation of the economy and to bring money under the control of the monetary authorities through the organised banking system. The quantity of money supply in India is not a real factor in inflation. It is actually the uncontrol- led behaviour of money and non-monetised trans- actions which causes inflation. Money supply in India, at Rs. 2,000 crores to Rs. 2,200 crores, is only about 20 percent of the national income, whereas in the U.S.A., at about \$140 billion, it is more than 40 percent of the national income.

Monetary Discipline and Confidence

The immediate need, it seems, is to strengthen the apparatus for the collection of taxes, and to bring money more under the discipline of the monetary authorities. As control over the behav- iour of money grows, it might be possible to devise machinery for estimating trends in savings and consumption, investment and cash preference, business risk-taking and speculative ventures, and similar economic and psychological forces. The opportunity may then arise to consider even tax- ation measures which have complicated results. Meanwhile, the more energetic collection of taxes from orthodox sources, and a more rational use of borrowed money would meet the needs of both the public and the private sectors.

It seems, therefore, to be a matter of imperative necessity that money supply should be channelled through the organised banking system. The in- creasing supply of money produced by develop- ment expenditure now circulates largely outside the system. The uncontrolled and unpredictable behaviour of this money presents a serious threat to the successful operation of new fiscal and mon- etary measures. Money flowing through the bank- ing system, on the other hand, can be brought under competent supervision, and will help the growth of resourceful banking. A resourceful banking system will not only be in a position directly to provide funds for the legitimate needs of the two sectors, but will also promote savings. A wider distribution of investment holdings will be facilitated by an active and extensive banking organisation; this will enable the authorities to deal effectively with many problems of inflation and concentration of economic power. Banking in India requires, therefore, not only to expand the territorial area of its operations, but also to con- vert a larger section of the money-using public to the use of its services. It will be noted that, small as the number of banking offices in India is com- pared with other countries, the number of accounts served by a banking office in India is also small, and averages less than 1,500, as against about 6,000 in the U.S.A.

The factors inhibiting banking expansion in India have been analysed by the Shroff Com- mittee, and it has suggested useful remedies. It is unfortunate that one of its most important re- commendations has been ignored. Confidence in bank money is crucial in a fast-changing economy, and it can be built only on the basis of a collec- tive guarantee of bank money. The history of banking in Britain, the U.S.A., Australia and other countries with organised banking systems shows that such collective guarantees have operated in them directly or indirectly. The amalgamation and absorption of weaker banks served almost the same purpose as insurance of deposits in the ab- sorbed banks. It was the U.S.A., however, which deliberately adopted a proper scheme of deposit insurance. Such a scheme is necessary to sustain confidence in bank money in India. The recom- mendations of the Shroff Committee on it might, therefore, be appropriately given renewed atten- tion.

COMPETITION IN EXPORT CREDIT

IT is unfortunate for the European countries im- peded by problems of oil and shipping that both America and Russia have lately been extend- ing the credit facilities offered to buyers of their goods. For a country in the U.K.'s position the strengthening of competition implicit in this development is peculiarly inopportune. It is the more regrettable because the threat of a "trade war" fought with export credits seemed earlier this year to have receded. The new threat is much more serious from America than from Russia, be- cause America is much the stronger trading nation. American prices are, generally, high, and shortage of dollars is a special impediment to purchasing from America. But a difference of years in the period of payment for costly capital equipment can easily outweigh any disadvantages of import- ing from America.

Most other exporting nations have arranged a *modus vivendi* whereby their facilities for export- credit insurance are restricted to a formula which regulates competition, for credits cannot generally be arranged without appropriate insurance. Ame-

rica is not a party to this agreement and American exporters can obtain official backing for much longer credits than any European (excepting Russian) exporter could negotiate. The maximum term of payment that these other countries can grant, even for big projects, is normally about five years, whereas the length of some American credits is more than 10 years—although it would be an exaggeration to suggest that the average Amer- ican term was twice as long as the average Euro- pean. The danger to competitors is in the recent lengthening of American terms, which has the approval and the active support of the American authorities. The principal medium for implemen- ting this policy is the Export-Import Bank. In some cases general credits are provided, on the condition that the money be spent entirely in America; in other cases, American firms themselves are enabled to tender on easy terms for specific contracts. Whichever form the credit takes, the period of payment is very favourable to the borrower.

U.S. Export-Import Bank Loans

The Export-Import Bank is now competing very effectively with the International Bank for Reconstruction and Development. Since the con- ditions of lending by the Export-Import Bank were relaxed some months ago, borrowers have found it easier to satisfy their requirements through that bank than through the International Bank; and for America there is the important advantage that loans provided by the Export-Import Bank are expendable only in America, whereas loans provided by the International Bank cannot be so restricted. In 1955-56 the Export-Import Bank's loans (\$376 million) were larger than ever before, and in 1956-57, they have been running at approxi- mately double last year's rate. The Russian threat is not so serious at present, if only because most of the Russian export effort is still directed towards the other communist countries. In the past year or two, however, the Russian Government has shown increasing interest in developing non-communist countries; particularly, large credits have been made available to India and Indonesia. The annual rate of such credits seems to be about £50 million—not a very large sum in itself but obviously capable of increasing. These Russian credits have generally been limited to a few years, but there has been a significant tendency recently to extend the period of payment to terms comparable with the American. A more striking characteristic of the loans is their very low rate of interest, nor- mally 2½ percent—with which, in present circum- stances, no "capitalist" rates can compare. The rate of interest is a particularly important con- sideration in the case of relatively poor countries which are reluctant to burden their future balance of payments with a heavy commitment.

Long-term Credit

When the restraint of competition in terms of export-credit insurance was agreed, the borrowing countries seemed generally aware that long-term credits were a danger to their balance of payments, because they encouraged excessive borrowing. But the attraction of these payment-periods of 10 years and more is not easily resisted when such terms are actually offered, and exporters of capital goods in countries which do not offer such terms are, undeniably, at a disadvantage. Is it, then, likely that other countries will be forced to extend their terms? Such a development is not in present circumstances, likely if only because Europe is in no condition to grant long-term credits. The U.K. especially, needs prompt payment so that she can finance her imports without excessive strain on her reserves. Expansion of exports is eminently de- sirable, but long-term considerations such as the preservation and development of markets are necessarily subordinate to the need to earn foreign currency for immediate use.

It is, however, precisely because they are thus hampered by circumstances that British exporters resent the encroachments of long American and Russian credits, and of low Russian interest rates. These exporters are waiting anxiously for a reduc- tion of interest-rates in the U.K. so that such credit as can be made available will be more effective. At the high rates now operative, indeed, many overseas importers do not want credit at all; they prefer to pay promptly and in full or to defer their purchases until the terms are less onerous. Mean- time, the European countries are losing trade in capital goods to the United States in Latin Amer- ican countries and to Soviet Russia in Asian countries, and these competitors, moreover, are spreading their long credits over a widening range—America even into Europe itself, Russia into the Middle East. It is a movement that can proceed much further, for the United States has actually and Soviet Russia has potentially a huge capacity for exporting, and for providing credit. Both coun- tries, moreover, wish to strengthen their interests in the less-developed areas.

CONFLICT IN THE POLICY FOR GOLD

POSSIBILITIES OF REVALUATION

IT is a remarkable fact that in the crisis month of November, the price of gold in the London market reached the lowest level since the market was reopened more than two and a half years previously. In one of the most menacing political crises since the war there had, indeed, been an appreciable demand for gold by hoarders, but the consequent rise in its price col- lapsed very quickly. Prices vary some- what, according to local conditions of supply

and demand, but the London market is the largest and the most elastic in the world, quoting the finest prices. There were no abnormalities to account for the decline to levels distinctly below the official U.S. buying price of \$35 an ounce—nearly offsetting the cost, some 12-15 cents an ounce, of sending gold bullion across the Atlantic.

However, before it is assumed that the world has lost interest in gold a few salient facts should be considered. The free price of gold in recent years has been remarkably stable, generally a few cents above the official U.S. price. This stability is convenient for hoarders, who can satisfy their wants without paying a significant premium, but it precludes any reasonable possibility of making profits on holdings of gold unless the price is raised officially. Even before 1933, when the Inter- national Monetary Fund abandoned its efforts to keep newly-mined gold in official channels, pre- miums of a few dollars an ounce brought substan- tial supplies of new gold to the free markets by surreptitious ways; now, with restraints removed, such supplies would soon be sufficient to extinguish the premium. Gold has still an appeal for those who expect a general devaluation of currencies, but it is otherwise an unprofitable investment. In not-distant memory, French hoarders have sold their gold, which was earning nothing, to invest the proceeds in securities, which were yielding quick capital profits; but some of them may have later regretted their incautious policy. The virtues of an assured value have lately been recognised again; but hoarders' demand has focussed rather on gold sovereigns, which are portable, than on gold bars, which are cumbersome. The price of coins continued to rise while the price of bars was falling. It seems, therefore, that the recent weak- ening of the price of gold was due to lack of de- mand as well as to abundance of supply. But a pressure of selling was certainly a factor in the movement. Not only were the British authorities using the gold market as an indirect means of supporting sterling; also some continental—Euro- pean central banks were selling gold to prepare for imports of oil from the dollar area.

Medium of International Settlement

As a medium of international settlement, gold is certainly not losing its importance. On the contrary, the gradual move towards multi-lateral payments is increasing the need for gold, since the generally-accepted equivalent of gold, the dollar, is too scarce to act as a widespread medium for national reserves and international exchanges. Considered from this point of view, the monetary position is more difficult than it was decades ago when sterling was an accepted gold-equivalent; for sterling then (as, generally, now) was plentiful. The world has economised gold by working on margins of credit. However, the outstanding credit-medium, the European Payments Union, has steadily increased the proportion of gold required for members' monthly settlements, and the arrangements that replace E.P.U., when currencies are convertible, will require full settlement of balances in gold or the equivalent. Between the two world wars, gold was economised by the gold-exchange system whereby many countries held a part of their reserve—as they now hold dollars—in currencies convertible into gold; but this system became incoherent and ineffectual in the early 1930s, when the fixed-exchange-parities which were the necessary basis of the system collapsed.

At the same time, various countries were eco- nomising gold internally—with profound effects on their monetary systems. It was in 1932 that the British authorities began to divert an in- creasing proportion of the gold reserve from the Bank of England to the Exchange Equa- lisation Account, where it now resides (in an accounting sense, wherever it may be located phys- ically). By this change the quantity of gold ceased to determine the quantity of currency and credit—or the change was an open recognition that the traditional relation between gold and money had been abandoned. "Management" of money is now generally accepted, but its results have disillusion- ed some competent critics. There are some advo- cates these days for a direct relation (though not necessarily a rigid relation) between the reserve of gold and the quantity of currency and credit. However, such ideas are not officially favoured, and it must be assumed that gold will not again be needed in appreciable quantities as a regulator of internal finances.

Value of World Trade

It is the international function of gold as a means of settlement that has to be considered whenever the demand and supply and price of gold are under discussion. And the simple and accept- ed fact is that the supply, scarce enough now, will become more and more inadequate as the value of international transactions increases. The effective world price of gold, \$35 an ounce, was fixed as long ago as 1933 and in the interven- ing period, the purchasing value of the dollar has been approximately halved. In a normal prewar year, 1937, the value of the world's gold reserves, more than \$25,000 million, exceeded by about one-fifth the value of the world's international trade, nearly \$21,000 million. By 1955 the estimated value of reserves had increased nearly to \$37,000 million, but it was considerably less than one-half of the value of the world's trade, some \$81,000 million. This year the proportion has deteriora- ted further. And, of course, the reserves are very unequally distributed. The Americans argue that an increase in the price would benefit mainly those with the biggest reserves (including Russia); but the broad facts seem to point unwaveringly to ultimate revaluation.

ECONOMIC RESEARCH

- is an essential part of modern commerce. But it is
- not always easy to obtain. The ordinary business
- house does not usually possess the records, statistics
- and archives which are the raw material of research.
- CAPITAL'S RESEARCH & STATISTICAL DEPARTMENT
- has a long record of service to Chambers of Commerce,
- Industrial Associations and private business concerns.
- It does not undertake trade inquiries, but its facilities
- and advice are available for all kinds of research
- proper into the problems of Indian commerce
- and industry.
- CAPITAL'S RESEARCH & STATISTICAL DEPARTMENT
- has constructed and maintains seven cost of living
- indices for various classes and communities in India
- and Pakistan. It offers the industrialist and business
- house its experience in
 - consumer market surveys
 - industrial prospecting
 - readership analysis
 - economic indices
 - business research

P. O. Box 14, Calcutta, or 5, Mission Row, Calcutta, India.

"CAPITAL" INDEX OF INDIAN INDUSTRIAL ACTIVITY **

The Capital Index of Indian Industrial Activity (Base: 1935) has now been brought up to July, 1956. Compared with the preceding month, there were decreases in cotton consumption 7.7 points, jute manufactures 12.8 points, cements 14.9 points,

papers 0.3 points and electricity 2.9 points, while increases occurred in steel ingots 4.0 points, pig iron 3.3 points, coals 5.6 points and wagons loaded 1.4 points.

The indices for cheque clearances and notes in

circulation also declined by 0.3 points and 5.4 points, respectively.

Combining all the factors, the Capital Index of Indian Industrial Activity declined by 1.4 points during July, 1956.

		Industrial Production.						Mineral Production	Total Number of Wagons Loaded (t)	Financial Statistics	Trade. Foreign & Coastal		Trade. Foreign & Coastal.		General Monthly Index

"CAPITAL" INDEX OF INDIAN INDUSTRIAL ACTIVITY (1935)

Stocks and Shares

SPECULATIVE ISSUES IMPROVE AT THE CLOSE

INVESTMENT SUPPORT ALMOST NON-EXISTENT

Wednesday Evening.

UNCERTAINTY about fresh taxes has given the speculative section of the stock market another bad week. It is quite clear that the Finance Minister's habit of announcing new measures whenever he thinks they are required, without waiting for the Budget, is going to have a most unsettling effect on the market. Although no taxes were announced on Monday, the fact that Mr. Krishnamachari was due to speak in the Lok Sabha was enough to give bears the opportunity of a quick raid and to force speculative prices down. Indian Irons touched their lowest level since March 1954—Rs. 28.8. A slight recovery has taken place since on news from America about the financial possibilities of Mr. Nehru's visit there, but the undertone remains distinctly uneasy. Prices went ahead again after hours this evening on the news that Mr. Krishnamachari, while pressing his new Bill for power to tax before obtaining Parliament's approval, had said that he does not intend to impose fresh measures unless needed and will not necessarily introduce the suggested 50 percent increase in excise duties all at once. Indian Copper shares have moved against the trend this week on rumours of a favourable interim dividend announcement. Other speculatives have eased in sympathy with Irons.

Investment scrip have remained dull throughout the week, with only nominal business passing. There have been reports from the market that the Life Insurance Corporation has shown some interest in selected preference shares. Government securities have remained quiet.

Details of the week's trading follow.

Due to continued stringency in the money market, there was virtually no enquiry for Government securities, and consequently prices moved down further. Three percent Conversion Loan 1986 was unchanged at around Rs. 73 and non-terminable paper was quoted at the same rate. In short-dated loans, 3% 1957 was quoted at around Rs. 99.12 and 3% 1958 was unchanged at Rs. 99.9. Medium-dated loans were generally easier with 3% 1959-61 at Rs. 97.14 and 3% 1963-65 at Rs. 94.3. Three percent 1964 was taken up to Rs. 94.6 ex-voucher and was later marked at Rs. 94.4 ex-voucher. In National Plan Issues, 3% 1961 was easier at Rs. 99.4 and 3% 1964 shed one anna at Rs. 98.3; 3% 1965 was marked back to Rs. 98.6 as was 3% 1967 to Rs. 98.5. In long-dated loans, 3% 1966-68 had sellers at the lower rate of Rs. 92.4 and 3% 1970-75 relapsed to Rs. 86.14; 3% 1964 was traded at around Rs. 98.8.

State loans were quotably unchanged and sellers predominated. Four percent U.P. 1968 was offered at Rs. 97.15 as was 4% West Bengal 1968 at Rs. 99. Among other loans, 4% Orissa 1968 changed hands at Rs. 97.12 and 4% Bihar 1968 had sellers down to Rs. 97.11.

After a long interval there was a moderate revival of interest in jute preference shares particularly Belvedere, Northbrook, Kinnison and National. Anglo-India were marked at Rs. 100.8 and Auckland 1st were crossed at Rs. 80.8. Hukumchand were done at Rs. 102 and Shree Ambica at Rs. 95. In the miscellaneous group, Calcutta Electric changed hands at Rs. 10.9 and a small odd lot of Dalmia Cement Rs. 40 paid-up came to hand at Rs. 36.8. Duncan Brothers were crossed at Rs. 60.12 and Indian Iron had buyers at Rs. 100. Jardine Henderson were marked at Rs. 61.8 and Shaw Wallace at Rs. 70.8. After a long lapse, Tezpor Tea reported business at Rs. 12.6.

