A T Sale No. 11, held on 20th and 21st August, offerings at the Export auction consisted of 52,000 packages for which there was a fair demand. Quality showed a decline and withdrawals were heavier than they have been for the last few weeks. C.T.C. Assams generally declined by about 4 annas a lb and orthodox manufacture Assams were also easier. Medium Assams and Doocars Broken were fairly well supported, but were 1 to 2 annas lower, while Fannings grades of this description were firm and those of clean black appearance were often several annas dearer. Stylish whole leaf grades sold well at dearer rates, but the more ordinary kinds shared in the general decline. The weakest feature of the Sale were Darjeeling teas, which were at times selling at Re. 1 below the previous rates.

Quotations	1956	1955
Clean Black Pekoe	1 15 0	2 14 0
Plain B.P.	1 9 0	2 2 0
Medium Assam B.P.	2 4 0 to 2 6 0	2 4 0
Best C.T.C. Assam B.P.	3 12 0 to 4 2 0	3 4 0

At the Internal Sale, Dust offerings consisted of 16,180 chests for which there was a strong demand. The strongest feature of the Sale were the black Middle East types and these were generally dearer while clean Cachar, Doocars and Medium Assams were 1 to 2 annas dearer and sometimes more. Non-wither Doocars were a strong feature and were 2 to 3 annas dearer. Grainy C.T.C. Assams again sold well, but the remaining C.T.C. offerings were generally 2 to 4 annas easier, and at the close of the Sale, were a full 4 annas down on last rates.

Quotations	1956	1955
Medium Doocars Dust	1 11 0 to 1 12 0	2 3 0 to 2 4 0
Medium Assam Grainy	1 15 0 to 2 0 0	2 4 0 to 2 5 0
Dust	2 10 0 to 2 14 0	
Best Assam C.T.C.	3 6 0 to 3 8 0	2 12 0 to 2 14 0

Leaf offerings consisted of 1,066 chests for which there was a fair demand, but prices were irregularly easier, and once again there was little enquiry for the green teas on offer.

FREIGHT MARKETS UNCERTAIN

THE Suez Canal situation continues to dominate the freight markets and both owners and charterers are marking time until the position is clarified. Tanker owners, in particular, are affected and it is reported that, of the two 84,000-tonners now fixed for 7½ years' consecutive voyages commencing early in 1958, one will be employed between Persia and North America but, because of her size, she will be unable to transit through the Suez Canal. Delays are now being experienced in the Canal because of a shortage of pilots, several not having returned from leave. Rates in the grain trades were much the same and U.S. Gulf-Chittagong was done at \$(U.S.)36 for two handy-sized vessels in September, but Rangoon-Colombo had to pay 80s. Further fixtures have been made in the local coal trade to Pakistan and charterers are still open for both Chittagong and Karachi.

SUGAR MARKET RISES

During the week ended 22nd August sugar sales in the Calcutta market averaged 5,500 bags daily. Arrivals were 2,500 bags a day and stocks totalled 160,000 bags. Rates for ready sugar ex-Kantapur delivery were Rs. 31-10 for ordinary grain, and Rs. 33-4 for big grain. Prices rose by 4 to 6 annas in the market due to a falling arrival rate.

HIDES AND SKINS STEADY

The market in hides ruled steady and prices showed an upward tendency. Stocks were less than in the previous week.

Bazaar Sales

(Between 14th August and 20th August, 1956)

Cowhides: Wet salted (Ord.) 16,000 pcs on the basis of Rs. 6-12 to Rs. 9-4; Wet salted (Slaughtered) 18,500 pcs. on the basis of Rs. 12-8 to Rs. 20.

Goatskins: Wet salted (Daissee, Killed) 63,450 pcs. on the basis of Rs. 210 to Rs. 230 and Rs. 315 to Rs. 328; Assam-Dinajpur 5,500 pcs. on the basis of Rs. 205 to Rs. 225; Patna (Ord.) 13,000 pcs. on the basis of Rs. 125.

Bazaar Stocks

(20th August, 1956)

Cowhides: Wet salted (Ord.) 141,000 pcs.

Goatskins: Wet salted (Daissee, Killed) 39,000 pcs.; Assam-Dinajpur-Jalpaiguri 100,000 pcs.; Muzafferpore-Patna-Pakur-Purneah-Kissen-ganj 164,000 pcs.

LINSEED FIRM

After a slightly weaker opening, prices have displayed a steady advance and very firm conditions have been noted at the close. Firm advices from the centres and poor arrivals of seeds have

resulted in a scarcity of goods in the market. There has been fair demand from crushers, but sellers have been reserved. Prices in the oil section have been maintained largely by good local demand; no fresh business from overseas was possible because of the large disparity in prices caused by the high export duty on linseed oil. Latest quotations were as follows: August-September Rs. 24-8 a maund.

THE BHULANBARAREE COAL COMPANY, LIMITED

NOTICE is hereby given to the members of the abovenamed Company that an Annual General Meeting within the meaning of the Companies Act, 1956, (being the Ninety-ninth Ordinary General Meeting of the Company) will be held at the Registered Office of the Company, Chartered Bank Buildings, Calcutta, on Tuesday, the 28th August, 1956, at 10.30 A.M., for the purpose of receiving the Report of the Directors, passing the Audited Accounts for the half-year ended 31st December, 1955, electing Directors and Auditors and for transacting any other ordinary business of the Company.

The Share Register of the Company will be closed from the 14th to the 28th August, 1956, both days inclusive.

By Order of the Board,
F. W. HEILGERS & CO. (PRIVATE) LIMITED,
Managing Agents.

Calcutta, 26th July, 1956.

NOTE—A member entitled to attend and vote at this meeting is entitled to appoint a proxy to attend and vote in his stead. Such proxy need not be a member of the Company.

THE DEHRI ROHTAS LIGHT RAILWAY CO., LTD.

NOTICE

IS hereby given that the Annual General Meeting of the Shareholders of the Company will be held on Friday, 21st September, 1956 at 11.30 A.M. at the Registered Office of the Company at Dalmianagar to transact the following business:—

- To receive and adopt the Directors' Report and Audited Accounts of the Company for the year ended 31st March, 1956.
- To declare dividend of Rs. 1/4/- per share.
- To elect Directors to fill up the vacancies caused by the retirement of Shri Harkishore Kejriwal and Shri A. K. Jain under Article 84 of the Articles of Association of the Company. The retiring Directors, being eligible, offer themselves for re-election.
- To appoint Auditors for the current year and to fix their remuneration. Messrs. Lovelock & Lewes, retiring Auditors, being eligible offer themselves for re-appointment.
- To transact the following as an item of special business, special notice of which is hereby given, to consider and if thought fit to pass with or without modification the following resolutions, which will be proposed as Special Resolutions:—

"Resolved that the Articles of Association of the Company be altered in the manner following:—

(a) For Article 32 the following shall be substituted, namely,

"32. The Company shall have a first and paramount lien upon all the shares (not being fully paid up shares) registered in the name of each member (whether solely or jointly with others) for all moneys called or payable at a fixed time in respect of such shares, and such lien shall extend to all dividends from time to time declared in respect of such shares. Unless otherwise agreed the registration of a transfer of shares shall operate as a waiver of the Company's lien (if any) on such shares."

(b) For Article 33 the following shall be substituted, namely,

"33. For the purpose of enforcing such lien the Directors may sell the shares subject thereto in such manner as they think fit, but no sale shall be made until notice in writing of the intention to sell shall have been given to such indebted member or to his executors or administrators and default shall have been made by him or them in the payment of moneys called or payable at a fixed time in respect of such shares for 30 days after such notice."

Explanatory Note: The shareholders are informed that the Company has been enlisted on the official list of quotations of the Bombay Stock Exchange. It has, however, been required by the said Exchange that Articles 32 & 33 of the Articles of Association of the Company with regard to lien on shares be amended in the manner as set out in the proposed resolutions (a) & (b) above."

The Share Transfer Books of the Company will remain closed from 6th September, 1956 to 14th September, 1956, both days inclusive.

By Order of the Board,
for SAHU JAIN LIMITED,
A. K. JAIN,
Managing Director,
Managing Agents.

Calcutta, 1st August, 1956.

Payment of dividend when declared will be made only to those members whose names are registered in the books of the Company on the 5th September, 1956 or to their mandatees.

N.B. A member entitled to attend and vote at the meeting of the Company is entitled to appoint another person as his proxy to attend and vote instead of himself and the proxy need not be a member.

HOOLUNGOOREE TEA COMPANY LTD.

THE Board of Directors has to-day decided to recommend to the forthcoming General Meeting of Shareholders a dividend of Rs. 7/8/- per share in respect of the year ended 31st December, 1955, without any deduction in respect of taxation payable by the Company.

By Order of the Board,
ANDREW YULE & CO. LTD.,
Managing Agents.

Dated, 16th August, 1956.

BASMATIA TEA COMPANY LTD.

THE Board of Directors has to-day decided to recommend to the forthcoming General Meeting of Shareholders a dividend of Rs. 1/8/- per share in respect of the year ended 31st December, 1955, without any deduction in respect of taxation payable by the Company.

By Order of the Board,
ANDREW YULE & CO. LTD.,
Managing Agents.

Dated, 16th August, 1956.

THE CUTTACK ELECTRIC SUPPLY CO. LTD.

NOTICE.

NOTICE is hereby given that an Extraordinary General Meeting of the Cuttack Electric Supply Company Limited will be held at the office of the Managing Agents, No. 14, Old Court House Street, Calcutta on Tuesday the 11th day of September, 1956 at 4 P.M. to consider and, if thought fit, to pass the following resolutions namely—

Resolution No. 1. "That the Board of Directors of the Company may appoint an Alternate Director to act for a Director during the latter's absence for a period of not less than three months from the State in which meetings are normally held."

Resolution No. 2. "Resolved that the consent of the Company be and is hereby accorded, with effect from the date of commencement of the Companies Act, 1956, to the Board of Directors borrowing and continuing to borrow monies for and on behalf of the Company in excess of the aggregate of the paid-up capital of the Company and its free reserves, that is to say, reserves not set aside for any specific purpose, and that such borrowing shall be exclusive of temporary loans obtained or from time to time to be obtained from the Company's Bankers in the Ordinary course of business."

Note 1. A member entitled to attend and vote at the meeting is entitled to appoint a proxy to attend and vote instead of himself and a proxy need not be a member.

Note 2. In connection with the business to be conducted at the meeting, please see the undernoted Explanatory Statement.

OCTAVIUS STEEL & CO. LTD.,
Managing Agents.

Calcutta, 20th August, 1956.

EXPLANATORY STATEMENT.

1. Re: Resolution No. 1.

Under Section 313 of the Companies Act, 1956 a Company's Board of Directors if so authorised by its Articles or by a resolution passed by the Company in General Meeting, may appoint an Alternate Director to act for a Director who is absent from the State where the Board Meetings are usually held. As the Company's Articles of Association do not contain a provision conforming with Section 313, it is desirable to have a resolution passed as provided for in that Section.

2. Re: Resolution No. 2.

Since the commencement of the Companies Act, 1956 the Company's Board of Directors under Section 293(1)(d) may not without the consent of the Shareholders, borrow in excess of the capital of the Company and its free reserves. The paid-up capital of the Company plus its free reserves aggregate a sum of Rs. 7,35,040/-.

Under Article 46 of the Company's Articles of Association the Directors' borrowing powers may not, except with the sanction of a General Meeting, exceed the sum of Rs. 8,00,000/- at any one time owing for principal in respect of monies borrowed for the purposes of the Company. That limit was raised to the sum of Rs. 10,00,000/- by a resolution of the Shareholders passed at an Extraordinary General Meeting of the Company held on 30th May, 1949. As will be noted from the Notice mentioned above (there being no specific limit stated in the resolution to be proposed) that limit of Rs. 10,00,000/- on the sums borrowed at any one time will not be varied and will continue to apply.

The Section of the Act above referred to has made it necessary to have the consent of the Shareholders to any borrowing in excess of the limit set out in the Section which as mentioned for the Company is a sum of Rs. 7,35,040/-. The Company has a Cash Credit Arrangement with its Bankers, Bank of India Ltd. in accordance with which it has borrowed Rs. 5,45,000/-. The Company in the near future will have to incur Capital Expenditure of over Rs. 4 lakhs for the purpose of extensions of its mains and this will have to be met by further borrowings from any possible source. The proposed resolution has to be passed in order to empower the Directors to exceed the limit of borrowings imposed by Section 293(1)(d) of the Companies Act, 1956, in this case Rs. 7,35,040/-.

The Managing Agents and the Directors of the Company, other than as such and as Shareholders, have no interest in the business represented by the above resolution.

THE CHAMPDANY JUTE COMPANY LIMITED.

THE Directors at a Board Meeting held today decided to recommend to the Shareholders in General Meeting the payment of a dividend at the rate of 4% per annum or Rs. 2/- per share for the half-year to 31st March, 1956.

A notice calling a General Meeting for 4th October, 1956, will be published shortly.

By Order of the Board,
JAMES FINLAY & CO., LIMITED,
Managing Agents.

Calcutta, 21st August, 1956

THE IMPERIAL TOBACCO COMPANY OF INDIA LIMITED

NOTICE is hereby given that the Forty-fifth Annual General Meeting of The Imperial Tobacco Company of India Limited will be held at Virginia House, 37 Chowringhee, Calcutta, on the 14th September, 1956 for the following purposes:—

- To receive and adopt the Statement of Accounts and Balance Sheet and the Reports of the Directors and Auditors thereon.
- If considered desirable to declare a dividend.
- To elect Directors.
- To appoint Auditors and fix their remuneration.

The share transfer books of the Company will be closed from the 28th August to the 14th September, 1956, both days inclusive.

By Order of the Board,
B. GRANGER PEARSON,
Assistant Secretary.

9th August, 1956

Virginia House,

37, Chowringhee,

Calcutta.

Notes: The dividend, if approved, will be paid on the 25th September, 1956, to the Shareholders whose names are registered in the books of the Company on the 14th September, 1956, or their mandatees.

Transfers received in order at the registered office of the Company by the 27th August, 1956, will be in time to be passed for payment of the dividend to the transferees.

Shareholders are requested to notify the Company immediately of any change in address.

A member entitled to attend and vote at the General Meeting may appoint a proxy, who need not be a member, to attend and on a poll to vote on his behalf.

THE MOZUFFERPORE ELECTRIC SUPPLY CO., LTD.

NOTICE.

NOTICE is hereby given that an Extraordinary General Meeting of the Mozufferpore Electric Supply Company Limited will be held at the office of the Managing Agents, No. 14, Old Court House Street, Calcutta on Tuesday the 11th day of September, 1956 at 4.10 P.M. to consider and, if thought fit, to pass the following resolution, namely—

"That the Board of Directors of the Company may appoint an Alternate Director to act for a Director during the latter's absence for a period of not less than three months from the State in which meetings are normally held."

Note 1. A member entitled to attend and vote at the meeting is entitled to appoint a proxy to attend and vote instead of himself and a proxy need not be a member.

Note 2. In connection with the business to be conducted at the meeting, please see the undernoted Explanatory Statement.

OCTAVIUS STEEL & CO. LTD.,
Managing Agents.

Calcutta, 20th August, 1956.

EXPLANATORY STATEMENT.

Under Section 313 of the Companies Act, 1956 a Company's Board of Directors if so authorised by its Articles or by a resolution passed by the Company in General Meeting, may appoint an Alternate Director to act for a Director who is absent from the State where the Board Meetings are usually held. As the Company's Articles of Association do not contain a provision conforming with Section 313, it is desirable to have a resolution passed as provided for in that Section. The Managing Agents and the Directors of the Company, other than as such and as Shareholders, have no interest in the business represented by the above resolution.

THE IMPERIAL TOBACCO COMPANY OF INDIA LIMITED.

Further to the notice dated 9th August, 1956 members are advised that the Forty-fifth Annual General Meeting of The Imperial Tobacco Company of India Limited will be held at Virginia House, 37 Chowringhee, Calcutta, on the 14th September, 1956 at 3.30 p.m.

By Order of the Board,
B. GRANGER PEARSON,
Assistant Secretary.

22nd August, 1956

JOINT STOCK COMPANIES PREFERENCE SHARES

Dividends are cumulative and shares carry a preferential claim on the property for the payment of capital and on the profits for dividend except in case of companies marked otherwise. Months against names of companies indicate approximately times of payment of dividends.

THE DWINDLING BALANCES

INDIA'S NEED FOR FOREIGN EXCHANGE INCREASES

It is too early yet to say that the second five year plan is running into foreign exchange difficulties. The present heavy drain on the sterling balances may be due to special factors which will correct themselves in a month or two. There is no reason for alarm at the moment, but there is every excuse for exaggerated caution. The plan's estimates of foreign exchange earnings are one of its weakest features. That is a fact which has been recognised from the beginning. The Planning Commission itself has emphasised the importance of exploring "all possible avenues..... or securing the required inflow of resource". The recent visit of Mr. B. K. Nehru, Joint Secretary of the Finance Ministry, to the capitals of western Europe was undertaken with this advice in mind. But calculations made so far have been based on the assumption that resources at present available will be adequate for the first three years of the plan without there being any need to supplement them with large foreign loans. Whether this expectation is now being revised in New Delhi is difficult to judge. But the need to have plans ready to stop any unexpected drain developing before the three years are up, is now clear enough, and comparing the size of the second plan's foreign exchange estimates with that portion of the sterling balances earmarked for development financing, it is obvious that the margin of error in the planners' calculations is too small or comfort. Current drawings on the sterling balances are running at the rate of Rs. 276 crores a year, averaged over the period since the second plan commenced on 1st April. This figure must be judged alongside the planners' estimate of Rs. 200 crores for the full five years. On present showing, therefore, extraordinary methods to supplement foreign exchange resources will be necessary in another seven months' time. That is, of course, assuming that the present trend continues.

Why the outflow of foreign exchange should be so much greater than expected may not be clear for some considerable time. The general rise in the world's price level is unlikely to be responsible for a discrepancy of this size, although it could play a larger part in the future than the planners originally expected. There is no particular seasonal reason why the drain should be so heavy, except that large food purchases have recently been made to cover possible shortfalls in this year's harvests. These have not been large yet, but even on the more optimistic views about the success of coming monsoons, they are more likely in future to increase than diminish. There have lately been signs of the inflation the planners warned might disrupt the foreign exchange estimates. But these are a recent development and have not yet assumed proportions which should seriously affect the balance of payments. It seems the most probable explanation is an increase in the import of equipment for industrial development. If this is the case, it will seriously limit the scope for corrective measures. Any interference with the flow of development machinery could disrupt the industrial progress planned for. It is this danger which suggests that an immediate review of the foreign exchange estimates might be necessary if the second five year plan is not to be wrecked in its first year.

The obvious way to correct an adverse balance of payments is to export more. This is not easy in the short-run and might, in fact, be anything but a satisfactory remedy for a developing economy which needs all the goods it can obtain for its own use. It is also an inflationary expedient and is, therefore, inappropriate at the present time. There is no question about the need for building up a sound and expanding export trade in step with the development of the economy, but it is scarcely desirable, even if it were possible, to divert resources now from development at home in a drive to increase those being sent abroad. That does not, of course, affect the need for encouraging traditional export industries to expand

their markets. Cotton textiles, for example, might provide scope for rapid growth if government policy could be more helpful. The planners set out a number of other ways by which foreign exchange might be raised and, especially in the short-run, these are more promising than any substantial expansion of exports. Raising loans in foreign money markets should be possible, especially after Mr. B. K. Nehru's European tour. How cheaply such loans could be arranged is difficult to say. The money market which might be expected most readily to supply India's needs—the London one—is prohibitively expensive at the present time. Others are not so familiar with Indian conditions, nor do they possess the same facilities. But there must be several creditor nations in Europe, particularly Switzerland and West Germany, which are at present looking for outlets for their surplus earnings and would benefit themselves by providing some of India's capital needs. There is at present no lack of facilities which can be tapped for the supply of export credits. This is a source of finance which has important short-run possibilities and might help to tide over a temporary difficulty.

If the planners have blundered in their estimates and the present drain on the sterling balances proves to be permanent, then the sources of longer-term finance may have to be cultivated more carefully. The plan named these as the World Bank, the International Finance Corporation, the United Nations Technical Assistance Administration and

the vast majority of India's newspapers which are bigger and better known, are so primarily because of their regard for standards and quality. The relative lack of concern for these two essentials in journalistic enterprise seems to have been the greatest weakness of the debate. This is unfortunate, because it is precisely against higher standards and competition that the price-page schedule constitutes a major attack. In many ways, newspapers are like any other business; their quality depends on the quality of people they employ, which depends to a large extent on what they are prepared to pay, which in turn depends on their financial position. The effect of the introduction of a price-page schedule would be to weaken the finances of the few journals in whose case they are still fairly healthy, without ensuring corresponding benefits for those which are poorly placed. The present thinking seems to run along the lines that if a newspaper tries to become richer by carrying more advertisements, it should be compelled to print more pages and that should automatically compel it under the new regulations to raise its price. The time would then arrive when more and more readers would shift their patronage to cheaper (and smaller) rivals, the advertisers would find it less attractive, and in consequence shift their advertisements also to the cheaper papers. The price-page schedule would thereby act as a sort of a governor, limiting the growth in each newspaper's advertisement revenue, and readership would as a result be more evenly distributed; the smaller and the younger papers would be able to move up in the general scheme of things, and ultimately be in a position to compete with their bigger rivals.

This reasoning seems to have at least one prominent weakness, and that is the idea that if an advertisement is not given to one newspaper it will automatically go to another. In a country where business men usually have to be badgered into buying advertising space, this is simply not true. The fact is that if newspaper A, in conforming with the price-page schedule, is obliged to decline an advertisement, the latter will not necessarily be offered to newspaper B; the likelihood is that it will be offered to nobody at all, unless some publication of the same general appeal as newspaper A turns up. Quite often such a publication will not be found, and the result then will be that the Government will have weakened the financial foundations of the newspaper industry as a whole. There are other strongly competing advertising media in this country, such as the radio, cinema, posters and leaflets. If certain newspapers can get substantial contracts for advertisements, it is only after struggling against these media, and not merely by sinking their own smaller cousins. There is nothing the Government can do to restrain the revenue earned by these other advertising media in competition with small and young newspapers; why, then, should it seek to subdue the attractions of the bigger and older journals, on the quite erroneous assumption that they alone hold the lesser rivals down?

It is clear from ministerial speeches during the Rajya Sabha debate that the Government itself has no clear idea what the effects of the price-page schedule will be. Dr. B. V. Keskar, Minister for Information and Broadcasting, virtually admitted that the proposal was being adopted after "strong pressure" from various newspapers and members of Parliament. The Government, he said, had been "very reluctant" to take the powers under the new Bill, and "had tried not to have any such things thrust on it." The surrender to pressure is unfortunate, and not only because there is no limit to when or where it might end. As long as there are newspapers which think that they have neither enough readers nor enough advertisements—and such newspapers are in the majority everywhere—there will always be pleas and suggestions to extend such protective umbrellas over their heads. To assuage their jealousy by tying down their bigger and more successful rivals is the surest way of putting shoddy, superficial and third-rate reading matter in the hands of the Indian public. If the intention is that there should be more newspapers, and more prosperous ones, the remedies probably lie in other directions. For the time being, at least, ambitions must be qualified by the fact that when readership is limited, the number of newspapers cannot be unlimited. The readership needs in each case to be increased by an improvement in quality, and that is a matter for newspapers to tackle individually and together. Only strong competition can ensure that standards are maintained and improved; this means that newspapers must be allowed to strive freely for wider audiences who buy them for their quality. As the circulation increases, the volume of advertisements is likely also to increase, and the two together should ensure the financial health of the industry. With financial prosperity would come also the scope for starting more newspapers, and for recruiting better brains. The concept of the price-page schedule seems likely to work in precisely the opposite direction—by weakening the few units which are financially viable, and by bolstering today's multitudinous symbols of mediocrity.

CHANGING TRENDS IN WORLD TRADE

KEEPING PACE WITH HIGHER PRODUCTION

THE expansion of international trade which began in 1952 has kept pace with the rapid growth of the world's industrial production. Between 1950 and 1955 the volume of both world exports and world industrial production increased by 31 percent to 32 percent. This is one of the statements contained in a report on recent developments in the structure and pattern of international trade issued in Geneva by the contracting parties of the General Agreement on Tariffs and Trade. This interesting analysis (*International Trade, 1955*, published by the United Nations) brings out a number of little-known recent developments in world trade.

Not only did the volume of trade increase by nearly a third in five years, but the rate of growth was accelerated year by year. The report notes three major developments.

(1) The rise in world exports last year was again mainly accounted for by trade among industrial countries, while the relative importance of the non-industrial areas continued to decline—both as suppliers to the industrial areas and as markets for their products.

(2) There was a revival of North America's exports due largely to the growing dependence of western Europe on supplies of American raw materials and fuel.

(3) Many industrial countries have been induced by growing competition in world markets to lower their costs of production, and, therefore, to rely more heavily on imports from the most economic sources of supply. To that end they have adopted more liberal import policies.

Trade among industrial countries last year reached 38.7 percent of the total world trade. It has been steadily increasing. On the other hand, the share of trade between the industrial and non-industrial parts of the world is shrinking. In 1937 it was 55 percent; in 1955 it was only 50.7 percent. The main causes of this important change in the pattern of world trade are analysed in some detail. One of them is the relative decline of the textile industries in the industrial countries.

Commenting on the liberalisation of dollar imports in western Europe, the G.A.T.T. report points out that in 1955 the imports of the eleven western European countries from North America rose by 38 percent, while their total imports from all other sources rose by only 12 percent. However, this increase in dollar imports does not seem to be directly due to the relaxation of import controls but rather to the greatly increased European need for raw materials, especially metals, and for fuels.

A feature of world trade last year was the relative stability of average commodity prices. This applied to both primary products and manufactures, although in both sectors some individual prices rose sharply. Another trend brought out by the report is the growing competitive advantage of the eastern European countries in the supply of capital goods. It is suggested that eastern European costs will benefit from closer exchange of technical information and designs, and from a higher degree of specialisation. The Communist countries now appear able to ship capital equipment and semi-manufactures "as readily as the industrial countries of the western world." Discussing the specialisation of eastern countries, the report says that Czechoslovakia, for instance, has increasingly concentrated on the export of machine tools, power plant and motor vehicles. East Germany has specialised in electrical machinery and precision instruments, and Hungary in barges, diesel locomotives and electrical appliances. Poland is offering railway rolling stock, mining equipment and power machinery, while Rumania exports oil-drilling equipment, pipes and tubes.

In dealing with less-developed countries outside the Communist bloc, eastern Europe is also gaining advantage from a readiness to accept payment in kind over a number of years. "They are prepared to buy important amounts of raw materials and foodstuffs," states the report, "which in certain cases would have been difficult to dispose of in world markets."

On the other hand, "the sporadic nature of the exports of certain commodities to eastern Europe and China, and the rapid transfer of orders from one source of supply to another which have been noticed in recent years, do not seem to give to the non-industrial countries the kind of stability which seems to them essential for their economic development." Quoting recent examples, the report refers to sharp fluctuations in Russian purchases of dairy products and cocoa, and "abrupt shifts" in the sources of supply for cotton, wool, rubber, meat and cereals from the rest of the world.

CURRENT COIN

Sen-Raleigh Expanding.—Mr. S. K. Sen, chairman, gave an encouraging account of the progress of Sen-Raleigh Industries of India Ltd. to the company's shareholders at the annual general meeting in Calcutta on Tuesday this week (a fuller report of his address appears on a later page). The company is paying its maiden ordinary dividend of six percent tax-free for the year ended 30th September, 1955. This has been possible because of a rise of more than Rs. 6.5 lakhs to over Rs. 11 lakhs in the net profit, which in turn is due to a rise of Rs. 24.75 lakhs to Rs. 112.95 lakhs in turnover. Normal depreciation has been written off and a general reserve created. Mr. Sen reports that the company ended the year with record orders on its books for both bicycles and components. Sales of all products showed an increase, and orders were in excess of production capacity in all lines except bicycle chains. Sen-Raleighs have substantial plans for expansion. They have asked the Government to sanction an increase in capacity which will enable them to raise output to 200,000 bicycles and 500,000 sets of components. Additional capital will be required to finance these expansion plans and the others already in progress. The company therefore intends to approach the Industrial Finance Corporation for a further loan of at least Rs. 15 lakhs. The advisability of getting the remainder of its share capital subscribed is also being considered. Mr. Sen makes an encouraging reference to the growing popularity of Indian bicycles, but urges the Government to be cautious in framing its future import policies.

Burrakur and Standard Collieries.—A general meeting of the shareholders of the Burrakur Coal Company is to be held in Calcutta today. The meeting has been called to consider the proposal made by Burrakur's directors and those of the Standard Coal Company Ltd. for amalgamation of the two concerns. The Standard Company has an issued capital of Rs. 8 lakhs divided into 80,000 ordinary shares of Rs. 10 each. The company's colliery was sold on 1st October, 1952, and since that date, except for fixed assets valued at Rs. 1,43,060, the entire assets of the company have consisted of investments. It is pointed out that Standard Coal is now virtually an investment company and that, as its business should be primarily coal-mining, it would be in the best interest of the shareholders to amalgamate with a first-class company like Burrakur. The directors of the Burrakur Coal Company say that an extensive development and expansion programme is now on hand and that large sums will be required for it. The alternative to raising a debenture loan or increasing the company's equity capital, both of which might be difficult and expensive expedients considering the present uncertain conditions in the coal industry, would be to amalgamate with the Standard Company and use its current liquid assets, valued at over Rs. 20 lakhs, to help finance the development programme. This step, Burrakur's directors point out, would increase the capital liability of their company to only a limited extent. It is therefore proposed that the entire assets and liabilities of the Standard Coal Company Ltd. should be transferred to the Burrakur Coal Company Ltd. in exchange for the issue of two ordinary shares of Rs. 10 each for every fully paid-up ordinary share held by the shareholders of the Standard Coal Company Ltd.

Collective Action by Business.—The business men's meeting, held in New Delhi last week under the auspices of the Federation of the Indian Chambers of Commerce and Industry, may represent the beginning of concerted opposition to the increasing State incursion into foreign trade. If the business community is to present a good case to the doctrinaires of New Delhi, it is clear that this is an indispensable method of doing it. The Government is not usually impressed by sound economic arguments unless there is a direct appeal to its political ideology, but lately a softening of attitudes has been evident, and there are welcome signs that the Government is paying more attention to economics than before. Mr. Babubhai Chinai, Vice-President of the Federation, who addressed the meeting, was both shrewd and sagacious in the observations and suggestions he made. Mr. Chinai was clear that the decision of the State to enter foreign trade was wholly political, although he did not want the policy itself to be challenged because that he considered would be practically useless. But while offering this counsel, he also reviewed all the issues arising out of State trading, particularly as they affect the interests of the business community. He recalled Mr. Krishnamachari's statement on the rationale of State trading in which the Union Minister had said that it was meant primarily to stimulate trade, mainly export trade and incidentally import trade, and in doing this, to fill many gaps in the existing trade mechanism. The Government had, however, given no assurance that State trading would be restricted to any particular lines, and

as things stood today, the issues arising could be classified broadly into these three categories: (1) the effect of State trading on foreign exchange earning and the reaction to it of overseas buyers, (2) its effect on the activities of mine-owners and shippers and (3) the need for co-operation between the State Trading Corporation and private trade. On the first two issues, Mr. Chinai cited a number of reasons why State trading would have some adverse effect on mine-owners, particularly smaller ones, and why foreign buyers would prefer to deal with private traders, thus making the point that further encroachment of the State on foreign trade would be undesirable from these points of view. On the third point convincingly proved that if anything went wrong with the iron and manganese ore export trade, it was mostly due to Government policy. Wagon shortage was a problem for which private traders were not responsible, and State trading could not be represented as an answer to that by any stretch of logic. He substantiated his arguments with the following facts. In 1953-54, manganese ore exports reached the level of 1,500,000 tons, i.e. 60,000 tons higher than the target fixed for 1950-51. But as a result of the quota system, introduced since October, 1953, inadequate transport facilities, violet price fluctuations and the lack of handling facilities at the ports, the exports have declined. Iron ore exports reached the very high level of 1,363,000 tons in 1955-56, entirely handled through private trade. In the circumstances, Mr. Chinai wondered how the argument that the private trading mechanism was inadequate could possibly hold true. Yet there was the heartening feature that the chief of the S.T.C. had declared his willingness to hold consultations with industry and trade and "to utilise the existing trade channels to the extent possible." He wanted the business community to take advantage of this, and form consultative bodies to be in touch with the Government on matters of trade, be it in ores, cement or vegetable oils—the other two lines which the S.T.C. has decided to enter or in which it is preparing to participate.

Trade With Burma.—The recent visit of Mr. Lalji Mehrotra to Madras produced many suggestions for removing difficulties in trading with Burma. The import of pulses into south India has been seriously delayed this year. Prices in Madras and elsewhere have been rising steadily because supplies from Burma as well as from north India have been held up by transport shortages and other difficulties. Burma is a major market for groundnut oil, and has often paid better prices than the U.K. for oil in drums shipped from Madras. But there is no quota for groundnut oil exports, so the Oils and Seeds Association asked the new Indian Ambassador to Rangoon to enquire which other vegetable oils would be acceptable. It is thought that vanaspathi might find a market in Burma. Complaints about rough handling at Rangoon port were also put forward and attention drawn to the increased expenditure resulting from port delays. Trade with Burma was once substantial but today India holds only third place as a trading partner. That is due partly to the end of tariff preference and partly to the fact that India cannot provide capital for Burma's rehabilitation. The reduced imports from Burma during 1955 cannot be ignored in assessing trade changes or prospects. As a source of raw rubber, Burma may become more important, but whether planters in south India will approve of this is doubtful. Raw cotton and groundnuts, which are available in limited quantities, might feature in exports to India. Indian exporters have not so far complained against State trading by the Burmese Government and have also refrained from criticising the export duties on rice and timber. This is perhaps because Burma's need for revenue and India's own fiscal policy render criticism futile. South India should be doing well out of the advance in prices this year for oil, pulses and condiments exported to Burma. The appearance of Japan as a new rival is explained by the reparations agreement, which accounted for the sharp increase last year in the flow of Japanese goods into Burma. There is, however, an agreement to supply Indian yarn and textiles for Rs. 185 lakhs and the payment will be made in the form of U.S. cotton.

Welfare Burden on Tea.—Welfare burdens increase for all major industries as the Indian Government administers its socialism to the economy in doses, but the tea industry, it would seem, has been made to shoulder more than a fair share of the burdens. Labour welfare in itself is a good thing, and the present impositions would be wholly desirable were it not for the fact that the cost of this welfare, together with taxation, has been seriously impairing the tea industry's competitive strength in overseas markets. This industry is a major foreign exchange earner, and affords employment to thousands of workers. These are important reasons why it should deserve fair, if not special, treatment during the second five year plan, during which it is expected to increase its output to 700 million lbs and maintain exports at the level

of 500 million lbs. But placing present market conditions against a background of constantly rising costs, and the average prices available to it, the industry fears that it will soon face a crisis on the scale of the one it did a few years ago. Yet the Government shows no keen awareness of this situation, and State Governments vie with one another in enforcing social security measures. Mr. H. C. Kothari, chairman of the Association of the Planters of the State of Madras, stated at this body's recent annual general meeting that the welfare cost to the industry in the State, under the Madras Plantations Labour Rules enforced since January this year, was staggering. "The full implementation of the Rules over a period of, say, 10 or 15 years," he calculated, "will give the worker an invisible wage increase of from 25 to 50 percent by way of cost of amenities, will give him free housing of a standard undreamt of by the ordinary agricultural worker of today, hospital facilities of a standard which even many mofussil towns in India do not have, free primary education to his children, free feeding of his children in well-appointed creches, free recreational facilities and maternity benefits for women workers which are 50 percent higher than in any other industry." The cost would correspondingly rise and Mr. Kothari feared that many small units would not have the strength to stand up to the burden.

India's Export Prospects.—With textile exports falling and the prospects for jute goods, another staple item of export, dimmer than usual, the problem of foreign exchange for the second Indian plan has lately come into sharp focus. The planners anticipated a gap of Rs. 1,120 crores in the country's balance of payments during the current quinquennium, and had hoped that the country's exports would rise at a rate sufficient to bridge this gap, with some windfalls of foreign assistance. But the trend of events must have disappointed them already. Exports have not been rising at the expected rate because competition in overseas markets has stiffened and, to make matters worse, a sharp inflationary pressure has made itself felt in the domestic economy. What this means for the plan needs little explaining, but it does seem that a far more resolute drive than has been made, so far is called for to save the situation. This is what Mr. K. P. Goenka, in the course of his presidential address, told the first quarterly general meeting of the Indian Chambers of Commerce, Calcutta, last week. After a detailed analysis of the events that have led to the present unhappy state of the trade balances, he stated his conclusion plainly that "the success of the plan would largely depend on the measures taken to augment the country's foreign exchange resources", and he suggested some of the measures that should be taken promptly to arrest the deterioration. Foreign aid could be a painless way of bridging this huge gap, but Mr. Goenka, like many others, does not believe that sufficient foreign aid will materialise. He, therefore, urged that efforts be made to "create conditions for such foreign enterprise as are already established in India to retain their interest in the country", so that the surplus indigenous capital can be invested in fresh enterprises. Among the measures he suggested to keep the payments balance in reasonable shape were those (such as lower tax rates, less of welfare by legislation, and a wider and more intelligent study of overseas markets) which could increase the competitive strength of Indian exporting industries.

INDIAN TEA ABROAD

THE rapid strides that have recently been made in the consumption of Indian tea in America and Australia would seem to justify the assumption that the conversion of our cousins to a taste for our teas will not take a tithe of the time which elapsed ere the average of 5 lbs per head of the population of Great Britain was reached. It must be remembered that, with the exception of the outturn of the Assam Company, no Indian teas worth mentioning were put upon the London market until 1862, and certainly they were not calculated to recommend themselves to public favour. Scarcely two factories pursued the same method of manufacture, in consequence of which there was so little uniformity that the dealers and brokers were in despair, and it was not until 1868 that Indians really began to attract attention in Mincing Lane, but for the subsequent three years, dealers purchased Indians merely for blending with the lower class of Chinas. From 1869 a demand gradually arose for the unadulterated article, from which time home consumption has steadily increased; and, though there is a considerable section of the public who still cling to the higher class of Chinas, such as that vended by Twinings, Newmann and other well known houses, even they are gradually veering round in favour of Indians. We may take it for granted therefore that within the next two years the demand for Great Britain alone, reckoning on the last census, will amount to 185 million pounds.

Without Prejudice

THE RIGHT TO WITHDRAW A RESIGNATION

HIGH COURT ACCEPTS PETITION OF EMPLOYEE

(FROM OUR LEGAL CORRESPONDENT)

THIS case has to do with the word "resignation". Resignation, that is, by an employee from his post, the right, if any, of the employee to withdraw it after it has been tendered, and the right, if any, of the industrial tribunals to quash the acceptance by an employer of a resignation after it has been tendered by an employee. Now, the average employer in a big way of business has generally a pretty sound idea of his general legal rights in the matter of dismissal. He knows he must prove disobedience, misbehaviour, infidelity, negligence or dishonesty before, generally speaking, he can "sack" a man without notice. He also usually has a sound idea as to his right to discharge a servant by notice and what period of notice he ought to give; and, though still imperfectly, he is beginning to apprehend with a fair amount of accuracy, how far these rights of his existing, as they have done for generations at common law, have been encroached upon and largely superseded by the Acts relating to industrial disputes.

Wherefore it seems odd, but is nevertheless a fact, that the ideas of that same employer on the subject of resignation by his employee are usually extremely hazy. For example, fairly recently, at a club committee meeting, the secretary, in a huff at not getting his own way, rose to his feet, planted his minute book and papers in front of the chairman, and after saying, "I resign," walked out, following up the verbal intimation a few minutes later with a formal written letter of resignation "with immediate effect". There were

on that committee two lawyers, judicial officials and business men of wide experience. Yet, though they, each one of them, knew that the secretary had been appointed by a general meeting to serve for 12 months, it did not occur to a single one of them to point out that the resignation, so-called, was totally illegal and inoperative. All they were concerned with was to induce the secretary, a valued friend, to withdraw the notice which he had had no right to give.

So we will investigate this matter of "resignation" by an employee. "The word 'resignation,'" says Mr. Barwell in his and Mr. S. S. Kar's well-known work, "is not a Term of Art", and adds not quite accurately, "It only means 'give up.'" It is the verb "to resign" that means "to give up." "Resignation" means the relinquishing of an office or, a document announcing this, as "I sent in my resignation". But there is another requisite. In order to make the resignation effective, it has to be accepted. Resignation by a servant does not operate as discharging the contract by bringing it lawfully to an end unless the resignation is accepted by the master. When that is the case, the parties have by agreement determined the contract. But if the resignation is not accepted, the servant remains bound, and should he choose to withhold his services, his conduct will be a breach of the contract entitling the employer to damages. "A contract of service," said Jenkins C. J., in an old Bombay leading case, "is continuous in its nature and its continuance and the obligations under it can only be terminable in certain defined modes. Mere resignation is not enough unless it is assented to or unless it complies with those terms which the law implies or the prior agreement of the parties may permit."

Again, a resignation, to be enforceable as such by the employer, must be genuinely such—a voluntary act performed at the free will of the employer. We often hear of "so and so" being

"allowed to resign". That may be all right in the case, say, of a Chancellor of the Exchequer who has allowed a budget leakage or an army officer who, to escape a court martial, is offered the more merciful alternative of resigning his commission. But cabinet ministers and officers of the armed forces are governed by traditional customs and regulations. In the ordinary everyday relationship of master and servant, an employer cannot hold a pistol to his employee's head and say, "Resign, or else...." Such a so-called resignation is not a resignation at all. It is "the sack", and as such opens up the risk of a suit for damages for wrongful dismissal. If an employer takes upon himself to call for his employee's resignation, and to do so under such conditions as amount to duress, as, for instance, if he should indicate that the consequence of not resigning would be dismissal, the employer does so at considerable risk. If the employee purports to resign for fear of dismissal, if he does so he has really been blackmailed into "resigning" and the courts may hold later that he has not resigned at all but has been illegally dismissed.

Thus in *Stephenson v London Joint Stock Bank Ltd.*, where a bank clerk was "required to resign," he was held to have been dismissed, the Lord Chancellor (Lord Halsbury) observing that "the use of polite instead of peremptory language did not alter the fact." In an Indian case, *Abraham Rueben v Karachi Municipality* the principle is clearly laid down. "The test to determine whether a person has resigned his services or has been dismissed therefrom is whether the actions and conduct of such person evince an intention no longer to be bound by the contract of service; on the other hand, if the conduct of the employer amounts to a basic refusal to continue the servant on the agreed terms of employment, then there is at once a wrongful dismissal and repudiation of the contract, even if the servant leaves service in pursuance of a request to resign."

Looking at the situation in reverse, the employer is not unprotected. Take the not infrequent case of an employee who, of his own volition, resigns lest worse befall. He knows, let us assume, that his conduct has been bad, that it is being investigated, that discovery is certain and eventual dismissal inevitable. So, in order to receive his provident fund and other amenities intact, he pushes in his resignation. No good. The employer's remedy is to refuse to accept the resignation, and, if the facts of the case justify him in so doing, to dismiss the employee.

The above summarises the general law on the subject which, however, we must remember, is liable to modification in cases to which the Industrial Disputes Act applies, having regard to the wide discretionary powers of the Tribunals. The latest decision on "resignations", one of the Allahabad High Court, is not concerned with the Act but deals with the interesting point as to how far, if at all, an employee is entitled to withdraw his tendered resignation before it has become operative and before it has been accepted by his employer.

The petitioner had been working as the superintendent of the Municipal Board, Auraiya, in the district of Etawah. Certain charges were framed against him by the president of the Board. They were investigated and were ultimately dropped on 27th September, 1954, so that the petitioner was completely cleared. On 24th February, 1955, a letter, which purported to have been received by the general clerk of the Board, was written by the petitioner. The purport of this letter was that, on account of certain reasons, the petitioner was unable to discharge his duties as superintendent of the Board, and under those circumstances he submitted his resignation, which he prayed should be accepted. This latter of resignation, though it purported to have been received in the office of the Board on 24th February, 1955, was dated 1st April, 1955. Now, if the president, being duly authorised by the Board so to do, had promptly accepted the resignation, the matter might have been at an end. The superintendent might have been out of his job. But the president did not do so, and the superintendent thought over things again and by a subsequent letter prior to 1st April, 1955, he withdrew or purported to withdraw his resignation, saying "he saw no reason not to serve the Board from 1st April, 1955." The president saw reason for the petitioner "not to serve the Board from 1st April, 1955," and rejecting the application for the withdrawal of the resignation, accepted the resignation with effect from 1st April, 1955, and directed the superintendent to hand over charge to the assistant superintendent. Whereupon the petitioner came to the High Court asking for an order setting aside the president's decision and confirming him in his position as superintendent. His case was that his letter of resignation, though handed over to the president on 24th February, 1955, was dated 1st April, 1955, and was not to come into effect until 1st April, 1955. Up to 1st April, he claimed that in the eyes of the law he was entitled to write to the president asking him not to consider his resignation application. In short, his contention was that it is open to a servant to withdraw his resignation before it became actually operative. The High Court accepted this view, quoted the president's order and confirmed the petitioner in his position as superintendent.

HOW considerate of the State bus drivers to arrange a jam on Hazra Road the very day the Calcutta Police launched their new traffic control scheme. We owe it to them for providing a reminder that not all the city's traffic problems are the result of poor roads and poorer driving; some are due to simple human perversity. I am not denying the part the police can play, although we have seen too many of these bursts of enthusiasm die speedy deaths, and it has usually been my experience that policemen are better at causing traffic jams than preventing them. But I do feel that a few wireless vans are not going to provide the cure for all Calcutta's typical traffic "types". I remember naming some of them a few weeks ago. One or two more have occurred to me since then. What, for instance, can the police do to stop the oncoming driver with the glaring headlights who switches off in deference to one's attempts to play him at his own game, only to flick them on again when he knows it is too late for retaliation? And what of the character who commits the most outrageous of traffic offences right under one's nose and then, in response to a richly deserved cussing, turns a face which reveals stupidity and unrepentance in just about equal amounts? How, may I ask, is it possible to get elementary traffic regulations and courtesies respected by a man who is incapable of feeling a fool? Drivers are not always to blame. Equally reprehensible is the policeman at the busy crossing who stands well back where he knows you cannot see him and then takes your number when he finds you haven't; the one who leans on his umbrella with one hand while he picks his nose with the other; the dreamy one; the argumentative one; the one who interprets his job of keeping the traffic moving at crossings as a duty to empty all minor roads while cars pile up in their hundreds on the main ones. But however limited wireless patrols might be, there is one bit of good they can do and that is to save from death or mutilation the unfortunate driver who is involved in an accident with a pedestrian. That may be another psychological problem—a feature of life in India which somebody the other day called "mobocracy"—but it is one which might respond to determined physical treatment.

The Appleby report is such an important document that I can perhaps be excused referring to it again this week. It raises a number of vital issues, but from among them I propose to touch only on a "popular" one, namely, the delay in the governmental administrative processes. This is a subject the public is fond of pecking at, and not without good reason. Mr. Nehru himself once complained that the Secretariat is a bewildering labyrinth, but that is no good reason why men and files should contrive to get themselves into such an inextricable tangle when they enter it. It may be partly due to the newly-promoted subordinate who has not yet been able to acclimatise himself to a senior post or, perhaps, as Mr. Appleby suggests, to the prevailing custom of not delegating responsibility to "other ranks". There is a further cause which also contributes. It was pointed out, not without a certain mordant humour, by Mr. A. D. Gorwala when he produced his report on administrative reforms some years ago; it is the mania which certain officials have for "doing" a file well. Describing how files inch their way through Government offices, he mentioned how, if they are kept pending for long, whatever the reason, they tend to develop a volition of their own, one that frequently expresses itself in an acute aversion from movement of any kind. A third cause—it has been suggested in some quarters that it is a recent phenomenon—is defective draft-

A DITCHER'S DIARY

I have heard it said of the new Companies Act that, especially on some points, its draughtsmanship leaves much to be desired. Almost every new case calling for a decision is rumoured to necessitate a correction so that—though this is no doubt sheer exaggeration—the original Act has become practically obliterated by the corrigendum slips pasted over it. Yet another cause is the hunt for precedents. I read some time ago that Dr. B. C. Roy was once kept waiting weeks for nothing more complicated than a set of tumbler just because the Finance Department was unable to find a precedent for such a requisition.

I did not agree with all the things Mr. John Sherman Cooper used to say when he was America's ambassador here. Although I admired his grasp of India's point of view, I often considered he did not do justice to that of his own country. But I could not agree more with what he said in San Francisco the other day about Portugal's relinquishing her hold on Goa. And I could not imagine a better time than now for her to do it. This year's Independence Day went off without a single incident on the border. It is more than a year since the last one of consequence took place. Portugal has never had a better opportunity of accepting the inevitable and saving her face as well. She would be doing the rest of the western world a good turn too. Mr. Cooper is right when he says that one of the main reasons the United States attitude is misunderstood in Asia is its apparent association with such obvious examples of unrepentant colonialism. He might have broadened his statement to cover the whole western attitude, because there is no doubting the damage which a hatred of colonialism has done to popular Asian thinking on, for example, the Suez Canal problem. There can be no other explanation of the apparent contempt which has been shown by people who would shrink from calling themselves fascists, for such an important moral question as the sanctity of contractual obligation and such an imperative practical one as whether Asia's lifeline should be left in the hands of a person who is no less a glutton for power and no more a man of his word than were Hitler and Mussolini. It is this out-dated, though understandable, prejudice against colonialism—that is retreating everywhere in Asia excepting Goa—which is helping the Soviet Union turn the Canal question to her own advantage in the cold war. The west must be regretting bitterly that its point of view is so determinedly misunderstood among ordinary Asians whose desire for peace and democratic freedom is every bit as strong as its own and whose grasp of international complications is not yet as admirable as that of Mr. Nehru and Mr. Menon. But while Portugal remains in Goa against India's wishes, it can expect nothing else.

Golf is the answer to the exercise problem for most of Calcutta's business men nowadays. A good one it is too, although there are certain Bacchanalian rituals attached to this particular sport whose health-giving properties are apt, occasionally, to be over-rated. But some people do not like golf—I must confess to being one myself—and for them the solution to the stiffening joint and the thickening waistline is not so simple. The climate is too hot for much walking; the mountains are a long way off; horses are expensive and difficult to keep; tennis is strictly for the energetic; and not everybody likes water well enough to want to swim in

it. There is, of course, Scottish country dancing, but that, or so it seems to me, is one of the most painful ways to an early grave yet devised by mortal man. I suspect there are many ditchers who are looking for just the right kind of exercise, one which does not, for instance, require too much exertion, involve too much expense, or demand too close an association with disreputable animals. The field is narrow; in fact there seems to be only one thing left—yoga. The fact of there being so many Central Government Ministers, eighty-four M.P.s and many civil servants taking regular yoga lessons, as Mr. Nehru disclosed last Saturday, is not necessarily among its best recommendations. But the Prime Minister's own practice most certainly is. If we could look forward, when our years are as advanced, to one tithe the energy he always seems to have, we should have no cause for complaint. I do not know how much of it Mr. Nehru attributes to his twenty-five years of yogic practice or how much to his temperate habits—and however we may regret the fact, there is no denying how important these are. Yoga has always struck me as being the ideal recreation for India. It can be practiced in reasonable comfort, although some of the photographs of *asanas* that I have seen suggest otherwise. It is inexpensive, although I am told a good teacher is essential. It can be indulged in concert with others, or, if preferred, can be limited to the confines of one's own bedroom. I still cannot decide whether it is possible to divorce the exercise part from the rather more doubtful mystical side. But I have been advised that it is.

It will, I am sure, be readily conceded that the present-day worker asks for and gets too much molly-coddling: tea at the work-bench, music, welfare amenities, this facility and that and, of course, the special emoluments, all too often unrelated to productivity, with which two world wars have made us familiar. When a worker happens to be woman, which is often nowadays, the employer has to inveigle her, in the U.K. for example, with promises that the job will not coarsen her hands, damage her finger-nails, or otherwise ruin her ensemble. It is perhaps fair that when employers prosper, workers should benefit. But in all countries where the worker is not being driven along with a pistol at his head, industry's largest single affliction is the continued demand for wage increases. In Britain, at the moment, the Confederation of Shipbuilding and Engineering Unions seems determined to push its demand no matter what the effect on export prices or the Government's fight against inflation. In such a bleak situation one may perhaps be permitted a nostalgic reference to an age when a contented worker was not a myth, as he seems to be now. I happened recently on a copy of *A Plan of the English Commerce* by Daniel Defoe who—strange quirk of fate—is today known only for his *Robinson Crusoe* and that, too, in tabloid form fit only for juveniles. Yet, more than two centuries ago, he was an indefatigable journalist and miscellaneous writer as well as being a novelist, and may be said to have helped lay, with others, the foundation of the modern English prose style. In portraying the typical English worker of his day Defoe says: "But let any Man see the difference of the Work, these (English workmen) need no Music, the Feast (i.e. good food) is better than the Fiddle, and the pudding does more than the Bagpipe; in short they work with a Vigour and Spirit not to be seen in other countries." How times change.

Company Meeting

SEN-RALEIGH INDUSTRIES OF INDIA LIMITED

CHAIRMAN MR. S. K. SEN'S REVIEW

Addressing the Sixth Annual General Meeting of Sen-Raleigh Industries of India Ltd., at Calcutta, on the 28th August, 1956, Mr. S. K. Sen, Chairman, said:

It is my pleasant duty to place before you the Accounts for the year ended 30th September, 1955. You will no doubt agree with me that the Company has made definite strides during this year. The results are encouraging and satisfactory.

The nett turn-over recorded a further increase from the previous figure of Rs. 88,20,000 to Rs. 1,12,95,110—an increase of Rs. 24,75,110 over the previous year's sales. The nett profit in the period has risen by over Rs. 6.5 lacs to Rs. 11,07,056 and this has fulfilled the expectation held out in my speech last year about the early payment of Ordinary Dividends. Operating results this year have allowed your Directors to recommend payment of the first Dividend of 6% free of income-tax for the Ordinary Shares of the Company whilst maintaining payment of the 5% Tax free Dividend on Preference Shares. This has been made possible after writing off all previous losses, initiating the creation of a General Reserve, and writing off normal depreciation. The total depreciation written off in 4 years of operation has been to the extent of Rs. 21 lacs.

Another notable event benefitting Shareholders has been the acceptance of shares of the Company by the Native Shares & Stock Brokers' Association for enlistment in the Bombay Stock Exchange. Members will be pleased to learn that reports from Bombay indicate that the Ordinary Shares have been at a premium since enlistment.

The Shares of the first and second issue, not being fully paid up, have been forfeited and steps have also been taken to re-issue the forfeited shares out of the first issue.

A welcome feature of the Bicycle Trade in 1955 appeared to be the acceptance by the Indian market of Indian Bicycles as a mainstay of the trade. This resulted in profit margins being established on almost all Indian products as opposed to the feature in previous years when the profit arose mainly from the very restricted imports, and the Indian products were held to be a secondary source of supply.

Realism

This reorientation of thought amongst the Indian traders was a necessary corollary for further expansion and consolidation of the Indian Bicycle Industry. I have often called for a realistic attitude and objective for dealers, and I am glad to say that within my lifetime I have lived to see the day when the Indian Bicycle is standing on its own, in quality and consumer demand, against all comers, and returning a reasonable profit to dealers.

Your Company closed the year with record orders on its books for both bicycles and components. All products recorded increased sales, and orders, as usual, were in excess of production capacity in all lines except in the case of bicycle chains. The position in regard to chains had been affected due to large imports and low rates of duty, under various heads other than as bicycle accessories, and this had created a glut on the market. Repeated and continuous representation to Government have produced some check on such activities, and it is hoped that the position regarding chains will improve in the near future. It is admitted that our chains stand supreme for quality, endurance and value.

Government policies regarding imports continued to follow the pattern set in 1954 of fairly liberal licences for Bicycles and Components. Liberalisation to this level, however, did not affect the indigenous manufacturers' sales to any great extent, although the imports did bring down profit margins on the imported bicycle range. If, however, the experiment is continued, it may endanger production by the Indian industry, and care should be taken by the Government in framing future import policies so that the expanding industry is not affected adversely. The demand for the Bicycle in this country has grown continuously over the past few years, and the year 1955 was not only a record production year for your Company, but also for the Indian industry. With a production of about 550,000 cycles, and in import of 150,000 bicycles, the consumption of bicycles this year constitutes an all India record.

All indications are that India will take its place amongst the premier Bicycle manufacturing and consuming countries in the World, and I am glad to say that Bicycles have been given reasonable prominence

in the Second Five Year Plan by the Indian Government. The Development Council for Bicycles, a body formed some years ago by the Government of India, representing Industry, Trade and Consumers, to advise on the Indian Bicycle Industry to the Commerce and Industries Ministry, had been asked to submit to the Indian Government its views on what targets should be framed for the Bicycle Industry in the Second Five Year Plan, and a target of 1.25 million Bicycles to be made in India by 1961 was advocated by the Council and accepted by the Planning Commission. Your Company expects to play a prominent part in the fulfilment of the Second Plan as it has done in the first. To this end applications have been made some time back to the Government of India for increases in capacity to be allowed to your Company to raise production in the Bicycle wing to 200,000 Bicycles, and the Component wing to half a million sets of Components. Plans for such expansion are already under active preparation at associate factories in the U.K. and the Continent at the instance of your Directors.

New Plans

These expansion plans along with the plan for manufacture of Freehubs and Bottom Bracket Axles, for which plant is now in order, or in the way, will make further calls on the Capital of the Company, and it has been thought prudent by your Directors to approach the Industrial Finance Corporation for a further loan of at least Rs. 15 lakhs. They have also considered the advisability of getting the balance of the Company's Share Capital subscribed.

All the expansions are expected to take place within the Second Five Year Plan period, and to help in the implementation of these plans, Mr. L. C. Clarkson, Works Director of Raleigh Industries Limited, visited India early in 1956 for a first hand assessment of the situation.

Whilst considering the Second Five Year Plan, your Company has also considered the wider aspects of the Government's Policy for raising the standard of living in the country, and as its contribution on the social side, has planned an extension of housing benefits to cover the majority of its Asansol factory workers at Kanyapur. A start was made with 200 houses last year, of which 144 have already been built, and 56 are held up due to the cement shortage. Further quarters for housing Executive Staff, Clerical Staff and Workers are expected to be developed during the Plan period.

Encouragement of the Small Scale and Cottage Industries and Co-operatives as a policy by the Government is not likely to affect the Large Scale Industries in view of the ever growing demand. I must, however, emphasise the fact that the Large Scale Industries are essential to the progress of the country in maintaining standard quality, obtaining, initiating and applying new techniques and improvements and design, and as such, has a special function to fulfil, and deserves equal encouragement from the Government. The Small Scale Component manufacturers with a production of Rs. 1.75 Crores as against estimates of a production of Rs. 5 Crores required for replacement purposes on over 3 million bicycles on the road will necessitate supplementation from the Large Scale Industry for self-sufficiency.

The Companies Act of 1956 calls for a considerable revision to the existing Articles of the Company, and some of its Amendments.

The Industrial Finance Corporation of India would also require some amendments to be incorporated within the Articles to bring these in line both with the requirements of the new Act, and the Industrial Finance Corporation. The opportunity will be taken to alter some of the main Agreements of the Company where working difficulties have been experienced due to technical reasons. Shortly after this meeting we hope to be able to place before you such amendments as are necessary in the Articles and the Agreements for adoption by you to regularise the position of the Company.

Before closing, I would like to thank all Shareholders who have attended this meeting, and all those who have been unavoidably absent, but who have given their full support to our policies generally, and I would also like to pay tribute to my colleagues on the Board, to the Management, Staff and Workers, and Overseas Associates, for the assistance they have all given to the Company towards the achievements of the year.

Finance in India and Abroad

THE CALCUTTA MONEY MARKET

FUNDS STILL EASIER

Tuesday, 28th August.

THERE has been little change in the money market during the past week. Demand for funds remains easier and there is still a general return of advances from the various sources of demand. Similar easiness is reported from the inter-bank market this week, but the call rate is unchanged at 3½ percent.

The bill market has been rather quieter. Few tea and gunny documents have been reported, but the volume is considerably less than last week. Remittance has been fairly good demand. Sterling continues to improve, largely, it is suspected, because of the activities of the British Treasury's exchange equalisation fund. The American dollar quotation is unchanged at Rs. 480½.

The improved supply of funds in the money market should help the State Government loans, a detailed announcement of which appears on page 288 of this issue of Capital. Fifteen State Governments are to approach the market this year for a total of Rs. 64 crores at prices between Rs. 99.4 percent and Rs. 100 percent. All loans will become due for repayment on 3rd September 1968, except that of the Government of Bombay which will be repaid at par on 3rd September 1970. The loans will be open for subscription on 3rd September and will close on 10th September or earlier. All the State Governments reserve the right to retain subscriptions up to ten percent in excess of the notified amount.

Bullion was steady on good offtake, though closing prices were shaded on profit-taking. Silver priced around Rs. 171.4 and gold was lower at Rs. 103.10.

During the week ended 24th August, Government of India Treasury Bills for Rs. 50,00,000 were sold in favour of the Reserve Bank.

Declines of Rs. 13.82 crores and Rs. 13.43 crores to Rs. 1,431.62 crores and Rs. 1,455.63 crores in notes in circulation and the total note issue, respectively, were outstanding features of the return of the Reserve Bank of India for the week ended 24th August, 1956. The currency contraction was adjusted by reducing rupee securities by Rs. 14.70 crores to Rs. 693.72 crores, and increasing rupee coin by Rs. 1.48 crores to Rs. 115.25 crores. Deposits showed an all-round increase. Deposits of the Government of India were Rs. 7.86 crores up at Rs. 61.58 crores, following good tax collections, and other Government accounts were Rs. 12 lakhs higher at Rs. 5.70 crores. Balances of commercial banks increased by Rs. 2 crores to Rs. 55.44 crores held due to easier money conditions. Balances held abroad declined by Rs. 5.60 crores to Rs. 28.79 crores. Other loans and advances fell from Rs. 60.79 crores to Rs. 54.98 crores, of which advances to scheduled banks against usance bills amounted to Rs. 28.12 crores (Rs. 30.76 crores). These advances amounted to Rs. 228.36 crores since 1st January, 1956. Ways and means advances stood at Rs. 7.64 crores, against Rs. 7.30 crores. Other features showed little change.

The return of the State Bank of India for the week ended 17th August, 1956, shows a rise of Rs. 1.78 crores in total deposits to Rs. 224.61 crores. Investments in Government securities are down by Rs. 30 lakhs to Rs. 94.74 crores, while other authorised investments are up by Rs. 20 lakhs to Rs. 11.45 crores. Advances, including cash credits and overdrafts, and bills discounted and purchased, have declined by Rs. 1.89 crores to Rs. 125.25 crores. Cash and balances are, in consequence, shown at Rs. 18.17 crores, or Rs. 75 lakhs higher.

The statement of the position of scheduled banks for the week ended 17th August, 1956, discloses Demand and Time liabilities at Rs. 644.75 crores (Rs. 15.90 crores on account of borrowings from banks) and Rs. 460.02 crores (Rs. 3.15 crores), compared with Rs. 637.86 crores (Rs. 14.22 crores) and Rs. 459.07 crores (Rs. 3.71 crores), respectively, in the previous week. Cash and balances with the Reserve Bank have increased by Rs. 2.10 crores and Rs. 1.16 crores to Rs. 37.62 crores and Rs. 50.41 crores, respectively. There is a drop of Rs. 26 lakhs in investments to Rs. 361.22 crores. Advances and bills discounted at Rs. 736.44 crores show a fall of Rs. 2.72 crores. The ratios to total liabilities of cash and balances, and of advances and discounts, are, in consequence, shown at 8.0 percent and 66.7 percent, against 7.7 percent and 67.3 percent.

According to the returns received in the Department of Commercial Intelligence and Statistics, the total gross sea and land customs revenue collected in India during June, 1956, amounted to Rs. 1,295 lakhs as compared with Rs. 1,392 lakhs in the corresponding month of the previous year. The comparison in the following should be taken

to refer to that of the current figures with those of the corresponding period of the preceding year. Of the total customs revenue collections, import duties accounted for Rs. 1,091 lakhs as against Rs. 1,073 lakhs, export duties for Rs. 177 lakhs as against Rs. 277 lakhs and land customs and miscellaneous for Rs. 27 lakhs as against Rs. 12 lakhs. The total gross collection of Union excise duties amounted to Rs. 1,494 lakhs as compared with Rs. 1,296 lakhs. During the three months, April to June, 1956, the grand total of gross customs and Union excise revenue realised was Rs. 8,019 lakhs as compared with Rs. 7,443 lakhs. Of this amount, import duties accounted for Rs. 3,285 lakhs (Rs. 3,053 lakhs), export duties for Rs. 559 lakhs (Rs. 756 lakhs) land customs and miscellaneous for Rs. 70 lakhs (Rs. 50 lakhs) and Union excise duties for Rs. 4,105 lakhs (Rs. 3,594 lakhs).

The following is a statement of the cash balances of the Central Government on the last day of May, 1956:

	Rs.
(1) At the Reserve Bank of India in India	48,82,76,000
(2) At treasuries in India	1,92,36,000
(3) In England (sterling converted at 18d. the rupee)	1,63,47,000
Total	52,38,59,000

The EASTERN BANK LTD. has declared an interim dividend of 3s a share, less income tax.

The MERCANTILE BANK OF INDIA LTD. has declared an interim dividend of 7 percent, less tax.

The NATIONAL BANK OF INDIA LTD. has declared an interim dividend for the year 1956 of 7½ percent, less income tax.

A good Sign for Exporters and Importers

LLOYDS BANK LIMITED INCORPORATED IN ENGLAND

V/O "STANKOIMPORT"
32/34, Smolenskaya-Sennaya, Moscow, U.S.S.R.

EXPORTS
A WIDE RANGE OF METAL CUTTING TOOLS:

DRILLS	SHAPER CUTTERS
TAPS	TOOLS
DIES	GEAR CUTTERS
CHASERS	SHAVING CUTTERS
CORE DRILLS	BROACHES
REAMERS	FILES
CUTTERS	NEEDLE FILES
	RAPS

The metal cutting tools we furnish are manufactured of the best grades of steel and undergo suitable heat treatment. This provides for extra long tool life and permits work at higher surface speeds and at larger feeds.

U.K. HELP FOR INDIAN INDUSTRIALISATION

LIGNITE MINING METHODS IN WESTERN GERMANY

(This is the second of a series of articles written by our New Delhi correspondent on the basis of a recent tour of Europe).

INDIA has some very good men who are doing excellent work for her in Europe. Mr. T. Swaminathan, Counsellor-Minister in London, is one of them. A tried and trusted lieutenant of the Union Commerce and Industry Minister, Mr. T. T. Krishnamachari, Mr. Swaminathan has done much to change the climate of opinion in favour of India. Industrial houses in Britain are anxious to help in implementing the second five year plan. They are convinced that an industrialised India will be a better market for British goods. Most of them now appreciate the background to the new company law. The initial apprehensions have been largely dispelled and leading British concerns are coming to this country to help set up machine-making factories. The application of Vickers and Babcock and Wilcox to collaborate with A.C.C. (India) in establishing a factory to manufacture cement-making machinery is at present before the Government of India. The construction of a steel works in Durgapur is being undertaken by the Indian Steelworks Construction Company which is a combine of a number of the topmost British engineering firms. Imperial Chemical Industries has already set up a plant for jade-green dyes-dyes in Ahmedabad and negotiations are going on

for installing another plant to manufacture "vat" dyes. Britain is well represented in this country's automobile industry. The Defence Ministry will shortly sign agreements with two British companies to set up an aero-engine factory and to manufacture a light-weight fighter plane. A British ship-building company has shown interest in constructing India's second shipbuilding yard.

South Arcot Lignite Project

The Planning Commission has given high priority to the lignite project in the South Arcot district of Madras State. Machinery and equipment of an estimated cost of Rs. 1.4 crores has already been ordered. The project proposes the mining of 3.5 million tons of lignite a year. The generation of 211,000 kW of electric power is also planned, as is the production of 70,000 tons of urea and sulphate-nitrate and 380,000 tons of carbonised briquettes. All this is expected to cost Rs. 52 crores.

Lignite is an important material for the West German economy. It is found in the districts of Cologne, Helmstedt, Hesse and Bavaria. The largest and the most important deposits, from the economic point of view, are in Cologne, where total output in 1955 reached 90.4 million tons. On account of its low calorific power, raw lignite can be transported economically over short distances. For longer hauls, it has to be processed into briquettes. In Western Germany, the first step in mining lignite is to drain out the sub-soil water. It sometimes takes two years to do this in certain areas. The removal of the overburden is the next step. This is done by giant excavators. The design and construction of these excavators have been very highly developed because open-cast mining of lignite is done on a large scale.

The excavator is equipped with two bucket ladders. The main ladder, designed for working below track level, is 60 metres long, overall, and is fitted with 1,400-litre capacity buckets. The depth of the overburden which has to be stripped by the excavator is about 38 metres. The secondary bucket ladder is designed for working at about the track level and is intended to level out the trackway for the excavator itself. The tumbler shaft of the main bucket ladder is driven from both sides by two motors each of 750 horse-power. It is a special feature of the plant that the locomotives pulling the spoil-carrying trains under the excavator for loading are operated, not by the locomotive driver, but direct from the excavator control cab. For this purpose, the locomotives are equipped with a second current collector, which connects them to the conductor rail, fed in turn by the excavator. The loading of the trains is carried out alternately, so that the excavation work may continue without interruption. The excavator moves its own track away from the slope in accordance with the progress of the excavation work. The necessary track-shifting appliances are connected to the bogie truck.

Bucket Wheel Excavator

One of the main differences between the bucket ladder excavator and the bucket wheel excavator is that the latter operates in two separate and distinct stages, namely, excavation and conveyance. The bucket wheel itself does the actual excavation work, while the conveyor, arranged at an angle to the bucket wheel, provides the means of transportation of the material won. The disposal of the spoil is done by means of further conveyors arranged to transport the material continuously. A special characteristic of the bucket wheel excavator is the favourable ratio between the electrical power required and the volume of material excavated and transported. Each type of machine is so designed that the total weight of the excavator is supported at three points. The carrying wheel bogies of rail-mounted trolleys are fitted to the excavator structure in such a way that they can adapt themselves to any unevenness of the track, thus enabling the load on the various carrying wheels to be equalised through compensating beams. This arrangement also prevents the excessive loading of the individual axles and guards against axle or rail fracture. Because of the extensive use of bogies, the excavator can also be employed on tracks with very small radii. As far as possible, all drive parts are arranged in the main body of the excavator. The bucket ladder for operating below track level is so designed that, by the addition of a few parts, it can be converted within a short time on the working site for working above track level. The third operation commences with the mining of lignite, which is sliced and transported to a factory for processing into briquettes.

Selling Tea in Britain

Unless prompt action is taken, the market for Indian tea in Britain might shrink. There are a number of reasons. Firstly, no such commodity as "Indian tea" is seen in British shops, although there is Ceylon tea, China tea, and even Darjeeling tea. Secondly, Ceylon is doing a great deal of publicity to push sales of her tea. There is a Ceylon tea stall in London, but no stall for Indian tea; nor does there appear to be any organised campaign to promote the consumption of the latter. Thirdly, there is a strong campaign to push up sales of coffee, particularly in London. Coffee shops have sprouted all over London and although coffee is more expensive than tea, they appear to do roaring business. Fourthly, the quality of Indian tea sold in Britain often seems poor, considering the price charged for it. According to official sources, the export of tea to the U.K. declined from £43,094,000 in January-June 1955 to £32,040,000 during the corresponding six months of 1956. A "drink more Indian tea" campaign in Britain is urgently necessary.

Stocks and Shares

SHARE MARKET STEADY IN MOST SECTIONS

INVESTMENT BUSINESS DISAPPOINTING

Tuesday Evening.

SPECULATIVE activity has accounted for most of this week's buoyancy on the Calcutta stock market. Although investment scrip have been dull and neglected, Indian Irons have fluctuated between Rs. 36-12 and Rs. 37-12. This evening's closing quotation is Rs. 37-4. The reason for the continued optimism among operators is partly due to improved advices from Bombay and partly to the continued anxiety over the Suez Canal crisis. A wave of profit-taking, which appeared to be developing today, seems to have been reversed by the persistent strength of the Bombay market no doubt due to support from nationalised life insurance funds.

The most disturbing feature of present conditions in Calcutta is the absence of substantial support for investment shares. The engineering and miscellaneous sections have enjoyed their usual activity but others have been quiet, although prices have tended to hold. Burrakurs among coal shares have been a feature due to the amalgamation which is to take place between the company and Standard Coal. After the modest activity of last week, jute shares have encountered profit-taking although prices have generally been maintained. Government securities have remained dull.

Details of the week's trading follow.

The small enquiry for Government securities reported last week has petered out and once again sellers predominate. Prices have been marked down and medium-dated issues are the worst sufferers. Three percent Conversion Loan, however, stabilised at Rs. 75-1 and there were buyers at this level. The Reserve Bank of India reduced its buying prices for 3% 1957 to Rs. 99-12 and 3% 1958 to Rs. 99-9. In medium-dated issues, 3% 1959-61 turned sellers at Rs. 98 and both 3% 1963-65 and 1964 were again marked down to Rs. 94-13 and Rs. 94-14 respectively; 2½% 1961 changed hands at around Rs. 93-7 and 2½% 1962 was marked at Rs. 93-15. In National Plan issues, 3½% 1961 changed hands at Rs. 99-6 and 3½% 1964 had sellers at Rs. 98-11; 3½% 1965 was traded at the lower rate of Rs. 98-8 but 3½% 1967 met with small enquiry at Rs. 98-7-6. In long-dated issues, 3% 1966-68 was quoted at Rs. 93-4 but 3% 1970-75 was weak at Rs. 89-15; while 3½% 1974 was slightly better at Rs. 98-7-6. State Loans were extremely quiet and with the exception of West Bengal issues there were sellers over. Four percent Madras 1967 was marked down to Rs. 99-8 and 4% U.P. 1967 had sellers at Rs. 99-10.

Jute preference shares continued to be freely offered without attracting buyers. Agartara were sold at Rs. 107, Alexandria at Rs. 98-7 and Alliance at Rs. 97. Business was reported in Fort Gloster at Rs. 109. Among miscellaneous issues, British India Corporation were done at Rs. 125, Burrakur 7½% at Rs. 138 and Dalmia Cement at Rs. 101. Humayun Properties were crossed at Rs. 10 and Indian Iron & Steel changed hands at Rs. 108. New Victoria met with some enquiry at Rs. 6, Orient Paper 1st were taken at Rs. 99-8 and the 2nd at Rs. 73-12. Rohtas Industries "B" Preference changed hands freely at around Rs. 64-8.

In the banking section, Hind Bank were better at Rs. 38 while United Commercial and Punjab National were unchanged at Rs. 59 and Rs. 57 respectively. Hindustan Commercial continued to meet with good enquiry at around Rs. 14. United Bank of India "D" shares came to hand at Rs. 4-8.

A solitary transaction was reported in the railway section in Delhi Rohtas at Rs. 14-14.

In the cotton section, Dunbar were in demand and improved from Rs. 298 to Rs. 304. Bowreah changed hands at Rs. 172 and Jaysree were active with the price rising to Rs. 7-6. Kesoram were done at Rs. 19-9 and New Victoria were unchanged at Rs. 2-13. Elgin Mills were slightly easier at Rs. 28.

In the coal section, there was a large turnover in Burrakur with the price improving steadily from Rs. 14-14 to Rs. 15-2. It is reported that the shareholders of the Company are opposing the proposed resolution whereby holders of Standard Coal shares will receive two Burrakur Coal shares for each share held by them. Standard Coal, on the other hand, have dropped back from Rs. 26-4 to Rs. 22-8. Bengal were unchanged at Rs. 538 and Bokaro Ramgur were crossed at Rs. 11-4. Amalgamated were reported at Rs. 23-7 and Equitable were slightly better at Rs. 31-4. New Manbhoom met with some enquiry at around Rs. 10-8 as did Raneegunge at Rs. 13-4.

Following the recent rise in prices of jute shares, profit-taking was noticeable at the higher levels but despite this prices were well maintained. Here is a chart showing representative price movements:

	Opening 23-8-56	Closing 28-8-56
Rs.		Rs.
Anglo-India	184	186
Birla	18 9	18
Chandpany	167	165
Howrah	24 6	24
India	150	147

Gourepore	Rs. 256	Rs. 255
Megna	93	90
National	26 8	26 4
New Central	17 6	172 2

Contrary to the general trend, there was a good enquiry for Kelvin which improved from Rs. 238 to Rs. 250 and Northbrooks had ready buyers at the higher rate of Rs. 26-4.

In electrics, Calcutta were unchanged at around Rs. 13-14 while Jubbulpore were better at Rs. 14-6. Patna Electric came to hand at Rs. 11-10.

In the sugar section, there was some enquiry for Dyer Meakin Breweries at Rs. 5-14 and Belund was unchanged at Rs. 21-6. Ramnugger improved from Rs. 26-6 to Rs. 27 and Shree Krishna Gyanoday were depressed at Rs. 13.

In the engineering section, Indian Iron & Steel, after being taken up to Rs. 37-12 met with some selling pressure, and reacted to Rs. 36-12; replacement buying at the close brought a recovery to Rs. 37-4. The proposal of the Directors of Braithwaite & Co. to write up the par value of the shares from Rs. 7 to Rs. 10 was well received by market operators and the price of the shares improved from Rs. 29-8 to Rs. 30-12. Indian Standard Wagon were steady at Rs. 202 as were Burn & Co. at Rs. 360. Indian Galvanizing were crossed at Rs. 21-12 and there was a good enquiry for Hooghly Docking at around Rs. 141. Jessop & Co. were depressed at Rs. 34-2 as were Richardson & Crundas at Rs. 24-12. Textile Machinery were fairly steady at Rs. 23-9. Marshalls were reported at Rs. 6-2.

In paper, Bengal were neglected at Rs. 110 while India Paper Pulp met with good investment enquiry and recovered from Rs. 25-4 to Rs. 25-10. Titaghar were unchanged at Rs. 41-4 but Shree Gopal were slightly better at Rs. 18-8. Orient Paper were well maintained at around Rs. 40-5.

In cement, Ashoka were steady at Rs. 15-8 as were Orissa at Rs. 13-14 ex-rights. Sone Valley were unchanged at around Rs. 8-13, but Dalmia were better at Rs. 15-12.

Only one share was dealt in among insurance scrip, namely, New Asiatic at Rs. 4-3.

In shipping, India Steamship, on reports of good earnings, spurred from Rs. 9-3 to Rs. 9-12. Calcutta Landing were unchanged at Rs. 16-4 as were India General Navigation at Rs. 114. Port Shipping eased from Rs. 17-5 to Rs. 17.

Among miscellaneous industrials, Aluminium Corporation were easier at Rs. 11-8 while Alkali & Chemical and Angelo Brothers were better at Rs. 22-4 and Rs. 24-4. Bengal Flour were firm at Rs. 30-8 as were Britannia Biscuits at Rs. 15-8. British Burmah Petroleum were lower at Rs. 4-2 as were British India Corporation at Rs. 10-10. Calcutta Trams were well maintained at Rs. 18-8 as were Clive Row Investment at Rs. 11-5. Dunlop Rubber improved slightly to Rs. 29-13 while Hindustan Motors were neglected at Rs. 10-3. Indian Rubber Manufacturers were steady at Rs. 16-8 as were Metal Box at Rs. 29-6. National Carbon were slightly easier at Rs. 29-2 and Rallis at Rs. 41-8. Rohtas Industries recovered from Rs. 22-12 to Rs. 23-3. Midnapore Zemindary spurred to Rs. 38. National Tobacco were unchanged at Rs. 13-8. Imperial Tobacco were crossed at Rs. 15-9 ex-dividend and Hoare were offered at Rs. 6-5. Reliance Firebricks were crossed at Rs. 22 and Sodepore Glass were marked at Rs. 2-15.

In the mining section, Indian Copper fluctuated narrowly around Rs. 6-14 while Chrestien Mica Industries were steady at Rs. 17-8. Metal Corporation met with some enquiry and recovered from Rs. 10-12 to Rs. 11-6. Burma Mines changed hands at Rs. 3-5 and Western Stockholders Investment at Rs. 1.

Tea shares were subdued with turnover at a minimum. Of the Assam shares, Bateli improved to Rs. 24-8 but Bishnauth Old eased to Rs. 24-2 as did Brooke Bond to Rs. 21-10. Brahmapootra were done at Rs. 8-4 as were Dhelakhat at Rs. 22-9 and Dimakusi at Rs. 33-4. Dufflaghur improved from Rs. 35-8 to Rs. 36-2 as did Tezporo from Rs. 23-4 to Rs. 24-8. Of the remaining shares, Sungma were crossed at Rs. 12-2 and Tukvar eased further to Rs. 12-4. Atal were done at Rs. 8-10 and Belto were fully steady at Rs. 59-8. Hansqua were crossed at Rs. 24-8 and Jaysree changed hands at Rs. 12-2. Gaikhatka came to business at Rs. 238. Among Pakistani shares, Dauracherra improved to Rs. 15-10, but Luckatooah eased slightly on profit-taking to Rs. 36-8. Patrakola and Teliapara improved further to Rs. 214 and Rs. 225 respectively.

The profit of the NATIONAL CARBON COMPANY (INDIA) LTD. amounted to Rs. 86.82 lakhs for the year ended 25th December, 1955. The dividend is 32½ percent. Taxation absorbs Rs. 36.66 lakhs. A sum of Rs. 9,91,716 is carried forward, making a balance of Rs. 16,46,239 in the profit-and-loss account. The directors say that the expansion scheme includes the establishment of a zinc rolling mill, a flashlight case plant and a chemical plant. The construction of the zinc rolling mill which was

GOVERNMENT OF UTTAR PRADESH FINANCE (BUDGET) DEPARTMENT

Dated Lucknow, August 10, 1956

PRESS NOTE

4 PER CENT UTTAR PRADESH STATE DEVELOPMENT LOAN 1968.

The Government of Uttar Pradesh are floating a loan of Rs. eight crores in order to finance their irrigation works, electricity projects and other State development schemes. The main terms of the loan are that the issue price will be Rs. 99-8-0 for every Rs. 100 of the loan applied for. The loan will have a currency of twelve years from 3rd September, 1956 and will be repaid at par on 3rd September, 1968 and will bear interest at the rate of 4 per cent per annum from 3rd September, 1956 payable half-yearly on 3rd March and 3rd September and is subject to income-tax. Subscriptions for the loan can be made in the form of cash or cheque, and will be received at the branches and treasury pay offices of the State Bank of India in Uttar Pradesh, the Government treasuries and sub-treasuries in the State of Uttar Pradesh where there is no branch or treasury pay office of the State Bank of India and at the offices of the Reserve Bank of India at Bombay, Calcutta, Delhi, Madras and Bangalore.

Full details of the terms of the loan are contained in Finance Department Notification No. B-6453/X-98-1956, dated August 10, 1956, copies of which, along with the application form are obtainable at the receiving offices mentioned above.

2. Financial Position of the Government of Uttar Pradesh—

Revenue Position—The revenue receipts and expenditure and the surpluses for the last twelve years are as follows:

(Figures are in lakhs of rupees)

	Revenue receipts	Revenue expenditure	Surplus (+)
1944-45	2,747	2,330	+417
1945-46	2,995	2,551	+444
1946-47	3,265	3,061	+204
1947-48	3,876	3,771	+105
1948-49	4,920	4,729	+191
1949-50	5,628	5,626	...
1950-51	5,189	5,194	+5
1951-52	5,556	5,550	+6
1952-53	6,483	6,483	...
1953-54	7,564	7,281	+283
1954-55	7,819	7,713	+106
1955-56	8,451	8,330	+121

The major portion of the revenue surpluses was put into various reserve funds. During 1949-50 and 1952-53, revenue expenditure exceeded revenue receipts because of large expenditure on Development Schemes and the gap in those years was covered by withdrawals from the Revenue Reserve Fund.

Balances in the Reserve Funds—The balances at the credit of the various reserve funds at the end of 1955-56 were 78 lakhs in the U.P. Road Fund, 73 lakhs in the Hospitals Fund, 4 lakhs in the Famine Relief Fund, 1,118 lakhs in the Revenue Reserve Fund, 18 lakhs in the Sugar Research and Labour Housing Fund, 2,913 lakhs in the Zamindari Abolition Fund, 10 lakhs in the Depreciation Reserve Fund—Irrigation, 179 lakhs in the Depreciation Reserve Fund—Government Bus Services, 333 lakhs in the Depreciation Reserve Fund—Electricity, 12 lakhs in the Contingency Reserve Fund—Electricity and 48 lakhs in the Depreciation Reserve Fund—Cement Factory. Some of these are invested in Government of India Securities. The total balance in these Reserve Funds amounts to 4,786 lakhs.

Debt Position—On March 31, 1956 the debt of Uttar Pradesh amounted to 13,382 lakhs consisting of 1,053 lakhs representing the consolidated debt due to the Central Government and 8,123 lakhs taken from that Government for development purposes and 828 lakhs for Relief and Rehabilitation Schemes plus 3,209 lakhs representing the amount of public loans floated by this Government from time to time plus 169 lakhs as Uttar Pradesh Encumbered Estates Act Bonds. Apart from this the State Government have also issued Zamindari Abolition Compensation Bonds of the face value of Rs. 3,304 lakhs the liability on account of which will be met, by annual equated instalments, from the extra revenue from Zamindari Abolition over a period of 40 years. Sinking Funds for all the public loans and the loans taken from the Central Government for development purposes have been formed and they are invested in Government of India Securities.

Assets of the Government—Against the outstanding debt of 13,382 lakhs there are assets in the form of the Ganga, Yamuna and Sarada Canals, various other small canals, the State tube-wells and the Hydro-Electric Grid, Electric Supply undertakings, Cement Factory and Government Bus Services, in which about 11,607 lakhs have been invested. Another asset is the balance due to Uttar Pradesh Government on account of loans and advances amounting to 3,220 lakhs. Besides these, there are a large number of buildings and roads for which no separate capital accounts are maintained.

State Balance at the close of 1955-56—The Uttar Pradesh Government had a free cash balance of 1,397 lakhs at the end of 1955-56.

Foot Note—The accounts for 1955-56 have not yet been closed finally. The figures for 1955-56 mentioned in the Press Note are based on the March (Final) 1956 Accounts as revised up-to-date by the Accountant General, Uttar Pradesh.

STOCK MARKETS INACTIVE
BUSINESS AT LOWEST LEVEL
FOR MANY MONTHS

London, 29th August.

THE main feature of the stock markets here during the past week has been the further contraction in business to the lowest level for many months under the influence of the Suez crisis. Consequently prices have moved narrowly and irregularly to record small and mixed changes in most cases. Gilt-edged securities tended to ease early in the week, but after the week-end, went ahead quite sharply on a renewal of investment support. Foreign bonds were extremely quiet with movements mixed. Interest in the industrial market was very selective. However, after the early uncertainty, this section took on a quietly steady appearance. It was also a quiet week in the Kaffir market. Prices moved within narrow limits to record small changes on balance. Oils moved irregularly, but at the end of the week, tended to improve reflecting President Nasser's favourable reply to Mr. Menzies. Copper and other base metals were uncertain. Tea shares tended to ease on disappointing dividend statements. Rubbers were quiet, although their prices held steady.

The Money Market

During the first few days of the past week, money was very tight on the London money market, and the rate for day-to-day loans was pushed up to 5 percent. The balance was upset on Monday by the absence of maturities, as a result of which funds were withdrawn rather heavily from the market. Little fresh credit was available and the authorities had to operate on a large scale to pull the market out of its difficulties, while several houses were forced to borrow a fair amount on Bank rate terms. The two following days were no better, but on Thursday, conditions were less difficult and on Friday due to disbursements of Government-departmental and local authorities monies, the market had its best day of the week. The high rates which the market had to pay for its requirements during the week resulted in a down-

ward revision of the weekly bid for Treasury bills with the result that the Government had to pay a higher rate for its short-term borrowing. Applications for £270 million worth of 91-day bills totalled £405,210,000 and were allotted at an average rate of 101s 2.95d against 100s 0.43d in the previous week. Offerings this week comprise £290 million worth of 91-day bills. The Bank of England return for the week ended 22nd August showed that bankers' deposits were about £3 million higher.

Activity on Wall Street

After easing on the first day of the past week, U.S. Government issues staged a good recovery. Treasury bonds steadied with the raising of the Federal Reserve discount rate, and the general firming and tightening of money for commercial borrowers. Convertibles followed the down-trend movement of Wall Street. Dow Chemical 3 percents of 1982 were prominent on the decline. Among oils, Standard Oil of Indiana 3-1/8 percents of 1982 eased quite sharply. Investment quality corporates, however, generally held steady. New York Central lines were slightly firmer among rails. Foreign bonds were quiet. Australian obligations improved fractionally, while German bonds continued to advance in moderate trading. Italian Republic 3 percents of 1977 eased on active selling.

U.S. Federal Reserve Return

The U.S. Federal Reserve Return for week ended 22nd August shows that the gold stock rose by \$1 million to \$21,857 million. Foreign deposits rose by \$15 million to \$304 million, while foreign investments fell by \$39 million to \$3,676 million. The Federal Reserve sold \$1 million worth of certificates and \$147 million worth of bills. Total discounts and advances fell by \$26 million to \$806 million, while aggregate excess reserves of member banks fell by \$397 million to \$294 million. The daily average excess reserves of member banks rose by \$92 million to \$655 million, while daily average borrowings fell by \$82 million to \$878 million. Business loans by the New York city banks rose \$107 million to \$10,330 million, compared with a rise of \$69 million to \$8,355 million in the corresponding week a year ago.

Hongkong Gold Falls

The Hongkong gold market was bearish in the past week, in spite of the tension in the inter-

national situation, and the downing of an American plane off the China coast. Traders said the situation was due to an overloaded position of bulls who took the opportunity at every advance to unload. Opening at \$(H)263, the value rose by a one-eighth, then moved steadily down on steadier sterling abroad, and suddenly spurted to \$(H)263 3/4 on Friday. Values lost ground finally to close at \$(H) 262 1/4. Carry-over charges were 630 cents in sellers' favour. This high interest rate also affected the market. The official offtake was 4,610 taels and the unofficial was 16,650 taels. Arrivals were 32,000 ounces. Forward contracts were done at \$(U.S.)37.83.

Vegetable Oil Market

Linseed oil showed again an easy tendency in the past week. Business has been less brisk than of late, and the pressure to sell near deliveries was still the prevailing feature. Although the castor oil market in India was reported to be firmer, the market here was quiet. Indian B.S.S. in bulk, Sept-Oct. shipment was said to have been offered at £130 a ton. There was little rape oil from abroad available at reasonable rates, and in Hull the price for spot remained at £160 a ton; for the Sept-Oct. delivery, £150 was quoted. Tung oil continued in quiet request on spot, with Chinese spot and September deliveries quoted at £188.

Easier Trend in Rubber

Reflecting cheaper first-hand offers, London rubber prices eased early in the past week with traders taking a hopeful view of the Suez Conference, but the market was still largely dominated by political uncertainties which made dealers disinclined to operate except against actual orders. Business was mostly confined to forward delivery positions, discounts for which tended to narrow. Sellers offered reservedly and a steadier trend ensued. Fluctuations were much smaller than of late, and prices indicated the absence of any tightness in nearby rubber. Holiday influences contributed to the smallness of demand. After slow trading, prices closed about a 1d a lb lower on the week. The sole crepe market was steady but dull. Although buying interest remained limited, there was no weight of offerings to depress prices which remained on the basis of 44d a lb, paid for 1/8th inch smooth No. 1 on the spot.

New Delhi

INDIA TO GET AGRICULTURAL PRODUCTS FROM
UNITED STATESWHEAT, RICE AND COTTON EXPECTED TO FEATURE
IN NEW THREE-YEAR PACT

(FROM OUR NEW DELHI CORRESPONDENT)

IT is expected that a \$360 million Indo-U.S. deal will be signed very shortly. It will be a three-year agreement, under which the U.S. Government will supply India 3 million tons of wheat, 200,000 tons of rice, 500,000 bales of cotton and some relatively minor commodities such as milk. India will pay for these purchases in rupees, 15 percent of which will be treated as a gift to this country and 20 percent will be used by the U.S. Embassy in New Delhi to meet certain obligations. The remaining 65 percent will be a loan to India to finance the second five year plan. This loan will carry four percent interest and will be repayable in 40 years.

The negotiations for the proposed deal have been conducted under the U.S. Agricultural Trade Development and Assistance Act of 1954. The Act authorises the sale of American farm surpluses for foreign currencies which can be used by the U.S. Government. The deal will ease India's foreign exchange position in so far as it relates to the purchase of agricultural products. It will also help her, firstly, to finance her development programmes and to that extent narrow down the gap between financial resources and development expenditure; and, secondly, to build buffer stocks of foodgrains to meet emergencies.

Coal Commission

The Government of India has decided to set up a Coal Commission with the Production Minister, Mr. K. C. Reddy, as chairman. The Commission will consist of about 18 members, and will make a thorough study of coal problems. Its first meeting will be held here on 4th September, it is expected. It will divide itself into various sub-committees, which will intensively study and examine the various problems facing the coal industry.

Bigger Demand for Fertilisers

With the change in the targets for agricultural production under the second plan, leading to an increased demand for fertilisers, the Ministry for Production has started preparing for the third five year plan as far as fertilisers are concerned. The target for fertiliser production under the second plan is 380,000 tons of the nitrogenous varieties. This is to be by expanding the existing capacity by 120,000 tons, and setting up three additional units to produce 220,000 tons. The Food and Agriculture Ministry's latest requirements are placed at 480,000 tons, or 100,000 tons more. The demand at the end of the third plan is estimated at 800,000 tons. Burmah-Shell has withdrawn its offer to manufacture fertilisers from the gases at its Trombay refinery.

Official Policy on Oil Refineries

Further details of the Government's attitude on the setting up of oil refineries in the future are now available. The conditions will be radically different from those on which the three refineries have been set up in India. Firstly, the Government will give no guarantee against nationalisation. Secondly, it will hold a major share in their equity capital. Thirdly, the companies, which in every case will have to be co-operative companies, will have to offer a part of the equity capital to the Indian public. The promoters of these conditions, it is learned, have been informed of these conditions, it is learned. They have gone back to consult their principals.

Expanding Port Capacity

A reference was recently made here to port capacity in relation to needs under the second plan. A conference, held recently with the Transport Secretary, Mr. N. M. Ayyar, in the chair, gave some idea of the latest position. Sir Ramaswamy Mudaliar, speaking there, complimented the chairmen of the ports of Calcutta, Bombay and Madras "for the energetic action they were taking to improve the position." He stated that conditions in the ports had improved, as a result of which the existing tonnage itself would be able to handle at least 20 percent more cargo. The Transport Secretary explained that Calcutta, Bombay, Cochin and Visakhapatnam had in peak years together handled a total tonnage of 24.01 million tons of cargo. The traffic handled during 1954-55 by these ports was only 20.17 million tons. Thus, the existing facilities were sufficient to handle an additional traffic of about 4 million tons. The works already completed, and the new works taken in hand, were designed to provide the following additional capacities:

Calcutta	1.5	million tons.
Madras	0.5	" "
Cochin	1.25	" "
Visakhapatnam	1.75	" "
Kandla	1.75	" "
Total	6.75	" "

The table below furnishes comparative figures of the peak traffic handled in each of the major

ports in past years and the traffic handled in 1954-55.

Ports	Traffic handled during peak period (in million tons)	Traffic handled during 1954-55
Calcutta	10.88 (1945-46)	7.81
Bombay	7.58 (1954-55)	7.58
Madras	2.58 (1944-45)	2.20
Cochin	1.58 (1951-52)	1.55
Visakhapatnam	1.39 (1953-54)	1.03
	24.01	20.17

Thus, with the existing facilities, the ports have sufficient capacity to handle a total traffic of 24.01 million tons. The following list shows the development works designed to increase port capacity, which have been completed or are in progress at major ports.

Description of work	When expected to be ready
Calcutta:	
Completed:	
1. Facilities for storage and shipment of ores.	
In Progress:	
1. Mechanical coal loading plant to be installed at coal berth.	December 1956.
2. Equipping No. 1 King George's dock with a 200-ton heavy lift crane.	January 1957.
3. Development of No. 5 berth into a mechanical ore berth.	February 1957.
4. Development of B and D berths, King George's dock, into general cargo berths.	February 1958.
Bombay:	
Completed:	
1. Ten transit sheds and warehouses.	
In Progress:	
1. Jetty Shed, Prince's dock.	November 1956.
2. Transit shed "M", Prince's dock.	July 1957.
Madras:	
In Progress:	
1. Construction of a jetty at north quay.	Sept. 1957.
2. Construction of jetties at south quays III and IV.	March 1958.
3. Construction of a new double-storeyed warehouse equipped with electrically-operated cargo lifts.	Work sanctioned.
Cochin:	
Completed:	
1. One coal berth.	
2. Two oil berths.	
3. Two warehouses.	

In Progress:

- Construction of a coal berth south of wharf. To be completed by April 1957.
- Black oil installation at the north end of Willingdon Island. Likely to be completed by early 1957.
- Construction of a wharf 1,207 feet long for accommodating four berths. Likely to be completed by June 1957.
- Construction of a warehouse for the four-berth scheme. Likely to be completed by June 1957.
- Metre gauge facilities. Likely to be completed in step with the completion by the Southern Railway of the main Ernakulam-Quilon link.

Completed:

- Oil jetty.
- Bunder.
- Construction of two berths. October 1956.
- Construction of the remaining two berths. April 1957.
- Three transit sheds. One almost completed; rest by March 1957.
- Four warehouses. By March 1957.

When the works in hand are completed early in 1958, which will be the peak year for traffic during the second plan period, the total capacity will have increased to 30.76 million tons. With the speedy introduction of the piece-rate system in ports other than Bombay (where it has already been introduced), it is reasonable to expect a 15 percent increase in capacity. Thus, the average capacity of the major ports from 1958 onwards is likely to be about 35 million tons, which represents a 75 percent increase over the traffic handled in 1954-55. This increase should fully cover the expected increase in imports and exports.

Estimate of Imports

No clear information is available at present about the total quantities of cargoes which are expected to come from overseas to Indian ports, and it is necessary to collect full information on this. As a first step, a *pro forma* statement has to be prepared and circulated to various Ministries and departments, calling for full particulars of all planned cargoes likely to move on their account over the next one or two years.

Sir Ramaswamy Mudaliar said that there was a considerable volume of cargo waiting for shipment from U.K. and west European ports which could not be moved all at once. He referred particularly to the underframes for the Integral Coach Factory—large items, of sizes which can only be put on decks—now lying in Continental ports awaiting shipment. He suggested that the various Ministries should phase their shipments and agree on priorities, having regard to the volume of shipping available and the capacity of the receiving ports.

The Joint Secretary to the Commerce Ministry, Mr. K. B. Lall, it is learned, explained the problems facing his Ministry, one of which was to find more shipping space and increase shipping capacity. He indicated that total imports of steel, cement, machinery and fertilisers were not likely to exceed 4 million tons a year, and would be within the estimated increase in the capacity of the ports, as indicated by the Transport Ministry. He declared that there was great difficulty in getting shipping space for low-rated cargoes such as iron

4 PER CENT STATE GOVERNMENT LOANS

(1) Government of Andhra	Rs. 600 lakhs	Issue price Rs. 99-8	per cent
(2) Government of Bihar	Rs. 200 lakhs	Issue price Rs. 99-4	per cent
(3) Government of Bombay	Rs. 750 lakhs	Issue price Rs. 100-0	per cent
(4) Government of Hyderabad	Rs. 200 lakhs	Issue price Rs. 99-8	per cent
(5) Government of Madhya Bharat	Rs. 100 lakhs	Issue price Rs. 99-4	per cent
(6) Government of Madhya Pradesh	Rs. 150 lakhs	Issue price Rs. 99-4	per cent
(7) Government of Madras	Rs. 1250 lakhs	Issue price Rs. 99-12	per cent
(8) Government of Mysore	Rs. 400 lakhs	Issue price Rs. 99-8	per cent
(9) Government of Orissa	Rs. 300 lakhs	Issue price Rs. 99-4	per cent
(10) Government of Punjab	Rs. 200 lakhs	Issue price Rs. 99-4	per cent
(11) Government of Rajasthan	Rs. 300 lakhs	Issue price Rs. 99-8	per cent
(12) Government of Saurashtra	Rs. 250 lakhs	Issue price Rs. 99-8	per cent
(13) Government of Travancore-Cochin	Rs. 200 lakhs	Issue price Rs. 99-4	per cent
(14) Government of Uttar Pradesh	Rs. 800 lakhs	Issue price Rs. 99-8	per cent
(15) Government of West Bengal	Rs. 700 lakhs	Issue price Rs. 100-0	per cent

All the State Governments reserve the right to retain subscriptions up to ten per cent in excess of the notified amount. All the above loans will be repaid at par on 3rd September, 1968 except that of the Government of Bombay which will be repaid at par on 3rd September, 1970.

THE LOANS WILL OPEN FOR SUBSCRIPTION ON 3RD SEPTEMBER, 1956 AND CLOSE ON 10TH SEPTEMBER, 1956 OR EARLIER WITHOUT NOTICE AS SOON AS SUBSCRIPTIONS APPROXIMATE TO THE AMOUNT OF EACH ISSUE.

All the loans will bear interest from 3rd September, 1956. Subscriptions may be in the form of CASH/CHEQUE in respect of all the loans. 3% BOMBAY GOVERNMENT LOAN 1956, 3% MADHYA PRADESH LOAN 1956 and 3% MADRAS GOVERNMENT LOAN 1956 will be accepted AT PAR for conversion into the new loan of the Government concerned; interest on the securities of the respective loans tendered for conversion will be paid up to and including 2nd September, 1956.

3 1/4% TRAVANCORE GOVERNMENT LOAN 1956 will be accepted AT PAR for conversion into the new loan of that Government. In addition to the interest due on securities of that loan tendered for conversion, tenderers will be paid interest at the rate of 4 per cent per annum on the amount of the principal of such securities from 16th August, 1956 to 2nd September, 1956 inclusive.

APPLICATIONS FOR ALL THE LOANS WILL BE RECEIVED AT THE OFFICES OF THE RESERVE BANK OF INDIA AT BOMBAY, CALCUTTA, DELHI, MADRAS AND BANGALORE.

APPLICATIONS will also be received at PLACES WITHIN THE RESPECTIVE STATES as follows:—

(i) At the branches of the State Bank of India and at Treasuries and Sub-treasuries in the case of Andhra, Bihar, Bombay, Madhya Pradesh, Madras, Orissa, Punjab, Rajasthan, Saurashtra and Uttar Pradesh loans.

(ii) At the branches of the State Bank of India in the case of West Bengal loan.

(iii) At the branches of the State Bank of India and at District Treasuries only in the case of Madhya Bharat loan.

(iv) At the branches and treasury pay offices of the Hyderabad State Bank and at Treasuries and Sub-treasuries in the Hyderabad State in the case of Hyderabad loan.

(v) At the branches of the Bank of Mysore Ltd., in the Mysore State except at Bangalore and at Taluk Treasuries in the Mysore State at places where there is no branch of the Bank of Mysore Ltd., in the case of Mysore loan.

(vi) At Treasuries and Sub-treasuries only in the case of Travancore-Cochin loan.

Copies of Notifications and Application Forms may be obtained at any Receiving Office.

and steel and ores. Mr. Lall suggested the setting up of a working party. His Ministry, he added, was anxious that the general export promotion drive of the Government should not be handicapped by a shortage of shipping space. The Government was anxious to develop the export of ores. The quota for private shippers would be slightly less for the second half of the year than for the first half. It would be approximately 400,000 tons, excluding that intended for Russia, Poland, etc., to which countries the State Trading Corporation would make shipments.

Taxation Reform

Following Professor Kaldor's report on the Indian taxation system, with special reference to raising additional revenues, the Ministry of Finance has deputed three officers, Messrs. N. H. Naqvi, S. Chandrasekhar and A. K. Mukarji, to visit the United States, Sweden and Japan to study the working of the taxes suggested by Professor Kaldor. The Secretary to the Ministry, Mr. A. K. Roy, is also expected to visit these countries.

Property tax is levied in Sweden, Japan, the Netherlands, Finland, Iceland, Luxembourg, the United States and Colombia. In Sweden, it is levied on individuals, families, trusts and foreign companies. All immovable properties in Sweden, and all movable properties existing there which are intended for business carried on in Sweden, are taxed.

U.S.A.

- (i) Capital gains realised through sale of all kinds of property, movable or immovable, which are not sold during the business.
- (ii) No capital loss allowed on the sale of an asset which was not held for the purpose of producing income.
- (iii) Capital gains and losses subdivided into: (a) long-term gains or loss. (b) short-term gain or loss.
- (iv) Capital losses generally set against capital gains and can be carried forward for five years. Part of the capital loss is also set off against the taxable income of the current year in special circumstances.

Other Concessions.

Net assessable capital shall not be less than 50 percent of the real value of the assets, or more than 30 percent of the income of the taxpayer liable to income-tax under the Income-Tax Act.

- (v) If one fails to collect a personal loan, the bad debt can be treated as a "short-term capital loss."

Japan

In 1953, revisions were made in every tax, and taxation on the capital gains of securities was repealed. But, a "revaluation tax", which by nature is a tax on capital appreciation, was re-imposed. Revaluation of assets was enforced and tax was imposed on the re-appraisal gains of assets.

Argentina

Capital gains tax is known there as "eventual profits tax." All capital profits made after 1st January, 1946, by physical or legal persons and not taxed by income-tax law.

Venezuela

Capital gains charged as general income, which includes income from personal property transactions and income from credits.

In the following countries, capital gains and losses are taken into account for determining taxable income under the income-tax law.

Belgium

Capital gains which enter the computation of taxable income include:

- (i) Gains arising from an industrial, commercial, or agricultural enterprise.
- (ii) Gains arising on the realisation of assets or on an appreciation of value shown in the accounts.
- (iii) Gain arising to a shareholder from the distribution of capital by the company.
- (iv) Capital losses are also allowed.
- (i) Gains arising on the sale of any assets in the course of the taxpayer's customary activities.
- (ii) Profit made on the transfer of goodwill, patent rights, leasehold property, minerals, etc.
- (iii) Profits on the sale of machinery, fittings and plants.
- (iv) Shared distributions out of capital profits to shareholders or partners made by a company or a firm.
- (v) Lottery winnings.
- (vi) Capital losses are allowed.

Poland

- (i) Profits arising on the transfer of land or buildings, if held for less than 10 years, are charged to tax.

- (ii) Profits arising on transfer of any other assets held for less than five years are charged to tax.

- (iii) Capital losses are allowed only against capital profits.

France

- (i) All kinds of capital gains for an individual or company

Holland

- (ii) For individuals, only capital gains arising from a business or profession or of over 500 florins in the case of speculation are included in income.
- (iii) Losses from speculations are allowed only against profits from speculation.
- (iv) On the liquidation of a company, all gains realised by a shareholder in excess of paid-up capital are considered.
- (v) Capital losses are also allowed.

Norway

- (i) Gains arising from the sale of a business or business assets.
- (ii) Profits made through the sale of any property other than securities.
- (iii) Lottery prizes.
- (iv) Capital losses are also allowed.

Switzerland

- (i) Profits on the sale, transfer or even re-valuation of assets of any business which is required by law to keep accounts.
- (ii) Lottery winnings.
- (iii) Losses are also allowed.

New Zealand
(1952-54)

- Profits from the sale or disposal of land acquired for sale or disposal of a profit is included in income.

South Africa
(1954-55)

- Casual profits are taxed.

Western
Germany

- Capital gains, in so far as they are income, are not exempt.

German Aeronautical Experts

The Government of India has engaged a team of German aeronautical experts led by Dr. Tank at Hindustan Aircraft Ltd. for the design and development of aircraft in India. A few of the experts have already joined, and the others are expected shortly. This in no way alters or modifies the earlier decision of the Government to set up an aero-engine plant in collaboration with Bristol, and to undertake the manufacture of the lightweight fighter, *Gnat*, in collaboration with Folland of Britain. The Defence Secretary, Mr. M. K. Vellodi, finalised agreements with these two companies during his recent visit to London. The *Gnat* is fitted with the Bristol Be-26 Orpheus axial-flow turbo-jet engine. The two agreements will enable India to manufacture both the aircraft and its engine. The Government has also finalised a deal to purchase English Electric *Canberras*, which are powered by two Rolls Royce Avon axial-flow turbo-jet engines. Deliveries of the first production *Canberras* to the R.A.F. began in January 1951. India is thus buying a tried and tested aircraft.

Indo-Egyptian Trade

Replying to a question in Parliament as to whether Britain's restrictions on Egypt's sterling balances had affected Indo-Egyptian trade, an official spokesman said that under the Indo-Egyptian Trade Agreement, all payments for Egyptian imports into India were made in Indian rupees, 40 percent of which were to be spent on purchases in India and the remainder, at Egypt's desire, were convertible into sterling. "As the entire trade between Egypt and India is financed with rupees, restrictions placed by the U.K. should have no direct effect on Indo-Egyptian trade. If any difficulties do arise, the Government will take such steps as are considered necessary to maintain the flow of trade between the two countries." Since the announcement, the Government of India has advanced money to the Bank of Egypt, through the State Trading Corporation, to purchase the Indian goods she needs.

Rising Cloth Prices

The low stocks and rising prices of mill-made cloth should be a matter of some anxiety for the Government. These stocks have been steadily decreasing and stood at 138,000 bales on 31st July, compared with 143,000 bales on 14th July. The prices of coarse and medium cloth similarly have been increasing. They have risen by 10 points to 141 since April 1956. Enquiries suggest that the *per capita* consumption of cloth during the first six months of 1956 has gone up from 15.9 yards to 16.65 yards. The coming Hindu festivals of Durga Puja and Deewali will give a further impetus to the price increase, it is feared.

Developing Small-Scale Industries

The Government of India is planning more effective measures to develop small-scale industries. A central workshop is being organised here in which prototype machine tools which are not manufactured in India at present will be manufactured. Their usefulness and the demand for them will be appraised through four regional workshops which will be set up simultaneously. The workshops will test the accuracy and performance of the machine tools already manufactured in this country. Western Germany has offered to supply, free of cost, all the equipment and technical personnel needed for these workshops, and has also promised to train Indians in that country.

London

U. K. ECONOMIC POSITION STEADIER

BALANCE OF PAYMENTS SHOWS SURPLUS

(FROM OUR LONDON CORRESPONDENT)

IT is such a change to receive a copy of the Treasury's *Bulletin for Industry* which does not qualify its assessment of the economic outlook with the ominous reference to "further measures if necessary", which has been such a feature of official pronouncements. Instead, it says that the measures taken are beginning to have effect and price stability is at last a real possibility. The Treasury, indeed, is pleased at the progress the national economy has made in the first half of this year. Consumer expenditure has kept steady while investment has gone up. Exports have been rising faster than imports and the balance of payments has changed from deficit to surplus. In 1956 capital investment in manufacturing industry is expected to be 21 percent higher than in 1955. Yet in the first half-year there was a balance-of-payments surplus of more than £100 million, against one of only £15 million in the first half of the previous year. What of the second half-year? The outcome of that is anyone's guess, but at least the majority of indicators on the purely economic, as opposed to the political, front, are reasonably reassuring. Most encouraging, perhaps, is that for the third successive month the terms of trade moved in favour of Britain again in July. While the index of export prices (1954 average=100) was unchanged in July, the import price index fell a further two points from 105 to 103. In consequence, the index of the terms of trade was down from 99 to 97. Lower import prices in July were due mainly to seasonal falls in prices of fresh fruit and vegetables and to lower average values for tea and unwrought copper. On the export side the index for all manufactured goods was one point up at 106, but there was a fall in the engineering products group from 107 to 106. Since the end of last year the index of the terms of trade has moved down from 101 to 97, indicating an improvement of just under 4 percent. This has obviously made a substantial contribution to the strengthening of Britain's balance of payments. But that the Government's measures are also producing results and contributing to the general improvement is shown in a variety of spheres by later entries in this despatch.

Wage Costs Dangers

An unqualified optimism about the future would be extremely dangerous at the present moment. Quite apart from the international uncertainties, the same issue of the *Bulletin* contains a set of figures which represent a serious warning about costs. They disclose how inflation of wage costs damaged our competitive position in 1955, and this process has undoubtedly gone further in the current year. The basic position is well known, costs rising more rapidly than output and rising prices. In 1955 national output rose by 3 percent and costs by 6 percent, the effect being an increase of 3 percent in cost for each unit of output.

	1953	1954	1955	1954	1955
National Output	116	122	126	5	3
Wage Costs:					
Total	144	154	163	7	6
Per unit	124	126	130	2	3

The base year for these index figures is 1943, equal to 100. Recently, and especially in 1955, the rate of increase in national output has slowed down, while the rate of increase in home costs has accelerated. The latest figures show who are responsible for the rise in costs, and it is unquestionably "wage and salary earners." Profits have expanded, but only a little faster than the expansion of production:

	1953	1954	1955	1954	1955
Wages and Salaries:					
Total	142	153	165	7	8
Per unit	122	125	131	2	5
Gross Profits:					
Total	153	170	178	8	5
Per unit	136	139	141	2	1

The point that stands out is that in 1955 the cost of wages and salaries a unit of output rose by 5 percent and the cost of gross profits by 1 percent. This upset the fair balance established in 1954, when both wages and profits contributed equally an extra 2 percent to cost a unit of output. As the Treasury points out, there has been no comparable increase in wage costs in western Germany. Between 1950 and 1954 labour costs a unit of output in manufacturing industry rose by more than 25 percent in Britain against only 2 percent in Germany, and since 1954 the position has almost certainly deteriorated even further.

Electrical Undertakings in India

After a lengthy tussle over balancing charges, a tentative agreement was reached between the Madras Electric Supply Corporation and the British tax authorities on the Corporation's tax liabilities. As a result, a further small liquidation payment of 25 percent on each £1 unit is to be made. The Madras company was one of three British-controlled electricity supply undertakings taken over

by the local Governments in 1947, at prices based on an independent valuation. The purchase figure was £1,612,500. The preference capital was repaid in October, 1950, shortly after the company went into liquidation. A first payment of 20s. 6d. a £1 Ordinary stock was made last September. There are certain tax questions in India still outstanding and a settlement favourable to the company might well permit a third distribution to be made. Of the other two companies, Cawnpore Electric Supply declared a third and final payment of 15s. a unit in April this year. The final winding-up is expected in the next month or two. Delhi Electric Supply and Traction was the first to complete its liquidation, the final payment being made a year ago. A fourth undertaking, the Calcutta Electric Supply Corporation, continues to operate as an independent concern. In February, 1946, the company reached an agreement with the Bengal Government under which 14 licences were grouped into a single licence with an option for the Government to buy the undertaking on 1st January, 1950, and thereafter at 20-year intervals on giving two years' notice. The Government decided not to exercise its option in 1950, so that, barring unforeseen political upheavals, this company should have a clear run until 1970.

Wool Marketing in 1955

The United Kingdom wool clip of 1955 was disappointing in some respects, says the British Wool Marketing Board in its annual report, for the year ended 30th April. It amounted to only 67,200,000 lbs., 5,300,000 lbs., or 7.3 percent, less than in 1954. Prices averaged 52.7d. a lb.—3.7 percent less than in the previous year. The average price of the comparable New Zealand clip, however, dropped by 6.6 percent and that of the Australian clip by 16.8 percent. At the board's sales 59,500,000 lbs., or 88.5 percent of the current clip, had been sold by 30th April, and stocks in hand at that date of 7,500,000 lbs. had been sold since then. The wool scheme had worked successfully in spite of less favourable conditions. Rising costs had been contained by economies by the Board, including a reduction of £11,555 in administrative costs. Total marketing costs on the smaller clip, at £1,238.136, were £34,114 less than in the previous year, though the average cost a lb. was 0.212d. higher. Finance costs rose by over 1d. a lb. because of increase in bank rate and those for the current year might show a further rise of 1d. a lb. unless money became cheaper. Since the wool scheme started six years ago, the Government's guarantees for wool had been supported by funds derived from the surplus made on the 1950 clip, at the time of the Korean war boom. The scheme was self-supporting. These circumstances resulted in a series of stable prices to producers. On the final disposal of the 1955 clip, however, the report says, producers' own price support funds will be virtually exhausted and any deficiency on the 1956 clip will have to be met from the Exchequer. A new phase is accordingly now beginning, and the Board hopes that its operations will not necessitate drafts on the taxpayers' money.

H. P. Debt Falls Again

Hire-purchase indebtedness continued to fall in June, according to Board of Trade figures. At the end of the month the total was about £397 million, or some 12 percent below the level at the end of the year, when it was estimated to have been at least £450 million. At the end of June the debt owing to retailers was about 2 percent lower than in the previous month, while that owing to finance houses was down by about 1 percent. Repayments are still being made at a higher rate than new advances, even though new advances by finance houses have risen from their low level in March and April. So probably have those made by retailers. Of the £397 million total debt, about £234 million is owing to retailers and at least £164 million to finance houses. Of the latter figure, £126 million, or 77 percent, was owing to members of the Finance Houses Association.

The bulk of the debt, £249 million, is on consumer goods, such as furniture, hardware, radio, and electrical goods. Of this, £234 million was owing to retailers. The debt owing to finance houses for motor vehicles was £126 million and that for industrial and farm equipment £17 million. The index number (December 1955=100) of the value of new hire-purchase credit extended direct

to hirers for new private cars fell from 115 in May to 106 in June. For used cars the index was 142 in June, as against 148 in May. For all goods the index was 101, against 108 in May and 96 in April.

Minimum Price Scheme Dropped

Proposals for introducing a minimum price scheme into the weaving section of the cotton industry have been dropped, at least for the time being. In April the employers' organisation on the weaving side of the industry—the Cotton Spinners' and Manufacturers' Association—completed a draft price maintenance scheme for weaving, similar in some respects to the one which has existed in the spinning section of the industry for many years, and circulated it to all its members for their comments and suggestions. In the meantime, however, Parliament has passed the Restrictive Trade Practices Act, and the Association has now issued a statement saying that it did not at present propose to introduce the scheme on a legally enforceable basis. The proposals contained in it would merely be circulated to members for their guidance. The attempt to introduce such a scheme was prompted to some extent by the industry's dis-appointment with the repeated refusal by the President of the Board of Trade to protect cotton against unlimited imports from abroad, and from its fears that profit margin will be reduced further and further if these cheaply produced foreign textiles are allowed to continue to flow in unchecked.

Car Production and Exports

Labour troubles and redundancy in the motor industry, though continuing, did not noticeably affect the production of cars last month. On the export side, in fact, the industry increased its shipments overseas in July by 1,700 cars to a total of 32,145—the highest monthly figure since May last year, and 1,200 more than in July, 1955. It is expected, however, that exports to Australia will decline soon because of the restrictions recently imposed on British cars. There was a slight fall in July in the number of commercial vehicles exported (13,376 in June, 12,703 in July), whereas there had been an increase of 4,000 during the corresponding period last year. These figures are contained in tables issued by the Board of Trade. The tables also show that, although the production of cars fell from 83,043 in June to 51,476 in July—a drop of 31,567—this was actually a few hundred fewer than the drop experienced between June and July the year before. An official of the Society of Motor Manufacturers and Traders, said that this decline occurred each year and was caused by some firms starting their annual holidays in July. Short-time working and strikes did not appear to have increased the figure. The decline in the production of commercial vehicles, however, is greater than normal—a fall of 13,700, compared with one of 10,000 in June-July last year.

Brevities

The British European Airways Corporation made a net profit of £603,614 in the year ended 31st March, and a gross profit of £1.2 million—an increase of 63 percent on the profit in 1954-55.

For the second month in succession the cost of living has fallen but not sufficiently to alter the Ministry of Labour's index of retail prices. On 17th July this figure was 102, the same as in June. The June index was 102.4, compared with the level of 100 on 17th January, expressed to the nearest whole number it was announced as 102. Therefore, in the first half of July, the cost of living fell by 0.4. This is the first time since 1952 that the index—now calculated on a new basis, on the old basis it actually shows a fall of 1 point on 17th July—has risen as little as two points between January and July. Last year, under the old index, it rose four points in this period, five in 1954, and three in 1953.

Also, for the second successive month the Board of Trade's index number of basic material prices shows a slight fall. For July the index (basis 30th June, 1949=100) was down from 155.2 to 154.1, which is the lowest level touched since November of last year. Last month's fall was due mainly to lower average prices for copper, down 6.3 percent, wool, down 1.5 percent, and linseed oil, with a fall of 8.6 percent. Among the materials that rose in price in July were rubber, up 13.2 percent, tin, up 1.1 percent, lead, which rose 0.4 percent, and palm oil, with a 9.8 percent increase.

CONTINUED RISE IN CLOTH PRICES

GOVERNMENT DETERMINED TO ENCOURAGE HANDLOOMS

(FROM OUR BOMBAY CORRESPONDENT)

THE Union Minister for Commerce and Industry, Mr. T. T. Krishnamachari, reiterated at a meeting of the All-India Handloom Board here that the Government was determined to do all in its power to encourage the handloom weaver. The object of the meeting was to consider ways and means of increasing the output of the handloom sector by 700 million yards over the next three years. Mr. Krishnamachari felt that an extension of the co-operative system would materially assist the handloom weaver in his activities. Apparently, he was satisfied with the progress that this sector has made over the last few years. He said: "Judging by the progress of expenditure up to March

last, I can say emphatically that, by and large, the State Governments have done well. The work which we have all done during the last three years has produced some good cumulatively, though it varies from place to place. At the same time, I concede that what we have done falls short of what we ought to do, and there is considerable leeway to be made up." Mr. Krishnamachari, however, did not specify in concrete terms the actual good that has been done and its relation to the national economy.

Working Capital

A number of suggestions were made at the meeting. It was proposed that the working capital be increased to Rs. 300 a loom and that this sum be made available to all within the co-operative framework. The other forms of financial assistance, it was urged, should include the granting of marketing loans on liberal terms and short-term loans to co-operative societies for the purpose of maintaining production during slack periods. The necessity of replacing the existing pit looms by frame fly-shuttle looms was also emphasised. The Commerce Minister conceded that a uniform quantum of working capital for each loom would be

desirable, and that in certain circumstances, it may be necessary to extend financial assistance to the handloom weaver. He suggested that a quota of production should be fixed for each State on the basis of its past performance, following which the aid requirements of individual States would be sympathetically considered. On the other hand, there has been sharp criticism of the Government for its proposal to introduce power looms within the small-scale industry. Such a step, it is contended, would lead to unemployment and defeat the very object of the cottage industry as a whole. But it is unlikely that the Government will entertain such objections.

This controversy apart, the fact remains that the country is committed to a policy of the small-scale sector subsisting alongside the organised mill industry. Just how much this experiment will cost the country remains to be seen, but certain manifestations are inevitable in the process of its working. One of these is a rising price level of most varieties of cloth. This has already happened and cloth prices today are about 12 percent to 15 percent higher than they were at this time last year. The Bombay piecegoods market was active last week, and prices of several popular qualities such as drills, dhoties and coatings increased by a further 3 percent. Brisk business has been transacted with merchants from West Bengal, Bihar and Delhi and most mills are now fully booked up till the end of November. On the other hand, mercerised medium shirtings have dropped by about 5 percent. But this is a temporary phase and it is expected that there will be a general rise in the price of all varieties within the next few weeks when the festive season begins. It is now generally believed that the internal demand for cloth is rising at a faster rate than production and in spite of the fact that mill output rose from 2,491 million yards in the first six months of last year to 2,583 million yards for the same period this year, a growing shortage of cloth is expected. This belief has helped strengthen prices and when the shortage shows signs of reaching an acute stage, it is likely that the price level will be forced up to abnormal limits, helped as it probably will be by hoarding and speculative activity. Certainly, there will be seasonal fluctuations when short-term market conditions of supply and demand exert their influence, but the long-term price range will show a tendency to stabilise at a higher level.

Increasing Competition

In these circumstances, it is possible that the Government may be compelled to reverse its decision to peg the output of the mill industry, but it is doubtful if such a reversal could be brought into effect in time to prevent the damage. Perhaps cloth imports from abroad may be necessary to avert a textile famine. Considering that the country itself seeks to export 1,000 million yards a year, this indeed will be ludicrous. Internally rising prices must inevitably lead to diminishing exports. It is expected that the export figure for August will not exceed 55 million yards as against 63.15 million yards shipped last month. An attempt has been made to explain away the fall by attributing it to the closure of Ahmedabad mills for several days during the recent disturbances. This may well have held up despatches, but the fundamental fact is that Indian cotton piecegoods are no longer competitive in world markets. In face of increasing demand and rising prices at home, there is no incentive for Indian mills to be competitive in foreign markets, particularly when they knew that they are fighting losing battles against competition from Japan, Pakistan and the Communist countries. It is officially reported that the Iranian market at present is stocked with 49 million metres and 35 million metres of cotton piecegoods imported from Russia and Japan respectively. Pakistan has already sold a sizeable quantity of grey sheetings to Ethiopia and Somaliland, and merchants in these countries claim that Pakistan qualities are superior to the Indian product and are cheaper. The baling, folding and presentation of Pakistan sheetings are, it is also claimed, superior. Communist China, too, has already entered the Aden market which has traditionally been India's preserve. A trial order for 2,000 bales has been placed with China, and it is reported that judging on the basis of samples submitted, the Chinese product, manufactured on automatic loom, would appear to be far superior to Indian qualities, and what is equally important, much cheaper in price. Competition from these sources in south east Asian markets has already been reported.

Need for Rationalisation

There would appear to be no point in urging the Indian mill industry to launch an all-out export drive in order to earn the foreign exchange which the country so urgently needs, because it is ill-equipped to do so. Even a natural or a controlled fall in internal cloth prices will not help the industry to fulfil its export target of 1,000 million yards each year, because the Indian industry is fundamentally uncompetitive. In this connection, the Government's decision to permit the production of 350 million yards under modern methods by the installation of new 200,000 spindles and 14,600 looms is a step in the right direction, but it does not go far enough. If India is to retain a fair share of the export trade, then rationalisation on a much larger scale is indicated. Even from the point of view of the local market, it hardly seems fair that the domestic consumer should continue indefinitely to subsidise outworn methods and equipment by paying higher prices for a necessary commodity. The issue of rationalisation will have to be faced sooner or later, and it is better to face it before the country's foreign markets are lost than after the damage has been done.

Plantation Topics

PLANTATION ENQUIRY COMMISSION REPORTS ON THE TEA INDUSTRY

NEED TO REDUCE COSTS OF PRODUCTION

THE Plantation Enquiry Commission, in its report on the tea industry in India, has suggested the creation of a tea replanting fund to be used for the purpose of replanting tea bushes. It has suggested that each grower should contribute Rs. 50 an acre every year to the fund. The Tea Board should draw up a programme of phased replanting of tea bushes as well as replacement and renewal of machinery and equipment. The report, which was presented to both Houses of Parliament on Tuesday, estimates that the production in the country may rise to 710 million lbs. a year by the end of the second five year plan. This would mark an increase of about 45.5 million lbs. over the present level of production. The Commission, however, says: "In our assessment the immediate problem before the tea industry in India is not so much the need for a large-scale expansion of the area as of continued maintenance of results already achieved and improvement of existing assets."

The Plantation Enquiry Commission consisted of Mr. P. M. Menon (chairman), Mr. K. G. Sivaswamy and Professor M. V. Mathur (members). It was appointed by the Government of India in 1954 to make a comprehensive enquiry into the economic conditions and problems of the tea, coffee and rubber plantation industries. It was asked to make recommendations on measures for securing a fair price for both the producer and the consumer, for the provision of finance for the industry, for suitable marketing arrangements and for the development and expansion of the plantation industry. The Commission's report on the tea industry was submitted to the Government some time ago and the recommendations contained in the report are being examined. Mr. Sivaswamy has appended a note of dissent to the report. The Commission's report on the other two industries, coffee, and rubber, is expected shortly.

The Commission says that retail prices of tea are high and need to be reduced if internal consumption is to increase. The Tea Board should make a special investigation of the difficulties under which the smaller packaging firms are suffering, and a ceiling should be imposed on the production of existing blenders as well as of new units. The objective should be to ensure that tea is vended only in package form. The abolition of the differential rates of excise duty on packed and loose tea is recommended. The Tea Board should make arrangements for packing and distribution, under its own distinguishing label, 50 percent of the quantity of dust tea that is now packed and sold in India. As for primary sales, the Commission recommends that the selling and buying brokers should be separate. Brokers have come to occupy an unusually strong position in the marketing of tea in Calcutta. They should not be connected in any way with the management, or be a major shareholder in any tea estate, or have any connection with the trade and export of tea. The Tea Board should assume the functions of regulating the sale of tea at the Cochin and Calcutta auctions. The abolition of the export quota system is recommended.

Profits and Capital

The Commission observes that generally speaking the ratio of gross profit to total capital in the tea industry has been high. In its opinion, withdrawal from reserves, other than the dividend equalisation reserve, for the purpose of declaring dividends, is unsound and should cease. As for the provision of finance for the industry, the Commission has emphasised that the tea industry should be given priority in the programme of extension of branches of the State Bank. The recommendations of the All-India Rural Credit Survey Committee have full application to the tea industry. The Commission also feels that the response of the capital market to debentures issued by tea companies should be favourable. It has made a number of recommendations for the improvement of transport in the tea producing areas, for labour welfare and for improving the supply of stores. It has suggested the setting up of a Plantation Labour Welfare Organisation controlled by the Central Government. The Commission has also recommended a basis for computing bonus payment to tea labour.

The tea plantation industry provides direct employment to over a million workers in the country and is, thus, the largest employer of organised labour. The report says that although the internal consumption of tea in India has been progressively increasing during the last few years, the major part of the production is exported. India occupies first place, in both acreage and production, among the principal tea-producing countries of the world which participate in international trade. The large volume of exports gives the industry a place of great importance in the Indian economy as a substantial earner of foreign exchange. The tea industry is also the mainstay of the plywood industry. In north India, the Doon and Terai region of West Bengal has the

highest yield per acre and Ranchi the lowest excluding Almora. In south India the yield is highest in the Anamalis. Unlike north India, tea is made throughout the year in the south.

Referring to the structure of the tea industry in India, the Commission observes that the total capital investment in tea is estimated at Rs. 113.06 crores. Of this, Rs. 40.51 crores (35.8 percent) is Indian and Rs. 72.55 crores (64.2 percent) non-Indian. Between 1939 and 1953, the figures of shareholdings revealed an overall fall of 10.4 percent in the shareholdings of the non-Indian sector and a corresponding rise in the Indian sector.

Concentration in Industry

Thirteen leading agency houses in Calcutta control over 75 percent of the tea production in north India. Of these, seven companies control more than 50 percent and five companies as much as 36 percent of the production. Eight agency houses of producers in Calcutta and their associate firms purchased over 50 percent of the tea at the Calcutta auctions in 1954. The retail distribution of tea in India is controlled by two leading firms to the extent of 85 percent. The Commission points out that in an industry in which capital is so largely in the hands of foreign business houses and 75 percent of the production is controlled directly by a limited number of agents of these firms, it is inevitable that there should be a high degree of concentration. The proportion of reserves to total assets in 1953 was higher in the Indian group than in the non-Indian group. The growth in the paid-up capital from 1939 to 1953 for the companies under various types of management shows that the increase is not very significant. What little increase there has been is also wholly accounted for by the issue of bonus shares or rises in the face value of the shares.

The Commission feels that there is need for the exercise of more rigid scrutiny before sanctioning new capital issues, especially in cases arising out of the purchase of proprietary estates, conversion of sterling companies into rupee companies and issue of bonus shares as a consequence of revaluation of fixed assets. It points out that the growth in the internal resources of the companies has not been commensurate with the needs of the industry for maintaining the fixed assets in a normal condition. A limitation of dividends by half would itself have enabled most companies to increase their internal resources by about 25 percent.

On the cost of production of tea in India, the Commission reports that the cost in 1950 was Rs. 118.15 a 100 lbs. This gradually rose to Rs. 140.36 in 1952, but decreased to Rs. 131 in 1953. The cost was generally higher in sterling and non-Indian rupee estates than in Indian estates. The highest was among sterling companies, Rs. 135.66 a 100 lbs. in 1953, while the cost of the director-controlled Indian public limited companies was the lowest at Rs. 102.11. The Commission finds that, after a certain point, there is no decrease in the cost of production as a result of an increase in the size or yield of the estate. It points out that in tea estates, most of the operations relating to cultivation and gathering of crops, etc. are done by hand, so the possibility of significant reductions in cost by increasing the size of the estate is limited. To bring about economy in the cost of production, the size of the estate should be related to managerial efficiency and the crop required to maintain a tea factory. The Commission's conclusion is that the optimum size for a tea estate may be anywhere between 800 and 1,000 acres. This will mean employment for about 1,000 to 1,500 labourers, which is almost as many as an efficient estate manager can supervise.

Need for Reduction

The Commission observes that the future of the tea industry is closely linked with the cost of production. India has to produce good quality tea at reasonable cost in order to face successfully the growing competition in the international market and to develop, as far as possible, the internal market also. Increased production per acre should be achieved by improved methods of production and increased productivity of labour. "General charges" and "payment to labour" form the largest parts of the total cost of tea production. The Commission suggests the following measures to reduce the cost of general charges: (1) a decrease in the remuneration paid to managing agents and secretaries; (2) abolition of the commission paid to managers, etc. (and instead giving them a consolidated salary); (3) increasing Indianisation of managerial personnel and reduction in the number of the non-Indian managerial personnel to the minimum; and (4) rationalising of the salary structure of the managerial cadre. The Commission has recommended that the Tea Board should undertake a well-planned and regular study of cost data to keep the industry informed about its economic efficiency and competitive position. A

"cost of production" section should be set up in the Tea Board for this purpose.

Replanting Fund

On the maintenance and upkeep of tea bushes, the Commission observes that in spite of the need for a programme of replanting for the very existence of the industry in the long run, progress has been tardy. Each tea garden should be required to lay aside every year a certain sum of money for the purpose of financing programmes of replanting. In the area covered by the replies received, as much as 28.79 percent of the plants were more than 55 years old, having been planted before 1900. Assuming the economic life of a tea bush to be 60 years, all this area will be due for replanting without undue delay. The larger proportion of old plants, i.e. those planted before 1900, are under non-Indian ownership. The Commission has, therefore, recommended that the Tea Board should draw up, in consultation with producers, a programme of phased replanting as well as replacement and renewal of machinery and equipment. The Government should ensure that the tea gardens make the necessary financial provision for this programme before they declare dividends or repatriate profits. The Tea Board should appoint development staff to assist the estates in framing such programmes and to co-ordinate and implement them.

The Commission has suggested that the Government should arm itself with powers to make investigations and issue directions necessary for the proper maintenance of fixed assets, including replanting, in any tea estate. It has recommended that a tea replanting fund should be created in the Tea Board to which each garden should contribute Rs. 50 an acre every year. The amount would be held in the fund by the Tea Board to the credit of the garden concerned. Tea gardens should be allowed to withdraw from the fund such amounts as may be necessary for the purpose of replanting according to a programme approved by the Tea Board. The scheme may be applied only to gardens of 100 acres and above. As the major portion of the acreage and production are accounted for by estates of over 100 acres, the scheme will cover 96.1 percent of the total acreage and 99 percent of the production in the country. The figure of Rs. 50 an acre has been arrived at by the Commission only as an approximation, and on the basis of the cost of replanting an acre and tending it for five years before plucking being taken at Rs. 3,000 and the economic life of a tea bush at 60 years. It says that a detailed investigation should be made by the Tea Board to determine a suitable figure.

The Commission has recommended that when tea gardens of 100 acres or more are sold, the approval of the Tea Board should be obtained. The Board should make an assessment of the age of the tea bushes in different blocks of the garden and the money required to finance the replanting of the existing bushes at the end of the economic life. Contributions to the replanting fund, based on this assessment, by the new buyer of an estate should be prescribed as a condition necessary for his registration by the Tea Board. Also, in the case of sales of sterling capital estates, repatriation of sale proceeds should be permitted by the Reserve Bank of India only after it has ascertained from the Tea Board that the necessary contribution to the replanting fund for the estate has been made.

Financial Help

Discussing the financial requirements of the industry, the Commission says that the yearly average of the working capital requirements for the three years 1951 to 1953 for north India works out to Rs. 1,290 an acre and for south India to Rs. 727 an acre. Apart from their own resources, like reserves and advances by managing agents, the external sources of finance on which the companies and other large producers depend are the commercial banks and brokers. The total bank advances during the three years ended 1953 were on the average Rs. 36.82 crores a year. The advances made by brokers, though much smaller than those made by the banks, were not inconsiderable. The Commission observes that the urgency, adequacy and availability of finance for every agricultural producer emphasised in the report of the Committee of All-India Rural Credit Survey have equal application to the tea industry. It considers the levy by some of the banks of a charge on gross sale proceeds in addition to interest is unjustified. It recommends that the Reserve Bank should use its good offices with the banks and, if necessary, use legal powers for the discontinuance of the levy. The Commission is of the opinion that the financial difficulties of the Indian section of the industry can only be removed by the State Bank providing finance in an abundant measure. It, therefore, recommends that in its programme of extension of branches the State Bank should give high priority to the opening of branches in tea plantation areas.

It recommends that the Industrial Finance Corporation and the Finance Corporations of the States in which the tea gardens are situated should meet the needs for long-term finance. It has made recommendations for the redemption of past debts of tea estates. The Commission has suggested that the State Finance Corporations should appoint a panel of experts in consultation with the Tea Board to evolve a common policy in the matter of grant of loans. The Tea Board should have a Plantation Finance Committee to keep a close watch on the financial needs of the tea industry. The Commission feels that the response of the capital market to debentures issued by tea companies should be favourable and recommends that tea

Cool filtered water for office or factory

'Tushar' WATER COOLERS

— by the makers of the famous 'Crystal' air conditioner

A 'Tushar' water cooler increases staff efficiency, helps to improve quality of work — quickly pays for itself in goodwill

- **Instantaneous cooling:** Continuous supply of instantly cooled water at the touch of a button — no unhygienic refilling or storing
- **Two models available:** Model R-10, capacity 10 gallons per hour (180 cupfuls per hour); and Model R-40, capacity 40 gallons per hour (720 cupfuls per hour)
- **Easy to install:** Needs only a water supply, a drainpipe and an electric plug point

- **Economical to run:** Cools to the temperature you choose, then switches off automatically
- **Silent working-Anti-splash construction- Handsome design**

companies should tap this source of finance for future capital in an increasing measure.

On the marketing of tea (primary sales), the Commission observes that the brokers have come to occupy an unusually strong position in the marketing of tea in Calcutta. The business is concentrated in a few hands. There is every reason to think that the valuation of the broker, which in his dual capacity he communicates to both the seller and the prospective buyer, plays an important part in deciding the relative prices of the produce at the auctions. The Commission, therefore, recommends that the selling and buying brokers should be separate. They should not be connected in any way with the management or be a major shareholder in any tea estate or have any connection with the trade and exports of tea. The Tea Board should assume the functions of regulating the sale of tea at the Cochin and Calcutta auctions. The rules governing the auction sales and other matters pertaining to the primary marketing of tea should be made by the Tea Board. In conformity with its objectives of promoting co-operative effort among growers and manufacturers, it should give every facility to producers for the co-operative marketing of tea. The Board should also go into the matter of warehousing and brokerage charges, about which complaints have been made. The tea exported under forward contracts and direct sales should be included within the ceiling prescribed for direct shipments to London.

Abolition of Export Quotas

The Commission recommends that the export quota system should be abolished. This will affect to some extent the income of the small producers, who should be granted assistance, like subsidised issues of manures and supplies of equipment accompanied by technical aid. Discussing the retail distribution of tea, the Commission finds that packed tea sold in India was on the average 52.94 percent of the total amount of tea estimated to be available for internal consumption during the four years 1951 to 1954. The effect of a higher rate of excise duty on tea sold in packages than on loose tea has been to stimulate the retail distribution of tea in loose form rather than in packages. The Commission considers this to be undesirable since it has the effect of stimulating the distribution of an article of human consumption in a less hygienic form. It has, therefore, recommended that the differential rates of excise duties on packed and loose tea should be abolished and the old uniform rate of duty of 3 annas a lb on all tea restored. The Commission has also recommended that for all producers whose total production does not exceed 5,000 lbs. a year, the excise duty should continue to be levied at the present rate of 1 anna a lb. only.

The Commission feels that if blenders reduce their overheads and quantum of profits, at least in the case of the popular grades, it will give encourage the increased consumption of tea internally, which is very necessary for the stability of the industry. Prices are high and need to be reduced if internal consumption is to be increased. The Tea Board should make arrangements for packing and distributing under its own distinguishing labels, 50 percent of the quantity of dust tea now packed and sold in India. Distribution can be arranged by the Tea Board through its tea houses as well as by ordinary commercial channels. The Commission has recommended that the Tea Board should make a special investigation of the difficulties under which the smaller packaging firms are suffering so that positive steps can be taken to increase their competitive capacity. In its opinion, ceilings on the production of existing concerns as well as the units which may be established hereafter should be fixed at the average of the last three years' production or 6 million lbs, whichever is more. Blenders' co-operatives should be organised and promoted in every way. The Commission has stressed that the objective should be to ensure that tea is vended only in package form within the shortest possible time. On adulteration, the Commission emphasises that the administration of food laws should be pursued with vigour and recommends that the tea waste rules should be promulgated and enforced at an early date.

Managing Agents

Referring to the profits earned by the industry, the Commission says that generally speaking the ratio of gross profit to total capital employed in the industry has been high. The remuneration paid to managing agents is based partly on a percentage of gross sales and partly on a percentage of profits, a specific minimum in each case also being sometimes prescribed. This, it says, results in substantial payment having to be made as managing agents' commission, even when profits are low or non-existent, as in 1951 and 1952. The managers and senior staff are also in most cases paid a commission based on profits. The report says that there was a higher increase in profits between 1945

and 1953 as compared with profits between 1939 and 1946. Indian companies showed a higher increase than sterling and non-Indian companies, which is explained only by the high production cost of sterling and rupee non-Indian companies. It says that withdrawals from reserves other than the dividend equalisation reserve for the purpose of declaring dividends is unsound and should cease.

Taxation Proposals

On taxation, the Commission has made several recommendations. For determining the world price of tea for fixation of the slab for export duty, instead of taking only the previous month's weighted average of the London auction prices, the previous six months' average may be taken. The rules and conditions for the levy of agricultural income-tax on tea plantations in different States should be made uniform. The Central income-tax authorities should collect both taxes and pass on the agricultural portion of the collection to the States. Sales tax on tea which figures in inter-State commerce should be made a Central levy. The Commission has recommended the abolition of the tax of 1 anna a lb levied on all tea consigned to any dealer in the municipal limits of Calcutta and the districts of 24 Parganas and Howrah, as this is inconsistent with the policy of encouraging the auctions in Calcutta. The abolition of the levy made by the Government of Assam on tea moved by road or inland waterways in the State is recommended.

For labour welfare, the Commission has recommended the setting up of a Plantation Labour Welfare Organisation controlled by the Central Government. It estimates the total cost of providing the required number of standard houses for tea labour both in the north and the south at Rs. 60 crores, on the basis of Rs. 2,000 for a new house and Rs. 1,000 for remodelling an old house. It expects a net addition of Rs. 50.63 an acre a year to the internal resources of the companies in the next five years. It thinks that this is a rather limited amount to meet the obligations under the Plantation Labour Act and to meet the other important needs of the industry. This will have to be taken into consideration in phasing the implementation of the Plantation Labour Act. The Commission has recommended that the plantation industry should be eligible for loans under the industrial housing scheme.

Payment of Bonus

Discussing the payment of bonus, which has been a major cause of industrial disputes in recent years, the Commission says that any scheme which may be evolved should incorporate the following essential requirements: (1) depreciation allowance should be separately funded and drawn upon only for expenditure on replacement and renewal of fixed assets; (2) the tea replanting fund should be set apart; (3) after providing for taxation, a statutory reserve for meeting developmental expenditure and unforeseen charges should be built; (4) a minimum dividend should be provided for as a percentage on share capital from what is left over; and (5) the remainder should be divided between the shareholders and labour and staff according to a suitable formula, the details of which should be worked out.

The Commission says that when co-operative institutions, as recommended by it, for supplies, insurance and marketing are fully developed and financial assistance is provided by the State Bank and State Finance Corporations, the need for the managing agency system in the tea industry should disappear. It has recommended that remuneration to staff should take the form of a fixed salary. The Tea Board should be empowered to examine cases of disproportionately highly paid staff working in tea companies, and when necessary, exert its influence in reducing the disparities that exist at present. An increasing number of Indians should be appointed in the managerial cadres of tea companies. All tea plantation companies should be required to seek the permission of the Controller of Capital Issues before increasing their capital.

Sale of Estates

As for the sale of tea estates, the Commission observes that a good many tea estates owned by foreign companies and individuals have been purchased by Indian nationals and in the majority of these estates, which included also the marginal ones, replanting was overdue at the time of sale for which the buyers often made no provision. If a return of at least 4 percent on the purchase price per acre is to be obtained over a long period, the prices paid in some of these cases were excessive. The Commission recommends that if a seller or the prospective buyer so desires, the Tea Board should send its expert evaluator to assess the price of the tea estate. The buyer should be aware of his obligations to the workers employed and take responsibility for their continued employment on the same terms as before. There should be a stipulation in the deed of transfer that the buyer takes this responsibility.

