World trade in cotton piecegoods declined sharply, probably more than seasonally, in the second quarter of 1956. The most important factor in this decline was a drop in Japanese exports from a postwar record level of 363 million square yards in the first quarter to 260 million in the second quarter. The decrease was fairly general, however; of the main exporters only Hongkong and, probably, France recorded any appreciable increase. In the first six months of this year, total world trade in cotton piecegoods was about 13 percent less than in the same period of 1955, itself a poor year for exports of cotton goods. Within the total, however, Japanese exports increased by about one quarter, and exports from the Netherlands, Belgium, Italy and Switzerland likewise expanded. On the other hand, shipments from the United Kingdom, France, the U.S.A. and Hongkong showed substantial declines compared with a year ago, and there were also slight decreases in Indian and German exports. World trade in piecegoods of man-made fibres, unlike those of cotton, expanded sharply in the second quarter, thanks largely to an increase in Japanese shipments from 237 million square yards to a new record level of 288 million. Exports from all the other main supplying countries, with the exception of Italy, were also greater than in the first quarter. Total world exports in the first six months of the year were about 12 percent greater than in the first half of last year, but only Japan, Belgium, the Netherlands and Austria shared in the increase; exports from the United Kingdom, the United States and France, in contrast, showed substantial decreases.

Depression Levels in U.K.

The basic conditions governing the level of activity in the U. K. cotton industry have not changed fundamentally during the last few months. Home market demand for most types of cotton and rayon textiles, apart from tyre cord fabric and certain industrial cloths, has remained strong, but shrinking exports and growing imports, accompanied by a continued running down of stocks, have kept output of cotton yarn and cloth at depression levels. In the first seven months of this year, the daily rate of output in the weaving section fluctuated within fairly narrow limits, rather better than at the worst point of the recession last summer, not quite as good as during the brief "rally" last autumn. Until June the same was true of spinning, but in July and August, the daily rate of yarn output, allowing for holidays, took a sharp downward turn, and during the latter month it was lower than at any previous period of the present recession. In both spinning and weaving it is the cotton section of the industry whose activity has continued to be so depressed; output of spun rayon and mixture yarns and of rayon and mixture cloth (with the notable exception of tyre fabric) has recovered fairly well from last year's setback.

Exports of cotton piecegoods declined slightly once again in the second quarter of this year. This latest decline was the result of a continuing fall in shipments to British west and east Africa and to French west and equatorial Africa, a sharp drop in shipments to Pakistan on the completion of deliveries under the American aid scheme, and a substantial decline in exports to the U.S.A. The increased shipments to Australia and New Zealand, and the maintenance of a fairly high level of trade with South Africa, were insufficient to counterbalance these unfavourable movements. In the case of rayon and mixture piecegoods, however, the expansion of exports to Australia and New Zealand, and the steadiness of trade with South Africa and Rhodesia, more than made up for the shrinkage of shipments to British west and east Africa; as a result, total exports of rayon and mixture piecegoods have increased slightly during the last two quarters. Imports of cotton piecegoods from India and Hongkong, principally for home consumption, and from Japan, China, France, Bulgaria and elsewhere for re-export, showed a marked increase in the first half of this year. So did imports of certain made-up cotton goods, notably shirts, which are now entering the country at a rate of 10 million a year, and towels, which

are coming in at a rate of about 11 million a year. In total it is estimated that imports of articles made up from woven cotton cloth so far this year have been at an annual rate equivalent to about 50 million square yards of cloth.

U.S. Output Declines

In the first quarter of this year, output of cotton cloth in the United States was 5 percent greater than in the corresponding period of last year, and greater than output in any quarter since the first three months of 1951. This was the peak of the boom, however. Orders received by mills in the first five months of the year were 11 percent down compared with the same period of 1955; apparently distributors had overestimated the rate of expansion of retail sales, and the slump in car manufacturing and the increase in imports also had their effect. As a result, order books began to shorten, mill stocks began to increase, and the margin between the price of cotton and that of woven cloth declined steadily from its January peak. Mill consumption of cotton in the second quarter was no greater than in the second quarter of 1955, and the daily rate of consumption in June and July was actually less than it was a year earlier. The man-made fibres sector of the textile industry suffered a setback before the cotton sector. Even as early as the first quarter of this year, output of fabrics of rayon and synthetic fibres was about 5 percent less than a year ago, the reduction being entirely in spun rayon and in nylon fabrics. In the second quarter, the weight of staple fibre consumed by spinning mills was 11 percent less than in the corresponding period of last year.

Exports of cotton piecegoods from the United States declined in the second quarter of the year and remained substantially below last year's level. A sharp reduction in deliveries to Canada was the main cause of the latest decline, but in comparison with the second quarter of last year all the main markets, in particular the Philippines, took less American cloth. There was a further slight improvement in exports of both rayon and synthetic fibre fabrics in the second quarter. Imports of cotton piecegoods expanded to reach a level of 65 million square yards in the first quarter, of which 50 million came from Japan. In spite of the fact that the mills have to pay more than the world price for their cotton, the U.S. Government has so far refused to institute import quotas, preferring to rely on the efficacy of the Japanese export restrictions. The Government is, however, paying a subsidy on the exports of textiles manufactured from American upland cotton. Although this is designed merely to equalise the position under the two-price system, in so far as other countries have in the last year or so been getting their cotton at below the internal American price, the competitive position of American mills in export markets will to that extent be improved by the subsidy.

Record Output in Japan

With the relaxation of the Japanese restrictions on the production of cotton yarn, output of both yarn and cloth rose to record postwar levels in the second quarter of this year. The combination of record output and reduced exports has caused stocks to begin to increase again after a long period of liquidation ended in March. It is not known what progress has been made with the proposal to reduce the number of spindles in place by 1.2 million, but it is noteworthy that the installed spindleage at the end of July was 540,000 greater than 12 months previously. The output of fabrics of man-made fibres continues to expand rapidly, production in the second quarter showing an advance of 21 percent compared with the same period of last year.

The postwar record level of exports of cotton piecegoods—363 million square yards—reached in the first quarter was not maintained in the second quarter, when shipments fell sharply to 260 million square yards. This lower level of trade continued during July and August. There was a very sharp drop in exports to Indonesia in the second quarter, and a similar fall in shipments of cloth to Hongkong, much of which is re-exported to the former market. Deliveries to Pakistan virtually ceased as a result of the completion of business under the American aid agreement, and exports to the U.S.A. were sharply reduced to a level more in accordance with the export quota of 150 million square yards this year. Burma, Singapore and Indo-China also took much less Japanese cloth during the second quarter, and shipments to Australia and Siam continued at the relatively low level to which they had fallen in the preceding quarter. The United Kingdom, the Netherlands, British west Africa and the Philippines were the only important markets to take more cotton cloth from Japan in the second quarter. Exports of rayon piecegoods expanded sharply in the second quarter to reach a new record level, and for the first time, they exceeded exports of cotton piecegoods. Almost all the main markets took greater quantities, the biggest increases going to British west Africa (the largest market), Hongkong and Afghanistan. Indo-China and Indonesia were the only important markets to take less cloth than in the first quarter.

Indian Expansion Plans

Output of mill-made cotton yarn and piecegoods in India continues to exceed last year's extremely high levels. The Government has permitted the mills to install a further 14,600 automatic looms; these are expected to produce 350 million yards of cloth a year, all of which must be exported. This is part of a plan designed to raise cloth production to a level of 8,400 million yards a year in the course of the next ten years; of the total it is planned that 1,000 million yards will be exported (the present level of exports is less than

800 million yards a year). Of the increase in production of 1,700 million yards over the present level, the intention is that at least 1,000 million yards would come from handlooms. At the end of August, the Government announced sharp increases in the excise duties on mill-made cotton cloth. The intention is, apparently, that the increased duties should be borne by the manufacturers and merchants, and not passed on to the consumers, as profits are held to have increased excessively. The proceeds of the increased duties are apparently to be used to help finance the second five year plan. Sea-borne exports of cotton piecegoods from India increased moderately in the first quarter of this year, and this level of trade was maintained in April and May; the volume of shipments was, however, less than in the same period of last year. Shipments to the United Kingdom, the Sudan, Burma and Iran expanded in the first five months of this year, but trade with Indonesia continued its steady decline.

The trend of output of western European cotton industries continues to be upward. In the second quarter of this year, cotton yarn output in these countries considered as a whole may have been as much as 4 percent higher than in the relatively depressed second quarter of last year, though still slightly less than in the same period of 1954. Germany continues to make the pace, with considerable increases in both cotton and rayon goods production compared with a year ago. French production of cotton goods, particularly yarn, has recovered well from last year's levels, but output of spun rayon fabrics is still well down. There are no signs of improvement as yet in the cotton sector of the Italian industry, but the output of spun rayon and mixture yarns and spun rayon fabrics is well above that in the same period of last year. Output in Austria and in the Netherlands has increased in the course of the last 12 months, while in Belgium the level of output of cotton goods has remained fairly steady and that of rayon goods has expanded.

WHOLESALE PRICE INDEX RISES

THE official wholesale price index (base: year ended August, 1939=100) advanced by 0.2 percent to 419.9 during the week ended 22nd September, 1956, compared with 418.9 for the previous week. The index was lower by 0.3 percent when compared with the corresponding week of last month, but was higher by 19.6 percent than that of a year ago. Higher prices of tea for internal consumption (+19%), gram in Patna (+4%) and rice in Calcutta, wheat in Hapur and bajra (+1% each) were responsible for a rise of 0.3 percent to 392.7 in the index for Food Articles in spite of a fall in the prices of gur at Muzaffarnagar (-6%), and wheat in Amritsar, gram in Hapur and sugar (-1% each). The index for Industrial Raw Materials declined by 0.3 percent to 505.1 due to a decrease in the prices of raw silk in Malda (-4%), groundnuts (-3%), shellac T.N. (-2%), and rapeseed in Kanpur and copra (-1% each). Prices of manganese ore (average export price) (+6%), castorseed in Bombay (+3%) and rapeseed in Calcutta and raw hides (+1% each) were, however, marked up. The index for Semi-Manufactures worked out to 408.1 as compared with 408.7 for the previous week. Items which showed noticeable changes were: Copra cake (-4%), castor oil in Calcutta and gingelly oil (-3% each), copper in Bombay (-2%), coconut oil in Bombay (+4%) and linseed oil (+2%). An increase in the prices of jute manufactures (+1%) raised the Manufactures group index by 0.1 percent to 392.1. Prices of tobacco leaf (+13%), black pepper and betelnuts (+4% each), all in Calcutta, and cashewnuts in Mangalore (+2%) showed advances while those of black pepper in Cochin and chillies (-4% each) exhibited declines and the index for the Miscellaneous group moved up sharply by 4.3 percent to 577.2.

Stocks and Shares

SELLING IN INDIAN IRONS PULLS DOWN MARKET

PRE-HOLIDAY CAUTION RESTRICTS TURNOVER: TEAS SOFTEN AFTER INITIAL SELECTIVE RISES

Tuesday Evening.

THE stock market has sulked in the shadow of the Government's decision not to let Indian iron increase its ordinary distribution, and activity during the past week has been further restricted by the approach of a long holiday. The publication of encouraging production figures by the Indian Iron and Steel Co. Ltd. for the quarter ended last September slowed the slide in the shares only temporarily. They closed this afternoon at Rs. 34.7. Operators are now awaiting a formal announcement about an issue of rights shares by the company; permission for such an issue was given by the Government around the middle of this year, and a premium of Rs. 3-8 a share was stipulated in the event of a one-for-one offer.

The selling in Indian Irons has not failed to influence the rest of the market. Easier commodity advices, especially from the gunny markets, have been an additional depressing influence. Engineerings have been quieter than usual in sympathy with the Iron leader, and except for a bout of interested support in a couple of scrip, have tended to soften. Jute shareholders are worried by the deterioration of profit margins that must result from the weakness of jute goods while raw jute remains relatively steady. Coals, already anxious about their cost-price troubles, have been further subdued by the continuation of the Raniganj strike. Tea shares responded selectively to the good auction results last week, but later thoughts have centred on the transport difficulties that are likely to arise if steamer men continue their strike. It is also remembered that it is normal for the tea markets to undergo some facelifting before the Pujas, because buyers replenish stocks before the holidays interrupt the auctions; to that extent, the recent rise in tea prices may not be an assured indication of future trends. Miscellaneous industrials have generally been quiet in sympathy with the rest of the market, though occasional shares are fairly maintained on investment or interested buying.

Government securities have been quiet.

Details of the week's trading follow.

* * * *

The Government security market continued quiet, and with the exception of short-dated and National Plan Loans, sellers predominated. The 3% Conversion Loan met with selling pressure and the price declined by six annas to close around Rs. 7-12, while Non-terminable Paper was marked back to the same price without any business passing. In short-dated Loans, 3% 1957 was unchanged at Rs. 99-12 while 3% 1958 had buyers over at Rs. 99-9. In the medium-dated group, 3% 1959-61 was marked at around Rs. 97-15, but 3% 1963-65 was quoted lower at Rs. 94-6; 2½% 1961 turned sellers at Rs. 93-7 and 2½% 1962 was taken at around Rs. 93-15. Among National Plan Loans, 3½% 1961 changed hands at Rs. 99-2 and 3½% 1964 met with enquiry up to Rs. 98-9; 3½% 1965 had buyers at Rs. 98-7-6 and 3½% 1967 was traded at around Rs. 98-8. Long-dated loans were weak with 3% 1966-68 on offer at Rs. 93 and 1970-75 at Rs. 89-6; 2½% 1976 turned sellers at around Rs. 83 but 3½% 1974 was asked for at around Rs. 98-8. State Loans were extremely dull except for a small enquiry for 4% 1968 issues, particularly those standing at a discount; 4% U.P. 1968 was easier at Rs. 99-2 and 4% Madras 1968 was quoted at Rs. 99-3. In contrast, 4% Saurashtra 1968 had buyers up to Rs. 99-9.

Trading in preference shares was very restricted, in the absence of institutional support. Selected shares in the miscellaneous industries, however, were wanted. There was an enquiry for Metal Box at Rs. 97 x.d. and Cawnpore Sugars at Rs. 129. Burn 6% were done at Rs. 114-8 and Indian Irons at Rs. 100 x.d. There was a trickle of business in jute preferences, but at levels lower than previously. Agarpara passed at Rs. 104 and Gourepore at Rs. 87.

There was very little interest in jute shares and prices in general moved downwards. The weakness of the gunny markets helped the decline, and operators were disturbed by the relative steadiness of raw jute—the latter on reports of floods and transport allocations upcountry. Nationals fell from Rs. 25-8 to Rs. 24-14, while Bally eased from Rs. 207 to Rs. 199.

Fluctuations in coal shares were very narrow and turnover was small. The consequences of the Raniganj strike were considered disturbing. Burakur idled around Rs. 15-13, while Central India moved barely an anna either way of Rs. 7-6.

The continued weakness of Indian Irons dominated the engineering section. Opening lower at Rs. 34-15 last Thursday, against the previous close of Rs. 35-11, they declined almost steadily to Rs. 34-7. At first, Jessop and Richardson and Cruddas also moved down in sympathy with Indian Irons, but after the week-end they met with interested support and recovered their losses. Jessop closed at Rs. 38-15, and Richardson and Cruddas at Rs.

27-15. Texmaco moved between Rs. 23-12 and Rs. 23-4, but the undertone there too was easier.

Miscellaneous issues in general tended to soften in sympathy with the general trend, but a few shares held up fairly well on interested support. Among the latter were B.I.C., which rose to Rs. 11-11 before closing around Rs. 11-5, and Angelo Brothers, which at one time touched Rs. 24-8 partly with the aid of rumours of satisfactory working. Indian Copper came on to an ex-rights basis with an opening quotation of Rs. 4-12, against the previous close of Rs. 7-2 c.r. They were later shaded to Rs. 4-11-6. Indian Aluminium met with profit-taking and declined to Rs. 18-6. India Steamship fluctuated around Rs. 10-7 with a steady undertone, and there were hopes of a dividend. Among papers, Orient were shaded to Rs. 39-2 in restricted activity. National Carbons were a steady feature around Rs. 30 on hopes of an interim distribution.

Teas received a boost before the week-end because of the very satisfactory auction results. But later operators became worried by reports that the transport of tea from upcountry areas had been disturbed by the strike of steamer employees. This, it was thought, might increase the cost of marketing, because more tea would have to be transported by air. Bishnauth Old, after touching Rs. 25-10, eased to Rs. 25. Brooke Bond was around Rs. 22-10.

* * * *
The output of the INDIAN IRON AND STEEL CO., LTD. during the quarter ended 30th September, 1956, showed an all-round improvement compared with the previous quarter. The production of pig iron and steel ingots increased from 148,306 tons and 117,710 tons to 174,447 tons and 133,325 tons, respectively. Semi-finished steel for sale was 23,367 tons, against 28,137 tons, and finished steel 63,206 tons against 64,472 tons; these two, taken together, thus rose from 92,609 tons to 113,593 tons.

How banking serves the SPICES INDUSTRY

There is tremendous demand throughout the world for pepper and cardamoms and South India produces the bulk of these spices. One-third of the entire world demand for pepper is grown between Karwar and Cape Comorin; and in 1951-52, India's exports earned more than Rs. 27 crores.

Within the last ten years there has been a remarkable increase in cardamom growing, particularly in the South Indian states of Mysore and Coorg, and the districts of Madras, Tinnevely, Malabar and Coimbatore.

The Indian spices industry has a happy future, and banking will naturally help to expand and improve it. The facilities and guidance of a good bank, such as the availability of ready funds when needed and the collection of dues from any part of the country, have become part of efficient organisation in every industry.

Ye at Palai are proud that many spice growers of South India employ the complete banking service we offer:

Current Accounts—Demand Drafts—
Telegraphic Transfers—Investments—
Letters of Credit—Bill Collection—
Deposits—Loans & Overdrafts—
Confidential Credit Reports, etc.

IMPROVED TURNOVER IN STOCK MARKETS

DEPRESSING INFLUENCE OF DUNLOP INTERIM

London, 9th October.

QUIET and mixed conditions have prevailed in the London stock markets during the past week, although business has been at a rather higher level than recently. The general undertone has been satisfactory and numerous gains have been reported. Distinctly firm conditions developed at one time, but the lower interim dividend and the half-yearly profits announced by Dunlop Rubber dampened enthusiasm, and some of the earlier gains were lost. Dividend announcements were responsible for many of the noteworthy movements. A better trend on Wall Street after its recent fall helped sentiment at one time, but there was little else to stimulate interest. The Suez situation naturally continued to dominate the markets, although hopes are rising of a peaceful settlement eventually. The outstanding feature of the week was the return to favour of the gilt-edged market, which recorded an all-round modest improvement following investment buying, and gains extended to half a point on the week. The recovery in sterling was primarily responsible for the rise in gilts, although lower profits reported by several leading industrial companies—Dunlops, Associated Electricals and Imperial Chemicals—diverted attention to gilts. The end-September gold reserve figures had little effect. Dollar stocks fell back, but rallied later following the recovery in New York. Suez Canal shares advanced. Banking shares held steady to firm, while insurance shares were more active. Industrials attracted selective buying, but interest was more widespread than in the preceding weeks. The Dunlop news dampened enthusiasm however and although

numerous gains were recorded, prices were below their best in some cases. Finance house shares moved up on the Kaffir market, but other South African gold shares were little changed. Indian gold shares responded sharply to the compensation news. Coppers moved to higher levels, as higher Rhodesian Selection Trust and Roan dividends were expected. Tins were quieter. Leading oils were higher and Anglo-Brazilian scored a sharp advance on bid talk. Rubbers continued to be in demand and recorded numerous rises, while teas, which were generally quiet, were higher in a number of cases.

The Money Market

There has been little change in the credit situation during the past week in the London money market. Supplies were stringent and the discount houses had a large bill take-up to finance. Demand for loans was keen, and under the pressure, the money rate held firm at 4½ percent. The feature of the week's moderate bill business was the demand by clearing banks for "hots" in view of their year-end maturity and which the market was able to sell at 5 percent as against 5 1/32 percent for early December maturities. The discount market again tendered more for the week's offer of Treasury bills and consequently, there was a further reduction of approximately 1/32 percent in the average rate. Applications for £280 million worth of 91-day bills totalled £424,880,000 and were allotted at an average rate of 10½ 15½ percent compared with 10½ 9.86½ percent in the previous week. Offerings this week comprise £280 million worth of 91-day bills, The Bank of England return for the week ended 3rd October showed that notes in circulation were about £1 million higher at around £1,810 million and bankers' deposits were about £1 million lower at around £229 million.

U.S. Federal Reserve Return

The U.S. Federal Reserve return for the week ended 3rd October shows gold stock unchanged at \$21,884 million. Foreign deposits increased by \$47 million to \$378 million, while foreign investments rose by \$11 million to \$3,726 million. The Federal Reserve bought \$100 million worth of bills and \$42 million under repurchase agreements. Total discounts and advances rose by \$402 million to \$975 million, while the aggregate of excess reserves of member banks rose by \$338 million to \$579 million. The daily average excess reserves of member banks fell by \$34 million to \$517 million, while their daily average borrowings rose by \$105 million to \$810 million. Business loans of the New York city banks rose by \$89 million to \$10,909 million, compared with the rise of \$149 million to \$8,749 million in the corresponding period a year ago.

Hongkong Gold Steady

The gold market, which was very steady throughout, was dominated by sterling movements. After opening irregular, values touched the week's low at \$(H)266½, then climbed steadily to the week's high at \$(H)267½. The main suppliers during the period were scattered speculators who were profit-taking. But as soon as this was absorbed by prominent bulls, the offerings stopped. Steadiness was maintained despite the arrival of 80,000 ounces in Macao. Carry-over charges were 240 cents a ten taels in sellers' favour. The official offtake was 2,250 taels and the unofficial was 14,100 taels. Forward contracts were done at \$37.7½.

Vegetable Oil Market

Anticipation of enquiries rather than actual business kept groundnut prices steady to firm, trade sources said. France would be wanting 15,000 tons between now and the end of the year. Traders were awaiting the invitation of tenders. After increased interest at the week-end, linseed oil prices receded steadily, but became steady during the closing stages. On Thursday, there was again interest in near deliveries and was supported by a better demand for spot oil on the Continent. At the close, near months were £2 to £3 higher a ton. Castor oil was steadier towards the close. Trade sources said this was due mainly to the resumed U.S. interest. Business to the United Kingdom was fair with occasional support from Continental buyers. Indian B.S.S. October-November held at £132. Coconut oil relaxed after moderate business on the news that the surcharge clause would be included in future contracts. Straits in bulk sold at up to £88 5s for October-November and November-December. There was no interest in Ceylon oil which was nominally quoted at £95.

Cautious Freight Market

In North American trades, charterers were more cautious following reports from New York that the new company formed by mineworkers, coal producers and railway companies had been authorised by the United States Government to charter 30 Liberty type vessels from the reserve fleet for use on the trans-Atlantic coal route. Far Eastern operators continued their widespread enquiries for tonnage to cover numerous cargoes of ore from India including 6,000 to 10,000 tons of iron ore from Vizagapatam or Masulipatam to Gydnia at 155s f.i.o. October. Coal charterers invited offers for 7,000 to 9,000 tons of coal from Calcutta to Port Sudan in November. With interest mainly centred in North American trades, fair business was transacted at around recent levels. The Isbrandtsen Shipping Company is reported to be taking seven vessels on bareboat charter from the U.S. reserve fleet for rice from the Gulf to India and for heavy grain from North Pacific to India, the latter for consecutive voyages over one year.

London

A CUSTOMS UNION PLAN FOR WESTERN EUROPE

COMMONWEALTH FINANCE MINISTERS FURNISHED WITH DETAILS

(FROM OUR LONDON CORRESPONDENT)

BUSINESS circles both here and in the Commonwealth countries will be giving considerable thought in the weeks and months ahead to the plan for creating a customs union in Western Europe and Britain's probable participation in a partial free trade area consisting of the customs union of the six Messina countries—France, Germany, Italy, Holland, Belgium and Luxembourg—and such other members of the O.E.E.C. as may decide to associate themselves with it. The object is to provide a big enough economic unit of the type now enjoyed by the United States and the Soviet Union that may derive the full advantages of large-scale production for a home market catering for 150 to 250 million people against the 40 million or so which the various individual units must now depend upon. The Commonwealth Finance Ministers were given both the details and the views of the British Government by Mr. Macmillan and Mr. Thorneycroft during the Washington talks following on the World Bank meeting. Final decisions have not yet been reached. The Commonwealth's considered views—and those of Western Europe as well for that matter—have still to be ascertained, but the British Government's ideas have now been made available to the public by the same spokesman, and it favours participation subject to certain reservations. Europe's desire to go forward with the scheme faces Britain with three alternatives. If she stayed out she would lose valuable markets; if she went in she would have to abandon the preferential arrangements with the Commonwealth, or join a free trade area as a compromise solution that will get the best from both worlds.

The immediate objection, of course, is the adverse effect on Commonwealth preferences which such a free trade area would have. But about 90 percent of Commonwealth exports to this country are concerned with agriculture and raw materials. The intention, therefore, would be to exclude these goods from the free trade area. This country would continue to afford Commonwealth products their present degree of preference, while opening our markets only to goods in which the Commonwealth is not seriously competing. The free trade area would provide this country with the full advantages of large-scale production for a common market comprising some 250 million people. Equally important, however, might be an enlarged economic unit holding out the possibility of accumulating and exporting capital. In the long run the future of the Commonwealth may well depend on this country's ability to export surplus wealth, particularly to the Colonial dependencies. By joining the kind of association outlined, Britain would not be disregarding her Commonwealth obligations, but rather adopting an economic posture that would enable her to carry them out. Half Britain's trade is with the Commonwealth, one-quarter with Europe. Britain provides a free market for Commonwealth goods and the Commonwealth countries a preferential market for British goods. Ninety percent of our imports from the Commonwealth are food and agricultural products that would not be affected. Industrial exports from the Commonwealth would continue to enjoy a preference in the British market compared with outsiders, such as the United States, but would lose this advantage as compared with members of the free trade area.

Capital for the Commonwealth

These points are, however, technicalities, and in Mr. Macmillan's view the importance of the scheme lies not so much in tariff as in capital. He found in Washington that the countries of the Commonwealth are hungry for capital on a scale that in recent years Britain has been unable to provide. He believes that the European free trade area will provide a surplus of wealth and savings greater than comes at present from the individual countries combined, and this surplus will be available for investment in the Commonwealth. "I do not think we can properly carry out our duties to the Commonwealth and the Colonial dependencies unless we can increase our surplus wealth. You cannot invest a deficit," he said. The reaction of participation on British industry is now under consideration by the F.B.I., but as Mr. Thorneycroft pointed out, we are already up against German competition and unless we can improve our competitive power we shall be on the way out anyway. Within the free trade area tariffs, except for purely revenue purposes, would be reduced in stages and ultimately abolished. This would happen over at least ten years. Industries would thus have ample time to adjust themselves. We would have the advantages offered by a large home market, if we could be really competitive. We could not maintain full employment unless we had ample foreign markets and were fully competitive in them.

Sir Norman Kipping, Director-General of the Federation of British Industries, declared at Cardiff the other day that the crux of the problem of the proposed European common market was whether it was a challenge and an opportunity or a threat. "I feel that it will be wise for everyone in British industry to examine very carefully whether he can accept the challenge of a prospect of free and equal competition in these markets with the other members, or whether he is com-

petitive to take up the position that conditions will favour his competitors and so entail the risk of the loss of his own home market."

Credit Squeeze at Work

The working of the credit squeeze, though it appears to have eased a bit in some sections—in respect of hire purchase sales of television sets, for instance, which have recently recorded a rise—is proving very effective overall, as the September statements of the London clearing banks show. Just how important is the part which the banks play in the economy is apparent from the fact that there has been a rise in industrial production in Scotland—whose banks are reputedly more liberal lenders—when the index for Britain as a whole has been static. A digest of Scottish statistics just published in Edinburgh gives the index for all industries as two percent higher in the first half of 1956 than in the same half of 1955. For the United Kingdom the index is unchanged over the year. There are two outstanding features in the latest bank statements: that some have at last begun to increase their investments, though only one-third are going into Government stock despite Mr. Macmillan's recent appeal and two-thirds into Treasury Bills to raise overall liquidity to nearly 37 percent; and the drop of £70.7 million in advances, to bring the total fall since the end of June to £115 million. Treasury figures are now being made available of borrowings by nationalised industries. Advances to the seven boards fell last month by £29.7 million to £21 million excluding the totals for the Scottish banks. The net fall in advances to the private sector therefore works out at £41 million, which is very considerable. The net reduction since the end of June is £103 million. The credit squeeze is definitely at work, but it is obvious that monetary measures work very slowly. But for the Suez situation and its adverse effects on Government's proposed expenditure cuts, it is widely believed that a lowering of the bank rate would have taken place this autumn. Indeed, in view of the time lag in monetary policy becoming effective and the Government's need to look forward to expanding production in 1957, if developments in the last two years are not to be wasted the possibility of a change in policy, even though present conditions are hardly propitious, is still not entirely ruled out.

The Balance of Payments

Though the payments position still gives cause for concern, it is at least some satisfaction that sterling appears recently to have recovered from the weakness which affected it when the Suez crisis was at its height and the Exchange Control had to come to its support earlier in September. The gold and dollar reserve figures for that month, just issued, showed an increase of \$52 million, which of course was due to the windfall receipt of \$177 from the Texas Oil Company for the assets of Trinidad Oil. Without that there would have been a net loss of \$125 million on top of the August loss of \$129 million. Even so, the net loss in the third quarter of the year, which is usually the worst, has been \$234 million (excluding the Trinidad Oil receipt) compared with \$335 million in the third quarter of 1955. At the end of the month the reserves stood at \$2,328 million compared with \$2,276 million at the end of August.

In transactions with the E.P.U. there was a deficit in September of £12 million compared with one of £16 million in August and £24 million in July. At least the European trend is in the right direction, though with the end of the holiday season one would have expected it to be more rapid. The Texas Oil receipt is, of course, a capital item which must be kept separate from the current trend of sterling area payments, but as it roughly equals the repayment instalments on the U.S. and Canadian loans it will no doubt be utilised for that purpose at the end of the year. Disregarding this transaction and allowing for the other special items, such as the \$3 million U.S. defence aid and the \$34 million paid in settling the August E.P.U. deficit, the sterling area's residual deficit came out last month as \$83 million. In August the deficit was \$68 million.

National Ordinary expenditure totalled £2,269 million in the first half of the financial year. It was £230 million more than the total income of £1,937 million. A year ago the deficit was £213 million. The deficit "below the line", where the main items are loans to State boards and local authorities, is down from £320 million to £179 million. Loans to local authorities fell sharply to £54 million from £217 million, but nationalised industries borrowed £63 million against nil. Income-tax receipts at £552 million rose £74 million and Customs and Excise receipts jumped by £43 million to £1,009 million. Revenue from death duties was nearly £9 million lower at £83 million.

Mysore Gold Terms

Details of the distribution of the £1,230,000 compensation payable by the Mysore Government for the expropriation of the British-owned gold mines have now been received in London and the companies concerned are understood to find the revised terms of the agreement more acceptable. Nundydroog Mines (KGF) is to be paid £476,000 (Rs. 63,49,000) and Champion Reef (KGF) £396,000 (Rs. 52,81,000) as cash compensation. These figures include compensation by each company for its shareholding in the Kolar Mines power station, which is also to be nationalised. Compensation excludes the sterling investments of the holding companies in the U.K. Three-quarters of the compensation will be paid on vesting day, which is to be not later than 30th November, 1956. The remainder will be paid three months afterwards and the Nationalisation Bill is expected to be passed before 20th October. At end-1955 Nundydroog Mines held gilt-edged to the value of £197,000 and Champion Reef £110,000. On this basis holders of Nundydroog 10s. Ordinary might expect a distribution of up to 20s. a share and Champion Reef's payment might amount to 15s. Mysore Gold, whose capital is quoted in units of Rs. 5, is to receive £258,000 (Rs. 47,71,000) as cash compensation. This is equivalent to about 4s. 3d. a share. These figures are an improvement on the Mysore Government's original proposals.

Brevities

On 4th October the Board of Trade received the Monopolies and Restrictive Practices Commission's report on the supply of tea which, it announced, will be published "in due course."

The Governors of the Central Banks in the Commonwealth are now in London for their informal exchange of views with the Governor of the Bank of England. It is understood there is no agenda and no statement is likely to be made; nevertheless, considerable interest is being taken in the meeting by business circles.

Mr. Evert Barger has been appointed Secretary-General to the Commonwealth Press Union in succession to Sir Henry Turner, who retired last month.

The National Coal Board and the Central Electricity Authority have agreed to build a pilot power station as part of a joint scheme to develop the technique of underground gasification of coal.

The Grand Council of the Federation of British Industries has reconstituted the F.B.I. Middle East Panel as a standing committee of the Federation, to be known as the Middle East Committee. Sir Ralph Stevenson, former British Ambassador to Egypt, has taken over the chairmanship.

Lord Harcourt, who has been head of the Treasury delegation and Economic Minister in Washington for two years, is returning to Morgan, Grenfell and Co., the bankers, early in the New Year. He will be succeeded by Mr. G. F. Thorold, who has been granted leave of absence from A. W. Bain and Sons, Ltd.

Four firms of management consultants have formed the Association of Management Consultants to pool experience and share research. The firms are Associated Industrial Consultants, Personnel Administration, Production Engineering and Urwick, Orr and Partners.

At Bhakra, where the Sutlej has cut deep gorges in the mountains and strewn its banks with boulders, an endless conveyor belt carries these aggregates to the location of the dam. The conveyor system, the longest in India, is operated with push-button ease. The belt was made by Dunlop in India.

Dunlop conveyor belts, made to B.S.S. at Sahaganj, are superior:

- * Tailor-made for specific service conditions.
- * Spliced at site by a Mobile Splicing team.
- * Tested rigorously to ensure world-famous Dunlop quality.

Bombay

INDUSTRY WELCOMES EXTRA RUBBER IMPORT QUOTA

PRICE EQUALISATION TO HELP PLANT REHABILITATION

(FROM OUR BOMBAY CORRESPONDENT)

THE Government of India's decision to grant a fresh import quota of 2,000 tons of raw rubber for the October-December period has been welcomed by industrial circles here. This will bring the total import for the year to about 8,000 tons. Added to the estimated domestic production of 23,000 tons, it will give the industry the 31,000 tons it needs for its current year's manufacturing programme. Malayan rubber prices have been particularly favourable and manufacturers, thus far, have taken full advantage of this to remain competitive in foreign markets for finished goods, but it now seems that this position cannot be maintained for long. The Government has ruled that the imported rubber will be sold at par with the domestic product, which is considerably more expensive, and the price difference credited to a fund for the rehabilitation of the rubber plantation industry. There is no question that the plantations need rehabilitation. Rubber plants and trees were first imported from Ceylon in 1878, on an experimental basis, and in 1902, India had two full-fledged plantations which marked the beginning of the rubber plantation industry. By 1910, the area under rubber was 29,500 acres. Progress continued steadily, but it was during the second world war that the industry received its first real impetus. During 1942-46, an additional 23,964 acres were brought under cultivation to meet the war-time requirements of the allied forces. By the end of 1953, about 173,600 acres were under cultivation producing 21,136 tons of raw rubber. Of this, 71,400 acres, or nearly 41 percent of the total area, were accounted for by small holdings, that is, holdings of 100 acres and below. The actual production this year is estimated at 23,000 tons.

Although good progress has been made, there is ample scope for improvement in several directions. For instance, the average annual yield is

low and amounts to no more than 270 lbs. an acre, as against the Malayan yield of 1,000 lbs. an acre. Clearly, a case exists for the thorough rehabilitation of the plantations. It is planned to replant 70,000 acres with new seed and to increase the total area by cultivating an additional 10,000 acres. This scheme, which is expected to show results over a 15-year period, is calculated to result in increased production at reduced costs which will help remove some of the existing disparity between Indian and Malayan prices. The importance of the scheme is highlighted by the fact that India is the only country in the world which is both a producer of raw rubber and a large-scale manufacturer of rubber goods. With the rehabilitation of plantations, the manufacturing industry can look forward to a more secure future.

Outlook for Malayan Rubber

The rehabilitation scheme is being partly financed by a cess of Rs. 6-4 a 100 lbs. on Indian raw rubber, and it is now sought to raise additional funds by increasing the price of imported rubber to the level of the home-grown product. This will be reflected in the prices of manufactured goods, and the danger is that the export markets will be threatened. The industry has an excellent export potential and is capable of supplementing foreign exchange earnings to a considerable degree. For instance, in 1953-54, it earned over Rs. 1.7 crores in terms of foreign currency. The international rubber goods market is extremely competitive and if Indian prices increase, a good bit of this lucrative trade will be lost.

There is every possibility that the Malayan prices of raw rubber will fall still further. Malaya is deeply concerned over the U.K. decision to increase its purchases of synthetic rubber from 70,000 tons to 80,000 tons next year. The extent of this concern is illustrated by the fact that Dr. Ismail bin Dato Abdul Rahman, the Malayan Minister for Commerce and Industry, stated recently in Kuala Lumpur that his country would ask Britain that the hard currency earned by Malayan rubber sales to the United States should be put into a separate account. Money from this account should not be used to purchase synthetic rubber, he said. The Minister pointed out that Britain was spending huge sums of money on buying synthetic rubber from the United States and that some of this rubber had been bought with the money earned by

Malayan natural rubber. He added: "This is adding insult to injury." In addition, the Rubber Producers Council, which represents all sections of the rubber industry in Malaya, has passed a resolution deploring the British Government's action and calling upon the Malayan Government to lodge a protest. The British Government, however, is compelled to permit the import of synthetic rubber, which sells at a cheaper price than the natural product, in order to keep British manufacturers in a competitive position with the Continent. Also, it is reported from New York that the first order for all-synthetic tyres for military lorries has been placed with a local manufacturer. These reports have caused some nervousness in Malaya's rubber circles.

Although there are indications that communist China is in the market for substantial quantities of Malayan rubber, there are many obstacles in the way of normal trading. At first, the Chinese demanded that they should be allowed to collect their rubber shipments before payment, but later expressed their willingness to use the normal letter of credit method of business. They also agree that the contracts governing sales will be based on those currently used in Singapore and London, but the Communist stipulation that arbitration on any shipment will be made in China is causing disquiet among Malayan shippers. If Chinese purchases do not materialise on the scale hoped for, a rubber slump in Malaya seems inevitable, which means that India's competitors in the finished goods market will be able to secure their raw rubber supplies at extremely favourable prices. This could mean India being priced out. Apart from the loss of foreign exchange, it would hit the Indian industry. It may be well, therefore, to reconsider the whole problem. The present system of equalising prices would seem to be too rigid, and a more flexible formula linked with competition in foreign markets may prove too complicated. An easier solution may well lie in allowing a rebate on the manufactured goods exported.

Japanese Foreign Exchange Budget

The Japanese \$2,341 million foreign currency budget for the latter half of the current financial year (from 1st October, 1956 to 31st March, 1957) is likely to have a favourable effect on Indo-Japanese trade inasmuch as it provides for increased imports of raw materials. The budget includes \$1,915 million for the import of goods and \$426 million for the settlement of invisible trade. The former amount is larger by \$150 million and the latter by \$79 million than those for the first half of the current financial year. The increase in the foreign currency budget seems to be motivated by three factors: to import more raw materials for the rising level of industrial production; to check the continued domestic price rises in iron and steel, non-ferrous metals and rayon yarn by allowing their import; and to have sufficient reserves capable of coping with any sudden change in the international situation. Moreover, the Government feels that import of raw materials must be adequately guaranteed during a period of economic expansion. It would be logical to assume that Japanese purchases of raw materials from this country would tend to increase. Raw cotton, manganese ore and iron ore are items which should be in particular demand. The new budget is expected to increase the volume of imports to \$2,840 million, which would represent an increase of \$660,000 or 30 percent over the figure for the previous year. On this basis, it is assumed that Japan's international account at the end of the current financial year will show a deficit of about \$110 million, in spite of a substantial increase in exports expected. On the other hand, such a budget is likely to result in a price stabilisation within the country and to strengthen the export potential of Japanese industry by making available an abundant supply of raw materials.

The other outstanding points of the budget are the enforcement of the "global system" for 80 percent of the budget, enabling Japan to buy goods from any country. Formerly the application of this system was limited to 60 percent of the total budget, and a control on imports from countries restricting Japanese exports, such as Australia and France. It is expected that Japan's international receipts and payments for the current fiscal year will reach \$3,250 million and \$3,360 million respectively. Meanwhile, a renewed Japanese trade drive in south-east Asia and Africa may be expected following the textile industry's decision to impose a ceiling on cotton exports to the United States. The ceiling will be based on Japanese exports to the United States last year and items which were the subject of excessive concentration in exports will themselves be subject to special control. It is expected that the restrictions which are to be imposed will cut Japanese exports to America to around 150 million yards.

Indian Traders in S. Viet-Nam

The recent south Viet-Nam decree prohibiting non-Viet-Nam nationals from carrying on certain trades is not likely to affect Indian textile merchants there. A decree signed last month declared 11 trades, including most of the retail trading and the intermediate rice trade, forbidden to foreigners. One of the trades in question is the textile trade in which over half the Indian population of south Viet-Nam is engaged. Reports reaching here now indicate that Indian textile retailers will not be affected by the decree, provided they keep a total stock of 10,000 metres or more of cloth in their shops. The 10,000 metres may be made up of different kinds of fabrics. Since most of the Indian merchants hold stocks in excess of this figure, they will not be affected. A few small establishments, however, may find themselves out of business.

Uttar Pradesh

THE CASE FOR STARTING NEW INDUSTRIES IN U.P.

PROPOSALS OF FACT FINDING COMMITTEE PUBLISHED

(FROM OUR LUCKNOW CORRESPONDENT)

THE Fact Finding Committee appointed by the Government under the chairmanship of Mr. B. M. Birla last February, to make recommendations for the development of new industries in the State has proposed a Rs. 100-crore programme of expansion in the private sector. The industries recommended are spinning and weaving (500,000 spindles and 500 looms), rayon and staple fibre, woollen manufactures, industrial alcohol, paper and board, cement, structural fabrication, railway rolling stock and electrical equipment. The report of the Committee, which was officially released last week, observes that because of the lack of an active stock exchange and strong financial institutions, the State has not been able to build up any sizeable money market. The rate of increase in the employment of productive capital has been the lowest in U.P. The Committee has suggested in this connection that provision be made for encashment of even a portion of the zamindari abolition bonds, worth Rs. 28.8 crores now lying idle. After dealing with various other means of raising finance, the Committee states that in the last resort, the Government will itself have to come to the aid of industry by granting loans or subscribing to the share capital of individual enterprises. Much unfavourable comment was evoked last time when the State Government announced a scheme of loan aid to private industry. But matters have not been improved with the phenomenon in this country of joint stock companies openly subscribing to political party funds. If private companies are free to contribute to party funds, it is asked by a section of the Press and politicians here, what guarantee is there that State aid will not be given to industry for political reasons?

Industrial Resources

Reviewing the industrial resources of Uttar Pradesh, the Committee notes that there were only 1,572 licensed factories in the State in 1954 as against 2,842 (excluding mining establishments and plantations) in West Bengal, 8,027 in Bombay and 6,369 in Madras. The licensed factories provide employment for 200,000 people in U.P. compared with 800,000 in Bombay, 600,000 in West Bengal and 300,000 in Madras. In view of the increasing population of the State from 45,600,000 in 1901 to 63,200,000 in 1951, the Committee is emphatic that employment opportunities must be increased in the industrial sphere. The survey of existing industries, namely, cotton textiles, sugar, glass and glassware, leather, oil, jute etcetera has brought to light various difficulties which retard progress. The Committee has summarised them as follows: (1) high rates of electricity duty compared with the rates obtaining in Ahmedabad, Bombay and Calcutta; (2) the large number of redundant labour in Kanpur; (3) frequent booking restrictions on the movement of goods from manufacturing centres in U.P. to consuming centres; (4) inadequate road transport; (5) higher rates of sales tax, especially in the case of vegetable oils and the vanaspathi industry; (6) non-availability of better quality raw hides for the tanning industry.

Industrial Relations

In the field of industrial relations, the Committee has pleaded for justice and fairness to both management and labour. In order to facilitate mutual consultations, the Committee favours recognition of only one trade union in the factory. The number of holidays in factories should be brought on par with those obtaining in other industrial centres. The Central Industrial Disputes Act should be implemented in U.P. or alternatively, the State legislation should be made more comprehensive on the lines of the Central Act. Incidentally, the Committee has contradicted the argument that the State is not a suitable area for the sugar industry. It points out that the sugarcane crop here needs to be irrigated twice only as against 15 and 35 times in Bombay and Madras, where the soil is not deep, and consequently, the retention of moisture is poor. According to the Committee, the development of the existing industries as well as the starting of new ones will provide employment for about 119,000 people, and also encourage the growth of numerous subsidiary industries which would, in their turn, further enlarge the scope for employment.

Limit on Mill Stocks

Kanpur's textile industry has been critical of the recent Central Government order prohibiting mills from carrying more than one month's stock. A deputation of millowners met the Chief Minister in this connection and urged upon him that due to the incidence of the excise duty, consumer resistance has increased. According to the deputations, if the existing restrictions on stock holding continued, some mills might be compelled to close down. A statement issued by Mr. J. K. Srivastava, chairman of the Employers Association of Northern India, says that in order to comply with the restrictions on stock-holding, mills may also be obliged to curtail production. He says: "Mills are not anxious to keep back stocks as these result in locking up capital and godown space. Their banking arrangements whereby they obtain finan-

cial accommodation against stocks are also limited. Apart from this, at least eight out of the 10 mills in Kanpur always hold stocks of cloth of over two months' production. This is attributable, firstly, to a lack of ready demand for qualities produced; secondly, transport bottlenecks and thirdly, limited holding capacity of the distributive trade."

Revenue for Local Bodies

The U.P. Government has expressed its opposition to the recommendation made by the Central Council of Local Self-Government that local bodies in rural areas should be given not less than 15 percent of the land revenue collected from their respective areas. The State Government is of the view that no part of the land revenue can be allotted to local bodies, whether a village panchayat or a district board, at least during the plan period. The State Government, it is understood, is also opposed to another recommendation made by the Central Council calling for provincialisation of top executive posts in all local bodies.

Extensive Flood Damage

Though not worse than last year's, this year's floods have caused widespread damage in eastern U.P., estimated at Rs. 15 crores. The Revenue Minister this week laid on the table of the House a comparative statement of the losses suffered in the current year and last year. In 1955, the area affected was 10,108,518; the number of villages affected 13,836; the number of people affected 13,986,257; the number of houses damaged 562,677; the number of human lives lost 231; the number of cattle lost 5,694 and the estimated damage to crops of Rs. 26.38 crores. In 1956, the area affected is 4,361,403 acres; the number of villages affected 17,915; the number of people affected 4,756,015; the number of houses damaged 162,230; the number of human lives lost 65; the number of cattle lost 476 and the damage to crops is estimated at Rs. 12.19 crores. One redeeming feature of this year's floods is that none of the dams in U.P. were breached, although the Opposition tried to spread an impression to the contrary. Politics has been injected into the flood relief operations also. Charges and counter-charges of party flags flying over relief camps have been made. The present floods have focused attention on the problem of water-logging. In the last two years, low-lying areas have increased on account of the construction of tubewell canals and the new roads constructed as *shramdan* by the villagers. It appears that in their enthusiasm for constructing roads, they made huge depressions wherever they liked.

LONDON INSURANCE LETTER

SUEZ RATES OF MARINE INSURANCE CUT BACK

By Air Mail.

THE reversal at the end of September of the rise in premium rates for risks of war and strike, riot and civil commotion relating to cargoes through the Suez Canal reflected the general easing of tension in the dispute—economically if not politically. The marine community felt that the crisis had been in its earlier stages somewhat out of focus. In such a condition, it is natural and necessary to take precautions against the worst eventualities, and premium rates are adjusted almost automatically as the risks are more rationally assessed. Previously, the main activity in "Canal insurance" had been in providing cover for the risk of diversion round the Cape—though British firms seemed less anxious than American to insure themselves against it. Deviation due specifically to lack of pilots was not normally covered. Some London underwriters were willing to quote for such cover, but generally at rates too high to interest shipowners.

In some canals—including both the Suez and the Panama, and in some other waters—parts of the Mersey and of the River Plate, for instance—a grounded vessel is not deemed to be stranded, for purposes of insurance, because no damage normally results. However, when most of the skilled pilots left the Suez service the problem assumed abnormal proportions—at least in shipowners' minds. Lloyd's underwriters were considering whether the customary accident clause was wide enough. But in fact, the Canal's operations proceeded without all the old foreign pilots more smoothly than anyone had dared to hope, and, like other anxieties, this one subsided somewhat. So far, the total effect of the Suez crisis has been nothing like the pandemonium that many commercial people imaginatively foresaw. The marine insurance market is now inclined to regard the reactions to it as merely natural adjustments to changing risks—quantitative rather than qualitative changes.

Nuclear Ships

Suez may have been uppermost in the minds of many delegates to the annual conference, in Monte Carlo, of the International Union of Marine Insurance, but as a subject of discussion it was overshadowed by nuclear insurance. Mr. A. B. Stewart, of Lloyd's, who was last year given the task of collating information on the subject, told the conference that marine underwriters would soon have to face the problem of insuring nuclear-powered commercial vessels. But he showed no alarm at the prospect. The main problem for un-

derwriters is that which occurs when any new development needs insurance, and there is no basis of underwriting experience on which the risks can be assessed. Already, however, those—such as Mr. Stewart—who have studied the position are impressed by the extreme precautions enforced by the nuclear experts. In other fields, the attitude to risks is too often casual; in the nuclear field nothing can be left to chance. So far as shipping is concerned, Mr. Stewart contends that nuclear power represents merely a different type of boiler, and one with less risk-potential than other types. It is also true, however,—and Mr. Stewart duly emphasised the point—that there is still no evidence how much damage could be caused by radiation in the event of a runaway. We know all about the damage that can be caused by fires or storms, for there have been many of them; but there have been no disasters—that is, no accidental disasters—arising from nuclear activity. Lacking precise knowledge of the risk that they are covering, underwriters must impose a limit on their liability. Packages of radioactive material are very carefully handled, but one of them was accidentally dropped, recently, at a London railway station, so that its lead casing was damaged. On this occasion, while the area was cordoned off, experts could be summoned to deal with the emergency; but in some distant port, or at sea, no such facilities would be available.

Fire Insurance

The persistently heavy losses caused by fire have raised the question whether fire insurance, in the conventional sense, is the best means of covering the risk. This is a social problem, for fires represent a big annual loss to the community, irrespective of insurance. Some people feel that the distinction between the fraudulent policyholder who deliberately starts a fire in order to claim, and the negligent policyholder, who fails to take proper precautions or prompt action because he feels protected is not as clear as it might be. Fire-detecting and fire-fighting systems are complementary to, but also in a sense competitive with, monetary insurance. Most fires are so small at their origin that they could be extinguished with a cup of water or even with a bare hand. A building perfectly equipped to detect fire and to act against it immediately would scarcely need insuring. But in such a hypothetical case, the cost of the installations would be far higher than the cost of insurance premiums. The persistence of fire losses suggests, however, that occupiers of buildings are relying too much on insurance and doing too little to combat the menace. They are not, in many cases, responsible for the structural defects of their premises against fire hazard, but they are responsible for prevention and control of fires.