In the banking section, Punjab National were easier at Rs. 48.8 as were United Commercial at Rs. 53. Hind Bank were reported at the lower rate of Rs. 34.8 and Bank of Bikaner were placed at Rs. 23. United Bank of India "D" shares were marked at Rs. 4.7.

In railways, a small lot of Bankura Damodar was crossed at Rs. 59.6 and Dehri Rohtas were dull at Rs. 13.4.

Cotton shares were extremely quiet with Jay-shree dipping to Rs. 6. Kesoram were lower at Rs. 15 and Elgins were marked back from Rs. 27 to Rs. 26. Bowreah eased to Rs. 130 but Dunbar recovered today to Rs. 206. New Victoria were shaded at Rs. 1.14.

In sympathy with the general trend, prices of coal

PROJECTS FOR 1957-58 BEING RE-EXAMINED

(FROM OUR NEW DELHI CORRESPONDENT)

India's three principal foreign exchange earners are jute goods, cotton textiles and tea. The jute industry is now running with 12% percent of its total loomage sealed. Exports of cotton textiles have fallen because home demand has increased. Tea exports have also declined. One of the Patel committees has been discussing various methods of boosting exports. It has been examining the possibility of exporting fixed quotas of various commodities, such as groundnut oil and raw cotton. An early policy decision is expected. This may lead to a rise in internal prices. If it is the first, that is, the world price, in line with the Government's policy to introduce a certain amount of austerity and thereby, that it would cause prices to move up to the world level, thereby providing an incentive for stepping up home production.

The foreign exchange requirements for the various projects mentioned in the recent correspondence between the Indian Finance Minister, Mr. T. T. Krishnamachari, and the World Bank President, Mr. Eugene Black, have now been estimated as follows:

Rs. 536.53 crores. At the end of November, 1955, the net foreign exchange reserves had stood at Rs. 767.64 crores, the sterling balances then being Rs. 719.69 crores.

Priorities for Imports

Because of the increasing pressure on shipping space, it has become necessary to regulate and fix priorities for the import of goods. For this purpose, a high-level committee, consisting of the Secretaries of the Ministries of Finance, Works, Housing and Supply, and Transport, has been set up. Various undertakings have been asked to furnish the following information:

1. Cargoes which are ready for shipment, but are known to be waiting for shipping space.

2. Cargoes expected to become available for shipment during December, 1956, and January, February and March, 1957.

Expansion in Dyestuffs

The Government has invited dye manufacturing firms in India to indicate the kinds of developments they are willing to undertake during the second plan, so as to ensure the production of most of the dyestuffs needed for domestic consumption. A reference has been made to the three project reports—one each by the Italian firm of Montecatini, the German firm of Bayer and the British firm of I.C.I.—all of which agree on one fundamental point—that there is ample scope and an urgent need to develop a dyestuffs industry in India on sound, economic lines in the immediate future. The first need is to assess the demand. A Government study estimates that domestic consumption of dyestuffs will increase by 30 percent by 1960—to a level of 7,000 tons in weight or Rs. 20 crores in value, as compared with 5,000 tons in weight, and Rs. 15 crores in value at present. I.C.I. however, places requirements at 10,000 tons by 1965. The Government says: "This estimate is particularly useful because plans for developing the manufacture of dyestuffs, and more particularly their intermediates, take several years to materialise. Considering the trend in the demand for cloth in recent months and the time lag between the planning of a project and its going into full production, it seems safer to proceed with a target of 10,000 tons rather than with the lower figure of 7,000 tons."

As for the pattern of production of intermediates, the Government says that it cannot be rigidly defined "at this stage". The broad picture, however, is fairly clear. Many of the complex and late intermediates can be advantageously developed by the very factories which undertake their final processing into finished or other products. It would, however, be advantageous to undertake the production of primary organic intermediates on a centralised basis in the sense that the capacity for them is linked not to the production programme of one single unit but is intended to supply the requirements of industry or industries as a whole." The Government, it is stated, is prepared to invest capital in this field to ensure the balanced development of the dyestuffs industry. The present intention is that as soon as replies from dye manufacturing firms have been received and studied, the Government will hold discussions with them in order to plan the programme of production.

Automobile Prices

The Minister for Heavy Industries, Mr. Morarji Desai, presumably did not wish to anticipate the findings of the Tariff Commission which he told Parliament last week that the comparison of the prices of the indigenous automobiles with those of similar imported vehicles is not possible because completely built up automobiles are not allowed to be imported into India on a commercial basis." The Tariff Commission, which has already submitted its report, was specifically asked to make recommendations on prices. It may be added that even during the last war, category by category, prices of automobiles were lower than they are today. An import duty of Rs. 6,000 a car should also offer an indication of what the prevailing landed prices in India of imported cars would be.

The Minister said that in the current year, the sale of automobiles in India was about 30,000, as compared with 23,000 in 1955. It was the policy of the Government to develop the manufacture of commercial vehicles in the country. The real issue was how this consumer compares with that in the period before protection, and what would have been the annual turnover, had prices of motor vehicles been on pre-protected duty basis, considering the rise of 11 per cent in the national income. Another point for consideration is the durability of Indian-manufactured cars compared with imported cars. The consumer is interested not only in the price but also in the durability and road-worthiness of a motor vehicle. In examining the obstacles to the healthy development of an automobile industry in India, some attention should be given to high prices and poor durability.

Indian experience of protection has not been very happy. It has implied not only high tariffs

but also quantitative controls, if not a total ban on imports. In a planned economy, such a course may sometimes be understandable. But will it happen when an industry has developed fully? Does the consumer, who by his sacrifices has built an industry, get any relief? The case of the sugar industry should provide the answer. Indian sugar is almost the dearest in the world. If there was any chance of it becoming cheaper, the advantage would go only to the foreign buyer, because a reduction in prices would be merely for the export market. Such are the boons of the socialist pattern of society. In the shape of things to come, as far as the automobile industry is concerned, may easily be visualised.

D.D.T. Factory in Alwaye

The contract for setting up a second D.D.T. factory in Alwaye, Kerala, has been given to the American firm of Singmaster and Breyer in New York. The total value of the contract is ₹737,100, of which the rupee expenditure may be equal to about ₹150,000. The firm has guaranteed to put up the complete plant and bring it to full production in a period of 18 to 23 months. There is a provision for bonus for each day that the firm shows full production before 18 months, and a penalty for each day of production delayed after 23 months. The factory, which is expected to cost about 100 lakhs, will have a capacity of 1,400 tons of D.D.T. a year. It is expected to go into production by the middle of 1958.

Schemes for a synthetic corundum factory and for the expansion of the Travancore Rubber Works are being examined.

Automatic Looms in Textile Mills

The Government of India has now allotted 10,512 automatic looms to cotton textile mills out of the total of 18,000 looms it is proposed to install for the production of 350 million yards of cloth for export under the textile policy announced in June this year. The decision to allow mills to install automatic looms was taken in view of the keen competition which exports of Indian cloth are meeting from other countries. Following this, it was decided to allow automatic looms only to these categories (a) where the Government has agreed to the allotment made would be exported; and (b) were already in the export trade and gave a guarantee that they would continue to export at least 87½ per cent of their past exports, in addition to the entire production on the automatic looms that may be allotted to them. Any mill which does not fulfil the guarantee will have to pay a penal excise duty on the cloth which is diverted for home consumption. The Government has marked out the following list which shows the State-wise allocation of automatic looms:

Name of State.	Number of Automatic Looms Allotted.
Bombay	3,840
Madras	3,696
Kerala	144
West Bengal	960
Madhya Pradesh	576
Uttar Pradesh	240
Rajasthan	96
Punjab	288

Estimates Committee Discusses Tourism

Another report of the Estimates Committee was presented to Lok Sabha last week. It was on tourism. Two recommendations are worth quoting. One is: "The Committee understands that a proposal for the creation of a Directorate-General of Tourism is now under consideration. While appreciating the good work that has been done by the Tourist Traffic Division for the promotion of tourism, the Committee is definitely of the opinion that there is no adequate justification for the creation of a Directorate-General of Tourism. One reason advanced in favour of setting up a Directorate-General of Tourism was that, at present, the policy-making and executive functions are combined in the existing staff of the Tourist Division of the Secretariat and that these should be separated. While, in general, this is a good principle to serve as a guide, in the case of tourism the Committee does not consider it of vital importance, for the simple reason that the subject of tourism has not yet developed to such an extent as to require an immediate separation of these two functions. Moreover, this point of separation of policy-making and executive functions will be adequately met when a board or a corporation is set up for tourism on the lines indicated by the Committee."

The second point made in the report is as follows:—"The present tourist organisation in the Ministry of Transport consists of a Deputy Secretary, assisted by two Under-Secretaries and other office staff. The Committee does not consider that it is wholly a Secretariat function to promote and develop tourism departmentally, though it is desirable for the Government to render all possible facilities for this purpose. It is for this reason that the Sargent Committee which examined the question of tourism in 1945 recommended the formation of a statutory corporation for the promotion and regulation of tourism. During the course of discussions, the representative of the Ministry of Transport agreed that ultimately, when the industry had developed, it might be proper to set up a corporation. He, however, felt that that stage had not yet been reached. He was, however, of the

opinion that the executive functions should be separated from the policy-making functions.

"In order to achieve this end, and also to achieve more flexibility in the day-to-day work of promoting and regulating tourism in the country, the Committee recommends that a board of managing directors should be set up for the promotion and regulation of tourism. The board may consist of four or five members, including the representatives of the Department of Archaeology, Ministry of Information and Broadcasting, and the Ministry of Transport. At least one of the members should be a person of experience in financial matters. The chairman and members of the board should work collectively and on a functional basis. The chairman should have, in exceptional cases where conditions demand, sufficient power to exercise his discretion, so that there is no delay or waste of expenditure. The chairman of the board should be directly responsible to the Minister and should not be subject to the control of the Secretariat of the Minister."

The model selected by the Committee, it seems, is the board of a nationalised industry. Such a board is an autonomous body, not only in the day-to-day administration of the undertaking but also in the use of finances. A nationalised undertaking, like its counterpart in the private sector, has authorised, subscribed and working capital of its own. It is subject to audit and ultimate control by Parliament. How the proposed board for tourism will balance its budget is not indicated by the Committee. Perhaps it will be meant to operate on a "no profit, no loss" basis, receiving the taxpayer's money as a contribution from the Government and allocating it among its various functionaries.

Life Insurance Corporation Investments

The Life Insurance Corporation has invested Rs. 10,45,80,684-3-6 in various categories of stock between 1st September, 1956 and 22nd November, 1956. This includes Rs. 8,20,53,020-13-6 in Government securities; Rs. 22,43,000 in other approved securities; Rs. 33,77,031-4 in debentures of joint-stock companies; Rs. 58,84,074-14 in preference shares of joint-stock companies; and Rs. 1,10,21,557-4 in ordinary shares of joint-stock companies.

Import of British Textiles

"The Government does not consider that any measures to check the import of British textiles into India are necessary at this stage," the Commerce Minister told the Lok Sabha last week.

Manufacture of Sulpha Drugs

It is proposed to manufacture the following sulpha drugs and their derivatives in India: sulphapyridine, sulphathiazole, sulphadiazine, sulphaguanidine, sulphamethazine, sulphasomidine and sulphacetamide. Some new sulpha drugs which are also being considered for production are disulphurmine, ethazole and urosulphan.

Steel Expansion in Third Plan

The Ministry of Iron and Steel is already thinking of the third five year plan. It has set up a Planning Section, with which its consultants are working in the closest collaboration. Bokaro, in the Damodar Valley area, is one of the sites which are being considered for the fourth new steel plant.

Textile Handlooms and Powerlooms

While the dust raised by the controversy over the modernisation of textile mills has not yet settled, the advocates of full employment have raised another storm in the handloom industry. Automatic looms became a live issue at the meeting of the Handloom Board held here last week. Many foreign importers want handloom products of greater width and length. The Government is anxious to improve the wages of handloom weavers. The old handlooms can neither produce cloth suited to foreign requirements nor improve the earnings of the weavers. So there is a proposal to set up 30,000 powerlooms to manufacture 300 million yards

of cloth, as against the 700 million yards produced by the orthodox type of handlooms.

Raw Film Project

A team of East German experts is due here next month to discuss the details of a raw film project. A report on it by the experts is already being examined. Meanwhile, an American firm of raw film manufacturers has also shown some interest in the project.

Plans for Oil from Assam

Provided the final draft reflects the broad heads of agreement so far reached, the 18-month-old negotiations between the Government of India and the Assam Oil Company will pave the way for fuller utilisation of oil, most of which still lies underground in the newly found oilfields of Nahorkatiya in Assam. Since the Government of India has rejected the normal type of integrated company responsible for the prospecting, production, refining and transport of oil, negotiations have been confined to the setting up of three limited liability undertakings, one for oil production, the second for refining and the third for the pipeline. In June last year, the Government reached an agreement on the capital structure of the production company, limiting its own share in the equity capital to 33-1/3 percent. The question of the size and location of the refinery was referred to an expert committee which, according to reports, has favoured Calcutta as the site.

The agreement will provide for Government control over the prices and disposal of crude oil, over the bringing in of non-Indian personnel by the company and over agreements with the non-Indians. The Assam Oil Company will be responsible for providing all the foreign exchange requirements out of its share of 66 2/3 percent. The articles of association of the company will provide for a pipeline, which will be a non-profit making enterprise, financed largely from loans. The Government will thus have 33 1/3 percent of the profits, plus income tax, plus a 10 percent royalty from the proposed production company. After a week's discussions, the Assam Oil Company's director, Mr. R. P. Smith, left for London to submit a final draft of the agreement for the production company for approval by his firm. The production company cannot function unless some decision is reached on the size, location and capital structure of the refinery. Presumably for political reasons, no decision is expected on the location of the refinery until after the general elections.

Finance Bills Passed

The two Finance Bills introduced on 30th November were passed by both Houses of Parliament last week. During the discussion in the Rajya Sabha, the Finance Minister, Mr. T. T. Krishnamachari, made some important observations, which are summarised below:

(1) The Government is determined to implement the second five year plan, without either scaling down its size or lengthening the plan period.

(2) It is wrong to imagine that deficit financing is being given up. "We have assigned a particular place for deficit financing in the plan. Created money should be used for the purposes of an expanding economy until such time as the money can be brought to back it by savings or taxation or loans. Deficit financing is now the sheet-anchor of the five year plan. It is of the same nature as poison—to be administered in small doses only when and as the economy develops a tolerance for it in its system", said Mr. Krishnamachari.

(3) Bank rate will not be raised.

(4) The administrative machinery will be strengthened, particularly to check tax evasion. If the joint Hindu family is used for tax evasion—and Mr. Krishnamachari is sure that it is—the remedy is not to find means of checking evasion through that source but to block the source itself. The Finance Minister admitted that the quantum

of tax evasion is much larger than the department has admitted. But the difficulty is the tendency of law courts to come in the way.

(5) The total needs of foreign exchange for the second plan, as estimated now, will be more than covered if all the foreign exchange reserves are used, including the Rs. 400 crores maintained as backing for the currency. The stability of a currency depends not so much on foreign exchange reserves, as on the stability of the internal economic structure. "I do think that at the end of the five year plan the Government will have enough tools in the country which can produce goods for export, if necessary, and for covering any foreign exchange deficit that might occur in the latter part of the plan period."

(6) The Finance Ministry is at present engaged in devising a system of "efficiency audit". The Finance Minister agrees with his critics that there is room for economy. The Government must put its house in order when it is making fresh demands on the people and is not reducing the burden of direct taxation. The Finance Minister gave instances from his own Ministry to show how some economy measures had already been affected.

(7) The proposed overhauling of the tax structure will take note of the need to give incentives to industry. The Finance Minister has indicated that at some stage the Government might have to come to Parliament for powers to stop courts from interfering with the normal methods of assessment and collection of taxes.

It is refreshing to hear the Finance Minister talking of economy. Over the past three years, even the urge for economy has been destroyed and expenditure on administrative personnel has been rising. Before levying additional taxation, democratic Governments are normally expected to convince the country that they have done all they can to economise. With the peculiarities of the Indian party system, this aspect of the problem has so far been neglected.

Expenditure on Ambar Charkhas

The following statement on Ambar Charkhas was made in the Lok Sabha by the Production Minister, Mr. K. C. Reddy.