The Commission has repeatedly emphasised the need for efforts for a steady increase in consumption of tea in the internal market. In its opinion, the potentialities of the internal market are very great, and a large and growing internal market is necessary for the stability of the industry. For promotion of exports, it suggests that the Tea Board should appoint an Export Promotion Committee consisting mainly of exporters of tea to look after the expansion of Indian tea sales abroad. A Marketing and Tea Promotion Directorate should be set up in the Tea Board which will make studies of various marketing problems in India and abroad.

For improvements in transport facilities, the Commission has recommended that the Central

Water and Power Commission should investigate the existence of shifting sands in the Brahmaputra which sometimes cause unexpected and abnormal delays in the navigable channels. The attention of the railway authorities has been drawn to the need for keeping the line connecting Dhubri with the Central Doars free from breaching to provide an alternative river route to Calcutta even when the rail route is disrupted.

The Commission is of the view that minimum wages should be the same in all States unless they vary on account of difference in cost of living. The minimum wage should not be disturbed frequently, once it is fixed. In so far as the wage is a minimum, there can be no exemptions for different holdings or estates.

PAKISTAN TEA OUTPUT INCREASES

SELECTIVE DEMAND AT AUCTIONS

(FROM A CORRESPONDENT IN EAST PAKISTAN)

PAKISTAN'S tea output in July was 7,346,430 lbs. compared with 6,736,775 lbs for the same month last year. Production from 1st April, 1956, to 31st July, 1956, totalled 20,525,126 lbs, as against 17,815,625 lbs for the same period of last year. Generally good growing weather was experienced during July. The cumulative increase over 1955 up to the end of May was 2,170,000 lbs, remained approximately the same up to the end of June and it advanced to 2,710,000 lbs by the end of July.

The pattern of the sales in the London market was the same as in previous months, with better liquoring types well supported at satisfactory prices, while thin liquorings and stalky types were neglected. There was no Pakistan tea on offer in London in July, except in the third week when 815 packages of 1955-56 season's tea realised an average price of 2s 8½d. Chittagong tea Sale No. 2 was held on 11th July, when 12,955 chests of Leaf and 3,078 chests of Dust were on offer. The market opened a full 3 annas down on the last rates, but improved slightly as the Sale progressed. There was very little demand for whole leaf grades, a large number of which had to be withdrawn without a bid. Tippy teas were well supported and frequently fetched prices above valuation. Clean Fannings closed some 2 to 2½ annas below previous rates, while Broken teas were up to 3 annas. Some 2,129 chests were withdrawn. In the Dust section, there was a good demand for the better liquoring leafier sorts and also for the popular tobacco-cut types which frequently sold above valuation. The plainer sorts met with much less enquiry and declined by 6 to 8 annas, while small powdery Plain Sylhet Dust was quoted at Rs 1-8. Sale No. 3 was held on 25th July, when 11,883 chests of Leaf and 2,772 chests of Dust were on offer. The market opened on a hesitant note and withdrawals were heavy in the first few pages. Sellers, however, were unanimous in refusing to accept a drop of more than 2 annas and once a price level had been established, bazaar buyers became more confident and the demand, although irregular, became fairly widespread. The better made whole leaf grades sold satisfactorily, but those resembling leafy Broken teas were neglected and were heavily withdrawn. Once again, tippy teas were keenly competed for and frequently sold at prices above valuation. The better liquoring B.O.P.s and O.F.s also were competed for, but thin liquoring and stalky varieties were not so keenly supported. Some 2,060 chests were withdrawn. The Dust section opened with a fair general demand, but prices eased as the Sale progressed to close 1 to 2 annas below last rates. Popular tobacco-cut sorts met with less competition than usual and declined by up to 4 annas. Plain Sylhet Dust was quoted at Rs. 1-6 to Rs. 1-7.

LONDON TEA SALES

AT last week's London tea sales the 55,879 packages on offer realised an average price of 4s 4.22d a lb, against 3s 11.77d in the previous sale and 4s 4.51d a year ago. Plain old season's broken pekoe was quoted at 2s 8d a lb, nominal, against 2s 9d in the previous sale. Prices obtained by some of the companies are given below:

	No. of packages	Average per lb.
Amalgamated	876	4/0½
Amgoose	270	10/0½
Assam Doars	388	4/2½
Assam Frontier	126	7/4½
Badulipar	545	7/6½
Consd. Estates	756	5/3
Consd. Tea & Lands	850	3/1½
Dekhari	120	7/11½
Doars	682	3/9½
Doom Dooma	126	6/10
Empire of India	324	2/11
Hunwal	306	8/0½
Jorchaat	791	9/5½
Kanah Devan	870	4/2½
Lungla	675	2/10
Lunuvu	1,044	5/6½
Nedem	300	4/9½
New Dimbula	390	4/6½
Southern India	354	3/4½
Standard	366	6/9
Travancore	2,125	2/11½
Upper Assam	228	8/4½

U.K. Tea Stocks

U.K. stocks of tea on 17th August amounted to 128.7 million lbs, against 123.9 million lbs a year ago.

Jute

INCREASED FIBRE DUTIES STRENGTHEN RAW JUTE PRICES

GUNNY MARKETS ACTIVE: BEST HESSIAN QUOTATIONS THIS YEAR

ONE of the main factors which has influenced the Calcutta fibre markets this week has been Pakistan's decision to increase the export duty on certain categories of raw jute. The duty on cuttings and ropes has been increased by Rs. 5 a bale, making Rs. 10 a bale in all, while Rs. 15 a bale has been added to the price of habi jabi, bringing the duty on this category to Rs. 20 a bale. The Pakistani authorities have said that habi jabi will now be considered in the same light as long jute for the purpose of export duty. The rate for long jute is unchanged, and remains at Rs. 4 a maund. These alterations have had far-reaching effects, because not only have they priced cuttings, etcetera, out of the Calcutta markets, but they have also strengthened the already bullish feeling among local operators, especially those dealing in low-grade jute suitable as replacement for cuttings. Pakistani markets too showed a sharp reaction to the news and very firm conditions prevail in upcountry centres. Operators have taken their cue from this and have themselves become reserved. Over the week, with encouragement from the goods market, they have succeeded in raising raw jute rates by Re. 1 to Rs. 1-8 a maund. Several mills have continued their demand for quick delivery jute, or delivery within one month and this has prevented any possibility of prices falling. Even those mills which were prepared to buy forward found that there was little or no discount attached to this type of trading and on several occasions there was the anomaly of two separate buyers purchasing jute for widely separated deliveries on a more or less similar price basis. Under the circumstances, sellers are naturally reluctant to face the uncertainty of forward trading, and although a fair amount of forward transactions have been concluded, no one seller has committed himself to heavy obligations. Those mills still looking for quick delivery jute have found sellers reluctant, as the majority have sold freely over the past few weeks and still have large undelivered balances on their books at prices Re. 1 to Rs. 2 below the current level. The availability of quick delivery jute has also dropped and it is reported that stocks in the Cossipore Indian jute, and B Bot and X Bot grades came in for a great deal of interest although the business done at the higher prices was very small. Sellers in general held very bullish ideas, and were encouraged in this by the very firm goods market. Local sellers were very reserved as the continued demand for quick delivery jute had depleted stocks in the Cossipore area to their lowest for several months. As all arrivals were diverted straight to mills there was no chance of them being built up again with the resultant possibility of a fall in price. Thus the sentiment of the whole market was governed by the activity in local circles.

The Trend in Gunnies

The gunny markets have lent considerable support to the fibre markets during the week, and more activity has been experienced than for some time. Although overseas buyers were reported to be interested in various fabrics, both of hessian and sacking constructions, the amount of interest shown has in no way warranted the violent fluctuations which have been predominant throughout. These were mainly the result of speculative manipulations in the fatka market, and it was impossible for firm offers to have any significance for more than a few hours. Consequently, bazaar operators have been well to the fore in all transactions. Many local shippers were caught short by the rise in prices and indulged in frantic covering operations, against their requirements before rates ran away from them. Prices in both the sacking and hessian sections reached new highs, and indeed hessian prices were the best recorded this year. The unusual activity has caused a reversal of the markets to which we have become accustomed, and towards the close, near hessian prices were quoted at premium of about 12 annas over forward shipment instead of the near-parity of the last few months and the discount of the early part of the year. Sacking, on the other hand, showed little change from recent workings and the ready position continued to be quoted at a fair discount on forward shipment, a situation which has been in vogue since the reselling of looms in mid-July. Before that, ready sacking held a very slender advantage over other positions.

THE JUTE MARKETS

Manufactured Goods: At the opening of the goods market last Thursday, the situation was dominated by speculative transactions in the fatka market which caused a general rise in sacking prices. Ready B Twills gained 14 annas and opened at Rs. 109-6 while January-March shipment jumped Re. 1 to Rs. 110-8. The hessian section ruled steady in sympathy and 40in 100z. Hessians gained between two and four annas to be quoted at Rs. 41 a 100 yards. Prices fluctuated rapidly throughout the day, but in the absence of any real goods support they tended to fall back towards the close. Both sections recorded small losses at the opening on Friday morning. From then on, however, a change came over the market, and rumours of American interest in Hessians caused rates in this section to jump 8-12 annas. Other fabrics followed in sympathy and a bullish tendency developed partly on account of the business reported and partly in support of the very steady fibre

markets. Heavy speculative activity and local covering by shippers over the week-end forced prices up still further, and by Monday morning ready Hessians had moved up to Rs. 42-3 and B Twills to Rs. 110-4. Fatka operators increased their activity after this and prices continued to rise until 40in. 100z. recorded a new high at Rs. 42-10 on Tuesday morning. Interest was centred mainly on the hessian section at this stage and all other fabrics merely moved in sympathy. At the close, prices could be regarded as nominal in the absence of real goods business and were quoted as follows:

	August	Sept.	Oct.-Dec.	Jan.-Mar.
	Rs.	Rs.	Rs.	Rs.
40in. 80z.	35-4	35	34-8	34
40in. 100z.	42-10	42-9	42-6	41-12
B Twills	110-12	111-8	112	111-8
Heavy Ceas (plain)	109	113-4	113	112
A Twills	135-4	136-4	137-8	137
Liverpools	126	127	128	127
Cornacks	111-8	112-8	113	112

Raw Jute: There was widespread activity in the raw jute markets this week, and it is estimated that about 700,000 maunds of jute were purchased. Delivery periods varied from ten days to shipment right up to the end of the year. The feature of the week, however, was the fact that prices showed very little variation, and were only slightly lower for October-November-December shipment than for ready delivery. The markets were very steady at the opening and Dhubri-Northern jute was quoted at Rs. 28-8 a maund for August-September shipment. Interest in quick delivery fibre soon pushed up ready prices, and jute in this category moved up to Rs. 30 a maund. Steady buying by mills of all types of jute, and rises in the gunny market added another eight annas to all quotations before the week-end. But this did not deter buyers, and fairly heavy business was transacted at the enhanced rates. By Monday morning, general quotations were put forward at Rs. 29-8 a maund basis Bottoms, but the business transacted at this stage was much smaller than earlier in the week. Pakistan's decision to increase the export duty on cuttings, etc., led to a squeeze on low grade Indian jute, and B Bot and X Bot grades came in for a great deal of interest although the business done at the higher prices was very small. Sellers in general held very bullish ideas, and were encouraged in this by the very firm goods market. Local sellers were very reserved as the continued demand for quick delivery jute had depleted stocks in the Cossipore area to their lowest for several months. As all arrivals were diverted straight to mills there was no chance of them being built up again with the resultant possibility of a fall in price. Thus the sentiment of the whole market was governed by the activity in local circles.

Heavy business was transacted for quick delivery jute this week, and prices ranged between Rs. 28-8 and Rs. 29-8 a maund basis bottoms for ten days' to one month's delivery, while Rs. 29-12 to Rs. 30-4 was paid for ready bills of lading. Western type fibre was purchased in Tossa grades at Rs. 28 a maund for deliveries extending from September right through to December. In Daissee jute, business passed for the same shipments at Rs. 28-8 a maund, and Daissee mesta at Rs. 26-8 a maund. Small lots of Daissee white are now appearing on the market, and contracts were passed for one month's delivery at Rs. 28-8 to Rs. 29-8 a maund. Towards the close business was also reported in Pakistan cuttings at Rs. 133 to Rs. 135 a bale for September shipment.

At the close the market was very steady. Quotations however were nominal because on Wednesday all markets were closed due to the holiday, and were as follows:

Indian Jute (New Crop):	Landed at Mills Rs. a md Basis Bottoms.	Shipment.
Lower Assam	30	August-Sept.
Northern	30	"
Murshidabad White	29	"
Daissee White	30	Sept.-Oct.
Daissee	30-8	"
Daissee Mesta	28-8	August-Sept.
Local Northern	30-8	Sept.-Oct.
Binli	28-8 for F.A.Q.	"
Tossa is quoted at 8 annas to Re. 1 a maund above the price of white jute.		
Pakistan Jute (New Crop):	Rs. a md.	Shipment.
Jat	32	Sept.-Oct.
District	31	"
Northern	30-8	"
Fucca:	Rs. a bale.	
Mill Firsts 2/3	210	Sept.-Oct.
Export Firsts 2/3	195	"
Export Lightnings 2/3	180	"
Jat Cuttings	133	Sept.

Imports into the Cossipore markets showed a rapid decline over the week and wagon arrivals totalled only about 520, which was nearly 300 less than the previous week. Consequently prices were very firm, and as mills were still interested in ready jute, local deliveries advanced to over

Rs. 30 a maund. General quotations in the market were based on Kishanganj jute at Rs. 30 to Rs. 30-8 a maund and there were eager buyers even at this price.

Mofussil: There was a marked increase in imports into most upcountry agencies last week, but this coincided with an increased demand from sellers covering against their August shipment contracts. During the week rates advanced up to Re. 1 a maund, and at the close quotations were based on Rs. 26-12 to Rs. 27-4 a maund in Dhubri. Recent reports of flooding have also helped to keep prices high, as sellers visualise a breakdown in transport arrangements.

MESTA ACREAGE DECLINES IN CURRENT SEASON

The all-India first estimate of mesta, 1956-57, puts the current year's area at 121,000 acres as against the corresponding estimate of 125,000 acres for 1955-56 according to the Directorate of Economics and Statistics, Ministry of Food and Agriculture. This shows a decline of 4,000 acres or 3.2 percent in area during the current year as compared with that of last year. Decline in acreage during the current year has been reported only by Bihar, where it has been attributed to unfavourable climatic conditions at the time of sowing. The decline in Bihar has, however, been offset to some extent by increases in Andhra, Orissa and Bombay. This estimate covers usually the period up to the end of June or the beginning of July, 1956. Till then, the condition of the crop was reported to be generally satisfactory. The estimate does not cover the entire area sown to the crop during 1956-57. Some late varieties of this crop are also grown in other States, such as Madhya Pradesh, Punjab, West Bengal, Hyderabad and Madhya Bharat. Data from those States will be included in the final estimate.

THE FOREIGN JUTE MARKETS

BUSINESS STEADILY BETTER

(FROM OUR DUNDEE CORRESPONDENT)

THE jute trade is now much improved and both spinners and manufacturers are comfortably situated with orders again. Mills and factories in most cases have resumed full time working and it is hoped that the present spurt in business is not temporary. The snag is, of course, that prices for jute yarns and cloth have not been advanced in sympathy with the rise in values of the raw material. These are now all above the minimum fixed rates in Pakistan and there is very little business being done in the fibre, as spinners cannot afford to pay the advance. It is the reluctance of producers to raise their terms that keeps down prices, so that the gap between imported and home produced goods can be narrowed. By the rise in values of Calcutta goods lately, the gap has certainly been reduced. Spinners declare they are losing money by selling cops on the basis of 14.19d a lb. for 8 lb. for the sizes 8/18 lbs., and there cannot be much profit in selling warp on the basis of 14.77d a lb. for 8 lb. A large business has been done in 100z., 90z. and 90z. hessian cloth for bag-making. In the widths 40in and 45in, Hessians these weights are obtainable at 12.3d, 11.5d and 11.1d a yard for 40in., compared with 12.4d, 11.88d and 11.35d respectively in the widths outside of these two. Manufacturers have booked just enough of these and it is difficult for buyers to place further orders. Offers of raw jute are not very freely made and there is a wide difference between sellers. Spinners have shown very little interest at the advance to £96 for Mill Firsts, £86 for Mill Lightnings and £82 for Mill Hearts, with export Hearts from £79, all September-October, cif. U.K. Some sellers are quoting well above these rates, which compare with the minima of £91, £81, £71 and £68 for the respective grades. Dark jute has also begun to move above the minima and grade Tossa-2/3 is lowest at £101 and fours at £91, at which there has been a fair business done recently, while crack Daissee-2/3 is still at £91 and grade now up to £83, September-October, cif. U.K.

Calcutta goods have risen further during the week to 62.3d for 40in. 100z. and 48s 3d for 74oz. August, 62s 6d and 48s 3d September and 62s 9d and 47s 9d October-December, with B Twills at 16½s 3d, 16½s and 16½s respectively, all f.o.b. Calcutta.

WHOLESALE PRICE INDEX RISES

THE official wholesale price index (base: year ended August, 1939=100) advanced further by 1.0 percent to 417.9 during the week ended 11th August, 1956, compared with 413.8 (revised) for the previous week. The index was higher by 2.7 percent and 17.1 percent respectively when compared with the corresponding weeks of last month and a year ago. Higher prices of tea (+13%), dal arhar (+4%) and rice (+1%) raised the index for Food Articles by 1.6 percent to 397.7 as compared with 391.5 (revised) for the previous week; prices of wheat, however, declined by 2 percent. The index for Industrial Raw Materials moved up by 0.9 percent to 497.4 because of an increase in the prices of groundnuts (+5%), linseed (+4%), castorseed (+3%), rapeseed and lac (+2% each) and raw cotton, raw jute, gingellyseed and copra (+1% each), although prices of manganese ore (average export price) (-26%) and raw silk (-2%) witnessed a fall. The index for Semi-Manufactures increased by 1.1 percent to 405.0. Items which exhibited significant variations were: Linseed oil (+3%), zinc (+4%), groundnut oil and gingelly oil (-3% each), castor oil, cotton yarn, copper and copra cake (+2% each) and buff hides (-3%). A rise of 0.4 percent to 387.2 in the index for Manufactures resulted from an advance in the prices of footwear (+4%) and jute manufactures and glass (+1% each). The index for the Miscellaneous group went up by 0.6 percent 567.0 due to an increase in the prices of black pepper (+5%), betelnuts and cashewnuts (+2% each) and chillies (+1%).

NEW BRITISH COTTON FABRICS FOR TROPICAL WEAR

Two new 100 percent cotton fabrics for tropical wear—Helikon, for suits, slacks, and skirts, and Cepea 56, a cotton shirting—were publicly shown in Manchester on 8th August by Mr. Robert Cowan, overseas director of the Calico Printers Association Ltd. The new fabrics are the result of two years' research and experiment, and the chief recommendations are their extreme lightness in weight, crease-resistance, and unshrinkability. The Calico Printers Association expressed the belief that these new cotton fabrics will revolutionise trade in both men's and women's wear for tropical and sub-tropical conditions. First lengths of the fabrics have already been put on the Far Eastern market. Marketing in Commonwealth countries will begin within the next few weeks, and it is planned to introduce the fabrics to the American market.

Mr. Cowan, and Mr. R. Thomas, another Calico Printers Association director, said they had personally tested Helikon suits—which weigh rather less than 2 lbs. and have the appearance and feel of linen—in hot climates. Mr. Thomas found that his suit remained perfectly smart for two days, and was reasonably presentable after four days' wear, without laundering. Mr. Cowan said he wore a Helikon suit on a 30,000-mile tour of the Far East and India, and praised the ease with which it could be washed. He also said that the other new fabric—Cepea 56—has the same crease-resistant properties, and can be as easily washed and worn without ironing. Another advantage is that the dyes are absolutely fast, and the marketing price should be about 20 percent cheaper than crease-resistant linen. The range of colours covers 17 shades. Both fabrics are self-coloured, and are without patterns or designs.

REASONS FOR DECLINE IN TEXTILE EXPORTS

In reply to a question in the Rajya Sabha recently, the Minister for Trade, Mr. D. P. Karmarkar, laid a statement on the table of the House giving reasons for the decline in India's cotton textile exports during the first half of this year. According to the statement, the main reasons are: readjustment of trade in the various markets, suspension of O.G.L. in Burma, competition from Japan, China and Russia in some of India's traditional markets in Asia and Africa, increased world trade in rayon and other synthetic fibres, shrinkage in world trade of cotton textiles, manufacture of cloth for domestic consumption by some of the cotton-growing countries which were large importers of Indian cotton textiles, higher prices in the internal market and increased demand for cloth in the country. To another question whether it was a fact that the export target of mill cloth was not reached during the last four years, the Minister replied in the affirmative.

while that for Miscellaneous remain unchanged at 283 points.

Correlating all the factors, the Middle Class Cost of Living Index for Calcutta shows that the cost of living increased by 4 points during July, 1956.

Calcutta Markets

SELECTIVE BUYING AT TEA EXPORT SALE

GOOD GENERAL DEMAND FOR DUSTS

AT Sale No. 12, held on 27th and 28th August, offerings at the Export auction consisted of 56,900 packages. There was a fair general demand in the early part of the Sale, but this weakened as the Sale progressed. The very best C.T.C. Fannings were strongly supported and were often much dearer, but C.T.C. Assam Broken and the more ordinary Fannings of this description were a full 4 annas to 6 annas easier. Internal buyers were more active than in recent weeks, and as a result, Common Broken and Fannings were well supported and were often dearer. Medium Broken, however, met with less support and were 2 to 4 annas easier. Useful sized Fannings of all descriptions, particularly from Cachar and the Doars were a strong feature and were generally selling at much dearer rates. Stylish Whole Leaf grades were well supported, but the more irregular sorts were little easier. There was little demand for Darjeelings, which were much easier, especially the flavoured sorts which generally declined by up to Re. 1 a lb.

Quotations

	1956 Rs.	1955 Rs.
Clean Black Pekoe	1 14 0	2 14 0
Plain B.P.	1 9 6 to 1 10 0	2 1 0
Medium Assam B.P.	2 1 0 to 2 3 0	2 4 0
Best C.T.C. Assam B. P.	3 8 0 to 3 10 0	3 4 0

At the Internal Sale, Dust offerings consisted of 17,499 chests for which there was a good general demand. The Sale opened at slightly dearer rates but softened towards the close. Black Middle East types were again a strong feature of the Sale and sold well, while the few very best C.T.C. kinds received good support. The remaining C.T.C. offerings were generally a full 4 annas lower except for the fibrous kinds which were well supported. Mediums and Commons opened fully firm to dearer, but at the close were 1 anna easier. Non-wither Doars, however, met with a good enquiry and were at times 1 anna dearer.

Quotations

	1956 Rs.	1955 Rs.
Medium Doars Dust	1 11 0 to 1 12 0	2 3 0 to 2 4 0
Medium Assam Grainy Dust	1 14 0 to 1 15 0	2 4 0 to 2 5 0
Medium Assam C.T.C. Dust	2 10 0 to 2 12 0	
Best Assam C.T.C. Dust	3 4 0 to 3 6 0	2 12 0 to 2 14 0

Leaf offerings consisted of 864 packages for which there was a fair demand, but prices were irregular and slightly lower. The few green teas on offer were virtually neglected.

FREIGHT MARKETS REMAIN QUIET

ANOTHER quiet week prevailed in the freight markets during the past week. Until the Suez Canal situation takes a definite form, it is likely that the markets will remain working at a minimum level of business. Business slightly increased in the American coal trade where French charterers paid 71s for September tonnage. Fixtures for potash from Hamburg to Ceylon and Chittagong have been reported, the former at 130s and the latter, which is unconfirmed, at 200s. Barley from South Australia to Basrah was fixed at 195s, and wheat from New South Wales to the Continent was fixed at 165s. Burma-Colombo repeated 80s for rice, but local coal charterers are experiencing difficulty in obtaining tonnage for Karachi. The time charter section was more active than of late with a variety of fixtures recorded. A new Norwegian motorship of 13,600 d.w. is reported to have been fixed at \$(U.S.)\$5.25 for five years with delivery early 1958, and a Panamanian Liberty secured \$(U.S.)\$4.50 for two years' trading, delivery November.

SUGAR MARKET DULL

During the week ended 28th August, sugar sales in the Calcutta market averaged 3,000 bags daily. Arrivals a day were 500 bags only, but stocks totalled 1,450,000 bags, as the rate of offtake declined, compared with that in preceding weeks. Rates for ready sugar ex-Kantapur delivery were Rs. 31-8 for ordinary grain and Rs. 33 for big grain. The market went dull.

LINSEED

After a rather firm opening, conditions have been easier and prices have displayed a steady decline during the past week. In spite of scarce supplies and firm advices from the centres, the lack of a steady offtake for linseed oil has had a depressing effect on the market, and little business has been reported. The oil section was dull, with local buyers reserved and the prospect of any exports in the near future very remote. Latest quotations were as follows: August-September Rs. 24 a maund.

HIDES AND SKINS

The market in skins ruled quiet, while that of hides was steady. Stocks were less than in the previous week.

Bazaar Sales

(Between 21st August and 27th August, 1956)

- As special business, to consider and if thought fit, to pass with or without modification the following Resolutions:

As a Special Resolution

(i) That pursuant to Section 314 of the Companies Act, 1956, consent be and is hereby accorded to Mr. J. A. Maroney holding and continuing to hold an office or place of profit under the Company as Sales Manager, Consumer Products notwithstanding his appointment as a Director of the Company.

As Ordinary Resolutions

(ii) That with reference to the provisions of Section 228 of the Companies Act, 1956, it shall not be necessary for the respective accounts of the several branch offices of the Company to be audited by a person qualified for appointment as Auditor under Section 226 of the said Act but that it shall be sufficient as hitherto if the said respective branch accounts are certified by or in accordance with the instructions of the Directors of the Company.

(iii) That H. H. Maharaja Sir Pratap Chandra Bhanj Deo, G.C.I.E., L.D., of Mayurbhanj be and is hereby appointed a Director of the Company.

The Share Register of the Company will be closed from 1st September to 21st September, 1956, both days inclusive.

By Order of the Board,

G. G. SWAN,
Secretary.

3rd August, 1956.

Pollock House,
18A, Brabourne Road,
Calcutta.

NOTE: A member entitled to attend and vote is entitled to appoint a proxy to attend and, on a poll, to vote instead of himself. Such proxy need not be a member of the Company. Proxies in order to be effective must be received by the Company not less than 48 hours before the meeting.

EXPLANATORY STATEMENT.

With regard to the three Resolutions set out under Item No. 4 of the Agenda, the following statement gives the reasons for the proposals embodied in these Resolutions:

- The first Resolution is necessitated by virtue of the provisions of Section 314 of the Companies Act, 1956, since Mr. J. A. Maroney is employed by the Company as Sales Manager, Consumer Products for which he receives remuneration.
- The second Resolution is designed merely to ensure that the practice which has hitherto prevailed regarding branch accounts shall continue to be observed. According to Section 228 of the Companies Act, 1956, unless the Shareholders decide otherwise, there must be a formal audit of branch accounts by a qualified Auditor which, apart from the expense is, in your Directors' opinion, unnecessary.

At present the number of Directors of your Company is nine whereas the maximum number permitted under its Articles of Association is ten. There is, therefore, a vacancy for another Director which it is desired to fill by appointing H. H. Maharaja Sir Pratap Chandra Bhanj Deo, G.C.I.E., L.D., of Mayurbhanj who is a Managing Director of Gladstone, Lyall & Company Ltd., and a Director of several other Companies. Your Directors consider that it will be of very great benefit to the Company to have the services of H. H. Maharaja Sir Pratap Chandra Bhanj Deo, G.C.I.E., L.D., of Mayurbhanj as a Director in view of his wide and extensive experience both of Company management and public affairs.

SIJUA (JHERIAH) ELECTRIC SUPPLY CO., LTD.

NOTICE is hereby given that the Fifty-eighth Annual General Meeting of the SIJUA (JHERIAH) ELECTRIC SUPPLY CO., LTD., will be held at the Registered Office of the Company, Chartered Bank Buildings, Calcutta, on Thursday, the 27th day of September, 1956, at 3-50 P.M., for the purpose of receiving the Directors' Report, passing the Audited Accounts for the year ended 31st December, 1955, declaring the Dividend recommended by the Directors, electing Directors and appointing Auditors.

THE SALEM-ERODE ELECTRICITY DISTRIBUTION CO. LTD.

NOTICE.

NOTICE is hereby given that an Extraordinary General Meeting of the Salem-Erode Electricity Distribution Company Limited will be held at the office of the Managing Agents No. 14, Old Court House Street, Calcutta on Friday the 14th day of September, 1956 at 4 P.M. to consider and, if thought fit, to pass the following resolution, namely—

"That the Board of Directors of the Company may appoint an Alternate Director to act for a Director during the latter's absence for a period of not less than three months from the State in which meetings are normally held."

Note 1. A member entitled to attend and vote at the meeting is entitled to appoint a proxy to attend and vote instead of himself and a proxy need not be a member.

Note 2. In connection with the business to be conducted at the meeting, please see the undernoted Explanatory Statement.

OCTAVIUS STEEL & CO. LTD.,
Managing Agents.

Calcutta, 21st August, 1956.

EXPLANATORY STATEMENT.

Under Section 313 of the Companies Act, 1956 a Company's Board of Directors if so authorised by its Articles or by a resolution passed by the Company in General Meeting, may appoint an Alternate Director to act for a Director who is absent from the State where the Board Meetings are usually held. As the Company's Articles of Association do not contain a provision conforming with Section 313, it is desirable to have a resolution passed as provided for in that Section. The Managing Agents and the Directors of the Company, other than as such and as Shareholders, have no interest in the business represented by the above resolution.

THE HOOGRAJULI (ASSAM) TEA CO. LTD.

THE Board of Directors has decided to recommend to the forthcoming Annual General Meeting of Shareholders a dividend of As. 8 per share in respect of the year ended 31st December, 1955, without any deduction in respect of taxation payable by the Company.

By Order of the Board,
ANDREW YULE & COMPANY LTD.,
Managing Agents.

Dated
Calcutta, the 22nd August, 1956.

HARBOUR RADAR FOR INDIA

A decision vital to the future expansion of Indian trade was made in 1948 by the Government of India, namely, to develop Kandla, in the Gulf of Kutch, as a major deep sea port to handle the output from Punjab and Delhi. Increased industrial and agricultural production, together with the development of the mineral resources of the hinterland, has already created extensive congestion in the port of Bombay. Kandla Creek is the only natural deep harbour in the Gulf of Kutch, and its geographical position is well chosen for service to the hinterland. Another important factor in the selection of Kandla is the combination of a natural deep water harbour adjacent to high land, enabling a port to be constructed quickly and developed to any extent which trade may justify. In keeping with the far-sighted approach to the problem made by the Government of India, the Lighthouse Department of the Ministry of Transport has placed a contract, as a result of open competitive tender, for the supply and installation of a Decca type 32 harbour radar at the port of Kandla, to assist the supervision of vessels navigating the approach channels of Tekra Creek to the new harbour. The Decca radar type 31 is the outcome of a long-term investigation by Decca into the requirements for harbour radar at major ports, and is the most advanced equipment of its kind in the world. The discrimination in range and bearing are of an extremely high order, designed to meet the requirements for a supervision of navigation in dense conditions of traffic. A further major development now being undertaken by the Department of Lighthouses is the scheme for the installation of radar on lighthouses to assist navigation in coastal waters. Decca harbour radar type 30A has already been chosen for the first stage of this new development programme, and will be fitted at Saugar and Khander Island lighthouses at the approaches to Calcutta and Bombay.

Mr. Sudhir K. Sen, chairman, Sen-Raleigh Industries of India Ltd., has been elected president of the Cycle Manufacturers Association for 1956-57. The Association represents the major cycle manufacturers of India.

PLANTATION COMMITTEE REPORTS ON TEA

COST STRUCTURE CRITICISED: REPLANTING FUND RECOMMENDED

THE way in which the Plantation Enquiry Commission's report on the tea industry has been made public seems a fair example of a current trend. First, a leak to the Press from a source obviously close to the Committee. Second, a brief information hand-out. And then, when public interest has subsided, the report itself and the authoritative comments from the officials and interests concerned. Under such a procedure, it is almost impossible for a lay commentator to write anything which is not based on inadequate fact or is not out of date so far as the general reader is concerned, by the time it is on paper. There may be nothing deliberate about this unco-ordinated method of publicising matters which are of urgent concern to every intelligent citizen, but it is certainly helping to limit public understanding of the issues involved and is making the task of the conscientious newspaper leader-writer an increasingly difficult one. It must, therefore, be stated right away that the comments made in this article are based on the somewhat sketchy information contained in the official Press summary. They are being offered now because the date when the full version will be released is still not known and there is every risk that it will not be before all but professional interest in the matter has been completely lost.

The Commission's report, if the Press summaries are to be accepted as a reliable guide, should make useful reference material. But whether it offers any suggestions which could improve the efficiency and prosperity of the industry and those who work in it, is doubtful. The constitution of the Committee fitted it admirably for its fact-finding activities, but its academic weighting and the absence from it of anybody who might be expected to know something about growing tea, must seriously limit the value of its recommendations. The emphasis is rightly placed on the improvement of the existing industry rather than on a large-scale increase in its present size. The Committee estimates that the output of tea may rise by another 45.5 million pounds above the present level by the end of the second five year plan. It is difficult to see how this will be achieved unless the internal market can be expanded at a much faster rate than at present. The Committee's recommendation on this point is the reduction of current costs. Its comments appear to be limited to items other than the wages of labour—which constitute, nevertheless, the largest with which the gardens have to contend. Any comment on the industry's costs which does not mention so important a matter as the uneconomic welfare charges with which companies are now struggling, can scarcely be of any real value in indicating how the price of tea is to be reduced. It is this expense of labour, much of it uneconomic, which at present accounts for most of the rigidity in the gardens' costs and is threatening, along with excessive taxation, eventually to price Indian tea out of world markets.

Besides the question of labour cost, the general charges to which the Committee refers are of little significance and certainly do not contribute to the present inflexibility in the industry's cost structure. The recommendation of a decrease in the remuneration paid to managing agents appears to ignore the very real value to the gardens, especially in difficult years, of their managing agency connections. The reduction of such payments to the point where the provision of specialised services and relief financing would become uneconomical, could not help the industry. The suggested abolition of the commission paid to managers and its consolidation into a fixed salary, takes no account of the important need for incentive. It is possible to find better ways of paying managers, but it is unlikely that either output or quality could benefit if the incentive element were ruled out completely. Fixed salaries would also increase

the rigidity of the gardens' costs and reduce their powers of resistance to periods of slack trade. Considering the conditions under which garden managers must work, it is unlikely that any reform of salary payments of the kind suggested would reduce costs without also losing the industry some of its best and most experienced men. The same could be said of the recommendation that the salary structure of the management cadre be rationalised. Any move to reduce remunerations introduced by this method, or by any other, would only lead to a general reduction in the quality of management. The Committee may be right in thinking that there is scope for more Indianisation, but to suggest that this can substantially reduce costs is to ignore the fact that a good Indian manager will not consent to being discriminated against in salary payments. Indianisation is going ahead at a pace limited only by the availability of the right type of recruit, subject of course to the fact that foreign shareholders are unlikely to agree to their capital being left completely in Indian hands. But there is little possibility that it will ensure a large saving in the industry's salaries bill.

A much more useful suggestion for reducing the overall cost of production is that for removing the taxes on tea passing through Calcutta and on its movement by road or inland waterway through Assam. The Committee considers that the various impositions levied on the industry should be the concern of the Central Government, which could then make the necessary allocation of the agricultural income-tax portion between the States concerned. This would certainly help relieve the present bewilderment which the number and variety of different levies is causing. But unless it also means a general reduction of the whole tax burden, it would, of course, have little or no benefit beyond that of convenience.

The Committee's views on the replanting of tea bushes appear to be based on the assumption that their economic life is invariably limited to sixty years. This may be convenient statistically, but it does not necessarily reflect the facts. The life of tea bushes, like that of most industrial assets, depends on the standard of maintenance. And there is no conclusion to be drawn from the fact that the larger proportion of old bushes is to be found on the sterling and non

THE SECOND ELECTION: FIRST VIEW

CHANCES FOR THE CONGRESS

IT is, in a sense, too early to speculate on the prospects of India's second general elections not due until early next year. The Election Commissioner is ready with his organisation, quietly proud of its first performance and richer by the experience. But the parties have yet to choose their runners, compose their manifestos, and send out the agents. On the other hand, the elections are already casting their shadow on many speeches and some decisions. When some M.P.s threaten to resign on the issue of States reorganisation, they do so doubtless in loyalty to some high principle, but thoughts of the coming elections may not on that account be totally absent from their minds. When some M.L.A.s canvass for the choice of particular regions for launching national extension blocks, they are no doubt guided by the highest patriotic motives; even so, the coming elections may have added something to their zeal. Thus, E-Day is already in India's life, and part of it. An additional reason for casting an advance look on the elections now is that distance may lend clarity to the view which many shades of me-tooism, to be discussed later, will tend to obscure as the weeks go by.

That it is possible to indulge in some speculation over free India's second general elections so far in advance of the event is itself a tribute to the political stability of the country. There is not another democratic country in the world where there are so many voters and where elections are held with more freedom and fairness. Very rightly India's first elections were hailed as a great success; they were no less. Her ability to repeat the feat five years later—five eventful years in which there have been no noticeable extensions of the frontiers of democracy—is perhaps the most hopeful fact in the troubled world of today, and no discussion on electoral prospects can begin without the fullest acknowledgement of this achievement. Of all the countries in Asia, India alone has embarked on two ambitious plans of economic advancement without any appreciable sacrifice of political liberty; in most other countries freedom has disappeared without much economic progress recorded in the process. India can well be proud.

So can the Congress Party, the overwhelming winner of the last elections and the strongest contestant in the next. Its record of nine years' government at the Centre and in the States (except for two brief spells in two States, PEPSU and Travancore-Cochin) is replete with achievements which have been universally acclaimed, although it is possible that acclamation abroad has been greater than that within. In spite of a daily Press almost wholly pro-Congress, in spite of the large and expensive publicity establishments maintained by the Centre and the States, the very real achievements of the Party have somehow failed to evoke that enthusiasm which many think is its due: the Party machine may have been at fault. Again, as the Party in power the Congress has been obliged to take several unpleasant decisions, and a certain amount of discontent was inescapable. In the matter of statal reorganisation, for instance, the Congress has created several pockets of intense resentment, a good deal of which was perhaps escapable. It will be surprising if a part of this is not carried to the polls. There are also complaints that the Congress Government under Mr. Nehru has paid overmuch attention to international affairs—at the expense of internal problems of greater immediacy. Outweighing all this, however, is the still enormous prestige of the Congress as the Party which brought freedom, and there is the country-wide habit, a major factor in India, of voting Congress. Not even the wildest optimists in opposition hope to offer, in the country as a whole, anything resembling a serious challenge to the Congress Party's continuance in power. The self-assurance of the Party, bordering on complacency, is matched by the virtually complete absence of morale in the parties in opposition.

Mr. Nehru's shrewdness as a party politician receives too little recognition from his countrymen, but the sad disarray in which all other parties are to be found today is the result as much of his manoeuvres as of the Left's own many errors. (This is the place to mention that there is no Liberal party left in India, and that, although Sir Stanley Reed said it long before the Avadi resolution, it may still be true that the Congress is more like the Conservative Party in Britain than like the Labour Party.) Every time Mr. Nehru castigates caste-ism, he not only fights a social evil, he also deals a blow to a political rival. When Mr. Nehru pays a visit to Vinoba Bhave's camp, he takes some wind out of Mr. Jai Prakash Narain's sail besides doing honour to a dedicated man. When he feasts his Russian guests into praising the achievements of free India, he not merely demonstrates his sincere belief in co-existence but also knocks the bottom out of the Communist Party of India. It may well be held

against Mr. Nehru that his truly great work for democracy in India is to some extent nullified by the enfeeblement of the opposition, largely his own work.

A good deal of the opposition is better dead. The communal parties had done much harm when they were popular; to defeat them is to strengthen liberalism, the very basis of democracy. The Hindu Mahasabha, the Jan Sangh, the Akali Dal, and such other parties may well get together but, unless communalism across the border changes the scene radically on this side, the success of these parties is unlikely to be an improvement on their showing, agreeably poor, in the last elections. Nor are the feudal parties, who may join hands with the communal ones, likely to take away many seats from the Congress, even in Orissa and one or two other States in which they exist. The parties on the Right have discredited themselves by being illiberal.

The Left has more strongholds than may appear from its present representation in Parliament and the State Assemblies, and several by-elections have demonstrated that in many constituencies, especially Assembly ones, a combined Left can offer a formidable challenge to the Congress. It is in this direction that the Communist Party of India has been devoting its famous energy and skill, and there are takers in the Praja Socialist Party, perhaps the only possible provider of an honestly democratic opposition. The P.S.P., however, is a sadly divided party. Mr. Asoka Mehta seems undeceived by the democratic protestations of the Communists, but Mr. Jai Prakash Narain (whose repeated renunciation of politics has done little to weaken his hold on the party) is apparently working hard for an electoral arrangement with them. The possibility of an alliance between these two, leading to the Congress losing quite a few seats, is not to be ruled out, at least in some States including West Bengal. The fears of a consequent Communist coup are perhaps exaggerated, for in working for an "arrangement" rather than an alliance on the basis of a common programme there is admission that even a combination is not expected to send them to power. Purists may, however, object to the kind of me-tooism which alone can bring the Communists and the P.S.P. together, with the Communists claiming to be democratic and the P.S.P. pretending to have much in common with the Communist Party. Whether the Congress is wise in seeking to fight this with its own brand of me-tooism—more Left than the Left—is another matter.

THE NEW CLOTH DUTIES

THE Government of India's decision last week to raise the excise duties on cloth may yet prove to be a folly of the first magnitude. It appears to show that when blunders are made, they must come not in isolation, but in series. The initial, and biggest, was certainly to peg the production of mill cloth. It was committed at the behest of a series of "expert" committees which were greatly concerned at the fact that people did not want to buy the cloth made by inefficient, small-scale producers because it was far too expensive and often of doubtful quality. The imposition of a ceiling on mill production, although relaxed a little recently, has not taken long to bring about a cloth shortage. Mill stocks are low, prices have been rising, and the approach of the festival season, when demand normally rises fastest, threatens to put the consumer in a fix.

The Government's arguments in favour of a heavier excise duty are not altogether convincing. The main one is that mills are making far too much profit because cloth prices have risen more than those of raw cotton. The attempt is therefore to be made to skim off some of this profit for the benefit of the Central Exchequer. It is significant that although the Government recognises that cloth is too expensive, it is doing nothing which will help the consumer. On the contrary, it must be aware that there is, at the moment, a sellers' market for the commodity, and in such a market most additions to costs fall on the shoulders of the consumer. The plain conclusion which emerges is that the Government wants to kick the cotton textile industry for something which is not the latter's fault; in the process, it is prepared to give consumers an even harder kick than it can the mills. The hardest one of all will go to those who can least afford to bear it—to the people, in whose personal budgets cloth is probably the biggest item after food.

It is time that Congress and non-Congress members of Parliament who spoke so vehemently against the excise duty increase earlier this week learnt to make up their minds. Mr. T. T. Krishnamachari, speaking from the new and august heights of the Finance Ministry, put the issue squarely before them. He suggested in effect that they could either penalise the consumer so as to support small producers who had hitherto miserably failed to produce the extra cloth expected of them; or they could let the mills expand and thus enable prices to come down gradually. Many members of Parliament must have found themselves in a quandary;

this may not have been expressed on their faces when they assembled for their, farewell group photograph on Tuesday, but the thought must have passed through many minds what a cloth famine could do to re-election chances. Others might have reflected anxiously that consumers will be going to the polls at the end of a season when the demand for cloth is usually at its highest; the public memory may prove not to be as short as the proverb so consolingly describes.

There were times during the Lok Sabha debate when Mr. Krishnamachari seemed confused in his own mind about the effects of the duty increases. On the one hand, he said that he was not sure how much of the increases would be passed on to consumers. On the other, he declared that the new duties would check the demand for cloth and thus help bring down prices. The latter supposition seems unlikely, because the only way the duties can check the demand for cloth is by pushing up its price. As the Finance Minister well knows, demand depends on prices themselves, not on the duty element in them. He appeared to be on equally weak ground in suggesting that mills' capacity should be increased, but kept in reserve for emergencies when demand outstripped supply. How any enterprise can be persuaded to make a heavy investment in expanding its capacity, if, in all probability, it will occasionally be obliged to keep it idle for prolonged periods at the Government's whim and fancy, is difficult to see.

CURRENT COIN

Expansion of Tata Iron.—The case for free enterprise was re-stated by Mr. J. R. D. Tata in his address at the annual general meeting in Bombay of the Tata Iron and Steel Co. Ltd. (a fuller version of it appears on a later page). Conceding the important part which the Government has to play in the economic development of the country, Mr. Tata said: "We in the industrial and business field are therefore at one with the Government in their objective of a prosperous, democratic and happy nation emerging from the years of toil ahead. Where we differ is in the respective rôles of the State and of the individual in the economic activity of the nation. We sincerely feel that some of the Government's policies are based on economic theories on capitalism and socialism which no longer fit the facts, if ever they did. They seem to ignore the lessons of the social and economic experiments undertaken elsewhere in the world during the last few decades; for instance, the fact that, apart from the United States, countries in Europe which have relied largely on free enterprise and given it the necessary support and encouragement, have achieved not only economic prosperity but also, through realistic fiscal and administrative measures, the socialist dream of an equalitarian welfare State." Referring to the working of the Tata Iron and Steel Co. Ltd, Mr. Tata said that the financial results of the year's operations were marked by a decrease of Rs. 34 lakhs in disposable profit largely due to lower sales of ferro-manganese and by the large accretions—exceeding Rs. 4 crores—to the plant rehabilitation fund and the development reserve under the Government's new retention price scheme. He welcomed the Government's new price policy which has enabled the industry to undertake large-scale expansion plans. Discussing the two million ton programme, the chairman stated that the project would cost approximately Rs. 75 crores of which Rs. 9 crores, spread over four years, would be spent on site clearing, modifications to existing shops and mills, and the provision of rolling stock and other items. Another Rs. 2.65 crores would be spent on the collieries and ore mines and quarries to meet the added requirements of the expanded programme, and about Rs. 2 crores on the electric ferro-manganese plant. As for financial resources, Mr. Tata said that the World Bank loan amounting to Rs. 36 crores in terms of various foreign currencies, and the additional share capital sanctioned last year, would provide the company with about Rs. 50 crores. The balance of Rs. 25 crores would be secured from retained earnings accruing to the plant rehabilitation fund and the development reserve between 1955-60 and from further borrowings. The chairman spoke of the contract entered into with the Henry J. Kaiser Corporation of the United States and said that the first orders for the principal items, such as the three main rolling mills and electrical equipment, have already been placed. Tata engineers had been sent to the Kaiser headquarters at Oakland and a 55-member Kaiser team was already at work in Jamshedpur. The number of American technicians will increase to 100 at the peak of the construction period while the Indian work force engaged on the project will grow to a maximum of 6,000.

Sone Valley's Expansion Plans.—In his report, to shareholders at the annual general meeting of the Sone Valley Portland Cement Co. Ltd. last week, the chairman, Mr. Anandilal Poddar gave an optimistic account of the company's expansion

plans. (A more comprehensive version of the speech is published on another page). This is the first annual general meeting to be held since Messrs. Martin Burn Ltd. resigned their managing agency and the company came under the control of its directors. A prominent feature of the plans for the future is a proposal to overhaul and renovate the present plant and machinery which, Mr. Poddar maintained, is badly in need of it. When this programme is completed, it is hoped production will exceed the maximum so far achieved. Negotiations have also been opened for additions to the plant in Japla. These are to be made in order to raise the capacity by another 750 tons. It is also proposed, in co-operation with the Government and the steel project, to set up a slag-cement works near Durgapur in West Bengal, which will be capable of utilising about 500 tons of slag from the Durgapur steel works and about 200 tons of clinkers or limestone from Japla. The directors have approached the Government of India stating their readiness to accept the addition of Rs. 4 a ton of cement, which is due to them as rehabilitation price, but which the previous management did not accept. This, Mr. Poddar pointed out, would increase the company's annual revenue by Rs. 8 lakhs. Representations have also been made to the Government for a suitable revision of the retention price for cement ex-factory. Mr. Poddar rounded off his review by the doubt which he and his fellow directors feel about the wisdom of placing the monopoly of cement marketing in the hands of the Government-sponsored State Trading Corporation.

Sales Tax in India.—The States of the Indian Union apparently consider sales tax—consumption tax that is—an inexhaustible source of income. In their greed for more revenue "to finance the evolution of a welfare State", the States have been vying with one another to cast the net even beyond the conventionally permissible commodities, and only recently U.P. decided to tax the consumption of foodgrains. The Constitution apparently fixes no limit to such taxation, a freedom which the States seem only too eager to exploit. But a time has been reached when a halt should be called to such capricious levies, particularly when the acceleration of developmental activities requires a stable price policy. The harmful effect of this tax—which is being imposed in all the States on an extremely wide range of commodities and in some, under a bewilderingly complex system of levy—on consumption and production, is all too obvious. Even the Taxation Enquiry Commission, which recommended leaving the States a good deal of flexible power to levy the tax subject to certain broad but vague conditions, has admitted that "the adaptation of the tax by the States to their growing financial needs and under the conditions and limitations created by the Constitution have combined to increase the cost of production, to enhance the burden on the consumer and to multiply the difficulties of dealers from whom the tax is collected." This is the unsatisfactory position in which the sales tax system in India still exists, and it is unlikely that the Taxation Enquiry Commission's recommendations, if implemented as they are, will improve it appreciably. The real remedy lies, as has been suggested by a brochure just published by the Federation of Indian Chambers of Commerce and Industry, in firm Central action fixing uniform rules of tax which all the States will have to follow. This is what commonsense also suggests. The brochure is entitled *Sales Tax—In Search of a Policy*. Explaining in detail the historical background of sales taxation in India and the circumstances under which the present mess has been created, the brochure lays down six broad conditions to form the basis of a policy in present circumstances: (a) no sales or purchase tax on transactions in the course of export and import, (b) no tax on inter-State transactions between registered dealers, which is the essence of the recent Supreme Court ruling, (c) where important raw materials or articles essential for the life of the community are concerned, Parliament should regulate its levy, (d) specific powers of co-ordination for the Union Government, (e) combining the sales tax levy on important industrial raw materials and essentials with some other tax for administrative convenience and (f) the States should follow the Taxation Enquiry Commission's recommendations on uniformity of the system.

Japan's Shipbuilding Lead.—Shipyards in Great Britain and Northern Ireland have again been surpassed by Japan in tonnage launched. Britain has also fallen behind both Japan and Germany in tonnage begun during the last quarter (ended 30th June), and both Japan and Germany have more export work in hand. These facts are brought out in the Lloyd's Register shipbuilding returns. These show that British yards launched 76 vessels of 306,053 tons during the quarter, while Japan launched 71 of 322,704 tons. Japan began work of 90 ships of 447,292 tons, Germany on 100 of 328,787 tons, and Britain on 62 of 277,108 tons. The British total is below average. Vessels

under construction in Britain at the end of June totalled 334, of 2,028,132 tons, a decline of 232,817 tons on the previous quarter. The fall was mainly due to the exceptional total completed (516,763 tons), the highest since 1921. The work in hand represented 28.1 percent of the world total compared with 32.3 percent at the end of the first quarter of the year. Japan was the country with the next highest total for work in hand—1,116,490 tons, an increase of 114,781 tons. Seventy-four ships of 464,905 tons were under construction in Britain for registration abroad or for sale—263,636 tons less than at the end of March, and the lowest total since September, 1946. The figure represented only 22.9 percent of the total tonnage being built in Britain, against 40.4 percent when the peak figure of 825,745 tons was reached in September, 1950. Countries in which the largest amount of such tonnage was being built were Japan (851,708 tons), Germany (547,166 tons), Sweden (272,252 tons) and France (214,376 tons), representing 76.3, 67.8, 73.7 and 55.5 percent respectively of the tonnage under construction in those countries.

CORRESPONDENCE

SCOTTISH COUNTRY DANCING (TO THE EDITOR OF "CAPITAL")

Sir,

On behalf of a legion of loyal Scots we must take the uttermost exception to The Ditcher's derogatory remarks anent our country's ancient yet evergreen institution—country dancing. (It is only exhaustion after a session last evening that tempers this phrasing).

You will not remember 1887. Our personal recollections of its famous law suit are still fresh; in which the widow of a centenarian sued an insurance company which endeavoured to hold that country dancing was not covered by their policy. Her plea was upheld, the verdict being that such deaths "are almost invariably from other causes." This, we consider, will effectively dispose of the general allegation. Reel and requiem are not collateral in nine cases out of ten; even their derivations are different to some extent.

Golf. Some may deem it a pity that "Old Tom" Morris is no longer available to assess, briefly, our erstwhile prowess at St. Andrews.

Tennis. We have never played in a match that took longer than sixteen minutes.

Yoga. Our national dress precludes it.

Sir, we venture to predict that when, by the passing of time, other interesting but subordinate pursuits have faded away, country dancing will endure, and maintain the veritability of its society's motto: "Hag gisi sgo odfo rone."

Yours etc,

TOM SCROGGIE,

GORDON SIMPSON,

Calcutta, 1st September.

QUALITY OF BENGAL COAL

WE understand that Mr. Apjohn, Vice-Chairman of the local Port Commissioners has recently made some interesting and exhaustive experiments with many samples of Bengal coal, and if we are rightly informed, he has obtained no less than twenty-two distinct varieties of coal produced by the local coal companies and syndicates for testing its power and capabilities for producing steam. Bengal coal has often been operated on or tested in a piecemeal fashion by varying and various methods; but we think that this is the first time on record that so many samples of Bengal coal have been treated or tested on the same lines or by the same measures. Objections have often been raised that the chemical analysis of a coal is not much of a test or guide as to its quality. With this idea, to some extent, we are inclined to agree. We have no doubt that in science or in relation to the matters of life, a practical application is the best, but in the case of coal its component parts cannot be discovered except by a chemical analysis, and we think that Mr. Apjohn's wish has been to provide something of a schedule or guide for those who wish to purchase Bengal coal, so as to formulate to them the relative merits of Bengal coal as they exist in relation to each other. In this we think he has been entirely successful, and the results he has obtained may be considered the most important and conclusive of its kind ever known. The Port Commissioners of Calcutta are a public body, and we trust that, in the interest of the Port in the interest of the coal industry, and more so in the interest of buyers, the valuable tests made by Mr. Apjohn will be made public.

BRITISH FIRMS IN INDIAN ECONOMY

THE NOTABLE ROLE OF SIMON-CARVES

(This is the third of a series of articles written by our New Delhi correspondent on the basis of a recent tour of Europe.)

"COME to India and see things for yourself"—This is the standing invitation to all from the Counselor-Minister in London, Mr. T. Swaminathan. As it has been already reported, a British mission consisting of some leading economists, financial editors of some of the important newspapers and a few M.P.s is coming out to India, at the invitation of the Government, "to see things for itself." Even without formal invitations, some of the leading British undertakings have already come to this country and started their operation. Simon-Carves, for example, have been in India for nearly half a century. They have almost continuously maintained a technical staff in the country, and the staff have throughout been engaged in building, reconstructing or servicing coke-oven plants in some part or the other.

This staff is now permanently resident, with the head office in Calcutta and a site office in Jamshedpur. It consists of a nucleus of senior British engineers, assisted by a large number of highly-trained and experienced Indian technicians and charge-hands. It is fully competent to carry out coke-oven contracts on the largest scale, and to give advice on all technical matters concerning the construction and operation of coke-oven

plants. The majority of the coke-oven plants in India have been built by Simon-Carves, and almost all the coke and gas at present used by the iron and steel industry is produced by these plants. In particular, they have built all the coke-ovens in service at present at the Jamshedpur steel works of the Tata Iron and Steel Company, and the Hirapur steel works of the Indian Iron and Steel Company.

The first Simon-Carves coke-oven plant in India was built in Giridih, in 1908 for the East Indian Railway, and other plants were subsequently built in Jharia for the Lodna Colliery Company and in Kusunda for the Bararee Coke Company. Between 1922 and the second world war, 240 ovens were built in Hirapur and Kulti, under three contracts for the Indian Iron and Steel Company, and in the mid-1930's, three large batteries comprising 164 ovens were built in Jamshedpur for the Tata Iron and Steel Company.

Postwar Activities

During the postwar years, both these iron and steel producers have given further important contracts to Simon-Carves. In 1950, a new battery of 72 coke ovens and a by-product plant were completed in Hirapur, and two more batteries of 78 ovens each are now being built. In 1953, a fourth battery of 52 ovens was completed in Jamshedpur: the first three batteries, built some 20 years ago, are now being reconstructed, and two of them are being extended. In addition to the coke-oven work, Simon-Carves have undertaken in Jamshedpur a considerable volume and variety of other steel-works construction, most of which is being, or has been, done as contractors to American consulting engineers: this works includes the construction of

blast furnace ore bins, the installation of open-hearth furnaces and soaking pits, the re-lining of blast furnaces, and the erection of a new steel melting shop.

In connection with the new State-owned steel works to be built in Durgapur by the British consortium, the Indian Steelworks Construction Company, Simon-Carves will build three batteries of coke-ovens (a total of 234 ovens) with their associated coal and coke handling equipment, by-product plant and sulphuric acid plant; they will also be responsible for the coal preparation plant (embracing the coal washery and the coal stocking, blending and reclaiming equipment) and the steam-generating plant supplying high-pressure steam to the entire steel works.

The postwar work of Simon-Carves in India covers the construction or reconstruction of coke oven plants comprising nearly 700 ovens. Over 3 million tons of Indian coal are at present carbonised annually in Simon-Carves plants, and the completion of contracts now in hand will increase this quantity to nearly 7 million tons a year. It has already been said that the Simon-Carves technical staff in India consists largely of Indian technicians, and it should be added that Indian labour is employed for plant construction on site. It is also the policy of Simon-Carves to make the maximum use of materials of Indian origin, such as bricks, refractories, fabricated steel work, and iron and steel castings: such materials may sometimes represent up to about two-thirds of the contract value, the only imported materials being certain specialised types of machinery and equipment not at present obtainable in India.

Since the second world war, Simon-Carves have received more than a dozen orders for heavy chemical plants from a number of enterprises in India. Eleven of these are sulphur-burning sulphuric acid plants, their aggregate capacity amounting to over 80,000 tons of sulphuric acid a year. Two of the largest were ordered by the Indian Iron and Steel Company, and among other purchasers are Indian Steel and Wire Products, Rontas Industries, and Century Rayon.

Demand for Viscounts

India has ordered 10 Viscounts for the Indian Airlines Corporation. I had an opportunity to see the aircraft assembled at the Hurn factory of Vickers-Armstrongs, on the edge of Hurn airport, near Bournemouth. It is the main production plant for the Vickers Viscount, the first propeller-turbine airliner in the world and the only airliner so powered at present in service. Viscount production was transferred to Hurn from the main Vickers-Armstrongs factory in Weybridge, in December 1953. Prior to this, the Hurn factory had been occupied with the production of the Varsity R.A.F. trainer, which had reached a rate of 100 a year. By the time this transfer was made, the Viscount was already well on the way to the success it has since firmly achieved. Orders for the aircraft—now approaching the 300 mark—then totalled 74. When Capital Airlines of the United States placed an order in August 1954 for 40 Viscounts (later raised to 60), bringing the total orders to 143, it became clear, with the promise of further orders to come, that a considerable increase in Viscount production would be necessary. Plans were immediately put in hand for the expansion of production capacity at the Hurn factory. This programme was completed by the end of February, 1955, and all the additional space has been in use since then. Hurn is purely the assembly plant for the Viscount; that is to say, the components and structural parts for the aircraft are manufactured elsewhere, at the Weybridge factory or by sub-contractors, and brought to Hurn for incorporation into the assembly line.

Assembly Work

The assembly line starts with the construction of the front and rear sections of the Viscount fuselage in cantilever jigs, in the first of four hangars or "shops" which form the main part of the factory. The sections are then moved over to the fuselage shop to join the central section of the fuselage which is built in a main frame. Nose and tail sections are also added there, and the completed fuselage moves on a trolley to one of the two erecting shops to join the final assembly line. Here it progresses stage by stage up the line until it emerges at the head as a finished aircraft, ready for testing and delivery. The main extensions at the Hurn factory have been effected to the two erecting shops, both of which have thus been more than doubled in size. Originally each shop was 342 feet long and accommodated five fuselages on the line—three with wings fitted and two without. They have now been extended to 796 feet, with side annexes, and can each accommodate 12 fuselages on the line—six with complete wings and six fitted with inner wings. Thus work can now proceed concurrently on 24 Viscounts instead of on only 10 as previously.

To keep pace with the demands of these two enlarged erecting shops, the fuselage shop has been doubled in size, and the number of fuselage main frames increased from three to eight, with space for more later on. The number of cantilever jigs for fuselage sections has also been more than doubled. The immediate effect of the expansion programme was to double Viscount production in 1955, during which it averaged nearly four a month. This year the production rate has again been raised to five a month (supplemented by production of one a month from a new line in Weybridge) and this will be maintained throughout the year. With the capacity now available at the Hurn and Weybridge factories, production can be further increased next year, if the state of the order book for Viscounts warrants it. At present, there is little reason to suppose that this will not be the case.

THE announcement that T.I.S.C.O. will in future be free to contribute to political funds must have had a sinister ring for some. We all know that sort of thing goes on, but little is usually heard about it, especially in public. But to many others it has come as a breath of hope. When a company of such standing declares openly that it feels it must protect its shareholders' interests by this means, there can be no doubt of the need for it. And the fact that it has decided to do so without any of the usual behind-the-scenes horse trading shows that it regards the issue as a moral one rather than a simple matter of buying privilege. It also means that others of equally unquestionable integrity may be persuaded to follow suit, because there must be few industrialists left in India today who are not coming round to the view that some form of political representation is their only salvation against bureaucratic encroachments. I do not know if this is T.I.S.C.O.'s intention, but something of the sort may be at the back of its mind. I have heard it said that a big-business "lobby" is what is needed to offset the doctrinaire socialists and so preserve some vestiges of political and economic liberalism in this country. I do not agree. It is not so much socialist pressure which has to be resisted as downright ignorance and prejudice. If these could be rooted out of India's politics, private industry need have no fear of its interests. As I see it, the crying need is for better politicians—for men who know the significance of the measures they are asked to vote on and whose approach to problems will be rational rather than emotional. How this can be assured without private industry itself taking an interest in politics, I for one do not know. For those who still have their doubts about the principle involved, it is as well to remember that it is nothing unusual. It happens in other countries; and it is the custom in Britain where—the doubters might bear in mind—it has not prevented the establishment of a welfare State, although it may have helped to curb some of the more wasteful and doctrinaire aspects of it. Most important of all, it has not damaged democracy, and that is what the present uncritical drift towards socialism is doing in India.

One of the odd things about the present trend of affairs in which Tatas now feel they must take an interest, is the apparent willingness, so soon after gaining freedom from foreign rule, to surrender it again to the domination of the State. It may be some consolation that the despotism is now being exercised by Indians and not the British, but it may prove a small one in the long run. The main prize, democratic freedom, which might be expected to be guarded as a treasure beyond price, appears scarcely to have a single friend who is not open to the accusation of self-interest. That is why it is good that so distinguished and disinterested a man as Dr. John Matthai should deliver himself in freedom's cause. It is not unreasonable to suppose that the views he expressed at the annual Convocation of the Calcutta University last Saturday, were conditioned by his experiences as chairman of that prototype of socialistic achievement, the State Bank. Dr. Matthai has already given his opinions on such questions as nationalisation for its own sake and the dangers of bureaucracy. But on Saturday he went to the root of the trouble—the tendency in India to look to the State for the solution of most social and economic ills. When leading British socialists are voicing their anxiety at the deadening effect too much State activity is having on individual character and initiative in their country, it is not surprising that an eminent Indian who, broadly speaking, also holds socialistic views, should be doing the same thing here. But the

A DITCHER'S DIARY

distressing fact remains that there are few who are doing. India needs more men who are prepared to learn the lesson the working of modern socialism is teaching the world—that there is a vast difference between theory and practice. As Dr. Matthai pointed out, it is strange that a country so dedicated to the doctrine of non-violence should be putting its trust in that embodiment of force, the State. It would be a tragedy if the desire to ensure equality and justice for all were to lead to the type of totalitarian socialism which, as we know from Russia's experience, is the very negation of both.

I have heard it said of the Russians that they have no sense of humour. After reading about the Ponomareva incident I am inclined to believe they lack a sense of proportion too. Stealing anything is not to be taken lightly, but to make an international incident out of an unproved pilfering case concerning five women's hats, is going a bit too far. If Miss Ponomareva had appeared in court to answer the charge she would have been assured of the sentimental support of the whole British public. Even if she had been convicted, and that is unlikely since there seem to have been so many doubtful factors, she would most certainly have been let off as a first offender. As it is, she has committed the much more serious crime of slipping her bail, will now attempt to contravene the numerous regulations with which a person leaving the country must comply, and has certainly made herself and her country a laughing stock in the eyes of the British public. But it seems unlikely she has had much say in the matter. The more probable explanation is that the Soviet Embassy lost its head, which is not surprising when it has shown itself so ignorant of the ways of democratic justice as to suggest that the British Government could interfere to stop the case. What is so striking about the whole affair is the disrespect which the Soviet authorities are still prepared to show for the laws and customs of another country, not to mention the contempt for the spirit of sportsmanship which they showed by calling off the athletic contests in which Miss Ponomareva was to have taken part. Or perhaps it is simply a lack of confidence in justice as an institution. Whatever the explanation, the fact remains that for the sake of five hats, the Russians have made complete asses of themselves. It would be interesting to know how Miss Ponomareva will come out of all this. If the matter is important enough in Soviet eyes to justify an international incident, the trouble caused must surely be deserving of nothing less than life-long exile to Siberia.

I am afraid I cannot agree—I mean, of course, with Mr. Rushbrook Williams in his article *Hindu Nationalism Today* which appeared recently in the *Spectator*. This does not mean I disagree with all the points he makes. In fact, I commented some time ago on the Hindu rituals nowadays associated with the inauguration of a new project or the launching of a new ship. I also suggested that it might be creating a sense of isolation among Muslims and other minority communities. But to infer, as Mr. Williams seems to do, that Hindu revivalism, nourished by a newly-won independence, is casting its baleful shadow across the land is quite another matter. His article, for all its appreciation of the religious neutrality of Mr. Nehru and other leaders, tends to give one the creeps, to my mind, unnecessarily. Perhaps Mr. Williams has been influenced too strongly by Dr.

I. H. Qureshi's book, *The Pakistan Way of Life*, because his article is confessedly based on it. I have not yet seen the book, but I hope I shall not be dubbed a cynic if, the present relations between the two countries being what they are, I suggest that there is no surer way of getting one's perspective wrong in writing about India than to take one's inspiration from a book by a Pakistani, and vice versa. Now for some of the more specific complaints which, Mr. Williams says, prove that Hindu revivalism is up on its hind legs. In the first place, he points out that the new community projects provide temples dedicated to Hindu deities. But I have it on good authority that houses of worship—Hindu, Muslim, Christian or other—are not specifically provided for in any community project. Only where there was one already, of whatever creed, has it been allowed to stand, renovated, of course, to fit in with the new surroundings. The next point is: "There is certainly a religious element in the value which the Indian people now attach to the presence of lawns, trees, flowers and shrubs as settings for their industrial, as well as their educational and religious construction." This statement is too vague for my taste. And in any case, this habit is not exclusively Indian. Modern town-planning enthusiasts throughout Europe are insisting on it too. Mr. Williams's next target is the *Panch Shila* which, he maintains, emanates from Hindu philosophy. Maybe it does, I am not so sure. But if it can help the cause of world peace what does it matter where it comes from?

Personally, I am utterly uninterested in doctrinal religious matters. But I suppose an historical interest in religions is different. In any case, living and working in India as I do, it would be strange if I were not to try in my own way to seek some understanding of the principal religions here. To take Hinduism, I must confess that much of it baffles me, but I can hardly ignore the fact that, unlike any other religion, it has an uninterrupted history of well over six thousand years. It is scarcely surprising, therefore, that it should have coloured the Indian way of life. I note that there are several things which, although doubtless religious in origin, have become ordinary social customs and have ceased to have any recognisable religious significance at all. Take *alpna*, for example. This traditional decorative art was unquestionably created to propitiate the gods. But it may now be employed to grace the pandal of an atheists' congress just as well. As for music, Calcutta's citizens at least will testify that at pujas all kinds of songs, from patriotic to amatory, issue in indiscriminate succession from the *mandaps*. This seems to show that these functions have lost a good deal of their old religious content and have now become little more than occasions for social goodfellowship and entertainment. Even the old rituals connected with them are fast disappearing. There is another point which strikes me. Tributes in paint, stone and word, to Greek paganism are, as everybody knows, pretty nearly inexhaustible. Men of all religious denominations have contributed their share. I suppose it is because there is an element of intrinsic beauty in that ancient religion and—this seems equally important—it has long been dead. If there were a Greek today who believed that every tree had its dryad or that Poseidon could still be seen rising from the sea, we should no doubt laugh him into a madhouse. The Hindu pantheon's great fault may be that it is still alive, albeit considerably etiolated. Seemingly, gods, no less than men, have to die to be appreciated.

**ASSAM OIL
COMPANY**

does it all

A Member of the Burmah Group of Oil Companies.

Oil from abroad costs valuable foreign exchange. Oil from inside India saves it. And we must have ever-increasing quantities to cope with the expansion of industry and agriculture.

Scientists and engineers are keeping Assam's oil industry working at full pressure to produce as much oil as possible from our own oilfields. Additional wells are constantly being drilled, yet even in an established area they are not always productive; in spite of modern knowledge and equipment, successful drilling still remains something of a gamble.

But no effort is spared to find oil and turn it into the fuel, lubricants and by-products which are so vital to the progress and prosperity of India.

THE TATA IRON AND STEEL COMPANY LIMITED

CHAIRMAN MR. J. R. D. TATA'S REVIEW

The following is the speech of the Chairman, Mr. J. R. D. Tata, to be delivered at the Forty-ninth Annual General Meeting of the Shareholders of The Tata Iron & Steel Company Limited, on Thursday, 30th August, 1956.

Ladies and Gentlemen,

Much has happened, since our last Annual Meeting, to confirm the views on economic trends to which I had given expression in previous speeches. You will recall that in these speeches I had, apart from dealing with events and problems directly concerning our Company, taken a great deal of your time in sharing with you my hopes, doubts and fears about some of the economic policies of our Government. In particular, I had sounded a note of warning against some developments which seemed to me to threaten the balance of the mixed economy to which I thought we were committed: for instance, the trend towards a highly centralised form of State "capitalism" and the nationalisation of Life Insurance, the use of ordinances as a means of implementing economic policies; the frequent recourse to constitutional amendments; and some of the provisions of the new Companies Act.

While pointing to the dangers inherent in such developments, I had consistently made it clear that free enterprise in India unreservedly accepted the national objectives of increased production and equitable distribution and was anxious to co-operate with Government in the building of a practical Welfare State in which state enterprise and free enterprise joined hands in the common task.

Concentration of Economic Power

If I took such pains to elaborate my views on these matters, it was not only because I felt that they were of vital interest to you as shareholders of this Company, but also because I hoped, that what I had to say might perhaps have a hearing in quarters where policy was fashioned. While I do not wish to waste your time in any repetition of views previously expressed, I feel I must reiterate the concern with which I and many others view the ever increasing centralisation of economic power in the hands of Government.

Nearly fifty years ago Woodrow Wilson said:

"The history of liberty is the history of the limitations of governmental power, not the increase of it. When we resist . . . concentration of power, we resist the powers of death, because concentration of power is what always precedes the destruction of human liberties."

We are witnessing in India an uninterrupted growth of Governmental power in the economic field and are already well on the way to a strange and unnatural combination of political democracy and economic autocracy. The question that should agitate the minds of all of us is whether our political freedoms can long survive if our economic freedoms continue to be whittled away. Once all economic power is centred in Government, will it not be found equally necessary to curtail other freedoms in the interests of the people? Although there may be no danger that the able men in power today, motivated as they are by democratic ideals, will abuse their powers history shows that the danger lies in the very existence of unlimited power which may one day fall into less worthy hands.

Nationalisation of Life Insurance

The extent to which Government's economic powers can be exercised was strikingly demonstrated during the year by the sudden nationalisation of Life Insurance. Although spokesmen of Government have stated in the past that ideology played no part in the formulation of their economic policies, it is noteworthy that, during the debate in Parliament on the Life Insurance Corporation Bill, the then Finance Minister said:

"There was no need for Government to make out a case that private enterprise had failed in order to effect nationalisation. Nationalisation

could be justified on grounds of ideology and philosophy."

"This statement, coupled with the fact that every practical object which the Government sought to achieve could have been secured without recourse to nationalisation, must lead to the conclusion that political or ideological considerations were largely responsible for the measure and that they are likely to motivate future economic decisions. The fact that in normal times Government should have invoked emergency powers to implement this decision by ordinance, without first consulting Parliament and sounding public opinion, cannot but add to one's uneasiness.

State Trading

Another cause for apprehension lies in the recent entry of the State into the field of trading. During the brief period of its existence, the State Trading Corporation has already taken over or entered trading in a number of important commodities and through its operations Government are in a position to exercise powers of control over the whole field of industry even more sweeping than those they already possess.

Private Sector's Performance

We are told that in India capitalism has failed to deliver the goods, that it has shown no initiative and that it cannot in an economically backward country like ours produce the dynamic results obtained in the highly developed economies of the West. So, it is argued, it must be replaced by socialism which, alone, can produce results. This view seems to overlook a number of facts such as that the Private Sector has fulfilled and in some cases exceeded its production quotas under the first Five-Year Plan; that private enterprise in India has not up to now had the freedom of action and the incentives it enjoys in the countries where it has proved so strikingly successful; and that there is enough evidence available that the introduction of socialism of the kind, and by the means, contemplated in India has not proved an unqualified success in other countries. Still, even if we accept the premise that the magnitude and urgency of the task in India render its performance beyond the capacity of free enterprise alone, the correct solution, which until now so long ago seemed to have been accepted by Government, lies in a mixed economy in which both free enterprise and State Enterprise are harnessed to the country's needs.

I feel the charge that free enterprise in India has shown no initiative in recent years is particularly hard to take. I for one am in fact surprised at the amount of initiative displayed considering the discouragement and disincentives to which it has been subjected. While saying this, it is only fair that I should acknowledge the help and advice which industry in the private sector has received in recent years from our dynamic Minister for Commerce and Industry. It is a measure of the man that his socialistic views have not prevented him or his Ministry from extending assistance to industries in need of it for purposes of agreed schemes of development. Without his encouragement and quickness of decision, our Two Million Ton Project might not have come into being or would still be at the stage of discussion and correspondence. We are grateful to him for his support.

Indian industry needs no compulsion to induce it to collaborate with Government or to make its full contribution to the economic development of the country. It is prepared to take the necessary risks and to make the necessary sacrifices, but it asks to be left in reasonable peace to do its allotted job.

Indian Companies Act, 1956

Instead, the restrictions from which it suffered in the past have been aggravated by the new Companies Act. While the many wholesome provisions enacted for the protection of the investor are to be welcomed, the strait-jacket into which the Act places Management goes beyond all reasonable requirements. Those of you who have taken the trouble to study this Act will appreciate the waste of time and energy caused

by a number of its provisions as illustrated by the thirteen pages of the notice and its annexure in this year's Report as compared to the one-page notice in previous years.

The Act has gone to extraordinary lengths in its attempt to regulate the operations of joint stock companies, including such provisions as those pertaining to family relationships, of which no less than eighty-six degrees, both legitimate and illegitimate, have been covered in the relevant section. The Act is not only the cause of much waste of time and energy but also of much avoidable expense. In a country in which there is such a dearth of administrative personnel, in some places a total absence of it—to care for the basic needs of the people in the countryside, it is sad to see so much administrative machinery and expenditure diverted to such relatively unproductive ends.

Agreement on National Objectives

To sum this part of my speech, let me say that we all realise that since Independence our Government have performed a tremendous task. Faced with an unprecedented array of political, economic and social problems, they have discharged with ability, devotion and success an appalling burden of responsibility. We also realise that their task in the coming years will remain a formidable one; that the success of India's plans of economic development is essential to the future prosperity and happiness of our people. We in the industrial and business field are therefore at one with Government in their objective of a prosperous, democratic and happy nation emerging from the years of toil and strife. Where we differ is in the respective roles of the State and of the individual in the economic activity of the nation. We sincerely feel that some of Government's policies are based on economic theories on capitalism and socialism which no longer fit the facts, if ever they did. They seem to ignore the lessons of the social and economic experiments undertaken elsewhere in the world during the last few decades; for instance, the fact that, apart from the U.S., countries in Europe which have relied largely on free enterprise and given it the necessary support and encouragement, have achieved not only economic prosperity but also, through realistic fiscal and administrative measures, the socialist dream of an egalitarian Welfare State.

Financial Results

Coming to matters of more direct and immediate concern to us, you may wish me to amplify the brief reference in the Report to the profits and to tell you something about the progress of our expansion scheme and also about the important understanding we have reached with the Tata Workers' Union which was widely publicised in the Press.

The financial results of the year's operations were characterised by a decrease of Rs. 34 lakhs in disposable profit largely due to lower sales of ferro-manganese and by the large increase in expenditure of Rs. 4 crores to the Plant Rehabilitation and Development Fund and the Development Reserve under Government's new retention price scheme. No ferro-manganese was produced during the year under review and as a result the tonnage despatched was some 10,000 tons less than in the previous year. We have up to now been making ferro-manganese in blast furnaces plant and primarily for our own consumption, only the surplus being sold. For operational reasons, ferro-manganese is made intermittently and sales have therefore been themselves intermittent. Last year's sales were exceptionally large. Once the electric ferro-manganese plant which we are now in the process of building at our Joda manganese mines is completed and in operation in the latter half of 1958 ferro-manganese will no longer be made in the blast furnaces, the whole capacity of which will be reserved for the manufacture of pig iron. Some of the output of the Joda plant will be for sale, but in view of our greatly increased requirements for steel making, the tonnage available will be relatively small until the plant's capacity is increased.

As shareholders will have noticed, the amounts set aside this year for Plant Rehabilitation and Development and to the Development Reserve exceed the corresponding provisions of the previous year by nearly Rs. 3 crores, of which Rs. 2.28 crores represents the net increase in retention prices after taxes and Rs. 68 lakhs the additional tax saving on the Development Rebate. The increase of about a crore in the provision for taxes is itself mainly in respect of the additional price element.

Ever since the war we have protested both to the Tariff Commission and to the Government of India against the excessively low retention prices enforced on the steel industry, which made it impossible for the industry to set aside monies for development or to attract fresh capital. We pointed out that the difference between the retention prices and the imported prices amounted each year to a figure which far exceeded the total value of protection received by the industry during the whole of the seventeen years in which protective duties were imposed. We are happy that at long last Government have adopted a price policy which has enabled the industry to undertake a large-scale expansion.

The Development Rebate granted from last year for tax purposes, in accordance with the recommendation of the Taxation Inquiry Commission, will provide out of tax savings a further valuable source of development finance. We are grateful to Government for their realistic policies which will result in immense benefits to the country in the years to come.

Two Million Ton Programme

Our expansion scheme, although still largely at the preparatory stage, made considerable progress since the last Annual General Meeting. I then stated that the preliminary studies made of the proposal to increase our ingot capacity from 1.3 million tons per annum, which we expected to reach on the completion of the current Modernisation and Expansion Programme, to two million tons, indicated that the project was sound, could be completed within three years and would require about Rs. 60 crores to be spent on the new plant.

Our main efforts in the subsequent months were directed at the two principal objectives of entering into the necessary engineering construction and purchase contracts and of securing the funds required to finance the project.

Appointment of Kaiser Engineers

The technical preparations were completed in record time. It was clear from the start that to complete a project of this magnitude and complexity under three years would require a high degree of co-ordination of its various parts and phases for which it was

essential to place under a single organisation the responsibility for all the engineering, procurement, construction and supervision services. We therefore entered into a contract with two Divisions of the Henry J. Kaiser Corporation of Oakland, California, known for their industrial and engineering experience and their ability to get things done quickly.

Even while the agreement with Kaiser's was being negotiated, much of the preliminary work was begun and worldwide inquiries sent out for the major items of plant and machinery included in the programme. The first order for the principal items, such as the three main rolling mills and electrical equipment, were placed as early as March 1956. A group of Tata engineers were sent to Oakland, the headquarters of Kaiser's, and a Kaiser team began to be built up at Jamshedpur from February 1956. Today some 55 members of the Kaiser Organization are already at work in Jamshedpur and their number will grow to about 100 at the peak of construction activities. The Indian work force engaged on the project will similarly grow to a maximum of 6,000 men.

The completion of the entire project in a matter of two and a half years will be an unequalled achievement in the industrial field in India. While Kaiser's may have under-estimated some of the local problems and difficulties, we have every hope they will be able to adhere to their time-table.

Rail and road transport difficulties, bottlenecks in steel fabrication and congestion in the Calcutta Docks are amongst potential sources of delay which will require constant and sustained attention. On the other hand, our chances of completing the job in time are improved by the co-operation and assistance extended to us from the start by the Ministry of Commerce and Industry and also by the Finance Ministry in general and the Exchange Control Department of the Reserve Bank in particular, in the expeditious disposal of innumerable applications, requests and references submitted to them. We are grateful to them all for their assistance.

Project Cost

With the disposal of the main technical issues of the project, the procurement of the large funds required to finance it became the main subject of attention and effort on our part. In my speech last year, I mentioned a figure of approximately Rs. 60 crores as the estimated cost of the new plant. This figure was based on rough estimates which proved commendably accurate, as the final figure including contingencies now comes to Rs. 62 crores. This, however, represents only the estimated cost of the new plant itself, including the cost of all the work and services entrusted to Kaiser's. In addition, a certain amount of related work has to be undertaken departmentally by the Government, such as the clearing of land, siting, clearing, modifications to existing shops and mills to tie them into the Two Million Ton Programme, the provision of rolling stock and other items. These will cost a total of approximately Rs. 9 crores, spread over a period of four years up to and including 1959-60. In addition, approximately Rs. 2.65 crores will be spent on the collieries and ore mines and quarries to meet the added requirements of the expanded programme, and about Rs. 2 crores on the electric ferro-manganese plant, to which I referred earlier in my speech. The total thus comes to Rs. 75 crores, which, however, does not represent the full measure of the Company's estimated capital expenditure during the five years from April 1955 to March 1960, as it does not include such items as the cost of the current Modernisation and Expansion Programme, annual renewals and replacements, our investments in the Indian Tube Company and a new refractories company and other ancillary schemes.

World Bank Loan

I stated in my speech last year that a good part of the moneys to be spent on the new plant would have to be raised in the form of a loan from abroad. In consultation with the Government of India, who kindly agreed to sponsor an application to the International Bank for Reconstruction and Development, popularly known as the World Bank, discussions were initiated with the President and other officials of the Bank in February this year. These were followed by detailed negotiations and the presentation of a formidable mass of data, and finally by the signature, on the 26th June, 1956, of an agreement for a loan of 75 million dollars, equivalent to Rs. 36 crores, in various currencies and on the principal terms mentioned in the body of the Report. A striking aspect of this loan from which we may well derive satisfaction, is the fact that it is the largest loan granted up to now by the World Bank to an industrial undertaking anywhere in the world and also the largest single loan granted for any purpose to any country in Asia.

While it is true that the loan is guaranteed by the Government of India, the financial strength and creditworthiness of the Company, painstakingly built up by the conservative financial policies followed all these years, was a major factor in the Bank's ready acceptance of our proposals.

One aspect of the negotiations with the Bank which I should like to mention is the remarkable speed at which they were conducted and concluded. We are thankful to Mr. Eugene Black, the distinguished President of the Bank, and to his associates for so kindly expediting, in response to our request, the detailed and complex procedures which the Bank normally follows in disposing of loan applications. Their co-operation was I believe, another reflection of their confidence in the Company and its Management.

This loan and the additional share capital, for the issue of which you passed the necessary resolutions earlier this year, will provide us with about Rs. 50 crores out of the Rs. 75 crores required for the Two Million Ton Programme. The balance of about Rs. 25 crores will be secured from retained earnings accruing to the Plant Rehabilitation Fund and the Development Reserve between 1955-56 and 1959-60 and, from further borrowings. The funds required to finance the other items of capital expenditure, to which I have referred earlier in my speech, will be met largely from internal resources and borrowings.

Agreement with the Union

A brief reference has been made in the Report to the conclusion during the past year of a comprehensive agreement between the Company and the Tata Workers' Union. This Agreement, which seeks to place the relationship between the two parties on a still firmer foundation of goodwill and mutual security, sets out the rights and obligations of the Company and the Union and records agreement on a number of outstanding issues. A special feature of this

Agreement was that it contained an important declaration of intention to bring about a closer association of employees with Management in the working of the industry.

Association of Employees

In furtherance of that provision, the Company and the Union subsequently held further discussions and reached complete agreement on the subject. Under a Supplement Agreement signed on August the 4th, the considerable machinery already in existence at Jamshedpur for joint consultation will be rationalised and, with the exclusion of matters concerned with collective bargaining or grievance procedures, will be brought within a three-tier structure of Consultative Councils. These will be set up for all departments of the plant, for the Works and the Town as a whole, and finally, at the top Management level where a Consultative Council of Management will provide a meeting ground for consultation and for an exchange of views on the general working of the Company and the industry. While the functions of these Councils will all be of an advisory character and Management will remain, as before, in control of the Company's affairs, due weight will naturally be given to the views and recommendations of the Councils.

The subject of associating employees with Management is admittedly a difficult and controversial one. It has been the subject of considerable attention and discussion on the part of Government and the Planning Commission who have expressed themselves in favour of the principle, and also of the Joint Consultative Board of Industry to whom the task of formulating specific proposals has been entrusted.

The question whether the Company should not have waited until an all-India policy had been evolved on the subject was discussed by the Company's Board who ultimately decided to ratify the draft agreement. This decision, which I am convinced was right, is in consonance with the accepted view that freely negotiated agreements are much to be preferred to imposed settlements. The Agreement was negotiated in a fine spirit of mutual frankness and co-operation and represents an honest attempt to devise means of understanding each other better and working closer together. I have every hope that it will prove workable in practice, provided both parties respect the intentions recorded in the Agreement and try to read into its provisions neither more nor less than they contain. This will apply particularly to the Joint Consultative Council of Management.

So far as we are concerned, we shall not seek to fetter the discretion of this Council in discussing such matters as will enable its members, and particularly those representing labour, to acquire a better understanding of the industry and its problems. At the same time, the Company has no intention of surrendering its managerial functions and responsibilities. I for one do not believe in the concept prevalent in some labour circles that factories, whether owned by the State or by shareholders, should ultimately be handed over to workers who would provide both the labour and management of the enterprise. In my opinion, such a view is both unworkable and impractical, and its pursuit can only lead to barren disagreements and ultimate disillusion.

The Management of mechanised industries is becoming more and more complex and requires increasingly high standards of technical and administrative experience and competence. Any worker, however humble his beginnings may have been in the industry employing him, should have the opportunity of rising in the organisation, his progress being determined by merit and his ability to discharge his allotted responsibilities.

But this obviously implies that at a certain stage such a worker leaves the ranks of labour and becomes part of Management. This is a very different proposition from that of handing over the management of a factory to the workers collectively.

I hope therefore that time and energy will not be wasted in a fruitless pursuit of the concept of workers' management which is unworkable, except possibly in very small-scale industries run on co-operative lines.

The Jamshedpur Community

Having said that, I should perhaps mention that somewhat different considerations may apply to functions concerned primarily with the fulfilment of individual and social life within the industrial community as distinct from functions and activities directly concerned with production, sales, finance or administration. Jamshedpur is for our employees a place in which to live as well as to work. The Jamshedpur community is now nearly half a century old. Many of its members were born, have taken up jobs and founded families there, and I believe there is ample talent, interest and civic sense to be found among them which could be harnessed to constructive and responsible work of a civic nature. For instance, many of the citizens within clearly laid down budgets and procedures. So long as the Steel Company furnishes the funds required for running the town, it would naturally retain financial control. Real democracy works from the roots up and we, as a Company, should welcome and encourage opportunities to develop the democratic qualities involved in collective work selflessly undertaken in the interests of the community.

To sum up, I feel that in entering upon these agreements with the Union, we have crossed the threshold of a new era of co-operation and goodwill in our relations with our employees at Jamshedpur. We have not undertaken this experiment in a vain-glorious desire to be pioneers or to set ourselves up as an example to others. We have done so in a spirit of humility.

We have already come a long way in developing sound industrial relations at Jamshedpur for which I feel both the Management and the leadership of the Union deserve credit. We have not by any means solved all our problems; discipline, morale and productivity are not yet what they should be. No doubt, our standards of management themselves can be further improved; but I think it can be said that the present Management of the Company and of the Union have the will to co-operate for the good of the industry and the country as a whole. I am confident that with this background the experiment is well worth trying. If we succeed, nothing but good can come of it for all concerned, including shareholders and employees. If we fail, little harm will have been done so long as the failure will not have been due to lack of goodwill.

We shall in the next few years have many difficult problems to face as a result of the expansion of our plant and operations. I believe the burden will be the lighter for its being shared by those who work for and with us.

Ending on this note, I should like on your behalf to thank all the members of our Management, staff and labour force throughout the Organisation for the excellent work they have put in during the past year.

Note: This is not a report of the proceedings at the above Annual Meeting, of which proceedings a separate report will be published.

RECORD OF ACHIEVEMENT

Sound underwriting and outstanding service to Policyholders are reflected in the rapid progress made by the ORIENTAL FIRE. Transacting Fire, Marine, Motor, Accident and all other classes of non-life business in the best ORIENTAL tradition, ORIENTAL FIRE also offers specialized cover against Machinery Erection and Breakdown and Boiler Explosion risks.

Company Meeting

SONE VALLEY PORTLAND CEMENT COMPANY LIMITED.

CHAIRMAN SHRI ANANDILALL PODDAR'S REVIEW

Address of the Chairman, Shri Anandilall Poddar, M.L.A., at the Annual General Meeting of the Company held on Friday the 31st August, 1956 at 36, Chowringhee, Calcutta.

Gentlemen,

It gives me great pleasure in extending to you a hearty welcome to this, the Thirty-third Annual General Meeting of your Company. The Directors' Report and the Audited Balance Sheet and Profit & Loss Accounts of the Company for the year ended 31st December, 1955, have been in your hands for some time. I seek your permission to take them as read.

During the last few months following the enforcement of the Companies Act, 1956, there has been some change in the administration of the Company. Messrs. Martin Burn Ltd., the Managing Agents during the year under review tendered their resignation and from the 1st August, 1956, the active management has been taken over by your Board of Directors. Some of the earlier Directors who resigned or could not continue under the new Companies Act were replaced by new Directors and the change over was effected with the utmost co-operation of Messrs. Martin Burn Ltd. for which I want to place on record our sincere thanks and appreciation of their good offices. Your Directors will endeavour to maintain the progress and high standard of management in conducting the affairs of the Company which was achieved by Messrs. Martin Burn Ltd., as the Managing Agents and on the excellent foundations laid. It will be their privilege to forge ahead with schemes for substantial renovation and considerable expansion.

New Management

You are aware of the plans for rapid industrialisation and large-scale development in the Indian economy during the Second and subsequent Five-Year periods. It is perhaps needless for me to state that in the building up of the New India of our dreams, Cement has to play a leading role and in appreciation of its great importance the target of cement production is being further raised for the Second Five-Year Plan from 125 lakh tons to 200 lakh tons per year, realising the assured future of the industry and fully conscious of the part your Company has to perform in contributing to the economic advancement of our motherland and with your good wishes I hope I give you some satisfaction to know that your Directors have already set afoot measures to achieve that end.

It is just a month we have been called upon to manage the affairs of the Company directly and during the period we have felt that in order to ensure more economic working and reduce the costs which have been high due mainly to worn out machinery requiring constant repairs, the present machinery require thorough overhaul and renovation. Immediate steps have been taken accordingly. You are aware that the Company produced in 1955 2,10,878 tons of cement. This went down to 1,96,190 in 1954 and to 1,95,000 tons in 1955. The main reason for this setback was the wear and tear of the plant and machinery due to age. There is a limit to what a smart jockey can do to spurt on an aged and run-down horse. Your Directors have set themselves to renew and repair the existing machinery without delay and they hope to regain the earlier efficiency in a few months so that by the time we meet again we shall be able to report having exceeded the maximum of annual production achieved in the Company's years of prosperity.

We are not going to rest on our oars at that and we are looking ahead with schemes for substantial expansion and development. Negotiations have been initiated for additions to the plant at Japla with a view to raise the capacity by another 750 tons and the setting up of a suitable Slag-Cement works in

West Bengal near Durgapur capable of utilising about 500 tons of slag from the Durgapur Steel Works and about 200 tons of clinkers or limestone from Japla, in co-operation with the Steel Project and the Government, is under active consideration. As soon as the necessary encouragement from the Government of West Bengal and the licence from the Government of India are secured we propose to go ahead with our Slag-Cement project.

The finances of your Company also need re-habilitation and immediately after assumption of the management on the 1st of August last your Directors have intimated to the Government of India their readiness to accept the addition of Rs. 4/- per ton on our production by way of re-habilitation price, which, the previous management did not like to accept. We are expecting the official confirmation of this payment very shortly and just at present I am not in a position to give you the news. On the assumption of our estimated production of 2,00,000 tons a year, this addition to the retention price so far allowed will mean an additional revenue income of Rs. 8,00,000/- a year.

In addition to our efforts to increase our income and resources in various ways your Directors have already approached the Industrial Finance Corporation for suitable assistance in putting our re-habilitation and expansion schemes into early action and we confidently hope that ample support both from Private and from Public Sectors will be forthcoming.

State Trading Corporation

As has been mentioned in the Directors' Report the distribution of cement in the Indian market has been taken over by the State Trading Corporation from the 1st of July last under circumstances explained therein. The Cement Industry of India cannot but view the encroachment into this field by a Government machinery with dismay and the dangers have been duly represented. We shall be prepared to extend our full co-operation to Government, however, and we hope the authorities will appreciate at least two things vital to us in this regard.

You are aware of the high reputation acquired and always maintained by the product of your works in their 'Rohas' Brand cement, which in normal times always fetched a higher price in the market and had never failed to attract customers. It is not understood how far your Company can be remunerated by the State Trading Corporation for manufacturing a high quality material and your Directors are thinking of making proper representation in that regard.

Representations have already been made to the Government for a suitable revision of the retention price for cement ex factory, as determined on the basis of the Tariff Commission in 1954, in view of the substantial increase in the items of costs, particularly for coal, wages and railway freight as also the threatened increase in the price of gypsum since the examination of the costing by the Commission two years ago. Should our representations succeed, and there is no reason why they should not be found reasonable, the future of cement industry generally and of your Company in particular will be doubly assured.

Gentlemen, with your co-operation we hope to be able to present you with a better account of ourselves next year and I thank you for the interest you have shown in coming over to this meeting this day.

I also take this opportunity to convey the thanks of the Directors to all the staff and labour of the Sone Valley Portland Cement Company with whose co-operation and active service this Company has forged ahead of all such concerns in the country and on whom the future success will also largely depend. I thank you all.

Finance in India and Abroad

THE CALCUTTA MONEY MARKET

DEMAND UNCHANGED

Wednesday, 5th September.

THE slack conditions in the money market are persisting. There has been little change in the demand for funds from any of the main sources. The inter-bank market has been very firm in the past few days due chiefly to the opening of the new State loans on Monday. The call rate is unchanged at 3½ percent, but it is reported that funds are unobtainable at this level.

The bill market has remained quieter. A few tea bills have come to hand, but gunny documents are scarce. Demand for remittance has been good. Sterling has strengthened slightly in the past day or two in spite of the large deficit in the sterling area's advance payments during August. Such a result had been on the whole expected and consequently discounted. A good deal of short-covering is now taking place. Free dealings in American dollars were opened in India on Monday. It is reported that there has been very little change in the dollar rate.

Silver was firm on strong speculative support and the price advanced from the previous week's level of Rs. 171-14 to Rs. 174-1, quoted today. The rate for ready delivery was Rs. 174-4. The London price remained unchanged at 78½d. The price of foreign silver in New York remained the same at 90½ cents.

Gold increased in sympathy with silver and the price rose from Rs. 103 to Rs. 103-9. The sovereign at Rs. 67-14 showed a gain of 10 annas.

During the week ended 31st August, Government of India Treasury Bills for Rs. 35,00,000 were sold in favour of the Reserve Bank.

The return of the State Bank of India for the week ended 24th August, 1956, shows a rise of Rs. 2.03 crores in total deposits to Rs. 226.64 crores. Investments in Government securities are down by Rs. 1 lakh to Rs. 94.72 crores, while other authorised investments remain unchanged at Rs. 11.45 crores. Advances, including loans, cash credits and overdrafts, and bills discounted and purchased have fallen by Rs. 1.48 crores to Rs. 123.77 crores. Cash and balances are, in consequence, shown at Rs. 18.37 crores, or Rs. 20 lakhs higher.

The return of the Reserve Bank of India for the week ended 31st August, 1956 showed a decline of Rs. 7.11 crores to Rs. 1,424.51 crores in active notes while the total note issue was Rs. 1.49 crores higher at Rs. 1,431.62 crores. Notes held in the Banking Department consequently increased by Rs. 8.58 crores to Rs. 32.63 crores. Deposits of the Government of India increased by Rs. 4.19 crores to Rs. 65.77 crores but other Government accounts declined by Rs. 2.79 crores to Rs. 2.91 crores. Balances of commercial banks at Rs. 56.52 crores showed an increase of Rs. 1.12 crores. Balances held abroad fell by Rs. 3.85 crores to Rs. 24.94 crores. Other loans and advances declined from Rs. 54.98 crores to Rs. 52.15 crores, of which advances to scheduled banks against usance bills totalled Rs. 22 crores against Rs. 28.12 crores. These advances amounted to Rs. 232.08 crores since 1st January, 1956. Ways and means advances stood at Rs. 8.06 crores (Rs. 7.64 crores). Other features disclosed little change.

The statement of the position of scheduled banks for the week ended 24th August, 1956, discloses Demand and Time liabilities at Rs. 654.47 crores (Rs. 17.01 crores on account of borrowings from banks) and Rs. 464.90 crores (Rs. 3 crores), compared with Rs. 644.75 crores (Rs. 15.90 crores) and Rs. 460.02 crores (Rs. 3.15 crores) respectively in the previous week. Cash has declined by Rs. 9 lakhs to Rs. 37.53 crores, while balances with the Reserve Bank have advanced by Rs. 31 lakhs to Rs. 50.72 crores. There is a rise of Rs. 80 lakhs in investments to Rs. 362.02 crores. Advances and bills discounted at Rs. 736.01 crores show a drop of Rs. 43 lakhs. The ratios to total liabilities of cash and balances, and of advances and discounts, are, in consequence, shown at 7.9 percent and 65.9 percent, against 8 percent and 66.7 percent.

The profit of the BANK OF MYSORE for the half-year ended last June amounted to Rs. 3,87,291. The directors have declared an interim dividend of 8 percent, including a bonus of 2 percent, to absorb Rs. 4 lakhs. Taxation reserve is allocated Rs. 2½ lakhs, leaving a carry-forward of Rs. 4,19,228.

According to the landborne trade returns received in the Department of Commercial Intelligence and Statistics, provisional figures of the total value of foreign trade of India by land with Pakistan, Afghanistan, Iran and Burma during July, 1956, are as follows (in lakhs of rupees):

	Imports from	Exports to
East Pakistan	74	28
West Pakistan	17	16
Other Countries	7	4
Total	98	48

Total trade amounted to Rs. 146 lakhs. Re-exports and trade in treasure were negligible. There was thus an adverse balance of trade amounting to Rs. 50 lakhs.

BATTERIES are our business

For over 60 years Chloride have been making batteries and nothing else. We were born when the motor industry was born, and we've grown up together. How young we were when the horseless carriage first shyly accepted the advance of the celluloid-cased accumulator! How old must one be to recall a day when 'battery' and 'Exide' were not synonymous to the motorist?

Our products provide an unfailing source of power in Generating Stations, Sub-Stations, Telephone Exchanges, Industrial Factories, Railway Coaches, Aircraft and Exide Batteries are fitted on more motor vehicles in India, new and old, than any other make.

Industries, Electrical Supply and Development Projects, Railways and Transport Operators depend on Chloride and Exide products as do India's motor vehicle manufacturers. They are thus assured of a quality product unequalled in performance and reliability and backed by an efficient and comprehensive Service Organisation.

Manufacturing more than 150,000 Storage Batteries per year of all kinds, the Exide Factory near Calcutta, is India's largest and foremost producer and ranks with the world's leading and best equipped Storage Battery Factories. Continuous research and development keep us consistently ahead of the times in all that is new in battery development.

LONDON INSURANCE LETTER

UNFORESEEN CIRCUMSTANCES

By Air Mail.

EVERY foreseeable contingency is taken into account when policies are drawn up, but circumstances which neither party envisaged arise from time to time. Egypt's declaration on ownership of the Suez Canal produced such circumstances. The British Government reacted by blocking Egypt's sterling accounts; in consequence, exporters of British goods to Egypt could not be paid by the normal method. In the normal policy of the Export Credits Guarantee Department, there is an exchange-transfer clause which would have been applicable if transfer of sterling from Egypt had been blocked, but in this case the "offending" action was that of the British Treasury—and the framers of the policy had not imagined that it would be necessary to allow for such a contingency. As promptly as possible (though there was no special urgency from its own point of view, as claims would not have to be settled until months later), the Department put exporters' minds at rest. A spokesman stated: "A loss arising from the inability to receive payment for goods shipped to Egypt because of the recently-introduced exchange regulations is

regarded by E.C.G.D. as a risk covered under its policies." In other words, one Government department has, as an act of grace, taken responsibility for the effects of an action by another Government department.

Naturally, as soon as that action was taken E.C.G.D. informed its policyholders that new insurance cover on shipments to Egypt could not at present be provided. Any business accepted by exporters after this warning early in August is not, of course, covered by the subsequent announcement on liability. Moreover, so far as E.C.G.D. accepted responsibility it required exporters to exercise "all reasonable care and forethought". In other words, if an exporter had accepted Egyptian orders before the restrictions were imposed, and proceeded to ship them after, he could not claim on a "shipment" policy (applying only to goods actually shipped) as he would be wantonly incurring risk of non-payment. A "contract" policy, on the other hand, provides full protection against losses incurred on contracts arranged before the beginning of August, whether or not the goods were actually shipped (or even finished) by then; but a holder of such a policy would likewise be debarred from claiming if he proceeded to ship the goods in the new situation. Lloyd's underwriters have had a different problem, arranging insurance against prevention of ships from passing through the Suez Canal. It has not been easy to assess an appropriate premium for covering shipowners against the risk of being diverted round the Cape—involving, perhaps, 30 extra days at sea. But this is, at least, a contingency that can be clearly foreseen and obviously a proper one for insurance.

Hire-Purchase Risk

Reasonable care is a natural condition of various kinds of insurance. It is especially important in a new form of insurance that is gaining favour in the U.K., covering hire-purchase business. It might be thought that the severe restrictions on hire-purchase transactions imposed by the authorities, which have certainly curtailed trade, would thereby curtail demand for cover; but there have been until recently no policies available to satisfy the need. The risk itself has been moderated insofar as the initial payment has been compulsorily raised, so that the credit element in each transaction is reduced; but reduction of the period of credit, which has also been enforced, increases the size of the periodic payments and, thereby, the risk of default on them. The credit-insurance which is the speciality of the Trade Indemnity Company is the domestic equivalent of that provided by E.C.G.D. in export trade. Hire-purchase insurance is a special branch of credit-insurance and is outside the range of trade indemnity. The organisation that has put forward a comprehensive scheme recently is the Credit Insurance Association. The main characteristic of the scheme is that it covers dealers' risks; whereas cover has been almost confined hitherto to the finance houses and industrial banks which put up money for the deals. There is not much experience of this kind of insurance in Britain, and it must be admitted that it begins to operate on a substantial scale at a time when many contracts are precarious. Many working people assumed that the prosperity that allowed them high wages would last indefinitely, and on that assumption they committed themselves to periodical payments which cannot be maintained out of substantially reduced pay-packets. Many workers in the motor industry are in this predicament; and many other industries, though not similarly afflicted with unemployment, have stopped the overtime work which provided considerable additions to basic pay. However, the basic risk in this kind of insurance is modified by the existence of tangible goods which (not being the property of the purchaser until payment is completed) can be repossessed by the seller and resold if payment falls more than three months in arrears—the period after which, in the new policy, loss is deemed to have occurred.

New Retirement Policies

The life offices are busy with the new policies for which demand has arisen since the Finance Act was passed a few weeks ago. This is the Act that incorporates the proposals of last April's Budget, a feature of which was the plan whereby small business people and professional men with no pension-schemes in their employment could provide individually for their retirement, or bodies of persons comprising or representing such persons could form private trusts for the purpose. The scope of the concessions provided in the original Bill was somewhat extended in the final Act, but still it covered only a part of the individual need. The policies which the offices are now formulating are based on the provisions that annual premiums not exceeding 10 percent of the insured's earnings or £750 a year are free of income-tax and sur-tax, and that the retirement annuity, when it falls due, will qualify as earned income and so bear tax at the favourable rate. The purpose is "provision for the individual of a life annuity in old age" and the policies cannot be adapted to any other kind of cover. As a general rule, annuities just begin between the ages of 60 and 70, and no lump-sum payment on the death of the insured is permissible; concessions allowed in case of his death before annuities begin, provide, essentially, only for return of premiums, with interest or bonuses. Many people will still find it desirable to take out supplementary endowment or other policies.

Stocks and Shares

SENTIMENT DEPRESSED IN STOCK MARKET

CLOTH EXCISE DUTY CAUSES SETBACK: SHARP REDUCTION IN TURNOVER

Wednesday Evening.

THE share market is quiet with little business passing. Speculative prices have fallen sharply from the buoyant levels recorded last week. There has been some profit-taking, but the main reason is that sentiment in Calcutta has been subdued by the dull conditions which have prevailed in Bombay since the increase in the cloth export duty was announced. A good shake-out is probably no bad thing for the market after the activity of the past week or two and operators are not unduly pessimistic about future prospects. The Suez Canal crisis appears no longer to feature in the market's calculations. Prices of speculatives were all lower at today's clearing.

There has been little activity in investment scrip during the past week. All sections have ruled quiet, including Government securities which have been influenced by the opening of subscriptions for the State loans last Monday. Information about the progress of these State issues is not yet available.

Details of the week's trading follow.

The gilt-edged market continued quiet and prices were again marked down on a wide front with the exception of the 3% Conversion Loan 1986 which met with enquiry and improved from Rs. 75-2 to Rs. 75-5. In short-dated loans, 3% 1957 was marked at around Rs. 99-12 and 3% 1958 had small buyers at Rs. 99-9. In the medium-dated group, 3% 1959-61 had sellers at around Rs. 98 and both 3% 1963-65 and 1964 were quoted lower at Rs. 94-12 and Rs. 94-13 respectively; 2½% 1961 was taken at around Rs. 93-7 and 2½% 1962 changed hands at Rs. 93-15. In National Plan issues, 3½% 1961 was quoted one anna lower at Rs. 99-5 as was 3½% 1964 at Rs. 98-10; 3½% 1965 was easier at Rs. 98-8 and 3½% 1967 was offered at around Rs. 98-7. Among long-dated issues, 3% 1966-68 turned sellers at Rs. 93-4 and 3% 1970-75 continued weak at Rs. 98-14; 3½% 1974, however, was asked for at Rs. 98-7-6.

Due to the flotation of the new State loans, there was virtually no business in pre-existing issues. Sellers depressed the market and there was a further marking down of prices. Four percent U.P. 1967 was quoted lower at Rs. 99-8 and 4% Madras 1967 was c. offer at the same rate.

A few more transactions were reported in jute preference shares during the week. Auckland 2nd were placed at Rs. 74 and Howrah "A" at Rs. 104-8. A small lot of Gourepore was done at Rs. 96. Lansdowne were marked at Rs. 99. Lawrence at Rs. 105. Naitati 2nd changed hands at Rs. 76 and New Central at Rs. 107. Among miscellaneous issues, Arthur Butler were enquired for at Rs. 9 and interested buying took up the price of Associated Hotels shares at one time to Rs. 90; tonight's closing quotation, however, is Rs. 84. Bharat Collieries came to hand at Rs. 85 and Calcutta Electric were transacted at Rs. 11-8. A small lot of Dalmia Cement Rs. 40 paid-up shares was placed at Rs. 38-8 and the Rs. 100 paid-up shares at Rs. 98. Chrestien Mica Industries were done at Rs. 59 and Cawnpore Sugar at Rs. 127. A small odd lot of Bengal Paper Rs. 50 paid-up was crossed at Rs. 71. Indian Iron & Steel were steady at Rs. 108-8 while New Victoria were easier at Rs. 5-10. Orient Paper 1st were taken at Rs. 99 and Rohtas Industries "B" Preference changed hands at Rs. 64-8 as did Shaw Wallace at Rs. 78. There were small buyers of Tezpur Tea at Rs. 13.

In the banking section, United Commercial were easier at Rs. 58-4 as were Punjab National at Rs. 56. Hind Bank reacted from Rs. 38-8 to Rs. 38 while United Bank of India were unchanged at Rs. 4-8 as were Hindustan Commercial at Rs. 14-10.

The only share dealt in among railway scrip was Dehri Rohtas at Rs. 13-11 ex-dividend.

The announcement from Delhi on 31st August increasing the excise duty on fine and super-fine cloth by six annas a square yard, and on coarse and medium cloth by four annas a square yard, not only had a depressing effect on cotton textile shares, but on the market in general. Bowreah and Dunbar fell heavily from Rs. 172 and Rs. 304 to Rs. 150 and Rs. 284. Kesoram were marked back from Rs. 19-6 to Rs. 18-14 and Elgin from Rs. 28 to Rs. 27-10. New Victoria were easier at Rs. 2-9. Contrary to the general trend, Jaysree Textiles were steady at Rs. 7-10.

There was little movement in the price of coal shares, but on the whole interest was lacking. Amalgamated were unchanged at Rs. 23-8 as were Bengal at Rs. 538 and East Indian at Rs. 32-8. Burakur eased from Rs. 15-4 to Rs. 14-13 as did Standard from Rs. 24 to Rs. 23-8. Equitable were shaded at Rs. 30-10 while Karanpura Collieries were steady at Rs. 118. Ranegunge were taken at Rs. 13-4 and New Manbhoom were unchanged at Rs. 10-8. Union changed hands at Rs. 14-8, Western Bengal at Rs. 7 and Central India at Rs. 7-7. In contrast, Borra moved up today to Rs. 24-4, Katras Jherria at Rs. 61 and Sibpore to Rs. 29-8.

Jute shares followed the pattern of coal scrip and prices were inclined to soften towards the close. Here is a chart showing representative price movements.

Rs. 34 as were Richardson & Cruddas at Rs. 25. Despite the publication of an excellent report, Textile Machinery reacted from Rs. 24.14 to Rs. 23.11, due probably to the generally quiet conditions prevailing in the market.

In paper, India Paper Pulp, were better at Rs. 25.8 ex-dividend while Titagur were easier at Rs. 40.12 as were Shree Gopal at Rs. 18. Orient were fairly steady at around Rs. 40.2. Star Paper met with some enquiry following the Company's decision to re-pay the debenture capital and the price improved from Rs. 11.6 to Rs. 11.11.

In cement, Assam Bengal were offered at Rs. 7.4. Ashoka were quoted at Rs. 12.4 and Dalmia were done at Rs. 15.2. Sone Valley were unchanged at Rs. 8.14.

In shipping, Bengal Assam came to hand at Rs. 145 and India General Navigation were Rs. 1 lower at Rs. 113. Indian Steamship were well maintained at Rs. 9.12 as were Port Shipping at Rs. 17.4.

Among miscellaneous industrials, Alkali & Chemical met with some enquiry and improved from Rs. 22.10 to Rs. 22.14. Indian Aluminium also were in strong demand and rose from Rs. 24.10 to Rs. 25.2; profit-taking at the close brought the price down to Rs. 24.12. British India Corporation were easier at Rs. 10.6 while Bengal Flour were steady at Rs. 30. Aluminium Corporation improved at Rs. 12.10. Angelo Brothers were unchanged at Rs. 24 and the announcement of a 5% dividend by the British Burmah Petroleum Co. Ltd., was received with disappointment; the price receded from Rs. 4.2 to Rs. 3.14. Dunlop Rubber were unchanged at Rs. 29.10, but Clive Row were quiet at Rs. 11.8. Hindustan Motors were depressed at Rs. 10 while Imperial Tobacco were bought on investment account at Rs. 15.10. Indian Cables reacted from Rs. 40.6 to Rs. 40.2. Contrary to the general trend, India Rubber Manufacturers met with keen enquiry on reports of excellent working, and the price spurted from Rs. 16.9 to Rs. 18.8. Jardine Henderson were offered at Rs. 98 as were Martin Burn at Rs. 23.13. Midnapore Zemindary receded from Rs. 38 to Rs. 37.8 and National Insulated Cables were easier at Rs. 25.10. National Carbon recovered from Rs. 28.15 to Rs. 29.5 and National Tobacco were lower at Rs. 13.11. F. & C. Osler at one time receded to Rs. 9.14 but recovered today to Rs. 14.8. Rallis were quiet at Rs. 41.8 and Rohtas Industries at Rs. 22.12.

With the exception of Metal Corporation, which were steady at Rs. 11.8, mining issues were depressed. Burma Mines eased to Rs. 3.3. Consolidated Tin to Rs. 2.8 and Orissa Minerals to Rs. 26.2. Indian Copper were quiet at Rs. 6.12.

Tea shares were again quiet and turnover was negligible. Among Assam scrip, Baghmari eased to Rs. 24.14 as did Bishnauth New to Rs. 20.8 and Brahmaputra to Rs. 8.2. Brooke Bond shed eight annas to Rs. 21 and Dhelakhat came to business at Rs. 22.8. Dibrugarh changed hands at Rs. 25.12, as did East India at Rs. 23.6 and Telojan at Rs. 25.10. Kottamullai were taken up to Rs. 29 and Tezpur and Tyroon were both fractionally better at Rs. 23.8 and Rs. 48 respectively. In the Doars section, Banarhat improved to Rs. 335, but later had sellers at Rs. 331. Gaikhatta were marked at Rs. 238 and Hantapara came back to Rs. 190, as did Hasimara to Rs. 32.8. New Doars met with moderate enquiry and improved to Rs. 304. Of the remaining shares, Nagri Farm changed hands at Rs. 27.10, as did Sungma at Rs. 12.10 and Kallinugger and Khoreel at Rs. 104.8. Lackatoorah recorded Rs. 36.14 and Patrakola had buyers at Rs. 206. Telapara were done at Rs. 220 and Atal, Belgachi, Gungaram, Hansqua and Jayshree came to business at Rs. 8.8, Rs. 62, Rs. 171, Rs. 24.8 and Rs. 11.14 respectively.

The profit of the BASMATIA TEA COMPANY declined by Rs. 5.99 lakhs to Rs. 2.15 lakhs for the year ended last December. Bringing in Rs. 93,033, providing for 1953, 1954 and 1955 labour bonuses and transferring Rs. 60,000 to general reserve, there is a balance of Rs. 1,43,235. The dividend has been cut from Rs. 8 to Rs. 1.8 a share but the capital has meanwhile been raised by a one-for-two scrip issue. The carry-forward is Rs. 66,735. Output improved from 6,617 maunds to 7,782 maunds. The average sale price declined from Rs. 3-3-2 a lb. to Rs. 2-2-3 a lb. Estimates for 1956 have been framed for a crop of 8,000 maunds at a cost of Rs. 10.28 lakhs.

The profit of the WESTERN BENGAL COALFIELDS amounted to Rs. 2.19 lakhs for the year ended last March, after providing Rs. 3.08 lakhs for depreciation and Rs. 1.90 lakhs for taxation. Bringing in Rs. 37,694, there is a balance of Rs. 2,57,162. The dividend has been maintained at 8 annas a share, leaving a carry-forward of Rs. 7,262. Raisings increased from 198,000 tons to 226,391 tons, and despatches from 192,000 tons to 251,412 tons.

The HOOGRAJULI (ASSAM) TEA COMPANY has incurred a loss of Rs. 51,932 for the year ended last December. Providing Rs. 47,851 for depreciation, Rs. 94,090 for 1953 and 1954 labour bonuses, bringing in Rs. 84,780 and making other adjustments, there is a balance of Rs. 26,849. The dividend has been reduced from Rs. 9 to 8 annas

a share, but the capital has meanwhile been increased by a three-for-two scrip issue. The carry-forward is Rs. 1,849. The crop increased from 5,834 maunds to 5,838 maunds, but the average sale price was Rs. 1-11-5 a lb. against Rs. 3-1-5 a lb. Estimates for 1956 have been made for a crop of 6,250 maunds at a cost of Rs. 8.58 lakhs.

Providing Rs. 3.30 lakhs (Rs. 2.30 lakhs) for taxation, transferring Rs. 41,500 (Rs. 35,000) to tax contingency reserve, Rs. 50,000 (same) to plant renovation reserve, Rs. 1.30 lakhs (Rs. 1.20 lakhs) to general reserve, Rs. 50,000 (nil) to debenture redemption reserve and bringing in Rs. 41,767, there is a balance of Rs. 3,04,629 for the KUMARDHUMI FIRECLAY AND SILICA WORKS for the year ended last December. The ordinary dividend has been maintained at Rs. 1-8 a share to absorb Rs. 2.25 lakhs (Rs. 1½ lakhs), leaving a carry-forward of Rs. 49,404. The directors say that the position of the order book is satisfactory and the company is obliged to quote for distant deliveries. "With three new steel plants to go up in the country, we expect demand to exceed supply during the second five year plan period."

BOMBAY QUIETER ON NEWS OF EXCISE DUTY

T.I.S.C.O. CHAIRMAN'S SPEECH WELCOMED

Tuesday Evening.

EQUITIES on the Bombay Stock Exchange received a sharp setback last week on selling pressure induced by the increased excise duty on cloth. Operators became nervous as it was difficult to ascertain to what extent the burden of the duty would be passed on to consumers. It is, however, generally believed that the marking down of values was probably overdue considering the substantial increase in prices which had taken place over the past two weeks.

During the early part of the week, sentiment improved following the encouraging speech by Mr. J. R. D. Tata at the annual general meeting of the Tata Iron and Steel Co. The Chairman mentioned about the satisfactory progress the company has been making in its expansion plans and he assured the shareholders that a reasonable return would be given on new share capital.

Tata Ordinary declined to Rs. 200.4. Indian Iron were lowered to Rs. 36.6 on selling pressure from Calcutta interests. Earlier steadiness in other engineering scrip was not maintained at the close on profit-taking. Premier Construction declined to Rs. 215.8, as did Alcock Ashdown to Rs. 342.8. Tata Locomotive fell sharply from Rs. 185 to Rs. 176 on realising.

Increased cloth excise duty resulted in pruning top gains in the textile section. Bombay Dyeing declined to Rs. 658.2 and Century were lowered to Rs. 568.8. Svaldeshi made Rs. 257.8 and Simplex changed hands at Rs. 211.8. India United Ordinary were offered at Rs. 13.3 and Apollo were transacted at Rs. 3. Khatav were an exception and the price improved to Rs. 286 on interested support.

Miscellaneous industrials were shaded in sympathy with the general trend. Associated Cement were done at Rs. 206.4 and Digvijay were taken at Rs. 203.8. Sugar shares were fairly steady, with Belapur making Rs. 250 and Walchandnagar Industries were in demand at Rs. 270.10. Routine business was transacted in shipping shares. Scindia declined to Rs. 18.14, while Great Eastern at Rs. 19.10 showed little variation. Automobile shares were quiet, and Hindustan Motors were freely available around Rs. 10.1. Mining shares were lower, with Sivrajpur Syndicate declining to Rs. 87.8. Bombay-Burmah fell to Rs. 764.6 ex-dividend on long liquidation and B.I.C. lacked interest around Rs. 10.8. National Rayon were lower at Rs. 266.8, as were Tata Chemicals at Rs. 19.14. Sen-Raleigh Industries were maintained around Rs. 15 and National Carbon came to hand at Rs. 29.4.

There was little change in banking and insurance shares. Bank of India made Rs. 172 and New India Assurance Rs. 48.

THE WEEK'S TRANSACTIONS

(In the following list of stocks and shares in which transactions have taken place during the past week the figures indicate. Opening Quotations. Highest for the week. Lowest for the week. Closing Quotations. Quotation for the Corresponding Closing Date a Year Ago. The last named being shown in parenthesis and will not be given where such a quotation is not available.)

DECLINE IN STOCK MARKETS

GILT-EDGED AND INDUSTRIALS FALL

London, 5th September.

THE stock markets have generally eased during the past week, reflecting various adverse influences. The Chancellor of the Exchequer's warning about the economic situation upset sentiment prior to the week-end. The continuing Suez crisis also dampened enthusiasm. Business throughout remained at an extremely low level. Gilt-edged securities reacted quite sharply following the Chancellor's warning on the domestic economic picture. Although not a great deal of selling occurred, the gilt-edged were without support, and prices fell back to record widespread and appreciable falls compared with their previous levels. In a quiet foreign bond market, German Potash issues receded, but others attracted little attention. Dollar stocks eased early in the week in sympathy with the decline on Wall Street, but later followed the recovery at that centre. Industrial equities followed the general movement of the market with widespread, and in some cases extensive, falls on balance. Virtually all industrial groups moved to lower levels, although there were occasional movements against the trend. The feature of gold mines was a speculative buying of low graders on the suggestion that the South African Government may give some assistance to these mines. Gains however were not always held. Other Kaffirs were

neglected. Coppers were generally inclined higher. Oils eased on international considerations. Rubbers and teas moved irregularly within very narrow limits.

The Money Market

Credit was very tight during the past week. A large proportion of day-to-day requirements was supplied by the authorities through purchases of bills from both the market and banks, but discount houses had still to borrow on penal terms though the overall amount was not large. By and large, the purchase of bills by the authorities and the forced borrowing at the Central Bank were, in effect, a preparation for the following disbursement of some £60 million of Trinidad Oil money. Applications for £290 million worth of 91-day Treasury bills totalled £384,995,000 and were allotted at an average rate of 108s 6.41d compared with 101s 2.95d in the previous week. Offerings this week comprise £290 million worth of 91-day bills. The Bank of England return for the week ended 29th August shows that notes in circulation were about £17 million lower at around £1,907 million and bankers' deposits were about £3 million higher at around £222 million.

Exchange Market Quiet

The foreign exchange market was overshadowed by international events on Monday. Conditions were very quiet throughout with the trading volume insufficient to cause significant changes in rates. Another factor which made for the subdued conditions was the closure of American centres, and in the absence of any U.S. selling, sterling held steady in terms of U.S. dollars. On the other hand, there was a small commercial demand for Canadian dollars which caused spot rates to move up by 3/16 cents against sterling to \$(C) 2.78-11/16. There was little movement of note among conti-

nental which, after tending to move against London were mostly unchanged at the close.

Activity on Wall Street

U.S. Government obligations eased in the past week under the lead of long-termers. Investment quality corporates also declined in dull dealings. Convertible and rail issues shaded in line with the decline in stock market values. Steels, oils and chemicals were soft spots. In the slow foreign section, German Nationals eased, while Italians were little changed. Greeks and Serbs eased slightly. Dane 4 1/2 percents of 1962 lost ground, but Norwegian 4 1/2 percents of 1965 improved. Australians were mixed. Japanese eased slightly. South Africans ruled quiet.

Hongkong Gold Firm

Gold values in Hongkong firmed towards the week-end after being steady in the early period, and closed at \$(H) 265 1/2. The movement of sterling dominated the market throughout. Opening steady at \$(H) 262 1/2, values fluctuated narrowly touching the week's low at \$(H) 262 1/2. They reached the week's high on Friday at \$(H) 266, reflecting the softness of sterling on the Suez news. Lower carry-over charges of 385 cents per 10 taels in sellers' favour also encouraged bulls. The official offshore was 6.240 taels and the unofficial was 16.550 taels. Arrivals totalled 50,000 ounces. Forward contracts were done at \$(U.S.) 37.83 an ounce, c.i.f. Macao.

Vegetable Oil Market Dull

The vegetable oil market was generally lifeless, with prices barely changed. There was a virtual stalemate in coconut oil due to a lack of buying response to the shippers' more determined attempt to append a clause to fresh contracts, making buyers liable for any rise in shipping freight rates. Agreement is being hampered at present by sellers who recently secured offers without the clause and can, therefore, sell on normal terms, although most of them want a small premium. Linseed oil opened on an erratic note with the selling ideas for B.S.S. varying from £117 to £119. However, after an inactive day, assessments worked lower and finally September-October deliveries, ex-tank, U.K., were available at £116 1/2. Groundnut oil was virtually unchanged and lacked attention. Groundnuts were frequently steadier with the Nigerian Board not apparently keen to sell even at £69 c.i.f., although a few parcels could be had for £67 1/2. American oils were generally unchanged reflecting the North American holiday. Castor oil rates were mostly repeated in quiet trading, a shade more was wanted for castorseed, but buyers were not inclined to follow the rise.

Relapse in Rubber

Trading was slow during the greater part of the past week ended 30th August. Renewed anxieties over the Suez situation stimulated trade and professional buying movement at the start of the period, and a rallying movement was strengthened by a covering of near shipment positions of No. 1 R.S.S. Demand was not sustained, however, and in the ensuing dullness, prices sagged. An easier view of the Suez crisis and Colonel Nasser's readiness to discuss with the Menzies mission contributed to the general dullness. Final values were about 1d a lb lower on the week. Buyers of sole crepe showed only occasional interest, but the few offers that were available commanded full recent values on the basis of 44d a lb for 1/2 inch No. 1 on the spot.

Improved Raw Jute Rates in Dundee

Reports received in Dundee state that Indian jute mills have recently been buying raw jute fairly freely against orders for goods. This is probably the reason for the recent improvement of jute values in Dundee, according to trade sources. The advance in prices is bringing out more business at all production centres. Producers are all better employed than they were and the trade is gradually recovering from the prolonged dull spell. In particular, trade sources say, Indian jute mills are in a position to insist upon the payment of higher prices for their cloth and bags. This month, their production will be curtailed by about 5,500 tons of goods a month by the sealing up of 5 percent of their looms which should bring their output more into line with the present-day consumption. Trade sources believe that the new rate of production in India will be just about sufficient to meet the world's demand for Indian made goods and may even result in reduction in stocks.

Blue Funnel Line

Vessels of the Blue Funnel Line trading with Far Eastern and Indonesian ports are not being re-routed via the Cape but are continuing to use the Suez Canal route. As a matter of routine, ships are taking on sufficient bunkers to allow of diversion at any stage should this become necessary. Australian ports are being served via the Cape, because of the saving in time, only of a few days, is not of great importance to costs.

Banking Adviser to Nepal

Mr. F. W. Gray is going to Nepal early in October to advise the Government on the development of banking practices in the country and on ways and means for developing commercial banking. Mr. Gray will stay in Nepal for one year. He will also advise the Government on specific problems arising out of the initial operations of the State Bank of Nepal and on problems relating to exchange stabilisation. He will be attached to the Ministry of Finance. Mr. Gray took his Tripos from the University of Cambridge in 1920 and has had experience in banking in England, China and the United States. He was Assistant Secretary of the Institute of Bankers, England (1921-1929); Economic and Financial Adviser, Bank of China, Shanghai (1930-1938); Co-Agent and Sub-Manager, Bank of China, London (1938-1949) and Treasurer, International Monetary Fund, Washington, D.C. (1950-1953).

New Delhi

GOVERNMENT DECIDES TO ESTABLISH COAL COUNCIL

REVIEWS AND STUDIES OF PLANS FOR INDUSTRY TO BE PREPARED

(FROM OUR NEW DELHI CORRESPONDENT)

THE Government of India has decided to set up a high-powered body, known as the Coal Council of India, whose main purpose it will be to have reviews and studies conducted under its overall supervision and guidance, for planning the development, utilisation and conservation of the country's coal resources. It will be necessary for the Council to consider whether other problems relating to coal should be brought under its review and study, and if so, what they should be.

The Council is composed of the following: The Minister of Production, Government of India, is chairman. The Deputy Minister of Production, Dr. J. C. Ghose. Member, Planning Commission, Mr. B. Mitter. Mr. J. N. Mookherji, Mr. Narendra Singh, Member, Railway Board (Transportation), the Director of Scientific and Industrial Research, the Coal Controller, the Chief Executive Officer, Lignite Project, Madras, the Secretary, Ministry of Finance (Expenditure), the Secretary, Ministry of Iron and Steel, the Secretary, Ministry of Irrigation and Power, the Secretary, Ministry of Natural Resources and Scientific Research, and the Secretary, Ministry of Production, are members.

The scope of the Council's activities will cover:

(1) Problems of Resources: assessment (quality and quantity); (a) exploration (geological); (b) assessment (physical and chemical surveys); (c) coking coal; (d) non-coking coal; (e) production (problems of mining, better mining, stowing, consolidation, conservation methods, etc.); and (f) transport.

(2) Demands: phasing of: (a) industry-wise; (b) for 5, 10, 15 and 20 years; trends; perspective planning.

(3) Metallurgical requirements: (a) requirements; (b) quality; (c) supply problems; (d) processes; (e) substitution; (f) economics; and (g) conservation, including pegging, stowing, beneficiation, blending.

(4) Transport requirements: (a) solid fuels; (b) liquid fuels; (c) electricity; (d) economics (in relation to resources) of a, b and c; and (e) transport.

(5) Power requirements: (a) for traction; (b) for metallurgy; (c) for industries; (d) for agriculture; (e) for domestic purposes; (f) methods of generation; (g) transmission; (h) location; and (i) economics and efficiency.

(6) Other industrial requirements: (a) classification; (b) sources and location; (c) supply; (d) quality; (e) processes; and (f) substitution.

(7) Domestic requirements: (a) requirements; (b) methods and processes; (c) economics; (d) phasing; and (e) transport.

(8) Coal-based chemical industries: (a) fertilisers; (b) heavy chemicals; (c) liquid fuels and hydrocarbons; (d) fine chemicals, drugs, dyestuffs; and (e) other uses.

(9) Organisation: (a) ownership and transfer of rights (time targets and sectors); (b) planning organisation: (i) production, (ii) preparation, (iii) distribution, and (iv) price structure; (c) economics; (d) dynamic (perspective) planning: (i) targets, (ii) methods, (iii) resources (human, financial and technological).

Indo-U.S. Agricultural Pact

An agreement between the Government of the U.S.A. and the Government of India for the import of surplus agricultural commodities under Title I of the Agricultural Trade Development and Assistance Act, U.S. Public Law 480, was signed last week. Inclusive of the provision made for payment of half the shipping costs, the agreement provides for a sum of \$360 million, equal to approximately Rs. 172 crores, for the supply by the United States of agricultural commodities to India during the next three years. It is proposed under this agreement to buy wheat for \$200 million, rice for \$26 million, cotton for \$70 million, tobacco for \$6 million and dairy products for \$35 million. At the present export market prices, the amounts provided are expected to cover the purchase of approximately 3.5 million metric tons of wheat, 200,000 metric tons of rice, 500,000 bales (480 lbs. each) of cotton, and 6 million lbs. of tobacco. The bulk of the dairy products is expected to be in the form of powdered skimmed milk. While these commodities are being purchased by India at export prices, the book value of the quantities indicated, for the U.S. Commodity Credit Corporation, will be about \$550 million. India will, however, not be restricted to buying from stored surplus stocks, and may, if she finds it to her advantage, buy her requirements in the open market.

All the rice will be shipped before 30th June, 1957, while other commodities like wheat and cotton will be imported by India according to a phased programme, taking into account the availability of shipping from the U.S.A., and storage facilities in India, etc.

U.S. Credit Account

The Government of India will credit a U.S. Government account in India with the equivalent of

the dollars paid for the purchase from time to time of surplus agricultural commodities in the U.S.A. The rupees so credited will be utilised in three ways. A total sum of Rs. 111.4 crores will be lent to the Government of India for economic development. The loan will be on a long-term basis and detailed terms of repayment will be settled in due course. Out of this, some Rs. 26 crores will be used for loans to private enterprise. A sum of Rs. 25.7 crores will be granted to the Government of India for expenditure on economic development projects. Thus a total of 80 percent of the sale proceeds will be available to the Government of India for meeting the rupee cost of projects included in the second five year plan. The U.S.A. will be free to devote the balance of approximately Rs. 34.3 crores to various uses in India such as (a) to help develop new markets for U.S. agricultural commodities on a mutually beneficial basis; (b) for the financing of international educational exchange activities; and (c) for paying U.S. obligations in India such as U.S. Embassy expenditure, etc.

The agreement is the biggest single transaction entered into by the U.S.A. with any country under the Public Law 480 Programme. It is also the biggest single agreement so far between India and the United States, the largest transaction previously being the wheat loan of 1951, which provided \$190 million. Shipments under this agreement will be over and above the normal Indian imports from all countries of rice, wheat and cotton. To the extent that imports over and above the normal imports will have been necessary, the agreement will result in considerable saving in foreign exchange, on which recently there has been a heavy drain. The import of agricultural commodities will enable India not only to make available increased quantities of foodgrains for domestic consumption, but also to build up reserve stocks against temporary shortages on account of famine or floods. With the availability of such large stocks at its disposal, which could be released at strategic points, the Government's ability to control foodgrain prices over the entire range, and generally to counter all anti-social activities, will be greatly increased.

Jet Planes for A.I.I.

The Government of India's decision to purchase three jet aeroplanes for the passenger services of Air-India International has already been reported in these columns. This is one case which illustrates the Planning Commission's making provisions in the second plan without matching them with financial resources. The plan says: "For Air-India International, the programme provides for the purchase of a few turbo-prop or jet aircraft both for meeting increased demand on the existing services and for providing additional services." The Planning Commission has provided Rs. 15.34 crores for the purchase of aircraft, Rs. 5.34 crores of which is allocated for the purchase of aircraft by the Indian Airlines Corporation. Of the remaining Rs. 10 crores, orders for aircraft costing about Rs. 2 crores have already been placed with the manufacturers. The three jet aircraft will cost roughly Rs. 12 crores, or Rs. 4.75 crores more than has actually been provided by the Commission.

On aerodromes, the plan says: "Works estimated to cost about Rs. 18 crores are expected to be started during the second plan, the provision in the plan being about Rs. 12.5 crores. The programme aims at meeting the new demands which have arisen from recent technical advances and from India's obligations under the convention on international civil aviation to provide facilities at aerodromes in conformity with the standards laid down by the convention. The programme for civil aviation includes works at aerodromes (Rs. 8.3 crores), telecommunications equipment (Rs. 2.9 crores), and air routes and aerodrome equipment (Rs. 70 lakhs). It is expected that eight new aerodromes and "gliderdromes" will be constructed during the second plan period. The programme of works at aerodromes includes construction of runways, taxi tracks, aprons and hangars."

This very impressive picture, however, does not indicate whether all or any of the three international airports of Calcutta, Bombay and Delhi will be developed for the jet aeroplanes which may be put in service. According to the Planning Commission, these airports are still below the standards laid down by the international convention for civil aviation. Money has been allotted to make up this deficiency rather than to develop them to meet the requirements of jet aircraft. Enquiries show that discussions are still in progress to determine the number—one, two or three—of aerodromes which should be so developed. These discussions concern the availability of money and the relative usefulness and cost of developing each airport. A larger allocation than has already been made in the plan will be required if these aerodromes are to become serviceable for jet aircraft.

Other Demands for More Money

Bigger allocations are also demanded for the coal plan, for oil exploration, for participation in oil companies with Assam Oil and Standard

Vacuum, and for stepping up the production of fertilisers to meet the higher targets of agricultural output. An increase in the allotment for the railways will also become necessary with higher agricultural targets. These difficulties have arisen because of the unrealistic approach of the Planning Commission. It knew that even the target of expenditure amounting to Rs. 4,800 crores for the public sector left an uncovered gap of Rs. 400 crores after taking into account all possible sources of revenue, including deficit financing amounting to Rs. 1,200 crores. For these reasons, presumably, it would not and did not increase the plan outlay, although it entertained and even accepted schemes the net effect of which was to enhance the total outlay by Rs. 1,000 crores, if not more. What did the Commission then do? On the one side, it kept up the façade of the people's plan, which highlighted the employment aspect of development. On the other, it applied an arbitrary and *ad hoc* cut to State and Central plans in order to keep within the total outlay of Rs. 4,800 crores. At the same time, Mr. V. T. Krishnamachari propounded a formula. He claimed that the plan could be implemented in full if the target for agricultural production was raised from 15 percent to 40 percent. He claimed further that this could be done without allotting additional funds. The increased agricultural production, he added, would lower the price level by 20 percent, which presumably would reduce the plan outlay by 20 percent also.

It is interesting to note that Professor W. A. Lewis in 1954 suggested in a leading article in *Capital's* annual number three objectives for the India of 1980:

- 45 percent more food produced at home;
- Ten million tons of steel, with an engineering industry of corresponding size; and
- seven percent of the world trade in manufacture.

This is, however, by the way. The issue is no longer of merely academic interest. It has come to the forefront. On the one hand, the ministries whose demands have not only been accepted but on the basis of which the Planning Commission has had a considerable boost-up, are asking the Government to allocate funds to meet their obligations. Air India International, for example, has already been given the green signal to go ahead with the purchase of three jet aircraft, thereby increasing the plan outlay by Rs. 4.75 crores. As a natural corollary, financial provisions will have to be made to develop at least one aerodrome to operate these aircraft. On the other hand, inflation has already appeared, and at least one Minister, Mr. Ajit Prasad Jain, has openly admitted that the rise in prices is largely due to deficit financing. Apart from this, the prices of coal, cement and steel have been raised during the past 12 months, thereby raising the ultimate cost of the plan as well. These are indications that in an election year additional taxation will have to be avoided. But in spite of a large number of committees and commissions, no attempt has been or is being made to cut expenditure.

The administration's viewpoint in this connection is that the Government should revise the second plan by reallocating priorities, thereby reducing its size. In other words, the Planning Commission should announce its 1956-57 and 1957-58 plans on a yearly basis. The Planning Commission, meanwhile, is wrestling with State Governments in an attempt to persuade them to increase the targets of agricultural production to 40 percent without any increase in the financial allotment. The Government of the Uttar Pradesh, which met the Planning Commission on 31st August, according to reports, stood up against Mr. V. T. Krishnamachari's formula. It demanded more money to increase agricultural production. These conferences with State representatives will continue till 12th October.

The basis of discussion is a letter, in the course of which the Planning Commission says: "At the conference of Ministers of Agriculture held in Mussoorie at the end of June 1956, certain proposals were made for additional financial allocations. In this connection, attention is invited to paragraph 7 of the Planning Commission's letter dated 5th June, 1956, which stated: 'For carrying out these suggestions and obtaining higher targets, there will be need for reviewing the internal distribution of resources allotted for agricultural programmes. To the extent necessary, some addition to the resources available under the plan may have to be considered. As stated earlier, in some cases, e.g., the seed multiplication farm scheme, it might be necessary and desirable to accelerate the programme and complete it in the first three years instead of phasing it over the five year period. State Governments may examine these various proposals and take appropriate action within the framework of the plan. Schemes which cannot be provided for within the plan should be reported separately for further consideration.' It is contemplated that specific proposals for the provision of additional resources should be considered, in consultation with each State, with reference to the detailed programmes which are formulated."

State Loans to Industrialists

The U.P. Government has created a fresh problem for the Planning Commission. Content 3 that U.P. is industrially backward, it has formulated plans to promote the industrialisation of the State. For this purpose, it proposes to divert over Rs. 1 crore from agriculture to industry. It has also succeeded in alluring to itself certain industries which were originally planned for location in Bihar and West Bengal. According to New Delhi

The imposing new building of the Reserve Bank of India, New Delhi, is equipped with a Carrier Air Conditioning Plant which provides summer cooling as well as winter heating—a system pioneered in India by Voltas

Air Conditioning ...a new force in Industry and Business

WHEREVER men and machines work, air conditioning helps them to work better. It creates comfortable, hygienic working conditions and protects equipment from harmful dust and humidity. That is why more and more modern industrial houses are using air conditioning in their factories as well as in their offices.

VOLTAS have been the pioneers in the field of air conditioning and refrigeration in India.

Backed by a wealth of accumulated experience, our engineers have made original and progressive contributions in projects of widely-differing natures, and scores of industries throughout the country have benefited by their efforts.

Air conditioning by VOLTAS can help your business, too! It's effective, economical . . . as a talk with a VOLTAS expert will prove. Contact VOLTAS today!

Carrier

The people who know air conditioning best

VOLTAS

VOLTAS LIMITED

Head Office: Bombay 1
Calcutta - Madras - New Delhi - Cochin - Bangalore - Ahmedabad - Secunderabad

reports, the U.P. Government has already promised financial assistance to the following:

Name of Firm	Amount	Purpose.
Sahu Jain,	Rs. 145 lakhs	For setting up a soda ash-cum-ammonium chloride factory, originally planned in Bihar.
J. K. Cotton and Spinning Co.	Rs. 90 lakhs	For setting up a rayon filament factory.
Lakshmiratan Engineering Co.	Rs. 50 lakhs	For setting up a plant to manufacture textile machinery.
Saraya Sugar Factory	Rs. 10 lakhs	For construction of a tramway.
Nawabgunj Sugar Mills	Rs. 8 lakhs	For shifting its idle plant to Hardwagunj.
Vibhuti Glass Works	Rs. 5 lakhs	For working capital.
Mass Products, India, Ltd.	Rs. 1.5 lakhs	For working capital.
General Electric Co.	Rs. 50 lakhs	For setting up a medium plant for the manufacture of switch-gear etc. Originally licenced for West Bengal.
Bist Industrial Corporation	Rs. 40 lakhs	For a sugar factory in Nainital.
Name of Project	Amount involved.	
The following projects are being examined:		
Craft paper	Rs. 10 lakhs.	
Aluminium plant	Rs. 150 lakhs.	
Cement factory	Rs. 100 lakhs.	
Wagon manufacture	Rs. 50 lakhs.	
Rayon yarn manufacture	Rs. 100 lakhs.	

Fundamental Issues

Some fundamental issues are raised. Firstly, the capital structure of an undertaking is controlled by the Central Government through powers vested in it by Parliament under the Capital Issues Control Act. This Act makes the grant of these loans illegal. Secondly, the Central Government has created financing institutions, such as the Industrial Finance Corporation, State Finance Corporations and the I.C.I.C., but they seem to be considered superfluous by the U.P. Government when it advances loans at 5 percent interest, as against 6½ percent charged by the Industrial Finance Corporations. Thirdly, the U.P. Government, by granting loans, has offended the industrial policy statement, which lays down that State assistance to the private sector should be in the form of participation in the equity capital. Apart from this, the whole move reverses the policy enunciated by the Planning Commission on industrialisation and weakens Central control over basic industries. It might start a race between various States to offer bigger and bigger inducements to industrialists so as to make them repudiate their commitments to one State in favour of another. The richer States would win if such a practice is permitted.

The dominance of U.P. in the Union Cabinet is already resented, particularly in the south. Speaking in the Lok Sabha on 31st August, Mr. N. Sreekantan Nair characterised the Central Government's industrialisation policy as "discriminatory", stating that of the Rs. 1,069 crores allotted for the development of industries in the second plan, "not a pie" had been allotted to Travancore-Cochin. "If this kind of discrimination is maintained, the propensity to disintegrate and to secede from the Indian Union will gather momentum."

It is natural for the Deputy Chairman of the Planning Commission, Mr. V. T. Krishnamachari, to take strong exception to the policy of the U.P. Government. It is explained in this connection that all the tests for the consumption of ammonium chloride were conducted in Bihar. It was in pursuance of the Government of India's policy that the Bihar Government refused a loan to Sahu Jain Ltd. Regardless of consequences, it is feared in the lobbies that Uttar Pradesh is still likely to have its way.

Shipping Development Programme

Shipping was once again in the limelight in Parliament. The Production Minister, Mr. K. C. Reddy, made a comprehensive statement on the ship-building industry in India. He said: "The main development programme connected with ship-building in general, including the expansion of the Hindustan Shipyard, are as follows: (1) the expansion of the existing Shipyard in Vizagapatam; (2) the construction of a dry dock in Vizagapatam; (3) the establishment of a second shipyard; and (4) the establishment of a marine diesel engine manufacturing unit.

"Expansion of Vizag Shipyard: "For expanding and improving the shipyard in Vizag, the Government had sanctioned a development programme costing Rs. 1.96 crores out of which Rs. 1.4 crores were spent during the first plan period. In the second plan, besides the provision for the spill-over of Rs. 56 lakhs from the first plan allocation, a further sum of Rs. 1 crore has been allotted for the second phase of development. The shipyard authorities have taken in hand the implementation of the development programme which includes the construction of additional berths, prefabrication workshop, office buildings, quarters and the installation of additional equipment. These are in various stages of planning and construction. Pro-

gress in this respect has not been as good as one would desire due mainly to the acute shortage of steel structural. Efforts are being made to procure these locally, as well as to arrange for imports from abroad, so that the targets laid down may be achieved. With the implementation of the development programme, the ship-building capacity of the yard will be doubled.