Expert Advice

It is suggested now that routine appliances, with perfunctory instructions on using them, are inadequate; that almost all businesses—even quite small ones, and particularly those engaged in fire-hazardous activities—should maintain their own fire-fighting service. Expert advice on the equipment needed in each case is readily available; it would not include a counterpart of the municipal fire-engine, but it would include equipment much more elaborate than the traditional fire-bucket. Its personnel would be drawn, of course, from the firm's staff, but the selected members would be specially trained and, probably, remunerated. It is difficult to conceive that such individual arrangements ever could, or should, eliminate fire insurance, even in the cases concerned. It is, however, arguable that some of the burden of carrying the fire risk should be lifted from the insurance companies by a deliberate rise in premium rates wherever the hazard seems excessive. Obviously, a firm that maintains its own fire-brigade justifies a low rate.

..such a situation

calls for this...

Thoroughly proven in efficiency, reliability and economy of operation, Miniature Direct Wire remote control systems by Standard are serving electricity undertakings at home and overseas, greatly simplifying the central control of electricity generation and distribution networks. Employing telephone-type apparatus to effect switchgear control through interposing relays, the Standard system of Miniature Direct Wire remote control operates at merely a few milliamperes at 50 volts D.C. over light-current multicore cables. Systems of this type are proving highly efficient and have introduced a new economy in the local control of electricity distribution substations. There is undoubtedly a Standard remote control system which will deal effectively with your control situation. Ask for further details.

PLANNING FOR EXPANSION

Planning for an Expanding Economy by Professors C. N. Vaidi and Brahmanand of Bombay University. Vora & Co. Publishers Private Ltd., Bombay. Price Rs. 8. Pages 400.

Most Indian writers on economics write about the descriptive variety and mix up their account with Indian vernacular terms and charlatan criticisms. Therefore one is pleased to see a book which has the freshness and crispness of English authorship. The criticism of the plan which it contains springs from honest convictions and the righteous indignation is supported by theoretical analysis.

The book is divided into two parts. Part I reviews the working of the Indian economy during the first plan and discusses the approach of the second plan and the consequences of this approach. Part II details the theory and process of capital accumulation, problems of investments and their effects on employment. Here one can find the influence of such noted economists as Professor Dobb. The appendix to Chapter VII and the appendices to Chapter IX elaborate certain aspects stated in the text and the note at the end of the book is excellently written, giving as it does a review of economic analysis from Ricardo to Mrs. Robinson which no post-graduate student should miss. The authors have also done signal service by their objective analysis, that Soviet growth model is inapplicable to the pattern of development of this country. The second plan, as has been pointed out in this journal, suffers from many basic contradictions, the serious consequences of which, by increasing prices and costs, are already being noticed. The income targets of the second plan and the employment targets are over-estimated to a substantial extent. The investment pattern suffers from a fundamental contradiction in that there is a conflict between the large-scale and cottage units and equipment making concerns which is not resolved. There is much learned criticism of these and the authors proceed to offer their alternatives. They have advocated maximisation of the speed of technical changes for accelerating the tempo of capital formation. But this proposal would lead to unemployment. They have rightly discarded the automatic compensation thesis of technological unemployment in Chapter X (Page 274) but the essence of the theory appears to have been accepted in Chapter XIV (Page 362). Even if it is assumed that increased capital formation resulting from the maximisation of the speed of technical process is absorbed in new capital construction activities, which for practical reasons are problematic in a democratic country like India, still there would be at least temporary unemployment. Again, a high rate of overall expansion of wage goods is held as the solution to the national problems, but here again the question of physical resources comes in. Perhaps a note on the employment and capital coefficient possibilities of Government steel projects might have been added. Perhaps the theories underlying the "new approach" will be amplified in Mr. Brahmanand's forthcoming book referred to in this one. The book should find a place on the shelf of everybody interested in the plan studies.

THE ASSIMILATION OF PRINCELY INDIA

The Story of the Integration of the Indian States. By V. P. Menon. (Published by Orient Longmans Ltd., 17, Chittaranjan Avenue, Calcutta. Price Rs. 25; pages 511.)

In August 1947, the British left India an independent nation but one which by legacy had long been

divided. By January 1950, when the new Constitution came into force, the old British India along with 554 princely States of differing sizes, wealth and power, had been integrated to form a republic. The history of the intervening and problematical years is the story of the birth of a nation. This publication is a brilliant analysis of the events which led to the formation of a consolidated India. It is authoritatively told by an author who was not only an objective observer, but who was also actively concerned in the metamorphosis. It is a book which every student of constitutional law or modern political Indian history should read. For the general reader who takes a lively interest in current affairs, it serves to provide a background which contributes to a greater understanding of many problems of the present day.

FACTS ABOUT INDIA

India, 1956. Published by the Publications Division, Ministry of Information and Broadcasting, Government of India. (Pages 592. Price Rs. 7-8.)

This official publication has established itself as a useful source of reference. Those who may urgently need to ascertain some of the basic economic and political facts about India, such as the total population and its net annual increase, the area and its physical features, natural resources, the national income, its various components and the per capita figure, the Constitution and its provisions, the system of Government, the fiscal structure, industry, commerce and agriculture, will find it very handy. It thus deserves a place in all public libraries, and also in many private ones. For foreigners interested in India's current affairs, the publication will be particularly useful.

Planting and Commerce, Annual Number, 1956. Edited by Joseph Stanley. Published by V. L. George at the Mar Thoma Memorial Printing and Publishing House Ltd., Ernakulam. (Pages 88. Price Rs. 3.)

The *Planting and Commerce* annuals provide a comprehensive review of the activities of India's plantation industry, and the trends and influences which feature them. The latest one fulfils the same purpose. It contains a survey of the industry in 1955 which is both informative and instructive. The statistical tables at the end, covering a wide variety of subjects, increase its utility as a source of reference for business men and students of Indian economics. Besides, a number of useful articles appear on allied subjects such as plantation labour, synthetic rubber production in the U.K., the prospects for natural rubber, the rubber manufacturing industry in the second plan, the Quilon-Ernakulam railway, and the development of Cochin into a quay port. In the survey, the editor writes: "Plantations have so long been considered a part of colonial economy that it has never received an objective and scientific approach from Indians of any standing. The result is that it was the great unknown and emerged as a part more of labour problem than as an important factor in India's economy." He stresses that the lack of a proper realisation of this industry's importance to the economy will cause great harm, particularly if the approach is solely from the points of view of labour welfare and Government revenues.

PROSPECTS OF U. K. CAPITAL GOODS INDUSTRIES

DRIVE TO INCREASE EFFICIENCY

THE seasonal weakening of the pound proceeds this year in unusually complex circumstances. The international dispute that has dominated the thoughts of half the world has only adverse implications for Britain and for the sterling area as a whole. Partly as a consequence of that dispute, Britain's internal position is confused. It is no longer sufficient to estimate the economic trends; we have now to consider also the political effects of changes in the economic situation.

"The most important feature of the economic position", stated the London and Cambridge Economic Bulletin in September's issue of *The Times Review of Industry*, "is the recent growth in the volume (and value) of British exports to a record level." A large debit balance of payment has been converted into a useful credit balance. But the Bulletin emphasised the seasonal character of the improvement in the first half-year, and that it was in any case "less than the amount required to cover our outgoings on capital account for external investment and debt repayment, and for rebuilding reserves". It appears, even so, that the external problem has been reduced to manageable proportions, if one can assume that the Government's policy will be allowed to take its course. This assumption is, however, questionable. The economic adjustments are now being made in increasingly difficult—one might say hostile—political circumstances.

Exchange Markets

The international exchange markets were acting rationally when they reduced the value of the pound after the Trades Union Congress had rejected the plea for wage restraint uttered previously by the Chancellor of the Exchequer. But the trouble is not, as many operators saw it, a simple matter of wage demands generating a new phase of inflation. Even in the short time since the Congress met, new wage demands have, indeed, been advanced, but resistance to such demands is increasingly effective. The unions themselves are generally more concerned now with security of employment than with improvement in the standard of living. Every month brings more convincing evidence that the trend of industry and trade in the U.K. is downward. The stagnation of production—which, as the Economic Commission for Europe has recently pointed out, contrasts sharply with the continuing upsurge in France, Germany, and Holland—has until recently been seen at home as a temporary result of restraints on consumer spending. It is now, however, apparent that the recession of demand is extending into the capital sector of the economy. The recession, therefore, can no longer be regarded as temporary; indeed, company chairmen informing shareholders, and stockbrokers advising investors, have lately warned against the common assumption that trade and industry will resume their upward course in the early months of 1957.

What will more probably happen in 1957 is a distinct recession in the capital industries, particularly building, while trade in consumer goods, even if it does not appreciably diminish, will almost certainly become more competitive. The latest figures, relating to mid-1956, show that industry's stocks of finished goods are already increasing.

The difficulty of disposing of finished goods is probably a more effective deterrent than the credit squeeze when plans for expansion are discussed in companies' board rooms. (But, of course, the squeeze is partly responsible for that difficulty.) Anyway, industry's plans for expansion have been, in the aggregate, sharply reduced—at least in a relative sense. Industry's expenditure on plant, machinery and vehicles was 27 percent more in 1955 than in 1954 and will be (according to declared intentions) 21 percent more in 1956 than in 1955, but the planned increase next year (according to provisional figures) is only 1 percent. Industry's expenditure on buildings was one-half more in 1955 than in 1954 and will evidently be one-third more in 1956 than in 1955, but plans for next year indicate a reduction of about one-tenth. The prospective reduction in the two categories combined is only slight, but it contrasts with big percentage increases in recent years. The particular decline in factory-building implies, moreover, that the recession may be cumulative as demand for machinery to equip new factories is curtailed.

Expenditure on Machinery

The brighter side of the picture is the continuing (though slight) increase in expenditure on machinery; which, since it is not apparently intended for new buildings, must be intended to modernise existing capacity. British industry is thereby making itself more efficient, better able to compete abroad. As part of its cost-saving policy, it is economising labour. Unless unforeseen circumstances arise, the demand for labour will be much weaker next year than it has been in the recent years of boom. Generally—though not in sheltered activities such as transport—the campaign for higher wages seems doomed to fail. Already the rise in wage rates exaggerates the rise in incomes, for overtime work is diminishing and short-time work is extending its range. With more goods coming out of more efficient factories (though it must be admitted that in this respect the results of capital expenditure have so far been surprisingly meagre), the problems of selling to a community with a static income will multiply. Significantly, consumption of steel in the second quarter of this year showed the first decline since 1952. It is in such circumstances that the Government would normally consider stimulants. Especially, the reduction of many families' incomes would suggest a counterbalancing relief of taxation, both to stimulate trade and to maintain average living standards. But the new military situation implies additional strains on external payments and on sterling. Continuing deflation seems necessary, both to restrain the demands of the private sector and to force labour into the most economic employment. How will labour, accustomed to full employment and prosperity, react? The question is no longer economic but political. And the answer is vital to the whole economy.

Jute

HESSIAN LEADS DECLINE IN GUNNY PRICES

RAW JUTE RATES ALSO EASIER

THE Calcutta jute goods markets entered their third week of depression after the holidays at the close of the last session, and following the previous pattern, prices showed a gradual decline. Overseas buyers stayed out, so speculative activity dominated proceedings. Bear operators were prominent and continuous selling pressure had its effect. Eventually, activity ceased completely and the market settled down to a period of stalemate. In spite of the lack of interest, prices moved only within narrow limits. There was a temporary revival in sacking towards the week-end on reports of interest in Twill constructions, but the business concluded was negligible and was mainly absorbed by bazaar operators. There was no interest from any source in hessian and the market for this fabric was particularly weak. Shipping was reported to be fairly good last month and this appeared to be one of the few factors that lent a little confidence to an otherwise inactive market. Towards the close, the prospect for mills' stocks of jute goods was the main talking point.

Although raw jute was quiet and prices receded, the week was not entirely devoid of business. The main interest was for quick delivery jute, and while some mills continued to buy through their agents in Cossipore and over the jetty, others preferred the regular market. In terms of quantity, the business was not large, but it was enough to prevent prices from showing too great a fall even though the majority of transactions were put through at a discount on the quoted rates.

A great deal of interest has been shown this week in reports from East Pakistan that a deputation from various balers' and sellers' associations has been sent to Karachi to press the Pakistan Government for a reintroduction of kutchale bale shipments to India. It will be remembered that these were banned about 18 months ago, and as the majority of Pakistani sellers who normally did business with India only had kutchale bale presses, the added expense of hiring pucca bale presses hit them very hard. If their requests are sanctioned, then Pakistani sellers are of the opinion that costs will be greatly reduced and that they will be able to present a more attractive price to the Indian buyer, who, at the present rates, considers the premium for Pakistani jute prohibitive. It seems unlikely, however, that the venture will meet with the success it warrants, as, according to reports, several of the larger pucca balers carry a certain amount of influence in Government circles, and already pressure has been brought to bear in order to ensure that these balers continue to make their profit under the existing restrictions.

Local jute circles were not impressed by mills' attempts to undercut rates, and although prices eased, the undertone was fairly steady. Sellers were reluctant to discount as upcountry markets were firm due to a falling off of imports. The transport situation also is still very acute in some areas due to flooding, and operators were not interested in fresh business until the backlog against existing contracts was wiped off.

THE JUTE MARKETS

Manufactured Goods: Quotations in the Calcutta jute goods markets were purely nominal at the opening last Thursday after the holiday, and B Twills were quoted at Rs. 113 a 100 yards for ready shipment and 113-4 for January-March shipment. Hessian was quiet in the absence of business and 40in. 100z. stood at Rs. 42-13 a 100 yards for ready shipment and Rs. 42 for forward shipment. No overseas or local enquiries were reported in the market and prices gradually declined throughout the day until Friday's opening showed a drop of 8 annas in sacking and 6 annas in hessian. During the day, interest in heavy goods revived on account of reports that enquiries had been received for tenders of sacking for Burma and also for internal consumption to replace sandbags used in the recent floods, and the previous day's losses were soon made up. Hessian, on the other hand, continued its downward trend and while heavy goods moved up, 40in. 100z. dropped 3 or 4 annas. During the week-end, interest in sacking dropped off, and prices began to fall. At the opening on Monday morning, B Twills were down to Rs. 112-14 for ready shipment while 40in. 100z. was unchanged at Rs. 42-5. At the close, the market was easier in the absence of business and opening quotations on Tuesday morning were as follows:

	Ready	October	Nov.-Dec.	Jan.-Mar.
	Rs.	Rs.	Rs.	Rs.
40in. 80z.	35-4	34-12	34-2	33-6
40in. 100z.	41-13	42	41-12	41-4
B Twills	112	112-8	112-8	112-8
Heavy Ceers				
(Plain)	112	113-4	113	112-8
A Twills	135-8	136	136-8	136-8
Liverpools	125-4	126	126-8	126-8
Cornsacks	112-4	112-12	113	113

Raw Jute: The fibre markets have been under mixed influences during the past week. Business has been done, but prices have fallen back, although only to the extent of about 4 annas a maund. At the opening last Thursday, prices were nominal

on the basis of Rs. 28-12 a maund for Assam Bottoms and sellers were offering freely at this level. Mills' ideas were lower, and any indications given out were invariable at a discount. Ready jute still commanded a small premium and business was done in ready bills of lading and ready delivery ex Cossipore at 4 or 8 annas above the quoted rates. This was one of the reasons why rates only showed a small reaction over the week in the light of limited mill interest. Upcountry markets were steady and transport difficulties added to the general tendency to look for higher prices. Sellers, although keen for business, resisted buyers' counter-bids, but this only met with partial success and eventually the transactions were put through at the buyers' level. Arrivals at mills have been restricted this week due to navigational difficulties on swollen rivers, and many country boats have had to tie up at various points on their journey to avoid danger. Lorry deliveries from many of the Daissee and Tossa agencies have also been affected as a result of flooded roads. Towards the close, the situation was easier and arrivals were on the increase. With the advent of the Pujā holidays the market lost a lot of its interest, and idle conditions prevailed.

During the week, business was done in Dhurbri-Assam ready bills of lading and rail receipts at Rs. 28-12 to Rs. 29 a maund, and at Rs. 28 to Rs. 28-8 a maund for October shipment. Murshidabad Tossa was also done at Rs. 28-4 to Rs. 28-8 a maund for 15 days' shipment, and Karimpore-Bongaon Tossa at Rs. 29 a maund basis Bottoms for the same shipment. Daissee was bought over the jetty at prices ranging from Rs. 29-8 to Rs. 30-8 a maund and at Rs. 29 to Rs. 29-8 against contract, but the former contained a considerable amount of moisture. In the pucca bale section, Dundee Hearts were done at Rs. 265 a bale, Mill Reds at Rs. 250 and Firsts at Rs. 235 for one month's shipment. Cuttings were done at Rs. 127 a bale for ready delivery and Rs. 124 a bale for ready bills of lading and October shipment.

At the close, the market was unchanged and opening quotations on Tuesday morning were as follows:

Indian Jute	Landed at Mills	
	Rs. a md. basis	
	Bottoms.	Shipment.
Lower Assam	28-8	Oct.-15th Nov.
Northern	28-8	"
Murshidabad White	27-8	"
Daissee	29-8	"
Daissee White	28-8	"
Daissee Meeta	27-4	"
Local Northern	28	"
Bimli	27 for F.A.Q.	"
Tossa is quoted at 8 annas to Re. 1 a maund above the price of white jute.		
Pakistan Jute	Rs. a md.	Shipment.
Jat	31-8	Oct.-Nov.
District	31	"
Northern	30-8	"
Pucca:	Rs. a bale	Shipment.
Mill Firsts 2/3	210	Oct.-Nov.
Export Firsts 2/3	190	"
Export Lightnings 2/3	175	"
Jat Cuttings	124	"

In Cossipore, wagon arrivals totalled over 800 wagons during the week, but this figure includes an accumulation over last week's holidays. All imports have found ready buyers in mill representatives and local operators who have covering against local contracts. As a result, prices have tended to remain steady, and stockists are not releasing their holdings meantime as they are hoping for a shortage in the near future as a result of transport hold-ups. At the close, Kishanganj jute was quoted at Rs. 27 a maund basis Bottoms.

GUNNY SHIPMENT STATISTICS

The following figures include coastal shipment relating to manufactured jute goods for shipment from the port of Calcutta. These are gross figures based on shipping bills presented:

	Hessian	Cloth	Total
	Bags (Tons)	(Tons)	(Tons)
1st to 30th September, 1956	2,265.0	30,257.5	32,522.5
1st to 31st August, 1956	3,711.0	38,809.8	42,520.8
1st to 31st July, 1956	2,896.1	31,027.8	33,923.9
	Sacking		
1st to 30th September, 1956	26,755.3	1,500.4	28,255.7
1st to 31st August, 1956	43,642.7	2,747.0	46,389.7
1st to 31st July, 1956	31,171.2	1,696.2	32,867.4

GUNNY SHIPMENTS DURING AUGUST

The following are the total net figures of manufactured jute goods shipped from Calcutta during the month of August, 1956 after providing for short shipments. These figures include shipments to coastal ports.

	Hessian	Cloth	Total
	Bags (Tons)	(Tons)	(Tons)
Gross	3,711.1	38,809.8	42,520.9
Short Shipped	380.2	1,689.3	2,069.5
August 1956 (Net)	3,330.9	37,120.5	40,451.4
July 1956 (Net)	2,803.0	30,699.6	33,502.6
June 1956 (Net)	3,059.1	30,108.4	33,167.5
	Sacking		
Gross	43,642.5	2,747.3	46,389.8
Short Shipped	697.3	37.7	735.0
August 1956 (Net)	42,945.2	2,709.6	45,654.8
July 1956 (Net)	30,251.6	1,693.7	31,945.3
June 1956 (Net)	27,489.1	2,007.4	29,496.5

THE FOREIGN JUTE MARKETS

QUIET AND STEADY NOTE

(FROM OUR DUNDEE CORRESPONDENT)

THERE is a lull in the jute markets at the moment and the whole position seems to be quieter. Nevertheless, there is little or no change taking place in prices for raw jute and Calcutta goods and this makes for a steady undertone all round. No doubt there will be a tendency to await the outcome of events concerning the Suez Canal situation. It is hoped that the whole affair will be amicably settled in the near future and that the industry will not continue to be overshadowed by the uncertainty as to what may happen to shipments of raw jute. The British Jute Trade Research Association has achieved an acid-resistant jute bag for carrying granular fertilisers. The Association has been engaged in this job for three years and steps are being taken to increase output to meet demand that is now being made for these bags. Fire-proof jute fabrics were shown to a number of agricultural journalists when they visited Dundee the other day, in addition to the above, while there was also a third product which was available for rot-proofing of bags. Raw jute shippers have maintained their prices on a more or less unchanged level since last report. Some sales have been made in Mill Firsts Marks at £99, Mill Lightnings from £87.10s to £89, Mill Hearts from £83 and Continental Mill Hearts at £79 and £80 a ton. The quotations for Daissee and Tossa have remained at the minima in most cases, the exception being grade Daissee-2/3, for which there is a demand at from £84.10s to £86. Good Daissee-2/3 is from £91 and Tossa-2/3 grade from £100 and fours from £90, all October-November shipment, c.i.f. U.K. Spinners have been buying only very moderate lots.

Calcutta goods have also shown small alterations during the period. Hessians have ruled round about 64s 9d for 40in. 100z. and 49s 6d for 74oz. October, 64s 6d and 49s 3d November and 64s 3d and 49s 3d December, with B Twills at 170s 6d, 171s and 171s respectively, all f.o.b., Calcutta. Jute yarns and cloth are still in moderate demand and spinners and manufacturers are fairly comfortably off for deliveries to the end of the year.

PRODUCTIVE EFFICIENCY IN THE U.K.

F.B.I. CHALLENGES VIEWS OF U.S. EXPERT

THE United States Technical Assistance Mission in London has concluded its task, and its services in the cause of efficiency have been much appreciated in Britain. Not so well received were the closing remarks of the head of the Mission, Mr. Francis F. Rogers, before he returned to the United States late in September, after five and a half years of investigation and advice. Mr. Rogers spoke of the "time-consuming inefficiency" of some British enterprises; notably in construction, public services, distributing, and catering, but also in manufacturing industries. He described British goods as "shoddy, often poorly inspected, resulting in culpable or concealed defects, lacking in style, and generally over-priced". He described the British economy as "highly cosseted" and British firms as "complacent"; and he advised British consumers to "refuse to pay".

The Federation of British Industries lost no time in issuing a reply to the remarks that it described as "utterly exaggerated". "It is simply not true", said the F.B.I. statement, "that manufacturers in general are 'cosseted' and 'complacent'; and 'it is quite wrong to suggest...that the inefficiencies of the few are characteristic of the average'. The F.B.I. pointed to the export trade as evidence that British firms could 'stand up to competition even with U.S. manufacturers, and even in the U.S. market'. It happened that a couple of days after Mr. Rogers uttered his strictures the British Treasury published, in its monthly *Bulletin for Industry*, an analysis of British exports to the United States. One of the most gratifying elements in the whole economic position this year has been the expansion of exports to the dollar area. In two-thirds of 1956, compared with the same period of 1955, the total value of British exports increased about one-tenth, and exports to the dollar area accounted for more than one-third of this increase. Expanded to an annual basis, this achievement would represent an increase of nearly £300 million in exports and of more than £100 million in dollars. The Treasury's analysis showed, however, that the increase in exports to the United States was confined to a narrow range of products: mainly aircraft, road vehicles, machinery, and wool goods. It was evident from Mr. Rogers' remarks that he was concerned mainly with ordinary consumer goods, which, with a few notable exceptions (such as wool goods, and also footwear), are not conspicuously successful in the United States market.

Competitive Tendering

Mr. Rogers would have presented a better-balanced picture if he had mentioned the legal action that had recently been initiated by an American tax-payer to prevent the authorities from wasting public money by purchasing American turbines for a dam on the Columbia river when British turbines were available much more cheaply. (To prevent long delays while the action was being fought, the contract was re-awarded, to the English Electric Company.) Yet at the same time, the chairman of the Central Electricity Authority in Britain, Lord Citrine, revealed that the C.E.A. intended to invite American tenders for electrical equipment required by Britain. Earlier in the year a special committee had recommended such action to compel British firms to tender more competitively among themselves: in fact, they have indulged in the practice known as "level tendering", whereby all firms quote, by agreement, the

same price for a particular job. It was this kind of practice (illegal in the United States) that caused Mr. Rogers to accuse the larger and more efficient firms in the U.K. of "holding umbrellas over the less efficient". And this American efficiency expert is not the only one who has perceived the debilitating effects of such a practice. After long delays—but better late than never—the British Government has formulated, and Parliament has ratified, a code of commercial behaviour that will moderate (though not entirely prevent) restrictive practices.

Law Against Restrictive Practices

The Restrictive Practices Act is one of the most important economic events in Britain this year—though its effects will not be perceptible until later. Another significant development, comparable on the international plane, is the British Government's agreement to participate in the preliminary study of a free-trade market in Europe, although its effects (if it ever comes into being with British participation) will mature still more slowly. It is no exaggeration to say that these two factors, together, can change the whole mood and character of British industry. The Federation of British Industries can point to some absurdities in Mr. Rogers' accusations, but it cannot convincingly deny that British industry as a whole—there are, of course, many notable exceptions among firms both large and small—is less willing to compete within itself, and consequently less able to compete internationally, than it was before the war.

Protection of uneconomic firms—whether by agreement in particular trades not to compete in price or by quotas or tariffs which make it difficult for foreign suppliers to compete in price—is not only a postwar phenomenon, but its effects can be, for Britain, more serious now than ever before. Sir Anthony Eden, the Premier, has spoken eloquently of the deadliest trade war in history that will confront us in the next few years. The international Bank's report has reminded us that British firms are relatively unsuccessful in tendering for capital contracts even in the Commonwealth. The essential fact is that there are no means of protecting trade abroad; therefore, a nation that lives by exporting must do nothing to promote inefficiency at home. Complacency is not, of course, the only problem. Mr. Rogers spoke of the "frightening deficiency" in technology; and the Economist has lately remarked that the real burden of defence is not its requirement of 10 per cent of the national income, but its claim to 60 per cent of the nation's technological resources. But it is undeniable that in years of easy trading many Britons—both employers and the employed—have become reluctant to face competition. Reluctant they are still; but circumstances are forcing them to change their easy ways.

IMPRESSIVE DISPLAY OF BRITISH AIRCRAFT

COMET ORDERED FOR DOMESTIC ROUTES

"THE impression Farnborough gives is of an industry which means business", stated one leading aeronautical journal during the Society of British Aircraft Constructors' display. This is evident not only in the aircraft, engines and components on show, but in variants and new designs just "around the corner". At the exhibition, a number of such projects were on view in model form. One of the most handsome of these was the Comet 4A on the de Havilland stand. This is the aircraft which has caused a stir in airline circles, for it has been ordered by Capital Airlines

for its domestic routes—the average stage-length being less than 600 miles. Previously it had not been thought that the pure-jet airliner could operate economically over such distances. Now the Comet 4A has really put the cat among the pigeons.

There was an interesting development on the Vickers stand. The turboprop *Vanguard* airliner with a double-bubble fuselage will be used by B.E.A. as a mixed passenger-freight airliner, but a model was displayed of an all-freighter version that differs little externally from the original aircraft. The freighter *Vanguard*, which has big loading doors, would offer a payload of no less than 40,000 lbs.—about 18 tons. Enquiries at the Armstrong Whitworth stand confirmed that this company is interested in a turboprop freighter aircraft, but it is still too early to discuss this aircraft in detail. The next Westland productions are to be *Westminster* and *Wessex* helicopters, both being represented on the Westland stand by cut-away models. Design work is proceeding on the former which is to be powered by two Eland engines. The *Wessex*, due to fly in 1958, is to have Gazelles. Westland say that a flying test rig is to be built shortly in order to test the Elands rotor system. This device will fly within a year or so and may be used as a "flying crane" to lift large, bulky loads over short distances.

Indian Order for Gnats

India's order for *Gnat* fighters throws a spotlight on this unusual aircraft and also on an interesting development, the two-seat trainer, a model of which (and a full-sized cockpit) was to be seen on the Folland stand. The trainer has a similar performance to that of the single-seat *Gnat*, a 14-hour endurance and a landing run of only 650 yards. Apart from the cockpit, the only obvious difference is a larger wing, which has an increase in area of 7 per cent. For air forces that want to train jet fighter pilots efficiently with the minimum of cost, the *Gnat* trainer has a powerful and obvious appeal. The third *Agriola* was on the Austen stand minus engine and outer wing panels. This aircraft, a crop-sprayer and top-dresser, is intended primarily for the New Zealand market, but obviously has a future in many other parts of the world.

A new version of the *Aerovan* was on view on the Miles stand. This aircraft features a very high aspect ratio wing of high efficiency which, it is claimed, results in a greatly improved performance. The flying display featured the latest developments of aircraft. The *President* is the civil counterpart of the Hunting-Percival *Pembroke*, the aircraft on view being equipped as a six-seater executive transport. On a total maximum horse power of 1,100 from two Alvis Leonides engines, this aircraft is designed to carry 12 passengers a distance of 1,300 miles very economically. It is also available for aerial survey, ambulance, freighter or training roles.

A *Skeeter*, of the type ordered for the Army, was flown fitted with Napier rotor-tip rockets. This results in a spectacular vertical climb from the ground, a valuable asset when operating from, say, small jungle clearings. Two *Twin Pioneers* decked out in Swissair and de Kroondulf (a Dutch East Indies subsidiary of K.L.M.) colours caused much comment. The first *Twin* flew a year ago; three are now flying, a fourth is complete and three more will be ready by the end of this year. By next June, 20 will have been completed and 15 more by the following December. This remarkable aeroplane is soon to be demonstrated abroad, probably in South America, Australia and the United States. The British aircraft industry means business, big business, in feeder-liner, helicopter, trainer, crop-spraying, executive, and other important world markets, as well as in the highly competitive gas-turbine airliner field.

REMODELLING THE BRITISH PLAN

ECONOMIC IMPLICATIONS OF SUEZ DISPUTE

THE British Government's vigorous reaction to President Nasser's decision to nationalise the Suez Canal was seen against the background of Sir Anthony Eden's statement, not long previously, that Cyprus was vital to Britain's defence of her supplies of oil. Discussion of the economic implications of the dispute with Egypt has likewise been focussed on oil. Only recently have the wider economic implications been appreciated, and still not fully. It is for politicians to argue whether the British Government's implied threats of military action were necessary or wise in this case. The fact remains that the nation's military strategy has been reconsidered, and that the planned reduction of conventional armaments, which nuclear weapons appeared to have made partly redundant, has been deferred indefinitely. The new idea is that, irrespective of developments around Suez, it is necessary to keep a substantial reserve of conventional forces available for immediate use in any contingency in any area of vital interest. This military reassessment implies also an economic reassessment. For the intended reduction of military expenditure was a major element—perhaps the most important element—in the plan to overcome inflation. That plan must now be completely revised.

Some people say that the Government should have presented an emergency Budget immediately the Suez crisis broke, before public feeling on the issue had subsided. A special tax on petrol, for instance, would have been an obvious measure in the circumstances. Even an increase in income-tax might have been acceptable. But the public's mood has already changed, and a budget even halfway through the financial year, in October, would not have the same impact. Next April, when the normal budget is due, the new situation will not be easy to explain. The truth is that Britain cannot accommodate the military expenditure of recent years without seriously straining her resources; and new ideas of rapid deployment of forces may involve, for instance, a considerable increase in expenditure on aircraft for carrying troops and supplies. The counter-inflation plan collapses if this expenditure must be maintained or increased. The intention was to reduce total Governmental spending in the current financial year by at least £100 million, and it was clearly understood that most of the saving would be effected in defence. By stages, a reduction as large as £400 million a year was envisaged; which would have been a substantial proportion of the current annual military expenditure of roughly £1,500 million.

Military Expenditure

The Budget in April did not provide for this first stage of the military economies; it did not profess to tackle the whole of the inflationary problem still left after the financial restraints imposed from early 1955. The intention was that more saving by the public, less spending by industry, and modification of the Government's basic commitments, would bring the economy approximately into balance. The public is, on the whole, buying no more goods and services than it was buying a year ago, and by the end of the year it may be buying less. Industry, on the other hand, plans to spend considerably more this year than it spent last year on buildings and equipment—and in recent months it has increased, not reduced, its estimates of expenditure. There is virtually no hope of equilibrium, on the present plan, if the Government cannot enforce its intended reductions. The Government must now formulate a new economic plan or accept inflation as inevitable. In financial circles it is assumed that acceptance of inflation, after all that has been said against it, and in the light of all the evidence of its damaging effects on the nation's vitality, is impossible. But it must be recognised that in much more favourable circumstances it has been very difficult to achieve even a moderate degree of deflation in more than 1½ years of effort.

It will be particularly difficult to make the public accept still more sacrifices, and any attempt to do so would provoke the labour unions to press for counterbalancing increases in wages. It is, of course, possible that strategic priorities can be so altered that preparations for "global war" can be diminished while preparation for "local wars" are increased—that some of the plans for nuclear defence can be deferred while more resources are devoted to conventional forces (the nuclear-power programme would certainly benefit from such a change); but in the present mood of the defence services such economy is not easy to envisage. It seems, therefore, that industry will be required to modify its plans, so that pressure on the engineering industries—which are also the armament industries—will be relaxed. The Government is presumably reconsidering the details of its financial policy. It had apparently abandoned the idea that monetary equilibrium could be achieved by raising short-term money rates; but in the new circumstances the arguments for a further rise in Bank rate are strengthened. The effects of a change in Bank rate are, however, both slow and unpredictable; and in the meantime increased expenditure means increased issues of Treasury bills. The most obvious weakness of the Government's position in the past years has been its inability to borrow more on short-term without causing more inflation, and it is evident that some method must be devised for neutralising the effects of such borrowing.

Plantation Topics

LONDON TEA SALES

AT last week's London tea sales, the 50,036 packages on offer realised an average price of 6s 0.15d a lb. against 6s 0.21d in the previous sale and 5s 3.59d a year ago. Plain broken pekoe was quoted at 3s 5½d a lb. against 3s 6½d in the previous sale. Prices obtained by some of the companies are given below:

	No. of packages	Average per lb.
Amalgamated	930	4/83
Angoorie	261	11/10
Anglo-American	1,434	5/10½
Assam Co.	1,236	7/6½
Borhat	251	6/2½
Central Provinces	567	5/11½
Chulsa	317	6/1
Consolidated Estates	240	7/6
Cons. Tea and Lands	1,941	4/2½
Dekhari	120	9/4½
Doors	310	5/0½
Doom Dooma	378	9/1
Eastern Assam	316	8/11½
Eastern Produce	1,026	7/0½
Empire of India	850	5/8½
Imperial	1,244	6/11½
Jhanze	630	7/8½
Jokai	1,144	7/5½
Jorehaut	774	11/1½
Kanan Devan	3,866	5/2
Majuli	777	7/5½
Malayalam	1,500	4/0½
Moabund	336	10/5½
Namdang	246	8/11½

New Dimbula	252	7/11
Rajawella	393	8/33
Scottish Assam	300	6/7½
Scot. Tea and Lands	300	8/43
Sephinjuri-Bheel	240	3/8½
Standard	492	8/5½
United Planters	466	6/9½

COLOMBO RUBBER PRICES

The following prices have been issued by the Rubber Board of India from the weekly market report published by the Colombo Brokers Association:

Sheet:			
No. 1	1.41	1.41	
No. 2	1.38	1.38	
No. 3	1.35	1.35	
No. 4	1.11	1.11	
No. 5	1.06	1.06	
Sht. Cutts. 1	1.02		
Sht. Cutts. 2	.97		
Crape:			
Water White	—	—	
R.M.A. No. 1X	1.56	1.34½	
R.M.A. No. 1	1.33/35	1.32½	
Crape 2	1.29½		
Crape 3	1.20½		
Scrap Crape:			
Sc. Crape No. 1	.85 Nom	.85	
Sc. Crape No. 2	.80/84	.80½	
Sc. Crape No. 3	.74/78	.74½	
Flat Bark	.70/72	.68½	
Sc. Crape 3X	.77		

To arrive at f.o.b. Colombo prices, add 53.45 cents a lb. for crape other than scrap crape and 31.45 cents for scrap crape to be above market prices.

AN EDUCATION IN

Oil

This is not an abstract design in an Art Class. It is one of the chemist's symbols for the structure of hydrocarbons. And hydrocarbons are the most important ingredients in oil—that vital fluid on which India depends so much for the progress of industry, transport and agriculture.

In the Assam Oil Company, chemists, physicists and geologists are engaged all the time on research, helping to find new sources of oil, devising more efficient and more economical methods of refining oil and discovering new uses for oil.

The results of such research mean that more and more of the oil and oil products which are needed for our expanding economy come direct from India's own oilfields.

STRONG GENERAL DEMAND
AT TEA EXPORT SALE

GOOD SUPPORT FOR DUSTS

AT Sale No. 17, held on 4th and 5th October offerings at the Export Auction consisted of 47,400 packages for which there was a very strong and general demand, and all descriptions with the exception of medium C.T.C.'s and poor Darjeelings were dearer. Whole Leaf grades and clean black Fannings were the strongest feature of the Sale and were fully 4 annas dearer and sometimes more. Commons and low mediums were also in very strong demand and were 2 to 4 annas dearer, while teas of orthodox manufacture with any quality were keenly competed for at 2 to 6 annas above last rates. The very best C.T.C. teas were well supported, but medium kinds were the weakest feature and were 3 to 4 annas lower. Tippy teas were well supported and flavoury Darjeelings were in fair demand, but the inferior sorts were slightly easier.

Quotations		1956	1955
		Rs.	Rs.
Clean Black Pekoe	2 0 0		2 4 0
Plain B.P.	1 12 0 to 1 12 6		1 10 0
Medium Assam B.P.	2 2 0 to 2 3 0		1 12 0
Best CTC Assam B.P.	3 6 0		3 4 0 to 3 6 0

At the Internal Sale, Dust offerings amounted to 17,024 packages. There was a good and general demand for all descriptions except for the better liquoring C.T.C.'s which declined by 3 to 4 annas and the poorer C.T.C.'s, which were 1 to 2 annas easier. Mediums and Commons were again well supported at rates which were generally fully firm to dearer, while clean black leaf exportable types were again a strong feature, although they were not as well supported as in recent weeks.

Quotations		1956	1955
		Rs.	Rs.
Medium Dooras Dust	2 1 0 to 2 2 0		1 11 0 to 1 12 0
Medium Assam Grainy Dust	2 4 0		1 13 6 to 1 14 6
Medium Assam C.T.C. Dust	2 6 0 to 2 8 0		
Best Assam C.T.C. Dusts	3 0 0 to 3 2 0		2 11 0 to 2 13 0

Leaf catalogues comprised 1,238 chests for which there was a good demand and prices were generally fully firm to dearer. The green teas on offer were fairly well supported and showed an improvement over last few sales.

SUGAR MARKET RISES

During the week ended 9th October, sugar sales in the Calcutta market averaged 3,000 bags daily. Arrivals a day were 1,500 bags and stocks totalled 75,000 bags. Rates for ready sugar ex-Kantapur delivery were Rs. 33 to Rs. 33-8 for big grain and Rs. 32-2 to Rs. 32-6 for small grain. The market rose during the week due to higher offtake, especially during its early part.

LINSEED IMPROVES

After a quiet opening, firmer conditions were noted following a Government tender for linseed oil, and prices rose steadily. More buyers were hoping for export business. Sellers were very reserved, however, and arrivals were very poor. Somewhat better conditions prevailed in the seeds section, and there was a small demand from local shippers and crushers; activity was small. Latest quotations were as follows: Ready-October Rs. 24 a maund.

HIDES AND SKINS

The market in goatskins continued firm and prices showed an upward tendency. Stocks were higher than in the previous week.

Bazaar Sales

(Between 2nd October and 8th October, 1956)

Cowhides: Wet salted (Ord.) 13,600 pcs. on the basis of Rs. 7-4 to Rs. 8; Wet salted (Slaughtered) 16,500 pcs. on the basis of Rs. 12-8 and Rs. 21.

Goatskins: Wet salted (Daissee, Killed) 28,200 pcs. on the basis of Rs. 230 to Rs. 255 and Rs. 330 to Rs. 345; Assam-Dinajpur 32,400 pcs. on the basis of Rs. 245 to Rs. 270; Purneah-Kissenganj 17,500 pcs. on the basis of Rs. 225 to Rs. 260; Pakur-Patna 11,500 pcs. on the basis of Rs. 150 to Rs. 220; Muzafferpore-Patna 92,000 pcs. on the basis of Rs. 175 to Rs. 185; and Muzafferpore 8,000 pcs. on the basis of Rs. 245 to Rs. 255.

Bazaar Stocks

(8th October, 1956)

Cowhides: Wet salted 1,64,500 pcs.
Goatskins: Wet salted (Daissee, Killed) 25,000 pcs.; Assam-Dinajpur-Jalpaiguri-Murshidabad 64,500 pcs.; Muzafferpore - Patna - Pakur - Purneah - Kissenganj 1,11,500 pcs.

COMPANY AND PUBLIC NOTICES

THE INDIAN IRON AND STEEL CO. LTD.

NOTICE

IN the Board's Circular Letter to the shareholders of Indian Iron & Steel Co. Ltd. dated 1st October, 1956 notification has been given that the Government of India are unable to agree to any increase in the rate of dividend on the Ordinary Share Capital of the Company. At a meeting of the Board of Directors held today, the Directors have accordingly recommended payment of a dividend of **One Rupee per share** free of Indian Income Tax being at the same rate as the preceding year. This dividend awaits the sanction of the shareholders at the Annual General Meeting to be held on the 30th November, 1956.

The Ordinary Share Register of the Company will be closed from the 20th November, 1956 to the 30th November, 1956, both dates inclusive and the dividend, if sanctioned, will be paid on or after the 17th December, 1956 to those shareholders whose names appear on the Register of Members on the 30th November, 1956.

By Order of the Board,
MARTIN BURN LTD.,
F. G. LIVERSEDGE,
Managing Director,
Managing Agents.

9th October, 1956.

12, Mission Row, Calcutta.

HULDIBARI TEA ASSOCIATION, LIMITED.

THE Sixty-seventh Ordinary Annual General Meeting of Shareholders of the above Association will be held at the Registered Office of the Association, No. 6, Church Lane, Calcutta, on Friday, the 9th November, 1956, at 12-15 P.M., to receive the Directors' Report, pass the Accounts for Season 1955, declare a Dividend and elect Directors and an Auditor.

The Share Transfer Books and Register of Members of the Association will be closed from the 27th October to the 9th November, 1956, both days inclusive.

By Order of the Directors,
DAVENPORT & CO. PRIVATE LTD.,
Managing Agents.

Calcutta, 11th October, 1956.

NOTE:—A member entitled to attend and vote at this Meeting is entitled to appoint a proxy, who need not be a member of the Association to attend and vote in his stead.

THE SHAHJAHANPUR ELECTRIC SUPPLY COMPANY LIMITED.

NOTICE

THE Annual Ordinary General Meeting of the Shareholders will be held at the Registered Office of the Company, Bahadurganj, Shahjahanpur on Wednesday, the 31st October, 1956 at 3 P.M. for the following purposes:—

1. To receive and pass the Directors' Report and the audited Accounts for the year ended 30th September, 1955.
2. To declare a Dividend.
3. To elect Directors in place of the retiring Directors.
4. To elect Auditors for the ensuing year and to fix their remuneration.

The Share Transfer Books of the Company will be closed from 24th October, 1956 to 31st October, 1956 both days inclusive.

OCTAVIUS STEEL & CO. LTD.,
A. H. GALLOWAY,
Managing Director,
Managing Agents.

Calcutta, 9th October, 1956.

NOTE: A member of the Company who is entitled to attend and vote is entitled to appoint a proxy to attend and vote instead of himself. A proxy need not be a Member of the Company.

NEW CHUMTA TEA COMPANY LIMITED.

THE Annual General Meeting of Shareholders of the abovenamed Company will be held at the Registered Office of the Company, No. 6, Church Lane, Calcutta, on Wednesday, the 31st October, 1956, at 12-15 P.M., to receive the Directors' Report, pass the Accounts for Season 1955, declare a Dividend and elect a Director and an Auditor.

The Share Transfer Books and Register of Members of the Company will be closed from the 18th October to the 31st October, 1956, both days inclusive.

By Order of the Directors,
DAVENPORT & CO. PRIVATE LTD.,
Managing Agents.

Calcutta, 9th October, 1956.

NOTE:—A member entitled to attend and vote at this Meeting is entitled to appoint a proxy, who need not be a member of the Company, to attend and vote in his stead.

Serving Industry—which Serves Mankind

1901—the birth of Monsanto starting with practically sweet nothing—the manufacture of a single chemical—Saccharin. Today, Monsanto ranks among the greatest names in chemicals and plastics, serving industry which serves mankind. Today—hundreds of industries rely on Monsanto: Agriculture—Automotive—Aviation—Beverages—Ceramics—Chemical Processing—Cosmetics, Perfumes—Dental—Dyeing—Electrical—Foods—Insecticides—Leather Tanning—Lumber—Machinery—Mining—Packaging—Paint, Varnish, Lacquer—Petroleum—Pharmaceutical—Pulp, Paper—Plastics—Printing Ink—Radio—Rayon—Refrigeration—Rubber—Soaps and Detergents—Textiles.

To those of you who are concerned with any operation in any of these industries, we extend a personal invitation—"Come and consult us". We shall help you increase production... improve products... decrease operating costs... and increase your sales.

MARGARET'S HOPE TEA COMPANY, LTD.

NOTICE is hereby given that the 56th Annual General Meeting of the Shareholders of Margaret's Hope Tea Company, Limited, will be held at McLeod House, No. 3, Netaji Subhas Road, Calcutta, the Registered Office of the Company, on Thursday, the 8th November, 1956, at 4-10 P.M., for the following purposes:—

1. To consider the Profit and Loss Account for the year ended 31st December, 1955, and the Balance Sheet as at that date, and the Reports of the Directors and Auditors.
2. To appoint a Director in place of Mr. G. T. Routledge, the retiring Director.

And, in this connection to consider, and if thought fit, to pass the following resolution which will be proposed as a Special Resolution in conformity with the provisions of Section 261 of the Companies Act, 1956:—

"That Mr. G. T. Routledge be and is hereby re-appointed a Director of the Company."

Special Notice dated 21st September, 1956, of intention to propose the foregoing resolution as a Special Resolution has been received by the Company wherein it is stated that a Special Notice of the Special Resolution is given to satisfy the requirements of Sections 190 and 261 (1) (f), (2) and (3) of the Companies Act, 1956, for the reason that Mr. G. T. Routledge, is a Director of Amluckie Tea Co. Ltd. and Tyroon Tea Co. Ltd., subsidiaries of McLeod & Co., Ltd., the Managing Agents to the Companies and he is, therefore, an associate of the Managing Agents within the definition in Section 2(3)(c)(i) of the Companies Act, 1956.

3. To appoint Auditors for the year ending 31st December, 1956, and to fix their remuneration.

As Special Business:

4. To consider and, if thought fit, to pass the following resolution:—

"That the Board of Directors be and is hereby permitted with effect from the commencement of the Companies Act, 1956, to borrow moneys from time to time for the carrying on of the business of the Company notwithstanding that the moneys to be borrowed together with the moneys already borrowed by the Company (apart from temporary loans obtained from the Company's Bankers in the ordinary course of business) will exceed the aggregate of the paid-up capital of the Company and its free reserves, that is to say, reserves not set apart for any specific purpose."

The Share Transfer Books of the Company will be closed from 25th October, 1956 to 8th November, 1956, both days inclusive.

By Order of the Board,
McLEOD & CO. LTD.,
A. T. DOIG,
Managing Director,
Managing Agents.

3, Netaji Subhas Road,

Calcutta, 4th October, 1956.

NOTE: A member entitled to attend and vote at the Meeting is entitled to appoint a proxy to attend and vote in his stead. A proxy need not be a member.

EXPLANATORY STATEMENT

The Resolution being Item No. 4 of the above Notice is intended to provide the Board of Directors with authority to enable them to borrow moneys from time to time for the Company's business in excess of the statutory limit being the paid-up capital of the Company and its free reserves, pursuant to Section 293(1) (d) of the Companies Act, 1956.

MACNEILL & BARRY LIMITED.

NOTICE is hereby given that the Board of Directors of this Company has sanctioned payment of the Dividend on the Preference Share Capital of the Company at the rate of 5½ per cent per annum for the half-year ended 30th September, 1956.

Payment will be made on 2nd November, 1956, to those Preference Shareholders whose names appear on the Company's Register on that date or in accordance with their instructions.

By Order of the Board,
A. H. FORSTER,
Secretary.

2, Fairlie Place,
Calcutta-1, 8th October, 1956.

THE HATTIKHIRA TEA CO. LTD.

A Dividend of 7½ for Season 1955, without any deduction for Income Tax paid by the Company has been declared payable to the Shareholders.

OCTAVIUS STEEL & CO. LTD.,
Managing Agents.
Calcutta, 9th October, 1956.

RANICHERRA TEA COMPANY LIMITED.

NOTICE is hereby given that the 48th Annual General Meeting of the Shareholders of Ranicherra Tea Company, Limited, will be held at McLeod House, No. 3, Netaji Subhas Road, Calcutta, the Registered Office of the Company, on Thursday, the 8th November, 1956, at 4 P.M., for the following purposes:—

1. To consider the Profit and Loss Account for the year ended 31st December, 1955, and the Balance Sheet as at that date, and the Reports of the Directors and Auditors.
2. To declare a Dividend.
3. To appoint a Director in place of Mr. J. Davies who retires by rotation and who, being eligible, offers himself for re-appointment.
4. To appoint Auditors for the year ending 31st December, 1956, and to fix their remuneration.

As Special Business:

5. To consider, and if thought fit, to pass the following resolution which will be proposed as a Special Resolution in conformity with the provisions of Section 261 of the Companies Act, 1956:—

"That Mr. G. T. Routledge be and is hereby appointed a Director of the Company."

Special Notice dated 21st September, 1956, of intention to propose the foregoing resolution as a Special Resolution has been received by the Company wherein it is stated that a Special Notice of the Special Resolution is given to satisfy the requirements of Sections 190 and 261 (1) (f), (2) and (3) of the Companies Act, 1956, for the reason that Mr. G. T. Routledge, the proposed candidate for a directorship, is a Director of Amluckie Tea Co. Ltd., a subsidiary of McLeod & Co., Ltd., the Managing Agents to the Company and he is, therefore, an associate of the Managing Agents within the definition in Section 2(3)(c)(i) of the Companies Act, 1956.

The Share Transfer Books of the Company will be closed from 25th October, 1956 to 8th November, 1956, both days inclusive.

By Order of the Board,
McLEOD & CO. LTD.,
A. T. DOIG,
Managing Director,
Managing Agents.

3, Netaji Subhas Road,

Calcutta, 4th October, 1956.

NOTE: 1. A member entitled to attend and vote at the Meeting is entitled to appoint a proxy to attend and vote in his stead. A proxy need not be a member.