Item	Amount apportioned Grant Rs.	Loan Rs.
Expenditure on Ambar Charkha trainees and on opening of new Parishramalayas:		
(a) Vidyalyas (30)	15,40,300	
(b) For running, 100 old Parishramalayas opened under the Ambar Charkha pilot project during 1955-56	21,60,000	
(c) For running 100 new Parishramalayas (for one year)	23,10,000	
(d) For running, 100 new Parishramalayas (for six months)	12,75,000	
(e) Supply of 10,500 Ambar Charkhas to training institutions	13,60,000	
Expenditure on the manufacture of 64,500 Ambar Charkhas (excluding those supplied to training institutions)		
Saranjam Karyalayas	8,90,000	
Expenditure on administrative matters:		
Functional offices	87,720	
Miscellaneous Expenditure:		
(a) Discretionary grant	25,000	
(b) Setting up of five main and 10 sub-production centres	2,75,000	
(c) Revolving credit for trading operations connected with the Ambar Charkha programme, including production and sale of yarn and cloth	50,00,000	
(d) Rebate for the sale of Ambar Khadi	20,08,980	
(e) Grant to Atira for research on the Ambar Charkha	62,000	
(f) Experiments on Ambar Charkha through the Khadi Board	5,000	
(g) Opening of a small Ambar Charkha workshop	46,000	
(h) Working capital for:		
(i) Production and sale of Ambar Charkha yarn and cloth and manufacture of Ambar Charkhas	100,00,000	
(ii) Purchase of cotton	40,00,000	
(i) For supply of Ambar Charkhas to spinners on a hire-purchase basis	76,80,000	
	170,45,000	216,80,000

Thus, in the name of employment, the taxpayer has been made to pay Rs. 387,25,000 to finance this ideological programme.

London

SIR ANTHONY RETURNS TO AN IMPROVED ATMOSPHERE

CHANGE IN U.S. ATTITUDE MAINLY RESPONSIBLE

(FROM OUR LONDON CORRESPONDENT)

THE Prime Minister returned from his Jamaican holiday on Friday last to find a situation very different in some respects from what it was when he left here three weeks ago. The least change in outlook was perhaps in the purely political sphere, though even here the intervening developments, on the economic front as well as in international affairs, have led to the appearance of a more reasoned and less hysterical opposition to the Government's policies. The largest and most significant contribution to this change has been made by the adoption of a completely different attitude on the part of the American administration, and it is at least pertinent to wonder whether had it been made evident earlier much of the intervening trouble might not have been avoided completely. As it is, the various crises which threatened us only a few weeks ago no longer dominate our thoughts and actions as they did; we can look forward with greater confidence; and, it is to be hoped, devote the new breathing space to a new consolidation of the position and the creation of a general determination to maintain such progress as we have made and to avoid any pitfalls which may lie ahead. A more realistic appreciation of our problems all round would help a great deal, and not least of all the abandonment of personalities and a more willing acceptance of the austerities which the situation imposes.

Within hours of Mr. Macmillan's disclosing to the House of Commons the measures he intended taking to maintain our gold and dollar reserves the International Monetary Fund had been approached for a loan and had approved an immediate drawing of \$561.47 million which will now become part of our gold and dollar reserves, besides agreeing that the U.K. Government would have an automatic right to draw a further sum equivalent to \$728.53 million in foreign currencies against sales of sterling at any time during the next twelve months. Taken together, this addition to our reserves which stood at \$1,965 million at the end of last month now stand at a de facto level of over \$3,000 million. This welcome reinforcement will go a long way towards making sterling safe against speculative pressure for a considerable time ahead. We have suffered from this pressure since last July, and the closing of the Suez Canal had the effect of aggravating the situation and giving rise to devaluation fears. Britain's determination to maintain the pound at its present value has been demonstrated, and the effect on the exchange market has been only too evident recently. As the bears start covering their earlier sales the improvement should be cumulative.

Other Measures

One of the conditions applicable to short-term credit loans from the I.M.F. is that the country receiving accommodation follows strict fiscal and credit policies. This, it has been disclosed by Mr. Jacobsson, Managing Director of the Fund, Britain has promised to do, and it probably explains our request to the U.S. and Canadian Governments for waiver of the interest payments due on their loans this month—a move which has been criticised seeing that the total involved is comparatively small, the negotiations with the Export-Import Bank for a loan reported to be in the region of \$500 million to finance our imports of American oil and certain other essential dollar commodities; the firmer attitude now being adopted with Western Germany in the matter of the cost of maintaining our forces in that country; the Government's revised ideas on defence expenditure to which the Chancellor of the Exchequer gave prominence at the N.A.T.O. meeting in Paris; the new petrol tax in this country to offset the fall in revenue from rationing; and not least of all Mr. Macmillan's warning that his credit squeeze measures will be maintained and might well be further tightened in the coming year.

Mr. Jacobsson did us one further good turn when he announced the I.M.F. help. He reported that the trading position of Britain continues to be essentially sound. The pressure exerted on the balance of payments position from the end of July was not caused by weakness in current accounts, but reflected a decline in confidence which caused remittances of sterling to be delayed and payments through sterling to be accelerated. He pointed out that sterling, since it serves as a means of payment for half the world's commercial transactions, is "particularly susceptible" to these influences, and concluded by declaring that it is "for the purpose of reversing this trend against a world-wide trading currency that the International Monetary Fund has today approved support on such a massive scale."

Good Trade Returns

Britain's trade gap, measured by the excess of imports over exports, narrowed appreciably last month. Exports at £291.8 million were only slightly below the October record and with re-exports, totalling £14.8 million at the highest level this year and imports sharply reduced at £322.8 million, the November gap was only £16.3 million. This was over £30 million less than in October and nearly £36 million below the monthly average for the first 10 months of this year. Last month's gap was, in fact, the smallest since November, 1950, excluding October, 1954, when the import-export pattern was

distorted by the dock strike. These are the first returns really affected by Middle East events, and in view of the fewer working days in November, the cutting-off of sales to Egypt and reduced sales to other Middle East countries, the export total is remarkable, and would be still more encouraging if it bore less of a resemblance to previous war scare booms. The steep fall of £314 million in imports was doubtless affected substantially by delays in the arrival of shipping diverted round the Cape. An undoubtedly encouraging feature in the performance of British exporters last month was the sharp rise to £43 million in sales to the dollar area. Excluding a further £2.7 million silver bullion re-payment, exports to North America were £2 million more than in October and 22 percent above the average of the first 10 months of this year. Exports to the U.S. at £25.1 million reached a new monthly record. Sales to Canada at £17.8 million were £1.5 million up on October and over 19 percent above the monthly average rate for the first 10 months of 1956.

Hire-Purchase Sales

Household goods shops' sales on hire-purchase rose by 14 percent in October compared with September. This increase was mainly seasonal, but it was also the result of a further small rise in the proportion of goods sold on hire-purchase. This does not mean, however, that the Chancellor's restrictions in this respect are not working. The latest Board of Trade figures on hire-purchase allow comparison to be made for the first time with the corresponding month of last year, when the information began to be collected. The index value for October at 88 (base Dec. 1955=100) goes against 77 in September, but it stood at 119 in October, 1955, the month of the emergency Budget. Total hire-purchase debt which was more than £451 million at end-1955, fell further in October. The index figure (Dec. 1955=100) is given as 81, against 83 in September. Old debt is still being paid off faster than new is being incurred.

Atomic Power Stations

Three of the four nuclear engineering combines set up recently at the instigation of the Atomic Energy Authority were awarded contracts on 13th December for the building of two atomic power stations in England, in Bradwell in Essex and in Berkeley in Gloucestershire, and one in Scotland, the first two being worth around £35 million each and the third between that figure and £40 million. The fourth combine, which was unsuccessful in tendering for these initial stations in the Government's original programme for the development of nuclear power, is negotiating with the Central Electricity Authority for the erection of a further station in Inkle Point in Somerset. This will probably mark the first move of a considerably expanded programme of nuclear power development which, it is expected, the Government will announce this week, for a fifth combine (Richardsons Westgarth/International Combustion (Holdings)/Crompton Parkinson) has now been formed—and it is safe to predict that there will be plenty of work to keep them all busy. The Atomic Energy Authority is anxious to spread atomic knowledge as widely as possible and has arranged a special course at the Harwell reactor school to give those in industry a further opportunity to acquire a basic knowledge of nuclear energy. The course, which will last six weeks, will start on 3rd June. About 60 places will be available. In addition to covering the basic principles of the physics and engineering of reactors, the course will provide lectures on such subjects as reactor metallurgy, shielding and health physics. Emphasis will be placed on special topics, such as the instrumentation of reactors and the use of radio-isotopes in industry.

The Tea Outlook

Tea prices may be expected to move back somewhat in January when supplies diverted via the Cape start arriving in London. That is the opinion of Sir Eric Miller, chairman of Harrisons and Crosfield, who informed the shareholders at the annual meeting of the company that there is plenty of tea to come forward. As a result of a prolonged drought, the 1956 production in Ceylon may be about 10 million pounds below 1955. South Indian and Indonesian crops are estimated to total 10 million pounds less than last year, but probable increases in North India and Pakistan indicate that 1956 world output may be only 10 million pounds less than last year. Meanwhile, Britain's average weekly consumption in the first 10 months at 9.75 million pounds compares with 9.28 million pounds last year. The U.S. however, has barely maintained its average imports of recent years, and any marked increase in other important markets is unlikely.

On the question of take-over bids, Sir Eric found it heartening that "shareholders generally seem to be supporting their boards." He expressed doubt on whether the acquisition of tea and rubber estates by local interests would prove advantageous in the long run. Sir Eric cited exorbitant export duties, wage demands and crippling taxation in the traditional tea-growing countries as the real reasons why responsible entrepreneurs have in recent years sought land suitable for tea-growing in Africa and are prepared to invest upwards of £250 an acre on new planting. This was in striking contrast to the fact that shares in good Indian tea companies could now be purchased at less than the value of their current cash resources, with their estates thrown in for nothing "quod est absurdum" as Euclid would have emphatically said, according to Sir Eric.

Government to Sell Lead and Zinc

The Board of Trade announces that it is about to make arrangements for reducing its stocks of lead and zinc. This is in accordance with the policy, announced in February in the Defence

White Paper, of running down the strategic holdings of industrial raw materials. The Board says it is anxious to make its disposals of lead and zinc without unduly disturbing markets, and will shortly be discussing with trade representatives how this can best be done. The rate at which disposal will be made will not be decided until these discussions have taken place. No sale will be made before the middle of January, 1957.

Brevities

The Directors of Champion Reef Gold Mines of India and Nundydroog Mines, to facilitate distribution of compensation money, propose restoring control and management to the U.K.

It is announced that Jordan wishes to move the headquarters of the Jordan Currency Board from London to Amman.

Mr. A. Lawrence Hughes has been elected president of the Manchester Cotton Association for the ensuing year. Mr. F. Dunkerley and Sir Leslie Roberts have been elected vice-presidents.

The Ministry of Labour has announced that at 13th November the official index figure which measures changes in the average level of retail prices (the cost of living index) compared with the level at 17th January (taken as 100), was 103, the same as at 16th October.

Bristol Britannia propeller-turbine airliners are to go into regular service with B.O.A.C. on the London-Johannesburg route on 1st February and on routes to Australia, Hongkong, Japan, Aden, Ceylon and Singapore in the latter part of 1957.

Correction.—In last week's despatch it was stated that the Tribunal had awarded an increase of 6 percent in the locomen's wage claim. This should have been 6 shillings, which would be 3 percent.

Road Sense

Our cities and villages are far apart... only 0.2 miles of road exist in every square mile, and the average of roads to each lakh of population is only 68 miles. Some Rs. 271 crores is being spent in the Second Five Year Plan to build a better road system—so that every village is within five miles of a national highway. The objective is to provide black top surfaces on all main arteries.

The Burmah-Shell Refinery is daily producing 600 tons of bitumen, besides special grades of bitumen that can be used cold.

These grades permit road construction where heating bitumen is not possible.

Bitumen is distributed by Burmah-Shell in drums, and in Bombay by road vehicles which carry bitumen in bulk direct from the Refinery to the customer.

All this is part of the road sense which we have gained by being in India's life and part of it.

Bombay

NEED TO INCREASE POWER OUTPUT IN BOMBAY

THERMAL ENERGY CONSIDERED IMMEDIATE ALTERNATIVE

(FROM OUR BOMBAY CORRESPONDENT)

ADDRESSING the sixteenth annual general meeting of the Association of Electrical Undertakings, Bombay State, Mr. J. A. Colaco, president, stressed the need to increase the output of thermal power for the Bombay-Poona area. Until power from the Koyna project became available, a thermal project could increase supplies, and it should be completed without loss of time. Mr. Colaco said that electricity rates had risen only slightly since prewar days. This increase was insignificant when compared with the rise in the prices of almost all other commodities. He also underlined the need for healthy competition between the State Electricity Board and other licensees in order to secure maximum efficiency and economy in the industry. As an example, he cited the Ahmedabad Electricity Co. Ltd., which was able to supply 100,000,000 kWh of bulk energy to the State Electricity Board's north Gujarat grid scheme at about 10 percent less than the rate at which the London Electricity Board bought some 7,000 million kWh from the U.K. Central Electricity Authority in 1955-56. He asserted that the financial provisions contained in the electricity law—as amended by the Electricity (Supply) Bill—were seen as a yardstick which the Legislature intended should initially be left for application by the undertakings themselves.

He deplored the possibility of electric traction being abandoned in Bombay as a mode of transport, and urged that the proper step would be to modernise the city's system. The transport of large masses of the people—in the quickest possible time—could only be achieved by electric transport. Mr. Colaco suggested that the possibility of utilising the trolley bus—in conjunction with an up-to-date tramway system—be carefully explored. Mr. Mohamed Husein Hasham Premji, chairman of the Bombay Electricity Board, has stated: "At the moment we are busy establishing the main transmission lines. We have a plan to establish inter-provincial boards with a central authority to arbitrate in disputes" over the sharing of waters, etcetera. "The major power house, near Surat, is to be expanded. Transmission lines are to be built in north Gujarat—an extension to our grid system from Surat to Baroda. The major transmission line will operate from the Koyna power house to Karad, and from Karad to Sholapur, Satara and Kolhapur. We are also planning a major power house in Bhusawal."

Criticism of Taxation Proposals

Criticism of the new taxation proposals continues. Mr. A. D. Shroff sees in them a "definite and continued trend towards the gradual disappearance of democracy in India." Speaking in Bombay at a recent function organised by the Democratic Group, Mr. Shroff foresaw insufficient resources to implement the second five year plan, and a grave financial crisis. He described the proposal for compulsory deposit of part of the depreciation allowance with the Reserve Bank as the "most serious blow for the private sector in India." This "forced loan" to the Government, he said, would lead to a "very serious monetary crisis." Mr. Shroff went on: "Imposition of super-tax on dividends betrays a lack of clear understanding on the part of our financial pundits of industrial conditions in India."

Stainless Steel Consumption

The current import policy relating to stainless steel is "not quite satisfactory to the trade and needs to be reorientated," the President, Mr. Ramanlal Shah, of the newly-established All-India Stainless Steel Industries Association has urged. He also said at a Press conference in Bombay that the Government of India should consider the manufacture of stainless steel within the country as foreign exchange, at an average rate of Rs. 3 crores a year, was being spent on imports. Mr. Shah expressed disappointment that the second five year plan made no provision for the development of this industry. After the State-owned steel units went into operation, he hoped that the Government would give proper attention to the ancillary industries. He urged that the Government take the trade into confidence and hold discussions with it before formulating a policy. Stainless steel consumption has been rising. Ten years ago, it was negligible, but 4,000 tons are now required and in five years' time, the consumption needs are likely to increase to 8,000 tons annually. Mr. Omprakash Agarwal, vice-president of the Association, declared that Indian-made sun cookers, the use of which is now restricted to laboratories, would possibly be manufactured for household use in the not-too-distant future.

Industrial Relations

"The need for a dynamic labour policy is self-evident," Mr. J. N. Cochrane-Barnett, chairman of the Indian Engineering Association, Bombay, observed while delivering the first R. S. V. Iyer Memorial lecture, in Bombay, on "The importance of a dynamic labour policy to management." He added: "It is the responsibility of the management to remove the doubts and suspicions in the minds of the employees, and lead the industrial society in creating a new productive and dynamic force in shaping the future of the country."

Madras

EXPANSION OF BANKING IN MADRAS

PLEA FOR HIGHER INTEREST RATE ON DEPOSITS

(FROM OUR MADRAS CORRESPONDENT)

IMPORTANT bankers have visited Madras in recent weeks in connection with the branch expansion of their banks. The Central Bank and the Union Bank branches are now well established and the Dena Bank has revived its branch in Madras. The greater demand for funds in the south has made bankers take these steps. Mr. Karanjia of the Central Bank indicated in Coimbatore that long-term finance for industry cannot be made available by joint-stock banks whose first obligation is to their depositors, and they therefore cannot provide capital for fixed assets. The State Financial Corporations, have not yet fully used their resources on loans to industry, and long-term loans are obtainable only at 6 percent from the I.F.C. or the State Corporation.