"Dry Dock Project: A sum of Rs. 2.14 crores has been allotted for this project in the second plan. A detailed project report has been prepared by Messrs. Rendal, Palmer and Tritton, the technical consultants, on the basis of which the construction of the dry dock will be taken up. The shipyard authorities have, in the meanwhile, taken in hand preliminary arrangements for the stockpiling of necessary materials so that the progress of work should not suffer on this score. The recommendations of the consultants on the design and dimensions of the dry dock have been accepted. The dry dock, when completed, will form an important and useful adjunct to the shipyard. Ships built in Vizagapatam now have to go to Calcutta or Colombo for dry-docking before delivery, involving an additional expenditure of Rs. 45,000 a ship. The dry dock will enable the shipyard to take up remunerative ship repair work, resulting in reduction of its overheads. The dimensions of the dock have been fixed so as to allow the largest of our naval vessels utilising it.

"Establishment of a Second Shipyard: During the second plan period, all preparatory action necessary for the establishment of a second shipyard in the country will be taken. The main difficulty in the establishment of the second shipyard is the paucity of trained personnel for manning the yard. The first priority, therefore, has to be given to building up a nucleus of trained workers. With this end in view, a sum of Rs. 75 lakhs has been allotted in the second plan for implementing a training scheme. It has been decided that the present shipyard offers the best facilities as a training ground. A training scheme which envisages the training of batches of 100 workers at a time over a period of 18 months has been drawn up. With the implementation of this scheme, about 500 technical personnel will be made available as a nucleus for manning the second shipyard when it is established, by the end of the second plan period.

"Meanwhile it has been decided that along with the training scheme steps should be taken for selecting the necessary technical consultants to assist in the establishment of the second shipyard. With this end in view, Indian embassies in countries which have a reputation for ship-building are being addressed to recommend the names of a few ship-building firms who would be interested in and capable of assisting in this matter. These firms will be required to submit their preliminary proposals from among whom one firm would be selected as the consultants. The selected firm of consultants would be required to go round all the possible sites and to submit its recommendations as to the most suitable place for siting the second shipyard together with a detailed project report. The manner in which this can best be achieved is under consideration.

"Marine Diesel Engine Manufacturing Unit: At present propelling machinery and important accessories for Indian-built ships have to be imported. In view of the desirability of becoming self-sufficient in this respect, the question of developing the necessary capacity for the manufacture of marine engines indigenously has been engaging the attention of the Government. Negotiations with three to four foreign firms of repute are in progress with a view to selecting one of them to collaborate technically in the setting up of a unit for the manufacture of marine diesel engines. A proposal to establish an inter-Ministerial committee to assist in the selection of the technical consultants and then guide the work of establishing the above factory is under consideration. Although the Planning Commission has not made any specific provision for this purpose in the second plan, it has agreed to this project being undertaken during this period. It has given the assurance that as soon as the scheme is sanctioned, it will be ready to make available the requisite funds for this purpose."

Government Aid to Shipping

The Deputy Minister for Transport, Mr. O. V. Algesan, made a statement indicating the steps the Government has taken or proposed to take to assist the shipping industry. He said that the Indian shipping companies had from time to time asked for various forms of assistance from the Government for the development of Indian shipping. Their suggestions had been discussed at the meetings of the Consultative Committee of Ship-owners, which were held every year under the chairmanship of the Minister for Transport. The following measures have been taken or are proposed to be taken to assist Indian shipping companies in the further expansion of their overseas trade, acquisition of tankers, etc.: (1) It is proposed to continue loan assistance to Indian shipping companies for the acquisition of tonnage. The necessary financial provision has been made in the second five year plan for this purpose. (2) It is proposed to continue to grant construction subsidy to Indian shipping companies on orders placed with the Hindustan Shipyard Limited, Vizagapatam. (3) The management of the Eastern Shipping Corporation Limited, Bombay, has been taken over by the Government from the Scindia Steam Navigation Company. The concern will be managed

with the assistance of a board of directors wholly nominated by the Government. Additional funds will also be invested by the Government in the Corporation for the expansion of tonnage, including tankers. (4) A new shipping concern, namely the Western Shipping Corporation (Private) Limited, has been set up entirely in the public sector for running shipping services on the India-Persian Gulf, the India-Red Sea and India-Poland services. This Company will have an authorised capital of Rs. 10 crores, the whole of which will be invested by the Government. (5) It is proposed to continue to give the necessary assistance and preference to Indian shipping companies, as at present, in the allotment of Government-owned and controlled cargoes.

The Deputy Minister stated that the following were the suggestions which the Indian shipping companies had made and the concessions which they had asked for: (a) exemption from customs duty and sales tax on ships stores, bunkers, etc.; (b) exemption from tax of the sale proceeds of vessels when ploughed back into the industry; (c) exemption from Section 49-D of the Income-Tax Act; (d) operation subsidy on losing services such as the India-Persian Gulf trade, passenger services in the India-Burma trade, etc.; and (e) the liberalisation of loan terms.

Mr. Alagesan added that the provision of Rs. 45 crores included a carry-over of about Rs. 8 crores from the first plan to meet the commitments entered into during that period. Thus a sum of Rs. 37 crores only will be available for the additional expansion programme relating to the second plan period. The provision might not be adequate for the purpose. It is, however, the intention to review the position from time to time with a view to securing additional funds that may be required. Indian shipping companies have already placed some building orders for ships in foreign yards as well as in the Hindustan Shipyard Limited, Vizagapatam. It is expected that they may be able to place orders for some more ships in foreign yards where some spare capacity may still be available. It is also likely that the companies will go in for some suitable second-hand ships when the market conditions are favourable.

Modernisation of Jute Mills

The Minister for Consumer Industries, Mr. Nityananda Kanungo, said in the Lok Sabha that 64 jute mills had so far modernised their machinery and equipment, partly or fully. The number, he added, included those which were in the process of modernisation. The Minister said that it was expected that a sum of Rs. 15 crores to Rs. 20 crores would be spent by the industry during the second five year plan on modernisation, provided the present pace of progress was maintained. Speaking on the extent to which modernisation had been able to lower the cost of production and improve the quality of the products, the Minister said that precise information was not available because the actual savings in costs and the improvement in the quality of products varied from mill to mill. However, the output of a modern spinning frame was reported to be about 25 percent higher.

New Cotton Spinning Mills

Licences have been issued for the establishment of six new cotton spinning mills in the Punjab and one in P.E.P.S.U. Of the six mills in the Punjab, which will have a total of 121,000 spindles, two will be in Ludhiana and one each in Hissar, Khanna, Kaithal and Abhor. The mill in P.E.P.S.U., which will have 24,000 spindles, will be located in Bhatinda.

Special Optical Glasses

The Minister for Production, Mr. K. C. Reddy, told Rajya Sabha that negotiations were still going on with foreign producers for the establishment of a factory in the country to manufacture special types of optical glass. Offers have so far been received from two firms and they are under examination.

Integration of Banks

The Government of India has deferred its decision on the integration of the Bank of Bikaner, the Bank of Jaipur and the Bank of Rajasthan with the State Bank of India as recommended in the All-India Rural Credit Survey Report, because the integration of these banks raises a number of difficult questions. By legislation, now before Parliament, the Bank of Hyderabad is being taken over by the Reserve Bank of India.

Construction Corporation

The Government of India has approved in principle the proposal to form a national construction corporation, it is learned. The details of the scheme, namely, the articles of association and the memorandum of association of the proposed corporation, are under preparation.

Purchase of Chinese Rice

A deal, it is understood, has been concluded in Peking under which India will purchase 60,000 tons of Chinese rice. This will be paid for in Indian currency, which, it is reported, China will use of purchase of Indian goods. In a written reply to a question in the Lok Sabha, the Food and Agriculture Minister, Mr. A. P. Jain stated that the total quantity of rice imported this year up to 15th August, 1956, was 25,300 tons from Burma only. About 420,000 tons of rice was expected in the remaining part of the year. Out of this, 260,000 tons were expected from Burma, 60,000 tons from China and 100,000 tons from the U.S.A.

London

NOTE OF HESITANCY IN THE ECONOMIC OUTLOOK

LITTLE IMPROVEMENT IN OUTPUT OVER PAST HALF-YEAR

(FROM OUR LONDON CORRESPONDENT)

THERE has been little enough during the past week to give the City much encouragement to take an optimistic view of the economic outlook in the immediate future. It continues, therefore, to adopt a "wait and see" attitude. Industrial output in July showed no appreciable change on its level a year ago. The Central Statistical Office puts its seasonally adjusted index (1948=100) for that month at 135-136 against 136 in July, 1955. The new seasonally adjusted series, "designed to make the trend of production more readily discernible," has been virtually unchanged for six months. In the same months last year it rose from 134 to 136. Holidays affected July output, but the average index for the first seven months of this year works out at no more than 137, compared with 136 for the corresponding period of 1955—and we must do better than that.

So far as the Suez canal situation is concerned there are still high hopes for a satisfactory solution of the problem, and that is responsible for hesitancy rather than any despondency. The same, however, cannot be said of the labour outlook in this country. The British Transport Commission has virtually told the three railway unions that it will reject all major wage claims made this year, without however actually dissuading them from continuing to press their claims. The shipyards are threatened with further production hold-ups either by bans on overtime or even full strike action: and it seems most unlikely, if the labour press and some of the more vocal union leaders are any guide, that the Trades Union Congress, when it discusses the economic situation at its annual conference this week, will give any indication that wage restraint is desirable.

Mr. Macmillan's Appeal

The importance at this stage of a sane lead from the T.U.C. cannot be overemphasised. Indeed, the Chancellor of the Exchequer, appreciating this, took the unprecedented step last week of calling a special Press conference of industrial correspondents with the express purpose of issuing a fresh reminder to the nation "that we live and work very near the margin of safety," but his remarks were addressed in the first place to the trade unions, and their main message was "Another round of wage increases unaccompanied by corresponding increases in production is bound to cripple our prospects. This time we shall all suffer." Later, answering a question about the possibility of industrial strife if wage increases are not granted, Mr. Macmillan said that there might be trouble of that kind and trouble of another sort as well. "If everybody's wages and salaries were doubled to-morrow no one would be much better off. 'I suppose,' said Mr. Macmillan in his context, 'we should devalue the pound and all that sort of thing.' Mr. Macmillan said he was not trying to threaten the T.U.C. but to put before it what it might usefully consider. This was that foreign competition had now increased and that it was no longer possible for Britain to "get away with it." He said that there must, of course, be "adjustments of wages". On the other hand, he insisted that inflation helped no one.

As regards the unions' contention that profits and dividends must be curtailed if wages were to be stabilised, Mr. Macmillan said, after correcting some misunderstandings on the subject: "Now I am not saying that restraint in dividends and profits does not matter. It does. Dividends economically, are small: psychologically they count. If restraint is needed it must apply to everyone. If the production of goods and services has not increased there is no more justification for higher profits than there is for higher wages. Those companies who have shown restraint in their dividend declarations have—and I say this emphatically—done the right thing by their country. In present circumstances I would like to see profit margins cut." Mr. Macmillan's main argument against wage increases was familiar, and has been published before. British earnings have been rising twice as fast as British output a man hour. Earnings in countries like Germany and America have risen also, but so has output. "As a community we have insisted on increasing our money incomes far more than we have been able to increase our output of goods." The consequences of another round of wage increases could be crippling. Some moderate labour leaders privately agree with the Chancellor's interpretation, but his warnings unfortunately are not expected to cut much ice with the majority of unions, who are already forming a new pay queue.

Changes of Employment

One of the purposes behind the Government's credit squeeze measures was to divert labour from industries catering to home demands to those serving export markets. The Ministry of Labour Gazette for August gives an indication of what has so far been achieved by publishing details of changes in employment up to June. The figures, in point of fact, are quite disturbing if it were not for the fact that we know that exports in the particular spheres concerned are in fact increasing, though not perhaps quite as much as might be desirable for balance of payments needs. Five

major groups of industries have lost workers—metal manufacture, engineering, metal goods and precision instruments, vehicle manufacturers, textiles, and clothing. Six groups of industries have been recruiting labour to an important extent—transport; agriculture; food, drink and tobacco; building; the distributive trades; and "professional, financial and miscellaneous services." The Board of Trade considers that Britain's four most important exporting industries are engineering, vehicles, textiles and chemicals. The first three have been losing manpower steadily since February, but it does not follow that the exporting sections of those industries have necessarily been dwindling, although the industries as a whole seem to have been losing workers.

The Ministry of Labour's figures show that the engineering industry has lost 34,000 workers since February, the vehicle-building industry 21,000 (9,000 in June) and the textile industry 25,000. The chemical industry has been more or less stable. The Ministry's figures show that 25,690 were unemployed in the motor industry at the end of June, although 321,300 were still employed. In textiles, 15,457 were unemployed, and 922,300 were at work. The regional analysis shows that the Midlands are suffering more than any other part of the country from unemployment, with 40,548 persons out of work on 16th July, an increase of nearly 15,000 in a month. On the same date, 35,772 were out of work in the North-west a third of them in Liverpool.

Indian Tea Report

The situation in Mincing Lane, which might have been expected to be affected by the Suez Canal situation does not really show a great deal of change on balance. The outstanding feature of recent auctions has undoubtedly been the exceptionally wide gap which is apparent between the prices of high-grade and other teas. Plain varieties are still fetching no more than 3s. a pound, but the better qualities are fetching prices as high

as 12s. a pound. With ordinary qualities so cheap, blenders are prepared to pay high premiums for their marginal requirements. On the other hand, the City, and tea circles in particular, are not at all happy about the report of the Indian Parliamentary Committee of Inquiry into the tea industry. Its view, as expressed by spokesmen to Press representatives, is that this is "just another pinprick." The committee's demand for control of "bonus" issues made on revaluation of assets is regarded as singularly misguided. It is a well-established fact that capitalisations of reserves do nothing in themselves to increase shareholders' prosperity. Exception is also taken to the claim that "limitation of dividends by half" would have enabled most companies to increase their internal resources by 25 percent. This calculation appears to have taken into account only last year's exceptionally high distributions. Common fairness would suggest that the average of good and bad years should be taken. The recommendation for a cut in managing agents' remuneration continues the long story of hostility to the managing agency system, but it is admitted that there is some reason to think that estates could reduce their expenses if they did not have to pay commission for the services rendered by such agents.

Brevities

The Indian Airlines Corporation, with five Vickers Viscounts already on order, has just placed an order for five more.

The London Stock Exchange has just ruled that no accumulated interest bond can be dealt in ex dividend until the actual ex-div. date. This move to prevent purchases and sales for the quick profit of the dividend—a tax avoidance move—will considerably narrow the market in short bonds.

A prospective purchaser has approached the board of Derby Tea. If a formal offer materialises, the directors will advise members whether acceptance would be more beneficial than a liquidation.

THE PROBLEM OF EDUCATED UNEMPLOYMENT

U. P. CHIEF MINISTER'S CRITICISM OF PLANNING COMMISSION

(FROM OUR LUCKNOW CORRESPONDENT)

ADDRESSING a meeting of the State Planning Board early this week, the Chief Minister, Dr. Sampurnanand, made a vigorous criticism of certain aspects of the Centre's financial policy. He also criticised the Planning Commission's proposals for solving the State's educated unemployment problem. The Planning Commission team, which investigated the extent of educated unemployment in Uttar Pradesh, has placed the figure at between 95,000 and 1 lakh. This, in Dr. Sampurnanand's view is wrong because the team took into account only those who were matriculates or had higher academic qualifications and excluded all those who had passed "Prathama", "Shastri" and other examinations from the unemployed category.

The Planning Commission has suggested three types of schemes for solving the problem of educated unemployment. These are: (1) the starting of orientation schemes, (2) the setting up of co-operative goods transport services and, (3) the establishment of pilot projects in small industries. Dr. Sampurnanand dismissed the first scheme as useless because he felt that the educated unemployed going through the orientation camps would in no way be more employed or be better suited for employment on passing through the camps. He said that the scheme amounted almost to the giving of doles and would directly result in widespread demoralisation. He did not think that the second scheme for setting up goods transport services on a co-operative basis was practicable, but he was wholly in favour of giving it a fair trial to pilot projects in small industries.

The Chief Minister felt that the nationalisation of life insurance has brought about the disappearance of the main class of subscribers to State loans. He also criticised the failure of the Central Government experts to "provide for items which could not be foreseen, but which were within the possibility of occurrence" as one of the shortcomings of the plan. The State Planning Board passed a resolution, moved by the Planning Minister, Mr. C. B. Gupta, urging the Central Government that "the position of material resources should be examined by the Planning Commission and adequate allotment of these material resources consistent with the difficulties and needs of this State should be made, as without these the implementation of the plan is hardly possible." This complaint of unfair treatment recurring unfailingly in the statements of U.P. Government spokesmen does not, however, seem fully justified. The second plan outlay for Bombay shows an increase of Rs. 80 crores over the first plan, for Madras an increase of Rs. 75 crores and for U.P. Rs. 87 crores. For mining and industry, the allocation for U.P. is Rs. 16.43 crores, compared with Rs. 9.47 crores for West Bengal, Rs. 15.2 for Madras, Rs. 9 crores for Bombay and Rs. 1.8 for Bihar. A comparison of the allocations under various other heads also shows that there is not much demonstrable basis for the grievance. Under "Miscellaneous" and "Other" heads, U.P., in fact, tops the list.

Gur Industry's Problems

Gur and khandasari manufacturers from 16 States met in conference in Lucknow this week to discuss the problems facing this important cottage industry. The conference was of special importance to U.P. which produces annually more than half the total of the country's gur and khandasari output worth over Rs. 80 crores. The gur and khandasari industry consumes about 58 percent of the sugarcane grown in the country and provides employment to 2,100,000 people on a seasonal and to 70,000

people on a whole-time basis in the rural areas. At present, the gur and khandasari manufacturers follow extremely wasteful methods, and it was claimed at the conference that if the improvements suggested by the Khadi and Village Industries Board could be effected it would raise the income of the gur manufacturers by Rs. 54 crores a year. Improved types of *kolhus* would increase the output and also result in better quality. The Board has suggested the raising of the general level of gur prices, but if this is done without regard to sugar prices or the consumer tastes, it may lead to the point of diminishing returns. The food content of molasses is the highest; next comes gur. Both are sold cheap, but the middle classes do not like to consume them, because they are not marketed in attractive form.

Octroi Duty Rate

The rate of octroi duty levied by municipalities in the State on goods entering their jurisdictions will be reduced, to the relief of consumers, if they adopt the non-refundable system of levy devised by the U.P. Government. The Minister for Local Self-Government, Syed Ali Zaheer, told a Press conference that the system would be tried in Meerut to start with, and be slowly extended to other municipalities. Under the new scheme, goods meant for temporary detention will be kept in warehouses and godowns made available to dealers by the municipality. A small rent will be charged for this facility, but this, according to the Minister, is different from the levy of an octroi duty. If an importer wishes to take out his goods for immediate export, it will be governed by the transit pass rules and treated accordingly. The Taxation Enquiry Commission has recommended that octroi should ordinarily be levied on the basis of weight and not *ad valorem* since it causes delay and harassment. The entire schedule of rates prescribed for the Meerut Municipal Board is now to be on a weight basis excepting such items as bricks, poultry, animals and cars where it is necessary to fix the basis according to number.

Flood Control Plan

The U.P. Government has submitted a Rs. 27-crore plan for flood control to the Union Government. Disclosing this, the Minister for Irrigation, Mr. Kamalapat Tripathi, said that this scheme had been drawn up on a reduced scale because the Government of India rejected the first Rs. 50-crore scheme. The scheme aims at training the rivers Ghagra, Rapti and Ganga at vital points. Another scheme for the construction of a flood detention reservoir in the Rapti basin in Nepal (near Jalkundi), at an estimated cost of Rs. 16 crores, has also been submitted to the Centre. According to Mr. Tripathi, if this reservoir is built, it should be possible to check nearly two-thirds of the flood water of the Rapti. This year also, extensive floods have taken their toll in Uttar Pradesh. According to official estimates, standing crops worth over Rs. 6 crores have been completely destroyed by the recent floods in the Ganga and the Yamuna in seven districts of the State. Besides standing crops, about 100,000 kutchas houses valued at Rs. 5 crores have also been destroyed. About 2,000 heads of cattle are also missing in the flood-affected areas.

Allocation for Agriculture

The U.P. Government, it is understood made yet another bid to get its allocation under "Agriculture" raised by the Centre at the meeting of Agriculture Ministers in Delhi. With the present allocation, U.P. says that it can increase its agricultural output by only 2,250,000 tons. It can raise the output to 28,000,000 tons, which is the higher level now demanded by the Centre if it is given an additional aid of about Rs. 18 crores. The State, it is claimed, has been able to produce the maximum results in the agricultural sector with the minimum of investment. U.P. needs only Rs. 337 per ton of increased food output, compared with Rs. 1,600 for Bombay, Rs. 1,200 for Madhya Bharat, Rs. 1,522 for Mysore, Rs. 1,715 for the Punjab, Rs. 609 for West Bengal and Rs. 546 for Madras.

Bombay

THE PROSPECT FOR PEPPER EXPORTS

BETTER DEMAND FROM COMMUNIST COUNTRIES

(FROM OUR BOMBAY CORRESPONDENT)

THE pepper export trade has been brisk so far this season. Between November 1955 and July this year, a total of 10,283 tons was exported, which represents an increase of approximately 580 tons over the corresponding period of the previous season. As usual, America was the best customer and accounted for a considerable percentage of the total. Demand in the United States has revived somewhat. In July, of the total export of 852 tons, 584 tons went to the United States, as against 215 tons in the same month last year. An interesting feature is that India's pepper trade with Communist countries is increasing. So far this season, Russia has purchased 2,950 tons and exports to the Chinese mainland have amounted to approximately 330 tons. In addition, Poland and Rumania have bought Indian pepper for the first time—50 tons and 40 tons respectively. Although these are relatively small quantities, the Pepper Merchants Association here believes that it should be possible to step up the trade and also that a potential exists in other Communist countries. It is felt that bilateral trade agreements between India and the "iron curtain" countries could lead to a considerable expansion of exports.

New Indonesian Crop

Whether or not the current rate of shipments can be maintained for the remainder of the season depends on the new Indonesian crop, the season for which opened early last month. It is a bit premature to assess its likely impact, but it is possible that international prices may fall; if Indian prices do not move in sympathy, American importers may switch over to Indonesian supplies. Over the past year, Indonesian and Malayan competition has compelled Indian exporters to reduce their price by approximately eight cents a lb. Production has remained steady at approximately 22,000 tons and it is doubtful if Indian exporters will be in a position to reduce prices still further. In that event, substantial dollar business will be lost. The Government of India is at last taking more interest in this lucrative trade and is now making efforts to stimulate exports. In this connection, a pepper and cashew nut mission is now on a sales promotion tour of Europe. Cashew nuts are a profitable commodity also, and substantial sales have already been made to the United States, Britain, Canada, Australia, Holland, Sweden, New Zealand and Hongkong. Total exports in 1955-1956 amounted to a little over 30,860 tons valued at Rs. 12.92 crores, of which the United States alone accounted for 24,400 tons valued at Rs. 9.8 crores. It now seems that France, Italy and Switzerland may also buy in the near future, while Russia and China have already made taken purchases. In these circumstances, it is possible that the mission will meet the success and will be able to stimulate cashew exports. But there is likely to be difficulty in promoting pepper exports. The problem hinges entirely on the question of price. While importers may be prepared to pay a premium of two to three cents a lb for Indian pepper due to its quality, a wider disparity in relation to Indonesian and Malayan prices is likely to meet with consumer resistance. In addition to competition, the demand for pepper is very elastic.

The fact is that pepper is a traditional export for Malaya and Indonesia, and constitutes a vital element in their economies. Before the war, Indonesia had a virtual monopoly of the export trade. The pepper crop there is grown on a plantation basis, whereas in India it is a subsidiary crop and grown on fragmented holdings. The yield per acre is small and production uneconomic. Indian exporters are therefore often unable to compete with their Malayan and Indonesian counterparts.

Increasing Production

The second five year plan proposes certain changes which should assist the trade. Production is to be increased from the present level of approximately 22,000 tons a year to 32,000 tons by 1959-60, and would still be well below Indonesia's capacity. In addition, research centres have been opened in Travancore-Cochin and Malabar, and regional committees will be set up in various States to encourage the growth of pepper. The research centres will be responsible for supplying technical assistance aimed at greater yields and improved qualities. These steps should lower production costs, which would help the export trade, but it is not clear how the problem of fragmentation of holdings will be tackled. An Export Promotion Council has been formed, but until the Indian product is competitive, the Council can do little except to maintain contact with foreign markets and to keep the home exporter informed of activity and price trends.

Infestation and Moulding

An export drive, if it is to be successful, must be preceded by a drive to improve pepper growing. In addition, the recent abolition of the export duty on pepper is a welcome step. In the past, exporters have been perturbed by the infestation and moulding which occurs in shipments made during the monsoon months. Affected consignments are detained at American ports by the Food and Drugs Administration. A release is authorised only after the consignment has been thoroughly cleaned. The cleaning process involves considerable time and expenditure, and it is estimated that on an average detention charges amount to about Rs. 300 a ton.

Commodity Markets

WHOLESALE PRICE INDEX RISES

THE official wholesale price index (base: year ended August, 1939=100) advanced by 0.8 percent to 421.1 during the week ended 18th August, 1956, compared with 417.9 for the previous week. The index was higher by 2.7 percent and 17.5 percent respectively when compared with the corresponding weeks of the previous month and a year ago. The index for Food Articles rose by 0.9 percent to 401.1 as a result of an increase in the prices of wheat (+3%), gram in Hapur (+5%), dal arhar (+4%), tea (+8%) and gur in Muzaffarnagar (+4%) in spite of a decline in the price of coffee (-5%). Higher prices of manganese ore (average export price) (+31%), groundnuts in Cuddalore (+8%), rapeseed (+5%), castorseed and copra (+3%), raw silk in Bangalore and wet salted cowhides in Kanpur (+2% each) and linseed (+1%) raised the index for Industrial Raw Materials by 1.5 percent to 505.1 as against 497.7 (revised) for the previous week, although the price of raw silk in Malda (-2%) and lac (-1%) showed declines. The index for Semi-Manufactures also moved up by 1.1 percent to 409.5. Items which exhibited significant variations were: groundnut oil, gingelly oil and linseed oil in Calcutta (+4% each), mustard oil (+9%), coconut oil and castor oil (+2% each), cotton yarn (+1%), linseed oil in Bombay (-5%), copper (-4%) and cowhides and zinc (-2% each). An increase in the price of jute manufactures (+2%) raised the Manufactures group index by 0.2 percent to 388.0. The prices of glass, however, fell by 1 percent. Prices of turmeric in Calcutta (-3%) and chillies and betelnuts (-2% each) moved down while those of black pepper (+1%) witnessed an advance and the index for the Miscellaneous group declined by 0.4 percent to 564.6.

INDEX NUMBERS BY GROUPS AND SUB-GROUPS

(Base: Year Ended August, 1939=100)

REPEAT INDIAN ORDER FOR VISCOUNTS

The Indian Airlines Corporation has confirmed an order for five further Vickers Viscount airliners, it was announced by Vickers-Armstrongs Ltd. on 30th August. The Corporation already has five Viscounts on order for delivery between July and October, 1957, and the second batch will be delivered early in 1958. The Indian Airlines Corporation is the thirteenth operator to place repeat orders for Viscounts, which have now been chosen by a total of 39 airline operators or companies.

Engineering and Transport

FLYING AT FOUR THOUSAND MILES AN HOUR

TESTS THROUGH WIND TUNNELS

DETAILS of two new wind tunnels, in which scale models of aircraft will be "tested" at up to four times the speed of sound, and missiles at up to six times the speed of sound equivalent to nearly 4,000 m.p.h., were given on 29th August in Brussels to a meeting of the Advisory Group for Aeronautical Research and Development of N.A.T.O. The speaker was Mr. F. E. Roe who is in charge of wind tunnels at the English Electric Aircraft Research Establishment at Warton aerodrome, Lancashire. The tunnels will be a joint facility for the Aircraft and Guided Weapons Divisions of English Electric and, when operating in 1958, will have a higher performance than any other similar type in Britain. They will cost more than £500,000. Wind tunnel tests are essential for the successful development of fast aircraft, and guided missiles. The new equipment will ensure that English Electric is adequately equipped to compete in the new fully supersonic era of aviation which is now beginning. The tunnels will show how aircraft built for speeds not yet experienced by man will behave in the air before they actually fly. Designs for future guided missiles will be similarly tested before any are fired. The company is convinced that successful aerodynamic designs are only possible if the necessary experimental equipment is constantly available. This applies equally to piloted aircraft and unmanned guided missiles.

Recording Equipment

As the needs of the Aircraft and Guided Weapons divisions of the company are not identical, a single tunnel could not be economically designed to meet the needs of both. However, by operating individual tunnels off a common compressed air supply, an appreciable saving in cost will be achieved. The Mach 4 Tunnel for the Aircraft Division will be a four feet square section and the Mach 6 Tunnel for the Guided Weapons Division will be an 18 inches square section. Both tunnels will be of the intermittent blow down type, and either can be operated by opening a valve allowing the compressed air to flow from the reservoir into the tunnel working section, where the model is poised, and escape into the atmosphere. Automatic rapid recording equipment will be used for measuring forces exerted on the models because of the limited operating time of under one minute. This information recorded on punch cards will immediately be available for analysis by feeding into a Deuce electronic computer which has been developed by English Electric. Shock waves forming on the models will be recorded photographically with the aid of Schlieren mirrors. A model of this new facility will be displayed on the English Electric stand at the S.B.A.C. exhibition at Farnborough. The meeting of A.C.A.R.D. in Brussels is the first one to be attended by representatives from the Society of British Aircraft Constructors.

AIR-INDIA INTERNATIONAL TO START SERVICE TO AUSTRALIA

Air-India International will inaugurate a new Super Constellation service to Australia on 5th October. This service will operate between Bombay and Sydney with an initial frequency of one flight a week, leaving Bombay every Friday and Sydney every Monday. All's Super G Constellation, Rani of Nilgiris, left Bombay on 2nd September on a proving flight to Sydney, for a technical survey of the route. The route of this service to Australia will be Bombay-Madras-Singapore-Darwin-Sydney. The Australia service will connect with the U.K.-Europe service in Bombay and provide through connections between Sydney

and London, Dusseldorf, Rome and Cairo. The new service will be operated with Super Constellation aircraft fitted with 19 first-class slumberette and 40 tourist-class seats. The distance of 6,400 miles between Bombay and Sydney will be covered in approximately 23 hours, making this the fastest service between Bombay and Sydney.

U.K. FIRM TO SUPPLY CABLES FOR INDIAN RAILWAY ELECTRIFICATION

A contract for the supply and installation of underground power and control cables in connection with the electrification of the Eastern Railway in the Calcutta region has been awarded to a British firm, British Insulated Callenders Cables Ltd., in conjunction with its associates, the Indian Cable Co. Ltd. The total value of the contract is in the region of £250,000, and is for 245 miles of control cable and 33 kV, 11 kV and 3.3 kV paper insulated feeder power cables. Certain sections of the Eastern Railway are being electrified to improve communications in the central and suburban areas of Calcutta. Work on the first stage, covering the main line between Howrah and Burdwan and the branch line to Tarakeswar, has already begun.

INDIA TO MANUFACTURE NEW TYPES OF ROLLING STOCK

The Hindustan Aircraft (Private) Limited, has entered into a technical assistance agreement with Maschinenfabrik Augsburg Nuernberg A.G. (popularly known as M.A.N.), Western Germany, for the manufacture of rolling stock in its factory in Bangalore. The agreement was signed in New Delhi recently by Mr. M. K. Vellodi, Secretary, Ministry of Defence, and chairman of the Board of Directors, H. A. L. and Mr. J. M. Shrinagesh, managing director of the company. M. A. N. was represented by Mr. H. Gohler and Mr. Swarnajit Singh, director, Escorts (Agents) Private Limited. The agreement covers the manufacture of rolling stock of different types including integral coaches.

DRIVE TO INCREASE TURN-ROUND OF RAILWAY WAGONS

The Railway Board has issued orders that the time at present allowed for the unloading of coal wagons for the railways' own requirements should immediately be cut by 50 percent, in order to increase the availability of wagons for additional traffic during the second plan period. The time allowed for unloading has accordingly been reduced from six hours to three hours. Orders have also been issued that there should be an immediate reduction from six to five hours in the time allowed for loading and unloading of wagons carrying other railway materials. These steps mark the start of a drive to make railway wagons "work harder". It is also expected that the business community will be soon called upon to co-operate with the railways in various ways and to help in the efforts to improve the turn-round of wagons.

DEMAND FOR INDIAN FANS

Indian electric fans are in demand in some 33 countries of Asia and Africa to which 17,318 fans, valued at about Rs. 20.3 lakhs, were exported in 1955. Singapore was the largest purchaser of Indian fans. Among other countries importing in substantial quantities were Ceylon, Kuwait, the Sudan, the Federation of Malaya, Nigeria, the Bahrain Islands, Tanganyika and Zanzibar. The number of fans produced in the country increased to 282,256 in 1955 from 238,950 in 1954. Figures for the first five months of 1956 at 136,450 show that a higher rate of production is being maintained this year. The requirement in India is expected to go up to 600,000 fans a year by 1960-61. There are at present 19 units engaged in the manufacture of electric fans, with an annual rated capacity of 401,700.

Plantation Topics

LONDON TEA SALES

AT last week's London tea sales, the 56,090 packages on offer realised an average price of 4s 6.31d a lb, against 4s 4.22d in the previous sale and 4s 5.24d a year ago. Plain old season's broken pekoe was quoted at 2s 9d a lb nominal, against 2s 8d in the previous sale. Prices obtained by some of the companies are given below:

	No. of packages	Average per lb.
Amalgamated	588	3/10½
Anglo-American	1,086	3/9
Anglo-Ceylon & General	414	5/10½
Assam Doocars	1,644	4/1
Assam Frontier	72	7/10
Chulsa	1,045	3/8
Consolidated Estates	736	5/7½
Craighead	276	5/7½
Dekhari	486	8/5½
Dimbula Valley	102	10/6½
Doocars	803	3/8½
Doom Dooma	342	7/11
Eastern Produce	1,644	5/5
Hope	784	3/9½
Imperial Company	503	5/8½
Jokai	348	9/6
Jorehaut	1,032	10/10
Kanan Devan	2,250	4/1½
Lankapara	719	4/2½
Lunava	906	5/6½
Malayalam	2,460	3/1
New Dimbula	384	4/11½
Ouvah	252	7/2
Rajawella	1,334	5/9½
Rupai	372	8/1
Scottish Ceylon	570	4/7
Scottish Tea & Lands	739	2/11½
Southern India	558	7/4½
Standard	237	4/8½
Tea Corporation	425	4/8½
Travancore	2,124	2/10½
United Planters	600	5/8½

U.K. Tea Stocks

U.K. stocks of tea on 24th August amounted to 125.1 million lbs, against 123.7 million lbs a year ago.

COLOMBO RUBBER PRICES

The following prices have been issued by the Rubber Board of India from the weekly market report published by the Colombo Brokers Association:

	Closing prices on 24-8-56 (Rupees a lb.)	Average for the period (Rupees a lb.)
No. 1	1.41	1.41
No. 2	1.38	1.38
No. 3	1.35	1.35
No. 4	1.11	1.11
No. 5	1.06	1.06
Sheet Cuttings 1	1.05	
do 2	1.00	
Crepe:		
Water White	1.42	1.43½
R.M.A. No. 1X	1.40/42	1.42½
R.M.A. No. 1		
Crepe No. 2	1.35	
Crepe No. 3	1.21½	
Scrap Crepes:		
Sc. Crepe No. 1	.85	.86½
Sc. Crepe No. 2	.81/85	.83
Sc. Crepe No. 3	.75/79	.77½
Flat Bark	.70/73	.72
Sc. Crepe 3X	.80	

To arrive at f.o.b. Colombo prices add 53.45 cents a lb. for rubber other than scrap crepe and 31.45 cents for scrap crepe to the above market prices.

COCHIN TEA SALES

At Sale No. 25, 1,250,000 lbs. of tea were on offer. There was a strong general demand. Commons and low medium Broken were 1 to 2 annas dearer. Fannings particularly those suitable for the Middle East were considerably dearer. Best liquorings were irregular following quality, while Whole Leafs were dearer.

TEA EXPORT DUTY UNCHANGED

The Government of India has issued a notification fixing the price of tea, for the purpose of determining the export duty, at Rs. 2-11-5 a lb. as against Rs. 2-8-5 a lb. fixed on 1st August, 1956. There is no change in the existing rate of duty of annas six a lb.

REGIONAL ARECANUT RESEARCH STATIONS

There is a proposal to establish six regional research stations in Assam, West Bengal, Bombay, Mysore, Madras and Travancore-Cochin during the second five year plan under the auspices of the Indian Central Arecanut Committee. This information was given by Mr. Ajit Prasad Jain, Union Minister for Food and Agriculture, in the Lok Sabha recently in a written reply to a question. The venue of the Central Technological Laboratory had not yet been fixed, he said.

Jute

GUNNY MARKETS FAIRLY STEADY: LITTLE BUSINESS DONE

FALL IN UPCOUNTRY FIBRE PRICES

ALTHOUGH the jute goods markets have been fairly steady over the past week, there has been very little real business. The only interest from overseas came from the Argentine, but the market still awaits her final decision. Speculators took advantage of the uncertainty and manipulated rates to such an extent that hessians moved through a range of about Re. 1 a 100 yards, and sacking through Rs. 2 a 100 bags. Once again, new highs were recorded in the former. It was only when one or two large operators began to book their profits at the higher levels that the market showed any sign of falling, but once it did, the decline was rapid, and towards the close prices at one stage were below the week's opening levels. Local shippers took interest and were responsible for a great deal of the firmness in the early stages, especially in forward shipment, where business was concluded right up to March 1957. This caused heavy goods prices to rise last Thursday, while all other sections recorded losses or were unchanged. The reason for interest in the near position was the placing of additional steamers for various destinations at short notice; the fact that bookings for other vessels closed at the end of August resulted in tightness for ready delivery goods.

Activity in the fibre markets was on a greatly reduced scale compared with the previous week. After a very firm opening, prices fell back towards the close. Ready jute, however, ruled steady throughout, and although interest for quick delivery was limited, transactions in this category carried a substantial premium. This was because imports into the local markets were again small, and many contracts calling for delivery in the early days of September were still unfulfilled. Sellers of forward shipment jute were prepared to discount in order to get business as upcountry markets were on the decline. Imports in the agencies were reported to be good and stocks there were increasing. But prices were prevented from falling back too far by uncertainty over the shipment of jute from Pakistan, which continued in spite of the fact that Pakistani markets were much quieter. The East Bengal authorities are making it increasingly difficult to get jute from there. Even when E.P.C. forms have been passed and the permission of the State Bank granted, the final price landed in India, after all charges have been paid makes the fibre too dear for Calcutta mills. Thus buyers are relying more and more on Indian jute. Latest reports on the New Crop are not encouraging. The moisture content of all arrivals is, as usual, very heavy, and much of the jute appears to be immature. Daissee white jute especially has been most disappointing, but the coming weeks should show an improvement in all types.

THE JUTE MARKETS

Manufactured Goods: The gunny market was very quiet at the opening last Thursday, and prices in almost all sections were depressed. Only forward sacking recorded a rise under the influence of shipper interest. Opening quotations were based on Rs. 110-12 a 100 bags for ready B Twills and Rs. 112 for January-March shipment, and Rs. 42-4 for ready 40in. 100z. hessians, with forward shipment at an 8-anna discount. Interest in sacking continued, especially for forward shipment. During the day, prices recorded a steady rise, opening on Friday morning 12 or 14 annas higher. Hessians were completely ignored and rates fell. Towards the week-end business began to improve. Interest from the Argentine helped hessian recover, and by Saturday morning 40in. 100z. rose to Rs. 42-11 for ready delivery and Rs. 42-2 for January-March shipment. Heavy goods rose in sympathy and in response to speculative activity which pushed up B Twill rates by 12 annas or Re. 1. The rise was short-lived, however, as over the week-end profit-taking by speculators in the fatka market resulted in a general slump in all sections. This, combined with the weakness in raw jute, forced down rates and by Monday morning the week's gains had been nullified. Hessian lost 6 or 8 annas and reverted to the week's opening rates. Sacking lost Rs. 1-8 in all deliveries, so B Twills fell back to Rs. 111-2 for ready and Rs. 112 for January-March shipment. Dull conditions prevailed throughout the day and only minor variations in prices were recorded. Opening quotations on Tuesday morning were virtually unchanged, but after a quiet opening interest increased when reports of a decrease in mills' stocks were circulated in the afternoon, and prices, especially of sacking, staged a recovery.

At the close, the market was very steady and the opening quotations were as follows:

	Ready	Sept.	Oct.-Dec.	Jan.-Mar.
40in. 80z.	35-4	34-14	34-6	33-4
40in. 100z.	42-3	42-5	42-3	41-8
B Twills	112-6	112-12	113-2	112-10
Heavy Cees (Plain)	109-8	114-12	114-12	113-4
A Twills	136	136-8	137-8	137-8
Liverpools	126	127	128	127
Cornacks	113-4	114-4	114-8	113-8

Raw Jute: Interest in the raw jute markets was keen at the opening last Thursday, and business on the previous day had caused quotations to rise. Prices were based on Rs. 29-12 a maund for Dhubri-Northern Bottoms for September-October shipment, but quick delivery jute was quoted at least 8 annas higher. Small interest was again shown, but buyers were not keen to buy ahead and confined their activity to the near positions. Prices remained at this level until Saturday, when they rose to Rs. 30 a maund, but interested parties were not deterred and business continued at the new levels. Over the week-end, a change came over the market as upcountry reports indicated that arrivals in the agencies were increasing. Sellers discounted 8 annas on Monday morning and Dhubri-Northern jute fell back to Rs. 29-8 a maund for early shipment. Local circles were unaffected by this news and quick delivery jute continued to demand a premium as imports into the Cossipore area declined. Only small business was reported, and with prices continuing to fall upcountry, Calcutta rates were reduced to Rs. 29 a maund on Tuesday morning. Towards afternoon, prices again advanced in sympathy with the gunny market, and several enquiries were put out by mills as they took advantage of the improvement in goods. Interest was again centred on quick delivery jute. Prices here were still high and buyers withdrew from the market, having taken up only small quantities.

During the week, business was done over a wide price range. The Dhubri-Northern varieties varied from Rs. 28-8 to Rs. 30 a maund for September-October shipment. Ready bills of lading also changed hands up to Rs. 30-4 a maund, and delivery ex Calcutta godown passed at Rs. 29-8 to Rs. 30-4 a maund for 15 days' to one month's delivery. Various grades of tossa jute were purchased at Rs. 30 to Rs. 30-8 a maund for shipment up to the end of October. Western fibre from Forbesganj and Purnea was purchased late on Tuesday at Rs. 28-8 for September-October shipment with no option of shipment from Sakrighalighat. Small lots of Daissee white were purchased at Rs. 29-8 a maund for September shipment. Business was also done on a small scale for bimil at Rs. 27-8 to Rs. 28 a maund for F.A.Q. Fairly heavy business was done in Pakistan cuttings, but it was confined to ready bills of lading; prices varied between Rs. 135 and Rs. 136 a bale.

At the close, the market was unchanged and opening quotations on Wednesday morning were as follows:

Indian Jute (New Crop):	Landed at Mills Rs. a md basis	Shipment. Sept.-Oct.
Bottoms.		
Lower Assam	29	"
Northern	29	"
Murshidabad White	28-8	"
Daissee White	29	"
Daissee	30	"
Local Northern (Old/New)	29-8	15 days, Sept.-Oct.
Bimil	28 for F.A.Q.	
Tossa is quoted at 8 annas to Re. 1 a maund above the price of white jute.		
Pucca Bales		
(New Crop):	Rs. a bale	Shipment. Sept.-Oct.
Mill Firsts 2/3	190	"
Mill Lightnings 2/3	175	"
Mill Hearts 2/3	160	"
S. G. Daissee	185	"
L. G. Daissee	170	"
Pakistan Jute (New Crop):	Rs. a md.	Shipment. Sept.-Oct.
Jat	32	"
District	31	"
Northern	30-8	"
Pucca:	Rs. a bale	Shipment. Sept.-Oct.
Mill Firsts 2/3	210	"
Export Firsts 2/3	190	"
Export Lightnings 2/3	175	"
Jat Cuttings	132	"

The Cossipore markets were slow to follow the downward upcountry trends as imports in the former showed no improvement. During the week, a total of 560 wagons arrived at the sidings, and there were ready buyers for all arrivals. Premium prices were still being asked for quick delivery. In many cases, there was not enough jute of the category required, and a number of sellers had to ask for the extensions on local delivery contracts. At the close, quotations were based on Kishanganj jute at Rs. 29-4 to Rs. 29-8 a maund, but there were very few sellers at this price.

Mofussil: Reports from upcountry indicate that imports have again improved as a result of which prices in the agencies have fallen by 8 or 12 annas a maund. There is still a heavy demand from sellers, and towards the close business with Calcutta mills for shipment jute has arrested the fall. In Dhubri, quotations are based on Rs. 26 a maund, but these rates are still out of line with Calcutta prices. Operators are reluctant to do business, and a steadier trend has developed with prices unchanged.

GUNNY SHIPMENT STATISTICS

The following figures include coastal shipment relating to manufactured jute goods for shipment

from the port of Calcutta. These are gross figures based on shipping bills presented.

	Hessian Bags (Tons)	Cloth (Tons)	Total (Tons)
1st to 31st August, 1956	3,711.0	38,809.8	42,520.8
1st to 31st July, 1956	2,896.1	31,027.8	33,923.9
1st to 30th June, 1956	3,284.4	30,646.6	33,931.0
	Sacking		
1st to 31st August, 1956	43,642.7	2,747.0	46,389.7
1st to 31st July, 1956	31,171.2	1,696.2	32,867.4
1st to 30th June, 1956	27,982.6	2,071.3	30,053.9

THE FOREIGN JUTE MARKETS

PRICES MOVE UP (FROM OUR DUNDEE CORRESPONDENT)

FOR some days it had been expected that prices for Dundee jute yarns and cloth would be advanced before they actually were on 29th August. Spinners had been complaining bitterly about the dearer tendency in raw jute prices and they were receiving no recompense in the shape of higher yarn rates. These are, of course, fixed at a maximum level by independent accountants, but the general feeling in the trade has been to keep prices down to a reasonably low level. Producers have no wish to scare buyers off jute to purchase substitutes. However, the gap between yarns and jute became so great that spinners were losing money and using up their cheap jute to maintain light coloured yarns. Common 8lb. cops have been raised from 14.19d to 14.77d a lb., and 8lb. spools from 14.77d to 15.35d, while 3ply 8lb. twist is up to 17.04d from 16.46d, and sacking 24lb. weft is raised to 12.35d from 11.76d a lb. The general rise is £5 a ton on all yarns except rove, which is up by only £2.15s to £29.5s for 48lbs. and £80.15s for 200lbs. In the cloth end of the trade hessians are up to 13.51d from 13.11d for 40in. 10½oz., 12.80d from 12.41d for 100z. and 10.51d from 10.20d for 80z., all a yard, less 3 percent discount for cash. The rate for 40in. 100z. and the 40in. and 45in. widths is now 12.41d against 12.03d a yard. These are the widths for making bags, in which manufacturers have entered all their wish meantime, because of the unsatisfactory price. Sacking and tarpaulin prices are raised on the basis of about £5 a ton.

The raw jute market has gone softer over the past two days and Mill Firsts are offered at £97 a ton, with Mill Lightnings at from £87, Mill Hearts at £84 and Continental Hearts at £80, while grade Tossa-2/3 is from £102 and fours from £91 and Daissee-2/3 from £92 for good marks and £83 for grade, all cif U.K., September-October shipment. Calcutta goods have also eased off to 63s 9d for 40in. 100z. hessians and 49s 6d for 7½oz., shipment September to December, with B Twills at 168s September, 168s October and 170s 6d November-December, all f.o.b. Calcutta.

GROWING COMPETITION FROM SUBSTITUTE PACKAGING IN U.K.

Concern was expressed at a Liverpool meeting of the National Association of Sack Merchants and Reclaimers over the rapid spread of the use of substitute packaging in the U.K., reports the Jute Bulletin of the Indian Central Jute Committee. Discussion centred round the appropriate steps which would have to be taken to combat competition. It was pointed out that deliveries of feeds in bulk were increasing to the detriment of the second-hand bag trade, and that some companies were even considering changing over to paper bags. Members suggested that if poultry feeds ceased to be packed in jute, a large part of the collectors' trade would disappear altogether. The secretary of the Association was instructed to write to the British Jute Trade Federal Council setting out the seriousness of the position and enquiring what steps, if any, the Federal Council proposed to take.

FAIR GENERAL DEMAND AT
TEA EXPORT SALE

GOOD SUPPORT FOR DUSTS

AT Sale No. 13, held on 3rd and 4th September, offerings at the Export auction consisted of 49,000 packages. There was a fair general demand which weakened as the Sale progressed. Once again internal operators were active, especially in teas for price. Medium Assam Broken met with fair support, but were generally 2 annas easier and medium Fannings were also cheaper. The commonest descriptions were well supported and were fully firm to 1 anna dearer, but Clean Commons were a little easier. The few bright liquoring C.T.C.'s on offer were well supported and were at times dearer, but where quality showed a decline, prices declined by 4 annas. Good B.O.P.'s of orthodox manufacture were 4 annas easier, while O.F.s in this category declined by 2 annas. Whole Leaf grades with a few tips were 1 to 2 annas lower, but the more ordinary kinds were about steady. The quality of Darjeeling teas was generally ordinary, but there was an increased demand for these types which sold 2 to 6 annas below last rates.

	Quotations			
	1956	1955	1956	1955
Clean Black Pekoe	1 14 0	2 12 0		
Plain B. P.	1 9 0 to 1 9 6	1 15 6		
Medium Assam B.P.	1 15 0 to 2 1 0	2 4 0 to 2 5 0		
Best C.T.C. Assam B.P.	3 4 0 to 3 6 0	2 6 0 to 3 7 0		

At the Internal Sale, Dust offerings consisted of 14,900 chests for which there was a good and general demand with black Middle East type the strongest feature of the Sale. Commons and Mediums sold well and were $\frac{1}{2}$ to 1 anna dearer. The few Second Flush grainy C.T.C.'s sold very well, but the remaining good C.T.C.'s were 2 to 4 annas easier, while Mediums in this category were well supported, but at irregular rates.

	Quotations			
	1956	1955	1956	1955
Medium Doonars Dust	1 12 0 to 1 12 6	2 1 0 to 2 2 0		
Medium Assam Grain	1 15 0 to 2 0 0	2 3 0 to 2 3 6		
Dust	2 12 0			
Medium Assam C.T.C.	2 2 0 to 3 6 0	2 11 0 to 2 13 0		
Dust	2 12 0			
Best Assam C.T.C. Dust	3 4 0 to 3 6 0	2 11 0 to 2 13 0		

Leaf offerings were 1,019 packages. There was a good demand at rates which were fully firm to dearer. The green teas on offer, however, were almost completely neglected.

LINSEED QUIETER

The market was distinctly quieter last week, and prices declined progressively. Although up-country markets were fairly steady and arrivals were poor, there were more local sellers. Demand fell off considerably due to the poor offtake of linseed oil and a substantial decline in the price of mustard oil. A depressed undertone prevailed in the oil section; prices declined and the market appeared to be lacking support. Latest quotations were as follows: Ready-September Rs. 23-4 a maund.

HIDES AND SKINS STEADY

The market ruled steady. Stocks were less than in the previous week.

Bazaar Sales

(Between 28th August and 3rd September, 1956)
Cowhides: Wet Salted (Ord.) 16,600 pcs on the basis of Rs. 7-4 to Rs. 9; Wet Salted (slaughtered) 17,500 pcs on the basis of Rs. 12-8 to Rs. 21.

Goatskins: Wet Salted (Daissee, Killed) 58,800 pcs. on the basis of Rs. 150 to Rs. 180; Rs. 187 to Rs. 265 and Rs. 340 to Rs. 345; Assam-Dinaipur-Pakur 27,000 pcs. on the basis of Rs. 180 to Rs. 240; Patna (Ord.) 25,700 pcs. on the basis of Rs. 95 to Rs. 165.

Bazaar Stocks

(3rd September, 1956)

Cowhides: Wet Salted (Ord.) 181,000 pcs.
Goatskins: Wet Salted (Daissee, Killed) 44,000 pcs.; Assam-dinaipur-Jalpaiguri 64,500 pcs.; Muzaffarpur-Patna-Pakur-Purneah-Kissanganj 163,000 pcs.

SHELLAC MARKET QUIET

During the week ended 4th September, the market was quiet. The range of quotations was as follows:

Pure Buttonlac	Rs. 140 buyers, 137 value, 135 buyers.
Lemon No. 1 Shellac	Rs. 140 buyers, 139-8 value, 137-8 buyers.
Lemon No. 2 Shellac	Rs. 137 done, 136-8 value, 134 buyers.
F. O. Std. 1 Shellac	Rs. 134 to 130 buyers 130 done and buyers, 130-8 buyers.
Pure TN Shellac	Rs. 129 to 126 basis done and buyers.
4% I.T.N. Shellac	Rs. 121-8, 116-8, 119 buyers.
No. 1 Kusmi Seedlac	Rs. 129-8 to 127-8 value.
No. 2 Kusmi Seedlac	Rs. 126 buyers, 125 to 123-8 value.
Fine Bysaky Seedlac (Manbhumi)	Rs. 124-8 buyers, 122, 121 done and buyers.
Fine Bysaky Seedlac (C.P.)	Rs. 122 to 118-8 buyers.
Ordinary Bysaky Seedlac (C.P.) under 5%	Rs. 118 to 115 buyers.
Ordinary Bysaky Seedlac (C.P.)	Rs. 113 to 110-8 buyers.
Kireelac	Rs. 46 to 44-8 buyers.

COMPANY AND PUBLIC NOTICES

THE RAMESHWARA JUTE MILL LTD.

NOTICE is hereby given that the 41st Ordinary General Meeting of the Shareholders of the Company will be held at Muktapur, P.O. Samastipur (Darbhanga), on Monday, the 1st October, 1956 at 3-30 P.M. for the following purposes:—

- (1) To receive and consider the Report of the Directors and to pass the audited accounts for the year ended 31st March, 1956.
- (2) To elect Directors in place of the retiring Directors. Mr. G. M. Misra, one of the retiring Directors, has already completed 65 years of age and as it is desirable to avail of his valuable advice by retaining him as a Director of the Company, the following resolution will be proposed as ordinary resolution under Section 281 of the Act, a special notice of which has been received by the Company and is also hereby given to the shareholders.
"RESOLVED that Mr. G. M. Misra who has completed 65 years of age be and is hereby re-elected a Director of the Company and that the age limit prescribed under Sec. 280 of the Companies Act, 1956, shall not apply to him."
- (3) To appoint auditors and fix their remuneration.
- (4) As special business, to consider and if thought fit, to pass with or without modifications, the following resolutions which will be proposed as ordinary resolutions:—

- (a) "RESOLVED that consent of the Company be and is hereby given to the Board of Directors to contribute and/or subscribe from time to time to any national, political, charitable, benevolent, public or general and other funds not directly relating to the business of the company or the welfare of its employees, such amounts as may be considered proper by it notwithstanding that such amounts in any financial year may exceed Rs. 25,000/- or 5% of the Company's average net profits, as determined in accordance with the provisions of the Companies Act, '56 during the three financial years immediately preceding, whichever is greater."
- (b) "RESOLVED that the Company does hereby consent and authorise its managing agents or any associate of its managing agents to retain any commission or other remuneration earned or to be earned by such agents or associate as the managing agents, secretaries and treasurers, manager, agent, secretary or selling or buying agents of any firm, body corporate or other concern in respect of any goods, power, freight, repairs or other services for the sale, purchase, supply or rendering of which a contract has been, or is to be, entered into by such firm, body or concern with the company, provided that the prices or amounts charged to or received by the company are at rates which are not less favourable to the company than the market rates or which are otherwise reasonable."

- (5) To transact any other business which may be brought before the meeting with the permission of the Chairman.

The Share Transfer Books of the Company shall remain closed from 17th September to 1st October, 1956, both days inclusive.

By Order of the Board,

BIRLA BROTHERS PRIVATE LTD.,
Managing Agents.

Muktapur, P.O. Samastipur,

(Darbhanga).

Dated, 30th August, 1956.

- N.B. (i) A member entitled to attend and vote at the above meeting is entitled to appoint a proxy to attend and vote instead of himself and a proxy need not be a member.
- (ii) Explanatory statement in regard to special business to be transacted at the meeting:

- (a) The Board of Directors have to give contributions from time to time to various institutions including charitable and other funds not directly related to the business of the Company or to the welfare of its employees and which are at times in excess of the limits as laid down in Sec. 293(i)(e) of the Companies Act, '56. A resolution has, therefore, been proposed to authorise the Direc-

tors to contribute to such funds in excess of the above limits.

- (b) Messrs. Birla Brothers Private Ltd., the managing agents of the Company are principal agents of the Ruby General Insurance Co. Ltd. and are entitled to insurance commission from the insurance company on any insurance contract entered into by this Company with the said insurance company. Sanction of the shareholders is, therefore, sought under Sec. 359 of the Companies Act, '56 to enable the managing agents and/or their associates to retain such commission or other remuneration which they may earn as mentioned in the resolution.

THE IMPERIAL TOBACCO COMPANY OF INDIA LIMITED EXPLANATORY STATEMENT

On 21st August 1956 the Company posted to its shareholders with the Report and Accounts for its year ended 31st March 1956 a Notice dated 9th August 1956 convening the Forty-fifth Annual General Meeting of the Company on 14th September 1956.

By an accidental omission, the hour of the Meeting was not specified in the Notice but the Company posted a further Notice dated 22nd August 1956 specifying the hour of the Meeting as 3-30 P.M.

The Directors' attention has since been drawn by certain of the shareholders to the fact that the further Notice dated 22nd August 1956 did not give them twenty-one days' notice of the Meeting to be held on 14th September 1956. The Directors have now been advised that the Notice convening the Meeting, including the further Notice, is not sufficient and that any proceedings on the basis of such Notices will not be valid.

The Directors have decided that a fresh and new Notice should be issued calling the Forty-fifth Annual General Meeting and they do hereby issue such Notice in the terms following:—

NOTICE OF MEETING

NOTICE is hereby given that the Forty-fifth Annual General Meeting of The Imperial Tobacco Company of India Limited will be held at Virginia House, 37, Chowringhee, Calcutta, on 27th September 1956 at 9 A.M. for the following purposes:—

1. To receive and adopt the Statement of Accounts and Balance Sheet and the Reports of the Directors and Auditors thereon.
2. If considered desirable to declare a dividend.
3. To elect Directors.
4. To appoint Auditors and fix their remuneration.

In accordance with the Notice already issued and dated 9th August 1956, the share transfer books of the Company have been closed from 28th August to 14th September 1956, both days inclusive, and further notice is now given that the share transfer books of the Company will remain closed from 15th September to 26th September 1956, both days inclusive.

By Order of the Board,
B. GRANGER PEARSON
Assistant Secretary.

Calcutta.

3rd September 1956.

Virginia House,
37, Chowringhee,

NOTES: The dividend, if approved, will now be paid on 28th September 1956 and not on 25th September 1956, to the shareholders whose names are registered in the books of the Company on 26th September 1956, and not on 14th September 1956, or to their mandates. Transfers received in order at the registered office of the Company by 27th August 1956, remain in time to be passed for payment of the dividend to the transferees.

Shareholders are again requested to notify the Company immediately of any change in address.

A member entitled to attend and vote at the General Meeting may appoint a proxy, who need not be a member, to attend and on a poll to vote on his behalf.

The Statement of Accounts and Balance Sheet and the Reports of the Directors and Auditors thereon were forwarded to shareholders on 21st August 1956.

Notice in particular to:—

P. V. Sykes, B. N. Saha, Raja J. R. Rao, I. M. D'Costa, M. Z. Osmani, G. Cumming, Maj. Genl. S. Shamsheer, F. Roscoe, A. M. Roscoe, Lt.-Col. R. O. B. Perrott, Rani J. K. Debi, W. E. Nicholson, M. L. Bhatia, A. T. W. Edmondson, M. Devi, Genl. S. S. J. B. Rana, Maj. Genl. N. S. S. J. B. Rana, P. A. Dikshit, K. A. Dikshit, P. Da P. Pinto, J. Pinto, D. P. Bahl, E. M. K. O. Carey, M. N. Patei.

CAPITAL (PRIVATE) LIMITED.

NOTICE is hereby given to the Members of the abovenamed Company that an Annual General Meeting within the meaning of the Companies Act, 1956 (being the Fifty-first Ordinary General Meeting of the Company) will be held at the Bengal Chamber of Commerce and Industry, Calcutta on the 28th day of September, 1956, at 10-00 a.m. for the purpose of receiving the Report of the Directors, passing the Audited Accounts for the year ended 31st December, 1955, electing Directors and appointing Auditors.

The Share Register of the Company will be closed from the 13th to the 28th September, 1956, both days inclusive.

By Order of the Board,
W. G. EASSON,
Secretary.

Calcutta,

30th August, 1956.

Note.—A member entitled to attend and vote at this meeting is entitled to appoint a proxy to attend and vote in his stead. Such proxy need not be a member of the Company.

UNION JUTE COMPANY LIMITED.

NOTICE is hereby given that an Annual General Meeting within the meaning of the Companies Act 1956 (being the One Hundred and Fifty-first Ordinary General Meeting) of UNION JUTE COMPANY LIMITED, will be held at the Registered Office of the Company, Chartered Bank Buildings, Calcutta, at 10-30 A.M. on Friday the 5th day of October, 1956, for the following purposes:—

1. To receive and adopt the Directors' and Auditors' Reports and to pass the audited accounts for the half-year ended 31st March, 1956.
2. To declare dividends recommended by the Directors.
3. To appoint Auditors for the financial year ending on 31st March, 1957, and to fix their remuneration.
4. To appoint a Director in place of Sir Asoka K. Roy, who retires by rotation and being 70 years of age is not eligible for re-election unless his appointment is approved by a resolution of the Company in General Meeting specifically declaring that the age limit shall not apply to him.

And in this connection to consider and, if thought fit, to pass the following resolution of which special notice as required by Section 281(2) of the Companies Act, 1956, has been received by the Company and the relative explanatory statement concerning which as required by Section 173 of the said Act is appended below.

TO BE PROPOSED AS AN ORDINARY RESOLUTION

"That the restriction as to age limit prescribed by Section 280 of the Companies Act, 1956, shall not apply to Sir Asoka K. Roy and that he be and is hereby re-elected as a Director of the Company, whose period of office as such director would be liable to determination by retirement of Directors by rotation."

The Share Transfer Registers of the Company will be closed from 21st September to 5th October, 1956, both days inclusive.

By Order of the Board,

BIRD & CO. (PRIVATE) LIMITED,
Managing Agents.

Chartered Bank Buildings,

Calcutta, 1st September, 1956.

Note:—(1) A member entitled to attend and vote at this meeting is entitled to appoint a proxy to attend and vote in his stead. Such proxy need not be a member of the Company.

(2) The dividends, if sanctioned, will be paid on or after 15th October, 1956, to those shareholders so entitled whose names appear in the Company's books on the 5th October, 1956, or to his nominees. No application for dividend warrants will be necessary.

Explanatory Statement: In the special notice given to the Company of the resolution under item No. 4 of the above notice it has been stated that the services of Sir Asoka K. Roy have proved most useful to the Company and as he has considerable experience and personal knowledge of the affairs of the Company, he should continue to remain on the Board of Directors of the Company and that the age limit imposed by Section 280 of the Companies Act, 1956, should not apply to him.

THE LAWRENCE JUTE COMPANY LIMITED

NOTICE is hereby given that an Annual General Meeting within the meaning of the Companies Act 1956 (being the One Hundredth Ordinary General Meeting) of THE LAWRENCE JUTE COMPANY LIMITED will be held at the Registered Office of the Company, Chartered Bank Buildings, Calcutta at 10-20 A.M. on Friday the 5th day of October, 1956 for the following purposes:—

1. To consider and pass the Audited Accounts of the Company for the half-year ended 31st March, 1956 and to receive the Directors' and Auditors' Reports thereon.
2. To declare Dividends recommended by the Directors.
3. To appoint Directors in place of those retiring.
4. To appoint Auditors and fix their remuneration.

The Share Transfer Registers of the Company will be closed from 21st September to 5th October, 1956, both days inclusive.

By Order of the Board,

BIRD & COMPANY (PRIVATE) LIMITED,
Managing Agents.

Chartered Bank Buildings,

Calcutta, 1st September, 1956.

NOTES:—1. Any member who is entitled to attend and vote at this meeting may appoint a proxy to attend and vote instead of himself and such proxy need not be a member of the Company.

2. Payment of Dividends if declared will be made only to those members whose names are registered in the books of the Company on 5th October, 1956 and Dividend Warrants will be sent to them on or after 15th October, 1956.

DHELA KHAT TEA COMPANY, LIMITED

NOTICE is hereby given that the Thirty-eighth Annual General Meeting of Shareholders of the Dhekhath Tea Company, Limited, will be held at the Registered Office of the Company, No. 31, Chowringhee Road, Calcutta, on Thursday, the 27th September, 1956, at 9-00 a.m., for the following purposes:—

1. To receive the Directors' Report for Season 1955.
2. To pass the Accounts for the year ended 31st December, 1955.
3. To confirm the Interim Dividend paid on 8th March, 1956.
4. To declare a final Dividend.
5. To elect Directors.
6. To elect Auditors for the current year and to fix their remuneration.
7. To transact any other ordinary business brought before the Meeting.

The Transfer Books of the Company will be closed from 15th September to 28th September, 1956, both days inclusive.

By Order of the Board,

A WARNING FOR THE ECONOMY

THE RESERVE BANK FEARS FOR STABILITY

THE latest annual report of the directors of the Reserve Bank of India, covering the year ended June 1956 and issued this week, reflects an undercurrent of anxiety somewhat more marked than in its predecessor. The doubts appear to be centred on its main theme—whether India can in the next few years combine economic expansion with financial stability. Over the past five years, says the report, she has been able to do so “in a substantial measure”. It points out that development outlays have been increasing, industrial and agricultural production have risen, there has been a balance in the external payments position as a whole, and an improved flow of savings has strengthened the capital market. All this has been achieved while the economy has maintained a fair degree of price stability. But the achievements spring from circumstances which are partly fortuitous and partly created. An important one has been the rising level of world economic activity, on which a not-too-diversified economy like India's depends heavily. Internally, no less important has been the high level of agricultural, especially foodgrains, production since 1953-54. Already, by that year, foodgrains output had exceeded the first plan target substantially, though it has declined somewhat since. This has been accompanied by a steady rise in industrial production, reflecting the stabilisation and consolidation of the economy. Meanwhile, development outlays, although they have increased steadily each year since 1951-52, seem regularly to have fallen considerably short of the planned targets. Even in the last two years of the first plan, when the Government sharply accelerated its investment expenditure, deficits proved smaller than budget expectations. (The Reserve Bank calculates that over the five years, 1951-56, the combined deficits of Central and State Governments were slightly less than Rs. 400 crores.) Loans and small savings yielded more than the planners had originally expected, while the payments deficit was smaller because less food and machinery was imported.

The broad conclusion to be drawn from this record seems to be that among the main factors making for economic stability during the first plan were: one, production, both agricultural and industrial, was high; two, Government budgetary deficits were smaller than expected; and three, borrowing was successful. Because of this, the payments deficit was much smaller than planned. These are also the factors which will be of crucial significance to the success of the second plan. Stressing the importance of economic stability, the Reserve Bank report underlines “the need for a careful and continuous assessment of the current economic situation with a view to appropriate adjustments in the pace and pattern of planned development, and in fiscal and monetary policies, from time to time”. It pleads, in other words, for prompt and easy flexibility in implementing the plan; and the fact that this requirement is appreciated in some official circles does not detract from the value of the strong emphasis given it by the country's foremost banking institution. On the contrary, the value is greatly enhanced in the light of the recent sharp increase in prices; the Reserve Bank pinpoints a major factor responsible for this year's price increases when it says that “recently the rise in money supply has tended to outpace the rise in production levels and economic activity.”

*

The Reserve Bank seems, as might be expected, to share the hopes of many about the fulfilment of the second five year plan, but what are more important are the qualifications with which it hedges those hopes. It says that if the targets of additional taxation and borrowing are achieved and the volume of deficit financing mentioned “remains as the outside limit”, there may not be a serious threat to financial stability, provided production, agricultural and industrial, expands at a satisfactory rate. First importance is attached to the need to produce more food and other essential

articles like cloth. It is pointed out that during the first plan, production targets for both food and cloth have been far exceeded, but even so the quantities have been fully absorbed and there has been no glut of either commodity on the market. The report says unequivocally that food targets should be higher than the plan suggests, but this increase must be achieved without increasing further the overall size of the plan. In other words, a bigger allocation for food cultivation is necessary, but the money must come by trimming down allotments for other, less urgent requirements. The Reserve Bank report is less direct in its advocacy of the need to increase cloth production. This is unfortunate, for the importance of cheap and plentiful cloth is nearly as great as that of cheap and plentiful food. If authoritative banking opinion were to be forthright in its support of immediate and rapid expansion in the organised textile industry, it would greatly strengthen the case of those who today have to suffer the retrogressive ideology of the Ambar Charkha and handloom advocates.

*

With the extent of food expansion an uncertain element, and cloth increase at present virtually banned by ideological whimsy, thoughts turn inevitably to the prospects for expansion in other productive sectors; in the circumstances these must come to occupy increasing importance as disinflationary influences. Here the Reserve Bank report omits to mention one important factor suggesting extreme caution in assessing prospects. This is that much of the expansion in industrial output achieved over the last three or four years is due to the fact that there has been a great deal of idle capacity in the country. Thus, not only has the expansion been achieved with a relatively small investment outlay; it has also been brought about much more rapidly than might henceforth be expected. No doubt there are still substantial industries in the economy, such as jute manufacture, foundries and re-rolling mills, which have idle capacity that should increasingly return to use as demand and raw material supplies improve. But, by and large, it is probably justifiable to expect

CALCUTTA, THE SICK CITY

STATISTICAL information, for which the public's appetite is perhaps exaggerated by some planners, comes to laymen with a strange impact. To take the recent socio-economic survey produced by the Departments of Economics and Statistics of the University of Calcutta, it confirms what has long been felt by them—imprecisely but not necessarily less vividly. And yet, the report has been the subject of editorial comment in the daily Press. The public has been told what it already knew, little more. But the report made a difference. Vague apprehensions have been given shape. It is now easier to make a case against the Government; one will be able to know what one is talking about. Inadequately unperceived, there may be yet another incidental effect of statistics on human affairs. Figures sometimes tend to de-personalise what is intensely personal. When a report says, as the one under review does, that in Calcutta a mother has on average 3.79 children, the layman is, first, apt to wonder about the fraction, then to laugh, and finally to dismiss the whole thing as a bad job. His reaction to the observation that although Bengalis form 66.5 percent of the population in the city they constitute 77.5 percent of the unemployed is likely to be emotional and uninformed, for it may not be readily obvious to everyone that the unemployed in other States are unlikely to stay at home until they get jobs in Calcutta while the Bengali does not go outside his State or city unless, again, he has been offered employment elsewhere. It is, therefore, necessary

that the results of industrial expansion plans, though more impressive in quantitative terms, are likely to take longer to materialise. To that extent, their disinflationary impact will take longer to show. This is the more so now that the emphasis has shifted sharply towards basic and heavy industries and away from those supplying consumer needs. The intention here is not to criticise the fact of the shift in emphasis, but only to suggest one of its possible repercussions. The case of the cotton textile industry illustrates this aspect of the present situation well. Impressive increases in cloth output have taken place in the past few years, with hardly any increase in production capacity, because the industry has been able to use more intensively the manufacturing resources which were formerly idle or under-employed. Now it is working pretty near capacity; if it is to expand production, it will have to make large investments which may not yield an increase in output for some months, perhaps years.

Exaggerated ideas have come to prevail on the ability of industries to finance expansion, and the Reserve Bank unfortunately seems to share them. Like the earlier *Report on Currency and Finance*, the present directors' survey seems to interpret the past year's performance of the capital and new issues market in rather flattering terms. The fact is that such improvement in investment as there may have been, is inadequate in relation to the needs of private industry under the second plan. The Reserve Bank rightly enough urges paying “the utmost attention to stimulating the flow of capital, foreign as well as domestic, into industry”; but in the same breath suggests something which would tend to do the opposite—when it implies that the distribution of profits should be conditioned by the needs of the private sector for replacement, modernisation and expansion. Distribution is always so conditioned in well-run industries, when they see that there is some purpose in replacing, modernising and expanding. But when they see no purpose in doing so, there is no reason why they should distribute less than they would normally. It is for the Government to help create the investment confidence which will not only encourage a larger proportion of earnings to be retained in some enterprises, but also a larger proportion of outside savings to be attracted. At present, these savings are not coming forward in sufficient amounts—certainly not sufficient to meet the large claims of Central and State Governments as well as those of private industry. To put moral or physical pressure on the distribution policies of industries would damage investment prospects further. Inflation or not, that is the last thing an economy can afford if it is to offer promise of continuing expansion.

for experts to interpret their findings unless they are to mislead the average reader of the daily Press.

CURRENT COIN

Calcutta. War and partition have left most resources far behind requirements. But the lag between the two cannot begin to be explained before it has been made clear that, even if existing services were maintained, there would be an absolute shortage in many items because of the rapid rise in population. It is as though a large number of unexpected guests arrived when there was not enough food and sleeping room for the hosts themselves. It has been unhappy Calcutta's lot to receive such guests since 15th August, 1947, and they continue to arrive at the rate of about 30,000 a month. No wonder that about 36 percent of the people "may be said to be living below the poverty line." Each earner is reported to be supporting 3.7 dependents on average. The position must be worse than the figure may suggest, because the additional burden has fallen mainly on Bengalis whose participation in the economic life of the city is negligible at the higher levels. Only 2.2 percent of the household, it is said, enjoy a monthly income of Rs. 750 or above; a further breakdown of the figure might show that of these lucky households not a few are non-Bengali.

The occupational pattern of the people probably suggests a certain lack of balance in preferring some jobs to others, generally indicating that the spirit of adventure is lacking. But a community's mental make-up is largely a product of its living conditions, and the survey provides enough facts to show that not all the fault may be the Bengali temperament's. More than 42 percent of the households have only 30 sq. ft. of room space a head, and single-member households have an average of about one-eighth of a room to live in. There is no water-tap in 35 percent of the households; 70 percent have no bathroom, 14 percent no latrine and 74 percent no kitchen. The figures may not be flawless, but the general picture is certainly not of a city fit for heroes to live in. A sense of insecurity is the inevitable reward of living in such conditions, which makes it easy to understand why among the educated classes there is a preference for "white-collar" jobs. The 17 percent who have gone in for what are called trading occupations have added to their manifestly insecure existence a further measure of hazard which is inherent in independent business.

The detailed figures on employment—on unemployment to be more accurate—are less easy to understand. Among those who have passed at least matric the percentage of the unemployed is said to be 17.4 against only 3.5 percent among the illiterate; this is not necessarily a reflection on the kind of education purveyed, although there is much amiss there. About 63 percent of persons between 15 and 24 who are seeking jobs are understood to be unemployed, followed by 11.5 percent in the next age group, 25 to 34. The sudden drop from 63 to 11.5 is not explained by the report, and it is possible that for many the search for a job at 15 was not wholly serious. The second age group, 25 to 34, is of the greatest significance, and if eleven and a half persons out of every hundred are offering their service to the community which is obliged to turn them away, there is clearly cause for concern. These frustrated men and women are unlikely to understand the significance of the frequent call of the national leaders to dedicate themselves to the mighty adventure of building a new India. They seem to be ready enough to offer themselves; it is the country which is unprepared to take them.

The popular reactions to statistical surveys has already been referred to. It is possible that, for all their usefulness at the expert level, they do yet another disservice to planners and the planned alike. The majority reacts almost exclusively in terms of emotion, rendered more uncontrollable by a semblance of scientific justification. The minority—the experts—may on the other hand begin to deal with figures, instead of with human beings. But a third possible result is deflection of attention from the overall problem to some incidental issue, from the general to the particular. While it is perfectly true that popular feeling, and even some politicians' effusiveness, could do with a little more of the concrete, the experts will still do well to mind the general. It is possible, for instance, that after reading about the shocking housing conditions in the city some well-meaning Minister will order the immediate construction of skyscrapers, and another, not to be outdone, may go for the creation of a million jobs. Both houses and jobs are needed, but the planner is well advised to keep his gaze fixed on the central problem—which is a rapid advance on all sectors of the economic front. Not as though that is a simple matter; in fact that is the toughest question; but it is on an answer to this that the answer to all else depends. There is a tendency to run away from the central issue, and hence this word of caution against getting carried away by details—heart-breaking details, but details still. The sick city of Calcutta suffers from many diseases; skin affections, which socio-economic surveys expose most vividly, are not the most serious of them. There is something the matter with its heart, and not everything is all right with the belly. These cured, the ugly rashes will disappear of their own accord.

Expansion of Indian Copper.—In his address to shareholders at the 32nd annual general meeting of the Indian Copper Corporation (published on a later page of this issue of Capital), the chairman, Mr. J. F. E. d'A. Willis, was able to announce a record year for the company. The chief reason for this excellent result, Mr. Willis said, was the high world prices for copper. These have since declined from the peak reached last year, but the fall has lately been arrested by the worsening international situation and labour difficulties in the Rhodesian copper belt. Mr. Willis warned shareholders that due to the recent rapid decline in the world prices of copper the result of the current year "although so far satisfactory, are unlikely to approach those for 1955." The ore reserves of the Corporation are now standing at 3,330,090 short tons compared with 3,369,286 short tons at the end of the previous year. This Mr. Willis maintained, is satisfactory in the circumstances of restricted lateral development. He pointed out that good progress has been made with development in depth and this should eventually provide extensive lateral development resulting in a substantial increase in the ore reserves. An extensive programme of prospecting and development is now in hand, under which it is expected the output of the mines will be considerably increased. The corporation hopes that, provided the results of the present exploration are satisfactory, by the end of the second five year plan, it will have substantially contributed towards replacing India's imports of copper. Mr. Willis noted with satisfaction that the Government of India's recent industrial policy statement provided that existing industries in Schedule A, which include copper, will be permitted to remain in the private sector and that their expansion has not been proscribed.

Indian Aluminium Labour Pact.—The Indian Aluminium Co. Ltd. signed a few days ago, with its Belur Works Employees Union, a comprehensive five year agreement aimed at ensuring industrial peace through collective bargaining. In many respects, it is a model of what such agreements should be. A distinctive feature is the way it links wage and bonus rates to production. In fact, it is stated that for the first time in this country, a union has joined the management in declaring that "the payment of bonus on company's earnings or profits is not considered a sound or satisfactory principle by either party.... Bonus will only be related to and paid on plant efficiency and output." There are two types of bonus. One is the monthly production bonus, which is based on the month's overall plant efficiency and recovery. The other is the annual productivity bonus, which is based on the total output during the bonus year. The general scheme of the agreement thus is that workers get paid according to their contribution to output, and the incentive is always there for them to do better. The worth of the work each category of employee does is scientifically evaluated, and then fixed by a job evaluation committee on which both management and labour are represented. Joint evaluation in this manner is expected greatly to reduce the scope for disputes, and the agreement has enough flexibility to cope with cases where the worth of the work done by a particular employee is liable to major change. Standard rates of production and labour strength at different operating centres have been fixed, and on the basis of the former, employees will get handsome allowances. Both the management and the union have specified their general obligations, duties and responsibilities in other ways too. The union agrees not to support indiscipline; grievances will be considered according to a specified procedure. Nor will it initiate or sanction strikes, stoppages and slow-downs. The Company, on its part, will not declare any lock-outs.

Tea Trade Trends.—World tea consumption fell in 1955 while production increased. India lost part of its markets in the U.S.A., Canada, Iran and the Irish Republic to Ceylon. These were among the notable events in 1955 concerning the Indian tea industry to which Mr. J. P. Shah referred in his presidential address at the sixteenth annual general meeting of the Calcutta Tea Merchants Association, held last week in Calcutta. Mr. Shah regretted that the International Tea Agreement which expired in March 1955 and which had been a useful instrument of trade stability, has not yet been renewed, a fact which contains a special warning to India of intensified competition by its rivals. He urged that a thorough examination of the causes of India's loss in 1955 be promptly made. Higher internal consumption could be of substantial help to the trade in times of falling exports, and he noted the happy trend of increase in the domestic off-take of Indian tea during the past year, but "in the existing relationship of internal and external demand," assistance to the market in the shape of buying by internal traders could only be of a temporary character. The trend of average

tea prices during 1955 suggested just this. During the year, the Calcutta export market opened at Rs. 2-2 3/4 a lb on an average, but it closed substantially lower at Rs. 1-10-0, despite the support from the internal buyers during the early part of the year. This is not minimising the importance of an expanding internal market, and Mr. Shah complained about the many levies on the home tea trade which work against internal consumption rising progressively to higher levels. But as the structure of the trade is now, the industry must devote all its energy to preserving its export markets. The export figures of the first few months of the current year suggest a happy trend of recovery. "The main instrument of stability of the trade," Mr. Shah pointed out, "must be production of good quality teas in quantities sufficient to meet the available demand." This should be backed by efficient propaganda in the main marketing centres including the U. K. Arrangements should also be made to provide sufficient modern and permanent warehousing accommodation in Calcutta to cope with the expansion of the tea auction centre.

Ore Export Trade.—Arguments against State trading in ore exports have been put forward on behalf of the private sector from time to time, but few are as logically convincing as those of the Committee of the All-India Mineral Convention which has recently submitted a memorandum on the subject to the Union Minister for Commerce and Industry. The memorandum contains arguments and facts which it will be difficult for the Government to refute on strictly economic grounds, though it may be able to find political reasons to support its case. But economic action based only on political grounds is unlikely to promote the apportioned economic ends. The Committee's memorandum says precisely the same thing. It is not clear how the mere substitution of State trading for private interests can increase foreign exchange earnings, if the quantity and value of exports remain more or less the same. Nor has it been exactly proved how the private traders have failed or where exactly the private trading mechanism has fallen short of the requirements of the trade. On the other hand, says the memorandum, any industry or trade which has a splendid record of contribution to the foreign exchange earnings of the country and to the promotion of employment through keeping thousands of small mining enterprises alive, "is entitled to some credit." Giving the figures for iron and manganese exports, which show a steady rise from 353,554 tons in 1944-48 to 1,568,000 tons in 1953-54, in response to a rising demand abroad, the memorandum says that this should be a positive proof of the private trade's ability to look after the country's export interests. The falls which have occurred subsequently are largely due to factors, such as the decrease of U.S. stockpiling demand, and the entry into the manganese ore export trade of new countries including Russia and South Africa, which are entirely beyond trade's control. The Government's Press note of 22nd June admits this. Correspondingly, foreign exchange earnings rose from Rs. 1.8 crores in 1948-49 to Rs. 21.76 crores in 1951-52 and to Rs. 24.24 crores in 1953-54. The subsequent decreases are due to the falling trend in ore exports. The prime internal cause for this setback has been the inadequacy of rail transport which again is not the responsibility of the trade. These facts apart, there is an important economic reason why the existing private trade mechanism should not be disturbed, and that is the existence of a multitude of small mining enterprises scattered all over the country which depend entirely on private traders for their working capital. It is unlikely that these interests will be supported to any appreciable extent by the State body, and if these enterprises die, a substantial source of rural employment will have gone with them. In the year 1953 when the trade enjoyed an unusually prosperous year, as many as 110,869 persons found employment in the mines. After thus stating the case for the private sector, the Committee goes on to make some constructive suggestions as to how both State trading and the private channel can function side by side usefully without the one encroaching on the sphere of the other. It suggests that the State body develop new mining areas and promote new markets, in the manner of all new commercial concerns. There is considerable scope for additional enterprise in the field, and only by doing this can State trading really fulfil its proclaimed purpose of increasing ore export trade and thus earn more foreign exchange for the country.

Volta's Second Birthday.—Volta Ltd. celebrated its second anniversary recently. In addition to inheriting the diverse agency business of Volkart Brothers, Volta, in this short period of time, has succeeded in introducing an altogether new industry to this country. With the production of the one-ton "Crystal" room air-conditioner, India became a manufacturer of air-conditioning units for the first time ever. An even greater achievement was the fact that all the component parts, with the exception of the motor compressor unit, were also manufactured within the country while the com-

plete unit was specially designed for Indian conditions. For instance, sheet metal iron which American manufacturers use for certain parts is unsuitable for the Indian climate. Instead, these parts in the Crystal are made from non-ferrous metals. Manufacture, therefore, amounted to a great deal more than mere assembly. Many technical difficulties had to be overcome. Special purpose machines for the manufacture of the component parts were not available either from domestic sources or from abroad. These, including the pipe bending, coil expanding and tin stamping equipment, were designed and manufactured locally. Dies and punches, in addition to jigs and fixtures, posed another problem. These were principally required to fabricate the special purpose machine without which India's air-conditioning industry could not have come into existence. Die making is a precision job and requires a high degree of technical skill. All the initial problems were solved and the required accuracy of 1/1000th of an inch was achieved. In due course, the motor compressor unit, the only imported component, will also be manufactured within the country.

Conditions for I.F.C. Loans.—The International Finance Corporation, constituted recently with the support of several Governments as an international investment agency "to aid productive private enterprise," has published a booklet setting forth the conditions under which it will lend its funds. Unlike the World Bank of which it is an affiliate, the Corporation will not "seek or accept a government guarantee of repayment of any of its investments," though the companies seeking finance from the Corporation must be located in a member country, including dependent territories. "Nor will I.F.C. seek, or require the enterprise to seek," the booklet further declares, "formal governmental approval of any proposed financing, except such as may be required by law." But before deciding to invest in an enterprise, existing or new, the Corporation will naturally wish to obtain detailed information about the enterprise concerned—its nature, capital structure, the quality of its managerial personnel (I.F.C. makes this a special point of emphasis), the operations of the company and the purpose for which finance is sought. "The Corporation will engage in financing operations in association with private investors", and will expect them to put up more than half the capital required. In the early stages of its operation, I.F.C. will have available for investment only its paid-in capital which is held in the form of U.S. dollars [of the total authorised capital of \$ (U.S.) 100 million, the subscriptions paid so far by 32 Governments including India total \$ (U.S.) 78.4 million]. The size of its own investment has been fixed at \$ (U.S.) 100,000, or its equivalent, as the minimum. An upper limit has not been fixed, though "as a matter of general policy", the Corporation will prefer to make a substantial number of "moderate-sized investments rather than to invest larger amounts in a relatively few individual projects." The enterprises eligible for I.F.C. loans (it is not authorised to invest in capital stock or shares) should be predominantly industrial, contributing to the economic development of the country concerned, and must be privately-owned. Investment by public funds in a private concern is in itself no disqualification, unless the Government shares in the control of management. It does not have a policy of uniform interest rates. "The interest rate will be negotiated in each case in the light of all relevant factors, including the risks involved and the nature and extent of any rights to participation in profits and to conversion or subscription to stock." Security is not essential for loans, but it may be demanded in appropriate cases. From the point of view of the under-developed countries, a happy feature of the objectives of the Corporation is that its loan policy will be largely guided with the idea of aiding private enterprise in the "less developed areas" of the world, and it will not usually invest in developed economies.

Better Prospects in U.S. Economy.—The seasonal revival of business activity which usually gathers speed after Labour Day promises to be intensified this year by the after-effects of the steel strike, reports the First National City Bank of New York in its September newsletter. Where the strike caused slow-downs, industry is now busy catching up. Prices and incomes are rising, and in general, optimism is more pronounced than it was earlier this year. The recent tightening of credit has not touched off a wave of pessimism as it did in the spring; instead, many regard these moves as a confirmation that good times lie ahead—times so good that they require restraint to keep them from getting out of hand. One reason for this feeling of optimism is the ease with which most of the economy rode out the steel strike. Total employment set a new record in July, and, on a seasonally adjusted basis, so did retail sales and construction activity. Despite the strike, overall industrial output dipped only 3 1/2 percent. Fortunately most steel-consuming firms had sufficient stock on hand to maintain production during July; manufacturers of machinery and most other producers' equipment and durable consumer goods increased their rates of output on a seasonally adjusted basis. The

speedy resumption of steelmaking and the continuing heavy retail demand promise a boost in overall production in August and September. The steel industry's recovery has been as rapid as repairs and wildcat strikes permit; by the end of August its operations were back to 96.5 percent of capacity. Retail sales in August appear to have held close to the record levels of the preceding three months, and government officials predict that August employment figures will show another new peak. Inevitably, the strike intensified the difficulty which certain industries were having in obtaining the types of steel needed. Heavy goods lines generally are plagued with unbalanced steel stocks and uncertain delivery schedules. It will be many months before this situation is cleared up, particularly in structural steel. Total civilian employment rose to 66,655,000 persons in July, the greatest number in the nation's history. Altogether, 152,000 more people had jobs than in June and 1,660,000 more than in July 1955. The Census Bureau includes in these employment totals all persons who have jobs but who currently are not working because of vacation, illness, or strikes. However, even if the striking steelworkers had been excluded, employment would still have been a million or more above last year's level. Some persons view with concern the fact that unemployment still totalled 2,833,000 persons in July, equivalent to 4.1 percent of the civilian labour force, and was 362,000 greater than in July 1955. A closer look at the figures, however, shows that the growth of unemployment is a misleading indicator of economic trends. Actually, the increase in employment during the past year has been 300,900 greater than the overall growth in the population of working age, although normally only part of this added population would enter the labour force. During the last 12 months, the civilian labour

force has increased by more than 2 million, nearly triple the usual annual increase. Over and above population growth, the prospect of high wages and plentiful jobs has attracted into the labour force since July 1955 about 360,000 teenagers and 369,000 women 20 years of age and over. Most, but not all, of these added job-seekers have succeeded in finding work, but nearly 90 percent of the net increase in unemployment has come from these two groups.

EDUCATION IN INDIA

REIS and Raynet has an excellent article on the subject of our schools and colleges in its issue of the 5th instant. It is not enamoured of the present system of education, which it seems to consider is destroying the solid nature of that which was formerly imparted. It says that in India the relations between preceptors and pupils before the establishment of schools and colleges on the modern plan were always satisfactory. The system of education was different. The pupils when they left their professors were not called upon to govern men. Most of them were averse to entering active life. They tried, however, in their own simple ways to serve the society of which they were members; they were distinguished by many sterling virtues; they were good neighbours, good fathers, good sons, good brothers, and good husbands. As Reis and Raynet truly says, these teachers have become extinct and a new race has appeared. We are in the midst of a period of transition and the minds of the students are being moulded from a Western standpoint. Instead of fitting the pupil for a contented life in the ancient grove, the modern system seeks to destroy ancient traditions and to make a potter's or a blacksmith's or a washerman's child, as good as a Brahmin's or a Kayasth's. We have already pointed out in these columns that the inevitable result of such education is to make the people discontented and unhappy. The great ambition now is to secure an appointment under Government, for knowledge is valued not for its own sake but for the money it may bring in. We are glad to see thoughtful writers in the Indian Press drawing attention to this subject. To our minds the system of education in India is radically wrong, and its fruits are to be seen in the discontent around us.

BANKING ALMANAC
1956-57 Edition Just Out

An INDISPENSABLE Book of Reference for Bankers, Manufacturers, Traders, Planters, Stock & Share Brokers and in fact for every concern dealing with Banks.

Contents: Complete particulars of Banks in India. Complete list of Bank Branches in India (Town-wise & Bank-wise). Complete particulars of the leading international banks of the whole world. And a mine full of other valuable information for businessmen.

Volume: 600 pages—Full Cloth Bound.
Rs. 10/- only (Postage & Packing Rs. 1/4/- extra).

INSURANCE & BANKING PUBLICATIONS
Post Box 676, NEW DELHI.

Trade with
Australia and
New Zealand

Business men trading with Australia and New Zealand are invited to use the complete banking service of the Bank of New South Wales.

The oldest and largest joint-stock bank operating in Australia and New Zealand, the Bank of New South Wales keeps in close touch with local conditions through over 850 branches and agencies (sub-branches) in Australia, New Zealand, Fiji, Papua and New Guinea. It is thus particularly well equipped to provide enquirers overseas with a full picture of the local business and rural scene.

THE SCOPE FOR TRIBUNAL ADJUDICATION

HIGH COURT STOPS REFERENCE ABOUT INDIVIDUAL EMPLOYEE

(FROM OUR LEGAL CORRESPONDENT)

THIS decision of the Patna High Court is a useful reminder to employers of labour, welfare officers and those concerned with the administration of the Industrial Disputes Act on two points. There is a tendency on the part of employers and workmen alike to assume that once a matter has been referred by the appropriate Government to an industrial tribunal as a dispute for adjudication by the tribunal, the latter body can and must proceed with its investigation and eventually make its award. While this assumption is generally and substantially accurate, it is not completely so. It would be more strictly correct to say that the tribunal must proceed unless lawfully restrained from so doing. In a proper case it can be so restrained. And the restraining agent is the High Court. That is the first point for consideration: which, in this particular case, is coupled with the second question as to what are the rights under the Act of an individual workman to have a grievance against the management, a grievance that is exclusively his own and not shared by his fellow workmen, investigated by a tribunal and made the subject matter of an award? It is not at all an easy question to answer. Although it may be that not a single one of the other workmen has himself suffered from the alleged grievance of which the complaining workman says he has been the victim, they may consider themselves as a body interested in the result and may, through their workers' union, take the matter up. But what if they do not? What if the aggrieved workman, disdaining the aid of his fellows and the union, or having been refused such aid by them, starts the ball rolling himself? Well, generally speaking, he will come a cropper. The principle on which the answer depends is laid down in a 1953 decision of the Patna High Court¹ and depends on the meaning and proper understanding of the expression "industrial dispute".

"Industrial dispute", as referred to and defined in Section 2(k), must be construed to mean not a dispute between an individual workman and the management, but a dispute which, though it may originate in an action concerning an individual workman, has developed into a dispute in which

the majority of the workmen in the establishment are interested.....(and) if Section 2(k) of the Industrial Disputes Act is to apply, there must be a dispute between a body of employees in the collective sense and the management.....a dispute would not by itself constitute an industrial dispute falling within the scope of Section 2(k) Industrial Disputes Act....."

That seems plain enough guidance. But the Government on occasions does refer to a tribunal a dispute between a solitary employee and the management. What is the management's remedy in that event? It is an expensive but salutary one—to apply to the appropriate High Court for an Order directed to the tribunal, prohibiting the latter from proceeding with or taking any steps in the reference, notwithstanding the Government's specific instructions to the tribunal to investigate and make an award on the so-called "dispute".

The latest case on the subject is informative and instructive. The facts were shortly these. Mr. Manna Lall was working as sales clerk in the sugar sales department of the South Bihar Sugar Mills, Bihta. He was suspended with effect from 31st March, 1952, on account—so it was alleged—of his having acted dishonestly and fraudulently in connection with the mills' business. It was alleged that he so acted in the discharge of his duties. It is not necessary to go into the details of the allegations made against the sales clerk (we copy under protest the horrible noun-verb which has come into use in recent years) charge-sheeted for an offence under Section 408, Penal Code. He was acquitted. We will stop there for a moment. You may think that the acquittal, the sales clerk having been judicially found "not guilty" of the offence alleged, would operate automatically as a bar to any future punitive disciplinary action of a civil character by the employer against the employee, in relation to the same alleged offence. That is not so. "It is well to remember that a civil court is never bound by a decision of a criminal court even when the same matter is agitated by the same parties." In spite of the acquittal, the management was perfectly entitled to proceed with its own investigation. And it did, with the result that, being satisfied upon materials in its possession that the clerk was guilty of unauthorised, fraudulent and dishonest acts in connection with its business, and that he was further guilty of neglect in the performance of his duties, it served upon him a notice to show cause, detailing therein the various charges against him, as to why he should not be properly dealt with, and to submit his explanations, if any. He

did submit his explanations. They were found to be unsatisfactory and a further opportunity was given him by letter to explain the charges against him. His reply was found to be vague and, as in the opinion of the management his conduct amounted to a major misconduct within the meaning of the Certified Standing Orders, Mr. Manna Lall was informed by a letter dated 27th March, 1954, that with effect from 31st March, 1952, his services were being dispensed with. As to his dues, the clerk demanded Rs. 3,559 from the mill. According to the management, his dues were Rs. 296-8-3 only. This sum was sent to him and duly received by him on 21st April, 1954.

That was in April and the management thought that the whole matter was at an end. But nearly seven months later, at the instance of the dismissed clerk, the Deputy Commissioner of Labour intervened, inspected the relevant papers, and had various discussions with the management on the basis of the possibility of a compassionate payment. The clerk was present on his own behalf at the inspection, but during all the discussions no one was present on behalf of the South Bihar Sugar Mills Workers' Union. The discussions, the management claimed, all proceeded on the basis that the dismissal of the clerk was fully justified and legal and the only question mooted was that of a compassionate payment. The management refused to make any.

With this background, the management was surprised when it received a notice from the chairman of the Industrial Tribunal informing it that the State of Bihar, by notification dated 18th January, 1955, had referred to him for adjudication the question of the justifiability, or otherwise, of the dismissal of Mr. Manna Lall, and directing the company to file a written statement. At no point of time, whether before or after the clerk's dismissal, had the South Bihar Sugar Mills Workers' Union, anyone on its behalf, or any other body of workmen, taken up the cause of the dismissed employee. No dispute at the instance of the Union had arisen or was ever raised by it, nor was any demand ever made by the Union on his behalf, either to the management or to the Government. In this view of the matter, the High Court held that the dispute, if any, remained an individual dispute; and the Workers' Union not having deemed it fit and proper to espouse the workman's cause, there was no "industrial dispute" under Section 2(k) of the Act to which reference was made earlier in this note.

The State Government having made its reference to the Tribunal and the High Court, it seems, could not quash the reference. But the High Court could restrain the Tribunal from taking any steps towards implementing the reference. Said Sinha J.: "I am definitely of the opinion that this Tribunal is not legally vested with jurisdiction and it must therefore be the duty of this court to prevent that Tribunal from usurping jurisdiction, and the Tribunal must refrain from continuing the proceeding which is, as held above, without jurisdiction..... I direct that a writ in the nature of prohibition or order under article 226 of the Constitution be issued directing opposite party 2 (i.e., the Tribunal) to forbear from proceeding with or taking any steps in Reference No. 2 of 1955, pending before him." Rai J. concurred.

It is always a pleasure to see a young and junior practitioner justly praised. It means so much to him. Therefore we rescue from the comparative obscurity of the Law Reporter, Sinha J.'s concluding observation: "I do not like to part with this case without observing that Mr. (Ranen) Roy, who has lately been enrolled as an advocate of this court, has argued the matter with ability and fairness".

DIVISION OF WORK BETWEEN UNION MINISTRIES

The board division of responsibility between the Ministry of Heavy Industries and the Ministry of Commerce and Consumer Industries, into which the Ministry of Commerce and Industry has been now split up, is as follows: The Ministry of Heavy Industries will be generally responsible for industrial policy as a whole. The administration of the Industries (Development and Regulation) Act will be the concern of this Ministry and all applications under the Act, whether for substantial expansion or for setting up new undertakings, should be addressed to this Ministry. The Ministry of Heavy Industries will be responsible also for all producer goods industries including iron and steel and non-ferrous metals; chemicals and pharmaceuticals, machine building industries including machine tools, engineering industries, cement and automobiles. The Ministry of Commerce and Consumer Industries will deal with all subjects relating to foreign trade and commerce and import and export control. On the industries side, this Ministry will be responsible for small-scale industries and the handloom industry, all textile industries, production of consumer goods by light engineering industries such as bicycles, sewing machines, cutlery, domestic electrical appliances, wood-screws, bolts and nuts, and for all other common consumer items including soaps and other toilet articles, matches, leather and rubber manufactures, glassware and crockery, paints and varnishes and plastic goods. The Ministry of Commerce and Consumer Industries will also be in charge of the plantation industries, namely, tea, coffee and rubber.

I SHOULD have known the remarks I made about Scottish country dancing a fortnight ago would not go unchallenged. It is, of course, difficult for a Sassenach to appreciate the fanatical regard in which this vigorous cult is held by its devotees. Careful and sympathetic observation of the practice is apt only to increase the mystery, in addition to evoking a profound relief that the traditional Terpsichorean caperings of one's own native land require nothing like the same energy. Indeed, how anybody who indulges in this violent pastime has strength left to defend it beats me. I can appreciate that the ditcher who wrote in to rem. me that I had missed his favourite sport of bowls from the list of waistline-reducers I suggested, had the breath to dictate his protest. But how a Scottish country dancing addict can find any after his exertions will probably remain as much a question without an answer as the one which will always puzzle those born south of the border—why didn't Hadrian build his wall higher? I have the greatest admiration for most things Scottish, not least for the traditional refreshment. But for the country dancing I have only profound incredulity. In the Highlands, of course, it is necessary to be vigorous to keep from dying of the cold and damp. One has only to watch the more sedate measures traditionally trod a few hundred miles farther south to appreciate the effect climate can have on these habits. But in Calcutta, it is an entirely different proposition. It has been my lot, on nights when the slightest movement has invited a torrent of perspiration, to watch Scots in full national costume perform, with the maximum of energy and dedication, such convolutions as would kill a normal person. Being a gentle soul, I always find the sight of so much human suffering quite insupportable and it is only my fascination and admiration for exhibitions of determination and endurance which keep me from bolting for the door. Nothing, I repeat nothing, would induce me to try it for myself.

The latest issue of Progress, Unilever's lavishly-produced quarterly review, contains an article of considerable practical interest to a country such as India which is setting out on uncharted economic seas. Professor Roy Harrod, Oxford economist and biographer of the late Lord Keynes, examines the new balance within the British economy and declares that power is now so diffused that "one cannot place sovereignty at a single point." The great party machines, the Cabinet, the civil service, the trades unions and "the poor old City which occasionally has to be appeased just a little" are all real sources of power, and the outcome, constituting what is actually decided and done, is a compromise. But now the nationalised industries have come upon the scene and are radically affecting this delicate balance of economic forces. These nationalised industries already claim about half Britain's industrial investment. But, says Professor Harrod, "they are not broken in; they have not yet been forced to compromise; the issue with them has not yet been joined; they have proceeded largely according to their own will and pleasure." The point is of real significance here because the cult of nationalisation is already acquiring fanatical proportions in some quarters. Professor Harrod argues that the United Kingdom cannot have a coherent investment policy such as would be needed to cope with inflation and deflation, and also permit the nationalised industries to follow their own dictates. He blames the high spending of local authorities and the nationalised industries—particularly the latter—for the somewhat tardy results of the 1955 credit squeeze. His conclusion is that

A DITCHER'S DIARY

the British economy and its planning agencies have not yet "digested" the nationalised industries and he regards this as the chief unsolved problem of Britain's post-war planning. There is certainly a warning in this for India.

I was surprised to learn that the Government's views on retaining the death sentence have been approved by all States except one. There seems something incongruous about capital punishment in a country whose religions and traditions have always emphasised humanitarian ideals; after all, these still constitute the main case against it. But it does seem to me that ideas about the death penalty are beginning to change. I do not think that is the reason why the House of Lords rejected Britain's abolition Bill; the explanation there is that the Law Lords, and the "Backwoodsmen" whom obstruction and prejudice turned out for the occasion, have traditionally opposed liberal experiments of any kind. What I mean is that the old arguments against capital punishment, that it does not discourage murder and that it represents society's lust for vengeance, and that it represents justice, although still true, are being swamped by the general fear that without it there will be no defence against the more "modern" type of vice crime. I still number myself among the abolitionists, but I am prepared to admit that gangsterism, armed robbery, dope peddling, adulteration of drugs, white slavery and kidnapping are quite different from an ordinary every-day case of murder. It is not that most of these crimes are any more prevalent now than they have always been. It is simply that they are conducted by people who are educated and intelligent enough to know what they are doing and because modern conditions permit them to be better organised and therefore more deadly. There has, I am afraid, been a good deal of reaction throughout the world from the liberal humanitarianism of the early part of the century; perhaps two brutal wars have had something to do with that. But most thinking people are prepared to admit that there can be worse crimes than straight-forward murder and that even with murder itself, there can be extenuating circumstances which complicate the issue. The answer might be to restrict the scope of capital punishment for murder and extend it for other serious crimes. It would mean establishing a scale of degrees for murder. But that should not be too difficult here. India has always been more flexible on this point than, for instance, has the United Kingdom.

I suppose most middle-class fathers with a grown-up daughter have, at some time or another, faced the problem whether, in the light of the girl's probable early entry into the holy bonds of matrimony, to go to the expense of giving her an academic or professional training. In the days when taxation and living costs were lower than they are now, the decision was perhaps less important—especially for the expatriate working in the East and trying to scrape a few coppers together for his declining years. The matter has come to mind because I see that a large London departmental store, which used to train women graduates for highly-paid jobs, is now limiting its scheme to male entrants. It has found, so it maintains, that the length of service subsequently given by women does not justify the elaborate training. An important industrial chemical concern is employing

more than 3,500 science graduates and doctors, but only 121 are women. It has found that the working life of a woman graduate rarely exceeds five years. Women who get married shortly after completing their training represent a high proportion of "wastage". In any case, they may have kept young men out of positions which they could have occupied for a working lifetime. The other aspect of the matter is, of course, that higher education in the United Kingdom is today increasingly subsidised by the State which can hardly regard its payments on behalf of young women destined for early marriages as a good long-term investment. This is obvious enough when it is realised that the number of applications greatly exceeds the places available at universities and the British Government is now contributing to them about £30 million annually in one form or another. As yet the problem has hardly arisen in India, but it will someday because female education permeates all sections of society. It would certainly be unreasonable to exclude any brilliant young woman from higher education. But those young married women graduates who argue that it is sufficient if they pass the benefits of their education on through their children have barely begun to answer the question which their abandoned professional careers really poses.

It must have been irritating for the Port Commissioners to be handed resignations by twenty-four Assistant Harbour Masters. It was not a pleasant prospect for Calcutta's trade and industry either. Dock labour troubles of various kinds are too familiar here for there to be any doubts about the damage they can do. But I am wondering if that really justified the attitude the Central Government chose to take. It was not a strike; after what happened in Bombay last year it is not surprising that other methods were chosen. Even if it had been, there seems no good reason why senior staff should not be as free to withdraw their labour in what they consider their legitimate interests as the ordinary worker insists on being. And I have yet to hear the workers threatened with a hanging. It seems to be established as a principle nowadays that large numbers, strong organisation and belligerent behaviour are a fair justification for not invoking the law whereas their opposites must qualify for all the rigours it allows. What justice there is in that escapes me, and it is justice which, so we are always being told, will inspire labour policy in a socialistic pattern of society. Although I do not know the full extent of the grievances involved, I am glad to find that the Assistant Harbour Masters have swallowed them in the nation's interest and have returned to their posts. But if they had not chosen to do so, I cannot see that there would have been any more justification for forcing them than is usually admitted in the case of the ordinary dock labourer. The trouble with our attitude towards these issues is that it is too easy to reconcile feelings with expediency. It is rare in labour matters nowadays that a sense of fairness takes precedence over honest-to-goodness convenience. My guess is that in future we will see more of this kind of action from senior employees. It may be foreign to their temperament and sense of responsibility. But society has only itself to blame if they have learned from their lower-paid but better organised colleagues that it is often the only thing which can guarantee their grievances a sympathetic hearing.

THE DITCHER.

INDIA'S NEW STEELWORKS

For the new integrated iron and steel plant to be built at Durgapur to produce 1½ million ingot tons per annum Simon-Carves will be responsible for the complete coal washing, blending and handling plant, the three coke oven batteries and coke handling plant, the by-product plant and sulphuric acid plant, and the steam-generating plant for the entire works.

The £15-million contribution of Simon-Carves to this great enterprise is characteristic of their close association of nearly half a century with the Indian iron and steel industry.

PUBLIC ADMINISTRATION IN INDIA

CRITICISMS AND SUGGESTIONS OF DR. APPELEY

(FROM A SPECIAL CORRESPONDENT)

THE second report of Dr. Paul H. Appleby on the Indian administrative machinery, which was laid before Parliament three weeks ago, does not contain any new or novel suggestions; it closely follows the type of recommendations made some years ago by Mr. A. D. Gorwala, but it is much more incisive than the first one he submitted in 1952. Anxious for the creation of conditions which are in his opinion essential for the success of the second five year plan, Dr. Appleby has criticised in very strong terms some of the existing official practices which hamper initiative, and hence progress, at every stage. He has laid bare the utter inadequacy of the system under which the Government now operates and has entered a well-reasoned plea for more decentralisation of official functions so that interference from higher officials is kept at a minimum.

This interference, according to Dr. Appleby, is of three principal kinds—(a) interference by an unimaginative audit organisation, (b) interference by the higher hierarchy of officials and (c) interference by Parliament. "The specific decisions by the Government departments," he points out "are reviewed by too many persons in too many organs of the Government in too detailed, too repetitive and too negative terms.... By a curious proliferation of the conceptions of parliamentary responsibility and cabinet responsibility and by reliance on excessive procedures of cross reference, there has been built an extraordinary evasion of individual responsibility and a system whereby everybody is responsible for everything before

anything is done.....Each process of review is unbelievably petty and frustrating."

Audit Objections

Two points have been made out in Dr. Appleby's analysis of interference by the audit organisation. First, officers of the Finance Ministry and of the office of the Comptroller and Auditor-General, he says, look at administrative problems from the cool retreat of an ivory tower. They frequently raise issues which are irrelevant or, at best, unimportant or trivial in relation to the total expenditure involved. Instances are not wanting that if an administrative department really wishes to incur some wasteful expenditure, it can do so, in spite of the "watchdog of Finance" sitting at its doorstep. The anxiety of the audit organisation to scrutinise every item of the proposed expenditure, and its refusal to accord sanction until it has been so scrutinised, however, penalises the honest and the scrupulous executive. Not only that; the latter feels inclined to "play for safety", which means that he hesitates to take a decision.

His second point is that a disproportionately large emphasis is placed by audit officers on minor or inconsequential matters while examining the activities of Government departments. Instead of making a broad examination of how the sanctioned funds have been spent, and of arriving at a finding whether the results achieved are proportional to the total expenditure incurred, one comes across in practically every audit report (these are duly submitted to the Public Accounts Committee of the appropriate legislature) a formidable list of petty infringement of the rules of the so-called financial propriety. In the discussions that follow, whether in the Public Accounts Committee or in the general assembly of the legislature, mountains are made of these molehills of infringement. This "increases the timidity of public servants at all

levels, making them unwilling to take responsibility for decisions, forcing decisions to be made by a cumbersome process of reference and counter-reference in which everybody finally shares dimly in the making of every decision, not enough is got done, and what gets done is done too slowly."

This system of financial control paves the way for interference by the higher hierarchy of officials. The so-called "Secretariat" sits unduly long over proposals submitted by the "Directorate" (which is the real executive body), and it is a familiar phenomenon to see files being shunted backwards and forwards between the two organisations, on the ground that "Finance" cannot, or would not, agree to some minor item in the proposals. Moreover, the very fact that the "Secretariat" is "above the Directorate" tempts the officers in the former organisation to throw their weight about and to interfere in matters which should be left to the latter. Behind this is the theory that it is the Secretariat which constitutes the Government; the Directorate is a mere agent.

Interference by Parliament

Finally, the question of interference by Parliament. Apart from the intrusions which are resorted to in connection with the examination of audit reports, there is an almost congenital suspicion in the minds of the legislators about the honesty and efficiency of Government officials. This suspicion is voiced in interpellations inside legislatures, in public speeches and in private discussions. Such interference is often justified on grounds of democracy and good government. Not infrequently, the lapses of a few are magnified into valid arguments for Parliament acting "as the keeper of the nation's conscience."

Nobody who has anything to do with the Government would dispute the general thesis of Dr. Appleby, namely, that the execution of development programmes is unduly delayed (and sometimes even prevented) by the curious system of checks and balances inside the administrative machinery. The system has clearly outlasted its usefulness. It requires a thorough overhaul, now that the avowed objective of the State is to promote rapid development in the quickest possible time. The successful establishment of a welfare State demands greater "production" (the term is used in a very broad sense) no less than better "distribution".

There is a strong case for the delegation of authority to officers at various levels. One may not agree entirely with Dr. Appleby that the Comptroller and Auditor-General is today "a primary cause of a widespread and paralysing unwillingness to decide and to act", but it should be possible so to remodel the administrative machinery as to make particular officers or Directorates responsible for the successful implementation of specified programmes within specified periods. They should, therefore, be given the widest possible discretion to act (within the framework of the Government's general policy) and be provided with the requisite funds, to be spent as they deem fit in the execution of the programmes. Their performance should be evaluated, whether by audit or by Parliament, only at the end of the specified periods, and entirely by the results achieved.

It is not denied that, under this arrangement, mistakes would sometimes be made; even the public funds may be occasionally misspent. But against these risks, one should consider the benefit which would accrue to the country by the quick implementation of programmes and projects. This is absolutely essential for the operation of public industrial and commercial enterprises which must have greater autonomy, and the principle of "judging by results" should be applied to them more faithfully than has been done so far.

Public Enterprises

Slowly, the Government appears to be realising the need for renouncing some of its powers in the matter of day-to-day administration of public enterprises. The present pattern of organisation of these enterprises is a proof of this realisation, though not much in the direction has been done. Another visiting expert, Professor J. K. Galbraith, remarked a few months ago that "the need for such delegation (of powers) has not yet been fully accepted in India". In spite of the fact that the pattern of management follows the joint-stock model of private enterprise, the principle is often modified in practice. "The high public officials on the Boards of the new corporations tend to become a channel for approving and checking management decision. In the end, the public official tends to become a link in a chain of command running from the management of the corporation, so-called, to the Minister. The corporate form thus becomes merely a façade for an autonomy that has ceased to exist."

Unfortunately, this is still the case. Both Parliament and the Secretariat are paying mere lip service to the principle of power delegation. There may have been historical reasons for being over-watchful, but that attitude is out of date and the administrative machinery must be adapted to the changed requirements of the present day. Secondly, the very fact that the country does not have any great fund of administrative and managerial talent emphasises the need for greater delegation at all levels, for only in this way can the most effective use be made of the country's limited administrative manpower.

INDIAN COPPER CORPORATION LIMITED

CHAIRMAN MR. J. F. E. d'A. WILLIS'S SPEECH

Addressing the Thirty-second Annual General Meeting of the above Company held at the Royal Exchange Hall, Royal Exchange, Calcutta, on Wednesday, the 12th September, 1956, at 11-30 A.M., the Chairman Mr. J. F. E. d'A. Willis, O.B.E., said:—

The results achieved, as you will observe from the Profit and Loss Account, far exceed those for the previous year which have hitherto constituted a record in the annals of the Corporation and are directly attributable to the consistent rise in the world price of copper. The maintenance of a high production standard and satisfactory despatches also played an important part in achieving these results. Although these high world prices for copper continued into early 1956, there has since been a rapid decline to approximately two-thirds of the peak reached.

ACCOUNTS.—Before proceeding to a detailed survey of the accounts, I would draw your attention to a change which has been made this year in the grouping of the Fixed Assets in the Balance Sheet. On this occasion those items which are allowed for statutory depreciation have been amalgamated, while Mining Rights and Permanent Works, on which depreciation is not allowed at present, continue to be shown separately.

The profit for the year, before providing for taxation, depreciation and reserves amounted to £1,474,804 as compared with £898,382 in 1954. Provision for taxation at £,083,046 includes £47,424 for taxation on the dividend and bonus for the year 1954 paid in 1955, and on the interim dividend for 1955 paid in February 1956, together with a provision of £47,424 for taxation on the proposed final dividend and bonus for the year 1955.

Full provision has been made for depreciation and £200,000 has been allocated to General Reserve as against £150,000 last year. Although the liquid resources of the Corporation are at present satisfactory, further heavy capital expenditure is anticipated during the next few years in order to develop the mine.

After making these provisions there remains a sum of £416,758 to which has to be added £111,715 brought forward from last year, giving a total of £528,473. Out of this your Directors are pleased to be able to recommend the payment of a final dividend of 10% and a bonus of 25%, both free of income tax which, together with the interim dividend of 10%, absorbs £411,390 leaving £117,083 to be carried forward to next year.

With the rapid decline in the world price of copper, the results for the current year, although so far satisfactory, are unlikely to approach those for 1955.

In order that the Issued Capital of the Company might be brought more into line with the Capital employed in the business, an application for the capitalisation of a portion of the reserves of the Company was submitted to the Government of India and Her Majesty's Treasury, United Kingdom. An issue of one unit of stock for each two units held has since been sanctioned.

COPPER LEASES AND OPERATING RESULTS.—A detailed review of the year's operations is given in your General Manager's Report, which may be seen during office hours at the Company's Head Office. The production of refined copper at 7,281 long tons was a record in the Corporation's history. Despatches were good and operating costs satisfactory, although slightly higher than the previous year.

DEVELOPMENT.—Lateral development was again restricted, but development in depth continued satisfactorily.

ORE RESERVES.—Although the estimated reserves now stand at 3,330,090 short tons as compared with 2,369,286 short tons at the end of the previous year, this is considered satisfactory in the circumstances of restricted lateral development. Good progress is being made with the development in depth, which should eventually provide extensive lateral development, resulting in a substantial increase in ore reserves.

SALES.—In spite of the high price of copper the demand was good and prices increased accordingly. The demand for brass sheets, however, remained steady with a less spectacular rise in price. The average selling prices of the Company's products during the year, as compared to the previous year, were as follows:—

	1955	1954
Copper Ingots	£309	£233 per ton
Rolled Brass	£245	£230 " "
Yellow Metal Circles	£266	£241 " "
Rolled Copper	£337	£288 " "

KYANITE.—The export of this ore continued to be unrestricted, which permitted larger despatches amounting to 19,234 tons as compared to 12,012 tons in the previous year. The demand in world markets was satisfactory and the export price maintained at approximately £20 per ton F.O.B. Calcutta.

The civil suit brought by the Bihar Government against the Corporation for alleged breaches and forfeiture of the lease, claiming Rupees One Crore damages, together with the civil suit brought by the Company against the Bihar Government for specific performance to renew their lease which expired on the 31st January, 1955, were made analogous and came up for hearing in the Subordinate Judge's Court, Patna during August, 1955. The hearing of the case was completed in early February, 1956 and judgment

prepared and is already well advanced. This expansion programme is aimed at increasing considerably the present output of the Mines and whilst no immediate results can be anticipated, it is hoped, provided the results of the present exploration are satisfactory, that by the end of the present Plan your Company will have substantially contributed towards making India less dependent on imports of this important metal.

During the year under review considerable development in depth has been effected in the existing Mosaboni Mine, utilising the newly constructed Circular Shaft to which my predecessor referred in his address last year. Development in depth on the scale at present envisaged will permit of extensive lateral development, but only to the extent as will counteract the diminution of ore reserves at the adjoining Badia Mine whose life is limited. Any expansion in output, therefore, must be derived from other areas and it is with this in mind that prospecting on an extensive scale is in progress to the north of the present working area.

With the Government of India's recent industrial policy announcement, it is satisfactory to note that existing industries in Schedule A, which includes copper, will be permitted to remain in the Private Sector and that this does not preclude their expansion.

STAFF.—A very high standard of efficiency has again been maintained both at the Mines and the Works and our thanks are due to all members of the Staff for the excellent service they have rendered to the Corporation.

Completely at ease in one of Pan American's Super Stratocruisers to the U.S.A.

RELAX — you're on the World's Most Experienced Airline

Enjoy yourself. You're surrounded by comforts and services unmatched anywhere in the air. Luxuries that are solidly backed by an unequalled record of air pioneering and accomplishment.

You're flying with the only airline that has made over 56,000 Atlantic crossings, over 35,000 Pacific crossings and 2,500 Round-the-World flights.

Pan American has carried 13 million passengers overseas in dependable speed and comfort—has flown over one billion miles overseas—and has 1200 pilots who have flown over one million miles each, 100 who have flown over three million miles.

This record is unmatched by any airline anywhere. So next time, choose Pan American—the only airline that gives you the priceless advantage of Round-the-World experience on every Tourist and First-class flight.

THE STRUCTURE OF BRITISH VEHICLE INDUSTRIES

NEW DEVELOPMENTS IN AIRCRAFT, AUTOMOBILES AND SHIPBUILDING

(This is the fourth of a series of articles written by our New Delhi correspondent on the basis of a recent tour of Europe).

A COMPLETE motor car or an aeroplane, contrary to the general belief in India, is not manufactured under any one roof in Britain or elsewhere in Europe, but a large number of industries are concerned in the process. In Britain, they come under a general name of the vehicle industries which include shipbuilding, motor vehicles, aircraft and the railway locomotive-building industries. In size and value, the vehicle industries are topped by the automobile industry, which consists of the manufacture of cars and commercial vehicles other than tractors.

On the production side, some of the new assembly plants in Britain, electrically-controlled and using the minimum of labour, may stand comparison with similar plants anywhere in the world for efficiency and reliability. The industry is located mainly in the Midlands, in London and in south-east England, but is represented in most regions. The motor vehicle producers may be divided into four main groups: (1) the "Big Five", which control between them 12 establishments producing over 90 percent of the output of cars and light vehicles; (2) specialist producers of cars; (3) specialist producers of cars and commercial vehicles; and (4) manufacturers of commercial vehicles excluding the "Big Five" and specialist producers. The largest firm in the first category, the British Motor Corporation, was formed by a merger of the Austin and Nuffield Companies in 1952, with the object of obtaining economies and standardisation. With assets totalling £91 million, the British Motor Corporation is the fourth largest motor manufacturing group in the world, representing some 37 percent of the British output of cars and commercial vehicles. Capital expansion plans involving more than £120 million over the next five years were announced by the leading manufacturers in October, 1954.

The principal trade association in the industry is the Society of Motor Manufacturers and Traders (S.M.M.T.), founded in 1902, which holds in London a motor exhibition annually and a commercial motor exhibition every two years. Research is carried out in Lindley, Warwickshire, by the Motor Industry Research Association, an autonomous body founded in 1946 and partly financed by the Department of Scientific and Industrial Research, but mainly by the industry and the S.M.M.T.; and also by D.S.I.R.'s Mechanical Engineering Research Laboratory in East Kilbride, Scotland.

Shipbuilding Industry

Shipbuilding is essentially an assembly industry, even for the ships it builds and repairs: it also

manufactures a very wide range of products for other industries. The U. K. economy is well adapted to meet this industry's requirements. In addition to the highly developed steel industry, it contains a wide variety of other industries capable of supplying the numerous components required. The shipbuilding industry consists of three types of establishments: (1) shipbuilding yards concentrating on the production of new ships; (2) shipbuilding yards which, in addition to new work, also undertake ship repairs and conversions; and (3) ship-repairing establishments. Some new shipbuilding establishments have their own marine-engine building shops. The number of firms engaged in shipbuilding is very large. About half the total output of new ships is, however, concentrated in the hands of about a dozen firms.

Over three-quarters of the total tonnage of ships built in U. K. yards come from the four main areas; namely, (1) the banks of the river Clyde in Scotland (where the *Queen Mary* and *Queen Elizabeth* were built in the interwar years); (2) the north-east coast of England—along the lower reaches of the rivers Tyne, Wear and Tees, and at West Hartlepool; (3) the north-west coast of England—on the river Mersey and at Barrow-in-Furness; and (4) Belfast, in Northern Ireland, where the largest individual shipyard is situated, and where the *Southern Cross* was launched in 1954.

In each of these areas there is capacity for building warships and all types of merchant ships from large passenger liners and tankers to small sea-going ships such as coasters and cross-Channel steamers. Ships are also built in the Southampton area, in the Isle of Wight and along the estuaries of the rivers Forth and Tay, while smaller craft—such as fishing vessels, yachts and barges—are built at numerous places along the coast. Repair yards and dry docks are situated in all the great ports, and there are important repair facilities in all the main shipbuilding areas. Some of the principal trends in U.K. shipbuilding during recent years are summarised below:

(a). Since the war, electric welding has become widely adopted as the standard method of construction, and the prefabrication of large sections of the ship has become a normal practice.

(b). Steel has been the chief construction material for shipbuilding since the end of the nineteenth century. A beginning has, however, been made in the use of aluminium alloys for superstructures. At the same time, plastics and bonded plastics and alloys are being employed increasingly in place of wood in interior construction.

(c). Oil has rapidly replaced coal as a source of power for ships. The amount of coal-fired tonnage in the U.K. merchant fleet has fallen to less than 1½ million tons—7½ percent of the total.

(d). The steam engine is giving way to the internal combustion engine as the normal method of propulsion. In particular, diesels are being used extensively for the smaller trawler and coaster vessels, medium-sized cargo vessels and liners, and oil tankers (except the largest). In addition to diesel developments, U.K. scientists, engineers and shipbuilders have carried out some pioneer work

on the practical application of other systems of propulsion, namely gas turbines. In 1952 the first crossing of the Atlantic by a gas turbine vessel was made by the U.K. tanker *Auris*. For the larger oil tankers, cargo vessels and passenger liners, steam turbine engines with higher steam pressures and automatic feed control systems continue to predominate.

(e). Demand has tended to favour medium-sized ships rather than giant vessels. Important postwar launchings have included the *Southern Cross*—a 20,000-ton one-class passenger liner with engines aft and no cargo space, and the *Vezilla*—a 31,000 d.w. ton steam turbine oil tanker, built under an oil company's £25 million tanker construction programme.

(f). A higher proportion of output has consisted of specialised tonnage. The chief example is oil tankers: between 1947 and 1953 their share of total U.K. production rose from 12 percent to 58 percent. Other examples are whaling vessels, dredgers, ore-carrying vessels, refrigerator ships and bulk sugar carriers.

Newer Aircraft

Confining the U.K. aircraft industry to those establishments which are engaged wholly or mainly in the manufacture and repair of complete aircraft (including gliders, airships and balloons) frames, engines of all types, propellers, undercarriages, and other parts and accessories (except electrical equipment), and which employed more than 10 persons, on the average, during the years, the censuses of production of 1935 and 1951 show that there were 215 such establishments in 1951 compared with 57 in 1935. Total membership of the Society of British Aircraft Constructors is at present about 550, but this includes manufacturers of materials, equipment and components excluded from the census definitions.

The market for gas turbine airliners may be divided into the very long-range market in which the principal aircraft, with which the U.K. industry expects to have to compete, are the U.S. *Boeing 707* and the *Douglas D.C. 8*, and the medium-long-range market. The chief U.K. competitor in the first market is expected to be the newly announced *Bristol 187*. This is expected to carry 130 passengers at a cruising speed of 500 m.p.h., and to be 20 percent to 30 percent more economical on runs ranging between 1,000 and 7,000 miles than the two U.S. types with which it is expected to compete. It will also have the advantage that it will be capable of operating with full load from every class 1 airport in the world all the year round. It will be powered by Bristol *EB 25* turbo-prop engines, and is scheduled to appear in the early 1960s. According to Bristol's chairman, it should be capable of flying London-San Francisco non-stop, and to Australia with two stops. There is a possibility that when the project is further advanced, joint production by the Bristol Company and the Canadian *Canair* and Canadian divisions of the U.S. General Dynamics Corporation, may be considered.

For somewhat shorter ranges, Britain is developing a whole bevy of competitors: the *Viscount*, which has already proved an outstanding success and the latest version of which, the *810-840*, due for delivery in 1958, should remain competitive for at least 10 years; the *Comet*, the more powerful longer-ranged version of which, the *Comet IV*, at present being developed, should restore this aircraft to the outstanding position from which accidents associated with its advanced nature had temporarily removed it; the *Britannia*, a later version of which is likely to be the first aircraft in the world capable of flying London-New York non-stop; and the newly announced *Vickers Vanguard*, considerably larger than the *Viscount*.

Feeder Planes

U.K. aircraft manufacturers are making determined attempts to solve one of the biggest of the current feeder airline problems—the replacement of the *D.C.3*. Many of the world's airlines operating short to medium routes are using *D.C.3*'s, some of which have now flown more than 40,000 hours. Above all its other qualities, the *D.C.3* or its military variant, the *Dakota*, has been available at artificially low prices, going down after the second world war to only a few thousand pounds sterling. Operators nowadays do not want merely another *D.C.3*; they want something better and more specialised, an aircraft that will fulfil their own particular requirements more exactly. Some of the more important airline companies have found that the best *D.C.3* replacement is the *Viscount*. As every operator has his own idea of precisely what form the replacement should take, successors to the *D.C.3* must assume many guises.

Appreciably larger than the *D.C.3*, there is the *Herald* for which deliveries are promised in 1957. Already orders for 33 of these 44-seater, high-wing monoplanes have been placed. Its ample power (four *Alvis Leonides* Major engines of 870 h.p. each), good performance and pressurised cabin should appeal particularly to overseas operators who have to contend with high terrain and high temperature, both factors which lengthen the take-off run. It can also be swiftly adapted to freight carrying. The *Aviation Traders' Accountant* approximates more closely to the *D.C.3* in size. It is designed to carry a similar load (up to 36 passengers or freight) from restricted spaces with the added advantage of cabin pressurisation, a tricycle undercarriage and twin turbo-prop engines (the well established *Rolls-Royce Darts*). Smaller than the *Herald*, its provisional price is also lower, and deliveries are expected to begin in 1957 from a new factory in Southend.

Finance in India and Abroad

ECONOMIC TRENDS IN INDIA

ANNUAL REPORT OF RESERVE BANK DIRECTORS

THE continuous rise in industrial production has been one of the heartening features of the Indian economy in recent years, and it may be expected that the process will be assisted forward with the broadening of the industrial base under the second five year plan," observes the Central Board of Directors of the Reserve Bank of India, in its annual report for the year ended 30th June, 1956. The report says that the expansionary effect on money supply of deficit financing of the order of Rs. 1,200 crores, proposed for the plan outlay in the public sector during the period of the second plan, and of the increase in bank credit and in the Reserve Bank's lending operations, will be only partly neutralised by the withdrawal of sterling balances. If, however, production, particularly of foodgrains and other essential articles, expands at a satisfactory rate, and the targets of taxation and borrowing are achieved, there may not be a serious threat to financial stability. Referring to the large requirements for imports of machinery and equipment during the second plan period, the report points to the urgency of export promotion. A policy of maintaining buffer stocks, assisted by the warehousing programme, says the report, should help to moderate fluctuations in agricultural prices. In this context, the procurement of larger supplies of agricultural commodities from abroad will acquire added significance.

The following are some of the highlights of the report. Money supply with the public (excluding State Governments' deposits with the Reserve Bank) during the year under review increased by Rs. 214 crores, or by 10.8 percent, to Rs. 2,191 crores. This was mainly due to deficit financing by the Government and the rise in bank credit. Exchange banks showed greater interest in the bill market scheme, partly because of the higher cost of borrowing abroad. Steps were taken to ensure a closer surveillance of bank credit for financing trade in important commodities, shares and debentures. On 17th May, 1956, the Reserve Bank asked banks to refrain from excessive lending against commodities and from assisting the speculative hoarding of stocks.

Market Borrowings

Aggregate net market borrowings during the first plan period exceeded the plan target of Rs. 115 crores by Rs. 62 crores. The net absorption of securities by the market during the first plan period, taking into account sales of securities from cash balance investment accounts and by the Reserve Bank from its portfolio, has been even larger, being of the order of Rs. 250 crores. Total collections of small savings, at Rs. 235 crores, have also exceeded the original plan estimate by Rs. 10 crores. The capital market maintained the distinct improvement noticed last year. The gilt-edged market displayed remarkable stability and strength throughout the year. The equities market also remained buoyant during the greater part of the year. There was brisk activity in the new issues market; while precise and complete data on capital issues for the private sector are not available, the total of new issues of Rs. 1 crore and over each was about Rs. 20 crores during 1955-56, as compared with about Rs. 16 crores in the previous year.

The overall balance of payments for the year July 1955-June 1956 may show a deficit on current account of Rs. 20 crores, after taking into account receipts of official grants, as against a surplus of Rs. 23 crores in the preceding year. Foreign trade was higher by about 6 percent than in the previous year.

According to the report, the year under review, which marked the close of the first five year plan, was characterised by a further rise in development expenditure and industrial production, expanding money supply and bank credit, successful Government borrowing and a buoyant capital market and also a continuous rise in prices. The principal economic indicators over the past five years broadly show that India has been able to combine in a substantial measure economic development with financial stability. Among the main features of this phase of economic growth may be mentioned the increasing outlays of the plan, the gains in industrial and agricultural production, the balance in the external payments position as a whole, and a better flow of savings which imparted strength to the capital market. Judicious monetary and credit policies pursued during this period also contributed to the total result. The report, however, points to the need for "a careful and continuous assessment of the current economic situation with a view to appropriate adjustments in the pace and pattern of planned development and in fiscal and monetary policies from time to time".

Trends in Production

Industrial production during 1955-56, on the basis of data for the first ten months, recorded a rise of 8 percent over the corresponding period of the previous year with almost all major groups of industries in the public as well as private sectors sharing in the rise. The aggregate levels of agricultural production have remained relatively stationary since 1953-54, when a record level of agricultural output was attained. The revised foodgrains target of 81.5 million tons by 1960-61, accepted at the recent Conference of State Agriculture Ministers, represents a 25 percent increase over the current level of 65 million tons, as against a 15 percent prescribed in the second plan. If such

an appreciable increase should be attained, it would make a significant contribution to stability in the economy against the inflationary repercussions of deficit financing.

Rising Prices

Prices rose almost continuously during the year with the general index of wholesale prices recording a rise of 10.7 percent, as against a net decline of 10 percent in the previous year. The price rise was not, however, general or uniform; it was mostly confined to agricultural commodities and semi-manufactures, the prices of industrial products remaining relatively steady. Since agricultural commodities and semi-manufactures were precisely the groups that experienced sharp declines in the previous year, the rise in prices during the year could be considered partly as a corrective to the previous fall. However, the continued price rise is attributable mainly to the decline in agricultural output, especially of foodgrains in 1955-56, larger exports of certain raw materials and increase in demand resulting from the large increase in investment expenditure and rise in incomes. As for the longer-term prospect, while the increase in developmental outlay, met in part by deficit financing, may be expected to exert an upward pressure on prices, increased agricultural and industrial output will be an important counter-vailing factor. In this context, the procurement of larger supplies of agricultural commodities from abroad will acquire added significance.

Expanding Money Supply

Money supply with the public (excluding State Governments' deposits with the Reserve Bank) increased by Rs. 214 crores during the year under review, or by 10.8 percent, to a total of Rs. 2,191 crores. The net rise over the entire first plan period (April 1951-March 1956) was Rs. 206 crores. The increase in money supply during 1955-56, of which currency accounted for about four-fifths, was mainly due to deficit financing by the Government and the rise in bank credit. The rise in money supply has to be viewed in relation to the expansionary trends in production, industrial and agricultural, the general level of economic activity and the steady extension of the boundaries of the money economy. However, recently the rise in money supply has tended to outpace the rise in production levels and economic activity.

Bank credit during the year recorded a sharp rise and contributed to a large expansion of money

When you have a journey to make, think first of flying. It's the fastest way to travel, and often the only way to get there in time. You escape all the tedium of a long journey—flying is so quick, convenient, and wonderfully comfortable.

INDIAN AIRLINES CORPORATION

4, Chittaranjan Avenue, Calcutta. Telephone: 23-5141 (6 lines)

supply. While scheduled bank credit increased by Rs. 149 crores over the year to Rs. 739 crores, as compared with a rise of Rs. 60 crores in 1954-55, the net deposit liabilities of scheduled banks increased much less than bank credit during the year, by Rs. 98 crores. The small rise of Rs. 38 crores in bank's resources in the busy season of 1955-56, as against a credit expansion of Rs. 180 crores, led to larger borrowing from the Reserve Bank, which increased by Rs. 67 crores, of which Rs. 46 crores were under the bill market scheme. Borrowings from the Reserve Bank outstanding at the end of the year were Rs. 53 crores, or Rs. 36 crores higher than a year before.

Government Finances

During 1951-56, the combined deficit of the Central and State Governments, as measured by the actual net addition to the Treasury bill holdings of the Reserve Bank and the draft on Government cash balances, would have been somewhat less than Rs. 400 crores. Plan outlays rose from Rs. 259 crores in 1951-52 to about Rs. 600 crores in 1955-56. The aggregate tax revenue of Central and State Governments was Rs. 635 crores in 1950-51 (pre-plan base year) and formed 6.5 percent of the national income; in 1955-56 aggregate tax revenue was of the order of Rs. 735 crores, which may constitute a slightly higher proportion of national income than in 1950-51. The projected level of plan outlays in the public sector under the second plan, averaging Rs. 960 crores a year, would involve a considerable increase in the tax effort of the Central and State Governments, and the fullest mobilisation of private savings through various borrowing schemes. Aggregate net market borrowings during the first plan period have exceeded the plan target of Rs. 115 crores by Rs. 62 crores. The net absorption of securities by the market during the five years of the first plan, taking into account sales of securities effected in recent years from the cash balance investment accounts of Central and State Governments and by the Reserve Bank from its portfolio, has been even larger, being of the order of Rs. 250 crores. Total small savings collections, at Rs. 225 crores, have also shown an improvement of Rs. 10 crores over the original plan estimate. The estimated net borrowings from the public during the five years, 1956-61, placed at Rs. 1,200 crores, comprising broadly Rs. 700 crores from market loans and Rs. 500 crores in small savings, would doubtless be facilitated by the substantial measure of the proposed deficit financing. However, since all the plan estimates are based on the assumption of constant (1955-56) prices, the borrowing programme, like the taxation programme, should be more appropriately considered apart from the influence of budgetary deficits. The technique of market borrowings for the Central and State Governments is being continuously reoriented to fit in, on the one hand, with the greatly increased requirements of developmental expenditure and, on the other, with the changing conditions of the market. During the year under review, therefore, it was decided to revert, after the expedient tried in 1954-55 of a combined Central and State "tap loan", to the normal practice of first issuing a Central loan and then the loans of the various State Governments. Accordingly, the 31 percent National Plan Bonds—Second Series—1955, for the Central Government, were floated on 1st July, 1955, at an issue price of Rs. 98-8 giving a redemption yield of 3.68 percent, were followed by two successive issues of 4 percent State loans, 1957, in August. The technique of issuing a number of separate loans, was further developed in the Central loans issued in July 1956. The Government offered loans of three maturities, i.e., six, 11 and 18 years.

Balance of Payments

The overall balance of payments for the year, July 1955-June 1956, may show a deficit on current account of the order of Rs. 20 crores, after taking into account receipt of official grant, as against a surplus of Rs. 23 crores in the preceding year. During the first plan period, the payments position on current account showed a net deficit of Rs. 27 crores, taking into account receipt of official grants aggregating Rs. 96 crores. Withdrawals from sterling balances during the first plan period have been about Rs. 140 crores, as against Rs. 290 crores originally envisaged. In view of the large requirements for imports of machinery and equipment during the second plan period, besides a draft of Rs. 200 crores on sterling balances, external assistance has been assumed at as high a level as Rs. 800 crores. Under the circumstances, the urgency of export promotion cannot be over-emphasised.

The second plan starts with the advantage of the accumulated experience and the overall stability achieved during the first plan period. An important aspect of the total problem will be to step up effectively investment and savings, output and employment, without unduly affecting price stability. Total investment in the economy, estimated to have been around Rs. 3,100 crores during the first plan period, more or less equally divided between the public and private sectors, is planned to rise to Rs. 6,200 crores during the second plan, of which public investment would form approximately 60 percent. The expansionary effect on money supply of deficit financing of the order of Rs. 1,200 crores envisaged in respect of plan outlay in the public sector during the period of the second plan and of the increase in bank credit and in the Reserve Bank's lending operations, would be only partly neutralised by the withdrawal of sterling balances. There may not, however, be a serious threat to financial stability, provided production, particularly of foodgrains and other essential articles, expands at a satisfactory rate and the targets of taxation and borrowing are achieved.

The establishment of the State Bank of India & China has declared an interim dividend of 7½ percent, actual, subject to income tax.

With mutual understanding, commonness of purpose and co-ordination of action between the Government of India, the Reserve Bank and the State Bank, there is little doubt that the latter can complement the functions of the Reserve Bank in an essential sphere, and emerge as a powerful instrument of public policy, including that of planned development, while at the same time maintaining the highest standards of commercial banking.

THE CALCUTTA MONEY MARKET

EASIER TREND PREVAILS

Wednesday, 12th September.

CONDITIONS in the money market are now distinctly easier and it is suspected in banking circles that the lowest point of the slack season has now probably arrived. A good deal of the advances made to the sugar industry are back with the banks, while the requirements of the jute industry and those on account of grain and seeds are much reduced. The interbank market has been tight during this week, but unaccountably easier today. It is suspected that the present tightness has been caused by the impending income-tax payments which are due for settlement this week-end. The call rate remains unchanged at 3½ percent.

The bill market has been quiet. A few gunny documents have come to hand, but tea bills are in short supply. Demand for remittance has been normal. Sterling is reported to be a little stronger on general expectations of settlement of the Suez Canal issue. There has been a certain amount of short-covering in New York.

Bullion was firm on good support though top gains were pared at the close on profit-taking. Silver declined from the previous week's level of Rs. 174-1 to Rs. 173-13, quoted today. The rate for ready delivery was quoted at Rs. 174-1. The London price was unchanged at 78½d. The price of foreign silver in New York remained the same at 90½ cents.

Gold was easier in sympathy with silver and the price fell from Rs. 103-9 to Rs. 103-6. The sovereign at Rs. 67-12 showed a loss of 2 annas.

During the week ended 7th September, 1956 Government of India Treasury bills for Rs. 29,70,00,000 were sold in favour of the Reserve Bank of India.

A rise of Rs. 15.67 crores to Rs. 1,440.18 crores in notes in circulation was the notable feature of the return of the Reserve Bank of India for the week ended 7th September, 1956. The total note issue was Rs. 72 lakhs lower at Rs. 1,456.43 crores. Notes held in the Banking Department consequently fell by Rs. 16.38 crores to Rs. 16.25 crores. Foreign securities declined by Rs. 9.94 crores to Rs. 596.74 crores, presumably due to a transfer to the Banking Department, in which foreign balances held abroad increased by Rs. 9.28 crores to Rs. 34.22 crores. Deposits of the Government of India declined by Rs. 6.91 crores to Rs. 58.86 crores, but other Government accounts were Rs. 13.82 crores higher at Rs. 16.73 crores, following State loan subscriptions. Balances of commercial banks at Rs. 56.16 crores showed a decline of Rs. 40 lakhs. Investments rose by Rs. 1.69 crores to Rs. 51.81 crores. Other loans and advances increased from Rs. 52.16 crores to Rs. 74.51 crores, of which advances to scheduled banks against usance bills totalled Rs. 24.49 crores (Rs. 22 crores). These advances amounted to Rs. 238.47 crores since 1st January, 1956. Ways and means advances stood at Rs. 5.32 crores against Rs. 8.06 crores.

The return of the State Bank of India for the week ended 31st August, 1956, shows a rise of Rs. 2.43 crores in total deposits to Rs. 229.07 crores. Investments in Government securities and other authorised investments remain unchanged at Rs. 94.73 crores and Rs. 11.45 crores, respectively. Advances, including loans, cash credit and overdrafts, and bills discounted and purchased, have increased by Rs. 45 lakhs to Rs. 124.22 crores. Cash and balances are, in consequence, shown at Rs. 18.06 crores, or Rs. 31 lakhs less.

The statement of the position of scheduled banks for the week ended 31st August, 1956, discloses Demand and Time liabilities at Rs. 654.74 crores (Rs. 17.03 crores on account of borrowings from banks) and Rs. 461.32 crores (Rs. 2.90 crores), compared with Rs. 654.47 crores (Rs. 17.01 crores) and Rs. 461.90 crores (Rs. 3 crores), respectively, in the previous week. Cash and balances with the Reserve Bank have increased by Rs. 5 lakhs and Rs. 95 lakhs to Rs. 37.58 crores and Rs. 51.67 crores, respectively. There is a drop of Rs. 60 lakhs in investments to Rs. 361.42 crores. Advances and bills discounted, at Rs. 735.14 crores, show a decrease of Rs. 87 lakhs. The ratios to total liabilities of cash and balances and of advances and discounts are, in consequence, shown at 8 percent and 65.9 percent, against 7.9 percent and 65.9 percent.

The CHARTERED BANK OF INDIA, AUSTRALIA & CHINA has declared an interim dividend of 7½ percent, actual, subject to income tax.

Stocks and Shares

MARKET BETTER AFTER SHAKE-OUT

INVESTMENT SHARES STEADY: ALL STATE

LOANS FULLY SUBSCRIBED

Wednesday Evening.

THE share market is in a more cheerful mood after last week-end's shake-out. The Finance Minister's threat that increased excise duties might be imposed on cloth if prices did not come down, helped the bears depress the main speculative issues. The West Bengal Chief Minister's efforts to raise subscriptions for the State loan has also taken a good deal of money from the market. Prices have now recovered some of the ground they lost and Indian Irons, which were at one time quoted down to Rs. 34-14 are now back to Rs. 35-10. The feeling in the market is better, but the undertone remains uncertain. Operators are also anxious about the new Finance Minister's apparent determination to use excise duties wherever these are necessary to keep a check on inflation.