2. Payment of the proposed Dividend, if declared, will be made on or after 15th November, 1956, only to those members whose names are registered in the Books of the Company on the 8th November, 1956, or to their Mandatees.

No application for Warrants will be necessary. Claims on behalf of holders of Shares on blank transfer will not be entertained.

EXPLANATORY STATEMENT

In the Special Notice given to the Company of the resolution being Item No. 5 of the above Notice, it is stated that Mr. G. T. Routledge is an associate of the Managing Agents within the meaning of the Companies Act, 1956, and therefore he can only be appointed a Director by a Special Resolution of which Special Notice has been given under the provisions of Section 261 of the Act.

MACNEILL & BARRY LTD.

NOTICE is hereby given that the Seventh Ordinary General Meeting of the Company will be held at the Registered Office of the Company, No. 2, Fairlie Place, Calcutta, on Saturday, 27th October, 1956, at 11-00 a.m.

BUSINESS:

1. To receive the Directors' Report and Auditors' Report and to adopt the Statement of Accounts for the year ended 31st March, 1956.
2. To declare Dividends.
3. To elect Directors.
4. To appoint Auditors and to fix their remuneration.
5. To transact any other competent business.

By Order of the Board,
A. H. FORSTER,
Secretary.

2, Fairlie Place,

Calcutta, 29th September, 1956.

NOTE—A member of the Company who is entitled to attend and vote may appoint a proxy to attend and vote instead of himself. A proxy need not be a member of the Company.

BHATKAWA TEA COMPANY, LIMITED.

NOTICE is hereby given that the 56th Annual General Meeting of the Shareholders of Bhatkawa Tea Company, Limited, will be held at McLeod House, No. 3, Netaji Subhas Road, Calcutta, the Registered Office of the Company, on Thursday, the 8th November, 1956, at 4-20 P.M., for the following purposes:—

1. To consider the Profit and Loss Account for the year ended 31st December, 1955, and the Balance Sheet as at that date, and the Reports of the Directors and Auditors.
2. To declare a Dividend.
3. To appoint a Director in place of Mr. R. H. D. Campbell who retires by rotation and who, being eligible, offers himself for re-appointment.
4. To appoint Auditors for the year ending 31st December, 1956, and to fix their remuneration.

The Share Transfer Books of the Company will be closed from 25th October, 1956 to 8th November, 1956, both days inclusive.

By Order of the Board,
McLEOD & CO. LTD.,
A. T. DOIG,
Managing Director,
Managing Agents.

3, Netaji Subhas Road,

Calcutta, 4th October, 1956.

NOTE: 1. A member entitled to attend and vote at the Meeting is entitled to appoint a proxy to attend and vote in his stead. A proxy need not be a member.

2. Payment of the proposed Dividend, if declared, will be made on or after 15th November, 1956, only to those members whose names are registered in the Books of the Company on the 8th November, 1956, or to their Mandatees.

No application for Warrants will be necessary. Claims on behalf of holders of Shares on blank transfer will not be entertained.

JESSOP AND COMPANY, LIMITED.

NOTICE is hereby given that the Directors have declared the payment, on 1st November, 1956, of the Dividend on the 5 per cent Cumulative Preference Shares of the Company for the half-year ending 31st October, 1956, without any deduction in respect of Income Tax payable by the Company.

The Preference Share Transfer Register will be closed from 29th October to 31st October, 1956, both days inclusive.

Dividends will be paid only to Registered Shareholders or their Mandatees.

By Order of the Board,
G. M. ROBBINS,
Secretary.

63, Netaji Subhas Road,
Calcutta-1.

4th October, 1956.

TEA COMPANIES

O. Po. and Dd indicate Ordinary, Preferred Ordinary and Deferred Shares respectively. P. next to the name of the company indicates that the company also has Preference Shares. Figures in 'accounts closed' column indicate the months of the calendar year in which accounts are closed. For Managing Agents refer to the Key (last page) under the numbers indicated.

THE SHIPPING LINK BETWEEN EUROPE AND ASIA

B. I. COMMEMORATES ITS CENTENARY

"It was Great Britain's unrivalled command of the swift steamer communications that made the British Empire possible," wrote the late Dr. Knowles in her famous study of industrial and commercial revolutions. In point of fact, the great days of the sailing ship were to be in the second half of the nineteenth century, by which time the Empire was a fact and the irruption of European trade into Asia and Africa was in full spate. The British India Steam Navigation Company, which celebrated its centenary a month ago, came into being at a moment when the possibilities of steam were only beginning to be glimpsed. Given average weather conditions, the large wooden sailing ship could, in 1956, still carry more goods more cheaply than any other kind of vessel. "The sailing ship, when I knew her in her days of perfection," said Joseph Conrad, "was a sensible creature.....no iron ship of yesterday ever attained the marvels of speed which the seamanship of men famous in their time had obtained from their wooden, copper-sheeted predecessors." It says something for the foresight of William Mackinnon, founder of the Calcutta and Burmah Steam Navigation Company, the progenitor of the B.I.S.N. Company, that from the beginning he plumped for steam vessels for the infant business, and for steam vessels powered by screw propellers in preference to the then more favoured sail-paddle. How daring this decision was may be gauged from the fact that sailing ships were largely employed to carry coal from Cardiff, Newcastle and Glasgow to the East to fuel the steamships that were ultimately to sweep them off the seas. Indeed, the coaling of the first steam vessels was to prove one of the most intractable problems in the logistics of shipping.

The whole story is admirably, if too briefly, told in *B.I. Centenary 1856-1956* by George Blake (Collins, 21s), which has been written to commemorate an occasion that is great not only in the annals of shipping, but also in the long record of British enterprise in the East. William Mackinnon began his Indian career as manager of a sugar mill in Coimbatore; Robert Mackenzie, the older founder-member of the historic partnership, and unhappily destined to a premature death, was in business in Ghazipur. Together they launched a firm of general merchants which enjoyed a considerable measure of success before Mackinnon inaugurated the Calcutta and Burmah Steam Navigation Co. Ltd. on 24th September, 1856, for the purpose of tendering for the mail contract between Calcutta and Rangoon. The company was formed with the modest capital of £35,000. In the light of latter-day arguments about the relationship between managing agent and managed company, it is not without significance that the historian should note that in the first troubled years of its existence the steamship company had behind it the "ever-increasing resources of the original mercantile firm". From the inception of the Calcutta and Burmah Steam Navigation Company, through 1862 when it became the British India Steam Navigation Company (original capital £400,000), and right up to the present day, Messrs. Mackinnon, Mackenzie and Company have been managing agents of the concern. The shipping company could not have been started without the inspiration of the agency house, and through the years, the two have grown together. Mr. Blake's narrative is the record of a long, harmonious and profitable partnership.

The third quarter of the nineteenth century witnessed an amazing expansion of world trade and economic activity with a corresponding increase in the amount of fetching and carrying to be done between the nations. William Mackinnon was quick to see the opportunities which lay ahead, and the transformation of the little Calcutta and Burmah line into the B.I. was recognition of the

rapid integration of Asia's trade with Europe and the quickening tempo of the commerce of the Indian Ocean and the eastern seas beyond. By the 1860's the Calcutta-Rangoon mail run had been enlarged to include services to Penang, Malacca and Singapore. A regular service was working between Bombay and Karachi, and a monthly run had begun round the coast of India from Calcutta to Bombay "touching at intermediate ports on the Coromandel and Malabar Coasts". At the time Vizagapatam, Coconada, Tuticorin, and Masulipatam were nothing more than names on the map. But Mackinnon's little screw steamers sought them out and gave them a place in the new and complex pattern of world trade. Except in the case of the mail steamers, the B.I. steamers cruised close inshore and any merchant with a parcel of goods to be put on board stood on a clear patch of beach and hoisted his umbrella to attract the shipper's attention. The captain was, in fact, the marine counterpart of the old country carrier, picking up trade where he could find it, in which he was encouraged by a commission on profits, an item in his remuneration

RUMBLINGS IN THE RUSSIAN EMPIRE

FREEDOM IN THE TEST-TUBE

(BY A CORRESPONDENT LATELY IN SOVIET RUSSIA)

TO one just back from Soviet Russia, post-Poznan news from Poland seems more agreeable than surprising. There is no mistaking the change that has come over the country, especially in its treatment of foreigners. Doves of Americans can be seen every day in the Kremlin, photographing anything they like and the Intourist guide trying hard to persuade that it has ever been so. It is now possible to talk to an ordinary Russian in a bus—if one knows Russian or the other party knows English—and the latter seems unafraid of consequences. The word "seems" has already been used twice, and this may be significant. It is no small mercy that the Intourist guide is not a tourist's only audience and teacher, as must have been the case even the other day. But it is impossible not to notice that not all the inhibitions, the instinctive distrust of all foreigners, have disappeared with Stalin. Again, the present air of relative freedom does not somehow strike one as being much more permanent than a brief Indian summer. Some Russians are undoubtedly enjoying themselves in the freer atmosphere. On the other hand, one meets a number of them who express misgivings that not every comrade is unspoilt by this unaccustomed freedom.

It is perhaps in the satellite countries that the new Khrushchev line is producing the most unpredictable results. The recent "holiday" Marshal Tito spent in the Crimea with Mr. Khrushchev, then the latter's sudden arrival in Warsaw, followed by Mr. Gomulka's unexpectedly outspoken address on his return to party leadership—they are all signs of some serious subterranean trouble quite conceivably brought about by the perhaps inadequately calculated risk taken by the new Russian leadership. It would be foolish to exaggerate the danger these disruptive forces constitute to Soviet power. But it is no longer a secret that what is happening in Poland is more a portent than an isolated event, and that it is causing the Kremlin no little concern. A sudden switch-back to Stalinist rigidity is not to be ruled out.

A useful question to ask is why, in the first place, the Russian leadership at all attempted these experiments in freedom. A cynical, but perhaps not wholly fanciful, answer is that no further refinement in tyranny was possible and, if his successors were to appear "different" from Stalin, this was the only course open to them. There are indications that the ebullient Mr. Khrushchev may have gone a little too far in his campaign of de-Stalinisation. The dead dictator's portraits, rather larger than life, can still be seen almost everywhere; and any irreverent reference to him, especially from a foreigner, is resented—even though the reference may be nothing like what Mr. Khrushchev himself said in his famous address to the secret session of the Twentieth Party Congress. The next generation of Russians may be taught differently, but not many of them today seem prepared fully to agree with Mr. Khrushchev in his derogatory assessment of Stalin's career. Those who rejoice in the new liberalism in Soviet Russia may be unwise to forget that the leadership still rests with the older generation.

That trouble should have started first in the satellite countries is only natural. Some of them are not strangers to freedom, as the Russians were even before the Revolution, and the masses in those countries have not been conditioned over so long a period. Secondly, Stalinist austerity is now beginning to pay off in Soviet Russia. The Communists have not a little to show for all the suffering they imposed upon the people for so long; there are parks for the people and apartment houses are going up at a tremendous speed. The Communist Parties in the satellite countries can claim no comparable achievements. The standard of living may in fact have declined in those countries, for they should be going through the phase Russia knew 15 or 20 years ago and now remembers with nothing short of horror. It is possible to argue that the Russians have by this time earned their relaxation while the newly communised countries have not; it is not easy to put this argument across to people who, besides suffering in their own countries, are now obliged to see an easier life in the neighbouring country, Russia. Discontent is only to be expected.

Kerensky's dream awaits no early fulfilment, and foolhardy offers of support to chosen elements in future Poznans can only provide the Russians with an excuse for stricter control and severer oppression, but the West will have to watch impending developments in the empire that Stalin built at least as closely as the men in the Kremlin must be doing. There are many possibilities, some of them hopeful, and waiting and watching may well be a better course of action than some of the adventurous steps canvassed by

men with more zeal than sense. The fact is that Mr. Khrushchev is now faced with a situation he cannot possibly have bargained for, and it is unlikely that he knows how to deal with it. The freedom he has given to the Russians after the long Stalinist night is, by western standards, very little indeed. There is still no free Press, and if there is much internal criticism, one hears none of it in public. But even this limited measure of freedom may prove too much. The satellite countries are already using it to a point the Kremlin cannot allow. Nor can the Russian reaction be a matter of unmitigated satisfaction to Messrs. Khrushchev and Company.

It is too early to assess the political significance of such phenomena, but the sight of Russian editions of Teddy boys in the Red Square and of well-dressed wives of well-to-do technocrats in Zis cars makes one wonder whether the Soviet civilisation is not approaching a phase that other proud civilisations of the past have known. There is now rising in Soviet Russia a generation which knows little of what has gone before and, in consequence, takes the present relatively easy life for granted. The country is still growing fast; Mr. Colin Clark or Mr. Peter Wiles, whoever is right about the rate of Russia's economic expansion, there is no doubt that the rate is high. But, and one speculates here with the utmost caution, there may be—tomorrow, if not today; next year, if not this—a tendency to sit back, to rest on the achievements of the previous generations. The Communists are trying hard to resist it; *Krokodil* satirises the slackers, and *Pravda* admonishes them regularly. But students of the history of civilisations know that leisure ushers in decay from inside, the potency of which is far greater than all the dangers from outside. The moral of this piece of Spenglerian speculation (and it is no more) is not that Soviet Russia may be left to rot of its own inanity, for signs of decay are still very few, but that her leaders, determined to fight the process of decay from inside, may be driven to desperate measures, the consequences of which will not be confined to Russia and her empire.

GUEST, KEEN, WILLIAMS SHARE ISSUE

THE public will have an attractive investment opportunity when subscription lists open on 7th November for an offer of ordinary shares in Guest, Keen, Williams, Ltd., a leading engineering concern. It is understood that the company proposes to issue 589,400 ordinary shares, of a par value of Rs. 10 each, at Rs. 20 a share. Applications are to be made for a minimum of 50 shares, or for multiples of 50. For the year ended last December, the company paid a total ordinary dividend of 17½ percent. For the current year, an interim dividend of 8 percent has already been paid (against last year's interim of 7½ percent). Assuming that the final dividend is at least the same as last year's, the yield on the shares will be good by present market standards. In addition to the attraction of any dividends which will henceforth be declared (to which the new shareholders will be entitled), an important consideration with investors will be the prospect of capital appreciation. It is believed that a higher premium on the issue price of the shares had been sought, but on the Government's suggestion the premium was reduced to Rs. 10.

The purpose of this issue is to help the company expand its production, enlarge the scope and range of its activities, provide additional working capital and afford an opportunity for the participation of Indian capital. It is expected that the expenditure on the various expansion projects, together with the normal replacement of fixed assets during the next four years, will be between Rs. 4 crores and Rs. 5 crores. A part of this money will be provided out of the proceeds of the present issue, and the company hopes to be able to finance the balance of the expenditure out of future earnings and resources which may become available from time to time. Guest, Keen, Williams, Ltd. was converted into a public company on 22nd October this year. Its net profits, before taxation, have shown a steady rise since 1953. In the year ended 2nd January, 1954, they amounted to Rs. 19.78 lakhs, out of which a dividend of 6 percent less tax was paid. In the following year, they rose to Rs. 49.68 lakhs, enabling the payment of a 15 percent dividend. During 1955, there was a further impressive rise in the profits to Rs. 99.31 lakhs, which provided a substantial cover for the total distribution of 17½ percent without deduction of tax. The company's trading during the current year so far shows continued improvement. This, together with the state of the order books, offers the hope that in absence of unforeseen circumstances, and with the development schemes gradually coming to fruition, the profits of current and future financial periods will respond suitably to the growth of the company.

After the shares now being issued have been allotted, the company is expected to come under the purview of Section 23A of the Indian Income-Tax Act. These shares are approved investments under the Insurance Act, and are therefore likely to be of much interest to insurance organisations. An application is being made to the Calcutta Stock Exchange in order to list them there and obtain

an official quotation. The latest balance-sheet, as at 31st December, 1955, shows fixed assets at more than Rs. 1.73 crores, and net assets at more than Rs. 2.29 crores. The present paid-up capital is Rs. 1,41,06,000, and is divided into 14,10,600 shares of Rs. 10 paid-up value each. Reserves held by the company are well over Rs. 70 lakhs.

The development plans of Guest, Keen, Williams, Ltd. are impressive. At the Calcutta works the extensions and modernisation, begun in 1954, of the bolt and nut cold forging department are now substantially completed, and the modernisation of the bolt and nut hot forging department has already commenced. The modernisation and extension of the forging plant and machining capacity for the railway permanent way and rolling stock fittings requirements are now being embarked upon. In addition, plans are being made for a greatly increased output of the special steel sleepers required for railway points and crossings. To keep pace with the modernisation of the fabricating departments and to ensure a satisfactory supply of bars, rods and special sections to these departments, modernisation and expansion of the rolling mills at the company's Calcutta works are now in progress.

Another development linked with the rolling mill expansion is the installation of a second electric steel melting furnace to provide special and alloy steels, which will increase the existing capacity from 6,000 tons to 12,000 tons per annum. It is expected that the new electric steel melting furnace will begin operating during the year 1957. It is also expected that the initial stages of the rolling expansion scheme will come into production at the end of the year 1958 and that its subsequent stages will be implemented by the end of the year 1959. It will be seen therefore that the cost of this expansion programme will be spread over some four years. The company is also developing at its Calcutta works the manufacture of tungsten-carbide for drawing dies and rock drill bits, for which latter there is a growing demand for use in the construction of river valley projects and quarrying generally. A further development is the manufacture of steel road wheels for pneumatic tyre equipment, plans for which have been drawn up. At the company's Bhandup works, a considerable expansion in the productive capacity of wood screws is almost complete and the resultant increase in production is already being experienced; at the same time this works is now manufacturing metal-thread screws and timmen's rivets, cotter pins and hypodermic needles as new lines.

CURRENT COIN

Calcutta Tram Fares.—The feature of Mr. D. E. Webb's speech from the chair at the recent annual general meeting of the Calcutta Tramways Company Ltd in London was a renewed plea for an increase in tram fares (a fuller report of the speech appears on a later page). He pointed out that the undertaking was being run on a day-to-day basis. The fleet of cars and the track was being maintained efficiently and the essential services were being duly rendered, but "we are not advancing as we should". Even the smaller projects for the realignment of tracks to conform with the city's traffic problems, and the provision of cars of improved design, affording greater comfort and travelling facilities for the public, cost sums vastly in excess of the surplus available to meet them. Mr. Webb declared that there is still a feeling in Calcutta that increased fares will mean increased profits for the shareholders. But, he emphasised, the amount available for shareholders was fixed under the agreement with the Government. "Even if the surplus on running the undertaking were to increase ten-fold, the amount available for the shareholders would not increase by one rupee. Any increase in the surplus can only accrue for the benefit of the Government and the people of Calcutta". During the year ended last December, traffic receipts, at £1.89 million, were a record in the company's history. According to Mr. Webb, this reflected the increased confidence of the travelling public as a result of the absence of major disturbances. Expenses, however, also rose by about £40,000. Discussing the prospects for the current year, Mr. Webb stated that the results of the company so far have been comparable with those of the past year. Receipts have remained constant but expenses have increased slightly, and there is therefore a small decline in the profit.

Malayalam Plantations.—Mr. H. W. Horner, chairman, has told shareholders of Malayalam Plantations Ltd. in his address, circulated with the latest report and accounts, that the past year has been a worse one for the company's tea, but a better one for its rubber. (The address is published on a later page.) The 1955-56 tea crop was bigger than in the previous year but still not as large as had been expected. The average price realised for exportable tea was lower, while the cost of production rose slightly. Rubber enjoyed favourable weather and its production exceeded estimates; the net average price for it was also slightly higher,

Mr. Horner reiterated the criticism he made last year of the tea export duty as being unfair and discriminatory. "Such treatment can hardly encourage new capital to enter India where success may produce profits liable to expropriation without justification". South Indian producers, he claimed, were at a particular disadvantage as far as the tea export duty was concerned. Referring to the replanting of rubber areas, Mr. Horner said that to contribute to the cost of replanting, a small and quite inadequate sum was included in the controlled price of rubber, and producers had been told that failure to replant would result in a reduction of the controlled price. "That it is necessary to maintain the estates, both tea and rubber, at a high standard of cultivation and equipment goes without saying, and we shall have to keep pace with the requirements of the Government in implementation of the Plantations Labour Act. Among contingencies are those unpredictable effects upon the company of the delays which may be occasioned by any difficulties in the Suez Canal area; for instance, we may have to finance the tea crop for a number of months longer than usual, together with enhanced costs of shipment, until sale can be effected and the proceeds realised. These and similar considerations emphasise the importance of maintaining the company's finances and of strengthening them, when possible, while giving the members a satisfactory dividend." Discussing the outlook for the current year, Mr. Horner pointed out that the market for medium and low-grown teas, similar to those which formed the bulk of the company's output, had been appreciably lower in recent months than in the corresponding months of last year, but it had improved in the last few weeks. Everything possible was being done on the estates to maintain a satisfactory standard of quality. Modernisation and improvement of factories and machinery were being effected each year, and these would be continued as circumstances permitted.

Shares from Levers.—Four companies belonging to the Unilever group which operate in India are taking measures to invite Indian participation in their capital structure. The companies are Lever Brothers (India) Private Ltd., the Hindustan Vanaspati Manufacturing Co. Private Ltd., William Gosage and Sons (India) Private Ltd. and Joseph Crosfield and Sons (India) Private Ltd. As a preliminary step, Lever Brothers (India) Private Ltd. has absorbed the other three companies, and proposes shortly to convert itself into a public company under a new name. The High Court of Bombay has sanctioned the amalgamations and the Government of India has sanctioned the other legal steps to be taken before part of the holdings of Unilever in the amalgamated company can be offered to the public. These companies have for many years been providing well-known brands of soap, toilet preparations, vanaspati, margarine and glycerine in this country.

New Line for Texmaco.—An agreement has been concluded between the Textile Machinery Corporation Ltd. and Combustion Engineering Inc. of the U.S.A. for the manufacture of water tube boilers and complete steam generating plants for the first time in this country. Texmaco already manufactures smoke tube boilers, pressure vessels and other heavy engineering equipment. Combustion Engineering Inc. is known in India for the steam generating units supplied to the Bokaro thermal power station of the D.V.C. The initial agreement between Texmaco and Combustion Engineering covers the manufacture of water tube boilers of various designs up to 75,000 lbs. of steam an hour, and working pressure of 400 lbs. a square inch, with a maximum temperature of 700 degrees F for oil, gas, coal and bagasse firing or any combination of these methods. The mechanical stokers or firing equipment will also be manufactured in India. A programme has been drawn up for indigenous manufacture by stages, with the first phase coming into operation immediately. The Texmaco factory in Belgharia, near Calcutta, is being expanded for the indigenous manufacture of complete steam generating plants by 1959. Indian personnel will receive training at the works of Combustion Engineering Inc. in the U.S.A. The manufacture in India of water tube boilers and steam generating plants will be of interest to such users of industrial steam as the textile, jute, sugar, oil, chemical and paper industries.

Promoting Exports.—India's export trade should be conducted with two main ends in view. One is the short-term need to earn foreign exchange to finance development plans. The other is the equally important long-term need to maintain and expand overseas markets for India's manufactured products, of which more will be available as industrialisation makes steady progress. It is not always that the authorities pay adequate attention to the two aspects of the problem. The pressing need to expand exports seems to have been recognised only theoretically so far; in practice, current fiscal policy tends often to

restrict them. A representation which the Indian Chamber of Commerce has just addressed to the Government offers some examples of how not to promote exports. The tea industry, one of the principal foreign exchange earners, has been burdened with so many levies that it might soon find it difficult to sell its products abroad at competitive prices. The production of the organised cotton industry has been pegged, although its foreign markets are in serious danger of being lost through increasing competition. Vanaspati exports are being hampered by the excise duty on better had there been a fiscal relaxation to help groundnut oil, and confectionery could have done the industry. The Chamber suggests that the obstacles should be removed if the exports of these industries are to increase. There are bright possibilities of selling leather and leather goods, engineering and electrical goods, chemicals, pharmaceuticals and paints, if sufficient efforts are made abroad.

U.S. Loans for Atom Power Reactors.—The U.S. Export-Import Bank has announced that it is ready to consider long-term loans to other countries to finance atomic power reactors. The Bank has also said, in a joint announcement with the U.S. Atomic Energy Commission, that it will make loans—under suitable circumstances—for the construction of research reactors. The United States now has research reactor agreements with 32 countries and power reactor agreements with seven. The Bank will consider loans to privately-owned public utility companies as well as to Governments to build the nuclear power systems in countries having atomic agreements with the United States. Loans will be made on terms

similar to those provided in the Bank's financing of conventional type power plants where U.S. equipment and technical services are required. Before approving a reactor construction loan, the Bank will require (1) a comprehensive engineering survey of the proposed projects; (2) a technical report by the A.E.C. on the reactor to be used; and (3) an arrangement for the lease or sale of atomic fuels by the A.E.C. for the term of the loan, unless nuclear fuels are available locally. Although proposed power reactor projects will not necessarily have to be more economical than a coal, oil or hydro-electric power plant, the relative efficiency would be taken into account, along with the availability and cost of conventional fuels in the country concerned.

FOOD FOR THE PEOPLE

THERE seems, we regret to say, to be little reason to doubt that we are on the verge of very pronounced scarcity if not actual famine. The needed rain has not fallen and the crops have consequently failed; prices of grain have already risen to famine pitch, and domestic servants, labourers and people on small wages are already feeling the pinch very sharply. It is reported that there are large stocks of food-grains in the country held in the hands of bunnies and others, who look to make an unhallowed profit out of the misfortune of the people. The Government, we understand, will do nothing in the way of importing grain. Buried in the mountain recesses of Simla, they are filled with Mill's *Political Economy*, and the beautiful theory of supply and demand. Theory is all very well. "No fiend's so cruel as a rearing brute," but the question is, how is the price of grain to be kept down, so that the poor may live? We believe that, if the Government of India were to import five or six cargoes of wheat, it would have a most salutary effect on prices, and the loss, if any, would be trifling. Our merchants cannot be expected to commit themselves to wheat imports which might lower local prices, and so expose them to a loss. They are not philanthropists. But the Government, which is concerned with the welfare of the country, might make the experiment with manifest advantage.

SOUTH EASTERN RAILWAY TENDERS.

The General Manager, Garden Reach, Calcutta-23 invites the following tenders:

- (1) Tender No. GM13/56/513 CS(56) for supply of:
 - (a) Socket galvanised as per our CME's DRG. 10670 item 5—2,288 Nos.
 - (b) Sliding Door LH complete as per IRS Drg.CB/50/12—30 Nos.
 - (c) Sliding Door RH complete as per IRS Drg.CB/50/12—30 Nos.
 - (d) Louvers slat MS as per drg. LLHXZ 114—30,000 Nos.
 - (e) Step Iron as per IRS Drg.CA 1137, alt.3—375 Nos.
 - (f) Chest Bullion complete as per IRS Drg.CA 273—15 Nos.
- (2) Tender No. GM 14/56/514 CS (56) for supply of 900 Nos. Sheet Aluminium Hard Temper to Specn. Alloy 'Indal' M57-S containing 2% manganese 13 gauge thick 12" x 2'-10".
- (3) Tender No. GM13/56/515 CS(56) for supply of:
 - (a) Tank roof water 120-gall. capacity made from aluminium alloy 'Indal' 3 S 1.1/4% manganese complete as per drg.479 C & W/KPA—30 Nos.
 - (b) Tank roof water 60 gall. capacity as per drg.480 C & W/KPA—30 Nos.
 - (c) Tank roof water 38 gall. capacity as per drg. 483 C & W/KPA—30 Nos.

Tender forms are obtainable from the Controller of Stores, Garden Reach, Calcutta-23 (IB Section) on remittance of Rs. 5/- per copy tender (not refundable) by Money Order to him direct in case of outside firms and on production of Cash Receipt from the Chief Cashier, Garden Reach, Calcutta-23 by local firms. Closing date of all tenders is 6-11-56 at 12 noon.

GOVERNMENT OF INDIA

Ministry of Railways
(Railway Board)

ENQUIRY NOTICE.

Indian Railways require a large number of bridge girder spans, both broad gauge (5'-6") and metre gauge, varying from 30 ft. to 200 ft. spans. Indian and foreign fabricating firms of repute interested in supplying these girders are requested to contact the undersigned for further information. This is not a Tender Notice but only an Enquiry.

Without Prejudice

DEMANDS FOR PUJA BONUS
TRIBUNAL TURNS DOWN CLAIM
OF WORKMEN

(FROM OUR LEGAL CORRESPONDENT)

HERE is an instructive case on demands for Puja bonus. This particular claim was for a Puja bonus for 1954 and was made on the ground that the payment of such bonus every year, at or about the time of the Puja, was a condition of service of the workman. The claim was also founded on what was said to be the standard practice. The workmen's union contended that the Puja bonus was to be paid every year irrespective of the profit and loss of the employers. It stated that the employing company had paid since 1948 the following annual bonus. In 1948, six days' wages as bonus were paid to all workmen who had completed one year of service and four days' wages to those workmen who had not completed one year's service. Similar payments of bonus were made during the years 1949-51, although the factory remained closed for about six weeks in the year 1951. In 1952, Rs. 5 was paid as bonus to all workmen, irrespective of the period of ser-

vice, notwithstanding the fact that the factory was closed from 7th April until August. In stating its case, the union further said that for the Puja bonus for 1953, a dispute arose between the parties, and it was referred to the tribunal for adjudication, but the dispute was amicably settled by the parties and bonus equivalent to five days' wages was paid to all the workmen. The workmen accordingly demanded payment of bonus for the year 1954 but, so the union alleged, the company refused to pay any bonus, although it earned huge profits in the year in question. So, one month's pay with dearness allowance to all workers had been claimed as Puja bonus for the year 1954.

The company resisted the claim, stating the payment of bonus every year at or about the time of the Puja was never a condition of service, nor was there any stipulation, express or implied, that bonus would be paid irrespective of the profit or loss of the company. It contended that the payments made to the workers during the years 1948-53 were purely grace payments as a gesture of goodwill to its staff, and on condition that the said payments would not constitute a precedent for the future. No oral evidence was adduced by either side. But from the documentary evidence adduced by the employers, it appeared that in the past the employers had paid bonus for the years 1948-53 at the time of the Puja, and that the bonus

so paid was not uniform but the amount varied from year to year. Counsel appearing for the union accordingly argued that this practice of payment of bonus since 1949 had ripened into a custom, and might reasonably lead to an implied agreement between the company and the workers, and that the workers could therefore claim bonus at or about the time of the Puja as a matter of right and as a term of the contract of service.

In this, arguing counsel was obviously relying on the observations of the Appellate Tribunal in the well known case of *Mahadaxmi Cotton Mills* (1952) L.A.C. 370-1952-II L.L.J. 635 wherein that Tribunal laid down principles to be observed in connection with claims for Puja bonus. These were their lordships' observations: "Puja bonus is a bonus claimed by the workers as a matter of right, payable by the employer at a special season of the year, namely, at the time of the annual Durga Puja. This right is not based on the general principle that labour and capital should share the surplus left after meeting necessary and prior charges, but it rests on agreement between the employer and the workers. The agreement may be either express or implied and, where not express, past practice may lead to an inference of implied agreement. But for implying an agreement, the practice must be unbroken and for a sufficiently long period to exclude the hypothesis that payments had been made out of bounty."

Applying the above principles to the present case, the tribunal found that there was no express agreement between employers and employees in the matter of Puja bonus, and therefore the question was whether an implied agreement to pay bonus once a year on the occasion of the Puja could be inferred from the facts established in the case. The union contended that the evidence as laid by the company proved at least an implied agreement, because for several years (that is from 1948 to 1953) the company had paid bonus at or about the time of the Puja. But the tribunal pointed out that for a practice to grow into a custom it must be reasonable, unbroken, and immemorial, or at least the practice must have existed for a reasonably long time. "Assuming," the tribunal added, "that there has been a practice in the last few years to pay some bonus at or about the time of the Puja regardless of profit or loss, it cannot be said to be reasonable, because if bonus is awarded to workmen irrespective of the fact whether or not the concern has made profits, then sooner or later the concern is bound to crash—a result which will not be beneficial either to the workmen or to society as a whole. Even if in the past the company voluntarily gave some amount as bonus to the employees, that can be no reason for the award of bonus in subsequent years. The materials placed before the tribunal indicate, no doubt, that some bonus was paid to the workers every year at or about the time of the Puja during the years 1948, 1949, 1950, 1951 and 1952, not at uniform rates but the rate varied from year to year, and that the company as a gesture of goodwill offered also to pay five days' basic wages to all workers as Puja bonus in 1953 when the matter came up before the tribunal. But it appears that only in the years 1951 and 1952 Puja bonus was paid in the month of October and that in other years, viz. 1948, 1949 and 1950 basic wages for a few days were paid as grace payments."

The tribunal did not consider that a period of four or five years was long enough to enable it to pronounce that the practice of paying bonus at or about the time of the Puja had been unbroken or for a reasonably long time; and as both elements of reasonableness and the existence of the practice for a reasonably long time were wanting, the case of the workmen based on custom could not stand. Nor, the tribunal held, could an implied agreement to pay bonus once a year on the occasion of the Puja be inferred from the facts established in the case. "For implying an agreement too, the practice must be unbroken and for a sufficiently long period to exclude the hypothesis that payments have been made out of bounty. Notices issued by the management at the time of payment of bonus in 1948, 1949, 1950, 1951 and 1952, and the copy of the award relating to the payment of bonus for 1953, go to show unmistakably that those payments were purely *ex gratia* and made on condition that they would not serve as a precedent for the future. In the face of such positive evidence on the side of the management, which was not and could not be categorically denied by any direct evidence on the side of the union, it is indeed difficult to disbelieve the company's version that payments were made as an act of grace and that they were purely voluntary on condition that such payments would not be accepted as precedents for the future. This evidence of the company does not exclude the hypothesis that payments have been made out of bounty but, on the contrary, it confirms that. The tribunal is accordingly of the opinion that the evidence on the record is not sufficient to lead to a reasonable inference that bonus was paid by the company in recognition of a right of the workmen so as to give rise to the inference that there was an implied agreement to pay bonus on which a case that bonus was paid as a condition of service could be founded. Therefore the Puja bonus for the year under reference cannot be claimed as a matter of right."

The tribunal held that the workmen's claim for Puja bonus was untenable, and made its award accordingly. It should be noted that this is a decision of the Industrial Tribunal and not of the Appellate Tribunal. It may therefore be the subject of further appeal. But so far as we are aware, no such appeal has yet been reported.

(1956. I. L.L.J. p.422).

A DITCHER'S DIARY

at all, look like easily expendable worms—and more by cars and trains. Time may not be saved this way, but time, surely, cannot be the only thing worth saving. How about the world? And the men, women and children living in it?

Three cheers for Jainull and his brave band of ten. Last week they demonstrated to an astonished world the invincibility of the human will in face of certain death, which had held them at bay for eighteen interminable days. Towards the end of last month, along with twenty-eight other underground workers, they were caught in the Burra Dhemo colliery disaster, one of the worst for years, and had all been given up for lost. But as rescue squads were probing around in search of the trapped, Jainull's party suddenly saw a tunnel of light and shouted for help, and shortly afterwards they were brought into the light of day on the morning of 15th October. They are now recovering—happy news—in the Kalla Central Hospital. Their feat of endurance, especially that of Jainull, the 40-year-old leader, has been acknowledged as nothing short of a miracle, since although during their period of entombment all had subsisted on water, some raw fish and the compressed oxygen in the pocket where they were resisting death, to him had fallen the task of bucking up his companions with hope-sustaining talk of help forthcoming, and it was he who appears to have been the least affected by the ordeal. When the eleven of them were brought up to the pithead, all save Jainull were carried on stretchers to the first-aid post a quarter of a mile away, but he jauntily walked the distance. It seems to me that before this feat the vaunted claims of pretenders to supernatural powers look a little shabby, and that Jainull's example constitutes a mild rebuke to current theories of the relation between life and nourishment.

Coming to think of it, I don't think I have ever been on a helicopter. It must be a very useful means of transport, and Mr. Nehru looks quite comfortable in it. (In discomfort, the *tonga* will take a lot of beating.) I still do not think I would care to travel by helicopter if I could help it. The thing looks ugly, and it deprives you of the security of *terra firma* without giving you the thrill of high altitudes. A view from above adds a new dimension to our usually horizontal existence, and you certainly see more of the scene, but there is, I suspect, a qualitative difference in the view from above. Flooded areas are, of course, best seen from a helicopter, and Mr. Nehru has not the time to spare; and in any case he probably meets more people in the flesh than any statesman of his stature. But I am still not among those who consider that the aeroplane has rendered all other forms of locomotion useless or primitive. There is nothing like the warm touch of humanity, which can be had only on land, and it remains my vague notion that there is an element of unreality in the view Messrs. Dulles and Krishna Menon get of the earth they fly over so frequently, with such tireless energy. Emergencies apart, a railway minister who travels by rail is likely to be more keenly aware of the common passenger's lot than one who travels chiefly by air. I would not subject the Director-General of Transport to the ordeal every day, but an occasional ride by him in a State bus—preferably during the rush hours—might well tell him more about the services he runs than can be found in the reports he doubtless studies. To return to the political level, I think politicians and dictators would plunge the world and its inhabitants into periodical wars less light-heartedly if they travelled less by air—from high, men, if seen

Early this week, I saw a new group of malcontents marching in procession down Chowringhee—that of laundry workers. This, taken together with the recent agitation staged by Delhi's domestic servants, makes me think that leftist parties are gradually widening their net in a pre-election bid to gain new supporters. I do not know what the grievances of Calcutta's laundrymen are, but I can quite conceive that the lot of domestics in this country is a hard one, although their wages have gone up by about two-hundred percent or more since prewar days. One great hardship of theirs, as it occurs to me, is that they are not, generally speaking, considered as entitled to any weekly recess or annual paid leave, as in many western countries. They have to work week in and week out, although this may include inflating marketing bills, plate-smashing, petty larcenies and eaves-dropping which last, I think, is the cause of the saying, "No one is a hero to his valet." Even so, theirs is a very important job, and there are few who can do without what Disraeli called "the gentle offices of servitude." I say this despite the fact that as great a man as Abraham Lincoln blacked his own boots and that Mr. Rajagopalachari has been known to wash his own clothes. I suspect that without the assistance of Hari, the valet who, it may be recalled, was once a member of the U.P. Assembly, Mr. Nehru's efficiency might have been impaired. In India, I am afraid, servants have not yet achieved the recognition they have in England and her literature. For example, Dr. Johnson's negro boy, Francis Barber, whom his master rarely addressed without

the honorific "Mr.", was a fairly well-known character. The Doctor left him an annuity of £70, and since he was also residuary legatee, his total receipts were something like £1,500. Tennyson's maid, Emma Durham has achieved immortality not only by carefully nursing the Poet Laureate in his last illness, but also by reason of a brilliant retort. One evening, when he was engaged in a pleasant conversation with friends, it had grown late and Emma wanted him to retire to bed. "Go away, old woman," said the poet jokingly, "and learn Latin." She went away but returned in a few minutes to announce, "*Tempus fugit*, my Lord."

I see the London Chamber of Commerce celebrated its seventy-fifth birthday a short while ago with appropriate feasting and speech-making. At seventy-five years of age, it is somewhat younger than several of our larger chambers of commerce in India. Incidentally, while on the subject of age, I note that, by his researches, one young man—with perhaps more zeal than discretion—is endeavouring to make the Bengal Chamber some years older than its official and admitted age. But that is by the way. One wonders how it is that London, the greatest port in Europe and for four hundred years a centre of world trade, did not have its own chamber of commerce until 1881. The answer is that until the last quarter of the nineteenth century, the guilds were pretty powerful and looked after many of the commercial interests which would ordinarily coalesce in a chamber of commerce. But what the London Chamber lacks in years, it more than makes up in size and importance. Today it has more than 14,000 firms in its membership, and it goes without saying that an immense staff and plenty of organisation are needed to service a body of this size. Furthermore, in the three-quarters of a century of its life, it has only had three secretaries, the present incumbent, Mr. A. de V. Leigh, having held the post for some thirty-three years. This may well be a record in its own field, and certainly Mr. Leigh has made an immense personal contribution to the growth of the London Chamber.

Geoffrey Tyson writes: The many banking and other friends in India of W. T. C. (Bill) Parker will have been saddened by the news of his death so soon after he had said goodbye to the country in which he worked for so long, and for which he had a deep and abiding affection. His protracted illness and unavailing struggle against an incurable complaint, was, in every way, worthy of one who lacked nothing in courage and had always met life on its own terms. Infinitely patient, always cheerful and considerate of others, he continued almost to the end to take a lively interest in all that went on around him in the great London hospital in which he spent his last days. Sundry Calcutta friends visited him regularly, and none ever heard a word of complaint from him as each day brought the end nearer. As husband and father, he was the centre of a united and devoted family to whom much sympathy will go at this moment. He was interred in the little fishing village of Beadnell on the Northumberland coast, where he had made his English home in recent years. It was typical of Bill Parker that he had already become the close friend of many of the fisherfolk there. Indeed, he had a genius for friendship, and that is why he will be most remembered by many people. Colleagues and business associates in the City paid their last respects to his memory at a service which was held at St. Michael's, Cornhill, a few days ago.

THE CALCUTTA TRAMWAYS COMPANY LIMITED.

RECORD TRAFFIC RECEIPTS

NEED FOR GREATER CASH RESOURCES

MR. D. E. WEBB'S SPEECH

The Annual General Meeting of The Calcutta Tramways Company, Ltd., was held on 9th October, 1956, at Winchester House, Old Broad Street, London. E.C. Mr. D. E. Webb, F.C.A., the chairman, who presided, said:

Gentlemen.—The accounts of your company for the year ended 31st December, 1955 show a continuation of the improved conditions of the previous year. The period was once more free from major incidents and, as a result, it has been possible to strengthen the company's position still further.

The popularity of the trams was once more evinced by the increase in the number of passengers car-

ried to a total of 384 million. In order to achieve this figure each tramcar in service had to run about one hundred miles a day through crowded streets, continually stopping and starting, and it is a matter for congratulation to our engineers and workshop and depot staffs that they not only keep the trams in first-class mechanical condition, but present them to the public in a condition of cleanliness comparable with the best of those in any world capital.

Traffic Receipts

Traffic receipts, which amounted to £1,891,939, were a record in the company's history, and were a direct result of the increase in confidence of the travelling

public as a result of the absence of major disturbances. At the same time expenses rose by some £40,000, of which increased payments to the staff in India amounted to £23,000. After charging London office expenses, setting aside £80,000 to renewals and replacements account, and including £10,831 expenditure on development account, the balance carried to revenue appropriation account was £206,018 compared with £189,639 in the previous year. The amount set aside for taxation amounted to £83,000 and, after paying Debenture stock interest and allocating the fixed agreed amount of £87,457 to shareholders' account, there remained a balance of £21,742 for transfer to special reserve account.

Turning to the shareholders' account, there is an item, First Debenture stock redemption account, appearing for the first time. This represents the purchase in the market of amounts of the First Debenture stock which have been bought in and cancelled at a considerable discount. It was felt that it must be in the interest of the Ordinary shareholders to acquire and cancel such Debentures as, whenever the underwriting is by the Government, they will become repayable at par out of the purchase price. The Second Debentures are, of course, already taken care of by the existing redemption provisions. During the year £6,305 of First Debenture stock has been purchased and cancelled at a cost of £3,902.

An interim dividend on the Ordinary shares of 3½ per cent. free of tax was paid in March, and your board now recommend the payment of a final dividend of 5 per cent., free of tax, making a total for the year of 8½ per cent., free of tax, compared with 7½ per cent., free of tax, for the preceding year.

Balance-sheet

Turning to the balance-sheet, there are a few points to which I would call your attention. The expenditure on renewals and replacements account amounted to £102,495 and has exceeded the allocation of £80,000 as foreshadowed last year. The major increase has been on renewals of permanent way, and this expenditure will remain high for several years to come.

An additional amount of £15,828 has been added to the special reserve account, being overprovision for taxation in previous years. These adjustments on taxation account arise mainly from the settlement of claims for double taxation relief on which finality in respect of certain past years has still not been reached.

The liquid cash position has further improved to a more satisfactory level. On this subject I would like to draw attention to the remarks I made last year regarding the necessity for these liquid reserves and the fallacy inherent in union leaders' arguments that they can be made available for any other purpose. At that time I said:—

"I would emphasize the following points:—

(a) Your undertaking is of necessity a cash business. There are, therefore, no sundry debtors in the normal course of trade.

(b) When disturbances occur, the source of cash dries up, whilst our normal expenses are off the road, our cash resources are depleted at the rate of about £100,000 a month.

(c) Once that money has been lost, we cannot make it up afterwards by working harder. It has gone for good.

(d) During a time of unrest cash ceases to come in but our creditors still have to be paid."

Need for Increased Fares

Once more I would reiterate how badly we need an increase in fares. We are running this great undertaking on a day to day basis. The fleet of cars and the track are being maintained in an efficient state and the essential services are being rendered to the people of Calcutta, but we are not advancing as we should. Even the smaller projects for the realignment of tracks to conform with the city's all-important traffic problems, and the provision of cars of improved design, affording greater comfort and travelling facilities for the public, cost sums vastly in excess of the surplus available to meet them, resulting from the present scale of fares.

There is still a feeling in Calcutta that increased fares will mean increased profits for the shareholders. One cannot repeat too often that the amount available for shareholders is fixed under the agreement with Government. Even if the surplus on running the undertaking were to increase ten-fold the amount available for the shareholders would not increase by one rupee. Any increase in the surplus can only accrue for the benefit of the Government and the people of Calcutta. One of the great objects behind the Agreement with Government was to ensure that never again would an increase in fares be questioned on the grounds that it would benefit the shareholders. Such an increase, when necessary, can only result in a surplus to be used in improving and modernizing the undertaking and alleviating the travelling worries of the public.

Current Year

The results of the current year to date are comparable with those under review. Receipts have remained constant whilst expenses have increased slightly, showing a small decrease in profit. I am visiting your undertaking at the beginning of November, when I hope to have conversations with Government on several matters of importance.

Our staff have rendered good service during the year under review. Whilst temporary stoppages have occurred, nevertheless on the whole our employees have shown a greater sense of responsibility in their negotiations and an increased appreciation of good employment. We sincerely hope that this points to a permanent improvement in the relations between management and staff, where both sides recognize their responsibilities, and where the seed of mutual confidence may have every chance of being sown and taking root.

The executive staff, some of whom have received promotion to more responsible tasks, have once more given of their best. Our agent, Mr. Blease, has had a worrying time due to the retirement of some of the senior members of his executive. He is, however, once more building up a first-class team, and our thanks are due to them all.

The report and accounts were adopted.

Flying to London? Do it the comfortable way—by the Kangaroo route

The Kangaroo route is the direct route—Calcutta to London the next day by fast, frequent B.O.A.C. and Qantas services. It is also the luxurious route—you enjoy First Class travel in the finest B.O.A.C. "Majestic" and Qantas "Connoisseur" tradition. Superb food and wines, attentive personal service, fully reclining "Slumberettes" or "Sleeper-chairs". No extras. Several flights weekly by Constellation or Super-G Constellation. Also comfortable "Coronet" Tourist services at substantially lower fares.

SEVERE DROUGHT RESTRICTS CROP

EFFECT OF EXPORT DUTY

MR. H. W. HORNER'S ADDRESS

The Annual General Meeting of Malayalam Plantations Limited will be held on 8th November, 1956 in London.

The following is the circulated address by Mr. H. W. Horner, the chairman:—

About the time of our meeting last year, in mid-November, 1955, the company's tea crop was some 600,000 lb. in excess of the crop for the corresponding period of the previous year. Unfortunately all districts then experienced a severe drought which extended over the last five months of the financial year 1955-56 and into the early period of 1956-57. Crops of both seasons were adversely affected: the crop harvested for 1955-56 at 15,933,400 lb. represented an improvement on that for the previous year, which was 15,832,250, but was disappointing since, if more usual climatic conditions had obtained throughout the year, the crop could easily have been substantially greater. For some years past special

attention has been given to improving the condition of the tea by manuring and cultivation, which will have the effect of increasing yields steadily without deterioration of quality. We shall realize these expectations in future years of normal weather, without doubt.

Crop Figures

At the lower level of the tea market which ruled throughout the year, the average net price realized for the exportable tea was lower by 6½d. a lb. than last year's figure, with a somewhat higher cost of production. The cost of quota purchased represented 1.32d. per lb. By contrast with tea, the weather was favourable for rubber, and the year's crop of 6,956,800 lb. was well in excess of that estimated and about 750,000 lb. more than the total for the previous year. The net total of proceeds of tea less cost of production—before deduction of London expenses and taxation—was about £380,000 less than the corres-

ponding figure for the previous year. This was compensated for to the extent of some £70,000 by the higher net revenue from rubber, due partly to increased crop and partly to an increase of about 2½d. a lb. in the net average price under Indian Government control.

After providing for depreciation and London charges as shown in the accounts the profit for the year is some £287,000 less than that for 1954-55. Taxation at £582,340 on the lower profits is about £100,000 less. Export duty, which during the year varied from 4 to 8 annas a lb., cost the company, directly or indirectly, about £375,000, making the total liability for the year in these two forms of taxation some £957,000.

Unfair and Discriminatory Tax

Last year I made reference to export duty as an unfair and discriminatory tax on tea, which in effect expropriates a large slice of profit before levying the taxes on profits which are common to all. Such treatment can hardly encourage new capital to enter India where success may produce profits liable to expropriation without justification, as in the case of tea. South Indian producers of tea are at a special disadvantage in the matter of export duty.

Despite the strongest representations which have been made regarding the inequity of the procedure, the assessment by the Government of the world price of tea, on the fluctuations in which the rate of export duty is varied arbitrarily from time to time, continues to be based on an average price much to the disadvantage of South Indian tea. For instance, for the nine months January-September, 1956, South Indian teas sold in the London auctions realized about 7d. a lb. less than North Indian teas, but had to pay the same rate of export duty.

Allocations and Dividend

Referring to the profit and loss account, the balance brought in from 1954-55 was £131,078 and the amount available for allocation from normal sources, after allowing for the surplus on disposal of fixed assets and the appropriations already made, is £488,799. The directors have transferred £115,809 to buildings, machinery, etc., special reserve and £100,000 to general reserve, and have brought to the credit of the appropriation account £50,000 from dividend equalization reserve.

An interim dividend of 6 per cent. was paid on 22nd June, 1956, and the directors now recommend a final dividend of 17 per cent. which less tax at 8s. 6d. in the £, will absorb £177,125 and will leave £145,865 to carry forward.

Replanting Policy

On this occasion, the board have decided to charge the expenditure on replanting during the year, £41,106, against the replanting reserve which is accordingly reduced to £258,894. We must, however, keep in view the necessities and contingencies of the future. We shall be obliged to continue to replace the existing rubber areas, of which so far rather less than half has been done. Towards the cost of replanting there is included in the controlled price of rubber a small and quite inadequate sum designated for replanting, and rubber producers have been informed that failure to replant will result in a reduction of the controlled price. That it is necessary to maintain the estates, both tea and rubber, at a high standard of cultivation and equipment goes without saying, and we shall have to keep pace with the requirements of the Government in implementation of the Plantations Labour Act. Amongst contingencies are those unpredictable effects upon the company of the delays which may be occasioned by any difficulties in the Suez Canal area; for instance, we may have to finance the tea crop for a number of months longer than usual, together with enhanced costs of shipment, until sale can be effected and the proceeds realized.