With the increase in interest rates, banks are keen on more deposits. The Government also hopes to gain from it. At a party in Madras given for Mr. Karanjia, the Finance Minister expressed the hope that State loans would receive greater support in the future. A good deal of forced liquidation by small holders has brought State loans down to a discount. Optimism about the capacity of the capital market to absorb these loans has not proved well-founded. Not enough attention has been given to Dr. Matthai's recent plea in Bangalore that an early revision of the interest rate structure in line with the present call loan rate be undertaken. Dr. Matthai stated that rural funds could be attracted only by offering more on deposits, and bankers should extend operations by paying more on deposits when they were getting more on advances. The removal this month of the ceiling of 2½ percent interest payable on savings by American banks was a consequence of tight money. The U.S. Government was now prepared to let banks pay 3 percent so that extra savings could be obtained by banks which were forbidden to pay interest on current accounts. The U.S. experience held a lesson for India, where the demand for bank credit likewise was rising. The rise in the national income has led to hopes of larger resources for banks, but in the south, greater efforts are necessary. The success of the Pandyan Bank, set up 10 years ago, is clearly due to intensive development of a small region together with attractive terms for small savers.

Medical Standards

States' Health Ministers last month formulated a plan for giving more scope to *ayurveda*. The blend of *ayurveda* with modern medicine is thus favoured by the Government, but it does not meet with the approval of the medical profession which feels that "electionism" is going too far. Conversely, new medical colleges, ill-equipped for teaching, are no remedy for the shortage of trained doctors. The risk of lowering standards is too great. Dr. A. L. Mudaliar fears that control over medical education by laymen is leading to a sorry situation. The real remedy lies in aiming at higher standards and improving medical colleges; also in providing post-graduate courses and keeping India abreast of the advanced countries. The opening of cottage hospitals in small towns, staffed by a small group of practitioners and getting a State subsidy to supplement fees from the well-to-do, is an idea now circulating. Though nursing homes in many towns have been set up, they are not co-operative ventures and are expensive. The strain on Government hospitals can be reduced only by giving more scope for private effort and initiative in medical relief. But the profession is clear in its objections to a four-year course for those who have not gone to a college and it is not prepared for "dilution" of any kind. A former Chief Minister nursed the notion that doctors could be multiplied for the use of the State by starting a curtailed course for school-leavers and letting them run village dispensaries subsidised by the State. But the profession is opposed to short-cuts and the views of Dr. A. L. Mudaliar against Government interference, incidentally lowering the status of those qualified in modern medicine, is supported by the profession at large.

Financial Irregularities

The Public Accounts Committee in its last report called attention to many financial irregularities on the part of the State Government departments. That Secretaries did not come to help the Committee is one of the complaints made in the report. The transactions of the Food Department have not yet been summed up in a balance sheet presenting the complete results. Excess payments to contractors have been recorded, and the Committee noticed that contracts had not been clearly worded so as to avoid loss. The Accountant-General's views on financial procedure have been invariably upheld by the Public Accounts Committee. It calls attention to the availability of cheap substitutes for quinine at present. But the Madras Government has extended the factory in the Nilgiris and hopes to get the full benefit of tariff protection by raising output. The Committee has indicated that savings due to an excess provision in advance are not to be approved in the light of modern practice.

Popular Entertainment

A brief report on the Entertainment Tax administration for 1955-56 reveals a higher yield of

about Rs. 94 lakhs, leading to the distribution of larger sums to local bodies entitled to 90 percent of the proceeds of the duty. The revenue rose on account of the better attendance at cinemas. More theatres have been opened, while larger audiences were reported, as many popular features were shown. Improvements in theatres also explain the rise in receipts. The collection of tax has been efficient and exemptions from tax are usually given in deserving cases. Concerts, but not exhibitions, are free of tax. The tax procedure, except in west Tirunelveli, is regarded as adequate. Commercial tax officers have been able to realise dues promptly. The greater popularity of Hindi pictures in Madras city, which shows the maximum collection from entertainment tax, is not surprising. There has been a decline in the popularity of English films. Barely half a dozen theatres in Madras State now show English films regularly. Science thrillers are in vogue and "visions of 2,200 A.D." appeal to fans who are impressed by the "other worlds." Literary masterpieces still score, and Scott is easily a success although the readers of his novels may not be so numerous. Russian films, eagerly passed and distributed on the cheap, have proved a dismal failure. Local audiences have stayed away from the pictures publicising Russian artists and even the recent visit of the circus here was only a qualified success, whereas enthu-

siasm was shown for a film depicting the Siamese court mainly because the Thai ballet (resembling the Indian dance) served as a happy reminder of the enduring cultural ties with that country.

Police and Social Welfare

At a conference held last week on social work, pleas were made for greater support for agencies dealing with social evils and problems. The voluntary worker's part was repeatedly stressed, along with the need for expert guidance. The drying up of private charity is a result of the current social changes, so the purely secular aspect of social work is not to be ignored. The association of the police with social work is a happy feature, and in a few places policemen are taking a hand in rural development. This is intended to make the police popular. They are expected to run clubs to keep boys out of mischief. The Commissioner of Police feels that the admonition of wrong-doers is sometimes more effective than prosecution. Station committees are now expected to help the police put down crime. The recent increase in crime has been attributed to the repeal of the Criminal Tribes Act, a social reform apparently conceived and carried out in haste. The incidence of crime in the city is said to have decreased of late, but in the suburbs, crime, especially burglary, is increasing.

Majestic

FIRST CLASS SERVICE

Calcutta to London

This is indeed the luxury way to fly to London! B.O.A.C. First Class "Majestic" services offer you swift, smooth travel by four-engined, fully pressurized *Constellation*. Spacious cabins with *fully-reclining* "Slumberette" seats; superb food and wines; really *personal* service. Also comfortable "Coronet" Tourist Class Services.

Delicious Indian food will be served on all our services from India on prior request.

First Class ▶ Single Fare Rs. 2,667
Return Fare Rs. 4,801

CALCUTTA TEA AUCTIONS IN NOVEMBER

DEMAND STRONG AND ACTIVE THROUGHOUT

THERE was an exceptionally strong and active general demand throughout the month and all descriptions, except the higher priced teas, met with very keen competition from export and internal buyers, say Messrs. Caritt Moran & Co. Private Ltd. in their monthly tea market review. The plainest kinds, clean commons, mediums and low mediums advanced by about 2 annas to 4 annas in each Sale, particularly Fannings grades which were very much stronger than Broken. Teas with black leaf appearance were in particular demand and non-wither Doors with bright liquors were strongly supported. Whole leaf grades and stylish B.P.S.'s were also a strong feature and the majority of the Darjeelings realised very satisfactory prices. Good liquoring Assam B.O.P.'s of orthodox manufacture and the better liquoring C.T.C. teas showed the least change in rates although a few selected lines realised high prices.

Darjeeling Leaf appearance showed little change from the previous month and cup quality was above average for the time of year. Assam C.T.C. teas showed a further decline both in leaf and liquor and many of the offerings were rather dull in cup. Leaf appearance of most teas of orthodox manufacture was of a commendably high standard and a number of useful liquoring teas were available. Out-turn from Doors district showed a marked improvement compared with the corresponding period of last year. The offerings included a large proportion of well-made black leaf teas and most of the teas of non-wither manufacture were quite bright in character. Cachar Leaf appearance continued to be much above average and for the most part was black and commendably free from stalk and fibre. While the majority of the liquors were rather plain, a few selected estates produced clean sweet teas with most attractive leaf appearance.

Internal Market

A total of approximately 5,700 chests of Leaf was offered. The few lines of tea on offer were mainly of a residue description and demand for

these was irregular but generally at dearer rates. Dust offerings amounted to a total of approximately 88,900 chests. Apart from the initial Sale, which was affected by the news from the Middle East, there was a good general demand and the market was slightly dearer, in spite of an easier tendency in the last Sale. Good liquoring Assams of C.T.C. manufacture were strong and prices were fully maintained. The brighter liquoring non-wither Doors were also a strong feature and these frequently sold at rates above those of orthodox manufacture. Clean Leaf Assams and commons received fair support, particularly the more leafy ones, and were generally about 1 anna dearer. The larger black leaf Dusts from these districts received little or no support from Middle Eastern buyers and consequently did not sell at a premium.

Export sales up to No. 23 totalled 1,032,359 chests at an average price of Rs. 2-8-8 against 993,200 chests at an average price of Rs. 2-6-5 in the corresponding period of the 1955-56 season. Internal sales at 21,207 chests of Leaf and 230,384 chests of Dust (Rs. 1-9-4 and Rs. 2-4-4) go against 47,063 chests and 293,373 chests (Rs. 1-6-3 and Rs. 2-3-5) in the same period of 1955-56.

November has seen an unpredicted rise in the price of Export quota. Business commenced at 27 ptes and rose steadily. Towards the middle of the month, however, there was a sudden strong demand and the price rose by over 5 annas a lb. within the next two weeks, falling slightly towards the end of the month. Transactions at the close were made at 72 ptes a lb.

The estimated North Indian crop to the end of October 1956 was 486,594,554 lbs. compared with 459,004,773 lbs to the same date last year. The average figure at this date for the three years 1953-55 was 445,447,895 lbs.

The Government of India has decided that the export duty on tea during December will be 8 annas a lb. against 6 annas in force hitherto.

Arrivals (in chests) during the period 24th October to 23rd November with the corresponding figures of the previous year in parentheses were: by steamer 489,549 (448,259), by rail 204,999 (129,434) and by air 19,059 (17,538), making a total of 713,607 (595,230) chests. From the beginning of the season, 1st April, 1956 to 23rd November, 1956, arrivals have been: by steamer 2,235,189 (2,271,925), by rail 692,186 (593,653) and by air 110,407 (143,693) chests, making a total of 3,037,782 (2,964,271) chests.

LONDON TEA SALES

AT last week's London tea sales the 39,278 packages on offer realised an average price of 6s 4.13d a lb., against 6s 3.61d in the previous sale and 4s 7.21d a year ago. Plain broken pekoe was quoted at 5s 6.1d a lb., against 5s 4.1d in the previous sale. Prices obtained by some of the companies are given below:

U.K. Tea Stocks

U. K. stocks of tea on 7th December amounted to 84.4 million lbs., against 121.6 million lbs. a year ago (converted at 110 lbs. a package).

COCHIN TEA SALES

At Sale No. 32, 2,900,000 lbs. of tea were on offer. There was a good general demand. The market however opened 2 annas lower, and weakened further to close irregularly 3 annas to 4 annas down for all grades except for Broken Pekoes which were steady.

COLOMBO RUBBER PRICES

Flat Bark	.90/94	.92½
Sc. Crepe 3X	1.06	

To arrive at f.o.b. Colombo prices, add 53.45 cents a lb. for crepe other than scrap crepe and 31.45 cents for scrap crepe to the above market prices.

Mr. N. W. Chisholm, who has been General Manager of the National Bank of India Limited since 1st April, 1953, will retire on 31st December after nearly 50 years' service with the Bank and Mr. William Kerr, Deputy General Manager, will succeed him. Mr. Chisholm retains his seat on the Board of Directors.

Jute

MILLS BUY LARGE QUANTITIES OF RAW JUTE

GUNNY PRICES FOLLOW FIRM TREND IN FIBRE

THE feature of the markets in the past week has been a sudden and unexpected increase in the buying of raw jute by mills. It is not clear what has provided the impetus, but it seems there has been a realisation that, in the prevailing conditions in the markets in Pakistan, it is unlikely that mills will be able to procure enough supplies from that source during this season, except at prohibitive prices. That, however, has been the general belief for some time, and it does not explain why it should have been acted upon so suddenly. Had there been much buying of manufactured goods to give mills encouragement, it would have been understandable. But, according to reports from exporters, there has been no sudden increase in demand from overseas buyers for manufactured goods. In fact, they say that the advance in prices of gunnies and hessian has been due to the rise in raw jute prices as a result of heavy buying by mills. It is possible, of course, that the determining factor was that the mills' raw jute stock position is rather vulnerable. Their consumption of raw jute from 1st July to 30th November was 2,521,000 bales, while total arrivals in Calcutta and mill stations over the same period were only 2,557,000 bales. All the arrivals, moreover, did not go direct to mills, a very substantial portion having gone to Cossipore, where stocks have recently been increasing. Stocks in mill godowns have, therefore, been decreasing over a period when they should have been increasing in preparation for the time when imports will be smaller. It must not be forgotten, of course, that mills entered the 1956-57 season with godown stocks of 829,000 bales, but with doubts about the possibility of being able to import jute from Pakistan, that does not provide a safe margin against any shortfall in supplies from Indian sources.

The rise in the price of raw jute as a result of increased buying by mills has been accompanied by a rise in the price of manufactures which bodes no good for the industry. There have been many reports of consumers turning to cheaper materials for packaging without there being any comparable development of new uses for jute manufactures. It is, therefore, imperative that steps should be taken to intensify propaganda in the jute-growing districts for the production of a bigger crop next year by increasing the acreage and by the adoption of better methods of cultivation. If the present level of prices continues until sowing time, there is no doubt that a bigger crop will be sown, but that is no excuse for complacency now. Pakistan has already decided to grow a bigger crop in 1957 and that may relieve the position by making it possible for Indian mills to import Pakistani jute, but it is essential that India should grow enough jute to meet the mills' requirements at reasonable prices.

THE JUTE MARKETS

Manufactured Goods: A moderate amount of overseas business is reported in hessian for deliveries up to June, and there has been day-to-day business in specialities but there has not been much overseas enquiry for heavy goods. The speculative counters rose sharply in sympathy with the advance in raw jute prices and a large amount of bear-covering was reported. On the morning of 12th December, 11-porter hessian was quoted at Rs. 46 and B Twills at Rs. 121-2. By Monday, the fatka quotations had moved up to Rs. 47-2 and Rs. 124-8 respectively but a reaction set in when mill buying of raw jute slackened off. The reported increase in burlap stocks in the U.S.A. and a decline in burlap consumption affected the speculative markets. There was also a revival of the rumour that the Government of India intended to impose an excise duty on jute manufactures. The easier tone in the market continued until late on Tuesday afternoon when there was a sudden spurt and hessian jumped to Rs. 48 in the fatka market. On the whole, the fatka quotation for hessian has been steadier than that for B Twills although more hessian is now being turned out and fewer B Twills. There has, however, been covering in hessian by shippers for near deliveries and quotations for the 100z. variety for December are at a premium of Rs. 2 over those for January-March.

Quotations on Wednesday morning were as under:

	Dec. Rs.	Jan.-Feb. Rs.	April-June. Rs.
40in 8oz.	38-10	37-6	36-10
40in. 10oz.	48-8	46-10	45-12
B Twills	124-14	125-8	124-12
Heavy Cees (Plain)	124	124-12	124-8
A Twills	124-14	125-2	124-12
Liverpools	139	139-8	139
Cornsacks	126-12	126-12	125-12

Raw Jute: Two large groups of mills coming into the market in quick succession for large quantities of jute produced more activity than has been experienced for a considerable time. On Thursday, a large quantity of Northern jute was done at Rs. 32 to Rs. 32-8 Basis Bottoms for delivery ex agencies, while Rs. 31-8 was paid for deliveries ex Calcutta. Local packing was done at Rs. 30-8.

Cuttings were sold at Rs. 136. The following day, Assam jute ex agency was bought at Rs. 32-8, Murshidabad Tossa at Rs. 32-8, Daissee at Rs. 33, Northern at Rs. 32-8 to Rs. 33, Western at Rs. 32 and Western Mesta at Rs. 29, basis Bottoms. Business continued over the week-end, with prices in some cases moving up a further 8 annas a maund. On Monday morning, the activity of the previous days faded out, but in the afternoon moderate business was done. The bulk of the buying throughout the week was of small parcels, as sellers were inclined to be reserved, particularly for Assam and Northern jute, imports of which are reported to be small. Daissee sellers were very reserved and offerings were small. This is said to be due partly to small imports and partly to keen buying by mill agents and at mill jetties at higher prices than are obtainable on contract. Mills have also been very active in the Cossipore market.