Investment shares have been better during the past week. Jute shares have benefited from the publication of a more promising set of jute goods stock figures. Coals have been steady but tea scrip quotations have tended to shade following the announcement that the end-August crop is running at about 12.75 million pounds greater than during the same period last year. Engineering shares have been fully steady and the feeling in this section has benefited from the fact that the two counters in the Mundhra group, Jessops and Richardson & Cruddas, have been marked up on interested buying. Miscellaneous share prices have been well held. The Government securities market has remained easy. The new State loans have now all been subscribed, but it is rumoured that some had a struggle to find buyers. The reduced market activities of the life insurance companies have been badly felt with these State loans.

Details of the week's trading follow:

Sellers continued to predominate in the gilt-edged market and prices were marked down further. Three percent Conversion Loan improved by two annas to Rs. 75-7, but closed easier at Rs. 75-8. In short-dated loans, 3% Loan 1957 was unchanged at Rs. 99-12 as was 3% 1958 at Rs. 99-9. In the medium-dated group, 3% 1959-61 was on offer at Rs. 98 and both 3% 1963-65 and 1964 were again marked back by two annas to Rs. 94-10 and Rs. 94-11 respectively; 2½% 1960 changed hands at around Rs. 96-6 but 2½% 1962 was marked down to Rs. 93-14. National Plan issues were weak with 3½% 1961 on offer at Rs. 99-2 and 3½% 1964 at Rs. 98-8; 3½% 1965 was taken lower to Rs. 98-6 and 3½% 1967 had sellers at around Rs. 98-7. Among long-dated issues 3% 1966-68 shed two annas at Rs. 93-2 and 3% 1970-75 again recorded a sharp fall to Rs. 89-10; 3½% 1974 turned sellers at Rs. 98-7-5. State loans continued depressed and once again practically no business was reported.

Very little business was reported in preference shares during the week. In the miscellaneous group, Alkali & Chemical were done at Rs. 104, Bowreah were marked at Rs. 106-8, Calcutta Electric at Rs. 11-8 and Godfrey Phillips at Rs. 68-12. There were buyers of Indian Aluminium at Rs. 82 and Indian Iron & Steel at Rs. 108. Rohtas Industries "B" were placed at Rs. 64-8 and New Victoria Cotton at Rs. 5-10. Only two transactions were reported in jute preference shares, namely, in Lansdowne at Rs. 80 and New Central at Rs. 105-8.

In the banking section, Allahabad Bank contributory were offered at Rs. 104 and Hind Bank were marked at Rs. 38. United Commercial were unchanged at Rs. 57-8 and Punjab National at Rs. 56.

No transactions were reported in railway shares during the week. Cotton shares were depressed with Dunbar losing further ground to Rs. 275. Elgins were marked back to Rs. 27-8 and Kesoram to Rs. 18. Cawnpore Textiles were unchanged at Rs. 8-14 as were Bengal Nagpur at Rs. 9-10.

In the coal section, there was a large turnover in Burrakur which fluctuated between Rs. 15-5 and Rs. 16-6; tonight's closing quotation is Rs. 15-11. Bengal were unchanged at Rs. 536 as were Amalgamated at Rs. 23 and Equitable at Rs. 30-8. Borra improved from Rs. 24-4 to Rs. 24-8 as did Central India from Rs. 7-6 to Rs. 7-9. Western Bengal were marked at Rs. 6-9 ex-dividend. New Manbhoom were required for at the higher rate of Rs. 11 against last week's opening price of Rs. 10-3. Katras Jherria improved from Rs. 61 to Rs. 62 while New Beerboom were marked back from Rs. 19-12 to Rs. 19-8. Standard were fairly steady at around Rs. 23-12. Seepore met with some enquiry and improved from Rs. 29-8 to Rs. 29-14 as did East Indian from Rs. 31-14 to Rs. 32-6. Karanpura Collieries were well maintained at Rs. 118.

Following the sharp reduction in jute goods stocks at the end of August by 15,800 tons, there was an upward movement in the prices of finished goods which was reflected, in turn, in higher jute share prices. Here is a chart showing representative price movements.

	Opening	Closing
6-9-56	184	185
Rs.	14	19
Anglo-India		
Chitavalas		

Howrah	24 c.d.	24 14 x.d.
India	142	146
Kinnison	179	180
National	24 12	25 13
Northbrook	27	28

Electric supply shares were featureless though there was a slight increase in the volume of business. Benares were taken at Rs. 17-12 while Calcutta were easier at Rs. 13-10 and Patna at Rs. 11-12. Agra were unchanged at Rs. 158 and United Provinces were crossed at Rs. 155-8.

Prices of sugar shares showed little variation. Balrampur were marked at Rs. 7-9 and Belund were shaded at Rs. 12-4 as were Carew at Rs. 9-2. Dyer Meakin Breweries were crossed at Rs. 6 and Durbhanga were marked back to Rs. 22-9.

Weaker advices from Bombay following the Finance Minister's threat to impose additional excise duties if cloth prices did not come down as a result of the latest measures adopted, had a bearish effect on the Calcutta market. The bears were quick to take advantage of the situation and Indian Irons were hammered down at one stage to Rs. 34-14 against the opening price of Rs. 36-2; covering at the close brought a recovery to Rs. 35-10. Beathwaite & Co., ceased to Rs. 30 as did Burn & Co. to Rs. 358 and Bharti Steel to Rs. 19-2. Indian Standard Wagon were better at Rs. 205 as were Textile Machinery at Rs. 23-11. National Iron & Steel provided the outstanding feature and rose sharply from Rs. 7-13 to Rs. 8-11. Jessops and Richardson & Cruddas were better at Rs. 35-3 and Rs. 25-7 respectively.

In paper, India Paper Pulp reacted to Rs. 25-4 as did Titagur to Rs. 40-2 and Shree Gopal to Rs. 17-12. Orient Paper, after being sold down to Rs. 39-6, recovered at the close to Rs. 39-15.

In cement, Assam Bengal were fairly steady at Rs. 7-4 while Sone Valley were easier at Rs. 8-12. Dalmia Cement were fractionally higher at Rs. 15-2.

In insurance, Indian Trade & General changed hands at Rs. 25, Ruby General at Rs. 5-14 and Triton at the previous quotation of Rs. 160.

The only share dealt in in the shipping section was India Steamship at around Rs. 9-11.

Among miscellaneous industrials, Aluminium Corporation were at one time taken to Rs. 12-12, but closed lower at Rs. 12-7, while Indian Aluminium were unchanged at Rs. 24-14. Assam Match were crossed at Rs. 20-4 and Assam Saws were depressed at Rs. 4-9. Bengal Flour provided a good feature, improving further from Rs. 30 to Rs. 32. Alkali & Chemical Corporation were well maintained at Rs. 22-13 as were Cal

during the period under report. Shipments to Japan fell from 48,811 tons to 20,745 tons due partly to lower raisings and partly to shortage of railway transport. Raisings of manganese ore fell way transport. Shipments of manganese ore fell from 38,720 tons to 29,107 tons. Sales increased from 16,959 tons to 29,107 tons. The directors say that the State Trading Corporation is bound to have a deleterious effect on the company's future. When the Corporation was originally set up, the Government announced that the intention was to conduct trading on a Government-to-Government basis, mainly with communist countries. This intention was soon abandoned however. The State Trading Corporation having been allotted 33 1/3% of the total export quota of ores for the six months ending 31st December, 1956, it is now engaging in ordinary trading and exporting, reports from abroad indicate the unsettling effect this incursion has had on buyers, and in the long run appears detrimental to the interests of the country as a whole.

We publish below the results of the JARDINE HENDERSON group of jute mills for the half year ended last March. The loss of the HOWAN MILLS COMPANY was reduced from Rs. 5.21 lakhs to Rs. 98,491. Bringing in Rs. 11,463, and transferring Rs. 4 lakhs from reserves, there is a balance of Rs. 6,12,973, of which depreciation absorbs Rs. 3 lakhs. The ordinary dividend has been maintained at 4 annas a share, leaving Rs. 57,035 to be carried forward. The directors say that for modernisation the hessian machinery has been erected and is expected to be in full production by the end of August. All sacking units have been received and satisfactory progress is being made with the erection of the new machinery.

The loss of the RELIANCE JUTE MILLS COMPANY has increased from Rs. 4.78 lakhs to Rs. 6.63 lakhs. There is again no dividend, and the debit balance has risen to Rs. 11,72,341. As for the modernisation scheme, the directors comment that the application to the National Industrial Development Corporation for a loan of Rs. 25,00,000, having been accepted in principle, is still under consideration and the final decision is awaited.

The BALY JUTE COMPANY made a profit of Rs. 58,526, against a loss of Rs. 26,512. Bringing in Rs. 15,350 and transferring Rs. 1 lakh from general reserve, there is a balance of Rs. 1,85,303, of which depreciation gets Rs. 50,000. There is again no ordinary dividend. The carry-forward is Rs. 65,302.

The profit of the MOTHOLA COMPANY has declined by Rs. 2.65 lakhs to Rs. 1.43 lakhs. Bringing in Rs. 53,033, there is a balance of Rs. 1,95,963. Reserve absorbs Rs. 50,400 (Rs. 2.75 lakhs). The dividend has been cut from 65% to 50%, including an interim of 10%. The carry-forward is Rs. 70,946. The crop increased by 280 maunds to 6,996 maunds but the average sale price fell from 51.68 annas a lb. to 36.24 annas a lb.

The balance of the KARANPURA COLLIERIES amounted to Rs. 1,47,527 for the year ended last February, after providing Rs. 1.40 lakhs (Rs. 1.04 lakhs) for depreciation, Rs. 32,016 (Rs. 43,500) for taxation, Rs. 47,200 (nil) for tax continuing year, and bringing in Rs. 2,661. The ordinary dividend has been doubled to 5%, leaving a carry-forward of Rs. 6,965. Raisings improved from 131,679 tons to 150,031 tons, and despatches from 133,566 tons to 148,818 tons.

Messrs. Tata Industries Private Ltd., managing agents for the TATA IRON AND STEEL CO. LTD. report that the total approximate production of iron and steel at the steel works in Jamshedpur during August, 1956 was: pig iron 97,800 tons; steel ingots 88,000 tons; semi for sale 18,100 tons; and finished steel 47,900 tons.

BOMBAY PRICES RECOVER ON REPLACEMENT BUYING

MARKET TECHNICALLY IMPROVED

Wednesday Evening.

THERE was a serious setback on the Bombay stock market last week and equity prices tumbled on a broad front due to heavy selling pressure induced by the increased cloth excise duty. Sentiment deteriorated further on fears that the Government would probably introduce some kind of price control if prices were found to increase as a result of increased levies. Suggestions of additional taxation measures to mop up surplus profits of industries were considered additional dampers.

Towards the close, however, some replacement buying helped the recovery of a portion of previous losses, but the undertone continued hesitant. Operators were in a difficult position to take a view considering that the Suez situation had taken a worse turn. In the meantime, reports of companies' working continue to be promising in view of the rapid economic development.

Tata Steels declined to Rs. 196.8, as did Indian Iron to Rs. 35-10 in sympathy. Alcock Ashdown were lowered to Rs. 337.8 and Premier Construction lost at Rs. 104.8. Tata Locomotive declined to Rs. 169 on selling pressure. Larsen and Toubro were on offer around Rs. 18.6.

The mill section was dotted with widespread losses and popular concerns suffered the heaviest falls. Bombay Dyeing dropped sharply to Rs. 637.8 and Century were down to Rs. 557.8. Swadeshi declined to Rs. 251.8 and Kohinoor changed hands substantially lower at Rs. 361. Apollo weakened considerably to Rs. 213.6.

Miscellaneous industrials experienced precipitous declines in sympathy with the general trend. Tata Chemicals touched a bottom of Rs. 19.8, though some replacement buying was seen towards the close. Scindia Steam were neglected at Rs. 19.1, while India Steamship evoked interest around Rs. 9-12 on interested support. Cement and sugar shares showed moderate declines. Associated Cements were taken at Rs. 203.4, as were Digvijay at Rs. 197. Belapur Sugar were transacted at Rs. 249.8 and Walchandnagar Industries came to hand at Rs. 268.2. National Rayon slumped to Rs. 261.8 on long liquidation. Bombay Burmah declined substantially to Rs. 737.8 and B.B. Petrol lost at Rs. 312. Mining shares saw a predominance of sellers, with Sivrajpur Syndicate declining to Rs. 84. Indian Copper, however, steadied to Rs. 7.3, at the close on hardening metal prices. Tata Oil were available at Rs. 55.

Turnover was restricted in banking shares, with Bank of India coming to hand at Rs. 171.8. Central Bank were done at Rs. 52. Insurance shares showed losses on balance, and New India were taken at Rs. 46.8, while Oriental made Rs. 3,650.

THE WEEK'S TRANSACTIONS

LETHARGIC CONDITIONS IN STOCK MARKETS

SELECTIVE SUPPORT FOR INDUSTRIALS

London, 12th September.

BOTH interest and the volume of business have continued at a very low level in the London stock markets over the past week. With sentiment completely dominated by the Suez Canal crisis, there has been a general reluctance to extend commitments, but there has also been an unwillingness to part with good-class shares so that, on the whole, no great movement in prices has been seen. However, when news was received that the Suez talks had ended without success, the markets took a decided turn for the worse on Monday as jobbers marked prices down to discourage selling. This was followed by an equally rapid recovery in the afternoon when it became known that the Egyptian Government had proposed the setting up of a negotiating body representing all users of the Suez Canal. New York failed to respond to this news however, and the London markets have once more relapsed into their previous lethargic conditions. Oil shares have continued extremely sensitive, and with dealers always endeavouring to keep their books level, it has taken little to move prices sharply in either direction. In the space of a few minutes, sharp losses have been turned into considerable gains. The gilt-edged market's overall trend has been towards lower levels, and on Monday, War Loan 3½ percent was again down to its lowest level ever of £68½. Despite dullness of gilt-edged securities, the £5 million New Zealand Loan attracted full subscription and now commands a premium of £½ but other Dominion and colonial issues have tended to ease. The spurt in industrials at the opening of the new account proved short-lived, although certain of the leaders have found support, especially American favourites including Rolls Royce, Hawkers and British Aluminium. Hudsons Bay however have fallen back somewhat. There has been little to assist gold shares and prices have tended to weaken. The visit of the South African Finance Minister to the United States will be followed with more than the usual interest in view of his statement that unless a higher price for gold is forthcoming certain mines are likely to close. Coppers have come under the influence of labour troubles in the copper

belt, but prices have held reasonably steady while other base metals have held well. Movements in rubbers and teas have been restricted.

The Money Market

The credit situation moved against expectations in the money market last week. Discount houses secured the majority of £290 million worth of the Treasury bills which had been offered at the previous tender and planned to take up most of about £60 million of the Trinidad Oil money released on Wednesday. But after very easy conditions early in the week—notably on Monday—the position deteriorated on Wednesday in spite of the Trinidad Oil money release, as some banks were low in funds and the overall supply of credit was insufficient to meet the market's requirements. Conditions remained difficult for the rest of the week. Applications for £290 million worth of 91-day Treasury bills totalled £220,000,000, and were allotted at an average rate of 10½ 4½d. compared with 10½ 6¼d in the previous week. Offerings this week comprise £290 million worth of 91-day bills. The Bank of England return for the week ended 5th September shows that notes in circulation were about £7 million lower at around £1,900 million, and bankers' deposits were about £13 million lower at around £265 million.

Activity on Wall Street

The U.S. Government obligations continued to decline with some touching new lows for the year, and a few coming very near their record lows set during the 1953 bond market slumps. Turnover, however, remained light with the decline reflecting the lack of investment demand. Investment quality corporates displayed a steady undertone with buying centring in new issues. Convertibles worked higher in sympathy with the recent sharp recovery in the stock market. Steels were in the forefront, while gains of a couple of points or more were made. Rails were mixed. In the foreign section, Australians accounted for a good part of the limited activity. Prices moved narrowly either way. Japanese issues were mostly fractionally lower. Germans were mixed, while Italians showed little change.

U.S. Federal Reserve Return

The U.S. Federal Reserve return for the week ended 5th September shows that gold stock rose by \$26 million to \$21,863 million. Foreign deposits rose by \$82 million to \$444 million, while foreign investments rose by \$41 million to \$3,694 million. The Federal Reserve bought \$135 million worth of bills, and \$34 million worth of bills under repurchase agreements. Total discounts and advances rose by \$218 million to \$688 million, while the aggregate excess reserves of member banks rose to \$287 million. The daily average excess reserves of member banks fell by \$49 million to \$448 million, while their daily average borrowings fell by \$139 million to \$796 million. Business loans of the New York city banks rose by \$195 million to \$10,585 million, compared with a fall of \$97 million to \$8,302 million in the corresponding period of a year ago.

Hongkong Gold Firm

The Hongkong gold market was dominated by the Suez developments and the depreciation of sterling against the dollar. After its early softness, the market firmed as the Suez talks reached a stalemate, and no gold arrived from Macao during the period. However, the fact that the carry-over charge still favoured sellers acted as a brake on the advance. The market reached a high of \$(H) 266½ on Saturday, but closed ½ of a point lower. Britain's gold and dollar reserve figures did not affect the market as a decline had been expected. The market is likely to continue firm. The official offtake was 2,710 taels and the unofficial 16,400 taels. Forward contracts were done at \$(U.S.) 37.83 an ounce, c.i.f. Macao. Carry-over charges were 290 cents per 10 taels in favour of sellers.

Indian Manganese Ore Exports

The Indian Government's recent action of imposing export duties on manganese ore of over 38 percent manganese content, has had few repercussions in the open market for Indian 46 to 48 percent ferro-grade manganese ore, according to trade sources. It is believed that no new contracts have been entered into since the new duty was imposed. It is not yet known whether the producers intend to absorb part of the export duty of Rs. 30 a ton applicable to 46 to 48 percent ore, or whether the whole of the duty will be passed on. Trade sources are unwilling to quote until the situation is clearer, but they are inclined to think that the prices are likely to go up eventually.

Steel from Powdered Ore and Coal

A new method of making steel from powdered ore and coal was described by Sir Charles Godeve, Director of the British Iron and Steel Research Association, in the course of his presidential address to the chemistry section of the annual meeting of the British Association for the Advancement of Science in Sheffield recently. It had been the desire of steel-makers for many generations, he said, to develop a direct steel-making process—one which converts ore to low-carbon steel directly. His Association was actively engaged in developing the new process under the name "Cyclosteel". This was still in the early stages, but it had got off to a promising start, and in the preparatory stages they had already made small quantities of very crude steel.

New Delhi

RELEVANCE OF COMMUNIST TECHNIQUES TO INDIAN CONDITIONS

AGRICULTURE UNDER THE CHINESE DICTATORS

(FROM OUR NEW DELHI CORRESPONDENT)

ACCORDING to a recent analysis, the number of outgoings from India in the form of delegations, cultural or otherwise, has shown a large increase. Two delegations recently visited Communist China. Among their members were the Deputy Minister, Mr. M. V. Krishnappa, and the Secretary of the Ministry of Food and Agriculture, Mr. P. N. Thapar. Both have given their impressions of China. The first point which calls for explanation is the value of such delegations to Communist countries. Earlier, a delegation went to Russia and submitted a report. Mr. Krishnappa, in his brief statement, expresses his appreciation of Chinese farmers, "who are better organised and better instructed. I saw the whole nation working very hard to increase production and thereby improve its standard of life. I was specially impressed by the way the Chinese have completely eliminated the natural enemies of crops, such as monkeys, rats, stray cattle, sparrows and other birds. These have either been eaten up or destroyed." Mr. P. N. Thapar, similarly, says that "the Chinese have always been better cultivators. In recent years there has been a marked improvement."

Chinese Methods

The plain issue is whether India is prepared to adopt Chinese methods. Mr. Thapar lays considerable stress on the price incentive for the cultivator. "In China, agriculture has received substantial and steady impetus from the fact that both prices and markets for agricultural products have been guaranteed by the State. Herein there is a lesson for India. We have been evading this most important responsibility under the fear that the problem of stabilising prices is too big for our resources and that even the U.S.A. is finding it difficult. Unlike the U.S.A., and like China, our surpluses are marginal, temporary and manageable. If China can solve the problem, there is every hope that we should also be able to do so."

Mr. Thapar's views are supported by the first progress report on the grow-more-food campaign, in which it was stated that "the cultivators, with their native shrewdness, have not been slow in adopting measures to step up production in a period which was marked by comparatively high prices for foodgrains. It can be safely assumed that, to the extent that prevailing conditions permitted and their resources warranted, they so adjusted their cropping programme as to maximise the production of food crops." Referring to jute, the report said that although the Government had guaranteed minimum prices to jute growers, the higher prices of paddy were too strong for the guarantee to combat the tendency of falling acreage.

Sugarcane is another example of how higher prices have led to bigger acreage. The issue therefore is, why spend enormous amounts of money in grow-more-food campaigns if agricultural production can be regulated by price manipulations? Secondly, what has the Government of India done to yield this powerful weapon, having known its potentialities as early as 1945? Thirdly, what is the price-level which provides an adequate incentive to the cultivator continuously to step up production?

Authoritarian Methods

It would be interesting to know whether Mr. Thapar is prepared to adopt Chinese methods to eradicate hoarding and black-marketing from India. In China, according to the delegation of which Mr. Thapar was a member, the Gestapo system is so thoroughly organised that a doctor in a village who charges a few annas more than the prescribed fees is promptly examined by the police and warned. Against this, Mr. Thapar's Ministry was ineffective in its warning to sugar manufacturers when sugar prices were rising rapidly two years ago. Mr. Krishnappa says that in China stray cattle were eaten up. In some parts of India, there is a ban on the slaughter of even useless cattle.

These delegations do perhaps serve some useful purpose, but it is futile to compare conditions when the real basis for comparison is lacking. The Congress rulers of India claim that industrialisation without tears is possible. Russia and China do not think so. India has thrown away the whip. China and Russia have been making effective use of it. In fact, the whip is an integral instrument of Communist ideology. The question often asked here these days is whether India, after these pilgrimages to Moscow and Peking, is planning to adopt a middle-of-the-road policy—merely a cracking of the whip, for the present. Coming months will furnish the answer.

Cloth Excise Duty

Parliament adopted the Central Excises and Salt (Amendment) Bill last week. In fact, the Bill provided the occasion for the first trial of strength between the new Finance Minister, Mr. T. T. Krishnamachari, and a band of M.P.s who strongly

criticised the new cloth excise duty. Messrs. Gulzarilal Nanda, Khandubhai Desai and Shriman Narayan, who are responsible for pegging the production of mill-made cloth, watched the fray with interest. The following figures show variations in the demand for cloth, its availability and prices. This table takes into account the production of cloth by all sectors of the textile industry—the mills, powerlooms and handlooms. The availability has been calculated after deducting exports (and during the war years, defence requirements).

Year	Availability of cloth (in million yards)	Population (in millions)	Availability per capita (in yards)
1939-40	6,074	384	15.75
1940-41	6,029	389	15.75
1941-42	5,608	394	14.25
1942-43	3,967	399	10.00
1943-44	5,470	404	13.50
1944-45	5,379	409	13.12
1945-46	5,051	414	12.20
1946-47	4,828	419	11.50
1947-48	4,762	424	11.25
1948	5,279	432	15.1
1949	4,911	347	13.9
1950	3,478	352	9.7
1951	4,238	367	11.7
1952	5,275	362	14.4
1953	5,566	367	15.0
1954	5,586	372	15.0
1955	5,980	377	15.9

Description	Category	Rs. As. P.
1. Drill, Bleached	Coarse	0 13 3
2. Drill, Bleached and Mercerised	Coarse	1 7 6
3. Long cloth	Medium	1 1 0
4. Dhori (10 yds.)	Medium	1 14 0
5. Saree (10 yds.)	Medium	7 0 0
6. Long cloth	Fine	1 0 9
7. Dhori	Superfine	18 0 0
8. Voiles	Superfine	1 4 6

There has been a steady increase in the consumption of cloth since 1951. Development schemes taken up under the first five year plan and the general increase in the standard of living have accelerated demand. In 1955, per capita consumption was nearly 15.9 yards. For the seven months January-July 1956, the total availability of cloth, after deducting exports, was 3,710 million yards. This gives a per capita figure for the year of about 16.8 yards. Thus, the increase over 1955 is as much as 0.9 yards a head. Production has also increased and mill output in the first seven months of the year was 3,056 million yards. The July figure was an all-time record at 478 million yards. But production has not kept pace with the increase in demand and there has been a steady decline in stocks held by mills, as is shown below (figures are in bales):

Year	Average production of cloth a month.	Stocks of cloth with mills at year-end
1952	255,000	278,580
1953	271,000	336,377
1954	278,000	302,022
1955	283,000	171,689

Since January 1956, although average production was 291,000 bales a month, the inadequacy of stocks has been especially marked as the following figures show:

Month	Production	Stocks
January 1956	...	144,366
February	...	115,154
March	...	143,511
April	...	126,857
May	...	112,312
June	...	132,460
July	...	138,367
18th August	...	148,673

Production in July was 318,000 bales, but stocks at present are only 148,673 bales, or less than two weeks' output. In normal times, the mills carry about five or six weeks' production. The cloth

Description	Category	Rs. As. P.
1. Drill, Bleached	Coarse	0 11 8
2. Drill, Bleached and Mercerised	Coarse	1 1 5
3. Long cloth	Medium	1 0 8
4. Dhori (10 yds.)	Medium	8 12 0
5. Saree (10 yds.)	Medium	7 0 0
6. Long cloth	Fine	1 0 2
7. Dhori	Superfine	16 2 0
8. Voiles	Superfine	1 5 6

output of the handloom industry has increased from 1,200 million yards in 1952 to 1,480 million yards in 1955. The figure for the first six months of 1956 is already 802 million yards and indicates an increasing rate of production. The total figures of production in the five apex co-operative societies in Madras, Andhra, Hyderabad, Uttar Pradesh and Bihar are as follows:

Period	Production (in million yards)
July-September, 1955	36.3
October-December, 1955	41.3
January-March, 1956	55.2

Demand has kept pace with production. Sales in these five co-operatives increased over this period from 34 million yards to 52 million yards.

Trends Since Decontrol

Cloth prices were decontrolled about the middle of 1953. The average prices of cloth, calculated in annas a lb. of yarn woven, for the different periods have been as follows:

	Coarse	Medium	Fine	Superfine
August 1953	37.4	39.74	80.00	143.07
January 1954	39.6	48.38	69.88	128.98
January 1955	37.95	43.32	65.60	127.95

Since January 1956, the rise in prices has been particularly steep:

1956	Coarse	Medium	Fine	Superfine
January	39.60	46.13	65.60	142.37
April	45.50	58.88	75.67	158.30
August	47.06	66.95	83.00	166.00
Increase since January 1956	7.46	20.82	17.4	23.63

For some representative varieties of cloth, the figures are as follows. It is emphasised that these represent wholesale, not retail, prices.

Description	Category	Wholesale price now ruling in market
January 1956	August 1956	Increase.
Rs. As. P.	Rs. As. P.	Rs. As. P.
0 13 3	0 14 3	+ 0 1 0

7 14 0	8 12 0	+ 0 14 0
7 0 0	8 0 0	+ 1 0 0
1 0 9	1 2 6	+ 0 1 9
18 0 0	19 4 0	+ 1 4 0
1 4 6	1 7 6	+ 0 3 0

Fair Prices for Cloth

The price of cloth depends on various factors, the price of cotton being the most important. When prices were controlled, the Tariff Board worked out an appropriate formula under which the fair ex-mill price of cloth was calculated. This formula took into account the cost of cotton, the manufacturing cost, and a return of 6 percent on the gross block to the millowner. To this was added a margin of up to about 15 percent for retail sales. For certain areas like Assam, involving higher costs of transport and freight, a margin of up to 20 percent was allowed. The fair wholesaler's margin out of this was normally considered to be about 3 percent. A comparison is given below as to what would be the wholesale prices calculated on the Tariff Board formula, and those actually prevailing at present. These show the extra profits now being made over and above what may be considered as fair selling prices.

As a result of the increase in demand and the high profits being made by the industry and the trade, there has been a diversion of cloth from foreign to internal markets. Actual exports of mill-made cloth in 1955 have declined by more than 100 million yards as shown below, with a consequent fall in foreign exchange earnings.

Year	Million yards	Foreign exchange earned
1954	810	Rs. 66.9 crores
1955	693	Rs. 57.43 crores

The decline in exports has continued this year. In the first six months of 1956, 362 million yards were sent abroad, but in the corresponding period of 1955, the quantity was only 342 million yards. In the second five year plan, a cloth export target of 1,000 million yards has been proposed. Lobby circles have in this context been discussing Tatas'

Fair wholesale price on the basis of Tariff Board formula			Wholesale price now ruling in the market August 1956			Extra margin available to the industry and trade

decision on contributing to political funds. One view here is that similar decisions by other industrial units would promote economic stability by reducing the political pressure for party funds.

Russians to Aid Coal Plans

The Russian Embassy has been requested to arrange for the visit of a team of Russian experts to help plan open-cast and underground mines in the Korba region. The team is expected to be ready to visit India in October. The possibilities of obtaining coal mining machinery from abroad, such as from the U.S.A., Britain, Russia and Germany, are being investigated. Twenty-five drills have recently been purchased by the Government and are being investigated. Tenders for 40 drills have been invited from foreign firms in India or their agents here. It is expected that they will be received within the next three months. In consultation with the Commerce and Industry Ministries, the possibility of setting up capacity for the manufacture of coal-mining machinery in India is being explored. The Russians have offered assistance in starting the manufacture of coal-mining machinery and equipment. Their Embassy here has been requested to supplement the Russian team which has already arrived in India at the instance of the Ministries of Commerce and Industry to advise on the establishment of capacity for the manufacture of heavy machinery, by the deputation of one or two experts from Russia to study suitable means of establishing the manufacture of coal-mining equipment in India.

The production target for coal at the end of the second plan has been fixed at 60 million tons, representing an increase of 22 million tons over the level reached in 1955 (38 million tons). The field-wise distribution of this additional production as planned at present is:

Field	Public Sector	Private Sector	Total
(million tons)			
Baniganj	—	5.70	5.7
Jharia	—	3.25	3.25
Karapura	2.5	0.55	3.05
Kathara	4.5	—	0.5
Korba	0.0	—	4.0
Central India (Jhilmili, Bismarapur and Korea)	3.0	0.5	3.5
Singareni	1.5	—	1.5
Other Collieries	0.5	—	0.5
	12	10	22

Mining in Korba

Korba is the first field which has been taken up for detailed investigation. In order to enable the Chief Mining Engineer to prepare for drilling, etc., where it is proposed to open coal mines, notifications have been issued under the Land Acquisition Act over areas covering about 50 square miles. As a result of the drilling done so far by the Chief Mining Engineer, it is reported, reserves totalling 70.3 million tons of the thick seam (inferior grade) group and 12 million tons of the thin seam (better grade) group have been proved. The thick seam will be worked by open-cut methods to produce about 2 million tons a year. Three quarriable areas have been selected. One of them will be worked by manual labour to start with. The other two, to be opened a little later, will be worked by machines. The thin group will have to be worked by underground mining methods. A pilot quarry which will be worked manually has been sanctioned at an estimated cost of Rs. 14 lakhs. The coal raised from it will be used to burn bricks for the construction of buildings in the locality and also to carry out tests. The purchase of open-cut machinery, estimated to cost Rs. 110 crores, has been sanctioned. Most of it has already been ordered.

A proposal to work the thin (Ghordewa) seam by a pair of inclines at an estimated cost of Rs. 25 lakhs, to produce 20,000 tons of coal, is awaiting the approval of the Government. This seam contains good quality coal which is intended for supply to the Bhilai steel plant. The Madhya Pradesh Government has handed over possession of the areas required for opening these mines, and also the mining leases. A railway line for the development of the field has already been constructed and the line is now open for goods traffic. To meet the requirements of power at the initial stages, two diesel generators have been purchased at an approximate cost of Rs. 2 lakhs. One of these has already arrived at the site and the second one has been despatched from Delhi. Two second-hand diesel generators, purchased from the Director-General of Supplies and Disposals, have been despatched to Korba. The Chief Mining Engineer has estimated that 8,000 miners quarters will be required there—600 in 1956-57, 2,000 in 1957-58, 1,400 in 1958-59, 2,000 in 1959-60, and 2,000 in 1960-61.

The Jhilmili-Bismarapur Area

In Jhilmili-Bismarapur, a notification for the acquisition of land under the Land Acquisition Act, covering an area of about 20 square miles, has been issued. The Railway Board has asked the South-Eastern Railway to submit an estimate for the survey of new lines. It is expected to start the actual survey in the coming working season, from October.

In Karapura, notifications for the acquisition of land under the Land Acquisition Act have been issued covering an area of about 90 square miles. Drilling has been in progress for some time. Encouraging results have been obtained from certain areas, the most important of which is Gidi. According to the Chief Mining Engineer, it will be possible

to plan quarries and inclines to give a monthly production of 20,000 tons a month in nine or 12 months.

In Kathara, an area covering 7 square miles has been notified for acquisition under the Land Acquisition Act. It has already been prospected by Anderson Wright and Co. A proposal was received from Tatas to acquire and work this area. This has not been agreed to, as it is reserved for working by the Government.

Developing Singareni Collieries

The Central Government has agreed to give the Hyderabad Government financial assistance to the extent of Rs. 4 crores for the development of the Singareni collieries. A request was made to the State Government that the Centre should be allowed to participate in the capital as well as the management of the collieries. Hyderabad has not agreed to this proposal, but has suggested that the Centre may appoint a director on the board of management. The question of the Central Government's participation in finance and management has again been taken up with the Hyderabad Government.

Setting Up of Washeries

It was decided that all metallurgical coal should be washed and the objective should be achieved in stages after considering the practical problems and actual needs which may arise from time to time. The Government has already placed an order with Eastern Equipment and Sales Ltd. (offering Japanese equipment from Daiichi Bhussan Kaisha) for the supply and installation of a coal washery plant, at a cost of about Rs. 1.66 crores, in the Kargali-Bokato collieries. It will wash the coal produced in these State collieries for supply to the steel plants in Rourkela and Bhilai. The washery has to be installed and be in operation by 1st January, 1958. To meet the requirements of washed coal of all the existing and projected steel plants, private collieries were given the choice to set up washeries. But as the response from the private sector is not considered very encouraging, it is now proposed to set up two central washeries in the public sector in Dugda and Patherdih, in the Jharia field. The Iron and Steel Ministry has decided to establish a coal washing plant as part of the Durgapur steel project.

Most of the areas in which it is proposed to set up new collieries are covered by mining leases and prospecting licences. It is therefore proposed to undertake legislation which will enable the Central Government to acquire lease rights from private lessees in unworked areas. State Governments' rights in minerals will remain intact and the Central Government will be working the mines as their lessees.

Training Technical Personnel

In order to provide technical personnel for the development schemes, the Government has sanctioned the opening of four training centres in Kargali, Giridih, Talcher and Kurasia, at a cost of Rs. 28 lakhs. Two of these training centres, in Giridih and Kargali, may be opened by October. Essential items of equipment and furniture, costing about Rs. 25,000, are being ordered. To ensure that properly trained personnel will be available for managerial posts, it has been decided to increase with immediate effect the rate of admissions in the Dhanbad School of Mines from 55 to 110 a year (90 for mining engineering and 20 for geology). It is also proposed to increase the rate of admissions to the Banaras Hindu University. The Ministry of Education is considering a proposal to develop facilities for post-graduate training in mining engineering.

Progress of Steel-Making Plans

The Secretary of the Iron and Steel Ministry, Mr. S. Bhoothalingam, has been away in Britain and Western Germany for finalising the deals for setting up steel plants in Durgapur and Rourkela. He returned to New Delhi this week. The three new steel plants in the public sector are scheduled to go into production as given below:

	Scheduled date of production	Estimated cost
Rourkela	September, 1958	Rs. 128 crores
Bhilai	October, 1958	Rs. 110 crores
Durgapur	June, 1959	Rs. 115 crores
		Rs. 353 crores

The original estimate for the Durgapur project was Rs. 116 crores, including Rs. 67 crores in sterling, Rs. 49 crores in Indian rupees, and Rs. 9 crores to cover shipping charges and the cost of erecting the plant, which was to be paid partly in rupees and partly in sterling. This estimate has now gone up by about Rs. 20 crores, partly because of additions to the plant and partly because of price rises. Of this, Rs. 13 crores represents expenditure in sterling and Rs. 7 crores in Indian rupees. The original estimates for the Rourkela project have gone up by Rs. 7 crores and those for Bhilai by about Rs. 23 crores.

Side by side, steps have been taken to train personnel for the plants. According to estimates, 540 engineering graduates and 5,000 skilled workers for each plant, or 1,620 engineering graduates and 15,000 skilled workers for all three, will be required. Eighty Indians will be sent to Russia for training in 1956, 515 in 1957, and 125 in 1958. Similar training facilities have been offered by the British and the German interests collaborating in the Durgapur and Rourkela projects.

Saving of Coking Coal

A plan has been worked out under which the consumption of coking coal on the Indian railways will be progressively reduced. By 1st April, 1957, it is proposed, 1,700,000 tons of coking coal will be

replaced by non-coking coal, reducing the consumption of coking coal to 3,000,000 tons a year. By 1st April, 1958, a further quantity of 1,500,000 tons of coking coal will be replaced by non-coking coal. By 1st April, 1959, the entire railway consumption of coking coal will be stopped and substituted by non-coking coal. It may be added that 60 percent of the locomotives on the Indian railways are of the earlier type and are expected to remain in service for at least 15 years more, using coking coal.

Intensive trials have disclosed the working ratio of diesel oil and rail-borne coal engines at 10:1. The diesel engine uses oil at the rate of Rs. 315 a ton as against Rs. 30 a ton for the rail-borne coal engine. In the coming year, therefore, the switch-over will be from the steam engine to the electric engine, wherever power is available. In the second plan period, the change-over from coal to electricity is to take place over 800 route miles. Diesel engines will be used over routes having fresh water difficulty or where line capacity has to be built. Some 1,300 route miles have been earmarked for haulage by diesel engines.

Merger of Banks

In connection with the integration of certain banks with the State Bank of India, it is now found that the Bank of Baroda does not fulfil the criterion for integration, as fixed by the Rural Credit Enquiry Committee. The status of the Bank of Mysore also seems undecided. The matter is being examined.

Glider Manufacture in India

A licence under the Industries (Development and Regulation) Act, 1951, was granted in May, 1956 to Aeronautical Services Ltd., Calcutta, for the manufacture of gliders. The firm also applied for permission to manufacture helicopters and radio-controlled target aircraft. According to the Industrial Policy Resolution, the State is exclusively responsible for the manufacture of aircraft except where, in the national interest, it considers it necessary to secure the co-operation of private enterprise. Therefore, no licence was granted to the firm for the manufacture of helicopters and target aircraft. The firm has put forward certain revised proposals now, which are under the Government's consideration.

Heavy Electricals (Private) Limited

A private limited company, entirely owned by the Government of India, has been registered in Gwalior, to take over the control and management of the Government's heavy electrical equipment project. The company will be known as the Heavy Electricals (Private) Limited. Its authorised capital is Rs. 30 crores. The State-owned factory, which will be located in Bhopal, is being designed to manufacture hydraulic turbines and generators, transformers, static capacitors, circuit breakers, switchboards and control desks, traction motors, A.C. industrial motors of 200 h.p. and above, and other items.

Iron Foundry Consultant

The Government of India has appointed Mr. J. Blakiestone as its consultant for the iron foundry and forge project.

Earnings of Dock Workers

Comparative figures are now available of the earnings of dock labour working under the piece-rate system in Bombay. The earnings of a fundal in 20 ships, before the system was introduced, were Rs. 175 in March, 1956 as compared with Rs. 237 for 26 ships in April, 1956 and Rs. 252 for 28 ships in May, 1956. The average earnings of the morpia worker were Rs. 117 in February, Rs. 163 in March and Rs. 169 in April. The average earnings of the mazdoor in 'A' category were Rs. 98 in February, Rs. 138 in March and Rs. 148 in April. The average earnings in 'B' category of the mazdoor were Rs. 84 in February, Rs. 118 in March and Rs. 132 in April. The piece-rate system was introduced in March, 1956.

The changes in cargo handling for the months of April and May, 1956 were as follows:

In April:		
Piece-rate cargo	(+) 53 percent.	
Non-piece-rate cargo	(-) 7 percent.	
Average for the two types cargoes	(+) 32 percent.	
In May:		
Piece-rate cargo	(+) 63 percent.	
Non-piece-rate cargo	(-) 30 percent.	
Average for the two types	(+) 22 percent.	

Finance Ministry Changes

Within a week of assuming office, as Union Finance Minister, Mr. T. T. Krishnamachari has reorganised part of his Ministry. He has bifurcated the Company Law Department, merging its Capital with the Department of Economic Affairs, issue Control, Stock Exchange and Industrial Finance Corporation sections. The Company Law Department will deal mainly with the administration of company law.

Inter-State Sales Tax

The Government of India's proposals on the levy of inter-State sales tax have been finalised. Legislation has been drafted, and it is expected that it will be brought before Parliament during its next session commencing on 12th November. Two minor points, however, are still being discussed. The Central Ministry of Food wants all foodgrains to be included within the scope of the Bill. This is being opposed by the States. The Ministry of Commerce, likewise, suggests bringing all exportable commodities within the scope of the legislation. But its proposal, on examination, is regarded as impracticable. The Cabinet's decision on both issues is expected soon.

London

CRITICAL DAYS AHEAD FOR U.K. ECONOMY

DISTURBING IMPLICATIONS OF HIGHER WAGE CLAIMS

(FROM OUR LONDON CORRESPONDENT)

CRITICAL days lie ahead for the British economy. The City's apparent optimism as to the outcome of the Menzies committee's discussions with President Nasser of Egypt on the future of the Suez Canal has given way to a realisation that no easy solution of the problem of reconciling the divergent viewpoints of the two sides is in sight. The recall of both Houses of Parliament suggests that at least a temporary deadlock has been reached. This does not mean, however, that no solution is possible. Indeed, keeping in mind that Arab economic interests are as vitally affected as are those of the western countries—to say nothing of the interests of Egypt's Asian supporters—some compromise seems inevitable. The short-term view of the Suez Canal situation is serious without being critical; but in the long-term it is a lot less dangerous than certain other developments of the past week.

As a threat to this country's economic recovery, for instance, it is not nearly so important as are the possible repercussions of the unanimous rejection of the Chancellor of the Exchequer's appeal for wage restraint by the Trades Union Congress. By virtue of the moderation and sense of responsibility displayed by many trade union leaders in the past, the T.U.C. has come to occupy a special place in the councils of the nation as the mouthpiece of a large and important section of the community. The present Government, no less than its predecessor, has accorded it that privilege. Can this continue after last week's "demonstration" merely because some of the speakers sought to minimise the dangers inherent in the resolution? For all the cautionary warnings against irresponsibility, the T.U.C. has in effect decided to defy the Government because it happens to disagree with it and because its advice on how the country ought to be run has not been accepted in full. It has given members the signal for a free-for-all wages scramble—which was already in being, anyhow—but in the process would appear to have sacrificed, or at least jeopardised, its claims to be uninfluenced by purely political considerations. It can hardly expect capitulation on the part of the Government, or special consideration at the hands of the employers in the changed circumstances.

Drop in Gold Reserves

The T.U.C. delegates had quite forgotten on Wednesday of last week the more responsible approach of the meeting to the question of automation the day before, and it completely ignored all the facts and figures just released on the labour position as well as the warning of the latest gold and dollar reserve figures. In July the latter turned out to be better than expected, in August they were distinctly bad, though the shock had been partly tempered by Mr. Macmillan's reference in advance to "quite a substantial fall". The first setback this year amounted to \$129 million to leave the reserves at \$2,276 million. U.S. defence aid was substantially lower at \$4 million (\$16 million in July) and there were outgoings of \$51 million against the July deficit with E.P.U. plus a further \$3 million to the creditors of the United Kingdom continues to be reasonably good, and the fact that the deficit with E.P.U. during August was £16 million against £24 million in July indicates that it is not deteriorating. This month's figures will also take credit for the payment of \$181 million for the Trinidad Oil Company—a welcome addition seeing that it exactly offsets the interest payments on the dollar loans due to be paid in December.

Unemployment and Earnings

The Ministry of Labour figures which the T.U.C. delegates overlooked included the latest employment statistics, as at 13th August, and the six-monthly survey of earnings and working hours up to April of this year. The number of people at work in Britain rose by 10,000 in July, but this was seasonal and the increases were in distribution and miscellaneous services; the manufacturing industries showed a fall of more than 20,000 and building of about 10,000. The total in civil employment at the end of the month was 23,040,000. There were 267,000 unemployed in July, of whom 319,000 were wholly unemployed. The increase between 10th July and 13th August was 28,000, and over the 12 months to 13th August, it amounted to 67,000, or 1.2 percent of the employed population, against 1.1 percent in July and 0.9 percent in August, 1955. On the other hand, the average weekly earnings of seven million manual workers in the last pay week in April

were the highest on record. The figure was £9 17s 9d, against £9 7s 2d in October last and £2 13s 3d in October, 1938. The average earnings of men only were £11 15s 4d, against £11 2s 11d in October last and £3 9s in October, 1938. The increase between October, 1955, and April of this year was 6 percent, and it was 271 percent compared with October, 1938. The figures cover all the manufacturing industries and a number of the principal non-manufacturing industries and include bonuses and overtime payments, but do not take into account deductions of income-tax and insurance contributions. Although earnings increased, hours worked decreased in the six months. Average hours worked in April were 46.7 a week compared with 46.9 in October, 1955, and 46.5 in October, 1938.

Cloth Imports

The two resolutions submitted by the cotton unions to the two biggest labour gatherings of the year—the Trades Union Congress last week and the Labour Party conference next month—not only emphasise the common ground between both sides of the industry, but should be of great value in enlisting public sympathy for Lancashire's case for protection against cheap cotton cloth imports. The one addressed to the T.U.C., moved by Sir Alfred Roberts, expressed concern about the serious effects on trade and employment of imports from overseas and instructed the General Council of the T.U.C. to press for Government action to protect the industry. Sir Alfred told delegates of the growing unemployment in the mills and emphasised that in the view of both workers and employers this was due to Indian and Hongkong goods being allowed to enter the country without restriction. He underlined the unity of the industry further by explaining that great efforts were being made to increase its efficiency but that these would be almost useless unless it could count on some measure of stability and safety from competition it could never hope to meet. The resolution to be submitted to the Labour Party conference at Blackpool follows a similar line. "This conference," it runs, "appreciates the importance of the cotton textile industry in the national economy, deplors the attitude of Her Majesty's Government towards its problems, which arise mainly through external influences, compliments the Parliamentary party for action taken in April on its behalf, and requests the National Executive Committee to adopt measures to safeguard the industry against 'unfair competition.'" This will not doubt be passed also.

Triangular Deal Problem Solved

One of the difficulties created by the triangular textile deals with Burma and Indonesia is that exporters have been left to make their own arrangements for dealing with the imports of American raw cotton which they receive in payment for their goods. Obviously traders who are not accustomed to handling raw cotton imports do not relish having to undertake this additional responsibility. The Manchester Chamber of Commerce has now made arrangements with importers of raw cotton which will relieve exporters under the Burma scheme from having to do this for themselves. A central pool has been set up through which they can be covered at the time when they ship their goods by the normal channels. A similar arrangement is being worked on in the case of the Indonesian deal and is on the point of being signed.

B.O.A.C. Looks Back and Forward

The annual report and accounts of British Overseas Airways Corporation show a gross profit in the year ended 31st March of £1,295,525—a drop of about 4 percent on the figure for 1954-55. The net surplus after charging interest on capital was only £117,831, against £261,687 the year before. However, the accumulated deficit which the Corporation has incurred in the past has now been cleared. This was done by adjustments in the accounts and coincides with the end of the statutory period during which Exchequer grants may be made to the Corporation. The halving of the net surplus is explained by the fact that the Corporation is still suffering from the disruption of its plans to re-equip with Comets. Last year the gap was partly filled by other aircraft and passenger capacity was increased by 21.1 percent to a total of 260 million ton-miles. This was, however, 9 percent below what had been planned, and in any case the aircraft which were obtained to fill the void were not good enough in passenger appeal to maintain the Corporation's share of the traffic.

The report shows that the overall load factor fell from 63.7 percent to 61.7 percent. The number of passengers carried rose by 32 percent to 386,000, but passenger revenues only went up by 20 percent. The overriding necessity is to get more modern aircraft into service, and the new chairman, Mr. Gerard D'Erlanger, has made it quite clear that the Corporation's future as a profit-making undertaking depends on this. In the immediate future the Britannia and the Douglas DC-7 (the "Seven Seas") should help in regaining business, but it will be a year or two before the new aircraft start paying off. The year's accounts in any case will carry the burden of the heavy expenditure incurred on their introduction and the inevitably costly business of operating no less than five different types, these two plus Stratocruisers, Argonauts and Constellations. Further problems lie ahead. The Corporation must now plan for the "jet age". On the Far East routes B.O.A.C. thinks that the advanced versions of the Comet may be most suitable, but this will not do for the vital transatlantic flight. A technical mission is now in the United States studying the relative merits of the Boeing and Douglas jet aircraft as a possible alternative.

Madras

NO IMMEDIATE PROSPECT OF LOWER FOOD PRICES

RURAL CONTRIBUTION TO MADRAS LOAN SUBSTANTIAL

(FROM OUR MADRAS CORRESPONDENT)

FOLLOWING the steady rise in rice prices, especially in Andhra, the chances of further aid from the Centre have increased. The promise of more fair-price shops for the deficit areas in the south has been reinforced by Mr. Krishnappa's declaration last week that the Central Government would release its stocks to force prices down. Mr. A. P. Jain hopes to bring about a crash in grain prices soon, but it is clear that the markets in the south are not going to react suddenly to his threats.

The encouragement to new grain dealers by offering Government stocks at Rs. 16 a maund may not lead to a decline in prices, since it is clear that the insufficiency of stocks, particularly in Andhra, is due to the recent floods and other factors. The changes in sales tax have also helped push up prices. It is only in the city of Madras that food prices have fallen in the past fortnight. In the districts, prices have been extremely firm because of the small supplies reaching millers. The previous appeals to landlords to sell their grain promptly have yielded little result. The marriage season has also increased the demand for rice.

The restoration of controls on prices and movements is ruled out in official declarations, so it is evident that imports from abroad will be the best brake on prices. This year so far, official sales have produced little result; the rise in the prices of pulses and other essential articles continues to occur as traders work for a bigger margin of profit. The increase in transport, handling and other charges is also a contributory factor: the threat of trouble in the ports encourages speculation. The new trade pact with Burma may however produce a change of the bullish view, especially when the Finance Minister has indicated that higher taxes are certain. The efforts of the States to increase food output is hampered by the fact that in irrigated areas, there has been an increasing preference for sugarcane, plantain and other money crops. Its profitability apart, the diversion of land to cash crops is looked upon as one way of circumventing agrarian reform laws. Private companies are being formed to operate large holdings as plantations that will be exempt from the law. The promise of more fertilisers and cheaper electricity for farmers may not counter the trend towards estate farming, with the landlord in the background.

Madras State Loan

The success of the latest Madras State Loan has been a surprise. Official efforts to secure rural savings have not gone in vain. The quota targets set for the districts have been reached, and even if some may dispose of their securities soon, it is clear that the discount on the issue was unnecessary. Last year, it was thought that Madras could place its 4 percent loans at par this year, but it was not followed in practice. The success of other State loans including those of T.C. and Hyderabad does not disprove the contention that 12-year loans at 4 percent are more acceptable to institutional investors than shorter-dated Central loans. The pattern of distribution may be due to the health of the banking system. In spite of higher interest rates prevailing in the south over a long period, it is clear that banking facilities have helped enlarge public subscriptions to the State securities. Instalment purchase of Government securities is helped by the arrangements between banks and their clients, to the advantage of the Government.

Transfer of State Territories

The arrangements for the transfer of territories are being completed. The loss of Malabar to Madras means a saving; the inclusion in it of the Tamil areas of Travancore-Cochin will be a valuable gain of the State. The argument over endowments in the Tamil taluks of Travancore has apparently ended. The contention that more must be paid out of the sum of Rs. 45 lakhs earmarked for the temples in T.C. State has not been pressed, and Madras may be content with the application of its law to temple administration. But Madras may gain, in a measure, from the orthodox standards adopted in Travancore. Temple revenues might increase in consequence. The gifts made to a single temple in Tamilnad runs to Rs. 10 lakhs in a year, and if the transferred temples prove as popular, their revenues might make them wholly independent of the State contribution. The temples might not also suffer a sudden change in administration, as the tradition of State control is older in Travancore. That, too, may influence the Madras standards of temple administration.

Life Insurance in Madras

The Madras branch of the State Insurance Corporation expects to complete new business of Rs. 5 crores in four months. Assurances to agents have been given and the proposed retrenchment is described as "provisional." In the first few days of its working, proposals for Rs. 29.38 lakhs were received, and the subordinate branches have been asked to help agents in securing more business.

The start is hopeful, but Madras has been familiar with life insurance for four decades and even in rural areas, life policies have been made familiar to well-to-do cultivators by agents. As the Cor-salaried staff have received assurances, the Corporation may be able to do more through them, but prompt settlement of claims is regarded as the key to further progress. There has been no indication of this yet. Some release of office accommodation in big towns is expected, but that is of little interest to the policyholder. How the Corporation's work will affect certain banks which had ties with life insurance is not discussed, but the printed circulars to policyholders to pay premiums through the State Bank seems to be a device to get more business for the latter. The joint stock banks may not immediately suffer, but the State monopoly of provident fund business threatens them.

Competition Among Banks

The growing competition among banks for business has led to a rise in the interest rate on fixed deposits. Higher charges on loans have led to a rise in the rates for deposits held in savings accounts. Scheduled banks cannot ignore the rates paid by the non-scheduled banks which offer 4 percent on savings; since the latter obtain 9 percent on secured advances, the mofussil banks with modest resources are still able to obtain regular deposits as they are not faced with high establishment costs and can manage to give better terms to their clients. The variations in interest rates between the urban and the mofussil areas persist, and the district co-operative banks are obliged to accept them as their own resources are limited. The advent of many big banks has made no difference to the trader or borrower in small towns, and even the opening of new State Bank offices is not likely to create a new situation. The restrictions on credit imposed this year have had their own effect on interest rates, but time deposits are likely to increase in view of the better terms available to regular savers. The pattern of savings which might change because of the high bullion prices may also help banks. Investment in jewellery is dwindling steadily, which process is furthered by the current increase in crimes, particularly burglaries.

Good Days for Film Industry

Awards for local films, though unofficial, have quickened public interest in the show business. The S. I. Film Chamber of Commerce, in its seventeenth annual report, comments on the new Copyright Bill, censorship problems, the compulsory exhibition of official news reels, and the fetention of the tax on shows in Andhra as well as in Madras. The rules for the licensing of cinemas in Madras have been revised and authority is centralised. Power cuts certainly hit the cinemas this year, but the production side has looked up. Attendance at cinemas has also risen. South Indian studios have raised their production, though the percentage of "hits" have scarcely increased. A vault for the storage of films is maintained by the Chamber, which gets royalties from music played on the radio, especially Radio Ceylon, which has a growing public here. The S. I. Film Chamber claims that tax relief for the industry, "which is an art, is overdue. A uniform levy of entertainment tax may not help much. Versions in two languages or even more is the rule, but the difficulty is the dependence on foreign models. Complaints about imitations of foreign films, including music and dances, are still common; the studios are not able to discover fresh talent. This year, the trade has received a concession in the form of extended licence for touring cinemas that depend on the rural masses and charge low prices. The second runs for most local pictures are done by touring talkies which are run with a modest capital by a self-employed manager. The Madras Government has recently allowed film producers the run of reserve forests for a fee of Rs. 1,000 for a fortnight's "shooting" which can be extended by the payment of an extra fee. The opening of new theatres in small towns, like the long run of popular pictures at several places, proves that the exhibitors are doing well, which also is helping producers. They have been turning away from mythology, but the sociological strain is not yet quite pronounced.

Bombay

IMPORTANCE OF COUNTRY CRAFT TO COASTAL TRADE

CLOTH CONSUMERS WILL BEAR EXCISE LEVY BURDEN

(FROM OUR BOMBAY CORRESPONDENT)

THE Government of India's decision to revise orders concerning the bonds to be executed by the owners and masters of vessels plying on the west coast of India has been widely welcomed in the shipping circles here. This is in response to an appeal by the Bombay Commission Agents Association and the Indian West Coast Sailing Shipowners Association against the orders issued by the Central Excise Collector and the Additional Collector of Customs, Bombay, on 28th May, 1956. These orders stipulated that the owner or master of a country craft would have to execute a bond of Rs. 50,000, and by a further order under the Sea Customs Act, it was notified that a separate bond would have to be executed for each voyage. The intention was to check certain malpractices which have crept into this trade. The two Associations frankly admitted that the charges levelled against a section of the coastal shipping trade were correct, but contended that the measures adopted were too severe which would penalise the innocent and the guilty alike.

The Central Government, by its order, has reduced the maximum amount of the bond to Rs. 15,000 and has further ordered that the bond executed would be of a permanent nature and applicable to all voyages of the craft concerned. Where a permanent bond is not executed, a owner or master can execute a temporary bond of the value of the goods carried abroad in one trip. A grave crisis has been averted from the point of view of the owners and masters, but the severity of the original measures reflects the seriousness of the situation and should serve to remind owners and masters of country craft that they, too, have a responsibility to see that the malpractices are checked. A tightening up and the rigid enforcement of Association rules could greatly help.

Illicit Trade

A serious charge brought against country craft owners and masters is that they have consistently helped to thwart the economic blockade of Goa by conducting an unauthorised export-import trade between the two countries. Neither of the two Associations has made any attempt to refute this charge. The fact that a large variety of foreign consumer goods, which are prohibited for import are openly on sale in the Bombay market is ample evidence of the existence of a flourishing smuggling trade. Another common custom is unlawfully to jetison cargo on the pretext of weathering rough seas and then save it for sale in the black market. Although these practices are criminal enough to justify severe punitive measures, it is doubtful whether these evils can be eradicated by threats of deterrent punishment alone. The fact is that a large number of country craft owners and masters continually face conditions which amount to economic distress. This is particularly true of those who operate from the Ratnagiri and Kolaba districts of Bombay. There are between 800 and 1,000 sailing vessels registered in these two districts and they ply between scores of ports scattered all over the coastline from Bombay to Vengurla. They only operate for about eight to nine months in a year and must, therefore, make sufficient money to maintain themselves during the months of their unemployment. About 10,000 seamen are employed on country craft. With their large families, it is estimated, about 100,000 people depend on this industry. The per capita income must therefore be deplorably low. In addition, owners have to incur heavy expenditure in renovating their vessels during the monsoon period in preparation for the new season. This constitutes a heavy drain on their resources. It is their economic condition which largely forces them to resort to illicit trade and other undesirable practices to supplement their income.

The country craft industry serves a real need, because steamer cargo vessels and ships cannot touch these ports due to the numerous creeks which dot the coastal line. With no railway facilities and little road transport, which the hilly character of the land and lack of bridges across rivers make it difficult to develop, most of the trade is conducted by country craft. A thorough investigation into this trade is therefore called for, and at the same time practical measures would have to be devised to remove some of the present disabilities and hardships of owners and masters. There is no reason why this industry should not flourish and be a valuable asset to the State, provided it is put on a sound basis.

Cause of Cloth Price Rises

In a statement issued here, Mr. C. L. Ghevala, secretary of the "Forum of Free Enterprise", said that the recent additions to excise duty on all varieties of mill cloth could at least be described as an expedient. It can hardly meet the situation which has been brought about by the Government's policies. He pointed out that the industrial community had repeatedly warned the Government that a rigid implementation of the restrictive policy against the mill sector would result in an acute shortage of cloth, with its inevitable consequence of a sharp rise in prices. He pointed out that at a time when production by the organised sector is deliberately restricted, the impact of the new duties would fall on the consumer. It was doubtful, he said, whether the ostensible object of mopping up increased profits would be achieved.

The real remedy, according to him, lies in increasing production within the shortest possible time. He opined that the present situation is symptomatic of an economic condition which seems directly from a basic flaw in the structure of the second five year plan. When the plan was in its draft form, industrial interests had pointed out the wrong character of the strategy which seeks to emphasise the development of heavy industries while depending on home and cottage industries for meeting the increased demand for consumer goods. In conclusion, Mr. Ghevala observed, "In an under-developed economy where a large mass of people are already subject to chronic shortages, to seek to enforce a restrictive mentality and to exhort the people to tighten their belts can hardly generate the necessary enthusiasm for a rapid planned economic development. Unless this flaw in the strategy of the plan involving the virtual stagnation and freezing of large-scale mechanised consumer goods industries is remedied and suitable adjustments made between the rôle of the mechanised large-scale production and the village industries sector in the structure of the plan, the situation is likely to worsen and will have adverse repercussions on the economy of the country as a whole."

Cotton Mill Profits

Meanwhile, addressing the annual general meeting of the Bradbury Mills Ltd., Mr. Ramnivas Ruia, the chairman, denied that the mill industry was making excessive profits. On the other hand, he pointed out that mills producing coarse and medium-count cloth were actually making less profit than last year because of the rising costs of production and increasing labour charges. He invited the Government to draw up a schedule of prices for various varieties which, in the Government's view, would be fair. The Finance Minister has already announced his intention of circulating such a "fair price" list for the guidance of consumers, but it is difficult to see what useful purpose this will serve. Such a list is not likely to affect prices simply because it has the sanction of the Government behind it. The normal laws of demand and supply are not likely to be suspended by wishful thinking. It is freely admitted by all concerned that there is a scarcity of cloth and the rising prices are a natural result of the scarcity. The Bombay cloth market continues to be active and fresh business enquiries have been received from Delhi, Kanpur and Calcutta. It is still not clear whether the Bombay mills will voluntarily accept a part of the burden of the enhanced excise duty. In this connection the Madras Piecegoods Merchants Association has appealed to the Bombay Millowners' Association to ask its members to reduce their ex-mill prices so as to offset at least a part of the increased duty.

CALCUTTA TEA AUCTIONS IN AUGUST

DISCRIMINATING BUYING CONTINUES

ALL good liquoring teas continued to receive strong support, but buyers showed keen discrimination and whenever quality showed a decline prices were appreciably lower, say Messrs. Carritt Moran & Co. in their monthly tea market review. This was particularly noticeable in the case of C.T.C. broken grades, but the very best fannings of this description continued to receive high prices. Fannings of useful size, particularly those of clean black appearance, were a strong feature throughout the month and low medium and plain tippy teas and prices showed a marked decline in the last two sales. Darjeelings were keenly competed for and realised very high prices in Sale Nos. 9 and 10, but demand was very much quieter in the last two sales, and the most flavoury kinds declined by Re. 1 in Sale No. 11 and a further Re. 1 in Sale No. 12.

Darjeeling Leaf appearance continued to be of a high standard and cup quality generally was above average. Many useful flavoury invoices were available and a few really fine teas were catalogued. A very attractive selection of second flush of Assam teas was included in the first two sales of the month and tippy teas were in plentiful supply. Although quality showed a decline in the latter half of the month, the outturn from this district was of a very satisfactory standard. Although a number of Doorars estates appear to be making a determined effort to maintain as useful a standard of leaf and liquor as is possible at this time of the year, the majority of the offerings were of a typical rains standards with stalk and fibre becoming more noticeable, particularly in the lower grades. Cachar Leaf appearance generally was fairly black and, with a few exceptions, commendably free from stalk and fibre. While the majority of the liquors were rather plain in character, a few sweet coloury teas were available.

Internal Market

During the month of August, four Leaf sales were held and offerings amounted to 4,298 packages. The selection was of a poor standard and consisted mainly of stalky and fibrous grades. In the first Sale, the market was irregular but prices over the next two Sales fully firm. An easier tendency was found in the final Sale of the month. Approximately 61,260 packages of Dust were on offer during the month. In the opening Sale, there was a good demand, the grainy C.T.C. Assams with good liquors in particular being a very strong feature and advanced by as much as 4 to 8 annas. All other descriptions shared in the advance and were 1 to 1½ annas dearer to buy, but poor liquoring teas were irregular. In the following Sale there was again a strong and active demand; Middle East types advancing by up to 8 annas, but C.T.C. Assam showed an easier tendency apart from the leafy types which were dearer. All other offerings were also 1 to 3 annas dearer to buy. In the next two sales, there was a good demand for all descriptions which showed advances, other than for C.T.C. Assams which declined by about 4 annas in each sale.

Sale No.	11	"	"	"	1	12	0	2	3	0
Sale No.	12	"	"	"	1	12	3	2	3	6

Export sales up to No. 12 totalled 374,273 chests at an average price of Rs. 2-9-7 as against 412,416 chests at an average price of Rs. 2-9-2 during the corresponding period of the 1955-56 season. Internal sales stand at 6,229 chests of leaf and 111,115 chests of Dust (Rs. 1-8-9 and Rs. 2-2-7) as against 16,946 chests and 107,241 chests (Rs. 1-9-4 and Rs. 2-5-11) in the same period of the previous year.

Throughout the month the price of Export Quota has generally continued at the slightly lower level prevailing at the end of the preceding month. At the beginning of the month business was transacted at prices which fell from 25 pies to 20 pies a lb. Thereafter prices rose gradually, and some business was transacted at 30 pies a lb. Prices declined steadily after this, however, and at the close, a fairly large amount of quota changed hands at between 24 and 26 pies a lb.

It is anticipated that a second interim allotment of export quota will be announced shortly as the initial allotment this season was only 40 percent of a garden's best crop figure, as compared with last year's initial allotment figure of 50 percent.

The estimated North India crop to the end of July, 1956 was 205,640,781 lbs., as compared with

194,933,223 lbs. to the same date last year. The average figure at this date for the three years 1953-1955 was 192,015,757 lbs.

The Government of India has issued a notification fixing the price of tea for the purpose of determining the export duty at Rs. 2-11-5 a lb. as against Rs. 2-8-5 a lb. in force from 1st August, 1956. The export duty, therefore still remains unchanged at 6 annas a lb.

Arrivals (in chests) in Calcutta warehouses during the period 24th July, 1956 to 23rd August, 1956 with the corresponding figures in parentheses, were as follows: By steamer 434,996 (391,235), by rail 89,191 (90,761) and by air 18,446 (27,298), making a total of 542,633 (509,294). Since the beginning of the season, 1st April 1956 to 23rd August, 1956 arrivals have been by steamer 815,663 (826,267), by rail 230,330 (217,179) and by air 50,653 (72,050), making a total of 1,096,646 (1,115,496) chests.

PLAN TO RAISE INDIAN COFFEE OUTPUT

SCHEME TO AID PRODUCERS

FURTHER details of the Coffee Board's development plan which the Government of India has sanctioned, are now available. Under the plan, the following types of aid will be given to planters: (1) monetary aid, (2) supply of approved seed for planting, (3) establishment of depots at certain centres for the supply of fertilisers and plant protection chemicals, (4) organisation of co-operative pulping and spraying units and (5) technical assistance and advice by the Research Department of the Board.

A sum of Rs. 2,47,17,500 will be available for granting loans, spread over a period of five years. The loan will be of two kinds: one for intensive cultivation and the other for opening new areas under coffee, including rehabilitation of abandoned areas. Loans for intensive cultivation will be given to estates in the five to 50-acre group in Arabica and five to 25-acre group in Robusta. For the latter group, the loan amount will be Rs. 500 and Rs. 375 an acre for Arabica and Robusta respectively, spread over five years. For the former group (Arabica), it will be Rs. 750 an acre spread over five years. Loans for opening new areas will be given at the rate of Rs. 1,000 an acre for Arabica and Rs. 750 an acre for Robusta spread over five years. Extension of area is however subject to certain specified limitations based on the existing holding. Loans will be granted according to the terms and conditions drawn up by the Board. Interest will be charged on all loans at 6½ percent a year. The Board will begin to collect the interest charges from the second year of the loan, and the principal will be payable from the sixth or seventh year. Estates between 50 to 100 acres will receive assistance by way of accelerated "Pool" payments. This facility will be available to those in the 25 to 50-acre group, provided they do not apply for any loan. Estates of 100 acres and above are not entitled to any financial aid, as they are expected to be in a position to raise necessary credit from banks and other sources. Estates below five acres have not been brought into this scheme because of serious administrative difficulties. They can however group their holdings on a co-operative basis to qualify themselves for aid.

PRODUCTION TARGETS IN COFFEE DEVELOPMENT PLAN

In reply to the criticisms made in a certain section of the Press that the target fixed in the coffee plan has not been made public, the Coffee Board says in a Press note that the target set in the plan has appeared in the Press on various occasions. When the plan was drawn up, the estimated average production was taken at 26,000 tons (18,000 tons Arabica and 8,000 tons Robusta), on which basis the targets were fixed as follows:

	Arabica	Robusta	Total	Expected Increase (tons)
(1) At the end of 1st five-year period	21,900	13,700	35,600	9,690
(2) At the end of 2nd five-year period	27,700	19,520	47,200	21,200
(3) At the end of 3rd five-year period	37,700	21,520	59,200	33,220

The plan envisages an increase of 9,690 tons, 21,220 tons 33,220 tons respectively at the end of each of the five-year periods as shown in the above table. Under the programme of financial aid, it is estimated that during the first five years, 44,800 acres (Arabica 31,000 acres and Robusta 13,800 acres) will come under intensive cultivation, and the area to be brought under new cultivation will be 16,700 acres (Arabica 14,000 acres and Robusta 2,700 acres). It is also expected that during this period, by voluntary effort, an additional 95,000 acres of coffee will come under intensive cultivation and about 7,000 acres more will be planted with new coffee. So the sum total of the area which is estimated to be brought under intensive cultivation will be 139,800 and under new coffee 23,700 acres. The loan aid for extension of acreage by opening new areas is for the present limited to existing coffee-growers only.

LONDON TEA SALES

AT last week's London tea sale, the 56,261 packages on offer realised an average price of 4s 7.74d a lb. against 4s 6.31d in the previous sale and 4s 7.67d a year ago. Plain old season's broken pekoe was quoted at 10½d 2s a lb nominal, against 2s 9d in the previous week. Prices obtained by some of the companies are given below:

	No. of packages	Average per lb
Assam Doorars	581	4/11½
Attaree Khat	457	6/1½
Central Province	720	4/9½
Cons. Tea and Lands	701	4/7½
Doorars	1,183	3/11½

WHOLESALE PRICE INDEX
SLIGHTLY HIGHER

THE official wholesale price index (base: year ended August, 1939=100) stood at 421.4 during the week ended 25th August, 1956, compared with 421.1 for the previous week. The index was higher by 2.1 percent and 17.9 percent respectively when compared with the corresponding weeks of last month and a year ago. The average for the month of August, 1956 worked out to 418.6 as against 409.2 (revised) for July, 1956 and 357.2 for August, 1955. The index for Food Articles declined by 0.5 percent to 399.1 as a result of a fall in the prices of tea (-13%), gur in Muzaffarnagar (-5%) and gram in Hapur (-2%) in spite of a rise in the prices of rice in Calcutta and wheat (+2% each) and salt (+1%). Prices of rapeseed (-6%), linseed in Calcutta (+3%), castorseed in Madras, raw silk, gingellyseed, copra and iron ore (+2% each) and raw jute (+1%) moved up, while those of linseed in Bombay and lac (-1% each), groundnuts and manganese ore (average export price) (-3% each) and castorseed in Bombay (-2%) exhibited declines. Consequently, the index for Industrial Raw Materials moved up by 0.1 percent to 505.6. The index for Semi-Manufactures rose by 0.4 percent to 411.1. Items which witnessed significant variations were: Mustard oil in Patna (+11%) and in Kanpur (+3%), sheepskins (+5%), groundnut cake (+3%), coconut oil in Cochin and castor oil (+2% each), goatskins (-5%) buffalo hides (-4%), gingelly oil (-3%) and cowhides, groundnut oil, linseed oil and zinc (-2% each). Higher prices of jute manufactures (+2%) and glass and chemicals (+1% each) and a slight increase in the prices of cotton manufactures were responsible for an advance of 0.4 percent to 399.7 in the index for Manufactures. The index for the Miscellaneous group advanced by 0.1 percent to 565.0 because of a rise in chillies (+5%); the price of betelnuts (-2%), however, showed a fall.

IRON AND MANGANESE ORE EXPORT
QUOTAS REVISED

In response to the representation that the export policy for iron and manganese ores should be announced on an annual basis in order to enable mineowners and shippers to plan their mining, contracting and booking of freight, the Government has decided that the quotas granted under the existing policy, announced in the Press notes of 27th July and 3rd August, 1956, should be doubled and the period of validity of the doubled quotas should be extended up to 30th June, 1957. Quota-holders are advised to approach the Export Control authorities at the ports to get their quota slips duly endorsed. Export Trade Control Officers at the ports have also been instructed to permit the mineowners and shippers to select either of the two basic periods, July-December, 1955, or January-June, 1956, whichever is more advantageous to them. Firms will not be required to choose the same basic period for all the ports. The question of extending to mineowners, who made no shipments on their own account in the past, facilities for moving ores to the ports in areas in which the transport situation is not too tight is being considered by the Government, and an announcement on the subject is expected.

By a notification, the Government has decided to impose, with effect from 31st August, export duty on manganese ore at the following rates: Manganese ore with manganese content over 38 percent, but not exceeding 40 percent Rs. 10 a ton; manganese ore with manganese content above 40 percent, but not exceeding 44 percent Rs. 20 a ton; manganese ore with manganese content exceeding 44 percent Rs. 30 a ton. Manganese ore with manganese content 38 percent or below will be exempt from duty.

Calcutta Markets

GOOD GENERAL DEMAND AT
TEA EXPORT SALE

AT Sale No. 14, held on 10th and 11th September, offerings at the Export auction consisted of 47,500 packages for which there was a good general demand. The very few really good C.T.C. Assams on offer were keenly competed for and were rather dearer, but the remaining C.T.C. offerings which were generally of an ordinary rains description were 2 to 4 annas easier. Non-wither Doors were a strong feature and were dearer while Clean Commons and Low Mediums were well supported and the Commonest sorts were generally a little dearer. B.O.P.'s and O.F.s. met with a fair demand but at 2 to 4 annas below last rates while Medium Brckens declined by 1 to 2 annas. Clean Black Fannings from all districts were a very strong feature of the Sale and were 2 to 4 annas dearer. Whole Leaf grades met with a fair demand, while the planer Darjeelings were fully firm and sometimes dearer. Tippy teas were very irregular.

Quotations	1956	1955
Clean Black Pekoe	1 14 0	2 3 6
Plain B.P.	1 14 0 to 1 9 6	1 14 0
Medium Assam B.P.	1 14 0 to 2 0 0	2 2 0 to 2 3 0
Best C.T.C. Assam B.P.	3 0 0 to 3 4 0	3 3 0 to 3 4 0
At the Internal Sale, Dust offerings consisted of 17,700 packages for which there was a good and general demand with clean black leaf types once again a very strong feature. The very best C.T.C. Assams were keenly competed for and sold well, but the remaining C.T.C.'s declined by 2 to 4 annas. All other descriptions received good support and were generally fully firm to dearer.		

Quotations	1956	1955
Clean Black Pekoe	1 14 0	2 3 6
Plain B.P.	1 14 0 to 1 9 6	1 14 0
Medium Assam B.P.	1 14 0 to 2 0 0	2 2 0 to 2 3 0
Best C.T.C. Assam B.P.	3 0 0 to 3 4 0	3 3 0 to 3 4 0
At the Internal Sale, Dust offerings consisted of 17,700 packages for which there was a good and general demand with clean black leaf types once again a very strong feature. The very best C.T.C. Assams were keenly competed for and sold well, but the remaining C.T.C.'s declined by 2 to 4 annas. All other descriptions received good support and were generally fully firm to dearer.		

FREIGHT RATES RISE DUE
TO SUEZ CRISIS

WITH tension growing in the Suez Canal crisis, the markets are going steadily in favour of owners and an expansion in business last week was likewise marked by an increase in the rates in some directions. The most notable activity was in the Mormugao-Japan ore trade where no fewer than eight vessels were booked up to December with top rates of 53s 6d a d.w. ton being paid to two Liberties giving Colombo and Karachi delivery respectively. With the amount of tonnage fixed to this area to carry grain, fertilisers and steel, it is significant that increased rates for outward voyages are being conceded. Another interesting fixture was that of a 6,500 tonner from Port Sulphur to India at 200s. Bremen-Calcutta paid 135s f.i.o. for bagged fertilisers while West Australia-India wheat was concluded at 140s for October and 137s 6d for December. An interesting fixture was that of 9,000 tons of pig iron from Manchester

to Japan at \$ (U.S.) 22. Usually it is the U.K. that imports pig iron.

SUGAR MARKET FALLS

During the week ended 12th September, sugar sales in the Calcutta market averaged 3,000 bags daily. Arrivals a day were 4,500 bags and stocks totalled 130,000 bags. Rates for ready sugar ex-Kantapur delivery were Rs. 31-7 to Rs. 31-13 a maund for ordinary grain and Rs. 32-14 a maund for big grain. Ex-mill rates ruled at Rs. 28 to Rs. 28-8 a maund for ordinary grain. The market closed lower, the rates having fallen by annas 2 to annas 3 a maund.

LINSEED QUIETER

Quiet conditions have prevailed in the market during the past week, although the tendency was slightly better at the close. Little business has been done with buyers, and sellers have acted rather cautiously. Crushers were depressed because of the poor linseed oil offtake, while sellers were not anxious to discount their prices on account of the fairly steady trends still prevailing in the centres. The oil section was dull: a few local buyers have been in evidence at lower rates, but with no parity between seeds and oil prices very little business has resulted. Latest quotations were as follows: Ready-September Rs. 23-40 a maund.

HIDES AND SKINS STEADY

The market continued steady. Stocks were less than in the previous week.

Bazaar Sales

(Between 4th September and 10th September, 1956)
Cowhides: Wet salted (Ord.) 1,000 pcs. on the basis of 10 annas to 11 annas; Wet salted (Ord.) 18,000 pcs. on the basis of Rs. 6-8 to Rs. 9-4; Wet salted (Slaughtered) 21,500 pcs. on the basis of Rs. 12-8 to Rs. 21.

Goatskins: Wet salted (Daissee, Killed) 31,500 pcs. on basis of Rs. 225 to Rs. 240 and Rs. 330 to Rs. 340 Assam-Dinajpur-Murshidabad 20,900 pcs. on the basis of Rs. 205 to Rs. 245; Purneah-Kissenganj 1,750 pcs. on the basis of Rs. 200; Patna (Ord.) 2,050 pcs. on the basis of Rs. 165; Muzafferpore 5,500 pcs. on the basis of Rs. 215 to Rs. 325.

Bazaar Stocks

(10th September, 1956)

Cowhides: Wet salted 1,66,000 pcs.
Goatskins: Wet salted (Daissee, Killed) 2,000 pcs.; Assam-Dinajpur-Murshidabad 77,500 pcs.; Muzafferpore - Patna - Pakur - Purneah - Kissenganj 83,600 pcs.

SHELLAC MARKET STEADY

During the week ended 11th September, the market was quiet at the beginning, and steady at the end. The range of quotations was as follows:

Pure Buttonlac	Rs. 135 value, 136 done and buyers, 136 buyers.
Lemon No. 1 Shellac	Rs. 137 buyers, 137 done, 136 buyers.
Lemon No. 2 Shellac	Rs. 134/132 buyers, 133 done and buyers, 132-8 buyers.
F. O. Std. 1 Shellac	Rs. 130-8, 129-3 buyers, 130 done.
Pure TN Shellac	Rs. 126, 125, 126 basis done and buyers.
4% I.T.N. Shellac	Rs. 118-8, 119, 117-8, 118-8 buyers.
No. 1 Kusmi Seedlac	Rs. 127-8, 126, 126-4 value.
No. 2 Kusmi Seedlac	Rs. 123-3, 122-8, 123 value.
Fine Bysaky Seedlac (Manbhumi)	Rs. 120, 118 buyers, 120 done and buyers.
Fine Bysaky Seedlac (C.P.)	Rs. 118, 116, 117-8 buyers.
Ordinary Bysaky Seedlac (C.P.) under 5%.	Rs. 114-8, 112-8, 113-8 buyers.
Ordinary Bysaky Seedlac (C.P.)	Rs. 109-4, 108-8, 109 buyers.
Kibzoolac	Rs. 44, 42, 43 buyers.

Shipments during September until the 8th were 9,609 packages comprising shellac 6,436 packages, seedlac 2,480 packages, buttonlac 144 packages and others 549 packages.

BIG INCREASE IN U.K. TEA IMPORTS

India accounted for over 55 percent of the 315,376,000 lbs. of tea Britain imported in the first seven months of this year. This total represented an increase of over 24,000,000 lbs. over that for the same period in 1955. The value of these worldwide imports, however, dropped by £14,250,000 to £64,387,000, although this figure was still over £7,500,000 more than that for the first seven months of 1954. In July of this year, Britain's imports of tea from both India and Pakistan were nearly doubled compared with those in July of last year. India sent 20,875,000 lbs., worth £3,753,000, compared with 10,551,000 lbs. to the value of £1,919,000, and Pakistan 1,141,000 lbs. (£160,000), compared with 577,000 lbs. (£94,000). In the seven months, India sent 178,626,000 lbs. (£35,802,000), compared with 155,161,000 lbs. (£45,012). The 14,173,000 lbs. of tea, worth £3,320,000, that Ceylon sent Britain in July compared with the 14,450,000 lbs. sent in July last year, for which Britain paid £2,784,000. In the first seven months of this year, Ceylon sent 78,996,000 lbs. (£19,733,000), compared with the 72,980,000 lbs. (£19,089,000) sent in the same period last year. Of the 315,000,000 lbs. of tea Britain imported from all sources to the end of July this year, all but 20,000,000 lbs. came from the Commonwealth.

Jute

WIDE FLUCTUATIONS IN GUNNY MARKETS

I. J. M. A. STOCK FIGURES HELP
PUSH UP HESSIAN

THE Calcutta jute goods market experienced mixed fortunes during the past week, and prices moved through a very wide range. At the opening, a slump developed, but a series of bullish factors produced enough confidence for the initial losses to be made up later, and new high levels in hessian were recorded before the close. Not the least of these bullish factors was the I.J.M.A. jute goods stock figures. These showed a drop of 15,800 tons over July and were the first concrete indication of the effect of the recent sealing of looms. This, however, could account for only a portion of the fall, and the balance was due to the best shipping month for some time, during which several extra steamers were placed to take up the backlog caused mainly by the go-slow tactics of loading crews. The improvement in the market towards the end of the week was the direct result of overseas enquiries. For some time, foreign buyers had been reluctant to pay high prices for Indian goods, and tended to delay orders so as to bring about a reduction. They reckoned without the speculative element, however, and prices were kept up by operators who manipulated the market to suit their own ends. Overseas consumers were at last forced to move, and mills sold heavily during the week to both pucca foreign buyers and local shipper interests. Events in Pakistan also induced buyers to enter the market. For a very long time, consumers of heavy goods have been able to buy sacking from Pakistan at a cheaper rate than from Calcutta. Now unconfirmed reports indicate that the Pakistan authorities, without promulgating any official ordinance, have made it known to manufacturers that the bulk of their sacking production will be required for internal consumption, and that this must be satisfied before permission is granted to export. Not only has this brought buyers back to India, but has strengthened local markets and created some much-needed confidence. At the close, the market is very steady, and it is reported that mills have sold fairly large quantities for forward shipment at the higher levels.

Raw jute, after a quiet opening, staged a gradual recovery. Business was on a much smaller scale, but it had a great effect. This was due to the current policy among buyers of taking up small quantities almost every day. It has caused a bullish sentiment, and combined with the improved goods market, has led to sellers reducing the quantity of jute on offer. Earlier in the week, their policy was the exact opposite as markets showed signs of falling away. Then they were keen sellers, and were willing to sell large quantities at a discount. A recent feature of the market is the growing practice among mills of supporting jute fatka operations by purchasing jute under ready bills of lading that have been taken delivery of by operators under fatka transactions. Large quantities of jute are arriving in Calcutta in this way, and one or two large groups have taken up bulk supplies. No risk is involved in this, but there does not appear to be any guarantee of marks or assortment, and one consignment may consist of several sellers' jute.

THE JUTE MARKETS

Manufactured Goods: At the opening of the jute goods market last Thursday, conditions were very depressed due to the general lack of interest from both home and overseas. Heavy goods prices slumped by over Re. 1 and ready B Twills dropped to Rs. 111-4 and January-March shipment to Rs. 111-10 a 100 bags. Hessian also lost ground and 40in. 100z. fell back 2 or 4 annas for ready shipment to rule at Rs. 41-15 and forward shipment at Rs. 41-6 a 100 yards. No mill business was reported and heavy selling in the fatka market kept prices low throughout the day. Some small overseas interest on Friday caused a slight rise at the opening and narrow fluctuations were prompted by speculative activities. Towards the evening, however, both sections improved rapidly on the report that mills' stocks of jute goods had shown a marked decrease. By Saturday morning, B Twills had moved up to Rs. 111-12 and 40in. 100z. to Rs. 42-8. Heavy shipper covering over the week-end forced up prices still further, and Monday's opening showed an increase of 12 annas or Re. 1 in heavy goods and 4 or 6 annas in hessian. Rumours of large foreign enquiries kept the market steady throughout the day, and mills took advantage of the rise to sell fairly large quantities for all deliveries. Local covering and fatka transactions also boosted the market, and by Tuesday morning B Twills had risen to Rs. 113-6 for September shipment and Rs. 113-4 for January-March shipment, while 40in. 100z. hessian recorded a new high at Rs. 43-9 for September and Rs. 42-2 for January-March.

At the close, the market was steady and opening quotations on Wednesday morning were as follows:

	Sept.	Oct.-Dec.	Jan.-March.
40in. 80z.	Rs. 35-12	Rs. 35-4	Rs. 34-6
40in. 100z.	43-9	43-5	42-2
B Twills	113-2	113-12	113-12
Heavy Cees (Plain)	113-8	113-12	113-12
A Twills	127-8	128-8	128-8
Liverpools	127-8	128-8	128-8
Cornacks	114	114-12	114

Raw Jute: At the opening last week, the fibre markets were quiet and quotations on Thursday morning showed a drop of 8 annas a maund. Dhubri-Northern jute was Rs. 28-8 a maund. Mills were not interested at this stage, and with the goods market showing signs of declining, sellers became easier and put large quantities on offer, usually at a discount. On Friday, prices dropped a further 8 annas and small business was done at the lower levels, mainly for quick delivery jute. Rates remained at this level, although business was reported at a discount. Mills' policy at this stage appeared to be to take up small quantities each day. Over the week-end, the gunny market improved. Mills, taking advantage of the rise, sold heavily and covered in jute, so prices on Monday morning reverted to Rs. 28-8 a maund basis Bottoms. Good business was done during the day in ready bills of lading and also in low quality jute for shipment. This succeeded in pushing rates up to the week's opening level of Rs. 29, at which price mills again bought on Tuesday.

Business during the week was confined mainly to ready bills of lading for Dhubri-Northern and Assam jute at prices ranging from Rs. 28-8 to Rs. 29-8 a maund basis Bottoms. Shipment jute was also done in these varieties at Rs. 28 to Rs. 28-8 a maund. Low quality jute from Forbesganj, Purnea and Jungli areas came in for some interest, and business passed at Rs. 27-4 to Rs. 28-8 a maund, according to district, for September-October shipment. Murshidabad Tossa was also done at Rs. 28 to Rs. 28-8 a maund basis Bottoms for one month's and September-October shipment. Small lots of Bimli changed hands at Rs. 27 for F.A.Q. for September-October shipment.

At the close, the market was unchanged and opening quotations on Wednesday morning were as follows:

Indian Jute (New Crop):	Landed at Mills Rs. a and basis Bottoms.	Shipment. Sept.-Oct.
Lower Assam	29	"
Northern	29	"
Murshidabad White	28	"
Daissee White	29	"
Daissee	29-8	"
Daissee Mesta	27	"
Local Northern	29	"
Bimli	27-8	"
Pakistan Jute (New Crop):	Rs. a md.	Shipment. Sept.-Oct.
Jat	31-8	"
District	31	"
Northern	30-8	"
Pucca:	Rs. a bale	Shipment. Sept.-Oct.
Mill Firsts 2/3	185	"
Export Firsts 2/3	170	"
Export Lightnings	155	"
Jat Cuttings	130	"

Business in the local Cossipore markets was dull towards the close, although mill representatives were still fairly active. Imports improved towards the end of the week, and a total of about 800 wagons arrived at the sidings. Stocks are still fairly low, and quotations were based on Kishenganj at Rs. 28-8 a maund. Quick delivery jute was at a Re. 1 premium.

Mofussil: Upcountry markets are very firm on account of heavy covering business. Imports are still small and in most areas rates continue to lead Calcutta by about 8 annas a maund. Business is heavy for mid-September shipment and early jute is in short supply. The transport situation is still difficult at the railway agencies, but those districts served by steamers are having no difficulty in getting jute away. Quotations in Dhubri at the close were based on Rs. 25 a maund basis Bottoms.

Raw Jute Consumption

The consumption of raw jute by mills reporting to the I.J.M.A. in August, 1956, amounted to 522,350 bales for a 203.5-hour working month. This was 26,250 bales less than the previous month, which had only 200.5 working hours. The total consumption for July and August is now 1,070,950 bales, as against 964,860 bales in the corresponding period of last season. In August 1955, consumption was 474,560 bales for a 200.5-hour working month.

tion for July and August is now 1,070,950 bales, as against 964,860 bales in the corresponding period of last season. In August 1955, consumption was 474,560 bales for a 200.5-hour working month.

I.J.M.A. PRODUCTION FIGURES FOR AUGUST

The Indian Jute Mills Association reports the total production of jute goods during the month of August as follows:

Description	Quantity
1. Twist and Yarn	
(a) For Sale	1,567 tons
(b) All others including that used in sewing bags	1,082 "
2. Canvas	136 "
3. Gunny Bags (Tonnage exclude sewing twist)	
(a) Hessian	4,485 tons
(b) Sacking	46,073 tons
4. Gunny Cloth	
(a) Hessian	30,806 tons
(b) Sacking	1,221 tons
5. Other manufactures (including ropes)	3,301 tons
6. Total production (above figures combined)	99,569 tons
(a) All kinds	11,280 lakh yds.
(b) Hessian (both bags and cloth)	13,492 lakh yds.
(c) Sacking (both bags and cloth)	11,573 "
(d) Canvas (both bags and cloth)	3.4 "
Summary	
(00,000 Yds.)	(000 Tons)
Aug. July Aug. Aug. July Aug.	Aug. July Aug.
1956 1956 1955 1956 1956 1955	1956 195

November-December, with B Twills offered at 169s 6d, 170s and 170s 9d for respective positions of shipment, all f.o.b. Calcutta.

GUNNY SHIPMENT STATISTICS

The following figures include coastal shipment relating to manufactured jute goods for shipment from the port of Calcutta. These are gross figures based on shipping bills presented:

	Hessian	Cloth	Total
	(Tons)	(Tons)	(Tons)
1st to 5th September 1956	571.2	8,695.3	9,266.5
1st to 5th August 1956	1,065.3	10,330.8	11,396.1
1st to 5th July 1956	664.8	8,406.1	9,070.9
	Sacking		
1st to 5th September 1956	7,304.2	224.9	7,529.1
1st to 5th August 1956	7,714.1	932.5	8,646.6
1st to 5th July 1956	8,156.1	766.0	8,922.1

SOUTH EASTERN RAILWAY TENDERS.

The Controller of Stores, Garden Reach, Calcutta-23 invites the following tenders:

(1) Tender No. CS14/56/516 GS(56) for supply of:

(a) Carriage Roofing 2-ply 3'-0" wide = 4,500 Rft.

(b) Underlay 3'-0" wide = 4,500 Rft

(c) Compound carriage roofing for hot application. = 37½ cwt.

(d) Nails for fixing (a) and (b) flat Head 1" = 30 lbs.

(e) Compound carriage flooring red with crystals. = 30 tons.

(f) Screws Sheridised superior rust resisting CSK. Hd. 1½" No. 10. = 160 Gross.

(2) Tender No. CS15/56/517CS(56) for supply of 329 Nos. Sheet plywood 3-ply 8'-0" x 4'-0" x 3/16" thick synthetic resinbonded moisture-proof to ISI Specs. 303-1951 Grade MPFI.

(3) Tender No. CS16/56/518CS(56) for supply of:

(a) Pan Lavatory stainless steel highly polished to IRS Drg. CI850. = 156 Nos.

(b) Bowls wash hand stainless steel highly polished to IRS Drg. CA1674 = 208 Nos.

Tender forms are obtainable from his office (B Section) on remittance of Rs. 2/- per copy tender (not refundable) by Money Order to him direct in case of outside firms and on production of Cash Receipt from the Chief Cashier Garden Reach by local firms. Closing date of all tenders is 28-9-56 at 12 Noon.

Engineering and Transport

THE BASIC COST OF MATERIALS

VITAL IMPORTANCE OF ATOMIC ENERGY TO U.K.

THE Economic Commission for Europe has lately investigated the use of such materials as aluminium and plastics as substitutes for steel. It has concluded that consumption of these materials will increase much more than consumption of steel in the next few years, in relation to current consumption, but that consumption of steel will nonetheless expand impressively. The discovery of large reserves of bauxite in Queensland has suggested possibilities of a big increase in production of aluminium, in addition to the new production planned in Canada, the Gold Coast, and elsewhere. But Australia has no great potentialities for supplying to the ore-bearing region of Queensland the quantity of electricity needed to maintain a big aluminium industry. If the best estimates of the quantity and the quality of the ore are realised, an important new source of supply will be available to the aluminium industries of other countries.

The interest that this discovery has aroused is fresh evidence of the anxiety that many people feel when they contemplate the gradual exhaustion of reserves of minerals. Already the richest ores available to the aluminium industry have been used, and the rising price of the metal reflects the use of poorer ores as well as the general rise in costs. Aluminium is still a comparatively new metal, and it is at present affected less than most minerals by this deterioration of quality. But a tenfold increase in annual consumption since pre-war years and a further prospective increase (as estimated by E.C.E.) of two-thirds by 1960 imply a fast-developing shortage of the better ores. Fortunately, industrial technique progresses. Some 50 years ago, it was impracticable to smelt copper ore containing less than 10 percent of the metal; now a content of less than 1 percent is adequate for smelting. Improvement of techniques moderates the rise in production costs. But it does not stop that rise. Prices can, and do, decline almost continuously for many months; yet the long-term tendency of prices of materials such as metals and coal (and the rule will apply in due course to oil) is always upward, because their sources are becoming more remote and less prolific.

Exploration in Antarctica

How remote these sources could become, we were reminded by Sir Raymond Priestley in his presidential address to the British Association for the Advancement of Science at the end of August. He was speaking (on the basis of personal experience) on Antarctica, where there must be huge reserves of minerals to be explored and exploited. Sir Raymond does not believe that the task is impossible in the era of nuclear power, but he perceives that it would require finance on at least a national scale. He envisages the whole enterprise going underground, after the ore is located—engine-rooms, hoisting gear, mineral-dressing plants, all operated in the underground conditions below the reach of the natural climate. New communities, with new ways of living, will be needed to exploit these resources. The whole project, so conceived, is quite different from the projects to which we are becoming accustomed even in undeveloped regions—and, of course, vastly more expensive. On the other hand, the mention of nuclear power suggests that tasks that are now only visionary can become practical possibilities. An alternative approach to the problem is by way of substitution. The Economic Commission for Europe emphasised the development of plastics, replacing more traditional materials—or, at least, absorbing some of the demand that would require greatly increased quantities of traditional materials. Here again nuclear science plays a part; radioisotopes can reduce considerably the cost of manufacturing some plastics.

Optimism of Mr. Colin Clark

At the British Liberal Summer School held a few weeks ago at Cambridge, Mr. Colin Clark, the Oxford economist, attacked the idea that the world's resources were inadequate to satisfy the needs of an expanding population. This idea, he said, was due to ignorance of the simplest facts of geography and agriculture and of the rapid replacement of scarce materials by substitutes. He quoted Dr. Dudley Stamp, professor of geography at the University of London, who told the World Population Conference in 1954 that the world was using only one-third of its cultivable land and that even that one-third was capable of greatly increased output. In reply to Mr. Clark, Lord Boyd-Orr, another authority on the world's food, said that a reasonable standard of living could be provided

for everybody only if politicians would "set aside their politics" and nations would combine to develop the world's resources. He suggested, as a start a reduction of 10 percent in the world's expenditure on armament, totalling about £40,000 million a year; one-half, say, of the £4,000 million thus made available could be applied to a world-wide development plan, beginning with the production of food. Mr. Ritchie Calder, science correspondent of the London News Chronicle, also emphasised the burden of military preparation, from the viewpoint of Britain, and especially of Britain's power. Lack of fuel and power in the next 20 years or so, he said, could cause the decline of Britain "not to a second or third-rate power but to a tenth-rate power", but the atomic-energy programme, which could greatly expand because "at least 60 percent of our rare atomic manpower and most of our atomic fuel is being devoted to weapon-research" Optimistic estimates such as Mr. Clark's can be dangerous if they lull us into a feeling of complacency. What is in question is not the potential output of the world, but the output that is practicable at economic costs. Manufacture of substitutes in developed countries may delay scarcities for many years, and at the same time delay development of undeveloped countries. But huge tasks of development must be performed sooner or later, and they will need some such international plan as Lord Boyd-Orr has envisaged. That 45 nations are co-operating in the International Geophysical Year Book 1957-58, exploring the world as a whole at a cost of some £100 million, is a promising augury for worldwide development.

COMPANY AND PUBLIC NOTICES

THE GOUROPORE COMPANY, LIMITED. NOTICE.

NOTICE is hereby given that an Annual General Meeting of the Members of the Company will be held at the Registered Office of the Company, No. 2, Fairlie Place, Calcutta, on Tuesday, the 9th October, 1956, at 11-00 A.M. for the following purposes:—

AGENDA

- To receive and consider the Directors' and Auditors' Reports and the Profit and Loss Account for the half-year ended 31st March, 1956, and the Balance Sheet as at that date.
- To declare Dividends.
- To elect Directors.
- To appoint Auditors and to fix their remuneration.

As Special Business:

(a) To consider and, if thought fit, to pass, with or without modification, the following Resolution which will be proposed as a Special Resolution:—

"RESOLVED that the Articles of Association of the Company be altered in manner following:—

(a) In the first line of Article 82 the word "twice" shall be deleted and the word "once" be substituted therefor.

(b) In the first line of Article 181 the word "twice" shall be deleted and the word "once" be substituted therefor.

(ii) To consider and, if thought fit, to pass, with or without modification the following Resolution which will be proposed as an Ordinary Resolution:—

"RESOLVED that the Board of Directors be and is hereby permitted with effect from the commencement of the Companies Act, 1956, to borrow moneys from time to time for carrying on the business of the Company notwithstanding that the moneys to be borrowed together with the monies already borrowed by the Company (apart from temporary loans obtained from the Company's Bankers in the ordinary course of business) will exceed the aggregate of the paid-up Capital of the Company and its free reserves, that is to say, reserves not set apart for any specific purpose".

The Share Transfer Books of the Company will be closed from 30th September to 9th October, 1956, both days inclusive.

By Order of the Board,

MACNEILL & BARRY LTD.,

A. H. FORSTER,

Secretary,

Managing Agents.

Fairlie Place, Calcutta, 24th September, 1956.

A member of the Company who is entitled to attend and vote is entitled to appoint a proxy to attend and vote instead of himself. A proxy need not be a member of the Company.

Explanatory Statement

Item No. 5(i). Articles 82 and 181 of the

Articles of Association of the Company provide that twice in every year, the books shall be examined and the correctness of the Balance Sheet and Profit and Loss Account ascertained by Auditors, and that the same shall be laid before General Meetings which shall be held twice in every calendar year. In accordance with these requirements of the Articles, the accounts have been closed half-yearly and a Profit and Loss Account in respect of each half-yearly period ending on the 30th September and the 31st March in each year and the Balance Sheet at each date has been laid before the Company in General Meeting. Under the provisions of the Companies Act, 1956, each such half-yearly period will be a financial year and as a result the usual half-yearly General Meetings will each be deemed to be an "annual general meeting" within the meaning of the Act. In consequence (inter alia) the Directors liable to retire by rotation and the Auditors will retire half-yearly. Your Directors, having carefully considered the matter and the difficulties attending the preparation of the accounts in conformity with the provisions of the Act, the additional work and expense which will be involved in adding an Annual General Meeting in each half-year, recommend that the accounts be closed once only on the 31st March to be laid before the Company at an Annual General Meeting in each calendar year, and that

the Articles be amended to give effect to such recommendation.

Neither the Directors nor the Managing Agents will derive any benefit in respect of their remuneration by reason of this change and interim dividends may, subject to trading results, be declared by your Directors under Article 162.

(2) Item No. 5(ii). By the provisions of Section

293(i)(d) of the Companies Act, 1956, the Directors without the consent of the company in general meeting cannot borrow monies in excess of this statutory limit being the aggregate of the paid-up capital of the company and its free reserves. An authority is therefore required for the Directors to borrow for the purposes of the Company in excess of this statutory limit but subject always to Article 65 of the Articles of Association of the Company. The presently proposed resolution will, in effect, restore the position which prevailed prior to the 1st April, 1956.

THE NUDEA MILLS COMPANY, LIMITED. NOTICE.

NOTICE is hereby given that an Annual general meeting of the Members of the above Company will be held at the Registered Office of the Company, No. 2, Fairlie Place, Calcutta, on Tuesday, the 9th October, 1956, at 11-30 A.M. for the following purposes:—

AGENDA.

- To receive and consider the Directors' and Auditors' Reports and the Profit and Loss Account for the half-year ended 31st March, 1956, and the Balance Sheet as at that date.
- To elect Directors.
- To appoint Auditors and fix their remuneration.
- As Special Business:

To consider and, if thought fit, to pass, with or without modification, the following Resolution which will be proposed as an Ordinary Resolution:—

"RESOLVED that the Board of Directors be and is hereby permitted with effect from the commencement of the Companies Act, 1956, to borrow moneys from time to time for carrying on the business of the Company notwithstanding that the moneys to be borrowed together with the monies already borrowed by the Company (apart from temporary loans obtained from the Company's Bankers in the ordinary course of business) will exceed the aggregate of the paid-up Capital of the Company and its free reserves, that is to say, reserves not set apart for any specific purpose".

The Share Transfer Books of the Company will be closed from 30th September to 9th October, 1956, both days inclusive.

By Order of the Board,

MACNEILL & BARRY LTD.,

A. H. FORSTER,

Secretary,

Managing Agents.

2, Fairlie Place, Calcutta, 6th September, 1956.

A member of the Company who is entitled to attend and vote may appoint a proxy to attend and vote instead of himself. A proxy need not be a member of the Company.

Explanatory Statement

Item No. 4. By the provisions of Section

293(i)(d) of the Companies Act, 1956, the Directors without the consent of the company in general meeting cannot borrow monies in excess of the aggregate of the paid-up capital of the company and its free reserves. An authority is therefore required for your Directors to borrow for the purposes of the Company in excess of this statutory limit. The Resolution is intended to provide that authority and to restore the position which prevailed under Article 65 prior to 1st April, 1956.

The Asahi Glass Co. Ltd. of Tokyo, Japan, is pleased to announce that by an arrangement with the Industrial Finance Corporation it has incorporated an Indian Public Company called "The Indo-Asahi Glass Co. Ltd." for the purpose of taking over the assets of the Sodopore Glass Works Ltd.

Asahi Glass Co. Ltd. are arranging to ship from Japan to India special equipment for the modernisation of the original plant and have also arranged to supply first class Glass Technologists.

It is hoped that the plant will go into production at Bhurkunda early in 1957.

THE GANGES ROPE COMPANY, LIMITED. NOTICE.

NOTICE is hereby given that an Annual general Meeting of the Members of the above Company will be held at the Registered Office of the Company, No. 2, Fairlie Place, Calcutta, on Tuesday, the 9th October, 1956, at 12-00 Noon for the following purposes:—

AGENDA.

- To receive and consider the Directors' and Auditors' Reports and the Profit and Loss Account for the half-year ended 31st March, 1956, and the Balance Sheet as at that date.
- To declare a Dividend.
- To elect a Director.
- To appoint Auditors and fix their remuneration.
- As Special Business:

To consider and, if thought fit, to pass, with or without modification, the following Resolution which will be proposed as an Ordinary Resolution:—

"RESOLVED that the Board of Directors be and is hereby permitted with effect from the commencement of the Companies Act, 1956, to borrow moneys from time to time for carrying on the business of the Company notwithstanding that the moneys to be borrowed together with the monies already borrowed by the Company (apart from temporary loans obtained from the Company's Bankers in the ordinary course of business) will exceed the aggregate of the paid-up Capital of the Company and its free reserves, that is to say, reserves not set apart for any specific purpose".

The Share Transfer Books of the Company will be closed from 30th September to 9th October, 1956, both days inclusive.

By Order of the Board,

MACNEILL & BARRY LTD.,

A. H. FORSTER,

Secretary,

Managing Agents.

2, Fairlie Place, Calcutta, 6th September, 1956.

Note. A member of the Company who is entitled to attend and vote may appoint a proxy to attend and vote instead of himself. A proxy need not be a member of the Company.

Explanatory Statement

Item No. 5. By the provisions of Section

293(i)(d) of the Companies Act, 1956, the Directors without the consent of the company in general meeting cannot borrow monies in excess of the aggregate of the paid-up capital of the company and its free reserves. An authority is therefore required for your Directors to borrow for the purposes of the Company in excess of this statutory limit. The Resolution is intended to provide that authority and to restore the position which prevailed under Article 65 prior to 1st April, 1956.

THE CHAMPDANY JUTE COMPANY, LIMITED.

NOTICE is hereby given that an Annual General Meeting (being the Sixty-sixth Ordinary General Meeting of the Company) will be held at the Registered Office of the Company, 2, Netaji Subhas Road, Calcutta, on

THE GANGES MANUFACTURING COMPANY, LIMITED.

NOTICE.

NOTICE is hereby given that a general meeting of the Members of the above Company, being an Annual General Meeting within the meaning of the Companies Act, 1956, will be held at the Registered Office of the Company, No. 2, Fairlie Place, Calcutta, on Tuesday, the 9th October, 1956, at 10-30 A.M. for the following purposes:—

AGENDA

1. To receive and consider the Directors' and Auditors' Reports and the Profit and Loss Account for the half-year ended 31st March, 1956, and the Balance Sheet as at that date.
2. To elect Directors.
3. To appoint Auditors and fix their remuneration.
4. As Special Business:

To consider and, if thought fit, to pass, with or without amendment, the following Resolution:—

Calcutta, 6th September, 1956.

Note. A member of the Company who is entitled to attend and vote may appoint a proxy to attend and vote instead of himself. A proxy need not be a member of the Company.

Explanatory Statement

Item No. 4. By the provisions of Section 293(1) (d) of the Companies Act, 1956, the Directors without the consent of the company in general meeting cannot borrow monies in excess of the aggregate of the paid-up capital of the company and its free reserves. An authority is therefore required for your Directors to borrow for the purposes of the Company in excess of this statutory limit. The Resolution is intended to provide that authority and to restore the position which prevailed under Article 65 prior to 1st April, 1956.

MARTIN BURN LIMITED.

NOTICE is hereby given that the Board of Directors of this Company has sanctioned payment of the Dividend on the Preference Share Capital of the Company at the rate of 5% per annum for the half-year ending 30th September, 1956. The Preference Share Registers will be closed from the 24th September to the 30th September, 1956, both days inclusive. Payment will be made on or after 10th October, 1956, to those Preference Shareholders whose names appear on the Company's Registers on the 30th September, 1956, or in accordance with their instructions.

By Order of the Board,
L. K. SEN CHOWDHRY,
Acting Secretary.

12, Mission Row,
Calcutta,
10th September, 1956.

MARTIN BURN LIMITED.

Convertible Notes.

NOTICE is hereby given that interest for the half-year ending 30th September, 1956, will be paid on or after that date to those holders of Convertible Notes whose names appear on the Company's Register on the 30th September, 1956, or in accordance with their instructions.

L. K. SEN CHOWDHRY,
Acting Secretary.

12, Mission Row,
Calcutta,
10th September, 1956.

THE HURRILADIH COAL COMPANY, LIMITED.

NOTICE.

NOTICE is hereby given that an Annual General Meeting of the Members of the Company will be held at the Registered Office of the Company, No. 2, Fairlie Place, Calcutta, on Friday, the 5th October, 1956, at 2-45 P.M. for the following purposes:—

1. To receive and consider the Directors' and Auditors' Reports, the Profit and Loss Account for the half-year ended 31st December, 1955, and the Balance Sheet as at that date.
2. To declare a Dividend.
3. To elect a Director.
4. To appoint Auditors and to fix their remuneration.
5. As Special Business:

To consider and, if thought fit, to pass, with or without amendment, the following Resolution:—

(As an Ordinary Resolution), "RESOLVED that the Board of Directors be and is hereby authorised with effect from the commencement of the Companies Act, 1956, to borrow moneys from time to time for carrying on the business of the Company notwithstanding that the moneys to be borrowed together with the moneys already borrowed by the Company (apart from temporary loans obtained from the Company's Bankers in the ordinary course of business) will exceed the aggregate of the paid-up Capital of the Company and its free reserves, that is to say, reserves not set apart for any specific purpose".

The Share Transfer Books of the Company will be closed from 28th September to 5th October, 1956, both days inclusive.

By Order of the Board,
MACNEILL & BARRY LTD.,
A. H. FORSTER,
Secretary,
Managing Agents.

2, Fairlie Place,
Calcutta, 7th September, 1956.

Note. A member entitled to attend and vote at the Meeting is entitled to appoint a proxy to attend and vote in his stead. A proxy need not be a member.

EXPLANATORY STATEMENT

Item No. 5. By the provisions of Section 293 (1) (d) of the Companies Act, 1956, the Directors without the consent of the company in general meeting cannot borrow monies in excess of the aggregate of the paid-up capital of the company and its free reserves. An authority is therefore required for your Directors to borrow for the purposes of the Company in excess of this statutory limit. The Resolution is intended to provide that authority and to restore the position which prevailed under Article 65 prior to 1st April, 1956.

COAL COMPANIES

O. P. F. and Dd. indicate Ordinary Preferred-Ordinary. Founders' and Deferred shares respectively. P. next to the name of the company indicates that the company also has Preference Shares. Figures in "accounts closed" column indicate the months of the calendar year in which accounts are closed. For Managing Agents refer to the Key (last page) under the numbers indicated.

TEA COMPANIES

O, Po and Dd indicate Ordinary, Preferred Ordinary and Deferred Shares, respectively. P next to the name of the company indicates that the Company also has Preference Shares. Figures in "accounts closed" column indicate the months of the calendar year in which accounts are closed. For Managing Agents refer to the Key (last page) under the numbers indicated.

FIVE PERCENT OF JUTE LOOMS RESEALED

THE FACTS BEHIND THIS WEEK'S MOVE

THIS week, the member mills of the Indian Jute Mills Association sealed 5 percent of their total loomage. Adding this proportion to the 2 1/2 percent sealed in July, the industry is now back where it was at the beginning of the year with a total of 12 1/2 percent of its capacity idle. This reversal of the unsealing policy adopted only eight months ago has been brought about by the behaviour of the industry's stocks of goods. These have risen continuously since November 1955. Their growth has helped to keep goods prices low in relation to raw jute throughout the whole period, and they recently attained a level which threatened to keep prices below costs of production for as far ahead as reasonable estimates of likely demand can reach. It is impossible for the industry to ignore such a situation. A cut in production was the only practicable step to take, short of increasing demand to the full extent required—and that is something quite beyond the industry's powers. The fact cannot be avoided that the mills have been producing more goods than the present level of world offtake justifies. There is no question of demand not having increased this year, although not, of course, as much as was expected when the unsealing took place in January and February. In the seven months ended July, a total of 590,900 tons of jute goods were sold compared with 569,500 tons during the same period in 1955. It is simply that world demand has not increased at the same rate as production and the industry has found itself unable indefinitely to go on manufacturing for stock.

The seriousness of the position can be seen from a few figures. At the end of July, before the 5 percent re-sealing was decided on, the industry's stocks of goods stood at 137,900 tons compared with 81,500 tons in the same month of the previous year. These were more than double what the industry was holding on 1st January, 1956. The usual seasonal reduction in stocks, which begins about May and continues until November or December, had not appeared. From 30th April to 31st July this year gunny stocks increased by 30,000 tons. During the same period in 1955 they fell by 21,900 tons. Up to end-July, the industry produced 665,100 tons of jute goods against 589,100 tons last year, an increase of 76,000 tons. Apart from the unsealing of 7 1/2 percent of total loomage, one important factor contributing to the higher production has been the better performance of recently-installed, up-to-date machinery. Another is the concentration on sacking manufacture, which gives a larger tonnage output than hessian; this is now being modified in the normal course of adjustment to changing demand circumstances. But what could not be corrected without a severe cut in overall output is the fact that buyers have felt themselves justified by the stock position in holding out of the market for a fall in prices. Such a hand-to-mouth method of purchasing has resulted in a persistent tendency for prices to be depressed. The wave of short-covering which followed the latest resealing announcement gives some idea of the speculative bear position which had been built up to the detriment of the industry's profitable working, during the period stocks were shooting up.

*

To the layman, the spectacle of one of India's major industries—and her largest dollar earner—in a state of depression when industrial output is expanding throughout the economy, must appear a strange one. The answer is simple enough. Ninety percent of the jute industry's output goes to export. It is true that internal requirements are increasing. The entire improvement in this year's overall demand up to the end of July was accounted for by a jump of 21,700 tons in home offtake; that of the rest of the world actually fell by 300 tons. But jute is still predominantly an export industry and is likely to remain so for as far ahead as the imagination can stretch. This means that any doctrinaire approach to the question of output based on what is required from the economy as a whole, is inappropriate and can be damaging. The continued

existence of an industry in jute's position depends on the ease with which it can adapt itself to changes in world economic conditions. These have been fairly stable this year so far. But the future contains no particular factor which holds the slightest hope that the expanded output of the Indian jute mills, plus this year's huge additions to stock, will be absorbed at prices high enough to cover costs of production. Such factors as foreign competition, substitute handling methods and fluctuations in the field of international economics, must constantly be watched. The progress of substitutes has not been any less this year than it was last, and the growth of foreign competition, especially from the modern low-cost Pakistani mills, has notably increased. The slight fall in world demand has shown that, even in a good year, the industry cannot expect any rapid increase in world offtake. This will come only with persistent and expensive efforts to expand the market; and it will take a long time, if in fact it is successful at all. It is possible that the industry will have to be prepared, given the present competitive strength of substitutes and other jute industries, to work even harder just to hold what it has.

The swift improvement in the price of jute goods which followed the latest resealing announcement has been regarded in some quarters as proof that the industry has been too pessimistic in its decisions to cut capacity. The sharp fall in stocks which occurred in August is also being offered as evidence. But these prices are likely only to be temporary because they are largely due to speculative short-covering and to enquiries which have been deferred from the period when the only trend in prices was downward. Already, the upward surge

quality of this season's crop is not yet known and, at the moment, the signs are conflicting. The industry has concentrated its suggestions for improving the crop on four points. These are, improved seed, better retting facilities, more scientific cultivation and increased fibre yield. Perhaps the most fruitful of the four would be the last-mentioned. It is certainly the one about which least has so far been done.

A CASE OF DOG BITES MAN INDO-BRITISH ECONOMIC TIES

IN spite of a decisive change in Indo-British political relations, economic ties between the two countries have strengthened since 1947. There are no intriguing factors behind this. Looking at it objectively, as did Mr. A. F. Morley, U.K. Deputy High Commissioner, in a recent address to the Ranchi Rotary Club, the reasons are essentially simple—enlightened self-interest and a great fund of goodwill. Mr. Morley summed it up as follows: "The U.K. has everything to gain from seeing India, as a fellow member of the Commonwealth and the sterling area, in strong economic health." He observed the fact that in spite of a consistent record, going back 120 years, of promoting the economic growth of India, British help in the current period has received little publicity, compared with the "foreign" aid from other countries whose motives for rendering it are not always strictly economic. The fact is that British aid has been taken so much for granted in India that the news has become almost as natural as "dog bites man", while the spectacular, but occasional, aid offer from totalitarian countries becomes the classic news of "man biting dog."

This is an explanation with which all thinking people will agree. Yet it is important that the ordinary people of India should get their facts in correct perspective and appreciate that the U.K. has offered India substantial assistance in the post-independence era—not to speak of the very large investment U.K. citizens already have in this country—in the teeth of severe economic hurdles which have had to be grappled with simultaneously. As Mr. Morley pointed out, quoting from the statistics of the Reserve Bank of India, the U.K. was responsible for over 80 percent of the total overseas business investment in India at the end of 1953. In the course of the preceding five years, during which the U.K. itself was in considerable economic difficulty, its business investment in India increased by more than 50 percent, bringing it to a total of Rs. 347 crores. Not far short of half of this increase went into Indian manufacturing industry.

Speaking strictly from the foreign trade point of view, the Deputy High Commissioner pointed out that India's commercial exchanges with the U.K. represented a very high proportion of this country's total foreign trade. In 1955-56 India sent Rs. 163 crores out of a total of Rs. 585 crores (or 28 percent) of exports to the U.K. as against a mere Rs. 11-crores' worth of export to communist countries. India's imports from the U.K. totalled Rs. 175 crores (26 percent)—a large part of it in the form of machinery and capital goods—of the total import bill of Rs. 650 crores during the same period. The communist countries supplied only Rs. 14-crores' worth of goods. A large part of this investment, especially the new investment, Mr. Morley indicated, contributed directly to the implementation of India's plans. Yet there is the feeling that the U.K. has not done all it could. That is perhaps so. But Britain has not been content with merely saying "no" whenever it has failed to comply with a request, it has, in fact, been working its way back to the position when it could render assistance on a much bigger scale.

Going to the heart of the matter, Mr. Morley said that a country could help another when it had a surplus to spare. The U.K. at present does not command such a surplus. Yet it could not be denied that the drawing down of India's sterling balances by Rs. 200 crores during the current plan period would amount to a "drain" on U.K. resources, because to that extent it represented unrequited exports. Besides, the U.K. Government would make a direct loan of £15 million for the Durgapur steel plant outside the £11½ million that the I.S.C.O.N. group would lend. Mr. Morley defined economic aid, in the context of modern economic needs, as not merely consisting of money, but technical skill as well. In the second field, U.K. assistance has been no less substantial. Apart from the very large number of business executives and technicians who come out "under their own steam" to work in this country, many have been coming under the Colombo Plan. Such assistance has already been available to India in the working of many of its vital projects—the Hirakud dam and the D.V.C., the Ganga bridge and Chittaranjan locomotive factory, the working of the Lac Institute and in the teaching at the Kharagpur Institute of Technology, one of India's foremost postgraduate engineering colleges. This is the list of assistance

which Mr. Morley drew up for his audience. As he himself said, it is neither "exhausting or exhaustive". British economic aid has been flowing steadily into India on a multitude of fronts, even if it has not always been noticed in the Indian Press.

ALMS AND THE MAN

LIKE all big cities in India, Hyderabad has its beggars, but it is doubtful if any other is so full of them. The first round of the Socio-Economic and Health Survey of Beggars in the Hyderabad-Secunderabad city area has shown that over 7,000 beggars of all descriptions tramp the streets, soliciting alms from all and sundry, and making an intolerable nuisance of themselves. The Survey, which was undertaken by the Indian Institute of Economics, Hyderabad, on its own initiative, shows that the beggar population falls into two main categories—the physically and mentally unfit, and the able-bodied professionals who have been at it for generations. The latter prowl the streets cleverly disguised in religious trappings or counterfeiting poverty in other ways. The investigating staff of the Institute includes an honorary medical officer, two lady social workers, and an inspector deputed by the State's Social Service Department. The response of the beggars was on the whole satisfactory, and the majority of them willingly submitted themselves to examination. This may in large measure be ascribed to the fact that each beggar was given one anna cash and ½ lb jowar to compensate for the loss of earnings during the time of investigation. Only seven of the 600 investigated in the first round of the Survey refused to accept the compensation offered on the ground that it was too small. Some indignantly declined to be examined or questioned on any terms.

An analysis of the medical results indicates that almost all the beggars were suffering from afflictions ranging from a harmless squint to malignant and contagious maladies, such as leprosy, venereal diseases, paralysis, heart and lung complaints and mental defects. Several had more than one disease, others hardly any. The reasons given by beggars to justify their mendicancy were in the majority of cases senility and decrepitude, physical unfitness for work, hereditary practice, insufficient income of the family, unemployment, desertion by husband or guardian, religious vows and aversion to exertion of any kind. The tactics employed by 416 of the 600 beggars investigated was a plain, direct appeal to charity, generally in the name of God, a familiar cry being *Allah kae nam per deo*. A common practice of women beggars was to hawk about infants in arms, either their own or hired for the purpose, and to plead on their behalf. This seldom fails to excite pity and loosen the purse strings. Others, clad in *sadhu's* or *fakir's* garb, recited prayers to attract alms. Fortune-telling, astrology and palmistry were also among the common methods of astute beggars. All the great religions of the world say that almsgiving is an indispensable means of salvation, and the average Indian is often religious-minded and charitably disposed. His heart melts when suffering or distress confronts him. He does out alms indiscriminately. Professional beggars, particularly the phoney ones, who are shrewd psychologists, are not slow to take advantage of this trait and play on the feelings of the charitably inclined. The Survey shows that the gimmicks used by beggars to fake infirmities are numerous and varied. But there are many genuine cases of physical disabilities and mental defects which deserve to be pitied and relieved. A case which is of great human interest, and which the investigators came across in the course of the Survey, was that of a little boy who was paralysed in both legs as a result of an attack of polio. He was being carried about pick-a-back by another little boy on his begging rounds.

That begging can be a lucrative profession and pays handsome dividends is one of the facts which has been disclosed by the Survey. The total monthly income of the 600 beggars whose cases have so far been investigated and analysed amounted to nearly Rs. 13,000. Many of them owned landed property, houses, livestock, gold and silver ornaments and solid cash, all valued at Rs. 18,000. Some of them were in debt, the average liability of each indebted beggar being Rs. 176. The rate of interest charged by money-lenders (who of course exploit even beggars) ranged from a modest 4 percent to an exorbitant 150 percent a year. As for social habits and behaviour, the investigators found that the life of the average street beggar is by no means all work and no play. The beggars have their "operas", so to speak, and indulge in many diversions, high jinks and spees. A large number of them have a weakness for toddy, or *shendi*, as it is called in "wet" Hyderabad, and even for potent distilled liquors. Several of them are regular cinema-goers and enthusiastic film fans. So far, all the efforts made by the authorities to remove beggars from the streets by providing food and shelter for them in homes for the disabled

and the aged, have met with such meagre success that they may be considered failures. At present, the State's Social Service Department, which is the first one of its kind in India, maintains what is called a *Bhiku Ashram*, besides a leper asylum. Both these, it is stated, are in a very unsatisfactory condition. The *Ashram* has about 50 inmates and the asylum about 25. Even these few protected beggars, in spite of various restrictions, go about begging in the streets during the day. Apparently, no inveterate beggar can be prevented from seeking the "freedom of the city", whatever the inducements.

In the final analysis, it appears that nothing short of legislation making begging in the streets a cognisable offence can solve the beggar problem. But such an enactment will not be justified unless proper institutions are first provided for the physically unfit, the decrepit and the mentally unsound. At the same time, it is felt that measures must be formulated to find suitable employment for the sturdy, able-bodied mendicants, whose poverty is the direct outcome of indolence, intemperance and folly, and who have deliberately chosen begging as a profession. It goes without saying that unless some such remedial measures are adopted at the Governmental level, the efforts of social reformers and social service workers will inevitably fail. Public co-operation is also essential. Few things offend human dignity and self-respect more than professional mendicancy and its continuance will unquestionably qualify the country's progress towards a "socialistic pattern of society" and the achievement of a welfare State.

CURRENT COIN

East India Hotels.—On a later page today appear the details of a public offer of stock in the East India Hotels Ltd. The offer consists of 350,000 ordinary shares of Rs. 10 each, and 30,000 6 percent tax-free cumulative preference shares of Rs. 100 each, both categories to be subscribed at par. The total issued capital is Rs. 1 crore, and the promoters and their friends have agreed to take up 350,000 ordinary shares. The company aims at becoming an important operator of hotels and restaurants. Its more interesting plan is to construct a first-class hotel on modern lines in New Delhi, where the Central Government has already allotted it a plot of land on Mathura Road. It expects to complete the building within one year. The other plan is to take over the Oberoi Palace Hotel in Srinagar; the managing agents of the company are Oberoi Hotels (India) Private Ltd. The estimate is published that in the first year after these projects are completed, the net profit is likely to amount to Rs. 19.64 lakhs; this would cover the preference dividend seven times over. It is hoped further that on this basis there will be scope for paying an ordinary dividend of 15 percent. These estimates of profits do not take into account the possible earnings from liquor sales. It is pointed out that even if Prohibition is introduced, the company might not suffer as a large proportion of its clients will be foreigners, who will be entitled to get liquor easily. The entire project in New Delhi and Kashmir is expected to cost Rs. 1.25 crores; of this, Rs. 1 crore is being raised by the share issue and Rs. 25 lakhs will come later from borrowing. Part of the working capital is to come from the profit of the company's unit in Kashmir. An application is to be made to the Bombay stock exchange to have the shares listed there officially. There is certainly scope in India for a good and enterprising hotel concern. Tourism should improve the occupancy ratio, and lower charges might improve it still further.

Progress in Jay Engineering.—In his address to the shareholders of the Jay Engineering Works Ltd. (published elsewhere in this issue of *Capital*), the chairman, Sir Shri Ram, was able to report another year of progress for the company. The output of both sewing machines and electric fans has increased. The average monthly production of sewing machines was up to 9,026 last year, compared with 6,476 the year before. The highest total for any one month was 12,012 compared with 9,241. The average production of electric fans last year was 6,939 against 4,478 in the previous year. Sir Shri Ram was able to report that the Government of India had granted a licence for the expansion of the fan factory's capacity from 10,000 to 26,500 a month, and of the sewing machine plant from 10,000 to 25,000. The company has successfully approached the Industrial Finance Corporation for another loan of Rs. 30 lakhs, and the machinery is on its way. The company's fan section is being shifted to a new site in order that its increased capacity can be accommodated. During the year, the manufacture of hurricane lanterns was abandoned and the plant turned over to other purposes. According to its plan, the company has succeeded in making table fans available at Rs. 60 each. The chairman was hopeful that the company would, in the near future, be able to sell 36" ceiling fans at about Rs. 100 each. Sir Shri Ram outlined the company's experience

in its efforts to increase exports. The difficulties which are at present being encountered in getting the drawback of customs duty allowed by the Government of India were cited as one of the impediments to increasing shipments. Sir Shri Ram suggested that the Government of India should call a conference of railways, industry, trade and labour to consider how exports can be encouraged in the nation's interest.

Prospects for Paper.—The index of output in the Indian paper industry rose from 104.2 in 1952 to 146.9 in April, 1956, while the general index of industrial production rose from 103.6 to 136.7 during the same period. For the paper industry in particular, this indicates a state of prosperity which has induced a fresh mood of optimism, and the industry is expecting substantially to fulfil the targets laid down for it in the second plan as it did those in the first. Speaking at the fourteenth annual general meeting of the Indian Paper Mills Association held this week, Mr. Ganga Prasad Birla, president, said that the production of paper and board rose to the record level of 186,849 tons in 1955-56 (against the first plan target of 200,000 tons) from 114,000 tons at the beginning of the quinquennium, or an increase of about 72,000 tons. The installed capacity at present stood well in excess of 211,000 tons. For the second plan, the target for installed capacity at 450,000 tons has been fixed by the Planning Commission on the recommendation of the Association, though the production target has been reduced by 10,000 tons to 350,000 tons. Licences granted for expansion or new units, Mr. Birla understands, now almost cover the capacity target, and he suggested the Government review the position so that the balance may be set up by the industry as soon as possible. The second plan target for newspaper production is 60,000 tons, the manufacture of which has been entrusted exclusively to the public sector. Two factors could still hamper the industry's expansion plans if they were not expeditiously removed—insufficient raw material supply and inadequate transport facilities. The Government has already appointed an *ad hoc* committee to look into the problem of raw materials for the industry. No representative of the industry is on the committee and Mr. Birla urged that the Association be given representation on it. In this connection, he noted two developments which could make the problem of raw material supply easier—the use of *Salai* for the manufacture of chemical and mechanical pulp and the experts' report in favour of utilising bagasse for the manufacture of newsprint and other types of paper. There was another of the industry's complaints to which Mr. Birla referred at some length—the levy of excise duty at varying rates on almost identical types of paper. After explaining the industry's point of view briefly, Mr. Birla urged that the procedure of the levy should be simplified to spare the industry much unnecessary trouble.

India's Trade Through Suez.—Of the total Indian imports in 1955-56 valued at Rs. 650 crores (c.i.f.) those which passed through the Suez Canal are estimated to be worth Rs. 462 crores. Of the total exports during the same year valued at Rs. 591 crores (f.o.b.), the exports which passed through the Canal are estimated at Rs. 393 crores. This was stated in the Rajya Sabha recently by the Minister for Trade, Mr. D. P. Karmarkar. He added, however, that no precise data were available. The Minister also said that exact figures of the total ocean freight paid on Indian trade passing through the Canal were not available. But it is estimated that Indian imports through Suez included, on an estimate, freight charges amounting to Rs. 36.9 crores to Rs. 39 crores. On Indian exports through the Canal the freight bill is estimated at Rs. 31.4 crores to Rs. 33.4 crores.

Insuring Railway Passengers.—The suggestion that insurance be provided for railway passengers, has been put forward by Prof. S. Kesava Iyengar, Director, Indian Institute of Economics, Hyderabad. In a statement issued in connection with the recent disaster on the Central Railway in Hyderabad State he has said that the tragedy raises three issues: compensation to the families of the victims; insurance against accidents to passengers; and, more efficient maintenance of the railway track. As regards insurance of railway passengers, Prof. Iyengar points out that insurance companies already issue policies to air passengers at airports. He suggests that the railways charge a flat rate on all railway tickets. Out of this, compensation at a flat rate could be organised for accidents, deaths, and other risks. Cover could be provided on a voluntary basis, the premiums, of course, varying according to the value required.

British Textile Machinery Exports.—Though exports of textiles from Britain have been falling steadily, just the opposite has been the experience of textile machinery exporters, particularly in recent months, and it is expected that this year's total will set up a new record. India is her best customer. After rising for some years, British exports of textile machinery amounted to 112,689

tons, valued at £50,447,000 in 1952. There was a sharp fall to 84,367 tons, valued at £40,797,000 in the following year, and a smaller further drop to 79,330 tons, valued at £39,454,000 in 1954. Last year, however, a recovery began with exports of 82,680 tons, valued at £43,295,000. This improved tendency has now become more strongly pronounced. In the first six months of this year the volume of the exports rose to 44,962 tons, compared with 39,758 tons in the first half of 1955, while the value rose to £24,494,000, against £20,653,000. The principal markets are shown in the following tables:

EXPORTS OF TEXTILE MACHINERY

	(000s omitted)		
	1956	1955	1954
India	£ 5,581	£ 3,149	£ 3,576
Pakistan	601	2,993	2,382
Australia	791	919	959
Soviet Union	1,320	2,114	2
Western Germany	1,108	1,016	907
Belgium	816	681	472
France	1,183	1,184	1,158
Italy	738	467	1,320
Egypt	1,073	484	528
United States	1,167	842	553
Mexico	847	369	334

Machinery for making synthetic fibres was valued at £563,146 in the first half of this year, against £223,968 a year previously; machinery for making full-length stockings was valued at £984,554, against £522,774; and lace, net and embroidery machinery at £419,054, against £279,930. There were very large increases in machines for processes preparatory to spinning and twisting and in looms, particularly those with automatic weft replenishing. Machinery for finishing processes other than bleaching, dyeing and printing also showed an encouraging expansion.

Cheap Textiles.—The search for new outlets for Lancashire's textile output has lately taken on a new direction, namely, of finding ways and means of cutting prices. In textiles the cheapest raw materials are viscose rayon staple and cotton, and blends of these two fibres can produce fabrics and garments which are not only inexpensive but also attractive in appearance and in use. What is more, they can attain a high degree of serviceability. All these points are demonstrated at an exhibition of "Fibro" and cotton blends which was opened recently at the offices of Courtaulds' Use-development Organisation at 15 Cross Street, Manchester. It seems clear that, for many purposes, blends of viscose staple and cotton give better results than either fibre used alone. The fabrics made from blends not only look more attractive but they also prove to be more durable, with greater resistance to abrasion and greater tear strength. They are being used extensively for workers' protective clothing and for garments for the armed forces. It is by no means only from the strictly utilitarian point of view, however, that these blends deserve attention. The permanence of the colours of spun-dyed viscose staple, for one thing, is most impressive, while another important point is that the blends, no less than materials made from cotton alone, can be subjected to such finishing processes as mercerisation and compression-shrinkage. "Easy-care" finishes, moreover, which permit drip-drying and minimise the amount of ironing required, can be applied as successfully to blends as to cotton goods. This makes them important influences in the trade in shirtings and dress goods, while they are being developed also for household textiles.

ECONOMICS OF JUSTICE

THE late Sir Fitzjames Stephen often said that it would be by far cheaper in the end and the truest economy for the Government of India to get the best Judges that money could buy; and there is no doubt that if the Government of India, or rather the Secretary of State in England, were honestly to attempt, at any reasonable cost, to get the very best men obtainable as Judges of the High Court in India, it would mean in the long run a substantial saving to the revenues and to the suitors. It may seem that Rs. 5,000, or even Rs. 6,000, a month is a very large salary for a Judge, but it must be borne in mind that if he gets through his work twice as quickly as the cheap Judges that we have lately been accustomed to, he will prove a more economical Judge both to the Government and the litigants. The experience of the last few years has been that the simplest commercial cases are drawn out to almost unparalleled lengths. In a trumpery case involving no principle, and laying down no rule of conduct, and the money value of which was Rs. 2,300, Mr. Justice Pigot managed to waste twenty-three days. The case by an irony of fate was a question of what constituted quick despatch; the public have not yet been enlightened upon this point, but they know what slow despatch means. It would have paid the Government to have given the plaintiffs Rs. 2,300 and to have told them to go away.

Without Prejudice

THE SUBSTITUTION OF AN AGENT

HIGH COURT SAYS FILING OF MEMORANDUM NOT ENOUGH

(FROM OUR LEGAL CORRESPONDENT)

NOWADAYS in the mofussil, every tea garden manager, mill manager and, in greater or lesser degree, every manager of any commercial concern has to be a lay lawyer as well. Many miles away from any chance of consulting even a junior pleader and, in any case, unable to leave his job, he may be and quite often is suddenly faced with a legal problem, perhaps a criminal one requiring instant action. The facts may be perfectly simple; he knows instinctively that he has a sound case. But one slip-up, one omission in strict legal procedure and he also knows that he may have let his company in for five or six years of litigation ending up after the incurring of heavy expense in the High Court or even the Supreme Court. The writer at one time had a good deal to do with tea garden managers over a large area, than whom it is difficult to imagine a more—no, a word—"unlegally-minded" body of men. Highly competent and efficient in their very specialised job, sportsmen, *et pretere nihil* outside it. Yet almost invariably one found, when the unavoidably delayed legal consultation took place after the manager had been compelled in the absence of any legal adviser to take legal steps and often to conduct correspondence with the other side on his own end unaided, that, forced to it, he had corresponded and acted in the preliminary steps in a manner that a trained lawyer could not have im-

proved upon. The reason behind this seeming paradox is simple. During long years of semi-isolation, these men have subconsciously developed to an astonishing degree the saving grace of commonsense; and the writer remembers well hearing many years ago the greatest law professor in England, Dr. Blake Odgers, K.C., Recorder of Bristol, advise his students that, when in doubt about the answer to any legal problem, all they had to do was to apply their commonsense and the answer which commonsense dictated would be the legal one in nine cases out of ten. "For," said this eminent man, "the law is commonsense." And so it is.

Wherefore, partly as an exercise in commonsense and partly because the same thing might happen to him, we invite the reader to consider the facts in the following simple case, and then say where the company concerned strayed fatally from the paths of commonsense, remembering, if he does not detect the error, that he himself would probably have done likewise.

* * * * *

These are the facts. Early in May 1954, Mr. Robert Walker, then General Manager of the Kannan Devan Hills Produce Co. Ltd., Munnar, to which, for brevity, we will from now on refer as "the company", filed a complaint against an accused person, alleging that he had criminally trespassed upon a certain piece of land in Munnar in the possession of the company. Now every manager of a concern which owns land has constantly to deal with cases of the wrongful occupancy of the concern's land by unauthorised persons. Apart from purely industrial disputes, it is probably about the most frequent and the biggest nuisance with which he has to deal; the dismissed or discharged servant, for instance, who refuses to

give up possession of the house he was allowed to occupy by virtue of his employment, leaving his successor-to-be sitting by homeless. Generally speaking, and wisely, the manager, on behalf of his employers, exercises the civil remedy of a suit for ejectment. But for trespass the law provides a criminal remedy too. It is a dangerous remedy to invoke, the punishment prescribed being imprisonment for a term which may extend to three months or a fine which may extend to Rs. 500, or both. Nevertheless, the drastic punishment renders the remedy, exercised in a proper case, extremely effectual. For criminal trespass is a compoundable offence. Anyway Mr. Walker, relying and acting no doubt on sound legal advice, took criminal proceedings. The details of the alleged trespass are not disclosed in the report of the High Court judgment and they are immaterial to the solution of the problem in commonsense which we have ventured to set the commercial non-legal reader. Here we will supply him with a clue. "Justice delayed is justice denied," so runs the slogan, and if that is a fact, then in every single contested case in this sub-continent justice is denied to one or other of the litigants seeking it. A civil suit, the counterpart of which in England would be decided by a County Court judge within six weeks from its being commenced, will in India drag on for years; and it is some thought to a lesser degree of delay, in criminal proceedings. Therefore—and this is the clue—every manager, if he is a senior man in length of service, knows when he sets the legal ball rolling that he himself may be retired or dead or transferred before that ball comes to a full stop; and by the same token, his employers, his assistants, and the company's lawyers responsible for the conduct of the proceedings know it too.

* * * * *

Mr. Walker, by virtue specifically of his power of attorney from the company, having filed his complaint, the magistrate duly took cognisance of the offence alleged, and in due course began the trial. Mr. Walker gave his evidence on behalf of the prosecution, as did also two other prosecution witnesses. All this occupied several hearings. The complaint had been filed on 8th May, 1954. Meanwhile, on 29th March, 1955, Mr. Walker retired. Mr. W. Wilson Mayne took his place as General Manager, and on 7th June, 1955, Mr. Wilson Mayne filed a memorandum before the magistrate stating that Mr. Walker had retired and that he had taken Mr. Walker's place. The memorandum made it quite clear that the new General Manager was acting on behalf of the company and not in his individual capacity, and the memorandum was headed "The Kannan Devan Hills Produce Co. Ltd., Munnar, represented by W. Wilson Mayne."

The defence took exception to Mr. Mayne's name being substituted in the complaint in place of the name of Mr. Walker. The learned magistrate upheld the objection, and further held that as the case could not be proceeded with in the absence of Mr. Walker, the accused was entitled to be acquitted; and he acquitted him accordingly. The company appealed in revision to the High Court, impugning the correctness of the acquittal.

The High Court rejected the magistrate's reasons for the acquittal in forthright terms. He had, it found, much strained the law in order to bring it about. The Chief Justice said, ".....in the present case we have no hesitation to hold that Mr. Walker filed the complaint for and on behalf of the company. The complainant's name is given in the cause title of the complaint as the Kannan Devan Hills Produce Co. Ltd., complainant. In his sworn statement on the complaint, Mr. Walker stated that the company was in the possession of the land trespassed upon and that the complaint was in respect of that trespass. This position was later reiterated in his evidence..... An agent can file a complaint on behalf of his principal under a power of attorney. It is in our opinion puerile to argue that when a duly constituted attorney files a complaint on behalf of his principal, a successor in the place of the attorney cannot prosecute the case or that he cannot get himself substituted in place of the former. According to the (magistrate's) decision, if the attorney files a complaint on his own behalf the principal runs the risk of the former leaving his service and abandoning the case. The implication can only be that when the complaint is by an attorney, the principal himself can continue the case or another attorney can come in, when the original attorney is replaced in the office of the attorney by the latter..... The lower court's view that substitution was not possible has therefore to be held to be bad."

Nevertheless the High Court upheld the magistrate's decision and confirmed the acquittal. Why? The answer to that question is the answer of commonsense, and with all the relevant facts before you, you are now invited to solve it. If, like the writer at first, you are unable to do so, here is another clue. Read back to the earlier part of this paragraph. The new General Manager "filed a memorandum before the magistrate, stating that Mr. Walker had retired and that he had taken Mr. Walker's place" and so on. The new General Manager was acting under legal advice and was not personally in any way responsible for the procedure adopted. He produced a mere memorandum, but not a power of attorney. Said the learned Chief Justice: "The magistrate was not prepared to allow the substitution without the power of attorney by the company in Mr. Mayne's favour being produced in court. The court was entitled to insist on its production and (it) was not produced. The magistrate was therefore right in refusing substitution."

People the world over have certain basic things in common. For instance the need for food. A good harvest is reason for rejoicing everywhere.

As in agriculture, so in many fields of human endeavour, a good

harvest is the result of joint effort. In India today, man and machine are harnessed to produce bountiful harvests in every field.

A constant supply of our petroleum products to such endeavours is fundamental to progress.

STANVAC — the name that stands for progress.

PSVOC-7/54

WITH apologies to the Brown Shrike, which I gather is the most conspicuous of winter migrants and has already arrived in Calcutta and must be regretting it, this city is still waiting for its brief cold weather. There is, I admit, a difference in the atmosphere; but that may be the work more of man than of nature. Demands for increased Pujah bonuses are not the only reminders of the approach of the great event. The shops are beginning to wear a festive look, and although we will doubtless hear the annual moan that sales are nothing like what they used to be—"they never were, they never were," as Mr. Punch might say—every part of West Bengal responds to the Durga Pujah as to nothing else, not even a general strike. Am I right in thinking that in recent years there has been a noticeable improvement in the way shops display their wares? There is certainly more colour in the shop windows, and in selling technique Calcutta may well have learnt something from America's aggressive methods. I am all for everything which gives a spurt to the State's economic activities, although I rather miss anything peculiarly Indian in the manner shops are laid out. It is not a wholly agreeable thought that in every respect the world is becoming Americanised although there is a deal we can learn from that great country. It will be a pity indeed if all the cities in the world began to look alike because of the identity of their model, America—and it seems to me that we may all be heading in that direction. I put it to Calcutta's enterprising retailers that the glaring neon lights, which flatten out everything, may not be the best and most becoming in which to bathe their wares. And why do I see so few Indian motifs in Calcutta's shop-window decoration? Durga Pujah, surely, is the time when we have a right to see evidence of the Bengali's famous artistic temperament, and why not some of it in commerce and trade?

* * * * *

The one important fact which has emerged from Europe's anxious discussion of the Suez problem, is that there is no vestige of support for leaving the Canal under the unfettered control of one man. It must have surprised some of Asia's nationalists that so many traditionally uncommitted nations, of which Sweden was the most notable, should have supported the concept of international ownership at the London Conference and reserved their strictures for the use of arms to enforce it. And a point which many Indian newspapers have overlooked is that the British Labour Party, whose anti-Imperialism is beyond suspicion, has not declared itself against international control, or even the eventual use of force if that is necessary, but only against its being used without prior reference to the United Nations. Those who are at present branding Sir Anthony Eden a warmonger might do well to ponder the fact that all the European countries, with the exception of Soviet Russia, voted on the same side at the conference in spite of the fact that not all have overseas possessions and few regard their own sovereignty with anything but the most extreme jealousy. The answer to the riddle is simple enough, Europe does not like dictators. The way Asia is thinking about the Canal problem is proving the fact that few Asians realise that the hatred of dictators and their ways is as strong in Europe, especially in Britain and France, as is the detestation of colonialism here. It is the memory of Hitler and Mussolini which, in Europe's eyes, is making a situation that seems from the Asian side a straight-forward attempt by a rising under-privileged power to assert its sovereignty over its own territory, into an all-too-familiar example of a dictator's need for personal triumphs

A DITCHER'S DIARY

with which to maintain his power and the usual complete disregard for international agreements and obligations he is prepared to show in doing it. The number of times the parallel between Nasser's action in seizing the Canal and Hitler's in occupying the Rhineland, has been cited, gives some clue to this haunting fear. Then, France stood where she does now as the most outspoken advocate of force. Britain preferred to appease—after all, Germany had a raw deal at Versailles and it was her territory anyway. But how emphatically events vindicated France's attitude and proved Britain's tragically wrong. A little force then would have saved a world war later. It can be argued that Nasser is not the figure Hitler was. That is true, but nobody thought much of Hitler in those days. Egypt can never have the power Germany produced. But Nasser is being backed by the Soviet Union and the time may not be far off when Russia will have become so involved that any attempt to halt Nasser's progress will also touch her prestige—and therefore her arms. And his progress will have to be halted. After all, he is pledged to wipe out Israel.