These and similar considerations emphasize the importance of maintaining the company's finances and of strengthening them, when possible, whilst giving the members a satisfactory dividend.

Outlook for Current Year

As regards prospects for the current financial year: crops were originally estimated at 16,958,000 lb. tea and 6,945,000 lb. rubber, but the drought in the early part of the year, already referred to, has made doubtful realization of the full tea crop. The shortage compared with last year was, at the end of September, more than 825,000 lb. Largely as a result of the careful cultivation of past years, the tea has stood up extremely well to the exceptional drought and casualties have been remarkably low. Many areas will require careful nursing but any loss of bushes in this respect has been inconsiderable.

The market for medium and low-grown teas, similar to those which form the bulk of this company's output, has been appreciably lower in recent months than for corresponding months of last year, but has improved in the last few weeks. Everything possible is being done on the estates to maintain a satisfactory standard of quality. Modernization and improvements of factories and machinery are being effected year by year, and this will be continued as circumstances permit. Sentinel Rock factory—a wooden structure erected over 60 years ago—has at last reached the point at which its replacement by a new building is necessary, and this has been authorized accordingly.

As was mentioned in the interim report issued in May, the output of dust tea to 31st December, 1956, has been sold forward without export quota. No other forward sales have been made.

Labour Conditions More Stable

Labour conditions during the year have been more stable than for some considerable time past and there have been no major incidents. Our staff throughout continue to render sterling service and deserve our sincere appreciation and thanks, as do our visiting agents and eastern agents, to all of whom we largely owe the satisfactory results which are before you.

We have to contend with inflationary costs; not only those imposed laid direct upon tea—but some of which I have referred to—but also resulting from general inflationary trends in India.

Sir Eric Miller will deal, in the course of the next few weeks, with the general position of tea and rubber in his address to the members of Harrison & Crossfield, Ltd. Any member of this company who cares to apply for it will be sent a copy of his address when it becomes available.

Oil from abroad costs valuable foreign exchange.

Oil from inside India saves it. And we must have ever-increasing quantities to cope with the expansion of industry and agriculture.

Scientists and engineers are keeping Assam's oil industry working at full pressure to produce as much oil as possible from our own oilfields. Additional wells are constantly being drilled, yet even in an established area they are not always productive; in spite of modern knowledge and equipment, successful drilling still remains something of a gamble.

But no effort is spared to find oil and turn it into the fuel, lubricants and by-products which are so vital to the progress and prosperity of India.

Finance in India and Abroad

THE CALCUTTA MONEY MARKET

RESTRICTED ACTIVITY

Wednesday, 24th October.

ACTIVITY in the money market has been restricted by the holidays, but in general conditions are relatively tighter than is usual for the time of year. Jute advances remain almost unchanged, but sugar funds continue to return. Credit for grains and seeds storage has been declining, but advances for mill cloth are quite substantial. As the sugar and cotton seasons approach, it is thought that greater demand for accommodation may be expected after some time. In the interbank market, conditions are tight: the call rate quotes 3½ percent, although business has been reported at even higher rates.

The working of the Exchange market has also been limited by the holidays. A number of tea bills have been passing, but those on account of gunny shipments have been very few. Remittance has been on a small scale. Sterling has recovered from a temporary weakening a few days ago.

The bullion market showed a mixed pattern. A firm tone was witnessed in silver on account of the approach of Diwali festival coupled with bear-covering during the fortnight under review. The price of silver increased from the last week's level of Rs. 173-5 to Rs. 173-14 quoted today and the ready is quoted at a premium of 4 annas. The London silver market remained unchanged at 78½d. The price of silver in New York was also unchanged at 90½ cents. Gold declined from the previous level of Rs. 104-7 to Rs. 104 due to lack of demand. The sovereign at Rs. 63-4 showed a fall of 4 annas.

During the week ended 12th October, 1956 Government of India Treasury Bills for Rs. 69,28,00,000 were sold in favour of the Reserve Bank.

During the week ended 19th October, Government of India Treasury Bills for Rs. 45,37,75,000 were sold in favour of the Reserve Bank.

A decline of Rs. 8.89 crores to Rs. 1,429.54 crores in active notes was the outstanding feature of the return of the Reserve Bank of India for the week ended 19th October, 1956. The total note issue was Rs. 68 lakhs higher at Rs. 1,450.55 crores. Notes held in the Banking Department consequently rose by Rs. 9.37 crores to Rs. 21.01 crores. Foreign securities fell by Rs. 4.97 crores to Rs. 521.83 crores, but rupee securities were up by Rs. 4.97 crores to Rs. 690.88 crores. Deposits of the Government of India declined by Rs. 2.53 crores to Rs. 52.91 crores but other Government accounts were Rs. 1.12 crores higher at Rs. 5.82 crores. Balances of commercial banks at Rs. 50.34 crores showed an increase of Rs. 1.76 crores. Investments fell by Rs. 1 lakh to Rs. 54.87 crores. Other loans and advances dropped from Rs. 92.28 crores to Rs. 86.17 crores, of which advances to scheduled banks against usance bills totalled Rs. 41.29 crores (Rs. 42.87 crores). These advances amounted to Rs. 311.38 crores since 1st January, 1956. Ways and means advances were shown at Rs. 4.04 crores, against Rs. 4.48 crores.

The return of the State Bank of India for the week ended 12th October, 1956, shows a fall of Rs. 3.17 crores in total deposits to Rs. 227.06 crores. Investments in Government securities are down by Rs. 4 lakhs to Rs. 96.43 crores, while other authorised investments remain unchanged at Rs. 11.39 crores. Advances, including loans, cash credits and overdrafts, and bills discounted and purchased, have decreased by Rs. 1.18 crores to Rs. 130.18 crores. Cash and balances are, in consequence, shown at Rs. 14.46 crores, or Rs. 18 lakhs higher.

The statement of the position of scheduled banks for the week ended 12th October, 1956, shows Demand and Time liabilities at Rs. 632.35 crores (Rs. 10.44 crores on account of borrowings from banks) and Rs. 435.91 crores (Rs. 2.26 crores), compared with Rs. 636.08 crores (Rs. 8.82 crores) and Rs. 454.22 crores (Rs. 2.26 crores), respectively, in the previous week. Cash and balances with the Reserve Bank have decreased by Rs. 3.16 crores and Rs. 59 lakhs to Rs. 36.40 crores and Rs. 48.56 crores, respectively. There is a drop of Rs. 1.18 crores in investments to Rs. 373.10 crores. Advances and bills discounted, at Rs. 759.50 crores, show a decrease of Rs. 17 lakhs. The ratios to total liabilities of cash and balances, and of advances and discounts, are, in consequence, shown at 7.8 percent and 69.9 percent, against 8.1 percent and 69.7 percent.

Provisional figures of foreign sea and airborne trade of India on private and Government accounts during September, 1956, according to data so far available in the Department of Commercial Intelligence and Statistics, Calcutta, are as follows: Merchandise, excluding transit trade of Pakistan but including that of other land frontier countries: Exports Rs. 48.78 lakhs, re-exports Rs. 37 lakhs (transit trade Rs. 1 lakh) imports Rs. 74.55 lakhs (transit trade Rs. 5 lakhs); Total trade Rs. 123.70 lakhs. Treasury: Exports of currency notes Rs. 50 lakhs, others nil; imports of currency notes Rs. 276 lakhs, others negligible. Balance of Trade: The merchandise import figures are exclusive of the value of certain consignments of Government stores awaiting adjustment. Subject to this defi-

ciency in import figures and to the exclusion of figures for transit trade, the total value of exports (including re-exports) of merchandise, gold and silver fell short of imports by Rs. 25,36 lakhs.

According to the returns received in the Department of Commercial Intelligence and Statistics, the total gross sea and land customs revenue collected in the Indian Union during August, 1956, amounted to Rs. 1,342 lakhs, compared with Rs. 1,242 lakhs in the corresponding month of the previous year. The comparison in the following figures with those of the corresponding period of the preceding year. Of the total customs revenue collections, import duties accounted for Rs. 1,114 lakhs as against Rs. 934 lakhs, export duties for Rs. 198 lakhs as against Rs. 298 lakhs and land customs and miscellaneous for Rs. 30 lakhs as against Rs. 10 lakhs. The total gross collection of Union excise duties amounted to Rs. 1,512 lakhs as compared with Rs. 1,312 lakhs. During the five months, April to August, 1956, the grand total of gross customs and Union excise revenue realised was Rs. 13,554 lakhs, compared with Rs. 12,683 lakhs during the same period of the preceding year. Of this amount, import duties accounted for Rs. 5,428 lakhs, against Rs. 5,032 lakhs, export duties for Rs. 919 lakhs, against Rs. 1,406 lakhs, land customs and miscellaneous for Rs. 124 lakhs, against Rs. 70 lakhs, and Union excise duties for Rs. 7,083 lakhs, against Rs. 6,175 lakhs.

LONDON FINANCIAL LETTER

THE GOVERNOR'S HINT ON BANK RATE

By Air Mail.

THE British Chancellor of the Exchequer has his main opportunity in April, when he presents his budget. He has another opportunity half way between budgets, at the Mansion House dinner in October. But in the past year or two, the emphasis of this function has been changing: the Chancellor is still in the leading rôle, but it is the Governor of the Bank of England who steals the show. What either of them could say this year was conditioned and circumscribed by the political developments of the preceding weeks. Mr. Harold Macmillan could assert that the Suez crisis had not so far affected the broad structure of his budget, but it was not his function to comment on long-term changes in military strategy that might result from it. Mr. Cameron Cobbold was necessarily, in the circumstances, likewise

no more the muhannad

FIRDAUSI'S EPIC POEM, *Shah-Namah* tells us that when Alexander invaded Persia in 331 B.C., swords and other weapons of steel were hurriedly sent for from India. Throughout the civilized world India was famous as the home of quality steel. In fact, the old Arabic word for "sword" is "muhannad", meaning "from Hind."

Today, once again, steel is very much to the fore in the nation's thinking, but with a different intent. The country's steel-making capacity is being rapidly enlarged, not for purposes of war, but for peace and development.

TATA STEEL

SERVES THE NATION

SOUTH EASTERN RAILWAY OPENING DATE OF TENDER EXTENDED

The opening dates of the following tenders, which were advertised in this paper during the early part of this month, have been extended as noted against each:—

- (1) Tender No. GM 16/56/K14/1(B)—for supply of 2 Nos. Diesel Engine Driven Portable Centrifugal Pump etc. will be opened on 2-11-56.
- (2) Tender No. GM 17/56/K14/1(B)—for supply of 1 No. Portable 20 K.W.A.C. Generator etc. will be opened on 2-11-56.
- (3) Tender No. GM 18/56/K14/1(B)—for supply of 6 Nos. Portable Diesel Engine Driven Air Compressor etc. will be opened on 5-11-56.
- (4) Tender No. GM 19/56/K14/1(B)—for supply of (a) 16 Nos. Pneumatic Dry Rock Drills etc. will be opened on 5-11-56.
- (5) Tender No. GM 20/56/K14/1(B)—for supply of 8 Nos. Diesel Engine Driven Winch capacity 10 tons etc. will be opened on 7-11-56.
- (6) Tender No. GM 21/56/K14/1(B)—for supply of 6 Nos. Diesel Engine Driven Portable Concrete Mixer 10/7 Cu. ft. etc. will be opened on 7-11-56.
- (7) Tender No. CS 17/56/K14/1(B)—for supply of 6 Nos. Petrol Engine Driven Internal concrete vibrator etc. will be opened on 8-11-56.
- (8) Tender No. CS 18/56/K14/1(B)—for supply of 1 set Diesel Engine Driven Portable Welding Set etc. will be opened on 8-11-56.

uninformative on the course of money rates, but it was his hint that the authorities would, at least, like to see them reduced that interested the city more than any other utterance at this function.

Mr Cobbold described the coming months as crucial and said that the determining events lay in the fields of industrial costs and public finance. There was no room at present, he said, for relaxation of monetary policies. Emphasising that no commitment had been given, or would be given, to anybody on the future course of Bank rate, he seemed deliberately to deny the idea that the Chancellor had told the banks in July that Bank rate would not be raised unless unforeseen circumstances arose. Yet the remark that attracted notice in the City was "we shall obviously feel more comfortable when circumstances justify a somewhat lower pattern of short-term interest rates", and he embellished the point by saying that restriction of bank credit, however necessary when consumption and investment were running too fast, should not be envisaged as a long-term method of offsetting other inflationary forces. As Mr. Macmillan also made one general comment in a similar vein, it can be concluded that the underlying theme of this mid-budget-year review was the authorities' belief that restrictive monetary policies could not advantageously be pressed further. "I must frankly admit", he said, "that I do not believe that we can solve all our problems by the monetary instrument alone. There is in practice, if not in theory, a limit beyond which the rate for money cannot be driven". Some bankers believe that the deciding factor now is money rates abroad; if they were reduced, so that short-term funds would not be enticed out of London, the London Bank rate might be reduced quite soon.

A Promising Sign

The most important item in the Chancellor's statement at the Mansion House was merely a preview of figures that were to be published immediately after. The Balance of Payments White Paper was, as a whole, an encouraging document. The U.K.'s current surplus—with all areas, on account of both trade and services—was £144 million in the first half of 1956, compared with £13 million in the first half of 1955. That is in itself a gratifying improvement, and it looks better still when analysed. Over the two periods there was only a trifling change in the U.K.'s balance with

the rest of the sterling area: all but £1 million of the whole improvement of £126 million was achieved in dealings with the non-sterling world, with which the U.K.'s balance was transformed from a deficit of £94 million to a surplus of £31 million.

Invisible items, especially oil and shipping, have played their part in the recovery, but its basic element is the expansion of physical exports —while the expansion of imports has been checked. Britain is thus in the unaccustomed position where she is strengthening the reserve of the whole sterling area, instead of drawing on that reserve to meet her current deficit and hoping that the other sterling countries will replenish it. Even so, as is well known, the gold and dollar reserve declined from £957 million at mid-1955 to £852 million at mid-1956. The explanation of this movement is simply the outflow of foreign funds from London. This movement has been accentuated since mid-year and at the same time the visible trade figures have deteriorated—the rate of exports was considerably reduced in the third quarter. If these two trends can be reversed—and the former, at least, seems to be halted—Britain can accumulate enough dollars before the year-end to pay the annual capital and interest of the dollar loans without undue strain. But one element in the position will remain distinctly unsatisfactory. High interest rates, while not wholly effective in retaining money in London, were very effective in restraining would-be borrowers, so that in the first half of this year a paltry £25 million flowed from Britain into the rest of the sterling area in the form of long-term commercial investment. Such parsimony is necessary at this time, but it cannot be viewed with favour.

III-considered Acts

It is evident that the outflow of foreign money in the third quarter of this year resulted partly from the British Government's blocking of Egypt's sterling, and it is by no means sure that this action did more harm to Egypt than to Britain. Some substitute arrangements for settling accounts with Egypt have cost dollars, and—more important—other countries holding balances in London have withdrawn them, fearing that they, too, might incur the British authorities' disfavour. Moreover, while Egypt herself has been excluded from the transferable-account area, countries with which she has maintained friendly relations have sold transferable sterling for Egypt's benefit. Pressure on the pound has thus been aggravated during the season when it is normally weak for commercial reasons. The authorities' handling of the situation has been criticised not only for this practical reason but also on grounds of principle. The authorities have been trying, with considerable success, to rehabilitate London as a centre of finance; yet they have demonstrated that a country cannot safely keep funds in London unless it can be confident that no major dispute will arise between it and Britain. Furthermore, the authorities have been guilty of surprising discrimination in allowing the former, but not the latter, to draw on Egyptian accounts in respect of confirmed credits—and the restrictions on the latter could not even affect the Egyptians, who had already received the goods concerned!

OFFICIAL POLICY TO ENCOURAGE CLOTH PRODUCTION

As an incentive to increase cloth production, the Government of India announced some time ago its decision to give a rebate of excise duty at the rate of six pices a yard on all cloth produced by a textile mill in excess of its average monthly production during the eight months, January to August, 1956. The rebate was to be allowed on cloth produced up to the end of December, 1956. The Government has now decided to extend this concession for all cloth produced up to the end of March, 1957. The Government of India has also cancelled its order issued on 24th September, restricting the stocks of cloth which can be held by any wholesale dealer to three months' average stocks. In case of West Bengal, the order had further stipulated that no dealer could hold more than one month's stocks of cloth manufactured by the mills in the State. This step was taken to check the rising trend in prices. The Government now considers that there is no necessity any longer to keep an all-India order of this nature in force. Powers have, however, been delegated to State Governments to issue such restrictive orders as and when they consider them necessary.

REDUCED EXCISE DUTY FOR SMALL SOAP MAKERS

A Central excise duty was imposed with effect from 1st March, 1956, on soap produced without the aid of power, but by executive notification, exemption from this duty was allowed to the manufacturers for the first 200 tons cleared by them in a financial year. It has been represented to the Government of India that in its actual operation, this duty falls somewhat heavily on the manufacturers whose output is between 200 and 400 tons a year. Accordingly, the Government of India has decided to introduce another slab fixing a lower rate of duty for those producing soap without the aid of power, whose production exceeds 200 tons but does not exceed 400 tons a year. The reduced rates of duty in these cases are: (i) in plain bars of not less than one pound in weight Rs. 2-10 a cwt; (ii) other sorts: Rs. 3-1 a cwt. This reduction does not apply to soap other than household and laundry or toilet.

Stocks and Shares

SHARE MARKET SOFT AND SUBDUED

BANK RATE RUMOURS WORRY OPERATORS

Wednesday Evening.

It is open to question whether the stock market is still on holiday or whether it has passed into mourning. The economic news over the Pujas was not entirely happy, but still there seemed to be no one solid reason why operators should have returned to Lyons Range with the drooping spirits they displayed on Monday. Sentiment seemed a little better towards the close this afternoon on settlement considerations, but the undertone still looks uncertain. There has been anxiety over the implications of the Black-Krishnamachari correspondence, but it now seems to have been allayed.

Rumours continue that the Reserve Bank might raise its Bank rate, and the general tightness of money is making itself felt. Cotton textiles have been subject to their own special uncertainties, with ministerial reflections on State trading, and these are not entirely neutralised by strong hopes that mills will soon be allowed to expand their cloth production capacity.

As far as individual industries are concerned, the reports have not been unfavourable, but in the context of the general economic uncertainties this can hardly provide an incentive. Coals have reason to be thankful for the end of the Ranigan strike—a selfish and pointless move if ever there had been one. Teas are relatively maintained because it is expected that the recently announced measures to regulate the size of the crop will help prevent what was otherwise a certain glut; auction results since the regulation moves were announced have been fairly satisfactory. Among miscellaneous industrials the features are few and far between; the general trend has been downward in sympathy with the rest of the market. Jutes are neglected.

Government securities have been dull.

Details of the past three days' trading follow.

The Government security market continued extremely quiet and except for an enquiry for short-dated and selected National Plan loans, sellers predominated through the list. There was a substantial marking down of prices and long-dated and non-terminable loans were the worst affected. The 3% Conversion Loan declined further by 5 annas to Rs. 74-3, while non-terminable Paper was marked back in sympathy to Rs. 74-4. In short-dated loans, 3% 1957 had buyers at around Rs. 99-12 and 3% 1958 was taken at Rs. 99-9. In the medium dated group, there was a small enquiry for 3% 1959-61 at Rs. 97-15, but 3% 1963-65 was marked back to Rs. 94-4. In National Plan loans, 3½% 1961 was steady at Rs. 99-3 and 3½% 1964 met with enquiry up to Rs. 98-8. The 3½% 1965 changed hands at Rs. 98-8 and 3½% 1967 was traded at the same rate. In long-dated loans, 3% 1966-68 shed 4 annas at Rs. 92-8 and 3% 1970-75 receded further to Rs. 89. The 3½% 1974 was, however, unchanged at Rs. 98-8 with small buyers at this level. State loans were weak, with sellers over for most issues. The 4% Madras loan 1968 was marked down to Rs. 98-14, while 4% U.P. 1968 had sellers at the lower rate of Rs. 98-13. The 4% Orissa 1968 was on offer at Rs. 98-12 and 4% Rajasthan 1968 had sellers down to Rs. 99. In contrast, 4% Saurashtra 1968 was asked for at Rs. 99-9.

Very little business has been transacted in preference shares. Sellers predominated in jutes at around the previous quotations. Agarpara were dealt in at Rs. 104, Empire at Rs. 108 and Fort Gloster Second Preference at Rs. 76-4. Gouropore were done at Rs. 87 and Howrah "A" at Rs. 102. Among miscellaneous preference shares, Birds Investments declined to Rs. 76 and B.I.C. had sellers at Rs. 124. Burn 6% were marked at Rs. 115 and Calcutta Electric were offered at Rs. 11-3. Indo-Burmah Petroleum were quoted at Rs. 105 and Indian Irons at Rs. 106. Jardine Hendersons changed hands at Rs. 64 x.d. but Rallis had buyers at Rs. 71. Shaw Wallace quoted Rs. 78.

A quiet and weaker tendency has prevailed in the engineering section. Indian Iron opened on Monday at Rs. 34-2, against the previous Calcutta close of Rs. 34-7, and after touching a low of Rs. 33-12, closed this afternoon at Rs. 34-2. Texmaco, the other speculative leader, have similarly met with long liquidation and short-selling, which has brought them down from Rs. 23-4 to Rs. 22-13. Jessop, and Richardson and Cruddas, which before the holidays were notably steady due to interested support, have moved down in sympathy. The former have fallen to Rs. 37-11, and the latter to Rs. 26-15.

Jutes have dropped quite noticeably. This is partly in line with the trend in the rest of the market, and partly because operators think that the present differentials between raw jute and manufactured goods cannot be giving mills much of a profit. Raw jute is steady on firm upcountry advices, while gunny prices seem to be losing the gains they made last week. National have fallen from Rs. 24-12 to Rs. 24-8, and Howrah from Rs. 22-12 to Rs. 22-6.

Teas seemed at first to resist the general decline, but latterly they too have softened in restricted turnover. The auctions this week have been quite good, but perhaps operators had hoped that the possibility of an export duty increase at the end of October might encourage foreign inter-

ests to buy more vigorously. Bishnauth New have been moving around Rs. 23-8, and Dhelakhat are better at Rs. 23-12.

In the miscellaneous section, activity has been very restricted. National Carbon have been steady at Rs. 30, because they have declared the long-awaited interim dividend of 7½ percent. Calcutta Electric too are well held around Rs. 13-5 x.d., they having declared an interim dividend of 3 percent. But prices of most other scrip are shaded. B.I.C. have eased to Rs. 11-3, and Dunlop Rubber have returned to Rs. 29-10 after rising a few annas. Profit-taking has reduced India Steamship to Rs. 10-3. Among papers, Orient have dropped to Rs. 38-10 in sympathy with other speculatives. Indian Copper have suffered the same fate, and disappointed additionally by the fall in copper prices, have dropped to Rs. 4-8 against the pre-holiday close of Rs. 4-11. Indian Aluminium have fallen to Rs. 16-12 from the pre-holiday rate of Rs. 18-8, on further consideration of proposals to finance expansion. Alkali and Chemical lost over Rs. 1 to Rs. 22-3, but have since partially recovered to Rs. 22-10. National Insulated Cables are steady at the lower level of Rs. 25-13.

Coals generally are dull and neglected. But speculative support is maintaining Burrakur around Rs. 16, and Central India at Rs. 7-8.

The profit earned by the HUKUMCHAND JUTE MILLS LTD. increased by Rs. 44,123 to Rs. 16,79,173 during the year ended 31st March, 1956. The ordinary dividend has been maintained at Rs. 2 a share. Allocations include taxation Rs. 8 lakhs (Rs. 9 lakhs) and depreciation Rs. 2.36 lakhs (Rs. 4.40 lakhs). Investment reserve absorbs Rs. 2 lakhs

NEW DELHI P. O. Box No. 172

5% Cal. Elec. Supply—Rs. 99-12—99-12—99-12—99-12.

In order to present the problem in its proper perspective, the annual average requirements of machinery under the third plan also have to be broken down under different categories, as has been done below for 1954-55, 1955-56 and 1961-62:

ESTIMATED CONSUMPTION AND REQUIREMENTS			
	1954-55 (Rs. lakhs)	1955-56 (Rs. lakhs)	1961-62 (Rs. lakhs)
Machine tools	500	700	1,000
Boilers	350	550	1,000
Air compressors	100	150	300
Pumping machinery	350	450	700
Mining machinery	175	175	300
Diesel engines	300	350	500
Electrical machinery	2,200	2,500	6,000
Earth moving machinery	150	300	500
Cotton textile machinery		1,200	1,700
Sugar machinery		500	500
Paper, newsprint, chemical, pulp, etc.	125	200	700
Cement machinery		300	1,200
		(estimated from overall investment)	
Rayon and staple fibre machinery			500
Refrigerating machinery		125	400
Steel Plant machinery			5,000
Fertiliser plant machinery			2,000
Miscellaneous			3,000
			25,300

The following deductions can now be made. In relation to the machinery needed by the steel industry, expenditure on steel plants during the third plan period, both for expansion and for setting up new units, is likely to be very heavy. It is important to realise that quite a substantial proportion of this expenditure is on items which are required by industries generally and are in no sense specially intended for steel plants. The Ministry of Iron and Steel has given the following estimates of the main requirements of a steel plant of one million tons' ingot capacity based on its experience:

	Rs.
Constructional material	7 crores
Structural steel work	13 crores
Castings	1.2 crores
Pipe work (exclusive of service pipes)	11 lakhs
Equipment	59 crores

Of these, the first four need not be discussed at any length. Construction materials, consisting of bricks, cement, concrete, rails, railway sleepers, etcetera, are being separately planned. The demand for structural and castings will be met mostly by the National Industrial Development Corporation projects, and the pipe work—both steel and cast iron—can be supplied by firms in the private sector.

Other Equipment

For equipment too, there are a number of items in the Iron and Steel Ministry's list which need not be considered here. Locomotives and rolling stock will, it is expected, be supplied by industrial units engaged in the production of these for other purposes and the development which is taking place in the manufacture of higher horse-power diesel engines should make it possible for these needs to be met without serious difficulty. Likewise, for electrical equipment, the heavy electrical equipment project scheme in the public sector, together with the capacity in the private sector, should take care of most needs.

The main items for which it is necessary to take steps to build indigenous capacity are the following:

(a) Coke oven and by-product plants. These are needed not only by the steel industry but also by major chemical industries.

(b) Blast furnace plants.

(c) Air and gas compressors: steam driven turbo-blowers for the supply of air to blast furnace plants are required in steel works. Turbo-driven boosters are needed for boosting up the pressure of coke oven gas. Turbo-type air compressors are also needed for the liquid air plants which have become integral parts of modern steel works and fertiliser factories based on oxygen-nitrogen from liquid air. Gas compressors are important items of plant equipment in fertiliser factories, soda ash plants and certain other chemical industries.

(d) Melting shop requirements: these should include open hearth furnaces, electrical furnaces as well as other equipment needed in melting shops.

(e) Rolling mills: capacity for making rolls is being developed under the National Industrial Development Corporation project and the next step forward would be the construction of rolling mills.

(f) Cranes: these constitute essential equipment in steel works. It is estimated that the value of cranes in the Rourkela steel plant will be Rs. 1.7 crores. In addition, they are needed by the railways, ports and heavy industries generally.

Mineral Development

The target for coal in the second plan period is 60 million tons, against 35 million tons in the first plan, and it may be expected to go up to 100 million tons by the end of the third plan. There will also be a considerable expansion of activities for the exploitation of minerals, including oil drilling, quarrying of limestone, mining of iron ore, manganese ore, bauxite, etcetera, both for domestic and export purposes. Capacity to supply machinery for these purposes is negligible at the moment.

The manufacturing programme of the firms proposing to make cement machinery includes equipment for quarrying limestone and other similar operations, as well as some items needed for coal mining. Production of some diamond core drills and stone crushers is also expected to go up in the near future. By and large, however, the production of mining machinery has yet to be developed on an adequate scale. The Production Ministry, which is responsible for coal mining, has furnished a list of the main items needed for coal mining, but it has not been possible for it so far to give any quantitative indications of requirements. While some of these items could be produced by industrial units which have capacity for castings, forgings and structural works, a wide field remains uncovered and special steps have to be taken to create additional capacity. In particular, the production of power cutters required for the mechanised mining of coal should be developed.

More Fertilisers

The production of fertilisers is another field in which steady and substantial expansion is to be expected. Therefore, it is suggested that capacity should be installed for producing the machinery needed not only by the fertiliser industry, but also by other chemical industries, both organic and inorganic. The efforts so far made to produce chemical plant and equipment have been limited in range, and by and large confined to firms which for the expansion of existing factories have had the equipment made in the country, copying and adopting the design of the equipment already installed. It is worth emphasising that what is lacking most is not so much the capacity to fabricate as the know-how for designing plants which mostly have to be made to fit the requirements of each unit, utilising the latest techniques and adapted to local raw materials. The machinery required by the iron and steel, mining and fertiliser industries are important both because of the magnitude of the demand for them as well as the fact that, according to the Industrial Policy Resolution, their development is the responsibility of the State. It is worth drawing attention to some less important industries whose machinery needs are being met at present mostly, if not wholly, by imports.

(a) Paper mill machinery: so far there has not been much interest in undertaking paper machinery fabrication. The manufacture of equipment to set up two complete paper mills of 50 tons daily capacity may be regarded as an appropriate target for the end of the second plan.

(b) Ceramic industries: only an insignificant portion of the demand needed for ceramic industries is being fabricated at present and there is, therefore, room for setting up capacity in this field.

(c) Solvent extraction plants: the total planned outlay for solvent extraction plants in the next five year period is Rs. 4 crores, and the recurring demand thereafter is worked out at Rs. 10 lakhs a year, assuming about 25 years' life for the plant.

Additional Items

The following additional items deserve special consideration:

(a) Heavy machine tools: these are required by practically all industries, including the iron and steel industry and other heavy industries, and, according to the Industrial Policy Resolution, have to be included in the public sector. The capacity developed or likely to be developed in the existing units is for the lighter types of machine tools and there is a clear need for setting up a factory to make heavy machine tools.

(b) Hydraulic presses, rams and other hydraulic mechanisms: there is practically no indigenous capacity for the manufacture of these items. Hydraulic mechanisms range from very light-weight mechanisms intended to operate as servomotors to very heavy hydraulic presses with a large capacity. Since absolutely no capacity has so far been established, the scope for the manufacture of hydraulic equipment is considerable. Foreign collaboration and technical know-how are necessary in this field.

(c) Earth-moving equipment and agricultural tractors: an assessment of the minimum estimated requirements of items of earth-moving equipment, such as crawler tractors, scrapers, dumpers, shovels and excavators required in connection with medium and small irrigation projects likely to be undertaken shows that foreign exchange of over Rs. 20 crores would be necessary in five years for imports from abroad. Even providing only for small numbers of such or other related equipment required for activities not covered in the above, it may be assumed that nearly Rs. 30 crores worth of such equipment in five years, or approximately Rs. 6 crores a year, will be necessary. The committee set up by the Government to go into the scope for the manufacture of such items in India, after standardising types and sizes to the largest extent possible, has recommended that it may be possible to arrange for the production of nearly Rs. 20 crores worth of such equipment within the country according to a phased programme, so that, commencing with part assembly and part manufacture in the very first year, imports of components could be cut down to a bare minimum of 20 percent by the end of the plan period. While tractors required for the above items are of the order of 110 to 150 d.h.p., agricultural tractors of various sizes such as below 20 h.p. between 20 and 30 h.p. and above 30 h.p. are also required to the extent of nearly 4,500 or 5,000 a year—involving foreign exchange of about Rs. 2½ to 3 crores annually. A number of firms have shown interest in undertaking their manufacture and a certain amount of action for implementing the project has been initiated.

(d) Heavy lifts, hoists, conveyors, etcetera: all these are required by a large variety of industrial units and so far not much progress has been reported in making them.

(e) Gear-cutting: one of the factors impeding the development of the production of industrial machinery is the absence of facilities for the supply of gear drive units. This deficiency needs to be made good.

Government's Financial Control

India now has a Finance Minister who is a strong upholder of the constitution. Mr. T. T. Krishnamachari was a prominent member of the Drafting Committee which framed it, so he understands it thoroughly. The main responsibility for the federal Constitution lies with the Congress Party which is in office today. Under it, certain fields of activity are demarcated for States and certain others for the Centre. To meet subsequent needs, there have so far been nine Bills to amend the Constitution, the last one having been passed during the recent session of Parliament. It is often asked how the Party which is responsible for framing the Constitution is also responsible for ignoring some of its provisions in actual practice. Education, for example, has been, and is, a State subject. The Congress Party, which has moved to amend the Constitution nine times, has had ample opportunity to make it a Union subject. But it has not done so yet. Crores of rupees for the Central Exchequer are allocated for education—of university, secondary and even primary standards. It would be interesting to know under what provision of the Constitution money is allocated, for example, to the Social Service Board or to health schemes or for the improvement of agriculture? Has this aspect of the problem been brought to the notice of Parliament by the ever-vigilant Auditor-General? And if so, with what results?

The problem is important for several reasons. India may be old as a country, but she is young as a democracy. Her present rulers are daily urging new codes of conduct and traditions, even for the millions yet unborn. How will other political Parties respect a Constitution if the Party responsible for its formulation often ignores it? Another point to consider is that a second five year plan has been launched, the dimensions of which are still a matter of controversy. The Finance Minister, speaking in Madras, said: "Having raised the expectations of the people, there is now no question of revising the plan on a downward basis. Politically, it is almost impossible. On the other hand, some increase in outlay might be necessary in certain directions." The Finance Minister, in this connection, gave "a very low priority" to the question of finding internal resources. He admitted, however, that it was one of the three major difficulties in implementing the plan. The safety valve was the system of yearly planning, but that could work only if the Finance Minister with his constitutional authority were given a free hand. Through the medium of yearly planning, correct priorities could be accorded, thereby weeding out items of non-essential character or items which it was constitutionally improper for the Centre to finance.

State Revenues

The raising of resources by States is of fundamental importance to the implementation of the plan. Experience during the first plan in this matter was not happy. The Planning Commission in its very first Progress Report highlighted the failure of State Governments to raise the resources they had promised. Their attitude is not difficult to explain. In one case, Union Ministries, intruding in State spheres and pursuing their policy of departmental imperialism, have been forcing certain schemes of their own conception upon the States. The States take up the schemes only if the Centre offers to foot the bill for them. Instances of the imposition of schemes by the Centre became so numerous that the Bombay Government lodged a mild protest at the formulaic stage of the second plan. The issue is a simple one. State Governments know better than the Union Health Ministry in New Delhi the importance, say, of improving water supply or drainage in a small town like Godhra. In a democratic set-up, if the citizens of Godhra deserve a better system of water supply, they will elect only such representatives to their State Legislature as will secure them this essential facility. Water supply and primary education, incidentally, belong to the lowest deck, namely, municipal administration. Yet, Union Ministries are daily expanding the number of their own personnel to deal with them. The question of primary schoolteachers' salaries has been linked with student indiscipline, and efforts to saddle the Centre with the subsidy have succeeded.

As far as planning is concerned, States have been coming to the Planning Commission with definite and well-defined schemes backed by equally definite and unequivocal undertakings to raise fresh resources in order to finance them. But after the schemes are accepted, their financing often becomes the responsibility of the Centre. Instead of insisting on fulfilling their undertaking, the Centre, obviously for political reasons, has been doing out money to finance such projects.

Depending on Centre

Apart from the constitutional aspect of the problem, the growing practice of financing projects which are exclusively the responsibility of the State is making the States indifferent to the mobilisation of their resources; it is also destroying federalism by making States heavily dependent upon doles from the Centre. If this unhealthy development continues, it is possible that a constitutionally-elected Government or one Party in a State may be destroyed by a Government at the

Centre belonging to a different party. These, however, are issues beyond the range of the present discussion. The problem before the country now is to implement the second plan and to find money for it. Through annual plans, the non-essential items might be weeded out, without destroying the general façade which "has raised the expectations of the people." It needs to be appreciated that social services, for example, are in most places financed substantially by private charities. The Centre might give a grant, provided State Governments and private charities contribute, say, four-fifths of the expenditure. Similarly, Indian culture should first be known to Indians living inside India, and cultural activities such as crowding of the already overcrowded Indian universities by non-Indian students may be postponed until 1961.

Several commissions and committees have examined the working of the administration since independence. Until recently, a two-man team was employed to recommend economies in administrative expenditure. But in spite of these non-stop surveys, the clerical establishment of the Central Government has increased from 142,850 in December 1951 to 198,553 in December 1955 and 204,721 in May 1956. The Hoover Commission, which examined a similar problem of overlapping in the United States, made two quote-worthy observations:

1. "The cost of this huge American Government must be met in dollars that must be collected in taxes which must be paid for in the work of the people."
2. "The Federal Government should be required to serve the interests of all the people all the time and not just segments of the population."

There are indications that at least some people in the Government of India are thinking of progress through a series of five year plans based on realism and constitutional correctness. The 1957-58 plan is now being formulated, and it may give some indication of coming trends.

Plans for Dyestuffs

The Government's decision to start a dyestuffs unit in the public sector, through the National Industrial Development Corporation, was announced here recently. There are ten dyestuffs manufacturing units at present, of which four are of a substantial size. They are all in the private sector, the biggest of them having a tie-up with Imperial Chemical Industries. All these units have plans for expansion. As already reported, the Government's main anxiety at present is to manufacture "intermediates" in this country. Three project reports were recently received—from Imperial Chemical Industries, Montecatini and Bayer. Their examination have convinced the Government that in order to be economic, the manufacturing units for intermediate should be of a fairly large size. At present, it may not be feasible for the private sector to set up a unit or units to manufacture all the intermediates. To entrust the work to one or two units would create monopolies. And to entrust it to all the existing units would make many of them uneconomic. It might lead to inter-dependence among units, which is not a desirable feature of development. On fuller examination, the Government has come to the conclusion that it would be best to launch the project in the public sector. The question whether there should be one or more than one unit of production is still being examined. The Italian project report has devoted some space to describing the "ideal" one unit of production. Imperial Chemical Industries has gone still further. It has selected one site and recommended that "any further development of other sites should be discouraged."

Imports Increasing

Imports of dyestuffs have been increasing during the past few years. Demand is expected to go up by about 50 percent by 1960, at the very least; there are strong indications of even higher consumption judging by the present rising trend in the demand for cloth. This would mean a consumption of nearly 10,000 tons of dyestuffs, valued at about Rs. 30 crores. A number of industrial units have obtained licences from the Government in the last decade for the manufacture of dyestuffs. Most of these schemes, however, are based on imported penultimate, and only in a few cases do they start from complex intermediates. The Government attaches the greatest importance to the development of the dyestuffs industry. It is anxious to ensure that by the end of the second plan, the bulk of the requirements should be produced at home. It also hopes that this production will be based not on imported intermediates but on indigenous raw materials. A detailed technical report covering the whole field has been prepared by an Italian firm. Similar reports have been submitted by a German firm and a British firm.

It is an essential part of the development programme for the dyestuffs industry that the production of intermediates should be developed to the maximum extent possible. The demand for intermediates has to be assessed not merely on the basis of production plans for dyestuffs, but also on the basis of developments in other important fields such as drugs, plastics, and explosives. Many of the complex and late intermediates can be developed by factories which undertake their final processing into finished dyestuffs or other products. At the same time, it is desirable to undertake the production of primary organic intermediates on a centralised basis, because the capacity of these is related not to the production programme of a single unit but to the requirements of the industry or industries as a whole. The Government has therefore decided that the National Industrial Development Corporation, which is a private limited company owned entirely by Government,

should set up central capacity to manufacture the primary intermediates. At the same time, it has asked firms in the private sector which are already registered or licensed for the manufacture of dyestuffs, as well as those which have applied for a licence, to indicate the kind of development they are willing to undertake for the production of late intermediates. A decision on the exact scope of the National Industrial Development Corporation project and the manner of its execution will be taken after the programme of the various firms already in the field is clearly known and determined.

Expanding Rubber Output

The Government is examining proposals to expand the area under natural rubber. Recent estimates place India's demand for rubber in 1970 at 80,000 tons, against the present production of 30,000 or 35,000 tons a year. According to these estimates, there will be a gap of about 8,000 tons after taking into account the rehabilitation and replanting of rubber trees and the contemplated manufacture of synthetic rubber. The latter two will provide 72,000 tons by 1970. A rubber tree "goes into production" about eight years after it is planted. It is therefore necessary to plan now to bridge the gap of 8,000 tons a year between the demand and availability of natural rubber in 1970. It is proposed to bring 50,000 acres of additional land under cultivation in Travancore-Cochin and parts of Madras. Three units are planned for the manufacture of synthetic rubber. Their location will be in the areas manufacturing alcohol. One of them, it is expected, will be in Uttar Pradesh and another in a steel works area.

Foundry-Forge Project

The broad outlines of the proposed foundry-forge project have been indicated by Mr. John

Blakiston, Technical Adviser to the National Industrial Development Corporation. They are designed to serve as a guide for the three organisations in Czechoslovakia, Western Germany and the United Kingdom in submitting their detailed project reports. Mr. Blakiston has suggested the Dhanbad-Bokharo-Ranchi area as "the most suitable location for accessibility by the main interests likely to participate in the project." He has submitted a memorandum to the Corporation on the nature and scope of forge-foundry works, in which he has suggested that the works should comprise a steel foundry, a grey iron foundry and a forge. The annual production and weight capacity of the steel foundry may be 15,000 tons of finished steel castings a year, with an occasional maximum weight of 50 tons. The capacity suggested for the grey iron foundry is 25,000 tons a year, with a maximum weight capacity of 50 tons. It is assumed that this plant will have to act as a balancing factor for the production of ingot moulds and slag ladles between the various steel projects of the second plan. As for the forge, the capacity suggested is 5,000 tons a year of finished forgings, with a maximum weight capacity of 15 tons.

Mr. Blakiston has recommended that there should be a heavy machine capacity section, with a limited selection of heavy machine tools, representing the major outsize of machine tool capacity for the whole of India. It is desired that the particular machine tools should be within the same area of the project to save on handling and transportation. A heavy drop stamp unit to work in conjunction with the heavy forge has been included by Mr. Blakiston in the project as an optional additional plant. A sub-section for the fabrication of heavy components from rolled steel slabs would

First...
we must
have

STEEL

The expansion of the iron and steel industry has been given first priority in the Second Five Year Plan. Three new plants—each with a capacity of one million ingot tons—will be established in the public sector, while the capacity of existing plants will also be increased. This means that by 1961, India's iron and steel capacity will be well over three times the present figure... from 1.3 million tons to 4.5 million tons. And the value of industrial machinery produced in this country is expected to increase by five or six times. What does this development mean in terms of oil? More fuels and lubricants to move raw materials... more cutting and quenching oils for actual production operations... more greases, lubricating oils and technical service required to look after the many new machines. Oil not only keeps the wheels turning... it helps to make the wheels in the first place. And where oil is needed—there you'll find Burmah-Shell.

BURMAH-SHELL
IN INDIA'S LIFE AND PART OF IT

be complementary to the class of work envisaged. All these sections of the project should be so planned and laid out that the buildings and plant may be expanded longitudinally to enable the production to be doubled, if necessary, at some future date. Mr. Blakiston, in his memorandum, has also suggested that the project should consist of seven bays, each of a standard-size 80 feet span, with an overall length of 500 feet, capable of expansion in either direction. The first bay will be for a heavy machine shop; the second for the forge and manipulatory fabrication; the third for grey iron and steel fettling; the fourth and fifth for the steel foundry; and the sixth and seventh for the grey iron foundry.

Mr. Blakiston has suggested these terms of reference to the tenderers merely as guidance. Any alternative which, in the opinion of the tenderers, is likely to reduce the capital cost or increase the flexibility of the plant, will be carefully considered. The basic conception of the scheme is to provide central heavy engineering facilities for the heavy engineering industry which, on account of the capital outlay required, may be beyond the means of private enterprise; and which can only be justified by serving in a comprehensive manner the aggregate out-size requirements of the constantly increasing and diverse heavy engineering, chemical and power projects. On the basis of an assessment of the availability of suitable components for manufacture, Mr. Blakiston has prepared a preliminary list of those consumed by some major industries. For the sugar industry, roll housings, stretchers, caps, gears, shafts, rolls and combs and evaporators are to be manufactured. For iron and steel works, he mentions roll housing, manipulating gear, charging box ends, rolls, ladles, driving shafts, ingot moulds, furnace castings, blast furnaces, bell and hopper gears and blast furnace ladles. For marine and transport, bow, rudder and stern frames, anchor chain links, anchor stocks, crank shafts, propeller shafts, locomotive cylinder and main castings, crankshaft and axle tree drop forgings, dredger shafts and buckets are needed. For the chemical industries, autoclaves, stills, caustic pots, pressure vessels, spun pipe moulds are required. For the mining industries, heavy components, including haulage and winding machinery, conveyor drives and coal cutting and handling tools are mentioned.

Mr. Blakiston says that many of these items are imported. Once the project is established, it will be overwhelmed with work and can select to its own advantage the components most suitable for the facilities it has. It is on this basis that he has framed the broad outlines of the foundry-forge project. The three organisations which have been asked to submit detailed project reports on the basis of the Blakiston memorandum are: Techno-

export of Czechoslovakia; Klockners of Western Germany; and Campbell, Gifford and Morton of the United Kingdom. Tenders are due by the middle of December, but it is possible that an extension might be asked for. When the quotations are received, they will be examined by Mr. Blakiston and placed before the next meeting of the National Industrial Development Corporation.

Newsprint Mill in Hyderabad

The Government of India has decided to entrust to the National Industrial Development Corporation the setting up of a newsprint mill in Hyderabad. The unit will be in the public sector. It will use bagasse, a by-product of sugarcane, in the manufacture of newsprint. The Corporation is likely to seek the technical collaboration of some foreign interests in the project. Bagasse is already being used in the manufacture of writing paper.

Aluminium Units

The aluminium manufacturing units in the Mettur Dam area of south India and in the Riband project area of Uttar Pradesh are also being processed by the National Industrial Development Corporation.

Coal Plans

From the data available so far, an estimate of the quality of coal to be mined in different areas has been tentatively made. It is as follows:

		(Million Tons)
Karanpura	Selected B	0.4
	Grade I	1.2
	Grade II	0.9
Korba	Selected A	2.5
	Grade I	2.00
	Grade IIIB	1.00
Kathara	Grade I	4.00
	Selected A	0.5
	Selected B	2.20
Bisrampur	Grade I	1.20
	Grade I	0.40
	Grade I	3.80
Korea	Selected B	0.50
	Grade I	0.50
	Grade I	1.00

For Korba, the position is that 2 million tons will be extracted from the Ghordeva seam, which is Selected A grade, and 2.25 million tons from the Jatraj seam. The coal of the latter category will be washed and is expected to yield 1 million tons of Grade I coal, and 1 million tons of middlings,

which will be classified as Grade IIIB. Half a million tons of these middlings will be used in the power house that is being set up by the Madhya Pradesh Electricity Boards. The other 500,000 tons will be used for brick-burning for the railways and other consumers, and also in the Bhilai project, where a certain quantity of middlings are needed. It is not correct to say that the coal of the Jatraj seam has an ash content exceeding 40 percent; it ranges from 28 percent to 36 percent. The notion that the ash content is more than 40 percent is derived from the fact that some stone bands contain, as stone bands usually do, a high percentage of ash. The ash content of these stone bands is not to be taken into account. The programme of production visualises the extraction of the higher grades of coal.

Black-Krishnamachari Correspondence

The text of the letters exchanged between the President of the International Bank for Reconstruction and Development, Mr. Eugene Black, and the Indian Finance Minister, Mr. T. T. Krishnamachari, were published recently. Mr. Black said in his letter: "In view of the acute shortage of railway investment, attention should be given first to the possibilities of improving the operational efficiency of the railway and of encouraging road transport and coastal shipping; the latter between them should be capable of making a considerably larger contribution than at present. I think that transportation could appropriately be regarded as a top priority for any Bank financing that may be devoted to the second five year plan." Coastal shipping was reserved for Indian owned and managed ships as early as 1950. A recent appraisal indicated a serious shortage of tonnage operating on the coast. It was claimed that about 30 more ships were needed, and the shortage was being felt particularly by the coal and the Andamans timber trades. This, it was stated, was largely due to the unprofitable nature of coastal shipping. "The remedy seems to lie largely in co-ordinating the freight structure of coastal shipping and the railways, a task to which the Rail-Sea Co-ordinating Committee is now addressing itself." It has also been asserted that railway rates are uneconomic and unrealistic and should be raised. At the same time, a demand has been made to earmark a definite share of the freight for coastal shipping.

Transport should not be used as a surreptitious way of raising taxation. The railway freight structure might appear "economically unrealistic", but it has managed to balance the Railway Budget, apart from making some contribution to the general revenues. In other words, it needs no upward revision so far as railway requirements are concerned. Any increase in railway freights would be in the nature of a tax on the general consumer using railway services. The issue, therefore, is whether it is a sound policy which is obviously calculated to benefit not all the people but only a section of them. In the final analysis, the continuation of any enterprise depends on its value to the public. If it is essential and if its services are better or cheaper than can be provided by a competitive agency, it deserves to be supported. If not, it does not deserve to survive. The Government has done its best to encourage shipping in general, and coastal shipping in particular. The Mudaliar Committee might find it difficult to recommend an increase in railway rates, because most of the witnesses from the interior appearing before it have urged the lowering of even the present rates.

Road transport stands on a different footing, as far as goods traffic is concerned. The Government has given assurances against nationalisation, at least for the second plan period. Here the issue is a slightly different one. Road transport is effective and profitable in Europe, largely because heavy vehicles are worked together with heavy trailers. Indian roads, particularly bridges in their existing condition, are too poor to be able to stand the weight of these heavy vehicles. A programme for road transport will have to take into account the strengthening of roads and bridges in India. In the ultimate analysis, most of the goods traffic will have to be carried by the railways. It is, therefore, in the fitness of things that the Finance Minister, Mr. T. T. Krishnamachari, has asked Mr. Black to discuss with his "trusted" lieutenant, Mr. B. K. Nehru, the financing of the railway development programme.

Company Secretaries and Accountants

The Finance Ministry proposes to sponsor the recognition or establishment, as the case may be, of two professional institutes—an Institute of Company Secretaries and an Institute of Cost and Works Accountants. During discussions on the Companies Bill, suggestions were made to provide for secretaries for every public or private limited liability company. But it was pointed out that until a profession of company secretaries had been built, it would be premature to provide for their compulsory appointment. There are three bodies of the secretarial professions functioning in India. Two of them are branches of U.K. organisations and the third is an Indian body. It is felt, however, that they are hardly adequate to meet the needs of this country. The Government has, therefore, accepted in principle the suggestion to set up a professional body for company secretaries under an act of Parliament. Pending the necessary legislation, it is proposed to set up an Institute of Company Secretaries as a limited liability company without share capital or profits. It will be located in Calcutta. There is also an Institute of Cost and Works Accountants in this country. It has 303 members and 267 student members. The Institute has been holding examinations twice a year. The Council of the Institute has offered to place it under Government control, and the proposal is now being examined. It is suggested that the Government should take it over and give it

statutory recognition in due course. Meetings of the interests affected are likely to be held in Calcutta soon.