Quotations on Wednesday morning were as under:

Indian Jute:	Landed at Mills Rs. a md. basis	Shipment.
	Bottoms.	Dec.-Jan.
Upper Assam	33-8	"
Lower Assam	34	"
Northern ex Agencies	33-8	"
Murshidabad Tossa	33-8	"
Daissee	34-8	One month
Daissee Mesta	30	"
Western Mesta	29	Dec.-Jan.
Northern ex Calcutta	33	"
Bimli F.A.Q.	29-8	"

Tossa is now quoted at Re 1 to Rs. 1-8 above the price of white jute, according to districts.

Pakistan Jute:	Rs. a md.	Shipment.
Ja	35	Dec.-Jan.
District	37-5	"
Northern	37	"
Pucca:	Rs. a bale.	Shipment.
Export Firsts	265	Dec.-Jan.
Export Lightnings	245	"
Cuttings	140	"

Arrivals in Cossipore during the week ended 18th December were 949 wagons. The market was firm most of the time, with prices rising and mills keen buyers. But it eased on Monday in sympathy with the lower B Twill quotations in Calcutta. The offtake has been less than the arrivals and stocks are increasing. The condition of most imports is unsatisfactory.

Mofussil: Imports in Assam and north Bengal remain small, but in the western and jungle districts they have increased, as Cossipore buyers are offering good prices.

Raw Jute Arrivals

Imports in Calcutta and mill stations during November were 768,000 bales compared with 806,000 bales in November last year. Imports of Indian jute were 683,000 bales, against 681,000 bales in November, 1955, but imports of Pakistani jute were only 84,000 bales against 126,000 bales in November, 1955. The total arrivals, July to November, were as follows:

	1956-57	1955-56
Indian	2,245,000	1,765,000
Pakistani	312,000	626,000
Total	2,557,000	2,391,000

I.J.M.A. Production

During November, the output of mills reporting to the I.J.M.A. was 83,000 tons, compared with 90,500 tons in November last year. The reduced output last month, compared with that of November 1955, was partly the result of three mills being closed for the whole month because of labour disputes and partly due to the transfer of machinery from the manufacture of sacking to that of hessian, which results in lower tonnage a loom. The detailed figures are given below:

	November, 1956.			
Tons	Total	Hessian	Sacking	Others
Percentage	83,800	36,800	41,800	5,200
		43.9	49.9	6.2
	November, 1955.			
Tons	Total	Hessian	Sacking	Others
Percentage	90,500	34,600	49,900	6,000
		38.2	55.1	6.7

Consumption of Raw Jute

On the basis of the reported production of manufactures, the consumption of jute by mills in November was 488,600 bales, compared with 5,28,000 bales in November, 1955. The total consumption from July to November was 2,521,000 bales, against 2,461,000 bales in July-November, 1955.

JUTE GOODS TRAFFIC THROUGH SUEZ CANAL

A total of 572,000 tons of hessian passed through the Suez Canal bound for the western hemisphere in the calendar year 1955, of which 207,000 tons went to the United States, according to the Jute Bulletin of the Indian Central Jute Committee. Hessian was the third largest item shipped to the United States via the Canal, being exceeded only by manganese and rubber. Among other materials, 592,000 tons and 57,000 tons of jute were shipped through the Canal to the western hemisphere and the United States, respectively.

THE FOREIGN JUTE MARKETS

STEADY PRICE TRENDS

(FROM OUR DUNDEE CORRESPONDENT)

RAW jute shippers in Pakistan are certainly maintaining their prices and there is no weakness shown in the case of either white or dark jute. The advance of week before last and on Monday of last week brought about another change in prices for jute yarns and cloth in the U.K. During the second half of last year, there was no change in values of productions, because raw jute kept a pretty even keel, but since June this year there have been alterations on six occasions, all in an upward direction. In that time, raw jute has risen from £91 for Mill Firsts, the minimum fixed rate, to £130 a ton, with Mill Lightnings from £81 to £116. The latest rise, which took effect from 11th December, affected most descriptions of yarns. The small fine yarns, 4 to 6 lbs., remain unchanged, also 200lbs. rove and upwards, and sacking wefts. Common 8lb. cops are raised from 16.50d to 17.08d and 8lb. spools from 17.08d to 17.66d approximately £5 a ton up, while rove in 48lbs. and 96lbs. went up by £2.15s a ton to £107.10s and £100.10s respectively. Manufacturers appeared to sense an advance in prices and they bought fairly freely before the rise. Spinners are now so well booked up in the case of weaving yarns that it is difficult to purchase for delivery before March, and there is not too much available in that month. Production of jute yarns has increased in this district considerably over the past few years, with much modern machinery having been installed, yet yarns are not too plentiful. A month or two ago, delivery could have been obtained off the shelf, but demand for jute cloth and bags has risen rapidly lately. Some widths and the weights of imported goods have run short. The value of 40in. 10oz. hessians has gone up from 13.94d to 14.36d a yard and of 8oz. from 11.42d to 11.73d, while 14 por. 18oz. 36in. tarpaulin is up from 26.89d to 27.59d, and 8/27/16 oz. sacking from 20.54d to 20.82d a yard.

Good marks of Daissee-2/3 are quoted at £115 and grade at £112, while grade Tossa-2/3 is at £123 and fours from £115. December-January, c.i.f. U.K. Mill Hearts are lowest at £110 and grade Hearts £104.

Calcutta goods have ruled firm at from 69s 9d for 40in. 10oz. and 52s for 7½ oz. December, 69s 3d, and 51s 9d January, 68s 6d and 51s 6d February and 68s and 51s March, with B Twills at 185s December to March, all f.o.b. Calcutta.

MANUFACTURE OF WOOLLENISED JUTE GOODS

A West German plant for the manufacture of woollenised jute blankets and wrappers—first of its kind to be imported in India—has been installed in the Technological Research Laboratory of the Indian Central Jute Committee, Calcutta. This synthetic material—50 percent jute and 50 percent wool—will bring down the cost of these products to half without affecting their quality. Apart from being cheap, this material, according to the research conducted in the laboratory, absorbs fascinating and lasting colours and can be utilised in producing articles of artistic value combined with durability. The machinery which has been imported at the initiative of the Union Ministry of Rehabilitation will serve the dual purpose of creating employment opportunities for displaced persons from East Pakistan and making available the blankets and wrappers at cheap prices to the masses. To start with, a batch of 100 displaced persons will receive training at the laboratory in the manufacture of this material for six months. After completing the course they will be sent to different refugee camps and colonies in West Bengal to organise production centres on a cottage industry scale. The laboratory, which will serve as a nucleus, will supply the yarn, besides training new batches to these centres. The scheme to train displaced persons which will cost over Rs. 1,25,000 including the capital expenditure on machinery from West Germany, is being implemented in accordance with the Union Government's policy to provide stable employment to displaced persons by setting up different cottage industries—ceramics, toy making, plastics, aluminium products—in rehabilitation colonies. Efforts will be made to train as many displaced persons as possible in the manufacture of woollenised jute so that the scope of the project could be expanded to other States where D.P.s from East Pakistan have been settled.

CANADIAN IMPORTS OF INDIAN JUTE GOODS INCREASE

Canadian import statistics indicate that Indian jute products enjoy some consumer preference in the Canadian market over those coming from the Netherlands, Belgium, France and Western Germany. Of the total jute manufactures worth \$13 million imported by Canada from all sources in 1955, Indian supplies accounted for \$10.6 million. In 1954, India's share was of the order of \$6.3 million out of a total \$11 million. Analysis of imports from non-Indian sources tends to show that the continental countries have so far been only marginal suppliers.

PROBLEMS OF SHIPOWNERS IN INDIAN PORTS

LABOUR OUTPUT AND HANDLING CAPACITY INADEQUATE
(BY A SPECIAL CORRESPONDENT)

CONDITIONS in the major Indian ports have recently received considerable publicity, chiefly because of the increased demands which will be made on them under the second five year plan. Several commentators, whose opinions deserve serious consideration, have expressed the view that one of the major factors retarding the implementation of the plan might well be the inability of ports to handle the extra volume of goods it is proposed to import. This view appears to be borne out by the fact that the major ports are already congested as a result of the initial inflow of heavy machinery and steel. The task confronting them can be stated simply. Until now, the highest volume of imports handled by Calcutta, Bombay, Madras, Visakhapatnam and Cochin during a peak year has been about 24 million tons. But it is visualised that by 1957-58 they must handle about 35 million tons annually, assisted by the new port of Kandla with an estimated capacity of about 2 million tons. The problem of increasing port capacities is receiving the Government's attention, somewhat belatedly, and several measures have been instituted.

The immediate measures are, of course, concerned with making the best use of the existing facilities and investigating the possibilities of staggering imports in order of priority depending on overall national requirements. The question of quick clearance of goods from dock areas in receiving particular attention and efforts are being made to speed up the supply of railway wagons and streamline the somewhat cumbersome Customs documentation procedure. Port authorities have been urged by ship-owners to increase their storage charges as an added inducement to importers to remove their goods quickly from port premises. The long-term measures concern port development schemes. It must be said that the authorities have displayed a certain lack of foresight in not implementing these schemes more vigorously during the first plan period. The greater part of the imports in the near future will consist of heavy machinery and steel, which constitute awkward and slow-handling cargo at the best of times because of their unwieldy dimensions. Generally speaking, the existing facilities at the major ports are not designed to handle this type of cargo, which requires, modern wharf cranes of adequate lifting capacities, mobile cranes, fork lift trucks and other mechanised equipment for safe and quick handling.

Co-operation of Labour

Ultimately, the success of schemes for increasing port capacities depends on the willing co-operation of dock labourers, who must be prepared to maintain the highest level of output a man-hour. In the last few years, especially after labour was decasualised, the major ports, particularly Calcutta and Bombay, were plagued with the constant succession of "go slow" movements. Piece-rate schemes for stevedoring labour will soon be introduced at all the major ports—one is already in operation in Bombay—and it is hoped that workers will respond to the incentive thus offered. Low labour output has an important bearing on port congestion and freight rates. Obviously, the longer it takes to discharge a ship, the longer the ship following has to wait for a berth. Quite apart from the delay aspect, low labour output costs the shipowner more a ton for cargo handled. The primary result of over-burdening a port beyond its capacity is congestion, which results in ships being used as "floating warehouses" lying idle in ports awaiting their turn to discharge. For the shipowner, this is an expensive business—a modern 8,000-ton cargo vessel costs Rs. 10,000 or more a day in port. This is by no means an exaggerated figure when one considers the number of trained personnel required to man a modern ship, port dues, cost of fuel, etcetera. Taken in conjunction with a tight charter market, where the world demand for tonnage exceeds supply, it can be readily understood that the prospect of idle time at discharging ports has an important bearing on freight rates.

Effect on Liner Companies

It is worth considering what effect port congestion has on the economics of established liner companies, that is, companies which maintain regular services over a range of ports. Take the example of a liner company operating over a particular run with six ships, each of which would maintain a schedule of three round voyages a year, given normal working conditions. Supposing that due to port congestion, resulting from berthing delays, labour troubles, etcetera, they find that each ship can do only 2½ round voyages a year—this straight-away means a 17 percent loss of each vessel's carrying potential. The provision of an extra vessel, an expensive investment, is required to maintain the previous carrying potential. The loss of carrying potential inevitably tends to push up freight rates. Recently, the annual report of one of the major British companies, whose services extend to India, the Far East and Australia, contained an illuminating statement on the effect of port congestion on its liner services. Comparison with conditions in 1939 reveals that the tonnage handled postwar is 10 percent greater, the number of ports served 10 percent fewer, while the time spent in

port is 50 percent greater, which last adds continually to operating costs.

A topical issue is the rôle played by the Suez Canal in India's overseas trade and the possible repercussions its closure might have on the second plan. No less than two-thirds of this country's foreign trade passes through Suez. If steamers tra-foreign trade passes through Suez. If steamers tra-foreign trade passes through Suez. If steamers tra-

BIGGER LOSS FOR THE INDIAN AIRLINES
NO SUBSTANTIAL RECOVERY FORESEEN

THE third annual report of the Indian Airlines Corporation for 1955-56, published recently, states that the year under review saw steady progress in all directions. Emerging from the earlier phases of integration, the Corporation settled down to its responsibilities and began planning for the future with confidence. The losses during the year exceeded those of the year before by Rs. 29.25 lakhs, but due allowance must be made for such factors as the increase in the wage bill (Rs. 59.21 lakhs) and the direct operating loss on feeder services (Rs. 12 lakhs). It is too early to prophesy the results for the future, but it is unlikely that the gap between expenditure and revenue will be appreciably narrowed down, as much capital outlay will be necessary for the development programme, and it will inevitably take time to sell the capacity built up.

The previous report had mentioned that soon after the I.A.C. took over the business of eight airline companies, it was confronted with various problems resulting from their different methods of working. In the circumstances, the question of evolving standardised procedures became a matter of urgent necessity. Accordingly, a uniform system of accounting was introduced at all the bases, and the I.A.C. has now recommended to the Government a form of balance-sheet and profit-and-loss account for approval under Section 15(1) of the Air Corporations Act, 1953. The remuneration, terms and conditions of employees had been re-determined earlier with effect from 1st January, 1955. During the year, several further adjustments had to be made in favour of the employees resulting in an additional financial burden.

The organisational pattern was revised earlier in the year as the system of administration at the bases had to be strengthened. In February, 1955, Area Managers were invested with additional powers to ensure unity of administration within their charges. In September, 1955, it was found necessary to relieve them of much administrative routine so as to enable them to devote greater attention to the more pressing problems of co-ordination. Accordingly, at all the bases, Deputy Area Managers with sufficient administrative experience were appointed. Further, in order to economise and achieve greater control over expenditure, the following measures were undertaken:

(a) Creation of an Internal Audit Department, which started functioning during year.

(b) Creation of a Central Purchase Organisation to co-ordinate the requirements of the different bases and to place bulk orders.

(c) Centralisation of the revenue accounts with effect from 1st April, 1955, under the direct control of the headquarters. Accounting for fuel, oil and booking agency commission was also centralised under this department.

Compensation for Acquisition

During the year, the approval of the Government was obtained to the payment of compensation to the companies whose undertakings were taken over in August, 1953, and offers were made accordingly. Although these offers were generally acceptable to the companies, there was a difference of opinion about the cut enforced on account of the outstanding leave liability. The companies appealed to the Airlines Compensation Tribunal, but eventually a compromise was reached as a result of which they accepted 25 percent of the liability for privilege leave. The work of issuing bonds, as well as of paying cash compensation is now over. However, small amounts are still due to three companies on account of marginal adjustments necessitated by the valuation of shares held by them in other air transport companies.

The changes in the character and composition of the I.A.C. fleet are shown in the following statement:

Serviceable	1st April, 1955	31st March, 1956
Dakotas	69	66
Vikings	12	12
Skymasters	3	6
Heron	—	—
Twin Beeches	1	—
Total	85	92

Besides the 92 serviceable aircraft, the I.A.C. had a fleet of nine aircraft of smaller types which were inherited from the previous airlines but were

unsuitable for its operations. The year started with 69 Dakotas but this strength was reduced to 66 at the close as two aircraft crashed and one was sold. Eight Heron aircraft, for which orders had been placed earlier, were received and put into operation. Three Skymasters were purchased, and the existing fleet of three Skymaster aircraft was renovated and standardised. The Skymaster engines were also modified to make them more powerful. The project for installation of these more powerful engines on a few Dakota-type aircraft was taken in hand. Certain other modifications and alterations were carried out in the entire fleet of Dakota aircraft. The selection of a modern aircraft to operate on trunk routes was studied in detail. After careful consideration, the Vickers Viscount fitted with Rolls Royce Dart Turbo-prop engines was selected. Detailed specifications were drawn up and an order for five Viscounts was placed with Vickers Armstrong Ltd., Britain. Deliveries are expected during July-October, 1957.

Engineering and Maintenance

The entire engineering department had been reorganised earlier. However, in order to achieve self-sufficiency in the overhaul of aircraft, engines and accessories, the working of the organisation was reviewed. Arrangements were made to meet the demand consequent on the arrival in 1957 of new aircraft. With a view to improving the standard of internal inspection of aircraft and engines during overhaul arrangements were made with the Civil Aviation authorities to obtain full approval for the system of inspection in the engineering organisation at all the bases. The engine overhaul department at the Delhi base was expanded to meet the demands of future production. A new machine shop will be completed and sound-proofing of the engine test house will also be undertaken there. Extensions of the engine overhaul shop will be completed to undertake the overhaul of Rolls Royce Dart engines. Steps were also taken to standardise the overhaul and maintenance procedure of aircraft, engines and accessories. The engineering instruction manuals for Dakota, Viking and Skymaster aircraft are nearing completion. The manual for Herons is under preparation.

The programme for training engineers was in operation, and in all 16 engineers completed their training abroad during the year. A more intensive scheme for training airline pilots in this country was introduced. Selected pilots were sent abroad for training and the services of experienced foreign instructors were obtained to train locally many more pilots.