I was interested, but not surprised, to see the certificates of appreciation hung in the Government Industries Museum on Chittaranjan Avenue where an exhibition of Krishnagar clay toys is at present being held. Interested, because the documents are of historical importance. One of them comes from Prince Albert, Royal Consort of Queen Victoria, and another from Napoleon III. But not surprised, because they only express admiration for what is eminently worthy of it. I have personally always admired Indian toys, especially those of Kalighat and Krishnagar and, I hope, my appreciation is not of that kind which a connoisseur of classical statuary displayed when, on receipt of a plaster cast of Venus de Milo which he had ordered, he was horrified to find that its arms were missing. What I like most about these toys is their realism (when this is aimed at) and their dexterous colouring, which strongly reminds me of Kipling's famous line "Who leste all thought of Eden fade. Bringest Eden to the craftsman's brain," and what I like least about them is their price, which is frequently more than it is convenient to pay. This I think is the main reason why this excellent cottage industry is not as flourishing as it might be. From time to time one hears of proposals to organise large-scale exports to western countries. I have no doubt that if it can be arranged—and there is hardly any reason why it cannot—much good may result. But I still think that there is no market as good as the home one for this kind of product, and prices ought somehow to be adjusted to suit it.

Bangla Desh, or to give the film its English title Land of Bengal, had its London premier a few days ago. This is prior to being shown at the Edinburgh Festival where it will figure among documentaries from many nations on many subjects. Bangla Desh has been made by a London film company for the Indian Jute Mills Association under the experienced direction of Oswald Skilbeck, who has made several documentaries on Indian themes, including an earlier jute film under the title of A Yarn Worth Spinning which, I understand, is still being shown on second and third run circuits in the U.K. and the U.S.A. The new film is in colour and was mainly shot in India. A former colleague of

mine who attended the London premier, tells me that it was enthusiastically received by an invited audience—and deservedly so. But, he writes, it is obviously difficult to blend scenes from rural Bengal with close-ups of cargoes of chilled beef from the Argentine or glimpses of the industrial cities of the western world. Inevitably there are certain abrupt contrasts in music and commentary which the professional critics are likely to notice. Nevertheless, the film is, it appears, a first-class exercise in public relations of which the I.J.M.A. may be justly proud. Another London occasion which has recently brought Indians and many friends of India together over a drink or two (or maybe three) was the cocktail party given by the London manager of the Bank of India to mark that famous institution's golden jubilee. Most ditchers will know that the Bank of India is an unobtrusive example of Indo-British co-operation, Indian ownership being combined with some British collaboration in its direction and in the top managerial posts. The Bank of India has for long been associated in the public mind with Bombay, the financing of the cotton trade and with the family of India's only baronet, Sir Cowasjee Jehangir, now in his seventy-seventh year and still the Bank's active and energetic chairman. The only British director is the veteran Sir Joseph Kay who has been on the board for more than thirty years, a record which I understand he shares with Mr. Amba Sarabhai.

I see that Mr. Nanda, the Planning Minister, has been investigating a rather unexpected source of manpower—the *sadhus*. These privileged parasites of Hindu society, he has decided, must work too, if the second plan is to be a success. There is nothing wrong with the project save one minor flaw—it is impracticable. It must be readily agreed that these spiritual recluses are commonly believed to be good at only one type of miracle, namely, the useless. They are credited with being able to walk through the air, stay buried underground for hours on end without any obvious sign of injury, swallow broken glass and even die by appointment. But when it comes to doing anything of practical use, their prowess is usually not as evident. Many will recall the stories of Pani Baba and Nepali Baba. The former was employed not too long ago by the Government of Saurashtra—or was it that of Bombay?—and on a reputedly fat salary, to locate underground water. It was found, however, that where he indicated water to be it invariably was not. Similarly, Nepali Baba, whose reputation as a magic curer at one time spread like wildfire, proved no more than a nine days' wonder. There are other reasons besides this why Mr. Nanda's project appears unworkable. The *sadhus* are, after all, spiritualistic, little interested in things so gross as plans for material prosperity. To buy their participation—if Mr. Nanda must—he may be called upon to change the plan into one for India's spiritual advancement, a step which, I think he might find hard to justify before his colleagues. Or else, they may demand that in order to work well they be provided with that invigorating and not infrequently inebriating beverage on which they are known to lean rather heavily, and which the Government of India, in its present puritanical mood, is unlikely enthusiastically to provide.

PROBLEMS OF THE SECOND FIVE YEAR PLAN

NOT ENOUGH FOR AGRICULTURE: THE LESSON. FOR THE WEST

By Dr. T. BALOGH

AFTER a period of intense gestation, the second five year plan has been finalised and submitted to Parliament. The differences from the original "plan-frame" of Professor Mahalanobis, which I have discussed in an earlier article¹, are not, perhaps, fundamental. They are nevertheless important. Total public investment at Rs. 4,800 crores in 1956-60 is now programmed to be more than double the total of the first five year plan and some 10 percent above the preliminary target. The most important changes involve a drastic—Rs. 829 crores, or almost 50 percent—increase in the capital investment for communications, to Rs. 1,384 crores, or almost 30 percent of the total. Of this, the lion's share (Rs. 632 crores of the increase and Rs. 900 crores in absolute amount) goes to the railways. The provision for construction and social services has also been significantly increased (from Rs. 750 crores to Rs. 946 crores, or by all but Rs. 200 crores—just over a quarter). The main cuts are in the allocation for power and industry. The vital coal-mining industry is expected to raise its output by 22 million tons (or more than 50 percent) on a very slender investment—though it could not raise it by more than some 6 million tons in the past five years.

In addition, the investment contemplated for the private sector, which was, perhaps, Rs. 1,600 crores in the first plan, and which was to increase to Rs. 2,200 crores according to the first drafts of the second, has now also been increased to Rs. 2,400 crores.

Discouraging Inflation

The impression created by the first sketch of the plan seems strengthened. Not only has the

¹ "Which Way Asia". The Nation. 19th March, 1955, pp. 337-9.

volume of investment been expanded further, but its composition has been considerably altered and the tasks facing India correspondingly increased. Targets for long-term investment unlikely to yield much immediate return—e.g. railways, transport in general and construction—have been considerably increased. As against this, allocations to industry (in the public sector) have been substantially reduced. Now it could be argued that this change will help one of the main tasks of the Government by providing employment for the millions of unemployed and under-employed. Railway and general construction can be undertaken without elaborate machines, the import of which would burden the balance of payments.

On the other hand, it must be said that even if we regard a large part of the investment in "power" as strengthening irrigation, investment in agriculture seems relatively insufficient. At Rs. 1,023 crores for the five years, it has fallen from 16 to 12 percent of the total planned. Yet at least part—possibly a large part—of the spectacular advances which have been made in food and agricultural raw material production have to a considerable degree been due to an unusually long series of favourable monsoons, a recurrence of which, over the second five year plan period, can surely not be counted upon with any assurance. Indeed, there was no substantial increase in production last year. No doubt the very backwardness of India assures a tremendous scope for improvement without huge capital investment. But it would be interesting to learn how, for instance, the proposed expansion of community development and agricultural extension schemes, to cover a population of 325 million as against only 80 million at present, is to be achieved by an increase

of outlay from Rs. 90 crores to Rs. 200 crores only. Yet this is one of the crucial conditions of success.

Need for Caution

Thus, there can be little doubt that the alterations in the plan since last year increase the need for conservatism in estimating the consequential increase in national real output. This, in its turn, limits the possibilities of financing this development domestically. The plan, as published, is rather equivocal on this point. The official estimates leave, altogether, not less than Rs. 2,400 crores, or 50 percent, of the total financial need uncovered by domestic resources. Some Rs. 800 crores (or roughly £800 million) of foreign aid is hoped for—some Rs. 100 crores a year. The cumulative deficit of the balance of payments, however, which last year has been estimated at only Rs. 1,000 crores—is now put at not less than Rs. 1,120 crores. Discussing last year's version of the plan, I pointed out that "the calculation makes no provision for the possibility of bad monsoons, for a decrease in exportable supplies as a result of rural sector or for a worsening of the terms of trade. The more probable amount that will eventually need to be raised abroad may be nearer Rs. 1,200—Rs. 1,600 crores". While the present calculation seems more realistic, I have no reason to modify my original criticism.

The amount to be found from domestic sources, even if the foreign aid reaches its planned total, is still no less than Rs. 1,600 crores. Now deficit financing in a country such as India, where the monetary economy is still at an early stage of its development in the predominant rural sector, has, in principle, considerable scope. The peasant farmers will, as they become more prosperous, build up balances before they spend their money. But with a total monetary circulation of Rs. 2,125 crores, the addition of so large an amount as Rs. 1,200 crores in five years would be fraught with danger, even if the traders and others in India were not as apprehensive, and as prone to speculative hoarding, as in fact they are. Thus the restraint which was at the base of the British war effort could hardly be counted upon to mitigate the Indian Administration's problems.

No Help from Controls

On the other hand, the system of direct controls, which had been instituted belatedly and reluctantly by the British Civil Service in India during the war, has been largely disbanded (not the least as a result of Professor Mahalanobis's influence, although he is now a determined protagonist of a "large" plan). Thus, little help can be expected from that side in mitigating inflationary pressure. The reluctance of the new Indian civil service to operate direct controls and discriminatory planning presents (as in Britain, from where a large part of the "civil service tradition" stems) a further important obstacle to the use of such restraints for mitigating the effects of a possible inflationary pressure due to the proposed deficit financing. There is no indication in the plan that the crucial importance is realised of a civil service reorganisation, of giving greater power to energetic and progressive young administrators and economists (there are many of them in "temporary" and thus subordinate posts). Nor is education sufficiently re-gear to cope with these tasks.

Consequently, very little has been done to limit the premature growth of demand for western-type consumer goods which is inevitable if, for example, electrification is not confined to industrial uses. Nothing has been done to enforce standardisation of production in those lines in which factory production is permitted and to see to it that Indian productivity is not sapped by small-scale production and product differentiation. As the case of the motor-car industry shows, this problem is not even realised. A much firmer financial basis must therefore be found for a larger portion of this outlay if the danger of a monetary crisis is to be guarded against. Yet, on the face of it, such a firm basis will not be easy to find.

Nor is this all. The plan foresees not merely a sharply expanded domestic private investment, but also a decisive stepping up of private investment by foreign firms in India. The gap in foreign payments is all but Rs. 400 crores, even if help from foreign governments and international agencies, to the tune of Rs. 800 crores, can be secured as planned. Of this, only Rs. 200 crores can be dealt with by drawing on accumulated sterling balances. The remainder of just under Rs. 200 crores is to be covered from the foreign exchange proceeds of private direct investment and credits already granted but unused. Thus no sharp increase in taxes falling on foreign interests can be contemplated. Indeed, it is difficult to square the desire for this rate of foreign direct investment with the nationalisation measures already announced or still under discussion, of which banking and general insurance are specially noteworthy.

Public Enterprise

The decision to entrust the main task of industrial development to public enterprise is certainly justified. Indian domestic entrepreneur-

¹ Foreign reserves are still some 20 percent higher than yearly imports i.e. about four times the relative size of British reserves (which must serve the whole sterling area).

A progressive tax on dividends paid out, which has been introduced, might be less deterrent to foreign investment than a straight profits tax. If it can be regarded as a "temporary measure," it will conserve the means of foreign companies.

ship, with notable exceptions, has shown little initiative. Nor can one criticise the decision to confine the expansion of large-scale enterprise, even in the private sector, mainly to the heavy industries, and to limit their growth in the consumer goods sector. The premature displacement of millions of handicraft workers would, at this stage, invite political disaster. There is, moreover, some hope that sufficient technical progress will be achieved in the much neglected field of capital equipment for small-scale industries (e.g. small powerlooms) to make them competitive, at least in a limited number of fields. The criticism of this aspect of the plan by the International Bank Mission is, in my opinion, woefully misconceived from a political point of view. And on this point political considerations must remain paramount.

But however justified these basic principles underlying the five year plan for the private sector may be, the means of putting them into effect seems lacking. The biggest profits will arise in the fields where no expansion is to be permitted, while little provision has been made to channel capital towards the areas where growth is deemed essential. We have already pointed to the need for standardisation. Thus a drastic strengthening needs to be made in both the financial resources available, and in control over investment, to direct the resources made available into the planned channels. Here again the problem arises of institutional reform and of the availability of administrative cadres with sufficient enthusiasm. Relatively little use has been made of the available lessons of democratic planning in wartime which are so appropriate to Indian problems now.

High Personal Taxes

It is, of course, not impossible to take a more hopeful view. There can be little doubt that in India the high rates of taxation—income tax at the margin is 92 percent—have also resulted in tax evasion. A memorandum of the Gokhale School of Economics and Politics, Poona, puts the sums lost through tax avoidance and evasion at some Rs.65-Rs.75 crores; more recently it has been suggested that this figure might be nearer Rs.200-Rs.300 crores, or around 2 percent of the national income. Even the Central Board of Revenue puts undeclared income as high as Rs. 160-Rs. 170 crores. Losses on this scale might considerably affect the financing of the plan. The critical increase in savings (or budget surpluses) needed to support investment on a scale sufficient to increase per capita income appreciably, and thus break the vicious circle of poverty, has been put at no more than 2 percent of the national income. And it is, to say the least, rather odd that total revenue is not to increase as fast as national income. The argument that this is needed to provide the lubricant for private investment is as exaggerated as the opposite argument that no amount of tax-increase will interfere with the investment plan for the private sector. Thus, some will be tempted to argue that tax reform could provide the much-sought answer, without the need for detailed direct controls (which are difficult to manage), to the supreme problem of India and of the non-Communist world—successful planning through democratic means in order to meet the Communist challenge.

Two particular circumstances are likely to prevent such an overall or global reform of direct taxes from providing an effortless and painless panacea. Increases in taxation of the severity needed would unquestionably hamper attempts to stimulate private investment. The effect of high rates might be to cut savings and investment rather than outlay. Secondly, even a cut in conspicuous private expenditure as such, will not, in Indian conditions, produce the desired results. What is required for the implementation of the plan is not resources in general but specific resources. The two main bottlenecks are: first, organising capacity, and, secondly, foreign exchange for essential (machinery) imports. It is not as if food imports at this juncture represented an important burden. As a large part of the expenditure of the richer classes is devoted to servants or goods produced by handicraft it does not involve even an indirect burden on the balance of trade. A non-discriminating cut in this expenditure might well result in increased unemployment rather than increased investment.

No doubt there is an urgent political need for curbing conspicuous consumption—for some further sacrifice will have to be exacted from the poorer (though not the poorest) sections of the population—though in India the need for equality in sacrifice is not felt as acutely as in the Protestant parts of Europe. And it is questionable whether direct prohibition of certain imports (e.g. motor cars and durable consumer goods) and crushing excise taxes on various other resource-absorbing, non-essential domestic expenditures, as well as direct bans on the starting of the large-scale manufacture of luxury consumer goods, would not be far preferable to a system, however skilfully devised, of reform of direct taxation. Moreover, administration of such a direct tax system would impose disproportionate demands on skilled personnel and effort, which a country like India will not find easy to spare for the purpose. It would be a mistake to suppose that tax avoidance can be eradicated by legislation. It has a deeper social significance. A reform of import policy, discriminating tax-concessions, and an energetic policy of regulating (and stimulating) private efforts at standardisation and rationalisation in the "new" industries (i.e. industries where the cottage industry is not being protected) would repay far more. A reliance on indirect taxation mainly falling on the poor (as against purchase

taxes) as suggested by the Bank Mission without such obvious countervailing burdens on the better-to-do would, in my view, result in a grave political threat to stability.

The Lessons

This review of the problems and difficulties posed by the second five year plan might suggest the conclusion that the plan is too ambitious, that too heavy a burden is contemplated and that, accordingly, a downward modification might be advisable. Nothing is further from the case. Indeed, from a purely political point of view even the present, increased, plan might well be regarded as still too small rather than too large. Even at the end of the second five year period, total investment will not be more than 12 percent of the national income, or substantially less, both absolutely and relatively, than that of China (which by that time might be expected to be between 16-18 percent). Accordingly, the rate of increase in employment and income will also be much slower.

So long as this inferiority does not mean an actual increase in unemployment and distress, but merely a more moderate rate of improvement, it should not raise insuperable difficulties for a democratic regime in India. But even a minor reduction of the present plan would bring India into the political danger zone. It is much to be regretted that this basic essential for all Indian planning has not been clearly recognised by outside economists, e.g., the International Bank Mission.

What is then the lesson to be learnt for India? It is that there must be little complacency in contemplating the task ahead. Thus the measures of reform needed to strengthen the administrative machine must be ruthlessly pursued. Ample and conscious use must be made of all talent available. Above all, foreign aid, both in education and training and in actual investment, must be consciously sought—provided it has no political strings attached. The present tendency to underestimate the strain on India might have dangerous consequences.

What is the lesson to be learnt for the West? The British and American Governments and financial circles no doubt dislike the trend towards national ownership and a "socialistic pattern of society". They must reflect that lack of unstinted western aid, far from deflecting India from the present course, must necessarily accelerate it. The Congress Party and even Indian entrepreneurs cannot neglect the terrible fate of the Chinese Nationalist Government, and any setback they

might experience will drive them towards a more radical solution. Whatever the feelings of the West, and especially of the U.S. Government, about Indian policy, it must back it lest much worse befall.

Western Aid

Fortunately the West should not find it difficult to furnish help. The commodities which India needs most to prevent an increase in investment and income from leading to a monetary breakdown, are the goods which are in heavy surplus in the U.S.A. Vast stocks of sugar, butter and cotton, possibly wheat and rice, represent an increasing embarrassment to the U.S. Government. An acceleration of the rate of aid could effectively and easily squash any crisis in India and restore confidence. It would also tend to cut the basis of any agitation for more extreme domestic measures. The reported agreement on \$350 million aid in the next three years is welcome but totally inadequate. The lectures given to India on the need of much greater private foreign investment are, in my opinion, both politically and economically misguided. No stable solution can be hoped from that tack, if for nothing else, because of the rapid increase in dividend liabilities. Foreign participation in Indian controlled enterprise is perhaps the most hopeful line of approach in this direction.

Britain can do little in her present economic predicament to increase the limited help to which it has committed itself in the shape of a long-term credit for the erection of a large steel works and of further releases of sterling balances. It is to be hoped, however, that it will earmark a part of any improvement in the balance of payments for strengthening India's position (if for no other reason, because of the latter's adherence to the sterling area). It is equally important that Britain should take a much more positive attitude towards providing technical help and in securing a more enlightened attitude on the part of international organisations to the problems not merely of India, but of the under-developed areas in general. Only in this way could it persuade the U.S.A. to do its (much larger) share. From this point of view the recent cuts in the diminutive British contribution to the so-called Colombo Plan is a horrible price exacted by orthodox economics from that sanity and generosity which are the only ways for the success of the West in the new era of competitive co-existence with communism. It is to be hoped that the West will learn more quickly and thoroughly in the future. It has shown signs of doing so in the immediate past: the American Presidential Election is a grave obstacle to clear thought.

MONSANTO CHEMICALS OF INDIA PRIVATE LTD.
Wakefield House, Sprott Road, Ballard Estate, Bombay 1.

A copy of this Prospectus having attached thereto the documents required by Section 60 of the Companies Act, 1956 has been filed with the Registrar of Companies, West Bengal.

An application will be made to the Stock Exchange at Bombay, for permission to deal in the shares now being offered and in due course for an official quotation.

Consent of the Central Government has been obtained to this issue by an order of which a complete copy is open to public inspection at the Head Office of the Company. It must be distinctly understood that, in giving this consent, the Government of India do not take any responsibility for financial soundness of any schemes or for the correctness of any of the statements made or opinions expressed with regard to them.

The subscription list will open at 10-30 a.m. on the 24th day of September, 1956, and will remain open until the 8th day of October, 1956, unless closed earlier at the discretion of the Directors, but not before the 3rd day of October, 1956.

PROSPECTUS OF THE EAST INDIA HOTELS LIMITED

MG. AGENTS: OBEROI HOTELS (INDIA) PRIVATE LTD.

(INCORPORATED UNDER THE INDIAN COMPANIES ACT VII OF 1913.)

Perspective View of the Oberoi Hotel, New Delhi.

AUTHORIZED CAPITAL	Rs. 2,00,00,000
DIVIDED INTO:	
(1) 1,00,000 6% tax-free Cumulative Preference Shares of Rs. 100/- each	Rs. 1,00,00,000
(2) 10,00,000 Ordinary Shares of Rs. 10/- each	Rs. 1,00,00,000
ISSUED	
1,00,756 Ordinary Shares of Rs. 10/- each (Paid up Shares Rs. 55,128/-)	Rs. 10,07,560
NOW BEING ISSUED	
30,000 6% tax-free Cumulative Preference Shares of Rs. 100/- each at par	Rs. 30,00,000
and	
5,99,244 Ordinary Shares of Rs. 10/- each at par	Rs. 59,92,440
	Rs. 1,00,00,000

It is, it is agreed that Rai Bahadur M. S. Oberoi and his friends will take up 99,244 Ordinary Shares of Rs. 10/- each at par by subscription in cash.

Further, it is agreed that with regard to the purchase of the immovable and movable assets of the Vendor Company appearing in the Memorandum of Association, the balance of Rs. 15,10,634-11-3, i.e. Rs. 15,10,634-11-3, will be paid and satisfied by allotment of 1,50,000 Ordinary Shares of Rs. 10/- each at par and the balance, i.e. Rs. 10,53-11-3 will be payable in cash to the Vendor Company.

PRESENT ISSUE

The remaining 3,50,000 Ordinary Shares of Rs. 10/- each and 30,000 6% (free of Income-tax) Cumulative Preference Shares of Rs. 100/- each are offered for public subscription.

The amount payable in respect of the Preference and Ordinary Shares is as follows:

- Rs. 25-0-0 per Preference Share on application
- Rs. 25-0-0 per Preference Share on first call and the balance in two equal instalments provided that there shall be intervals of not less than two months each between calls and between application and first call.
- Rs. 2-8-0 per Ordinary Share on application, and
- Rs. 2-8-0 per Ordinary Share on first call and the balance in two equal instalments provided that there shall be intervals of not less than two months each between calls and between application and first call.

Applications must be for a minimum of 5 Preference Shares or multiples thereof and 10 Ordinary Shares or multiples thereof.

Prospectuses and application forms will be available from the Brokers to this issue and from the following Banks and their Branch Offices and the Registered Office of the Company:—

1. State Bank of India, Chandni Chowk, Delhi.
2. Central Bank of India Ltd., Chandni Chowk, Delhi.
3. Punjab National Bank Ltd., Civil Lines, Delhi.
4. Mercantile Bank of India Ltd., Chandni Chowk, Delhi.

Completed application forms along with payment must be delivered before the close of the subscription list to any of the Brokers to this issue or the Banks, or the Registered Office of the Company.

Where no allotment is made, the deposit will be returned in full and where a partial allotment is made, the unallotted balance will be returned. The Directors reserve the right to refuse any application wholly or in part without assigning any reason. The shares when issued will be subject to the Memorandum and Articles of Association of the Company, a copy of which may be inspected at the Registered Office of the Company during office hours. The Share Certificates will be issued within 3 months of the date of allotment.

DIVIDEND, CAPITAL AND VOTING RIGHTS

The following is a summary of the rights, privileges and restrictions attached to the Preference and Ordinary Shares of the Company and of the limitations upon dividends and the creation of further shares.

Dividends: The profits which the Company may determine to distribute in respect of any financial year or any other period shall be applied, first, in paying the holders of the Preference Shares a fixed cumulative preferential dividend at the rate of 6% per annum (free of Income-tax) on the capital for the time being paid up thereon and the balance of the said profits shall be distributed amongst the holders of the Ordinary Shares in proportion to the amounts paid up on the Ordinary Shares held by them respectively.

Capital: The assets available for distribution to members whether on a liquidation or not shall be applied, first, in repaying the Shareholders of the Preference Shares the amounts paid up on such Preference Shares together with a sum equal to any arrears or deficiency of the fixed dividend thereon whether declared or not, up to the commencement of the winding up. The Preference Shares do not confer on the holders any further right to participate in the assets or profits of the Company. The balance of the assets shall be distributed amongst the holders of the Ordinary Shares in proportion to the amount paid up on the Ordinary Shares held by them respectively.

THE EAST INDIA HOTELS LIMITED—Cont'd.

Voting: The Preference Shares entitle the holders to receive notices of any General Meeting, but do not entitle them to vote thereat unless—

- (1) The dividend on the Preference Shares or any part of such dividend has remained unpaid in respect of an arrearage period of not less than two years preceding the date of commencement of the meeting; or
- (2) The business of the meeting includes the consideration of a resolution which directly affects the rights attached to the Preference Shares. (A resolution for winding up the Company or for the repayment or reduction of its share capital will be deemed directly to affect the rights attached to the Preference Shares.)

On a show of hands every member entitled to vote who (being an individual) is present in person or by proxy, or by proxy shall have one vote. On a poll, the voting rights in respect of the Ordinary Shares shall be as specified in Section 87 of the Companies Act, 1956. No member will be entitled to be present or vote either personally or by proxy at any meeting in respect of shares registered in his name on which any calls or other sums presently payable have not been paid or in regard to which the Company has and has exercised any right or lien.

Variation of Rights: The special rights attached to any class of shares may be varied or abrogated with the consent in writing of the holders of three-fourths of the issued shares of the class or with the sanction of a special resolution passed at a separate meeting of the holders of the shares of the class but not otherwise.

Restrictions on Transfer of Shares: There are no restrictions on the transfer of fully paid shares, but the Directors may decline to register any transfer of partly paid shares to a person of whom they do not approve and may also refuse to register any transfer of shares on which the Company has a lien.

Borrowings: Subject to the restriction imposed by Section 233 of the Companies Act, 1956, the Directors may exercise all the powers of the Company to borrow money on mortgage or charge its undertaking, property and unclaimed capital or any part thereof and to issue debentures and other securities.

PROSPECTUS

Objects: The East India Hotels Limited was incorporated on the 26th May, 1949, for the purpose of running the business of Hotels and Restaurants and their allied trades.

The Hotel Project at New Delhi: The hotel project at New Delhi will include public rooms, such as Lounge, Grill Room, Dining Room, Banquet Room, Conference Room, Swimming Pool, Sheds, Restaurants, Nightclubs, etc. The hotel will be fully air-conditioned and centrally heated and will be built and equipped on the most modern western lines. There will be ancillary establishments such as bakery, confectionery, laundry, ice and mineral water factories, etc. The hotel will be a small town in itself, and is expected to have 200 rooms with 375 beds and will be one of the best anywhere. Apart from this, the project will provide employment for a large number of persons. It is thought that the project itself will contribute a relatively large percentage to the country's earnings of foreign exchange. A plot of land situated on Mathura Road, in New Delhi, has been allotted to the Company by the Government of India. This land has been acquired for the construction of this modern 3-story hotel building with a height of 100 feet. The terms of the contract will be found under the heading "Contracts Relating to Properties" of the Prospectus.

Oberoi Palace Hotel, Srinagar: The plans include the purchase from Hotels (1933) Private Ltd. of the immovable and movable assets comprised in Oberoi Palace Hotel at Srinagar, Kashmir. Negotiations for the purpose have been completed with the Vendor Company. The Vendor Company has agreed to permit the Company to use the name "OBEROI PALACE HOTEL" in connection with the hotel at Srinagar, without charging anything for the same. The Oberoi Palace Hotel started functioning from the middle of June 1955 and has been a success in the inter-national travel market and international personalities such as Marshal Buleginin and Mr. Nikita Khrushchev, who recently stayed at this hotel, have spoken highly of it. The Oberoi Palace Hotel is situated on the Dal Lake and is spread over 50 acres of land with accommodation for 150 beds. It is luxuriously furnished and has a commanding view of the Lake and mountains. It is today fulfilling the needs of a first class hotel in Kashmir. Its initial success is indicative of how areas developed facilities. During the period since its inception, the hotel has been full most of the time. Rai Bahadur Oberoi has secured a lease with the Government for 10 years each year to operate the Oberoi Palace Hotel in the former Palace which has been altered, renovated and improved for the purpose of operating as a hotel. The following is the summary of the capital expenditure incurred in this respect:—

	Rs.	As P.
Furniture fittings, Cutlery, etc.	6,22,563	12 9
Crockery, Linen, etc.	42,927	6 6
Machinery and boilers, etc.	85,377	11 3
Electric Installation	2,81,823	13 0
Sanitary Installation	473,962	2 9
New Wing, Construction	4,000	0 0

Auditors Certificate: This is to certify that the above assets appear in the books of Hotels (1933) Private Ltd. at values noted against each item.

PROSPECTS

Scope for More Hotels: There is a growing need for hotels in both New Delhi and Srinagar. The present hotel accommodation in these two cities is quite inadequate to meet certain necessities in advance to the Government, to serve the increasing number of tourists and visitors. The existing hotels are consistently full and invariably there is difficulty in securing accommodation.

This is particularly so in New Delhi which is now ranked as one of the great political capitals of the world. This shortage of accommodation in the city for instance, was acutely felt during the rush for the Indian Industries Fair in December last. The present accommodation in hotels in Delhi is 900 rooms. In the opinion of the Ministry of Transport, Tourist Division, Government of India, another 1,100 rooms are required. With the completion of our new hotel and the said 1,100 rooms, the demand will be met. Therefore there is scope for 500 more rooms to meet the total demand.

In the coming years the strain on hotel accommodation, especially at Delhi and Srinagar, is likely to grow worse. On account of developments which are taking place in the political, economic and cultural spheres, a number of visitors and tourists from abroad is expected to increase considerably.

Political Missions: Politically, India's stature among the nations of the world has grown immensely. In Asia, India has come to be the dominant position. Nations of both the East and the West are looking to Delhi for giving a lead to establish world peace. Consequently, distinguished statesmen of the world, Visits of foreign Ambassadors and representatives of U.N. bodies, such as the Economic Co-operation for Asia and the Far East, the World Health Organisation, the International Monetary Fund, the International Bank for Reconstruction and Development and the International Labour Organisation to India and its capital

have been on the increase year after year. It is also well known that last year, a large number of distinguished State guests travelled to India, including the King and Queen of Nepal, the King of Saudi Arabia, the King and Queen of Iran, Mr. Secy of State and Lord and Lady Mountbatten.

Trade Missions: Economically India has made large strides. Her agriculture, industry, trade, banking and insurance have recorded notable progress. The country is just on the threshold of launching further huge development schemes under the Second Five-Year Plan. This has attracted foreign businessmen, financiers, technicians, trade missions, etc. to visit the country for establishing business contacts and securing orders for their home products. The visits particularly of trade delegations in recent years to India have resulted in creating an atmosphere which augurs well for laying foundations for expansion of not only trade with outside countries but also tourism. In this expansion, the hotel industry has scope for playing an important role in future. Locally, too, the growth of sales organisations, whose representatives have become a lucrative source of rich clientele for first class hotels.

Cultural Missions: Exchange of cultural missions, visits of foreign scientists and educationalists and the number of tourists have all grown. Not only have these exerted pressure on hotel accommodation in important business centres, but have increased the number of banquets, luncheons, dinners, reception parties to be catered for by hotels. Locally, too, these fastidious and discriminating guests who attend these functions are few and far between in the country, and this offers wide scope for entry into this field as proposed by The East India Hotels Limited.

Foreign Market: The enormous expansion in airline traffic during the past decade also clearly indicates that the people of the world have become more travel conscious. Thus, in 1945, the world airlines carried 33 million passengers over 775 million miles. By 1955, the figure increased to 69 million passengers and 1,407 million miles. A major contributory factor to this expansion in tourism has been the enormous rise in family incomes especially in America. In the U.S. alone there are 14 million families with income sufficient to finance a round-the-world tour once during their adult life. This is mainly reserved for the growth in the number of U.S. tourists to different parts of the world, as stated below:—

TURKEY: In 1951, Turkish Customs recorded 370 North Americans as entering the country. By 1955, this number increased to 13,000.

EGYPT: In 1951, the records indicated 3,700 North Americans as entering the country. By 1955, this number had increased to 23,000.

JAPAN: In 1951, 700 North Americans visited Japan. In 1955, the number was 47,700.

AUSTRIA: 61,800 North Americans visited Austria in 1951. By 1955, the number had increased to 1,10,000.

ITALY: In 1952, 3,34,000 North Americans visited Italy and in 1955 the figure was 5,54,000.

Statistics relating to earnings of foreign exchange from tourist traffic by these countries are not available. An idea as to such potentialities of tourism may, however, be gained from the earnings of Japan. In 1952, dollar receipts from tourism in that country amounted to \$82 million. This figure rose to \$33.0 million in 1953 and \$39.0 million in 1954.

Pleasure and business travel has become one of the world's largest businesses and also one of the most lucrative. The satisfying of the basic needs, interests, and desires of tourists provides the key to unlock the barriers impeding tourist traffic and increase foreign exchange earnings.

International airlines from the U.K. and U.S.A. have placed orders for a very big number of jet airliners for delivery in 1958. Each of these aircraft will be capable of, it is stated, carrying annually the same number of Transatlantic Passengers as the s.s. QUEEN MARY. This provides an indication as to the prospects of expansion of tourism in future.

It is a sure benefit to this expansion in the volume of international traffic. It is expected that there will be an increase of 200 per cent in such traffic in Delhi in 1956. The hotel industry in Delhi will have to equip itself to meet this demand by increasing the hotel accommodation to a corresponding extent.

Government's Interest in Tourism: The Government of India has recognised the importance of making tourists comfortable. It has initiated several measures in this direction. It has encouraged establishment of up-to-date hotels and has striven to make travel comfortable by improving air and rail transport facilities and freeing the travellers from vexatious and cumbersome formalities. The Government has opened a number of tourist centres both in India and abroad for assisting in the expansion of tourism.

The Kashmir Government is taking keen interest in encouraging tourism, as it has proved an important source of earning foreign exchange. According to the Director of the Tourist and Transport Department, Srinagar, in 1955, during the current year 1,00,000 tourists are expected. The State Government is making adequate provision for transport arrangements for tourists. Repairs are being built to link Tarnagur and Gulmarg. At Srinagar, a tourist centre, one of the biggest in the world, will soon be opened. The State Government proposes to open Yacht clubs in various places in co-operation with foreign clubs, and arrangements are being made to revive winter sports on the 1947 scale. The State Government has earmarked Rs. 105 lacs in the second Five-Year Plan for providing facilities to tourists.

In short, the growing volume of tourism, the shortage of hotel accommodation, the dearth of luxurious hotels, and the Government's desire to extend assistance to the hotel industry, today, offer a large scope for new ventures and it is to fit into this situation that The East India Hotels Limited has been formed.

Promoters: The promoter of the Company is Rai Bahadur M. S. Oberoi. He is not receiving any profit or remuneration for his services as such. Rai Bahadur Oberoi has paid on behalf of the Company a sum of Rs. 1,77,000/- to meet certain necessities in advance to the Government, Building Contractor and Architects. He will be entitled to be reimbursed these amounts by the Company and to be indemnified by the Company against all liabilities in respect of contracts entered into on behalf of the Company.

Backing of Oberoi Group: The two hotels will have the backing of the Oberoi Hotel Chain having an international reputation and particularly in the East, Europe and U.S.A. It is very difficult for a single hotel to attain success on its own efforts, whereas a company which combines the management of the two hotels of The East India Hotels Ltd. will be entrusted to the Managing Agents, subject to the provisions of the Companies Act, 1956. The Managing Agents will not charge any remuneration for the first year of its operation.

OBEROI HOTELS

INDIA	PAKISTAN
1 Hotel Imperial, New Delhi.	11. Faletti's Hotel, Lahore.
2 Hotel Cecil, Simla.	12. Flashman's Hotel, Rawalpindi.
3. Mairani's Hotel, Delhi.	
4. Swiss Hotel, Delhi.	
5. Hotel Mount View, Chandigarh, Calcutta.	
6. Hotel Mount Everest, Darjeeling.	
7. Hotel Mount Everest, Darjeeling.	
8. Palm Beach Hotel, Gopalpur-on-Sea, Orissa.	
9. Oberoi Palace Hotel, Srinagar, Kashmir.	
10. Clarke's Hotel, Simla.	14. Cecil Hotel, Murree.

Comprising the largest chain of 14 luxurious hotels in the East, the Oberoi Group has, by offering every facility for convenience and comfort, come to be recognised as the home for international travellers. It is known for its personalised service, cordial hospitality and friendliness throughout the globe. And Mr. Oberoi as the Chief Executive of the Management of these hotels brings with him to The East India Hotels Ltd. a rich and varied experience acquired over a period of years. Under his supervision and management, the promotion of this Company should prove to be a successful venture from the very inception of its operation. It will also have the benefit of experience of some of the staff now under the employ of Mr. Oberoi to look after the interest of the Company in the initial stages. In order to keep in line with the policy of Indianisation, there is also a scheme under consideration to send young people for training to hotel schools abroad, so that the Company may have experienced and trained personnel on its staff.

Co-operation of Inter-Continental Hotels (U.S.A.): Inter-Continental Hotels Corporation, which is a wholly owned subsidiary Company of Pan American World Airways, was formed some years ago at the instance of the American Government, particularly to provide technical assistance in connection with construction, financing and operation of new hotels abroad. Pursuant to the policy of the U.S. Government of furthering the economic development of friendly foreign nations, The International Co-operation Administration had commissioned Pan American World Airways to conduct technical assistance programmes with several countries.

Pan American World Airways is the only Airline at present operating a complete, round-the-world service in India, and particularly New Delhi, are a high light of a round-the-world trip. Pan American makes 5 round-the-world flights each week in each direction serving 84 countries and providing 80% of the total requirements of American Tourists in this respect. It has established modern first class hotels in many ports of the world to meet the comfort and requirements of its passengers.

Pan American World Airways will be operating new jet aircraft on their round-the-world services from 1958. Other Airline Companies will also be operating similar aircraft. Each of these aircraft has a carrying capacity of 120 passengers, which is a 100% increase on the carrying capacity of the existing aircraft. A preliminary survey indicates that a 200% increase in tourist traffic may be anticipated as compared to 1955. Pan American World Airways is anxious to obtain first class hotel accommodation in India, operated to American standards. This Company will be in a position to provide such accommodation for the use of Airline passengers and their crews.

The promoters are at present negotiating with Inter-Continental Hotels Corporation with the object of securing the patronage of the hotels under the management of Oberoi Hotels (India) Private Ltd. in New Delhi and also with the object of getting the benefit of their latest technical know-how. These arrangements will materially assist the new Company by ensuring a regular flow of visitors to the hotels. The arrangements will also provide for training of Indian operational personnel in the U.S.A. and Inter-Continental Hotels will loan their technical staff if required during the initial period of operation. The Company may be provided with facilities to use the teletype system of reservation throughout the 400 offices of Pan American World Airways.

SPECIAL PRIVILEGES FOR SUBSCRIBERS: Every subscriber to Preference and Ordinary Shares will be issued with the Oberoi Gold Card on request. The holders of the Gold Card will be entitled to all the amenities and particularly to a discount of 10% on the purchase of goods and services at the hotels, restaurants, and at other places where hotels may be built or acquired in the future. Moreover, the holder of an Oberoi Gold Card will be entitled to the same discount on room charges at all the other hotels in the Oberoi Group, throughout India and Pakistan. Besides the discount of 10% on room charges, the holders will be assured of receiving exceptional personal service and attention at the Company's hotels and all other hotels in the Oberoi Group in India and Pakistan. This unique service will indeed give the holder of a Gold Card a special advantage when staying at any of the hotels. A Gold Card will be valid for 5 years from the date of issue. In the case of companies, they will be permitted to nominate one person who will be entitled to the use and privileges of the Gold Card. In the case of individuals or others holding shares in joint names, one of the holders of the Gold Card will be entitled to the use of the privileges of the Gold Card.

PROCEEDS OF ISSUE

The entire project in Delhi and Kashmir will cost Rs. 1,25,00,000 when fully developed with all ancillary establishments. The immediate requirements are Rs. 1,00,00,000 but it must be emphasised that without the project is a completely finished entity and will in no way be handicapped in its operation without the ancillaries which will be added at a later stage but which will undoubtedly enhance the earnings of the project. This total capitalisation cost will be provided as under:—

(A) By Share Capital	30,000 6% tax-free Cumulative Preference Shares of Rs. 100/- each	Rs. 3,00,00,000
(B) By Preference Shares	30,000 6% tax-free Cumulative Preference Shares of Rs. 100/- each	Rs. 3,00,00,000
(C) By Ordinary Shares	7,00,000 Ordinary Shares of Rs. 10/- each	Rs. 70,00,000
Total		Rs. 1,00,00,000

(B) It is proposed to raise Rs. 1,00,00,000 by the issue of 1,00,000 Preference Shares of Rs. 100/- each. The Directors expect that this loan can be obtained at a rate not exceeding 6% per annum depending on the market conditions. The present intention is to raise the loan at a later date when the project is completed or is nearing completion and its operation is nearly full capacity, so that its earnings are sufficient not only to ensure payment of interest on the amount borrowed but also to set apart a sum of Rs. 25 lacs per annum towards the repayment of the loan.

(C) The working capital which is estimated at about Rs. 4,00,000 will be provided partly from the profit of the Company in running the hotel at Srinagar and partly lent by the Managing Agents free of interest.

The proceeds of the funds are proposed to be expended in the following manner:

(a) CONSTRUCTION OF HOTEL IN NEW DELHI	Rs.
Land and Building	54,81,210
Electric and Sanitary Installations	...
Lifts, Air Conditioning, (estimated)	...
Furniture, Crockery, Cutlery, Glass-ware, Carpets, Kitchen, Utensils, Linen, Cooking Ranges, Laundry Plant, etc. (estimated)	19,68,790 0 0
(b) ASSETS OF OBEROI PALACE HOTEL, SRINAGAR	15,10,655 0 0
Grand Total	3,00,000 0 0
Less: Proceeds to be issued	4,39,345 0 0
Balance	1,30,00,000 0 0

THE EAST INDIA HOTELS LIMITED—Cont'd.

ESTIMATES OF PROFITS

A general idea of profits which is a representative unit in the hotel industry can be had from the results of the working of the Hotel Imperial, New Delhi, of the Oberoi Hotel Group. An abstract of income and expenditure of this hotel for the years 1952-53, 1953-54, 1954-55 and 1955-56 is given in the table below. The figures are taken from the books maintained by Associated Hotels of India Ltd. which owns the hotel.

HOTEL IMPERIAL, NEW DELHI.

Total Number of Beds: 150

Average Occupancy: 92%

INCOME:	1952-53	1953-54	1954-55	1955-56
	(Rupees in lacs)			
Board & Lodging, etc.	21.17	21.65	24.03	26.53
Rental & Miscellaneous	1.14	1.79	2.68	3.09
Receipts, etc.	6.11	6.06	6.55	7.33
Sale of Liquor	29.22	29.70	32.26	36.95
EXPENSES:				
Food, Establishment, Rent, Taxes, Insurance & Miscellaneous	26.29	20.34	23.23	20.27
	8.94	9.36	10.03	16.68

PROFIT

It will be seen from the above table that the percentage of expenses to income was 69.3 in 1952-53, 68.4 in 1953-54, 69.8 in 1954-55 and 54.8 in 1955-56 leaving a profit margin of about 30% in the 3 years, 1952-53, 1953-54 and 1954-55 and about 45% in 1955-56.

The proposed New Delhi hotel will contain 200 rooms with 375 beds. The average number of residents is estimated at 230 per day in the year.

In the Oberoi Palace Hotel, Srinagar, there are 90 rooms with a provision of 150 beds. The average number of residents works out to 80 per day for a period of 84 months.

The estimated profits calculated on the basis of the average occupancy in both the hotels are shown in the proforma income and expenditure statement below, for the first year after the completion of the project.

	(Rupees in lacs)		
	New Delhi Hotel	Palace Hotel Srinagar	Total
Total Accommodation	375 Beds	150 Beds	
Average Occupancy	60%	53%	
INCOME			
Board & Lodging	41.00	5.75	46.75
Food sale, Rental, Laundry & Miscellaneous Receipts	13.10	.85	13.95
Sale of Liquor	—	1.00	1.00
	54.10	7.60	61.70
EXPENDITURE			
Food, Establishment, Rent, Taxes, Insurance & Miscellaneous	22.48	5.85	28.33
GROSS PROFIT	31.62	1.75	33.37

If the loan of Rs. 25 lacs is raised by the Company, the position of Profit & Loss will be as follows:—

Gross Profit	33.37
LESS APPROPRIATIONS	
Overhead Expenses of Head Office	.61
Interest on Loan	1.50
Depreciation	5.00
	7.11
Less Tax payable @ 45% of the assessable profits	5.56
Tax on Dividend in excess of 6%	1.06
Net Profit	19.64
Sinking Fund for Loan	2.50
	17.14
Preference Share Dividend @ 6%	1.80
Ordinary Share Dividend @ 15%	10.50
	12.30
Reserve Fund	4.84
	4.80
Carried over	.84

It will be seen from the above statement that the Company can expect to earn an income of Rs. 61.70 lacs in the first year after the completion of the project, as against the expenditure of Rs. 25.33 lacs, leaving a gross profit of Rs. 33.37 lacs. Of the latter, a sum of Rs. 13.73 lacs is appropriated for interest on loan, depreciation, taxation at the present rate, and overheads. The estimated net profits available for distribution to shareholders would be Rs. 19.64 lacs.

Preference Dividend Cover: On the basis of an estimated net profit of Rs. 19.64 lacs, the dividend on the 6% tax free Cumulative Preference Shares will be covered over 11 times by earnings.

After deducting from the estimated net profit of Rs. 19.64 lacs, the sum required for payment of dividend on Preference Share Capital, the balance of profit represents a return of 26.5 per cent on the amount of the issued Ordinary Share Capital. After providing a reserve year, the Company according to the above Profit & Loss account will be in a position to declare a dividend of 15% Free of Tax to the Ordinary Shareholders.

The above estimate for the first year is made @ 60% average occupancy and taking into account the depreciation relief for the first five years. In the course of the next 5 years, the average occupancy is expected to rise to 80 to 90%, which means an increase in the income by nearly 40 to 50%. The consequent increase in earnings will more than compensate the Company for the higher incidence of tax from the sixth year, owing to the discontinuance of the development rebate thus enabling it to maintain, or perhaps even raise the dividend.

WINE PROFITS: The above profit, it may be noted, does not include profits on liquor sales in the New Delhi Hotel. Even if prohibition is introduced, the Company is likely to continue its sales of liquor to residents, permit holders and foreigners. If this additional income is taken into account, the earnings would be higher and will enable the Company to pay still higher dividends.

STATUTORY & GENERAL INFORMATION.

Minimum Subscription: The minimum subscription in respect of the present issue of which the Directors will proceed to allot is Rs. 30,00,000/-.

	Rs.	Rs.
1. Purchase price of Property	11,78,000	
Paid	6,17,000	5,61,000
2. Preliminary Expenses		20,000
3. The repayment of any money borrowed by the Company in respect of the foregoing matters	7,77,000	
4. Working Capital	4,40,000	
5. Any other expenditure stating nature and purpose thereof and the estimated amount in each case: (To complete 100 rooms furnished and equipped)	27,02,000	45,00,000
Less Working Capital to be met out of Company's fund and advance from Managing Agents	5,00,000	
Shares already allotted	10,00,000	15,00,000
		30,00,000

Contracts Relating to Property: 1. The Government has allotted to the Company a plot of land measuring 6.32 acres in New Delhi for the construction of a new hotel building on international standards. The plot is situated near the Delhi-Mathura Road and Wellesley Road crossing in the North East corner adjoining the Golf Club.

The terms and conditions under which this plot of land is being leased to the Company are specified by the Land & Development Officer, New Delhi in his letter No. O-L dated 17th December 1955, addressed to the Company. The lease will be completed in due course. This includes the following:—

- The Company is required to pay for the land as under:
 - For the area measuring about 5.46 acres at Rs. 2,05,000 per acre which comes to Rs. 10,92,000/- plus Rs. 27,300/- as annual ground rent at 2 1/2 per cent of the premium.
 - For the area measuring about 0.86 acres at Rs. 1,00,000 per acre which comes to Rs. 86,000 plus Rs. 2,150 as annual ground rent at 2 1/2 per cent of the premium.

- Only one-third of the area measuring 5.46 acres will be built over and the remaining area shall be left for gardens, roads, car parks, etc. An area of about 0.86 acres will be converted into a lake and adjoining garden.

The construction of the building has already been taken into hand. A part of the building is intended to be completed by October and the entire project by mid-1957.

2. Agreement for sale dated the 31st August, 1956 and made between Hotels (1938) Private Ltd., of the first part and Rai Bahadur M. S. Oberoi of the second part and the Company of the third part.

This agreement provides for the purchase by the Company from Hotels (1938) Private Ltd., of the assets comprised in the latter's hotel at Srinagar at a price of Rs. 15,10,654-14-3, which will be paid and satisfied by the Company by the issue of and allotment of Rs. 15 lacs in its 1,50,000 Ordinary Shares of Rs. 10/- each at par credited as fully paid up and the balance, i.e. Rs. 10,654-14-3 will be payable in cash. The sale is subject to the consent of Yuvraj Karan Singh the landlord to the assignment of the properties, comprised in two leases dated 17th June, 1954 and the 12th November, 1954, in favour of the Company. As these leases stand in the name of Rai Bahadur M. S. Oberoi, he has been made a party to the Agreement. Rai Bahadur M. S. Oberoi and T. R. Oberoi who are the Directors of the Company are also Directors of the Vendor Company.

Expenses to this Issue: The estimated amount of the Preliminary Expenses including brokerage and commission is Rs. 3,00,000/-.

Directors' Qualification and Remuneration: The qualification of a Director shall be the holding in his own name or jointly with any other person of shares in the Company of the nominal value of Rs. 5,000/-.

Managing Directors: The Board may subject to Section 316 and 317 of the Act appoint one or more Managing Directors of the Company. Such Managing Director will, subject to Section 255 of the Act, not be liable to retire by rotation but will cease to be a Managing Director if he ceases to be a Director. He will, subject to Sections 309, 310 and 311 of the Act, receive such remuneration as the Company may determine in general meeting. The Company will not appoint Managing Directors as long as it has Managing Agents.

Managing Agents: Oberoi Hotels (India) Private Ltd. are the Managing Agents of the Company by virtue of the Agreement dated 26th May, 1949. They receive by way of remuneration for their services a commission of 10% on the net profits and are entitled to be reimbursed all expenses incurred on behalf of the Company. Such remuneration is subject to the provisions of the Companies Act. The subscribed capital of the Managing Agents is Rs. 4,00,000/- divided into 400 Ordinary Shares of Rs. 10/- each.

Interest of Directors: Sir U. N. Sen and Mr. M. L. Khaitan are Directors of Associated Hotels of India Ltd., of which Hotels (1938) Private Ltd. (the Vendor in respect of assets comprised in its hotel at Srinagar) is a subsidiary. Rai Bahadur M. S. Oberoi is a Director of Oberoi Hotels (India) Private Ltd., the Managing Agents of the Company and of Associated Hotels of India Ltd., and Hotels (1938) Private Ltd. Mr. T. R. Oberoi is a Director of Oberoi Hotels (India) Private Ltd., Associated Hotels of India Ltd., and Hotels (1938) Private Ltd.

Consent: The consent in writing of the Auditors, Bankers, Brokers and Legal Advisers to the Company to act in their respective capacities have been obtained. The Auditors, Messrs. G. Basu & Co., have given and have not withdrawn their consent to the inclusion of their report and certificate in this Prospectus in the context in which they appear.

The foregoing written consents and copies of the contracts mentioned below have been attached to the copy of the Prospectus which has been delivered to the Registrar of Companies, West Bengal, for registration.

Contracts: The following Contracts (apart from contracts entered into in the ordinary course of business) have been entered into by or on behalf of the Company and are or may be material.

(a) Agreement for the same dated the 31st August, 1956 and appearing under the heading "Contracts relating to Property" of this Prospectus.

(b) Letter dated 17th December, 1955, from the Land & Development Officer, New Delhi setting out terms and conditions of the Lease of the land in New Delhi.

(c) Correspondence with Messrs. Uttam Singh Duggal & Co. Ltd., Delhi, Building Contractors for the construction of the hotel building.

(d) Correspondence between Rai Bahadur M. S. Oberoi and Inter-Continental Hotels Corporation.

(e) Managing Agent's agreement dated the 26th May, 1949, between The East India Hotels Ltd. and Oberoi Hotels (India) Private Limited, regarding the Managing Agency terms, remuneration, etc.

Brokers: Brokerage at the rate of 4 annas per Ordinary Share of Rs. 10/- each and Re. 1 per Preference Share of Rs. 100/- each will be paid to recognised brokers on allotments made in respect of applications bearing their stamps.

Messrs. Merwanjee Bomanjee Dalal and Messrs. Harbans Singh Mehta & Co., are the Managing Brokers to this issue and will be in addition entitled to a commission of 1 anna per Ordinary Share and 8 annas per Preference Share on all shares subscribed by the public.

AUDITORS' REPORT

We have examined the Accounts of The East India Hotels Ltd. for the five years ended 31st March, 1956, and in accordance with the provisions of clause 24 of Part II of Schedule II of the Companies Act, 1956, we report as follows:—

The Profit & Loss Account of the Company for these years were set out hereunder and have been arrived at after charging all expenses.

THE EAST INDIA HOTELS LTD.

Year ended	1952	1953	1954	1955	1956
Income	Nil	Nil	Nil	Nil	Nil
Expenses	8,002	256	270	270	6,101
Loss	8,002	256	270	270	6,101

We further report that no dividends have been paid in respect of any of the five years ended up to 31st March, 1956. The net assets of the Company as at 31st March, 1956, as disclosed by the audited Balance Sheet as at that date were as follows:—

Current Assets		Rs.
Advance to Contractors	...	1,932
Current Account with M. Agents	...	7,799
Balance with Bank	...	139
		9,869
Preliminary expenses	...	13,125
		22,994

Less Current Liabilities & Provisions		Rs.
Sundry Creditors	...	1,665
Nett Assets on 31st March, 1956	...	21,329

Nett assets of Rs. 21,329 shown above are represented by:—		Rs.
Share Capital of 1,00,756 Ordinary Shares of Rs. 10/- each, -/-/- per share called up	...	50,378
Calls received in advance	...	4,750
		55,128
Less Debit Balance in Profit and Loss account	...	33,799
		21,329

G. BASU & CO.,

Auditors.

Inspection: Copies of Memorandum and Articles of the Company, the consent order of the Central Government, the Auditors Report and Certificate and the Contract and correspondence referred to above and copies of the balance sheets and profit and loss accounts on which the Auditors' Report is based may be inspected at the Registered Office of the Company on any working day during business hours until the subscription list is closed.

Dated the 14th September, 1956.

Signed by the following Directors:—

Sir DHIREN MITRA, Kt.
Mr. M. L. KHAITAN
Mr. RAMNIWAS RAMNARAIN RUIA
Mr. MURARI VAIDYA
Rai Bahadur M. S. OBEROI
Sir USHA NATH SEN
Mr. T. R. OBEROI

Dated the 14th September, 1956.

JAY ENGINEERING WORKS LTD.

SIR SHRI RAM REVIEWS ALL-ROUND PROGRESS

The following is the text of the speech delivered by Sir Shri Ram, Kt., Chairman of the Jay Engineering Works Ltd., at the Annual General Meeting of the Shareholders of the Company held at Calcutta on the 14th September, 1956.

Gentlemen,

With your permission I will take the Balance Sheet and Profit & Loss Account and the Directors' Report as read.

We are meeting almost after a year, and I am glad to say that the past year has been of continued greater success and greater service which is evident from the figures given below:—

Particulars.	Year ending 31st March, 1955.	Year ending 31st March 1956.
Sales	Rs. 2,23,95,049	Rs. 3,05,31,764
Profits	18,78,517	27,26,497
Payment to Labour	54,75,532	63,52,919
Number of Workers	2,639	2,934
Number of Usha Embroidery & Tailoring Schools:		
AND	120	150
Students	8,000	11,000

The average of monthly production last year of Sewing Machines was 9,028 Nos. and the highest in one month was 12,012 Nos. as compared to the monthly average of 6,476 Nos. in the previous year and the highest of 9,241 Nos. in a particular month. The average production of Electric Fans last year was 6,939 Nos. as compared to 4,478 Nos. in the previous year.

During this year the Directors decided to discontinue the manufacture of Hurricane Lanterns. The building and most of the machines have been utilised for other purposes.

The Bhela Enamel factory has been shifted to Chhindwara and has started working there.

I told you last year that the definition of Section 23A of Indian Income-Tax Act was so modified, as to create serious difficulties, in paying back our loans, even to the Industrial Finance Corporation of India. We had applied for exemption. So far no decision has been arrived at.

Last year I said that we intend to produce a Table Fan and sell it for about Rs. 60/-. I am glad that these Fans have been put on the market. We hope within the next few months to put 36" Ceiling Fan on the market for about Rs. 100/-.

I am glad to say that we have acquired about 75 Bighas of land at a distance of about 3 miles from our present site, at a cost of roughly about Rs. 4 lacs. We have already built the necessary roads, boundary wall, and a bridge, and covered an area of about 12 lac sq. ft. The machinery is being shifted there, and it is hoped that by the end of December we will be making there about 6,000 Fans per month, in addition to about 8,000 Fans in the existing factory. The Fan Section will be completely shifted to the new site by next year, when we hope to be making about 25,000 Fans a month.

Expansion

During the year the Government of India have been good enough to give us licence for expansion of the Fan Factory capacity from 10,000 to 26,500 Fans per month and the Sewing Machine Factory from 10,000 a month to 25,000 a month.

For the expansion of these factories more finance was required, and the Industrial Finance Corporation of India have kindly sanctioned another loan of Rs. 30 lacs.

Orders have already been placed for machinery for the expansion of the Fan Factory, and the balancing of the existing Sewing Machine Factory.

The Needle Plant has been shipped from Europe and we hope that before the end of this financial year it will be in full swing.

A four storied building has been put up for housing the Tool Room, Design Office, Development and Research Dept. and Training School, etc.

Although due to increase in the price of various raw-materials the cost of raw-materials of Sewing Machines has gone up by over 20% and of Fans by over 10%, we are however selling these at the old prices and have not increased the rates.

I have to point out that very great difficulty is being experienced since sometime on account of very poor and unstable quality of the Pig Iron and of Hard-Coke.

The Government of India recently announced its policy about uniformity in the prices of Steel & Pig Iron of both Indian and imported. While this has helped the industries which are away from port towns and is welcome, but so far as the exports are concerned, I would suggest that on the engineering goods exported, the prices of raw-materials, whether Pig Iron or Steel, should be charged on the basis of the indigenous prices. While the difference in cost to the Pool will be negligible it will be a great help towards export of these goods.

While the Government of India have been good enough to accept the principle of a draw-back of custom duty on goods exported, but the procedure is so complicated and so difficult that it is almost impossible to get any refund. It entails a lot of work for the Government without doing any good to the industry. I, therefore, suggest that it should not be very difficult to devise an ad-hoc basis the amount of draw-back duty paid on such articles as are exported, whether they are Fans, Sewing Machines or Oil Engines or any other items. This would very considerably reduce the complicated procedure, which is being followed now, and make it possible for the industry to get the Draw-back-Duty amount.

We, Industrialists, owe a duty to our country in helping it to secure as much foreign exchange as can be possible. I feel that there is room for considerable increase in the export of general engineering goods. The markets should be explored for proper assessment and every effort made to increase the exports.

Like various other countries, it would be a good thing if the Government of India called a Conference of Railways, Industry, Trade, Labour, etc., to seriously consider as to how exports could be encouraged and helped. I do hope that the authorities will give the suggestion of mine due thought.

I am conscious of the small contribution at present of the general engineering industry to our export trade, but I am sure that in our national drive to conserve and augment our foreign exchange resources, we cannot afford to neglect even a small contribution, and I am equally certain that there is very great scope for proper encouragement and for the export of engineering goods.

The earnings of our workers are steadily going up, and for the last year they received in the shape of Puja Bonus & Profit Sharing an amount equal to 5 1/2 months wages, which is the highest in India.

A few years back we started giving work to poor families and Refugees outside the factory. It helped them in making a good living. In other places men skilled or unskilled find employment, and the number of such people has greatly increased and may be in the neighbourhood of about 1500 working outside our factory premises.

We are also going ahead with our policy for recruiting educated people. In the previous year we had 358 Matriculates and now on 31st August 1956 we have 600. We think the scheme has been very successful.

In the end, I have pleasure in conveying my thanks to and my appreciation of the work done by all my colleagues.

Accounts

After the speech of the Chairman, the Audited Accounts of the Company for the year ended the 31st

March, 1956, were passed. A dividend of 10% free of Income-tax was declared in respect of the equity or ordinary shares of the Company.

Thereafter the following resolutions were passed unanimously:—

1. As Ordinary Resolutions:—

- Mr. L. P. Singhanian and Mr. M. G. Bhagat, who retired by rotation, were re-elected as Directors of the Company.
- M/s. H. P. Khandelwal & Co., Chartered Accountants, were re-appointed Auditors of the Company for the year 1956-57 at a remuneration of Rs. 20,000/-.
- Declaring that the age-limit prescribed in section 280 of the Companies Act, 1956, shall not apply to Shri D. N. Sen.
- Approving and consenting to the renewal of the agreements and appointments of 146 Sole Selling Agents in India and abroad, a list whereof was included in the notice to the shareholders;
- Consenting to the Board of Directors contributing and/or subscribing amounts to any national, political, charitable, benevolent, public, general and other funds, not directly relating to the business of the Company or the Welfare of its employees, the aggregate whereof in any financial year may exceed Rs. 25,000 or 5% of the average of the Company's net profits during the immediately preceding three financial year; whichever is greater; and
- Providing that various books, registers and documents of the Company shall be kept open for inspection by shareholders and others during certain hours.

2. As Special Resolutions:—

- Electing and appointing Mr. M. G. Bhagat a Director of the Company and approving the appointment of Mr. D. N. Sen, Shri K. L. Poddar and Shri B. K. Rohatgi as Directors of the Company, and providing that the said gentlemen do continue as Directors until they retire.
- Authorising the Managing Agents and the associates of the Managing Agents to retain commission and other remunerations, etc. in terms of section 359 of the Companies Act, 1956; and
- Approving the contracts which are or may be entered into between the Company and India Electric Works Limited, for supply of goods by the latter under Section 360 of the Companies Act, 1956.

PRODUCTIVITY LAGS BEHIND WAGES IN U.K.

PAYMENTS PROBLEMS FOR THE STABLE SWISS ECONOMY

(This is the fifth of a series of articles written by our New Delhi correspondent on the basis of a recent tour of Europe).

THERE is a great deal of prosperity in Britain at present. Poverty, as it exists in India, is unknown. People eat well and dress well. Children are well cared for. There are jobs for everyone and more to spare. And this overdose of prosperity is not without its dark aspect either. Two distinct developments are taking place. Like his Indian counterpart, a British worker today works with his eyes on the clock. He is also seen losing pride in his work.

A growing influx of immigrants from colonies, particularly from the West Indies, is another development which reminds a visitor of Gibbon's *Decline and Fall of the Roman Empire*. Britain because of her Commonwealth and Empire connections, cannot even regulate the immigration into her territory. Because of the industrial boom there men and women from the colonies, and even from such European countries as Germany and Poland, find an easy market for their labour. Slump, if and when it comes, will create difficulties which may not be easy to solve. In any scheme of rationalisation, the force of public opinion will demand the retrenchment of "outsiders" which, in the circumstances, would be criticised and even dubbed as racial discrimination. As it is, on the Roman model of Gibbon's description, the colonials and other outsiders are called upon to do unattractive jobs, unattractive to the British workers of today.

Study of Wages and Output

The industrial output is rising. Profits are going up, and so are wages. But *pari passu*, the output of a worker is not keeping pace, as compared, for instance, with Germany. This is borne out by a recent study, which discloses that, with 1953 as base, the production of manufacturing industries has risen from 87 points in 1949 to 94 points in 1952 and 115 points in 1955. Output a man, during the same period has risen from 92 points in 1949 to 110 points in 1955, as against 68 points in 1949 to 117 points in 1955 in Germany. Labour costs a unit rose from 83 points in 1949 to 106 points in 1955 in Britain, while they declined from 104 points in 1949 to 96 points in 1955 in Germany.

Due to higher costs of production, Britain is losing its competitive strength in world markets. For instance, it has lost its 100-year old Indian market for railway locomotives due precisely to this reason.

One view is that it is the welfare State ideology which is responsible for Britain's sliding down in the industrial field. Overemployment has deprived the worker of the normal incentive to improve the quality of his output. Unless a worker is imbued with the feelings of patriotism and devo-

tion to his duty, fear of dismissal is the only check against negligence and inefficiency. Social security legislation has removed that check now. The workers could raise productivity only with the love of their country. The figures quoted above do not indicate a positive reply.

Swiss Economy

During the first half of 1956, Switzerland's economy enjoyed stable conditions. The factors making for the expansion of Swiss trade and industry during recent years have continued to operate during the first half of 1956, not only within the country but also in foreign trade. All branches of activity have shared in this boom, and if the rate of progress has been slowing down in certain lines, it is because an increasing number of Swiss industries are approaching the limit of their productive capacity. Mention should also be made of a certain seasonal falling off which has been particularly noticeable in some industries such as building, and which may be put down to the extremely unfavourable weather at the beginning of the year. Industries producing consumer goods, which were hitherto lagging behind, have now regained their position in the general upward trend of activity. There has been a slight slackening in the new orders received by the capital equipment industries largely due to their delivery dates being sometimes too long.

Saturated Labour Market

The Swiss labour market is characterised by quite an unprecedented state of saturation. At the end of July, there were scarcely 500 unemployed in the whole of Switzerland, and the number of vacancies was ten times greater. At the same time nearly 300,000 foreign workers were engaged in the country and there has been a steady increase in the overtime worked. This labour shortage is particularly affecting agriculture, where production costs and prices are tending to rise. The hotel industry, for its part, is enjoying a period of prosperity which is partly due to the relative stability of prices. Proof of the gratifying state of affairs in this industry is the increase in the number of foreign tourists which continues to expand despite the unusual weather conditions. The money and capital market has come under various influences, but there has been no modification of its general structure. At the beginning of the year, liquidity increased noticeably because of the influx of foreign capital. The re-starting of building work and the floating of a number of Swiss and foreign loans restored the situation to normal.

Increasing Foreign Trade

The results of foreign trade during the first six months of the year reflected the high level of economic activity the country is enjoying at present. Imports amounting to 3,545 million francs and exports worth 2,902 million francs represented new record figures and were 14.8 percent and 9.6 percent higher respectively than the figures for the first half of 1955. The debit side of the trade balance has increased as compared with the preceding year, and stood at 643 million francs. Swiss exports have developed favourably in all branches of production, the watch-making and machine-building industries being especially prominent. All other Swiss industries are making progress, or maintaining their present levels, with the sole exception of the dyestuffs industry which showed a further drop in comparison with the preceding year.

Average import prices are tending to rise: imported raw materials and manufactured goods have perceptibly risen in price compared with last year, whereas foodstuff prices have remained virtually at the same level. Swiss exports, on the other hand, have dropped in price, particularly where manufactured goods are concerned. This divergent trend in the prices of Swiss foreign trade, which started as far back as 1954, has further strengthened since the beginning of this year. If the components of Swiss foreign trade are examined in relation to the country's various trading partners, it will be seen that trade with Europe has developed more than that with overseas countries. Swiss trade with Europe represents 71.5 percent in value of the imports and 62.7 percent of the exports of the total foreign trade. The debit side of Switzerland's trade balance stands at 716 million francs on European traffic, whereas trade in goods with overseas countries shows an excess of exports of 73 million francs.

Rising Living Costs

Taken as a whole, the results of foreign trade are regarded as encouraging. Competition on world markets has increased in recent years, more particularly since 1950. A comparison with the progress made by other countries shows that Switzerland has even lost ground in relation to certain of its competitors. If the general figures for world exports are compared with those of Switzerland, it will be found that Switzerland's share is approximately the same today at 1.6 percent. In 1933, it was 1.5 percent. It will also be noted that imports have increased in recent years much more than exports. This is evident from the steadily increasing adverse balance of trade. The general survey of Switzerland's economic situation is not without its darker side, and one phenomenon in particular is exercising the minds of those in charge of that country's affairs. This is the cost of living, more or less faithfully reflected by the index of consumer prices which reached 175.6 (1939=100) at the end of July. A year ago, this index stood at about 172, a figure which at one time appeared to have been stabilised. The situation has, however, changed since the end of 1955, and for this reason, a perceptible increase of 2 percent in living costs has been recorded in the space of only a few months.

Finance in India and Abroad

THE CALCUTTA MONEY MARKET

DULL WEEK FOR BILLS

Wednesday, 19th September.

THE money market continues easier with funds returning from sugar mills and on account of grain storage. There has been no increase recorded yet in advances against stocks of Pujah cloth. These will, in any case, be limited this year due to the Government's attempts to curb the general supply of credit. The interbank market remains tight. Last week's tax payments did not make a heavy call on the market as was at first expected. The call rate is still officially 3½ percent, but it is reported that business has taken place at higher levels.

It has been a featureless week in the market for export documents. A small number of tea bills has come to hand, but very few gunny documents have been reported. Remittance has been good. Sterling is reported to be much stronger this week. The value of the pound has improved in the London and Continental markets. The reason is suspected to be a rush from Continental operators to cover short positions.

Silver was steady on short-covering and the price advanced from the previous week's level of Rs. 171-13 to Rs. 172-4, quoted today. The rate for ready was quoted at Rs. 172-8. The London price has remained unchanged at 78½d. The price of foreign silver in New York is the same at 90½ cents.

Gold was firm in sympathy with silver, and increased from Rs. 103-6 to Rs. 103-15. The sovereign, at Rs. 67-12, showed a gain of 2 annas.

During the week ended 14th September, Government of India Treasury Bills for Rs. 47,09,75,000 were sold in favour of the Reserve Bank.

A decline of Rs. 7.73 crores to Rs. 1,432.45 crores in active notes was the outstanding feature of the return of the Reserve Bank of India for the week ended 14th September, 1956. The total note issue was Rs. 1.06 crores higher at Rs. 1,457.49 crores. Notes held in the Banking Department consequently increased by Rs. 8.79 crores to Rs. 25.04 crores. Deposits of the Central Government and other government accounts rose by Rs. 14.55 crores and Rs. 2.81 crores to Rs. 73.41 crores and Rs. 19.54 crores respectively, following subscriptions to the State loans. Balances of commercial banks as a result declined by Rs. 2.44 crores to Rs. 53.72 crores. Balances held abroad dropped by Rs. 1.08 crores to Rs. 33.14 crores, but investments increased by Rs. 38 lakhs to Rs. 52.19 crores. Other loans and advances increased from Rs. 74.51 crores to Rs. 76.73 crores, of which advances to scheduled banks against usance bills were up from Rs. 24.40 crores to Rs. 30.90 crores. These advances amounted to Rs. 248.20 crores since 1st January, 1956. Ways and means advances stood at Rs. 5.07 crores, against Rs. 5.32 crores.

The return of the State Bank of India for the week ended 7th September, 1956, shows a rise of Rs. 2.26 crores in total deposits to Rs. 231.33 crores. Investments in Government securities and other authorised investments are up by Rs. 1 lakh and Rs. 10 lakhs to Rs. 94.74 crores and Rs. 11.55 crores, respectively. Advances including loans, cash credits and overdrafts, and bills discounted and purchased, have risen by Rs. 9.71 crores to Rs. 133.93 crores. Cash and balances are, in consequence, shown at Rs. 19.82 crores, or Rs. 1.76 crores higher.

The statement of the position of scheduled banks for the week ended 7th September, 1956, shows Demand and Time liabilities at Rs. 639.38 crores (Rs. 9.71 crores on account of borrowings from banks) and Rs. 459.04 crores (Rs. 2.31 crores), compared with Rs. 654.74 crores (Rs. 17.03 crores) and Rs. 461.32 crores (Rs. 2.90 crores), respectively in the previous week. Cash has diminished by Rs. 2.34 crores to Rs. 35.51 crores, while balances with the Reserve Bank have increased by Rs. 1.57 crores to Rs. 53.24 crores. There is a rise of Rs. 4.96 crores in investments to Rs. 366.38 crores. Advances, including bills discounted and purchased, at Rs. 758.46 crores, show an increase of Rs. 23.32 crores. The ratios to total liabilities of cash and balances, and of advances and discounts, are, in consequence, shown at 8.1 percent and 69.1 percent, against 8.0 percent and 65.9 percent.

The total gross sea and land customs revenue collected in the Indian Union during July, 1956, amounted to Rs. 1,177 lakhs as compared with Rs. 1,372 lakhs in the corresponding month of last year. The comparison in the following is of the current figures with figures the preceding year. Of the total customs revenue collections, import duties accounted for Rs. 1,028 lakhs as against Rs. 1,045 lakhs, export duties for Rs. 124 lakhs as against Rs. 317 lakhs and land customs and miscellaneous for Rs. 25 lakhs as against Rs. 10 lakhs. The total gross collection of Union excise duties amounted to Rs. 1,441 lakhs as compared with Rs. 1,314 lakhs. During the four months, April to July 1956, the grand total of gross customs and Union excise revenue realised was Rs. 10,701 lakhs as compared with Rs. 10,129 lakhs during the same period of the preceding year. Of this amount, import duties accounted for Rs. 4,314 lakhs as against Rs. 4,098 lakhs, export duties for Rs. 703 lakhs as against Rs. 1,087 lakhs, land customs and miscellaneous for Rs. 95 lakhs as against Rs. 60 lakhs, and Union excise duties for Rs. 5,589 lakhs as against Rs. 4,884 lakhs.

GOVERNMENT OF INDIA

Ministry of Railways

(Railway Board)

TENDER NOTICE

1. Tenders are invited from established foundries in India only for the supply of Cast Iron C.S.T. 9 Sleeper Plates, Broad Gauge, to be supplied by 30th May 1957.

2. Approximately 75,000 tons of imported pig iron will be available for allotment upto 75% of the quantity ordered on firms who will be expected to make up the remaining raw materials and melting losses by obtaining scrap or other materials available in the market. No such materials will ordinarily be supplied by Railways, but should the Railway find any such scrap available with them they will have the option to ask the suppliers to take over the scrap with suitable adjustment in prices if required.

3. Applications for copies of tender documents should be made to the Deputy Director, Works, Railway Board, New Delhi. Tender documents embodying conditions of supply and contract and relevant drawings will be supplied at Rs. 10/- per set and will be available for sale from 19th September 1956 onwards on any working day during office hours.

4. Tenders will be received upto 13.00 hours on 19th October, 1956 and opened in the office of the Railway Board, New Delhi, at 15.00 hours on the same day.

P. R. Chopra.

Deputy Director, Works,
Railway Board.

New Delhi.

STOCK MARKET VALUES WELL MAINTAINED

MAND FOR SHIPPING AND WESTERN OIL SHARES

London, 19th September.

PRICES held up remarkably well in the stock markets last week in spite of various adverse influences, particularly the continuing Suez Canal crisis. Selling remained at a very low level. There was some selective buying, notably of shipping shares and western hemisphere oil shares. Movements for the most part however were within narrow limits, and business generally remained subdued. Gilt-edged securities were subordinated throughout, and on balance, prices showed little change. The new issues by New Zealand and the East African High Commission restricted interest. Firmness of German bonds, particularly of Potash issues, was the main feature in the foreign bonds market. Disappointing August trade figures had little effect on the industrial market, where prices for most part moved within narrow limits. A number of good features developed however, following selective buying. Shipping shares were outstanding and attracted good buying under the influence of the Suez situation, but buying elsewhere was confined to most part held fairly steady. Gold shares were very quiet, but there was a little selective buying of developing mines' shares which recorded a number of small gains. Latest Orange Free State dividends were well received, but had no great effect on prices of the shares concerned. Coppers were well maintained in spite of labour troubles, while tins and other base metals inclined to harden. Interest in oils was centred in Trinidad and other western hemisphere issues, which recorded numerous gains. Outside these issues, prices moved within narrow limits generally, with leaders mostly easier on balance. Rubbers were quiet but steady, while tea shares attracted only a modest

amount of attention and generally recorded little material change.

Stock Market Prospects

The *Investors' Chronicle* market newsletter writes: "All markets remain dominated by the day-to-day Suez Canal developments. With world events at a critical stage, the markets are naturally unsettled and are treacherous for short-term speculators, but ripe for a sharp recovery, given any encouragement. London gilts eased but held above early August resistance levels. Industrials drifted with little pressure. Oils favour the bulls on any lessening of tension. A minor decline in gold share brought no genuine selling. Cheap buyers have appeared. Wall Street may test the 50th August resistance levels." Gampell comments: "The London stock exchange at Wednesday's opening is remarkably nonchalant in face of Wall Street's easiness, several overnight developments and this afternoon's presumably momentous Commons debate. This reassuring behaviour speaks well for the market's technical strength. It seems likelier to rally on good news than to panic on bad. Frankfurt's recent firmness may be a significant pointer for other countries."

The Money Market

The Government's continuing credit squeeze policy made itself felt in the London money market last week. Credit was in short supply on most days, and although the market had a smaller bill take-up to finance, it had to pay dear for its requirements with 4½ percent as the main effective rate and 5 percent when under pressure. In view of the tight money position, the week's turnover in bills was moderate and nothing under 5 percent was paid for the late November and early December maturities. Because of tight credit conditions and weakness of sterling caused by the week's developments on Suez Canal situation, the money market revised its tender bid again during the week and the average rate for bills, consequently was raised by approximately 1/32 percent to 102s 0.77d percent. Applications for £290 million worth of 91-day bills totalled £404,215,000 and were allotted at an average rate of 102s 0.77d compared with 101s 4.5d. Offerings this week will comprise £280 million worth 91-day bills. The Bank of England

return for the week ended 12th September shows that notes in circulation were about £8 million lower at around £1,892 million and bankers' deposits were about £17 million higher at around £226 million. Fine trade bills were unchanged.

Activity on Wall Street

U.S. Government obligations extended the recent decline on a small volume earlier in the week, with a number of long-termers dropping to new lows for the year. The market, however, later developed a firmer tendency and trading quickened on recovery. Foreign dollar bonds were mixed in slow dealings. German Nationals moved fractionally to one point both ways, while Italians were mostly a shade higher. Norwegians were unchanged. Australians were marked down by fractions to one point and Japanese Governments were mixed, while South Americans were quiet.

U.K. Trade Deficit in August

The U.K. had a provisional trade gap of £60,700,000 in August, the Board of Trade announced. This compared with the gap of £44,100,000 in July and £69,200,000 in August last year. The average for July and August at £52,500,000 was £1,500,000 more than the monthly rate in the first half of the year, but nearly £20 million lower than the monthly rate for last year. Imports c.i.f. in August amounted to £253,400,000 against £266,200,000 and re-exports f.o.b. £8,200,000 against £9,800,000.

Hongkong Gold Softer

The Hongkong gold market closed softer after a steady early period. Traders were hesitant awaiting the Suez developments and the forthcoming meeting of the International Monetary Fund. Opening at \$ (H) 266½, values climbed to the week's high at \$ (H) 268½. Heavily overbought operators began unloading at midweek, so prices gradually receded to close at \$ (H) 265½. Trade sources attributed the easiness to heavy Macao arrivals totalling 80,000 ounces and to the Suez news indicating that no force will be used. The official offtake was 3,580 taels, while the unofficial was 16,800 taels. Carry-over charges were 3½ per ten taels in favour of sellers. Forward contracts were done at \$ (U.S.) 47.81 an ounce, c.i.f. Macao.

Rutile Production in U.S.A.

The office of the U.S. Defence Mobilisation has announced that it is bringing its rutile expansion programme to an end. Rutile is a mineral used to produce titanium. The office said supplies of rutile are now sufficient to meet U.S. mobilisation needs. The annual U.S. rutile requirement was set by the office last year at 35,000 tons and tax benefits were extended to domestic mining companies to boost the output. The office added that the Interior Department had recommended that the demands for titanium-bearing ores in a mobilisation period could be met through the combined use of rutile, ilmenite and slag. An official said that Australia was the principal foreign supplier of rutile to the American market and had plentiful supplies of the mineral.

Vegetable Oil Market

The vegetable oil and seeds market is uncertain with the prospect of dearer freights in the light of the continuing Suez dispute which is forcing up prices and suppressing demand. Coconut oil was extremely firm last week with Straits bulk oil rarely mentioned under £92½ c.i.f., although few buyers were prepared to go above £91½. Similarly, Ceylonese oil was marked up to £99 c.i.f., while buyers were disinclined to pay more than £97½. Copra was also a firm item with first-hand sellers difficult to trace under the \$181 mark for Philippines, after reported early business at \$180 c.i.f. Linseed oil received little constructive buying support, and with Canadian linseed tending to be easier, prices of the oil were barely held at last rates. Groundnut oil received moderate support with £123 ex-tank Rotterdam reportedly paid for spot Nigerian bulk oil, while tentative sellers of forward shipments were wanting £122½ c.i.f. with buying interest in the region of £120. Groundnuts were firmly held at last rates, although reported business was confined to Rhodesian for September-October, to North Continent at £79 c.i.f. with further buyers, but further sellers wanting £80. Palm oil was dearer on higher freights, and £98 was currently wanted for December shipments of Malayan 5 percent bulk. Castor oil was again dearer on good enquiry circulating with bids reported at £134, cost and freight, for British Standard specification grade in drums.

World Rubber Statistics

Advance statistics issued by the International Rubber Study Group shows that world production of natural rubber in the month of July totalled 162,500 long tons. Consumption amounted to 145,000 long tons including estimated imports by Russia of 9,650 long tons and by China of 6,900 long tons. Stocks at the end of the period totalled 817,500 long tons of which there were in producing areas 260,000 long tons, consuming areas 375,000 long tons and alofts 182,500 long tons. The stock figure excludes those not available to industry in the U.K., the U.S.A. and France. Synthetic rubber production during the month was 97,500 long tons and consumption 77,500 long tons while stocks held at the end of the period were 247,500 long tons. The Group estimates exports from Indonesia during the month at 61,215 long tons.

U.S. Rubber Imports

The United States imported 37,673 long tons of natural rubber during the month of July, according to the Department of Commerce. This compares with 31,687 long tons in June. Imports of latex amounted to 3,522 long tons during July compared with 5,006 long tons in June. U.S. consumption of imported synthetic rubber in June amounted to 412 long tons.

Stocks and Shares

LESS BUSINESS IN SPECULATIVES

SOME INVESTMENT SUPPORT FOR SELECTED SCRIP

Wednesday Evening.

THE stock market has been steady throughout the past few days, although speculative counters have tended lower. Investment scrip have been enjoying the customary pre-Pujah activity and engineering shares especially have featured. Jessops and Richardson & Cruddas, both shares in the Mandhra group, and Indian Standard Wagon and Burn & Co. have all featured. There has been some enquiry for coal shares in spite of the deteriorating situation in the Raniganj field. Jutes have been quiet, but miscellaneous counters have found their usual support. Only the tea section, among the main ones, has ruled dull and been neglected. The undertone remains fairly steady, but the many bear factors which are at present troubling operators in the speculative market, and the approach of the traditional Pujah slackness, are all contributing towards a growing feeling of hesitation.

Indian Irons have had a quiet week fluctuating between Rs. 35-12 and Rs. 35-1. Among speculatives, only Indian Copper have been a firm feature at Rs. 7. The undertone in this section of the market is cautious.

Government securities have been lifeless.

Details of the week's trading follow.

The Government securities market continued quiet but a slightly better tendency was noticeable with the appearance of buyers at the close who were attracted by the low price level. There was an increase in turnover and prices recovered from the lowest levels recently touched. Three percent Conversion Loan 1986 was marked at Rs. 75-6 cum-voucher and later at Rs. 75-3 ex-voucher. Short-dated loans were unchanged with 3% 1957 quoted at Rs. 99-12 and 3% 1958 at Rs. 99-9. Among medium-dated issues, 3% 1959-61 had sellers over at Rs. 98 and both 3% 1963-65 and 1964 were easier at Rs. 94-9; 2½% 1961 was asked for at Rs. 93-7 and 2½% 1960 had buyers at Rs. 96-6. In National Plan issues, 3½% 1961 met with enquiry at Rs. 99-2 and 3½% 1964 recovered to Rs. 98-9; 3½% 1965 was better at Rs. 98-7 but 3½% 1967 was marked back to Rs. 98-6. In long-dateds, 3% 1966-68 was in demand at Rs. 93-2 but 3% 1970-75 continued quiet and was quoted lower at Rs. 89-8; 2½% 1976 was asked for at Rs. 83 and 3½% 1974 was unchanged at Rs. 98-7. State loans continued depressed and once again very little business was reported. Four percent Madras 1968 was marked back further to Rs. 99-2 as was 4% U.P. 1968 to Rs. 99. Four percent West Bengal 1964 was traded at around Rs. 100-3.

Slightly more business was done in preference shares during the week. In the miscellaneous group, Aluminium Corporation 5% were crossed at Rs. 99-8 and Bathgate changed hands at Rs. 42-3. Burn 6% were taken at Rs. 116 and Britannia Building and Iron at Rs. 100. Bharat Collieries were done at around Rs. 54-12 and Calcutta Tramways came to hand at Rs. 9-10. Calcutta Electric were crossed at Rs. 11-7 and there were small offerings of Chrestien Mica at around Rs. 58. Dunlop Rubber 2% were reported at Rs. 95 and Gilanders Arbuthnot were crossed at Rs. 55. A small lot of Indian Aluminium was taken at Rs. 82 and Indian Iron & Steel were reported at Rs. 108. Martin Burn were offered at Rs. 103 in view of the new rights issue at par and New Victoria were crossed at Rs. 5-13. Shaw Wallace were placed at Rs. 78. In jute, Auckland were sold at Rs. 88, Howrah 7% at Rs. 107 ex-dividend and the 'A' Preference at Rs. 102 ex-dividend. Khardah were marked at Rs. 91-8. A small odd lot of National Jute changed hands at Rs. 109 as did Reliance at Rs. 95.

In the banking section, a small lot of Allahabad Bank fully-paid was crossed at Rs. 350 and the partly-pays were done at Rs. 166. Hindustan Mercantile were offered at Rs. 13-8 while both Punjab National and United Commercial were steady at Rs. 87 and Rs. 87-8. United Bank of India "D" shares were done at Rs. 4-8.

In the railway section, Arrah-Sasaram were crossed at Rs. 71-6 while Delhi Rohas changed hands freely at around Rs. 13-6. Shahdara Delhi Saharanpur were done at Rs. 129-8.

In cotton, Kesoram were better at Rs. 18-6 ex-dividend as were Dunbar at Rs. 27-8 and Cawnpore Textiles at Rs. 9-3. Bowrah were unchanged at Rs. 150 while New Victoria improved from Rs. 2-9 to Rs. 2-11. Elgin Mills were shaded at Rs. 27-6. Jayshree Textiles were steady at Rs. 7-10.

Despite the serious position of the coal industry as a result of the labour strike in the Raneeunge coalfields, a few selected coal shares met with some enquiry such as East Indian at Rs. 33-2. Katras Jheriah at Rs. 62 and Borrea at Rs. 24-14. Bengal were five points lower at Rs. 525 and New Beerboom were unchanged at Rs. 19-8. New Manbhoom were shaded at Rs. 11-12 while Burrakur, after idling at around Rs. 15-9 improved today to Rs. 16. Seebpore were higher at Rs. 30. Among the smaller fry, Western Bengal were reported at Rs. 6-9, Central India at Rs. 7-8 and Bhagora at Rs. 6-8.

Business in jute shares was on a restricted scale

and a few selected scrip met with enquiry. Here is a chart showing representative price movements.

	Opening 13-9-56 Rs.	Closing 19-9-56 Rs.
Anglo-India	187	192
Belvedere	158	15 8
Birla	18	18 4
Champdany	161 c.d.	161 x.d.
Fort Gloster	375	370
Gourepore	247	247
India	146	145
National	25 12	25 6
New Central	16 10	16 13
Northbrook	28 c.d.	28 8 x.d.
Union	160	160

Electric supply shares were featureless and prices showed little variation. Among the few shares which were dealt in were Bhagalpur at Rs. 8-12, Calcutta Electric at Rs. 13-7 and Jubbulpore at Rs. 14-5.

In the sugar section, Belsund were slightly better at Rs. 12-4 as were Champaran at Rs. 26-10 and Durbhanga at Rs. 22-12. Ramnugger improved from Rs. 27-9 to Rs. 27-14. Other issues were unchanged.

In the engineering section, Indian Iron & Steel, after being knocked down to Rs. 35-1 on settlement considerations, recovered at the close to Rs. 35-3, which was the official settlement rate. Steady features were Burn & Co., which improved to Rs. 360 and Indian Standard Wagon which rose from Rs. 207 to Rs. 215. Jessop & Co., and Richardson & Cruddas also provided good features, improving from Rs. 35-8 to Rs. 37-2 and Rs. 25-8 to Rs. 27-8 respectively. Contrary to the general trend, Textile Machinery receded from Rs. 23-12 to Rs. 23-4. National Iron & Steel were unchanged at Rs. 8-9.

In paper, India Paper Pulp were marked at Rs. 25-4, Orient were easier at Rs. 39-7 and Tita-

Distributed by SHAW WALLACE & COMPANY LIMITED

Dressed for the occasion

Each occasion demands
a different and
appropriate dress.
Similarly, each
particular painting
'job' should have a
specialised and suitable
paint. I.C.I., over many
years, have developed
specialised paints for
specialised purposes—
all Supreme Paints!

Manufactured by:
THE ALKALI & CHEMICAL
CORPORATION OF
INDIA LTD.

Sole Selling Agents
IMPERIAL CHEMICAL INDUSTRIES
(INDIA) PRIVATE LTD.

Calcutta, Bombay,
Madras, Kanpur,
New Delhi.

Duco

the car finish used by 9 out
of 10 car manufacturers.
Give your car complete 'Duco'
protection by using the full
'Duco' refinishing system.

Dulux

the synthetic enamel with a
world-wide reputation for
outstanding durability. Used
on all forms of transport;
for decorative purposes, too.

Necol

a range of specialised products
suitable for a wide variety of
industrial uses; a product for
every purpose.

Brushing
Duco

the 'brushing' version of
the famous 'Duco' finish. Used
in and around the house for
decorating and in the workshop
for minor repair jobs.

SIXTYONE YEARS STRONG IN SERVICE

ing the announcement of a rights issue to shareholders in the proportion of one for one at a premium of Rs. 2-8; there were strong buyers at the close at Rs. 20-2 ex-rights. Indian Cables were better at Rs. 36 as were Indian Rubber Manufacturers at Rs. 17-12. Indo-Burma Petroleum were unchanged at Rs. 40-8 while Indian Wood Products rose sharply to Rs. 43. Jardine Henderson were depressed at Rs. 96, but Martin Burn recovered from Rs. 24-8 to Rs. 25-3. Metal Box were marked back from Rs. 29-8 to Rs. 29 while National Insulat-

The BISRA STONE LIME Co. Ltd., has made a profit of Rs. 2.16 lakhs for the half-year ended last September, after providing Rs. 41,405 (Rs. 49,175) for depreciation, Rs. 3.82 lakhs (Rs. 1.30 lakhs) for taxation, Rs. 51,989 (Rs. 53,506) for quarry overhang, Rs. 16,000 (Rs. 20,000) for tax contingency reserve and making other provisions. Bringing in Rs. 9,142 and transferring Rs. 1,132 from capital reserve, the total Rs. 2,489, of which water supply absorbs Rs. 50,000 and mechanical reserve Rs. 1.75 lakhs (Rs. 75,000). The dividend has been maintained at 14 annas a share, leaving a carry-forward of Rs. 24,689.

The TEZPORE TEA CO. LTD.'s profit has decreased from Rs. 22,80 lakhs to Rs. 7.15 lakhs for the year ended 31 December. The ordinary dividend has been reduced from 50% to 15%, though the ordinary capital has meanwhile been increased by a one-for-four scrip issue. The carry-forward is Rs. 55,278, against Rs. 59,985 brought in. The crop was 32,034 maunds against 29,539 maunds, but the average price declined from Rs. 2-6-8 to Rs. 1-13-3 a lb. Estimates for the current year have been made for a crop of 28,000 maunds at cost of Rs. 37.48 lakhs.

The profit of the NAGASURREE TEA COMPANY has declined from Rs. 13.51 lakhs to Rs. 1.48 lakhs for the year ended last December. The dividend is cut from 40% to 71%. Revenue reserve is allocated Rs. 65,000 (Rs. 3.25 lakhs). The carry-forward is Rs. 48,298, against Rs. 80,227 brought in. The crop decreased from 14,615 maunds to 12,500 maunds as the average sale price from Rs. 2-15-5 a lb. to Rs. 1-12-1 a lb. Estimates for the current year are for a crop of 12,500 maunds at a cost of Rs. 14.86 lakhs.

The ARATI COTTON MILLS LTD. has earned a profit of Rs. 11,005 for the 14 months ended 31st December, 1955. There is again no distribution. Sales improved from Rs. 33.76 lakhs to Rs. 47.74 lakhs. The company has received a loan of Rs. 15 lakhs from the Government of India during the period under report. Orders for spinning machinery have been placed, and on completion of the project the total number of spindles will be 25,000.

Reports of further credit squeeze were circulated though it was generally believed that the Reserve Bank's recent directive to regulate advances on commodities would not hamper increased industrial advances. The grave Suez Canal situation was interpreted differently according to changes in the market trend. Some industries, such as cement, heavy chemicals and paper, would probably benefit temporarily if imports were interfered with. Second thoughts convinced operators that deterioration in the Canal situation could hamper economic development in the country in the long run as increased freights will raise prices.

Safty-Inner Liner*
more than a tube
the modern tyre—tube Combination
that protects against
blowouts!

* This Safty-Inner Liner which is a part of the tyre makes Firestone tubeless the safest tyre you have ever used. Here is why; it protects against blowouts—unlike a tube, the Safty-Inner Liner is relaxed and not under tension (thus, not tending to explode like a toy balloon.) It protects against punctures—any penetrating object is gripped by the Safty-Inner Liner which prevents rapid loss of air.

why not get the extra safety
of a Firestone Tubeless tyre
—it costs no more than a
regular tyre and tube.

Firestone

New Delhi

SECOND PLAN EXPENDITURE LIKELY TO EXCEED PRESENT ESTIMATES

NEW OFFICIAL FIGURE OF RS. 5,200 CRORES CONSIDERED CONSERVATIVE

(FROM OUR NEW DELHI CORRESPONDENT)

PARLIAMENT discussed and approved the second five year plan before adjourning sine die last week. Most members, however, discussed everything except the plan. Hindi in relation to State Ministers' recent decision in favour of retaining English, cow protection, prostitution, caste marks on foreheads, compost pits and midwives—these were among the subjects covered during the debate. The Minister for Planning, Mr. Gulzarilal Nanda, took the opportunity to indicate a Cabinet split over textile policy.

The new Finance Minister, Mr. T. T. Krishnamachari, in a down-to-earth speech, admitted that the total outlay in the plan for the public sector was greater than Rs. 4,800 crores. Listing some of the items, he said that the estimate of Rs. 425 crores for the three steel plants was expected to go up by Rs. 50 crores or Rs. 60 crores. An additional investment of Rs. 100 crores was needed for heavy industries and of Rs. 40 crores or Rs. 50 crores for atomic experiments. Oil development will cost Rs. 30 crores, as against Rs. 11.5 crores provided in the plan. This is in addition to the money needed immediately for the refinery in the public sector, and for collaboration with the Assam Oil Company and the Standard Vacuum Oil Company. More money will be required if the explorations which are to be undertaken succeed. At a recent meeting here, it was pointed out that even with the present inadequate target for additional shipping tonnage, 50 percent more money than has been provided in the plan will be necessary. The lignite project, as now approved, will cost Rs. 68 crores, or Rs. 16 crores more than has been provided for in the plan.

Agricultural Targets

The controversy over targets for agricultural production still continues. The Ministry of Food and Agriculture and State Ministers are demanding not only Rs. 150 crores more than was provided for in the plan but also a price incentive to step up the target of 15 percent in the plan to one of 40 percent recommended by the Deputy Chairman of the Planning Commission, Mr. V. T. Krishnamachari. The Prime Minister, however, recently told Parliament that the agricultural targets would have to be stepped up within the provision made in the plan. Even if the Prime Minister's suggestion is carried out, a rise from 15 percent to 40 percent would create the need for additional transport facilities. The railways contend that the provision for them in the plan is inadequate and they cannot therefore be called upon to carry the extra load. The criticisms about growing operational inefficiency on the railways made by Mr. Feroze Gandhi have a great deal of substance. There can, for example, be no sound reason for introducing third-class air-conditioned trains while overcrowding remains and transport facilities for goods are inadequate.

Returning to the question of the plan outlay, Rs. 4.5 crores have already been provided for jet aircraft over and above the provision made in the plan. The Finance Minister was conservative in his estimate when he said that the plan outlay in the public sector was no longer Rs. 4,800 crores, but Rs. 5,200 crores. Referring to consumer industries and their targets, he said: "We are in the course of revising these targets, but when we revise target figures, there will have to be a revision in regard to resources available, in regard to transport available, and in regard to foreign exchange resources available. In fact, having raised the targets, I have asked them to calculate the foreign exchange content in the import of machinery, in the machinery that has to be erected for these consumer industries; and it is a fact which I have to look into very carefully, because, I will repeat once again, the first danger that we see on the horizon is the shortage of foreign exchange. So, with these considerations, I am not in a position to say today what is the target which the Planning Commission will ultimately accept for consumer industries. But the revision will undoubtedly be an upward revision. It cannot be a downward revision. It may be a selective revision. But we are not giving up the idea of revision altogether."

Outlook for Resources

"That takes me to the next point, namely, the outlook for resources. My predecessor, speaking in the last session, did touch upon this point, very effectively I should say. I would only like to add to what he has said in relation to the new facts that have come into operation since he spoke on the last occasion. It is an accepted fact that the task of raising the resources required for the plan is not an easy one. In fact, every foreign critic touches our soft spot as to how we are going to get those resources. During the current year, fresh taxation, so far as the Centre is concerned, has been imposed, which will yield a little over Rs. 50 crores this year and which will in a full year equal Rs. 65 crores, assuming the rates

are kept level, and about Rs. 15 crores from the States. That gives you, for four years (Rs. 65 crores plus Rs. 15 crores—Rs. 80 crores, multiplied by four) Rs. 320 crores. If you add Rs. 65 crores for this year, it will give you Rs. 385 crores." The plan has provided Rs. 450 crores as the target for taxation for both the Central and the State Governments, and that is just the beginning. With economies buoyant and the levels of production rising, there should be an improvement in the resources position. Economists, particularly Mr. Arthur Lewis, have pointed out that one cannot run a welfare State on the basis of public revenues amounting to a mere 7 percent or more, or thereabouts, as total income. I, certainly, and members on this side are not prepared to accept that our goal is that of a purely welfare State. The resources have to be raised very carefully when we are thinking of something which is above a welfare State. That is what I would like to tell my friend, Mr. Tulsidas. We are not thinking in terms of a welfare State; we are thinking of a State in which the content of welfare will be something which can be translated into real terms for the people, where the people will feel that it is not somebody who is creating a welfare State, but that the people are creating a welfare State for themselves.

Scope for Taxation

"The scope for taxation has by no means been exhausted. I hope people will not treat it as a bare fact, although it must be recognised that great care will be required in selecting the right forms and degrees of taxation. The gap envisaged in the plan is about Rs. 850 crores, out of which, as I said, about Rs. 450 crores is expected to be met by taxation and the other Rs. 400 crores will be left uncovered. As I have said before, the steps taken to go to cover more than Rs. 375 crores, or nearly Rs. 385 crores, out of the Rs. 400 crores. You will not condemn me as being an incurable optimist if I say that it should not be difficult for us to cover the unbridged gap altogether likewise. There is always an increasing need for so raising the marginal levels of taxation."

Dr. Jaisooriya: "The total taxation is Rs. 850 crores?"

Mr. T. T. Krishnamachari: "Rs. 850 crores is the figure provided. Rs. 400 crores has been left unprovided for. I am taking Rs. 850 crores as taxation; and I am looking for a few crumbs here and there which will augment that figure."

"The question of loans and small savings can go far in providing the resources. The State loans, from being a matter of a mere Rs. 15 crores or Rs. 18 crores in the past, have now shown a great deal of resiliency. Recent experience in respect of the State loans shows that allotments have reached about Rs. 68 crores. This certainly holds a great promise for the future. In fact, what has been allotted to these States by way of loans in this respect is Rs. 300 crores. If we had reached thus a figure of Rs. 68 crores in the first year of this plan, I think there is an element of progress in all these loans."

Deficit Financing

The Finance Minister refused to place absolute faith in deficit financing. "Deficit financing is permissible only to the extent that the needs of monetary circulation require it and the community is prepared to hold cash rather than spend it." As for foreign exchange, he said that the gap was no longer Rs. 800 crores, but was already Rs. 1,200 crores. In conclusion, Mr. Krishnamachari declared that the Government was already thinking in terms of the third five year plan.

The Finance Minister seems to have made a realistic appraisal of the second plan. He said that actual outlay would greatly exceed the figure given, that the foreign exchange gap had widened and that the Government was according priorities and thinking in terms of the third plan. It is felt that similar realism should be shown in according priorities. As matters stand, the Union Education Ministry's priorities are a museum, then a theatre, and lastly a library. Building operations for the National Museum are already proceeding.

Production Minister to Visit Russia

Mr. K. C. Reddy, Production Minister, expects to visit Russia in October. Speaking at a Press conference, he said that during his stay there he hoped to acquaint himself with the capacity of Russian heavy industry to meet India's needs for machinery of various kinds. Mr. Reddy is particularly interested in coal-mining equipment for the public sector. He will also inspect the progress of arrangements there for the fabrication of steel plant for the Bhilai project.

The Production Minister said: "To provide the necessary technical personnel for the expansion of coal production, the Government has sanctioned the opening of four training centres in Kargali, Giridih, Talcher and Kurasia at a cost of Rs. 28 lakhs. The centres in Giridih and Kargali

are proposed to be opened next month. Additional centres will be opened in some other places also. As most of the areas selected for starting new collieries are covered by mining leases or prospecting licences, a draft Bill to enable the Central Government to acquire these rights from private lessees is being prepared. The Bill will lay down the principles of compensation for acquisition. The State Governments' rights in the minerals will remain intact. The Centre working the mines as their lessees. The coal company formed to own and manage existing State collieries, as well as the new collieries which will be established, will have its headquarters in Ranchi. The Minister for Production is chairman of the board of directors, which includes officials as well as non-officials. One director with special knowledge of labour problems will be included.

"The production plans of the private sector are being closely watched by the Coal Controller. On the basis of a study of these plans, the Coal Controller has prepared a transport plan for the additional coal to be moved from different colliery groups. This has been communicated to the Railway Board. The private owners are expected to submit their plans to the Coal Controller for scrutiny and approval. A team of Russian experts is expected to visit India in October to help in planning the development of the Korba coalfield. The team will study the project report and working plans already prepared by an Indian team of mining engineers and suggest the type of machinery to be used and working methods to be adopted. Another team of Russian machinery experts is also expected to visit this country to advise the Government on the establishment of capacity for the manufacture of coal-mining

THE INDIAN TUBE COMPANY (1953) LIMITED

A TATA-STEWARTS AND LLOYDS ENTERPRISE

General Services	Screwed and Socketed Tubes, Class A, 'B' & 'C' (Galvanised and black) to B.S. 1387, upto and including 6" n.b., and Pipe Fittings.
Power	Cold drawn, Hot finished and Electric Resistance Weld Boiler Tubes.
Poles	Tramway, Transmission, Lighting.
Public Services	Air, Gas, Water and Sewage Mains.
Mechanical	Seamless and Electric Resistance Weld Tubes for Rollers, Conveyors and other mechanical purposes.
Steel Strip	High Tensile Steel Box Strapping and Cold Rolled Steel Strip for manufacturing purposes.
Enquiries and Orders for Screwed and Socketed Tubes and fittings ex-stock should be addressed direct to our Warehouse Offices.	
Head Office:	41, Chowringhee Road, P.O. Box 270, Calcutta. Telephone: 44-5224 (5 lines)
Branch Offices and Warehouses:	
18, Fosberry Road, Secree, Bombay-15.	39, Hide Road, Kidderpore, Calcutta. Telephone: 45-4561.
Works: Jamshedpur, Bihar.	

STEWARTS AND LLOYDS OF INDIA, PRIVATE LIMITED

Fabrication and Erection of complete pipework installations for Steam, Gas, Compressed Air, Fuel Oil, etc.

Coils for Refrigeration and other industrial uses. Light Structures of Tubular construction. Water Well Casing. Oil Country Goods.

Head Office: 41, Chowringhee Road, P.O. Box 270, Calcutta.
Telephone: 44-5224 (5 lines).

Works: 39, Hide Road, Kidderpore, Calcutta.
Telephone: 45-4561.

SOUTH EASTERN RAILWAY TENDERS.

The General Manager, Garden Reach, Calcutta-23 invites tender No. GM12/56/2408B (56) for supply of 593 cwt. of Nut Hex Head M. S. Forged Black 1½", 3/4" & 1" dia. to BSS 916-46. Tender Forms are obtainable from the Controller of Stores, Garden Reach, Calcutta-23 on remittance of Rs. 5/- per copy (not refundable) by Money Order to him direct in the case of outside firms and on production of cash receipt from the Chief Cashier, Garden Reach by local firms. Closing date 5-10-56 at 12 Noon. Firms not on the Railway's list of approved contractors must enclose a valid Income Tax Clearance Certificate with the tender.

control of the project to a Government company to be incorporated under the Indian Companies Act of 1956."

Machinery Orders

Machinery has been ordered for the Neiveli lignite mine at an estimated cost of Rs. 3.36 crores as follows:

Types of machinery ordered	Names of firms with which orders have been placed.
1. Heavy Duty scraper Loaders	Blackwood Hodge.
2. Pneumatic Tyred Motorised Scrapers	
3. Bottom Dump Combination Units	
4. Crawler Tractors	Larsen and Toubro.
5. Heavy Duty Rippers	
6. Angling Blade Bulldozers	Greaves Cotton and Co.
7. Electric Shovel Excavators.	
8. Self-propelled Mobile Crane	William Jacks and Co.
9. Track-Shifter Tractor	
10. Bucket Wheel Excavators (Large and Small)	Orenstein-Koppel and Lubecker Maschinenbau.
11. Crawler-mounted Slewable Spreaders	
12. Erection Equipment for Bucket Wheel Excavators Spreaders	

The Production Minister, dealing next with fertilisers, said: "Three new fertiliser factories, including the fertiliser unit of the lignite project, are being set up during the second plan. Together with the expansion of Sindri's capacity by 60 percent, the production of the new units and increased production in the private sector is expected to meet the entire requirements of nitrogenous fertilisers as at present estimated. A private limited company, known as the Nangal Fertilisers and Chemicals Ltd., has been registered to take charge of the Nangal fertiliser project. The capacity of the Nangal factory will be 200,000 tons of ammonium nitrate a year, suitably diluted with diluents to ensure keeping qualities. The factory will also produce heavy water for the use of the Department of Atomic Energy. Ammonia will be produced by the electrolytic decomposition of water and liquification of air. The factory is expected to start production by 1960. Three foreign firms, invited to give preliminary reports for the project, have submitted their reports, which are now being examined. One of them is likely to be selected as technical consultants. The factory will be located on the right (western) bank of the Sutlej river. A detailed programme of recruitment and training of technical personnel for the project has been drawn up in collaboration with the management of Sindri, where training is proposed to be arranged."

Expanding Sindri Factory

Work on the expansion of the Sindri factory is proceeding satisfactorily. New plants to be supplied, erected and commissioned by the Italian firm, Messrs. Montecatini, will go into production by March 1958. Some technicians of the contractors are already at the site and the first consignment of plant and machinery has arrived in Sindri. Two new fertilisers, urea and ammonium sulphate nitrate (double salt), will be produced at the rate of 70 tons of urea and 400 tons of double salt a day in the new plants, raising Sindri's capacity by over 60 percent. Sindri Fertilisers and Chemicals is itself carrying out certain ancillary items of work. The fertiliser factory which is to be set up in Bokaro will be based on the coke oven gases which will be available from the steel plant. The capacity of the factory, which is expected to go into production by 1960, will be 80,000 tons in terms of nitrogen a year. A proposal for a heavy water plant in Sindri is being examined.

As for the heavy electrical equipment project, Mr. Reddy said: "The heavy electrical equipment factory will be designed to manufacture turbines, generators, transformers, static capacitors, circuit breakers, switch-boards and control desks, small and medium sized motors, traction motors, insulating materials, etc. A team of experts, including representatives of Associated Electrical Industries, technical consultants for the project, has now selected a site near Bhopal after carrying out tests of the soil-bearing capacity. The Bhopal Government is making available 7½ square miles of land at the site and will arrange for water and power. The recommendations made by a delegation of Indian engineers, which went to the U.K. in April-May this year for drawing up a manufacturing schedule for the factory, have been accepted by the Government. The detailed project report is due by 30th November, 1956. The recruitment of engineers who will be given specialised training in the factories of the technical consultants in the U.K. is being taken in hand. The consultants have prepared a report for the training of Indian personnel."

Construction of Dry Dock

Mr. Reddy said that for the construction of a dry dock, a project report has been prepared by Rendal-Palmer and Tritton of U.K. The dry dock will save the time spent on sending ships to Cal-

cutta or Colombo for dry docking, as well as an expenditure of Rs. 40,000 a ship. It will also enable the shipyard to undertake remunerative ship repair work. During the second plan, all preparatory work necessary to establish a second shipyard will be carried out. A nucleus of about 500 to 600 technical personnel will be trained at the Hindustan Shipyard. At the same time, action is to be taken to select technical consultants for the second shipyard. Leading shipbuilding firms are being approached. Negotiations to select a firm of technical consultants for the manufacture of marine diesel engines have also been started. At present, the propelling machinery and important accessories have to be imported.

Burmah-Shell Offer on Excise Duty

Burmah-Shell has voluntarily surrendered its protection in the shape of exemption from excise duty of 2 annas a gallon granted for ten years on all oil refined in its Bombay refinery. This will mean forgoing an income of Rs. 2.2 crores a year. The Government hopes that the lead given by Burmah-Shell will be followed by the other oil companies operating or about to operate refineries in India. The total of this excise duty comes to Rs. 4.4 crores a year, including Rs. 2.2 crores retainable by Burmah-Shell, Rs. 152.5 lakhs retainable by Standard Vacuum and Rs. 67.5 lakhs retainable by Caltex.

Uniform Prices for Coal and Salt Proposed

The Ministry of Production is working on a scheme to equalise the freight structure for coal and salt in order to make them available at uniform prices all over India. A similar scheme is already in force for fertilisers and cement. The effect will be that industries located in the coal-producing belt, such as Sindri Fertilisers, will have to pay more for coal, while industries in, say, Delhi will pay less.

Labour Participation in Management

The Labour Secretary to the Government of India, Mr. Vishnu Sahay, will lead a delegation which will shortly be leaving to study the system of labour participation in management in certain European countries. The system has been tried with some success, it is said, in Yugoslavia. The British Labour Party, however, is opposed to it. Some interesting questions arise. If labour becomes a partner in management, it should surrender its present bargaining position. Labour participation in the management of the Indian railways, for example, should deal effectively with inefficiency in general and pilferage in particular. A bigger question is who are going to represent workers on the management.

Indo-Japanese Talks on Unfair Competition

Discussions have been held between the Government of India and the Government of Japan to reach an understanding on the safeguard of Indian industries and Indian exports against unfair competition. No agreement has yet been concluded. Pending such an understanding, the Government of India has refrained from assuming any obligations towards Japanese trade either under the General Agreement on Tariffs and Trade (G.A.T.T.) or any other international agreement.

Japanese Industrial and Machinery Mission

A 17-man Japanese industrial and machinery mission has arrived here to assess India's need for machinery and equipment and to negotiate sales. Its leader, Mr. Shinichi Takasugi, said that the mission would discuss details of industrial co-operation with Indian business men. A Japanese ship, well equipped with the goods Japan has to offer, is also on its way to India. India feels that if Japan is anxious to sell plant and machinery here, she must be prepared to buy Indian goods, particularly since foreign exchange is a big headache for New Delhi at present.

State Trading Corporation

"Trade, not aid", is India's new slogan. The Finance Minister told Parliament last week how acute the foreign exchange position is. He spoke of a new pattern of trade which, through the exchange of goods, saved foreign exchange. It is claimed that the State Trading Corporation is engaged in reducing practical difficulties for foreign importers, such as the transport bottleneck and the vagaries of speculative markets. The Corporation, it is stated, has taken steps to stimulate the export of boots, shoes, woollen textiles, handicrafts and even tea to supplement the efforts made by private trade. It hopes to introduce healthy trade practices or to improve them wherever they have fallen below recognised standards. It is claimed that it has already assisted consumers, both Indian and foreign, by stabilising the prices of commodities, particularly those which had acquired a scarcity value, such as cement, soda ash and caustic soda in India, and iron and manganese ore abroad. In the case of manganese ore, the Corporation has arranged for the complete fulfilment of old contracts; and in the case of iron ore, it has done the same, to the extent that transport is available. For this reason, export quotas were recently doubled. Exports in fulfilment of old contracts can be made at the contract prices provided the foreign importer is prepared to pay the enhanced export duty.

Agreements on Steel Plants

Representatives of the Indian Steelworks Construction Company of Britain, which is building a one million ton steel plant in December, are expected here by the middle of October. They will sign the final agreements, the details of which were settled by the Secretary to the Iron and Steel Ministry, Mr. S. Bhoothalingam, who returned from the U.K. last week. A similar team of Krupp representatives is expected shortly.

London

SUEZ SITUATION PROVES AN OVERSHADOWING ISSUE

PROPOSAL FOR A CANAL-USERS' ASSOCIATION

(FROM OUR LONDON CORRESPONDENT)

WITH stock markets very hesitant, the commodity markets recording higher prices all round in anticipation of delays in receiving further supplies and the possibility of higher re-routing costs, and the shipping companies busy re-routing vessels and revising schedules so as to keep running costs to a minimum, the Suez canal situation has more or less dominated all discussion in the City. In the circumstances, it is almost incredible that Sir Anthony Eden's disclosure in Parliament of the three-Power proposal for a canal-users' association as an answer to what appeared to be an intractable problem should actually have come as a complete surprise. Devised in Washington, with Mr. Dulles and the British and French Ambassadors as the main architects, the plan was a well-kept secret. It is obvious, however, that both this secrecy and the need for quick action to fill the void created by the failure of the Menzies Mission to persuade President Nasser to compromise on international operation of the waterway and the determination of the foreign employees of the Suez Canal Company not to continue working for the new Egyptian authority, have resulted in a makeshift plan being produced which may or may not prove workable when further details are gone into at the conference to be called in London shortly. The idea is certainly ingenious: whether it is practicable is another matter. Egyptian co-operation is essential for success—and it is not easy to see that it will be forthcoming.

Meantime, shipowners from the main maritime nations using the canal have met in London privately to consider the new proposal, while representatives of the British shipping industry have had discussions with the Minister of Transport. The P. and O. are diverting passenger liners via the Cape and cancelling all passages to Port Said, Aden and Bombay, but passengers for the last-named port are being given the option of landing at Colombo if booked on vessels serving the Far East. On the other hand, the oil companies so far have made no change in their plans for shipment of oil from the Persian Gulf through the canal. So far as insurance is concerned, the American market has added Suez to the areas "excluded" from war risks cover at a nominal rate and higher premiums will apply. This move has not been followed here as yet.

Wage Demands

This preoccupation with Suez will not last for long. The new round of wage claims has made a start with the decision of the leaders of the shipbuilding and engineering unions at York on 13th September to apply immediately for a "substantial" pay increase for more than three million workers. Simultaneously, the leaders of the National Union of Railwaymen and the Transport Salaried Staffs Association were discussing a joint approach on wages to the British Transport Commission, while the miners' leaders met and decided to press for a speed-up on their claim for merging the bonus shift—now paid to men who work five days a week as an incentive to greater production—into basic pay. Whether we like it or not, we must accept that the "wage scramble" which the T.U.C. sanctioned at Brighton is with us. These initial pointers hardly link up with Sir Thomas Williamson's broadcast the other day as the new chairman of the T.U.C. that he was "perfectly certain the trade union movement, in the interests of its members, would not engage in a wage scramble" and advising his listeners that there was really no need to get panic-stricken about the resolution on economic policy. Nor was there much reassurance to be gained from his further admission that, now that the Congress was over, the General Council could continue consideration of its economic policy, which was adjourned just before the meeting, though it does explain the platform's inability to influence the floor.

Whether the timing of the scramble has been well chosen is open to doubt. Last week's *Board of Trade Journal* publishes figures which suggest otherwise. Stocks of finished goods are shown to be rising—by nearly 3 percent in the second quarter of the year after a 4 percent rise in the first—while preliminary returns of investment plans for 1957 show that expenditure next year will for the first time in three years, show a declining trend. These indications that the industrial boom is ending are reinforced by a survey of the probable course of industrial profits made by a prominent firm of stockbrokers. On the basis of statistics released by the *Financial Times* and Moody's Economic Service, the firm shows that the curve of profits, which has been rising over the past three years, is now levelling off, and might well begin to decline. These are hardly encouraging factors from the point of view of fresh wage claims.

Trade Gap Widens

The provisional foreign trade figures for August strike a cautionary note. Exports, as is usual in this holiday month, fell by nearly £13 million compared with July to total £253.4 million. Taking July and August together the average value of exports, £259.8 million, was 2 percent lower than the monthly rate in the first half of 1956, but 7 percent higher than the monthly rate for last year. Imports in August amount to £322.3 million, or £2 million more than in July. For the two months

July and August together the average value of imports was £321.2 million, 2½ percent lower than the monthly rate in the first half-year and 1 percent lower than the monthly rate for 1955. Re-exports at £8.2 million continued the decline shown in recent months. The excess of imports (valued c.i.f.) over exports and re-exports (valued f.o.b.) rose sharply to £60.7 million in August, £16.5 million more than in July. Taking July and August together the average "gap" was £52.5 million. This was £1.5 million more than the monthly rate in the first half-year, but nearly £20 million less than the monthly rate for the year 1955. Once again dollar exports did fairly well in August, although there was a small drop in shipments to Canada. Total exports to North America were valued at £34.4 million. They included a further silver shipment of £2.5 million to the United States, bringing the total of these repayments in the last five months to about £11.5 million.

Progress of the Credit Squeeze

The latest quarterly return of bank advances issued by the British Bankers' Association show that the credit squeeze is operating over a wide field even though it is being applied with the degree of discretion appropriate to the situation. The total in August is given at £2,002 million, which is £15 million more than in May, but £213 million less than in August, 1955, and the latter is a better comparative figure seeing that loans necessarily fluctuate at different times of the year. About £77 million, or over one-third of the reduction, is due to lower loans to the nationalised industries. Apart from this sector, advances have been cut by £136 million, or 6½ percent, which is quite a satisfactory reduction even though it may have been partly offset in its effects by a greater velocity in the circulation of cheques. Loans to the engineering industry, an important contributor to exports, have risen, and also those to shipping and shipbuilding. On the other hand, moderate reductions have been made in the loans to the textile industries, agriculture, the food, drink and tobacco group retail trade, builders and contractors, local authorities and "unclassified industry and trade." Advances to higher-purchase finance companies amounted to £45 million in August, 1955, to £30 million in May last, and to £25 million in August, 1956. "Personal and professional" borrowers have carried the bulk of the cut and total advances here are down to £329 million, representing 16½ percent of the total against 18 percent a year ago.

Trade Talks with Japan

Negotiations on trade and payments between the sterling area and Japan, which were expected to begin this month, are now not likely to start

until the middle of October because of a change of personnel in one of the Japanese Ministries concerned. So far as British views are concerned, there has been some satisfaction at the decline in Japan's sterling balances from £120 million at the beginning of the year to the present figure of about £60 million, even though it is realised that this development strengthens the case for an increase in Japanese exports to sterling area markets. The balances are now only a little above the amount regarded as the minimum working capital Japan needs to hold in London. One source of sterling earnings not so far explored is the Japanese shipbuilding industry for hitherto British shipowners have been refused permission to order new tonnage from Japanese yards, although they have not only been able to undercut British yards with fixed prices but also to offer much earlier delivery. This competitive margin has of late been decreasing somewhat.

Freedom for Sugar Trading

Sugar imports, which have been under Government trading since 1939, will return to private channels on 1st January, when the Sugar Board, set up under the Sugar Act this year, will begin to operate. The reopening of the London Terminal Sugar Market will follow. An announcement by the Ministry of Agriculture and Food issued last week states that a surcharge on all sugar will be applied from the same date. This is a device for averaging prices and not an addition. The effect will be that the consumer will pay the true average cost of home supplies, whether above or below world prices, as at present. For balance of payments reasons some import licensing control is likely to be necessary. An announcement will be made by the Board of Trade next month.

Film Industry's Problem

Television's threat to the film industry is becoming serious, and this, coming on top of the heavy impact of entertainment tax, is giving rise to a new crisis. Last week the Rank organisation, Britain's largest cinema group, announced the closing of 40 cinemas. Mr. J. Arthur Rank has this week disclosed that another 39 theatres are to be closed. Most of the cinema will be sold, and there is a little doubt that the sale of these properties should yield a handsome capital profit, but from the long-term point of view it must be disquieting to find that cinema attendances in six months have dropped by as much as 10 percent in areas which can be reached by commercial television. The entertainment tax absorbs one-third of gross receipts, which is why Mr. Rank says the future success of the industry depends on it being cut and is confident that it will be.

DELIVERING THE NATION'S GOODS

Transport in India is largely synonymous with the Railways. There is hardly any long-distance bulk movement of goods that does not involve a journey by rail.

For over a century the Railways in India have played a vital role, helping to knit our vast and far-flung country into a single unit. Today, the Railways are called upon to play the most important part in India's programmes of development.

The Railways are carrying men and material smoothly and economically wherever needed . . . serving the needs of commerce, industry and the common man.

DIESEL-ELECTRIC LOCOS FOR TISCO

Whether it is pulling molten metal cars from furnace to furnace, transshipping iron ore from railway yards to works, or moving a mass of hot metal from the Blast Furnaces to the Duplex Plant, speedy haulage is an integral process in the continuous production of steel.

Tata Iron & Steel Co. Ltd. had the foresight to appreciate the operational advantage of the diesel-electric over the steam locomotive for this important operation, when in 1934 they ordered a 30-ton GE diesel-electric locomotive, first of its kind to have been shipped out of the U.S.A.

Usefulness has been proved in service. Tata's Steel experts have signified their confidence in General Electric by putting into service at Jamshedpur, last year, ten 80-ton, three 35-ton and four 25-ton new diesel electric locomotives. These provide motive power for increasing important haulage duty resulting from the programme for the expansion of the steel plant.

General Electric is proud of its research, engineering experience and equipment being utilised in the service of India's largest steel plant... to promote the country's industrial progress.

RAISING OILSEEDS OUTPUT IN INDIA

SCHEMES UNDERTAKEN BY CENTRAL COMMITTEE

THANKS to the many-sided operations of the Indian Central Oilseeds Committee, the production of oilseeds during the first five year plan rose from 5,102,000 tons in the base year, 1950-51, to 5,877,000 tons in 1954-55. The target of additional production for the plan was fixed at 400,000 tons, subsequently raised to 500,000 tons, and as the above figures show, the target was substantially exceeded.

The headquarters of the Central Committee, which was constituted in May 1947 under the Indian Oilseeds Committee Act, 1946, was permanently shifted from Delhi to Hyderabad in 1954. The activities of the Committee, which is representative of all oilseed interests in the country, official and non-official, have considerably expanded over the years and cover all aspects of the oilseed industry—from growing to crushing. The large number of projects in hand, some of which have been completed, include 11 schemes of agricultural research, one of technological research, 17 relating to the village oil crushing industry and two for the development of marketing. So far the Committee has sanctioned 166 schemes, 24 of which have been completed.

Research in West Bengal

The scheme for research on oilseeds in West Bengal and the results achieved under it up to 31st March, 1955, are summarised in the eighth annual report of the Committee. The scheme was launched in November 1950, with its headquarters at the State Agricultural Research Institute, Tollygunge and sub-stations at the State agricultural farms in Berhampore and Bankura. According to the report, special attention was paid to the cultivation of improved varieties of groundnuts over an extended acreage. Eight types, including No. 3/28 (Departmental), were tried out in different soil and climatic conditions.

In loamy soil, A.H-25 from Madras exceeded others in yield the average yield being 19.6 maunds an acre. Because of the effect on the intercultural operations of the spreading types of groundnuts, and the high cost of cultivation, the farmers in West Bengal, states the report, were reluctant to grow groundnut. It is however hoped that if the cost of cultivation can be reduced without affecting the yield by eliminating earthing operations which are generally practised in West Bengal, there may be possibilities for its expansion in the State, particularly in the river valley project areas.

The Committee's latest report shows that, as in previous years, there has been a marked increase in the introduction of improved ghanis in the village oil crushing industry. Under the auspices of the Committee, a number of demonstration units of improved ghanis have been installed in various Community Project areas. Considering the needs of the industry, the Committee has made several recommendations to further the development of the village oil industry. One of the most important recommendations relates to the organisation of co-operatives among the oilmen (Telis) in West Bengal, the total expenditure for which has been estimated at about Rs. 6,000. The Central Government's sanction for the project has been obtained and communicated to the State Government.

Developing New Resources

The question of developing minor oilseeds resources in the country has also been engaging the Committee's attention. By tapping this potential resource, the Committee believes, it will be possible to increase the production of both edible and non-edible oils which can supplement the requirements of the country for export as well as for internal consumption and can release for edible purposes an appreciable quantity of such oil now consumed by industries. On the export of oilseeds and oils, the report states that in November 1954, the position was reviewed. It was recommended to the Government of India to liberalise the export policy by releasing more quotas of groundnut and castor oils. It was also recommended that the export quotas of oilseeds and oils should be announced early in advance of the period concerned. Agreeing with this, the Government of India has been allowing the export of H.P.S. groundnut in limited quantities by established shippers.

The position of the levy of export duty on oilseeds and oils is being reviewed almost at every meeting. The Government of India abolished the duty on groundnut oil, kardiaised and nigerseed with effect from 16th March, 1952, but the ban on the export of groundnut oil remained in force during the period June, 1953 to July, 1954. On 20th July, 1954, however, a small quantity was allowed for export with a duty of Rs. 350 a ton imposed on it. It was reduced to Rs. 225 a ton subsequently, and further Rs. 100 a ton in November, 1954.

During the year 1955, the Committee had under consideration the ways and means by which oilseeds production could be further stepped up during the second five year plan. As desired by the Government of India, a tentative target of 900,000 tons of additional production was proposed for the end of the second plan. A break-up of the target figures for each individual State was also roughly indicated. The State Governments were requested to send detailed proposals to achieve the target which were communicated to the Central Government. The total target fixed by the Centre for the second plan period is 6,600,000 tons, 4,500,000 tons for groundnuts and 2,100,000 tons for other major oilseeds.

Plantation Topics

FACTORS BEHIND RISING TEA COSTS

OPPOSITION TO VOLUNTARY CROP REGULATION SCHEME

(FROM A SOUTH INDIAN CORRESPONDENT)

THE Plantation Enquiry Commission's report relating to the tea industry is being carefully studied by the planters in the south. Although they have not yet openly expressed their opinion on the report, some of them feel that it is the product of a certain amount of ignorance, or at least, of an inadequate understanding of the problems of the industry. On the Commission's observations on the rising cost of production, they point out that it is not the expense on general charges or of selling that accounts for the major share of the costs, but, as Mr. W. W. Kilgour pointed out in his presidential address to the annual conference of the United Planters Association of Southern India recently, the heavy commitments on labour welfare, increased taxation and increases in the cost of materials are the main factors in the increase in production costs.

South Indian Tea Output

South Indian tea crop to the end of July at about 73,000,000 lbs is slightly less than that of last year. The long drought experienced early this year and the occurrence of flush worms in certain parts of Travancore account for this loss. With more suitable weather conditions prevailing since July-August, producers feel that this loss can be made up without much difficulty. While this was the case with production, there was an increase of 5,000,000 lbs in the export of South Indian teas from Cochin during the first seven months of this year. Exports to the United Kingdom increased by 2,500,000 lbs and the U.S.A. and Canada together took 1,000,000 lbs more. Australian off-take amounted to 29,600,000 lbs., an increase of 2,800,000 lbs. over that of last year.

The planters' attitude to voluntary regulation of tea crop as a method to adjust production to demand is different from the attitude of their North Indian counterparts. Mr. M. M. Verghese, chairman of the Planting Committee of the United Planters Association of Southern India, said that they did not believe in the artificial process of cutting down the crop on a percentage basis. Instead they favoured the idea of restricting the production of inferior quality teas which cannot be sold for profit. The planters in the south have decided upon finer plucking with this end in view. The south has not fully utilised the expansion of tea acreage allowed to it under the 1950-55 International Tea Agreement. According to Mr. Verghese, the capacity for extension is limited because of the high costs involved. The constantly shifting industrial policies of the Government are also discouraging further investment in tea.

New Rubber Import Policy

South India produced 1,730 tons of raw rubber in July as against 1,638 tons in the corresponding month of last year. Production for the first seven months of 1956 amounted to 11,361 tons against the manufacturers' off-take of 16,847 tons, showing a gap of 5,486 tons between indigenous production and consumption. This difference may rise to 6,000 tons by the end of this year. A change has been effected in the rubber import policy according to which the Rubber Board will directly import raw rubber and will distribute it among the manufacturers at the same statutory price as is fixed for indigenous rubber. The purchase policy of the manufacturers will, therefore, be no longer influenced by world market prices which are at present lower than Indian prices.

LONDON TEA SALES

AT last week's London tea sales, the 48,126 packages on offer realised an average price of 5s 0.46d a pound, against 4s 7.74d in the previous sale and 5s 0.41d a year ago. Plain broken pekoe was quoted at 3s 1d a pound. Prices obtained by some of the companies are given below:

	No. of packages	Average per lb
Amalgamated	1,257	4/11
Assam-Doors	426	5/13
Central Province	604	4/6
Chubwa	426	10/03
Consolidated Estates	410	6/3

Spring Valley	156	7/4
Standard	552	7/10
Tingri	390	7/9
United Planters	660	6/

COCHIN TEA SALES

At Sale No. 26, 1,400,000 lbs. of tea were on offer. There was a very strong general demand

for everything particularly for good teas. Low Mediums and Mediums were 2 to 4 annas dearer and Best Liquorings were up to a rupee over valuation. Whole Leafs were very strong and dearer, and Middle East types met with a good enquiry at rather lower rates.

NORTH INDIAN TEA CROP REPORTS

The following summary of crop and weather telegrams has been received for the month of August, 1956:

Upper Assam: Weather generally seasonable; immediate prospects good; outturn last month normal to good; crop slightly down at Panitola; outturn to date slightly over last year at North Lakhimpur.

Central Assam: Weather generally seasonable, but cold and wet and interfering with outturn in Moran; crops generally unfavourable in Moran; immediate prospects fair.

Lower Assam: Weather generally seasonable, but wet and interfering with outturn in Nowgong, rainfall above normal at Bishnauth; crop prospects generally favourable; outturn last month normal to good.

North Cachar: Weather favourable; immediate prospects fair to good; outturn to date slightly under last year at North Cachar; helopeltis prevalent at Happy Valley; black rot prevalent in some districts of Lakhimpur; blight disappeared from North Cachar and less severe in Lakhimpur.

South Cachar: Weather generally favourable, but wet and interfering with outturn in Longai; immediate prospects fair to good; outturn to date considerably over last year in Chargola; helopeltis and black rot prevalent throughout the district.

Eastern Doars: Weather favourable; immediate prospects good; outturn last month good; outturn to date considerably over last year at Kalchini; black rot prevalent at Kalchini.

Central Doars: Whether seasonable; immediate prospects fair to good; outturn last month about normal; outturn to date considerably over last year in Binnaguri; helopeltis prevalent at Binnaguri; factories seriously congested and despatch situation serious in Binnaguri.

Western Doars: Weather seasonable; rainfall for the month deficient in Nagrakata; immediate prospects fair to good; outturn to date slightly over last year in Dam Dim and Chalsa; helopeltis prevalent at Oodlabari and Chalsa; black rot prevalent in Oodlabari, but lifting in Chalsa.

Darjeeling: Weather seasonable; immediate prospects fair; outturn last month good; blister blight prevalent in some districts.

Teral: Rainfall normal for the month; outturn to date about normal; crop prospects fair to good; helopeltis prevalent in North Teral.

COLOMBO RUBBER PRICES

The following prices have been issued by the post published by the Colombo Brokers Association-Rubber Board of India from the weekly market report:

Sheet:	Closing Prices on 7-9-56 (Rupees a lb.)	Average for the period (Rupees a lb.)
No. 1	1.41	1.41
No. 2	1.38	1.38
No. 3	1.35	1.35
No. 4	1.11	1.11
No. 5	1.06	1.06
Sheet Cuttings 1	1.05	1.05
Sheet Cuttings 2	1.00	1.00
Crape:		
Water White	—	—
R.M.A. No. 1X	1.39	1.38
R.M.A. No. 1	1.33/39	1.37
Crape No. 2	1.29	1.29
Crape No. 3	1.19	1.19
Scrap Crape:		
Sc. Crape No. 1	.88 Nom.	.86
Sc. Crape No. 2	.80/83	.81
Sc. Crape No. 3	.75/79	.76
Flat Bark	.70/74	.70
Sc. Crape 3X	.79	.79

To arrive at f.o.b. Colombo prices add 53.45 cents a pound for rubber other than scrap crape and 31.45 cents for scrap crape to the above market prices.

"CAPITAL" STOCKS AND SHARES INDEX*

The Capital Stocks and Shares Index (Base: 1939) has now been brought up to July, 1956. Compared with June, the July indices for preference shares and government securities reveal drops of 0.9 points and 0.3 points, respectively.

There were increases in banks 2.9 points, cottons 21.8 points, papers 33.1 points, engineering 4.1 points and sugars 0.4 points, while decreases occurred in coals 1.5 points, jutes 4.3 points, minings and oils 6.7 points, cements 2.6 points, teas 24.1 points and

miscellaneous 16.5 points.

Correlating all the factors, the Capital variable yield securities index shows that the index for stock prices in the above classes of shares advanced by 0.8 points during July, 1956.

SUEZ DEVELOPMENTS HELP BULLISH TREND IN GUNNIES

RAW JUTE STEADY IN SYMPATHY

THE Suez dispute played a very large part in the movements of the Calcutta markets last week, and at one stage conditions were akin to a boom. Local speculators took the view that consuming countries might start stockpiling, and with this in mind, bought heavily. Prices were forced up in both sections of the market, and hessian recorded new high levels, although this was mainly because of reports of a large increase in American burlap consumption. Mills took advantage of the situation to sell fairly large quantities of both heavy goods and hessian for all deliveries. Shipping statistics also proved bullish, as many operators hastened to get goods away in the hope that they would go through the Canal, and thus avoid increased freight and insurance charges. All these factors led to a very firm market, and the general undertone is much healthier than it has been for some time. Hessian is very strong, especially in the near position, where September shipment stands at a premium of Rs. 1-8 over forward shipment. Less than a month ago the near and the forward positions were at par, and for some time before that forward shipment invariably commanded a small premium. The position in sacking has also undergone a reversal in recent weeks, and ready shipment now stands at a premium of up to about Re. 1 over forward shipment, as against a former discount of sometimes Rs. 2. Towards the close of the week, easier conditions prevailed as mills' constant selling pressure began to make itself felt, and a temporary lull developed with prices dropping slightly.

The fibre markets were not slow in following the upward trend in goods. Mills continued with their buying policy, however, as they were able to take advantage of the favourable gunny rates, and fair quantities were taken up both for ready delivery and also for September-October shipment. The demand for quick shipment jute has slackened in the Cossipore markets with the advent of the Daissee season, and several mills have reverted to jetties purchases of this fibre. This is regrettable in the light of the many malpractices experienced in this form of business. Already the price of dry Daissee in the mookams has been forced up to uneconomic levels due to two large groups reopening their jetties purchase schemes. It is reported that nearly all cases recent purchases have been made at high levels for jute containing heavy moisture, which might cause big losses to the mills concerned. Sellers naturally take advantage of the situation and are not interested in carrying on legitimate business in the orthodox manner where they are bound by contractual guarantees when they can get rid of their jute for a quick cash return without the expenses involved of drying it out and delivering a fair tender. It is surprising that the groups concerned, who have already reported heavy financial losses, should encourage this and by doing so, increase their losses. Raw jute prices moved up about Re. 1 a maund over the week end, the influence of the rising goods market, and sellers in general held very reserved ideas. Towards the close, interest waned, and although there was little change in general quotations, sellers were willing to consider counter-bids with a firm offer in hand.

THE JUTE MARKETS

Manufactured Goods: Speculative activity in the fatka market caused opening prices of jute goods to record a small increase. B Twills advanced 4 or 6 annas for September-March shipment at 4 annas less. Hessian showed very little change and 40in. 10oz. remained at Rs. 43-11 and Rs. 43-2 a 100 yards for the near and forward positions respectively. In spite of fairly good enquiries and a fair amount of business, there was very little price movement during the next two days, but the undertone was very firm. Towards the week-end, a change came over the market. Prices soared on Saturday morning under the influence of the general political situation, and heavy speculative activity. September shipment B Twills jumped by Rs. 1-8 to Rs. 115 and hessian rose to Rs. 43-15. The boom continued over the week-end, and prices reached new high levels on Monday morning with 40in. 10oz. at Rs. 44-5, and B Twills rising to their highest since early March at Rs. 115-14. Brisk business was done at this level, both in real goods and fatka, but eventually selling pressure caused rates to fall. Tuesday's opening saw sacking drop by Rs. 1-4 and hessian by 8 or 10 annas. At the close, the market was a little easier, and opening quotations on Wednesday morning were as follows:

	September	Oct.-Dec.	Jan.-March.
40in. 8oz.	Rs. 36-2	Rs. 35-8	Rs. 34-4
40in. 10oz.	43-15	43-7	42-6
B Twills	114-8	114-8	113-14
Heavy Ceers (Plain)	114	115-8	114-4
A Twills	138-8	139-8	139
Liverpools	127	128-8	127-8
Cornsacks	115	115-8	114-12

Raw Jute: The raw jute markets opened on a very steady note last week as mills continued to take up small quantities. Opening quotations were

morning were as follows:

Indian Jute (New Crop):	Landed at Mills Rs. a md basis Bottoms.	Shipment.
Lower Assam	29-8	Sept.-Oct.
Northern	29-8	"
Murshidabad White	28-8	"
Daissee White	29	"
Daissee	30	"
Daissee Mesta	28	"
Local Northern	29-5	One month
Bimli	28	Sept.-Oct.

Tossa is quoted at 8 annas to Re. 1 a maund above the price of White jute.

Pakistan Jute (New Crop):	Rs. a md.	Shipment.
Jat	32-8	Sept.-Oct.
District	32	"
Northern	31-8	"

Pucca:	Rs. a bale	Shipment.
Mill Firsts 2/3	215	Sept.-Oct.
Export Firsts 2/3	195	"
Export Lightnings	180	"
Jat Cuttings	131	"

RISE IN JUTE ACREAGE DURING CURRENT YEAR

The all-India first estimate of jute, 1956-57, puts the current year's area at 1,634,000 acres as against the corresponding adjusted estimate of 1,425,000 acres for 1955-56, according to the Directorate of Economics and Statistics, Union Ministry of Food and Agriculture. This shows an increase of 209,000 acres or 14.7 percent in area during the current year as compared with last year. The major portion of the increase in the current year's acreage has been in Bihar though small increases have been reported from U.P. and Tripura also. These increases have generally been attributed to favourable weather conditions at the sowing time. The increase has, however, been offset to some extent by decreases in West Bengal, Orissa and Assam. The information given in this estimate generally covers the period up to the middle of July, 1956. Till then, the condition of the crop on the whole was reported to be satisfactory. This estimate does

Power you can count on!

The rigid care exercised in the construction guarantees a degree of strength and reliability that ensures long life and trouble-free service over several years.

KIRLOSKAR  ELECTRIC

GMS-K/3

not cover the entire area sown to this crop. The area reported in the final estimate is generally slightly higher.

GUNNY SHIPMENT STATISTICS

The following figures include coastal shipment relating to manufactured jute goods for shipment from the port of Calcutta. These are gross figures based on shipping bills presented.

	Hessian Bags (Tons)	Cloth (Tons)	Total (Tons)
1st to 10th September, 1956	829.3	14,039.5	14,868.8
1st to 10th August, 1956	1,715.2	17,590.7	19,305.9
1st to 10th July, 1956	392.7	14,389.4	15,322.1
	Sacking		
1st to 10th September, 1956	10,416.9	487.6	10,904.5
1st to 10th August, 1956	21,684.9	1,939.4	23,624.3
1st to 10th July, 1956	11,522.9	775.6	12,298.5

THE FOREIGN JUTE MARKETS

THE CANAL CRISIS

(FROM OUR DUNDEE CORRESPONDENT)

THE Suez Canal crisis is overshadowing the jute industry at the moment and buyers are somewhat worried about how to act. Business is proceeding quietly but steadily, with little confidence shown to place contracts for big quantities of either yarns or cloth. It may be that jute shipped to the U.K. and Continent in the near future will have to make the much longer voyage round by the Cape, adding about three to four weeks to the journey between Pakistan and its destination. This should not affect the price for the fibre in Pakistan, but shippers might have to raise their terms to spinners. Already the position is very firm indeed and values are higher this week. Mill Firsts are quoted at from £98 to £100 and Mill Lightnings from £87 to £89, while Mill Hearts are lowest at £84 and Continental Hearts are usually named at £80, all September-October shipment, c.i.f. U.K. Spinners have shown some interest lately, as they must have jute in hand to bridge the gap if jute is to take longer to come from Pakistan. Dark jute is also dearer for some things, such as grade Daissee- $\frac{1}{2}$ and grade Tossa-4. These are now quoted at £84 and £91 respectively, September-October, with grade Tossa- $\frac{1}{2}$ at £100 and crack Daissee- $\frac{1}{2}$ at £91. If buyers were to purchase for shipment a month later, they would probably be able to do so at £1 less than the rates named for white jute, as the dark jute is mostly at the minima. Most spinners are more or less comfortably placed with orders for hessian yarns and early delivery is not so easily to be had now. Prices remain firm at 12.00d a yard for 40in. 10oz. and 10.51d for 8oz. Sacking is in demand but tarpaulin remains quiet. Calcutta goods are quieter, but prices are at 66s for 40in. 10oz. and 50s 6d for 7 $\frac{1}{2}$ oz., September and October and 65s 3d and 49s 9d November-December, with B Twills at 173s 3d, 174s and 175s for the respective positions of shipment, all f.o.b. Calcutta.

INDUSTRIAL TRENDS IN THE UNITED KINGDOM

COTTON MANUFACTURERS SEEK PROTECTION

(FROM A SPECIAL CORRESPONDENT)

THE industrial situation, specially influenced as it still is by a combination of wholly unreasonable weather, international politics and trade union stridency, seems to be inducing a stock-taking mood, in an endeavour to discover where we all are and where we are likely to find ourselves at the end of a year or so. And so it is that papers read at various conferences and having, nominally, industrial themes mostly tend to have a general flavour, as might be gathered from the frequent occurrence in their titles of "What Next?" in this or in that? It would be hard to find any precise answer in most of these efforts; indeed, the questioner is only too obviously himself seeking knowledge rather than providing it. Something more definite is promised by the Cotton Board's forthcoming conference, which is to be concerned with "Cotton's New Look." But, as far as has been announced so far, only one of the subjects to be discussed can be regarded as entirely new. That is to be concerned with the great publicity campaign soon to be launched with the aim of persuading the British public to insist on being supplied with cotton textile goods made in Britain. Whether this campaign can be looked upon as a substitute for a demand that imports of cotton goods from India and elsewhere should bear high tariffs is doubtful; for the available evidence indicates that the supporters of a policy of protection for the Lancashire cotton industry have gained in numbers during the past few months.

The papers read at the British Association gathering had little of value to offer to industry—or, so its critics allege, to the world in general. The Association has been under fire for many years, the charges being those of defective organisation and poor quality of the lectures delivered. Certainly criticism has not been lacking in substance this year and it has had to be officially recognised, that reforms are long overdue and must be undertaken without further delay. The only industrial topic with any liveliness related to a claim for a new process of steel-making, which was said to surpass the existing Bessemer one. But the method is at too early a stage for its practical merits to be judged. Automation was considered at length. The approach was the now familiar one of broad acceptance of its implications, as was also the case with numerous speeches on the subject delivered at the Trades Union Conference. Approval was virtually unqualified at the latter. It was roundly declared that the increased use of automatic processes and controls in industry would substantially improve the economic position of workers. The only doubt sounded, and that mild one, was that non-manual workers might possibly suffer in those directions where computing machines can be made and installed with a relatively low capital outlay.

Conference on Automation

A conference on automation held under the auspices of the College of Production Technology yielded more for reflection. Thus, Dr. Woodley, the Principal of the College, insisted that automation was simply the outcome of a gradual evolution which had been taking place over many years past. It was not a sudden innovation, as was the

impression so often given. The pace of development was quickening perceptibly, and it was this fact which was compelling attention. But we ought not to allow ourselves to be overwhelmed. We are not in a position to allow ourselves the attempt of wholesale automation with any safety; for we had not the personal skill to make the venture. The truth is that we shall for long, if we are to act wisely, have to give full heed to the fact that technological instruction is the prime necessity. Moreover, there is a tendency to exaggerate the scope of automation. Dr. Woodley believes that it would be optimistic to estimate that one in every 500 industrial establishments in Britain "could even contemplate introducing automation." Plainly, however, the number of establishments which could, with advantage, introduce additional automatic aids is far greater than that suggested by him. Indeed, there is hardly an undertaking of any industrial or allied importance which will not be able to make a further advance along these lines over the next decade. Presumably, what Dr. Woodley has in mind is the practice of automation in an absolute and continuing sense, embodying many forms and taking various directions, and yet well integrated throughout an entire industrial undertaking. There will, in other words, have to be a constant submission to a new principle, and this submission will become more complete as instruments, machinery and equipment are forthcoming to fulfil new conceptions of manufacture and fresh products enter into civilised life. It would, indeed, be wrong to think of this as a task to be accomplished without the aid of genius—and even the automation type of genius is hardly likely to be common.