Checking Cloth Price Rises

The Government has taken extensive measures to ensure that cotton textiles are sold at reasonable prices. Prices so far have been steady; at any rate, they have not risen sharply—so it is claimed. The imposition of excise duties on cloth was one method of promoting consumer resistance. The order against the keeping of more than three months' stocks by mills in general, and more than one month's stock by mills in West Bengal, along with the credit squeeze by the Reserve Bank, were other steps to check the rise in prices. The Textile Commissioner allotted a larger number of railway wagons for the movement of cloth to consuming centres, particularly West Bengal. There was a danger of an artificial cloth famine being created by dealers refusing to take delivery of goods. To counteract this, a member of the Central Board of Revenue, Mr. B. N. Banerji, recently visited Calcutta and secured assurances from dealers against such hold-ups. As a last resort, the Government retained requisitioning powers, and these were duly exercised. The West Bengal Government issued an order on 10th October requisitioning all consignments of textile goods which arrived up to and including 6th September, and were still held by the railway authorities in godowns.

Stocks of cotton textiles with mills on 31st August this year amounted to 154,000 bales, against 202,000 bales on 31st August, 1955. Exports of textiles during the first six months of 1956 amounted to 346 million yards, against 362 million yards in the corresponding period of 1955. Since both stocks with mills and exports have declined compared with 1955, home consumption must have gone up. According to the latest estimates, per capita consumption on an annual basis during the last six months has been 16.8 yards, or 0.9 yards more than in 1955. On this basis, the per capita consumption of 18.5 yards mentioned for 1961 should be reached by 1958, and the 1961 per capita

consumption should be not less than 20 yards. With a per capita consumption of 18.5 yards and an export target of 1,000 million yards, India should produce 8,400 million yards of cloth a year, against the present output of 6,700 million yards. She should, in other words, produce 1,700 million yards more of cloth by 1961. The Government has permitted the installation of 2.1 million new spindles; 1.8 million had already been licensed and 320,000 more were approved by the Licensing Committee at its meeting here last week. They will be installed in the new mills in Punjab and West Bengal which are being assisted financially by the Union Ministry of Rehabilitation.

On the loomage side, a production of 350 million yards has been allotted to the mill industry, the whole of it being for export. The issue before the Government is whether to stick to the existing targets and face an acute cloth scarcity in 1958 or to enhance the 1961 target on the basis of a per capita consumption of 20 yards. The latter would require a further expansion of cloth production by 600 million yards. To produce this quantity, 1.2 million additional spindles and 30,000 additional looms will be needed, on the assumption that the extra production will be entrusted to the mill industry. An early indication of the Government's policy is expected.

Revised Foodgrains Target

The Planning Commission, particularly its Deputy Chairman, Mr. V. T. Krishnamachari, has succeeded in persuading State Governments to revise their targets for agricultural production. The second plan mentioned a target 15 percent above the 1955-56 production. A little before the Planning Commission was to sign the second plan, Mr. V. T. Krishnamachari suggested raising the target to 40 percent. The two main features of his proposals were that the increase in the 1961 target from 15 percent to 40 percent should be within the existing outlay; and that the additional production should reduce the prices of agricultural commodities by 20 percent. As a result of recent discussions, State Governments

have agreed to a revised target for foodgrains of 30 percent over the 1955-56 production, against the original target of 15 percent for 1961. It is explained that the revised target is only for foodgrains and not for all agricultural products.

Indo-Czech Iron Ore Pact

A two-year Indo-Czech agreement on iron ore was reached here last week. Under it, India has undertaken to supply 500,000 tons of iron ore, at the rate of 250,000 tons a year. Negotiations for the sale of one million tons of iron ore a year, on a long-term basis, will be resumed by an official of the Commerce Ministry, Mr. B. K. Kochar, during his forthcoming visit to Japan, where he will represent this country at an E.C.A.F.E. session. They were initiated by the Japanese industrial mission during its recent visit to New Delhi, when the State Trading Corporation, offered to supply one million tons of iron ore a year on a long term basis. While in Japan, Mr. Kochar will also explore the market for manganese ore, which is in great demand there. In fact, India's anxiety is to push up exports of manganese ore in preference to iron ore. While on the subject of Indo-Japanese trade, it may be added that there is a growing realisation on both sides of the need to readjust their foreign trade policies. War and postwar developments have changed the pattern of Indo-Japanese trade. By mutual co-operation rather than cut-throat competition, the two countries can foster their trade relations, it is emphasised here. India, for example, needs steel, cement and machinery for her industrialisation, which she is prepared to buy from Japan or take in exchange for certain commodities she is prepared to export. Salt, iron ore, manganese ore and tobacco are other goods on India's export list.

Import and Export Council Meetings

The next meeting of the Import Advisory Council will be held here on 17th November. The Export Advisory Council will meet on the following day. The term of appointment of the two Advisory Councils has been extended for a further period of six months. The Councils were last reconstituted in November 1954 for two years.

THE WHEELS OF THE PLAN

Help the Railways—Your Railways—Serve You Better

EASTERN RAILWAY

country is spending

Rs. 7,200 crores in the

Second Plan period

on development

programmes. Production

in fields and factories

will be stepped up

to a still higher level,

our basic heavy

industries will be

expanded, and new industries

established. An enormous

flow of raw materials to

factories and workshops.....

a ceaseless stream of

finished products

to internal markets

and ports—that

is the charge ahead

of our country's

transport system.

India's blue-print for

prosperity is keyed

to her transport...

and the Railways will

bear the burden.

Up go coal prices — but cement stays the same

The cheapest (and the best) cement is still supplied by the ACC group of Free Enterprise factories. Meanwhile coal and other prices go up.

And does anyone suffer by this refusal to increase cement prices? Certainly not. Cheap cement means low cost building of everything from homes and roads to dams and factories. Cheap cement means better living for millions.

How does it stay cheap? Simply by improving methods of manufacture—i.e. by efficiency! Only thus could the ACC have kept down its price of cement despite the following price-raising factors which have come about in recent years:—

- Higher wages
- Higher royalty charges
- Higher freight charges, & NOW
- Higher coal prices

By this very efficiency and refusal to add to inflationary trends, the ACC is contributing to a new era of history—an era of wealth and prosperity, undreamed of even twenty years ago.

NO NEW LIGHT ON MAJOR ECONOMIC PROBLEMS

MR. HEAD'S PROMOTION COMES AS A SURPRISE

(FROM OUR LONDON CORRESPONDENT)

A CROWDED fortnight has furnished us with much to think about, without providing a great deal of clarification of the obscurity surrounding the major problems which have a bearing on the economic outlook in the immediate future. Sir Anthony Eden's partial re-shuffling of his Cabinet to relieve Sir Walter Monckton, on health grounds, of his heavy responsibilities as Minister of Labour and then Minister of Defence, has been expected for some time, and the only surprise is Mr. Head's promotion to the Defence Ministry in view of the strong criticism to which he has been subjected both by the Opposition and even by some Conservative back-benchers for his handling of certain questions as Secretary for War. On the other hand, there is force in Whitehall's argument that the promotion is "logical" as an entirely new broom would be faced with almost insuperable difficulties at this juncture. The Conservative party's annual conference in Llandudno, contrary to expectations, proved to be a triumph for the Government, whose general policy over a wide field came in for much greater approval than the unusually critical resolutions on various topics suggested as being likely. The responsible Ministers did well in ensuring this result, and Mr. Butler and the Prime Minister himself went a long way towards dispelling the idea that they had lost their grip on the rank and file and were in danger of jeopardising the party's position in the next election by lack of a firm policy.

Progress Report

The Bankers' Dinner at the Mansion House was notable this year for the unanimity it disclosed between the views of the Chancellor of the Exchequer on the one hand and the Governor of the Bank of England on the other as to the steady progress that is being made towards containing the inflationary danger. The City had awaited these speeches with foreboding and it received them with relief. Mr. Macmillan revealed that Britain's balance of payments surplus for the first half of this year was in fact £144 million (in July he anticipated a figure of "something over £100 million"), which is an impressive improvement on the comparable period in 1955 of a surplus of only £15 million. He also disclosed that so far the financial and trade consequences of Suez have had no significant effect on the economy. He saw no reason to fear that "the broad structure" of his Budget would not be maintained. He supported this view with the statistical evidence already available, but warned us of the continuing threat from Suez and of the internal danger of the still unsettled wage claims which are serious because our external reserves are still too low. Mr. Cobbold followed with an authoritative assessment of the working of the Government's monetary policy. The economy he saw as "still overstrained", but rather less so than some months ago—with the tempo of activity slightly diminishing. As to the struggle with inflation, he described it as "effectively joined but certainly not yet won." Mr. Cobbold endorsed the view that the coming months are crucial and that the determining events lie in the fields of industrial costs and public finance. He refused to give any commitment as to the future course of the Bank rate, but he did go as far as to say that the Bank will feel more comfortable "when circumstances justify a somewhat lower pattern of short-term interest rates." On the much-discussed question of the desirability of introducing statutory liquidity ratios the Governor of the Bank of England registered his strong preference, shared by the banking com-

munity, for the current policies of economies, increasing savings and a general funding programme.

Sir John Braithwaite, chairman of the Stock Exchange, continued his regular efforts to educate the public as to the relationship of profits and dividends to inflation and put in a strong plea for profit taxation reform. His thesis was the inadequacy, in present conditions, of depreciation allowances for tax purposes based on historical costs. During a period of stable prices the historical cost basis worked out well. But it has become anachronistic in the present inflation phase. The effect is to make profits as published and as taxed appear considerably greater than they really are. Sir John frankly recognised the practical difficulties which arise once the Inland Revenue leaves the firm ground of historical cost for the more debatable realm of price indices and estimates. He ventured to assure Mr. Macmillan, nevertheless, that companies and their advisers could find a new and realistic basis for calculating depreciation satisfactory both to the Revenue and themselves.

September Trade Deficit

Britain's trade gap, measured by the excess of imports over exports, widened again last month. At £63.7 million, it was £2.9 million larger than the August figure of £60.8 million and substantially above the average of the first nine months which is £53.1 million. Imports in September at £295.1 million were £27 million less than in August and below the average of £332.3 million for the first nine months. But exports also fell, by £30 million to £231.4 million, against the nine-month average of £259.2 million. Exports in September, as in August, are usually low because of holidays. This year both exports and imports may have been reduced through the requisitioning of ships due to the Suez emergency. Sales to Canada and the United States in September were valued at £33.1 million, against £34.4 million the month before. In the first half of this year Britain not only paid her way in her current transactions with the rest of the world but earned a substantial surplus of £144 million, £126 million more than for the first half of 1955. The usual Government White Paper shows that the main factor responsible for this turn-round was an increase of £168 million in earnings from exports, against a rise of only £36 million in imports. Britain also achieved a surplus of £61 million in the first half of this year with the vital dollar area. This compares with a deficit of £76 million in the first half of last year.

As Others See Us

The opinion of an outsider is always interesting, if not always very welcome. The O.E.E.C. has been considering economic conditions in Europe. It finds that British production is lagging well behind that of other European countries—14 percent up on 1953 as compared with 41 percent for Western Germany, 38 percent for France, and 28 percent for Belgium. The average for the 15 countries was 27 percent. The report also says that over the past two years prices of consumer goods have risen faster in Britain—by 12 percent—than in any other European country except Turkey, Greece and Iceland. Dealing with the U.K. alone, it says: "External economic problems are likely to continue to be a major preoccupation of the United Kingdom for some time to come." The report acknowledges the success of the credit squeeze and other measures that have caused the improvement in the balance of payments in the first half of 1956. Industries producing consumer durables for the home market have been made to release resources, but the next stage which is slow to start, is for these resources to move to the engineering industries working for export markets. Something has to be done to make the economy more flexible and the O.E.E.C. suggests that more foreign competition is wanted. "The most direct stimulus to greater flexibility in the economy can be provided by greater foreign competition."

Steel Production Recovering

Steel production has begun to recover from the low point to which it had been reduced by the ban on overtime by the industry's maintenance workers. Production in September was at an average weekly rate of 417,000 tons a week, which is a good deal better than the low level of 326,400 tons a week reached in July, but not yet up to the level reached in the early months of this year. The change in the pattern of demand for steel since last year is stressed in a statement from the Iron and Steel Board. Deliveries to the heavy capital goods industries were higher in the eight months of 1956 than in the same months of last year. Deliveries to the motor, cycles and aircraft group of industries were lower. Deliveries to the shipbuilding and marine engineering industries were 16,800 tons between January and August, 1956, against 14,600 tons in January to August, 1955. This tendency for the capital industries to use more steel and the consumer goods industries to use less may be seen also in figures for steel imports. Imports of plates and of sectional steel have increased, while imports of sheet and tinplate are well below last year's level.

Investment in 1957

A new Bulletin for Industry from the Treasury summarises the reasons for expecting industrial investment to level off during 1957. Estimates of expenditure have been received from some four hundred companies. These expect to spend 9 percent less on building work in 1957 than in the present year. They expect to spend a little more on plant, machinery and vehicles in 1957, but their total capital expenditure will be slightly down. There is confirmation of this trend from the fall in industrial building approvals in the first half of this year. The fall was not extended into

home orders for machine tools in the second quarter. On the other hand, new home orders for capital goods in engineering generally have been picking up in the second quarter and may well have been higher than in the first or second quarters of 1955. "Provisional indications are that manufacturing investment may begin to level out next year at the high levels attained," the Treasury concludes.

Employment Statistics

Employment exchanges in Britain filled 176,000 vacancies in the four weeks ended, 22nd August. The number of vacancies notified but unfilled on that date was 361,009, 36,000 fewer than on 25th July, and 87,000 fewer than a year previously. These figures are given by the Ministry of Labour and National Service, which also announces an increase of 6,000 in unemployment between 13th August and 17th September, and a fall of 25,000 in "temporarily stopped" workers. The announcement says, however, that the decrease in those temporarily stopped resulted from some workers on short-time ceasing to register as unemployed when they were disallowed benefit by the National Insurance Commissioners because they were covered by a guarantee week agreement. There were 247,600 registered unemployed in Britain on 17th September, of whom 225,200 were wholly unemployed and 22,400 temporarily stopped. This was 1.1 percent of the estimated working population, compared with 1.2 percent in August and 0.9 percent in September, 1955. Of the wholly unemployed, 38 percent had been out of work for more than eight weeks.

Television Hits the Cinemas

Figures to be published shortly by the Board of Trade will show that the decline in cinema attendances in the second quarter of 1956, compared with the same period of 1955, was 9 percent. Admission to 4,424 cinemas totalled 279 million. It is interesting to note that the Rank organisation has decided to close 79 of its cinemas. Although no detailed figures are yet available, attendances at many cinemas improved in the past quarter, but this is believed to be due to the bad weather. The impact of television is shown in a report which indicates that the fall was more than the average in the North-Western (13 percent) and Midland regions (11 percent). Commercial television began in the Birmingham area in February and in Manchester in May.

Exchange Control Relaxations

Further simplifications of Britain's Exchange Control formalities, to be introduced this week, will be welcomed in commercial and financial quarters. Designed to help traders and to achieve administrative economies, the changes will reduce the number of forms to be completed by about 1,300,000 a year. One change will raise the exemption limit for filling in forms for export shipments from £250 to £500. The effect will be to reduce the number of forms to be completed by over 300,000 a year, or by about 37 percent of the present number of forms for exports to destinations outside the sterling area. As for import payments, Exchange Control forms will be abolished for all payments up to £250, with the resultant elimination of about 400,000 forms a year, or about 50 percent of all the Exchange Control forms relating to U.K. imports from outside the sterling area. It is also proposed to abolish forms for most "invisible" payments up to £250, which will add another 600,000 forms a year to this Exchange Control bonfire. This represents about 45 percent of the number of all Exchange Control forms for payments outside the sterling area for "invisible" transactions, but only about 11 percent of their value. The new arrangements do not affect the requirements of the Exchange Control Act, 1947, regarding the collection of sums due and the surrender of foreign currency. That the exporter's duty is to obtain prompt return to this country of the proceeds of his exports still stands.

Work Study in Jute Mills

Since April, 1954, the Association of Jute Spinners and Manufacturers has operated a work-study advisory service to assist and advise firms on the application of work study and incentive methods. This will now be organised on a new basis in view of the ending of the contribution towards its cost which came from U.S. counterpart funds. In future the Association will finance the service entirely from its own resources for the benefit of its member-firms. The service will be continued largely in its present form and, as before, close liaison will be maintained with the work study staffs of individual firms. Among the special projects which are to be continued is the successful "productivity ladder" scheme which the jute industry last year introduced for the first time in this country and to which reference was made in a recent despatch. This scheme enables individual firms to compare their own rate of productivity in various stages of processing with that of other firms.

Mysore Gold Pay-out

With the completion of arrangements covering the nationalisation of the Mysore gold mines the City has shown considerable interest in share prices and break-up values. There are substantial gaps. The 10s. shares of Nunddydroog Mines, for instance, are quoted on the market at about 16s. 4d., against the 20s. that holders might expect to receive on nationalisation. The latter figure is based on the £476,000 compensation receivable and the £107,000 of gilt-edged held. Champani Reef, similarly, are 2s. 9d. below their approximate break-up value of 15s. The vesting date has been fixed by the Mysore legislature as 30th November, and three-quarters of the compensation will then be payable at once. The remaining quarter will be payable 24 months later.

Bombay

INDIA LOSING TEXTILE TRADE IN MIDDLE EAST

INCREASING COMPETITION FROM COMMUNIST COUNTRIES

(FROM OUR BOMBAY CORRESPONDENT)

A COMMITTEE member of the Cotton Textiles Export Promotion Council, Mr. M. N. Savani, Middle East tour, Mr. Savani points out that whereas five years ago India supplied the bulk of Iran's textile requirements, such exports now amount to no more than a mere trickle. Mr. Savani estimates the annual Iranian demand at 250,000,000 metres of which Iran's own mill industry and the handloom sector now produce 125,000,000 metres each year. Russia with 50,000,000 metres a year is at present the leading exporter to Iran followed by Japan with 25,000,000 to 30,000,000 metres. East European Communist countries including Poland, Czechoslovakia and Hungary between them account for another 20,000,000 to 25,000,000 metres, while India and Italy share the last place competing for the balance of 25,000,000 metres. There are various factors which have contributed to this decline. A fundamental change would seem to be a shift of consumer preference from coarse and medium varieties to fine and superfine fabrics, and in this field, India is unable to compete with the Communist countries and Japan. The diminishing demand for coarse and medium counts is being increasingly met by the local industry and imports of these qualities are drastically restricted and subject to prohibitive duties, while the import of certain varieties, such as grey cloth and coating is prohibited. Iran's barter agreements with the Communist bloc facilitate the imports of textiles from the Communist countries to the detriment of the Indian trade which is conducted on a cash-and-carry basis.

Apart from the uncompetitive position of the Indian industry which derives from old-fashioned and outmoded equipment (which also prevents the proper finishing of the fabric), certain other requirements of this market have not been met. Iranian merchants, for instance, prefer to receive printed fabrics in as wide an assortment as possible whereas Indian mills stipulate an unreasonably large quantity for each design and colour. Again, the demand from Iran is for coloured weft shirtings and dyed poplins in 29" and 36" widths with double foldings and in 40-yard pieces while India supplies in 24-yard pieces and in single fold only. India is not in a position to supply printed chintz, shirtings and dyed poplins on rolls while the competitor countries are able to do so. This is an important factor as the Iranian retailer is prepared to pay a premium of about two annas a yard if the cloth is supplied on rolls instead of in pieces.

Perhaps the Indian industry is not entirely to blame. The export demand is widely dispersed over a large number of mills and forms a relatively small proportion of their individual total output. It seems hardly worth their while to disturb their normal production, geared as it is to the mass consuming home market, in order to roll off comparatively smaller quantities of specialised fabrics for an erratic foreign market. Yet, the aggregate demand is considerable and the overseas customer must be offered what he actually requires and at a competitive price instead of being coaxed to accept in large minimum quantities something he does not really need at prices higher than those ruling elsewhere. Perhaps when the new spindles and looms recently sanctioned by the Government of India come into operation, it may be possible to pay attention to these details because the quantity of cloth so produced would be limited and specifically meant for the export market. In addition, the mills will have an incentive to comply with these requirements in the knowledge that they can at last be competitive with the new equipment installed. The Indian industry would be well advised to consider this point carefully because customer requirements of piece lengths and packing is as important a factor as price. The Cotton Textiles Export Promotion Council could also assist by keeping the home industry well informed on changing fashions and tastes. Mr. Savani also draws attention to a serious complaint which was made to him during his tour. It was alleged that various varieties are stamped as having been dyed in fast colours while in actual fact they are not so. In particular, it was alleged that almost all types of Leopards which are dyed in sulphur black are stamped as fast colour, but the colour begins to fade and run with the first wash. There can be no excuse for such practices and they must cease forthwith. There can be nothing more disastrous than a blot on the integrity of a mercantile community.

Syrian Textile Industry

Much the same conditions prevail in the other countries of the Middle East. The Lebanon, for instance, is also developing her own textile industry. The country has a number of mills which produce almost all varieties of cloth including superior shirting and specialised items such as towels and furnishing fabrics. The country needs to import little except for bleached voiles and heavy satins which are supplied by the U.K. and Japan. The import duties are prohibitive which are designed to protect the home industry. Syria, too, has an efficient textile industry of its own which takes care of the home market in addition

to exporting some quantities to Jordan, the Lebanon and Iraq. Mr. Savani was impressed with the Syrian manufactured cloth which he found superior to the Indian product. He particularly found that Syrian grey sheetings were flawless, whitish in appearance and without any kitty. The reason for this is perhaps the superior Syrian cotton. Indians may be able to do some business with this market in heavy quality grey and bleached drills, heavy grey sheetings and mercerised bleached voiles but not at the present price level. Syria would appear to be a good market for cotton yarns, but India would have to face severe competition. In the cotton yarn market, Belgium is now listed as the world's largest exporter with the United Kingdom second and Hongkong in the third place. India takes the eighth place in this field being beaten by Italy, Japan, Egypt and the United States. Some very low prices indeed have been quoted at subsidised rates to producers. Manchester reports indicate that in recent months there have been a spate of low quotations for yarn from Pakistan and there is some wonder in the trade there as to how Pakistan mills can afford to offer their products at such low figures. Jordan has no textile industry of her own and continues to be an importer and was once a good market for India which has now been lost to Japan, the Communist countries and Britain. Iraq, on the other hand, has just started a few mills which concentrate on the manufacture of grey cloth. According to Mr. Savani, the quality is excellent because the local cotton is of sufficiently long staple and better in quality than that used by Indian mills for the manufacture of similar cloth. Iraq, too, has imposed a steep import tariff in order to protect the domestic industry and of the varieties that are still imported, Japan and the Communist bloc seem to have a monopoly. Similarly, Kuwait and Bahrain which used to be India's traditional markets have been lost to foreign suppliers.

The broad fact emerges that not only has India to face severe competition from Japan and the Communist countries, but she also has to contend with the development of the local industry in this area. This seems to be an inevitable development which could have far-reaching repercussions in the future. These countries have the advantage of modern equipment and adequate supplies of superior home-grown cotton. Their cost of production should therefore be low and when a reasonable stage of development is reached, the textile manufacturers of the Middle East may well threaten India's traditional export markets in Africa. Meanwhile, recent reports from other markets are not very encouraging. Although India

has retained her position in the Aden market and during the first six months of this year exported 21,700,000 yards and accounted for 78 percent of Aden's total imports, indications are that competition from China and Pakistan is stiffening. Local merchants are now reported to have a stock of over 500 bales of Chinese grey sheetings as against an earlier stock of 50 bales. It is also reported that further orders of 3,000 bales of grey sheetings have been placed with Communist China for delivery this month. Competition from Pakistan is also expected to increase in intensity following reports that the target of 2,000,000 spindles for the cotton textile mills of West Pakistan is expected to be achieved within the next few months. So far, over 1,657,000 spindles and 24,600 looms have been installed. Another 128,340 spindles and 2,548 looms are under installation while orders for the remaining spindles and looms have been placed to complete the target. At present, textile mills in West Pakistan consume more than 250,000 bales of indigenous cotton annually. No repeat orders have been received from Singapore because of the high price level ruling in India. This market is now switching over to Chinese and Russian exports. Recently, two consignments of 50,000 yards and 200,000 yards of Russian printed shirting have been imported into Singapore. The qualities found immediate favour and the entire stock was cleared in a short time. It is reported that fresh orders exceeding 1,000,000 yards have been placed with Russia. Russian manufacturers also accept buyers' designs for printing and the minimum stipulated is 15,000 yards for each design. Spain is also trying to enter this market and has recently supplied job lots of printed cotton piecegoods at an average c.i.f. price of 13d a yard, but these qualities have not proved popular because of their dull finish.

Indian Textile Exports

The quantity of cotton piecegoods passed for shipment from this country during the first nine months of this year has amounted to only 563,350,000 yards as against 676,100,000 yards in the corresponding period of last year. The actual exports for the first eight months of this year totalled 495,400,000 yards. Japan has, on the other hand, shipped as much as 697,000,000 yards in the first seven months of this year. British exports for the first eight months of 1956 total 315,000,000 yards. Japan's consumption of Indian cotton recorded a sharp increase from nearly 9,000,000 lbs. in 1954 to 31,000,000 lbs. last year. Japan's total consumption amounted to 967,000,000 lbs which was made up of 349,000,000 lbs from America; 50,000,000 lbs. from Egypt and Africa; 86,000,000 lbs. from Pakistan; 31,000,000 lbs. from India and 351,000,000 lbs. from sundry sources.

KERALA STATE

(FROM OUR MADRAS CORRESPONDENT)

THE expeditious hearing of the Coimbatore textile bonus dispute by a board of arbitrators (on which both parties to the dispute had their members with a District Judge as chairman) was in part due to a precedent. But the award is distinctly more generous, for 1955 was a good year for most mills. In spite of the millowners' plea that four months' pay is the most that could be given, the majority decided in favour of six months' pay. Going by the precedent, the mills that paid poor dividends are now saddled with the liability to pay bonus. Although the L.A.T. recently reduced the Mettur Mills workers' bonus from eight to six months' pay, it was represented to the Board that nine months' pay could be granted as bonus as the spinning mills in the south have new advantages. The millowners contended that power cuts affected their prosperity, but their lawyer failed to win the case and the bonus has got to be paid by Diwani to the employees of 44 mills. Only two mills running at a loss for years are exempted. The Kaleswarar mills which has not paid a dividend has to pay two months; while Cambodia which declared only a 5 percent dividend has got to pay three months like Coimbatore Spinning and Weaving Mills which have declared a 16 percent dividend for 1955.

The millowners' representatives submitted a minute of dissent, but their view that the compensation paid to the workers during lay-off should be deducted did not prove acceptable to the four others on the Board. As many as 23,000 workers

in 21 mills will get five months, but it is noteworthy that some mills paying 20 percent dividend have got to pay four months pay as bonus, while other Coimbatore mills paying 20 percent dividend are now called upon to pay six months to their workers. The award, it seems, is rough justice to shareholders who will soon find that 1956 profits will be badly cut by the addition to the wage bill. A point to remember is that recently a five-year wage-bonus agreement was signed with the trade unions for the sake of industrial peace and the Board did not take into account the future benefits promised to labour. Nor did it ascertain whether the mills with old equipment can undertake timely renovation if they are forced to fall in line with the bigger mills and pay out bonus on a scale fixed apparently arbitrarily.

The I.N.T.U.C. unions made common cause with the communists in pressing the case for bonus, and the Madras Government is likely to accept the 4 to 3 majority view, as a labour dispute must be avoided. The award applies to Salem also and covers even apprentices who have put in three months' work in 1955. The implications for the share market will be seen now. There are a few mills which can pay dividends on the 1955 scale, but the majority will not be in a position to do so, especially if the bonus liabilities cut into the current year's profits.

Foreign Trade via Madras Port

The foreign trade of Madras port in June reveals an increase in exports as well as imports. Arrivals of steel and oil from abroad were a new feature. Shipments of tobacco fell and the tea export trade declined. Some increase in the exports of handloom goods to Africa was noticed, and hides and skins exported to Japan increased. The decline in exports, compared with June, 1955, was marked in metals and ores as well as in grain and flour. The stoppage of groundnut oil exports reduced with the volume and value of its exports from Madras. The port however has also been affected by congestion and vessels have encountered delay in entering and clearing. Proposals for ore dumps and bigger cranes have been made. Labour trouble has been averted but the dockers' demands have not been withdrawn. Uniform and increased pay in all ports figures among the demands put forward. The committee of enquiry, which recommended piece rates for dock workers, has been dissolved. The work nullified by the strike call. Port labour here is distinctly militant, being inclined to follow the Bombay union. During his visit for opening the new Ernakulam-Kottayam line Mr. L. B. Shastri, the Union Railway Minister, advocated a greater use of road transport and shipping.

Industries on West Coast

The visits of Union Ministers to the west coast were the occasion when pleas for more capital for Kerala industries were made. The impending separation of Malabar has led to a plea for more State-owned enterprises. The starting of tin-can factories and stainless steel manufacture in Travancore-Cochin cannot enlarge employment opportunities appreciably. But big tanneries in Trichur may relieve unemployment. The snag, however, is that the tanning industry in the south has already surplus capacity and those in Dindigul can easily use the raw hides and skins from the west coast. Yet it has been claimed that a big tannery in Chalakkudi in Trichur district will help the local artisans. Village flaying centres to provide better hide have been approved, but the main demand is that timber should in future be processed in west coast towns by setting up saw mills there. The industries using desiccated coconut as their raw material have good possibilities. There is also a better future for plywood. Compared with Calcutta the factories on the west coast have advantages. Those in Calcutta may have a big market, but they must get wood from the Andamans. Those in Malabar can step up output with local supplies and one factory in Baliapattam has a development programme. The demand for plywood now is not only for tea-chest manufacture, but the high cost of good timber and the lack of trained artisans necessitate the use of plywood for a variety of purposes, and the west coast factories, with an export trade by sea can do better, if the soft-woods are used. The match factories in the south are dependent on soft-wood and Kerala may be able to develop its own industry as the Mettur chemical factory expects to produce chlorate of potassium in quantity this year. Curb on big match factories to limit their output to 35 million gross boxes are already in force. T.C. intends setting up a cottage match industry as Madras has done. Sago manufacture from tapioca may be attempted and starch for industrial use produced for export. The industrial potential of Kerala is rated high, but lack of capital is a formidable barrier. The opening of paint factories to use cashew oil has been advocated, but the best prospects seem to be offered by coir. Even though the export of yarn is not favoured officially, the manufacturers feel that the domestic market alone cannot absorb the entire production, so regular exports to Australia and other countries should be made. Handloom interests are arguing still about the need to keep all weavers in work and protesting against the installation of powerlooms. The coir industry has got over its postwar depression, but labour trouble is endemic, and at the last meeting of the Alleppey Chamber of Commerce, attention was drawn to the need to keep coir products competitive in overseas markets. The economic handicaps of Kerala cannot be removed by migration or transport facilities, but by creating new lines of employment in small towns. There is a chance that the Wynaad may be fully opened up by Travancore settlers, in which case, the supply of plantation products for export will be increased.

More than 2,00,000 miles

- and this LEYLAND 'COMET'
runs smoothly as ever!

Forward-controlled chassis, designed specially to combine large body space with easy handling; 6-cylinder vertical direct-injection compression ignition engine; average payload 7½ tons

It's the only 7½-ton payload chassis made in India!

Mr. Jagadeeshwariah, well-known Secunderabad operator, bought his first Leyland 'Comet' five years ago. "This chassis has now covered over 2 lakh miles and it has proved to be extremely reliable and economical. I unhesitatingly recommend that there is no finer vehicle obtainable today," he says. Mr. Jagadeeshwariah now has four 'Comets', and is thinking of buying a fifth 'Comet' to add to his fleet!

Main Dealers:
For Bombay, Saunshira, Cutch and Hyderabad:
Automotive Manufacturers Private Limited
108 Bazar Ward, Kuria, Bombay

For West Bengal:
Associated Indian Enterprises (Private) Ltd.
7-11, Ganesh Chandra Avenue, Calcutta-13
For Delhi, Madhya Bharat, Punjab, Pepsu, Rajasthan,
Himachal Pradesh, Bhopal and Madhya Pradesh:

RAW JUTE EASES AFTER INITIAL FIRMNESS

MODEST BUSINESS IN SACKING CONSTRUCTIONS

THE publication of various trade statistics over the past few days caused a definite reaction in the market, and compared with previous years, they make interesting reading. Total arrivals of raw jute at Calcutta and mill stations in the first three months of the current season (July to September) total 1,172,000 bales, made up of 1,035,000 bales from India and 137,000 bales from Pakistan. This is an increase of 389,000 bales from India, but a decrease of 209,000 bales from Pakistan, making an overall increase of 180,000 bales. On paper, this may appear to be satisfactory, but it is not so when placed against the consumption figures. During the same three months, Calcutta mills have consumed 1,563,000 bales of raw jute, or 90,000 bales more than during the same period of last year. Thus, they have used 391,000 bales more than they have imported. This figure can be reduced by about 100,000 bales on account of jute purchases and local supply, figures for which are not included in the arrival statistics, but it is safe to say that imports fall short of consumption by at least 300,000 bales. The deficit has had to be made up from the mills' carry-over from last season, which has now been reduced to about 500,000 bales and is far from adequate for emergency. It perhaps would have been sufficient if the carry-over was distributed evenly throughout the industry, but this is not the case. Already we have had mills resorting to urgent purchases from local markets for very short delivery to supplement their supplies, and although it was stated that the reason for these purchases was contracts not being fulfilled in time, if the carry-over had been adequate this state of affairs would never have existed.

As a result of these interpretations, the jute markets have ruled fairly steady over the past fortnight. Sellers have been inclined to hold on to their stocks, especially as immediately before the recent holidays, imports into the main up-country agencies were practically nil. This, of course, was largely due to transport restrictions on account of floods, but it nevertheless was a bullish factor for operators. Within the past few days, and arrivals have increased. This is nowhere better demonstrated than in the local Cossipore markets, where wagon arrivals since last week-end were about 350 a day, a figure far in excess of the handling capacity of unloading crews. Operators have been influenced by the increase, and towards the close conditions were easier.

There has been a fair amount of activity in the jute goods market over the past two weeks, and rates advanced considerably in the four working days between the holidays. Heavy goods came in for most of the support as a result of Australian interest in woolpacks and cornsacks, and business was reported in both these constructions. The extent of the business, however, did not warrant an increase of about Rs. 2 a 100 bags in sacking prices, and most of this rise was the direct result of speculative activity. Later in the week, operators began to take their profits and the market with offers. Prices fell rapidly, and it was not long before sacking rates had fallen back to the previous levels. Hessian tended to remain steady during the period under review, although interest was limited, but reports from America on consumption were encouraging and helped to strengthen operators' ideas. Calcutta mills took advantage of each rise in prices, and although business was limited to only a few standard sizes, it was the first sign of activity for some time.

THE JUTE MARKETS

Manufactured Goods: The current report covers the period from 11th October to 24th October, during which time business was restricted to only eight working days because of the local Durga and Lakshmi Pujas. Early in the period, interest was evident from Australia for woolpacks and in spite of the holidays, negotiations were conducted and enquiries put through. This resulted in sacking prices showing a large increase. At the opening after the holidays, heavy goods rose by about Rs. 2 for B Twills to open at Rs. 115-4 a 100 bags for October shipment, and Rs. 115-8 for bags for January-March shipment. Hessian at this stage was comparatively neglected, but rates moved up in sympathy with sacking, so 40in. 10oz. was quoted at Rs. 42-2 a 100 yards for near shipment, and Rs. 41-4 for forward shipment. A fair amount of business was reported at this level and foreign enquiries continued to maintain prices. At this stage, it was learnt that the Government was also buying heavy goods constructions within narrow limits but with a very steady undertone. Speculators had been very active meantime, and with the high prices ruling, heavy selling pressure had an adverse effect, and prices receded rapidly. Hessian did not come under this influence as reports of an increase in American burlap consumption coupled with small foreign enquiries had a stabilising effect. At the close, before the holidays for Lakshmi Pujas, prices were based on October 40in. 10oz. at Rs. 42-5. At the opening on 22nd October, the excitement had gone out of the market and

rates showed a drop of 8 annas in heavy goods and 4 annas in hessian. There was no interest from any source, so prices declined. By Tuesday morning, they had fallen to Rs. 114-4 for October B Twills and Rs. 41-12 for 40in. 10oz. hessian.

At the close, prices were easier in the absence of business, and opening quotations on Wednesday morning were as follows:

	October	November	December	Jan.-March
	Rs.	Rs.	Rs.	Rs.
40in. 8oz.	34-4	34	33-12	33-8
40in. 10oz.	41-10	41-11	41-11	41-8
B Twills	113-12	114-4	114-4	114-2
Heavy Goods (Plain)	114	116	115-8	114-2
A Twills	135-8	137	137	137-8
Liverpools	125-6	126-12	127	127-4
Cornsacks	113-10	114-6	114-6	114-8

Raw Jute: The fibre markets opened on a steady note and all quotations rose by 8 annas a maund to Rs. 29 basis Bottoms for Dhubri-Assam October-November shipment. Several enquiries came at the beginning of the holidays at lower rates, but they were strongly resisted by sellers who were influenced by a rise in the upcountry markets. Eventually buyers withdrew because of the rising prices, and by the opening on 15th October, Dhubri-Assam rates had advanced a further 8 annas to Rs. 29-8 a maund, in sympathy with the steadier goods market. As a result of gunny business, mills covered in jute, and over the next few days a fair amount of business passed at full market rates for forward shipment. There was also a steady demand for quick shipment jute, and before the next holiday, a mill group purchased a large quantity of local jute for delivery within three or four days. This encouraged the sellers' already bullish ideas and the market closed on a very steady note. Over the holiday and the week-end, however, imports into the upcountry agencies and the local Cossipore markets increased sharply, with a consequent easing of prices. This, coupled with the quieter goods market, caused opening jute quotations on Monday morning to fall back to Rs. 29 a maund. Over the next two days, buyers stayed completely out of the market, and although quotations remained unchanged, the undertone was easier.

During the period under review, business was done in Dhubri-Assam-Northern jute at Rs. 28-12 to Rs. 29-8 a maund basis Bottoms for October-November shipment, and also in Local Assam and Northern jute at Rs. 29-8 to Rs. 30 a maund for ready delivery. Daissee and Tossa were in good demand, being purchased from first-class agencies at Rs. 29-8 to Rs. 30 a maund for ready and October-November shipment. Small lots of Daissee Mesta changed hands at Rs. 27-8 a maund basis Bottoms for the same shipment, and F.A.Q. bimbi was done at the same rate. Pakistan Cuttings were reported at between Rs. 123 and Rs. 126 a bale for October and October-November shipment.

At the close, the market was quiet, with very little jute on offer. Opening quotations on Wednesday morning were as follows:

Indian Jute:	Landed at Mills Rs. a md. basis	Shipment.
Lower Assam	29	Oct.-Nov.
Northern	29	"
Murshidabad White	29	"
Daissee	29-8	"
Daissee Mesta	27-8	"
Local Northern	29	"
Bimbi	27-8	"

Tossa is quoted at 8 annas to Re. 1 a maund above the price of white jute.

Pakistan Jute:	Rs. a md.	Shipment.
Jat	32	Oct.-Nov.
District	31-8	"
Northern	31	"
Pucca:	Rs. a bale.	Shipment.
Mill Firsts 2/3	220	Oct.-Nov.
Export Firsts 2/3	200	"
Export Lightnings 2/3	185	"
Jat Cuttings	125	"

Imports into the Cossipore markets have totaled 1,680 wagons since 11th October, 450 of these being in the last two days. This is the largest figure for some time and is well above last year's average. Prices have not dropped a great deal, however, as all arrivals have been taken up by mill representatives and operators with October contracts to cover against. Strong demand for quick delivery jute over the past few days has

caused a tightness in this category, and sellers are demanding high prices. At the close, Kishengani jute was quoted at Rs. 27-8 to Rs. 27-12 a maund basis Bottoms, but offers at this price contained a considerable amount of moisture.

Raw Jute Consumption

During September 1956, mills reporting to the I.J.M.A. consumed 492,630 bales of raw jute in a 197½-hour working month, against 522,300 bales in the previous month which had 203½ working hours. Total consumption for the period July-September, 1956, now amounts to 1,563,600 bales. In September 1955, which was a 209-hour working month, raw jute consumption amounted to 508,740 bales, and the total for July-September, 1955, was 1,473,610 bales.

I.J.M.A. PRODUCTION FIGURES FOR
SEPTEMBER

The Indian Jute Mills Association reports the total production of jute goods during September, as follows:

Description	Quantity
1. Gunny Bags	
(a) Hessian	5,004 tons
	1,441 lakh yds.
	85.7 lakh Nos.
(b) Sacking	42,821 tons
	10,23.9 lakh yds.
	4,53.8 lakh Nos.
2. Gunny Cloth	
(a) Hessian	30,527 tons
	11,92.4 lakh yds.
(b) Sacking	1,014 tons
	23.1 lakh yds.
3. Other manufactures	5,151 tons
4. Total production (above figures combined)	
(a) All kinds	84,517 tons
(b) Hessian (both bags and cloth)	13,36.5 lakh yds.
(c) Sacking (both bags and cloth)	10,47.0 lakh yds.

	Summary			(000 Tons)		
	Sept. 1956	Aug. 1956	Sept. 1955	Sept. 1956	Aug. 1956	Sept. 1955
Hessian	13.37	13.53	13.52	35.5	35.4	35.4
Sacking	10.47	11.57	11.35	43.8	48.2	47.2
Others				5.2	6.0	4.8
	Grand Total			84.5	89.6	87.4
				Hours worked 197.5 203.5 209.0		

N.B.—These statistics are based on replies received and represent all members of the Association and Gagalbhai with estimates for three non-member mills.

THE FOREIGN JUTE MARKETS

BRISK BUSINESS AGAIN

(FROM OUR DUNDEE CORRESPONDENT)

WITH raw jute mounting up in price during the past week consumers of all commodities in the trade have been displaying a fair amount of activity. Spinners have been purchasing jute on a much freer scale, even though the prices they are paying for the raw material are higher than those obtainable for jute yarns. Still, trade must go on, and a large business has been done in the various qualities of yarns, particularly the hessian descriptions on the basis of 14.7d a lb. for common 8lb. cops in the range 8/16lb. and at 15.35d a lb. for 8lbs. warp on spools. There is a belief that a change in prices for yarns and cloth must take place in the very near future. It is understood that imports into the markets from upcountry in Pakistan are very small and that buyers have great difficulty in securing the quality they require. Mill Firsts, for instance, are extremely scarce and offers to this market have practically ceased. The last sale made was one at £103 for a secured parcel, October-November shipment, c.i.f. U.K., while on spot as much as £110 has been paid for a good Mill First and offered in that position at £108. Mill Lightnings have become lowest at £92, and Mill Hearts at £88, with Continental Mill Hearts at £82, October-November, c.i.f. Many sellers are quoting more than these rates. Daissee-2/3 is now at £92 for good marks and £88 for grade, while grade Tossa-2/3 is from £102 and fours from £92, c.i.f. U.K., Oct.-Nov.

Both spinners and manufacturers are now very comfortably sold in yarns and cloth and it is beginning to be difficult to secure delivery of anything this year. The improvement in the carpet trade which has set in during the past two weeks has made a considerable difference to the yarn trade here. Twist is almost unobtainable at 17.04d a lb. for 3 ply 8lb. and sacking yarns are again in demand at 12.35d a lb. basis 24lb. weft, and there are orders going around for rove at £99 5s for 48 lbs. and £80 15s for 200 lbs.

Calcutta goods here are firming up to 63s 9d for 40in. 10oz. and 48s 9d for 7½ oz., October and

I.J.M.A. STOCK FIGURES FOR SEPTEMBER

The Indian Jute Mills Association reports the total stocks of jute goods at the end of September, 1956 as follows:—

Description	30th September, 1956 Lakh Yds. 000 Tons	31st August, 1956 Lakh Yds. 000 Tons	Increase over (+) or decrease from (—) last month Lakh Yds. 000 Tons	30th September, 1955 Lakh Yds. 000 Tons
Hessian Cloth & Bag	10.35	10.34	+1	13.16
Sacking Cloth & Bag	21.07	21.16	+9	7.74
Others		7.1	+0.4	3.0
Grand Total (000 Tons only)	124.7	123.5	+1.2	69.7

N.B.—These figures are based on replies received and represent all members of the Association and Gagalbhai with estimates for three non-member mills.

November, and 63s 9d and 48s 6d December, with 3 Twills at 176s and 175s for the respective positions of shipment, all f.o.b. Calcutta.

GUNNY SHIPMENT STATISTICS

The following figures include coastal shipment relating to manufactured jute goods for shipment from the port of Calcutta. These are gross figures based on shipping bills presented.

	Hessian	Cloth	Total
	(Tons)	(Tons)	(Tons)
1st to 15th October, 1956	3,439.8	18,815.1	22,254.9
1st to 15th September, 1956	1,017.5	17,058.5	18,076.0
1st to 15th August, 1956	1,829.8	18,488.7	20,318.5
	Sacking		
1st to 15th October, 1956	24,065.5	871.3	24,936.8
1st to 15th September, 1956	13,483.3	1,405.9	14,889.2
1st to 15th August, 1956	23,915.5	2,046.9	25,962.4

NATURAL FLAVOUR

PROTECTED IN TRAYOPHANE
Moisture-proof Film

Boiled sweets and toffees retain their original flavour and freshness in Trayophane. Trayophane also keeps them clean, provides a shining decorative wrap. Whatever you wrap—sweets, biscuits, tea, coffee, cigarettes—Trayophane keeps the goodness in—shuts the weather out!

Trayophane moisture-proof film can be heat-sealed—just run a hot iron along the seam! You can print your name on its bright, shiny surface! And Trayophane is stronger and cheaper than any other packaging material. Ask for our free samples folder.

BUSINESS SELECTIVE IN STOCK MARKETS

GILT-EDGED AND INDUSTRIALS RISE

London, 24th October. BUSINESS was selective in the London stock markets during the past fortnight, but a firm tendency developed in the second week and prices in many cases are higher than those prevailing a fortnight ago. There has been little news to encourage buyers, and selling has been on a very small scale, so a selective demand was sufficient to move prices. Various factors combined to restrict activity, including the Suez situation, wage claims, the uncertainty on Wall Street and activity in the new issue market. The main feature was the continuing firmness of gilt-edged securities which recorded further all-round rises under the lead of medium-dated stocks. A less promising outlook for industrial equities was emphasised by the recent half-yearly statements of several leading companies. The possibility of a fall in interest rates and the high yields obtainable, all contributed to the revival of interest in the gilt-edged. The continued flow of new issues of fixed interest securities had little effect and various issues in which dealings were started during the past fortnight opened at a premium on their issue prices. These included £15 million London County Council issues and £6 million General Electric loan stock issues. In the foreign market, East European bonds responded smartly to the developments in Poland, and recorded appreciable gains, while Japanese and German issues attracted support from time to time. The industrial market remained subdued in the first week, but a firm trend developed later on selective buying, and an all-round advance was recorded. Steel shares and textiles were outstanding with the latter responding to reports of improved trading conditions. The better trend in Kaffirs in the first week was not maintained subsequently, and prices drifted lower in spite of satisfactory quarterly reports. Coppers fell back in sympathy with the lower trend in the metal prices. Tin shares were active and firm, and there were good features elsewhere in mines. Leading oils recorded little change. Rubbers moved up on hopes of the repayment of surplus funds, while tea shares recorded a number of gains. Some of the rises were substantial, and followed bids for the companies concerned.

The Money Market

On the whole, it was a very uncomfortable week for credit in the London money market. For three days running the supply of funds was bolstered by Government disbursements, but the market got no accommodation from the Bank. Conditions were never easy, but an indication of improved conditions was that day-to-day loans which ruled on the basis of 4½ percent to 4½ percent were ½ percent below those of the week. Easier money conditions together with other technical considerations paved the way for the reduction of approximately ½ percent in the Treasury bill rate at the week's tender. Discount houses adjusted

UNITED INDUSTRIAL BANK LIMITED

A SCHEDULED & CLEARING BANK
(Established 1940)

Head office:
7, Wellesley Place, Calcutta.
Phone: 23-3481 & 23-3482.

BANKING BUSINESS OF ALL DESCRIPTIONS TRANSACTED.

Chairman:
Sri JADU NATH ROY

Branches:

M. K. BHATTACHARYYA, C.A., I.B. (Lond.),
General Manager.

their buying rates of fine bank bills to the new level, with three months quoted at 5¼ percent to 5½ percent. Clean bills remain unchanged. Applications for £280 million worth of 91-day bills totalled £392,860,000, but only £260 million was allotted at an average rate of 100s 2½d percent compared with 102s 2½d percent in the previous week. Offerings this week comprise £200 million worth of 91-day bills and £60 million worth of 63-day bills making a total of £260 million. The Bank of England return for the week ended 17th October showed that notes in circulation were about £5 million lower at around £1,878 million, and bankers' deposits were about £5 million higher at around £237 million.

Stock Markets Prospects

The Investors' Chronicle market newsletter writes: "Success of the London County and General Electric Loans and fair investment buying strengthened the gilt-edged in London, but rumours of a new Australian loan caused uneasiness. Industrial shares, this week, closed with bear-covering and selective investment support. Gold shares met little selling, but there was little interest. There may be some switching from industrials into the gilt-edged as interest rates are thought to be around the peak, but the course of the gilt-edged will be decided by the volume of the new capital issue. Good savings figures and firmness of sterling have encouraged some buying. Steel shares show resistance after the recent heavy falls as several now stand below the denationalisation price. Generally, however, industrials remain clouded by rising costs and falling profits."

Activity on Wall Street

Convertible bonds on Wall Street were generally easier during the past week in line with the declining trend in the stock market. Some of the leading issues were soft, Dow Chemical being prominent, while several oils including Sinclair and Standard of Indiana lost ground. Inland Steel 3½ percent, however, advanced on a small turnover. Investment quality corporates were shaded slightly in slow dealings. U.S. Government securities fluctuated irregularly in large professional dealings. In the foreigner section, Australians were mostly higher. Union of South Africa 4½ percent held steady. Among Japanese issues, Government 6½ percent of 1964 eased. Tokyo Electric 6 percent of 1963 eased early, but eventually regained most of the losses. German Nationals were mostly fractionally lower, while Italians improved. Denmark 4½ percent and Norwegians were higher by fractions. Serbs eased after early steadiness.

U.S. Federal Reserve Return

The U.S. Federal Reserve return for the week ended 17th October shows that gold stock fell by \$1 million to \$21,900 million. Foreign deposits rose by \$38 million to \$341 million, while foreign investments declined by \$49 million to \$3,671 million. The Federal Reserve bought \$26 million worth of bills and \$1 million worth of certificates, but sold \$32 million worth of bills originally bought under repurchase agreements. Total discounts and advances fell by \$127 million to \$452 million, while the aggregate reserves of member banks rose by \$184 million to \$495 million. Daily average excess reserves of member banks fell by \$63 million to \$571 million, while their daily average borrowings fell by \$143 to \$571 million. Business loans of the New York city banks rose by \$8 million to \$10,874 million, compared with a fall of \$47 million to \$8,654 million in the corresponding period a year ago.