Operations and Traffic

The scheduled services operated by the Corporation covered an unduplicated mileage of about 14,600 miles on 31st March, 1956, and the network of route mileage extended to over 22,709 miles. Suitable changes in the route pattern were made, which resulted in increased utilisation, as is seen from the following statement:

1954-55 (Aircraft utilisation rate an annum hours)	1955-56 (Aircraft utilisation rate an annum hours)
Dakotas	1,371
Vikings	1,510
Skymasters	1,010
Heron	—
Total	1,378

On the night services, it was decided to introduce Skymasters to meet the public demand for four-engined aircraft and because of the large traffic potential. Expectations seem to have been justified as the load factors have been consistently satisfactory. On the whole, it can be said that the night services have proved popular and met public needs and convenience to a large extent. The time-tables of the night services and the day service from Bombay, Delhi, Calcutta and Madras are so planned as to provide maximum onward connections for the passengers. From 1st February, 1956, the Bombay-Calcutta day service has also been operated with Skymasters instead of Vikings. The operations on this route are being watched with a view to developing further traffic. The Herons are being employed on the following scheduled routes:—Delhi-Agra-Gwalior-Bhopal-Indore-Aurangabad-Bombay; Delhi-Jaipur-Jodhpur-Ahmedabad-Rajkot; and the Delhi-Lahore services. The Delhi-Rajkot service was introduced from 1st February, 1956. As a result of this, Jaipur and Jodhpur were deleted from the Delhi-Jaipur-Jodhpur-Karachi service and the Delhi-Karachi link was provided by a non-stop Dakota Service.

Capital and Finance

The capital of the Corporation stood at Rs. 7,58,68,027, at the close of the year, and was made up as follows.

	Rs.
(a) Outstanding liability on account of compensation bonds and cash compensation	2,63,66,027
(b) Capital received from the Government of India	4,95,02,000
Total	7,58,68,027

In addition, the loan liability of the Corporation to the Government of India was Rs. 2,76,83,147.

The profit-and-loss account shows that the loss incurred in the year was Rs. 119.40 lakhs, as against Rs. 90.15 lakhs in the previous year, the amounts included as depreciation in these figures being Rs. 59.01 lakhs and Rs. 40.63 lakhs respectively. The cash loss is, therefore, Rs. 60.39 lakhs for the year under review, the corresponding figure for

the previous year being Rs. 49.52 lakhs. The increase in expenditure was mainly due to salaries and allowances, fuel and oil, insurance and depreciation. While the increase in fuel, oil, insurance and depreciation reflected the increase in the capacity operated as a result of the introduction of Skymasters on the night air mail services and Herons on the feeder routes, the increase in salaries and allowances was mainly due to the introduction of revised conditions of service in accordance with Section 20 of the Act, as well as to some increase in the strength of staff. The main causes of the deficit are loss on petrol rebate, new taxes on petrol imposed by State Governments and a sharp rise in the wage bill. It is relevant to mention that the I.A.C.'s contribution to Government revenues during the year by way of excise duties and sales tax on aviation petrol was Rs. 86.55 lakhs and Rs. 9.79 lakhs respectively.

Future Trends

The Corporation having emerged as a compact business unit at the commencement of the year, it became possible to devote greater attention to the consolidation of the present and the building up of the future. Traffic has been steadily on the rise and there was an all-round improvement in the load factors achieved. In fact, earnings during the year exceeded those of the year before by Rs. 1.16 crores, and were the highest on record so far. Nevertheless, expenditure rose more than proportionately, largely on account of the increase in the wage bill and the acquisition and maintenance of new aircraft. While the Skymaster services continue to show promise, the Heron services have not yet acquired full momentum and continue to register poor load factors thereby contributing in no small measure to the losses sustained. At the same time, it must be admitted that the I.A.C. lost some of the business which could have come its way by freighting, etcetera, on account of a reduction in the size of the Dakota fleet. It is clear, therefore, that it has to adapt its equipment to the growing and specialised requirements of traffic in the country and beyond. It must also aim at achieving such economies as it can by standardising the equipment and eliminating a multiplicity of types. With this object in view, it has placed an order for five Viscounts, the delivery of which is expected some time in the middle of next year. It has also secured an option for another five Viscounts and has recently confirmed it. With a fleet of ten, which is expected to be in operation in early 1958, it hopes to maintain at a much higher standard the night air mail services as well as the day services to important points in India and adjoining countries. In the meantime, much preparatory work has to be done by way of installation of new workshop equipment and conversion of technical personnel to different types of work. The I.A.C. is confident that by progressively modernising its fleet, it will be able to generate more traffic and at the same time economise by retiring some of the obsolete equipment.

PLANNING FOR NUCLEAR POWER IN U.K.

FUTURE LINES OF DEVELOPMENT

THE British Government's decision to accelerate and expand the nuclear-power programme was a natural and necessary reaction to the oil crisis. The U.K. must diminish its dependence on oil as such, whether it comes from the Middle East, which is politically unstable, or from the western hemisphere, where it costs dollars. The present crisis could not have been avoided, although it might have been somewhat eased, if in earlier years military demands for nuclear resources had received less priority. Now not even military demands can be allowed to interfere with a programme for electric power which is essential to the U.K.'s economic security. The earlier programme was planned cautiously not so much for reasons of finance as because it was thought that various shortages—all of them aggravated, if not caused, by the needs of defence—would frustrate a more ambitious programme. Shortage of uranium was a possible limiting factor—and, indeed, shortage of enriched uranium restricts the range of reactors that can be extensively developed in countries outside of America, but the possibility of building a second huge and complex diffusion plant for producing uranium-235 is being considered in the U.K. Another threatening shortage was in the supply of graphite, of the exceptional purity required for nuclear reactors; but a new company has been formed in the U.K. to produce substantial quantities of this essential material.

The main problem now—even more serious than the shortage of qualified personnel (which, again, would respond to any relaxation of military demands)—is the shortage of thick steel plate. The British steel industry is under pressure for delivery of steel plate in general, and large quantities of it will be needed to build the giant tankers that will still be needed as long as we can foresee, to transport oil; but the deficiency of steel can be, and must be, overcome. Meantime, the nuclear power-station at Calder Hall, Cumberland, inaugurated in mid-October, after three years of designing, three years of building, is now working by routine, supplying electricity to the national grid. Although it is the first full-scale nuclear power-station in the world, its "teething troubles" have been actually less than those normally associated with a conventional power-station. Operationally, Calder Hall's only peculiarity, due to its novelty, is that it must

be closed down occasionally for inspection and, if necessary, the charging of the uranium fuel-elements and for a general check-up; but after the first few months these interruptions will be infrequent. Nuclear power-stations built in future will not be closed down for such inspections and replacements, for charging and discharging of the fuel will be fully automatic.

Calder Hall Power-Station

Power-stations of the type of Calder Hall—moderated by graphite, cooled by carbon-dioxide gas, using natural uranium as fuel—were declared "obsolete" before Calder Hall began working. Even such an authority as Dr. J. V. Dunworth, of the U.K. Atomic Energy Research Establishment, admitted to a recent conference of nuclear engineers that he had not envisaged a few years ago the advantages that this type has proved that it possesses. It was, indeed, adopted in the first place instead of the water-cooled system previously intended—primarily because it was safe: in a densely-populated island there are not enough sites for hazardous constructions. Now, however, Dr. Dunworth believes that no other system—using liquid instead of gas to take the heat from the reactor—can be regarded as a commercial proposition until it has been much further developed. "Calder Hall", he said, "will give this country a foundation for its nuclear-power programme for at least a decade to come." Sir Christopher Hinton, managing director of the Industrial Group of the U.K. Atomic Energy Authority, went further. On another occasion he said: "In my view, the merits of the Calder Hall type of reactor and the potential improvements which can be made in its design are such that plants of this type will still be built 25 years from now." However, he emphasised that, while the U.K., by improving the Calder Hall system, should be able to retain for at least a decade her lead in the use of nuclear power, leadership could be maintained in the long run only by developing reactors that were capable of higher ratings. It is, therefore, in that direction that the development work of the authority is now turned.

Power Plant Export

At another recent conference, attended by representatives of more than 100 companies, Sir John Cockcroft, director of the Research Establishment, imparted some up to date information on development work. It covered various different projects that were not merely practicable, but potentially economic. Some of them follow the pattern of Calder Hall, but important changes are envisaged in the second and third stages of the U.K.'s programme. A promising development for the second stage is the pressurised-water system, using water to withdraw the heat from the reactor. A significant development relating to the third stage is the designing of power-units fuelled with thorium-233, from say, 10 years hence the U.K. may rely increasingly on thorium as the alternative to uranium. Of special interest is the news that reactors have now been designed, and are now being developed, especially for export. The fact is that, while the U.K. has accepted Calder Hall as the basic pattern for years to come, this type of power-station is too big and too costly for many requirements abroad, and the U.K. will lose valuable export business unless she develops less cumbersome and cheaper units. There is also in process of development a ship-propulsion unit that could be used alternatively as a small land-based power-station. Some of these developments seem far removed from Calder Hall, but no pure experimental work is quite the same as actual operation. The working of Calder Hall will provide definite answers to many questions that have hitherto been answered only tentatively or not at all, and will thereby help reduce the cost of all the nuclear power-stations of the future that are based on the same principles. Anyway, Calder Hall was designed primarily to produce plutonium, with electricity as a by-product, and power-stations optimised for producing power will be more efficient for that purpose.

AMERICAN AIRLINE BUYS BRITANNIAS

THE manufacturers of the British Britannias sold £12 million worth of aircraft to three operators in three days. On 3rd December, the manufacturers announced that Northeast Airlines of the U.S.A. had ordered five series 305 Britannias for delivery in 1957. Thus the third of the U.K.'s turbine-powered airliners has been ordered by an American airline. Previously, Capital and Continental had ordered Viscounts and the former, Comets. Northeast's Britannias will carry 92 first-class, or 133 tourist-class passengers. They will cruise at 400 m.p.h. (644 km.p.h.) on routes extending from Montreal to New England, New York and Florida.

Mr. George Gardner, president of Northeast Airlines, said: "We found ourselves wanting the world's foremost turboprop airliner and found it available two to three years ahead of any comparable American-made transport." For Bristol the decision means a major break-through at one of the key-points of the American market—the New York-Miami route being one of the richest traffic prizes in the United States. On 4th December, Hunting-Clan Air Transport signed for two series 310 Britannias with an option on one further aircraft. This airline is the fifth to order Britannias. Then, on 5th December, the Ministry of Supply ordered three more series 250s in addition to their existing order for 10 aircraft. An indica-

tion of the Britannia's potential as a troop carrier was given earlier in the year by the Under-Secretary of State for Air. He said that two battalions of troops were moved to Cyprus in 40 hours by 52 aircraft. A similar move for the same number of troops in 40 hours could be done with five Britannias.

Flying Hours

Britannias, which have accumulated some 7,000 flying hours covering 2 million air miles (3.2 million air kilometres), are to be manufactured at the parent factory in Filton and in Short and Harland in Belfast where some 50 percent of the shop floor space is devoted to their production. The latter have undertaken the construction of 25 aircraft to date—for B.O.A.C., the Ministry of Supply, the R.A.F., Canadian Pacific Airlines and Northeast Airlines—the first few of which are well advanced. The first series 300 Britannia made in Belfast is due to fly early next year. A tour of the assembly line reveals that eight aircraft are in an advanced stage of construction, while provision for the manufacture of more Britannias is being prepared. A new shed, consisting of five bays, will enable 10 of these aircraft to be built simultaneously. The first two bays are due to be completed in February, 1957.

It became apparent in mid-1953 that growing world interest in the Britannia would soon necessitate reinforcement of the Filton production potential. By the end of the year, preliminary work began on jigs and tools. Just over a year later, Short's factory was ready to start the first stages of production. This is about to bear fruit. Short's contribution to the Britannia is not confined to production. The outer wing of the long-range Britannia (series 310) with its integral fuel tank is the work of Short designers and is being built in Belfast in quantities sufficient for the needs of both the Belfast and Filton production lines. This involved fitting a number of series 300 aircraft with the type of wing designed for the series 310 and so converting them to aircraft having the same extended range. The Short production line, augmenting the already considerable Filton output, will ensure that orders for the Britannia will be executed with the minimum of delay. The remainder of Short's productive potential is taken up with sub-contract work on Canberras—now nearly complete—and Seamews by their own design, the first of which is to go into service shortly. Shorts have also evolved a seat for Viscount installation, the first of which is to be delivered to B.E.A. this month.

B.O.A.C. COMMONWEALTH ROUTES

The Board of B.O.A.C. has decided that the Bristol Britannia, the world's largest turbo-propeller airliner, will go into service on Commonwealth routes in February next. The first Britannia service is due to leave London for Johannesburg on 1st February. This will be followed by turbo-prop service through India to Australia in March. The services to the Far East and Ceylon will begin in the later part of 1957, but the exact dates will be announced later. The modifications made by the Bristol Aeroplane Company to prevent icing troubles which occurred in the engines of the Britannia under certain atmospheric conditions have been fully tested and found satisfactory both by the makers and B.O.A.C. B.O.A.C. has a fleet of 33 Britannias on order. Six of these giant planes have already been delivered to the Corporation.

OIL PROSPECTING TO CONTINUE IN PAKISTAN

Pakistan Petroleum Limited has announced that it will spend Rs. 2,09,00,000 in 1957, mostly on prospecting for oil. Rs. 51 lakhs of this sum will be spent on capital and development of the existing fields. The above decisions were taken at a recent meeting of P.P.L.'s board of directors in Karachi. The Government of Pakistan, which holds 30 percent of the shares of the company, is represented on the Board. The foreign exchange element will be provided by the Burmah Oil Co., (Pakistan Trading) Ltd., who are the majority shareholders. The drilling programme allows for the completion of the three existing exploratory wells in Karachi, Khairpur and Adhi, and for the commencement of two new deep wells, one in East and the other in West Pakistan. A development well will also be drilled in Sylhet in order to test the extent of the gas reservoir discovered in the last well. Geophysical surveys will be carried out in both West and East Pakistan. The expenditure just announced will bring Pakistan Petroleum's total investment in oil exploration to Rs. 10 crores. It has to its credit the discovery of the Sui and Sylhet gas fields and the Balkassar oilfield.

BRITISH MACHINE TOOLS FOR DURGAPUR STEEL WORKS

The Asquith Machine Tool Corporation of England, which is acting as consultants and administrators on behalf of the Davy and United Engineering Company, reports having received official instructions about the machine tools and all auxiliary equipment to be provided for the central engineering maintenance department of the Indian steel works project in Durgapur, West Bengal. This plant and equipment, which will cost about £300,000, is being provided for the maintenance of all sections of the Indian project, including rolling mills, forges, coke ovens, and blast-furnace plants. According to this report, installation is expected to start in March 1958, and be completed by November the same year.

Commodity Markets

TEXTILE EXPORT TARGET NOT
LIKELY TO BE REACHEDMARKETING POSSIBILITIES IN U.S.A.
FOR HANDLOOM PRODUCTS
(FROM A SPECIAL CORRESPONDENT)

CLOTH exports have continued to improve, but despite the higher quantity shipped during the past two months, the overall performance for 1956 will not reach India's export target of 1,000 million yards. For the 11 months to November, the total quantity passed for shipment is placed at 704.67 million yards, against 805.84 million yards shipped during January-November 1955. Quality-wise, exports of coarse goods during this period have been slightly better at 122.74 million yards, while shipments of medium varieties have dropped from 579.57 million yards in January-November, 1955, to 486.31 million yards during the corresponding period this year. Exports of fine and superfine styles have been running at lower levels, obviously because of keen competition.

A detailed study of the export figures for this year reveals that during the first ten months of the year, 572 million yards were exported against 657 million yards exported in the corresponding period last year, recording an overall decline of 13 percent. The drop is mainly due to the significant setback in sales to Asian and African zones. Other traditional buyers like Europe and the Oceanic areas have maintained the usual patronage in the overall picture of this year's exports. Japan's efforts to capture the Asian market by catering to the specific needs of the buyers have been fairly successful and to the disadvantage of the Indian shipper. Pakistan, Russia and China also appear to be active in these markets. Following the closure of the Suez Canal, south-east Asian countries have been looking more to India for meeting their immediate cloth needs. The recent substantial business with Indonesia and Aden reported by shippers is indicative of this trend. Indonesia has lifted the temporary ban imposed in September on the import of cotton textiles from countries other than those which entered into agreements with her to sell cloth and yarn against supplies of U.S. aid cotton. Following this, she has bought substantial quantities of grey sheetings, gladap, dyed drills, etcetera, from India. Burma has been inquiring for a wide range of her usual interests, while Hongkong has taken renewed interest in grey sheetings. Business with Singapore has also been satisfactory. West Africa has been buying mainly grey bafts and dyed and bleached drills.