New Tootal Enterprise

Yet another British textile company has announced its intention of entering new fields. This is the well-known Tootal Broadhurst Lee Company, which showed a substantial fall of profits in its recently issued report. It is true that in this instance there is to be no departure from the textile field; for what it is proposed to do is add the manufacture of bonded fabrics to the present activities. This is to be done under a licence granted by a U.S. company. There is already one British company manufacturing bonded fabrics in the strict sense of the term, and, of course, many fabrics produced by a number of firms, in which resins are employed, are bonded in some degree. Such is true of the chief kinds of artificial leathers. But it would appear that Tootals are to be especially concerned with bonded cotton fabrics; and these fall into a distinctive class of their own. The fabrics have a deposit of waxy lines of adhesive on the surface of the cotton. The adhesive takes the place of the cross threads in weaving and reinforces the cotton fibres. It has been claimed for these fabrics that they would lead to the supplanting of fully woven fabrics and even to the dispensing with weaving altogether. Little has been heard of these claims lately, but the fabrics have found a number of specialised uses. In addition to the bonding method mentioned above, other processes have also met with success, including those for blending heat softened man-made fibres into the cotton web, or the use of an overall chemical solution which bonds various kinds of fibres. It would seem that one of the greatest uses for these fabrics is in bags and packets requiring strength. Where an overall chemical solution is used, the absence of ventilation imposes limitations upon a bonded fabric in comparison with a woven one. It has to be observed that endeavours are being made by the means of minute perforations to remove this drawback, and the latest bonded fabrics have far more pliability than those first introduced in the United States ten years ago.

The annual display by the Society of British Aircraft Constructors calls for comment, as indicating the trends of the British aircraft industry. It is, however, hardly possible for others than technical experts to separate the military implications from the civil. Much has been said, as an outcome of the display, upon the competition developing between the United States and Britain in the building and use of jet aircraft, and upon the fact that the former, with its larger territory and consequently greater facilities for landing, has a strong advantage. That Britain cannot indefinitely use up agricultural land for runways has also been given prominence. It was interesting to see that "design for survival" is now a description frankly used by companies specialising in these helps to longer living. If this seems a candid admission of the risks which the development of aviation involves, it probably also sounds a note of assurance in that a warning against hazards, and provision for emergencies is an important concern of modern industry. One firm engaged in these manufacturing activities has a very wide range of products, catering not only for aviation, but providing, as well, escape and anti-exposure suits, etc. for submarines, protective clothing against radioactivity, chemicals and fire and for workers in cold rooms. The lifejackets it manufactures include a "Baby's Floating Survival Cot."

Static Electricity

A conference was held by the Textile Institute in Zurich on the subject of static electricity. Radioisotope static eliminators have swiftly come into use in Britain, largely through the development by the British Cotton Industry Research Association of what is known as the "Shirley Rase Unit". The presence of "static" is responsible for many troubles to industry, including the greater risk of fire, and, in textiles, the soiling of fabrics in the loom. While the use of radioisotopes has carried forward the dissipation of static a great deal has yet to be known about its generation, conductivity, the electrical resistance of fibres and similar matters.

Engineering and Transport

PROSPECTS OF AUTOMATIC MINING

PROGRESS ACHIEVED IN U. S. A. AND RUSSIA

IN various quarters in Britain—at the meetings of the British Association for the Advancement of Science, at the conference of the Trades Union Congress, in technical magazines and general newspapers—automation of production has been discussed recently with lively interest. The whole subject, confused hitherto by irrational thinking based on inadequate facts, is gradually settling into perspective. The limitations, as well as the possibilities, of automation can now be more clearly seen. Britain is obsessed with her prospective shortage of power (though on that subject, too, opinions are slowly changing), and it is natural that, in the more detailed assessment of automation, coalmining has received due attention. Some people in the coal industry, working with seams that are too hard, too thin, too steep, too variable, and in the other too-familiar natural conditions, spread their hands with a deprecatory gesture when anyone suggests mining coal automatically. Yet they cannot deny that the United States and Russia are advancing towards automatic mining. American geology is admittedly much more suitable for the purpose than British, but Russian mines have no corresponding natural advantage; yet in Russia "all-round automation and remote control of machines and mechanisms" is envisaged underground, as well as in surface installations, during the next few years.

Automation of mining is essentially more difficult, though not necessarily more complex, than automation of manufacture. In a factory, elaboration of machines and of controlling mechanisms can enable materials to pass through a precisely-planned process, to turn out a product "untouched by hand". In a mine, the machines themselves must move, for the material is, in the first place, static. In a factory, the processes of production do not affect the conditions of production. In a mine, disturbance of the strata in the course of working changes the conditions. Automation of mining must, therefore, include automatic roof-control. Some authorities will say that automatic roof-control is the key to automatic mining. The methods of mechanical cutting, loading, conveying, are already in operation, and to control them automatically does not seem inherently more difficult than to control productive processes in a factory by electronic and other instruments. Roof-support is more static, therefore, less mechanised. What has to be made automatic is not the act of supporting but the acts of withdrawing, moving, and resetting, the supports. And these actions must be combined with the conveyor that operates close to the coal-face.

Attempt in U.K.

In Britain, the Mining Research Establishment has been working on the idea that mining will be automated when the passing of a cutting and loading machine along the face will trigger a movement in the control system that operates the conveyor and the roof-supports. No such system has yet been devised, but equipment that would be applicable with such a method is already in production and the changes that would be needed to convert it to automation do not seem fundamental. Promoters of automation in British mines are particularly interested in a thin-seam machine called a trepanner, whose cutting head is a hollow auger that drills through the coal, leaving a core that can be easily broken off. (In its modern version, it is fitted with identical heads at each end and has thus to be only reversed, not turned, at the end of each run.) The core of coal formed inside the trepanning wheel, and coal cut by auxiliary mechanisms above and below it, are diverted on to the conveyor alongside. So mechanical cutting and loading are simultaneous. This machine first installed in 1954, yielded excellent outputs while working, but much of its capacity was wasted while the supports were advanced after each cut. The conveyor has also to be moved into the face, but the operation takes much less time than moving hundreds of supports. Mechanisation of the support system, using self-advancing hydraulic equipment, has now minimised the delay, and minimised also—an important consideration for safety—the critical period between extraction of the coal and support of the newly-exposed roof. The self-advancing support systems used with the trepanner work in conjunction with an armoured flexible conveyor, the conveyor and supports being in effect a combined unit. When the cutter-loader has passed, operation of the appropriate valves of the hydraulic mechanism cause double-acting rams fixed in the base of the supports to push the conveyor into the track that the machine has just made, and the movement of the conveyor pulls out single-acting rams, which are likewise connected both to it and to the supports. When the conveyor is in its new position, appropriate valves operate the pulling action of the rams, which draw the supports close to the conveyor. There are variations of this system, but its principle—integrated advance of conveyor and supports—is established.

The Human Element

There is still, however, the human element operating the processes. Efforts are now directed to simplifying the human operations, reducing them to the minimum, and, finally, except for remote control, eliminating them. As the new

functions (including haulage of the trepanner) are mostly hydraulic, it is in the hydraulic mechanisms that automation must be developed. There seems to be no insuperable obstacle to automating the valves of the hydraulic systems, either with some of the complex instruments of modern industry or, perhaps, more simply, by the action of the passing power-loader in pressing a button or turning a handle to start the next cycle of operations. Automatic mining, no longer fanciful, could certainly increase production with fewer men. The obstruction is not so much technical as economic—the very large capital expenditure that would be required to instal automatic systems extensively.

B.O.A.C. EARNS REVENUE SURPLUS FOR FIFTH YEAR RUNNING

The B.O.A.C. earned a profit for the fifth year running in 1955-56 amounting to £1,295,525. After remuneration of capital there was a net surplus of £117,731 against a net surplus in the previous year of £261,687. The disruption of the Corporation's plans for substantial re-equipment with Comets continued to affect seriously the revenue earning ability of its services. The fleet on passenger services provided 200 million capacity-ton-miles for sale; this was 21.1 percent more than in the previous year, but fell short by 9 percent of the capacity planned for 1955-56 with the Comets in service. Yet the number of passengers carried by the Corporation increased by 32 percent on the

previous year. The total number of passengers carried was 385,778 compared with 291,135 in the previous year. The passenger load factor rose from 61.6 percent to 62.2 percent. Revenue from the carriage of mail and freight increased from £12,253,772 to £13,278,436, an increase of 8 percent during the year. The total revenue increased by 15.8 percent to £42,706,582, nearly £6 million greater than in the previous year. The costs of operation also rose by 15.5 percent to £41,264,980, while costs a capacity-ton-mile fell back from 39.9d to 38d a figure considerably below that of 39.2d achieved in 1953-54. The reduction of 4.8 percent in the cost a unit for sale was partly due to the spread of costs over a greater capacity than in the previous year and partly to efforts to keep down costs at all levels of the Corporation.

The most significant change in the year was the continued advance of the demand for tourist class travel on all routes. In 1954-55, tourist passengers had accounted for 45 percent of those who travelled on the Corporation's services, while in 1955-56 the proportion was 53 percent. This widening of the market for air travel by reducing fares will continue and should receive added impetus when the Corporation, in company with other international operators, further reduces tourist fares on the North Atlantic routes in April, 1958.

While services to the east had for some years been operated at a substantial profit, a sharp loss was sustained during the year under review. The reasons for this change in results were clear.

Coronet

TOURIST SERVICE

Calcutta to London

Travel like a prince at low Off-season Tourist Fares

SAVE Rs. 602

Single Fare Rs. 1,560 * Return Fare Rs. 2,808

These Off-season fares are available from India between 1st October, 1956 and 28th February 1957. Return journey may be made within validity (one year) of ticket. Low Off-season Tourist fares to other major European destinations are also available. There are also luxurious First Class services by "Majestic". Delicious Indian food will be served on all our services from India on prior request.

Constellation 749s took over the operation of all first-class services terminating beyond Karachi: while these aircraft were more modern than the Argonauts they replaced and offered approximately the same capacity, they were, in fact, the replacement aircraft for the Comets which they were quite unable to match in passenger appeal. Moreover, they were expensive to operate because of their purchase as stop-gap aircraft at a time when aircraft prices were high. Furthermore, the Corporation's competitors on these routes were rapidly becoming equipped with modern aircraft which were more attractive particularly on longer stages. Much however, was done to improve the facilities available to passengers, particularly by the provision of slumberette seating on Constellation services progressively from 1st March, 1956 and by the employment of Asiatic stewardesses on the far eastern sections of these routes.

The great necessity for the corporation is to introduce into service more modern aircraft as soon as they become available. At the beginning of the current financial year, the Corporation placed orders for 33 Bristol Britannias, 19 de Havilland Comet IVs, 10 Douglas 7Cs and 14 Vickers Viscounts (for associated companies). A beginning will be made with the introduction of the first Britannias later this year on the eastern routes, while the DC-7Cs are due in service on the North Atlantic route in January, 1957. In the years immediately after 1956-57, the prospects are very bright. The long-range Britannias should be in service late in 1957 and the Comet IV, a couple of years later. With these British aircraft, the Corporation should have two outstanding types in operation ahead of other international airlines.

BRITISH FIRM WINS INDIAN CONTRACT

After a 16-day trip to India, Mr. W. H. Sharp, director of a British firm manufacturing cranes and excavators, is back in Yorkshire with a £300,000 contract. The contract, gained against keen competition from Japanese, Italian, German, Belgian, and French manufacturers, is for 27 cranes for use on the Indian railways, where they will assist in maintenance work. To be delivered over the next two years, they comprise 13 ten-ton steam travelling cranes and nine five-tonners. The British firm recently completed a previous contract worth £250,000 for supplying 24 cranes.

MODERN WATER TREATMENT TECHNIQUE

Modern water treatment technique caters for every variety of municipal industrial requirement, irrespective of the source of supply or the nature and amount of pollution that may be encountered. Typical of the latest practice in Britain is the new Prewley Waterworks, of the North Devon Water Board, which forms part of a large scheme to supply for the first time water to an extensive rural area. The source is river water which when the run-off is high is discoloured by peat, but during dry periods the water is at times so clear that little more than filtration is required to arrest suspended matter. This necessitates purifying water which sometimes is acid and coloured and other times relatively clear, containing only minute amounts of impurities and the purification arrangements have been designed for these specific circumstances.

The plant has a purification capacity of 1,400,000 gallons a day and provision is made to treat the water with alumina and chalk, and a small dose of lime during the pre-filtration process of flocculation and sedimentation, and the addition of a further dose of lime after filtration. It is possible to apply chlorine either during these processes or after filtration and the water can also be de-chlorinated wholly or in part after filtration. Flocculation and sedimentation are effected in an accelerator plant, cylindrical in shape and constructed of reinforced concrete 37 feet in diameter and containing 16 feet of water. This plant permits more rapid completion of the physical and chemical changes involved in the purification of the water than the flocculation and sedimentation tanks generally used for water purification. It can, therefore, be built much smaller and in such a form as to avoid the difficulties of discharge of precipitates and sludge associated with the longer rectangular sedimentation tanks. It depends for its effectiveness upon the most intimate admixture of the chemical reagents with the incoming raw water, and the circulation of precipitate formed during the purification process.

At Prewley three agents are employed—namely, sulphate of alumina, chalk, and lime which are measured by dry chemical feeders whose output is easily adjustable by the operator to cope with

fluctuations in the quality of the water, merely by turning a small wheel on each machine. Drive is by a fractional horse-power electric motor on each machine which also automatically starts and stops according to the opening and closing of the automatic water inlet control valve. The three feeders stand on a floor, level with the accelerator, the chemical reagents being stored in another compartment above this storey and suspended through the ceiling are steel hoppers into which the reagents are emptied from bags. A chlorograph is installed on the same floor as the chemical feeders for delivering chlorine either into the accelerator or after filtration.

Course of Water

The partially clarified water flows into a channel common to the four manually-operated filters, comprising the filtration plant, each of which contains graded sand supported by a number of graded beds of pebbles with a total thickness of about 45 inches. The filter underdrains are non-metallic and non-corrodible discharging filtered water into a channel constructed integral with the floor of each filter, from where the water flows to controllers and then to a covered pure water channel which conducts it to a contact tank to ensure adequate time of chlorine contact prior to de-chlorination. The filters are cleaned by compressed air and water, the wash water being raised from the pure water channel by centrifugal pumps to a tank constructed above the roof of the filter house. After filtration the water passes through an underground contact tank to ensure adequate contact time for the chlorination process before being discharged to the service reservoir. The latter is constructed of reinforced concrete in two compartments completely covered. When full it contains 1,500,000 gallons, the top water level being 1,080 feet above sea level and from the service reservoir the water goes into supply through a 15-inch main, subsequently branching into a 10-inch main and a 12-inch main. A well equipped instrument panel forms part of the necessary equipment including a Venturi meter for recording the rate of flow and quantity going into supply. A Klaxon horn raises an alarm should the flow exceed a pre-determined rate thus indicating a burst main or other cause of excessive demand. The sludge both from the accelerator and the filters is taken into tanks to settle, after which the separated water is drawn off and the solid sludge emptied and disposed of from time to time. All the refiltration plant and instruments were manufactured and erected by the Paterson Engineering Company (India) Ltd., of London, which has an office in Calcutta.

NEW BRITISH LINER FOR EASTERN SERVICE

An order for a new 40,000-ton liner costing £10 million has been placed by the Orient Steam Navigation Company with the shipbuilding branch of the Vickers-Armstrongs Ltd. It will be the largest passenger ship built in Britain since the mammoth Queen Elizabeth (83,673 tons) was completed in 1940 for the trans-Atlantic run. The new Orient liner, for which no name has yet been chosen, will be built at Barrow-in-Furness, and will come into service in 1960 on the England-Ceylon-Australia run. With an operating speed of 27 knots and an even higher top speed, the new liner will complete the passage between England and Australia in 21 days—one week less than the fastest ships at present take on the same run. There will be the most modern accommodation for 2,000 passengers. This is 600 more than the largest Orient liners now carry. Another feature will be the use of aluminium for the construction of the entire super-structure. This will mean a saving of about 1,000 tons in weight as against the use of steel for the same purpose. The P. & O. line is also planning a similar 40,000-ton liner for the England-Ceylon-Australia route. While several designs are under consideration, the actual order for building the ship has not yet been placed.

AMENDED INDUSTRIAL DISPUTES ACT COMES INTO FORCE IN PARTS

The Government of India has decided to bring into force the following provisions of the Industrial Disputes (Amendment and Miscellaneous Provisions) Act, 1955, from 17th September, 1956: Clause (a) of section 32: Under this clause, the term "workman" now includes supervisory personnel also provided their wages do not exceed Rs. 500 a month and they do not exercise functions mainly of a managerial nature. All technical personnel are also covered under this definition. Clause (b) of section 32: The Certifying Officer or the appellate authority will have the power to adjudicate upon the fairness or reasonableness of the provisions of any standing orders. Clause (c) of section 32: This empowers the workman with the right to apply for modification of standing orders. So far, only the employer had such a right. Clause (b) of section 10: The time of submission of Conciliation Officers' report may be extended by mutual consent. Clause (d) of section 9: This authorises the Conciliation Officer to call for any document for verification of implementation of Awards. Clause 20 and 27: The clause enhances the penalty for breach of settlement of wages. Clause 27 enables the appropriate Government to delegate its powers and functions to any subordinate authority. The Industrial Disputes (Amendment and Miscellaneous Provisions) Act, 1956, was passed in the last session of Parliament. The President has already assented to the Act.

Commodity Markets

BRITISH TEXTILE REVIEW STEADY IMPROVEMENT IN TRADE

ONE of Britain's well-known failings is the inadequacy of up-to-date statistics. An important index of textile trade is that compiled by the Wholesale Textile Association, in collaboration with the Bank of England, showing the value of wholesale textile sales; but the figures relate to a period of a couple of months back. The latest figures, however, complete the picture for the first half-year; which shows a relatively encouraging position. In January-June, compared with the same period of 1955, all categories of trade (there are 10 of them) improved, excepting gloves, whose sales decreased 53 percent. The whole index increased 6 percent in the half-year. And the seasonal recession in June, though sharp, left that month's trade at the highest level of any June in five years. Total stocks at the end of June were 33 percent more than a year previously. On the retail side, trade has subsequently been disorganised by the appalling summer, but preparation for the normal firm opening of the wool season in Australia has confirmed confidence in wool goods. Confidence in the stability of cotton, on the other hand, continues at a low ebb, and interest in Lancashire is focussed on a new scheme—proposed tentatively after months of deliberation—to establish minimum prices for certain types of fabrics. The recent Act against restrictive practices would make a firm agreement difficult to enforce, but "recommended" minimum prices are still permissible, and the effects of price-cutting in recent months have won some support for the idea. But any attempt to keep up prices of goods subject to the competition of cheap imports seems foredoomed to failure.

The Real Problem

The next few months are regarded in Lancashire as crucial. As trade will be seasonally firm, it will be possible to test the belief that stocks of many cotton goods have been allowed to fall too low and that the reduction of a few pence a pound in the prices of raw cotton will impart the necessary impetus to buying. In late-September or early-October it should be possible to discern whether any serious restocking is in progress. If in the meantime, the raw material shows further weakness the restocking movement will most probably be deferred. It is now admitted that the reduction of yarn prices, reflecting the easier trend of raw cotton, has somewhat enlivened business. Cotton was certainly—and many people say is still—too dear. But the adjustment, so far as it has gone, assists many of Britain's competitors as much as Britain herself; the fundamental problem of declining exports is almost unaffected. In one important respect, however, the reduction of cotton prices has changed this country's relative position—and thereby weakened to some extent its case against India. A part of Lancashire's argument has been based on the favourable prices, alleged to be artificial, at which cotton is available from internal sources to the Indian mills; but at the reduced international prices the difference has been narrowed, if not eliminated.

Yet it must be said that if this reason for objecting to cheap imports falls down the British industry will find others. The difference in costs between Britain and such producers as India and Hongkong is fundamental, and Lancashire frightens itself with visions—not entirely fantastic—of an engulfing flood of cheap cloth on to the home market. Lancashire wants to know what point, if at all, the Government will restrict these duty-free imports from Commonwealth sources. And the Government is desperately hoping that Lancashire will be able to fight its own battle, so averting the awful decision whether to change a fundamental principle of Commonwealth trade or to abandon the industry to its fate. These troubles at home have sometimes obscured the fact that the cotton industry is still a big exporter, earning abroad approximately the same as the wool industry. But the old rival abroad, Japan, is now relieved of the limits on its production; and competition from the United States may soon become more severe. Converters need the cheap imported cloth to strengthen their position in export markets. More man-made fibres must be used, for stability and diversity. And firms which can produce specialities must manufacture specifically to satisfy overseas requirements.

Stimulating Challenge

A market-research team which investigated trade in North America reported that style, quality, price, and delivery, were the main factors in selling in the markets there. The Board of Trade Journal contained last month an account by Mr. A. Ormerod, director and production manager of Ashton Brothers, Hyde, of his firm's efforts to satisfy these requirements. The tasks of reorganisation involved will intimidate the less progressive firms; but Mr. Ormerod has shown that success, which eludes those who sit and wait for it, will come to those who get up and work for it. Some of the orders accepted by this firm were for quantities so small that they would normally be regarded as little more than samples. But the principle of this method of trading is to fulfil each individual requirement. The method is quite uneconomic unless production is properly adapted to it, since the wide range of products requires a wide range of equipment. Meticulous attention to quality re-

quires, moreover, that only the best available equipment be used, that operatives be thoroughly trained for the particular task, and that quality-control be carefully organised, from inspection of raw materials to passing finished goods for shipment. To restrict costs it is necessary to rearrange the sequence of production so that it is affected as little as possible by batch-size; Ashton Brothers changed completely their methods of production and re-equipped entirely their yarn-dyeing and preparation units. Day-to-day planning of production is needed to ensure prompt delivery; and Ashton Brothers found it necessary to finish cloth in the laboratory to save time involved in commission-printing. Mr. Ormerod's conclusions are as challenging as the North American market itself. "Selling to, and manufacturing for, the American market is a continual challenge, which, if met successfully, cannot help but have a stimulating effect throughout the entire organisation. The dollar business becomes a catalyst for quality and service resulting in a general lifting of sights by both the selling and production departments." If, even so, the dollar trade were disappointing the method would still justify itself by improving business generally—in the home market as well as abroad. Efficiency is a surer means of survival than defensive price-fixing or appeals to the Government for protection.

GROUNDNUT ACREAGE HIGHER THIS YEAR

The all-India first estimate of groundnut, 1956-57, puts the current year's area at 8,955,000 acres as against the corresponding adjusted estimate of 7,721,000 acres for 1955-56, according to the Directorate of Economics and Statistics, Union Ministry of Food and Agriculture. This shows an increase of 1,234,000 acres or 16 percent in area during the current year as compared with that of

ASSAM OIL
COMPANY

does
it
all

The Americas and the Middle East are not the only places with oilfields! Oil is produced here in India, too, and derricks are a familiar part of the landscape at Digboi in Upper Assam. The Assam Oil Company has been operating this oilfield for over fifty years, producing some 300,000 gallons of high quality petroleum products daily.

Everyone in the country benefits from this flow of home-produced oil. It speeds food production. Keeps factories running smoothly. Keeps goods moving by rail, road, sea and air. Takes people to work and provides work for them—as well as saving precious foreign currency.

The Assam Oil Company itself employs over 8,000 'oil men'. It spends much time and money in looking ahead. Not only in training technicians and executives, but also in finding new sources of oil and new methods of processing it into the much-needed petroleum products which are so vital to India's expanding economy.

When you have a journey to make, think first of flying. It's the fastest way to travel, and often the only way to get there in time. You escape all the tedium of a long journey—flying is so quick, convenient, and wonderfully comfortable.

INDIAN AIRLINES CORPORATION

'ENGLISH ELECTRIC'

Plays a Vital Role in India's Development

The English Electric Company's plant plays an important part in the generation of electricity from water power in India. Francis reaction, impulse and vertical feathering-propeller water-turbines and alternators have been installed at many of the major Hydro-electric stations such as Bhira Power Station, Bombay, Mettur Power Station, Madras, Khatima Power Station, U. P. etc. Many steam turbo-alternator sets have also been supplied for a wide variety of installations, including power stations, chemical works, textile mills, railways and collieries. Several million KVA of transformers have been supplied for operation in India and all the recent substations of the Calcutta Electric Supply Corporation are equipped with 'English Electric' Units. Eleven substations of the Bhakra-Nangal Grid are being completely equipped with 'English Electric' Transformers and associated switchgear.

HIRAKUD DAM PROJECT, ORISSA: For this Project the English Electric Company is supplying two generating units, each unit consisting of a 52,000 H.P. Vertical Shaft Feathering Propeller Turbine coupled to a 37,500 KVA semi-cylindrical type generator.

OIL REFINERY, TROMBAY, BOMBAY: All the transformers totaling over 20,000 KVA capacity, together with the associated high and low tension switchgear were supplied by the English Electric Company to the Standard-Vacuum Refinery at Trombay. The illustration shows two of the 5-panels 22 kV 500 MVA Switchgear installed at the Refinery.

RIVERSIDE POWER HOUSE, KANPUR: 'English Electric' Steam Turbo-Alternator Sets are installed at this Power House. The associated Transformers and Switchgear are also supplied by 'English Electric'.

THE ENGLISH ELECTRIC COMPANY LIMITED

(Incorporated in England. Liability of Members Limited.)

CALCUTTA BOMBAY MADRAS NEW DELHI LUCKNOW

last year. Increase in area during 1956-57 has been shared by almost all the groundnut growing States, especially, Saurashtra, Hyderabad, Madhya Bharat, Andhra and Bombay, and has been attributed to favourable weather conditions at the sowing time. This increase in acreage has, however, been offset to a small extent by decreases reported by Mysore, Bhopal and Madhya Pradesh. The information given in this estimate covers the period generally up to the end of July, 1956. Till then, the condition of the crop was reported to be generally satisfactory. The estimate does not cover the entire area sown under groundnut crop during 1956-57. Past experience has shown that the area at the first estimate stage forms roughly 60 percent of the area of the crop finally reported.

WHOLESALE PRICE INDEX RISES

THE official wholesale price index (base: year ended August, 1939=100) advanced by 0.1 percent to 421.5 during the week ended 1st September, 1956, compared with 421.0 (revised) for the previous week. The index has higher by 1.8 and 18.8 percent respectively than those of the corresponding weeks of last month and a year ago. The index for Food Articles declined by 0.5 percent to 395.9 because of a fall in the prices of tea (-6%), gram (-3%), wheat in Hapur and gur in Muzaffarnagar (-2% each) and dal arhar and sugar (-1% each) in spite of an advance in the prices of wheat in Amritsar (+4%), gur at Ahmednagar (+3%) and rice in Calcutta and bajra (+1% each). Higher prices of manganese ore (average export price) (+17%), groundnuts in Bombay (+5%), raw jute (+4%), linseed in Bombay and copra (+2% each) and lac (+1%) raised the index for Industrial Raw Materials by 1.0 percent to 510.7, although prices of raw silk (-6%), linseed in Calcutta (-4%), groundnuts in Cuddalore (-3%), gingellyseed, rapeseed and iron ore (-2% each) and castorseed (-1%) were marked down. The index for Semi-Manufactures moved down by 0.2 percent to 410.3. Items which showed noticeable changes were: gingelly cake (-6%), linseed oil in Calcutta (-4%) and in Bombay (+4%), castor oil and groundnut oil both in Calcutta and mustard oil (-3% each), groundnut oil both in Madras, buffalo hides and copra cake (-2% each), gingelly oil (+4%), cow-hides and groundnut cake (+3% each). A rise of 0.4 percent to 391.2 in the index for Manufactures was brought about by an increase in the prices of paints (+5%) and jute manufactures (+3%). A fall in the price of black pepper (-2%) was almost neutralised by an advance in the price of chillies (+2%). The index for the Miscellaneous group thus stood at 564.8, compared with 565.0 for the previous week.

INDEX NUMBERS BY GROUPS AND SUB-GROUPS

CENTRAL INDIA COTTON ASSOCIATION

The Government of India has on the advice of the Forward Markets Commission granted recognition to the Central India Cotton Association Limited, Indore, for forward trading in cotton and cottonseed for a period of three years. The Association will initially function through two rings, one in Indore for cotton and the other in Ujjain for cotton and cottonseed. A Gazette of India Extraordinary to this effect has been issued.

Mr. N. W. Chisholm, one time manager of the Calcutta branch of the National Bank of India Ltd., has been appointed to a seat on the Board of Directors of the Bank.

Calcutta Markets

IMPROVING DEMAND AT TEA EXPORT SALE

STRONG SUPPORT FOR DUSTS

AT Sale No. 15, held on 17th and 18th September, offerings at the Export auction, consisted of 55,500 packages. There was only a fair demand at the start of the Sale, but this strengthened considerably as the Sale progressed and both export and internal buyers operated freely. There was more demand for Medium Broken and these were sometimes dearer, while Medium Fannings sold well and were fully firm, especially if they were black and had useful liquors. The best C.T.C. Assams on offer were rather irregular but at times easier, while the poorer fibrous sorts were a very strong feature and were generally several annas dearer. Assam B.O.P.'s and O.F.s of orthodox manufacture were selling at dearer rates, especially those with any quality. Low Medium Broken met with more support and were about an anna dearer, while Commons were firm and the commonest sorts were 1 to 2 annas dearer. There was more demand for stylish B.P.S. which were fully 2 annas dearer, but stylish Whole Leaf grades were 2 annas easier. The poorer Whole Leaf grades generally sold at dearer rates. There was quite good support for Darjeeling teas, but these were 2 to 4 annas below last rates.

Quotations

	1956 Rs.	1955 Rs.
Clean Black Pekoe	1 13 0 to 1 14 0	2 6 0
Plain B.P.	1 9 0 to 1 9 8	1 11 6
Medium Assam B.P.	1 14 0 to 2 0 0	2 0 0
Best CTC Assam B.P.	3 0 0 to 3 4 0	3 3 0 to 3 4 0

At the Internal Sale, Dust offerings consisted of 15,926 chests for which there was a strong and general demand. Clean black leaf types suitable for the Middle East sold well and were generally fully firm, while the best C.T.C. Assams were well supported and were generally dearer, but the poorer, more fibrous C.T.C. kinds were often easier. Commons and Mediums were 1 to 2 annas dearer and sometimes more, while residue descriptions were a very strong feature and generally sold several annas above valuations. There was more interest in Darjeeling teas than in recent weeks and dealer prices were realised, particularly for those with flavour.

Quotations

	1956 Rs.	1955 Rs.
Medium Doonars Dust	1 14 0 to 1 14 6	1 12 0 to 1 13 0
Medium Assam Grainy Dust	2 1 0 to 2 2 0	1 15 0 to 1 15 6
Medium Assam CTC Dust	2 10 0	
Best Assam CTC Dust	3 4 0 to 3 8 0	2 9 0 to 2 11 0

Leaf offerings consisted of 989 packages, for which there was a good demand at prices which were firm to slightly dearer. The green teas on offer met with a fairly good enquiry.

SUGAR MARKET

During the week ended 19th September, sugar sales in the Calcutta market averaged 3,500 bags daily. Arrivals a day were 4,000 bags and stocks totalled 120,000 bags. Rates for ready sugar ex-Kantapur delivery were Rs. 31-10 for ordinary grain and Rs. 32-14 for big grain. The market was quiet at the beginning, but prices improved by 2 annas to 3 annas towards the end due to better demand.

HIDES AND SKINS FIRM

The market in skins ruled firm and prices showed an upward tendency. Stocks were less than in the previous week.

Bazaar Sales
(Between 11th September and 17th September, 1956)

Cowhides: Wet salted (Ord.) 2,700 pcs on the basis of Rs. 7-4 to Rs. 8-12; Wet salted (Slaughtered) 16,500 pcs. on the basis of Rs. 12-8 to Rs. 20.

Goatskins: Wet salted (Daissee, Killed) 59,180 pcs. on the basis of Rs. 145 to Rs. 180. Rs. 220 to Rs. 240 and Rs. 325 to Rs. 335; Assam-Dinajpur 39,200 pcs. on the basis of Rs. 180 to Rs. 225; Purneah-Kisenganj-Maldah 8,510 pcs. on the basis of Rs. 210 to Rs. 220; Pakur-Patna (Ord.) 13,800 pcs. on the basis of Rs. 165 to Rs. 200; Muzafferpore 14,200 pcs. on the basis of Rs. 225 to Rs. 235; Muzafferpore (Killed) 2,500 pcs. on the basis of Rs. 330.

Bazaar Stocks

(17th September, 1956)

Cowhides: Wet salted 1,90,200 pcs.

Goatskins: Wet salted (Daissee, Killed) 26,000 pcs.; Assam-Dinajpur-Murshidabad 55,000 pcs.; Muzafferpore-Patna-Pakur - Purneah - Kisenganj 73,500 pcs.

LINSEED BETTER

Slightly better conditions have been observed towards the close of last week, and prices have shown a small rise. Arrivals from the producing centres were very scarce and are likely to remain so for some time due to heavy rains upcountry. Sellers were rather reserved, and with buyers

unwilling to pay high prices with a very poor demand for linseed oil, very little business has been reported. The oil market has remained inactive and the offtake has been very poor; there have been a few enquiries at lower prices. Latest quotations were as follows: September-October Rs. 23-8 a maund.

SHELLAC MARKET QUIET

During the week ended 18th September, the market was steady at the beginning and quiet at the close. The range of quotations was as follows:

Pure Buttonlac	Rs. 134 value, 135 buyers.
Lemon No. 1 Shellac	Rs. 134, 136, 135 buyers.
Lemon No. 2 Shellac	Rs. 130, 131-8, 131 buyers.
F. O. Std. 1 Shellac	Rs. 128-8 buyers, 130 done and buyers, 128 buyers.
Pure TN Shellac	Rs. 125, 126, 124-8 basis done and buyers.
4% I.T.N. Shellac	Rs. 116, 118-8, 115-8 buyers.
No. 1 Kusmi Seedlac	Rs. 125-8 to 124-8 value.
No. 2 Kusmi Seedlac	Rs. 122 buyers, 121-8, 120-8 value.
Fine Bysaky Seedlac (Manbhumi)	Rs. 119, 118 done, 116-8 buyers.
Fine Bysaky Seedlac (C.P.)	Rs. 116-8 to 115 buyers.
Ordinary Bysaky Seedlac (C.P.) Under 5%	Rs. 112-8 done, 112 buyers, 112 done and buyers.
Ordinary Bysaky Seedlac (C.P.)	Rs. 107-8 done, 106-8 buyers.
Kireelac	Rs. 41-8, 42-8 buyers, 41 done and buyers.

Shipments during September until the 14th were 12,495 packages comprising shellac 8,497 packages, seedlac 2,930 packages, buttonlac 209 packages and others 859 packages.

Hastings Belting

SOUTH EASTERN RAILWAY TENDERS.

The Controller of Stores, Garden Reach, Calcutta-23 invites the following tenders:

- (1) Tender No. CS14/56/516 CS(56) for supply of:
 - (a) Carriage Roofing 2-ply 3-0" wide = 4,500 Rft.
 - (b) Underlay 3-0" wide=4,500 Rft.
 - (c) Compound carriage roofing for hot application. = 373 cwt.
 - (d) Nails for fixing (a) and (b) flat Head 3" = 30 lbs.
 - (e) Compound carriage flooring red with crystals. = 30 tons.
 - (f) Screws Sheredised superior rust resisting CSK. Hd. 1 1/2" No. 10. = 160 Gross.
- (2) Tender No. CS15/56/517CS(56) for supply of 320 Nos. Sheet plywood 3-ply 8-0" x 4-0" x 3/16" thick synthetic-resinbonded moisture-proof to ISI Specs. 303-1951 Grade MPFL.
- (3) Tender No. CS16/56/518CS(56) for supply of:
 - (a) Pan Lavatory stainless steel highly polished to IRS Drg. C1850. = 156 Nos.
 - (b) Bowls wash hand stainless steel highly polished to IRS Drg. CA1874 = 208 Nos.

BRITISH INDIA ELECTRIC CONSTRUCTION CO., LTD.

NOTICE is hereby given that an Extraordinary General Meeting of the Members of the above-named Company will be held at the Registered Office of the Company, 21, Netaji Subhas Road, Calcutta, on Monday the 15th day of October, 1956, at 12-10 P.M., to consider, and if thought fit, to pass the following Resolutions, and Resolution No. 1 will be proposed as a Special Resolution:—

Resolution No. 1 (As a Special Resolution).

That the Articles of Association of the Company be altered in manner following:—

- (1) Articles 53 and 54 shall be deleted and the following New Article 53 substituted therefor:

"In addition to any other meetings, general meetings of the Company shall be held within such intervals as are specified in Section 166(1) of the Companies Act, 1956, and subject to the provisions of Section 166(2) of that Act, at such times and places as may be determined by the Board of Directors. Such general meetings shall be styled 'Annual General Meetings' and shall be specified as such in the Notices convening these meetings. All other meetings of the Company shall be styled 'Extraordinary General Meetings'."

- (2) Article 63 shall be deleted and the following New Article 63 substituted therefor:

"The ordinary business of an Annual General Meeting shall be to receive and consider the Profit and Loss Account, the Balance Sheet and the Reports of the Board of Directors and of the Auditors, to appoint Directors in place of those retiring by rotation, to appoint Auditors and determine the manner in which they shall be remunerated, and to declare dividends. All other business transacted at an Annual General Meeting and all business transacted at an Extraordinary General Meeting shall be deemed special business."

- (3) Articles 126, 127 and 128 shall be deleted and the following New Article 126 substituted therefor:

"At every Annual General Meeting the Board of Directors shall lay before the Company a Profit and Loss Account made up to the 31st December in the preceding year and a Balance Sheet as at that date and such Profit and Loss Account and Balance Sheet shall comply with the requirements of Sections 210, 211, 212, 215 and 216 and of Schedule VI to the Companies Act, 1956, so far as they are applicable to the Company, but save as aforesaid, the Board of Directors shall not be bound to disclose greater details of the result or extent of the trading and transactions of the Company than they may deem expedient."

- (4) Article 129 shall be deleted and the following New Article 129 substituted therefor:

"Once at least in every year the Accounts of the Company shall be examined and the correctness of the Balance Sheet and Profit and Loss Account ascertained by one or more Auditor or Auditors."

- (5) Article 130 shall be deleted and the following New Article 130 substituted therefor:

"The Company at each Annual General Meeting shall appoint an Auditor or Auditors to hold office until the next Annual General Meeting and their appointment, remuneration, rights and duties shall be regulated by Sections 224 to 227 of the Companies Act, 1956."

Resolution No. 2 (As an Ordinary Resolution).

"That pursuant to and for the purposes of compliance with the provisions contained in Section 293 (1) (d) of the Companies Act, 1956, this meeting hereby consents, such consent to be effective as on and from the 1st April, 1956, to the Board of Directors of the Company borrowing monies for the purposes of the Company notwithstanding that the monies to be borrowed together with the monies already borrowed by the Company (apart from temporary loans obtained from the Company's bankers in the ordinary course of business) will exceed the aggregate of the paid-up capital of the Company and its free reserves, that is to say, reserves not set aside for any specific purpose."

By Order of the Board,

BALMER LAWRIE & CO., LTD.,

TRAINING FOR REFUGEES IN WOOLLENISED JUTE GOODS MANUFACTURE

A Rs. 1.3 lakh scheme for setting up a training unit of 100 refugees, for subsequent large-scale manufacture of blankets and knitting wool from a newly created variety of mixed woolenised jute, is being put into action with the arrival in Calcutta of the shipment of machinery from western Germany. Preliminary arrangements for the installation of the plant have been completed by the Technological Research Laboratory of the Indian Central Jute Committee in Calcutta, to whom the Union Rehabilitation Ministry has entrusted the execution of the project for training the refugees under its auspices. On completion of this technical training, during which monthly stipends will be paid to trainees, a promotional centre will start functioning for large-scale manufacture of wrappers, blankets, knitting wool, and other goods from woolenised jute, providing a new variety of cheap, durable and colourful mixed fibre product for the refugees as well as for the general consuming public on a co-operative cottage industry basis.

Mr. N. W. Chisholm, one time manager of the Calcutta Branch of the National Bank of India Ltd., has been appointed to a seat on the Board of Directors of the bank.

THE EASTERN CACHAR TEA CO. LTD.

THE Annual Ordinary General Meeting of the Shareholders will be held at the Registered Office of the Company, No. 14, Old Court House Street, Calcutta, on Tuesday, the 9th day of October, 1956, at 3 p.m., for the following purposes:—

- (1) To receive and adopt the Directors' Report and the audited Accounts for the year ended 31st December, 1955.
- (2) To elect a Director in place of the retiring Director.
- (3) To elect Auditors for the ensuing year, and to fix their remuneration.

And as Special Business:—

- (4) To consider and if thought fit to pass the following resolution, namely:—

"That the Books, Registers and other documents required to be kept by the Company and referred to in Sections 49, 144, 163, 196, 301, 304, 307 and 372 of the Companies Act, 1956, shall be available for inspection at the Registered Office of the Company, by the persons respectively referred to in those Sections as being entitled to inspection, between the hours of 10 a.m. and 12 noon on each business day, upon twenty-four hours' written notice of intention to inspect, such notice indicating what books, documents and registers are intended to be inspected."

The Share Transfer Book of the Company will be closed from 4th October, 1956 to 9th October, 1956, both days inclusive.

OCTAVIUS STEEL & CO. LTD.,
A. H. GALLOWAY,
Managing Director,
Managing Agents.

Calcutta, 14th September, 1956.

NOTE:—

A member of the Company entitled to attend and vote at the meeting is entitled to appoint a proxy to attend and vote instead of himself and the proxy need not be a member.

EXPLANATORY STATEMENT

With reference to the resolution relating to inspection of Books, Registers and other documents, referred to in the accompanying notice, the Companies Act, 1956 provides that the Company may impose reasonable restrictions on such inspection but so that not less than two hours in each day are allowed for inspection, and the resolution is being moved in order to comply accordingly with the Act.

COAL COMPANIES

O, Po, F and Dd indicate Ordinary Preferred Ordinary, Founders' and Deferred shares respectively. P, next to the name of the company indicates that the company also has Preference Shares. Figures in "accounts closed" column indicate the months of the calendar year in which accounts are closed. For Managing Agents refer to the Key (last page) under the numbers indicated.

NEW CAPITAL ISSUE PROSPECTS

DIFFICULTIES LIKELY FOR SMALLER CONCERNS

NOW the Central and State borrowing programmes have been completed, the time has come for an inspection of the list of private institutions which are planning an approach to the market. There is every sign that it is going to be a long one. Several first-class companies are known to be requiring fresh capital, both ordinary and preference, to finance their expansion schemes, and a number of old-established foreign concerns will be offering Indian participation in their ownership for the first time. In addition to these, a host of small companies whose prospects are less assured and whose names not so well-known, will be in the market with all kinds of issues. Altogether, they should constitute a tempting selection of opportunities for the person or institution with funds to spare and the desire to invest them in India's future. The question is to what extent these offers will appeal to a market which has lived through another year of the "socialist pattern"; has seen the 1948 Industrial Policy Resolution replaced by a new one; has just provided a larger sum than last year to satisfy the needs of the Union and State Governments and is, at the moment, suffering from a shortage of funds on both speculative and investment account. It would be a mistake to judge the prospects of new equity issues on the success of recent public loans. The circumstances are essentially different, even for the scrip of the really first-class companies. For the new and less-reputable concerns, the fact that government borrowing has been satisfied with comparative ease has absolutely no significance at all. This is an important matter, because these are the issues on which so much of the possibility of rapid expansion in the private sector relies.

The attractions of equity shares as a whole depend on present and future yield prospects. These vary according to industry and between good trading years and bad. Unless they can provide a reasonable average compared with that of other forms of investment, including cash and bullion, equities are unlikely to be held in preference to these other assets. A factual survey of the capital issues of the private sector published in the August issue of the *Reserve Bank of India Bulletin*, shows that average profits after tax, as a percentage of net worth, for 771 companies, over the years 1950-53 was only 7.3, and fell as low as 5.5 in 1952. After deducting the average proportion placed to reserve, this figure is seriously reduced, and when preference dividends have been paid, it is unlikely that the percentage available for distribution to the equity shareholder has been greater than five; it might well have been lower. This is not an attractive yield for equities in a developing economy. Since 1953, of course, economic progress has quickened and profits have increased. But to set against this, there is the fact that the 1956 Budget imposed additional corporate taxes, and one on bonus issues. There was probably some improvement in the prospects for ordinary shareholders in 1955. But the fact that the price index number of variable dividend industrial securities at the end of July 1956 was lower than it was in January, shows that there has been none this year. Yields rose, but investors' assessment of future prospects deteriorated in the first six months of 1956. This fact does not suggest that the new crop of capital issues will meet with a uniformly enthusiastic reception.

There will probably be little need to fear for the success of any issue made by a company of sound reputation and with a long history of profitable working. Where such concerns are planning to offer equities they can be assured of a good response although the price required may be higher than they will like to pay. There is still a firm demand for investments which have the best backing; it is the smaller companies, many of which will now be deprived of the guarantees which a sound managing agency can provide, who will have to be prepared for a struggle. The extent of their difficulties depends on a number of factors. Chief among them may be whether the particular indus-

try is in immediate danger of nationalisation. If it is, then the terms offered will have to be particularly attractive if capital requirements are to be met in full. Companies engaged in coal and mineral mining may be hard pressed to satisfy their needs. Iron and steel concerns will probably share the fortunes of the better-established companies and experience little difficulty in raising resources under the conditions the Government has laid down, although existing shareholders can expect little benefit to compensate them for the restrictions under which dividends have suffered in recent years. Cotton textile issues are likely to meet with a favourable response, especially now that changes are imminent in the Government's textile policy, but the current fortunes of the jute and tea industries are unlikely to encourage investors to put their resources into these. The most attractive issues will be those of engineering and miscellaneous concerns. These have a future assured by the continuing progress of economic development and the relative lack of interest on the part of the nationalisation enthusiasts. Their ability to find the support they need will vary according to the reputation of the company concerned and the orders it already has or can reasonably expect. But unless a concern is known to be under inefficient or disreputable management, issues in these industries are likely to be fairly well supported.

The really doubtful case is the new company whose management has not had the opportunity of proving its worth and which must obviously be

ly one-tenth of a steel plant each. The people of Kashmir, similarly, might feel that they should get at least a fraction of an oil refinery, instead of Bombay getting two whole ones. But a Government which vigorously advertises the concept of national unity would be contradicting itself if it supported economic provincialism of this kind. Yet, by attempting the dispersal of industry through the equalisation of the price of basic industrial commodities, this is precisely what it is attempting to do, although slowly and surreptitiously.

The main aim in providing iron, steel, cement and coal to everybody all over the country at the same price is to encourage people to start industries which use these materials in places where they do not at present exist. The more relevant point to examine, however, is why they do not exist there. The location of particular industries is governed by a variety of factors—political, economic, social and strategic—of which two of the most important ones are proximity to sources of raw materials, and nearness to markets. The reason, for instance, why many gentlemen from Rajasthan have jute mills in West Bengal but none in their own State, is that the eastern area of this subcontinent is the best source of the raw fibre and has convenient facilities for despatching gunnies to foreign markets. In its present mood, it would be understandable if the Production Ministry started to feel sorry for the vast majority of Indian States which do not produce jute goods and thereupon equalised the freight rates for fibre. But it would not be reasonable. On similar grounds, it would also not be reasonable to encourage the growth of engineering industries in, say, the Naga Hills, by supplying that area with subsidised coal and steel. The fact is that the coal and steel industries have been concentrated in the West Bengal-Bihar area because this region has outstanding advantages in terms of natural resources. The growth of these industries has given rise to a number of secondary activities which use their products and have chosen nearby locations in order to get them more cheaply. The growth of an industrial hinterland near the ports of Calcutta and Bombay is partly natural to conditions in which steel has had to be imported, but owes much to other circumstances as well, such as the fact that the concentration of population offers a more assured labour supply and better demand prospects.

The argument that equalising the prices of steel, cement and coal will even up the advantages of all regions in having industries which use these materials, is fundamentally unsound in the sense that it shows only one half of the picture, while completely ignoring the other. Only industries which are distant from the sources of supply of these materials, and near their consumer markets, will benefit. Those which are near these sources of supply, but distant from their own consumer markets, will lose heavily. This is not only because, under the freight pooling system, they will have to pay a higher freight on basic industrial materials than is economically necessary; it is also because they will get no relief on the freight they pay for the transport of their finished products. In sum, the tendency will be for industries to disperse away from sources of coal, steel and cement—towards their consumer markets. There is no ground here for a sweeping assertion that this will be to the good. On the contrary, there is sound reason to believe that the effects will be adverse. It is also significant to notice which areas will be the chief sufferers. West Bengal and Bihar now produce nearly all the country's steel, and about 70 percent of its coal; at the end of the second plan, they will still be producing 60 percent of the steel, and roughly the same proportion of coal.

Whatever the long-term advantages or disadvantages, the results in the short-term are likely to be damaging. The effects of pooling and equalising freights is that the nearby customers of steel, cement and coal immediately have to start paying more for these commodities. If they cannot switch to forms of transport other than the railways, the nearer they are, the more they have to pay. Since industrial expansion has taken place mainly in the regions where steel, cement and coal have been more easily available, it is clear that a vast sector of Indian industry will be affected by the higher freight rates. This will mean a rise in production costs to an extent which cannot be dismissed lightly—neither by units supplying the needs of the domestic consumer, nor by those which have large Government construction contracts to fulfil, and least of all by those which have exportable commodities to sell. This last is a point which may particularly be borne in mind while the Finance Ministry ruminates over its acute shortage of foreign exchange.

Looking at the results likely to be secured in the longer term, it is extremely doubtful whether dispersal of industry to the extent that the Production Ministry hopes for will be achieved. To begin with, entrepreneurs cannot ignore the fact that the policy is basically irrational; that being so, it would be rash to assume that it would be sustained over a long period—say, over the fifty, sixty or a hundred

years which is by no means a below-average life for an industrial unit. If it is not sustained, the new units they start will become liable to suffer sharp competitive disadvantages. Secondly, greater dispersal is likely to be secured only in the case of industries which are large users of steel, cement and coal (such as the engineering industries). With others, the sources of their more important raw materials, and suitable labour, will still be a major factor determining location. Looking at some of India's biggest industries, such as cotton textiles, jute, sugar, tea and petroleum refining, it seems extremely doubtful whether many will be inclined to move much further from where they are. The prospect that such dispersal as there may be will be limited, does not however condone the fact that it will nevertheless be lopsided. If only one cotton textile mill, or engineering concern, were to move to Cape Comorin, instead of starting in Bombay or Calcutta, it does not alter the fact that even that single move would be wrong.

The greatest deterrent to the dispersal of industry, however, is transport, and that one factor alone suggests why private, if not public, entrepreneurs, will be extremely chary of starting production in the more distant corners of the country. In general, it would not be wrong to assume that the transport of raw materials requires a good deal more carrying capacity than does the transport of finished goods. The growth in the world's tanker tonnage, partly necessitated by the shift from refined to crude oil brought about after Mossadegh's raid on the Abadan refinery, is an example of what might be necessary on the Indian railways. Before the Production Ministry proceeds with its ill-conceived scheme, and before the Railway Ministry accepts it in the satisfaction that it has no revenue to lose thereby, it would be as well to examine the transport implications closely. Mr. Lalbahadur Shastri, Railway Minister, has already declared that out of the extra railway capacity of nearly 43 million tons annually likely to be available at the end of the second plan, nearly 85 percent will be taken up by extra steel, coal and cement. It would be interesting to know whether, if the Production Ministry's scheme to equalise certain freights achieves the expected results, even the remaining 15 percent is likely to be left over for anything else.

THE WORM BEGINS TO TURN PLIGHT OF BRITAIN'S MIDDLE CLASSES

MR. HAKO L. MACMILLAN, Britain's Chancellor of the Exchequer, has said that he detests the term "middle classes". He is also suffering some embarrassment from the demands of these classes, however they may be described. Indeed, "the revolt of the middle classes" is a significant event in Britain this year. It takes various forms: apathy, if not active opposition, on the part of former Conservatives towards Conservative candidates at the polls, demands by Conservative Members of Parliament for tax-allowances on school fees, animated criticism of the Government's policies in the Conservative Press, and so on. Politically it is a revolt of Conservatives against Conservative policies (or, as the critics would say, lack of them); economically it is the cry of a large element in the community that has been squeezed first by inflation and then by the restraints that are intended to control inflation. Whether Mr. Macmillan likes the term or not, "the middle classes" have been classified by Dr. Mark Abrams, statistician and sociologist, in an analysis written for *The Sunday Times*. Dr. Abrams has shown that "the plight of the middle classes" relates to only a section of them; and he would doubtless agree that there is a section of "the working classes"—and, indeed, of "the upper classes" too—likewise afflicted.

The middle classes of 30 years ago comprised two distinct segments, upper and lower. Dr. Abrams includes in the former doctors, clergymen, higher civil servants, bankers and others in an aristocracy of finance and industry, judges, barristers, solicitors, university teachers, headmasters of public and grammar schools, and officers in the armed forces—and, of course, their families. The lower segment he identifies as: shopkeepers, small employers, elementary-school teachers, bank employees and similar "black-coated" workers, industrial technicians, the more highly-paid skilled manual workers, and factory foremen. The difference between the two groups was in their education, as well as in their functions. Now, the professional class is augmented by the better-educated sons of the lower-middle class. More significant is the emergence of a new superior middle class—the technicians, administrators, and managers, of large-scale industry and commerce, including: accountants and company secretaries, production engineers and research chemists, company directors, structural engineers, industrial designers, sales managers, advertising agents, public-relations officers, scientists, physicists, electrical engineers, marketing officers, and buyers. Dr. Abrams estimates that they outnumber the old

upper-middle class by more than two to one. It is not this new class that is kicking against the Conservative leadership. It has, indeed, many privileges—including in many cases the expense-account that can so usefully supplement a fixed salary. And, broadly speaking, the salaries of this class begin where those of the professional class end, around £2,500 a year. (It is pertinent to remark, however, that it is from this new class that high American salaries attract some of Britain's best technicians. On the other hand, while prices have approximately trebled and taxation in various forms has risen steeply, the gross incomes of the old middle classes have, approximately, only doubled since the late-1930s; and those of the upper segment have rather lagged behind those of the lower segment.)

In those prewar years professional people could save a substantial part of their income, and much of their savings was invested in Government securities. Even in terms of money, a Government stock bought in 1936, for example, shows heavy depreciation at today's values; in relation to current prices of goods the depreciation—both of capital and of income—is, of course, far worse. Some of these people bought houses as investments; but the rents that they are allowed to charge to occupiers are controlled at much less than the prewar values. Even in better times these upper-middle-class people had occasion to borrow from the banks: in present circumstances the banks' facilities could help them considerably. But these facilities are no longer available: so far from getting further advances, many middle-class people have had to repay some or all of what they have already borrowed. Just as the favoured elements in the middle classes are those related to big industry, so the favoured borrowers are big companies. There are not many alternative sources of finance; therefore, in many cases securities have been sold to cover expenses—one cause of the decline in prices of Government stocks in the past year. These are not sudden developments. The squeezing of the old middle classes has been in progress for years, during and (more noticeably) since the war. In the era of inflation and scarcity the industrial workers' bargaining-power has been strong and their incomes have approximately kept pace with the cost of living. There has been a redistribution of wealth in their favour.

When a Conservative government was put in power in 1951 the middle classes believed that this process would be reversed—that wealth would be, to some extent, redistributed again, in their favour. They were patient while the national economy was being restored to health (anyway, the Conservatives' majority in Parliament was precarious); and their patience was rewarded by the solid strengthening of the Conservative government in the elections of 1955. But more than a year has passed since then, and "the plight of the middle classes" has grown worse. The "dispossessed" feel that their champions have betrayed them. Yet the Conservative leaders are adamant. As the shortage of labour is being overcome the workers' bargaining-power is already weakening and open favouritism of the middle classes would lose the millions of working-class votes on which any government must rely. Mr. Macmillan knows that the problem of the middle classes can be solved only by stabilising the value of money and by reducing the military burden so that taxation in general can be reduced.

CURRENT COIN

Texmaco Expands and Diversifies.—There is a number of reasons why the address of Mr. K. K. Birla, chairman, at the annual general meeting of the Textile Machinery Corporation Ltd. in Calcutta on Monday is of special interest. (The address is published in full on another page of this issue of *Capital*.) The company is a young one, but an expanding unit in an expanding industry. It is diversifying its production to meet the growing demand for new engineering products, and has obtained expert foreign assistance in doing so. Last, but not least, its shares are among the most active on the Calcutta market, carrying as they do the virtues of group support and membership of the forward list. The expansion is reflected by the fact that the company's paid-up capital has been increased from Rs. 1 crore to Rs. 1.9 crores. As Mr. Birla pointed out, foreign technical know-how has been secured to produce new items of cotton spinning machinery, card clothing, jute spinning machinery, water tube boilers and sugar mill machinery. It is proposed to make all these on a fairly substantial scale. The output of ring spinning frames and spares has been raised in the cotton textile machinery division; demand has increased since the Government revised its textile policy and allowed an expansion in the cotton mills' production. Satisfactory progress has been made in the manufacture of carding engines (with Japanese collaboration); the first batch, with a few imported components, will be on the market some months hence. A sepa-

rate factory is to be established for card clothing, which will also be set up with Japanese collaboration and which will meet a fairly large proportion of the domestic demand. In the case of jute mill machinery, a start has been made with spinning frames; a few will be manufactured this year, containing some components from the collaborators in the project, Fairbairn Lawson Combe Barbour Ltd. According to Mr. Birla, the boiler and heavy engineering division is working satisfactorily; hitherto, only industrial boilers of the shell type have been made but the manufacture of water tube boilers also will start soon. To the railways, the company is supplying locomotive boilers, wagons and other equipment. The production of wagons is to be changed over from the metre gauge to the broad gauge variety during the current year. Structural steel work is being done for river valley projects and steel plants, and Dutch collaboration has been secured for manufacturing sugar mill machinery. The steel foundry division is making castings as well as ingots, and proposes shortly to install a rolling mill for rolling mild and special alloy steel sections. Mr. Birla complained of a shortage of pig iron, steel and cement; and criticised the move to sell steel and pig iron at uniform prices all over India.

Dunlop Rubber Expansion.—The Dunlop Rubber Co. (India) Ltd., has announced important extensions to its manufacturing facilities in India. The existing factory at Sahaganj near Calcutta is to be expanded to give increased output of truck and bus tyres, cycle tyres, cycle rims, general rubber goods and Dunlopillo. An entirely new plant is to be established in south India, probably near Madras, where sites are at present being surveyed. It is planned to manufacture truck, bus and cycle tyres there, principally for the needs of the south Indian market. The factory is expected to be in operation in about two years' time.

Cotton Textile Exports.—Addressing a general meeting of the All India Exporters Association recently, Mr. P. R. Ashar, President, emphasised the two main factors which have adversely affected India's textile exports—a rising trend of domestic consumption and increasing competition from its rivals. During the first six months of this year only 342 million yards were exported as against the annual target of 1,000 million yards set for the second five year plan. Mill production has increased, and to some extent so has handloom production—during the first seven months of the year mill output totalled 3,056 million yards, and the July figure of 478 million yards was a record. Handloom production has moved up from 1,200 million yards in 1952 to 1,480 million yards in 1955 and production during the first six months of 1956 was 802 million yards. But there is definite evidence that domestic consumption has been absorbing an increasingly larger proportion of this higher output. Mr. Ashar furnished some statistics of home consumption also. From 11.7 yards a head in 1951, it rose to 14.4 yards in 1952, 15 yards in 1953 and 1954 and 15.9 yards in 1955. According to the offtake figures available for the first seven months of this year, that is, taking the total supply minus exports, the per capita figure seems to have risen to 16.8 yards. Mr. Ashar doubted whether the increased excise duty would serve the purpose of discouraging domestic consumption so that more cloth might be available for export. The basic problem is that of demand exceeding supply, and the solution obviously lies in raising output in the quickest and most efficient way, which only the organised mill industry is at present equipped to undertake.

Critique of State Enterprise.—In a recent Rotary Club speech in Bombay, Mr. C. H. Bhabha made some disturbing observations on the conduct of State enterprise in this country. Open discrimination, corruption, nepotism and the traditional bureaucratic disregard for everybody except their superiors are some of the charges Mr. Bhabha has levelled against the politicians and bureaucrats who now run the large number of State business concerns. In support of each of his charges he has adduced reasonable evidence. Mr. Bhabha is a responsible industrialist who was Minister for Commerce in the first interim National Government, and, until recently, chairman of the Great Eastern Shipping Corporation, a body in which the State owns substantial interests. In these capacities Mr. Bhabha has had enough experience of the way the Government does things. In the first place, Mr. Bhabha cites the example of the new Company Act, Section 620, which vests, as an omnibus measure, powers in the Government to exempt State enterprises "from the operation of the several sections of this legislation." Private concerns are entitled to no such special treatment. Another example of such discrimination is to be observed in the operation of the rent control laws under which "public and semi-public institutions are legally entitled to charge any fantastic rentals for their properties". But private individuals have to follow the law. These legal discriminations, Mr. Bhabha rightly held, offend against the fundamentals of democratic government. Even the goal

of "a socialistic pattern of society" which may justify to some extent the discriminatory treatment in favour of State concerns, is being largely deprived of that justification because of the way in which these concerns are actually being run. Mr. Bhabha's comments on the recruitment methods were outspoken. In one instance, "in a State enterprise where there were vacancies for three or four junior officers, for which over 3,000 applications were received, wire-pulling, recommendatory letters and even semi-directives came from no less than two dozen highly-placed politicians and bureaucrats." Besides, there has been "all-too frequent interference" in the normal functioning of State concerns by politicians and their entourage "that treat these enterprises as their happy hunting ground for personal benefits and profits".

Protection of Production.—The fact that there is a tendency excessively to protect new industrial enterprises, not only those which are in actual operation, but even those which are mere projects, has lately been the subject of complaint by business men, Indian and foreign alike. Some time ago, Mr. K. G. Milne, chairman of the Bombay Electric Supply Co. Limited, spoke of the "dog-in-the-manger policy" of new domestic manufacturers who, while unable to fulfil their commitments, actually come in the way of the industry obtaining its requirements elsewhere. Even a reasonable volume of imports of such goods as transformers and meters is becoming increasingly difficult. Mr. Milne's complaint found strong support in the presidential speech of Mr. S. M. Shah, at the recent annual general meeting of the All India Importers Association. "While we are

in general agreement," said Mr. Shah "with the view that wherever indigenous production is expanding and both the price and quality are reasonably fair, the imports could profitably be curtailed. But we cannot support the imposition of restrictions on the basis of expected or anticipated production. We find near-famine conditions in respect of a number of items because the Government has imposed restrictions on imports on the basis of anticipated production, and the production did not materialise.

VICEREGAL TOURS

THE HINDU PATRIOT is of opinion that the only useful purpose which is served by gubernatorial tours is that they enable the Viceroy to make important announcements or declarations of policy. If this be so, we can only characterise them as an absolute waste of public money, and when these tours are undertaken at a time when there is serious apprehension of a widespread scarcity, we must further characterise them as a wicked and wanton waste of public money. As the *Patriot* truly says, the Viceroy is only shown the bright side of the shield, the streets through which he may pass are repaired and the houses on either side white-washed. Complimentary speeches are delivered and much money wasted on useless shows, while the Viceroy leaves the principality no wiser than he entered it. The visit of a Viceroy to native States serves no useful purpose, and means costly and lavish entertainments and the spending of large sums of money. We are thoroughly in accord with the *Hindu Patriot* and the *Indian Mirror* in saying that these visits should be discouraged, and we cannot too strongly urge upon the Viceroy that touring round India, at this time of impending famine, is very much out of place, and may be misconstrued as an utter want of sympathy with the people whom he has been temporarily called upon to govern. It is not necessary to hold a durbar to deliver speeches. Our brother Scots in Calcutta will be very glad to see His Excellency on the 30th of November, and to give him an opportunity of unburdening himself on any subject he may choose, and, if it should afterwards be found that he had been too gushing in his language or too profuse in his promises, the convenient excuse could readily be forthcoming that it was an after-dinner speech.

RETURNING AN EX-CONVICT
TO PRISONSENTENCE ENHANCED IN
SPURIOUS DRUGS CASE
(FROM OUR LEGAL CORRESPONDENT)

THIS is a two-fold problem for the non-legal reader. The first part is one of law, but he should be as well able to solve it as any lawyer, depending, as it does, upon commonsense and a knowledge of the English language sufficient to interpret the ordinary plain meaning of one everyday English word and to apply that meaning to the relevant facts. The second part relates to ethics, humanity and, in particular, fair play, and one is pretty certain that the reader will go wrong on it, as the writer did and still does, notwithstanding that he has had the advantage of studying the High Court judgment upon it. On second thoughts, we will put it differently. The reader's answer, if he agrees with the writer, will be right ethically but wrong legally. We have no sympathy with the accused in the case. The peddler in spurious medicinal drugs, the non-administration of which, in genuine form, to the patients for whom they are intended, may result in their deaths, is little better than a murderer. He is, as Gajendragadkar J. observed in the Bombay High Court later, "toying with the lives of citizens." All the same, when detected and caught, he is entitled to fair play, and the question here is whether this particular peddler got it or not.

The accused was one P. K. Mancharamani, a resident of Kalyan Camp, Bombay. It appears that Inspector Chaubal of the Anti-Corruption

Branch Thana had received information that certain persons were selling spurious drugs in the market. For that reason the Inspector got in touch with a Mr. Ovalekar on 4th August, 1953, and persuaded him to act as a bogus customer. Mr. Ovalekar was given Rs. 110 by Mr. Chaubal, who on instructions purchased six dozen bottles of penicillin prepared by two well-known and entirely reputable laboratories, from the accused. These bottles were sold by the accused at Rs. 9 a dozen. The standard price was Rs. 12 to Rs. 15 a dozen. On 28th August, 1953, Mr. Ovalekar again purchased one gross bottles from the accused in Thana. The samples were then taken from these bottles and were sent to Mr. Rangnekar, a Bombay Drugs Inspector. That gentleman, merely by visual inspection, gave his opinion that the drugs were spurious. On 3rd September, 1953, Mr. Ovalekar was given Rs. 435 to purchase drugs from the accused in the presence of panchas. One of the panchas accompanied Mr. Ovalekar.

Inspector Chaubal, Mr. Rangnekar and others waited near a cinema at 11 a.m. The accused, the pancha and the bogus customer entered the Jain Hind Hotel and came out after about 30 minutes. Then a signal was made and the police stopped the accused. He was searched and marked currency notes worth Rs. 45 were found on him. The balance of Rs. 390 was with Mr. Ovalekar who also had five dozen bottles of penicillin bearing the names of two impeccable manufacturers. These drugs were sent to the chemical analyst and it was found that they were spurious. The accused was tried on two charges, the first under Section 420, Penal Code (cheating), read with Section 511, and the second for the sale of the spurious drugs knowing them to be spurious under Section 275. His defence was that although he admitted that he had sold the bottles in question to Mr. Ovalekar, he did not know that the drugs were spurious. He had, he claimed,

obtained these drugs from a person who had posed as an agent of Dumex and Glaxo Laboratories and that if he had known that they were spurious he would not have sold them. The magistrate rejected the defence, believed the prosecution evidence, and convicted the accused on both charges. For the offence under Section 420 read with Section 511, the magistrate sentenced him to 18 months' r.i. plus a fine of Rs. 500 and, in default of payment, for the offence under Section 275, the sentence was one month's rigorous imprisonment. The two sentences were to run concurrently, not consecutively. The accused appealed against both convictions.

You are now invited to consider the conviction on the first charge. Could it stand on appeal and, if not, why not? This is where your knowledge of plain ordinary English, should come in and enable you to answer the question correctly, albeit you have no legal knowledge. The whole case on the first charge depended on the meaning of one simple word; and that word is "cheat", or rather the verb "to cheat". To cheat means to deceive, to impose upon. Where was this essential element of cheating in what the accused had done? He had not deceived or imposed upon the purchaser for a single moment. Mr. Ovalekar was a bogus customer, who knew well that the drugs for which he asked and which were being sold to him were spurious drugs. He sallied forth with the deliberate object of buying spurious drugs as he had done on previous occasions and if he had been supplied with the genuine article, his whole object would have been defeated. The real deception in the case was the deception of the accused by Mr. Ovalekar and the person imposed upon was not Mr. Ovalekar by the accused but the accused by Mr. Ovalekar: quite rightly, and as it should be, of course. But, as in the accused's conduct, the essential element of cheating was lacking, the conviction on the first charge could not stand and the lower Appellate Court set it aside. The State appealed to the Bombay High Court but at the hearing, in the words of Gajendragadkar J., "did not press the appeal because on the findings of fact made by the lower Appellate Court, (the prosecution) felt that it would not be easy to persuade us to reverse the conclusion of the lower Appellate Court." So the reversal of the conviction on the more serious of the charges with the fine and substantial sentence of imprisonment was confirmed by the High Court. But the State had another card in its hand, a trump; and it proceeded to play it.

And that brings us to the second consideration, that of ethics and fair play.

A man is charged with a criminal offence. He is tried, convicted and sentenced to a term of imprisonment. He goes to jail, serves the full term, is then released and the prison gates clang behind him. He is a free man again and he has expiated his crime. Can he, months later, be sent back to jail again to serve a further term for the same offence on the sole ground that the original sentence was inadequate and should be increased? You may think, as the writer certainly does, that on the most elementary principles of fair play, equity and even strict justice, it could not be done. The man, a first offender, having served his allotted term, may have reformed; he may have secured respectable employment; he may have married; and his past, anyway, is behind him. To argue and to act otherwise, and to send him to prison again for the same offence may seem to you so astonishing as to shock the conscience. Nevertheless, that is what happened to the accused in this case. He was convicted by the magistrate for two separate offences and sentenced separately on each. He appealed. On the more serious charges he was acquitted by the Appellate Court, which, however, confirmed his conviction on the less serious charge and the sentence, which he only served.

The State appealed to the High Court challenging the correctness of the finding of the lower Appellate Court that the offence under Section 420 read with Section 511 was not proved but, as has been stated, did not press the appeal. And it will be noted that—in the words of the High Court judgment—"after the sentence of one month was imposed by the learned magistrate on the accused in regard to the offence under Section 275, no attempt was made by the prosecution to apply for the enhancement of the said sentence." Why not? It is a fair assumption that when it filed its appeal, the prosecution had not realised how remote was its chance of persuading the High Court to reverse the acquittal. The prosecution, when expectant of a reversal, would have been satisfied with the 18 months' imprisonment sentence and Rs. 500 fine being restored. When it eventually did realise the weakness of its grounds of appeal, it virtually abandoned it and the acquittal was not disturbed by the High Court. What the prosecution did—and this was its trump card—was to press for an enhancement of the sentence on the lesser charge, which sentence had already been served and the ex-convict discharged from jail. Well, learned judges have to administer the law as they find it and the application for enhancement was no doubt technically in order. The sentence on the lesser charge was certainly a lenient one even for a first offence. So the High Court enhanced the sentence from one month to the maximum sentence, six months, and issued a warrant for the arrest of the accused so that he could go back to prison and serve the additional term.

1956. A.I.R. (Bombay). (August). p.559.

I FIND from Press reports that the U.K. is being convulsed by "Rock 'n' Roll" disorders. It all started, as such things usually do, in the U.S.A. where the film *Rock Around the Clock* produced a wave of teenage musico-mania exhibiting itself through Corybantic dances, noisy singing, foot-stamping, furniture-wrecking and general violence. One is reminded of the Frank Sinatra swoon craze and the Johnny Ray tears sessions. The film, I understand, has now been withdrawn, but many are left wondering how a musical rhythm could have caused all this juvenile near-lunacy. I myself recently heard a "Rock 'n' Roll" record in a restaurant in this city, and all it did was help my dinner down. Much to my disappointment, not a single foot muscle twitched, and when I looked round to see how the rest of the people were affected, I failed to detect even the faintest ripple of excitement. Which led me to conclude that all manias—and fanaticism belongs to this family—are just passing crazes which catch on because folk have nothing more exciting to occupy their minds. Take another example, that of the religious "Rock 'n' Roll" we have just been witnessing in this country. An unwary publisher reprinted a book which has been in circulation in many countries, including this one, for over fifteen years. During all this time nobody took any particular notice of it. But as soon as the reprint appeared there were violent outbreaks of fanaticism. The book was promptly withdrawn and all sales stopped, but exhibitions of maniacal religious fury continued, creating as such things notoriously do, a vicious chain reaction. Many who took part in it had never seen a copy of the offending book and few must have had any knowledge whatsoever of the degree or kind of its offence.

It was easy to read between the lines of Mr. Nehru's speech last Sunday the anxiety he is feeling about the recent revival of communalism. And it is difficult to contradict him when he says that certain newspapers—he mentioned especially those financed by "foreign agencies"—have much to answer for. The Prime Minister is obviously considering the possibility of legal curbs on the freedom of the Press. A dismal one he appears to be finding it too, and quite rightly. I cannot remember in this diary ever having accepted a single one of the many excuses which are always being found to justify curtailing free expression, and I would shrink from doing any such thing now. But that may be because I do not have the responsibility of tackling the problem myself. I must admit, if I were Mr. Nehru I would be sorely tempted. There are times of national emergency when such expedients have to be tolerated, at least for a limited period, and if it were not that Press freedom in India is such a precious bloom, which has to be guarded carefully and continually lest it be smothered on some plausible pretext or other, I would be prepared to agree that this would be the best way out of a situation which should certainly not be allowed to continue. As it is, I feel every possible alternative ought to be tried before resorting to anything so drastic. Mr. Nehru has mentioned foreign newspapers before as being guilty of communal agitation, and has refused to name them, no doubt out of personal consideration for the safety of their staffs, quite apart from his natural reluctance to take any kind of action when a warning will do just as well. But it now seems fair to ask whether the whole of the Indian Press, and especially those newspapers—and *Capital* is one—which are neither financed by foreign agencies nor engaged in stirring up communal feeling, should continue to go in fear of their freedom and reputa-

A DITCHER'S DIARY

tions for the sake of a few disreputable and mischievous elements. Communalism is a despicable thing, but the majority of newspapers, Indian or otherwise, have no part in it and ought to be exonerated, which they would be by implication if the guilty ones were named. The danger to the spirit of Press freedom in India involved in hiding the identity of the offenders is serious enough: the risk to the general reputation of foreign newspapers in this country is infinitely worse.

I consider it a mistake to belittle Stalin's achievements, or to deny that his ruthlessness served the Soviet Union well in a period when that quality was needed above all others. His denigration is, in my opinion, an indictment of the system which made such tyranny possible, the colleagues who slavishly obeyed his arbitrary commands and the communist parties of the world who told his lies for him. I see from the secret text of the speech given before the Party's closed session in Palghat, and now available for public scrutiny thanks to the initiative of the Democratic Research Service, that Mr. Ajoy Ghosh, General Secretary of the C.P.I., agrees with me that denouncing Stalin does not detract from Russia's very real achievements. But he does not, of course, draw the logical conclusion that the present Soviet leaders are a bunch of cowardly sycophants and the world's communist parties, including India's, a conspiracy of malevolent liars who are ready for any mischief so long as Moscow bids it. Whether Mr. Ghosh is prepared to be honest with himself or not, there must be other members of his Party who are not so sure that the excessive mental gymnastics required of the faithful can altogether be reconciled with their own self-respect—such as is left to them after imbibing communism's reason-corroding brew. That there are, is proved by another secret document, obtainable by courtesy of the same source. It points out that "the entire party is divided from top to bottom". Members are accused of "individualism, a trait that is characteristic of the petty bourgeoisie". It may be true that the C.P.I. has contrived to swallow the new Moscow line in quicker time than most of the world's communist parties. But it has obviously not done so without a good deal of gulping. The reports coming out of the Soviet Union nowadays suggest that the old order is little changed. They may be right, although I have my doubts; if it has not altered in any other way, it is surely weaker for being more divided. But international communism will never be the same again, and a good thing too.

How many, I wonder, of the countless thousands in this country who have read, and still read Edgar Wallace's stories know that the father of modern detective fiction was at one time closely associated with Lokamanya Tilak and the Indian nationalist movement? In his centenary-year life of Lokamanya Tilak, the authorised biography sponsored by the Kesari Mahatma Trust and published by John Murray of London, Mr. D. V. Tahmankar describes how these two men, so different in their background and ways, first came together. Wallace was attracted by Tilak's researches into the antiquity of the Vedas. He subsequently offered to help the Indian nationalist movement for which he worked in London and Paris during 1919. "He was", says Mr. Tahmankar, "particularly anxious

that the British people should know Tilak as he was and not as his enemies painted him—the infant terrible of Indian politics". For a short period Wallace worked as a sort of voluntary Press agent for Tilak who spent a year in England in 1918 prosecuting his famous libel case against Valentine Chirol, reorganising the London committee of the Congress Party and forming that alliance between Congress and the British Labour Party which has persisted ever since. The Delhi Congress of December 1915 elected Lokamanya Tilak, Mahatma Gandhi and Hasan Imam as delegates to present the Indian case at the Paris Peace Conference of 1919. But passports were refused by the authorities and the delegation never appeared in Paris in person. Instead, Tilak sent its representation in writing by the hand of Edgar Wallace who personally presented it to M. Georges Clemenceau and President Wilson. Wallace did not require to do this sort of thing for anything so sordid as money; *The Four Just Men* had appeared in 1905 and *Sanders of the River* in 1911 and, by the time he met Tilak, Wallace was a highly successful dramatist and novelist who had no need to supplement his income by doing courier's work. He undertook the mission because he liked Tilak.

We all know that a kiss carelessly given can sometimes cost a great deal of money. But I am sure that no unwary prospective co-respondent or unwitting candidate for breach of promise can have been more surprised at the consequences of his innocent actions than the unfortunate youth of Ahmedabad whose kiss cost him a fine of Rs. 200 under Section 294 of the Indian Penal Code. The incident took place in a public garden and was observed by a policeman who, one would have thought, could have found more serious matters on which to exercise an otherwise admirable sense of duty. It must be admitted that a good deal depends on the way a kiss is given, but the only evidence which appears to have been needed to support a charge of "obscenity" before a magistrate who proved to be equally zealous in the cause of safeguarding public morals, was simply that it occurred in public. This was also the fact which the youth and the girl concerned must have experienced the most difficulty in denying. And it is the one which, as the learned judge of the Bombay High Court who reviewed the case remarked, could convict almost every person in this country who has ever met or parted from a friend or relative in anything so public as a railway station or airport. That the affectionate pair were charged at all is bad enough, but it is surely insufferable that the magistrate should also have taken the opportunity to impose a swingeing penalty and to deliver himself of a number of "sweeping statements on the subject of morality". Now the conviction has been set aside, the law is no doubt rightly satisfied that justice has been done and its prestige upheld, but it is impossible not to reflect on the kind of thinking which wrongly condemned such an innocent act as obscene in the first place. Puritanism is on the increase in India, and it is probably no coincidence that this event took place in Bombay State from which so much of it appears to be taking its inspiration. This is only a small example of the humbug to which the private citizen can be submitted by those who like to appoint themselves custodians of his morals; it deserved the rebuke it got. Another one, I always feel, is that those who want to imbibe a little liquor should be forced to sequester themselves in special rooms like conspiring criminals in some cities.

THE DITCHER.

For every hour in the air, a Clipper receives two hours of maintenance on the ground.

Every day Clippers must pass the world's
toughest fitness test

Before and after each flight, a rigorous inspection is made of all operating parts. Even in flight, the state of a Clipper's* health is under constant scrutiny—through the electronic eyes of Pan Am's Engine Analyzer.

Every 11 weeks engines are taken down with critical interest. Instruments probe vital parts. From nose to tail each square inch is thoroughly inspected, every part replaced at the slightest drop from peak efficiency.

INDO-BRITISH ECONOMIC CO-OPERATION

COLLABORATION IN VITAL FIELDS OF PRODUCTION

(This is the sixth of a series of articles written by our New Delhi correspondent on the basis of a recent tour of Europe).

THE Suez Canal dispute is unlikely to have any adverse effect on Indo-British relations, particularly on the co-operation between the two countries in the economic field. The high rate of personal taxation in India and the feeling of insecurity which has been caused by the nationalisation of life insurance, the threatened nationalisation of the anti-west campaign by the Indian Communist Party and some other left groups, have not discouraged British industrial concerns in participating in the industrial development of India.

The following examples of Indo-British collaboration have been mentioned already: (1) the steel plant in Durgapur, (2) A.E.I. and the H.E.P. scheme, (3) the A.C.C.-Vickers-B. and W. Project, (4) the manufacture of jade green dye-Project, (5) Imperial Chemical Industries and their staffs in installing a vat dyestuffs plant, (6) the Bristol engine and Folland Gnat negotiations, (7) Powell Duffryn and the lignite project, (8) Vickers' supposed interest in the projected second shipyard and (9) the automobile industry. Other examples of Indo-British collaboration which are being dealt with in the course of this article are as follows: (1) Indian Telephones Industries, (2) Hindustan Cables Limited, (3) Indian Explosives Limited, (4) Sindri Fertiliser Factory, (5) Chittaranjan Locomotive Works and (6) Hindustan Aircraft Limited.

Telephone Manufacture

A 15-year agreement was signed in 1948 between the Government of India and the Automatic Telephone and Electric Company Limited of the U.K. for the establishment of a telephone equipment factory in India. This agreement led to the formation of the Indian Telephones Limited whose factory in Bangalore is now in operation. A.T.E.C. gave general assistance in the manufacture of various items of telephone equipment including automatic exchange equipment and multi-channelled carrier equipment. They also provided facilities

for the training of factory personnel at their own establishments in the U.K.

Under an agreement signed with the Government of India in 1949, Standard Telephones and Cables Limited of the U.K. undertook to provide technical assistance in the designing, erection and running of a factory in India to manufacture paper-insulated, lead-covered and armoured telephone cable. This led to the establishment of the Hindustan Cables factory in West Bengal which is wholly owned and financed by the Central Government. The factory is designed to produce annually about 400 miles of dry-core paper insulated cables of various specifications, valued at approximately Rs. 1 crore. Production at the factory started in 1954, with the target of 104 miles for the last six months of 1954-55. Actual production was a little over 112 miles during the period. Production has been stepped up however, and was expected to reach about 510 miles of cable during 1955-56. In the course of the second plan, the Posts and Telegraphs Department has a programme to link the major cities of India by a network of underground cables. To meet this requirement, it is proposed to produce 300 miles of co-axial trunk cables a year at the factory. Plans for the manufacture of switchboards and of cables required by the Indian Telephone Industries Limited for switchboards, both automatic and manual, are under consideration.

Production of Explosives

The Government of India and Imperial Chemical Industries Limited entered into an agreement in November, 1953, for the establishment of a factory in India to manufacture commercial high explosives, including gelatine, semi-gelatine and powder types of explosives based on nitro-glycerine. A company known as Indian Explosives Limited with an authorised capital of Rs. 4 crores has been formed to undertake this project. The capacity of the proposed factory which will be situated in Gumia in Bihar will be 5,000 tons a year. When full production is reached, India will be self-sufficient in the commercial blasting explosives. The range of products requiring nitro-glycerine is constantly being extended, and as Indian Explosives Limited will profit from Imperial Chemical Industries' research and experience in this field, the high quality of the end-product will be assured; what is equally important, the country will save a considerable amount of foreign exchange, now spent on imports.

Expansion in Fertilisers

I.C.I. and another important U.K. firm, Power Gas Corporation Ltd., were closely associated with

the establishment of the Sindri fertiliser factory in Bihar. Their representatives formed the technical mission which came to India in 1944 at the invitation of the Government to advise on the best methods of expanding the fertiliser industry in the country. Later, the Government of India commissioned the Power Gas Corporation Ltd. to supply with the help of a consortium of U.K. chemical plant manufacturers, plant and machinery for the proposed factory and also to act as agents to the Government of India for their procurement and erection. It may also be added that Costain John Brown are one of the three firms that have been invited to submit project reports for the fertiliser-accum-heavy-water plant to be established in Nangal.

Three out of the nine project reports received in connection with the Government's heavy foundry scheme have come from U.K. firms. A. F. Craig Limited of Scotland are one of the three firms who have been asked to manufacture sugar machinery in collaboration with Indian associates. British firms have also shown interest in the manufacture of printing machinery in India. A scheme for the manufacture of Ferguson tractors by Standard Motor Products, Madras, was recently approved by the Government of India.

Automobiles, Cycles and Radios

Outstanding examples of British collaboration in India's automobile industry are the arrangement between the British Motor Corporation and Hindustan Motors, the Standard Motor Products of the U.K. and Standard Motor Products of India Ltd. for the manufacture of motor cars: between Leyland Motors Ltd. and Ashok-Leyland Ltd. for the manufacture of lorries and buses and between Enfield Cycles and Madras Motors Ltd. for the manufacture of motor-cycles.

Important arrangements of collaboration for the manufacture of cycles in India include the following: (1) T. I. Cycles of India Ltd. with Tube Investments of the U.K., (2) Sen-Raleigh Ltd. with the Raleigh Cycle Company of the U.K. and (3) Wearwell Cycle Company of India with the Wearwell Cycle Company of the U.K. There are reports that another prominent U.K. firm of cycle manufacturers is shortly likely to conclude arrangements for the manufacture of their machines in association with an Indian concern.

In the field of radio, the following are perhaps the more important cases of collaboration: (1) E. K. Cole Ltd. and National-E.K.C.O., (2) Bush Radio Ltd. and Modern Trading Company and (3) Murphy Radio Limited and Murphy Radio of India Limited.

British firms have also been taking a leading part in the manufacture of diesel engines in India. The following are a few examples: Frank Perkins Limited who have arrangements with Simpson and Company; Henry Meadows Limited who are collaborating with Automobile Products of India Limited; Ruston and Hornsby Limited who have arrangements with Ruston and Hornsby India Limited and Greaves Cotton; National Oil and Gas Company who have arrangements with Mahindra and Mahindra Limited. Other industries in which U.K. firms are collaborating with Indian firms include office machinery, textile machinery, jute machinery, tea and sugar machinery, road-making equipment, electrical machinery and switch gear, drugs and pharmaceuticals, chemicals, titanium pigments, boilers, steel tubes, cement glass and rayon. This list is far from being exhaustive.

Chittaranjan Locomotive Works

The Railway Board has an agreement with the North British Locomotive Company under which the British firm has been providing technical assistance in the manufacture of locomotives at the Chittaranjan loco works. The agreement not only covers the supply of components, raw materials, machine tools and other equipment, but it also covers the supply of technical personnel and designs, production and planning.

The Hindustan Aircraft Factory is jointly owned by the Central Government and the Mysore State Government. It is however under the control of the Union Ministry of Defence. Among its other activities, the factory is engaged in the assembly and manufacture of Vampire aircraft for the Indian Air Force under an agreement with De Havillands of the United Kingdom.

Atomic Reactor Construction

The United Kingdom Atomic Energy Authority activity helped the Indian Department of Atomic Energy in establishing India's first atomic reactor in Trombay. The U.K. body provided enriched uranium fuel elements for this reactor and under an agreement, reached between the two in last December, the U.K. will assist in the design and construction of a high-flux research reactor which it is proposed to build at a later date.

Some of the British firms with whom contracts have recently been placed by India include the following: (a) Babcock and Wilcox are to supply boilers to the value of Rs. 91 lakhs for the Khaperkheda Power project and boilers to the value of Rs. 22 crores for Korba power station; (b) Vulcan Foundry are to supply locomotive boilers to the value of approximately Rs. 2 lakhs for the Railway Board; (c) Orders for sugar machinery to the value of £500,000 were recently placed by Indian concerns with A. F. Craig and Company Limited, Paisley; (d) English Electric have secured orders for water turbines and alternators for Rihand. English Electric are also to supply five alternators for the Bhakra-Nangal scheme.

TEXTILE MACHINERY CORPORATION LIMITED

CHAIRMAN MR. K. K. BIRLA'S REVIEW

Speech of the Chairman, Mr. K. K. Birla delivered at the Sixteenth Annual General Meeting of the Shareholders on the 24th September, 1956.

Ladies & Gentlemen,

It gives me great pleasure to welcome you to this annual meeting of the Textile Machinery Corporation Ltd. The Directors' Report and the audited accounts and balance sheet for the year ended 31st December, 1955, are already with you and with your permission I will take them as read.

From the Directors' Report you will see that our Company has been making steady progress; we have widened the scope of our activities. Several agreements have been entered into with reputed foreign concerns by means of which we have secured technical know-how for producing certain new articles, namely, items of Cotton Spinning Machinery, Card Clothing, Jute Spinning Machinery, Tube Boilers and Sugar Mill Machinery, all of which we intend to make on a fairly substantial scale. These expansion schemes, as you may well imagine, will require additional financial outlay and for this purpose the Authorised Capital of our Company has been increased during the year from Rs. 1.5 crores to Rs. 4 crores and the Paid-up Capital from Rs. 1 crore to Rs. 1.9 crores.

In our Cotton Textile Machinery Division we have raised our output of Ring Spinning Frames and spares in order to cope with the present demand within the country. This higher demand arises out of the revised policy of the Government of India in regard to expansion of spindleage and loomage in Cotton Mills. Several mills have been permitted to expand and new mills are being set up. Installation of automatic looms has also been permitted. These are welcome signs of a change in the outlook of our national planners which the mills as well as machinery makers have been waiting for after a considerable period of stagnation. One hopes that the increase in activity this new policy has engendered will be sustained and that the Government will create the necessary conditions to make it stay. The time is now ripe for a review of the capacity existing in this country for the manufacture of Looms and Ring Frames and the capacity now being created for back processes machinery. The indigenous manufacturing interests have shown commendable speed in the past in availing themselves of opportunities for increasing their ranges of production. They have the resources and they are prepared to expand further and we hope they will.

Our Cotton Ring Spinning Frame production, as I have mentioned earlier, is on a much higher scale than hitherto. We are applying the latest methods in Production Control calculated to ensure maximum utilisation of plant capacity and economies in consumption of material. There has been a substantial improvement in the quality of our Frames. A Statistical Quality Control Unit has been started here whose work has in a very large measure helped to locate and eliminate flaws developing at the different stages of manufacture. We are glad also to note that standard specifications for component parts including those of our products are being evolved by the technical sub-committees constituted by the Indian Standards Institution.

Japanese Collaboration

Our Carding Engine production in which we are being assisted by Japanese collaborators, M/s. Howa Machinery Ltd., is progressing satisfactorily. The first batch of our Carding Engines which we hope to put on the market within a few months will have a small proportion of imported components. A year hence we expect to make complete Carding Engines in our own works.

I have already referred to Card Clothing as a new line to be undertaken by us. A separate factory has to be set up for this purpose. Our Japanese collaborators in this project, M/s. Kanai Juyo Kogyo Ltd., will soon be sending here a team of experts to help us in choosing a suitable factory site and also to install the plant. We shall have sufficient capacity installed to produce a fairly big portion of the indigenous demand for Card Clothing.

In our Jute Mill Machinery Project we have made a start on Spinning Frames. We shall be making only a few frames this year with a portion of their components made by our collaborators, M/s. Fairbairn Lawson Combe Barbour Ltd., Leeds. Side by side with this, we are planning for large scale manufacture and for progressive increases in the proportion of components to be made here.

Jute mills in the country have a big programme for rehabilitation of plant and we hope to be able to supply a fairly substantial portion of their requirements in this.

Our Boiler & Heavy Engineering Division has also been working satisfactorily. We have been making Industrial Boilers till now of the Shell Type only. We shall soon be making Water Tube Boilers also. We have entered into an agreement with Combustion Engineering Inc. of New York for technical collaboration in this project. For the Railways we are making Locomotive Boilers.

Our Wagon production is now on a sound footing. In the current year we shall be changing over from Metre Gauge to Broad Gauge Wagons. We have some capacity for Passenger Coaching Underframes too; this line will be developed after we have secured an order for this item from the Railways. There are certain other lines as well of Railway Equipment which we hope to develop by and by. The Railways have done a very useful service to manufacturing interests by opening Show Rooms displaying the goods they import. We are grateful to them and to the Railway Equipment Committee for their very many helpful suggestions.

In Structural Steel Work our Boiler & Heavy Engineering Division, encouraged by the results of its work

in fabricating the Sluice Gates for the Rupar Head Works of the Bhakra Nangal Project—the longest barrage gates in India—has now undertaken fabrication of Radial Spillway Gates for the Fanchet Hill Project of the D.V.C. In this highly specialised work we are being aided, as in the past, by M/s. Voest of Austria. Besides this, we are making structural parts for steel plants—Bustle Pipes, Hot Blast Stove Shells, Tyreer Jackets, Detarrar Casings, etc.

Sugar Mill Machinery will be an additional line of manufacture in the Boiler & Heavy Engineering Division. In this we shall work in collaboration with M/s. Stork-Works, Amsterdam, the world's foremost makers of Sugar Mill Machinery. For this and our other expansion schemes we are constructing new shops and installing additional plant.

Our Steel Foundry Division was set up with a view to achieving self-sufficiency in steel castings and mild steel and special steel sections required for our own different lines of production. We are now making castings as well as ingots. We shall shortly be installing a Rolling Mill for rolling mild and special alloy steel sections. The possibilities of further expansion are being closely watched.

Raw Material Shortage

One unsatisfactory feature about our current production and expansion plans is the shortages we now find of Pig Iron, Steel and Cement. On account of these shortages we have not been able to proceed with our work at a pace we would have liked to. We are, however, assured that these difficulties will soon be tidied over since the Government, being seized of the situation, have taken steps to import these materials on their account.

Pig Iron imported on Government account is proposed to be sold at a uniform subsidised rate on the same lines as imported Steel. As regards indigenous Steel, the advantage we had till now of cheap prices at the major ports will no longer be available to us. Indigenous Steel is now being sold at a slightly higher but uniform price at all Rail-head stations. As fairly big consumers of indigenous Steel we shall hereafter be paying more for this commodity. Since, however, this price equalisation scheme was conceived in the interests of consumers all over the country we welcome it as such. Industrial units like ours situated at or near major ports will suffer a freight disadvantage in the matter of long distance haulage of their finished products. Since they have foregone the slight advantage

they initially held in cheaper Steel we feel it is but reasonable that they get some concession in the matter of Railway-transportation costs of their goods for long distance haulage.

The shortage of trained technical personnel is another problem which we in common with all engineering concerns have to contend with at present. We need to quickly make up an adequate quota of technical personnel to man our new divisions. We have recruited and are still recruiting graduate engineers who will undergo intensive training in our different manufacturing lines. Some of the foremen and assistant foremen at present working in engineering industries have not had the advantage of a basic engineering education. They could do better by equipping themselves with the necessary theoretical background. In this connection we had some time back made a proposal to the Government of West Bengal for establishing an Institute of Engineering for training foremen. The Government have accepted this proposal and your Company has already donated a sum of Rs. 2½ lakhs towards this establishment and it will be making further donations with your approval according to necessity. This institution will impart basic theoretical and practical knowledge enough for men of the foreman category and it is hoped that our own employees along with those of other engineering concerns will derive some benefit out of it.

Government Policy

In the revised Industrial Policy Resolution of the Government of India announced this year vast reservations have been made for development exclusively by the State of certain industries. I mention specially Heavy Castings and Forgings of Iron and Steel, Heavy Plant and Machinery for the manufacture of Machine Tools and Mining and also the Machine Tool Industry as amongst the categories thus reserved. I do not feel that the reasons that have impelled the Government to reserve Iron and Steel, Mineral Oils, Shipbuilding, etc. will apply with equal force to the industries I have named. These are relatively smaller industries that private enterprise can quickly build up under the watchful eye of the State's Development Departments. For rapid development both in quantity and quality these industries would do better under conditions of free competition. At any rate, the Private Sector should not be shut out of these altogether.

But a few years back our Engineering Industries were languishing in hopes of matching their output to their installed capacities through increased output. We seem now to have got out of that rut and some of us have even had a taste of foreign markets. We now have an Engineering Export Promotion Council making surveys of export potential in overseas markets. Our country is likely to have a surplus of steel within a few years which can be utilised in making exportable goods and with our low priced steel we should be able to hold our own in the foreign markets for our wares.

Ladies & Gentlemen, before I conclude I would like to express our thanks and appreciation to the officers, members of the staff and the workers for their unremitting efforts in sustaining the progress of your Company.

THE 1956 NORTH INDIAN TEA SEASON

NEED TO FINISH PRODUCTION AT END OF NOVEMBER

By B. L. Lahoty

THE point has now been reached in the production of this season's tea crop when approximately half has been safely packed into its boxes. This is, therefore, an appropriate time to make a view of the prospects for the industry. From the point of view of quantity we find that the crop is nearly 23 million lbs. ahead of last year. This would indicate that if a similar increase is maintained, north India may find itself approaching 580 million lbs., which is 100 million lbs. higher than the crop of three years ago. Whether the world can absorb this increase is a matter for considerable doubt.

So far as the Calcutta auctions are concerned, only some 20 percent of this season's crop has been sold, and the already increased crop figure just undoubtedly affect adversely the sale of the remaining 80 percent, with one possible exception—that of good quality tea. It has been made abundantly clear this season that although tea in general may be in excess of world requirements, good quality tea is definitely in such short supply that buyers are willing to pay prices higher than ever before in the history of the industry for this particular category. It is, therefore, the producers of the Doars, Terai, Cachar and about half of Assam who are in danger. This could amount approximately to 3/5ths of the northern Indian industry. It seems even at this early stage that there should be agreement among producers to finish production by the end of November. This should constitute a reduction in the crop of some 15 million lbs. and it is this 15 million lbs. of tea which is, frankly, of very indifferent quality in most years. It would be much better to concentrate on old weather work in this month of December so that increased quantities of the first and second flush of next season can be made when quality teas are produced. In fact, the decision should be based on this consideration alone. In addition, it is advisable that each estate should destroy 2 percent of its production if this has not already been sold for chemical purposes. This would ensure that a large proportion of residue tea is prevented from reaching the consuming public. It would also have the benefit of reducing the crop figure by a further 10 million lbs. or so.

Turning more closely to the troubles of Common and Low-Medium producers, it is now accepted that the cost of production consequent on the recent Plantation Labour Legislation has raised levels

to something of the order of Rs. 1-12 a lb. by the time the tea has been sold in Calcutta. A little over 25 percent of this season's Calcutta sales have been sold under this price and with more tea available in the world, the prospects of selling tea at an average price above Rs. 1-12 a lb. are becoming more remote. The question, therefore, arises what can be done to save this high proportion of north Indian producers from making a loss and incurring possible bankruptcy. To start with, it may be as well to study a breakdown of the different items which go to make up the price structure of Rs. 1-12 a lb. Shown below is Case "A" of one pound of Assam tea (which district provides over 60 percent of the north Indian Crop) sold in the Calcutta auctions whose overall cost ex-warehouse Calcutta is Rs. 1-12 a pound.

ITEM	Amount Rs. a. p.	Percentage
Assam transport tax	0-1-0.0	3.57
Transport and Freight (Rs. 7-8 per md.)	0-1-6.0	5.36
Insurance (5/8 percent)	0-0-2.1	0.63
Interest at 5 percent for three months	0-0-4.2	1.25
West Bengal entry tax	0-1-0.0	3.57
Calcutta warehouse and P. C. Charges	0-0-2.3	0.68
Cess	0-0-7.7	2.29
Inspection, lotting, sampling, printing	0-0-0.84	0.25
Brokerage from Seller	0-0-3.36	1.00
Production and management expenses	1-6-9.5	81.40
	1-12	100.00

Case "B" shown below, is the breakdown of a similar pound of Assam tea placed free on board in Calcutta.

ITEM	Amount Rs. a. p.	Percentage
Assam transport tax	0-1-0.0	2.89
Transport and Freight (Rs. 7-8 per maund)	0-1-6.00	4.33
Insurance (3 percent)	0-0-2.10	0.51
Interest at 5 percent for three months	0-0-4.20	1.01
West Bengal entry tax	0-1-0.00	2.89
Calcutta warehouse and P. C. charges	0-0-2.30	0.55
Cess	0-0-7.70	1.85
Inspection, lotting, sampling, printing	0-0-0.84	0.20
Brokerage from seller	0-0-3.36	0.81
Production and management expenses	1-6-9.50	65.84
Export duty	0-6-0.00	17.34
Calcutta warehouse clearing and shipping	0-0-5.00	1.20
Commission from buyer	0-0-2.40	0.58
F.O.B. cost	2-2-7.40	100.00

(Exclusive of buyer's commission on A/c the importer).

Case "C" is another similar pound of Assam tea shown below as sold in London at the auction equivalent of Rs. 1-12 Calcutta.

	Amount (Sterling) d.	Amount Rs. a. p.	Percentage
Assam transport tax	1.13	0-1-0.00	2.69
Transport and Freight Assam-Calcutta	1.69	0-1-6.00	4.02
Interest at 5 percent for five months	0.83	0-0-8.85	1.98
Calcutta warehouse clearing and shipping	0.47	0-0-5.00	1.12
Cess	0.72	0-0-7.70	1.71
London warehouse shipping and sale charges	1.47	0-1-3.70	3.50
Freight and insurance, Calcutta-London	2.48	0-2-2.45	5.90
Export duty	6.75	0-6-0.00	16.07
Brokerage from seller	0.42	0-0-4.50	1.00
Production and management expenses	2-2-0.4	1-7-1.80	62.01
	3-6-00	2-5-4.00	100.00

In Case "A" it will be seen that no less than 9.43 percent of the cost structure goes in tax to either the State or Central Government. Case "B" is even worse and 24.97 percent goes in a similar manner. In Case "C", the percentage is 20.47 percent.

Effect on Competition

It seems inconceivable after the unhappy experiences of the jute industry, that the Government should continue to burden with taxes the country's main export. That it has handicapped it to the extent shown above, in addition to the normal tax on profits, is nothing less than sheer folly. At the present time, north India's main rival in the sale of Common tea in London is the African producer, who is not burdened by any of these taxes. In consequence, the African producer is able to land his tea in London at considerably lower cost and is in the happy position of being able to make a profit. He is, therefore, able not only to continue production but to expand it, and it is estimated that in 10 years' time, Africa's exports will go from their present figure of 50 million lbs. to 150 million lbs. Add to this the Press announcements that Argentina expects to be in a position to export 30 million lbs. of tea in 1960, while Russia plans to produce 390 million lbs. at the end of the sixth five year plan. On top of this we have increased production from Iran, Japan and China. And for full measure, the old competitors, Ceylon and Indonesia, are not going to sit still, one can be sure. These should be sobering thoughts for those who have the interests of Indian tea at heart and there cannot be any doubt that some alteration must be made to the taxation policy which is at present applied to the Indian tea industry.

The simplest method would be to remove all initial taxes, such as excise, export duty, Assam transport and West Bengal entry taxes. If this were to be done it would permit producers to make profits and it so often appears to be forgotten that when a profit has been made the Government is, of course, the main beneficiary. However, before anybody can benefit it is necessary that a profit should be made. At the moment this is in doubt for nearly 3/5ths of the industry. Once a profit has been made it would be fair to say that 2/5ths of this profit goes to the Government in tax, while 2/5ths would go to the shareholder and 1/5th would be ploughed back into the company for development purposes. It is not difficult to see that the Government also gathers a proportion of the 2/5ths that goes to the shareholder.

Another important aspect of the value of making profits is that producers can then spend money in the industries ancillary to the tea industry. Of these there are many, and they mainly concern the maintenance and improvement of the tea-producing properties. In this manner, the Government once more stands to gain since it also taxes the different ancillary industries to the same extent when they make a profit in their turn. A great deal is said in these days of "siphoning-off" or "mopping-up" excess profits. This seems to be a contradiction in terms since the tax structure of the country is so based that the bigger the profit, the greater the amount of revenue which will accrue to the Government. To "siphon off" profits at one level merely means reducing the ultimate profit or even making it impossible to earn a profit at all; the whole idea appears to spring from muddled thinking. Any denial of this would be an admission on the part of the Government that it neither believes in its own company taxation structure, nor the power of the machinery to collect the taxes properly.

The solution to the problem lies in the hands of tea producers. The Government should realise its responsibility to the tea industry. It should be made clear that only disaster can come from a policy whereby taxes, etc., are imposed on tea before or at the time of its sale or export. If the Government were patient and waited until the sales had been effected and the profits made, then it could have its share of the prosperity and of the incomes of those who either work or invest in the industry. Possibly the most important aspect of the removal of all taxes on tea is that the price of the commodity is reduced to the consumer. And one fact we know to be absolutely true, is that the lower the price of tea to the public, the greater is the quantity consumed.

Stocks and Shares

MARKET RULES QUIETLY STEADY

ISOLATED FEATURES IN ENGINEERING, CEMENT AND MISCELLANEOUS ISSUES

Wednesday Evening.

BOTH the speculative and investment sections of the Calcutta stock market have been steady this week. Indian Irons have risen from last week's clearing level of Rs. 35-3 to a maximum of Rs. 36-5. This evening's closing quotation is Rs. 36. Indian Coppers are a firm feature among speculative counters and have improved to Rs. 7-2 on the approach of the bonus issue. Other clearing shares have been well maintained. The buoyancy is largely due to rumours about an early dividend declaration for Indian Irons. The undertone of the market is now more uncertain. Operators are becoming cautious on the Bombay market's reactions to the Government's restrictions on cloth stocks. The view appears to be that this move anticipates a general policy of restrictions on wholesale and retail trading where this is considered necessary to curb inflation. The volume of business is now lower and a wave of the usual pre-Puja slackness appears to be drifting over the market.

Investment shares are fairly steady. The engineering section has been the main feature with gains recorded in a number of scrip. Miscellaneous shares too have found good support. The main reason for the bright conditions in these two sections has been better corporate news. Improved auction prices and reports of increased Russian purchases have helped tea shares and the feeling in this section has been better. Apart from Burrakurs, which have been appreciated on interested buying, coals have been neglected. Jutes have lost the interest which followed the re-sealing announcement and the better goods prices which resulted. Government securities are quiet.

Details of the week's trading follow.

The small enquiry reported for Government securities last week appears to have been satisfied and, with the exception of one or two loans, sellers predominated the market. Three percent Conversion Loan 1946-86 was one anna easier at Rs. 75-2 and Non-terminable Paper was nominally quoted at Rs. 75-4. In short-dated issues, there were buyers of 1957 at Rs. 99-12 and 3% 1958 at Rs. 99-9. Among medium-dated loans, 3% 1959-61 was quoted lower at Rs. 97-15 and both 3% 1963-65 and 1964 were marked back to Rs. 94-8; 2% 1961 was, however, in good demand at around Rs. 93-7 as was 2% 1960 at Rs. 96-6. In National Plan issues, 3% 1961 was traded at Rs. 99-2 and 3% 1964, after being asked for up to Rs. 98-9, was later on offer at Rs. 98-8-6; 3% 1965 was fully steady at around Rs. 98-8-6 and 3% 1967 was slightly better at Rs. 98-7. In the long-dated group, 3% 1966-68 turned sellers at Rs. 93-2 and 3% 1970-75 was again quoted lower at Rs. 89-7; 2% 1976 had small buyers at Rs. 83 and 3% 1974 was asked for at Rs. 98-7-6. State loans continued quiet with very little business passing.

Business in preference shares was of a nominal nature and a mere handful of shares changed hands. In the miscellaneous group, the outstanding feature was Associated Hotels, which were marked up from Rs. 79 to Rs. 90. Bathgate, done at Rs. 42-4 and Borra at Rs. 103. Calcutta Electric were marked at Rs. 15-5 and a small lot of Chrestian Mica Industries was crossed at Rs. 58. Dalmia Cement Rs. 100 paid-up was quoted at Rs. 101 and a small lot of Dunlop Rubber 2nd Preference changed hands at Rs. 91. There was a good enquiry for Indian Aluminium at Rs. 84 and business was reported in a small lot of Indian Cable shares on a filled-up deed basis at Rs. 27-12. New Victoria were transacted at Rs. 5-13, Orient Paper 1st at Rs. 99 and Rohtas Industries "B" at Rs. 604. In jute, Auckland 5% came to hand at Rs. 76 and Lawrence "B" were reported at Rs. 75. Standard Jute were sold at Rs. 84.

In the banking section, Punjab National were unchanged at Rs. 57 while United Commercial were marked down from Rs. 57-4 to Rs. 56-8. United Bank of India "D" shares changed hands at Rs. 4-8 while Hind Bank were fairly steady at Rs. 38-12.

In the railway section, two transactions were reported, namely, in Arrah-Sasaram at Rs. 71-8 and Dehri Rohtas at Rs. 13-6. Cotton shares were featureless. Elgin Mills were done at Rs. 27-9 while Kesoram were marked back from Rs. 18-5 to Rs. 17-14. New Victoria were unchanged at Rs. 2-10 as were Cawnpore Textiles at Rs. 9.

Except for Burrakur Coal, which were turned over in fair quantities at around Rs. 16, little business was reported in coal shares. Bengal were marked at Rs. 507 ex-dividend as were New Beer-bloom at Rs. 19 ex-dividend. Central India came to hand at Rs. 7-7 as did Western Bengal at Rs. 6-8. After a long lapse, Hurriladih changed hands at Rs. 23-7 and Ranegunge were done at Rs. 13-2. Rewa Coal were unchanged at Rs. 23 as were East Indian at Rs. 33-3. Equitable were marked at Rs. 29-14 x.d.

The enquiry for jute shares which followed the re-sealing of 5% of the looms appears to have fizzled out completely with business reduced to a

trickle. Here is a chart showing representative price movements:

	Opening 20-9-56 Rs.	Closing 26-9-56 Rs.
Anglo-India	192	192
Belvedere	158	158
Birla	18 4	17 14
Cheviot	191	185
Ganges	71	67
Lansdowne	105	101
National	25 6	25 5
Northbrook	26 8 x.d.	26
Union	160 x.d.	160 x.d.

Electric supply shares were subdued and only four shares were mentioned during the week under review, namely, Calcutta Electric at Rs. 13-7, Dishergarh Power at Rs. 100, Kurseong Hydro-Electric at Rs. 5-8 and Patna at Rs. 11-8.

Sugar shares followed the pattern of electric supply shares and in this section, too, only three shares were dealt in, namely Belsund at Rs. 12, Carew at Rs. 8-15 and Shree Krishna Gyanoday were crossed at Rs. 12-12.

Engineering shares provided the best section, and in most cases closing prices were higher than those prevailing at the beginning of the week, as will be seen from the following table:

	Opening 20-9-56 Rs.	Closing 26-9-56 Rs.
Burn & Co.	360	373
Indian Galvanizing	21 12	22
Indian Iron	35 5	36
Indian Standard Wagon	215	228
Jessop & Co.	37 3	37 3
Richardson & Cruddas	27 6	27 6
Textile Machinery	23 7	23 8

Paper shares were dull with India Paper Pulp quoted at Rs. 25-2 and Titaghar at Rs. 39-8. Shree

TO HERALD AN INDUSTRY'S COMING OF AGE

NEARLY TWENTY YEARS AGO, the development of the aluminium industry in India was initiated with the help of Canadian technical and financial resources. Today this vital industry has entered a new phase of growth with Indian Aluminium Company's decision to install a new 10,000 ton smelter at Hirakud. This smelter will be India's largest and will more than double the country's production of aluminium.

As in the past, the Canadian associates of Indian Aluminium Company will contribute their know-how and experience in this new phase of growth. They will share, too, in the costs of the project, to finance a part of which the Company proposes to issue new capital.

Indian Aluminium
Company Limited

A Canadian-Indian Enterprise

436

Gopal were unchanged at Rs. 18. In cement, Assam Bengal were one anna higher at Rs. 7-5 and both Ashoka and Orissa were steady at Rs. 12-6 and Rs. 13-8. Sone Valley were a good feature today, improving from Rs. 9 to Rs. 9-11.

In insurance, Concord of India were higher at Rs. 12-4 while New Asiatic were freely offered at Rs. 3-11 ex-dividend.

In shipping, India Steamship were steady at Rs. 10-9 as were Port Shipping at Rs. 17-12.

Among miscellaneous industrials, Airways (India) were done at Rs. 5-4 and Alkali & Chemical Industries were also better at Rs. 23-8. Anglo Brothers were bought on investment account at Rs. 23-4 and Bengal Flour were well maintained at Rs. 38 as a result of cornering operations. British at Rs. 23-4 and India Corporation were at Rs. 29-14. Hindunlop Rubber were neglected at Rs. 10 and Imman Motors were steady at Rs. 15-12. Imperial Tobacco were enquired for at the higher rate of Rs. 40-14 while India General Navigation were unchanged at Rs. 11-0. Indian Wood Products met with good enquiry and spurred from Rs. 43 to Rs. 48. Jardine Henderson were offered at Rs. 95 while Martin Burn were steady at Rs. 25-2. Metal Box reacted from Rs. 29 to Rs. 28-12 and National Carbon were very steady at Rs. 29-13. Rallis rose from Rs. 40-2 to 42-8. Rostas Industries were marked at Rs. 22-1 and Shaw Wallace were shaded at Rs. 13-10.

In the mining group, Indian Copper met with sustained enquiry and improved to Rs. 7-1. Other issues in this section were unchanged.

Tea shares were a slightly better market with Betan improving to Rs. 56-8 and Bishnauth New to Rs. 21-8. Bateli changed hands at Rs. 24-6 ex-dividend as did Bishnauth Old at Rs. 23 and Bor-

mah Jan at Rs. 21-15. Brahmaputra declined to Rs. 8-13 but Brooke Bond maintained Rs. 20-11. Dessai & Parbutia were done at Rs. 413 and Dibrugarh, Jutilbari and Methoni were marked at Rs. 24-8, Rs. 25 and Rs. 22-7 respectively. Tyroon were done at Rs. 297 and Hantapara and Hasimara came to business at Rs. 198 and Rs. 32 respectively. Gielle were crossed at Rs. 28-14 but Soom were Rs. 2 easier at Rs. 30. Tukvar changed hands at Rs. 12-6 and Hattikhira improved to Rs. 15-8. Dauracherra recorded Rs. 15-12 and New Samanbagh advanced by over a rupee to Rs. 19-12. Patrakola were steady at Rs. 202 as were Hansqua at Rs. 24.

The TEESTA VALLEY TEA COMPANY has made a net profit of Rs. 60,333 for the year ended last December, against Rs. 2,62 lakhs. The dividend has been cut from 40% to 15%. Renewals and additions reserve is allocated Rs. 10,000 (Rs. 1 lakh), leaving a carry-forward of Rs. 56,736 (Rs. 54,405). The crop decreased from 440,947 lbs to 370,473 lbs, and the average price fell from 48.73 annas a lb to 41.97 annas a lb. Estimates for the current year have been made for a crop of 5,000 maunds at a cost of Rs. 8.22 lakhs.

The profit of the TEZPORE TEA COMPANY amounted to Rs. 7,16 lakhs, including Rs. 59,985 brought in, for the year ended last December. The dividend has been reduced from 50% to 15%, but the ordinary capital has meanwhile been increased by a one-for-four scrip issue. The carry-forward is Rs. 55,278. The crop was 32,034 maunds and the average sale price declined from Rs. 2-6-8 a lb to Rs. 1-13-3 a lb. Estimates for 1956 have been made for a crop of 28,000 maunds at a cost of Rs. 37.48 lakhs.

May and granted substantial increases in wages. Production costs have risen sharply but controlled selling prices in West Bengal and Bihar were increased from 5th July by only Rs. 3 a ton. These developments will have an adverse effect.

OPERATORS TURN CAUTIOUS IN BOMBAY DEALINGS

GOVERNMENT TEXTILE POLICY HOPES

Wednesday Evening.

THE Bombay Stock Exchange closed last week in an easier mood, and equity prices were lower on selling pressure. Operators were disinclined to extend commitments due to a number of uncertainties. The decision that mills and wholesalers will not be allowed to maintain more than one and three months' stocks, respectively, has been bearishly interpreted. There is general inclination to await further developments in Government policy about increased mill production. Fears of further credit squeeze continue to disturb sentiment. During mid-week, rumours of an increase in bank rate were circulated, but they were short-lived as it was generally believed that no such decision could take place now since the Governor of the Reserve Bank is out of the country.

Tata Steels were lowered to Rs. 199, as were Indian Iron to Rs. 35-15. Alcock Ashdown lost at Rs. 346-4 and Premier Construction changed hands at Rs. 217. Tata Locomotive were maintained around Rs. 175 in the expectation of a maiden distribution. Premier Automobiles came to hand at Rs. 105-8, while Hindustan Motors were freely offered around Rs. 9-15.

The mill section was dotted with a number of losses. Prices closed lower, and at every rise profit-taking was evident. Bombay Dyeing were done at Rs. 645, as were Century at Rs. 355. India United Ordinary changed hands at Rs. 12-9 and Simplex were transacted at Rs. 204. Svadeshi made Rs. 257, and Kohinoor Rs. 367-4. Apollo lost at Rs. 2-13-6.

Miscellaneous industrials declined in line with the rest of the market. Associated Cement were done at Rs. 203 and Digvijay Cement at Rs. 201-8. Sugar shares were quiet, with Belapur closing functionally lower at Rs. 253. Walchandnagar Industries lost at Rs. 270-10. Shipping shares were, however, steady on prospects of increased freight. India Steamship improved to Rs. 10-9, as did Great Eastern Shipping to Rs. 20-2. Scindia were absorbed at Rs. 19-3. Among mining shares, Indian Copper were steady at Rs. 7-8 on influential support, while Sivrajpur Syndicate were taken at Rs. 87-8. Bombay-Burmah came to hand at Rs. 751-4 and British India Corporation advanced to Rs. 11-7 on interested support. National Rayon were steady around Rs. 272-8 and National Carbon met with support at Rs. 29-14 on strong investment buying. Tata Chemicals were transacted at Rs. 20-4 on dividend hopes.

Business in banking shares has been restricted, with Bank of Baroda coming to hand at Rs. 100. Bank of India were done at Rs. 171. There was very little interest in the insurance section, with New India quoting lower around Rs. 44-8.

Electricity supply undertakings were steady, and Ahmedabad Electric were taken at Rs. 95-10. Andhra Valley were done around Rs. 1,223-12 and Tata Hydro at Rs. 127.

THE WEEK'S TRANSACTIONS

(In the following list of stocks and shares in which transactions have taken place during the past week the figures indicate Opening Quotations Highest for the week. Lowest for the week Closing Quotations—Quotation for the Corresponding Closing Date a Year Ago, the last named being shown in parenthesis and will not be given where such a quotation is not available.)

STOCK MARKETS FAIRLY STEADY
TURNOVER STILL RESTRICTED
DUE TO SUEZ CRISIS

London, 26th September.

THE Suez Canal crisis continued to dominate the London stock markets during the past week and conditions were much the same as those prevailing in recent weeks. Prices for the most part held reasonably steady, and the general tone was not unsatisfactory. A number of good features developed following selective buying, but business as a whole was at a low level. Very quiet conditions prevailed in the gilt-edged market where prices recorded little change on balance. In the foreign section, German bonds moved somewhat irregularly while other foreign bonds and rails were subdued. Antofagasta and Costa Rica issues, however, attracted modest demand from time to time. Dollar stocks lost ground in sympathy with the steady fall in New York. Bank and insurance shares held steady to firm. The industrial market responded to a selective demand and a number of good features developed, but generally, this market was subdued and prices were little changed. Shipping shares were outstanding and recorded a widespread advance under the influence of the Suez situation. Electrical issues, by contrast, receded following Associated Electrical's half-yearly statement showing a fall in profits, and the announcement of a £14 million issue by General Electric. An all-round advance was recorded in Free Staters and other developing mines shares, while the older producers were selectively supported. Chartered

Tanganyikas and Messinas were outstanding features in a generally firm copper share market, while tin shares recorded widespread advances. Oils moved irregularly in response to various developments in the Suez situation, and generally were little changed on balance. Stimulated by recent dividend statements, rubbers advanced, while tea shares also improved on small but selective buying.

The Money Market

It has been a very difficult week in the London short loan money market. For most of the time, there has been considerable calling by both the large clearing banks and outside institutions, while very little fresh money has come into the market. Government funds were disbursed early in the week, but this did little to relieve the position and at times, discount houses were paying 5 percent and, in isolated instances, 5½ percent for tight money. On several days a number of discount houses were obliged to go direct to the Bank of England and borrow on the full Bank rate terms of 5½ percent for the week. The position eased towards the week-end, but even then, conditions could hardly be described as comfortable. The stringent credit conditions have kept bill business at a low ebb, but rates of up to 5½ percent have been paid for December dates. Following the bill tender on Friday of the past week, discount houses adjusted upward their buying rates for fine bills. Applications for £280 million worth of 91-day bills totalled £380,005,000 and were allotted at an average rate of 103s 4.86d compared with 102s 0.77d in the previous week. Offerings this week comprise £280 million worth of 91-day bills. The Bank of England return for the week ended 19th September showed that notes in circulation were about £10 million lower at around £1,882 million, and bankers' deposits were about £1 million lower at around £225 million.

Activity on Wall Street

Foreign dollar bonds were slow and featureless on Wall Street. Australian and Japanese Government issues gave a little ground, while the Union of South Africa 4½ percents added a small fraction. German Nationals were mixed with gains and losses of fractions to one point or so. Danish 4½ percents lost a major fraction under small offerings with Italians and Norwegians little changed either way. Greeks were a shade higher and Serb 7 percents moved up fractionally on improved volume of business. U. S. Government obligations extended the recent recovery with the long end of the list scoring sharpest gains in several weeks. Dealings were slow. Traders attributed the upturn to professional activity. Investment quality corporates were firm with demand centring in newer issues. Convertibles were marked down sharply in heavier dealings, in sympathy with the persistent decline in the previous week of stock market values. The hardest hit with losses of 3 to 4 points were Bethlehem Steel, Dow Chemical, General Dynamics and Radio Corporation.

U.S. Federal Reserve Return

The U.S. Federal Reserve return for the week ended 19th September shows that gold stock rose by \$1 million to \$21,884 million. Foreign deposits fell by \$21 million to \$355 million, while foreign investments declined by \$14 million to \$3,667 million. The Federal Reserve sold \$243 million worth of bills. Total discounts and advances fell by \$191 million to \$413 million, while the aggregate of excess reserves of member banks increased by \$225 million to \$519 million. The daily average excess reserves of member banks rose by \$23 million to \$735 million while their daily average borrowings fell by \$358 million to \$654 million. Business loans of the New York city banks rose by \$69 million to \$10,762 million compared with a rise of \$138 million to \$8,547 million in the corresponding period a year ago.

Vegetable Oil Market Dull

The vegetable oil market was generally dull and inactive with price changes favouring the buyer. Following the removal of export duty, offers of Indian linseed oil were at more competitive rates, but the market is currently unsettled; the quotations for forward shipments range between £116 and £123 c.i.f. However the presence of Indian offers caused some weakness in the British Standard Specification grade, and ex-tank offers were down by £2 a ton. Coconut oil lacked attention and moved lower with Straits bulk oil finally obtainable at £90 c.i.f. or possibly a shade less. Copra was also cheaper, but finally steadier at lower levels with the market narrowing. Edible oils admitted little quotable change, although the quiet business passing was mainly thought to be at discounted rates. A tender of 360 tons of South African groundnuts slackened off, although Rhodesian fair average quality was holding at £82 c.i.f. after the week-end business at £81 c.i.f. North Continent.

Poor Demand in Rubber Market

A recovery movement early in the week ended 20th September, was poorly supported, and values moved irregularly downwards. After responding to improved Eastern advices, prices advanced on some factory demand, but trading was slow for the greater part of the week. Although traders were inclined to take a less gloomy view of the Suez crisis, the situation still overshadowed the market and made business difficult by the complications of insurance and freight rate increases, and also by the scarcity of offers for shipment, especially to Mediterranean ports. Near months closed a 1d a lb. lower on the week, while 1957 positions lost about ¼th of 1d a lb. Offers of good quality sole crepe were small and commanded full recent values based on 44d a lb. for ¼th inch smooth No. 1 on the spot.

New Delhi

PROJECT REPORTS ON THE DYESTUFFS
INDUSTRYTHREE FIRMS INDICATE WAYS TO EXPAND
AND DIVERSIFY PRODUCTION

(FROM OUR NEW DELHI CORRESPONDENT)

PROJECT reports on the dyestuffs industry have been received from three firms by the Government of India and are being closely examined. The report from Montecatini of Italy is in seven volumes, that of Imperial Chemical Industries of Britain is in two volumes, and the one from Bayer of Germany is also in two volumes. There may be differences on details, but there is fundamental agreement among the three firms on the practicability of establishing a dyestuffs industry in India. Some dyes are already being manufactured here. The industry is protected. What have not so far been manufactured are the intermediates. They are connected with coal tar distillation; as such, the three steel plants in the public sector should assist in establishing a dyestuffs industry. On the assumption of what the future demand for cloth is likely to be, estimates have been made of the requirements of dyes. According to one estimate, it is necessary to manufacture 57,076 tons of 153 intermediates, as follows. Those worth producing in India are:

	Number of products	Quantity in metric tons.
1. Aromatic intermediates to be produced in central plants	97	36,311
2. Aliphatic chemicals of the C2 range to be produced in places other than central plants or dyestuff factories mentioned under (1) above	19	2,202
3. Products which may be produced in Sindri	9	3,542
4. Products of acetylene chemistry which may be produced in other suitable places	5	1,002
5. Products which may be produced in textile auxiliary factories	2	5
6. Hydrocarbons and other coal tar derivatives	18	13,340
7. Others	3	674
	153	57,076

Those not recommended for production in India are:

1. Each required in quantities of 10 tons or more a year	19	497
2. Each required in quantities less than 10 tons a year	23	78

Two Factories

For this purpose, it is stated, there should be two factories, one in Bombay State and the other in the West Bengal-Bihar area. The following intermediates are suggested for the two factories:

Central Factory 1 (Bombay area)

1. Chlorination plant	3 sets of equipment
2. Sulphonation plant	7 sets of equipment
3. Acetylation plant	6 sets of equipment
4. Alkali fusion plant	6 sets of equipment
5. Nitration plant	9 sets of equipment
6. Reduction plant	6 sets of equipment

Central Factory 2 (West Bengal-Bihar)

1. Phthalic anhydride Maleic acid	} plant
2. Alkyd resin plant	
3. Phenol/B-naphthol plant	
4. Plant for refining benzene and toluene.	

The Bombay factory, it is stated, would manufacture 90 products. The West Bengal-Bihar factory, it is suggested, would manufacture the following seven:

	Metric tons a Year
Alkyd resins	1,200
B-Naphthol	1,200
Maleic acid	800
Phenol	1,400
Phthalic acid anhydride	1,500
Refining of:	
Benzene	10,000
Toluene	1,000
	17,100

The following aliphatic products, it is suggested, should be produced in places other than these two factories:

	Metric tons a Year
Acetoacetic ester	42.8
Acetoacetic ester sodium salt	21.4
Acetone	248.6
Acetic acid	637.2
Acetic acid anhydride	269.4

Products which may be manufactured in Sindri are:

	Metric tons a Year
Formaldehyde	35.4
Formic acid	11.6
Hexamethylene tetramine	100.0
Isobutanol	23.1
Methanol	3,223.6
Oxalic acid	76.0
Oxalic acid diethyl ester	46.5
Phosgene	13.0
Urea	13.1
	3,542.3

Products of acetylene chemistry which may be manufactured in other suitable places are:

	Metric tons a Year
Calcium cyanamide	665.7
Dicyandiamide	1.2
Thiourea	153.0
n-Butanol	16.7
Vinylacetate	165.0
	1,001.6

Products which may be manufactured in textile auxiliary factories are:

	Metric tons a Year
Nekal A (Isopropyl naphthalene sulphonate)	0.6
Nekal BX (n-Butyl naphthalene sulphonate)	4.1
	4.7

The Power
to do work

Energy means the power to do work, and India needs all the energy she can get if the targets of the Second Five Year Plan are to be fulfilled. The proportion of commercial energy—that is to say, coal, electricity and oil—to the whole energy system is still extremely low in India. Nevertheless, it is beginning to have its impact on traditional methods and ways of life, even in remote rural areas.

The contribution made by oil in the commercial energy pattern in India has increased by 100% since 1948. Oil is the most flexible source of energy available... it is, in fact, 'packaged power' in an easily handled form. It is our job to maintain and extend a distribution organization which will ensure that energy from oil flows to all parts of the country cheaply, efficiently and in sufficient quantities.

BURMAH-SHELL

... IN INDIA'S

LIFE AND PART OF IT

440

Hydrocarbons and other coal tar derivatives would be:

	Metric tons a Year
Benzene, crude but already part-purified	10,000.0
Benzene-Ligroin mixture	22.4
Carbazol	2.5
o-Cresol	0.8
Ligroin	11.2
Naphtha C	1.9
Naphthalene, hot-pressed	2,444.0
Naphthalene, pure	180.0
Gamma Picoline	11.0
Piperidine	0.2
Pyridine	26.3
Pyridine II	6.5
Xylene crude	607.3
Xylene pure	16.7
Xylenol	9.3

Others, raw materials and intermediates, would be:

	Metric tons a Year
Ethanol	450.0
Glycerol	212.5
Amylose AN (modified starch)	11.2
	673.7

The manufacture of the following is not recommended because it would be too intricate and costly, and the quantity needed in India is too small.

1. Fast Blue BB Base (requirements 30 tons a year)
2. J Acid Urea (requirements, 16.3 tons a year)
3. Beta-naphthylamine (quantity required, 36.8 tons a year)
4. Diphenylether (quantity required, 34.1 tons a year)
5. Cyanuric chloride (quantity required, 10.2 tons a year)
6. Phenyl isocyanate (quantity required, 10.7 tons a year)
7. Diethyl metanilic acid (quantity required, 17 tons a year)
8. 3-Chloro-2-toluidine (quantity required, 74.6 tons a year)

According to rough estimates, each of the two factories will cost Rs. 8 crores, half of which will be needed for plant and machinery.

Surplus Labour in Ordnance Factories

The Finance Minister, Mr. T. T. Krishnamachari, discussing the question of automatic looms for the textile industry, spoke of "automation without tears". Others have now taken up the refrain by demanding "industrialisation without tears". The problem is whether this is possible, and, if so, at what cost. The long overdue retrenchment of surplus workers in ordnance factories, followed by a strike, has spotlighted the issue. The Defence Minister, Dr. K. N. Katju, made a very well-reasoned statement in Parliament on the subject. He said that there has for some time been a large and redundant labour force in the ordnance factories. The tax-payer had been paying Rs. 6 lakhs a month to maintain it in idleness. Apart

from other considerations, Dr. Katju said that this payment for idleness was demoralising the whole set-up and might have unfortunate repercussions on the defence organisation. The Prime Minister, intervening, added that everything would be done, and was being done, to find other jobs for the retrenched civil personnel of ordnance factories. Despite these appeals and assurances, many who sympathise with the surplus staff have gone on strike to coerce the Government to maintain 6,000 men in idleness at the country's expense.

The trouble-shooters, namely, the communist members of Parliament, have been raising the question of labourers working on river development projects, who should normally be retrenched after the projects have been completed. The plea is being made that they too should be kept in employment.

This affects the whole basis of labour policy. The accepted principle so far has been that a worker has a vested right in a piece of work and must go out to seek other employment after the work has been completed. An hotel, for example, is being constructed in New Delhi and an army of masons, carpenters and others now working on it will have to look for other jobs after the building has been completed. Efforts will, and should, be made to provide them with work on other projects, but to claim that they must be kept on the labour roll of the hotel even after building operations have ceased would be to propound a new law for labour in India. This is exactly what is being suggested for the ordnance factories. These 6,000 men were employed because of the war, and have continued to draw their salaries although the war ended over 11 years ago. It is argued that the men who are to be retrenched have wives and children, who would suffer if the former lost their jobs. But, firstly, the men, when taking up employment, knew that it was temporary and was only for the duration of the war. Secondly, the tax-payer, who pays to maintain them in idleness, may not be a bachelor either.

Demobilised Soldiers

In 1946, there were 12 million men in the Indian forces, as against less than a million today. Nearly 11 million men have thus been demobilised or retrenched, during the last ten years without anybody shedding a tear for them. The civilian, some say, has deprived the soldier by elbowing him out from the employment exchanges which were specially created for the latter. These men mostly came from the rural areas. The point raised here is, why was not similar sympathy shown the soldier? One reply may be that a soldier did not "create wealth" and was in the nature of a "parasite." But so are these 6,000 men from the ordnance factories. The basic fact is that a soldier who volunteers to stake his life for the country is not placed on an equal footing with the civilian. The issue raised by the strikers is of fundamental importance—whether a worker has a vested right in a job which he has entered in the clear knowledge that it is temporary and therefore terminable? Secondly, whether the policy for employment has any regard for productivity? The country cannot afford to boost employment for its own sake; it cannot have thousands of men merely digging holes and then filling them up.

Effect on Exports

The Ministries of Finance and Commerce in general, and the Finance Minister, Mr. Krishnamachari, in particular, have been greatly perturbed over the foreign exchange position. Plans to stimulate exports are being examined. These plans should take into consideration the cost of production of a commodity. This, in turn, depends on labour costs. Has any study been made about labour costs in relation to productivity in India?

The Board of Trade Journal of Britain recently published a study of the competitive strength of West German and British exports, in which it said: "Comparative labour costs per unit of output, which are what must be considered here, depend on four factors: (a) earnings; (b) paid holidays; (c) social security payments and other additions to wages; and (d) differences in productivity." Since the inauguration of the first five year plan, emphasis has often been laid on statistics. Considerable literature has been produced to show a rise in the standard of living, per capita income and so on. But there is hardly any study of comparative productivity at the beginning of the two five year plans. Such a study should help in understanding the point raised by the Defence Minister, Dr. Katju, that the productivity of permanent staff in the ordnance factories is being undermined by the large force of parasites maintained at the public expense.

In the ultimate analysis, it seems that democracy in India is fast coming to mean the rule of the nuisance potential. A soldier, for example, is not allowed to organise himself into trade unions, so he has no nuisance value. He is demobilised without tears. His civilian counterpart in the same department can organise himself, with the result that everybody from the Prime Minister downwards issues appeals and assurances that everything is being done to absorb the idlers. The case of the liquor trade further illustrates the point. Completely disregarding the unemployment aspect, and the economic consequences, prohibition is being enforced simply because men in the liquor trade are not organised. Yet, in the name of employment, crores are being spent on khadi because its advocates have a nuisance value.

Equalising Coal Prices

The Government's plan to equalise the freight structure for coal, and thereby equalise its prices,

should have far-reaching effects on the economies of certain areas in India and of their populations. Since the time of Adam Smith, the value of territorial division of labour has been recognised. The location of industries has so far been influenced by the location of raw materials in general, and of coal in particular. It is because of coal that industries have been concentrated in the West Bengal-Bihar region. With the new plan in action, it might be worthwhile setting up a steel plant in even, say, Rajasthan.

Two important issues arise. Firstly, the price of coal affects the price of all the manufactured articles which depend on coal. The Indian consumer may not count for much, but the foreign consumer does count, for he cannot be coerced into paying high and uncompetitive prices. And it is he who enables India to earn foreign exchange. Some instances can be cited. A foreigner refuses to eat Indian sugar, in spite of its sweetness, nor can he be persuaded to own an Indian-made motor-car, unless prices are reduced to competitive levels. India is already being pushed out of the world textile market by Japanese competition. The point worth considering is whether the equalisation of coal prices will add to the cost of production, particularly of exportable commodities. It may be added that if the policy of the Government is to create equality of opportunity not only for each Indian but also for each State, it should, for example, take early steps to equalise the opportunities for producing sugar in such a manner that Uttar Pradesh and Madras become equal, not in prices but in profits. As it is, it will be interpreted as a plan to lure away industries originally allocated to West Bengal and Bihar, and to deprive these two States of the chief advantages nature has given them over the others.

Talks on Plan for Next Year

The Planning Commission is formulating the 1957-58 plan, and discussions are in progress. Enquiries show that the one year plan will be based on the availability of resources, particularly foreign exchange. In the allocation of priorities, some projects may be held over and others may be slowed down. Efforts are being made to avoid non-development expenditure.

Higher Technical Institutes

The U.N.E.S.C.O.-sponsored Higher Technical Institute in Bombay will start functioning this year. Pending the construction of the Institute buildings in Bowati, near Bombay, arrangements are being made to house lecturers and install equipment somewhere else in the vicinity. The U.N.E.S.C.O. venture is being assisted by Russia. Six Russian professors, assisted by Professor Wilkins of the U.K. and Dr. W. J. Ellis, head of U.N.E.S.C.O. in India, toured the country last May and selected Bowati as the site for the Institute. Fifteen Russian professors, with their interpreters and equipment, are expected to reach India in time for the inauguration of the Institute in November.

The German Government has given the initial personnel and equipment for the third higher technical institute to be located in north India. The first institute is already functioning in Kharagpur, West Bengal. The site for the third institute is now being selected. The likely choice is Kanpur or Allahabad.

Shortage of Consumer Goods

Newsprint, paints, varnishes and rubber tyres are some of the consumer goods which are in short supply at present. Efforts are being made to stimulate their import. Such a course is not possible for cotton textiles, firstly, because of political considerations, and secondly, because of the higher prices of foreign, coarse and medium cloth. This situation, which has largely been created by the advocates of the *Ambar Charkha*, has seriously affected foreign exchange earnings. On the one hand, foreign exchange is needed to import certain categories of consumer goods which are in short supply. On the other, there has been a decline in earnings because of a decline in exports of cotton textiles. This in turn is largely due to higher home demand for cloth and to intensified Japanese competition. The Government may be driven to build a buffer stock of cotton textiles as well by creating additional spinning capacity in mills. An immediate revision of the targets for cloth production is proposed.

Australian Sheep in India

India is a possible market for 10,000 Australian Polwarth sheep. This is the estimate of Mr. S. M. Carr, stud stock expert of the New Zealand Loan and Mercantile Co. Ltd., who recently visited this country. He inspected the Polwarths sent here two years ago from the Riverina area of Australia. This original shipment of 500 sheep was made through the U.N. Food and Agriculture Organisation. The Indian Government has found the Polwarths so satisfactory that it has asked for two more shipments, states Mr. Carr. The first flock is running on good country in Kashmir, at the foot of the Himalayas. On the basis of his talks with Government officials, Mr. Carr believes that there may be a market for about 10,000 Polwarths in India. The Government is working on a sheep and wool development drive. While the wool yield of native sheep ranges from about 1 lb. to 2 lbs. a head improved varieties can yield about 6 lbs. The Polwarth, one of the few sheep breeds evolved in modern times, takes its name from the district in western Victoria where it was developed in the 1880's. It is the product of a Merino-Lincoln cross, and is a dual purpose wool-and-meat type noted for soft-handling comeback wool.

London

CHANCELLOR LEAVES FOR I.M.F. AND WORLD BANK MEETINGS

COMMONWEALTH ECONOMIC TALKS TO FOLLOW

(FROM OUR LONDON CORRESPONDENT)

MR. MACMILLAN, the Chancellor of the Exchequer, left London by air on Thursday night for the United States, accompanied by Sir Edward Boyle, Economic Secretary to the Treasury, and a team of senior officials from the Treasury and the Bank of England. The main purpose of the trip is to attend the annual meetings of the International Monetary Fund and the World Bank, but of no less importance, and of even greater interest, will be the usual discussions which follow after these international meetings, between the Commonwealth Finance Ministers and their advisers. These usually cover a lot of ground, since they are not based on any fixed agenda, and this time will probably be even more diverse than is normal in view of the many current problems which face the Commonwealth countries in the financial and economic spheres. Mr. Macmillan will surely be called upon to explain the progress of his anti-inflationary measures, how they have been affected by the Suez situation, and especially his future intentions with regard to the credit squeeze and the repercussions thereof on the financing of development in other parts of the Commonwealth.

The disclosure that the Chancellor may be joined for the Commonwealth discussions by Mr. Peter Thorneycroft, the President of the Board of Trade, suggests that the most important of the subjects to be considered will be the British Government's attitude towards the Western European plan to form a Customs Union or a free-trade area. Continental countries have been pushing this idea vigorously of late and a working party of the O.E.E.C. will start examination next week of the details of a common market, and how the United Kingdom might be associated therewith, while the Federation of British Industries—at the request of Mr. Thorneycroft, who has been giving the whole question considerable thought recently—is finding out the views of the business world on the idea. Any British participation in such a free trade area in Western Europe, even if it were only partial, would be of considerable concern to other Commonwealth countries. They have been kept informed of developments so far, but a full exchange of views at first hand would be of greater value to all concerned.

Some "Facts" for Labour

Before he left for Washington, Mr. Macmillan took advantage of the opportunity presented by an engagement to speak to his constituents at Bromley to make a fresh and up-to-date assessment of the economic situation, and incidentally to reply to some of the criticisms of the Government's policy voiced at the Trades Union Congress. Contrary to expectations, it was not a fighting speech; indeed, it was almost conciliatory. Basically, there was no serious disagreement between him and the T.U.C. leaders on Britain's economic problems, the two main ones being the movement of labour from one job to another and of how to keep prices steady. The division came on how the second of these was to be achieved. There was a view that any appeal to commonsense or reason was foolish and that the only thing to do was to take action which would enforce it, and particularly building control and the greater use of import control. Mr. Macmillan did not reject control if they were likely to achieve results, and the crisis justified them, but he warned against unemployment and the return to rationing which would be inevitable. In support of the success of the policy the Government was following the Chancellor interspersed his speech with some interesting figures. Average take-home pay for a worker is now about 45 percent higher than in 1951. Prices have risen only about 25 percent, leaving the worker with a clear gain of over 15 percent or a rate of increase more than enough to double the ordinary man's standard of living in 25 years. Since the war, production has gone up by about 30 percent, money incomes by 90 percent, with the result that our costs of production have recently risen twice as fast as the Americans' while the Germans' have not risen at all. "At Brighton," Mr. Macmillan said, "I was criticised because I was neglecting exports. But during the first eight months of this year the value of total recorded exports was 12 percent higher than in the same period last year, the value of imports was only 1 1/2 percent higher. We have not got the export surplus we want, but we have moved a long way towards it, and there are still more jobs than there are people available. It is because we must continue this improvement that I am so anxious that we must be sensible about wages and prices."

The British Employers' Confederation, on the other hand, has come forward with an outspoken statement criticising the T.U.C. for its policy on wages and its rejection of the Chancellor of the Exchequer's plea for restraint, which it says was supported by "false" arguments and was injurious to the national economy.

August Trade Figures Reassessed

The full figures of Britain's overseas trade in August have now been made available, and they furnish an opportunity for at least a partial revision of the unfavourable impression created by the preliminary returns. Disregarding the seasonal trend and excluding the special silver shipments to the United States, the Board of Trade finds the "underlying increase" of exports in July and August together as being close on 10 percent in value and rather more than 6 percent in volume, which is more or less in line with the increase shown in the first half of this year. The August decline in exports was fairly widely spread among various types of goods, but the fall was heaviest in cars and aircraft. On the import side the increase was against the normal seasonal trend, but was more than covered by an unusually heavy arrival of oil during the month. The commodity pattern largely followed the July trend (which was relatively low). One explanation for the sharp increase in the trade gap was the fall in re-exports, which at £82 million was the lowest total since July last year.

On the basis of this reassessment the Board of Trade says the August figures do not justify any anxiety, but what is not so good is the fact that after moving in Britain's favour for three months the terms of trade in August remained steady at 97, having come back to this figure from 102 in April. Both import and export indices were unchanged at 103 and 106, respectively (1954 average = 100). Within the manufactured goods class on the export side, however, the index for engineering products rose by 2 points to 108—and this is the sphere in which we are meeting the strongest competition.

Steel Industry's Plans

The steel industry has once again revised its expansion plans upwards, according to the annual report of the Iron and Steel Board to the President of the Board of Trade. As a result of new plant brought into operation last year it is now estimated that the steel industry has the capacity to produce 21.3 million ingot tons in 1956. The plan provided for an output of something over 22 million tons by 1958, but as a result of certain new projects and adaptations it is now thought that production in 1958 may rise to about 23.5 million ingot tons. Whether the possible output for 1956 will actually be reached depends on the effect of the ban on overtime by maintenance workers. The expansion plan had been based on the expectation that the steel demand for the manufacture of durable consumer goods (including cars) for the home market would increase by about 10 percent a year or twice as fast as the needs of the capital goods industries. But the expansion over the past two years has been much more rapid, averaging more than 20 percent a year. This exceeded all the estimates made by Government departments, by the metal-using industries themselves, by the steel industry, and by the Board. A study is now being made of the probable level of demand for steel in the early 1960s. In due course a new plan for the development of the steel industry in the years following 1958 will be drawn up. "Substantial additions" to the industry's productive capacity will become necessary again after 1958, the Board states. Some major projects which will affect the capacity after that year have already been approved since the end of 1955 or are now under consideration. The Iron and Steel Board has been told by the Government that there should be no postponement of any schemes which were essential to maintain or increase steel production. Only expenditure which had no direct bearing on production should be restrained. In fact, the capital expenditure of the steel industry is rising sharply. "From an examination recently made by the Board, investment in 1956 is likely to be substantially greater than in recent years," the report states.