Firm Undertone in Hongkong Gold

Hongkong gold remained quiet with the undertone inclined to be firm. Price movements were narrow as the market lacked incentives following small fluctuations of the sterling rate abroad. A sustaining factor is that stocks here are limited in spite of the fact that 70,000 ounces are held in Macao. In the opening period, the price was \$(H)268½, but eased gradually to \$(H)267½, after which the market steadied touching the week's high of \$(H)268½, finally closing ¼th of a dollar lower. Carryover charges were 73 cents a ten taels in favour of buyers. The official offtake was 3,710 taels and the unofficial 11,700 taels. Arrivals in Macao were 48,000 ounces. Forward contract was done at \$(U.S.)37.77.

High Demand for Copper Scrap

The Deputy Director, Copper Division of the U.S. Business and Defence Services Administration, Mr. W. A. Meissner said that current indications point to a continuing high demand for copper scrap in 1957, but perhaps not as good as in 1955. He said that this was due to a slackening of residential housing construction which would last until 1960, and keep brass mill and foundry production lower than in 1955. The American Zinc Institute reported that the combined shipments for July and August of galvanised sheets totalled 276,048 tons compared with 279,058 tons shipped in June alone. The lower level reflected the July steel strike. Shipments in the first eight months of this year reached 1,928,253 tons, compared with 1,818,135 tons in the same period last year.

Cheaper Electrolytic Copper

A leading U.S. custom smelter has reduced its price of electrolytic copper to 35 cents from the previous level of 37 cents a lb. Other sellers are expected to follow suit. Sales at 37 cents are reported to be slow and with the price of scrap dropping, custom smelters have been able to lower their electrolytic price. The producer's price is still 40 cents, but how long they will be able to hold that differential of 5 cents a lb. is a moot point.

Commodity Markets

WHOLESALE PRICE INDEX FALLS

THE official wholesale price index (base: year ended August 1939=100) declined further by 0.2 percent to 417.8 during the week ended 6th October, 1956, compared with 418.8 (revised) for the previous week. The index was lower by 0.5 percent when compared with the corresponding week of last month, but was higher by 18.2 percent than that of a year ago. The index for Food Articles declined by 0.3 percent to 389.5, compared with 390.7 (revised) for the previous week due to a fall in the prices of dal arhar (-6%), rice (-2%), and gram at Hapur (-1%) in spite of an advance in the prices of tea for exports (+8%) and wheat (+1%). Prices of gingellyseed (-7%), groundnuts and lac showed declines while those of manganese ore (average export price) (+11%), raw jute and linseed (+2% each), and castorseed in Bombay (+1%) were marked up and the index for Industrial Raw Materials stood at 504.2 compared with 504.4 for the previous week. The Index for Semi-Manufactures fell by 0.3 percent to 404.7 compared with 405.8 (revised) for the previous week. Items which exhibited significant changes were: Groundnut oil (-4%), coconut oil and copper (-3% each), castor oil in Calcutta and zinc (-2% each), gingelly cake (+4%), kerosene oil (+3%), and castor oil in Madras and copra cake (+2% each). A fall of 0.2 percent to 390.8 in the index for Manufactures was brought about by slight declines in the prices of cotton and jute manufactures. The price of glass (+6%), however, witnessed a rise. Lower prices of turmeric (-6%) and betelnuts (-4%), both in Calcutta, black pepper in Cochin (-3%) and chillies in Patna (-1%), caused a fall of 0.7 percent to 584.2 in the index for the Miscellaneous group.

MIDDLE CLASS COST OF LIVING INDEX NUMBER FOR CALCUTTA

(Base: August, 1939)

THE Middle Class Cost of Living Indices, by groups, have now been brought up to September, 1956. As compared with August, the September Index for Clothing shows a rise of 12 points, while those for Food, Fuel and Lighting, and Miscellaneous remain unchanged at 484, 268 and 283 points, respectively.

Correlating all the factors, the Middle Class Cost of Living Index for Calcutta shows that the cost of living increased by 1 point during September, 1956.

water tube boilers
to be manufactured
in India

Texmaco has just concluded an agreement with Combustion Engineering Inc. of U. S. A., world's foremost boiler designers and engineers, for the manufacture of Water Tube Boilers. The production programme comes into operation immediately and deliveries are expected to commence from 1957. Texmaco, pioneer manufacturer of a wide variety of engineering products including industrial boilers, again opens a new chapter in the history of India's industrial development.

NUCLEAR ELECTRICITY COMES INTO USE

OPENING OF CALDER HALL POWER-STATION IN U.K.

THOSE who have noted the succession of "historic dates" in the development of nuclear power may be a little reluctant to add another one, but 17th October, 1956 deserves a special place in history as the date when energy from a full-scale nuclear power-station was first fed into a national electricity system. It is the date of Queen Elizabeth's ceremony to link Britain's Calder Hall power-station, in Cumberland, with the national grid. It has been said that Calder Hall was obsolete before it began working; also that Dounreay, in the north of Scotland, which will be the first power-station to "breed" more fissile fuel than it consumes, is too far in advance of proved techniques. What is important, however, is not whether the authorities have built or are building the best possible stations, but that a new source of power has actually come into use. Naturally and rightly, new and better methods of supplying this source of power are being worked out all the time. Even at this early stage it is estimated that power-stations costing only one-tenth more than Calder Hall may produce four times as much power; and on that reckoning, being economical to operate, they will produce electricity much more cheaply than it can be produced by coal or oil.

A couple of weeks before the inauguration of Calder Hall, Britain's Central Electricity Authority received the first tenders ever to be submitted by private firms for constructing a full-scale nuclear power-station. It is little more than two years since the leading electrical-engineering groups were invited to study gas-cooled graphite-moderated reactors (such as Calder Hall's) and to form organisations capable of building them.

When the British Government's programme for nuclear power was published early last year, training of industrial firms' senior personnel at the Atomic Energy Authority's establishment was already in progress, but it was obvious from the requirements of the programme that the pace would have to be accelerated. While yet more experts were being trained, completely new laboratories had to be built and equipped.

Huge Outlay

The speed at which private industry has prepared itself matches the speed at which the authorities have pressed nuclear power forward from the beginning. But this new phase has its disadvantages. Co-operation between private firms and the authorities can ensure that work proceeds along the lines of Britain's requirements (which are not necessarily, however, the same lines as other countries' requirements), but it cannot avoid multiplication of effort. Working in a competitive spirit, on a commercial basis, the groups are inevitably using more money and resources (including precious personnel) than a single organisation would require to obtain the same results. Already these private firms have spent not much less than £10 million on research and development (diverting some resources from other activities that might have been immediately more profitable), and the new secrecy (commercial instead of military) that surrounds their operations cannot altogether conceal that four big groups are doing some research that the Atomic Energy Authority could have done alone. On the other hand, a new source of power—with incalculably important by-products, the radioactive isotopes—calls for participation of industry on the widest possible basis. It is no secret that the British Government regards these developments as a potential rejuvenator of the whole economy, as the beginning of a new era in which Britain can regain her lead in technology—if only she can train enough technologists and apply them to peaceful pursuits.

The first major application of the new energy is to generate electricity, but it seems that trans-

port will be affected sooner than was until recently imagined. In his presidential address to the physicists at the meeting of the British Association for the Advancement of Science a few weeks ago, Sir George Thompson remarked: "I do not see the slightest hope for the nuclear motor-car; and I have grave doubts about the nuclear aeroplane." The more deeply the problems are investigated the more firmly technicians are convinced that the proper application of nuclear energy to transport (other than trains or other vehicles using electricity from a main source) is in ships. Nuclear ships are, in fact, in the same phase of development now as nuclear electricity was a few years ago: it is a question not of investigating interesting possibilities, but of proceeding deliberately to an objective. The list of countries known to be working on nuclear-powered ships (other than submarines) includes America, Russia, Britain, Holland, France, Norway, Sweden and Japan. Of these countries, the first two are almost certainly the farthest advanced. Either America or Russia seems capable of putting a nuclear vessel into commission within the next two years.

American Aim

The Americans are at present interested primarily in a general-purpose vessel carrying both passengers and freight, the Russians in an ice-breaker, also carrying passengers and freight. An interesting feature of this Russian vessel is that it is designed to be refuelled at sea, so that the considerable cost of nuclear-fuelling installations at docks—which has been estimated at possibly £250,000 for each unit—will not, presumably, trouble the Russians in the early stages. However, when such installations have been set up they will serve as a basis for a continuing growth of nuclear shipping; although they will not at first be continuously used, for one charge of fuel will last many months, even a year or two, in each vessel. Partly by so reducing refuelling time, the operating costs of nuclear ships will be low. This factor must be set against capital costs which, initially at least, will be high.

Plantation Topics

REGULATION OF N. INDIAN TEA CROP

EARLY STOP TO PLUCKING

THE Calcutta Tea Regulation Committee has announced in greater detail the measures it proposes to take to regulate the size of north-east India's 1956 tea crop. It explains that at present, there is a more than adequate supply of ordinary tea on the Calcutta and world markets, which has led to many gardens selling below their cost of production for the greater part of this season. The Committee, which consists of representatives of the tea producing associations of north-east India, has decided to recommend to member gardens of all producing associations that:

1. All gardens in the Assam Valley and the Doors should stop plucking on 20th November.

2. As for gardens in Cachar, Tripura, Darjeeling and the Terai, those which have already reached their average total crop of the three years 1953, 1954 and 1955 by that date should cease plucking on 20th November, while those which have not reached such a crop should cease plucking when they have done so or, at the latest, on 30th November.

3. All tea waste and residual teas of a standard unit for sale at the Calcutta auctions should be destroyed.

It is hoped by these measures to mitigate the present excess of ordinary teas in the markets and to establish a better balance between high quality, medium and plain teas. It is stated that the 1956 crop in north-east India up to the end of September is the highest on record, and there is no danger that the public will be starved of tea. An earlier end to the season than usual will also bring ancillary benefits to the gardens. Early pruning will ensure early second flush and quality teas next season. More time will be available for replanting, overhauling of tea machinery and factory buildings, provision of workers' houses and other improvements. Workers will not, in any way, suffer from the proposed regulation, as their fixed daily wage is guaranteed, and as leaf at the end of the season is normally insufficient to enable labour to earn more than the fixed wage at piece rates. The Committee strongly emphasises the need to destroy tea waste and residual teas of a quality unfit for sale in the public auctions so that these may not, by local disposal, be used to adulterate good tea and thus lower the reputation of Indian tea generally.

CALCUTTA TEA AUCTIONS IN SEPTEMBER

STRONG DEMAND FOR CLEAN BLACK FANNINGS

CLEAN black Fannings of a useful size continued to be a very strong feature and sold at dearer rates in each succeeding sale. Commonest kinds received rather better support than in the previous month and clean common teas were fully firm to dealer, say Messrs. Carritt Moran and Co. Private Ltd. in their monthly tea market review. Buyers showed keen discrimination for all other kinds and in the first two sales of the month, prices were appreciably lower and reflected the seasonal decline in quality. Demand strengthened considerably in the last two sales when export and internal buyers were operating freely. Teas of orthodox manufacture with any quality were in particular demand, and in Sale No. 15, C. T. C. teas of poor appearance, but with strong coloury liquors, were a very strong feature. In Sale No. 16, demand for C. T. C. teas was even keener and in many cases prices advanced by 8 to 12 annas a lb. Darjeelings met with only fair support and generally sold at lower rates.

Darjeeling Leaf appearance was again of a high standard and although cup quality showed the usual seasonal decline, the offerings throughout the month were of a very satisfactory standard for the time of year. Assam teas of orthodox manufacture were commendably free from stalk and fibre and a number of useful, bright liquoring teas were on offer. C. T. C. teas showed a marked decline in quality and a large weight of stalky and fibrous offgrades, which, however, had useful coloury liquors, were catalogued for sale. Although the offerings from Doors included a number of plain liquoring teas, leaf appearance and cup quality of the majority of estates was above average for the time of year. Cachar Leaf appearance, almost without exception, was of a remarkably high standard, being black and free from stalk and fibre. Due to inadequate manufacturing facilities a number of estates continue to produce soft and plain liquors with evidence of faulty firing, but most of the teas on offer were clean and sweet in cup.

Quotations

	1956-57 Rs. As. P.	1955-56 Rs. As. P.
Sale No. 13 Plain B.P.	1 9 9	2 0 0

Sale No. 15 " "	1 9 3	1 14 0
Sale No. 16 " "	1 9 9	1 11 6

Four leaf sales were held during the month and offerings amounted to 3,738 packages. The

selection was of a poor standard consisting mainly of stalky and fibrous types, but there was a fairly good general demand in each sale, and prices may be quoted slightly dearer as compared with the previous month. Dusts on offer amounted to 64,988 packages. In all the four sales, there was a strong and general demand, Black leaf teas in particular were a very strong feature. All other descriptions shared in the general advance and prices in the last sale can be quoted as showing an advance of 2 to 4 annas above that of the previous month. The few best C.T.C. Assams remained about steady, but the poorer fibrous types were up to 4 annas below last rates.

Quotations

	1956-57 Rs. As. P.	1955-56 Rs. As. P.
Sale No. 14 " "	1 9 3	2 0 0
Sale No. 15 " "	1 13 9	2 0 0
Sale No. 16 " "	1 15 3	1 13 0
Sale No. 16 " "	2 1 0	1 11 0

Export sales up to No. 15 totalled 528,885 chests at an average price of Rs. 2-9-0 compared with 570,588 chests at an average price of Rs. 2-8-11 during the corresponding period of the previous season. Internal sales amounted to 9,519 chests of Leaf and 160,894 chests of Dust (Rs. 1-8-11 and Rs. 2-3-4) against 26,191 chests of Leaf and 154,055 chests of Dust (Rs. 1-7-8 and Rs. 2-5-6) in the same period of last year.

The price of Export Quota remained fairly steady throughout the month and business was transacted at 21 to 25 pies a lb. A second interim release of quota amounting to 10 percent of a garden's best crop figure was announced on 30th September, bringing the total so far released to 50 percent.

The estimated North India crop to the end of August, 1956 was 305,343,481 lbs., as compared with 282,472,972 lbs. to the same date last year. The average figure at this date for the three years 1953-1955 was 275,616,336 lbs.

The Government of India has issued a notification fixing the price of tea for the purpose of determining the export duty at Rs. 3-3-9 a lb. as against Rs. 2-11-5 a lb. in force from 1st September. The export duty, therefore, still remains unchanged at 6 annas a lb.

Arrivals (in chests) in Calcutta warehouses during the period 24th August, 1956 to 23rd September, 1956 with the corresponding figures in parentheses, were as follows: By steamer 611,059 (426,183), by rail 95,393 (103,189), and by air 22,310 (30,617), making a total of 728,762 (559,989) chests.

5 gallons of lubricating oil

every day

— Rs 7950 in a year!

THERE'S a metals plant in a large industrial city saving Rs 7950 every year — just because they asked us at Standard-Vacuum for free advice about their lubricating problems!

One of our engineers visited the plant and noticed that a good deal of oil was being wasted — because of the manner in which important machinery was lubricated. Thanks to his recommendations, the factory now uses 1500 gallons of lubricants less each year, and the machinery is working more efficiently than ever before.

Looking after machinery
When our expert comes to visit you, he is backed by the world's greatest lubrication experience — no less than 90 years of it. Not only is he working with the right oils, a full range of MOBIL Industrial Lubricants, but he can give you expert advice on the maintenance of your equipment.

Correct lubrication is a matter for experts. Our advisory service is free — why not ask us to help you?

COMMONWEALTH TRADE IN
PLANTATION PRODUCTS

IMPORTANCE OF U.K. MARKET

PLANTATION crops—sugar, tea, coffee, cocoa, spices, tobacco and rubber—are among the staple products of many Commonwealth countries and represent some of the major dollar-earners of the sterling area. The dominant position which these commodities hold in the export trade of a number of Commonwealth producers is shown in the latest edition of *Plantation Crops* published by the Commonwealth Economic Committee. Cocoa accounts for three-quarters of the foreign trade of the Gold Coast and tea two-thirds of that of Ceylon; sugar represents about one-half of all shipments from Fiji and British Guiana, while Mauritius and Barbados are almost entirely dependent on the crop. Gross shipments of rubber from Malaya, at the low point reached in 1953, still accounted for over 40 percent of all exports, while coffee has risen to between 20 and 30 percent of the trade of British East Africa.

For both rubber and cocoa, the Commonwealth has lost ground in the U.S. market, compared with before the war, to Indonesia for rubber and to French Africa and Latin America for cocoa. For both commodities, the U.K. has become the most important market for Commonwealth exporters and draws most of its supplies from them. The bulk of the U.K.'s tea comes from the Commonwealth, and while the total consumed in the U.S.A. is only one-fifth as great, the proportion drawn from the Commonwealth has risen to some three-quarters; supplies of coffee from the Commonwealth also account for the greater part of U.K. imports, but represent a very small proportion of U.S. requirements, although shipments from British East Africa are again increasing. The bulk of the spices consumed in the U.K. is drawn from Commonwealth territories, which now supply over one-half of the large imports into the U.S.A. Commonwealth countries accounted for some three-quarters of U.K. imports of sugar in 1955 and over 40 percent of its tobacco; the U.S.A. draws little tobacco and virtually no sugar from the Commonwealth. Markets in continental Europe and overseas countries are becoming increasingly important to Commonwealth exporters of some plantation products, notably rubber.

Production Figures

World output of sugar in 1954-55 was little below the high figure of the previous season, and promises to reach a record level in 1955-56; India, Australia and the Union of South Africa have contributed substantially to the increase, although the expansion in Australia was checked in the 1955-56 season by adverse weather conditions. The high production of tea in 1954—the bulk of it from Commonwealth countries—was exceeded in the following year; the setback in cocoa supplies in 1954, however, reflected the lower level of production in the Commonwealth countries of west Africa, while the recovery in world production in the following season was due largely to the upward trend in Latin America and in French territories in Africa. The record outturn of tobacco in 1954 was the result of increased production both in the Commonwealth and in the U.S.A., while heavier crops in the following season in Greece and Turkey largely offset a decline in India and Canada. Over 40 percent of the world's rubber is produced in the Commonwealth; the reversal in 1954 of the decline in world production reflected increased yields in Indonesia, but the very high total reported in 1955 was in great measure attributable to the sharp recovery in Malayan production. The Commonwealth share of world coffee output is not large, but the expansion of production in India and East Africa in recent years has been of note. Net trade in sugar in 1954 had been slightly below the large total of the previous year, but a striking increase in supplies from Latin American countries was reported in 1955. Exports of cocoa and coffee declined in 1954, but while the former showed little change in 1955, the latter rose, as U.S. imports approached their previous level; in spite of the upward trend in tea production the trade declined in 1955. Exports of tobacco, however, have continued at a high level, while the expansion in world rubber trade in 1955 reflected large shipments from almost all Commonwealth sources as well as from Thailand.

U.K. Tea Consumption

Consumption of tea in the U.K. reached a peak figure of over 9.6 lbs a head in 1954; sugar consumption has recovered in recent years, the 1954 figure of 105 lbs a head comparing with 103 lbs before the war. The sharp rise in coffee prices in early 1954 was responsible for the fall in per capita consumption in the U.S.A. from 16.7 lbs in 1953 to 14.7 lbs; high prices limited the use of cocoa, too, average disposals a head in the U.S.A. dropping to 4.1 lbs in 1954, compared with 4.3 lbs before the war. Tobacco consumption in the U.K. rose in 1954 to 4.6 lbs a head, as against the prewar average of 3.7 lbs, but that in the U.S.A. fell to 9.1 lbs a head—still over one-third higher than before the war. The U.K. demand for natural rubber in 1955 was at a record level, while in the U.S.A. it was second only to that in 1950. The high prices recorded in 1954 for tea and in the early part of the year for cocoa and coffee, were not equalled in 1955. Ample supplies

U.K. Tea Stocks

U. K. tea stocks in London and provincial warehouses on 12th October amounted to 98,059,610 lbs. against the previous week's 98,935,540 lbs. The total amount to be landed on 12th October was 13,372,920 lbs. Deliveries during the week totalled 11,259,850 lbs. and landings in the same period were 10,412,920 lbs. The total float on 12th October was 49,335,508 lbs. including 37,084,310 lbs. from Calcutta, 2,534,440 lbs. from Chittagong, 2,836,658 lbs. from Cochin and 5,880,500 lbs. from Colombo.

COCHIN TEA SALES

At Dust Sale U, the 500,000 lbs. of tea on offer met with a fair general demand, but prices were irregularly 1 to 2 annas lower for everything.

At Sale No. 28, 1,350,000 lbs. of tea were on offer. There was a good general demand, particularly for Medium Broken which were 2 to 3 annas dearer. Best liquorings and good mediums were lower following quality. Middle East types were neglected while Whole Leafs were fully firm to dearer.

COLOMBO RUBBER PRICES

The following prices have been issued by the Rubber Board of India from the weekly market report published by the Colombo Brokers Association:

	Closing prices on 12-10-56 (Rupees a lb.)	Average for the period (Rupees a lb.)
Sheet:		
No. 1	1.41	1.41
No. 2	1.38	1.38
No. 3	1.35	1.35
No. 4	1.11	1.11
No. 5	1.06	1.06
Sheet Cuttings	1 -/88	
do	2 -/93	
Crape:		
Water White	—	—
R.M.A. No. 1X	1.32/33	1.33
R.M.A. No. 1	1.30/32	1.31
Crape No. 2	—	1.26 1/2
do No. 3	—	1.19 1/2
Scrap Cresses:		
Sc. Crape No. 1	.87	.86 1/2
Sc. Crape No. 2	.79/86	.81 1/2
Sc. Crape No. 3	.72/78	.74 1/2
Flat Bark	.67/70	.68
Sc. Crape 3X	—	.78

To arrive at f.o.b. Colombo prices add 53.45 cents a lb. for crape other than scrap crape and 31.45 cents for scrap crape to the above market prices.

We don't all wear the same type of clothes; but, here or thousands of miles away, clothes are a basic necessity. A simple piece of cloth is everywhere the symbol of one of man's fundamental needs. For the fulfilment of this need we must depend on the joint effort of many; in India industries and development projects all form a part of this joint effort, speeding the nation's progress. A constant supply of our petroleum products to such enterprises is fundamental to this progress.

FAIR GENERAL DEMAND AT TEA EXPORT SALE

STRONG BUYING IN DUSTS

AT Sale No. 18, held on 22nd and 23rd October, 1956, offerings at the Export auction, consisted of 61,700 packages. At the commencement of the Sale, there was a fair general demand, but this weakened as the sale progressed. The strongest feature of the sale was Whole Leaf grades and the well-made stylish kinds were from 4 to 6 annas dearer. Clean Commons and Low Mediums were a fairly strong feature and were 1 to 2 annas dearer, the Fannings grades receiving more support than the Broken, especially if they were clean and black in appearance. The few Medium teas of orthodox manufacture with bright liquors were strong and fully firm, but the remaining Mediums were from 1 to 2 annas easier. C.T.C. teas were also easier and declined by 2 to 4 annas. Well rolled stylish B.P.S. were in good demand and were fully firm to dearer and non-wither Doors were also strong and advanced by 1 to 2 annas. Tippy teas were generally easier and some of the more expensive kinds sold at up to 8 annas below last rates. Darjeelings met with a slightly improved demand.

Quotations

	1956	1955
Clean Black Pekoe	2 3 0 to 2 4 0	2 8 0
Plain B.P.	1 12 0 to 1 13 0	1 14 6
Medium Assam B.P.	2 2 0	2 0 0
Best C.T.C. Assam B.P.	3 2 0 to 3 3 0	3 4 0 to 3 6 0

At the Internal Sale, Dust offerings consisted of 18,309 chests for which there was a strong demand at rates which were generally 1 to 2 annas above last rates. Black exportable types were a strong feature and were generally fully firm, while Darjeelings met with more enquiry, but at irregular rates. Commons and Mediums were strongly competed for, especially the cheaper kinds. Better

C.T.C.'s were 2 to 4 annas easier, but the poorer fibrous C.T.C.'s were generally dearer.

Quotations	
Medium Doors Dust	2 5 0
Medium Assam Grainy	1 13 0 to 1 13 6
Dust	2 5 0 to 2 6 0
Medium Assam C.T.C.	1 15 6 to 2 0 0
Dust	2 10 0
Best Assam C.T.C.	2 14 0 to 3 0 0
Dust	2 12 0 to 2 14 0

Leaf catalogues comprised 1,321 chests for which there was a good and general demand for all sorts except for the green teas on offer which were a very weak feature.

FREIGHT RATES UNCHANGED

THE past week's freight market remained basically unchanged with the exception of a few coal fixtures of consecutive voyages to continental ports of discharge. The single voyage coal from American ports to the Continent paid 74s and it appears that charters are unlikely to move at present. Tonnage for wheat from the Pacific to the Continent were obtained at an easier rate, but charterers are finding it difficult to obtain tonnage for Indian ports' discharge. Although Australian shippers have a variety of orders in hand they are not making any firm offers and it appears that they are expecting owners to come forward first. In the Indian ore markets, fixtures have been concluded and are open for iron and/or manganese ore from Madras or Vizagapatam to Rijeka at 130s f.i.o. Indian ore charterers are open for tonnage for Vizagapatam-Trieste and indication of freight is 132s 6d. f.i.b. Charterers are open for rice from Gulf to Pakistan at \$(U.S.)36. Fixture from Burma to Colombo with rice has been concluded at 73s 9d. f.i.o. In the time charter market, an oilburner with heavy lifts has been fixed at 47s 6d for Indian round voyage.

LINSEED QUIETER

Somewhat quieter conditions prevailed because of the lack of buying support in linseed; despite poor arrivals, buyers were less keen, except at lower prices. Activity was on a very limited scale. The oil section was weak, and local prices were out of line with indications from overseas. Demand was very poor. Latest quotations were based on Ready-October, Rs. 23-12 a maund.

HIDES AND SKINS STEADY

The market ruled steady. Stocks were higher than in the previous week.

Bazaar Sales

(Between 15th October and 22nd October, 1956)
Cowhides: Wet salted (Ord.) 20,000 pcs. on the basis of Annas 9; Wet salted (Slaughtered) 18,600 pcs. on the basis of Rs. 12-8 to Rs. 20.

Goatskins: Wet salted (Daissee, Killed) 46,960 pcs. on the basis of Rs. 255 to Rs. 275 and Rs. 320 to Rs. 340; Assam-Dinajpur 23,500 pcs. on the basis of Rs. 225 to Rs. 265; Purneah-Kissenganj 1,000 pcs. on the basis of Rs. 245; Patna-Pakur 800 pcs. on the basis of Rs. 230; Muzafferpore-Patna 20,000 pcs. on the basis of Rs. 255 to Rs. 270.

Bazaar Stocks

(22nd October, 1956)
Cowhides: Wet salted 2,01,000 pcs.
Goatskins: Wet salted (Daissee, Killed) 19,000 pcs; Dinajpur-Assam-Jalpaiguri 32,000 pcs; Muzafferpore-Patna-Pakur-Purneah-Kissenganj 90,000 pcs.

SHELLAC MARKET STEADY

During the fortnight ended 23rd October, the market was steady. The range of quotations was as follows:

Pure Buttonlac	Rs. 123 value, 126, 127, 125, 127-8 buyers.
Lemon No. 1 Shellac	Rs. 125 value, 126, 130-8, 129-8, 130-8 buyers.
Lemon No. 2 Shellac	Rs. 120 value, 121 buyers, 123 done and buyers, 124-8, 125-8 buyers.
F. O. Std. 1 Shellac	Rs. 116-8, 120-8 buyers, 121/122 done, 121-8 buyers, 123 basis done and buyers.
Pure TN Shellac	Rs. 112 basis done and buyers, 114-8, 117 buyers, 118/119 basis done and buyers.
4% I.T.N. Shellac	Rs. 100 to 108, 107, 107-8 buyers.
No. 1 Kusmi Seedlac	Rs. 115-8 to 122, 121, 121-8 value.
No. 2 Kusmi Seedlac	Rs. 111-8 to 116 value, 116 buyers, 116 value, 118 buyers.
Fine Bysaky Seedlac (Manbhum)	Rs. 105 buyers, 110 done and buyers, 111 buyers.
Fine Bysaky Seedlac (C.P.)	Rs. 100, 106-8, 105-8, 104-8 buyers.
Ordinary Bysaky Seedlac (C.P.) under 5%	Rs. 95, 100, 97-8, 101, 99, 100-8 buyers.
Ordinary Bysaky Seedlac (C.P.)	Rs. 87-8 to 95-8, 94-8 buyers.
Kireelac	Rs. 35/37 buyers, 37 done and buyers, 37 buyers.

Shipments during October until the 17th were 7,911 packages comprising shellac 5,257 packages, seedlac 1,614 packages, buttonlac 369 packages and others 671 packages.

COMPANY AND PUBLIC NOTICES

TIRRIHANNAH COMPANY LIMITED.

NOTICE is hereby given that the 49th Annual General Meeting of the Shareholders of Tirrihan-nah Company, Limited, will be held at "McLeod House", No. 3, Netaji Subhas Road, Calcutta, the Registered Office of the Company, on Wednesday, the 21st November, 1956, at 2-30 P.M. for the following purposes:—

1. To consider the Profit & Loss Account for the year ended the 31st December, 1955, the Balance Sheet as at that date and the Reports of the Directors and the Auditors.
2. To declare Dividends.
3. To appoint a Director in place of the Retiring Director; Mr. P. C. Banthia being longest in Office, retires by rotation and offers himself for re-election.
4. To appoint Auditors for the year ending 31st December, 1956 and to fix their remuneration.
5. To appoint a Director in place of Mr. O. N. Goenka who vacates his office under Section 262(2) of the Companies Act, 1956.

The Share Transfer Books of the Company will be closed from 7th November 1956 to 21st November 1956, both days inclusive.

By Order of the Board,
McLEOD & CO. LTD.,
A. T. DOIG,
Managing Director,
Managing Agents.

Calcutta,
23rd October, 1956.

NOTE: 1. A member entitled to attend and vote at the Meeting is entitled to appoint a proxy to attend and vote in his stead. A proxy need not be a member.
2. Payment of the proposed Dividends, if declared, will be made on or after 30th November, 1956, only to those members whose names are registered in the Books of the Company on the 21st November 1956, or to their Mandatees. No application for Warrants will be necessary. Claims on behalf of holders of Shares on blank transfer will not be entertained.

EXPLANATORY STATEMENT

With regard to Item No. 5 of the above Notice Mr. G. T. Routledge was a Director of this Company for a long time. He vacated his office under Section 314 of the Companies Act. Your Board of Directors co-opted Mr. O. N. Goenka as a Director in his place. Mr. O. N. Goenka vacates his office in terms of Section 262(2) of the Companies Act, 1956. The vacancy may be filled up by the members.

HUKUMCHAND JUTE MILLS, LTD.

NOTICE TO SHAREHOLDERS.

A LETTER FROM THE BANK

TWISTING MR. BLACK'S GOOD INTENTIONS

It is difficult to see why the exchange of letters between Mr. Eugene Black, President of the World Bank, and Mr. T. T. Krishnamachari should have caused such a fuss. If the public is not already aware that serious doubts exist in some quarters both here and abroad about the wisdom of India's present economic policies, then it has not been reading its newspapers, and certainly not its Capital. If the mission Mr. Black sent to New Delhi earlier this year reported that too little attention is being paid to transport in the second plan and that private enterprise and foreign capital are not receiving the encouragement they ought to have, then it was only expressing views already held by the majority of the country's responsible economic opinion. It is true that the only recommendation which those views can usually claim is the goodwill and self-interest which prompts them, while Mr. Black has behind him the weight of a body of funds which can make all the difference to India's development plans. But it is not clear why so much interest should have been aroused by what is, after all, only the latest recruitment to the vast army of doubters which already exists. And there is certainly no logical reason why the occasion should have been interpreted by some as an attempt to interfere in India's domestic affairs.

There seem to be two main reasons why it has been. The first is the memory of what happened to the World Bank's plans to help with the Aswan Dam. The second, is the comment made on Mr. Black's letter by the world's most honoured newspaper, *The Manchester Guardian*. There is certainly no parallel between India's case and Egypt's. Although the Bank had a right to refuse to spend its money on Egyptian development while that country's own resources are being wasted on bombing planes, the final decision, when it came, was largely a political one. India is not squandering her sustenance on aggressive weapons, although whether the waste, as distinct from the political danger, of spending money on bombers is any greater than throwing it away on *Ambar Charkhas* is a moot point. And there is no reason to suspect that relations with the United States are any the worse because Indian politicians profess socialism instead of capitalism, and practise neither efficiently. In fact, it should not have been necessary for Mr. Nehru to reassure his recent Press conferences that relations with the World Bank are still friendly. India will no doubt go on getting her loans, providing the projects they are required for are sound ones. But whether as many will be forthcoming as might be if India's economic future were more promising and current policies less hampered by muddled ideology and sentimental fads, is another matter. As India's banker, Mr. Black has a right to express his opinions and there is no doubt, whatever his critics may say, that he would be doing less than his duty if he were not to act upon them. That is why Mr. Krishnamachari gave the best reply possible under the circumstances—a propitiatory one—although his answers to most of the points raised suggested a complacency which, considering his new responsibilities, it is unlikely he feels.

★

Neither Mr. Black nor Mr. Krishnamachari, and certainly not Mr. Nehru, is to blame for twisting this exchange of letters into something more sinister than a purely banker-client affair. There is little doubt that *The Manchester Guardian* is the real culprit. It is one thing to plug the general theme, as the paper rightly does, that the west's approach to Asia's problems should be conducted on economic rather than military lines and that all assistance should be without strings, and quite another to imply that undeveloped countries have a natural right to assistance no matter how inefficient and wrong-headed their internal policies may be. No sound commercial institution, which the Bank most certainly is, whatever its political ties, is going to throw its money away, and no newspaper leader writer in possession of his senses would suggest that it ought to. If it is desirable

Black would be able to give maximum help to the process.

That the World Bank President is justified in his doubts about the present course of economic development is too obvious to be questioned. The minor rôle given to private enterprise is not to be explained away completely by its lack of resources, ability or initiative. It is true that the State has the major part to play in the development of basic industry, but if any proof is needed that the private sector would have done more had it been allowed to, there is no need to look any further than coal and steel. The reason for turning down the Birla project for a steel plant at Durgapur and choosing a State-sponsored one instead, was purely political. So was the decision to entrust the public collieries with the lion's share of the increased coal output required for the second plan, in spite of their obvious inability to do the job and the fact that it can still be done without serious difficulty and additional expense by the private pits. To maintain that the Government's policy on nationalisation is prompted primarily by concern for economic efficiency and not by ideological considerations, is to contradict the statement made by Mr. Nehru when recommending the new industrial policy statement to the Lok Sabha last April. Such expensive fads as the *Ambar Charkha* and Prohibition will cost the country dearly, yet nobody can seriously maintain that they are sound economic contributions to India's development. Prohibition can be expected to waste Rs. 200 crores of revenue over the next five years. It would be tiresome to express this in terms of steel plants, railway wagons, machine tools, or even schools and hospitals, which will have to be forgone. But such is the price the country seems to be prepared to pay to satisfy the whim of a few Congress faddists.

to think that some of the grievances of the employees owe their origin to the fact of take-over, and Parliament and the people may well find that these very demonstrations have led to a situation in which the much advertised benefits of nationalisation will be just impossible to achieve.

One of the glib assumptions of the advocates of nationalisation is that as soon as an industry is declared the property of the people its workers are on a sudden so imbued with a sense of public duty that the tensions known to have existed between them and their private employers simply disappear. Of course, they do nothing of the sort. There is the experience of nationalised industries and services in Britain to show that, if anything, nationalisation leads to the most fantastic demands being made by labour. When a worker is employed by the State he in fact deals with a Minister, a politician dependent on popular support, and the argument soon ceases to be an economic one. It is difficult enough to explain a balance sheet to a single voter; to attempt to do so before a vast electorate is the most frustrating job in the world. Issues are then decided on purely political considerations, which usually favour workers in the mass. Ministers saddled with administrative responsibilities are caught in the coils of their ill-considered pre-election promises, and it is the administration which suffers in the end.

Private employers are to be forgiven if they permit themselves some malicious pleasure when a State-owned industry faces the difficulties they are themselves confronted with very frequently because of high-minded official pronouncements on how labour should be treated in the middle of the enlightened twentieth century. But that is by the way. It is the economic consequences of the intrusion of politics into business which Parliament and the people will have to face up to, and the daily Press of the country clearly has a duty in the matter which it cannot shirk indefinitely. It may be taken for granted that industries are taken over by the State not so much to set an example of how higher moral principles should be implemented in their running as to run them, as the Government likes to claim, more efficiently. It is because the idea is to run such industries on business lines that corporations are created, so that they may not be reduced to the inertia of government departments. It is the avowed wish of the Government that the insurance corporation should reap the full benefits of nationalisation; the benefits of centralisation in fact. It should now be possible to effect savings in many directions, to rationalise, and to mobilise what has hitherto gone to shareholders and in other allegedly wasteful ways. The criticism heard in Parliament and the Press of losses incurred by some nationalised industries leaves one in no doubt that the general desire is that, even after nationalisation, industries should be run economically and efficiently.

Can Parliament or the Press or the people claim that the conditions created by these three are such as could enable the new corporations to live up to what is expected of them? Mr. H. M. Patel, chairman of the Life Insurance Corporation, is already engaged in a bitter debate with his workers. Nationalisation makes sense only if there are obvious economic advantages accruing from it; the advantages Parliament and the people will demand to see very shortly. And yet, what is the kind of backing Mr. Patel is receiving? The insurance employees' organisations have enlisted the support of several Members of Parliament, and the daily Press appears extremely reluctant to alienate the employees, its patrons in the circulation department. Mr. Patel is surely entitled to something more than that, if only because these very parties, Parliament and the Press, will be unsparing in their criticism if he should produce an annual report showing no economies consequent on nationalisation.

The current argument over new pay scales in the insurance corporation will perhaps blow over; there may even be a compromise, either on the corporation's terms or on the employees'. What will remain are the problems of nationalisation. If this drastic liquidation of private enterprise does not, obviously and manifestly, lead to public good, in terms of economies, then second thoughts are clearly warranted on the whole question. The Government runs many charitable hospitals and homes; nobody asks how much money they make. If, however, nationalised industries are not to be run on the same ill-defined political or humanitarian principles, and yet not on well-known economic bases, Parliament owes it to the people to say so. What cannot go on is that Members of Parliament and the Press in general should support every demand of the employees—because they vote and buy newspapers—and then insist that the corporations should be good business propositions as well. Mr. Verma, chairman of the Damodar Valley Corporation, has the problem of surplus staff on his hands; and Mr. Patel, chairman of the Life Insurance Corporation, does not know how to show savings without economising on something. Between them they should ask the Government, which may ask Parliament, what it is that is expected of them.

DEVELOPING INLAND WATER TRANSPORT

EVIDENCE has been growing that the country is heading for a serious shortage of transport during the second five year plan. The railways have already admitted that in spite of their ambitious expansion programme, they are not likely to be able to cope with the increase in traffic that will result as economic development proceeds. The jealousy with which they have regarded other competing forms of transport seems to have been assuaged by this realisation, although a statement issued some months ago by Mr. K. B. Mathur, Member for Transportation in the Railway Board, claiming many questionable advantages for rail over road transport, did not provide the fairest example of the change in thinking. Mr. Mathur's arguments were effectively answered by Mr. B. V. Vagh, Vice-President of the Indian Roads and Transport Development Association, on behalf of the road transport industry; now, a persuasive case outlining the advantages of inland water transport has been presented by Captain W. T. Martin, Superintendent of the Joint Development Department of the R.S.N. and I.G.N.R. Companies. He points out that inland water transport is well suited for carrying large quantities of raw materials in bulk. In highly industrialised countries, it is used to move such commodities as coal, ores, building materials, oil, steel, machinery, chemicals and foodgrains on a large scale. In north-east India, where other forms of transport are often disrupted by floods, river transport can carry all types of goods in small quantities or in bulk. It is particularly suited for taking machinery, heavy lifts and heavy pipe sections over the long distances from Calcutta to Assam, and bringing back jute and tea. The capital and maintenance costs of inland water transport, it is suggested, compare favourably with those of the roads or the railways. The cost of craft needed to carry one million tons of goods a year over a haul of 1,000 miles amounts to Rs. 12 crores (with the traffic carried one way only). In

accordance with the present system of training works adopted in the rivers of north-east India, the annual cost of maintaining the channels works out to Rs. 300 to Rs. 500 a mile.

Captain Martin states that the freight rate for goods carried by inland water transport from Calcutta to Assam averages 1 to 1½ annas a ton-mile, the distance being between 800 and 1,000 miles. The freight rate for jute, which comes down from Assam to Calcutta, averages 1.04 annas a ton-mile. For tea, it averages 1.68 annas a ton-mile. Although river distances are generally somewhat longer, he claims that these rates are much cheaper than those for road or railway transport. The average life of inland water vessels (tugs and barges) is estimated at about 50 years, which compares favourably with the life of railway rolling stock and is much more than that of road vehicles. Expansion in inland water transport, it is pointed out, would not cost much in terms of foreign exchange. Tugs and barges are being constructed in India when the steel is available; only their machinery is imported, which applies also in the case of the railways and road vehicles. Inland water transport, it is emphasised, is particularly suited for long-distance traffic and for bulk commodities. The average haul for all traffic handled by the companies which operate inland water vessels in north-east India is 840 miles. Their system extends from Calcutta to Dibrugarh via the Brahmaputra (a distance of 1,150 miles), and from Calcutta to Patna via the Ganges (a distance of 920 miles). Each of the flotillas they operate normally carries the equivalent of four metre-gauge goods trains or 1½ broad-gauge goods trains. It is often argued that slowness is a major disadvantage of inland water transport. But Captain Martin points out that it is possible to move a greater quantity of traffic between two points within a given length of time by this means than by any other. Cargoes despatched between Calcutta and Assam, he claims, are delivered quicker by water transport than by either rail or road.

The purpose of these arguments is not to suggest that one form of transport should be developed instead of another; Captain Martin takes the entirely rational view that "all modes of transport need to be co-ordinated and developed to the fullest extent possible." The railways have for long assumed in themselves an inherent superiority; Mr. Vagh's case for road transport and Captain Martin's for inland water transport show that the assumption is far from true. Each has its own advantages and its own limitations, and the one way in which balanced development can be achieved is to free them from a plethora of unnecessary restrictions and regulations. It is important that the railways should not bully their way to success by exploiting the virtues of their particular ownership; it is no less important that the Central and State Governments should try to seek some measure of agreement, after years of fruitless effort, on a common transport policy.

A NOVEL PROPOSAL FROM INDIAN ALUMINIUM

SHAREHOLDERS in the Indian Aluminium Co. Ltd. will shortly meet to consider a noteworthy new method by which they may help finance their company's large expansion plans. This is represented by the proposal to issue Rs. 2,68,13,200 worth of Convertible Loan Stock, which carries interest at the rate of 5 percent per annum, and is to be issued in units of Rs. 200 each. The Loan Stock will be offered to those who are ordinary shareholders of the company on 20th December, 1956; they can apply for Rs. 200 worth of it for every 15 ordinary shares they then own. Holders will have the option to convert their Loan Stock into ordinary shares after it is issued. For each Rs. 200 worth of the Stock, they will get 15 fully-paid ordinary shares if they convert before 15th December, 1957; 14 ordinary shares if they convert between 1st January, 1958, and 30th June, 1960; and 12 ordinary shares if they convert between 1st July, 1960, and 15th December, 1970. After the last of these dates, they will no longer have the option to convert. But on 2nd January, 1971, and on the same date in each succeeding year, the company will redeem at par Loan Stock amounting to Rs. 25 lakhs, until the whole lot has been redeemed. At any time after 31st December, 1970, the company may also redeem at par all or any of the Loan Stock then outstanding, after giving three months' notice; if it chooses to redeem only part of the Stock, that part will be selected by drawings. Any of the Stock which remains outstanding on 2nd January, 1981, will be redeemed.

The notable feature of the proposal is that it gives Stockholders two clear choices. One is to satisfy themselves with a steady and assured return of 5 percent per annum by holding on to what they have. The other is to accept the promise offered by the equity of a rapidly expanding company which belongs to a prosperous young industry. They do not have to make up their minds at once; they may do so at any time over the next nearly 14 years.

Indian Aluminium some time ago announced details of its proposal to issue 411,000 rights ordinary shares, of a par value of Rs. 10, at a premium of Rs. 2-8 each. The proceeds of the rights issue, and of the new Convertible Loan Stock, are intended to finance partially the expansion programme, the main feature of which is the establishment of an aluminium smelter in Hirakud, Orissa. The smelter will have an initial capacity to produce 10,000 tons of aluminium ingot, but can later be expanded to produce 20,000 tons or more per annum. The amount required for the company's expansion programme and for additional working capital is estimated at Rs. 8.65 crores. Aluminium Ltd., the majority shareholder in Indian Aluminium, has agreed to subscribe to 50 percent of the new issue of ordinary shares, and 50 percent of the Convertible Loan Stock issue. The progress of the Loan Stock conversions will be watched with considerable interest. It is possible that a number of holders may decide to convert in the very early stages of the issue, on the apparently fair expectation that the company is likely to maintain its last ordinary distribution of 9 percent. That distribution was supported by the encouraging working results for 1955; the 1956 results are expected to be a good deal better, since the Alupur smelter was only partially utilised last year. When the Hirakud project has been completed, which it is expected to be by the end of 1958, profits should show a quite impressive increase.

CURRENT COIN

Raw Material for Foundries.—In his presidential address to the fifth annual general meeting of the Indian Foundry Association this week, Mr. K. L. Jalan discussed some of the industry's problems which have hindered expansion in this important line of production. The prevailing scarcity of pig iron constitutes by far the most important of those. It has been officially claimed that the requirements of the foundry industry, estimated to rise to 800,000 tons by 1960-61, will be met indigenously through the steel-making plans,

but Mr. Jalan doubted whether the indigenous sources could, as planned, be able to meet the growing demand. At any rate, the current shortage is unlikely to be met out of the present production in the country and the plans to expand steel-making capacity, both in the public and the private sector, will not fructify until late 1958. Mr. Jalan, however, appreciated the fact that the Government is contemplating the import of about 150,000 tons of pig iron in 1956-57 and he urged that the imports should be so planned that a continuous flow of supply is always ensured. A suggestion was also made by him to raise pig iron production in the country by working inferior ores with lignite or non-coking coals. This, he said, could be done with low shaft furnaces. Madras, where suitable lignite deposits exist, offered some scope and he understood that a private industrialist was going to put up a low shaft furnace in Salem for producing 20,000 to 30,000 tons of pig iron a year. Mr. Jalan commended the idea from two points of view. First, it would relieve the strain on bigger units and facilitate better regional distribution. And second, the pressure of demand on transport could be correspondingly relieved. Inadequate supply of hard coke is no less a serious problem for the industry which has already found it difficult to obtain its requirements during the past few years. It has been estimated by the Fuel Research Institute that by 1960 the industry's needs of hard coke would be about 80,000 tons a month (current monthly production in India is about 32,000 tons), and there is little prospect of the country raising its production to meet the foundries' needs now or in the near future. He, therefore, asked of the Government of India, whose Minister of Heavy Industries, Mr. M. M. Shah, was present at the meeting, to enlighten the industry on the following matters which are of great importance to its working: the estimated production of foundry-grade pig iron in the 1957-61 period and the quantity it has been proposed to import, the distribution of the total supply between the public and private units, the prospective supply of by-product hard coke and whether the prices of coke would be equalised as it is proposed to equalise coal prices.

More Indian Cotton Consumed.—In keeping with the growing need for conserving foreign exchange, the Indian mill industry has been progressively switching over from foreign to domestic cotton. Against 4,768,912 bales of cotton (Indian and foreign) consumed in 1954-55, the mills consumed in 1955-56, 4,968,707 bales. In 1954-55 the quantity of Indian cotton consumed was 4,138,438 bales; this rose to 4,365,456 bales in 1955-56. The industry is able to shake off some of its dependence on foreign cotton, because the rise in the consumption of domestic supplies has been steady. From 2,987,000 bales consumed in 1951-52, the figure increased to 3,612,000 bales in 1952-53, to 3,889,000 bales the following year, and to the all-time record of 4,365,000 bales in 1955-56. There has been a steady decline in the consumption of foreign cotton. Against 1,084,000 bales of foreign growths consumed in 1951-52, only 603,000 bales were consumed in 1955-56—and indications are that this decline will continue—quite apart from U.S. aid-cotton. Another development is the sharp fall in Egyptian cotton imports due essentially to price disparities. Against 2,460 bales (720 lbs. each) imported between 1st September and 10th October, in the 1955-56 season, only 1,245 bales were imported during the corresponding period in the new season. The rising trend in the prices of Egyptian cotton has probably been responsible for this setback. Indian mills will be producing less superfine and fine fabrics hereafter, because of the heavy excise levy, and the lack of attractive export markets for these goods. There will, therefore, be a considerable fall in the off-take of cotton used for fine and superfine material, and Egyptian cotton is admirably suitable for this type of production. In this context there is no wonder that mills neglect Egyptian styles, especially when prices are stepped up. Indian spinners now appear to be looking for PIMA Grade I cotton of 1-9/16" staple length, which is quoted in Bombay at around Rs. 2,380, against the prevailing quotation of Rs. 3,090 for Egyptian Karnak.

Hyderabad State Bank Take-over.—The Hyderabad State Bank, constituted under the Hyderabad State Bank Act of 1941 to provide banking facilities for the State's agriculture, commerce and industry, was renamed "The State Bank of Hyderabad" on 22nd October when the Reserve Bank of India took over its shares. There is no proposal yet for its merger with the State Bank of India. In view of the reorganisation of States it has been decided to transfer the management of the Hyderabad Government loans, which are at present being managed by the Hyderabad State Bank, to the Reserve Bank of India with effect from 1st November 1956. The books of the Bank's offices and 50 branches in Hyderabad State and in Bombay, in so far as they relate to the Hyderabad loans, were closed from 29th October 1956, for transfer of the records to the Reserve Bank of India's offices and State treasuries. Holders of

securities enfaced for payment of interest at the Hyderabad State Bank and its branches have been requested to tender their securities for payment of interest, renewal etc., at the Public Debt Office of the Reserve Bank of India at Hyderabad, or local treasuries on or after 1st November. Holders of the 4 percent Hyderabad State Development loans of 1963, 1967, 1968, as well as of the Central and other State Government loans enfaced at Hyderabad, have also been asked to present their securities at the Reserve Bank of India's Public Debt Office. Holders of such securities enfaced at the Bombay Branch of the Hyderabad State Bank have been requested to tender them at the Reserve Bank's Public Debt Office, Bombay.

All-Weather Textiles.—Applying aluminium flakes suspended in resin to a lining fabric after it has been woven and dyed is not exactly new—it has been used in Britain for some time now in the manufacture of waterproofs—but it has been left to an American manufacturer to extend the application of the process to enable people to wear the same weight of clothing all the year round, since it is found that it supplies additional warmth in winter and gives coolness in summer by reflecting the sun's rays. Garments lined with the new material were displayed in London recently, and our correspondent reports that they looked much the same as those with conventional linings. It was hardly the best time of the year for a display of these garments, for autumn fashions are now being displayed. However, travel coats made of wool, alpaca and camel hair have been treated and would change in their degree of warmth according to the weather met by the traveller. The woman torn between buying a light-weight summer raincoat or a winter-weight raincoat can compromise by having either when it is lined with the metal insulation. A black velvet theatre coat, also shown, will please any wearer who has to choose between warmth and glamour. The linings can be dry-cleaned and are porous. It is estimated that the process adds about 1s. 6d. a yard to the cost of a normal lining.