The U.K. has continued to show interest in the usual styles, but with the disparity in prices, not

much business has been possible. Canada's purchases have been confined to bed-tickings. Demand from east Africa, particularly from Mombasa, has been moderate, and this has been confined to grey sheetings, drills, coatings and leopards, but enquiries from Dar-es-Salaam are very meagre. The Sudan, too, has bought moderate quantities of grey sheetings, voiles and mulls, and the heavy demand from Aden, after a lapse of several months, is attributed to the closure of the Suez Canal and the consequent delay in obtaining supplies from other sources.

Textile Mill Plans of Burma

Burma is out to expand her cotton mill industry to the point of self-sufficiency. So it is approaching nearby countries for financial and technical participation in its campaign to set up a full-fledged mill industry. It has already come to an arrangement with Japan whereby Japan will install two textile mills in Burma with Japanese technicians and managerial staff, spending about Rs. 2.5 crores a year for next ten years. The Millowners' Association, Bombay, has been informed that Burma would like to have another two mills set up there by Indian industrialists. The suggested size of these mills is a complement of 40,000 spindles each, which will produce coarse cloth. The Deputy Prime Minister of Burma, U. Kysaw Nyein, while recently in Bombay, indicated that his country would welcome: (i) the majority or entire capital, plus managerial and technical personnel from India, (ii) a smaller share of capital plus managerial and technical assistance or (iii) plus managerial and technical assistance without any capital at all. Dearth of capital will not be a problem, and according to him, Indian residents there are willing to invest in a textile industry set up with Indian participation. Guarantees for repatriation of capital and profits, double taxation relief, speedy issue of import licences for machinery and other assistance have been offered to such participants. Burma already has two mills with a total capacity of 30,000 spindles and 400 looms to produce coarse cloth, and imports annually 100 million yards of cloth and 15 million lbs. of cotton yarn from various countries. Last year, she imported 9.4 million yards of cloth from India. Annual production of cotton in Burma is estimated at between 85,000 and 90,000 bales, and the quality is capable of producing yarns of 16 to 18 counts.

Handloom Exports

The Handloom Board has been pursuing a vigorous campaign to step up exports of handloom goods to different countries. A Handloom Survey Team sent by the Ford Foundation of America, which made a two-month survey tour of the important handloom weaving centres in India, has made some valuable suggestions. The team is of the view that the American market can alone lift

the entire output of the Indian handloom industry, provided production and marketing are so organised as to give the United States what she wants and "how she likes it." It appears that textile circles in the United States consider that there is very little to teach the Indian producer in weaving, but his dyeing is so poor that the colours could almost be guaranteed not to last. Besides reliable and modern dyeing, other improvements in production techniques suggested by the team are that the yarn must not only be calmed, but must also be mercerised and gassed. The length of the handloom fabrics should be not less than 40 yards, and 60-yard pieces will be preferred. The width must be standardised.

According to the team, among the handloom fabrics in which Americans would be specially interested are cotton fabrics using double attachments, as in the Madras area, sheer cotton with woven pattern in inlay and isolated motifs, fabrics in distinctive plaids, checks and stripes, towelling and furnishing fabrics. Most of the Indian varieties of handloom silks are of interest to American consumers, says the team. The team considers that the standards of production, quality control and salesmanship of Indian handloom fabrics must conform to international standards if they must sell in America, and a system of quality control and inspection of goods prior to export is recommended. It has also recommended the setting up of a handloom export service corporation as a purely Government agency to organise production and export sales. Such a Corporation, it is suggested, might organise production in five centres in the country, including Madras and Coimbatore. For marketing, it should open an agency in the United States.

WHOLESALE PRICE INDEX FALLS

THE official wholesale price index (base: year ended August, 1939=100) declined by 0.6 percent to 431.7 during the week ended 1st December, 1956, compared with 434.2 (revised) for the previous week. The index was higher by 2.9 percent and 18.5 percent respectively, when compared with the corresponding weeks of last month and of a year ago. The index for Food Articles receded by 0.2 percent to 422.6, compared with 423.5 (revised) for the previous week as a result of a decline in the prices of gur in Muzaffarnagar (-10%), wheat in Amritsar and bajra (-3% each) and rice in Calcutta (-2%) in spite of an advance in the prices of wheat in Jabalpur (+6%), dal arhar (5%) tea for exports (+4%), rice in Vijayawada (+2%) and gram in Hapur (+1%). The prices of raw cotton (-8%), manganese ore (average export price) (-7%), copra (-4%), groundnuts and castorseed (-3% each), and rapeseed in Calcutta and raw jute (-2% each) witnessed declines, while those of linseed in Bombay (+8%), raw silk in Bangalore (+2%) and raw hides and lac (+1% each) were marked up and in consequence, the index for Industrial Raw Materials, went down by 3.2 percent to 514.2, compared with 531.1 (revised) for the previous week. The index for Semi-Manufactures moved up by 0.2 percent to 420.4, compared with 419.5 (revised) for the previous week. Items which showed significant changes were: Castor oil in Madras (+12%), linseed oil (+5%), coconut oil in Calcutta and gingelly cake (+4% each), coconut oil and groundnut oil both in Bombay (+2% each), groundnut oil in Calcutta (-6%), and in Madras (-3%), coconut oil in Cochin and copra cake (-2% each). An increase in the prices of liquors (+7) and rayon and silk manufactures (+4%) raised the index for manufactures from 386.3 to 386.8; the price of jute manufactures (-1%), however showed a decline. The miscellaneous index declined from 591.2 to 590.5.

INDEX NUMBERS BY GROUPS AND SUB-GROUPS
(Base: Year ended August 1939=100)

Groups and Sub-Groups	1-12-56	Week Ended 2-11-56	3-11-56	3-12-55

BRITISH TEXTILE REVIEW

LANCASHIRE HOPEFUL
AGAIN

THE late months of the year are a seasonally favourable period for the Lancashire cotton industry, and this year the recovery has exceeded expectations. Does it mark the end of the industry's contraction or is it just another temporary halt along the downward path? The recovery in the trade as a whole (individual companies are exceptions, of course) is confined to the home market. The export figures for September were uncommonly bad, and there is no clear evidence of improvement since. The value of yarns and woven fabrics exported in the first three-quarters of 1956 was £65.5 million, compared with £74 million in the same period of 1955. It is argued, however, that an increase in total activity is not inconsistent with this decline, because the industry has underestimated the home trade. The sceptics' answer is that imports of cloth (which reached an impressive total of almost £20 million in the first three-quarters of this year) can greatly expand their share of the market—although it should be remarked that nearly two-thirds of this imported cloth is re-exported after processing and finishing. Anyway, the recovery, whether or not permanent, is a fact. Weekly figures of production of single yarn in October were among the best of the year. Delivery dates for many fabrics have been put back as new orders exceed current output. More generally (and looking a little further back, because the figures are not up to date), August's sales of wholesale textiles were at the highest level for that month since 1951. Throughout the cotton trade there is more confidence in values, at their reduced levels; and there is clear evidence that the reduction of prices has stimulated demand.

Forward or Out

It may be recalled that confidence began to revive in Lancashire early this year and that the recovery of trade proved illusory. Not many firms are optimistic after repeated disappointments, but many are confident enough to proceed with re-equipment. At the Cotton Board's conference, Mr. Fred Wood, president of the Master Cotton Spinners' Federation, said bluntly: "Those who are not prepared to go forward would be well advised to consider whether the time is not ripe for them to retire from the trade altogether." He is not the only one to recognise that boldness is a condition of survival—although even boldness needs financial backing. (A problem that besets those in the cotton and rayon industries who have lost faith is how to finance their entry into other fields while they are not earning profits.) Re-equipment is necessary for two reasons. Most obviously, it is needed to diminish the low-wage countries' advantage in production-costs. But it is also needed to maintain or increase output with a diminishing labour force. It is a fact that every revival of trade (including the present one) finds the cotton industry short of workers. It has long been recognised that much of the machinery can be used efficiently only on the basis of double- or treble-shift working; but this system is not easily adopted when labour is scarce. However, a big advance in organisation was achieved when agreement in principle on shift working and other conditions was reached for the main spinning section of the industry after a year of negotiation between the Federation of Master Cotton Spinners and the operatives' unions. Gradually, the reduced and renovated industry is taking shape. It was stated in Harrogate that 265 mills had been closed between the beginning of 1952 and the middle of 1956, but this painful process represents the dissolution of the weaker units. The industry that remains is mostly well equipped and is not neglecting further modernisation, and it is gradually introducing methods of using its machinery that will produce full benefit from technical efficiency. So it may be that the recent, qualified, revival of confidence is soundly based.

Nylon Export Troubles

One of the most dynamic elements in the British textile industries is the nylon section, but it is no longer enjoying its former prosperity abroad. The extent of its achievement in export trade is obscured in the official returns, as nylon yarns and staples are included with manmade fibres generally and this multi-purpose fibre is hidden in various garments and fabrics and in such industrial products as tyres and ropes. But the Board of Trade Journal published some informative figures specifically relating to nylon. The figures are not encouraging. Particularly severe has been the setback in the stocking trade. The value of nylon stockings exported in 1951 was as high as £6.7 million; in 1955 it was £1.7 million; in the first half of 1956 it was £0.6 million. The fall in value may be attributed partly to the cheapening of nylon yarn in this country, but certainly the change did not stimulate sales in this category—it did not, anyway, have a marked effect on prices. The decline, however, occurred in the fully-fashioned category: in the first two-thirds of 1956, the quantity of seamless nylon stockings exported, 208,145 dozen pairs, was more than double the quantity exported in the same period of 1954. Knitted piecegoods are not so big an item of export trade as stockings, and they have not fared quite so badly. Even so, the decline in value of exports, from a peak of £2.0 million in 1953 to £0.9 million in 1955 and £0.4 million in the first half of 1956, is severe. It is doubtful whether the trade in nylon goods will recover its former vitality, which belonged to a period of temporary

scarcity while plans for large-scale production in various countries were maturing. Now other countries are satisfying most of their requirements, and some of them are competing keenly in the remaining export markets.

New Crossbred Futures

An important development in the London wool terminal market was when trading in a crossbred wooltop contract began. Business was brisk almost from the outset; so the belief that a crossbred contract was needed to supplement the merino contract was quickly confirmed. The basis of the new contract is Bradford 50s carded tops, but other grades ranging from 46s to 56s, subject to appropriate adjustment, are being delivered by sellers. The basis of this wooltop future market is broadened, and its total turnover will certainly expand, for the merino contract did not represent a satisfactory medium for hedging operations by users of crossbred tops. (Antwerp, but not New York, operates a crossbred contract.) The London futures market, itself, has been functioning for three and a half years, and its turnover has settled above the level of New York's. Since crossbreds make up approximately one-half of the supply of apparel wools, the scope for expansion on the new basis is obvious.

ESTIMATE OF INCREASE IN RICE ACREAGE
THIS YEAR

The all-India first estimate of rice for 1956-57 puts the current year's area at 68,889,000 acres, against the adjusted first estimate of 65,742,000 acres for 1955-56, according to the Directorate of Economics and Statistics, Union Ministry of Agriculture. This shows an increase of 3,147,000 acres or 4.8 percent over last year. The increase in acreage during the current year has occurred mainly in the case of winter crop and has been reported by almost all the rice-growing States except West Bengal, where the acreage declined due to adverse weather conditions at the time of sowing. The increase is particularly marked in the case of Bihar, Orissa, U.P. and Assam and is generally attributed to favourable climatic conditions at the time of sowing. The present estimate covers the period generally up to the end of September or the beginning of October, 1956. Floods, excessive rains and drought have hampered the normal sowing and transplantation of paddy in parts of a few States, such as Assam, West Bengal, Bihar and U.P. and the information on late sowing and transplantation in these areas will be included only in the next estimate. The rice crop is reported to have been affected to some extent by heavy rains and floods in parts of Nellore, Krishna and Cuddapah districts of Andhra, Tanjore and South Kanara districts of Madras, Kaira and Konkan districts in Bombay. The crop is also reported to have been damaged by attacks of insects and pests and by crop diseases in parts of Ahmedabad, Broach, Sholapur, Belgaum and Nasik districts in Bombay. This estimate does not cover the entire area sown to rice crop. Past experience has shown that the area at the first estimate stage forms roughly 90 percent of the area finally reported. The information given in this estimate relates to the set-up of States before their re-organisation on 1st November, 1956.

MEASURES TO INCREASE HANDLOOM
CLOTH PRODUCTION

The All-India Handloom Board, at its recent New Delhi meeting, considered measures to achieve the target of additional production of 1,000 million yards of cloth during the second plan allotted to the handloom sector. Out of the additional production of 1,700 million yards to be achieved during the second plan, the handloom sector has been allotted 1,000 million yards—700 million yards from mill yarn and 300 million yards from Ambar Charkha yarn. It was emphasised during the discussion that more and more handlooms should be brought within the co-operative fold so that not only the weavers' conditions will improve, but it will be easier to organise production and thus step up the output of handlooms. It was pointed out that the Centre had recently adopted several measures to increase the quantum of financial assistance to the weavers to enable them to increase production. The limit of working capital for cotton and handlooms has been raised from Rs. 200 to Rs. 300 a loom. Loans for the working capital of apex co-operative societies for marketing are now admissible up to ten times their paid-up capital instead of five times. A lumpsum grant of Rs. 218 a weaver will be paid for the conversion of pit-looms into frame-looms—a better type of loom on which increased production can be obtained. To improve the conditions of weavers, the Central Government has also decided to give financial assistance for renovation and rehabilitation of weavers' houses. The assistance will be given in the form of 33-1/3 percent as grant and 66-2/3 percent as loans subject to a maximum of Rs. 1,000. Several members stressed the importance of linking production with demand and improving the quality of handloom fabrics. It was agreed that attention should be paid to consumer preference, the use of proper raw materials and maintaining a standard of quality. The question of accumulation of handloom cloth stocks during the slack season from July to October was considered. It was stated that the grant of a short-term loan to the weavers to tide over this period could be considered. The progress made in the registration of looms for the purpose of collecting correct statistical data on handlooms was reviewed. It was agreed that the registration of the remaining looms should be completed as early as possible.

MIDDLE CLASS COST OF LIVING INDEX NUMBER FOR CALCUTTA
(Base: August, 1939)

THE Middle Class Cost of Living Indices, by groups, have now been brought up to November, 1956. As compared with October, the November Index for Food shows a fall of 4 points, while those for Clothing, Fuel and Lighting, and Miscel-

laneous remain unchanged at 546, 268 and 283 points, respectively.

Correlating all the factors, the Middle Class Cost of Living Index for Calcutta shows that the cost of living declined by 2 points during November, 1956.

MANGANESE ORE AS EARNER OF FOREIGN EXCHANGE

EXPORT PROSPECTS HARMED BY GOVERNMENT POLICY

(By Dr. R. M. Agarwal)

IN economic development, foreign trade plays an important part—particularly in underdeveloped economies which have to import more capital goods and technical know-how than their exports can pay for. Their adverse balances of trade and shortage of foreign exchange present the biggest hurdle during the early stages of development. India, for example, is experiencing the same difficulty. During the first plan, there has been an adverse balance of trade to the extent of Rs. 512 crores: Rs. 221.65 crores in 1951-52, Rs. 96.06 crores in 1952-53, Rs. 50.05 crores in 1953-54, Rs. 62.72 crores in 1954-55 and Rs. 81.52 crores in 1955-56. During the second plan, imports have been estimated at Rs. 4,340 crores and exports at Rs. 2,965 crores, indicating an adverse balance of trade amounting to Rs. 1,375 crores.

In the first eight months of the financial year 1956-57, the adverse trade balance totalled approximately Rs. 203 crores, reducing the sterling reserves held by the Reserve Bank from Rs. 746 crores to Rs. 543 crores. Although the decline has resulted from the large imports required for the second plan, it is obvious that the rate of withdrawal cannot be sustained much longer. The requirements of foreign exchange for the second plan are proving larger than had been estimated, and it will be necessary not only to cut imports, but also to secure more assistance from abroad.

Adverse Trade Balance

The mounting adverse trade balance and the limited scope for cutting imports stress the need to step up exports. At the last meeting of the Import Advisory Council, suggestions to curtail imports of non-essential commodities were made, and it was hoped thereby to save about Rs. 50 crores a year in foreign exchange. In recent months, greater restrictions have been imposed on imports of non-essential goods. The following table which gives the imports of merchandise during 1955 and those which it is estimated will be imported during the second plan.