India to Build Jet Aircraft and Engines

It was announced in London the other day that the Government of India has ordered 25 Folland Gnat light jet fighters and will also manufacture Gnats under licence at the works of Hindustan Aircraft Ltd., in Bangalore. Deliveries of the British-built aircraft will begin in April, and will be spread over a period of about two years. To facilitate the start of production in India, Folland will supply a number of components and detail parts and will train Indian technicians, both at the factory at Hamble, near Southampton, and in India.

The Indian Government has also signed a long-term agreement with Bristol Aero Engines Ltd., which includes authority to manufacture in India, under licence, the full range of Bristol "Orpheus" turbojet engines. The "Orpheus" will power both British-built and Indian-built Gnats. The "Orpheus" engines will be produced at what will be India's first jet engine factory, near Bangalore, where there are already facilities for the overhaul and maintenance of aircraft engines. Negotiations between the Bristol company and the Indian Government began early last year. The British Minister of Supply, Mr. Reginald Maudling, welcomed "this example of collaboration between the Government of India and Britain's aviation industry," and said that it had the full support of the British Government. He added: "India is now entering for the first time the highly specialised field of precision engineering for aviation, and the agreements mark the start of a new industry in India—gas turbine manufacture."

HEAVY CHEMICALS OUTPUT
MAY RISE THIS YEARASIC DEVELOPMENT PROBLEMS
(FROM OUR BOMBAY CORRESPONDENT)

THE heavy chemicals industry continues to make satisfactory progress. Preliminary estimates indicate that the final production figures at the end of this year both for soda ash and caustic soda will show an improvement over 1955. Although the monthly output with an average of 6,473 tons of soda ash so far this year indicates only a fractional increase over that for last year, industry circles here believe that barring unforeseen circumstances, production will pick up in the next few months and the 1955 total of 77,272 tons will be exceeded. The improvement in caustic soda has been more noticeable. The monthly rate of production rose from 2,854 tons last year to 3,231 tons for the first quarter of 1956, recording a net gain of 377 tons a month. An encouraging feature is that the soda ash industry has been able to reduce its cost of production. Manufacturing costs fell from Rs. 271 in 1952-1953 to Rs. 250 a ton in 1953-1954, and now it is expected that a figure of Rs. 233.31 a ton will soon be reached. These figures exclude the return on block and interest on working capital.

This is indeed a remarkable achievement considering that the raw material prices have remained static while labour costs have risen considerably. The fall is ascribed to technical improvements within the Indian industry and to the economies effected by an increase in production. It is to be hoped that foreign technical experience will be available for the country's new soda ash units envisaged under the second five year plan. The chief difficulty of course lies in designing plant. Packaged soda ash plants are just not available. Blueprints have to be specially drawn up to suit the requirements of each individual manufacturer taking into account local conditions and the quality of raw materials available. Each unit has to be designed separately because each unit is fabricated by a different engineering manufacturer. There are about nine major units manufacturing soda ash in the ammonia soda process now universally used, and balancing them presents another problem. If all the units have not been designed to work in consonance or if there is any defect in adjustment, the entire process is thrown out of gear. It is only now that the two existing plants have been able to rationalise their manufacturing equipment. These are some of the technical pitfalls which the proposed new units will have to guard against.

Expansion Plan of Tatas

It seems that further economies in the cost of production will be possible when Tata's expansion plans to increase output from 140 tons a day to 200 tons a day are complete. But equally it seems that this will be the final drop and costs will stabilise at the new level for an indefinite period. Although production is scheduled to be increased under the second five year plan, the additional quantity will be manufactured by three new plants which have yet to come into existence. The distribution of production over five plants, therefore, means that the industry will consist of medium-sized units whose production costs must remain higher than those of the large-scale units normally associated with the soda ash industry in the technologically advanced countries. It would be logical, therefore, to infer that the imported product will continue to be cheaper and the Indian industry will need to be protected for an almost indefinite period.

The present policy of medium-sized units is a sound one provided it is only an interim measure. A dispersal of the industry is necessary considering the size of the country, the distance between the present manufacturing and consuming centres, and the heavy freight charges. But demand is likely to outstrip the envisaged increased production even before the new units are commissioned. A secondary plan of expansion will, therefore, be necessary and it may then be thought appropriate to sanction extension to the units in operation rather than to set up additional plants. It should, therefore, be possible, in due course, to convert the present medium-sized industry into a large-scale industry which would compare favourably with the units installed in Britain and the United States. Meanwhile, it would be worthwhile to pay the price of protection. Another welcome development is that the new plant in Dalmianagar, which will have a rated capacity of 100 tons a day, will confine itself to the production of heavy soda ash. The demand for the grade is estimated at approximately 40,000 tons a year. Heavy ash is used by the glass and the bichromate industries. At present, the entire quantity is imported from abroad because the two units have so far concentrated on the production of light ash.

Caustic Soda Manufacture

While the soda ash industry is now set on its logical course of development, there is a complication in the case of caustic soda. The problem relates to manufacturing processes. There are two methods of producing caustic soda. The first is the electrolytic process by which a solution of brine is electrolysed which gives rise to caustic soda, chlorine and hydrogen. The second process is the causticising process by which a solution of soda ash is treated with lime and this reaction results in caustic soda and calcium carbonate. The first process is the more economical and is commonly used in the modern caustic soda industry. But a problem is posed in this country by the chlorine which is a by-product of the electrolytic

method. For every one ton of caustic soda manufactured by this process, 9/10th of a ton of chlorine is simultaneously produced. The demand for chlorine in terms of its orthodox has been estimated at 9,000 tons a year while the quantity actually generated seems astronomical in comparison. This is a serious problem, for the disposal of surplus chlorine is no easy matter.

In spite of the fact that Tatas have set up a benzene hexachloride plant which consumes an appreciable quantity of chlorine, they are still faced with the problem of a surplus. They have, therefore, been compelled to manufacture a part of their caustic soda output by the wasteful causticisation process. The same considerations apply to the new plants and at least two of the three proposed soda ash units will be compelled to reserve 50 percent of their output for conversion into caustic soda by this uneconomical method. The caustic soda industry is, therefore, faced with a serious handicap which will persist until adequate uses are found for chlorine. But it seems extraordinary that the Government should make it a condition that the new soda ash plants must divert as much as 50 percent of their output to a use which is fundamentally uneconomic. Would it not be advantageous in the long run to continue to import this additional quantity of caustic soda at a cheaper price from abroad till the chlorine problem is solved and allow the soda ash industry an unobstructed field of development? If the soda ash industry had reached a stage of overproduction, there would be a case for such a diversion, but this stage of course has not been reached.

The fact is that the development of the basic heavy chemical industry has reached a stage where it must have new outlets if it is to develop further or even consolidate its existing position. The development of consumer industries is now an urgent necessity. An extremely strong case exists for the development of the fine and intermediate chemicals industries. These fine chemicals and intermediate chemicals are needed by a number of ultimate industries which are now functioning in this country; for example, the pharmaceuticals, dyestuffs and the plastic industries which at present depend on imported intermediates. In effect, the basic industry and the ultimate industry exist, but the intermediate industry which links the two is still missing. This is a vital link without which the overall chemical industry cannot flourish. A wide and a lucrative field of development lies ahead which also offers a challenge to free enterprise.

Sharing Cloth Excise Duty Burden

The textile muddle is now becoming serious. The recent increase in the excise duty on cloth has had wide repercussions, and business conditions in the textile market remain abnormal. Ahmedabad millowners have already announced their willingness to absorb the entire increase, but the Bombay industry feels differently. The Bombay Millowners Association Committee passed a resolution urging member mills to share the burden of the increase with their respective wholesale dealers on a fifty-fifty basis provided the latter give a guarantee that no part of the increase will be passed on to the consumer. Most mills, it is reported, are willing to adopt this suggestion, but an influential section of the wholesale trade is unwilling to co-operate. The Working Committee of the Bombay Piecegoods Merchants Mahajan summoned an extraordinary general meeting at which a resolution was passed requesting the mills to bear the entire burden of the new duty or, in the alternative, to offer the merchants the option of cancelling their existing contracts. It is contended for the trade that the profit on wholesale transactions works out to a bare 2 percent on an average on the actual turnover and dealers, therefore, will have to sustain heavy losses if any part of the increased excise duty falls on them. It seems unlikely that the Bombay mills will accede to this request at the present stage in spite of the precedent set in Ahmedabad. The general feeling in mill circles here is that Ahmedabad will have to have second thoughts and sheer financial circumstances will force the mills there to reconsider their position in due course.

Meanwhile, a stalemate exists. The season has begun, but buyers are holding off their purchases till the situation clarifies. The brisk activity usually associated with this time of year is absent, and the textile trade is practically at a standstill in circumstances of accumulating stocks. The recent action of the Government in issuing a fair retail price schedule has further complicated the situation. Although this was published initially in the eastern zone of the country, it is believed that similar action and similar prices will soon be posted on an all-India basis and the Bombay mill industry has already lodged a protest with the Government on the ground that the suggested fair prices bear no relation to the realities, and are, in fact, extremely unfair. At the other end, retail establishments have openly expressed their inability to conform to this schedule and fear unnecessary friction with their customers. In computing these prices, which appear to be unreasonably low, the Government, it is presumed, has applied the Tariff Board formula of 1952, but it is not clear if it has given adequate consideration to the changed conditions of production. Irrespective of the merits of the schedule, however, it is difficult to see what useful purpose would be served by it, unsupported as it is by legal authority. The only result so far has been to create suspicion in the mind of the consumer against the retail merchant and ultimately against the mill industry.

Increase in Prices and Demand

There is no doubt that cloth prices have risen, and steeply so, in recent months, but this would

appear to be the logical consequence of a number of factors which are now in operation. Obviously, an inflationary tendency must manifest itself in a rise in the general price level, particularly of foodstuffs and cloth. A part of the increase in textile prices must, therefore, be put down to this factor. Secondly, it seems beyond doubt that the demand has risen at a faster rate than supply. Assuming an annual per capita consumption of 17 yards, the total internal offtake would be in the neighbourhood of 6,460 million yards, and if the export target of 1,000 million yards is taken into account, the overall requirement of the country must then be estimated at 7,460 million yards. Against this, the actual textile production last year, including the output of the small-scale industry, amounted to 6,847 million yards. It would, therefore, appear that there is a deficit of approximately 600 million yards. Although the production of cloth has increased and the mill output amounted to 3,056 million yards in the first seven months of this year, with July hitting a record figure of 478 million yards, the demand has also registered a further rise. Stocks with mills soon after the all-time high output of July amounted to no more than 148,678 bales, which represent only two weeks' production. In normal times, mills usually carry stocks equivalent to the output of five to six weeks. This would indicate that the pressure of demand is being well sustained. This pressure is likely to be intensified with the increase in population and with the steep up in individual expenditure due to extra second plan incomes. The laws of supply and demand will, therefore, operate in full strength. An increase in the price level will be a logical outcome of this almost unrestrained pressure.

Profits and Controls

The charge that the mills are capitalising on the present scarcity in order to make abnormal profits, ignores the fact that the cost of production has also risen in terms of increased labour charges, higher prices of raw cotton and mill stores in general. It is doubtful if the excessive profits which the Government seems so anxious to mop up do in fact exist. If this be true, then the enhanced excise duty must eventually sieve through to the consumer. Assuming that the enhanced excise duty succeeds in checking abnormal mill profits, if they exist, how would this restrain the retailer from adjusting his prices to the rising level of demand? It will merely mean that the retailer will be free to take full advantage of the situation to the exclusion of the millowner, while the consumer will be left in exactly the same position as now. The only feasible solution would seem to be the imposition of price controls at every stage. Although such a method is to be deplored because of the unwholesome practices which creep in with it, it is the only effective way of stabilising prices at a reasonable level and to curb inflationary tendencies. But before any controls are imposed, it would be necessary to conduct a thorough enquiry and to ensure that adequate allowance is made for the increased costs of production and the increases which are likely in the immediate future. The price formula would have to be linked to the cost of industrial materials index and labour earnings. It may also be worthwhile to consider the feasibility of statutorily earmarking a percentage of the mill profits for the rehabilitation of plant. Obsolete and outworn plant is a fundamental weakness of the Indian textile industry which must be removed at the earliest possible opportunity. This would seem to be a satisfactory method of financing replacements without imposing any undue burden on the industry's capital resources.

The long-term solution is not of course to increase production and this has been repeatedly pointed out by the industry in informal statements and informal approaches to the Planning Commission. But the mill industry was allowed to expand till June this year when an announcement was made permitting the installation of 14,600 new looms, but the output from these looms is to be reserved for the export market. Even if this supply were to be diverted to the home market, it would be totally inadequate to meet the situation. The wiser course would seem to be to permit expansion on a much bigger scale and to reduce the burden of responsibility proposed for the small-scale industry. Meanwhile, conditions of scarcity will continue. The mills are already working to full capacity and a third shift seems impracticable because of worker resistance and the disproportionate increase in production costs. After all, nearly 20 percent of the machinery installed in India's mills is worn out and there is a limit to the strain that can be put on it.

Indian Cotton for Lancashire

The growing importance of India as supplier of raw cotton to Lancashire is now apparent. This follows the continued drop in supplies from Egypt, and it is believed that by the end of this year, British payments to India for cotton will exceed considerably those to Egypt for the first time in history. Already the quantity of cotton received from India so far this year exceeds Egyptian supplies. According to official statistics, during the first eight months of this year, Britain imported from India 369,618 cantals worth £2,979,390, an increase of nearly 50,000 cantals and over £240,000 in value for the corresponding period of last year. During the same period, supplies from Egypt dropped in quantity from 248,862 to 185,030 cantals and in value from just over £4,500,000 to £2,986,032. In the season ended August this year, India's exports of raw cotton exceeded her imports. Exports amounted to 600,000 bales and imports to 598,030 bales as against 330,000 bales and 625,672 bales respectively in the previous season.

Uttar Pradesh

SALES TAX CONCESSIONS ON
FOOD AND CLOTHGRAIN DEALERS CRITICISE
CHANGES

(FROM OUR LUCKNOW CORRESPONDENT)

SUBSTANTIAL sales tax concessions and exemptions have been announced by the Finance Minister, Hafiz Muhammad Ibrahim, on cloth and foodgrains. Foodgrains have now been exempted from sales tax and foodgrain dealers are, instead, required to pay an exemption fee according to a slab system. At present, a dealer with a turnover of Rs. 12,000 has to pay a tax of Rs. 375. In future he will have to pay only Rs. 150 on the same turnover, the exemption fee being calculated on the basis of three pies to the rupee. The present multi-point tax on ata, suji and maida has been reduced from six pies in the rupee to three pies, single point. The maximum exemption fee payable by the foodgrain dealers has been fixed at Rs. 8,000. The U.P. Grain Dealers Association has taken a highly critical view of these changes as, in its opinion, the real purpose behind them is only to give an impression to the people that foodgrains are no longer taxed. In fact, according to a spokesman of the Association, the exemption fee will operate as a multi-point tax, because every dealer has to pay the fee which will ultimately be passed on to the consumer. He also contends that the incidence on the consumer will be nine pies in the rupee and not three pies as suggested by the Finance Minister. The grain dealers, however, are willing to accept the arrangement provided the transactions between one wholesaler and another of value ranging between Rs. 1 lakh and Rs. 8 lakhs are not included in the turnover. Otherwise, they propose to continue their agitation.

The other major concession announced by the Finance Minister relates to a 50 percent rebate on cloth imported from mills outside the State. He also told the State Legislature that eventually the sales tax on cloth would disappear when it is merged by the Centre with the excise duty. Cloth dealers too are not satisfied with the concession for two reasons. Firstly, the rebate does not apply to cloth manufactured in U.P. itself. And secondly, it makes no change in the rate of sales tax on cloth in U.P. which is fixed at one anna in the rupee compared with three pies and six pies in the rupee in neighbouring States like Rajasthan, Madhya Bharat, Punjab and Delhi. Relief to cloth dealers, however, has been given in another way by major reductions in the license fee payable by them. The drop in annual income to the exchequer on these concessions is estimated at Rs. 20 lakhs.

Electricity in U.P.

The U.P. Electricity (Temporary Powers of Control) Act has been given a further lease of life for two years. Uttar Pradesh has not set up an Electricity Board as required under the Central Act of 1948, but an undertaking has been given by the Government that the Board will be brought into being in the financial year 1957-58. For some time past, it has been stated, the Government has been experiencing difficulties in dealing with situations caused by the failure of licensees to discharge fully the obligations imposed on them by the terms of their licenses. According to the Minister for Power, the Government has also been receiving complaints of inefficiency of staff, irregular supply of energy, and threats of closure of power houses for one reason or the other. The Government has now taken powers to deal with such situations by incorporating in the State Act, Section 4 of the Indian Electricity Act, 1910.

Having abolished the zamindari system in the rural areas in one of the most extensive land reform measures to be undertaken in any State since Independence, the U.P. Government is now pushing through a Bill for similar abolition of intermediaries in urban areas. Against the Rs. 137 crores which had to be paid as compensation to the dispossessed zamindars in the rural areas, it is estimated that the sum payable to urban zamindars as compensation will be Rs. 2 crores. A Bill introduced in the Legislature in this connection last week provides that compensation up to Rs. 50 would be payable in cash and the rest in bonds. The measure would affect about 15 million acres of agricultural land out of a total of about 45 million acres throughout the State. The number of urban zamindars who will be affected is placed at 145,448. The Bill does not take into account uncultivable land in the urban areas as the price of such land varies from town to town and it is difficult to fix the rate of compensation. The compensation to which an urban zamindar would be entitled is fixed at a flat rate of 16 times his net assets instead of on a sliding scale, as under the Act for rural areas. The Bill does not seek to interfere with possession or rights in unoccupied areas. In order to obviate hardship to lessees who had taken out leases on land for building purposes but have let it out temporarily for cultivation, it has been provided in the Bill that such lessees will be able to oust their sub-tenants and utilise the land for building purposes.

Rationalisation in Kanpur Mills

The Kanpur Textiles Mills Rationalisation Inquiry Committee, appointed under the Chairmanship of Mr. Justice Bind Basni Prasad has

year, has signed its report and submitted it to the Government. The report, it is understood, runs into 500 pages and there are appendices and a note of dissent which runs into another 300 pages. It is believed that on two-thirds of the recommendations there has been unanimity among the members. Mr. Bagla of the Swadeshi Cotton Mills and Mr. Bell of the Elgin Mills represented the employers on the Committee while labour was represented by Mr. Ganesh Dutt Bajpai of the Suti Mill Mazdoor Sabha and Mr. Kashinath Pandey of the I.N.T.U.C. Four experts also worked with the Committee. The report deals with three categories of workers—spinners, weavers and doffers and clerks. These categories constitute 48 percent of the labour in the seven mills covered by the report. According to Mr. Bind Basni Prasad, the report should pave the way for rationalisation among other categories of workers also as death of precedents had so far blocked work in this direction.

Minute of Dissent

Mr. Ganesh Dutt Bajpai, in his minute of dissent, is understood to have raised the question of wages and workload. The chairman's ruling on the differences between representatives of employers and labour is, it is learnt, that "while improvements will certainly improve the working of the looms, all the improvements suggested need not be mandatory." On the question of technical improvements, employers maintain that besides the cost of automatic warp machines being prohibitive (Rs. 450 a loom) it was not the practice to install these devices on plain Lancashire looms unless they were used to manufacture very fine quality cloth. The chairman is understood to have ruled that it would be best to experiment first with a view to finding out how the weaver reacts to it and what effects there might be on the quality of cloth, production, efficiency and wages.

On the number of operations to be done each hour, the chairman has struck a middle course and ruled that there should be 96 operations, whereas the labour representatives had demanded 80 and the employers' representatives 134. The question of substitute workers on machines permanently vacated also created serious differences of opinion. The employers wanted rationalisation to be introduced on such machines straightaway. Labour's demand was that workers should be made permanent before rationalisation was introduced on these machines. The chairman is understood to have expressed the view that since rationalisation on machines worked by substitute labour, through natural wastage, would take about 10 years, the employers' view might be accepted on the point.

MAKING SOAP WITH NON-EDIBLE OILS

CENTRAL AID FOR COTTAGE UNITS

A PROGRAMME to provide whole-time employment to 4,000 workers in the cottage soap industry, using non-edible oils, has been approved by the Government of India. The programme will also provide employment to 100,000 workers for two months. Financial assistance amounting to Rs. 46.41 lakhs has been sanctioned by the Union Ministry of Production to the All-India Khadi and Village Industries Board for implementing the programme during the current financial year. The programme proposes the setting up of 165 compact oil-crushing and soap-making units of three different sizes. This is in addition to the 67 units which were sanctioned in the last two financial years. Some of these have started production, while others are under construction. Of the 165 units, 15 will have four oil-crushing centres each, 30 units two oil-crushing centres each, and the rest one oil-crushing centre each. Each unit will also have a soap-making centre. The units will be set up by statutory State Boards, co-operative societies and registered bodies, which will receive from the All-India Board loans and grants for meeting the capital cost. They will also be given loans for providing working capital for the units.

A loan of Rs. 5 lakhs has been sanctioned to the Board for being disbursed to existing soap-making and oil-crushing centres as against Rs. 4 lakhs in the last financial year. The new loan will be given to the existing centres which had repaid the earlier loans within the stipulated period, for expansion of works or for collection of non-edible oil-bearing seeds, etc. A production subsidy on neem and other non-edible oils at the rate of one anna a seer is to be given and a sum of Rs. 223,000 as grant has been sanctioned for the purpose.

Training of Personnel

To meet the requirements of trained personnel for the existing and proposed centres, the training programme is being enlarged. Training of supervisors-chemists, managers of oil-pressing centres and apprentices is being arranged in several places. During the current financial year, training is to be given to 100 supervisors-chemists for soap-making centres, 300 managers of oil-pressing centres and 200 apprentices for soap-making and oil-crushing. Five training institutions are to be given grants amounting to Rs. 22,500 for implementing the training programme. A model centre for soap-making has been set up in the Nasik Vidyalaya for providing training. The manufacture of soap from non-edible oils is to be introduced as a craft in 100 schools. For this, 100 teachers are to be trained under the programme. In addition, grants are to be given to educational institutions so as to encourage students to make an interest in the technique of manufacturing soap. An amount of Rs. 25,000 has been provided as grant for conducting experiments and research on non-edible oils for producing soap. As manufacture of soap with non-edible oils is a departure from present practice, it is necessary to educate public opinion and popularise the use of such soaps.

EXPORT DUTY ON LINSEED OIL ABOLISHED

The Government of India has removed the export duty of Rs. 250 a ton on linseed oil.

SUGAR PRODUCTION AND DESPATCHES

Production and despatches of indigenous sugar from factories amounted to 1,857,000 tons and 1,525,000 tons up to 15th September, 1956, in the current season, against 1,587,000 tons and 1,037,000 tons respectively in the corresponding period of the previous season. Stocks with factories on 15th September, 1956, were 746,000 tons, compared with 596,000 tons last year.

WHOLESALE PRICE INDEX FALLS

THE official wholesale price index (base: year ended August, 1939=100) declined by 0.3 per cent to 420.4 during the week ended 8th September, 1956, compared with 421.5 for the previous week. The index was, however, higher by 0.6 per cent and 19.0 per cent respectively when compared with the corresponding weeks of last month and a year ago. The Food Articles index went down further by 0.1 per cent to 395.5 due to a fall in the prices of tea for export (-6%), wheat in Jabalpur (-3%) and in Hapur (-1%) and sugar (-1%) in spite of an advance in the prices of tea for internal consumption (+6%), coffee (+5%), and rice in Calcutta (+1%). A fall of 0.5 per cent to 508.3 in the index for Industrial Raw Materials was brought about by a decline in the prices of linseed (-3%) and raw jute, rapeseed and lac (-2% each), although the prices of raw silk (+11%), gingellyseed in Jhansi (+3%) and manganese ore (average export price) (+1%) rose. The Semi-Manufactures index also declined by 0.4 per cent to 408.6. Items which showed significant changes were: Gingelly oil (-9%), linseed oil (-7%), mustard oil (-4%), buffalo hides and groundnut oil (-2% each) and gingelly cake (+5%). The Manufactures index stood at 391.4 as compared with 391.2 for the previous week. The prices of jute manufactures (+1%) witnessed a rise while those of glass and chemicals (-1% each) were marked down. The index for the Miscellaneous group moved down by 2.2 per cent to 552.4 because of a decrease in the

prices of chillies and tobacco both in Calcutta (-6% each) and black pepper cochineal (-1%). Chillies in Patna (+3%), however, showed an increase.

MIDDLE CLASS COST OF LIVING INDEX NUMBER FOR CALCUTTA

(Base: August, 1939)

THE Middle Class Cost of Living Indices, by groups, have now been brought up to August, 1956. As compared with July, the August Indices for Food, and Fuel and Lighting reveal rises of 4 points and 9 points, while those for Clothing and

Miscellaneous remain unchanged at 534 and 283 points.

Correlating all the factors, the Middle Class Cost of Living Index for Calcutta shows that the cost of living increased by 3 points during August, 1956.

DULL WEEK FOR GUNNIES AND FIBRE

LITTLE BUYING INTEREST SO PRICES FALL

THE past week has been the dulllest for some time. Although prices have moved through a fairly wide range, this has been due not to any real goods activity but to speculation. The tendency, with one or two exceptions, has been for prices to decline. In the absence of any large overseas interest, there has been very little confidence in the market. The notable exception was early in the week, when it was reported that the Argentine was showing interest in hessian. As is usual when this buyer features in the news, prices advanced rapidly. The Argentine's current buying policy, however, is vastly different from that of previous years. It is now so worked that it has little effect on prices, and the reaction to the news was more the result of wishful thinking among speculators than of direct purchases. It was rumoured that Australia was again interested in woolpacks, and the combination of bullish factors succeeded in forcing up both sacking and hessian. The trade was not allowed to enjoy this state of affairs for long, however, as speculators soon stepped in to try and take advantage of the rise. Once the legitimate business was completed, heavy selling pressure in the fatka market depressed prices, and for the remainder of the session rates gradually declined with speculators predominant.

The fibre markets were slow to react to the changes in goods, so that over the week raw jute rates dropped by only 8 annas a maund. Buyers showed very little interest on account of the weak goods market and the small business that was reported was confined, in the main, to Indian mills. These purchases were invariably made at below the quoted rates. Sellers were reluctant to discount to any great extent as many of them still held bullish ideas on the basis of upcountry reports and the continued restrictions on the movement of jute from Pakistan. The latest raw jute arrival figures tend to confirm sellers' ideas on the latter point. In the first two months of the current season, arrivals from Pakistan were 86,400 bales less than in the corresponding period of last year, although arrivals in August were almost double those of July. Against this, arrivals from Indian stations were nearly double those of last year, making an increase in the grand total of 219,000 bales. Mills' consumption of raw jute has increased in the same period by over 100,000 bales, so the situation, on paper, appears to be quite healthy. But operators are taking a long view and are gambling on the possibility that the eventual shortfall of Pakistan jute will not be covered by the increase in indigenous fibre. Prices of Pakistan jute at present are high compared with Indian jute, and as long as the disparity continues, there seems to be little likelihood of a substantial fall in current Indian rates. The weather has considerably restricted the movement of jute, both upcountry and in the Calcutta area. This is particularly so in the Daissee areas. There not only is it impossible for imports to be handled, but sellers have been unable to dry their present holdings, so supplies to mills have been held up.

THE JUTE MARKETS

Manufactured Goods: Opening prices in the jute goods market were depressed last Thursday. With no real goods business, all sections recorded substantial losses. September shipment B Twills dropped by Re. 1 to Rs. 113-8 a 100 bags, and January-March shipment by 14 annas to Rs. 113. Forty-inch 10oz. hessian lost 8 or 10 annas for the near and forward positions to rule at Rs. 43-5 and Rs. 41-14 a 100 yards respectively. Speculative activity and heavy fatka selling pressure were mainly responsible for this fall, but towards the close sentiment improved on interest from overseas buyers. Friday's opening brought about a considerable improvement. Heavy goods prices moved up rapidly and were about Re. 1 higher than on the previous day. Hessian followed with a 6 or 8 annas rise. Business was done at this level, but the scale of operations was not as large as had been expected. Once the Argentinean and Australian requirements were satisfied, prices fell back almost as rapidly, and by Saturday the previous day's gains were almost completely nullified. At this stage, September B Twills stood at Rs. 113-14, with forward shipment at a discount of 14 annas. Forty-inch 10oz. hessian operated at Rs. 43-8 for September shipment and Rs. 42 for January-March shipment. Heavy speculative activity over the week-end depressed the markets still further, and a sharper fall was prevented only by local shipper covering. Even so, sacking lost 12 annas or Re. 1, and hessian about 8 annas at the opening on Monday morning. During the day, quiet conditions prevailed. On Tuesday, all markets were closed on account of the hartal. Opening quotations on Wednesday morning, which were purely nominal, were as follows:

	September	October	Oct.-Dec.	Jan.-Mar.
	Rs.	Rs.	Rs.	Rs.
40in. 8oz.	35-12	35	34-10	33-12
40in. 10oz.	43	42-13	32-8	41-10
B Twills	113	113-2	113	112
Heavy Cees (Plain)	112-4	114	113-12	112-8
A Twills	136-12	137-4	137-8	137-4
Liverpools	125-12	126-4	126-8	126
Cornacks	113-4	113-10	113-10	113

Raw Jute: The fibre markets were almost completely neglected throughout the past week, buyers taking only a limited interest in view of the weak trend in gunnies. Indian mills appeared to be the only interests willing to do business and several purchases were reported for forward shipment at 8 or 12 annas below the market rate. Opening quotations on Thursday morning showed a drop of 8 annas a maund from last week's closing prices, and Dhubri-Northern jute was quoted at Rs. 29 a maund basis Bottoms for September-October shipment. The majority of sellers, although keen for business, were reluctant to discount prices to any great extent in view of the steadier upcountry markets, so there was a wide difference in sellers' and buyers' ideas. Lower and Upper Assam jute were almost completely neglected. Sellers showed a preference for business in Murshidabad District Tossa, where prices appeared to be lower than in other regions, but this fibre is not popular with many buyers as it normally contains a fair amount of jungli jute.

Mills' interest was limited to small lots of Dhubri-Northern jute at Rs. 28-8 to Rs. 28-12 for September-October shipment, and ready bills of lading at Rs. 29 a maund, basis Bottoms. Western area fibre changed hands at prices ranging from Rs. 28 to Rs. 28-4 and jungli at Rs. 27-8 to Rs. 28 a maund, all for September-October shipment. Small lots of Daissee were purchased at Rs. 30 to Rs. 31 a maund for seven to ten days' delivery, while jettty purchases rose as high as Rs. 31-8. Daissee Mesta was done at Rs. 27 a maund.

At the close, the market was unchanged, and opening quotations on Wednesday morning were as follows:

Indian Jute (New Crop):	Landed at Mills Rs. a md basis Bottoms.	Shipment. Sept.-Oct.
Lower Assam	29	"
Northern	29	"
Murshidabad White	28	"
Daissee	30	"
Daissee White	29	"
Daissee Mesta	27-8	"
Local Northern	28-8	"
Bimil	27-8 for F.A.Q.	"

Tossa is quoted at 8 annas or Re. 1 a maund above the price of white jute.

Pakistan Jute (New Crop):	Rs. a md.	Shipment. Sept.-Oct.
Jat	32-8	"
District	32	"
Northern	31-8	"
Pucca:	Rs. a bale	Shipment. Sept.-Oct.
Mill Firsts 2/3	210	"
Export Firsts 2/3	190	"
Export Lightnings	175	"
Jat Cuttings	128	Oct.-Nov.

The Cossipore markets are a little easier, but prices have been pegged as a result of mill interest and local purchases. All imports have been taken up on arrival, thus preventing any accumulation of stocks. During the week, wagon arrivals dropped to under 600, mostly from the Western and Murshidabad districts. At the close, quotations were based on Kishenganj jute at Rs. 28-8 a maund basis Bottoms.

Mofussil: Imports into the main upcountry agencies have shown a rapid decline, partly due to communication difficulties. Prices have also dropped and in Dhubri were based on Rs. 25 a maund basis Bottoms. Only small business has been reported, mainly of a covering nature, and markets are quiet.

THE FOREIGN JUTE MARKETS

IN THE GRIP OF ANXIETY

(FROM OUR DUNDEE CORRESPONDENT)

THOUGH members of the jute industry have experienced many periods of uncertainty about the future, seldom have these been more acute than now. Spinners here are apprehensive about the situation and they believe that they may be called upon to pay heavier freight rates, which may be as much as a few pounds a ton if their jute has to be sent round by the Cape. So far as the time factor is concerned, there should not be much delay, probably about 10 days, but the question of the jute being shipped from Pakistan is also an important matter. Many complaints are being heard this season about shipments being late and spinners are not now so keen to do further business in yarns. Some are getting filled up with orders to the end of the year, and most of them are now refusing to sell beyond that. The raw jute market has gone soft, after being very firm, with Mill Firsts rising to £100, lowest mentioned, and Mill Lightnings at £90, while Mill Hearts were at £86 and Continental Hearts £82, October-November, cif. U.K. Last week, the rates were £88, £88, £84 and £80 respectively, but there were only one or two sellers quoting these lowest limits. Business has been done more freely here of late, and as high as £98 has been paid for Mill Lightnings, afloat, as well as £97 and £94 reported to have been done. The delay in shipments from Pakistan is causing much trouble, and it may get worse. Dark jute is

only slightly above the minima in some cases, with others at minima. Crack Daissee-2/3 is at £91 10s, and grade £85, with grade Tossa-2/3 at £101 and fours at £91, cif. U.K., October-November.

Jute yarns are very firm on the basis of 14,77d a lb. for common 8lb. cops and 15,35d for 8lb. spools, at which a good business has been done, mainly in the weaving yarns, for delivery over the next three months. This is the result of much more business in jute cloth at 12,80d a yard for 40in. 10oz. hessians and 10,51d for 8oz. Calcutta goods have more or less maintained their firm undertone at 66s 3d for 40in. 10oz. and 51s 3d for 7 1/2 oz. October and 66s and 51s November-December, with B Twills at 174s and 173s respectively, all f.o.b. Calcutta.

U.S. BURLAP CONSUMPTION AND STOCKS

U.S. burlap consumption increased sharply during August. At an estimated 83 million yards, it was at its highest level since October 1953. A considerable increase in the use of burlap bags for export grain and flour, together with a further switching from multiwall paper bags to burlap bags on returnable bag programmes, seems to have accounted for last month's good performance. Undoubtedly, the lower levels of burlap prices and their relative stability, which continued so long, converted many users from other methods of packaging to burlap bags, principally for returnable bag programmes. If, however, prices do not return to more competitive levels, there is the danger that such burlap business may not continue. U.S. burlap stocks increased by an estimated 15 million yards last month. At an estimated 259 million yards, 139 million yards were spots and 120 million yards were afloats. Appearing below are two tables which include the August figures: (1) based on member reports to the Textile Bag Manufacturers Association and the Burlap and Jute Association and (2) projected to represent the estimated consumption and stocks for the entire industry:

AUSTRALIAN BAG MANUFACTURERS WANT PROTECTION

Jute bag manufacturers in Australia have demanded a protective tariff, reports the Indian Central Jute Committee. At a recent session of the Australian Tariff Board in Perth, it was urged on behalf of the Chamber of Manufacturers that an import duty of 30 percent should be imposed on jute bags, sacks, packs and bales arriving in Australia. The Board was told that the local industry had now the capacity to satisfy the entire internal demand for such goods. The Chairman of the Board felt that he would have to consider whether the incidence of the cost as a result of the proposed protective measure would be high to users.

SLIGHT INCREASE IN FRENCH OUTPUT AND EXPORTS OF JUTE GOODS

Production and exports of jute goods by the French jute industry during the first five months of the current year were slightly higher than in the corresponding period of 1955. At an estimated 77,891 tons, of which 44,665 tons were yarns and 33,226 tons fabrics, output during January-May 1956 was 1 percent higher than in the similar 1955 period.

Calcutta Markets

STRONG GENERAL DEMAND
AT TEA EXPORT SALE

GOOD SUPPORT FOR DUSTS

AT Sale No. 16, held on 24th and 25th September, offerings at the Export auction consisted of 57,000 packages. There was a very strong and general demand. Both export and internal buyers were competing strongly. Mediums and Low Medium Assams sold well and were generally 1 to 2 annas dearer, but buyers followed quality closely. Fannings were again a very strong feature and were dearer, especially the black types which were often as much as 4 annas above last rates. Commons and commonest types were in good demand and were 1 to 1 anna dearer. There was much more demand for C.T.C. Assams, which were 8 to 10 annas dearer, while orthodox B.O.P.s and O.F.s. were considerably dearer depending on quality. Darjeeling met with a fair demand but were generally 2 annas easier, while Leaf grades were about firm on last rates.

Quotations

	1956.	1955
	Rs.	Rs.
Clean Black Pekoe	1 13 0	2 5 0
Plain B.P.	1 9 6 to 1 10 0	1 10 6
Medium Assam B.P.	2 0 0	1 14 6
Best C.T.C. Assam B.P.	3 8 0 to 3 10 0	3 4 0 to 3 6 0

At the Internal Sale, Dust offerings consisted of 16,372 chests, for which there was a very strong and general demand. The strongest feature of the Sale was clean black types suitable for the Middle East and these were generally 2 annas to 3 annas

dearer, while the few best C.T.C. Assams on offer also sold well. The remaining C.T.C.s, however, were rather irregular but generally declined by 2 to 3 annas, while Mediums with quality and the better Commons advanced by 1 anna to 2 annas and sometimes more.

	1956	1955
	Rs.	Rs.
Medium Doars Dust	2 1 0	1 10 0 to 1 11 0
Medium Assam Grainy	2 2 0 to 2 3 0	1 13 to 1 13 6
Dust	2 8 0	
Best Assam C.T.C.	3 4 0 to 3 8 0	2 10 0 to 2 12 6

Leaf offerings consisted of 887 packages for which there was a good demand at prices which were generally fully firm to dearer.

SUGAR MARKET STEADY

During the week ended 26th September, sugar sales in the Calcutta market averaged 5,000 bags daily. Arrivals a day were 500 bags only and stocks totalled 110,000 bags. Rates for ready sugar ex-Kantapur delivery were Rs. 32 for ordinary grain and Rs. 33 for big grain. The market showed a rise of annas 4 to annas 6 at the beginning of the week on the report of falling arrivals, and remained steady throughout.

LINSEED IMPROVES

After a fairly quiet week with prices more or less unchanged, a steadier tendency set in at the close of the past week following the Government's announcement on the removal of the export duty on linseed oil. This decision is especially welcome because of the lifeless condition which has

prevailed in the oil market ever since the duty was imposed earlier in the year. Although it is hoped that exports will commence shortly, local prices have been somewhat higher than the current U.K. rate of £116 a ton. The initial local reaction expressed itself in an advance of 8 annas a maund on seed prices, and Re. 1 a maund on oil. With conditions unsettled, however, little activity has been recorded at these levels. Seeds were very scarce, and only small quantities were available from time to time. Latest quotations were as follows: September-October Rs. 24 a maund.

HIDES AND SKINS FIRM

The market in skins continued firm. Stocks were less than in the previous week.

Bazaar Sales

(Between 18th September and 24th September, 1956)

Cowhides: Wet Salted (Ord.) 25,000 pcs. on the basis of Rs. 7 to Rs. 8-4; Wet salted (slaughtered) 17,500 pcs. on the basis of Rs. 12 to Rs. 20.
Goatskins: Wet Salted (Daissee, killed) 61,000 pcs. on the basis of Rs. 205 to Rs. 260 and Rs. 330 to Rs. 340; Assam-Dinajpur 49,000 pcs. on the basis of Rs. 177-8 to Rs. 260; Purneah-Kissenganj 2,000 pcs. on the basis of Rs. 215; Muzafferpore 7,500 pcs. on the basis of Rs. 220 to Rs. 225.

Bazaar Stocks

(20th September, 1956)

Cowhides: Wet Salted 1,32,500 pcs.
Goatskins: Wet Salted (Daissee, Killed) 27,000 pcs.; Assam-Dinajpur-Jalpaiguri - Murshidabad 50,000 pcs.; Muzafferpore-Patna-Pakur-Purneah-Kissenganj 73,500 pcs.

For offices and industrial establishments

Greater efficiency
in cool working conditions

-with **Carrier**
self-contained air conditioners

WHEREVER a Carrier self-contained air conditioner is installed, the staff begin working better than ever before. The cool, noise-free atmosphere leads to greater efficiency; even a small increase in efficiency will pay for the cost of the Carrier in a couple of years!

You can change the action of your Carrier to suit the weather, to get extra coolness on hot days, extra dryness on damp days!

Works silently, cuts off noise

Your Carrier self-contained air conditioner works as quietly as a whisper. At the same time, since you shut windows and doors, it helps to cut off street noises, lets you work or relax in silence and comfort.

Cools better at less cost

Specially-designed coils and filters make your Carrier more efficient, help it to cool better at lower cost.

Remember—the Carrier self-contained air conditioner is remarkably compact, and takes up little floor space. The sale of these

Circulates clean, filtered air

Your Carrier sucks in air in a steady stream, filters it, then spreads it gently and evenly. So you get an equally-cool temperature throughout—no dust, no unpleasant draughts!

Removes more moisture

Your self-contained Carrier not only lowers the temperature but removes moisture from the air—gallons of it! A new 'Humitrol' regulates the rate at which moisture is removed.

units in India is backed by Voltas' unique after-sale service and their engineers' unmatched experience in the line.

Plantation Topics

PROSPECTS FOR COFFEE
DEVELOPMENT PLAN
ENQUIRY REPORT ON TEA
INDUSTRY CRITICISED

(FROM A SOUTH INDIAN CORRESPONDENT)

ARRANGEMENTS are in progress for the implementation of the Coffee Board's development plan, which has been already approved by the Central Government. The plan, it may be recalled, envisages an increase of production by 9,690 tons to 35,690 tons at the end of the first five years, and again by 33,220 tons to 59,220 tons by the end of 15 years. Financial assistance will be given for the development and expansion of the coffee area, the details of which were reported in the 13th September issue of *Capital*. A total of 139,800 acres are expected to be brought under intensive cultivation and new plantings will be made on 23,700 acres. About the scheme of assistance a thing to be noted is that financial assistance for extension of acreage is limited to the existing coffee growers only. If present arrangements work according to plan, loans would be advanced to the planters by February next year to enable them to make timely arrangements for the new season. The targets laid down in the plan are based on an estimated average production of 26,000 tons which is far below the turnover of over 33,500 tons of the 1955-56 season. The 1956-57 season's crop prospects, it is said, are equally bright. Preliminary estimates place the crop at about 34,000 tons. The industry has entered a phase in which an average crop of over 30,000 tons can be safely expected. So the target to be reached at the end of the first five years of the coffee plan, i.e. 35,690 tons, will not prove difficult unless natural calamities go against the growers.

Criticism of Planters

The South Indian planters' first reaction to the Plantation Enquiry Commission's report on the tea industry has been summed up in an editorial of the *Planters' Chronicle* of 15th of September, based on the skeleton report officially provided. The criticisms can be summarised as follows: The Commission's criticism of the managing agency system in tea industry is unwarranted in view of the recent amendments to the Company Law. One cannot overlook the great service rendered by the agency houses to the tea industry, especially the relief financing extended to tea companies during the period of the economic crisis. The Commission's suggestions that the remuneration paid to the managing agents and secretaries be reduced, the commissions paid to managers be abolished and that they be given a consolidated salary, the managerial staff be Indianised and that the salary structure of the managerial cadre be rationalised in an effort to cut down the cost of production, reveal a lack of understanding and proper appreciation of the industry's problems. Managers are given commission as an incentive to efficient production and good management. The planters have no objection to progressive Indianisation of the managerial staff, if suitable personnel are available. In rationalising the salary structure, they feel there is the risk of losing some of the ablest and experienced men in the industry, if it means the scaling down of the prevailing level of salaries. The planters are surprised at the Commission's not referring to the numerous provisions for labour welfare while enumerating the factors responsible for the high cost of production.

Tea Replanting Fund

The tea replanting fund proposed by the Commission in its report fails to impress the planters. They see many practical difficulties. There is no guarantee that the contributors to the tea replanting fund will be eligible to get back the full amount they subscribed. On the other hand there is every possibility that the funds contributed by the more efficient estates may be utilised in part to meet the replanting expenditure of the less efficient units. This proposal will also put a heavy burden in the form of administration on the Tea Board. The planters question the advisability of entrusting the Tea Board with the task of packing and distributing 50 percent of the dust tea marketed in India. The Commission's recommendation that the export quota system, which is now in vogue in India, should be abolished is welcomed by the planters.

COCHIN TEA SALES

At Dust Sale S, the 500,000 lbs. of tea on offer met with good demand but prices were irregular. Medium dusts were fully firm to occasionally dearer, while the best liquorings were about steady. Commons were irregular and occasionally easier, but the Middle East types were strong and dearer.

RISE IN TOBACCO AREA AND PRODUCTION

The all-India final estimate of tobacco, 1955-56, places the year's area and production at 921,000 acres and 259,000 tons as against the partially revised estimate of 846,000 acres and 244,000 tons for 1954-55, according to the Directorate of Economics and Statistics, Union Ministry of Food and Agriculture. This shows an increase of 75,000 acres or 8.9 percent in area and 15,000 tons or 6.1 percent in production over last year. The increase in area and production of tobacco during 1955-56 has been shared by most of the tobacco-growing States. The increase is particularly marked in Bombay. The increases during 1955-56 are attributed to better climatic conditions.

LONDON TEA SALES

AT last week's London tea sales the 41,390 packages on offer realised an average price of 5s 2.77d a lb., against 5s 0.46d in the previous sale and 5s 5.85d a year ago. Plain broken pekoe was quoted at 3s 2d a lb. against 3s 1d at last sale. Prices obtained by some of the companies are given below:

	No. of packages	Average per lb.
Amalgamated	1,293	4/8
Anglo-American	1,836	3/10
Assam Doars	942	4/9

U.K. Tea Stock Falls

U.K. tea stocks in London and provincial warehouses for the week ended 14th September, totalled 109,127,370 lbs. against 111,803,450 lb. in the previous week. The total amount to be landed on the same date was 11,409,750 lbs., deliveries during the week were 10,540,090 lbs. and landings in the same period were 7,864,010 lbs. Total afloat on the same date

was 43,943,017 lbs. including from Calcutta 31,360,860 lbs. from Chittagong 1,507,710 lbs. from Cochin 3,188,947 lbs. and from Colombo 7,865,500 lbs.

COLOMBO RUBBER PRICES

The following prices have been issued by the Rubber Board of India from the weekly market report published by the Colombo Brokers Association:

	Closing Prices on 14-9-56 (Rupees a lb.)	Average prices for the period (Rupees a lb.)
Sheet:		
No. 1	1.41	1.41
No. 2	1.38	1.38
No. 3	1.35	1.35
No. 4	1.11	1.11
No. 5	1.06	1.06
Sheet Cutting 1	1.05	
Sheet Cuttings 2	1.00	
Crepe:		
Water White	—	—
R.M.A. No. 1X	1.37/38	1.36 1/2
R.M.A. No. 1	1.35/37	1.35 1/2
Crepe No. 2	1.30 1/2	
Crepe No. 3	1.21 1/2	
Scrap Crepes:		
Sc. Crepe No. 1	88 Nom.	.87
Sc. Crepe No. 2	84/87	.83 1/2
Sc. Crepe No. 3	76/80	.77 1/2
Flat Bark	72/75	.72 1/2
Sc. Crepe 3X	80	

To arrive at f.o.b. Colombo prices add 53.45 cents a lb. for rubber other than scrap crepe and 31.45 cents for scrap crepe to the above market prices.

COMPANY AND PUBLIC NOTICES

THE PATHEMARA TEA CO. LTD.

THE Annual Ordinary General Meeting of the Shareholders will be held at the Registered Office of the Company, No. 14, Old Court House Street, Calcutta, on Tuesday, the 23rd day of October, 1956, at 2-50 p.m., for the following purposes:—

- (1) To receive and adopt the Directors' Report and the audited Accounts for the year ended 31st December, 1955.
- (2) To elect a Director in place of the retiring Director.
- (3) To elect Auditors for the ensuing year, and to fix their remuneration.

And as special business:—

- (4) To consider and if thought fit to pass the following resolution, namely:—

"That the Books, Registers and other documents required to be kept by the Company and referred to in Sections 49, 144, 163, 196, 301, 304, 307 and 372 of the Companies Act, 1956, shall be available for inspection at the Registered Office of the Company, by the persons respectively referred to in those Sections as being entitled to inspection, between the hours of 10 a.m. and 12 noon on each business day upon twenty-four hours' written notice of intention to inspect, such notice indicating what books, documents and registers are intended to be inspected."

The Share Transfer Book of the Company will be closed from 18th October, 1956 to 23rd October, 1956, both days inclusive.

OCTAVIUS STEEL & CO. LTD.

A. H. GALLOWAY,
Managing Director,
Managing Agents.

Calcutta, 21st September, 1956.

NOTE:—

A member of the Company entitled to attend and vote at the meeting is entitled to appoint a proxy to attend and vote instead of himself and the proxy need not be a member.

EXPLANATORY STATEMENT

With reference to the resolution relating to inspection of Books, Registers and other documents referred to in the accompanying notice, the Companies Act, 1956 provides that the Company may impose reasonable restrictions on such inspection but so that not less than two hours in each day are allowed for inspection, and the resolution is being moved in order to comply accordingly with the Act.

THE INDIAN IRON AND STEEL CO. LTD.

NOTICE is hereby given that the Board of Directors have sanctioned payment of dividend on the Preference Share Capital of the Company at the rate of 5% per annum for the half-year ended 30th September, 1956.

The Preference Share Registers will be closed from the 5th to the 10th October, 1956, both days inclusive. Payment will be made on or after the 1st November, 1956, to those Preference Shareholders whose names are on the Company's Register on the 10th October, 1956, or in accordance with their instructions.

By Order of the Board,
MARTIN BURN LTD.,
F. G. LIVERSIDGE,
Managing Director,
Managing Agents.

12, Mission Row,
Calcutta,
27th September, 1956.

THE KARANPURA COLLIERIES LIMITED.

NOTICE is hereby given that the Thirty-eighth Annual General Meeting of the Shareholders will be held at the Registered Office of the Company, Chartered Bank Buildings, Calcutta, on Saturday, the 29th September, 1956, at 10-30 A.M., for the purpose of receiving the Report of the Directors, passing the Audited Accounts for the year ended 29th February, 1956, declaring the Dividends recommended by the Directors, electing a Director and appointing Auditors.

The Share Transfer Registers of the Company will be closed from the 15th to the 29th September, 1956, both days inclusive.

By Order of the Board.

BIRD & CO. (PRIVATE) LIMITED,
Managing Agents.

Calcutta, 30th August, 1956.

NOTE (1) A member entitled to attend and vote at this meeting is entitled to appoint a proxy to attend and vote in his stead. Such proxy need not be a member of the Company.

(2) The Dividend, if sanctioned, will be paid on or after 6th October, 1956, to those shareholders so entitled whose names appear in the Company's books on 29th September, 1956, or to their mandates. No application for Dividend Warrants will be necessary.

THE TELIOJAN TEA COMPANY, LIMITED.

NOTICE is hereby given that the 35th Annual General Meeting of the Shareholders of The Teliojan Tea Company Limited, will be held at McLeod House, No. 3, Netaji Subhas Road, Calcutta, the Registered Office of the Company, on Thursday the 25th October 1956, at 3-50 P.M. for the following purposes:—

1. To consider the Profit and Loss Account for the year ended the 31st December 1955, and the Balance Sheet as at that date, and the Reports of the Directors and the Auditors.
2. To declare a Dividend.
3. To appoint a Director in place of Mr. J. Davies who retires by rotation and who, being eligible, offers himself for re-appointment.
4. To appoint Auditors for the year ending 31st December, 1956, and to fix their remuneration.

The Share Transfer Books of the Company will be closed from 10th October, 1956 to 25th October, 1956, both days inclusive.

By Order of the Board,
McLEOD & CO. LTD.,
A. T. DOIG,
Managing Director,
Managing Agents.

3, Netaji Subhas Road,
Calcutta, 22nd September, 1956.

NOTE: 1. A member entitled to attend and vote at the Meeting is entitled to appoint a proxy to attend and vote in his stead. A proxy need not be a member.

2. Payment of the proposed Dividend, if declared, will be made on or after 2nd November 1956, only to those members, whose names are registered in the Books of the Company on the 25th October, 1956, or to their Mandatees.

No application for Warrants will be necessary. Claims on behalf of holders of Shares on blank transfer will not be entertained.

THE BORMAH JAN TEA CO. (1936) LTD.

NOTICE is hereby given that the 21st Annual General Meeting of the Shareholders of The Bormah Jan Tea Company (1936) Ltd., will be held at McLeod House, No. 3, Netaji Subhas Road, Calcutta, the Registered Office of the Company, on Thursday, the 25th October, 1956, at 3-40 P.M. for the following purposes:—

1. To consider the Profit and Loss Account for the year ended the 31st December, 1955, and the Balance Sheet as at that date, and the Reports of the Directors and the Auditors.
2. To declare Dividends.
3. To appoint a Director in place of Mr. J. Davies who retires by rotation and who, being eligible, offers himself for re-appointment.
4. To appoint Auditors for the year ending 31st December, 1956, and to fix their remuneration.

As Special Business:

5. To consider, and if thought fit, to pass the following resolution which will be proposed as a Special Resolution in conformity with the provisions of Section 261 of the Companies Act, 1956:—

"That Mr. G. T. Routledge be and is hereby appointed a Director of the Company."

Special Notice dated 13th September 1956, of intention to propose the foregoing resolution as a Special Resolution has been received by the Company wherein it is stated that a special Notice of the Special Resolution is given to satisfy the requirements of Sections 190 and 261(1)(f), (2) and (3) of the Companies Act, 1956, for the reason that Mr. G. T. Routledge, the proposed candidate for a Directorship, is a Director of Amluckie Tea Co. Ltd., a subsidiary of McLeod & Co. Ltd., the Managing Agents to the Company and he is therefore an associate of the Managing Agents within the definition in Section 2(3)(c)(i) of the Companies Act, 1956.

6. To consider and, if thought fit, to pass the following Resolution:—

"That the Board of Directors be and is hereby permitted with effect from the commencement of the Companies Act, 1956, to borrow moneys from time to time for the carrying on of the business of the Company notwithstanding that the moneys to be borrowed together with the moneys already borrowed by the Company (apart from temporary loans obtained from the Company's Bankers in the ordinary course of business) will exceed the aggregate of the paid-up capital of the Company and its free reserves, that is to say, reserves not set apart for any specific purpose."

The Share Transfer Books of the Company will be closed from 10th October, 1956 to 25th October, 1956, both days inclusive.

By Order of the Board,
McLEOD & CO. LTD.,
A. T. DOIG,
Managing Director,
Managing Agents.

3, Netaji Subhas Road,
Calcutta, 22nd September, 1956.

NOTE: 1. A member entitled to attend and vote at the Meeting is entitled to appoint a proxy to attend and vote in his stead. A proxy need not be a member.

2. Payment of the proposed Dividends, if declared, will be made on or after 2nd November, 1956, only to those members whose names are registered in the Books of the Company on the 25th October, 1956, or to their Mandatees.

No application for Warrants will be necessary. Claims on behalf of holders of Shares on blank transfer will not be entertained.

EXPLANATORY STATEMENTS

1. In the Special Notice given to the Company of the resolution being Item No. 5 of the above Notice, it is stated that Mr. G. T. Routledge is an associate of the Managing Agents within the meaning of the Companies Act, 1956, and therefore he can only be appointed a Director by a Special Resolution of which Special Notice has been given under the provisions of Section 261 of the Act.

2. The Resolution being Item No. 6 of the above Notice is intended to provide the Board of Directors with authority to enable them to borrow moneys from time to time for the Company's business in excess of the statutory limit being the paid-up capital of the Company and its free reserves, pursuant to Section 293(1)(d) of the Companies Act, 1956.

BAGHMARI TEA COMPANY, LIMITED

NOTICE is hereby given that the 38th Annual General Meeting of the Shareholders of Baghmari Tea Company, Limited, will be held at McLeod House, No. 3, Netaji Subhas Road, Calcutta, the Registered Office of the Company, on Thursday, the 25th October, 1956, at 4 P.M. for the following purposes:—

1. To consider the Profit and Loss Account for the year ended the 31st December, 1955, and the Balance Sheet as at that date, and the Reports of the Directors and the Auditors.
2. To declare a Dividend.
3. To appoint a Director in place of Mr. J. Davies who retires by rotation and who, being eligible, offers himself for re-appointment.
4. To appoint Auditors for the year ending 31st December, 1956, and to fix their remuneration.

As Special Business:

5. To consider, and if thought fit, to pass the following resolution which will be proposed as a Special Resolution in conformity with the provisions of Section 261 of the Companies Act, 1956:—

"That Mr. G. T. Routledge be and is hereby appointed a Director of the Company."

Special Notice dated 6th September 1956, of intention to propose the foregoing resolution as a Special Resolution has been received by the Company wherein it is stated that a Special Notice of the Special Resolution is given to satisfy the requirements of Sections 190 and 261(1)(f), (2) and (3) of the Companies Act, 1956, for the reason that Mr. G. T. Routledge, the proposed candidate for a Directorship, is a Director of Amluckie Tea Co. Ltd., a subsidiary of McLeod & Co. Ltd., the Managing Agents to the Company and he is therefore an associate of the Managing Agents within the definition in Section 2(3)(c)(i) of the Companies Act, 1956.

6. To consider and, if thought fit, to pass the following Resolution:—

"That the Board of Directors be and is hereby permitted with effect from the commencement of the Companies Act, 1956, to borrow moneys from time to time for the carrying on of the business of the Company notwithstanding that the moneys to be borrowed together with the moneys already borrowed by the Company (apart from temporary loans obtained from the Company's Bankers in the ordinary course of business) will exceed the aggregate of the paid-up capital of the Company and its free reserves, that is to say, reserves not set apart for any specific purpose."

The Share Transfer Books of the Company will be closed from 10th October, 1956 to 25th October, 1956, both days inclusive.

By Order of the Board,
McLEOD & CO. LTD.,
A. T. DOIG,
Managing Director,
Managing Agents.

Calcutta, 24th September, 1956.

Surprise at Thermopylae

When Xerxes, the mighty Persian emperor, invaded Greece in 480 B.C. he had with him a company of Indian archers. These Indian archers used a new weapon—a steel-tipped arrow which had been brought all the way from India. History records that the Greek army was surprised by the superior arms of Xerxes and was defeated in the battle of Thermopylae.

Today, once again, steel is very much to the fore in the nation's thinking, but with a different intent. The country's steel-making capacity is being rapidly enlarged, not for purposes of war, but for peace and development.

TATA STEEL SERVES THE NATION

Dalmia Products of Proved worth...

REFRATORIES
For all industrial purposes Firebricks, mortars, insulating bricks in all heat ranges and shapes.

STONEWARE PIPES
For drainage purposes—perfectly salt glazed, acid-resistant and tested to standard specifications.

As a contrast to the strictly limited success of the I.M.F., the World Bank must be ranked as one of the most important international institutions which emerged from the war. Its most significant feature is the way in which it has been able to channel private investment, which would otherwise have remained within its own national boundaries, into public development projects in economically backward countries. It is estimated that out of the average \$400 million a year which the Bank has been lending, half this amount has been raised on the world's capital markets. This is a remarkable achievement. It has helped to offset the reluctance which private capital has felt since the war—and justifiably—in placing itself at the mercy of newly-formed national governments whose creditworthiness has usually varied in inverse proportion to their needs. Most of the private capital has come from United States investors, whose traditionally sound business requirements will no doubt be satisfied by the fact that the institution they have supported made a profit last year of over \$29 million and brought its reserves to a figure of \$228 million. This is all entirely satisfactory. But it would be a pity if the opportunity were not taken to expand such a prosperous business, and preferably into activities which have previously been thought too risky. That is why the new International Finance Corporation is such a welcome development. The aim of this institution will be to lend to private industry. There is no need to fear that its scope will be limited. The requirements of its parent organisation have always been stringent, and similar caution may well restrict the Corporation's activities for the next year or two. But there is no reason why courage should not grow with experience and if the World Bank's record of not one single default can be repeated, it no doubt will. Both institutions will be of immense value to countries like India in furthering economic development.

If it proves to be nothing worse, the Suez problem will represent an unaccountable risk for holders of sterling for as long as it lasts. If oil shipments, for instance, are stopped, the loss for Britain will not be far short of \$225 million in a full year. If the situation deteriorates to the point where pipeline supplies are interfered with too, the total cost of replacing Middle Eastern with dollar oil could amount to \$500 million a year for the

----	--	-----	---

consideration in a port already notorious for its inadequacies—inadequacies which arise to a large extent from labour indiscipline itself, and which, if they continue, will steadily undermine the port's working, finances and growth.

During the first five year plan, the main object of schemes for Calcutta port was to replace the facilities which had deteriorated through use. Some provision was also made to install new facilities in accordance with the changing patterns of trade and to cater to some extent for the large increase in traffic which was expected as a result of accelerated industrial development. As the Commissioners point out, only schemes which were considered very urgent and "inescapable" were included in the first plan; restriction of scope became necessary, they say, because of the shortage of time and money. A fairly large number of projects which were essential from a long-range point of view had to be kept in abeyance for inclusion in the second plan. But the plea of a shortage of money might now seem slightly incongruous in light of the fact that, during 1951-56, the Commissioners were able to use barely 30 percent of the funds allotted for development. It is worth noting that the schemes for those five years were originally estimated to cost Rs. 8 crores; more were added later, with the result that the estimate rose to Rs. 12.07 crores. Of this, only Rs. 3.97 crores was to be provided by the Commissioners; the rest was to come from the Central Government in the form of loans carrying no interest for the first seven years and repayable in 23 equated instalments with interest. But ultimately, of the total estimated outlay, only Rs. 3.49 crores was spent until the end of March this year, and of the latter, as much as Rs. 3.07 crores came from the Government of India.

The Commissioners' explanation for this remarkable short-fall in expenditure on developing a port which badly needs development, centres mainly on three points: too little time, difficulties in getting equipment and materials, and certain changes in the time that instalment payments became due to suppliers (which may or may not indicate delays on the part of the latter). It is pointed out, for instance, that the execution of the projects was taken in hand after two years of the plan period had passed. Some large projects, such as the construction of quarters, general cargo berths and a suction dredger were included at a later stage in the development schemes. Such equipment as cranes, dredger, launches and tugs could not be procured against orders and had to be manufactured. Difficulties were also experienced in getting materials like steel and pipes, and there were "other delays in the execution of works." As for instalment payments, it is stated that they become due when progress on construction reaches a certain stage; if the first instalment of Rs. 42 lakhs on a new suction dredger was provided for in the revised estimates for 1955-56, but the actual instalment did not become payable until May 1956, the reason presumably is that the manufacture of the dredger was delayed.

It would be interesting to know how development plans for Calcutta port are framed. The progress of its first plan schemes seems to suggest that the procedure is to ask for the money; get it sanctioned; be able to use less than a third of what has been sanctioned; and finally say that there was too little time to use the whole lot. It would be discouraging to contemplate the consequences if all the State projects and enterprises which have been lined up before the Planning Commission with their begging bowls were to follow the same procedures and produce the same results. The conclusion seems difficult to escape that the Calcutta Port Commissioners have for many years, like the Government of India now, looked upon the "five" in five year plans as a slightly superfluous item which need not be taken too seriously. If the attitude were to persist during the second and later plans, not only would industrial expansion in eastern India suffer seriously but exports (the chief of which pass through Calcutta) would certainly suffer.

All this does not suggest that Calcutta port has too much money. The fact is that it has too little in relation to development requirements. There is an urgent need for it to conserve resources, and to get more; but the need for organisational efficiency, which may permit the money allotted for a particular period to be usefully spent within that period, appears no less urgent. It is this aspect of the question to which attention may profitably be directed if the port's strong case for more vigorous development is not to be undermined by past tardiness, present quibbling and future sloth.

CURRENT COIN

Index of Industrial Activity.—Corrected for seasonal fluctuations, Capital's Index of Indian Industrial Activity shows a decline of 5.0 points during April, 1956. Mainly contributing to the decrease were jute manufactures, steel ingots, cement, paper and electricity. Cheque clearances declined.

Satisfactory Year for Imperial Tobacco.—In his speech (published on a later page of this issue of Capital) to the 45th annual general meeting of shareholders last week, the chairman of the Imperial Tobacco Company of India Ltd., Mr. G. H. J. Clarke, was able to report a satisfactory year for the company. The increase in sales noted in the previous year has been maintained and, subject to approval, a final dividend of 4 percent is contemplated. The company has declared, as a matter of policy, that an adequate level of reserves will be maintained to safeguard the real capital position under present conditions of mild inflation throughout the economy. Referring to the weight of taxation on tobacco products, Mr. Clarke supported strongly the plea of his predecessor, Mr. E. H. Hare, that the Government should consult the tobacco industry on the best ways of applying tobacco and cigarette excise duties when these are being planned. The methods used at present, Mr. Clarke maintained, "have severely inhibited the natural growth of sales" with adverse effects on the overall yield from such taxation. He regretted that the States had continued to levy sales tax on tobacco and tobacco products at varying rates when they are already subject to high duties imposed by the Centre. Mr. Clarke voiced his anxieties about the behaviour of certain minority elements in the company's labour force whose tactics "not only adversely affect overall output but also the earnings of the individual worker". On the whole, however, relations with the staff have been good, and it remains the company's policy, in such a highly mechanised industry, to maintain a high standard of working conditions and provision of adequate amenities. This was one item of costs in which, Mr. Clarke warned, increases are taking place. He also mentioned such questions as raw material prices. These have still to be fully reflected in production costs. In particular, Mr. Clarke mentioned the higher prices of leaf tobacco in south India this year.

Indian Raw Jute Consumption.—The problem of adequate raw jute supply at reasonable rates, which caused so much worry last year due to Pakistan's peculiar raw jute price policy, was discussed at some length by Mr. D. S. Kuthari in his address from the chair to the seventh annual general meeting of the Jute Brokers Association held this week. Last season's Indian crop, he said, was the largest of the last four years, yet India had to rely on Pakistan for "a large proportion of her requirements". The total consumption between July, 1955 and June, 1956 was 6,340,000 bales, which Mr. Kuthari said was also the highest for the past four years. Pakistan's share of the supply was 1,308,000 bales. This means that in spite of her best efforts, India still has to depend on raw jute supply from across the border. As the experience of the past year has shown, this dependence, Mr. Kuthari stressed, "is highly detrimental to the jute trade in general." Consumption statistics show that the average monthly offtake of raw jute by the mills during the period March, 1956 to June, 1956 was about 554,000 bales. At this rate, India will have to import raw jute this year also. Mr. Kuthari did not discuss whether the re-sealing of looms will appreciably reduce imports, but even if that happens, it cannot still be said that a permanent solution has been found. The permanent solution, as Mr. Kuthari rightly emphasised, is the one which has so often been stressed in the leading articles of this newspaper. It lies in raising internal production and supply qualitatively and quantitatively, particularly the former. Mr. Kuthari urged the Government to "take every possible step to increase the cultivation of jute so that India can become self-sufficient in her raw jute requirements". His plea will find wide support from all concerned in this country.

South Indian Railways.—The railway system in south India is to see some changes in the near future. At a recent Press conference, Mr. K. B. Mathur, Member of the Railway Board, pointed out that the increase in rail traffic requires the early conversion of the present metre-gauge system to broad gauge. Though nothing was said about speed, it is clear that faster trains, to compete with buses now running up to distances of 125 miles in south India, will be called for. While it was claimed in the past that the Peninsula will be crossed by the metre gauge line from Masulipatam to Marmagao via Hubli, it is realised that the old metre-gauge system (the corduroy rail-

roads preferred by the pioneers) will not stand up to new demands. The remodelling of the Vijayawada yards is treated as the prelude to extensive reorganisation. Track now being doubled on the broad gauge and the conversion of the lines from Gudur Renigunta to broad gauge will be taken up. The line from Vijayawada to Masulipatam is being turned over to broad gauge. The growth of iron ore traffic from several districts to minor ports like Masulipatam and Kakinada is one reason. Another is the increased congestion in Madras port, attention to which was drawn by the London Financial Times before enquiries were made locally. One result will be the displacement of metre-gauge wagons by broad-gauge ones. The preponderance of metre gauge in the Southern Railway will gradually disappear, but that implies early strengthening of track before heavier rails are laid. Extensions may not be required if the lines in Mysore and Tamil districts are converted soon into the standard gauge. The change is perhaps due to visits of Indian railway officials to foreign countries as well as to the realisation that break of gauge is the major handicap for goods traffic. Longer trains, carrying greater loads, will ensure economy and the loco position has greatly eased.

Railway Earnings Rise.—The Railway Board's figures relating to the Indian Railways' gross earnings during the current financial year show an appreciable rise over those of the same period last year. The total from 1st April, 1956 to 31st August, 1956 (taking the actuals up to July and adding the approximate for August) was Rs. 139.53 crores, representing an increase of Rs. 12.79 crores over the actuals of Rs. 126.74 crores for the previous year's corresponding period. The approximate figure for August, 1956 amounted to Rs. 26.30 crores against Rs. 26.35 crores in July, 1956 and Rs. 24.60 crores in August, 1955. Of the Rs. 139.53 crores earned during the first five months of this year, coaching accounted for Rs. 58.88 crores and goods for Rs. 78.84 crores, showing a rise of Rs. 3.60 crores and Rs. 9.33 crores respectively over the corresponding figures for the previous year. These were, however, slightly offset by a fall of Rs. 14 lakhs in earnings of "others" which were Rs. 1.81 crores against Rs. 1.95 crores. Corresponding to the rises in earnings, there was an appreciable increase in the tonnage lifted, the figures for April-August periods being as follows: on the broad gauge 32,432,000 tons (30,837,000) and on the metre gauge 8,493,000 tons (7,730,000). During August, 1956 and the previous month, the respective figures were: 6,806,000 tons (6,432,000) on the broad gauge and 1,557,000 tons (1,529,000) on the metre gauge. Wagon loadings also showed improvement, they increasing during the month by 3.97 percent on the broad gauge and 5.21 percent on the metre gauge during July, 1956. For the period, April to August, 1956, the improvements were respectively 7.41 percent and 11.7 percent compared with those of the same period in 1955-56. The commodity-wise figures of the movement show a mixed pattern; the railways were able to move, among other important commodities, 8.85 percent more coal, 100.7 percent more raw jute, 76.8 percent more sugarcane, while the movements of grain and pulses, cotton manufactures, jute manufactures and pig iron declined by 1.16 percent, 9.59 percent, 35.2 percent and 31.0 percent respectively.

Distribution of Chemicals.—It was Mr. O. N. Jajodia's complaint at this week's annual general meeting of the Indian Chemical Merchants Association, which he addressed from the chair, that while the Government is giving all its attention to the question of raising the domestic output of chemicals and their overall supply, an improper policy of distribution among various consuming interests is being followed. He referred specifically to the policy of canalising the import of caustic soda and soda ash which, he mentioned, had actually resulted in the consumers paying higher prices than they would have done otherwise. This result was due to the fact that the import was not being handled through the normal channels of trade. He suggested that the reversal of the policy could be the only corrective and urged that established importers be given import licenses subject to reasonably prescribed ceilings. Referring to the current report that the Government is considering a proposal to import sulphur on its own account, Mr. Jajodia said that surplus was being sold in the market at a normal profit at present, and the Government's direct handling of its distribution would not benefit anyone. On the other hand, it might have the same result as the policy of canalising the import of caustic soda and soda ash. Moreover, it will mean the loss of livelihood for the existing traders. For these reasons he felt, the existing channel of trade should not be displaced. The indigenous production of chemicals has been rising, although it is still a long way short of total demand, and a number of new items such as calcium carbide, stabilised bleaching powder, D.D.T., ammonium chloride, ferric

chloride, titanium dioxide and some others are being produced within the country.

Covering Atomic Risks.—Since October of last year a committee, set up by those insurance companies who are members of the British Insurance Association together with Lloyd's underwriters, has been making an intensive study of the insurance problems arising out of the industrial use of atomic energy, with particular reference to the new atomic power stations that are to be erected by the Central Electricity Authority. The committee has been in touch with the United Kingdom Atomic Energy Authority, from which source useful information concerning the hazards involved has been obtained. The completion of the first stage of the work of the committee has resulted in its reaching the interesting conclusions that the fire and explosion hazards involved in the operation of the new atomic power stations will differ little from those encountered in many modern industrial or power production plants. The hazard of possible radio-active contamination involving both damage to the power station itself and liability to third parties is, however, a new one attaching to these power stations and one that must be faced. Since the estimated cost of the next two stations to be erected by the Central Electricity Authority might exceed the figure of £30 million each, it is obvious that large sums insured must be expected. The committee has pointed out that, though the possibility of a catastrophe cannot be ignored, its likelihood is exceedingly remote. The committee considers that the insurance of these risks is a practical possibility for insurers who, recognising these developments as of the greatest importance in British industrial progress, will no doubt feel a responsibility to afford cover in respect of the new risks involved. Quite apart from power stations, other risks involving fissile materials are already being insured, radio-active isotopes used in certain stages of manufacture being insured in transit and in the manufactory. Marine underwriters can apply the findings of the B.I.S. and Lloyd's committee to their own branch. Two possibilities stand out: the operation of ships by

atomic power and its attendant hazards, and the risk of damage and contamination to vessels by reason of an atomic explosion, intentional or not. The equipment of merchant vessels with atomic power is certainly nearer realisation than could have been imagined only a few years ago, but is still in the future, and before such vessels become common some time will elapse. In Great Britain, by 1975, 42 power stations will have been built if all goes according to plan, apart from privately-owned reactors, and in the U.S.A. and elsewhere as great, or a greater, project is in preparation. The possible spread of damage and contamination could, given a catastrophe, be enormous.

Fewer Looms in Cotton Mills.—According to returns received by the International Federation of Cotton and Allied Textile Industries, and estimates which it has made, the number of power-looms in cotton mills throughout the world at 31st January, 1956, was 2,870,302, or 19,127 less than a year previously. Ordinary looms decreased by 51,242, but there were increases of 30,907 automatics and 1,208 semi-automatics. The total number of looms in the United Kingdom on 31st January is given as 312,606, against 333,820 a year previously. Automatic looms increased by 483 to 39,640, and looms with automatic attachments increased by 517 to 5,548. There was a fall from 289,632 to 267,418 in ordinary looms. Other returns show that 762 looms of all kinds were being erected in British mills as increases of productive capacity and 2,021 as replacements, and all these are expected to be brought into operation this year. The totals include 1,372 automatic looms and 136 with automatic attachments. Reductions are also shown in the numbers of looms in place in Belgium, France, Germany, Italy and the United States, while increases are recorded of 32,479 for Japan, 8,022 for Turkey and 3,479 for Pakistan. There were increases of 5,813 for South America as a whole, and 2,135 for Africa. A total of 19,659 looms was being erected in the world at the date of the returns, comprising 15,243 automatic and only 4,400 ordinary looms. During 1957-58 a further 14,893 looms are known to be on order and these are all in addition to looms already in place. Most of these also are automatic looms. The greatest increases in weaving capacity are taking place in Pakistan, Turkey and Brazil. The

International Federation's returns also include figures of the idle looms and the average hours worked each week by looms in operation in different countries. In hours worked each week the United Kingdom comes at the bottom of the list, with 36.87, and Hongkong comes at the top with 145.66. Some of the figures are given in the following table:

LOOM ACTIVITY		
	Average hours per week	Total idle looms
United Kingdom	36.87	76,242
Europe as a whole	62.19	152,890
Africa	96.42	335
North America	104.80	12,650
South America	86.70	36,990
Asia	111.88	42,358

The United Kingdom had the largest number of idle looms. Other countries which had large numbers of looms idle when the returns were taken included Brazil, with 35,904, Italy with 34,647, France, with 33,026, and the United States with 11,320.

CORRESPONDENCE

HINDU NATIONALISM

(To the Editor of "CAPITAL")

Sir,

I have read your comments on my *Spectator* article with interest. The article was a straightforward piece of political reporting. All I was trying to do was to give the reasons which underlay my impression that Hindu nationalism is the real "glue" which sticks India together, and to explain to people here that the secular State laid down in the Indian Constitution is not anti-religious. I have a profound respect for Hindu culture, and I am sorry if you should form the impression that I was intending to attack it in any way. Its revival as a political influence seems to me essential as well as inevitable; and why you should think that I condemn it as a "baleful" shadow I can't imagine.

Similarly, in my remarks about *panch shila*. Surely, to find its roots in Hindu political philosophy is not to argue against its truth or its applicability to international conditions?

I can understand an old-fashioned atheist (of the type now about extinct) objecting to my analysis of the part which Hindu socio-religious traditions play in the life of modern India. But if I were a Hindu, I should be very proud of what is happening.

Naturally, I don't take my ideas about India from Pakistani sources (any more than I take my ideas about Pakistan from Indian sources). But I was reviewing a book on Pakistan by a Pakistani; and it seemed to me to be an interesting exercise to compare his ideas about India with what I saw and heard for myself in India earlier this year.

Of course there is a revival of Hindu nationalism in Free India. Why on earth shouldn't there be? And why should not India be proud of it?

Yours, etc.

SCIENCE AND COMMONSENSE

WHETHER the plague which admittedly has made its appearance in Bombay comes here or not, there is no doubt that the "scare" will be productive of good. We understand that Burra Bazar and other similar parts of Calcutta are being put in order, the rubbish and filth removed, and the houses white-washed. This is a step in the right direction, and the plague or no plague, cannot but be beneficial in the long run. We are somewhat in sympathy with the remarks of the *Indian Mirror*. It says: "Our Health Officer may be a very good scientist and may yet achieve fame in the world of science by some remarkable discovery in his laboratory. But meanwhile the urgent sanitary wants of Calcutta are not being attended to, and the real danger lurks in the existing deplorable condition of this populous city." It seems to us that we are having a great deal too much science, and far too little common sense. We want the streets to be swept, houses to be cleaned, refuse to be removed and the sewers flushed; and if we were satisfied that this would be done effectively and properly, we should be inclined to run the risk of the diseases which are inseparable from Eastern climes, without being inoculated with all kinds of bacteria and other abominations that modern science seems to consider are necessary to preserve life.

Without Prejudice

THE MEANING AND SCOPE OF INDUSTRIAL DISPUTE

JURISDICTION OF CONCILIATION OFFICERS

(FROM OUR LEGAL CORRESPONDENT)

"IF there is no industrial dispute, the conciliation officer has no jurisdiction to initiate a proceeding under the Industrial Disputes Act." That reads like a platitude and a self-evident truth. But it is not. It is a fact, but not a self-evident one always. Conciliation officers quite often do start proceedings without such jurisdiction, and it is not so unusual as it should be for employers to submit to it without realising that it is within their power to prevent the proceedings going on, until it is too late to do any thing about it. There have been two points of view as to the equal duty of employers in this respect. It has been argued that it is the duty of an employer who wishes to stop the conciliation officer getting to work in the mistaken belief that there is an industrial dispute for him to investigate, to point out to him that there is in fact no industrial dispute to attract his jurisdiction, and to state the grounds for that contention. The other point of view is that it is for the conciliation officer himself to find out whether an industrial dispute exists so as to enable him to start a conciliation proceeding under the Act. Whichever of these two viewpoints is correct (and there appears little doubt in the light of the decision we propose later to discuss that the latter one is), it is certain that the first course pays dividends and that that is where an efficient welfare officer comes in.

We can hardly call the following a problem, because it is so bespattered with clues that its solution should be obvious. We will consider first that word "dispute" in its statutory, colloquial and dictionary meaning, for the Tribunals

and High Courts have at various times considered all three. "An industrial dispute," says the Act, "is any dispute or difference.....which is connected with the employment or non-employment or the terms of employment or with the conditions of labour of any person." Thus the Act. The Oxford Dictionary sums it up almost ideally, "Dispute: Conflict of opinion not yet decided." And if we add to the above Mr. Barwell's valuable elaboration of the meaning of the word in its statutory sense, the reader has all he ought to need, save the facts, to perceive where the conciliation officer in this case went wrong and had to be put right by the High Court. "For a dispute to arise, the two parties, viz., the employer and his workmen, must both come into conflict and a difference must ensue therefrom. It will be improper to assume that a dispute can come into existence by a one-sided demand or a unilateral action by one of the parties, which demand or action has neither been referred to the other party, nor even communicated to that party, and in respect of which there was no opportunity, nor any occasion for the other party to express any view or indicate any positive or negative relation thereto." [C. P. Sarathy v State of Madras and others (A.I.R. 1951, Mad. 191)].

And now a reminder on the duties of conciliation officers. "Where any industrial dispute exists or is apprehended, the conciliation officer..... shall hold conciliation proceedings in the prescribed manner." [Section 12(1)]. "The conciliation officer shall, for the purpose of bringing about a settlement of the dispute without delay, investigate the dispute.....for the purpose of inducing the parties to come to a fair and amicable settlement of the dispute." [Section 12(2)]. If no settlement is arrived at, the conciliation officer must report fully to the Government, which may refer the matter to a Tribunal. [Section 12 (3 and 4)].

Two things stand out here. One is that the key word is "dispute". Repeated over and over again, the word is of the essence of the conciliation officer's jurisdiction. Not a one-sided demand, not a unilateral action by one of the parties but a

conflict and a difference between two parties or, as the dictionary puts it, "a conflict of opinion not yet decided" between employer and employee. The second point is this. A conciliation officer's functions, once they are lawfully put into operation, are of great importance, since they may bring about all the expense, delay and harassment of long-drawn-out Tribunal, Appellate Tribunal, High Court, and even Supreme Court proceedings. Wherefore it has to be seen that a conciliation officer does not start this ponderous machine running where he has no right to do so.

That brings us to the facts in an interesting illustrative case. It was an application to the Patna High Court by Messrs. B. A. and Brothers, a firm having its head office at 2 and 3 Clive Row, Calcutta, dealing in patent medicines and other medicinal preparations; and the petitioner was the firm's manager, having sole and exclusive charge of its Patna branch. The case concerned a clerk in the office of the Patna branch on 5th February, 1948, on a salary of Rs. 50 a month. The services of this clerk had to be dispensed with, with effect from 26th September, 1948, when he was given full salary for the month of September as also one month's further salary in lieu of notice. After receiving the payment, the clerk granted a receipt as token of final settlement. But some three weeks later, the clerk filed an application before the Assistant Labour Commissioner, Patna, requesting his intervention. Five months passed, and then on 15th March, 1953, a notice was issued to Messrs. B. A. and Brothers, Patna, from the office of the Assistant Commissioner of Labour, Patna, informing them that the Conciliation Officer and Assistant Commissioner of Labour, Patna, would hold conciliation proceedings on 31st March, 1952, at 3 p.m. in his office and requesting the firm to send a representative to participate in the proceedings. The manager appeared at the hearing and explained to the officer concerned the circumstances attending the dismissal of the clerk and also, so it was alleged, pointed out that the so-called "dispute" was no dispute at all. Nevertheless, the Labour authorities went ahead. On 18th June, 1952, the Assistant Commissioner of Labour, Patna, wrote to the manager "on the subject of the wrongful dismissal of Sri Rara Brikshna Singh" (the clerk), intimating that on 23rd June, 1952, a conciliation proceeding would be held under Section 12, Industrial Disputes Act, at 11 a.m. in his office in Patna. The manager was requested to send his accredited representative with all relevant papers and with necessary authority on his behalf. These proceedings were, after some discussion, adjourned to 10th July, 1952. So the machinery of the Act was now set in motion, and was now creaking along towards the Industrial Tribunal.

The firm decided to try to bring the machinery to a stop. They took steps before the Patna High Court to have the conciliation proceeding quashed under Articles 226 of the Constitution. "Industrial dispute," said Sinha J. in the High Court (Rai J. concurring), "as defined in Section 2(k) must be construed to mean not a dispute between an individual workman and the management but a dispute which, though it may originate in an action with regard to an individual workman, has developed into a dispute in which the majority of the workmen in the establishment are interested. In the present case, there is no material to hold that, apart from the opposite party (the clerk) making a request to the Assistant Commissioner of Labour, there was any industrial dispute within the meaning of Section 2(k) of the Act. He was dismissed and was given full pay for the month in which he was dismissed, plus the pay of a month in lieu of notice. He accepted the payment and gave a receipt in token of his acceptance..... If there is no industrial dispute, the conciliation officer has no jurisdiction to initiate a proceeding under the Industrial Disputes Act.....Certainly there was no 'industrial dispute'.....It is for the conciliation officer himself to find out whether there is any such industrial dispute as defined in Section 2(k) of the Act to enable him to start a conciliation proceeding under the Act, and if it is found that there is no 'industrial dispute,' such proceeding must be quashed as being without jurisdiction." The proceedings purporting to be conciliation proceedings were all set aside accordingly.

This case shows how important it is to keep an expert eye on proceedings under the Act from the very start, and not to assume that because the authorities charged with the administration of the Act say that a thing is so, they are necessarily correct. Messrs. B. A. and Brothers performed a public service. They could, no doubt, by admitting the conciliation officer's jurisdiction, have settled this paltry claim for a song. Instead, on a matter of principle, they incurred the expense, delay and general inconvenience of recourse to the High Court. If they had not done so, we should not have been able to record the following trenchant hint to the authorities by their lordships, Sinha and Rai JJ. "The Act has been brought into existence with as much speed as possible in the interest of both the management and the workmen. It is therefore necessary that proceedings under the Act should be started with the utmost circumspection so that unnecessary harassment may not be caused to the management and public time wasted in starting proceedings without careful ascertainment of the facts on which the jurisdiction is founded."

1956, A.I.R. Patna. (September). 320.

Barwell and Kar on Service in Industry. Vol. 2. p. 515 at seq.

LAST week's London Centenary Dinner of the British India Steam Navigation Company was, I am informed, in every way an appropriate commemoration of a great occasion. Sir William Currie presided, and the principal guest of the three hundred and fifty distinguished men of business and affairs who received invitations, was Lord Waverley, Chairman of the Port of London Authority and, as Sir John Anderson, a former Governor of Bengal. Of the many points which emerged from the speeches, two are, I think, of some special interest. One is that long before the Persian Gulf assumed its present importance as an oil-producing area, regular services by the B.I.S.N. virtually opened up its trade with the rest of the world with whom the shipping company was practically its sole means of contact. Secondly, the original Mackinnon of Mackinnon Mackenzie & Co., was one of the founding fathers of British trade in and with the East African territories. We are so often apt to think of this famous firm in its historic Indian setting that we overlook the fact that its trading activities spread over three continents and embrace many other activities besides shipping. The growth of the British India line over the last hundred years has proceeded alongside the development of the trade of the Indian Ocean, though its services have extended far into the other six of the seven seas. Both for itself, and for other shipping lines, it has produced several generations of magnificent seamen, and among the greetings which came by telegram to the London dinner was one from the present master of the Queen Mary, himself an old B.I. officer. Britons and Asians served through two world wars on B.I. ships, of which a heavy toll was taken by enemy action. One of the first cargoes to pass through the Suez Canal from south to north was carried by a B.I. steamer.

London was not the only place where the centenary of the B.I.S.N. has been celebrated in the past week or two. Calcutta, the home of the company, had a share in commemorating the happy occasion only last week. Many of those who foregathered were probably aware of the rôle the line has played in the life of this city. Others may not have been, but I am glad to see their opportunity will come. A book by Mr. George Blake is now in preparation and should make interesting reading. The history of this company is that of Indian shipping generally, from the day in 1856 when a young Scotsman named William Mackinnon formed the Calcutta and Burmah Steam-Navigation Company in response to John Company's offer of a contract for the carriage of mails between this city and Rangoon, to the present much-changed times. It was from this venture that the B.I., as it is known everywhere there are ships and seafarers, grew into the great organisation it is today. The process was not a painless one. Many an uneconomic run was tried out and subsequently abandoned because it did not pay. Although many of India's seaports must owe a great deal of their present prosperity to the enterprise of whichever one of the series of distinguished Burra sahibs was in charge of affairs at the time, others which once featured on the company's schedules have simply languished and been forgotten. In 1863, for instance, the following monthly services had been established by firm contract: Calcutta to Bombay calling at Bimlipatam, Vizagapatam, Conconada, Madras, Negapatam, Tuticorn, Masulipatam, Cochín, Bayapore, Cannanore, Mangalore and Sheddahgar. Pondicherry and Colombo were ports of call at the Company's option. How many of these ports found their way

A DITCHER'S DIARY

on the list because the authorities wanted them there and not because the company found them profitable, must be left to the imagination, but some are rarely heard of now. Calcutta's prosperity was already established when the first B.I. ship sailed up the Hooghly, but there is no doubt how much it has owed to the company since then. The long list of B.I. ships, and there have been four hundred and fifty nine of them, reads like a roll of honour in the service of commerce and war. It is a proud record with which to start the second hundred years of a useful and vigorous life.

I see that a new edition of Sidney Smith's letters has just been published by the Oxford University Press. I have not seen a copy yet, but I suppose that need not deter me from commenting on it. After all, it was Smith himself who said, "I never read a book before reviewing it; it prejudices one so." If this strikes the reader as levity, I shall plead that I have had occasion in the past to dip into his letters in a different edition, and feel confident that the present one is bound to provide many an hour of pleasant re-reading. For, although Smith professed not to like letter-writing—"Correspondences are like small-clothes before the invention of suspenders: it is impossible to keep them up"—much of the wit which made him the most brilliant conversationalist of his time found its way into his letters. My reasons for mentioning him are threefold. He was a notable journalist and founded the famous *Edinburgh Review*; was that rather unlikely phenomenon, a wit in clerical clothing; and finally, through his family, was remotely connected with India and even this city. One of his brothers was Advocate General and another Supreme Court Judge of the Adawlat Court here and a third, Accountant General of Madras. As a journalist, he was perpetually involved in controversies and, since he was a good man and had few faults, he was always on the side of toleration, justice and reason. Although a parson, he had none of the asceticism of one about him. He was easily satisfied with the best in food and drink and, for him, the ultimate in heavenly bliss was eating "pâtés de foie gras to the sound of trumpets". He loved London and hated the country which he called "a healthy grave". Again, "In the country I always fear that creation will expire before tea-time." As for his witty correspondence, here are two examples. "How very odd, dear Lady Holland," he once wrote, "to ask me to dine with you on Sunday the 9th, when I am coming to stay with you from the 5th to the 12th! It is rather like giving a gentleman an assignation for Wednesday, when you are going to marry him the preceding Sunday—an attempt to combine the stimulus of gallantry with the security of connubial relations." On another occasion he sent out an invitation to breakfast: "I have a breakfast of philosophers tomorrow at ten punctually; muffins and metaphysics, crumpets and contradiction. Will you come?"

Calcutta has not been able to pioneer a movement like the Forum of Free Enterprise for a number of reasons, but there is no doubting the interest there is in it here or the part which this city can play. I shall be surprised if Mr. A. D. Shroff goes back to Bombay with any other impression. His visit, together with that of Mr. Masani a fortnight ago, has done much to explain the aims of the Forum and give people in Calcutta

some idea of what they can do to help. The impression I got from listening to him was that the movement has a big future before it. And the reason for that is its emphasis on freedom and democracy, both of which tend to have been forgotten since the first flush of enthusiasm which followed Independence. It is clear enough to anybody who has eyes to see that India is moving away from these virtues, inevitably sometimes, because rapid economic advance is worth many sacrifices. But whether through apathy, or because there is no tradition of democratic freedom in this country and therefore little popular demand for its preservation, the encroachments of the State have gone far beyond what can now be excused on grounds of economic expediency. That is why the Forum is one of the most important developments in India's social and economic life since the war. It provides a rallying point for those who realise that prosperity will avail this country little if it loses its liberty in the process. After all, not every domination needs be a foreign one. I suspect the movement will increase in popularity in direct proportion to the State's intrusion upon the activities of the business community. That is not surprising because it is there where it is noticed most. But it would be a pity if the Forum became associated exclusively in the public mind with the purely selfish interests of private business. The real defence of free enterprise is that it is part of the liberal way of living, a way which is far more creative of happiness and prosperity than the authoritarian.

I noticed that the news of the new London-Transatlantic telephone link received scant attention in the daily press. The reason, I suppose, is that by now we are so used to science's miracles, we no longer marvel at them. But it would be a pity to let the occasion pass without recalling how much this achievement owes to the imagination and energy of one American business man, Cyrus Field. When, in 1854, a British engineer named Gisborne was seeking financial support for laying a cable between Newfoundland and New York, Field conceived the wholly improbable idea of laying one between Newfoundland and Ireland. Within days he had persuaded financiers in Liverpool, Manchester and London to put up an initial £350,000 for his Atlantic Telegraph Construction and Maintenance Company. The technical development which brought such a wild notion within the scope of the practicable was, of course, the discovery of gutta percha as a water-resistant insulator, but the enormous cable, which contained no less than 367,000 miles of copper wire, snapped as it was being laid out. This was the first of the two major setbacks which occurred before the project could be completed. The news of success was not then restricted to inconspicuous corners of the daily newspapers. "Public celebrations were held in both London and New York and Queen Victoria and the President of the United States exchanged messages of congratulation. But in the middle of it all the cable stopped working and defied all efforts to get it going again. Field suffered six years of oblivion and the world forgot his project. But in 1866 his fourth attempt was wholly successful and "Young America was wed to the Old World". Field's perseverance proved that it is the human qualities that count, even in scientific matters. And it is a lesson which is useful to remember in an age which takes its miracles for granted.

THE IMPERIAL TOBACCO COMPANY OF INDIA LIMITED

Speech by the Chairman, Mr. G. H. J. Clarke, at the Forty-Fifth Annual General Meeting of the Company on the 27th September, 1956.

Ladies and Gentlemen:

I have pleasure in welcoming you to this the Forty-Fifth Annual General Meeting of the Company.

The meeting was originally convened for the 14th September, 1956 and I wish to express the Board's regrets that the accidental omission of the hour of the meeting in the original Notice made deferment advisable in the interests of the shareholders. An explanatory statement has been sent to you.

With your approval we shall take the Notice convening this Meeting, the Report of the Directors and the Accounts which have been circulated, as read and the Assistant Secretary will now read the Auditors' Report.

Since the last Annual General Meeting, Mr. E. H. Hare has resigned from the Board after serving your Company for over 30 years, latterly as the Chairman of the Board.

Mr. W. E. Nicholson, who had served, mainly in the tobacco growing areas of Southern India, for over 33 years, resigned from the Board early this year.

We wish them both much happiness in well-earned retirement.

Following Mr. Hare's resignation, I was elected Chairman in December 1955.

In April of this year, Mr. C. N. Kirkus, Mr. N. Shiva Rao and Mr. E. G. Willis were appointed to the Board.

These three gentlemen bring to their new duties and increased responsibilities an extensive experience and expert knowledge of your Company's business in its various aspects and they will, I know, make a substantial contribution to the progress of your Company.

The Accounts in your possession give a comprehensive picture of the financial results of the Company's trading during the year under review and I believe you will regard these results as most satisfactory.

Sales

In the tobacco industry, as in many others, the volume of sales is a decisive factor in contributing to a company's financial prosperity and I am pleased to report that the increase in sales volume, to which Mr. Hare referred in his speech last year, was fully maintained throughout the whole of the year now under review.

That increase has called for further investment in both fixed and current assets as reflected in the Balance Sheet, although in the case of fixed assets some element of the increased investment was occasioned by higher costs of new machinery.

Having regard to the fact that the bulk of the Company's investments are short-dated, that item on the Balance Sheet read with the cash position indicates a satisfactory degree of liquidity.

Consequent upon the introduction, under the Finance Act, 1956, of a tax on distributed profits, provision has had to be made in the Accounts now presented for the tax liability in respect of the profits distributed by way of dividend out of the profits for the year to 31st March, 1956 as well as in respect of the two interim dividends for the year under review, all of which were distributed during the year to 31st March, 1956. The additional tax burden arising from these distributions amounts to Rs. 13,26,500 and is included in the charge for Income and Super Tax in the Profit & Loss Account, a charge which in total approximates very closely to the amount left available for disposal by the Board out of the results of the year's trading.

The appropriations made by the Board and their recommendation as to the Final Dividend are set forth in the Report of the Directors on page 4 of the Report and Accounts, and at this stage I need only say that these appropriations continue to reflect the application of the Board's financial policy to which Mr. Hare referred in some detail in his speech last year. The final dividend of 4%, if approved, will now be payable on 28th September, 1956.

There are already evident to us all signs of a mild inflationary tendency in the country's economy and whilst we welcome the broad aims of the Second Five-Year Plan, with its promise of a better standard of living for all in this land, it behoves us to have clearly in mind the implications that the execution of the Plan carries in the way of possible inflationary pressure at some points in the economy. It will therefore continue to be the policy of your Board to ensure that the Company's Reserves are maintained at a level adequate to safeguard the real capital position.

I have referred earlier in my speech to the increased volume of sales during the year under review and to the benefit derived therefrom by the Company.

The revenues of the Central Government have also benefited directly through the medium of increased collections of Tobacco and Cigarette Excise Duties on that greater volume of sales.

Taxation

It has always been the contention of the tobacco industry and of your Company in particular that frequent increases in the rates of taxation of tobacco products were bound to have an adverse effect on consumer demand. That point of view has been supported in the past when sudden, too frequent increases in Tobacco and Cigarette Excise Duties have severely inhibited the natural growth of sales in following years, with consequent adverse effect on the overall yield from such taxation to the revenues of the Central Government.

In the year under review, the benefit accruing to the Central Government from increased collections of the duties has arisen, as I have said, directly from

the increased volume of sales and gives support to the further contention of the industry that a satisfactory measure of increase in tax collections will arise naturally from an expanding volume of sales.

There can be no question of challenging the right of a Government to tax tobacco and its products, but I do wish to support, most strongly, the point made by Mr. Hare in his speech last year that, in fairness to the consumer and in order to avoid any permanent damage to a sound revenue-producing source, Government should consult with the tobacco industry as to the best method of applying the incidence of this type of taxation. Failure to do so not only harms the tobacco industry, as well as those it employs and those it serves, but also defeats the intention of Government.

During the year under review, the States have continued to levy Sales Taxes on tobacco products at varying, though high, rates and it is greatly to be regretted that tobacco and tobacco products, already subject to high duties imposed by the Centre, have not yet been totally exempted from sales and local taxation.

A high proportion of your Company's sales is made in the form of a single cigarette for a single sale and there can be no question but that a multiplicity of State and local taxation rates, on top of the Central duties, seriously hampers the growth of our industry and greatly restricts the yield from taxation to the Central Government.

Andhra Act

An example of a type of State taxation damaging to the tobacco industry as a whole and to the economy of this country is to be found in the Andhra Act of 1955 amending the Madras General Sales Tax and the Madras Tobacco (Taxation of Sales and Registration) Acts as applied to the State of Andhra. The 1955 Act imposed a tax at the rate of 7½ paise in the rupee on first purchases of certain varieties of raw tobacco. Not only does this impose an additional and heavy burden on cigarette manufacturers in this country but, at a time when competition in overseas markets is unusually keen, it places Indian grown tobaccos at a price disadvantage in these markets and may therefore seriously affect this country's valuable export trade in that commodity. The Government of Andhra State promised to review the operation of this tax; and it was greatly hoped that the tax would be removed in the overall interest. Such hopes however have been considerably dimmed by the passing of a further Act imposing a tax on country varieties of tobacco, formerly excluded, but however logical it may be to extend the application of the tax to all varieties of tobacco, the tax remains damaging to the industry as a whole and to the economy of this country.

I have intentionally laid considerable emphasis on this subject of taxation of tobacco products because whilst of vital interest to your Company, the effects of its application and incidence are of equal interest to the Central Government.

The first five months of the current trading year again record an increase in sales volume but I would remind you of the following factors which are likely to affect our costs and so offset the financial benefits of that increased volume.

The effects of rising raw material costs have yet to be fully reflected in our production costs; in particular, we had to pay higher prices for leaf tobacco in Southern India this year and grade out-turns are likely to be disappointing.

Furthermore, the mounting costs of wages and of the provision of amenities for our workers have an inflationary effect on production costs and unless these increased wages and amenities are matched by increased production on the part of those receiving them, the Company's prosperity, and theirs, must suffer.

Staff Relations

Relations between the Management and the workers have been very good throughout the year. Nevertheless, your Company, no doubt in common with other manufacturers, has suffered an occasional loss in production through the ill-advised tactics adopted by small groups of workers, often without the support of their recognised labour union.

In an industry so highly mechanized as ours, we have always set great store by the maintenance of a high standard of working conditions, of good relations with labour and the provision of adequate amenities; all of which further the aims and objectives of the Second Five-Year Plan; but we are entitled to expect that all workers will reciprocate by giving of their best to increase production.

I must say that there is increasing and encouraging evidence that both workers and their representatives are beginning to share our conviction that such differences as may arise from time to time between factory managements and workers are more readily capable of settlement by direct negotiation rather than by the adoption of tactics which not only adversely affect overall output but also the earnings of the individual worker.

Whilst, therefore, I am hopeful that rising costs of production will not offset the benefits of expanding sales, I would be failing in my duty to you if I did not warn you of the significance of the upward trend in costs. Your Directors have felt justified, however, in the light of the results of the first five months' trading of the current year, in declaring an Interim Dividend of 2%, free of income tax.

I now beg formally to move the adoption of the Report and Accounts for the year ended 31st March, 1956 including the payment on the 28th September next of a Final Dividend of 4% on the income tax, on the issued Ordinary Shares of the Company.

I shall now ask a member to second the Resolution and when that has been done, if anyone has any question to put or comment to make on the Accounts, it will be a convenient time to do so.

Finance in India and Abroad

THE CALCUTTA MONEY MARKET

DEMAND UNCHANGED

Wednesday, 3rd October

THE limited number of days in which business has been transacted in the past week, and the general feeling of slackness appropriate to a holiday season, have meant that there has been little change in demand for financial accommodation. Funds continue to return from the sugar industry and from grains and seeds storage. The requirements of the jute industry have been maintained. A fair quantity of advances are still bound up in Pujah cloth stocks, but there has been little increase in the past few days. The interbank market is unchanged and the call rate remains at 3½ percent.

A fair business is reported from the bill market this week, with tea and gunny documents in evidence. Remittance has been good. Sterling continues its stronger tendency as tension over the Suez Canal situation eases.

Bullion was firm on short-covering because of poor arrivals. Silver advanced from the previous week's level of Rs. 172-15 to Rs. 173-1.

Gold improved from Rs. 104 to Rs. 104-8 in sympathy with silver. The sovereign, at Rs. 68-4, showed a gain of 6 annas.

During the week ended 28th September, Government of India Treasury Bills for Rs. 39,25,00,000 were sold in favour of the Reserve Bank.

A drop of Rs. 8.48 crores to Rs. 1,409.23 crores in notes in circulation was the main feature of the return of the Reserve Bank of India for the week ended 28th September, 1956. The total note issue was Rs. 1,27 crores higher at Rs. 1,450.54 crores. Notes held in the Banking Department consequently rose by Rs. 9.75 crores to Rs. 41.31 crores. Foreign securities declined by Rs. 10 crores to Rs. 586.74 crores, but rupee securities were up by Rs. 10 crores to Rs. 703.72 crores. Deposits of the Government of India rose by Rs. 3.96 crores to Rs. 71.39 crores, but other Government accounts were Rs. 4.89 crores lower at Rs. 19.06 crores. Balances of commercial banks, at Rs. 52.64 crores showed a rise of Rs. 9 lakhs. Investments decreased by Rs. 10.03 crores to Rs. 32.34 crores. Other loans and advances dropped from Rs. 90.69 crores to Rs. 86.81 crores, of which advances to scheduled banks against usance bills totalled Rs. 36.37 crores (Rs. 40.65 crores). These advances amounted to Rs. 273.35 crores since 1st January, 1956. Ways and means advances remained unchanged at Rs. 2.84 crores.

The return of the State Bank of India for the week ended 21st September, 1956, shows a drop of Rs. 85 lakhs in total deposits to Rs. 227.36 crores. Investments in Government securities and other authorised investments are up by Rs. 1 lakh and Rs. 5 lakhs to Rs. 95.86 crores and Rs. 11.61 crores, respectively. Advances including loans, cash credits and overdrafts, and bills discounted and purchased, have decreased by Rs. 1.54 crores to Rs. 131.67 crores. Cash and balances are, in consequence, shown at Rs. 17.15 crores, or Rs. 1.60 crores less.

The statement of the position of scheduled banks for the week ended 21st September, 1956, shows Demand and Time liabilities at Rs. 631.89 crores (Rs. 9.76 crores on account of borrowings from banks) and Rs. 461.05 crores (Rs. 2.25 crores), compared with Rs. 639.14 crores (Rs. 11.29 crores) and Rs. 460.57 crores (Rs. 2.11 crores), respectively, in the previous week. Cash and balances with the Reserve Bank have decreased by Rs. 1.30 crores and Rs. 1.79 crores to Rs. 35.98 crores and Rs. 49.30 crores, respectively. There is a rise of Rs. 2.34 crores in investments to Rs. 373.48 crores. Advances and bills discounted at Rs. 751.48 crores show a drop of Rs. 31 lakhs. The ratios to total liabilities of cash and balances, and of advances and discounts, are, in consequence, shown at 7.8 percent and 69.8 percent against 8.0 percent and 68.4 percent.

According to the landborne trade returns received in the Department of Commercial Intelligence and Statistics, the provisional figures of the total value of foreign trade of India by land with Pakistan, Afghanistan, Iran and Burma during August, 1956, are as follows (in lakhs of rupees):

	Imports from	Exports to
Eastern Pakistan	124	33
Western Pakistan	26	11
Other Countries	29	4
Total	179	48

Total trade amounted to Rs. 227 lakhs. Trade in treasure was nil and re-exports were negligible. There was thus an adverse balance of trade amounting to Rs. 131 lakhs.

I.F.C. LOANS TO INDUSTRY INCREASE

SUGAR AND TEXTILE MAJOR BORROWERS

INDUSTRY is seeking the assistance of the Industrial Finance Corporation of India in an ever-increasing measure, so the amount of loans sanctioned by the Corporation has been increasing. According to the eighth annual report of the Corporation, just published, the aggregate amount of loans sanctioned during the year ended 30th June, 1956, was Rs. 15.13 crores, which is more than double that of the previous year. Applications received during the year numbered 86 and the loans asked for totalled Rs. 27,70,01,800 as against 46 and Rs. 11.27 crores respectively of the previous year. Just over half the number of applications, as well as of the amount asked for, came from the sugar and textile industries. The remaining applications covered other major industries such as engineering, chemicals, cement and paper. A significant feature of the applications from the sugar industry was that by far the greater portion of the loans was sought by co-operative sugar factories located in Bombay, Mysore, Assam and Punjab. The loans sanctioned to sugar co-operatives totalled Rs. 5.5 crores and three applications received from them for a total amount of Rs. 1.3 crores were pending the issue of sanction at the end of the year. In pursuance of the policy of the Government to encourage the establishment of co-operative enterprises, the Central and State Governments have agreed to guarantee the loans that were sanctioned by the Corporation during the year to sugar co-operatives on 50-50 basis.

Loans and Repayments

Since its inception, the Corporation has sanctioned loans totalling Rs. 43,20,75,000. Of this amount, Rs. 16,73,19,677 has been disbursed so far. During the last eight years 115 applications from new undertakings, namely, factories that went into production after 15th August, 1947, were sanctioned, covering amounts totalling Rs. 25,70,50,000. During the same period, 93 applications for loans from old undertakings for renovation, modernisation and expansion amounting to Rs. 17,50,25,000 were sanctioned. According to the schedules of repayment of principal, the total amount due to the Corporation at the end of the year was Rs. 2,24,76,000, of which a sum of Rs. 1,68,70,152 was received. The amount in default is Rs. 48,65,848 only, constituting 21.6 percent of the

A good Sign for Exporters and Importers

Lloyds Bank offers a full overseas service through the vast network of over 1700 branches in the United Kingdom and Agents throughout the World.

Let LLOYDS BANK

look after your interests

amount due. Only six companies accounted for the bulk of the defaults. The assets of one of these companies have been sold and those of another have been leased out. Similar steps are contemplated in respect of one or two of the others.

The total amount of interest charged and to be received on loans sanctioned since the beginning of the Corporation was Rs. 2,80,88,922-6-10 of which a sum of Rs. 2,62,91,257-5-10 has been received. The amount in default is only Rs. 17,72,312-1-6. The amount in default is only Rs. 17,72,312-1-6, constituting less than 6.4 percent of the amount due. Three companies including the Sodepore Glass Works Ltd., accounted for the larger portion of the defaults. One company has been granted extension of time to pay the arrears of interest amounting to Rs. 25,352-15-6. To reduce the time-lag between the sanction and disbursement of loans, and also to reduce the legal charges to borrowers, the Corporation has, as an experimental measure, appointed its own full-time law officers at two of its branches. These officers will hereafter examine the title to the properties to be mortgaged to the Corporation and draft the loan documents. If this experiment proves successful, law officers will soon be appointed at the other branches of the Corporation also. To bring about a closer liaison between the Corporation and the Controller of Capital Issues in granting loans and in sanctioning capital issues to industrial concerns, a suitable procedure for mutual exchange of information has been evolved.

Several amendments were made to the Industrial Finance Corporation Act in September, 1955. By virtue of one of the amendments, power is now vested in the Corporation not merely to sell the property mortgaged to it but also, in suitable cases, to lease it, so that after re-imbursement itself its dues from the lease money, the Corporation will return the property intact to the loanee concern the shareholders of which will thereby be enabled to realise their investments. Pursuant to another amendment, a whole-time paid chairman has been appointed in place of the part-time

honorary chairman. By another amendment, the Corporation is now able to raise funds by borrowing from the Central Government.

During the year under review, two more State Financial Corporations were established, in Andhra and Orissa, raising the total number of State Financial Corporations to 13. The Industrial Finance Corporation is represented by its managers on the boards of directors of these State Corporations. An Indian company, under the name of Indo-Asahi Glass Company Ltd. has arranged to buy the entire assets of the Sodepore Glass Works Ltd. Considerable progress has already been made towards completing the sale transaction. It is expected that the factory which will run in co-operation with a reputed Japanese firm of glass manufacturers will be able to go into production before long.

LONDON FINANCIAL LETTER

RAISING THE PRICE OF GOLD

By Air Mail.

ALTHOUGH to some observers in Britain, South Africa's annual plea to the International Monetary Fund for an increase in the price of gold seems a matter of routine, to others it appears that the plea gathers circumstantial force each year. It is assumed that the South African advocate knew in advance that the American authorities would again reject the proposal—and, of course, lacking their concurrence, a rise in the international price of the metal is impossible; yet the renewed initiative is approved in London, even if the argument that some marginal mines will have to close at the present price does not particularly impress. Inflation, which has made the prewar price of gold so unrealistic, is weaker in Britain and various other countries than it was a year ago, but it must be resisted as firmly as ever, and the inflationary implication of a rise in the price of gold is still a strong argument against

such a move. On the other hand, it is increasingly obvious that the relation between the world's stock of monetary gold and the world's total of international payments has become utterly remote, so that even small proportional changes in balances of payments can unduly strain reserves. As there is no logical limit to the growth of trade, it must at some point become impossible to use gold for its traditional monetary function unless the value of the world's stock, responding only slowly to changes in quantity, can be substantially written up.

There is not a particular moment when such a change seems to have become suddenly opportune, but a gradual change of circumstances can, eventually, perhaps, overcome America's opposition. While America was buying most of the world's newly-mined gold, she had an obvious interest in keeping the price low; but for some years past, she has been selling more than she has been buying. Moreover, a large total of American obligations to other countries has been accumulating in the U.S.A., and the possibility of converting a substantial part of the debts into gold may impress upon the American authorities that the monetary value of even their stock of gold is not unquestionably adequate. The inflationary effects of a rise in the price of gold could certainly be neutralised with the aid of modern techniques. It may be that the strongest objection to a rise is that which is least discussed, because it is political; Russia has evidently the largest stock of gold in the world outside of America and is evidently the largest producer in the world outside of South Africa—so revised independent estimates suggest.

Interest Rates Stay High

The reduction of the West German bank rate from 5½ percent to 5 percent did not cause so much as a tremor in London. An abnormal and unnecessary creditor position, which was embarrassing even the West German authorities, was sufficient explanation of a move which was recognised to be against the international trend. Moreover, the rates at which West German industry borrows are much higher than comparable rates in Britain. Bank rate is now a half-point higher in Britain than in Western Germany, but other rates are much closer to Bank rate in Britain than in Western Germany. The economic position in the U.K., viewed without consideration of international politics, seems to favour a reduction of interest rates. Production is weakening; stocks of materials are no longer being built up, while stocks of finished goods are accumulating; and plans for expansion of industry are being curtailed. On the side of consumption, the continuing increase in wage rates is not as effective as had been supposed, because basic wages are being supplemented less by overtime pay and more is being saved. Hire-purchase debts were reduced about 13 percent in the first seven months of this year; repayments are in excess of new borrowings. Total consumption, in real terms, has not increased this year, compared with the same period of last year.

The domestic scene has the appearance of stagnation, while, generally (though not in August), the external position is being strengthened by expansion of exports. This is approximately the situation that was expected when the restraints on inflation were first imposed. The check on internal expansion was seen as undesirable in itself but necessary. It was not felt that the economy should be allowed to subside too far; declining production, which seems now to be in prospect, is essentially unhealthy. From the Treasury's viewpoint, moreover, interest rates such as those now ruling—nearly 5½ percent—has to be paid on Treasury bills—are far too expensive. It was expected, therefore, that about this time a reduction of Bank rate would be considered. On the contrary, because the Government's plan to reduce expenditure (from the levels of last April's estimates) by at least £100 million has collapsed under the impact of the Suez crisis, and because organised labour is in open rebellion against the wage freeze, "further measures" are being actively considered.

An Outdated Statute

Bankers are following with keen professional interest a discussion that has arisen from the efforts of Pye, one of the biggest radio and electronic firms, to reduce the clerical work involved in paying wages. Indirectly, moreover, the subject bears on saving. This company's procedure was—and is again—the same as that of others. Clerks are sent to the bank to collect large amounts of cash, having checked it, they return under guard; the money is re-counted, sorted, and put into envelopes for the employees. Pye worked out that this procedure cost 90 man-hours a £15,000 handled. It decided, if the workers were agreeable, to pay its wages by cheque. Few employees had bank accounts; so bearer cheques would have to be used. Local tradesmen agreed to cash the cheques; and the employees were quite willing to be paid in that form. Special cheques were designed for use with the company's punch-card machines. The new method came into operation in January 1954. It worked smoothly, and very economically, until recently. In the meantime, legal opinion had decided that the company was contravening the Truck Act of 1831, and that if in a court of law, judgment went against it, the way would be open for a flood of claims for "unpaid" wages. The Truck Act (as further developed in 1887) provides that the entire amount of an employee's wages must be paid in current coin of the realm. The abuse against which the worker was supposed to be protected was payment "in kind", but the wording of the Act seems to exclude payment by cheque. Repeal of the Act, it is argued, would enable the use of bank accounts to extend widely in the wage earnings class, and so, indirectly, promote saving.

TRANSPORT PROBLEMS IN THE SECOND PLAN

CONFLICTING CLAIMS OF RAILWAYS AND ROAD VEHICLES

By Dr. M. N. Ghosh

THE transport problem has assumed great importance and urgency in the second five year plan, because of the heavy demands of industrial expansion on the country's transport system. The lack of unused capacity on the railways as also in other modes of transport, makes it worse. The adequacy of the investment programme on the railways has, therefore, been questioned by many. The question of providing alternative modes of transport to cope with the new heavy traffic has not been given the importance it deserves in the draft plan, although lately, due to the campaign of road-transport interests, the possibility of finding alternate means of transport is being considered seriously. The questions involved in this relate to the investment needed and the costs for a given volume of freight turnover in the latter mode of transport. Conflicting claims have been made by the proponents of the railway and road transport case on the scope of economy that the respective means of transport offer.

Mr. K. B. Mathur, Member (Transportation) Railway Board, has stated that considering rolling stock and vehicles alone, capital needed for carrying one million tons of goods 300 miles by rail would be Rs. 4 crores to Rs. 5 crores, while for road transport, the capital cost would be Rs. 11.6 crores. Mr. E. V. Vaughn, vice-president of the Indian Road Transport Association, has stated the opposite case. Working on the basis of allotments for the railways during the second plan, he concludes that the total railway investment for carrying one million tons of goods will be Rs. 115 crores plus the cost of extra wagons and other special rolling stock at the rate of Rs. 4½ crores. The corresponding investment in road transport would be Rs. 4½ crores only, outside the cost of building new roads which is about one-eighth of that of a mile of railway track.

The estimates given above are widely divergent. Although it is possible to verify Mr. Mathur's estimate by an analysis of operations, i.e., considering the engines needed for goods train services (train engines, shunting engines, etc.) and wagons for the actual volume of freight turnover and the present prices of engines and wagons, it is not so easy to verify the other side's case. On the basis of operations in 1949-50, the capital cost for the transportation of one million tons of goods over 300 miles in the broad-gauge railways (i.e. 300 million ton miles) works out to Rs. 2.1 crores for engines and Rs. 2.5 crores for wagons. The corresponding estimate for road transport may be obtained from an analysis of actual operation of the existing road transport organisation. The estimates of Mr. Mathur and of Mr. Vaughn are both theoretical, calculated on the basis of the daily volume of freight carried by a truck. Mr. Vaughn has rightly stressed the real nature of the present railway plan with large investments for the replacement of worn-out tracks and rolling stock and for the increase in the traffic capacity of the track by double-line electrification, dieselisation etc. The comparisons merely on the basis of rolling stock and vehicles is improper, in his view.

However, considering the rolling stock and vehicles only the relative position of the railways and road transport cannot be stated in as simple a manner as they have done. This is because their calculations ignore the composition of goods, i.e., the loading characteristics of different classes of goods, which ultimately is the final justification for the class rates in the railways; weight alone does not determine rolling stock needs and the costs of operation. The investment estimates have been considered on the basis of the actual operating conditions in the railways and the structure of commodities handled. But the commodities usually transported in a truck are lighter on an average than those by the railways, and a straightforward comparison is, therefore, statistically inadmissible. All goods are considered homogenous for transportation purposes which they are not. In fact, lighter goods need more rolling stock on the railways for the same volume of traffic (ton miles) than heavier goods. The average load a broad-gauge wagon for different classes of commodities may be roughly given as follows:

Heavy merchandise (including coal)	20 tons.
Light merchandise	10 tons.
Miscellaneous (small)	5 tons.
Average wagon load	15 tons.

The specific minimum wagon loads also vary considerably.

MINIMUM WEIGHTS FOR WAGON LOADS (MAUND)			
Commodities.	B.G.	M.G.	Class of charge-changes from time to time.
Coal	600		
Loose Cotton (pressed)	120	100	R.R./14
Unpressed fibres	200	160	R.R./8
Firewood	270	220	R.R./1
Fresh Fruits	270	220	R.R./3
Gunnies	270	220	R.R./7
Safety matches	200	160	R.R./15
Dry grass for fodder	160	120	

I.R.C.A. Goods Tariff No. 28. Appendix H.

Considering miscellaneous commodities, it is found that the wagons needed would be about

three times those for the average of commodities. Again, the number of wagons in a train cannot be increased beyond a limit, because the gross weight has to be related to the tractive power of locomotives and also because of the difficulties in marshalling yards which may reduce the efficiency of wagon usage generally, through goods trains excepted. Thus we may assume that the net ton miles of freight for miscellaneous commodities a train mile is as low as one-third of those for average commodities. Shunting operations also depend upon the number of wagons so that, on the whole, we may assume that miscellaneous commodities need three times as many engines as the average commodity need on the railway. Thus the volume of investment in the railway rolling stock for carrying 300 million ton miles of miscellaneous commodities would be about Rs. 13.8 crores, while for light and heavy merchandise, it would be Rs. 6.9 crores and Rs. 3.5 crores respectively.

Nature of Road Goods Traffic

As already noticed, the composition of goods usually handled by road vehicles is generally of a lighter nature. The reason for this is easily understood. It is due to the rating system in the railways in which there is possibly an element of subsidisation in favour of coal and other heavy merchandise such as grain, etcetera, and which is made up by increasing the rates on miscellaneous and light commodities. Economically, this is perfectly justifiable since the system aids the growth of the economy by fostering the development of basic industries. However, it enables truck operators to compete in the transportation of such high-rated commodities. The capital needs for road transport is thus based on the existing pattern of road traffic which is composed mainly of light commodities.

We have no factual data on the loading capacity of motor trucks for bulky commodities, but the way trucks are loaded, it is likely that loading characteristics of different commodities are not as great as those on the railway. Considering Mr. Mathur's estimate of Rs. 11.5 crores for carrying 300 million ton miles by road vehicles, and assuming that the average commodity carried by road vehicles corresponds to the light merchandise in the railway classification, the investment needed for carrying miscellaneous commodities may not be 50 percent higher than Rs. 11.5 crores, i.e. Rs. 17.25 crores, while for light merchandise it will be Rs. 11.5 crores. If trucks with trailers are considered the amount of investment would be still less, because the cost of a trailer is about one-third a unit of space and load than the truck itself, while the more powerful engine needed for this would not increase the cost of a truck very much. Thus if trucks with trailers are used, the capital needed for 300 million ton miles of traffic would be about two-thirds of the above estimates, e.g. Rs. 11.5 and Rs. 7.7 crores for miscellaneous and light goods respectively.

These calculations are based on the average haulage of goods. However the degree of rolling stock usage depends upon the length of haul, since considerable time is spent by a wagon in loading and unloading, so that wagon time needed a mile for short hauls is greater than for long hauls. It will be possible to calculate the exact nature of this dependence from detailed data on operations which are not available. Assuming the average time for each loading and unloading operation to be 24 hours (on the basis of six hours of time for unloading from the following day-break after the arrival of a consignment) we may roughly calculate the wagon requirements for a given volume of short-haul traffic. Thus during the average time of nine days between two successive loadings of a wagon (wagon turnaround), two days are spent in loading and unloading and 2½ days are spent in empty journey. The capital needs for rolling

stock for short hauls of 30, 60 and 90 miles may be calculated on this basis.

Similarly, the number of trucks needed for a given volume of road goods traffic depends upon the length of haul, as loading and unloading take time. The average haul of a truck is much smaller than that of a railway wagon and may only be about 30 miles for highway traffic and would be even less if urban traffic is included. It may also be assumed that truck service for a distance of 30 miles requires two hours of running time and two hours for loading and unloading. Calculations on this basis gives the capital investment needs for rolling stock and vehicles for light merchandise and miscellaneous traffic for hauls of 30, 60, 90 and 270 miles as the table below shows:

CAPITAL INVESTMENT FOR 300 MILLION TON MILES (VEHICLE AND ROLLING STOCK) (IN CRORES)

Length of haul	Light merchandise		Miscellaneous	
	Rail	Road*	Rail	Road*
270	6.9		13.8	
30	13.9-20.5	7.7	27.9-41.2	11.5
60	10.0-12.9	5.8	20.1-25.8	8.6
90	8.7-10.4	5.1	17.4-20.7	7.5

So far, the investments needed for the extension of track and line capacities on the one hand and the construction of new roads on the other, have been ignored. However, as Mr. Vaughn has pointed out, the cost of constructing roads would be about one-eighth of that of a mile of railway track, this ratio will be much higher if the existing track is used by increasing the line capacity by constructing double lines, better signaling arrangements, etcetera. Another very important factor for goods traffic is the godown space needed for storage. The godowns are already congested. The railway plan has allocated a large sum for the extension of storage facilities—about 10 percent of the allocations for rolling stock. Very little of such investment would be needed for road transport as goods will move directly from the source to the consignee's establishment.

On the whole, it appears that for light and miscellaneous commodities and for short hauls, road traffic needs less capital investment than the railways. The operational costs of the railways also depend upon the nature of commodities and the distance of haulage, so that for light and miscellaneous commodities and for short hauls, the cost a ton-mile is likely to be much higher than the average cost a ton-mile, especially when the cost of depositing and removing from railway terminals is taken into account. For such traffic, road vehicles can compete successfully with the railways, whenever proper roads exist, and in fact, they do in spite of various restraints. For heavy merchandise including coal and other minerals and for long distances, the railways will perhaps retain their advantage for decades, as the experience of the U.S.A., Russia and other advanced European countries show. Thus in Russia, in spite of its being the second largest producer of mineral oil in the world, the volume of goods traffic by road formed only 3.5 percent of the total traffic in 1955. To formulate an efficient and economic plan of the allocation of traffic between the different modes of transport it is necessary to have a co-ordination of these services and to make a factual study of existing road facilities, railway tracks and the volume and character of the Traffic for zones around industrial centres and ports, where such co-ordination of transport is urgently needed.

* Only large trucks with trailers are considered and Mr. Mathur's estimates have been used. Mr. Vaughn's estimate would reduce the estimates given here by 60 percent.

INDIA'S MOST POPULAR CAR... HINDUSTAN LANDMASTER

and here is the reason...

IT IS THE ONLY LOW-PRICED CAR THAT OFFERS:

- ★ Big car spaciousness, comfort and performance
- ★ Surprisingly low maintenance and operating cost
- ★ Elegant styling ★ Best re-sale value

THE SOUTH ARCOT LIGNITE PROJECT

VARIOUS USES OF BROWN COAL
(FROM OUR NEW DELHI CORRESPONDENT)

THE Government of India, as was announced some time ago by the Production Minister, Mr. K. C. Reddy, has decided to go ahead with the lignite project in the South Arcot district of Madras. It is a multi-purpose project from which coal, electric power and fertilisers will be produced. In Western Germany, I reported recently, the coal deposits are successfully exploited. The coal extracted from the deposits serves several purposes.

One part of the raw coal will be used to feed the power station. Another will be crushed and screened to feed the drying plant, which will reduce its water content of approximately 53-55 percent to 10-15 percent. The dried coal will then be conveyed to a briquetting factory. It is planned to produce from the Madras coal very high-grade briquettes, yielding an abrasion-proof, lumpy coke after low-temperature carbonisation. In addition, it will be possible to produce briquettes suitable for direct use in industrial plants. The use of Madras lignite for such a purpose, it is said, will involve certain difficulties, because the briquettes are not weather-resisting, that is to say, they can easily be disintegrated by moisture, which can only be prevented if special measures are taken. The disintegration can be avoided if the briquettes

are not directly used, but converted into coke by low-temperature carbonisation. The lump coke produced by low temperature carbonisation is at all events weather-resisting. It has the same combustible properties as charcoal and may, therefore, be used for such purposes as domestic and first-rate industrial fuel. It may also be used to advantage for smelting Salem iron ore in the Krupp-Renn process.

Liquid Products

The liquid products obtained from low-temperature carbonisation may be converted by distillation and refining into road tar, diesel oil, fuel oil and gasoline. By applying the Bergius process of hydrogenation all the liquid products may be worked up into high-grade gasoline. Briquettes or granular dried coal or the briquette chips may be subjected to pressure gasification with oxygen and either be gasified to high-grade town and pipe-line gas, or the gas produced can be converted into synthesis gas which may subsequently be used for the production of urea and other fertiliser salts. The liquid products obtained from gasification, namely the tar oils, may be worked up in the same manner as the tar oils from low temperature carbonisation. Moreover, it is possible to recover raw phenols from both low temperature carbonisation and gasification.

As a matter of fact, Madras lignite with a 53 percent to 55 percent water content has as low a calorific value as nearly all younger brown coals so that its transportation is only worthwhile if the destination is not far away from the mine.

Besides, its moulding value, compared with garden-mould, is so low that a utilisation for qualified purposes is impossible. In Germany and Australia, brown coals are, therefore, dried and briquetted. According to the local conditions, indirect dries heated with low-pressure steam, or direct drying processes operated with fire gases have had to be developed. In order to overcome the difficulties of weather on brown coal, and at the same time to recover its valuable bitumina in the form of tar oils, the briquettes are subjected to low-temperature carbonisation.

Low-temperature carbonisation means careful heating of fuel in various temperatures up to 450°C. In the absence of oxygen, products such as tar oils, semi-coke and low-temperature carbonisation gas, are recovered through this process. Liquid hydro-carbon, high in paraffin and hydrogen content in the form of tar middle oil and gas naphtha which are subsequently worked up into saleable products are then recovered by hydrogenation under pressure, or by treatment with selective solvents. The combustible gases formed during low-temperature carbonisation and the mostly small-sized semi-coke are by-products which may be used as high-calorific fuel in working up plants for tar oils, in power stations or in other industrial plants. A high grade lumpy fuel with no smoke is produced by a special process out of dry brown coal powder with a low residual water content which is also pressed into the making of stable briquettes.

Smokeless Coke

These briquettes maintain their shape and high bulk density during subsequent low-temperature carbonisation in a shaft furnace, heated directly with recycle gases. This coke which, because of its high calorific value, burns smokeless like charcoal, may, therefore, be used for various purposes in industry and, especially, in households. Low-temperature carbonisation gas and liquid hydro-carbons are recovered as valuable by-products.

Gases with a high heating power may be recovered from pre-dried granular or briquetted brown coal. The latest development of the gasification technique relates to gasification by oxygen and steam under high pressure of solid fuels which include brown coal. This technique makes it possible to recover directly, and virtually to an unlimited extent, gas equivalent to coke-oven gas or town gas with a standard purity. The gas may, by appropriate treatment, be produced also in such a composition that it can be used as a basis for synthetic processes. In India, for example, it may be utilised economically as finished gas for ammonia synthesis. Urea may be produced from the ammonia and from the waste carbon dioxide to be recovered as a by-product. Urea is assuming increasing importance as a fertiliser and cattle feed extender. Besides, it is more and more used for the manufacture of plastics and glue.

Importance of Phenol

The tar oils, obtained in a large quantity as a high quality by-product, are worked up in the same manner as those recovered from low-temperature carbonisation. Low-temperature carbonisation, hydrogenation and gasification plants of the brown coal industry release phenol-containing effluents, which are not allowed to be discharged into the rivers for biological reasons. The introduction of modern extraction processes makes it economically possible to purify these effluents and to recover at the same time valuable raw phenols. The phenols are the basic material for the production of bakelite from which a variety of articles for daily use are manufactured. The fabrication of pressed plates for use in the building industry and the manufacture of furniture might become of particular importance for India, since this will permit the utilisation of waste timber.

Stocks and Shares

SPECULATIVES CLOSE WEAKER ON PRE-HOLIDAY LIQUIDATION

INDIAN IRON DIVIDEND ANNOUNCEMENT DISAPPOINTS OPERATORS

Monday Evening.

THE speculative section of the Calcutta stock market remained fairly steady up to today's clearing. The chief reason for this was the anticipation of a possible increase in the Indian Iron dividend expected to be announced this morning. When the announcement proved to be disappointing (Mr. Leslie Martin's statement is reviewed below) prices sagged and a pre-holiday slackness settled over the market. Indian Coppers encountered some profit-taking, but closed at Rs. 7-2 on expectation that the next quotation will be ex-rights. Other speculatives were featureless.

Investment shares have tended to hold their values in spite of the approach of the holidays. Little business has been done however, and the tea, coal and jute sections have been distinctly dull. Engineering and miscellaneous shares have been fairly well supported. Government securities continue weak.

In a circular letter addressed to shareholders of the Indian Iron and Steel Company, the Chairman, Mr. Leslie Martin, reports that the Government of India has refused to approve an increase in this year's rate of dividend. The Board of Directors of the Company, Mr. Martin explained, has made continual representations to the Government on this issue, but without result. Since the sanctioning of the proposed rights issue at a premium of 35 percent, shareholders have expressed concern at the unfavourable position in which the company has been placed compared with others. Subsequent representations from the managing agents have also failed and the Government's attitude is now confirmed in a letter dated 22nd September, 1956. The letter, signed by the Minister for Home Affairs and Heavy Industry, Pandit Pant, refers to a letter from the Ministry of Commerce and Industry dated 27th April, 1956 and states that: "In view of the heavy debt of the company and the need to conserve resources for approved expansion schemes, the Government is unable to agree to any increase in the dividend of the company at this stage and the reason why this was not made a condition precedent to the grant of a loan to the Indian Iron and Steel Company was that it had been made clear to the company in the course of the loan negotiations that the Government of India should be consulted in the matter of distribution of profits earned". The Minister explained that any increase in the dividend to be paid to shareholders at this stage would not be in their or the public interest. He also mentioned that two loans taken by the company from the Government—one interest free—were still outstanding. The company has already borrowed from the World Bank and is approaching this institution again for a fresh loan which would need a guarantee by the Government of India. In the circumstances, the Minister considered, instead of increasing the rate of dividend all available resources should be mobilised to complete the expansion programme. The Minister said: "By continuing the rate of dividend at the present level for some time, the economic and financial position of the company will be further strengthened and I feel sure that when the shareholders fully appreciate this point, they will readily agree to give their fullest support to this policy".

Details of the week's trading follow.

Business in Government securities was at a low ebb this week with sellers predominating. Three percent Conversion Loan 1946-86 was unchanged at Rs. 75-2 and Non-terminable Paper was lower at Rs. 75. Fluctuations in other dated stocks were minor. Among short-dated issues, 3% 1957 and 1958 were quoted at Rs. 99-11 and Rs. 99-9, respectively. Among medium-dated loans, 3% 1963-65 and 1964 were marked at Rs. 94-6 and Rs. 95-2, while 2% 1960 were on offer at Rs. 96-6. In National Plan loans, 3% 1961 was done at Rs. 99-2, as were 3% 1964 at Rs. 98-9; 3% 1967 met with scattered interest around Rs. 98-5. In the long-dated group, 3% 1970-75 were traded at Rs. 89-8 and 3% 1974 was transacted at Rs. 98-8. Business in State loans was restricted, but 4% 1968 Madras and U.P. Loans improved to Rs. 99-4 each.

Routine business was transacted in miscellaneous shares, with Calcutta Electric quoting Rs. 11-5 and Indian Aluminium done at Rs. 84.

United Commercial came to hand at Rs. 56-8 in the banking group, and United Bank of India "D" shares changed hands around Rs. 4-8.

Except for Burrakurs, which were maintained around Rs. 16 on professional interest, there was little interest in the coal section, following the strike in the Raniganj coalfield. Western Bengal came to hand at Rs. 6-8, as did Rewa at Rs. 23-6. Bharat was transacted at Rs. 7-8.

Interest in jutes was limited, except for Reliance and Bally which improved to Rs. 10-12 and Rs. 213 respectively, on interested support. National changed hands at Rs. 25-6 and Nellimarla were done at Rs. 10-14. Belvedere were on offer at Rs. 213 and Dalhousie made Rs. 181. Kamarhatti

"A" were transacted at Rs. 141, as were New Central at Rs. 16-8 ex-dividend.

Indian Copper were maintained at Rs. 7-2 on a report that the scrip will be quoted on ex-rights basis when the market reopens on 4th October. Western Stock Investment came to hand at Re. 1.

In the engineering section, Indian Iron were lowered to Rs. 35-11 on selling pressure and Indian Standard Wagon backed to Rs. 224 on profit-taking, the company having declared a one-for-one scrip issue. Indian Galvanizing were fractionally better at Rs. 23-2. Realising reduced Jessop to Rs. 38-2 and Richardson & Cruddas to Rs. 27-13. Kumardhubi were done at Rs. 9-14, but Textile Machinery declined to Rs. 23-5 on profit-taking.

Cement shares met with demand, Asoka Cement making Rs. 13 and Sone Valley Rs. 9-14. Rohtas were done at Rs. 23. Miscellaneous industrials were selectively firm, with National Insulated Cable rising to Rs. 26-8 and National Carbon to Rs. 30-4. B.I.C. were back to Rs. 11-6, and India Steamship to Rs. 10-10 on profit-taking. Dunlop Rubber realised Rs. 29-12 and Indian Aluminium were traded at Rs. 19-13. Variations in paper shares were minor. Orient Paper came to hand at Rs. 39-5 and Shree Gopal were done at Rs. 17-13.

Tea shares met with increased support and prices gained fractionally. Among Assam gardens, Betjan came to hand at Rs. 57 and Brooke Bond improved to Rs. 21-14. In the Doars group, Hantapara jumped to Rs. 235 and Hasimara were better at Rs. 34-4. Among Cachar estates, Central Cachar were transacted at Rs. 74-8.

The MACHINERY MANUFACTURERS CORPORATION has earned a profit of Rs. 10.42 lakhs for the year ended last March, against Rs. 9.15 lakhs. Depreciation absorbs Rs. 9.28 lakhs, against nil. Arrears of preference dividends up to 31st March, 1953.

"Where now the city stands,
there was once naught but the city's site." OVID

Calcutta

On August 24 1690, when Job Charnock stood on the banks of the Hooghly, he saw before him a depressing landscape of mud hovels, swamps, and paddy fields. On that very site has risen in the course of the years a pulsating city with heavy industry, modern transport and busy docks—a metropolis which could have made little progress but for STEEL—thousands of tons of it.

Experts of the Government of India and representatives of the Associated Electrical Industries of the U.K., who are technical consultants for the Government's heavy electrical equipment project, have agreed on the items which are to be manufactured at the first stage of production. The factory, which is to be located near Bhopal, is expected to go into production by 1960, and will attain its full capacity by 1967. The schedule of manufacture includes A.C. and D.C. rotating machinery, rectifiers, transformers, switchgears, traction and control gears, industrial control gears, D.C. motor starters, capacitors and water wheel turbines. It has also been decided to take up the manufacture of switchboard instruments, meters and relays, insulating materials and steam tur-

A Calcutta firm whose scheme for the manufacture of bus bodies and pick-up bodies was approved early this year is now to be allowed to manufacture van bodies and diesel and oil tankers also. Another Calcutta firm is to be licenced for the

In operating efficiency, the Travancore-Cochin Financial Corporation shows a good record, the ratio of administrative expenses to total income during 1954-55 and 1955-56 being 15 percent and 12 percent respectively. The record of the Saurashtra State Financial Corporation is also good. The operating results for the first year in each of the 12 corporations show that the bulk of their earnings was absorbed by administrative expenses. The ratio of net profits available for distribution as dividends to paid-up capital varies between 0.14 percent and 2.22 percent, the latter ratio being recorded by Travancore-Cochin Financial Corporation during 1955-56. This excludes the Madhya Bharat Financial Corporation, which suffered a loss on its first year's working. The ratio of subventions received from State Governments to total

dividends distributed by the 12 corporations during the period under review ranges between 37 percent and 100 percent. So far, the largest amount of subventions, totalling Rs. 5.13 lakhs, has been taken by the Punjab State Financial Corporation. It is closely followed by the Bombay State Financial Corporation with Rs. 5.12 lakhs. The Saurashtra Corporation has obtained a subvention of Rs. 4.81 lakhs and the West Bengal one Rs. 4.68 lakhs. Others, in order of the amounts of subventions received, are Hyderabad (Rs. 3.72 lakhs), Travancore-Cochin (Rs. 2.95 lakhs) Assam (Rs. 2.85 lakhs), Rajasthan (Rs. 1.80 lakhs), Bihar (Rs. 1.64 lakhs), Uttar Pradesh (Rs. 1.39 lakhs), Andhra (Rs. 37,000) and Madhya Bharat (Rs. 34,000).

Only about 27 percent of the available funds have so far been utilised for loans and advances by these corporations. Let alone the high proportion of investments in Government securities and deposits with banks in the first year of the working, even in subsequent years these have remained quite substantial. The percentage of loans and advances (including bank deposits) to total investments (including bank deposits) is the highest in the case of the Travancore-Cochin Financial Corporation, at 60.71 percent. Next comes Bombay with 59.19 percent. Other Corporations have invested much less than 50 percent in loans and advances.

Only the Hyderabad and Saurashtra Financial Corporations have so far taken up debentures in other companies, as permitted by Section 25(e) of the State Financial Corporations Act. The total amount of debentures held by Hyderabad is Rs. 10 lakhs, and by Saurashtra Rs. 3.75 lakhs. The total number of applications so far received by the 12 Corporations comes to 1,073, asking for loans of

Rs. 18.3 crores. Of these, 860 applications have been actually considered. The total amount of loans sanctioned up to 31st March, 1956, is Rs. 5.5 crores which works out to 41 percent of the amount of loans applied for in the 860 applications considered. Considering the loan operations of individual Corporations, it is noticed that the highest percentage of loans sanctioned to the loans asked for on applications considered is recorded by the Travancore-Cochin Financial Corporation. This percentage works out to 79. Against this, the lowest, 16.41 percent, is in West Bengal. Of the total amount of loans sanctioned, Rs. 2.8 crores have actually been disbursed to industrial concerns by these Corporations. The percentage of loans disbursed to loans sanctioned works out to 50.5.

New Pattern of Foreign Trade

A new pattern of external trade is being evolved these days. The Government has a number of bilateral agreements with Communist countries, which by and large have not added much to the quantum of India's foreign trade. It is stated the operation of State trading at one end and private trading at the other is largely responsible for the inadequate results. The State Trading Corporation, it is claimed, is bridging the gulf; it deals at Governmental level with the Communist countries and thereby provides an agency for the private sector here to trade with them. By this method, some of the lacunae have been removed. The needs of foreign importers are satisfied by assembling supplies against their indent orders. Quality control is introduced in all transactions and the settlement of disputes at Governmental level is assured. Speedy supplies are made. The private

sector, it is asserted, is not sidetracked or superseded. The State Trading Corporation acts as an intermediary, and by this method, it has secured, for example, a contract from Russia for the supply of shoes worth Rs. 1 crore. Russia is also buying handicraft products through the Corporation. The Corporation has purchased a ship from Yugoslavia for Rs. 90 lakhs, half of which will be paid in Indian rupees. The Japanese Industrial Mission which is here is negotiating a long-term agreement for the purchase of iron ore. The State Trading Corporation has offered to sell one million tons in addition to what is being offered by the private sector. Japan may supply steel, machinery and equipment in return.

Secretariat Appointments

Mr. S. Ranganathan has become Secretary to the Commerce and Consumer Industries Ministry. He belongs to the pool of financial and commercial officers created before the war. He has served in the Central Board of Revenue and in the old Ministry of Commerce. He has done much to get coastal trade reserved for Indian shipping and to reform the insurance law.

Mr. L. K. Jha has become officiating Secretary to the Heavy Industries Ministry.

Mr. Reddy to Tour Europe

The Production Minister, Mr. K. C. Reddy, will leave on 10th October for a three-week tour of certain European countries, including Russia, Western Germany and Britain. He will be accompanied by the Coal Development Commissioner, Mr. R. S. Krishnaswamy, and a technician from Sindri, Mr. Chakravarti.

For offices and industrial establishments Greater efficiency in cool working conditions

-with **Carrier**
self-contained air conditioners

WHEREVER a Carrier self-contained air conditioner is installed, the staff begin working better than ever before. The cool, noise-free atmosphere leads to greater efficiency; even a small increase in efficiency will pay for the cost of the Carrier in a couple of years!

You can change the action of your Carrier to suit the weather, to get extra coolness on hot days, extra dryness on damp days!

Works silently, cuts off noise

Your Carrier self-contained air conditioner works as quietly as a whisper. At the same time, since you shut windows and doors, it helps to cut off street noises, lets you work or relax in silence and comfort.

Cools better at less cost

Specially-designed coils and filters make your Carrier more efficient, help it to cool better at lower cost.

Remember—the Carrier self-contained air conditioner is remarkably compact and takes up little floor space. The sale of these

Circulates clean, filtered air

Your Carrier sucks in air in a steady stream, filters it, then spreads it gently and evenly. So you get an equally-cool temperature throughout—no dust, no unpleasant draughts!

Removes more moisture

Your self-contained Carrier not only lowers the temperature but removes moisture from the air—gallons of it! A new Humitrol regulates the rate at which moisture is removed.

units in India is backed by Voltas' unique after-sale service and their engineers' unmatched experience in the line.

WORLD BANK BORROWERS BUY LESS FROM U. K. PURCHASES FROM GERMANY GO UP

(FROM OUR LONDON CORRESPONDENT)

BRITISH industry has been given much food for thought in the past week, and it is to be hoped the thinking will be done by all sections and that it will be productive of revised policies. The annual report of the World Bank discloses that last year its borrowers reduced by almost half their purchases from this country, and that our loss turned out to be a gain for Germany. At the same time, about two-thirds of all the World Bank funds made available in recent years have been for transport and electric power developments, always regarded as our principal export industries. Finally, we learn that about half the Bank's loans have gone to Commonwealth countries where we might have expected to enjoy special consideration, but apparently price and delivery date factors have proved more important in the context of the World Bank's conditions. The actual figures are not without interest. Total borrowings in the year ended June, 1956, were roughly £100 million, of which 13.2 percent was spent in the U.K., against 23.9 percent of the 1955 total, while Germany's share rose from 6.4 percent to 14.1 percent.

There are lessons to be learnt from the World Bank report, as there are from some very frank remarks made by Mr. Francis E. Rogers in a farewell speech he made to journalists on the closing down of the U.S. Technical Assistance Programme in London, of which he has been the head for the last five and a half years. His main criticisms were that inefficient firms are being shielded by their more efficient colleagues, that there is too much "complacency" and not enough "competition" in some industries, and that our consumer goods are often of poor quality and workmanship. He thought that inferior firms should be given the choice of "going to the wall" or growing more efficient. There was need for better management, better trade union practice, and better utilisation of resources. The Federation of British Industries has lost no time in replying to Mr. Rogers's strictures, which it regards as being "utterly exaggerated", for it is simply not true that manufacturers in general are "cosseted" and "complacent." The figures of our export trade, it points out, prove that we can stand up to competition even with United States manufacturers and even in the United States market. It is quite wrong to suggest, as Mr. Rogers does, that the inefficiencies of a few are characteristic of the average.