OVER-PRODUCTION OF GOODS

THE large extensions that are approaching completion have caused our jute manufacturers to make a review of the situation. A well-attended meeting of the Indian Jute Manufacturers Association was held last Thursday to consider the desirability of going on short time. Every one present appeared to be satisfied that a curtailment of production was desirable, but when it came to the question of how that curtailment was to be brought about, a considerable divergence of opinion was at once apparent. The increase in the production of jute manufactures has been brought about in three ways: (1) By the addition to the looms of the existing mills. (2) By the introduction of the electric light into a number of them. (3) By the erection of new mills. The representatives of those mills that were not the proud possessors of the electric light appeared to consider that, before any general curtailment could be carried out, the electric light should be stopped, and then they were agreed almost unanimously to work five days a week of so many hours each. It was pointed out that the electric light was only one form of extension, and that if it was to be discontinued, all new looms that had been erected since its introduction should also be stopped, but this reasoning did not find favour with those who had not the light. It seems to us that the electric light is quite as much an extension as the addition of looms. Thus, for instance, if a mill with 500 looms were to add another 50 it would increase its producing power 10 percent, and if the same mill instead of adding the looms were to put in an installation of the electric light, it would practically be able to work two hours a day longer, or taking the day at twelve hours, the production would be increased by about 13 percent. If, therefore, the mill that had added the electric light was to discontinue it, the one that had added the 50 looms should also shut them down, and similarly the new mills which have not commenced to work should remain silent.

SOUTH EASTERN RAILWAY TENDERS

SALE OF 130 CONDEMNED WAGONS

The General Manager invites tenders for the sale of 130 Condemned wagons stabled at Mathurakati Scrap yard, South Eastern Railway, Khargpur. Tender No. S4/S/3/3 in this connection is obtainable from the office of the Controller of Stores, South Eastern Railway, Garden Reach, Calcutta-23 on production of Cash Receipt for Rupees five only from the Chief Cashier, South Eastern Rly., Garden Reach, Calcutta-23, by local firms and on remittance of Rupees five only by Money Order to the Controller of Stores, South Eastern Rly., Garden Reach, Calcutta-23 by outside parties. The cost of tender forms is not refundable. The wagons may be inspected on any working day before the closing date of the Tender. The closing date is the 27th November '56 at 12 Noon.
GENERAL MANAGER.

INDUSTRIAL TRENDS IN THE UNITED KINGDOM

NARROWING OF PROFIT MARGINS

(BY A SPECIAL CORRESPONDENT)

ALTHOUGH for fully a year past British industrial companies have referred to increasing difficulties, there has been, so far, with the exception of textile undertakings, little of this state of affairs reflected in their reports. However, many of those issued during the last few weeks have provided tangible evidence that the difficulties are making themselves felt definitely, mainly through the narrowing of profit margins. A striking example of this is provided by the powerful Imperial Chemical Industries which, while showing an increase of £15 million in turnover during the first half of 1956, nevertheless also records a fall of some £500,000 in trading profits. In other words, it has required a very substantial increase in business to maintain profits at their previous level. It may be recalled that I.C.I. was among the companies which agreed to stabilise the selling prices of certain of their products over an indicated period, in an endeavour to check inflation. Its latest financial results suggest that individual attempts to deal with inflationary tendencies existing in a country as a whole are attended by a considerable amount of risk to those who make them. Ironically enough, where deflation has occurred, as in the case of prices of some non-ferrous metals, I.C.I. has had to write down the value of the stocks of the metals it held. This shows that if deflation is to be truly sound, then it must be of a general and even nature. Partial inception of the process, however well-intentioned, only brings about another kind of instability.

It is not clear in what proportions the declines in profit margins which have occurred are attributable to increased competition in the home and foreign markets respectively. Some companies have emphasised their loss of overseas business; but, on the other hand, important contracts on foreign account have been announced, especially for engineering products. While precise figures cannot be given, it is probably true that keener competition is now being experienced in nearly all markets. The home market, despite the allegedly faithful pursuit of national economy, still has the advantage of the periodical placing of

Government and municipal contracts on a large scale. Although the practice of economy is worthy of admiration, nothing must be allowed to interfere with being up-to-date in armaments or the provision of amenities for the people. These beneficial official activities influence the index of national production, which now stands much where it did a year ago. It seems likely that, if the index could be based separate from State and similar financial excursions, then a decline in the current figure would be shown.

Portable Electric Tools

The newer industries continue to plan confidently for the future, and in some directions hardly likely to be known to the overseas reader. As would be expected, television is well to the front, and prominent electrical companies have near completion elaborate research laboratories for the study of coloured television. Given less publicity, and yet very much in the news, are improvements in portable electric tools which, while finding employment in industry proper, are being adapted to a hundred and one household uses. As in the United States, the "do it yourself" movement has become extensive in Britain, the reasons being the high cost of repairs to structures, difficulties of getting any kind of manual assistance and so forth. An exceptional amount of inventive attention has been turned to horticultural aids, especially for mowing, digging, lawn-cutting and trimming. Electric mowers and electric hedge-cutters are now fairly common, although for mowing, petrol-driven machines hold first place. It is possible to get an electric hedge-cutter (of a new type) for £6, against £16 a year ago for the only kind then available. Reports vary concerning the efficiency of these aids. Some of the dissatisfaction expressed is due to the difficulty of getting used to a new technique. There are also plenty of stalwarts who roundly declare that gardening is a craft which cannot withstand the impact of a minor industrial revolution and remain, so to speak, spiritually whole. But the truth is that you cannot have gardening as a craft in the absence of the old type of gardener, with his ability to stand up to the weather without a windproof jacket and not needing refreshment provided by the housewife four times a day. Nor can his fine feelings for plants be done without, or his knowledge—limited, perhaps, but sturdily independent.

This type, already hardly met with in a days march, will soon be as extinct as the dodo. So the future is rosy for electrical tools inside the house and on top of it and in the garden round about.

Quality Textiles

The British textile industry has witnessed a resuscitation of the arguments for and against concentration on qualitative rather than quantitative manufacture. The issue has been given fresh point through the holding in Gothenberg, Sweden, of an international conference on "Fabric Quality and Informative Labelling." Two hundred delegates, mainly European, discussed the subject. There were also representatives from the United States and Japan. The British and American delegates, with many examples in their countries of improvements in the quality of fabrics, and others soon to be given effect, were strongly in favour of pride of place being given to qualitative production. It was felt that there were no technical obstacles to Britain and the United States producing high class fabrics in greatly increased amounts. The principal problem is how to educate the public, so as to ensure that it demands this class of goods. One difficulty which has to be combated is the over-conservatism which, notwithstanding the demand for the novel, characteristic of much of the modern world, is still common among the average housewife. Even with nylon and "terylene", which are apparently well-established in public favour, a never-ceasing advertising campaign is deemed essential in order to prevent taste slipping back to the natural fibres. Fabrics which are blends of several fibres have the handicap of a scepticism about the enduring value of "mixtures." There is, too, another aspect. The laundries' handling of fine fabrics is often far from gentle or knowledgeable, and so brings these materials into unwarranted disrepute. The conclusion was reached that the first step to be taken is to ensure that the labelling of all fabrics is correct and clear, and that both shop assistants and purchasers should be given practical encouragement to know much more than they do at present about the properties of the new fibres. It is believed also that the public should be made acquainted with something of the scientific processes which have gone to the discovery of the man-made fibres. To this end, Imperial Chemical Industries has prepared a film under the title of *A Point of Departure* which, using an evolutionary approach, traces in simple manner the emergence of the modern fibres.

Care-Free Fabrics

The campaign proclaiming the virtues of a finish which allows the minimum of ironing of textiles is growing in strength, the Bradford Dyers' Association and other Lancashire textile concerns having allocated large sums of money for this purpose. The campaign is frequently conducted under the heading of "Care-free Fabrics", which description, for the time being at any rate, bids fair to become a slogan. As is well known, nylon and other man-made fibres have as an inherent virtue the capacity always to present a smooth front to a ruffled world. The man (said to be a diplomat) who allegedly goes round the world with one nylon shirt, washing and drying it each night, has supplanted Santa Claus. The challenge, in this respect, of the man-made fibres to cotton and rayon fabrics could not be ignored. Hence, manufacturers of these last fabrics have sought to impart much the same virtue by means of finishing. This is done by means of resins, and also largely depends upon the reducing of space between the fibres used in the fabrics. The fabric makers themselves admit of no questioning that the result is excellent from every point of view. Other experts have avowed that the lessening of the need to iron cotton and rayon, by finishing methods as so far disclosed, cannot be accomplished without affecting the fabrics adversely.

Synthetic Minerals

A substantial grant which the Nuffield Foundation has made for the study of synthetic minerals visualises an eventual long leap forward in human pursuits, contributing as it does to the at present largely unknown territory of cosmic chemistry. Far-reaching also are the "bubble chamber" detectors, which can keep pace with the new particle accelerators which play so prominent a part in the study of high-energy nuclear physics. It is still the case, according to Dr. C. Dodd, writing in the October 1956 issue of *Endeavour*, that "with existing techniques the analysis of the photographs produced in a single day by a bubble chamber operating in the beam of a pulsed accelerator would take over a year to complete." A new analysis technique, utilising existing electronic computers, is therefore essential. The giant computers are at present being located in the British Universities, but they are to be made available for industrial research purposes, as well as for scientific inquiry. The Oxford University is soon to install the latest model, made by Ferranti Ltd., one of the foremost British companies in the manufacture of radio and electrical machinery and equipment generally. It is claimed that this model will operate five times as fast as models at present being used. It should be noted, however, that it is estimated that to prepare a programme for one day's work by the computer will take three months. How can the human contribution to modern computation be speeded up? Does it mean only a revolution of the methods of organisation of human effort. Or does it imply that we shall have to produce individual brains of greater capacity and which will operate far more quickly?

A DITCHER'S DIARY

WE all have our birthdays, and *Capital* is no exception. When this particular time on the calendar comes round I usually announce that we are entering another year of publication—this time our sixty-ninth—and that, once again, no celebrations will be held. But the occasion is not allowed to pass entirely without something special to mark it and if we have no plans for our own anniversary there is nothing to stop our helping to make a success of somebody else's. The one I have in mind is, of course, Christmas and the way *Capital* helps is through its toy fund. Every year we try to brighten as many small children's Christmases as you make it possible for us. Last year's effort can be seen from the figures printed at the end of this week's "Current Coin." Collections showed an improvement on 1954, which was a creditable achievement after the depredations of the 1955 Budget, and there seems no good reason why this year's figure should not be better still—profits may be down, but hopes have surely never been higher. Although collections improved, less money was spent on toys last year because the balance brought forward was so much lower than that from 1953. We avoided what disappointment we could by spreading the money more thinly. Just as many children got toys, but perhaps they were not as durable or as elaborate as they might have been. We do not want to do that again this year and we even have hopes of increasing the number of poor children who will benefit. All contributions in the form of cash or cheques should be sent to the *Capital* Christmas Toy Fund, 5, Mission Row, Calcutta. And please sent them as early as possible.

I do not agree with the view I have heard expressed in certain quarters that Miss Padmaja Naidu, who takes over this week as the Governor of West Bengal, has received her high appointment solely because she is her mother's daughter. The late Mrs. Sarojini Naidu was, of course, a very great personality and doubtless India owes her a large debt. She held many high offices in the Congress, of which she was President for more terms than one. But a good part of her contribution to the country—and to my mind a no less important one—lay in fields other than political. She was, to begin with, an excellent poet: one who, alongside of Professor Manomohan Ghosh and Sri Aurobindo, secured for herself a distinguished place in what has since been called Indo-Anglian poetry, and could count among her admirers the well-known critic Sir Edmund Gosse. But she sacrificed the muse at the altar of the struggle for freedom, and was the first woman leader to have achieved all-India eminence which, I think, was an inspiring example for the country's entire womanhood. How eagerly it has been followed is seen in the subsequent crop of India's women leaders which includes such figures as Mrs. Vijaylaxmi Pandit, Mrs. Durgabai Deshmukh, Mrs. Hannah Sen, Mrs. Hansa Mehta and Mrs. Rameshwari Nehru, to name only a few. To be the daughter of such a mother is certainly a privilege of which, it is well known, Miss Padmaja Naidu has made good use. She has always been active in social service without elbowing her way to the limelight, and I am quite sure that she meant business when she said recently that her sole function as Governor would not be to preside over prize distribution ceremonies at schools. No doubt she will make an excellent beginning by applying herself to the urgent and vast task of bringing hope and succour to West Bengal's flood-stricken.

During the coming week, the Calcutta School of Music introduces the first of the cold season's

celebrities, pianist Claudio Arrau. I should be surprised if the name were well known to music-loving ditchers, but if the various Press reports which I have read on the accomplishments of this artist can be accepted as a basis for judgment, it is only a matter of a very short time before the Arrau light bursts into a brilliant international star. *The Manchester Guardian*—which is not always wrong—uses double superlatives to describe his performances. After two resoundingly successful tours of South Africa and a much-acclaimed recital at the Salzburg Festival in 1952, he now comes to Calcutta. On 6th November he will be playing with the Calcutta Symphony Orchestra, a selection of works by Beethoven, Mozart, Weber, Hadyn and Arthur Duckworth. His solo performance on the 8th, includes a tempting programme from List, Schumann, Beethoven, Mozart and Boulenc. This promises to be a stirring overture to the season's musical entertainment. I never fail to raise my metaphorical hat to the efforts which the Calcutta School makes in keeping us in touch with good music through inspired performers. It is a tremendous task magnificently carried out. I can only hope that the New Empire will be packed to capacity on both occasions so that Calcutta's devotees of music will be able not only to enjoy the genius of Arrau, but to help the School to keep up its good work as well.

Coffee-house admirers of Soviet régimes may have had good reason to rub their eyes in astonishment over the past few days' performance in Budapest. A "people's democracy" which can line up foreign tanks to mow down thousands of its own people when they ask for a voice in their own affairs does not, one suspects, accord entirely with the concepts of "socialist justice" on which leftist consciences have for years been nurtured—concepts which have previously been seen in practical operation in East Berlin and Poznan. One sincerely hopes that the past month's events in both Poland and Hungary will help persuade the Orwellian double-thinkers that imperialism is not purely a capitalist monopoly. The strength of the Russian forces sprawled over eastern Europe has clearly been considerable, and it is hard to see what purpose they could have been serving other than to provide a powerful backing of military repression for Moscow's political dictatorship and economic blood-sucking. Russian cronies like Mr. Sobolev may assert before the Security Council that the whole Hungarian uprising has been provoked and financed by western agents; but even he must at times wonder why, if this be true, one of the first impulses of the new Hungarian Government under Mr. Nagy has been to disband its security police and tell the Russian troops to get out. Indeed, in contrast to whatever Moscow has been saying, a feature of the Budapest proceedings has been the Hungarian officialdom implicitly to admit that the revolt reflects genuine popular discontent not only with the conduct of affairs at home but also with the dictation from Moscow. The admission has been made more explicitly this week in Mr. Nagy's announcement that he "fully acknowledges" the new autonomous councils formed by the Hungarian forces. Still, one might perhaps be forgiven for looking upon the latest moves towards democratisation in Poland and Hungary with a measure of scepticism. Both Mr. Gomulka and Mr. Nagy were not wholly averse from Mr. Stalin's company before he sent them to jail; they may like him no longer, but they have yet to show

how far the antipathy is based on ideological rather than merely personal grounds.

I see that the English Association has recently celebrated its jubilee. Founded in 1906, this important academic body has rendered signal service in the field of English scholarship, and although originally its aims were purely educational, namely, "to afford opportunities for friendly intercourse and co-operation amongst all who love our literature and language, and desire to spread a knowledge of them," over the years these have been widened to include much other activity. For example, it has compiled several standard anthologies of English poetry—*The Modern Muse* and *England* are among them—published pamphlets aimed at the general reader and the monumental *Year's Work in English Studies*, which last series is specially for the advanced student with access to academic libraries. The list of its presidents constitutes an impressive bead-roll of great names in literature and scholarship, among which figure those of several British Prime Ministers. It is, however, a matter of regret that despite its undoubtedly solid achievements, its membership has shown a continued decline in recent years, and that its various branches at home and overseas have not been as active as they might have been. I was not a little surprised to see from the Association's jubilee volume of *Essays and Studies* that two quite new branches have been opened in Trivandrum and East Pakistan. I wonder how it could have missed out Calcutta, India's cultural capital. If there is a branch here, I have not found it, nor has it me.

I was not lucky enough to meet Group Captain Cheshire, V.C., when he was in Calcutta, but that has not prevented me from following his activities with the greatest interest. Superbly successful in war, he appears to be devoting his life as a civilian selflessly making up to humanity at large for the destruction he, and the force of which he was a member, were obliged to wreak upon it in the cause of duty. There are not many of us blessed with so acute a sense of what should be our real attitude to mankind; but then, Cheshire has proved himself to be no ordinary mortal. Even now that India has a "socialistic pattern" of society, there are few places in the world where humanity can be served better than it can be here. The Cheshire Homes may seem a small contribution to India's welfare, but they are an important one for all that because, so I am told, their work is concentrated on those who have been pronounced incurable and who are all too likely in this country to end their days in squalor and neglect. A few such have already been admitted to a house in Serampore where a modest start has been made with the work. Medical assistance, skilled supervision, cleanliness and good food are available for them. But the continuation and extension of the Homes depends on public generosity. That is why the local committee of the Cheshire Homes of India is holding a dance and dinner on 2nd November at Firpo's restaurant with the entire entry fees and proceeds of the side shows to go to the cause. It is probably true that there are already too many charities in Calcutta, and it has never been my practice or intention to recommend them all. But I do feel that this one can be counted an exception, not only because it is a comparatively new venture so far as India is concerned, but also because it owes so much to the personality of a man to whom, and to the force in which he served, we all owe a great deal.

THE DITCHER.

Serving Industry—which Serves Mankind

1901—the birth of Monsanto starting with practically sweet nothing—the manufacture of a single chemical—Saccharin. Today, Monsanto ranks among the greatest names in chemicals and plastics, serving industry which serves mankind. Today—hundreds of industries rely on Monsanto: Agriculture—Automotive—Aviation—Beverages—Ceramics—Chemical Processing—Cosmetics—Perfumes—Dental—Dyeing—Electrical—Foods—Insecticides—Leather Tanning—Lumber—Machinery—Mining—Packaging—Paint, Varnish, Lacquer—Petroleum—Pharmaceutical—Pulp, Paper—Plastics—Printing Ink—Radio—Rayon—Refrigeration—Rubber—Soaps and Detergents—Textiles.

To those of you who are concerned with any operation in any of these industries, we extend a personal invitation—"Come and consult us". We shall help you increase production...improve products...decrease operating costs...and increase your sales.

The consent of the Government of India has been obtained to this issue by an order, a complete copy of which is available for public inspection at the Head Office of the Company. It must be distinctly understood that in giving this consent the Government of India do not take any responsibility for the financial soundness of any scheme or for the correctness of any of the statements made or opinions expressed with regard to them.

A copy of this Prospectus has been delivered to the Registrar of Companies, West Bengal, for registration, such copy having attached to it—

- the written consent of the Auditors mentioned herein to the issue of this Prospectus with their report included therein in the form and context in which it is so included;
- a statement in writing signed by the Auditors as to the adjustments made by them in arriving at the profits and statement of assets and liabilities included in their report and giving their reasons therefor; and
- copies of contracts Nos. 1 to 12 mentioned herein under the heading "Contracts" or memoranda giving full particulars thereof.

Application is being made to the Calcutta Stock Exchange for permission to deal in and for an official quotation of the Ordinary Shares of the Company.

The Subscription List will open at the commencement of Banking hours on the 7th day of November, 1956, and will close on the 14th day of November, 1956, or earlier or later at the discretion of the Directors.

GUEST, KEEN, WILLIAMS, LIMITED.

(Incorporated on the 17th day of February, 1931, under the Indian Companies Act, 1913 as Henry Williams India (1931) Limited, which name was changed to Guest, Keen, Williams, Limited on the 19th day of December, 1934).

SHARE CAPITAL

AUTHORISED

Rs. 3,00,00,000/- divided into 30,00,000 Shares of Rs. 10/- each.

ISSUED, SUBSCRIBED AND PAID-UP

Rs. 1,41,06,000/- divided into 14,10,600 Ordinary Shares of Rs. 10/- each fully paid.

LOAN CAPITAL

The Company has no debentures or other loan capital outstanding but has Bank overdrafts secured by hypothecation of stock-in-trade.

ISSUE OF

5,89,400 Ordinary Shares of Rs. 10/- each fully paid at Rs. 20/- per share.

PAYABLE IN FULL ON APPLICATION.

Applications for Shares by members of the public must be for a minimum of 50 Shares or for multiples of 50 Shares.

The Company is advised that the Ordinary Shares now being issued are "Approved Investments" within Section 27A of the Insurance Act, 1938.

An interim dividend of 8% free of tax was declared on the 20th September, 1956, to shareholders at that date in respect of the Company's 52 weeks financial period ending the 29th December, 1956. The Shares now being issued will rank for any further dividend that may be declared in respect of the said period and any subsequent financial periods and in all other respects *pari passu* with the Ordinary Shares of the Company already issued.

As the existing shareholders do not intend to apply for an allotment all the Shares now being issued will be available for allotment to the public save that 50,000 Shares of this issue are being reserved initially (without any obligation on the Company) for those employees who have a minimum of twelve months' service with the Company. Applications for Shares from such employees for a minimum of 10 Shares or for multiples of 10 Shares will be considered.

History and Business.

The Company was incorporated in Bengal on the 17th February, 1931 as a Private Limited Company under the name HENRY WILLIAMS INDIA (1931) LTD. and was formed *inter alia*, with the object of acquiring and carrying on the business of HENRY WILLIAMS (INDIA), LIMITED, an earlier Com-

pany incorporated in Bengal in the year 1922, which founded the Company's manufacturing Works at Calcutta. The other main objects of the Company will be found set out below in this Prospectus. The change to the Company's present name was made on the 19th December, 1934 consequent upon the purchase of a large interest by GUEST, KEEN & NETTLEFOLDS, LTD., of Birmingham, England.

On the 4th December, 1948 GUEST, KEEN & NETTLEFOLDS, LTD., purchased from the other shareholders their interests in the Company, thus becoming the sole owners. On the 29th January, 1953, the Company formed a wholly owned Subsidiary, NETTLEFOLDS OF INDIA PRIVATE LTD., incorporated under the Indian Companies Act, 1913 for the purpose of carrying out the project for manufacturing wood screws and kindred fastenings in India. This Subsidiary as well as the Company has the right to use wood screw and kindred trade marks and labels, including the name "Nettlefolds", which is famous throughout the world for these products, under user agreements with the proprietors. The Company has also entered into a user agreement with George Goodman Ltd., of Birmingham, England in respect of the latter's trade mark and labels relating to safety-pins and kindred products manufactured by the Company in India. The Company has also entered into an Agreement with Exors. of James Mills Limited of Stockport, England, whereby the Company is permitted to manufacture in India under Licence certain products including railway permanent way fittings under Trade Marks and Patents belonging to Exors. of James Mills Limited, in consideration of which the Company pays a royalty based on the selling price of the products subject to a minimum payment of £500.00 per annum. The said Agreements contain provisions whereby the user of the Trade Marks undertakes that the goods to be manufactured shall be up to specification and that the Owner of the Trade Marks shall have a right of access to the place where the goods are manufactured for the purpose of inspecting all stages of manufacture.

The Company and its predecessors have always laid emphasis on the specialised lines of engineering and in particular those pertaining to Railways. The fulfilment of orders received from the Railways has always constituted a large part of the Company's activities. The Company is one of the pioneers in India of rolling special sections used in the manufacture of springs for which business it continues to execute a very substantial part of the Country's needs. In addition the range of manufactures includes baling buckles for the Jute Industry, and, of more recent years, grinding media for the Cement Industry and a growing variety of forgings for the Automobile Industry. Railway Points and Crossings, Permanent Way Fittings, Signal Fittings and Rolling Stock components are all made at the Calcutta Works, which is in the advantageous position of having its own Rolling Mills and Furnace Plant for making special and alloy steels. For nearly 30 years the Company has been the largest single producer in India of Steel Railway Sleepers, and its Bolt and Nut Department is by far the largest Bolt and Nut unit in India.

The Bhandup Works which commenced manufacturing in September, 1953 is now the largest producer in the Country of high-class steel and brass Wood Screws. As additional lines this Works started manufacturing Safety-pins in the latter half of 1954. Cotter Pins in the first half of 1955, Hypodermic Needles in January, 1956, Tinmen's Rivets in June, 1956 and Metal-thread Screws in July, 1956. These products of the Bhandup Works are marketed and distributed throughout India by Nettlefolds of India Private Ltd.

The Company specialises in mechanical engineering and also has a valuable Agency section importing and selling a wide range of mechanical and electrical products of the following well known overseas manufacturers:—

Land, Premises and Plant.

The Company has its main office at Calcutta, offices at Bombay Madras New Delhi and at London, England, and manufacturing works at Bhandup near Bombay and at Calcutta.

The Calcutta Works is situated at Shalimar, Howrah, West Bengal, on two sites owned by the Company each of which is within its own ring fence, the older site containing an area of approximately 33 acres and a site recently acquired for future development containing an area of approximately 11 acres. The two sites are joined by railway sidings and are readily accessible to Andul Road. Erected on this land is a modern, well-equipped, manufacturing works with a covered floor area totalling approximately 6,21,000 sq. ft. The Works is well served by internal railway sidings, adequate to handle incoming raw materials and outgoing finished goods. Ample water is available from deep tubewells and surface tanks. The Plant and Machinery is well maintained in efficient condition and at the 31st December, 1955, the written down book value of the fixed assets pertaining to the Calcutta Works was Rs. 1,03,93,006/-.

The Bhandup Works, approximately 18 miles from Bombay on the main Agra Road is served by its own siding from the Central Railway. The property on which the Works are situated comprises a residential area of approximately 15 acres on the west side of the Agra Road, and an industrial area of approximately 53 acres on the east side of the Agra Road, which latter accommodates the Works proper. Approximately 13 acres of the industrial area are rented on a 50 years lease to Sankey Electrical Stampings Private Ltd. The industrial area has its own electric generating station, water is taken both from the mains supply and from wells on the Estate. This Works has a covered floor area of approximately 70,000 sq. ft. and all the Plant and Machinery has only recently been installed and is well maintained in efficient condition; at the 31st December, 1955, the written down book value of the fixed assets pertaining to the Bhandup Estate was Rs. 45,59,276/-.

The Company's Head Office at Calcutta is held on lease, and a written undertaking has been received for an extension of this lease until the 30th June, 1979. The offices at Bombay, Madras New Delhi and at London, England, are all held under tenancy agreements on reasonable terms.

Management and Staff.

Of the Directors, the Chairman, Mr. R. Catlow has for most of his working life been connected with GUEST, KEEN & NETTLEFOLDS, LTD., England, and has, since August, 1952, been a member of the Board of that Company. There are four full-time Working Directors, all of whom have been in the employment of the Company for many years either as executives or Directors and have considerable practical experience as engineers and commercial men, as well as holding technical qualifications. There are three non-executive Directors in India, who have recently joined the Board, whose experience and guidance will form a valuable contribution to the efficient running of the Company.

The Managing Director and the three other full-time Directors are responsible for the day to day running of the business, and they are ably assisted by experienced officials, many of whom have spent most of their working lives with the Company.

The total number of employees of the Company including the management, staff and operatives employed at Calcutta and Bhandup Works is approximately 3,550. The Company has been operating and will continue to operate recruitment and training schemes for its employees both in India and overseas, which it anticipates will continue to provide and train executives and operatives for its requirements. The efficiency and continuity of management at all levels are maintained by the Company's long standing practice of promotion wherever possible from within the organisation. Labour relations have, on the whole, been very satisfactory and there is reason to hope that they

Hot and Cold Rolled Steel Strip, Steel Rod and Wire.

Oil Burners, Flame Guns and Torches.

Railway Track and Signalling Equipment.

Bronze, Brass, White Metal, and "Otilite" Self-Lubricating Bronze Bearings.

Tubular Scaffolding and fittings, Prefabricated Tubular Steel Structures, Racking, Grandstands, etc.

"Thermit" Welding of Rails.

Electrodes, Welding Plant and Accessories.

Switchgear up to 3.3 KV. Automatic A. C. Control Gear, etc.

Rail Anchors, Rail Lubricators, Switch Point Protectors, Rail Benders, Hydraulic Track Jacks.

Boiler Fittings, High Pressure Valves, etc.

High Tensile Steel Wire.

Woodworking Machinery.

High Speed Steel, Tool Steel, Twist Drills, Spiral and Volute Springs and Metal Working Tools.

Reinforcing Fabric and Bars for Concrete.

Railway Electrical and Mechanical Signalling Instruments, etc.

Non-ferrous Rod and Wire.

Mining Machinery, Bolland and Sinking Capstans, Ram Pumps, Haulage Gear, Winders, Flexible Couplings, etc.

will continue to be so. Opportunities are assured by the Company's technical and commercial training policy for the promotion of Indian Nationals in the management of the affairs of the business, and additional requirements of technicians are supplemented by imported staff with specialised qualifications.

Development.

At the Calcutta Works the extensions and modernisation begun in 1954, of the Bolt and Nut cold forging department are now substantially completed, and the modernisation of the Bolt and Nut hot forging department has already commenced. The modernisation and extension of the Forging Plant and Rolling Stock fittings requirements are now being embarked upon. In addition, plans are being made for a greatly increased output of the special steel sleepers required for railway points and crossings. To keep pace with the modernisation of the fabricating departments, and to ensure a satisfactory supply of bars, rods and special sections to these departments, modernisation and expansion of the Rolling Mills at the Company's Calcutta Works are now in progress. In addition to meeting the needs of the Calcutta and Bhandup Works this development provides not only for the growing requirements of spring steel bars and special sections for the Company's outside customers, but also for further potential capacity to take up additional supplies of steel semis as and when they become available under the Government programme for the development of the Steel Industry. Another development linked with the Rolling Mill expansion is the installation of a second Electric Steel Melting Furnace to provide special and alloy steels, which will increase the existing capacity from 6,000 tons to 12,000 tons per annum. It is expected that the new Electric Steel Melting Furnace will begin operating during the year 1957. It is also expected that the initial stages of the Rolling Mill expansion scheme will come into production at the end of the year 1953 and that its subsequent stages will be implemented by the end of the year 1959. It will be seen therefore that the cost of this expansion programme will be spread over some four years.

The Rolling Mill and the Steel Furnace expansion schemes have been approved by the Government of India under the Industries (Development and Regulation) Act, 1951, and the Registration and Licensing of Industrial Undertakings Rules, 1952, as follows:—

A Licence (No. L/4/75/55 dated the 3rd December, 1955, for the manufacture of bars and rods) has been obtained from the Central Government for effecting a substantial expansion to this industrial undertaking, of which a copy is open to public inspection at the Head Office of the Company. It must be distinctly understood that in granting this licence the Government of India do not take any responsibility for the financial soundness of this undertaking or for the correctness of any of the statements made or opinions expressed in regard to it.

A Licence (No. L/4/72/55 dated the 12th November, 1955, for the manufacture of special steels including spring steel and alloy steel) has been obtained from the Central Government for effecting a substantial expansion to this industrial undertaking, of which a copy is open to public inspection at the Head Office of the Company. It must be distinctly understood that in granting this Licence the Government of India do not take any responsibility for the financial soundness of this undertaking or for the correctness of any of the statements made or opinions expressed in regard to it.

The Company is also developing at its Calcutta Works the manufacture of Tungsten-Carbide for Drawing Dies and Rock Drill Bits, for which latter there is a growing demand for use in the construction of the Country's River Valley Projects and quarrying generally.

A further development is the manufacture of steel Road Wheels for pneumatic tyre equipment, plans for which have been drawn up. It is proposed, in the first instance to manufacture only

wheels for Animal Drawn Vehicles but later on for Motor Cars.

In their letter Ref. No. 11 (85) IA (LA)/55 dated 3th June 1956, the Government of India informed the Company that the manufacture of Animal Drawn Vehicle Wheels is not governed by the Industries Act and that the Company is not required to obtain a Licence for this purpose. The manufacture of Motor Car Wheels has received the approval of the Government of India under the Industries (Development and Regulation) Act, 1951, and the Registration and Licensing of Industrial Undertakings Rules, 1952, as follows:—

A Licence (No. L/11/36/56 dated 19th June, 1956, for effecting a substantial expansion to this industrial undertaking for the manufacture of Motor Car Wheels) has been obtained from the Central Government for effecting a substantial expansion to this industrial undertaking, of which a copy is open to public inspection at the Head Office of the Company. It must be distinctly understood that in granting this Licence the Government of India do not take any responsibility for the financial soundness of this undertaking or for the correctness of any of the statements made or opinions expressed in regard to it.

To augment existing service facilities for the production department a new Tool Room and Machine Repair Department are being built and equipped with the latest precision machinery.

At the Company's Bhandup Works a considerable expansion in the productive capacity of wood screws is almost completed and the resultant increase in production is already being experienced; at the same time this Works is now manufacturing Metal-thread Screws and Timmen's Rivets. Cotter Pins and Hypodermic Needles as new lines. These developments have all received the approval of the Government of India under the Industries (Development and Regulation) Act, 1951, and the Registration and Licensing of Industrial Undertakings Rules, 1952, as follows:—

A Licence (No. L/4/70/55 dated the 29th October, 1955, for effecting a substantial expansion to the existing undertaking for the manufacture of wood screws) has been obtained from the Central Government for effecting a substantial expansion to this industrial undertaking, of which a copy is open to public inspection at the Head Office of the Company. It must be distinctly understood that in granting this Licence the Government of India do not take any responsibility for the financial soundness of this undertaking or for the correctness of any of the statements made or opinions expressed in regard to it.

A Licence (No. L/4/49/55 dated the 29th April, 1955, for the manufacture at Bhandup, Bombay, of metal-thread screws of smaller sizes and small rivets including timmen's) has been obtained from the Central Government for effecting a substantial expansion to this industrial undertaking, of which a copy is open to public inspection at the Head Office of the Company. It must be distinctly understood that in granting this Licence the Government of India do not take any responsibility for the financial soundness of this undertaking or for the correctness of any of the statements made or opinions expressed in regard to it.

The following schemes not being classed as "Scheduled Industries" under the said Act have received the approval of the Government of India as follows:—

Approval for the scheme to manufacture Safety-pins was given by the Ministry of Commerce and Industry letter ref. No. E. I. 47(2)/53 dated the 6th March, 1953, and approval for doubling the capacity was given by the Ministry of Commerce and Industry letter ref. No. E. I. 47(2)/53-G.I. dated the 25th August, 1955.

Approval for the manufacture of Wire goods, — Screw Hooks, Eyes, Cotter Pins and Gate Hooks was given in the Ministry of Commerce and Industry letter ref. No. Eng. Ind. 34(12)/53 dated the 14th September, 1953, and approval for substantial expansion of production was given in the Ministry of Commerce and Industry letter ref. No. G. Ind. 37(5)/55 dated the 23rd April, 1956.

Approval for the manufacture of Hypodermic and Scrum Needles was given by the Ministry of Commerce and Industry letter ref. No. Eng. Ind. 45(3)/54 dated the 27th April, 1954.

It is expected that the expenditure on these aforementioned projects together with normal replacement of fixed assets during the next four years will be between four and five crores of rupees, a part of which will be provided out of the proceeds of this issue, and the Directors expect to be able to finance the balance of this expenditure out of future earnings and resources which may become available from time to time.

Objects of Issue.

The objects of this new issue are to enable the Company to expand its production, to enlarge the scope and range of its activities, to provide additional working capital and to afford an opportunity for the participation of Indian Capital.

The Company was converted into a Public Company on the 22nd October, 1956.

FINANCIAL INFORMATION.

Auditors' Report.

The following is a copy of the Report of the Company's Auditors, Messrs. Price Waterhouse Peat & Co., Chartered Accountants.

The Directors, Messrs. GUEST, KEEN, WILLIAMS, LTD., 41, Chowringhee Road, Calcutta-16.

Dear Sirs,

We have examined the books and accounts of GUEST, KEEN, WILLIAMS, LTD., as kept in Calcutta in which are incorporated the certified returns from the Calcutta Works, Bhandup Works (which started production in 1953) and Bombay and Madras Branches for the five years ended 31st December, 1955, and the books and accounts of Nettlefolds of India Private Ltd., a wholly owned subsidiary company of GUEST, KEEN, WILLIAMS, LTD., as kept in Bombay for the period from 29th January, 1953 to 31st December, 1955 and report that the profits or losses of the Companies are as set forth. These profits or losses have been arrived at after charging all expenses of working, management and consultants' fees including provision for normal depreciation on the basis as allowable for taxation and after making such adjustments as in our opinion are appropriate.

No dividend has been declared by Nettlefolds of India Private Ltd., since the date of its incorporation on 29th January, 1953.

Yours faithfully,
PRICE WATERHOUSE PEAT & CO.

GUEST, KEEN, WILLIAMS, LIMITED.—Cont'd.

Profits and Prospects.

The period covered by the Auditors' Report includes the five years to the 31st December, 1955. The profits for the 52 weeks ended the 29th December, 1951, were exceptional for that time and marked the end of the post-war boom. The profits for the 53 weeks ended the 3rd January, 1953, reflected a definite change to a buyers' market and falling off in customers' requirements which continued for the greater part of the 52 weeks ended the 2nd January, 1954, and was caused mainly by the holding off by Government of its normal purchases of railway requirements. This was general in the Engineering Industry at that time but particularly affected the Company's steel Railway Sleeper Department which had to close down due to the absence of any orders whatsoever. The profits for the 52 weeks ended the 1st January, 1955, reflected a return to better trading conditions and were assisted by the earnings of the new Wood Screw Department at Bhandup Works and the first Steel Furnace at the Calcutta Works. The period ended the 31st December, 1955, showed further improvement in earnings, mainly assisted by the Company's progressive plant development and modernisation coupled with a continued rising demand from customers. The trading so far this year shows continued improvement and this together with the state of the Order Book leads the Directors to believe that (in the absence of circumstances beyond their control) with the additional finance now to be made available to the Company, and with the Company's various development schemes gradually coming to fruition, profits of current and future financial periods will show an increase consistent with the growth of the Company.

STATUTORY AND GENERAL INFORMATION.

Minimum Subscription.

(a) The minimum amount which in the opinion of the Directors is required to be provided in respect of each of the matters mentioned in clause 5, part 1 of Schedule II of the Companies Act, 1956, is Rs. 95,00,000/-, made up as follows:—

(i) Cash purchase price of property purchased or to be purchased	Rs. 71,75,000
(ii) Expenses of this Issue	Rs. 3,25,000
(iii) Re-payment of monies borrowed in respect of the proposed matters	Nil
(iv) Additional Working Capital (being the balance)	Rs. 20,00,000

(b) The amounts to be provided over the next four years in respect of the matters aforesaid otherwise than out of the proceeds of this Issue, are estimated to be Rs. 2,78,25,000/- and will be provided out of such facilities as may be available to the Company from time to time.

Underwriting.

The Shares now intended to be issued have not been underwritten but the Company will pay brokerage as indicated below.

Contracts.

The following contracts, not being contracts in the ordinary course of business, which are or may be material have been entered into by the Company during the two years preceding the date of this Report:—

(1) Dated the 5th October, 1955, between the Company and P. & M. Company (England) Ltd., whereby the former Company is given the sole right to manufacture in India under Licence from P. & M. Company certain products including Nail Anchors under Trade Marks and Patents belonging to the latter.

(2) Dated the 28th September, 1956, between the Company and Jardine Henderson & Co., Ltd., appointing the latter Registrars and Share Transfer Agents to the Company for a period of five years.

(3) Dated the 1st January, 1956, between the Company and Henry Morton Leach, William Leach, the latter Managing Director of the Company for a period of five years at a salary of Rs. 6,000/- per month and such other benefits, privileges and emoluments granted to Senior Staff by the Board of Directors. In addition Mr. H. M. L. Williams is paid a commission of 1% of the net profits of the Company of any year.

(4) Dated the 16th November, 1955, between Guest, Keen & Nettlefolds, Ltd., of the first part, Guest Keen & Nettlefolds (Midlands) Ltd., of the second part and the Company of the third part, for registration of the latter Company as registered user under the Trade Marks Act, 1940 of certain Trade Marks relating to wood screws and kindred products.

(5) Dated the 9th March, 1956, between Guest Keen & Nettlefolds (Midlands) Ltd. and the Company's wholly owned subsidiary India Private Ltd., for registration of the latter Company as registered user under the Trade Marks Act, 1940 of certain Trade Marks relating to wood screws and kindred products.

(6) Dated the 20th September, 1956, between the Company and Sankey Electrical Stampings Private Ltd., whereby the former Company leased to the latter certain pieces of machinery and plant situated at Bhandup Works together with several structures, buildings, and erections standing thereon and other rights and liberties appertaining thereto for a period of five years commencing from 1st January, 1956, at a monthly rental of Rs. 1,041-7-1.

(7) Dated the 13th April, 1955, between the Governor of West Bengal of the first part, the Administrator Howrah Municipality of the second part and the Company of the third part, whereby the Governor agreed to sell (the Administrator confirming) and the Company agreed to purchase certain pieces or parcels of land containing an area of approximately 33 Bighas 5 Colutta Works, for the sum of Rs. 5,32,400/-. The purchase price has since been paid by the Company and the property conveyed to it by a Conveyance dated the 24th August, 1955.

(8) On 9th July, 1956, an order on the Brightside Foundry & Engrs. Ltd., Sheffield, England, for the supply of Rolling Mill Equipment the cost of which is estimated to be Rs. 2,816,240 (Rs. 1,16,83,200/-).

(9) On 25th January, 1956, an order on G. W. B. Furnaces Ltd., Dudley, England, for the supply of one Tagliatelli Electric Furnace the cost of which is estimated to be Rs. 3,09,492 (Rs. 4,06,560/-).

(10) Various orders numbered 10/1 to 10/7 dated 10th October, 1956, on various orders for the supply of Wheel-making Equipment. The cost of these orders is estimated to be Rs. 2,40,533 (Rs. 5,40,440/-).

(11) Various orders numbered 11/1 to 11/6 dated between 30th May, 1955 and 7th July, 1955, on various orders for the supply of Plant & Machinery the cost of which is estimated to be Rs. 18,38,717/-.

(12) Various orders numbered 12/1 to 12/17 dated between 21st February, 1955 and 3rd September, 1956, on various contracts and suppliers for the supply and erection of Buildings, Plant and Machinery and Equipment the total cost of which is estimated to be Rs. 35,65,530/-.

Redeemable Preference Shares.
The Company has not within the two years preceding the date hereof issued and it does not at present intend to issue any Redeemable Preference Shares.

Other Previous Issues.

No Shares or Debentures have been issued or agreed to be issued within the two years preceding the date hereof either for cash or as fully or partly paid up otherwise than in cash.

Commission.

No sums have been paid within the two years preceding the date hereof or are payable as commission for subscribing or agreeing to subscribe or procuring or agreeing to procure subscriptions for any Shares in or Debentures of the Company or as discount in respect of Shares issued.

Payment to Promoter.

No amount or benefit has been paid or given within the two years preceding the date hereof or is intended to be paid or given to any promoter or to any officer of the Company apart from normal remuneration and reimbursement paid to such officers.

Option to Subscribe.

The Company has not entered into any contract or arrangement and does not at present propose to enter into any contract or arrangement whereby any option or preferential right of any kind has been or is proposed to be given to any person to subscribe for any Shares in or Debentures of the Company.

Purchase of Property.

Save as respects property purchased or acquired or to be purchased or acquired under Contracts being Item Nos. 7 to 12 referred to above, the Company has purchased or acquired or proposes to purchase or acquire which is to be paid for out of the proceeds of the present issue or the purchase of acquisition of which has not been completed at the date of the issue of this Prospectus, is property of the Company.

(a) the contract for the purchase or acquisition whereof has been entered into in the ordinary course of the business of the Company, the company has not been in contemplation of this issue or this issue in consequence of the contract; or

(b) as respects which the amount of the purchase money is not material.

The property purchased or acquired or to be purchased or acquired under Contract Nos. 7 to 12 aforesaid has vested or will vest absolutely in the Company and there have been no other transactions relating to such property within the two years preceding the date of this Prospectus.

Miscellaneous.

The fixed assets of the Company were revalued in the year 1946 and as a result of such revaluation the value of the said assets was increased from Rs. 20,47,417/- to Rs. 1,26,01,828/- of which Rs. 85,48,499/- being credited to Capital Reserve Account. On 29th August, 1947, the Company issued 11,75,500 fully paid Bonus Shares at Rs. 10/- each by capitalising the sum of Rs. 1,17,55,000/- standing to the credit of Capital Reserve Account which was made up of the aforementioned amount of appreciation of value of fixed assets together with a further sum of Rs. 22,00,591/- transferred from General Reserve Account during the year 1947.

Directors.

The Articles of Association of the Company provide that:—

The number of Directors shall not be less than three nor (unless otherwise determined by the Company in General Meeting) more than nine. The Consultant (see reference below) has the right to appoint up to one-third of the total number of Directors and to nominate the Chairman. A Director does not require any share qualification. Each of the Directors of the Company shall (unless otherwise determined by the Company in General Meeting) be paid out of the funds of the Company as remuneration for his services as a Director the sum of Rs. 200/- in respect of each Meeting of the Directors which he attends. If any Director being willing shall be called upon to perform extra services or to make any special exertions in or residing away from his usual place of business or residence for any of the purposes of the Company, or in giving special attention to the business of the Company as a member of a Committee of Directors, the Company may remunerate the Director so doing either by a fixed sum or by a percentage of profits or otherwise as may be determined by the Directors and such remuneration may be either in addition to or in substitution for his share in the remuneration from time to time provided for the Directors. The Articles provide that the business of the Company shall be managed by the Directors who may exercise all such powers of the Company as are not by law or by the Articles required to be exercised by the Company in General Meeting. The powers of the Directors are, however, subject to any regulations which may be made by the Company in General Meeting not being inconsistent with the Articles or the provisions of any law.

Interest of Directors.

Mr. H. M. L. Williams is the Managing Director of the Company and receives remuneration for his services as such.

Mr. J. F. Healy, Mr. W. E. Murphy and Mr. W. Morrice are salaried employees of the Company and in addition together share a commission totalling 1% of the net profits of the Company.

Mr. R. Catlow, Mr. H. M. L. Williams and Mr. J. F. Healy are shareholders (each holding less than one-tenth of the issued capital) of the Company and of NETTELFOLDS, LTD., the principal shareholders of this Company. Mr. H. M. L. Williams and Mr. J. F. Healy are also Directors of NETTELFOLDS OF INDIA PRIVATE LTD., the wholly owned Subsidiary referred to above. Save as above no Director has any financial or other interest in any of the property acquired by the Company within the two years preceding the date hereof or proposed to be acquired by it.

Indemnity.

The Articles provide that every Director, Manager or Officer of the Company or any person employed by the Company as Auditor shall be indemnified out of the funds of the Company against all liability incurred by him as such Director, Manager, Officer or Auditor in defending any proceedings, whether civil or criminal, in which judgment is given in his favour, or in which he is acquitted or in connection with any application in which relief is granted to him by the Court.

Management.

The Management of the Company is vested in and exercised by the Directors. The Company has no Managing Agents.

Consultant.

Guest, Keen & Nettlefolds, Ltd., a Company incorporated in England was appointed the Technical Consultant of the Company by virtue of an Agreement dated the 17th September, 1948, effective from the 1st January, 1949, and terminating on the 31st December, 1967, in accordance with the terms of the said Agreement, inter alia, the Consultant undertook to furnish the Company with technical assistance in regard to manufacture and details of plant processes and methods for the production of engineering products (other than wood screws and their kindred products) which was the subject of separate Agreements with the Company and with the Company's wholly owned subsidiary. Furthermore, the Consultant undertook to leave to the Company technical instructors and advisers and to advise the Company of any patent invention development process or manufacturing improvement and the results of any research carried out by the Consultant relevant to the manufacture of the Company from time to time. In addition the Consultant agreed to afford overseas technical training for the Company's employees. The overseas training has extended from training Indian Officers at the highest level at an Administrative Staff College in England to courses for Works Junior Supervisory Staff on specialised machines at the various works of Guest, Keen & Nettlefolds, Ltd. in the United Kingdom. All these facilities will still be fully available to the Company and the Company relies on them for its continued technical

development. For the services to be rendered pursuant to the said Agreement which have undoubtedly been of great benefit in the past and which the Directors consider essential for the future prosperity and expeditious development of the Company, the Consultant receives a remuneration of twelve and a half per cent of the profits of the Company with an assured minimum of Rs. 80,000 per annum and a fixed royalty of Rs. 2,000 per annum. The Consultant in accordance with its rights under the Agreement is entitled to appoint and has appointed two Directors. The Directors so appointed are ex-officio Directors and are not subject to retirement by rotation. By an Agreement dated the 30th May, 1950 between the same parties as are parties to the said Agreement dated the 17th September, 1948, the Company has agreed to accept performance of the obligations contained in the last mentioned Agreement, by G. K. N. Group Services Ltd., a wholly owned subsidiary of Guest, Keen & Nettlefolds, Ltd.

Borrowing Powers.

The Articles provide that the Directors may from time to time raise or borrow any sum or sums of money for the purposes of the Company and may secure the repayment of any sum or sums of money so borrowed in such manner and upon such terms and conditions in all respects as they think fit. The Directors' borrowing powers are now limited by Section 233 (1) (d) of the Companies Act, 1956.

Voting Powers.

The Articles provide that, subject to any special rights or restrictions affecting any particular class of shares, on a show of hands every member present in person or by proxy shall have one vote, and on a poll every member present in person or by proxy shall have one vote for every Ordinary Share held by him. There are no special rights or restrictions attaching to the present Ordinary Share Capital of the Company.

Restrictions on the right to transfer and vote.
The Articles provide that the Directors may decline to register any transfer of shares upon which the Company has a lien, and in the case of shares not fully paid up may refuse to register a transfer to a transferee of whom they do not approve. No member shall be entitled to be present or to vote on any question either personally or by proxy or as proxy for another member at any General Meeting or upon a poll or be reckoned in a quorum whilst any call or other sum shall be due and payable to the Company in respect of any of the shares of such member.

Auditors' Consent.

Messrs. Price Waterhouse Peat & Co., have given and have not before delivery of this Prospectus for registration withdrawn their written consent to the issue of this Prospectus with the inclusion therein of their Report, set out above, in the form and context in which it is included.

Main Objects.