MERCHANDISE IMPORTS (Rs. crores)			
	1955	Annual average during second plan	Percentage increase or decrease
1. Machinery and vehicles	159	300	+88.7
2. Iron and steel	50	86	+72.0
3. Other metals	25	44	+76.0
4. Grains, pulses and flour	35	48	+37.7
5. Sugar	20	7	-65.0
6. Oil	63	82	+30.2
7. Chemicals, drugs and medicines	34	32	-5.9
8. Dyes and colours	18	17	-5.6
9. Paper, paste-board and stationery	14	11	-21.4
10. Cutlery, hardware, electrical goods and apparatus	36	29	-19.4
11. Raw cotton	54	54	—
12. Raw jute	17	18	+5.9
13. Others	130	140	+7.7
Total	655	868	+32.5

According to the official classification, the percentage of imports of different items in the January-June period of 1956 was as follows:

1. Plant and Machinery	17.31
2. Raw Materials	56.89
3. Essential Consumer goods	21.87
4. Non-essential Consumer goods	3.93

It should be obvious from the above, that imports of non-essential consumer goods constitute an insignificant proportion of the country's total imports, so their stoppage is unlikely to save much foreign exchange. Moreover, in a developing economy, there is always a time-lag between investment and production. People generally do not save and invest enough. It is very necessary to ensure an adequate flow of consumer goods to mop up surplus money in the hands of the people and check inflationary trends. Therefore, the approach to the foreign exchange problem should be of a positive character. The Government has, no doubt, been giving increasing attention to this problem and has also established a number of export promotion councils to suggest ways and means of increasing exports.

In one or two cases, it has also granted concessions by abolishing or reducing export duties. But the policy of the Government to resort to State trading and to canalise exports has, in effect, neutralised the benefits which the export promotion policy it was supposed was conferring on private trade. Although State trading may have justification from the point of view of the Government's public policy, it should be introduced slowly so as not to create unnecessary hardship for private trade. Otherwise the advantages expected from State trading will be lost.

The following table gives the main items of exports in 1955 from India and those expected during the second plan:

MERCHANDISE EXPORTS (Rs. crores)

	1955	Annual average during second plan	Percentage increase or decrease
1. Tea	112	127	+13.4
2. Jute yarn and manufactures	126	122	-3.3
3. Cotton yarn and manufactures	63	75	+19.0
4. Oil (excluding mineral oil)	39	22	-43.6
5. Tobacco	11	15	+36.4
6. Hides, skins and leather	27	28	+3.7
7. Cotton raw and waste	35	22	-37.1
8. Metallic ore and scrap iron and steel	20	23	+15.0
9. Coal and coke	4	5	+25.0
10. Chemicals, drugs, and medicines	4	5	+25.0
11. Cutlery, hardware, vehicles, electric goods and apparatus and machinery	4	4	—
12. Others	151	145	-4.0
Total	596	593	-0.5

Exports of metallic ores and scrap iron and steel are expected to increase from Rs. 20 crores in 1955 to Rs. 23 crores annually during the second plan, i.e. an increase of approximately 15 percent. Among the metallic ores, the main items are manganese ore, iron ore, kyanite, chrome ore, etcetera. But manganese ore occupies the most important place as it brings in the largest amount of foreign exchange. The table below, giving the value added by manufacture as also the earnings from exports of important minerals, clearly indicates the importance of manganese ore as an item of export:

PRODUCTION AND EXPORT OF IMPORTANT INDIAN MINERALS (Quantity in 000 tons) (Value in Rs. lakhs)									
Year	Qty.	Coal	Value	Qty.	Iron Ore	Value	Manganese Ore	Ore Value	Total of all Minerals Value
PRODUCTION									
1952	...	36,304	5,362	3,926	268	1,462	2,245	10,804	143,000
1953	...	35,580	5,276	3,855	281	1,902	2,948	11,278	176,000
1954	...	36,880	5,390	4,308	289	1,414	1,954	10,252	139,000
1955	...	38,230	5,603	4,640	324	1,570	2,188	10,616	145,000
EXPORTS									
1952	...	2,488	876	669	299	1,409	2,155	3,560	—
1953	...	1,271	453	1,093	501	1,659	2,570	3,838	—
1954	...	1,255	394	1,056	463	1,086	1,520	2,647	—
1955	...	724	215	1,299	567	766	892	2,195	—

India has always been a large exporter of raw materials, including minerals. Recently, there has been a shift in the emphasis on various items of exports, and it has been suggested at different levels that as far as possible, exports of raw materials be stopped and/or curtailed and they be exported only in finished or semi-finished form. Manganese is used mainly for manufacturing ferro-manganese, which is necessary for refining steel. But none of the main producers of steel, except Soviet Russia, produces enough manganese ore for its consumption, so they have to import large quantities. India is among the biggest producers and exporters of manganese ore, being next only to Soviet Russia. So far, Indian manganese has been exported without processing. However, the Government has recently issued licences for the production of 171,000 tons of ferro-manganese a year and it is expected that in years to come, greater emphasis will be laid on the export of ferro-manganese rather than on the export of the unprocessed ore because ferro-manganese offers considerably better value. The average price of high grade manganese ore is about Rs. 250 a ton, whereas the average price of ferro-manganese is about Rs. 900 a ton. But it will take some time before the plants come into operation. Till that time, manganese ore exports should not be allowed to suffer.

Free Licensing

Until recently, the export of manganese ore used to be licensed freely. Only an export duty was levied in the latter half of 1947 at the rate of 25 percent *ad valorem* which was subsequently reduced to 15 percent *ad valorem* from 9th April, 1948, and then abolished from 18th August, 1954. The Government of India in its notification dated 22nd June, 1956, announced that it would resort to State trading in manganese ore. This was announce-

ed without giving due consideration to the various problems arising from such a policy with the result that the trade had to face for about six months utter chaos and confusion from which it is still to recover. However, the Government has now allotted quotas to exporters and mineowners to the extent of 66 2/3 percent/75 percent of their performance during July-December, 1955, or January-June, 1956 whichever be the more advantageous, and the remaining 33 1/8 percent/25 percent has been allotted to the State Trading Corporation. This period was the period of lowest exports in the history of the manganese ore trade, and the determination of the quota on the basis of the performance during this period is, therefore, not the proper thing to do. The policy becomes still more incompatible with the export target of 1,500,000 tons fixed for the second plan. Furthermore, the Government has also levied export duty at specific rates with effect from September, 1956. However, the question of higher prices is considerably less important than that of regular supply to buyers overseas.

India is among the chief producers of manganese ore, and as an exporter is the largest. Her reserves, it is said, are almost inexhaustible, and she is in a position to maintain supplies for a fairly long period. But the trade cannot prosper on intermittent and irregular supply. The conditions created by State trading have made the export trade so very uncertain that buyers are being compelled to seek new sources of supply as they cannot afford to take chances on a strategic raw material. If the uncertainties are not immediately removed, India may lose its importance as a supplier of manganese ore to world markets.

The greatest difficulty in the way of increasing exports has been the acute shortage of transport. The table below shows the number of wagons allotted for the movement of manganese ore during the last few years:

Year	Jan.-June	July-Dec.	Total
1952	...	61,000	82,000
1953	...	82,000	94,000
1954	...	72,000	67,000
1955	...	62,000	83,000
1956	...	64,000	—

There has been some improvement in recent months, but not enough. The transport bottleneck has been a constant headache to the trade and it is expected to grow worse during the second plan period due to the inadequacy of rolling stock. It is realised that it is not possible to increase rolling stock capacity immediately. But even within the present limits, there is considerable scope for improvement. Manganese ore enjoys "E" priority for purposes of rail movements, so if the priority is upgraded, say, to "B" or "C", that will ease the situation considerably. The success of the second plan depends very much on the amount of foreign exchange earned by the country. Therefore, all export commodities, particularly those enjoying large export markets, should be given higher priority. It is quite possible that an upgrading of the priority for manganese ore movement may bring a little hardship internally, but considering its importance, the sacrifice is necessary.

Shipping Shortage

Another difficulty is the shortage of shipping space, and it has become more acute since the blockage of the Suez Canal. How important the Canal is to the foreign trade of the country can be seen from the fact that of the total external trade valued at about Rs. 1,240 crores, goods worth about Rs. 850 crores or 64 percent passed through the Suez Canal during 1955-56. Of the total imports of Rs. 850 crores, imports of the value of Rs. 462 crores or 71 percent came through the Suez Canal. Of the exports worth Rs. 591.00 crores, goods worth about Rs. 393 crores or 67 percent, it is estimated, passed through the Canal. Freight paid on imports via the Canal is estimated at Rs. 33 crores, and that on exports at about Rs. 32 crores.

The following table gives the export figures relating to manganese ore to the various countries:

COUNTRY-WISE EXPORTS (Quantity 000 tons)											
	1952	1953	1954	1955	1956 (6 mths.)		1952	1953	1954	1955	1956 (6 mths.)
Countries	(Tons)	percent	(Tons)	percent	(Tons)	percent	(Tons)	percent	(Tons)	percent	(Tons)
U.K.	140	9.9	159	9.6	150	13.8	80	10.5	27	7.3	—
Sweden	10	0.7	10	0.6	4	0.4	1	0.2	1	0.1	—
Norway	18	1.3	4	0.3	6	0.5	13	1.7	4	1.1	—
West Germany	148	10.5	103	6.2	55	5.0	22	2.9	10	2.6	—
France	45	3.2	66	4.0	60	5.5	113	14.7	40	10.6	—
Italy	30	2.2	19	1.1	32	3.0	29	3.8	16	4.4	—
Japan	31	2.2	105	6.3	88	8.1	67	8.7	95	25.7	—
Canada	3	0.2	11	0.7	—	—	4	0.5	—	—	—
U.S.A.	931	66.0	1100	66.3	642	59.1	299	39.0	105	28.3	—
Others	53	3.8	83	4.9	49	4.6	138	18.0	74	19.9	—
Total	1,409	100.0	1,660	100.0	1,086	100.0	766	100.0	372	100.0	—

The table shows that more than 50 percent of our total manganese exports go to continental countries and pass through the Suez Canal. The blockage of the Canal has considerably reduced the shipping space available, as it takes greater transit time for cargo to pass round the Cape of Good Hope. The comparative figures of distance as well as transit time through the Suez Canal and round the Cape of Good Hope are given below:

	Miles via Suez	Miles round Cape	Percent- age in- crease.	Days in round trip via Suez	Days in round trip via Cape	Percent- age in- crease.
London to Bombay	6260	10,720	71.2	31	54	72.2
London to Calcutta	7933	11,450	44.3	40	57	42.5

This means a reduction of about 40 percent from Bombay and 30 percent from Calcutta in the shipping space available for the Indian trade. The undeveloped condition of Indian ports has reduced it still further by way of increased hours required for loading and unloading cargoes. The extra time taken in transit has naturally resulted in increased freight rates. The freight rate for manganese, which was 95s a ton for U.K. ports in 1952, was increased to 115s from February, 1955, 125s from March, 1956, and 155s from November, 1956, besides the usual surcharge of 15 percent. Even though the rates of W.P.A. and F.P.A. insurance have remained more or less the same, war insurance rates have been increased by 8 annas a Rs. 100 with effect from November, 1956.

All these factors have considerably and unexpectedly upset India's trade plans and consumer resistance has increased. Of course, it is true that these developments are of international importance and they have affected not India only but almost all countries of the world. It is also true that it is not possible to postpone the buying of manganese ore indefinitely. But it is time that India consider these developments in all seriousness and changed the export policy. Otherwise all potential export markets will be lost and once lost, it will be very difficult to regain them. The confusion created by State trading has already created doubts about the flow of Indian supplies and the international developments have made the confusion worse confounded. It may, therefore, be suggested that the Government free exports of manganese ore. It is a commodity which could bring in much more foreign exchange, but the policy of the Government has been anything but helpful.

The Government has recently entered into trade agreements with a number of countries and in those instances trading on Government level was unavoidable. But let the Government confine its trading activities only to the Iron Curtain countries. In other cases, exporters and mineowners should be allowed to make the maximum possible exports, subject, of course, to the fact that they do not act against the general policy of the Government. State trading was introduced to secure better prices through collective bargaining. But instead of that, it, by underselling has actually jeopardised the entire trade. The State Trading Corporation has recently negotiated the sale of manganese ore overseas and it is understood that the prices it has been able to get are far below those secured by private trade. The question of comparative advantages and disadvantages cannot be overlooked and if all the factors are weighed, the balance will definitely be in favour of private trade. The country has already suffered considerably in international markets. The lower export figures for the first six months after State trading was introduced clearly indicate how matters stand.

Calcutta Markets

BETTER DEMAND AT TEA EXPORT SALE

GOOD GENERAL BUYING IN DUSTS

At Sale No. 26, held on 17th and 19th December, offerings at the Export auction, consisted of 68,740 packages. The market opened at about last rates, but strengthened considerably as the Sale progressed. There was a strong demand for clean commons and low mediums, which were 2 annas dearer and Fannings grades, which were the strongest feature of the Sale, and the clean black sorts were often selling up to 3 annas above last rates. Medium Assam B.O.P.'s and O.F.'s were also in good demand, but at slightly easier rates, while the lower grades in this category were from 1 anna to 1½ annas dearer. There was more enquiry for the best liquoring C.T.C. teas, but the majority of the offerings sold at about 1 anna below last rates. Whole leaf grades and "Tea for Price" were also a strong feature and the former were often selling up to 3 annas above valuations. Darjeeling teas were also generally dearer to buy.

Quotations	1956 Rs.	1955 Rs.
Clean Black Pekoe	2 7 0	2 1 0
Plain Broken Pekoe	2 5 6	1 7 0
Medium Assam B.P.	2 7 0	1 9 0
	3 0 0	2 5 0 to 2 6 0

At the Internal Sale, Dust offerings amounted to 26,503 chests, for which there was a good general demand. Commons, Doosars and orthodox Assams were firm and sometimes up to 1½ annas dearer, particularly the smaller types. The strongest feature of the sale were the black exportable types, which were 2 annas to 3 annas dearer. C.T.C. Assams were rather irregular, those with good quality liquors being generally firm or dearer, while the remainder were usually 1 anna easier and the grainy descriptions sometimes declining by as much as 2 annas.

Quotations	1956 Rs.	1955 Rs.
Medium Doosar Dust	1 15 0	1 5 6 to 1 6 0
Medium Assam Grainy Dust	2 0 0 to 2 0 6	1 7 6 to 1 8 0
Medium Assam C.T.C. Dust	2 6 0	
Best Assam C.T.C. Dust	2 10 0 to 2 11 0	2 2 0 to 2 4 0

Leaf offerings consisted of 2,613 chests, for which there was a good general demand. Residue descriptions were a very strong feature and were from 2 annas to 4 annas dearer, but the remainder were a little irregular and were generally firm on last rates.

FREIGHT RATES STEADY

THERE is some evidence to suggest that the markets have, temporarily at least, reached the top. Transatlantic coal voyages, after paying 120s have weakened to 118s for single voyages. A further 30 *Liberties*, it is reported, have been released from the mothball fleet to American operators and these will be employed mainly in the coal and grain trades. Meantime, those markets which had been overshadowed by the transatlantic coal trade have now shown some remarkable figures. In particular, rice from the U.S. Gulf to Coochin or Madras has paid 300s a ton for January-February loading and wheat from the same ports to Karachi 240s and to the U.K. 150s. Ore from Vizagapatam to Rotterdam paid 217s 6d f.i.o. In the time charter section, three *Liberties* secured \$10.475 for four years' trading and another \$10.610 for two years' trading. A point of interest to local charterers and receivers is the recent attempt by owners to claim that laytime commences in sandheads in the event of their vessels being detained there because of the lack of berthing facilities in Calcutta. Their argument is based on a recent judgment where a vessel was detained in Spurn Head awaiting a berth in Hull and laytime was adjudged to count from arrival in Spurn Head.

HIDES AND SKINS QUIETLY STEADY

The market was quietly steady. Stocks were less than in the previous week.

Bazaar Sales

(Between 11th December and 17th December, 1956) **Cowhides:** Wet salted (Ord.) 6,000 pcs. on the basis of annas 10-6; Wet salted (Ord.) 32,000 pcs. on the basis of Rs. 7 to Rs. 9-4; Wet salted (Slaughtered) 18,500 pcs. on the basis of Rs. 12-8 to Rs. 21.

Goatskins: Wet salted (Daissee, Killed) 49,900 pcs. on the basis of Rs. 265 to Rs. 275. COAL COMPANIES

O. Po F. and Dd indicate Ordinary Preferred Ordinary Founders' and Deferred shares respectively. P. next to the name of the company indicates that the company also has Preference Shares. Figures in "accounts closed" column indicate the months of the calendar year in which accounts are closed. For Managing Agents refer to the Key (last page) under the numbers indicated.