Production Level Stagnant

Another sobering thought is furnished by the latest figures relating to the level of industrial production. The Treasury has revised the index figure for June (1948=100) a point upwards to 141. The July figure is given at 126 and for August it is estimated to be 115-116, as against 118 in August of last year. There were more holiday days this August than there were in the same month last year, so a better way of judging how the production level is going is to compare the eight-month average for the two years. In 1955 this worked out at 134. This year it is only 135. The levelling-off of the overall index disguises a considerable shift of emphasis between different industries. Taking July and August together, the output of coal and bricks was virtually the same as last year. That of crude steel was 2 percent up and of sulphuric acid 71 percent up, while 12 percent more electricity was generated. On the other hand, the output of cars was 24 percent less than last year's (partly owing to the strike); of commercial vehicles 20 percent less; of cotton yarns 10 percent less; and of man-made fibres 1 percent less.

In the face of these warnings, the persistence with which many trade unions are pressing wage claims—especially as industrial profits are declining, as has been disclosed by the half-yearly progress reports of I.C.I. and G.E.C. last week—seems particularly unfortunate. They lend support, however, for the F.B.I. President's appeal to employers and trade unions alike to exercise "responsibility" during coming months. Sir Graham Hayman, who was speaking at Bradford, said industry was making a real effort to keep prices steady, and the fruits of the policy of price restraint were already reflected in a more stable price level. But to defeat inflation and restore the real value of the pound, far more drastic action was needed than price restraint. In particular, the policy could not be successful unless there was co-operation from labour. Sir Graham said that it was misleading to talk of a wage freeze. The incentive of higher wages—where they could be afforded—was more than ever desirable to encourage mobility and to provide incentives for skill and efficiency. "But I feel sure," he went on, "that using the fruits of greater productivity to keep prices steady is at the present time the fairest and most effective way of distributing the benefits of an increase in the national income." Restraint was only another name for responsibility. He appealed to both sides of industry to show the greatest sense of responsibility during the coming months. The future was critical. A plateau was a poor resting place if the only way off it led down a precipice.

Free Trade

These developments are all of interest in view of the Commonwealth discussions in Washington on the West European free market proposal, to ex-

plain which Mr. Thorneycroft has now joined the Chancellor of the Exchequer in America. The F.B.I. has been considering this question for some time at the request of the President of the Board of Trade, and Sir Graham made a cautious reference to the subject at Bradford. He said the implications of the plan were profoundly important and far-reaching. Imperial preference had been an immense "growth factor" among members of the Commonwealth, and although it might well diminish over the years as the members developed and broadened their economies, its value was still too great "to justify its being jettisoned in favour of a common market in Europe." On the other hand—and here is the other horn of the dilemma for British industry—Sir Graham was aware that our exports to Europe were of great importance. "We cannot ignore the implications of a customs union between western European countries which might well endanger our trading position in that area." At this stage it was not a matter of choice between one system and another. The problem was really to consider participation in a European common market, in order to preserve and expand our interests in that area while at the same time preserving the essentials of imperial preference. "It may be that a formula can be worked out which reconciles these two systems," he concluded.

A report is now being drafted for the consideration of the Grand Council of the F.B.I. on 10th October and that will no doubt influence the British Government's final decision on the matter, as will the views of the Commonwealth Finance Ministers expressed in Washington.

Commonwealth Bankers to Meet

Although no important decisions need be expected, keen interest will be taken in the discussions to take place in London early in October between the heads of the various Commonwealth central banks. Many of the Commonwealth central bank Governors will be returning through London from the Washington meeting of the International Monetary Fund and the World Bank, and the Governor of the Bank of England has taken the opportunity of inviting them to spend some days in London to discuss recent experience of monetary policy. Problems facing the central banks in Commonwealth countries vary a great deal and the coming talks may well afford fresh light and guidance. The discussions will supplement the regular exchange of informal visits and correspondence between the Bank of England and other Commonwealth central banks.

Freight Rates via Suez

The 15 percent surcharge on freight rates between European and most countries east of Suez has been suspended. It was imposed week before last because of the Suez crisis. The announcement by the three Shipping Conferences which imposed the increase said the great majority of their vessels were getting through the Suez Canal without serious delay. Some ships had been diverted and others re-routed round the Cape. The existing pilot service had handled the rest. The warning was added that the danger remained that the surcharge might have to be re-imposed. The three Conferences include most of the major British lines operating between Britain and the Far East. Insurance rates have also been cut. On 28th September London underwriters announced reductions of 2s. 6d. a £100 for cargoes through the Canal. They are now rated at 3s. 3s. a £100 against the 5s. 9d. fixed last week and a minimum of 9d. before the present dispute.

Lloyds Bank Surprises

The directors of Lloyds Bank, through Sir Oliver Franks, their chairman, sprang a surprise on the City by announcing last week that they have decided to simplify the capital structure and, more or less as a *quid pro quo*, recommend a final dividend for the current year of 7 percent against the 6 percent paid last year. Explaining the proposals, Sir Oliver pointed out that in the past ten years Lloyds Bank had steadily built up its reserve strength. He did not think that the depreciation of Government security holdings had any serious effect on the bank's financial position. It was now possible to eliminate the reserve liability of £54

million without impairing "the bank's credit and standing." In fact, the uncalled liability of £3 15s. on the £5 A share can only be called up in the event of a winding-up, and then only if needed to meet the liabilities of the bank. That is now regarded as such a remote contingency that it need not be insured against. Apart from cancelling the uncalled liability on the A shares, which will reduce them to a nominal 25s. fully paid, the directors also propose to consolidate them into £1 shares. Next, the nominal value of the B stock units is to be reduced from £1 to 8s. 4d. and the resulting units will be amalgamated with the A shares to form a single class of fully paid shares of £1 each. The B shares have a maximum but not fixed dividend of 5 percent without any priority. Apparently, many thousands of them are held in very small amounts, and they cause undue trouble. The tidying up of the capital structure will make an increase of capital much easier. Sir Oliver Franks was careful to say that no such plan was implied in the present announcement. Meanwhile, Lloyds Bank will have a more popular and more marketable type of share. As for the raising of the dividends to an annual rate of 13 percent against 12 percent, this is equivalent to about 16 percent on the former capital. Sir Oliver commented that this was the "all but final step towards restoring the rate of 16 percent from which the dividend was reduced 21 years ago."

Cotton Still Presses Its Case

Sir Raymond Streat, the chairman of the Cotton Board, loses no opportunity to press Lancashire's claims for protection against cheap imports. At the convention of the National Association of Outfitters at Harrogate he told delegates that many countries which formerly provided large markets for the British cotton industry had erected high tariff barriers to help develop an industry of their own. We could have born this, but in the past two years the home market had been flooded with cheap goods from India and Hongkong. Those countries, said Sir Raymond, enjoyed free entry into our market; the British cotton industry was appealing to the Government for a change of policy to grant it some protection in the same way as other industries.

Sir Raymond continued, "I think it is true to say that the British cotton industry is practically the only major industry of any modern country which has to face a substantial flood of imports without any protection at all. This must be combated. We do not want to rely on goodwill, but on our own energy and resources, and we are, in fact, embarking on many new endeavours to counter these adverse trends."

In this country to-day the community at large was enjoying the highest standard of living Britain had ever known. There was a uniformity of consumer purchasing power which was really a miracle, and lifted our society to a level of economic and social achievement unequalled in any country in the world. A great opportunity existed for those who dealt in articles of clothing to pursue their rightful claim to a full share of that increased purchasing power."

Brevities

Up to 13s. a lb. for high grade Northern India teas has now been paid at the London auctions. These top rank teas are now selling at levels ruling during the famous boom two years ago. Even the low grades are now catching up. Their price is around 3s. 6d. a lb. against a low of 2s. 9d. two or three months ago.

Several hundreds of guests, many from Indian and Far East ports, attended two dinners in London last week to mark the centenary of the British India Steam Navigation Company and each received a book, written by George Blake, the Scottish novelist, on the company's fascinating history.

Further representations have been made by the Mysore Gold Mining Co., Champion Reef Gold Mines of India and Nundydroog Mines to the Government of India and the Government of Mysore about the Mysore Government's proposal to nationalise the mines and the compensation to be paid. Stockholders have been advised to await a further announcement, which is expected to be made in the near future.

LET YOUR SAVINGS GROW...

WOOL TRADE WELCOMES MORE EXPORT QUOTAS

THE PROBLEM OF INCREASING YIELDS

(FROM OUR BOMBAY CORRESPONDENT)

THE Government's decision to issue further export quotas for wool during the period October 1956 to 31st March 1957 has been welcomed in trade circles here. The previous export quota has been almost exhausted and shippers have found it difficult to enter into fresh business. The turnover in the export trade has therefore been negligible in the past few weeks. Meanwhile, the Yellow season has begun in north India and reports reaching Bombay indicate that the daily arrivals in the Delhi market now amount to 250 maunds. Prices, however, have been slightly easy because of the increased competition among stockholders to dispose of their previous seasons' purchases. Exporters here have been quoted Rs. 2.12 a lb. f.o.r. Bombay for the Delhi, Beawar, and Punjab qualities of Yellow while White varieties are nominally placed at around Rs. 3.5 a lb. Greys are quoted at around Rs. 1.4 and Light Greys at Rs. 1-8 a lb.

Indian wool, with its characteristic springiness, is today rated the best carpet wool in the world. With this naturally superior product, India has built up a modest export trade with other carpet-manufacturing countries. Of these, Britain is India's leading customer and accounts for approximately 50 percent of the country's total annual export. In 1952-1953 when there were no export restrictions on wool, 37,966,013 pounds were exported abroad netting the equivalent of Rs. 84,102,214 in foreign exchange—an all-time record. It is possible that this record would have been broken in subsequent seasons but the Government clamped down on exports with the object of ensuring an adequate supply of wool for the domestic manufacturing industry. Indirectly, wool contributed in the same year another Rs. 36,861,025 towards the foreign exchange earnings of the country in the form of carpet exports. It is clear, therefore, that there is considerable scope for further expansion and sheep farming, if scientifically developed can be a valuable asset to the country's economy.

India's sheep population is estimated at 40 million head and the annual wool production is computed at 58 million lbs, which represents one and a half percent of the total world clip. The average annual yield works out to 1.45 lbs a head, which is deplorably low compared with 6 lbs a head in New Zealand for a comparable quality of wool. This disparity in yields is all the more marked considering that India has the unusual advantage of two main clips in a year, the White or the spring clip and the Yellow or autumn clip. In certain areas a third and a fourth clip are also obtained in between the two main clips. In the other wool-producing countries of the world only a single clip is obtained in a year. The fact of the matter is that under the existing set-up wool production in India is conducted on haphazard lines. It is in the hands of poverty-stricken shepherds who have neither the facilities nor the necessary knowledge for sheep farming. They are a floating population and wander from one place to another in search of water and pastureland. Cross-breeding and the improvement of stock is therefore impossible. The Rajasthan stock is the best in India and accounts for nearly 40 percent of the country's total output. Also, the Rajasthan yields are the highest in the country and are estimated at 4 lbs a head each year. The yields in the south, Cutch, Saurashtra, the Punjab and Uttar Pradesh are extremely poor and in some

cases are no more than 1 lb. a head in the whole year. The quality is much below the normal standard. It is believed that cross-breeding with Rajasthan rams would increase the yield considerably and would also result in a markedly superior product. The Government's research stations in the wool producing states of the country are conducting cross-breeding experiments and promising results have been obtained. In Rajasthan, for instance, four distinct indigenous breeds have been established and the qualities of their wools graded. In addition, the Government has a Sheep and Wool Department on which Rs. 15 lakhs is spent each year. Experts of the Food and Agricultural Organisation have also visited the country to advise on sheep and wool development.

Need for Settling

But it is impossible to take any concrete steps unless the shepherd population of the country is settled on compact sheep farms which have adequate grazing facilities and an abundant supply of water. Planned experiments and planned production imply settled conditions and this is the crux of the problem. It is now proposed to include sheep farming as an integral part of the community development projects wherever possible. Advantage should also be taken of the multi-purpose projects which will bring vast areas of arid land under irrigation. Some of these could be earmarked as pasture lands and the nomadic shepherd community settled on specially demarcated areas to develop, under competent supervision, a potentially lucrative industry. Any rational locating of sheep farms would have to take climatic considerations into account for generally the higher the altitude and the lower the temperature, the better the quality of wool. For example, the wool produced in the hilly tracts of Kashmir is similar to the better types of New Zealand and is far superior to the wool which is sheared on the plains. It is this wool which enables the Kashmiri workmen to weave their exquisite fabrics which are in demand in the luxury markets of the world. Similarly, the wool imported from Tibet and Nepal is of good quality with a long staple and of fine texture. About 9 million lbs. of wool are imported from these two countries every year. Of this quantity, 3 million lbs. are consumed by the domestic mill industry for weaving piecegoods and blankets after blending with the coarser domestic wools. The balance is re-exported to Britain and the Continent.

The export trade is highly organised and the Liverpool market continues to sell Indian wools on an auction basis. In addition, the practice of selling on a firm contract basis has also been established. But local marketing is most unsatisfactory. The shepherd brings his wool to the nearest market and sells it to the middleman after much haggling. The middleman cleans the wool and, in turn, sells it to the exporter. In the first stage of the transaction the price is an uncertain factor and is largely governed by the needs and the circumstances of the shepherd. Neither is satisfactory grading possible under such a procedure. It is obvious that with proper development India can establish herself firmly in the wool markets of the world and build for herself an enviable export market and in the process rehabilitate a sizeable section of the community.

The Cotton Crop

The 1956-1957 cotton crop is estimated at 5,500,000 bales. Reports indicate that the first all-India estimate puts the current year's area at 14,602,000 acres as against the adjusted first estimate of 13,175,000 acres for last year. This shows an increase of 10.7 percent. The increase has occurred mostly in Americans, Dholleras, Jarilla, Bengals and Southrons. On the other hand, the production of Omras has declined. These reports introduced an easier trend in the futures market but curiously the ready market has not moved in

sympathy. The disparity between the two sections now stands at approximately Rs. 80 a candy. It is possible that apart from reports of a bumper crop, the market has deliberately been kept low by operators in order to avoid government action similar to last year's. But if the disparity continues at this level for any length of time it is feared that the link between the two sections of the trade may be severed leading to fresh complications. There have been no restraining factors in the ready market and premiums have been paid for popular varieties over the official ceilings. The trade believes that the government will extend the credit squeeze to cotton also and the banks will be advised to demand a margin of 50 percent on advances against cotton. Meanwhile, the wholesale textile market continues slack. There has been hardly any demand from upcountry centres and prices have declined by about 5 percent. This is believed to be a temporary phase and once the problem of the enhanced excise duty is settled, demand is expected to revive and the present fall restored.

Tata Hydro-Electric's Results

The annual report issued by the Tata Hydro-Electric Power Supply Co. Ltd., indicates that the company's profits rose from Rs. 25,00,587 in 1954-1955 to Rs. 27,95,640 in 1955-1956 recording a net increase of Rs. 2,95,053, or 11.8 percent over the previous year. This increase was possible despite the fact that the total expenditure was Rs. 7,96,791 in excess over the previous year. The increase is accounted for mainly by the increased cost of thermal power purchases and interest on a short term loan. The report indicates that power generation and sales, inclusive of the thermal energy purchased, were the highest ever. Satisfactory monsoons over the past two or three years have helped in conserving hydro resources, with the result that during 1955-1956 over 1,300 million units were generated and 322 million additional units purchased from the Electricity Board's installations at Chola. The total energy sales were 1,395 million units, besides which it was possible to return to the railways approximately 45 million units replacing in kind almost all the energy supplied by them during 1953-1954. Technical expansion has also been satisfactory. Progress on the construction of the first 50/62.5 Mw unit at the Trombay thermal stations has been according to schedule. Unless unexpected hitches occur, the first unit is expected to be in commercial operation by November this year to be followed by the second unit in April 1957.

After considerable delay, a part of the land required for the construction of the Carnac receiving station was acquired at the end of March. All equipment has been ordered and a part of it has already arrived. The main building, which will house the switchgear and control room, is under construction. The work is being expedited to enable a part of the load for south Bombay to be transferred to it as soon as possible. The 100 Kv overhead lines from Trombay to Sewree Fort were completed and the work of laying two 100 Kv underground cables, each 4.75 miles in length, between Sewree Fort and the Carnac receiving station, will be completed and connected by the end of the year. Two 30,000 Kva transformers were commissioned into service at Parel for adequate 22Kv supplies to sub-stations and a third 16,000 Kva transformer was brought into service for supplies to the two oil refineries, Indian Rare Earths and the Atomic Energy Reactor Plant.

Various measures have been taken to build up the system transmission and distribution capacities to keep pace with the rapid industrial development in the Bombay-Poona region and the higher load demands expected with the commissioning of the Trombay thermal station. These measures include the provision of 6.6 Kv metal enclosed air blast switchgear for the Parel receiving station in replacement of the 40-year old switchgear, now obsolete in design and inadequate in rupturing capacity; the replacement by stages of the old underground feeder cables near the Parel receiving station which serves the textile industry among others; the rewinding of the sixth generator at the Khopoli generating station which when completed will complete the remodelling and result in the station operating at a much higher efficiency and peaking capacity; the construction of a 110 Kv transmission line between the Dharavi and the Parel receiving stations; the replacement of the 35-year old 21,000 Kva, 100/22 Kv power transformer banks at Dharavi by two 60 Mva transformers; the existing 100 Kv breakers and switchgear for the transformers and outgoing feeders will be replaced by new switchgear to suit operating conditions when the Koyna hydro-electric station is interlinked with the system; the reconstruction of the Bhira-Dharavi 110 Kv lines via Khopoli to replace the existing black steel tower line. In addition to laying some new feeders to meet the increased load demands, plans are being worked out for reorganising and reinforcing the entire underground distribution network so as to relieve the overloading of old cables which have been in service for long periods. Despite these expansion plans, electricity will continue to be scarce in Bombay. The Government of Bombay, having intimated applications for allotment of the capacity of the first unit from Trombay, have received demands exceeding 222,000 Kw including certain reservations proposed by the Government for their own requirements and for essential consumers. The indications are that the load demand will continue to increase steadily until it absorbs the entire additional power to be generated by the two new sets at Trombay.

Madras

TENANCY REFORM LAW IN MADRAS STATE

SECURITY OF TENURE AND FAIR RENT ASSURED

(FROM OUR MADRAS CORRESPONDENT)

THE Madras Tenants Protection Bill was passed quickly by the Legislative Assembly, after the Select Committee had scrutinised it, and given its approval to most of the clauses. The minor changes it made left the objects and reasons as they originally were. The landowner's right to resume the personal cultivation of his land has been conceded up to a point in the Act. The old rent can still be fixed by the owner, provided he has obtained the tenant's consent to it. It is expected that this provision might benefit the small landowner, if he has no other income. Landowners with less than 13½ acres are distinguished from those who have larger holdings. Some Congress M.L.A.s appreciated the troubles of small owners, but suggested that the fixity of tenure be conferred on crop-sharing tenants in ryotwari areas. In the main, the new law gives all cultivating tenants new and unprecedented rights and restricts the freedom of the owner to vary the rent or charge tenants. In the course of the third reading of the Bill, the Revenue Minister gave the assurance that officers would be impartial and act in accordance with the current theory of social justice.

It has been claimed that the reforms will soon lead to ceilings on land holding and provide eventually for the distribution of land to tenants on payment of compensation. This means that the Transfer of Property Act will undergo big changes. It has however been recognised that the redistribution of land now belonging to larger landlords can come only after the acquisition of the surplus land by the State. Stoppage of eviction (as in Travancore-Cochin State) is however the immediate aim. The owner is entitled to half the gross produce. To an appreciable extent, the special needs of Madras where peasant proprietors are in a majority and where the owner is to some extent a partner in cultivation have been recognised. Further, a rise in wages might reduce the tenants' income. The fall in their number in recent years may justify the reform, but the fact remains that lack of working capital on the part of tenants is the chief obstacle to improvement. Although small landlords have been exempted from the scope of the Act, fragmentation of land by subdivision among coparceners cannot be prevented. But intensive cultivation might follow the reforms. The Government which pushed through the Bill will be able to plead at the coming elections that land reform measures, as promised, have now been extended from Tanjore to all districts. The tenants' demand for a bigger share in the paddy crop raised in the summer has been successfully pressed in certain areas leading to agrarian trouble. The Madras Assembly's decision on fair rents was anticipated by cultivating tenants, and the landowners could not do anything but wait. The measure, of course, does not exceed the recommendations of the official Subramaniam Committee and, in effect, only creates conditions for the security of tenure, fair rents on a uniform basis and checking the process of landlessness among cultivators. Yet no attention has been paid to the problem of "tied" land labourers whose number is increasing.

Sales Tax Administration in Andhra

The recommendations made by the Special Committee set up in Andhra on sales-tax administration centres on evasion: strict penalties are required, stresses the Committee which suggests that dealers who suppress facts should be prosecuted and the penalty collected along with the dues. Commercial Tax Officers should have the right to seize and retain account books in order to make a prompt and penal assessment. The changes are clearly influenced by the example of Madras where the sales-tax authorities have been armed with extra powers to deal with evasion. That harassment is involved has not been denied, although safeguards have been proposed in suitable cases. Appeals against the Department to the Appellate Tribunal are frequent because the payment of tax due is promptly demanded. The report of the Committee does not appear to have considered the plea that the trading community is handicapped by the new revenue law. There have been no estimates of evaded taxes or of the loss of income to the State, which in view of the higher single-point levy on eight specified commodities, should be in a position to collect more. The prices of commodities such as coffee and jaggery have gone up because of the new rates of the tax, and higher sales-tax in Andhra affects the consumer in Madras. The frequent pleas for the rationalisation of sales tax have evidently made no impression on the Government whose policy is solely guided by its need to raise more revenue.

Case for More Industries

The Union Minister for Heavy Industries, Mr. Manubhai Shah's visit to Madras and other places was the occasion for the Madras demand for more industries being pressed again, particularly in places such as Salem and the west coast. A new aluminium plant in 1959 is taken as certain. The Union Minister hinted that a shipyard might be started and the new paper mill could be located in the west coast, while Salem's minerals are regarded favourably. The starting of a rayon plant to produce stape pin has been advocated by mill-owners in Coimbatore. The establishment of a thermal plant to overcome power cuts has been recommended. In fact, this seems the most urgent item for the south at present in view of recurring

reductions in power supply during the summer. Mr. Shah indicated that millowners should take the lead in setting up a thermal plant to supplement hydel power. The more important of promises made by Mr. Shah relate to accelerated work on Neiveli and to the starting of new spinning mills. His fresh assessment of potentialities in the south has not created enthusiasm, but it is noted that Dunlop's proposal to start a new tyre factory near Madras has come without official inspiration. The expansion of the cycle industry to produce 1.1 million cycles will be easy and the tyre factory will raise the consumption of rubber. The shortage of raw rubber is being overcome. At the annual meeting of the Cochin-Malabar Estates Ltd., Mr. Kilgour referred to the fact that the company put through its own development plan, now well advanced as it has 1,584.47 acres of immature rubber. He commented on the scheme for synthetic rubber by pointing out that the replanting scheme drawn up in 1949 would have averted the shortage, and made the synthetic rubber scheme superfluous. He also pointed out that instead of setting up a plant costing Rs. 12 crores near Bareilly to employ 8,000 workers, the Government could raise rubber production by over 20,000 tons a year by planting 80,000 acres providing direct or indirect employment to 200,000 workers in Kerala, where unemployment is so acute. He remarked that spending Rs. 12 crores, of which half will go out on foreign exchange, on a scheme that is perhaps meant to help the oil refineries is strange when the clamour is for aiding small and decentralised industries at present.

Railway Extension

The General Manager of the Southern Railway announced that the new rail line from Ernakulam to Kottayam will be opened in October. The first section of 37 miles of the line to Quilon is ready. By the middle of 1957, the line from Quilon to Mevucakara (30 miles) will be ready. Kottayam has a big trade in rubber. The main interest of the Southern Railway extension plan lies in the proposal to electrify the 100 miles from Madras to Villupuram. The suburban service to Tambaram will be extended. It is perhaps meant to create demand for power from Neiveli. But the fear that the traffic is not enough to justify the scheme has been voiced. The rise in earnings by Rs. 4 crores in 1955-56 may justify development but the area from Madras to Villupuram is well served by road transport, and the traffic density required for early electrification does not exist. The saving in coal does not seem important as against the capital cost of doubling the railway track.

Training for Future Managers

The University diploma course in business

management and business administration has taken its place with that for public administration. The Madras Institute of Management, organised last month, held its first meeting on 20th September. The Madras Finance Minister spoke of the need for qualified managers which the General Manager of the Hindustan Aircraft factory also stressed. Dr. A. L. Mudaliar hoped that scientific management would lead to economies in production. The pooling of knowledge and experience for raising output has become necessary and better management may reduce friction with labour. Mr. Srinagesh pointed out that production per manhour is low in India as compared with China.

New District in Madras State

Although Madras will not have the divisional system of administration, long in vogue in Bombay State, certain changes in its district administration are in the offing. The creation of a new district from the Tamil taluks of south Travancore has been promised. It is taken for granted that its name will be Kanya Kumari, after the Cape, and the headquarters will be located in Nagercoil, only 40 miles from Trivandrum. Though not on the rail route, the town is very well served by road transport and has growing ties with Tirunelveli. The district headquarters town is large and prosperous, and officials transferred from Kerala will have no reasons to complain. The creation of a new district of Pudukottah has been suggested. When the State was merged in 1948 there was a plea that a new district should be constituted with Pudukottah town as its headquarters. It was argued that it would be better than Ramnad constituted by the division of Madura. Pending the publication of the official committee's conclusions on district administration in Madras, some guidance is available from the proposed formation of the three districts in the new Kerala State out of Malabar and Kasargode with headquarters in Cannanore, Kozhikode and Palghat respectively. The Registration department in Madras has long recognised that work in the area is heavy and four district registrars look after the registration of documents in Malabar which has also two District Courts like Tanjore. Whether the Nilgiris should remain a separate district after November has not yet been considered, but the balance of advantage may lie with its inclusion in Coimbatore. Help for developing tourist attractions has been promised, but that semi-English hill district is not at all like the Agency areas to which ordinary laws do not apply. There is however no likelihood of the Board of Revenue here passing out of existence. The Madras Government has often declared that its supervisory functions are inseparable from revenue administration and the collection of sales-tax is another reason for retaining it.

Tan Hides in Fair Demand

There has been a fair demand for kips in the past week, Messrs. D. B. Vos and Son Limited, a leading firm of hides and kips merchants in London report. The best demand was in 8 to 8½ and 10 to 12 lbs average kips, particularly for better grades and these have been steady to firm. There has been less interest for lightweight kips in which there has been a slightly weaker tendency. Buffaloes have been fairly steady with only a moderate demand, and it is reported that there has been some U.S. buying direct from Madras. Cow-calf and buffalo-calf continue steady with moderate interest.

WORKING CLASS COST OF LIVING INDICES RISE IN JULY

The consumer price index numbers for working class (base shifted to 1949 = 100 except where otherwise indicated) increased in 14 centres during July, 1956, according to the Labour Bureau, Government of India. The maximum rise of six points was recorded by the index in Tinsukia which stood at 114. The index for Mercara appreciated by five points to 106, for Ajmer by four points to 97 and Jharria by three points to 89; for Delhi, Cuttack, Berhampur, Gauhati, Silchar and Patna (base: 1953 = 100) by two points each to 109; 114, 112, 98, 110 and 93 respectively, for Jamshedpur, Dehri-on-Sone, Ludhiana and Madras plantation centres, the indices rose by one point each to 107, 98, 93, 105, respectively. The food group indices appreciated in 13 centres, fuel and lighting indices in eight centres, clothing indices in six centres and miscellaneous group indices in five centres. The index number for Akola declined by one point to 94 mainly due to a recession in the miscellaneous group index. The index number for Jabalpur receded by two points to 101 due to a fall in almost all the group indices. The index number for Monghyr showed only a fractional rise and stood at 89.

EXPORT PROSPECTS FOR ATOMIC EQUIPMENT

Official Assessment

The Authority's own programme of research is focussed on the three successive stages of the nuclear-power programme. For stage one, research and development work on graphite-moderated gas-cooled reactors (like Calder Hall) is still being done but the Authority, which will thereby assist the companies in their tasks. But technical interest is naturally focussed on more novel ideas for the later stages. Among the possibilities now under investigation for stage two, are the pressurised-water reactor and the sodium-graphite reactor, in either of which the heat-rating would be higher than that of the gas-cooled reactor, but both of which would require enriched fuel, which is at present scarce. The sodium-graphite system—using graphite to moderate the reaction and liquid sodium to draw off the heat that it generates—seems at present the more promising, and it is possible that design of a prototype of such a system will be started this year. The third stage is not quite so urgent, and choice of an experimental reactor for it will probably not be made until a year or two hence; still more enterprising researches for it are, therefore, permissible. Most important are the possibilities of "breeding" fuel. The experimental commercial-scale fast breeder reactor now under construction in Dounreay, Scotland, is not a part of the 12-station programme, but its principles may be incorporated in the programme's last stages.

Export Potential

An important consideration with these stage-three reactors is their export potential. It is no secret now that the authorities have revised their no ideas of the export trade that British industry can expect from nuclear equipment in the next decade. "It is reasonable to expect", said the A.E.A. report, "that orders from overseas will follow, rather than precede, the achievement of nuclear power on a competitive basis in this country." But it is questionable whether the type of reactor on which, for her own needs, Britain is necessarily concentrating her main effort at present is the most suitable for export. Few of the countries which are much interested in supplementing their conventional sources of power require installations as large and cumbersome as Calder Hall—though Japan (in circumstances somewhat similar to Britain's) is definitely interested. The stage-three reactors, on the other hand, will be a basis for medium-powered nuclear power-stations, which will be much more readily exportable. It will be years, however, before such stations have been tested in Britain, and in the meantime it seems that the export trade will be mostly in research reactors. Countries as differently situated as western Germany and Australia are in the market for such reactors in Britain, and the Authority is helping to expand the trade by keeping in mind the export potential of any of its major developments. The value of this export trade is probably approaching a rate of, say, £25 million a year. Even so, it is only a modest part of the total export trade of British engineering industries.

LITTLE INTEREST FROM OVERSEAS

BUYERS: FIBRE ALSO EASIER

The fibre markets have followed a similar pattern and although prices have shown little change, there has been an easier tendency throughout the week. The movement of jute was seriously affected by the recent rains, not only locally but also in many upcountry agencies, and this was probably the only thing that prevented prices from falling right back. Mill interest has been insignificant and the fresh business contracted has been of no consequence. The only section that showed any activity was the local Daissee market, where two large groups continued to dominate proceedings, with a buying policy that has been criticised by the rest of the trade. This refers to jetty purchases; Daissee sellers apparently prefer to sell direct to the mill in this fashion as not only do they get a quick cash return for their goods with no brokerage to pay, but they have been able to secure a much better price than the market rate for jute which under a contract guarantee would incur a heavy moisture penalty. This has seriously affected deliveries and offers of jute to other mills, and encouraged malpractices. Many sellers have been experiencing difficulty in getting rid of cuttings as mills are no longer interested in this type of jute, having transferred a large percentage of their looms to hessian. In many cases, they are having difficulty in using up their own line-cuttings, and as most mills were well bought for cuttings early in the season at much lower rates, interest has waned. Sellers of all types of fibre, however, continue to hold bullish ideas, especially since the recent flooding upcountry; they think that there may be a heavy demand for quick delivery jute in the near future should transport be further disrupted. The volume of business concluded during the week was exceedingly small and towards the close the lack of interest had its effect and prices eased.

THE JUTE MARKETS

Manufactured Goods: Tuesday and Wednesday being official holidays, this report only covers four working days. At the opening last Thursday, the markets were firm as a result of hessian business with the U.K. and the U.S.A. Prices in both sections advanced. Heavy goods increased by about 6 annas for September B Twills to be quoted at Rs. 113-6 a 100 bags, and January-March shipment Rs. 112-6. Forty-inch 100z. hessian also showed a similar rise and quotations were based on Rs. 43-7 and Rs. 41-14 a 100 yards, respectively, for the near and forward positions. After the initial rise, prices gradually slipped back and by Friday morning the advantage in the near position had been lost, while the forward section lost half the amount gained the previous day. No further overseas business was reported, and in sympathy with the quieter raw jute markets, prices continued to decline. On Saturday morning, September B Twills had dropped to Rs. 112-3, nearly 1 d. down from the week's opening prices, while 40in 100z. stood at Rs. 42-15, which was 8 annas lower than at the beginning of the week. After the week-end the market was unchanged and opening quotations were as follows:

	September	October	Oct.-Dec.	Jan.-Mar.
	Rs.	Rs.	Rs.	Rs.
40in. 8oz.	36	35-2	34-10	33-12
40in. 10oz.	43	43-2	42-12	41-12
B Twills	112-8	113	113	112-4
Heavy Cees				
(Plain)	111-4	113-8	113	112-4
A Twills	135-8	136	136-8	136
Liverpools	125	125-8	126	125 8
Cornsocks	112-8	113-4	113-4	112-12

Raw Jute : There is very little to report from the raw jute markets. Mills have shown little buying interest as the working margin between jute and gunnies has been severely cut by the fall in goods prices without a corresponding drop in fibre rates. Opening quotations last Thursday were unchanged, and Dhubri-Northern jute was based on Rs. 29 a

At the close, the market was unchanged, and opening quotations on Monday morning were as follows:

Indian Jute (New Crop):	Landed at Mills Rs. a md basis Bottoms.	Shipment.
Lower Assam	28-12	October.
Northern	28-12	"
Murshidabad White	23	"
Daissee	23-3	"
Daissee White	23-8	"
Daissee Mesta	27-8	"
Local Northern	29	"
Bimili	27-3 for F A Q.	"

Tossa is quoted at 3 annas or Re. 1 a maund
above the price of white jute.

Pakistan Jute (New Crop):	Rs. a md.	Shipment.
Jat	32	Oct.-Nov.
District	31-8	"
Northern	31	"
Pucca:	Rs a bale	Shipment.
Mill Firsts 2/3	185	October.
Export Firsts 2/3	170	"
Export Lightnings	155	"
Jat Cuttings	124	"

The Cossipore markets continue to rule steady. Daily business is being conducted, and there is now very little difference in the price of Northern jute and jungli jute. Imports have dropped, and for the first four days of the week only totalled 365 wagons. Daissee business has been brisk, and high prices have been paid for wet Daissee for sale to mills over the jetty.

Mofussil: In the northern Bengal areas, the movement of jute has been entirely suspended due to the floods, and prices have tended to rise. In Dhubri and Assam, jute is moving freely, although animals have been much smaller than was anticipated. All imports have found ready buyers, who still have September or early October contracts to cover. As a result, prices have shown little change. At the close, prices in Dhubri were based on Rs. 24-12 a maund.

THE FOREIGN JUTE MARKETS

PRICES FIRMER

(FROM OUR DUNDEE CORRESPONDENT)

THE markets generally are quiet, but there is a firm undertone in all sections. Shippers are not offering the raw material very freely and in some cases they raised their terms last week by about 20s a ton. In others, there is very little change and the irregularity appears to have the effect of curtailing business. Spinners here are buying only occasionally and usually small quantities. Prices are still on the high side compared with the rates obtainable for jute yarns. Mill Firsts are mentioned by only a few firms and are sold from £99 a ton, with Mill Lightnings ranging from £88 to £91 and Mill Hearts from £84. Export Hearts from £80, crack from £78 to £81, and grade from £84, grade Tossa-2/3 from £101 and four from £91, all c.i.f. U.K., October-November settlement. A number of sales have been made at the prices named and at £100 for grade Tossa-2/3 and £90 for fours. The tendency has been upwards during the past day or two.

Calcutta goods have also been irregular, with speculative selling sometimes to take less than the usual market quotations. Hessians are at 65s 6d for 40in. 10oz. and 50s 6d for 7½oz., October, 64s 6d and 50s November and 64s 3d and 49s 3d December, with B Twills at 172s 6d, 172s and 171s 6d for the respective positions of shipment, all f.o.b. Calcutta. Prices are mentioned for January-March at 63s 9d for 40in. 10oz., 48s 3d for 7½oz. and 171s 3d for B Twills. Spinners have transacted a fair

business in jute yarns and there are none now searching for orders for delivery over the next two months at least. Production is on again at all works and prices rule firm on the basis of 14.77d a lb. for common 8lb. cops in the sizes 8/16 lbs., and at 15.35d for 8lb. spools. Twist is active and reasonably early delivery is difficult to obtain at 17.04d a lb. for 3ply 8lb., while sacking yarns are also well booked up at 12.35d a lb for 24lb. weft. Rove is firm at £99.5s for 48 lbs and £80.15s for 200lbs. Manufacturers are busy and prices are firm at 12.80d a yard for 40in. 10oz. and 10.51d for 8oz. A good enquiry continues to exist for all widths and weights and narrow sackings are in good request.

GUNNY SHIPMENT STATISTICS

The following figures include coastal shipment relating to manufactured jute goods for shipment from the port of Calcutta. These are gross figures based on the shipping bills presented :

	Hessian Bags (Tons)	Cloth (Tons)	Total (Tons)
1st to 25th September, 1956	1,376.8	22,044.4	23,421.2
1st to 25th August, 1956	2,786.5	21,593.3	24,379.8
1st to 25th July, 1956	1,571.6	16,024.2	17,595.8
	Sacking		
1st to 25th September, 1956	16,820.5	1,479.2	18,299.7
1st to 25th August, 1956	28,438.3	2,305.8	30,744.1
1st to 25th July, 1956	16,368.0	1,021.8	17,389.8

Commodity Markets

WHOLESALE PRICE INDEX FALLS

THE official wholesale price index (base: year ended August, 1939=100) declined further by 0.3 percent during the week ended 15th September, 1956, compared with 420.1 (revised) for the previous week. The index was lower by 0.5 percent when compared with the corresponding week of last month, but was higher by 8.4 percent than that of a year ago. The index for food articles went down further by 0.9 percent to 391.5 as compared with 395.0 (revised) for the previous week, due to a fall in the prices of gram in Patna and tea (-4% each), rice and coffee (-2% each) and wheat in Amritsar (-1%). The prices of wheat and gram, both in Hapur, (+2% each) and bajra and dal arhar (+1% each), however, showed a rise. Lower prices of manganese ore (average export price) (-5%), gingelly seed (-6%), rapeseed in Bombay (-1%), and raw jute (-1%) brought down the Industrial Raw Materials index by 0.4 percent to 506.4 as compared with 508.6 (revised) for the previous week, although the prices of groundnuts in Bombay and raw silk (+3% each) and linseed, rapeseed in Calcutta and copra (+2% each), were marked up. The index for Semi-Manufactures stood at 408.7 as against 408.6 for the previous week. Items which recorded significant changes in this group were: gingelly oil (+10%), copper in Bombay (+4%), coconut oil and groundnut oil (+2% each) and mustard oil and castor oil (-2% each). The index for the Manufactures group advanced by 0.2 percent to 391.6 as compared with 390.7 (revised) for the previous week, due to an increase in the prices of jute manufactures (+2%), and glass (+1%). The Miscellaneous group index also moved up by 0.1 percent to 553.5 as compared with 553.0 (revised) for the previous weeks because of an increase in the prices of chillies in Calcutta (+6%) and black pepper in Cochin (+4%) in spite of a fall in the prices of black pepper in Calcutta (-4%) and chillies in Patna (-2%).

INDEX NUMBERS BY GROUPS AND SUB-GROUPS
(Base: Year ended August, 1939=100)

Groups and Sub-Groups	Week ended

B.A. (Hons.), B.L.,
Secretary.

"CAPITAL" INDEX OF INDIAN INDUSTRIAL ACTIVITY **

The Capital Index of Indian Industrial Activity (Base: 1935) has now been brought up to April, 1956. Compared with the preceding month, there were decreases in cotton consumption 1.4 points, jute manufactures 3.9 points, steel ingots 11.8 points,

pig iron 0.7 points, cement 24.2 points, paper 12.6 points, wagons loaded 11.4 points and electricity 6.3 points, while coal increased by 8.5 points.

The index for cheque clearances declined by

5.1 points, while that for notes in circulation rose by 7.7 points.

Correlating all the factors, the Capital Index of Indian Industrial Activity declined by 5.0 points during April, 1956.

		Industrial Production.						Mineral Production	Total Number of Wagons Loaded (T)	Financial Statistics	Trade Foreign & Coastal		Trade Foreign & Coastal.		General Monthly Index

"CAPITAL" INDEX OF INDIAN INDUSTRIAL ACTIVITY (1935)

Plantation Topics

RECORD EXPORTS OF INDIAN PEPPER

SUBSTANTIAL IMPORTS BY COMMUNIST COUNTRIES

(FROM A SOUTH INDIAN CORRESPONDENT)

INDIA'S pepper export figures to the end of August, 1956 reveal that during the first ten months of the current season (November, 1955—August, 1956) the country exported 11,700 tons of pepper, the highest for the comparable periods of the previous five seasons. The United States, the largest customer, took comparatively less, but the loss was offset by the exports to communist countries. Russian offtake amounted to roughly 3,000 tons, while China bought about 330 tons. Rumania and Poland, two new customers, together took 90 tons of Indian pepper during this period. It is understood that the trade delegation of the Pepper Export Promotion Council now touring eastern European countries has secured orders for another 130 tons. Market circles expect that the demand from the communist countries will further increase.

In view of the lower prices at which pepper has been traded from the beginning of the season, it is expected that home demand will be more than usual. Certain estimates place home requirements at 10,000 tons as against 7,000 to 8,000 tons consumed last year. Stock position at present seems comfortable, at any rate, from the points of view of the growers and dealers, who are scarcely inclined to sell on a declining market. The uncertainty caused by the Suez crisis may also be encouraging their reserve. One month hence, the new season will begin. Reports on the standing crop are favourable. Trade circles estimate it at about 24,000 tons.

Lemongrass Oil Output

The State Trading Corporation is expected to buy a certain quantity of lemongrass oil for eastern European countries. India is likely to produce 1,200 to 1,400 tons of lemongrass oil this year, the highest on record. The last season's production, which in itself was a record, amounted to something like 1,000 tons. In spite of steep rises in production the price remains more or less steady. The current price of Rs. 97-8 a dozen bottles of 16 oz. each compares with Rs. 95-8 in August 1955.

Crisis in Cashew Industry

All efforts made by the Government to resolve the crisis in the cashew-processing industry in Travancore-Cochin have failed. The processors have gone to the Court against the Government declaring the industry a non-seasonal one. Meanwhile, it is reported that the factory owners have refused to participate in the tripartite conference convened by the Government to find a solution for the crisis. In view of the current uncertainty, cashew processors are indifferent to making contracts for the import of African nuts. Usually, forward buying of imported nuts starts from August so that the processors start getting the supplies from December. The bankers also, it is reported, are very reluctant to finance raw nut imports from Africa. The South Indian Cashew Manufacturers' Association is pessimistic on the prospects of importing even the usual supplies from Africa. Indigenous production is not sufficient to meet processing requirements for more than three months.

TEA CROP REGULATION AGREED ON

At a meeting of the Calcutta Tea Regulation Committee, which comprises the Tea Producing Associations of North East India, held at the Bengal Chamber of Commerce last Thursday, it was unanimously agreed that a substantial curtailment of the 1956 tea crop was necessary in order to regulate supplies. The dates from which members will be recommended to cease plucking will be advised shortly. It was also agreed that members should destroy all residual and waste teas of a quality unfit for sale in the auctions.

TEA EXPORT DUTY UNCHANGED

The Government of India has issued a notification fixing the price of tea, for the purpose of determining the export duty, at Rs. 3-3-0 lb. against Rs. 2-11-5 a lb. fixed on 1st September 1956. There is no change in the existing rate of duty of annas six a lb.

U.K. TEA IMPORTS INCREASE IN AUGUST

Britain imported 40,649,000 lbs of tea in August, compared with 35,090,000 lbs in the same month last year, and India and Ceylon together accounted for some 87 percent of these imports. India sent 22,157,000 lbs (compared with 17,663,000 lbs in the same month last year), for which Britain paid just over £4 million. Ceylon sent 13,539,000 lbs (over 2 million lbs more than was sent in August of last year), to the value of just over £3 million. In the first eight months of this year, Britain's tea imports amounted to 356,033,000 lbs, 30 million lbs more than in the same period last year to the value of £72,201,000. There was a rise of 28 million lbs in imports from India, which sent 200,781,000 lbs worth £39,891,000, in the eight months. Imports from Ceylon increased by 8 million lbs, compared with the same period last year, the figure to the end of August being 92,535,000 lbs, to the value of £22,772,000. British imports of tea from Pakistan were nil in August, but in the eight-month period, she took 6,851,000 lbs. worth £1,137,000.

LONDON TEA SALES

AT last week's London tea sales the 32,100 packages on offer realised an average price of 6s 0.2d a lb. against 5s 2.77d in the previous sale and 5s 5.03d a year ago. Plain broken pekoe was quoted at 3s 6.1d a lb. against 3s 2d in the previous sale. Prices obtained by some of the companies are given below:

	No. of packages	Average per lb.
Amalgamated	1,023	5/2
Amgoorie	131	11/
Anglo-American	1,554	4/8½
Assam Dooars	569	6/5½
Assam Frontier	827	9/5½
Budla Beta	126	10/9½
Chubwa	564	7/9
Chulsa	216	5/3
Consolidated Estates	306	7/7
Cons. Tea and Lands	1,167	5/4½
Dekhari	252	10/7
Doom Dooma	132	10/11
Eastern Produce	696	6/10½
Imperial	354	5/4
Jhanzie	1,085	7/7½
Jokai	912	8/10½
Jorehaut	390	10/
Kanan Devan	2,484	4/11½
Lanka Plants	315	7/9

Mr P. G. Bhagat has been appointed Managing Director, Hindustan Steel (Private) Limited, Calcutta, in place of Mr. S. N. Mozumdar, who has proceeded on leave preparatory to retirement.

FIRST PLAN ACHIEVEMENTS IN HYDERABAD

COMMON PEOPLE UNHAPPY ABOUT DISINTEGRATION OF STATE

(FROM A SPECIAL CORRESPONDENT)

THE State's five year plan exhibition provided definite proof that Hyderabad, which will lose its existing identity as a Part B State in November with the States Reorganisation Act coming into force, has made appreciable headway under the first plan, and bids fair to improve its record under the second. Hyderabad was grappling with certain special problems, after emerging from a long period of feudalism, when the first plan was initiated. Yet the measure of success achieved is in no way behind that of others. Although the allocated funds could not be fully spent within the plan period, the physical targets reached are satisfactory on the whole. The main object of the first plan which was to lay the foundation for speedy economic progress in successive plans, has been fully achieved. A noteworthy feature of the second plan, which envisages an outlay of Rs. 99.89 crores as compared with Rs. 45.58 crores in the first, is its emphasis on popular co-operation in the public and the private sector alike, for raising the national wealth. Among large-scale industries in the State, the Singareni Collieries Company Ltd., reached a higher level of production under the first plan. It had planned to expand its output from 1,62,000 tons of coal in 1950 to 1,500,000 tons a year by the end of the plan. The Government also indicated its willingness to lend Rs. 96 lakhs, and though the loan granted was actually Rs. 52.19 lakhs, the company was able to exceed the target, the production in 1955 being 1,550,000 tons. Another enterprise which obtained a loan of Rs. 115.28 lakhs was Sirsilk Ltd. For the expansion of the Central Laboratories belonging to the Department of Scientific and Industrial Research, (the laboratories have contributed greatly to the advancement of local industries by developing modern methods and techniques) a sum of Rs. 27 lakhs was provided, of which only Rs. 17.39 lakhs was expended, mainly on the building programme.

Plan for Large-scale Industry

The second plan for large-scale industries provides Rs. 9.50 crores for minerals and Rs. 1.84 crores for other industries. The break-up of these figures is: expansion of Singareni Collieries Rs. 9.0 crores; expansion of Hutti Gold Mines Rs. 0.5 crores, and expansion of the Praga Tools Corporation Rs. 1.5 crores. A sum of Rs. 20 lakhs has been provided for the establishment of a co-operative sugar mill, and Rs. 10 lakhs for a tannery. Village industries have been allotted Rs. 5.70 crores. Noteworthy among the principal targets of the second plan is that of stepping up coal production from 1,500,000 tons to 3,000,000 tons a year. The production of machine tools is expected to increase in value from Rs. 60 lakhs a year to Rs. 1.5 crores, and gold from 11,000 fine ounces to 30,000 fine ounces. The production of cement, paper and sugar is also to be increased appreciably in the private sector. The co-operative yarn spinning mill, which is to be set up, is expected to produce 6,400 bales of cotton yarn; the proposed co-operative sugar mill to produce 80,000 bags of sugar; and the proposed tannery is expected to produce 288,000 square feet of leather. In the small-scale and cottage industries sector, the second plan aims at increasing the production considerably of handloom cloth, woollen blankets, khadi, leather, vegetable oil, silk, metal goods and handicraft products.

Labour Welfare

As labour is intimately connected with industrial development, the welfare of workers has been and is receiving top priority. Under the industrial housing scheme, financed and subsidised by the Government of India, construction work to the extent of over Rs. 1.5 crores has been carried out under the first plan. Under the low income group housing scheme, an extensive construction programme has been undertaken, for which the Centre has given a loan of Rs. 1 crore. Five schemes for labour welfare, estimated to cost Rs. 33.25 lakhs, have been formulated. Besides the expansion of the administrative machinery of the State's Labour Department to cope with the increasing industrial and commercial activities in the State provision has been made for the establishment of six "A" type and 15 "B" type social welfare centres, opening of workers' educational classes, establishment of libraries in factories for the benefit of workers, expansion of employment opportunities, apprenticeship training for skilled craftsmen, evening classes for industrial workers, and the training of officers.

Impending Break-up

It is yet too early to say what the economic and industrial picture of the Hyderabad State will be when it is broken up and its existing component areas are merged with the different linguistic units. So far as the common man is concerned, he is definitely against the disintegration of the State in which people of various communities and languages have lived together harmoniously for centuries. The consensus of opinion is that the unity of the people of India is best promoted by mixing them up rather than by dividing them on the basis of narrow loyalties.

COMPANY AND PUBLIC NOTICES

THE NEW ASSAM VALLEY TEA COMPANY, LIMITED. NOTICE.

NOTICE is hereby given that an Annual general meeting of the Members of the above Company will be held at the Registered Office of the Company, No. 2, Fairlie Place, Calcutta, on Tuesday, the 30th October, 1956, at 10-30 A.M. for the following purposes:-

AGENDA

1. To receive and consider the Directors' and Auditors' Reports and the Profit and Loss Account for the year ended 31st December, 1955, and the Balance Sheet as at that date.
2. To declare a Dividend.
3. To re-appoint by a resolution which will be proposed as a special resolution a Director who retires by rotation.

Special notice to propose the undernoted resolution as a special resolution in conformity with the provisions of Sections 190 and 261 of the Companies Act, 1956, has been received by the Company in which it is stated that Mr. H. Mackay Tallack is the Managing Director of the Managing Agents' Company and as such an associate of the Managing Agents within the meaning of the Act and a person who can only be appointed or re-appointed a Director of the Company by Special Resolution in conformity with Section 261 of the Act.

To consider, and, if thought fit, to pass, with or without modification, the following resolution:-

(As a Special Resolution). "RESOLVED in conformity with Section 261 of the Companies Act, 1956, that Mr. H. Mackay Tallack be and is hereby re-appointed a Director of the Company liable to retirement by rotation".

4. To appoint Auditors and fix their remuneration.
5. As Special Business:

To consider and, if thought fit, to pass, with or without modification, the following Resolution which will be proposed as an Ordinary Resolution:-

"RESOLVED that the Board of Directors be and is hereby permitted with effect from the commencement of the Companies Act, 1956, to borrow moneys from time to time for carrying on the business of the Company notwithstanding that the moneys to be borrowed together with the monies already borrowed by the Company (apart from temporary loans obtained from the Company's Bankers in the ordinary course of business) will exceed the aggregate of the paid-up Capital of the Company and its free reserves, that is to say, reserves not set apart for any specific purpose".

The Share Transfer Books of the Company will be closed from 23rd to 30th October, 1956, both days inclusive.

By Order of the Board,
MACNEILL & BARRY LTD.,
A. H. FORSTER,
Secretary,
Managing Agents.

2, Fairlie Place,
Calcutta-1, 21st September, 1956.

Note. A member of the Company who is entitled to attend and vote may appoint a proxy to attend and vote instead of himself. A proxy need not be a member of the Company.

EXPLANATORY STATEMENT

Item No. 5. By the provisions of Section 293(1)(d) of the Companies Act, 1956, the Directors without the consent of the company in general meeting cannot borrow monies in excess of the aggregate of the paid-up capital of the company and its free reserves. An authority is therefore required for your Directors to borrow for the purposes of the company in excess of this statutory limit. The Resolution is intended to provide that authority and to restore the position which prevailed under Article 65 prior to 1st April, 1956.

THE MIRZAPUR ELECTRIC SUPPLY CO. LTD.

THE METHONI TEA CO. LTD.

THE Directors have decided to recommend to the forthcoming Annual General Meeting of the Shareholders a dividend of 17½% in respect of the Season 1955, payable without deduction for Income Tax paid by the Company.

OCTAVIUS STEEL & CO. LTD.,
Managing Agents.

Calcutta, 1st October, 1956.

THE METHONI TEA COMPANY LIMITED

THE Annual Ordinary General Meeting of the Shareholders will be held at the Registered Office of the Company, No. 14, Old Court House Street, Calcutta on Wednesday, the 31st day of October, 1956, at 3-30 p.m. for the following purposes:-

- (1) To receive and adopt the Directors' Report and the audited Accounts for the year ended 31st December, 1955.
- (2) To declare a dividend.
- (3) To elect a Director in place of the retiring Director. In this connection, Special Notice is hereby given of the intention to move the Special Resolution at the meeting that is to say.
"That Mr. T. D. Crabb who retires by rotation be and is hereby re-appointed a Director of the Company".
- (4) To elect Auditors for the ensuing year, and to fix their remuneration.

And as special business:-

- (5) To consider and if thought fit to pass the following resolution, namely:-
"That the Books, Registers and other documents required to be kept by the Company and referred to in Sections 49, 144, 163, 196, 301, 304, 307 and 372 of the Companies Act, 1956, shall be available for inspection at the Registered Office of the Company, by the persons respectively referred to in those Sections as being entitled to inspection, between the hours of 10 a.m. and 12 noon on each business day, upon twenty-four hours' written notice of intention to inspect, such notice indicating what books, documents and registers are intended to be inspected".

The Share Transfer Book of the Company will be closed from 24th October, 1956 to 31st October, 1956, both days inclusive.

OCTAVIUS STEEL & CO. LTD.,

A. H. GALLOWAY,
Managing Director,
Managing Agents.

Calcutta, 1st October, 1956.

NOTE:-

- (i) In connection with the business to be transacted under item 3 and item 5 of this Notice, please see annexed Explanatory Statement.
- (ii) A member of the Company entitled to attend and vote at the Meeting is entitled to appoint a proxy to attend and vote instead of himself and the proxy need not be a member.

EXPLANATORY STATEMENT

Item 3. In the Special Notice given by the Company to the shareholders, under item 3 of the annexed notice for Annual General Meeting, intimation has been given of intention to move a Special Resolution for the re-appointment to the Board of Directors of Mr. T. D. Crabb. Special Notice of such intention has also been given to the Company. Under the provisions of Section 261 (1) (f) of the Companies Act, 1956, Mr. Crabb, who is in office of the Managing Agents of the Company can be appointed to the Board only by Special Resolution. Since he will retire in rotation at the meeting, his re-appointment for compliance with those provisions, will have to be by Special Resolution.

Item 5. With reference to the resolution relating to inspection of Books, Registers and other documents, referred to in the accompanying notice, the Companies Act, 1956—provides that the Company may impose reasonable restrictions on such inspection but so that not less than two hours in each day are allowed for inspection, and the resolution is being moved in order to comply accordingly with the act.

JARDINE HENDERSON, LIMITED.

NOTICE is hereby given that an Interim Dividend at the rate of 2½% per annum, less Indian Income-tax thereon, will be paid to the Registered holders as on the 22nd October, 1956, of the 50,000 Cumulative Preference Shares of Rs. 100 each in the Company in respect of the year ending 31st March, 1957.

The Share Transfer Books of the Preference Shares will be closed from the 15th to the 22nd October, 1956, both days inclusive.

By Order of the Board,
D. FORDWOOD,
Secretary.

4, Clive Row,
Calcutta. 1.
1st October, 1956.

A roof over our heads—a place to rest, to shelter our families from the heat of the sun, from cold winds and driving rain—that is what we all need. Like food, a home is a basic necessity common to peoples of all countries.

A happy home, cherished by everyone, is founded on the common aims and efforts of all members of the family. In India today, a new outlook is born in the family—an outlook devoted to progress. Rapid industrialization is bringing about more employment, a higher standard of living, and more and better homes.

A constant supply of our petroleum products to fast developing industries is vital to this progress.

STANVAC — the name that stands for progress.

STANDARD-VACUUM OIL COMPANY (Incorporated in the U.S.A. with Limited Liability.)

STANVAC 1956

THE SOORAH JUTE MILLS COMPANY LIMITED.

CALCUTTA.

NOTICE is hereby given that an Extraordinary General Meeting of the members of the above-named Company will be held at the Registered Office of the Company at 8, Royal Exchange Place, Calcutta, on Wednesday the 31st October, 1956 at 3-30 P.M. in the afternoon, as special business to consider and if thought fit to pass with or without modification the following resolutions:

SPECIAL RESOLUTIONS

- (a) "RESOLVED that the Authorised Capital of the Company be increased to Rs. 1,00,00,000/- by the creation of 2,00,000 new Ordinary Shares of Rs. 10/- each and 50,000 new Second Preference Shares of Rs. 100/- each with powers to the Directors subject to the articles of association to issue such 50,000 new Second Preference Shares with such preferential or Special rights, privileges or conditions attached thereto as they may decide."

- (b) "RESOLVED that the Memorandum of Association of the Company be altered by adding thereto after clause 3(t) thereof the following two sub-clauses: "3(tt) To establish and support, or aid in the establishment and support of associations, institutions, funds, trusts and conveniences calculated to benefit persons who are or have been employed by or who are serving or have served the Company or its predecessors in business or the dependents or connections of such persons and to grant pensions and allowances and to make payments towards insurance". "3(ttt) To subscribe contribute or guarantee money for any national, charitable, benevolent political, public, general or useful object or fund or for any exhibition".

- (c) "RESOLVED that Article 151(17) of the Company's Articles of Association be deleted and substituted by the two following sub-clauses:

"(17a) To give pensions, gratuities, allowances, bonuses, profit sharing bonuses or benefits or other charitable aids payments or monies to or for the benefit of persons who are or have been employed by or who are serving or have served the company or its predecessors in business or the wives, children, dependents or connections of such person or persons as may appear to the Directors just and proper whether any such persons his widow children or dependents or connections have or have not a legal claim upon the Company."

"(17b) Subject to the provisions of Section 293(1) (e) of the Companies Act, 1956 to establish, maintain support and contribute or subscribe to any national, charitable, benevolent, political, public, general or useful object or fund and any institution, society or club, which may be for the benefit of the Company or may be connected with any town or place where the Company carries on business."

ORDINARY RESOLUTIONS

- (d) "RESOLVED that consent of the Company be and is hereby given to the Board of Directors to contribute and/or subscribe from time to time to any national, political, charitable, benevolent, public or general and other funds not directly relating to the business of the Company or the welfare of its employees, such amounts as may be considered proper by it notwithstanding that such amounts in any financial year may exceed Rs. 25,000/- or 5% of the Company's average net profits, as determined in accordance with the provisions of the Companies Act, 1956, during the three financial years immediately preceding, whichever is greater."

- (e) "RESOLVED that the Books, Registers and other documents of the Company required to be maintained and disclosed under

the provisions of the Companies Act, 1956, shall be kept open for inspection by the persons entitled thereto to the extent and in the manner and on payment of the requisite fees, if any, at the Registered Office of the Company on any working day from Monday to Friday between the hours 3 P.M. to 5 P.M. (S.T.) and on Saturday between 11 A.M. to 1 P.M. (S.T.) provided however, the Register required to be maintained under Section 307 of the Act shall be open for inspection by any member as aforesaid during the period prescribed under Clause (a) of Sub-Section (5) of Section 307 of the Act."

By Order of the Board.

HINDUSTHAN INVESTMENT CORPORATION LTD.,

Managing Agents.

8, Royal Exchange Place, Calcutta.

Dated 17th September, 1956.

- N.B. (i) A member entitled to attend and vote at the above meeting is entitled to appoint a proxy to attend and vote instead of himself and a proxy need not be a member.

- (ii) Explanatory statement in regard to the above items of business.

(a) The Company proposes to set up a Staple Fibre Spinning Plant at a suitable place in West Bengal or at Banaras. To meet the finance required for the above project and also for the redemption of the Company's debenture loan which is to be redeemed in September 1957, it is desired to issue 50,000 Second Preference Shares of Rs. 100/- each with such preferential or special rights, privileges or conditions attached thereto, as the Directors may decide. It is, therefore, necessary to increase the present Authorised Capital of the Company by creating new Second Preference Shares. Opportunity has also been taken to create additional Ordinary Shares and thereby increase the Authorised Capital to Rupees one Crore.

- (b, c, & d) In the existing Memorandum of Association of the Company the Objects for which the Company was established do not include the provision for contribution by the company of funds (1) for benefit of employees and their relatives and (2) towards charitable and public objects. Under Article 151 (17) of the Company's Articles however power has been given to the Company's directors to make the above contributions. It is felt therefore, that to suit modern conditions, the lacuna in the Memorandum should be removed and the above objects included therein and Article 151 (17) should also be suitably altered to conform to the change in the Memorandum. Two sub-clauses have been set out in the notice accompanying this explanatory statement detailing the manner in which the Memorandum of Association should be altered for the above purpose. The first sub-clause 3 (tt) deals with the contributions for employees and their relatives and it is felt that having regard to the promotion of goodwill between the company and its employees the inclusion of such a clause should be made. The second sub-clause 3 (ttt) deals with contributions to charitable and public objects. Contributions to non-political charitable objects have for a long time been included in the objects of other companies and it is felt that this Company should also be able to contribute to these funds. As regards political objects or funds the industrial policy of the Government of the day is of vital importance to most industries and particularly to your company which has numerous dealings and transactions with the Government. It is common ground that industrial policies are influenced by political parties who form the Government of the day. It is therefore in the interest of the Company to be able to contribute to the funds of political parties which in the company's opinion will serve the interest of industries in general and of your company in particular.

It is therefore proposed that the second object above referred to should be set out separately in more explicit terms as a new sub-clause 3 (ttt).

Shareholders might be interested to know that under Section 293(1) (e) of the Companies Act 1956 the right

of a company to contribute to funds not directly relating to its business or the welfare of its employees is clearly recognised but it is provided therein that the contributions made by the Board of Directors of a company in such case shall not exceed 5 per cent of its average net profits or Rs. 25,000/- whichever is the higher except with the consent of the Company in general meeting. It is felt that the power given to the directors under Section 293(1) (e) of the Act is inadequate and resolution (d) set out in the Notice is intended to give the directors wider powers to contribute to these funds.

As stated above the existing Article 151(17) of the Company's Articles of Association sets out the power of the Board of Directors to contribute for benefit of employees and also to charitable and public objects. It is proposed to delete this sub-clause and substitute therefor clauses as detailed in the notice conforming to the proposed alterations in the Memorandum of Association.

- (e) Certain Registers and documents required to be maintained and disclosed by the Company under various provisions of the Companies Act, 1956, are to be kept open for inspection to the extent and in the manner during such hours as may be fixed by the Company in General Meeting. It is proposed to fix the days and hours for such inspection by a resolution of the Company and hence this resolution is put before the General Meeting of the Company.

The Directors and Managing Agents of the Company have no interest in the business represented by the foregoing resolutions other than in their capacity as shareholders.

HASTINGS MILL LIMITED.

NOTICE.

THE Annual Ordinary General Meeting of the Company will be held at the Registered Office, at 14, Netaji Subhas Road, Calcutta, on Monday, the 29th October, 1956, at 3-30 P.M. for the following purposes:—

- (1) To receive and consider the Report of the Directors and to pass the audited accounts of the Company for the year ended 31st March, 1956.
- (2) To declare dividends.
- (3) To elect Directors.
- (4) To appoint Auditors for the current year.
- (5) As special business, to consider and if thought fit, to pass with or without modifications, the following resolution which will be proposed as ordinary resolution.

"RESOLVED that consent of the Company be and is hereby given to the Board of Directors to contribute and/or subscribe from time to time to any national, political, charitable, benevolent, public or general and other funds not directly relating to the business of the Company or the welfare of its employees, such amounts as may be considered proper by it notwithstanding that such amounts in any financial year may exceed Rs. 25,000/- or 5% of the Company's average net profits, as determined in accordance with the provisions of the Companies Act, 1956, during the three financial years immediately preceding, whichever is greater."

- (6) To transact any other ordinary business of the Company.

The Share Transfer Books of the Company will remain closed from 16th October, 1956 to 29th October, 1956, both days inclusive.

By Order of the Board,

Per Pro. BANGOR BROS. LTD.,

Sd/- B. D. BANGUR,

Managing Agents.

Calcutta, 24th Sept. 1956.

- N.B.— (i) A Member entitled to attend and vote at the above meeting is entitled to appoint a proxy to attend and vote instead of himself and a proxy need not be a member.

- (ii) EXPLANATORY STATEMENT IN REGARD TO SPECIAL BUSINESS TO BE TRANSACTED AT THE MEETING:

The Board of Directors have to give contributions from time to time to various institutions including charitable and other funds not directly related to the business of the Company or to the welfare of its employees and which is at times in excess of the limits as laid down in Section 293 (1) (e) of the Companies Act, 1956. A resolution has, therefore, been proposed to authorise the Directors to contribute to such funds in excess of the above limits.

THE INDIAN STANDARD WAGON COMPANY LIMITED.

NOTICE.

NOTICE is hereby given that the Annual General Meeting (being the Thirty-seventh Ordinary General Meeting) of the Company will be held at the Registered Office, 12, Mission Row, Calcutta at 11 a.m. on Friday the 2nd November, 1956, for the following purposes:

1. To receive and adopt the Audited Accounts for the year ended 31st March, 1956 and the Directors' and Auditors' Reports thereon.
2. To declare Dividends. The dividends if declared will be paid to the shareholders whose names appear in the Company's books on the 2nd November, 1956 or to their mandatories.
3. To appoint Directors in place of those retiring. In this connection notice is hereby given that Special Notice as defined in Section 190 of the Companies Act, 1956 has been received by the Company under Section 281 of that Act, to move the following resolution at the Meeting:—

"That Sir P. P. Ginwala who has attained the age of 81 years be and is hereby appointed a Director of the Company and that it is hereby declared that the age limit laid down in Section 280 of the Companies Act, 1956 shall not apply to him."

4. To appoint Auditors and fix their remuneration.

5. As special business to consider and if thought fit to pass with or without modification the following resolutions which will be proposed as special resolutions. (A) "That sub-clause 3(17) of the Memorandum of Association of the Company be deleted and substituted by the following two sub-clauses:

"(17a) To subscribe, contribute or guarantee money for any national, charitable, benevolent, political, public, general or useful object or fund or for any exhibition".

"(17b) To establish and support, or aid in the establishment and support of associations, institutions, funds, trusts and conveniences calculated to benefit persons who are or have been employed by or who are serving or have served the Company or its predecessors in business or the dependents or connections of such persons and to grant pensions and allowances and to make payments towards insurance".

(B) "That Article 151 (17) of the Company's Articles of Association be deleted and substituted by the two following sub-clauses:—

"(17a) Subject to the provisions of Section 293(1)(e) of the Companies Act 1956 to establish maintain support and contribute or subscribe to any national, charitable, benevolent, political, public, general or useful object or fund and any institution, society or club, which may be for the benefit of the Company or may be connected with any town or place where the Company carries on business."

"(17b) To give pensions, gratuities, allowances, bonuses, profit sharing bonuses or benefits or other charitable aids payments or monies to or for the benefit of persons who are or have been employed by or who are serving or have served the Company or its predecessors in business or the wives, children, dependents or connections of such person or persons as may appear to the Directors just and proper whether any such person his widow children or dependents or connections have or have not a legal claim upon the Company."

The Share Registers and the Transfer Books of the Company will be closed from the 23rd October, 1956 to the 2nd November, 1956, both days inclusive.

A member entitled to attend and vote at the Meeting is entitled to appoint a proxy to attend and vote on a poll instead of himself and a proxy need not be a member.

By Order of the Board,

MARTIN BURN LIMITED,

F. G. LIVERSEDGE,

Managing Director,

Managing Agents.

Calcutta,

28th September, 1956.

EXPLANATORY STATEMENT AS REQUIRED BY SECTION 173 OF THE COMPANIES ACT, 1956.

ITEM No. 3.

Sir P. P. Ginwala who retires by rotation and is otherwise eligible for reappointment, has attained the age of 81 years and Section 280 of the Companies Act provides that he can not be reappointed a Director of the Company except by a resolution of which special notice has been given in accordance with Section 281 of the Act. The Company has received such a special notice from a Member notifying his intention to move the resolution set out in the Notice. Sir P. P. Ginwala joined the Board of Directors of this Company in 1944 and has rendered valuable assistance to the Board as a technical expert. It is in the interest of the Company that the Board should continue to receive the benefit of his long experience and able guidance.

ITEM No. 5.

Clauses 3(17) of the Memorandum and Articles of Association at present reads as follows:—

"To establish and support, or aid in the establishment and support of, associations, institutions, funds, trusts and conveniences calculated to benefit employees or ex-employees of the Company, or its predecessors in business, or the dependents or connections of such persons, and to grant pensions and allowances, and to make payments towards insurance, and to subscribe or guarantee money for charitable or benevolent objects or for any exhibition, or for any public, general or useful object."

This sub-clause deals with two different classes of objects to which the Company may contribute funds, the first relating to associations and funds for benefit of employees and their relatives and the second relating to charitable and public objects. These being two distinct objects it is desirable that they should be set out separately and it is accordingly proposed that the first object should be repeated without enlargement of its scope as a new separate sub-clause 17(b). As regards the second object the existing clause in so far as it relates to subscriptions to public objects is stated in a form too restricted to suit modern conditions. The industrial policy of the Government of the day is of vital importance to most industries and particularly to your Company, the principal buyer of whose products is the Government. It is common ground that industrial policies are influenced by political parties who form the government of the day. It is therefore in the interest of the Company to be able to contribute to the funds of political parties which in the Company's opinion will serve the interest of industries in general and of your Company in particular.

Shareholders might be interested to know that under section 293(1)(e) of the Companies Act 1956 the right of a Company to contribute to funds not directly relating to its business or the welfare of its employees is clearly recognised and it is provided therein that the contributions made by the Board of Directors of a Company in such case shall not exceed 5 per cent of its average net profits or Rs. 25,000/- whichever is the higher.

In the existing clause in the Memorandum it is not quite clear whether the Company could contribute to a political fund and it is desirable that a specific provision in the Memorandum to contribute to such political objects and purposes should be included. It is therefore proposed that the second object above referred to should be set out separately in more explicit terms as a new sub-clause 17(a).

The existing Article 151(17) of the Company's Articles of Association sets out the power of the Board of Directors to carry out the object contained in clause 3(17) of the Company's Memorandum of Association. It is proposed to delete this sub-clause and substitute therefor clauses as detailed in the notice conforming to the proposed alterations in the Memorandum of Association.

The Directors and Managing Agents of the Company have no interest in the business represented by the foregoing resolutions other than in their capacity as shareholders.

MACHINERY MANUFACTURERS CORPORATION LIMITED

NOTICE

THE Tenth Ordinary General Meeting of MACHINERY MANUFACTURERS CORPORATION LIMITED will be held on Friday, 19th October, 1956, at 4-00 P.M. at the Registered Office of the Company, Gateway Building, Apollo Bunder, Fort, Bombay, to transact the following business:

1. To receive and adopt the Directors' Report and Audited Profit & Loss Account and Balance Sheet for the period ended 31st March, 1956.
2. To declare a Dividend.
3. To elect Directors in place of Mr. M. M. Parekh, Mr. J. H. Mehta, and Mr. M. A. Chidambaram, who retire from the Board under Article 114 of the Articles of Association of the Company, but are eligible for re-election.

4. To pass an Ordinary Resolution waiving the age limit prescribed under section 280 of the Companies Act, 1956, in respect of Sir Sobha Singh.
5. To pass the Ordinary and Special Resolutions, details of which, with an Explanatory Statement as required under section 173 of the Companies Act, 1956, have been posted to the shareholders.

6. To appoint Auditors for the current year and to fix their remuneration.

For and on behalf of the Directors,

MACHINERY MANUFACTURERS CORPORATION LIMITED,

K. C. MAHINDRA,

Chairman.

Bombay, August 10, 1956.

COAL COMPANIES

O, P, F and Dd indicate Ordinary Preferred Ordinary Founders' and Deferred shares respectively. P next to the name of the company indicates that the company also has Preference Shares. Figures in "accounts closed" column indicate the months of the calendar year in which accounts are closed. For Managing Agents refer to the Key (last page) under the numbers indicated.

THE LINK BETWEEN WAGES AND PRODUCTIVITY

HOW WORKERS CAN SHARE IN THE GAINS OF INDUSTRIAL PROGRESS

THE problem of linking wages to productivity is, in an expanding economy, always present but never solved. There is no one perfect way of doing it, but as the economic situation changes there is always a better way than the one we have just been using. In America, the unions, the employers or the Government come up with a new system every few months. In India we are just beginning to move away from the degrading system of annual bonuses, obtained after begging or a hold-up or a combination of both. Significantly, the first use of a modern way of linking wages with efficiency has been made by an Indian company in which North American methods set the pace. If this progressive example is to be emulated elsewhere in Indian industry (it cannot be simply copied, for conditions vary so widely), then some thought must be given to the general economic and administrative problems raised by all efforts to give workers a share in rising productivity. The considerable investments now being made in industry will begin to bear fruit in much increased productivity well within the life of the current plan, so the question is of growing importance.

After the factory system had eclipsed the ancient piece-work economy, the notion that workers had any right to a share in productivity gains was lost in wide sectors of industry. Wages were just payment for human effort, and effort was measured by the hours spent before a machine. The first sign of a more modern attitude came from the employers' side in the form of the Taylor system, where wage increases were offered as a spur to extra effort by the individual or the team. Although this technique is accepted by some classes of Indian labour, notably seasonal labour drawn from the villages (such as Bihari coalminers), it is rejected or resented by the stable part of the industrial population here as abroad. The unions claim that it leads inevitably to continual increments to the work burden, and there is evidence to support them. But the working class has now come to accept the general notion of "proportional wages", the idea of a dynamic liaison between wages and industrial efficiency.

So the main conception is now accepted on both sides: that fixed wages, varying only with living costs or depending only on what the unions can extract by means of strike or intimidation, are not the best way of rewarding labour in a progressive economy. This view is of course most enthusiastically accepted in expanding economies, such as America's is now and as we all hope India's will be within a few years. And more especially is it embraced in the more progressive industries and enterprises. Fixed wages, not linked to efficiency, will of course always retain their place over a wide sector of the economy, but in the dynamic industries that set the tone for an expanding economy, a new idea is making its way.

When this stage of agreement on the principle of proportional wages had been reached, a totally new element was introduced. This came, not as is often thought from the fertile brain of Lord Keynes, but first from the homelier mentality of Henry Ford. Ford's theory of the "worker-customer" was that as his production of motor cars increased, he had to pay higher wages not for any moral or technical reason, but just so that somebody could buy his output. This idea was given consistency and general application by Keynes in the theory of the balance between purchasing power and savings, and today probably most employers accept it in a crude way without knowing what implications it has for their own individual wage policies. One employer has very definite ideas on its implication for his business, and since that business is the world's biggest, his views are noteworthy. This is Mr. C. E. Wilson, head of General Motors. Mr. Wilson has been, since 1948, ready to assume that productivity is going to increase at a rate of 2 percent per annum and therefore offers

his workers an "annual improvement factor" of 2 percent of their wages after they have been adjusted for cost of living rises.

If this bold and rigid notion of the link between wages and productivity astonishes and disarms Indian employers, it has the same effect on most U. S. employers, who regard Mr. Wilson as an extravagant "original". Some unions support Mr. Wilson, but some do not. The interesting point is that already the dispute about wages and productivity does not divide employers on one side from workers on the other: both camps are divided about the best way to connect labour rewards with industrial progress. Though this increases the confusion, it offers the hope that the question can be discussed in India without the sterile stalemate where the boss takes one view and the worker the opposite. Secondly, what is usually criticised in the General Motors' plan is its rigidity and its risks—not the new idea that the basic problem is to promote labour revenues in order to guarantee the offtake of goods. Several leading Indian employers are already convinced advocates of this doctrine. Naturally, what no one outside the unions has ever dreamed of advocating is that wage increases should be given apart from or prior to actual increases in productivity. Least of all in India, where inflation constantly threatens, can there be any suggestion of giving general wage increases in the hope that things will look up. The problem is how and why wages should move in step with actually realised increases in productivity.

THE CHANGING PATTERN OF STERLING AREA TRADE INDEPENDENCE OF COLONIAL TERRITORIES

THE impending emergence (next March) of the Gold Coast from its status as a colony to that of an independent State, renamed Ghana, represents a political and economic rearrangement of countries that is immediately important to Britain especially and will later present new opportunities to other trading nations. The independence of India and Indonesia—though these vast territories are not exactly comparable—is being followed, less stressfully, by the independence of the British colonies. The Central African Federation, of the Rhodesias and Nyasaland, is still in process of formation, and its territory is still partly administered from London; it will soon be a big "new" country of great potential wealth. The West Indian Federation is taking shape. Malaya, too, and Nigeria, will gain their right of self-government within the next few years. There is already talk of a West African Federation based on the Gold Coast and Nigeria. Backward countries are coming to maturity. Some of them are destined to become as India is now, important factors in international affairs. But Britain is a little anxious, even apprehensive, about the direction of these countries' development. Will they remain aligned, more or less, with Britain? Will they turn to the United States? Or to the Soviet Union? Will Britain have to fight for trade in those countries as in any non-sterling territories? How will they use their monetary assets, at present held in sterling by Britain? How will the change affect trading?

An essential characteristic of these emergent countries is their ability to earn dollars with their primary products. It may be that when further developed they will be less interested in primary production, but that thought can be no consolation to Britain when the dollars are no longer accruing automatically to London. The Gold Coast earns about £20 million-worth of hard currencies mostly U.S. dollars, annually by selling cocoa, timber, manganese, diamonds, and other of her natural products. But the value of her imports of hard-currency goods has been only about one-fifth of that amount. Her accumulated sterling balances in London, arising mostly from conversion of her surplus dollars, are of the order of £200 million. Before the announcement of a date for independence, the Gold Coast's Legislative Assembly was already restive over the use of the dollars earned by the territory: it is doubtful how long this questionable policy of compulsory lending by the colonies to the mother country can be permitted. Anyway, independent Ghana will have full control over her sterling balances, and the same procedure will apply to other territories as they gain independence.

The change will not, probably, have immediate and obvious effects on the financial position within the sterling area. London's control over the colonies' finances relates mainly to the spending of dollars and to the management of currency. The colonies cannot freely spend their sterling balances, but use of these balances seems to be restrained more by lack of plans for development than by financial restrictions. Experience shows that independent countries develop their economies with enthusiasm, but they cannot immediately spend the sterling balances bequeathed to them, for a large part of these balances—probably between one-half and two-thirds in the case of Ghana—will be needed as reserve for one purpose or another. The "new" countries will, of course, issue their own currency and manage it, but they will remain within the sterling system. The significance of this change from colonial to independent status is in long-term capital and trade rather than in these more technical financial matters. Development is needed not only because the territories are underdeveloped but also because they depend too much on a narrow range of products—especially cocoa in the Gold Coast and rubber in Malaya. Development calls for large quantities of capital, which is not readily forthcoming from Britain—indeed, Britain's exports of capital to sterling countries have recently represented relending of capital imported from other sterling countries, and the colonies have provided much of the imports. Unless Britain's finances change profoundly the "new" countries will have to look elsewhere for finance. And finance from other countries will involve trading with other countries—even though Britain's provision of finance for the Kariba Gorge project in Southern Rhodesia has not assured commensurate contracts with British firms. In matters of ordinary trade British exporters will lose their privileged position in the colonies that have become independent.

This move towards independence can be seen as a part of a broad change in Britain's trading position. The line that divides the British Commonwealth and the sterling area from the rest of the world is already blurred, and a few years hence it may be almost imperceptible. The change demands a change of policy on Britain's part; and there are signs that such a change is already occurring. Especially noteworthy is Bri-

tain's attitude towards the proposed common market in Europe. Initially this proposal made no appeal to the British Government, convinced as it was that the nation's function was to act as the focus and the guiding force of the Commonwealth. But hard facts are stronger than sentiment. Figures show that the European nations that have made most progress in recent years are those which participated fully in the thriving European market, while Britain, her trading efforts directed mainly towards the "outside" sterling area, has lagged behind. At the meeting of the Organisation for European Economic Co-operation in July, Britain agreed to take part in a serious study of the plans for a common market—thereby, it seems, tacitly accepting the principle of participation in an European trading system. It is not so much devotion to the principle of free trade as fear that protective tariffs will exclude her from a big market that has changed Britain's policy. The weakening of the sterling system must be counterbalanced.

THE SIGNIFICANCE OF INDIAN IRON'S DIVIDEND

THE Government of India's decision not to let the Indian Iron and Steel Co., Ltd. increase its ordinary dividend above the Re. 1 a share paid in recent years has been widely deplored. There are a number of reasons to support the criticisms which have been made in market circles of an act which seems to exemplify an important aspect of New Delhi's recent attitude to the distribution of steel profits. An earlier manifestation of this attitude came a year ago, when, despite the fact that Indian Iron's working during the year ended March, 1955, had produced record results, an increased dividend was not allowed for reasons similar to those given now. Everybody—including workers and the Government—got more because of those results; shareholders alone were refused the modest increase in returns they had asked for. The implications of the official veto are not measurable merely in such terms as that each Indian Iron shareholder will now have two annas or four annas less than he ought to have had; they are more far-reaching when considered in relation to their

ordinary dividend would be merely maintained. The disappointment has spread to other sections as well, as is inevitable in a trade which is strongly influenced by steel shares. The general pattern is a reminder of the fact that when the Government interferes with the affairs of the steel companies, the interference does not affect merely the companies and their shareholders; it affects the whole investment market to a much greater degree than would interference in other industries. That is why the implications of its policies on steel finance should be considered in the wider context of savers' morale and confidence. The imposition of an ultra-conservative distribution policy may help the auto-financing of expansion plans, but it does not stimulate the flow of new investment into industry which is the primary consideration for a growing economy.

With the dividend controversy now settling, market interest has come to centre on a formal announcement of an offer of rights shares. The Government, it will be recalled, gave permission for such an issue a few months ago—the shares to be offered in the ratio of one for one, at a premium of Rs. 3-8 each above the par value of Rs. 10. It was indicated earlier that the proceeds of the issue, if made, would be used to help finance schemes described as the "1955 extensions", which would considerably increase the company's steel-making capacity.

CURRENT COIN

I. F. C. Progress.—The chairman of the Industrial Finance Corporation of India, Mr. K. R. K. Menon, was able to report an increase in profits of Rs. 8 lakhs to Rs. 32.86 lakhs for the year ended 30th June, 1956, when he addressed the annual general meeting of shareholders on 29th September. Mr. Menon (whose speech is reported on another page of this issue of *Capital*) regretted that it had been necessary to apply to the Government of India for a subvention so that the entire guaranteed dividend, amounting to Rs. 11.25 lakhs, could be paid. This was necessary because the whole of the net profit had to be transferred to the reserve against the anticipated loss on account of the Sodepore Glass Works. Mr. Menon hoped that this year, depending on the size of the amount that the Corporation would require to write off against the Sodepore Glass Works account, it would be possible to pay the guaranteed dividend out of profits without having recourse to another subvention. Apart from this one unfortunate debt, the Corporation's financial position improved in the year under review. The amount of loans applied for reached the record figure of Rs. 27.70 crores, compared with Rs. 11.27 crores for 1954-55 and Rs. 9 crores for 1953-54. Mr. Menon considered that this performance was a fair indication of the increasing confidence the industrial public is placing in the institution. There has been some difficulty in meeting the increased demands made, but it has been possible to sanction loans amounting to Rs. 15.13 crores compared with Rs. 7.34 crores in 1954-55 and Rs. 5.27 crores in 1953-54. The Corporation has taken steps to quicken the pace of its work and effect other general improvements. The question of reducing the number of audits is engaging attention and is now being brought to the notice of the Government. Mr. Menon recounted a number of problems with which the Corporation will be faced in financing private industrial expansion during the second five year plan. He mentioned especially that such institutions as the Industrial Credit and Finance Corporation of India and the National Industrial Development Corporation both have a greater measure of freedom in financial operations and enjoy certain special facilities which the Corporation does not share. Mr. Menon expressed some doubt that the Central Government and the State Governments might continue to implement the policy of utilising the Corporation as their main channel for processing their own industrial loans. In this connection, he mentioned the habits of some State Government finance corporations, which have been offering loans at rates of interest which are only about half those charged by the I.F.C.

New Issue for Guest, Keen, Williams.—The general engineering firm of Guest, Keen, Williams is shortly to be converted to a public company. It will be offering to the general public a portion of its ordinary share capital amounting to approximately 30 percent of the whole. It is believed that the offer will be for Rs. 10 shares at a premium which has not yet been announced. This issue has been expected in market circles for some considerable time, and it promises to be one of the most attractive of the year. Investor interest in shares quoted on the Calcutta stock market is, at the moment, chiefly concentrated on engineering and miscellaneous issues. The reason is not difficult to fathom. Development in the second and subsequent five year plans is bound to improve the prospects of all industries which cater for the internal industrial market and over which the prospects of nationalisation have not yet cast their

shadow. Guest, Keen, Williams, Ltd. specialises in mechanical engineering and particularly in railway specialities. From its Bhandup works, which came into production in September, 1953, the company is reported to have the largest output of high class steel and brass wood screws in India. The opportunity for an equity stake in a concern of this kind, under one of the best known and most efficient managements in the country, is bound to raise a good deal of public interest.

Employment in August.—Despite a fall in the registration—from 170,978 during July to 144,836—the number of employment seekers registered with the Employment Exchanges in India increased to 797,212 during August, 1956 from 792,345 during the previous month, according to the Directorate General of Resettlement and Employment, Government of India. The total number of job openings notified to Exchanges declined by about 7 percent. Correspondingly, there was a fall in the number of persons placed in employment. The number of placements secured during August 1956 was 14,901 as against 16,007 during the previous month. The number of vacancies notified by the employers was 21,935, which marked a fall of 1,633 when compared with the corresponding figures for July 1956. Of the total number of vacancies notified, 6,507 were made available by the Central Government, 8,974 by State Governments, 3,117 by quasi-Government establishments and local bodies and the remaining 3,337 by other employers. There was thus a decrease of 1,475 in the public and of 158 in the private sector. Of the total placements, 4,750 were secured under the Central Governments, 6,090 under State Governments, 2,307 under quasi-Government establishments and local bodies and the remaining 1,754 with other employers. Of the total number of persons registered with the Employment Exchanges, 8,482 employed and self-employed persons, including 252 women, desired further employment assistance with a view to bettering their prospects.

Development in Andhra.—At the recent 28th annual meeting of the Andhra Chamber of Commerce, a reference was made to the industrial potential of the enlarged Andhra State. Dr. B. Ramakrishna Rao, who is likely to become Chief Minister after 1st November indicated that the rapid development of the State requires more than the Rs. 178 crores allotted in the second plan. Higher coal output is the foundation for further industrial advance and the recent speech of Dr. Melkote at the Singareni Collieries annual meeting supports the belief that output in this semi-public enterprise will rise steadily. Industries in Andhra, as well as in Telengana, should benefit considerably. Negotiations for a fertiliser factory are in hand, according to Dr. Ramakrishna Rao. The opening of a new cement works is provided for in the Nagarjunasagar Scheme. The mineral resources of Telengana should help the growth of a paint industry. The single Azam Jahi Cotton Mills in Warangal will not be enough and more mills are required, though the cotton-growing area has gone to Bombay under the States reorganisation scheme. The establishment of new spinning mills at Adoni and Guntakal, along with that projected in Tirupattur, will only partially ease the yarn problem for the handloom industry. The example of Madras, which is further increasing its spindleage, cannot be missed by Andhra industrialists though it may be urged that postwar ventures in the textile field have not yet proved a success. However, the Andhra Chamber realises that the break-up of the Nizam's former dominion will leave most of the existing industries in Andhra and the Chamber hopes to increase its influence and usefulness by opening a branch to link up the two commercial organisations in Hyderabad city. Power supply from Tungabhadra next year should make a great difference, but the lack of capital is a great handicap. It has been frequently pointed out that joint stock enterprise in Andhra has not developed to the same point as in Madras where hydro-electric development helped expand the textile industry in Coimbatore.

The Petroleum Industry.—The presidential address of Mr. W. B. Metre, at the annual general meeting of the Geological, Mining and Metallurgical Society of India, held recently in Calcutta, provided an interesting account of the Indian petroleum industry's growth. Mr. Metre's account was devoted exclusively to the primary production of oil, so no reference was made to the refining capacity which has been built up chiefly with foreign investment, and the fresh capacity that is likely to be added to it soon. But that did not make his address any the less interesting, and there was much in it to suggest a fairly hopeful prospect of the industry's further growth. Assam is at present the only centre of oil production, and on the basis of the geological data available, it will have to be looked upon as the principal source of this vital industrial fuel in the future. Mr. Metre, who is the senior geologist of the Assam Oil Company, stated that the proved and probable resources in the Nahorkatiya area (in Assam) are sufficient to plan for a production target of 24 million tons of oil a year, together with about 45 million cubic

feet of gas a day (which is equivalent to about 0.6 million tons of fuel oil a year). Production from the Digboi area is declining and is likely to average 300,000 tons annually over the next few years. Yet the Company expects to meet 56 percent of the present estimated crude oil requirements of the country. "This will be a very great improvement on the present production of about 8 percent of the total consumption", he said. The estimates do not include the proved but unestimated pools in the Hugrija area near Naobolia, where oil has been found, and the Moran area which is expected to be oil-bearing. The discovery of oil in the alluvial Nahorkatiya area gave rise to the hope that oil might be found in several of the other large alluvial areas also, Mr. Metre said. In some, such as the Bengal basin, the S.V.O.C. is now "carrying out much geophysical work." The extensive Ganges valley and the alluvial tracts of Rajasthan and Saurashtra also have the same geological features. Mr. Metre emphasised that oil prospecting needed infinite patience, an over-dose of optimism, much experience and great technical skill. It also required much organised work, and he welcomed the constitution of the Oil and Natural Gas Commission by the Government of India.

International Tin Pact Prospects.—The recent sharp rise in the London price of tin by over £44 to £818 15s. a ton coincided with the first stage in the operation of the international tin agreement, and gave rise to doubts as to whether it could work. First contributions by producer members to the buffer stock were due to begin last Saturday. Initial contributions equivalent to 15,000 tons of metal which can be made either in tin or the cash equivalent have to be received within three months. This operation has undoubtedly been complicated. Having moved within the "neutral" price range of £720-£800 for a considerable period, the price is now in the £800-£880 range when the buffer stock manager may sell to stabilise the price. But he is not forced to do so until the price reaches £880. At present, the buffer stock has not the metal with

PUJA HOLIDAYS

Because of the Puja holidays, there will be no issue of *CAPITAL* on 18th October, 1956. The next issue to be published will be dated 25th October, 1956.

which to operate. Under the agreement not more than 75 percent of contributions are to be in tin metal, the remainder being in cash. Since cash contributions are at the rate of £640 a ton, producers are unlikely to be eager to make contributions in metal at current price levels. With the buffer stock manager unable to buy tin until the price has fallen below £720 a ton—he is not forced to buy until it is below £640—the agreement would appear unable to deal with any price rises in the near future. By mid-December the buffer stock should have at least sufficient funds to support the market should the price have fallen below £720.

SHEPHERD AND HIRELING

WHEN, in the Autumn of 1873, Ceres held her hand and a wall of misery went forth from each corner of Behar, Lord Northbrook, who was the Viceroy at the time, promptly grappled with the situation and put himself at the helm of the State. Throughout the summer of 1874, he was to be seen almost daily in Calcutta, the only relaxation he permitted himself being a trip to Barrackpore from Saturday to Monday; he directed all his officers to be at their posts, and himself setting the example, unflinchingly showed them what their duty was. The consequence was that everyone respects and esteems Lord Northbrook whether they agree with his political opinions or not. The times apparently have changed. While famine is rearing her head, and starvation appearing on the horizon, the Viceroy remains at Simla, and the Lieutenant-Governor at Darjeeling. Sir Alexander MacKenzie, it is true, is not so much concerned with the famine, but the plague, like the poor, is now with us. When the ship is in danger, it is the duty of the Captain to be at his post and in touch with every official, so as to know exactly what is going on, to be able to give his orders promptly and to feel that they will be as promptly executed. He does not usually select that time for going on shore to a picnic. We shall, we suppose, soon hear that the Simla Dramatic Society has been giving a performance, honoured by the presence of His Excellency. We shall, we suppose, soon hear from Darjeeling that picnics, junketings and gymkhana entertainments, all patronised by the presence of Sir Alexander MacKenzie, are in full swing. History repeats itself, and so surely as those charged with the Government of the country neglect their plain and paramount duty, so surely sooner or later a day of reckoning will arrive. There is a slumbering feeling of indignation at the apparent indifference which is being shown by the Government of India to the famine and the Government of Bengal to the plague. We all know that the good shepherd careth for his sheep, but that the hireling fleeth.

BUILDING CONTRACTORS

SOUTH EASTERN RAILWAY TENDERS.

The Controller of Stores, South Eastern Railway invites the following tenders:

- (1) Tender No. GM.16/56/K14/I(B)—for supply of (a) 2 Nos. Diesel Engine Driven Portable centrifugal Pump 25,000 GPH at a total head of 80 ft., (b) 2 Nos. Diesel Engine Driven Portable Centrifugal Pump 15,000 GPH at a total head of 100 ft. and (c) 4 Nos. Diesel Engine Driven Portable Centrifugal Pump 10,000 GPH at a total head of 100 ft. Earnest Money required is Rs. 920/-. The opening date of the tender is 22-10-56 at 12 noon.
- (2) Tender No. GM.17/56/K14/I(B)—for supply of (a) 1 No. Portable 20 K.W. A.C. Generator and (b) 4 Nos. Portable 5 K.W. A.C. Generator. Earnest money required is Rs. 1,000/-. The opening date of the tender is 22-10-56 at 12 noon.
- (3) Tender No. GM.18/56/K14/I(B)—for supply of 6 Nos. Portable Diesel Engine Driven Air Compressor capacity 210 Cfl. per minute at 100 lbs. pressure. Earnest Money required is Rs. 1,000/-. The opening date of the tender is 22-10-56 at 12 noon.
- (4) Tender No. GM.19/56/K14/I(B)—for supply of (a) 16 Nos. Pneumatic Dry Rock Drills (b) 6 Nos. Pneumatic Grinders and (c) 10,000 Rft. Pneumatic Hose Pipe 3" bore. Earnest Money required is Rs. 1,000/-. The opening date of the tender is 22-10-56 at 12 noon.
- (5) Tender No. GM.20/56/K14/I(B)—for supply of (a) 1 No. Diesel Engine Driven Winch capacity 10 tons and (b) 2 Nos. Diesel Engine Driven winch capacity 5 tons. Earnest Money required is Rs. 1,000/-. The opening date of the tender is 22-10-56 at 12 noon.
- (6) Tender No. GM.21/56/K14/I(B)—for supply of 6 Nos. Diesel Engine Driven Portable Concrete Mixer 10/7 Cu.ft. capacity. Earnest Money required is Rs. 1,000/-. The opening date of the tender is 22-10-56 at 12 noon.
- (7) Tender No. CS.17/56/K14/I(B)—for supply of 8 Nos. Petrol Engine Driven Internal Concrete Vibrator. Earnest Money required is Rs. 460/-. The opening date of the tender is 22-10-56 at 12 noon.
- (8) Tender No. CS.18/56/K14/I(B)—for supply of 1 set Diesel Engine Driven Portable Welding Set. Earnest Money required is Rs. 460/-. The opening date of the tender is 22-10-56 at 12 noon.

Tender forms can be obtained from the office of the Controller of Stores, South Eastern Railway, Garden Reach, Calcutta-23 (I. B. Section) on remittance of the cost to him direct by Money Order or on production of the Cash Receipt from the Chief Cashier, South Eastern Railway, Garden Reach, Calcutta-23.

The cost of tender form for items (1) to (6) above is Rs. 5/- each and for item (7) & (8) is Rs. 2/- each. This amount is not refundable.

Firms not on this Railway's approved list of Contractors must give their Bankers' reference and enclose a valid Income Tax Clearance Certificate with the tenders.

Without Prejudice

THE FINALITY OF AN EDITOR'S DECISION

CROSSWORD COMPETITOR CLAIMS FIRST PRIZE

(FROM OUR DUNDEE CORRESPONDENT)

"THE editor's decision shall be final". . . "The editor's decision shall be final and legally binding and he will not enter into any correspondence whatsoever with the competitors." But while admitting the validity of the editorial refusal to enter into any correspondence on the simple and conclusive ground that no one is under any legal obligation to correspond with anyone else unless he wants to, what about the first question? Notwithstanding the peremptory terms of the ukase to that effect, is the editor's decision necessarily final?

To attempt to answer this question we shall have to consider editors in particular and editors in general; for there are editors and editors. Some are absolute czars. W. T. Stead was himself in his own person the *Review of Reviews*, so was C. P. Scott for the *Manchester Guardian*, H. W. Massingham for the *Nation*, J. L. Garvin for the *Observer*, Wickham Steed for *The Times*, Horatio Bottomley for *John Bull* (old style) and sundry others. You never thought of the journal as such apart from its super-eminent editor and vice versa. But these are the exceptions which prove the rule, or rather the principle, and the latter is quite a simple one.

An editor is a man in a job. An ordinary contract of service subsists between him and his employers, the proprietors of the journal. If I, being a Wesleyan Minister, submit an article on the Higher Criticism to Mr. Muggeridge rejects the same, as he undoubtedly would, his decision is not binding on me, for I from my Manse can appeal to his employers over his head and they could order him to publish it by the ordinary law of master and servant. Mr. Muggeridge would certainly resign. But Mr. Muggeridge would go out and my article would go in.

It does happen sometimes. The writer has the privilege of access to a library of pre-Victorian and mid-Victorian books, and has been studying the works long out of print of second-grade (far better work than the first-grade of today) writers of that period: Charles Reade, James Fennell, Lord Lytton, Wilkie Collins and the like. Wilkie Collins, a young beginner wrote a novel *A Grape from a Thorn*. It was rejected by the editor to whom he submitted it for publication as a serial, whereupon he consulted a young friend named Charles Dickens, who read it, liked it and advised appeal to the proprietors over the editor's head. Wilkie Collins did so. The proprietors ordered its acceptance. Then, and later in book form, it was an enormous success; and through that consultation between two young men and the appeal, one reader in India about a hundred years later has been able to read the work with the keenest appreciation.

An editor's decision is not necessarily final and, if Dr. Laik Ahmed Hashmi had realised that fact,

he might not have rushed into criminal proceedings in Muzaffarpur, Bihar, over his grievance against an editor who claimed that his decision was final and declined to correspond about it. The doctor had a possible alternative remedy. A civil suit. But being, no doubt, exasperated, he went the whole hog and started a criminal prosecution.

The prosecution had to do with a prize competition, a crossword competition, in fact. Now, the outlook for competitions of this kind, where money prizes are awarded to successful competitors, is bleak in the extreme, and both the Central and State Governments look with a jaundiced eye upon them. Apart from recent legislation, by the ordinary law of the land, a competition with the benefit of an opportunity of securing a prize where the result depends on chance is illegal. Contrariwise, if the result depends on skill, the competition is not a lottery and therefore is not illegal. But merely to state the two extremes is to oversimplify the matter. Organisers of competitions have exercised great ingenuity in keeping within the letter of the law while offering the public all the excitement of a lottery for enormous prizes. They do this by walking with delicate precision in the middle of the road. There is an element of luck and an element of skill on which the result depends, and the design of the organisers is to make it impossible for the authorities to discharge the onus which lies upon the prosecution to prove that the element of luck predominates and not that of skill. You may ask why these legal stratagems should be necessary at all, and consider that for Parliament and the States to go out of their way to prevent the citizen from risking his rupee on the chance of a big return is Pecksniffian humbug. The answer is that Mr. Seth Pecksniff is still alive and flourishing in every Parliament in the Commonwealth. It is he who hampers me in contributing to Irish hospitals by buying a ticket in the Irish Sweepstake, which ticket may be treated, if detected by his customs officers, as prohibited goods by his Lottery Acts of 1836 and 1844; he also who, by the invocation of the Sunday Observance Act of 1825, would prevent two village cricket clubs from playing on a Sunday afternoon a match for the benefit of the captain of their country XI; it is he who stopped this last summer the Duke of Beaufort from richly contributing to charities by charging for admission to his own ground on the occasion of the match on a Sunday between the ducal team and an international XI. And now, by the Prize Competitions Act of 1955, the Indian legislature has restricted the amount of a prize to Rs. 1,000, the number of entries to 2,000, the number of entries to two a person and the entry fee to Re. 1.

To return to Dr. Hashmi. He claimed that a paper known as *Shama*, an Urdu periodical, ran a crossword competition, and that he had entered and had submitted 12 solutions. Out of these, six were in his own name and six in the name of his son. His allegation was that a correct solution was sent by his son, and that in spite of this, his son was not awarded the first prize. Hence, the doctor said, he had been cheated.

The editor and the management of the paper, on the other hand, contended that the doctor's son did, in fact, get a prize, though not the first one. His solution, they claimed, contained two mistakes, and therefore he was not entitled to the first prize. There was in the published rules of the competition, the usual stipulation that the editor's decision was to be final. In cases of this kind, it is submitted that an aggrieved competitor is not necessarily deprived of his civil remedy by reason of the latter stipulation. What does the word "decision" mean? It means "settlement of an issue." "conclusion come to after consideration". It is the duty of an editor to consider honestly, impartially and reasonably the question submitted to him. If he does that and his decision is wrong, the competitor can do nothing about it. The editor's decision is final. But if I can prove beyond a peradventure that my entry contained no mistakes, that the editor duly received it any acknowledged receipt, and then, notwithstanding my claim to the first prize, gave it to an entrant with errors, surely that must imply that he has not come to a decision on my claim at all. He comes to no "settlement on an issue". He has just arbitrarily or recklessly awarded the prize to one not entitled to it.

So a civil suit, though a shaky one, might lie. But to run the editor in criminally as a common cheat, that is a very different kettle of fish. Said Iman J., delivering the judgment of himself and Ramaswami J., in the Patna High Court: "So far as the offence is concerned, I fail to see what offence has been committed. Here was a competition and it is alleged on behalf of the editor that the son of the complainant had committed two mistakes. There was no deception of any kind practised on the opposite party or his son. It is really a case of dispute as to whether the son of the opposite party had put in a correct solution or not. The fact is disputed by the editor of *Shama* and the other petitioners. In other words, there is no mens rea at all in the case. . . There is absolutely nothing on the record to show that there was any criminal intention on the part of the editor."

The High Court accordingly quashed the criminal proceedings pending before the magistrate. [A.I.R. (Patna) 1956, p. 256].

i.e., criminal intent.

A DITCHER'S DIARY

It is a pity the B.B.C.'s Third Programme cannot be heard in India, otherwise I am sure there would be many listeners to this series, the preparation of which took Francis Watson and his colleagues several months of work in India and England.

The association of workers with management is one of those things which should be hastened with slowly. It is becoming too much of a catchphrase these days, like "building socialism" and "fighting for peace". There is no need to dismiss it as impracticable altogether, but unless it is pursued empirically and with caution, it may turn out to be nothing more than a recipe for chaos. In any event, it should never be considered for all commercial or industrial activities, and I think the production of newspapers is one of them. When the Deputy Minister of Labour, Mr. Abid Ali, speaking in Calcutta last Saturday, declared himself in favour of the "orderly and progressive association of employees or workers with the management in the newspaper industry" he did not say whether he included the editorial function as well. Such vagueness may have been deliberate, it is rarely necessary to be precise when one is electioneering. But in a country where newspaper editors are still, in all too many cases, struggling for independence from the dictates of general managers and proprietors, it seems to me to be dangerous indeed to suggest publicly, if only by forgetting to qualify one's utterances, that the weight of organised labour should now be thrown into the scales against them. Without editorial independence, newspapers become nothing more than propaganda sheets, and that is a serious danger in India today. The many pressures with which editorial opinion must contend and the growing volume of regulation under which newspapers have to work, already make the expression of independent opinion a task of some difficulty, if not a hazardous one. To add another in the shape of organised labour would make it infinitely worse. If worker participation does come—and that is something which I personally doubt—the Press is unlikely to escape. But there are many functions in producing a newspaper which differ little from those involved in manufacturing generally and it may be those to which Mr. Ali intended his remarks to be restricted. But long before anything of the sort is attempted it would be as well to study the relationship between editorial, and commercial management in Indian newspapers. If I were the secretary of a communist trade union, I would be on the job now.

In the Press outpourings on the Suez crisis the tendency seems to have been for the newspapers on both sides to exaggerate the rôle of the Canal pilots. The Egyptians have excitedly publicised the number of Russian and other foreign navigators who have come to their aid. The British and French newspapers have emphasised the number of established pilots who have withdrawn, and have implied the progressive slowing down—if not disintegration—of the convoy system. Up to now, of course, they have been proved very wrong indeed. Interviews have been sought with returning pilots who, to do them justice, appear to have been extremely reticent in expressing their opinions about their own indispensability. In all, the newspaper-reading public of two hemispheres has probably never before been made so aware of the men who run the Canal. Inevitably, there has been some distortion of the facts, and too much

importance has probably been given to the part the pilots play. At least M. Picot, Director-General of the Suez Canal Company, seems to think so. I see from a London newspaper report that in the course of a B.B.C. interview he has said that while he would not wish to minimise the key position which the pilot holds in the scheme of things, the latter are, so far as the Canal is concerned, no more than the equivalent of an engine driver in a railway system. Nobody can run a railway with engine drivers alone, they have to be backed by operating staff, a signalling organisation and planned and supervised movement of the entire rolling stock on the line. So it is with the Canal. No pilot can operate efficiently without the closest co-operation, at every stage of the journey, of the shore staff, of whom there are (or were) between five and six hundred. But the lay mind blithely assumes that all that is needed to get a ship from one end of the Canal to the other is to put the pilot aboard. One has the strong impression that the publicity, or public relations, aspect of this dispute has been ineptly handled, whether it be the pilot question, troop movements or the Users' Association. The Canal users will have to find another excuse for believing that Egypt cannot run the show on her own.

I recall that about six months or so ago it was proposed that changes be made in the uniform of the Calcutta Police; the point was even discussed in the Assembly. But I still see policemen dressed in their old-type white coats, tight-fitting leggings, heavy boots and picturesque red turbans. The matter is certainly not of any great personal interest to me; apart from the occasional traffic problem, I have little to do with the tribe. But as a newspaperman I took sufficient interest at the time to make a few comments, and I feel a little baulked that so far there has been no visible sign of progress. Professor Nirmal Bhattacharya, it will be recalled, gave the Assembly a vivid and humorous description of how he once saw a policeman running with one hand outstretched to catch a thief, while keeping his turban in place with the other. I like the turban, and where else than in India is it worn? But it may have its drawbacks where comfort and convenience are concerned. It is not altogether uncommon, for instance, to find on a windy day one of Calcutta's myrmidons of the law standing distraught between his pick-pocket and his headgear in human imitation of Buridan's ass. We must, of course, appreciate his anxiety over not being detached from his familiar nimbus and symbol of authority; without it he would probably look as ridiculous as an angel minus a halo. I would be disappointed to see the turban go, but there is certainly one item of the policeman's outfit which clamours for change, and that is his boots. If they have not yet achieved the distinction of Charlie Chaplin's, it cannot be said they do not deserve to. They are certainly not as ragged; indeed what merit they have lies in their exceptional durability. Unlike most things in this city, they appear to be of material so tough that I can quite believe the common rumour that they have to be immersed in water for a month before they are fit to wear. It is not surprising that with such footwear, criminals in this city can usually put an increasing distance between themselves and their uniformed pursuers. If my memory serves me right, I seem to have read in the newspapers that in many recent minor street robberies the culprits have remained untraced. This may be the reason.

THE DITCHER.

Completely at ease in one of Pan American's Super Stratocruisers to the U.S.A.

RELAX—you're on the World's Most Experienced Airline

Enjoy yourself. You're surrounded by comforts and services unmatched anywhere in the air. Luxuries that are solidly backed by an unequalled record of air pioneering and accomplishment.

You're flying with the only airline that has made over 58,000 Atlantic crossings, over 38,000 Pacific crossings and 2,700 Round-the-World flights.

Pan American has carried 13 million passengers overseas in dependable speed and comfort—has flown over one billion miles overseas—and has 1200 pilots who have flown over one million miles each, 100 who have flown over three million miles.

This record is unmatched by any airline anywhere. So next time, choose Pan American—the only airline that gives you the priceless advantage of Round-the-World experience on every Tourist and First-class flight.

Let your Travel Agent arrange your trip—his services are free. Or call Pan American in:

CHAIRMAN MR. K. R. K. MENON'S REVIEW

The following speech was delivered by the Chairman, Mr. K. R. K. Menon, at the Eighth Annual General Meeting of the Shareholders of the Corporation held on the 29th September, 1956.

Gentlemen,
I have pleasure in placing before you the Accounts of the Corporation and the Report of the Board of Directors for the year ended the 30th June, 1956. Printed copies of the Accounts and the Report are before you. These have also been circulated to all the shareholders. I shall, if you agree, take them as read. I would, however, make some observations on a few points.

The working of the Corporation for the year ended the 30th June, 1956 has resulted in a profit of Rs. 32.68 lakhs which shows an increase of Rs. 8 lakhs over that of the previous year. After setting aside a sum of Rs. 10.18 lakhs as provision for taxation we are left with a net profit of Rs. 22.50 lakhs. The whole of this amount, however, has had to be transferred to the reserve for Bad and Doubtful Debts in view of the anticipated loss in the account of the Sodopore Glass Works Ltd., to which I made a reference in my speech last year. We have, therefore, had to call upon the Central Government this year also to pay us a subvention to enable us to pay the entire guaranteed dividend amounting to Rs. 11,25,000/-. We hope that with the further provision that we shall make from the current year's profit towards bad and doubtful debts, there will be no need to set apart any amount in the succeeding years on this account. As we shall make a substantial saving in our tax liability on our current year's income, depending on the size of the amount that we are obliged to write off in the account of the Sodopore Glass Works Ltd., we anticipate that we will have

sufficient balance left out of our profits this year to meet the guaranteed dividend to our shareholders without having recourse to a subvention from Government. You will observe that I take quite an optimistic view of the future. I do so, relying particularly on two major factors, namely, first the increasing measure of appreciation on the part of the industrialists of the country, and also of Co-operative Societies engaged in industrial enterprises, of the ability of the Corporation to meet their needs in the matter of long-term loans, and second, the marked increase in the volume of industrial investment that is likely to materialise during the period covered by the Second Five Year Plan.

A Record Year

Evidence of the first named factor will be found in the figures relating to our activities furnished to you in the Annual Report which is in your hands. It will be noticed that the amount of loans applied for in the year which has closed reached the record figure of Rs. 27 crores 70 lakhs as compared with Rs. 11 crores 27 lakhs for 1954-55 and Rs. 9 crores for 1953-54. The average for all the previous 7 years put together is Rs. 8 crores 62 lakhs. I venture to think that this is a fair indication of the increasing amount of confidence that the industrial public is now placing in our institution. To deal effectively with this enormous increase in the demands made on us, and at such short notice, has been no easy task, and the measure of the modest success we have achieved in this direction is indicated by the fact that the total amount of loans sanctioned by us during the year under review was Rs. 15 crores 13 lakhs as against Rs. 7 crores 34 lakhs in 1954-55 and Rs. 5 crores 27 lakhs in 1953-54. The yearly average for all the

previous seven years put together was only a little over Rs. 4 crores. I see no reason why this very satisfactory record for 1955-56 should not be maintained in the succeeding years if our administrative machinery is geared adequately to cope with the increasing load, and our relations with the industrial and commercial sector of the public continue to be as close and cordial as they have been during the past year.

In connection with this last named factor of public relations it is my very pleasant duty to take this opportunity to acknowledge the assistance that we have received during the year under review from the various Chambers of Commerce and Industry whose representatives were good enough to meet me and my colleagues on the Board of Directors on several occasions for free and frank discussion of various problems of mutual interest. These discussions greatly facilitated our work during the year, and have helped in particular to focus our attention on ways and means of simplifying our procedure to the advantage of our clients as well as ourselves. I feel sure that the steps we have already taken in pursuance of these discussions would bear fruit in the far future in the shape of better business for us and more cordial relations with our clients.

I will refer to just one or two of the more important measures that we have adopted in connection with the drive that we embarked upon in the year under review for quickening the pace of work and effecting other general improvements. A measure of great significance, was the institution of a separate legal branch of our own, manned by full-time officers under the control of the Corporation, in our head office as well as in two of our branch offices. This measure, which has been introduced as an experiment for the present, will be extended to all our branch offices after we satisfy ourselves that there are no snags to it. It is designed to quicken the pace of work at various stages in connection with the examination of title deeds and the execution and registration of mortgage documents. This will also cut down to a very considerable extent the legal charges now incurred by us and passed on to borrowers. Many of our clients have expressed great satisfaction at this long over-due reform in our administrative set-up. We have also succeeded in considerably simplifying, and standardising to as great an extent as possible, the terms and conditions incorporated in our mortgage deeds. The previous practice of our sending for our clients' representatives all the way to the Head Office in Delhi to discuss and finalise the terms and conditions of loans was given up, and branch Managers were delegated authority to deal with our clients on the spot on our behalf. We have also liberalised to an appreciable extent the conditions under which interim loans are granted, particularly in cases where, pending the finalisation of the legal formalities concerned with the execution and registration of the formal mortgage deeds, machinery, etc. ordered by our clients has to be paid for or documents relating to which have to be retired.

Audit

Before I leave the administrative and organisational aspects of our work I should like to mention one or two salient facts in regard to the audit that has been done of our accounts. We have now four different auditors carrying out audit throughout the year, and I shall refer briefly to each of them. Firstly, there is our own internal audit, the machinery for which, in the course of the year, been put on a satisfactory working basis. This has been found to be of very great value to us. Secondly, there is the audit done by a firm of Chartered Accountants who are elected by the shareholders. Thirdly, another firm of Chartered Accountants appointed by the Central Government in consultation with the Comptroller & Auditor General also conducts an audit. Irregularity has been brought to notice by either of these firms of Chartered Accountants. Certain relatively minor matters to which our attention was drawn by them have been looked into and set right. Fourthly, there is the audit carried out by the Director of Commercial Audit under the auspices of the Comptroller & Auditor General. In the course of the year under review the Director of Commercial Audit conducted his audit in two instalments, the first one extending from the last week of September 1955 to the first week of February 1956, covering our official year ending 30th June, 1955, and the second extending from the first week of June 1956 to the first week of August 1956, covering the first half of the year 1955-56. In the audit of the accounts for the first period a large number of formal objections were raised by the audit party and, after we had commented upon them, only a few of these objections are now understood to be in the process of finalisation. We are hopeful that a few more of these items also will be withdrawn or modified as a result of further discussions. The audit of the second period is still in the process of completion.

There is no doubt that in the existing set-up we have a multiplicity of audit, somewhat in excess of real requirements. One might also be tempted to take the view that if the bulk of the items of original audit objections was withdrawn there must have been created quite an appreciable quantity of work at all levels most of which would have been eventually proved to be infructuous. These and other related matters have engaged our close attention and we have brought these to the notice of Government.

I now turn to the second important factor, which I would describe as the external factor—distinct from the internal factors about which I have been speaking to you till now—which, in my opinion, should give us ground for hope of an even greater volume of business for the Corporation in the future. This factor is centred round the spurt in industrial investment in the private sector that it is anticipated will materialise during the Second Five Year Plan period.

Second Plan

The Planning Commission in their report on the Second Five Year Plan have given detailed figures of some of the overall targets of industrial investment in both the public and the private sectors which they state will show that the Second Plan period will be one of "intensive and many sided industrial effort." During the first Five Year Plan period there was a shortfall of investment in the private sector in certain industries, though, in the aggregate, the investment target of Rs. 230 crores for expansion programmes was bettered in actual performance to Rs. 340 crores. The lag in private investments occurred, according to the Planning Commission, in industries which required heavy capital investment and offered a relatively small profit margin. It is this kind of industry which might not be able to attract adequate equity capital from the investing public that would claim our special attention during the

coming years, with due reference of course to the industrial priorities drawn up by the Planning Commission in their report. The general scheme of priorities in the private sector as envisaged by them places Iron & Steel first, then heavy and medium engineering industries, including structural fabrication, automobiles, railway rolling stock, castings and forgings, industrial machinery, bicycles, sewing machines, motors and transformers, etc., followed by fertilisers, chemicals cement, refractories, jute and cotton textiles, sugar, paper and a wide range of consumer-goods industries. The programme of overall development envisaged in the private sector during the 2nd Plan period is estimated to involve an outlay of Rs. 720 crores, comprising Rs. 570 crores of new investments and Rs. 150 crores on replacements and modernisation. Of this total estimate of Rs. 720 crores a provision has been made by the Planning Commission for Rs. 55 crores for the activities of the National Industrial Development Corporation and Rs. 15 crores for us, leaving a balance of Rs. 650 crores to be raised from other sources. While our figure of Rs. 15 crores is near enough to the average of our disbursements during the past seven years, our achievement during the past one year leads me to think that we should be able not only to reach this target quite easily but to improve on it to an appreciable extent in the next five years. We, therefore, propose to address Government on the subject of the feasibility of increasing this figure.

In spite, however, of the fact that these figures relating to the industrial development in the private sector during the Second Five Year Plan that I have given you do augur well for an institution like ours which may well be described as a hand-maiden of the private sector, I think it is just as well that I invite your attention also to one or two factors which we shall have to take into account in assessing our ability to rise to our full stature in the coming years. Firstly, we must take note of the fact that we have other institutions like the Industrial Credit and Investment Corporation of India and the National Industrial Development Corporation whose fields of activity converge on ours, and indeed, overlap with ours to some extent. Secondly, it is important to bear in mind the fact that both these institutions have a greater measure of freedom in the matter of financial operations than we have, and they enjoy certain special facilities which we do not share. Thirdly, though the Central Government have so far implemented the policy of utilising the Corporation as the main channel for processing their own industrial loans, and we may hope with confidence that this policy will continue to be followed, we cannot be sure that the State Governments have been, or will be, equally helpful to us in this matter. I mention this as we have been given to understand that certain State Governments have sanctioned loans directly to certain industrial concerns, and, according to a statement contained in the Annual Report of one of the State Financial Corporations, the State Government concerned have been "offering loans at rates of interest which are only about half of those charged by us and on the basis of security which are also very much easier than those observed by the Corporation." You will agree this is a matter of vital importance to both ourselves and the State Financial Corporations.

Diminishing Resources

The fourth, and, in a sense, the most important factor which is likely to come in the way of expanding our activities to the fullest extent otherwise possible is the fact that, if we succeed in inviting business at the present rates and dealing with application for loans at the pace that we have achieved last year, our own monetary resources will soon be tapering off, thereby accelerating the advent of the day when we shall perhaps be forced to borrow under conditions which might leave us little or no margin of profit after meeting our tax obligations and our working expenses. This matter is engaging our serious attention already, and we hope that we should be able to find a satisfactory solution in collaboration with the Central Government who have been apprised of the matter. It will take some time before a final decision is taken; I mention it now merely to reinforce my point that if the outlook is on the whole bright and we could be quite optimistic regarding the future, it behoves us also to take note of other factors which we shall have to take into account.

In my speech last year I said that we had been obliged to take over possession of the assets of certain concerns who had defaulted in their obligations to us. The position in this regard is explained in our Annual Report. You will have observed that there has been considerable progress in this matter. I am glad to inform you that one of these factories, which we sold, and another which we leased, have both now gone into production. It is gratifying that these concerns which had virtually closed down business for considerable periods have been set on their feet again and brought into full production, thanks to the intervention of this Corporation. We are taking appropriate steps with the same objective in regard to the other concerns also, and we hope it will be possible to achieve our objective consistent with the safety of the funds invested by the Corporation.

You will no doubt also recollect that the Board of Directors had decided to sell the factory of the Sodopore Glass Works Ltd., another of our defaulting concerns, to the Asahi Glass Company Ltd. of Tokyo and that the vendee concern were to form an Indian company to take over the assets and work the plant. This Indian company has now been formed, and necessary action in regard to the execution of the sale and mortgage deeds is well under way. Steps have also been taken by the company to make necessary arrangements for bringing the factory into production as early as possible. We expect that this factory will start working before long.

Another noteworthy feature of our activities in the year under review was that we sanctioned loans to Co-operative Societies of a total amount of Rs. 9 crores 50 lakhs. I should like to mention in this connection that apart from the impetus that this has given to the Co-operative movement as such the fact that as a condition precedent to our loans, the members of these Societies, drawn mostly from the lower income groups, have been made to subscribe towards the industrial schemes financed by us, a total sum by way of share capital of the order of Rs. 2 crores 20 lakhs, has contributed appreciably towards helping Government's efforts at promoting savings and drawing them off for investment purposes.

A large majority of the concerns to whom we have lent money did quite well during the year under review, and, in the case of a number of concerns, we have no reason to withhold the permission asked for to declare dividend in excess of the normal maximum of 6%. This very satisfactory position in regard to

production and profits is reflected in the figures relating to progress of repayments furnished in the Annual Report.

You will have noticed from the industry-wise figures given in the Annual Report that our loans to the sugar industry aggregated Rs. 11 crores 58 lakhs at the end of the year under review. We have been advised by the Central Government that we should continue to finance Sugar Co-operative Factories on the scale that we have been doing hitherto, and that as regards loans to sugar factories other than Co-operative Sugar Factories our policy in regard to their financing should not be unduly restrictive in view of the recent enhancement by the Government of the target of production for the industry.

Loan Applications

We dealt with the large majority of loan applications in consultation with our Advisory Committees of which we have had four working in the course of the year, viz. those for the Textile, Engineering, Chemical and Sugar industries. These Advisory Committees are now in the process of being reconstituted so as to include a larger number of technical experts in each, and also so as to provide for a wider territorial representation.

The figures given in Appendix E to the Annual Report showing the State-wise distribution of the loans sanctioned by us in the year under review as well as in the previous years will show that as compared with the position as it obtained on 30th June, 1953, there has been a marked increase at the close of our financial year in June, 1956, in the loans sanctioned to concerns located in certain States. Excluding those States which, relatively speaking, may be described as industrially advanced, the figures relating to the progress in some of the other States are, I think, worth inviting your special attention to. These are—

(i) Andhra	— Increase from Rs. 4 lacs up to the end of 1955	to Rs. 1 crore 29 lacs at the end of 1956.
(ii) Assam	— from nil up to the end of 1955	to Rs. 45 lacs at the end of 1956.
(iii) Punjab	— from Rs. 1 crore 10 lacs up to the end of 1955	to Rs. 2 crores at the end of 1956.
(iv) Travancore-Cochin and	— from Rs. 1 crore 12 lacs up to the end of 1955	to Rs. 3 crores 18 lacs at the end of 1956.
(v) Uttar Pradesh	— from Rs. 1 crore 30 lacs up to the end of 1955	to Rs. 2 crores 95 lacs at the end of 1956.

Efforts are being made to effect substantial increases of this kind also in other States similarly situated.

The ministerial and officer staff of the Corporation was augmented to some extent to make good deficiencies which had existed since long. On the procedural side, certain measures were adopted which have resulted in the cutting down of delays in the day-to-day work of the Corporation to an appreciable extent. This matter continues to engage the personal attention of myself and my General Manager, and we are hopeful of effecting further improvements as soon as the additional staff to be newly recruited are in position.

Before resuming my seat, I should like to convey my sincere thanks to my colleagues on the Board of Directors and on the various Advisory Committees for their co-operation and guidance in all our deliberations. I should also like to convey on behalf of the Board and on my own behalf our thanks to the General Manager and the entire staff of the Corporation, both here and in the branches, for their very loyal and devoted work throughout the year in spite of the exceptionally severe strain that had been placed on them as a result of the marked expansion of the activities of the Corporation in the year under review.

The Second Five Year Plan tells us that of the 54 million houses in rural areas a large number need reconditioning or rebuilding. During the Plan period a sum of Rs. 120 crores will be spent on housing, which together with housing expenditure in the private sector, will produce 1,900,000 new houses by 1961.

Wanted: machines for living in

What has oil got to do with all this building? Land levelling and transportation of materials call for fuels and lubricants... pumps and generators on site require diesel oil... in almost every stage of building, Burmah-Shell petroleum products have their part to play.

Oil is the most flexible source of energy available... it is, in fact, "packaged power". It is our responsibility to see that energy from oil flows to all parts of the country cheaply, efficiently and in sufficient quantities for the job on hand.

Please sign that light bill, Mr. Accountant!

But have a look at it for a moment. How much electricity did you use last month? And how much did you use *before* you installed Fluorescent Lighting? Your bills are now about *one-third* of your previous bills, aren't they? How did this happen?

Your technical staff will tell you that Philips Fluorescent Lamps and Fittings provide more than

three times as much light with the same consumption of electricity! And the light given by these lamps is even, glare-free. Working tests have proved that Philips Fluorescent Lamps, used with quality control gear, have an average burning life of 7,500 hours.

Good judgement to switch to Philips Fluorescent Lamps and Fittings!

PHILIPS

'TL' Fluorescent Lamps and Fittings
make light work for you!

Expert service for you—Call in the Philips Lighting Service Bureau to examine your existing lighting installations. You will find that they are trained experts, happy to place their long experience in shop, factory and office lighting at your disposal—their services are free of charge.

Finance in India and Abroad

THE CALCUTTA MONEY MARKET

GOOD SHOWING OF TEA BILLS

Tuesday, 9th October.

THE lack of general commercial interest at this particular holiday season has ensured that there is little change to report from the money market this week. Borrowing activities from the various industries appear to have steadied. A fair quantity of funds remains tied up in Puja cloth stocks because offtake this year is down on that of last. The interbank market has been active and business has been done up to 3½ percent. The official call rate is unchanged at 3½ percent, but it is expected that pressure on this rate will continue until the holiday closings.

Good business is once again reported from the bill market. The emphasis appears to be chiefly on tea bills, of which a large supply has come to hand in the past week. Remittance remains good. After a sharp slump towards the end of last week, sterling is recovering lost ground. The reason appears to be mainly the interest which the United Kingdom is showing in a closer association with the proposed enlarged tariff-free western European market.

Bullion was steady on good offtake. The price of silver increased slightly from the previous week's level of Rs. 173-1 to Rs. 173-5 quoted today. The rate for ready was quoted at Rs. 173-8. The London price was unchanged at 78½d. The price of foreign silver in New York has remained the same at 90½ cents.

Gold rose from Rs. 104 to Rs. 104-7 in sympathy with silver. The sovereign at Rs. 68-2 showed a loss of 2 annas.

The return of the State Bank of India for the week ended 28th September, 1956, shows a rise of Rs. 4.79 crores in total investments to Rs. 232.15 crores. Investments in Government securities are up by Rs. 79 lakhs to Rs. 96.65 crores, while other authorised investments are down by Rs. 17 lakhs to Rs. 11.44 crores. Advances, including loans, cash credits and overdrafts, and bills discounted and purchased, have decreased by Rs. 1.29 crores to Rs. 130.38 crores. Cash and balances are, in consequence, shown at Rs. 17.77 crores, or Rs. 62 lakhs more.

The statement of the position of scheduled banks for the week ended 28th September, 1956, discloses Demand and Time liabilities at Rs. 637.50 crores (Rs. 10.35 crores on account of borrowings from banks) and Rs. 457.50 crores (Rs. 2.16 crores), compared with Rs. 631.89 crores (Rs. 9.76 crores) and Rs. 461.05 crores (Rs. 2.26 crores), respectively, in the previous week. Cash and balances with the Reserve Bank have declined by Rs. 52 lakhs each to Rs. 35.46 crores and Rs. 48.78 crores, respectively. There is a rise of Rs. 2.13 crores in investments to Rs. 375.61 crores. Advances and bills discounted at Rs. 754.43 crores show an increase of Rs. 2.95 crores. The ratios to total liabilities of cash and balances, and of advances and discounts, are, in consequence, shown at 7.7 percent and 68.9 percent against 7.8 percent and 68.8 percent.

The President of the Indian Republic has promulgated an Ordinance to transfer with effect from 22nd October, 1956, the share capital of the Hyderabad State Bank to the Reserve Bank of India and to provide for its proper management and other connected matters. It may be recalled that a Bill for the same purpose was introduced in Parliament in the recent session, during which however, it could not be taken up. The Hyderabad State Bank is constituted under the Hyderabad State Bank Act (No. XIX of 1950 Fasil). Fifty-one percent of the bank's share capital is held by the Government of Hyderabad and the rest by private shareholders. The State Government enjoys certain special powers of management. The Hyderabad Bank constitutes an integral part of the financial and banking machinery in the areas comprised in the existing Hyderabad State. It has been functioning as the agent of the Reserve Bank in the State for conducting Government business. There are 33 centres where the treasury business is conducted by the Hyderabad State Bank and at 25 of these centres, it maintains currency chests and small coin depots. In order to avoid a serious dislocation of the banking and treasury arrangements in the area it has become urgently necessary to make changes in the constitution and management of the Hyderabad State Bank, before the reorganisation of States takes effect.

COMPLICATIONS OF LAND REFORM IN INDIA

THE PROBLEM OF ECONOMIC CEILINGS

By V. V. R. Sharma

IN the creation of a socialist pattern of society in India, land reforms by and large will have to be given priority over others. We have accepted in principle the necessity to replace the complicated and feudal types of land tenures prevailing in several of our States by a simple and democratic system of peasant-proprietorship, in which the land belongs to the tiller. Thereby, it is hoped, the peasant will be assured of his right of ownership, and the multifarious types of oppression and exploitation formerly practised by the zamindars and other intermediary interests will be gone, the incentives necessary for land improvement and efficient production will be provided, the basis for an equitable system of rural credit will be created and the improvement of irrigation and other public works in those areas which have been grossly neglected for decades will be undertaken.

Legislation for the abolition of zamindari and other feudatory tenures has been passed, or is under way in all States. The main object of this legislation has been to remove, by compensation in one form or another, the revenue or rent collectors and other sub-feudatory interests above the "tenant" himself. This represents, no doubt, a great step forward although, even here it must be remembered that everywhere the problem has not been tackled on a uniform basis and in an equally efficient manner. In some States, the laws have been passed, but the steps to enforce them effectively have yet to be taken. The various measures adopted provide for (1.) transferring the zamindaris

or other types of estates directly to State Governments, in the first instance; (2.) the determination and payment of compensation to the dispossessed landlords and other intermediary interests and (3.) the determination and conferment of rights of ownership on the tenants or cultivators. But all these have neither been quick nor effective. Although the main concern should be to look after the interests of the cultivators, payment of compensation to the dispossessed landlords, especially the smaller ones, to enable them to rehabilitate themselves in some other walks of life, should be promptly made.

The measures for carrying out the survey and settlement of the hitherto unsurveyed land, the preparation of records of rights, and the final allotment of ownership rights to the occupancy tenants or cultivators, should be efficient and rapidly carried out. Further, in every one of the areas where the abolition of zamindari has been in progress, it is necessary to create machinery suitable for village administration, and for rural credit and other forms of assistance to the ryots for which, to some extent, they used to look up to the zamindars in the past. All this is complicated and difficult, but its implementation in a just, efficient and rapid manner should be the immediate task of the States. There is reason to fear that if this is not done expeditiously, much of the advantage arising out of zamindari abolition might be lost.

Laws not Enough

Further, in determining the actual rights of ownership, it is possible that influential interests may play a dominant rôle, and in view of the absence of well-established records, in the erstwhile zamindari areas, great harm may be done to the actually deserving and rightful cultivators. These points are made mainly to emphasise the fact that the mere passing of laws does not take

us very far; it is equally important to see to it, first of all, that the legislation itself is framed after taking into consideration the complications and peculiarities of the agrarian structure in the region, and that great care and energy are devoted to the administrative implementation of that legislation; otherwise, its value will be lost.

In this connection, it must be asked, apart from the psychological satisfaction of attaining "ownership", what is the real gain to the ryot? The main advantage is, or should be, the reduction of the real burden. It is not clear that there has been any such advantage in all cases. Where, as in U.P., the ryots have not been able to pay for the acquisition of Bhoodani rights, there is no reduction. Further, as in Madras and Andhra, where the rentals charged formerly by the zamindars were, in fact, lower than the land revenue rates charged in the neighbouring ryotwari areas, the burden might actually have been enhanced. The rigidity of revenue collection and the absence of remissions except where the crops have been totally lost are also in contrast with the more liberal policy adopted by some of the erstwhile zamindars.

All this leads to the conclusion that the process and progress of the abolition of zamindaris and similar tenures has to be watched carefully, and the complications of the position which are bound to differ from region to region, should be studied with a view to ensuring that this major act of land reform, fulfils the desired aspirations and objectives. The projects for research on the subject sanctioned from time to time should be expedited, and their results made available to the States for their guidance in further action. The main principle of land reform, that is, vesting the ownership of land in the actual cultivator, is achieved, only to a very limited extent by the abolition of zamindari and the like tenures. The ownership of land passes to the persons who have been legally in the position of "occupancy" tenants, or tenants without such rights, but who were dealing directly with the zamindars and their agents, in paying the rent. In several cases, these persons were not the actual cultivators. They were only enjoying the fruits of the land just as the non-cultivating owners of land in the ryotwari areas did, while the tenants-at-will, who had no legal protection against eviction or from excessive rents, were cultivating the land. Both in the zamindari areas and elsewhere, these "tillers of soil" do not get the land. In most areas, the prevalence of oral or customary arrangements of tenancy makes it impossible even to trace the actual cultivator. The revenue and other village records rarely show the actual position.

Redistribution of Land

If the actual tiller of the soil is to be given the rights of ownership, without ousting the large number of peasant-proprietors who, for one reason or the other, have given their lands on lease, the land has to be redistributed; holdings above a certain size will have to be taken over on compensation and distributed among the cultivators who are now landless. Such cultivators would include not only the landless tenants and the tenants who cultivate bits of land too small to provide them even with subsistence, but also the millions of landless agricultural labourers who obtain only partial employment on land at low wage levels.

To do this, first of all, a "ceiling" on holdings has to be fixed in each area; the excess being distributed among the landless. This procedure is fraught with several difficulties. Firstly, we do not have accurate and satisfactory data about land holdings, either on the basis of ownership or on the basis of cultivation units. Secondly, the determination of a "ceiling" which would be equitable and which would not adversely affect the efficiency of cultivation would be difficult. Several factors, such as the fertility of the soil, the crops grown, the availability of irrigation, the value of the land, the size of the family which is cultivating or supposed to live on the land, will have to be taken into account. Further, the mere size of the holding is no indication of its economic condition as it may consist of several plots distributed widely and consisting of lands of different types. Any imposition of a "maximum" on an arbitrary basis will lead to the further fragmentation of land between the various members of a family, who may now be holding or cultivating it jointly.

Above all, the fact remains that except in a few areas where large holdings of a relatively poor type of soil exist, land available for redistribution over a ceiling, fixed after taking into account the above mentioned factors, would be extremely limited in most cases. Existing evidence clearly shows that there is, in fact, no land, readily fit for cultivation, available for redistribution. Even if a few families own large holdings, in actual fact, they are not cultivating. The land is being cultivated by tenants, so there is nothing to be passed on to the landless. It is thus essentially a question of ensuring the position of the tenant, and fixing for him fair terms of tenancy, and not a question of redistribution.

Even assuming that there is, in some areas, a certain amount of surplus land, over and above a properly determined individual "ceiling", for redistribution, among whom should this be distributed? Should it go to landless labourers, who are actually in need of land? In this connection, it should be remembered that the weakest part of our agrarian economy is this landless labour force, made up mostly of Harijans and other backward classes. The discontent of these classes is the main political capital of disruptionist elements. These

people want land, while there is no land to be given.

Landless Labourers

Further, the pressure on land is the highest in areas where the shortage is most acute; holdings are pitifully small, and a substantial proportion of the rural population—say, 30 to 50 percent or more—consists of landless labourers. If land, where it is available, will be redistributed, who should be the people to get it? What will be the area over which redistribution will be limited? If land is available, for example, in Hyderabad or Madhya Bharat, will this be given to the landless cultivators or labourers of Andhra, Malabar or Travancore-Cochin States? (Even if it is given, will they take it and move to such far off places?) Or, will redistribution be limited to the people of a particular village, tehsil, district, or State only? If that is so, what contribution can redistribution make to the problem of the landless, particularly in the densely populated areas where there is no surplus land, in any sense of the term, to distribute? (It is interesting to note that even in the Bhoodan movement, land is only being collected, but no satisfactory plan of distribution is yet being worked out.)

In making proposals for fixing ceilings to be followed by redistribution—all these factors have to be borne in mind. Measures which overlook the complication of the situation and attempt at oversimplified solutions must lead to evasion and corruption. There would be no real relief, and in the process, productive efficiency might suffer. It can, of course, be argued that even though legislation may not be implemented effectively or successfully, the very fact that certain laws have been passed may give psychological satisfaction and appease the people to some extent. If this view were accepted, then it might be desirable to pass laws for the purpose. But all things considered, it is better to proceed cautiously and carefully, taking all the facts of the situation into account, rather than to pass hasty legislation which it is difficult to implement.

The Bhoodan Movement

Two important sources for the implementation of a plan of redistribution, of which account may be taken here, are the voluntary gift movement called "Bhoodan" initiated by Acharya Vinoba Bhave, and the possibility of reclaiming waste land—public and private—in certain regions. The first has already assumed dimensions of a great movement, but its actual value and content have yet to be clearly established. It is the natural tendency of men, particularly in the case of a cherished asset like land, to give away what is not wanted for one reason or the other—waste or jungle or rocky land or land under dispute. In such cases, cultivation would require a large effort for reclamation, and further investment for residence, cattle and other productive equipments. The land that is really cultivable and good is likely to be limited. Even there, equitable and practical schemes of distribution have to be worked out and facilitated by the provision of the capital required for cultivation. For ensuring the legality of the scheme of distribution and for providing the facilities mentioned above, the State has necessarily to step in. Until this is done, "Bhoodan" by itself is not likely to achieve the objects for which it has been launched.

The second source is the land which is brought under cultivation by the reclamation and irrigation projects under five year plans. Of course, the highest priority in these cases has to be given to the people displaced by the projects. But the potentialities of the project areas have not been fully examined and surveyed. In every project area, it is necessary to conduct detailed surveys for this purpose. The State should acquire all uncultivated land in the region, develop communities and townships and allot the land to the landless, after the main stages of the project have been carried out. This offers the only hope for solution of the problem of the landless. Immediate attention should be devoted to this activity by the States of the regions in which the projects have been launched, particularly by special authorities such as the Damodar Valley Corporation.

Zamindari abolition does not necessarily benefit the actual tiller of the soil, especially if he is a tenant-at-will. His position in the ryotwari areas has also been most unsatisfactory. Generally speaking, where there has been a shortage of cultivable land of good productivity and facilities, rents also have been high and terms of tenancy disadvantageous to the tenant. There has been no security of tenure, and this has led to the exploitation of the land without proper care for the conservation of its fertility or for the promotion of productive investment. In some cases, it has led to the growth of absentee landlordism.

On the other hand, it is not possible to dogmatise and say that the tenant has always suffered and the landlord gained. Tenancy has enabled the small cultivator to add to the size of his holding by adjoining plots and thus put his labour and equipment to more productive use. Where land existed in scattered bits, particularly in more than one village, it was to the advantage of the owner and the cultivator alike that the most accessible and conveniently situated plots should be cultivated together by one person. Landlords in several cases have provided the capital necessary to purchase the land and they also make all the major investment needed as well as share most of the main types of non-labour costs. They even provide credit to the tenant. Taking all these factors into account, it cannot be argued that the rents were universally excessive, although in some cases they undoubtedly were.

Legislation to regulate the relations between tenants and landlords has been enacted in several States and enforced recently. Notable instances are Bombay, Hyderabad, and Mysore among others. Madras has been trying to tackle the problem, first, on a local basis in Tanjore, where the situation was explosive and a comprehensive tenancy law has now been enacted. The main principles of this legislation are: (1.) providing the status of a protected tenant to persons with long-standing tenancy; (2.) fixing the maximum rental that could be charged taking into account the nature of the land and the crop, and providing a machinery for fixing rents and the settlement of disputes between the landlords and tenants and (3.) providing for written leases for a minimum period of eight years.

As in the case of most legislation of this type, evasion or anticipatory steps such as eviction, resumption of land for personal cultivation etcetera have widely taken place. Where the pressure on land was high, and people needed land for cultivation merely for keeping themselves alive and employed, the legislation has been completely evaded. The tenant does not under such circumstances, dare to seek the protection of the law. In States where no such legislation has yet been passed, landowners, quite naturally, are taking steps to resume the land, and provide for cultivation under their own management or by other means which do not involve the difficulties of tenancy. It is reported that in some areas, where the landlord used to advance money to the tenant, he now requires it to be deposited with him, in lieu of the rent. The actual developments in these matters in different regions are also under investigation, and the results of such studies should throw a great deal of light on the various facets of the problem. The point here again is that in the background of an overall shortage of land, and the lack of other avenues of employment, tenancy legislation (the desirability of which is not questioned) is no final solution to the problem.

Unemployment among Landless

In India the most difficult problem to solve in relation to land today is that of the landless agricultural labourer. For him there seems to be little chance of obtaining land to any significant extent in spite of a redistribution programme. Even the existing peasant-proprietors and tenant-cultivators will not get enough to give them even subsistence (not to speak of economic) holdings. Tenancy legislation has had the unavoidable effect of reducing the scope of tenancy. As far as possible, the proprietor tries to cultivate the land himself rather than lease it out and thus jeopardise his rights. This removes one mechanism whereby several landless labourers used to climb up the agricultural ladder formerly—wage labourer to cropsharer or tenant-farmer and finally, the purchaser of land. This opening is now very much reduced, if not alto-

gether eliminated. Reduction in the size of the holding, either by redistribution or fixing ceilings at low levels, reduces also the scope for employment of labour. It is well known that only the relatively large cultivators could employ both permanent and casual labour on a significant scale. Where holdings have become small, for instance, in East Punjab, coastal Andhra, Malabar, etcetera, the extent of unemployment among agricultural labourers is large and acute.

Thus all the measures of land reform now contemplated, (except minimum wage legislation, which, in all probability cannot be enforced at all), have actually adversely affected the interests of landless labourers. This is a development fraught with great danger, and should be avoided at all costs. In this connection, it may also be noted that excepting programmes of road-building and other public works, the whole programme of the community projects and agricultural extension blocks does not contain anything of substantial advantage to the landless class of agriculturists. This is already a source of great discontent.

Summing Up

In the above paragraphs, an attempt has been made to draw attention to some important aspects of the problem of land policy in India today. (No attempt has been made to cover aspects such as the provision of rural credit or the promotion of co-operative farming, which, though important, are essentially measures that should follow the basic reform of providing land to the cultivator.) The main object has been to bring out the extremely complicated nature of this problem which, admittedly, is of vital importance to the nation. The chief points to be noted in this connection are: (1.) the overall shortage of land, particularly in the areas where it is needed, makes a solution of the problem very difficult; (2.) hasty enactment of legislation may achieve nothing, but lead only to corruption, evasion and greater discontent; (3.) the interests involved are several and their relative positions need careful study; (4.) the reforms envisaged should not lead to the sacrifice of economic efficiency and the improvement of production for which a great effort is currently being made, and (5.) in view of the complexities and local peculiarities to which this problem gives rise in a vast country like India, it should be tackled essentially on a local or State basis. This is true not merely because land and agriculture are State subjects, but also because no general solution acceptable to all and capable of adoption on a uniform basis is practicable. In the light of the general principles that are now well known, and in the light of the facts of the situation in each area, solutions to the problem in all its aspects should be worked out locally. The Central Government and the Planning Commission may encourage, advise, assist and exhort, but if they attempt to do anything more, the possibilities are that more harm than good may result.

RISING TREND IN COTTON YARN OUTPUT

WORLD PIECEGOODS TRADE DROPS

ALTHOUGH total world production of cotton yarn in the second quarter of 1956 was seasonally less than in the first quarter, there is no doubt that the trend of activity continues to be strongly upward. This unusual state of affairs is disclosed in the Cotton Board's latest quarterly statistical review. Yarn output in the second quarter in those countries for which figures are available, including all the principal non-Communist exporting nations, was over 3 percent greater than in the second quarter of 1955. The greatest increase in production in comparison with a year ago was achieved by Japan, where the relaxation of Government restrictions had the immediate effect of raising output to record postwar levels. German production also continues to run well ahead of last year's level, and there seems to have been a fair measure of recovery in the level of French activity. The steady rate of increase in the output of the Indian and Hongkong industries continues; on the other hand, U.S. cotton yarn output in the second quarter was no greater than in the same period last year, and in the United Kingdom, it was below the already depressed level of the corresponding period of 1955.