The Main Objects of the Company, as set out in sub-clauses (a), (b) and (c) of Clause 3 of its Memorandum of Association are as follows:—

- To acquire and take over as a going concern the undertaking and certain assets of Henry Williams (India), Limited, and with a view thereto to enter into and carry out effect, with or without modifications or alterations as may be agreed upon, whether before or after the execution thereof, an agreement already prepared and expressed to be made between Henry Williams (India), Limited and the Liquidators thereof of the one part and the Company of the other part, a draft whereof has been subscribed with a view to identification by A. H. Bishop, a Director of the Company.
- To carry on the business of iron-founders, mechanical and railway engineers, and manufacturers of railway appliances, agricultural implements and other machinery, toolmakers, brass-founders, electrical and other workers, mill-wrights, colliery owners, ship owners and ship-builders, machinists, iron and steel converters, smiths, wood-workers, builders, painters, metallurgists, electrical engineers, water supply engineers, gas-makers, farmers, printers, carriers, and merchants in all branches of manufacture, repair, convert, alter, let on hire, and deal in machinery implements, rolling-stock, and hardware of all kinds, and to carry on any business (manufacturing or otherwise) which may seem to the Company capable of being conveniently carried on in connection with the above, or otherwise calculated directly or indirectly, to enhance the value of any of the Company's property and rights for the time being.
- To carry on any business relating to the winning and working of coal and other minerals, the production and working of metals, and the production and manufacture of the Company or any other materials which may be usefully or conveniently combined with the engineering or manufacturing business of the Company, or any contracts undertaken by the Company, and either for the purpose only of such contracts or as an independent business.

Documents.

Copies of the Memorandum and Articles of Association of the Company, the Consent Order of the Controller of Capital Issues, the Licences issued by the Controller of Government referred to above, the Contracts referred to above as being material contracts and/or copies thereof, the above-mentioned Auditors' Report and copies of the balance sheets and profit and loss accounts upon which the Report is based can be inspected at any time during the usual business hours at the Registered Office of the Company for a period of fourteen days from the date of publication of this Prospectus or at any other subscription list closes whichever is earlier.

Copies of the material contracts specified above or memoranda giving full particulars thereof and the consent of Messrs. Price Waterhouse Peat & Co. were attached to the copy of this Prospectus delivered to the Registrar of Companies West Bengal, for registration.

APPLICATION AND ALLOTMENT.

Applications for shares which must be for 50 shares, or multiples of 50 shares (10 shares in the case of applications from employees) must be made on the accompanying official form and will be refused if not so made. The application form together with remittance for the full amount payable on application must be sent to the Brokers or a Branch of the National Bank of India Ltd., in India, the remittance being made by cheque or draft which, if it is desired to avoid payment of Bank charges must be drawn either upon a branch of the National Bank of India Ltd., in India, to which the application and remittance by cheque or draft are being sent, or upon a Bank situated in a town in which there is a branch of the National Bank of India Ltd. If drawn upon a Bank elsewhere the appropriate bank charges must be included in the remittance otherwise the application will be refused.

Cheques or Drafts should be made payable to the "National Bank of India Ltd., Account Guest, Keen, Williams, Ltd., New Issue", and should, for the applicants' protection, be crossed "A/c Payee only". A separate cheque or draft must accompany each application form.

GUEST, KEEN, WILLIAMS, LIMITED.—Cont'd.

of any balance of the application money received will be refunded to the applicant, in which event Bank's commission, if any, will be payable by the applicant.

Share Certificates will be available for issue in exchange for Letters of Allotment on and after 15th March, 1957, and each applicant who is allotted more than 100 shares will receive Share Certificates in lots of 100 shares, and such smaller denominations as may be required to complete the total number of shares allotted except when the applicants request Share Certificates in larger denominations.

BROKERAGE.

Brokerage at the rate of 4 annas per Ordinary Share will be paid by the Company on allotments made in respect of applications bearing the stamp of a recognised stock broker.

Copies of this Prospectus and forms of application may be obtained from the Brokers at the addresses given above and from the Bankers named above, at any of their branches in India.

STRICTER REGULATION OF CREDIT URGED**OFFICIAL APPEAL TO U.K. BANKERS**

BANKERS in other countries may see significance in the recent request to British bankers to apply more resolutely the official policy of restraining credit. The simple implication of the request, that Mr. Harold Macmillan, the Chancellor of the Exchequer, was not going to abandon his restraints merely because they had become unpopular, was immediately perceived. The Chancellor made sure that it should be so, by the peculiar solemnity of the occasion at the Treasury, and by including representatives of overseas banks in the gathering. But there are other implications, possibly of more permanent interest, as they relate to the technique of monetary control itself rather than to the policies which guide the use of this control. In banking circles in Britain, the policy is approved, but the method of applying it is criticised. The official communiqué released after the meeting (itself an unusual procedure) emphasised that monetary action could be effective only "if the Government and the banking organisations worked in close co-operation, and asserted that the Government was doing its share of the task of deflation. The Government has, indeed, as the Chancellor reminded the bankers, done much—reduced expenditure (notably subsidies), cut capital plans, removed investment allowances, raised direct taxation of profits and indirect taxation of many goods, restricted hire-purchase, transferred local authorities' borrowing from the Exchequer to the capital market, promoted saving by the public, and planned forced saving through a substantial budgetary surplus. Yet the bankers are still

not convinced that the Government has done all that is necessary or all that it could have done.

The one glaring omission from the list of the Government's achievements is effective control of credit. The Chancellor has in effect said to the bankers: "We have undertaken all these other measures—we have played our part; now you take care of credit." And the bankers will, of course, loyally abide by the directive to continue, and if necessary reinforce, the restriction of advances to their customers. But they will not be convinced that restriction of credit is a proper part of their function; they will still feel, as they have felt for a year past, that the Government is shirking its responsibility. Of the various explanations of the Chancellor's unorthodox procedure (these directives are usually issued through the medium of the Bank of England) the most convincing is that an appreciable increase in the supply of Treasury bills in the next few months is foreseen. The banking system will tend to become excessively liquid, and the monetary pressure on the banks to restrict their lending, already weak, will become weaker. To counteract this tendency, the Chancellor has suggested to the banks that it will be advisable to invest more of their resources in Government stocks, which are not liquid assets in the bankers' sense. It is interesting to compare the request of a year previously, that the banks should not sell Government stocks to replenish their liquid resources as a basis for lending. The authorities "advise" the banks on their investing as well as on their lending.

This suggestion that it is now opportune to invest in Government stocks has another significance. The reason why the banks have been until recently reluctant to take advantage of the good yields on such stocks is the possibility that bank rate will be raised again and that Government stocks will therefore depreciate further. To convince them that they can safely increase their investment portfolios the authorities must convince them that no further rise in Bank rate is envisaged. The Chancellor has, in fact, made it known that, unless a new crisis develops, Bank rate will remain at 5½ percent until conditions favour a reduction. He has thus discarded a potentially useful weapon. The details of the plan can now be seen more clearly. The Chancellor is restricting spending (both public and private), promoting saving (both public and private), and maintaining a relatively high rate of interest to support these actions. But his policy will be frustrated if credit is plentiful; and the expansion of the floating debt which must, at least temporarily, result from the Treasury's direct financing of the nationalised industries' requirements, and from the repayment of the unconverted portion of maturing War Bonds in mid-August, will broaden the credit base. So the banks are asked to ignore the abundance of money and to act as though money were tight.

Open Market Operations

The authorities recognise that an easy money market cannot be controlled by "open market" operations any more effectively than a boat can be steered with slack rope at the helm. The bankers argue that this inefficiency can be corrected only by tightening the rope. They have not the slightest doubt that if the Government and the central bank so wished they could exercise such control of the banks' liquid assets that no exhortations and directives would be needed; normal banking principles would prevent the banks from lending more than was desirable. Moreover, the whole monetary system could be made so tight that evasion of the banks' restraints by borrowing from other sources would become impossible. It seemed a few months ago that Mr. Macmillan was aware that the Government, and only the Government, should be responsible for contracting credit, and that he was forming plans to reduce the floating debt. By raising taxes and curtailing expenditure he will, indeed, somewhat reduce the debt, provided that the Treasury bills issued to finance the new commitment to the nationalised industries are quickly funded into bonds. But what is really needed is a much larger funding operation, including a substantial part of the floating debt that has accumulated over the years. In the present state of the bond market such an operation would, indeed, be difficult. Yet there is a lingering suspicion that the main impediment to it is not the technical difficulty but the Chancellor's reluctance to use the one deflationary instrument that Britain has never used in this generation, severe contraction of credit. Perhaps he believes that inflation is curing itself; and perhaps he is right. But the banking community believes that the illness is only dormant, and that it will break out in a new crisis within a year or two unless it is eradicated soon.

I.S.I. STANDARD FOR ACTIVATED CARBON

The Indian Standards Institution has published an Indian standard (IS: 877-1956) on methods of sampling and test for activated carbon used for decolourising vegetable oils and sugar solutions. This standard prescribes the methods of sampling and tests for determining moisture, ash, bulk density, matter soluble in water, and dilute hydrochloric acid, titrable acidity or alkalinity and pH value of the aqueous extract. Screen analysis and methods of determination of filtrability and oil retention and decolourising power have also been prescribed. It is hoped that the methods prescribed in this standard will enable the producers as well as consumers to assess the quality of the material and will also serve as an incentive to the indigenous industry. Copies of this standard, which has been prepared by I.S.I.'s Heavy Chemicals (organic) Sectional Committee, are now available for sale at the I.S.I. offices in Delhi, Bombay and Calcutta.

Finance in India and Abroad**THE CALCUTTA MONEY MARKET****INTERBANK CONDITIONS TIGHT**

Wednesday, 31st October.

BUSINESS in the money market has reached a very low ebb. The depth of the slack season has now been reached, and it is expected that a general improvement may take place from next week. Demand conditions are very slack, but still considerably higher than at this time last year. The expectations of an early improvement are based on the fact that the sugar crushing season is due to start in a few days' time. The cotton crop is now due, and accommodation will soon be required on account of the kharif harvest. Money is extremely tight in the Calcutta interbank market. Banks have paid up to 4 percent for call loans, and it is reported they are willing to go even higher. This was the highest interbank rate quoted this year.

There have not been many bills in the market this week, but a few tea documents have been in evidence. Gunny bills have been scarce. Remittance has been fair. Sterling weakened considerably on the first news of a deterioration in the Middle East political situation, but has since shown signs of recovery.

Silver was quiet on profit-taking in view of the Diwali festival. The price dropped from the previous week's level of Rs. 173-14 to 170-15, quoted today. The rate for the ready metal was Rs. 171-8. The London price remained unchanged at 78½d. The price of foreign silver in New York was the same at 90½ cents.

Gold was firm and the price advanced from Rs. 104 to Rs. 104-4. The sovereign at Rs. 68-4 showed a gain of 4 annas.

During the week ended 26th October, Government of India Treasury Bills for Rs. 36,12,00,000 were sold in favour of the Reserve Bank.

A decline of Rs. 10.65 crores to Rs. 1,418.89 crores in active notes was the outstanding feature of the return of the Reserve Bank of India for the week ended 26th October, 1956, while the total note issue was Rs. 1,40 crores higher at Rs. 1,451.95 crores. The currency expansion was adjusted by reducing foreign securities by Rs. 29.81 crores to Rs. 492.02 crores and increasing rupee securities by an equivalent amount to Rs. 720.69 crores. This was done probably by a transfer to the banking department, in which balances held abroad increased by Rs. 20.64 crores to Rs. 90.23 crores. Deposits of the Government of India and other Government accounts improved by Rs. 1.24 crores and Rs. 21.99 crores to Rs. 54.15 crores and Rs. 27.81 crores respectively. Balances of commercial banks at Rs. 51.39 crores showed a rise of Rs. 1.06 crores. Other loans and advances declined from Rs. 86.17 crores to Rs. 83.35 crores, of which advances to scheduled banks against usance bills totalled Rs. 40.29 crores against Rs. 41.29 crores. These advances amounted to Rs. 318.20 crores since 1st January, 1956. Ways and means advances stood at Rs. 3.88 crores (Rs. 4.04 crores).

The return of the State Bank of India for the week ended 19th October, 1956, shows a rise of Rs. 4.28 crores in total deposits to Rs. 231.94 crores. Investments in Government securities and other authorised investments are down by Rs. 8 lakhs and Rs. 10 lakhs to Rs. 96.35 crores and Rs. 11.29 crores, respectively. Advances, including loans, cash credits and overdrafts, and bills discounted and purchased, have decreased by Rs. 1.48 crores to Rs. 128.70 crores. Cash and balances are, in consequence, shown at Rs. 15.81 crores or Rs. 1.35 crores higher.

The statement of the position of scheduled banks for the week ended 19th October, 1956, discloses Demand and Time liabilities at Rs. 643.41 crores (Rs. 10.86 crores on account of borrowings from banks) and Rs. 454.17 crores (Rs. 1.89 crores), compared with Rs. 632.35 crores (Rs. 10.44 crores) and Rs. 453.91 crores (Rs. 2.26 crores), respectively, in the previous week. Cash and balances with the Reserve Bank have increased by Rs. 3.06 crores and Rs. 1.36 crores to Rs. 39.46 crores and Rs. 49.92 crores, respectively. There is a drop of Rs. 36 lakhs in investments to Rs. 372.74 crores. Advances and bills discounted at Rs. 758.10 crores show a decrease of Rs. 1.40 crores. The ratios to total liabilities of cash and balances and of advances and discounts, are, in consequence, shown at 8.1 percent and 69.1 percent, against 7.8 percent and 69.9 percent.

According to a recent notification issued in the Gazette of India, the Government of India has extended the legal tender character of all currency notes of the Government of India and bank notes other than those bearing the Asoka pillar emblem in the design and in the water-mark for a further period of six months with effect from 28th October, 1956. This extension has been considered necessary to avoid inconvenience to those who may be still holding such notes.

In every country and in all ages, men have associated light with knowledge and power, prosperity and progress.

In India today, progress is reflected in lights that shine in more and more homes in villages and cities, as the power of fast-flowing rivers is harnessed in an increasing measure, and the energy which lies buried in the earth, in coal pits and oil pools, is unlocked.

A constant supply of our petroleum products to major projects is a powerful factor in speeding up the nation's progress.

LABOUR PARTICIPATION IN MANAGEMENT

SOME EXAMPLES FROM ABROAD

(FROM OUR NEW DELHI CORRESPONDENT)

A MISSION consisting of senior officers of the Government of India and representatives of workers has gone abroad to study workers' participation in management. The Labour Secretary, Mr. Vishnu Sahai, is leading the team, which is to visit France, Belgium, the U.K., Western Germany, Sweden and Yugoslavia. The following is a brief account of the schemes which are in operation in Yugoslavia, Western Germany and France.

The Yugoslav Federal Assembly passed in 1950 what is called the Basic Law on the management of State economic enterprises and higher economic association by workers' collectives. The law proposes the administration of the undertaking or the association of undertakings through two elected bodies of workers, namely, the Workers' Council and the Management Committee. The Workers' Council is elected by direct secret ballot by all the workers and officials of an undertaking. The strength of the Council varies from 15 to 120 members, depending upon the size and structure of the undertaking, and holds office for one year. The Council meets at least once every six weeks. It deals with all important and policy matters, such as approving the plans and the balance sheet of the undertaking, taking decisions on the administration of the undertaking, distributing the disposable part of the net income and wage fund surplus, and issuing the rules. The Workers' Council elects the Management Committee, and is also empowered to dismiss managers. The entire Workers' Council or any of its members may be dismissed by the work people before the expiry of their term of office for inefficient performance of duties.

The Management Committee is the executive organ of the Workers' Council. It is elected by the Council from among its members and consists of three to 11 persons (including the manager), depending upon the size of the undertaking. At least three-fourths of its members must be workers employed directly on production or in the basic economic activity of the undertaking. A new Management Committee should not contain more than one-third of the members of the previous Committee and nobody can be a member for more than two consecutive terms. The Management Committee is in charge of the day-to-day administration and is responsible for various matters such as preparing basic draft plans and issuing monthly operational plans, looking after internal organisation and job classification, taking steps to increase production and to improve the efficiency and skill of workers, etcetera. The members are not paid for their work on the Committee, but are entitled to compensation equivalent to their wages lost in the performance of the Committee's duties. The Basic Law of 1950 provides for the establishment of a Workers' Council and a Management Committee for an association of undertakings, also elected by the personnel. But these provisions have never been applied as it is feared that higher economic associations might become monopolistic combines. The new changes have, it appears, produced beneficial results, such as appreciable reductions in the labour force in individual undertakings, coupled with an increase in overall production and savings in raw materials, fuels, etcetera. The system of management by workers is still in the process of evolution. The trade unions in Yugoslavia have, on their part, been providing training to workers in the art of business management, which is essential for the success of the system.

Co-determination in W. Germany

In West Germany, labour participation in management, or "co-determination", is governed by two legislative enactments: (i) the Co-determination Law, 1951, and (ii) the Works Constitution Act, 1952. The former is applicable only to large undertakings, that is, those normally employing more than 1,000 persons, and operating as joint-stock companies. It provides for the establishment of two organs, namely, the Board of Supervision and the Managing Board for administration of undertakings covered by it. The former sets and reviews the policies which are executed by the latter. It consists of 11 members—ten representing the workers and shareholders, or five each, and the eleventh being an independent member chosen by the representatives of both workers and shareholders. The five workers' nominees must have the approval of the trade unions concerned and they have to be accepted by the shareholders without question. The Managing Board, which runs the undertaking, consists of three directors, of which one is a nominee of the trade unions concerned. The Works Constitution Act, 1952, applies to all undertakings except those covered by the 1951 Act. It provides, among other things, for the establishment of Works Councils and Economic Committees and for collaboration between employees and management. The clause relating to co-management or employee participation provides that one-third of the members of the Board of Supervision must be employees' representatives. The workers' representatives elected under this Act require no union endorsement. Adequate data is not available to judge how far the co-determination system has been successful. However, from an on-the-spot investigation conducted in 1953 into the working of the co-determination system in two steel companies employing about 33,000 workers, it was noticed that the system could function satisfactorily, at least in periods of good business activity.

Important among the conclusions that emerged from this investigation were: (i) the prevalence of a general atmosphere of mutual trust and collaboration between workers and management, seldom found to the same degree in other industries; (ii) decisions by the Managing Board were made by a consensus of opinion instead of a majority vote, indicating a spirit of true partnership; (iii) the position of the Labour Director was not an incongruous one and he commanded a position of influence even though he was in a minority; and (iv) there was evidence of psychological and economic gains to the workers. Among the economic gains to workers were increased wages, better and more welfare benefits and greater job security, compared with the undertakings in which the system of co-determination did not prevail.

French Experiment

In France, labour participation in management is more highly developed and organised in the public sector than in the private sector. In the latter, there is no direct participation in management, but only a system of co-operation. The term public sector covers a wide range of nationalised industries and services, such as mines, banks, insurance, electricity and gas, posts and telegraphs and several public undertakings such as railways and other means of transport. In public undertakings of the latter type, the Government has only a share in the capital, while the nationalised industries are owned and managed exclusively by the Government. There is no uniformity in the organisation and management of undertakings in the public sector other than the nationalised industries in the management of which certain broad principles are observed. One of these is the workers' right to participate in the management of industries as well as undertakings.

Generally speaking, the administration of nationalised industries is a three-tier system—a general administrative body at the head of each industry, a board of directors at the head of each undertaking and within the undertaking itself, an arrangement for representation of the staff. The strength of workers' representatives in the administrative bodies is generally about one-third of the total number of members. The position, however, varies from industry to industry. There is no uniform method of selecting workers' representatives on the administrative bodies. It is governed by State decrees or ordinances relating to the particular industry. In the bodies at the industry level, workers' representatives are generally nominated by the most representative organisations on the basis of their strength in the industry. At the unit level, representatives are chosen from among the staff of the undertaking itself. It is difficult to give any idea of the progress achieved by the introduction of the present system of labour management co-operation because industry in France was generally subject to various controls, such as of prices, wages, credits, etcetera. However, since nationalisation, notable increases have occurred in the total output of the coal, electricity and gas industries, and in labour productivity.

SCHOLARSHIPS FOR TRAINING IN BANKING IN AUSTRIA

The Austrian Banks (Messrs Creditanstalt-Bankverein, Wien I, Schottengasse 6, and Messrs Oesterreichische Laenderbank AG, Wien I, Am Hof 2) have offered one scholarship each for practical training of Indian nationals in banking in Austria for a period of one year. Candidates should possess a first class degree in Commerce or Economics or equivalent qualifications with Banking and/or Currency as one of the subjects or a second class degree in Commerce or Economics with at least four years' practical experience in a scheduled bank. They should have a working knowledge of German and should be between 18 and 25 years of age on 30th November, 1956. The selected candidates will get about Rs. 350 a month for their maintenance and other incidental expenditure in Austria. Passage expenses both ways will have to be borne by the candidates themselves. Application forms and other relevant information can be obtained from the Ministry of Education, Scholarships Division (S-9), Government of India, New Delhi. The last date for receiving applications in the prescribed forms is 30th November, 1956.

TOBACCO EXPORT INCREASES WHILE ACREAGE AND OUTPUT FALL

The export of unmanufactured tobacco increased during 1954-55. During the year, 72.8 million lbs. were exported against 69.0 million lbs. in 1953-54. Indian's foreign exchange earnings from this export during 1954-55 were nearly Rs. 10 crores. Domestic consumption in the year showed a significant increase over that of the previous year; during 1954-55, 565 million lbs. were cleared for home consumption, against 529 million lbs. in 1953-54. The total tobacco cultivation in India, however, showed a small decline during 1954-55. Total acreage under tobacco and its production in the country during the year were 860,000 acres and 2,48,000 tons as against 910,000 acres and 268,000 tons for 1953-54. The fall in area sown to the crop and in the output was attributed to unfavourable climatic factors. This information is contained in a recent publication entitled Tobacco in India, 1954-55, brought out by the Directorate of Economics and Statistics, Union Ministry of Agriculture. This publication also gives a detailed analysis of the position of the tobacco economy during 1954-55 along with the relevant information on cultivation and trade in principal producing countries of the world.

Stocks and Shares

SPECULATIVES IMPROVE ON WAR RUMOURS

SHARP RISE IN IRONS AND COPPERS

Wednesday Evening.

THE dull conditions which persisted throughout the holiday period and threatened to continue indefinitely, have suddenly been dispelled by the dramatic turn of political events in the Middle East. Reacting in the usual bullish fashion to war rumours, operators have today lifted Indian Irons from round about Rs. 34 to Rs. 34-11. Other speculatives have tended to improve in sympathy and Indian Coppers have benefited from the increase in the London price of the metal; the share is now quoted at Rs. 4-8. Among other speculatives, Burrakur are better at Rs. 16-12 on interested support and Texmaco have improved to Rs. 23-2. There is a general feeling among operators, which is supporting the bullish trend, that the lifeless character is beginning to show concern at the lifeless character of the country's stock markets and intends to do something to improve matters. It is rumoured that the Finance Minister, Mr. Krishnamachari, is coming to Calcutta soon to discuss the situation with the city's business men.

Investment counters have improved in isolated cases, but the general undertone in the various sections remains weak. Among engineering shares, Jessops and Richardson and Cruddas have featured. Government securities remain comparatively quiet.

The behaviour of the market will no doubt be governed during the next few days by developments in the international sphere, but it would be surprising if operators remained permanently bullish about a situation which contains such threats for the Indian economy.

Details of the week's trading follow.

There has been a slightly better tendency in the Government security market and selling pressure has abated considerably. Scattered demand was seen in short and medium-dated stocks, while sellers predominated in long-dated loans. Towards the close, the 3% Conversion Loan recovered to Rs. 74-4 in restricted trading. Non-terminals paper was quoted at Rs. 74-4. Among short-dated loans, there was scattered enquiry in 3% 1957 loan at Rs. 99-12 and 3% 1958 met with demand at Rs. 99-8. In the medium-dated section, enquiries were found in 3% 1959-61 loan at Rs. 97-15; 3% 1963-65 were done at Rs. 94-5; 2½% 1961 made Rs. 93-7; and 2½% 1962 were available at Rs. 93-15. In National India loans, 3½% 1961 had good demand at Rs. 99-4 and 3½% 1965 was steady at Rs. 98-8. Long-dated stocks were weak, with 3% 1966-68 quoting Rs. 92-8 and 3% 1970-75 freely available at Rs. 88-13. State loans continued weak and offerings were larger than in the previous week. The 4% 1968 U.P. loan was quoted at Rs. 98-11, 4% 1968 Madras loan was offered for Rs. 98-12 and 4% 1968 West Bengal loan was available at Rs. 99-13. There were enquiries for 4% 1968 Saurashtra loan and the price improved to Rs. 99-9.

Business in preference shares was restricted. Sellers predominated in jutes, and miscellaneous issues were selectively bought. Among jutes, Auckland First were done at Rs. 80 and Auckland Second made Rs. 64-8. Anglo-India were crossed at Rs. 107-12 and Clive 6% came to hand at Rs. 86-8. Naitahi Second Preference declined to Rs. 73 and National were crossed at Rs. 112. Northbrook were in demand at Rs. 79-8. In the miscellaneous group, Allahabad Bank were transacted at Rs. 114, Carew at Rs. 102 and Shaw Wallace were crossed at Rs. 79. Business was done in Dalmia Cement First Preference at Rs. 100-8. Indo-Burmah Petroleum and Indian Iron and Steel were transacted at Rs. 105 each.

In the engineering group, Indian Irons rallied to Rs. 34-9 on short-covering. Jessop were done at Rs. 37-12 and Textile Machinery at Rs. 23-2.

In the coal section, Burrakur came to hand at Rs. 16-12 and Central India at Rs. 7-9. Western Bengal were done at Rs. 6-7 and Bharat Colliery at Rs. 7-8.

Among jutes, National were transacted at Rs. 24-12 and Dalhousie at Rs. 95. Megna were taken at Rs. 89-8 and Kelvin at Rs. 210.

Business in the miscellaneous group was limited. Among textiles, Elgin improved to Rs. 29-12 and Kesoram were available at Rs. 17. New Victoria made Rs. 2-10. Among cement companies, Asoka Cement were steady at Rs. 12-9 and Sone Valley under; pig iron, production 290,900 tons, despatches 19,100 tons; semis for sale, production 52,800 tons, despatches 52,200 tons; finished steel for sale, production 142,500 tons; despatches 138,900 tons. The net value of the materials despatched, after deducting from the invoices the rebate payable to the Government, freight on outward traffic, commissions, discounts and rebates paid to other parties, amounted approximately to Rs. 860 lakhs. The figure of net realisations includes approximately Rs. 50 a ton to be credited, after taxes, to a separate development fund earmarked specifically for capital expenditure on the expansion programme of the company under an agreement with the Government.

Turnover was restricted in the tea section and selective buying was observed. Baghmari came to hand at Rs. 23-6 and Brooke Bond at Rs. 21-10. East India were done at Rs. 26-8 and Hantapara were maintained at Rs. 201. Tezpur were wanted at Rs. 23-11 and Patrakola were in demand at Rs. 230.

The profit of MACNELL AND BARRY, LTD. amounted to Rs. 52.03 lakhs for the year ended last March, against Rs. 37.39 lakhs. Bringing in Rs. 6,21,756 and other miscellaneous receipts, there is a balance of Rs. 58,28,096. The ordinary dividend has been increased from 7½ percent to 11 percent. The harbour boating replacement reserve is allocated Rs. 2.86 lakhs (Rs. 2.21 lakhs), and general reserve Rs. 8 lakhs (Rs. 2 lakhs), leaving a carry-forward of Rs. 6,31,124. The directors say that towards the end of the year under review the company acquired the remainder of the issued share capital of Kilburn and Co. Ltd, which is now a wholly-owned subsidiary.

There is a net profit of Rs. 93,312 for the HULIBARI TEA ASSOCIATION LTD. for the year ended last December, compared with Rs. 12,81 lakhs. The dividend has been reduced from 80 percent to 12½ percent. The carry-forward is Rs. 99,369, against Rs. 1,07,181 brought in. The crop increased from 16,07,368 lbs to 17,67,246 lbs, while the average sale price declined from 42.42 annas to 26.95 annas a lb. Estimates for 1956 have been made for a crop of 21,500 mounds at a cost of Rs. 23.73 lakhs.

The BROOKE BOND ESTATES INDIA LTD. has earned a profit of Rs. 13.64 lakhs for the year ended last December, against Rs. 46.65 lakhs. The dividend has been reduced from 47½ percent to 12½ percent. Taxation absorbs Rs. 6.20 lakhs (Rs. 19½ lakhs), leaving a carry-forward of Rs. 5,15,711, against Rs. 9,32,859 brought in. The crop rose from 32,58,393 lbs to 36,07,458 lbs, but the average sale price declined from Rs. 2-14½ to Rs. 1-15 a lb.

After providing Rs. 6 lakhs for depreciation and Rs. 23 lakhs for taxation, and transferring Rs. 10 lakhs (Rs. 8.38 lakhs) to dividend equalisation reserve and Rs. 10 lakhs (Rs. 7 lakhs) to development reserve, there is a balance of Rs. 14,44,024, including Rs. 2,29,489 brought in, for the ORIENT PAPER MILLS LTD. for the half-year ended last March. The ordinary dividend has been maintained at 10 annas a share, leaving a carry-forward of Rs. 2,12,435. The directors say that a licence has been received from the Government of India for establishing a paper mill in Vindhya Pradesh having a rated capacity of 100 tons a day. The necessary leases of forests in Vindhya Pradesh have been secured and signed to ensure a sustained supply of raw materials for the new project. The paper mill is to be established near Amlai railway station on the Bilaspur-Katni line. It is proposed to raise further capital of Rs. 50 lakhs by the issue of preference shares in order to meet the requirements of funds to implement the modernisation and expansion programme of the company.

The INDIA MACHINERY COMPANY has made a gross profit of Rs. 2.13 lakhs for the year ended June, 1955. Providing Rs. 40,000 for taxation, bringing in Rs. 20,711 and making other adjustments, a balance of Rs. 17,337 is carried forward.

The net profit of the BHARAT JUTE MILLS amounted to Rs. 50,949 for the year ended March, 1955. Bringing in Rs. 11,618, there is a balance of Rs. 62,567. Taxation reserve absorbs Rs. 25,000. Reserve fund is allocated Rs. 25,000, leaving a carry-forward of Rs. 12,567.

Messrs. Tata Industries Private Limited, managing agents for the TATA IRON AND STEEL CO. LTD., report the results of the working of the company for the quarter ended 30th June, 1956 as under: pig iron, production 290,900 tons, despatches 19,100 tons; semis for sale, production 52,800 tons, despatches 52,200 tons; finished steel for sale, production 142,500 tons; despatches 138,900 tons. The net value of the materials despatched, after deducting from the invoices the rebate payable to the Government, freight on outward traffic, commissions, discounts and rebates paid to other parties, amounted approximately to Rs. 860 lakhs. The figure of net realisations includes approximately Rs. 50 a ton to be credited, after taxes, to a separate development fund earmarked specifically for capital expenditure on the expansion programme of the company under an agreement with the Government.

PRICES HIGHER IN BOMBAY ECONOMIC POLICY DOUBTS TROUBLE OPERATORS

Tuesday Evening.

AFTER remaining quiet throughout the past week, sentiment on the Bombay Stock Exchange improved substantially towards the close, mainly due to short-covering. During the early part of the period under review, operators were scared by rumours of increased bank rate and fears of fresh taxation. There was a general inclination to wait before extending commitments as the forthcoming meeting of the A.I.C.C. is expected to formulate the Congress economic policy which will be placed before the country on the eve of the general election. Slow off-take in the piecegoods market was regarded as an additional damper. Towards the close, however, sentiment improved as shorts were anxious to cover their position in view of fresh troubles in Egypt.

Tata Steels recovered to Rs. 192.4, as did Indian Iron to Rs. 34.9 on better advices from Lyons Range. Alcock Ashdown were lowered to Rs. 331.4 and Tata Locomotive lost at Rs. 169.8. Premier Construction were slightly steady at Rs. 108.8 and Larsen and Toubro were available at Rs. 18.8.

Widespread losses dotted the textile group, though closing levels were slightly higher. Bombay Dyeing recovered to Rs. 626.4, as did Century to Rs.

549.8. Simplex were absorbed at Rs. 201.8 and Swadeshi were taken at Rs. 252.8. India United Ordinary were steady at Rs. 12.5 on the publication of a dividend. Apollo lost at Rs. 2.13 and Tata Mills were transacted at Rs. 55.8. Selected buying took place in Kohinoor around Rs. 346.

Miscellaneous shares were easier in sympathy with the general trend. Among cement shares, Associated Cement declined to Rs. 196.4 and Digvijay were steady at Rs. 193.12. Sugar shares were fairly steady, with Belapur making Rs. 252.8 and Walchandnagar Industries were transacted at Rs. 280. Short-covering lifted Scindia Steam to Rs. 19.3 and Great Eastern Shipping were steady at Rs. 22.6. Tata Chemicals were quietly taken at Rs. 20.1 on the announcement of an ordinary maiden dividend at 10 annas a share. Hindustan Motors were offered at the lower price of Rs. 9.7, while National Rayon recovered to Rs. 261.8 on bear-covering.

Banking shares were about steady, with scattered incidental support. Bank of Baroda were absorbed at Rs. 102 and Bank of India were transacted at Rs. 143. Central Bank came to hand at Rs. 53.8. Insurance shares lacked interest, with sellers predominating, and New India Assurance were freely available at Rs. 45.4.

Electricity supply undertakings met with fair demand, and Ahmedabad Electric improved to Rs. 94.1. Tata Hydro met with scattered interest at Rs. 126.8.

THE WEEK'S TRANSACTIONS

(In the following list of stocks and shares in which transactions have taken place during the past week the figures indicate Opening Quotations. Highest for the week. Lowest for the week. Closing Quotations—Quotation for the Corresponding Closing Date a Year Ago, the last named being shown in parenthesis and will not be given where such a quotation is not available.)

Commodity Markets

BRITISH TEXTILE REVIEW

FREE TRADE IN EUROPE

PRESIDENT Eisenhower's decision to raise the tariff on woven wool fabrics imported in excess of certain limits, coincided with the European discussions on forming a free trade area. The coincidence was fortuitous, but it increased Bradford's interest in the discussions. An article on the subject by Mr. R. Robson, head of the statistical department of the Cotton Board, which appeared in *International Review of Cotton and Allied Textile Industries* at the same time, helped to clarify the issues. Until a few months ago Britain stood rigidly aloof from this European plan (which relates, of course, to intra-European trade in general, not only to the textile trade), but she has yielded to the threat of virtual exclusion of her goods from the Continent. The main alternative scheme are Customs union, with a common European tariff against other countries' goods, and a free trade area, with no control over individual countries' tariffs against non-European goods. Britain has strongly favoured the latter, as it would allow her to maintain imperial preference between one non-European product and another. It is recognised, however, that cheap Asian products allowed duty-free into Britain would tend to circulate all over the common market, and other European textile industries are even less willing than British textile industries to receive such competitive goods.

Promoting Specialisation

The form of the common market would determine its detailed effects on the textile industries, but the mere fact of expanding a market from national to international proportions would promote specialisation. Mr. Robson remarked that existing European markets were generally big enough to support efficient producing units, except, perhaps, in the case of prints or rayon staple, which could benefit from a very wide scope. He mentioned also that transport of machinery, as well as textile goods—would restrain the rearrangement of Europe's textile production. Nevertheless, free trade would certainly strengthen some branches and cause others to wither away. Mass production would be stimulated, costs reduced, and some European producers would be in a stronger position to sell their goods outside of the common market. Obviously, such a plan puts a premium on efficiency. The U.K. cotton industry is efficient in a technical sense, but it must be admitted that in recent years it has been, as a whole, less successful than its continental counterparts. Competition in man-made fibres would be very keen, but the British units could mostly hold their own, although some sections of the rayon industry would suffer. The wool industry, judged by its success as an international exporter, is already proven efficient; its high-quality goods have been selling well in the dollar markets and in some European markets, especially Western Germany. In the lower-price range, this industry would suffer more competition from Italy, but as a whole it might benefit most from freedom of European trade. It is wise, however, to recall the warning of Sir Frank B. Sanderson, chairman of Salts (Saltaire), the big worsted group, that "competition is perhaps more severe today than at any time since the war".

Problems of Exporters

The quota and tariff arrangements approved by President Eisenhower at the end of September were a necessary reminder that the north American markets would not tolerate a persistent increase in imports of foreign wool goods. Some people in Yorkshire were apprehensive because of the increase of 17 percent in the British industry's exports to the U.S.A. in the first eight months of this year, compared with the same period of last year. They would be more comfortable in markets where success did not bring its own nemesis. But it was evidently the success of the Japanese rather than the British that stiffened the American restrictions, and it will evidently be the British who will suffer most from the increase in tariffs on imports in excess of the quota.

British exporters of cotton goods are concerned more with the competition of other exporters than with the restriction of individual markets, though the problems are not entirely separable. The Cotton Board's quarterly survey contrasted the rising trend of yarn production with the falling trend of cloth exports, both on the international plane. It is doubtful, however, if the decline in Japan's exports of cotton goods in the second quarter, which was an important factor in the total decline, will continue, for it was in Japan that output of yarn increased most strongly. A week or two earlier the International Federation of Cotton and Allied Textile Industries published figures showing changes in the numbers of looms installed at the end of January. These figures showed considerable decreases for Europe—especially Britain and France—and considerable increase for Asia, notably Japan. It is noteworthy that, whereas the number of looms in place at the end of January, totalling some 2,870,000, was 19,000 less than a year previously, the number of automatic units had increased by 31,000. In following this trend, Lancashire is still handicapped by under-employment of its machinery. The average operation of British looms is about 37 hours a week, whereas Hong-kong's are working almost "round the clock". On this basis expenditure on automatic machinery cannot be fully remunerative.

There was more encouraging evidence of technical progress at the Sixth National Fabric Fair at the Royal Albert Hall, London, in October. Some of the products worth special mention are cottons treated with a new stain-resistant water-repellant finish by Calico Printers' Association, combined with the same group's well-known crease-resistant finishes; a superfine strong viscose rayon, by Courtaulds, which is remarkably like Egyptian cotton; a finish for filament Terylene, by Imperial Chemical Industries, which makes it remarkably like silk; a finish for spun rayon, by Joshua Hoyle, which adds this material to the list of those which need almost no ironing after washing. Numerous interesting fabrics showed the trend towards subtle combinations of fibres. Opened at the same time was an exhibition of Lurex materials at the firm's new headquarters in London. It happened to coincide with the personal appearance of the controversial American entertainer, Liberace, who has an inclination towards materials with gold or silver threads in the weave. Lurex showed materials embodying this technique, made up into attire ranging from sumptuous evening dresses to a sports jacket (from Australia). The most dress-conscious elements in London are already very interested in these metal-fibre cloths.

WHOLESALE PRICE INDEX RISES

THE official wholesale price index (base: year ended August, 1939=100) advanced by 0.2 percent to 418.1 during the week ended 13th October, 1956, compared with 417.4 (revised) for the previous week. The index was lower by 0.2 percent when compared with the corresponding week of last month, but was higher by 16.6 percent than that of a year ago. Higher prices of rice in Calcutta (+5%), wheat in Amritsar (+4%) and in Hapur (+1%), gur in Ahmednagar and gram in Hapur (3% each) and sugar (+1%) raised the index for Food Articles by 1.1 percent to 593.1, compared with 587.7 (revised) for the previous week; prices of rice in Patna (-4%) and coffee-Plantation P.B. (-1%) were, however, marked down. Lower prices of raw silk in Bangalore (-2%) and linseed in Bombay, raw cotton and raw jute (1% each) brought down the index for Industrial Raw Materials by 0.2 percent to 503.2, although the prices of copra (+4%), and linseed in Calcutta, castorseed in Bombay and groundnuts (+2% each) showed advances. The index for Semi-Manufactures moved down by 0.8 percent to 401.5. Items which showed noticeable changes were: buffalo hides and gingelly cake (-6% each), gingelly oil (-5%), castor oil in Madras and copra cake (-3% each), linseed oil in Bombay and cowhides (-2% each), mustard oil in Kanpur, castor oil in Calcutta and Groundnut oil (+3% each), and mustard oil in Calcutta and Coconut oil in Cochin (+2% each). The index for Manufactures remained stationary at the previous week's level of 390.0 (revised). The Miscellaneous index moved up by 0.2 percent to 585.5, compared with 584.2 for the previous week due to an increase in the price of chillies (+1%).

INDEX NUMBERS BY GROUPS AND SUB-GROUPS

(Base: Year ended August, 1939=100)

SUGAR PRODUCTION AND STOCKS

The production and despatches of sugar from indigenous factories amounted to 1,859,000 and 1,649,000 tons up to 15th October, 1956, in the current season as against 1,590,000 and 1,148,000 tons respectively in the corresponding period of last year. The stocks with the factories on the same date stood at 6,32,000 tons, compared with 495,000 tons last year.

Ship, Marine, General Engineering and Foundry work of all descriptions is undertaken at competitive rates at the RAJABAGAN DOCKYARD of INDIA GENERAL NAVIGATION & RAILWAY CO., LTD. FOR ESTIMATES AND FURTHER DETAILS apply to KILBURN & CO., PRIVATE LTD. Managing Agents, 4, Fairlie Place, CALCUTTA.

WIDESPREAD LOSSES IN STOCK MARKETS INFLUENCE OF MIDDLE EAST DEVELOPMENTS

London, 31st October. Quiet and irregular conditions prevailed in the stock markets prior to the Israeli-Egyptian developments. When this news became known, prices were marked down sharply, so that wide-spread, and often appreciable, losses were recorded, compared with the previous levels. There was little actual selling as the sharp marking down of prices by dealers discouraged potential sellers. The quiet and unsettled conditions prevailing prior to the Israeli news reflected the delicate international situation, particularly in the Middle East, and the uncertain performance of Wall Street before the Presidential elections. After moving narrowly, gilt-edged securities dropped sharply, following the Israeli news. "Iron Curtain" bonds were in demand in the foreign sector, following the political developments in eastern Europe. Interest in the industrial market was selective for most of the week, but again the news from the Middle East at the end of the period brought a sharp reaction with widespread, and in some cases substantial, losses recorded on balance. Gold shares declined in the absence of support. Oil fell back heavily at the end of the period, with British Petroleum and Shell in the lead. Rubbers reacted on the news that one rubber group is forming an investment trust to invest its surplus assets. The feature in teas was a sharp rise in several Ceylon issues following increased bids for shares of the companies concerned.

The Money Market

The previous improvement in credit conditions was well maintained in the money market during the past week. The flow of funds to the market was more in keeping with its requirements. Only once was any help provided by the authorities and that only on a small scale. Easier conditions brought money down to 4½ percent and it was felt that this might be the level at which the present official policy aims in order to promote an easier trend in certain interest rates. There was a fair offtake of bills, with banks buying January and hot maturities at 4½ percent, although some tried to get the same bills at 4½ percent, but this rate was fully resisted. As a result of better short-term loan conditions, the mixed average rate for bills sold at the week's tender was again reduced. Applications for £200 million worth of 91-day bills totalled £346,955,000 which were allotted at the average rate of 99s 2½d percent. For the £60 million worth of 63-day bills, applications totalled £65,425,000, which were allotted at the average rate of 99s 10½d percent. This week £270 million worth of bills are offered comprising £200 million of 91 days' maturity and £70 million of 63 days' maturity. The Bank of England return for the week ended 24th October shows that notes in circulation were about £4 million lower at £1,874 million and that bankers' deposits were about £5 million higher at £242 million.

Stock Market Prospects

The Investors' Chronicle market newsletter writes: London gilts have been consolidating their rally, but without new buying, the recent highs may be a temporary ceiling. After penetrating the Suez low, industrials are in for a technical rally. Gold shares could shortly have a strong technical rally led by Free States. Dominated by political considerations, Wall Street is merely consolidating and its outlook is unpredictable. London has soon to contend with a change from a cold to a hot war on the wages front, as the bargaining season is ahead. Equities no longer stand to benefit from inflationary wage demands. This is a profitless inflation which may direct attention to gold shares.

Activity on Wall Street

Foreign scrip were highlighted by a speculative demand for Polish issues on account of the recent political developments. Prices moved forward to a new high for the year with some Government bonds gaining up to four points and the City of Warsaw nearly three points before easing on profit-taking. Elsewhere, dealings were slow. German Nationals were fractionally mixed. Danish and Greeks were selectively lower, but Norwegians held steady. Several Italians declined one point on small sales. Japanese were largely neglected. U.S. Government bonds experienced one of the sharpest declines in months with several long-dated issues dropping to new lows for the year. The movement was attributed to the fear of competition from higher-yielding corporate debentures scheduled for placing on the market in the weeks ahead. Corporates also lost ground in slow dealings. Convertibles were generally lower, reflecting the steady decline on Wall Street.

Hongkong Gold Softens

The undertone of the Hongkong gold market was steady throughout the week, but later, reported arrivals of 22,000 ounces from Macao counteracted the bullishness. Developments in eastern Europe and Singapore caused little reaction, while the reported capital influx from Saigon had very little effect as money was said to be finding its way into real estate. Values had advanced to \$(H)269½ by Thursday, but dipped to close late at \$(H)268½. The official offtake was 770 taels and the unofficial 1,600 taels. The carry-

over charges were 170 cents a ten taels in the buyers' favour.

Platinum Futures Trading

Trading in platinum futures will begin on 3rd December on the New York Mercantile Exchange, announced Mr. Joseph Mersel, the president. The contract will call for the delivery of 50 troy ounces of certified quality platinum bar or sheet with four delivery months under the trading regulations—January, April, July and October—and the contract opening 18 months in advance. In addition, there will be a spot market in which 50 ounces of certified lots may be bought or sold for immediate delivery on the day of the transaction.

Copper Output Outside U.S.A.

Production of refined copper in countries outside the United States in the month of September amounted to 105,938 tons, compared with 120,706 tons in August and 108,601 tons in September, 1955, according to the U.S. Copper Institute. Crude copper production in September consisted of 139,981 tons of primary against 150,013 tons in the previous month and 140,606 tons in September of last year, and 759 tons of secondary against 460 in the previous month and 1,049 tons in September of last year. Deliveries to fabricators in September totalled 116,222 tons against 114,928 tons in the previous month and 117,547 tons in September 1955. Copper stocks at the end of September are placed at 215,820 tons against 219,122 tons in the previous month and 174,377 tons in September last year.

Mixed Trend in Vegetable Oils

In spite of the fact that Singapore remained closed, lack of demand from Europe caused some price shading on the part of dealer-sellers and Straits coconut oil closed barely steady. A similar trend was noted in Ceylonese, but trade was negligible in spite of sellers' readiness to take £1 a ton under shippers. Resale deals in the Philippine copra were reported at \$17½ c.i.f. November-December, against \$180 wanted for first-hand. British Standard Specification grade linseed oil admitted a firmer trend with ex-tank U.K. offers around £1 a ton higher. Groundnut oil was fully steady with Nigerian claiming useful enquiry from Rotterdam. Nigerian groundnuts were firmer with the Board wanting £76 c.i.f. January-March, after making £75 c.i.f. North Contango. Rhodesian f.a.q. sold at £60 c.i.f. November-December over the week-end and sellers are now asking £81. Castor oil was strong on the prospects of scarcity of Indian oil following the recent heavy U.S. buying. It is estimated that only about 2,000 tons are left unsold in India, and new crop shipments will start in January-February next year.

Steadiness in Rubber

Only small fluctuations occurred in rubber last week and values finally were about a ½d a lb. higher on balance. Traders attributed much of the underlying steadiness to an unexpected increase in the demand for float parcels and also to a welcome improvement in enquiries from U.K. factories, which, it was said, booked moderate quantities towards the close. Another contributory factor was the development of interest in forward shipment parcels with good sales reported in January-March, 1957, shipment. Nearby rubber, it was said, was much in excess of requirements for the time being, but stocks were running down and would need replenishing before long. Scarcity of supplies continued to be the main characteristic of the sole crepe market and sellers had no difficulty in obtaining bids of 44½d a lb. for 4th inch smooth No. 1 on the spot.

Freight Increase on Pepper Shipments

The Straits-New York Shipping Conference notified shippers that the freight rate on pepper (black or white in bags) from Malayan base ports to the U.S. Atlantic and Gulf ports will be increased from \$(U.S.)72.25 to \$(U.S.)79.50 a 20 cwt. as from 1st January, 1957.

Freight Markets Firm

Firm conditions prevailed in North American coal and grain trades under a sustained demand. Miscellaneous enquiries were also on a good scale and included a Liberty-size cargo of rice from the Gulf to West Coast India at \$30.50 free discharge, end-November. A contract covering 70,000 tons of bagged sulphate from New Westminster to India was mentioned around \$23 f.i.o. over December to June. South American and Cuban sugar and Far Eastern trades were generally quietly firm, although new orders were noted for the Far East ern account. In Mediterranean trades, offers were wanted for 8,000 to 10,000 tons of phosphate from Kossier to Cochin, free discharge November. Time charter enquiries were resumed on a good scale and the rates were firm. Very firm conditions persisted, but chartering was on a very small scale because of owners' reluctance to commit vessels at the current rates. There were reports of 125s f.i.o. being paid for ore from Marmagao to Japan, December-January.

U.K. Automobile Exports

Lack of shipping space was hampering the U.K. motor car industry's export drive, Sir William Rootes, chairman of Rootes Motors, said in London. Sir William who was speaking at a Press conference on the motor show said that fully 3,000 vehicles were held up in the U.K. awaiting shipment. He stated that new models, coupled with the industry's intensive sales drive, had produced orders which, had it not been for the shortage of shipping, would have resulted in a large increase in dollar earnings. Markets for British cars in both the United States and Canada were now well established, he added. Referring to spare parts, Sir William declared that in his opinion the criticism of shortage overseas was not justified.

MONETARY METHODS AND OBJECTIVES

ADJUSTMENT OF INTEREST RATES

BRITAIN'S notorious inflation seems to be more or less under control, and if the Suez crisis, with its long-term implications, could be put out of mind, one could say that there was little risk of resurgence of that trouble within the next year or two. Such confidence may seem rash in view of the militant attitude of the labour unions on wage claims, but the unions cannot override the economic facts, and these facts will make it difficult for employers to grant wage increases and for employees to press for them. The economy is no longer visibly over-extended; demands have been reduced until they are in approximate equilibrium with supplies. Other countries have experienced the same trouble, in varying degrees, though with less serious results, because they are less vulnerable. These countries have likewise, in varying degrees, mastered their inflation; though in some of them the task is by no means completed.

The present seems an opportune time, therefore, to consider the methods that have been used to control inflation; and, in fact, the International Monetary Fund, in its recent annual report, has uttered some interesting thoughts on the subject. They are, of course, open for discussion, and the discussion should help the national authorities to make their future actions more efficient—whether the task is to impose further restraints or to relax some restraints imposed already. Most people agree with the I.M.F. that corrective methods have been much improved in the recent phase. In the past, Governments have too easily relied on restriction of foreign exchange and on physical control of trade. In recent years, while they have not entirely abandoned such devices, they have been more willing to reduce excessive demands by monetary action. Such action takes various forms, principally, the direct form, taxation, and the indirect form, central regulation of the supply of money. The I.M.F. is not convinced that the Governments, having eschewed physical controls, have always adopted the best alternatives to such controls.

Reliance on Bank Rate

A disadvantage of high interest rates, which are an essential—usually the main—element of indirect monetary control, is that they operate more against capital investment than against consumption. An advantage of fiscal measures is that they can be applied specifically against consumption. In some countries, especially Britain and Western Germany, capital investment has imposed such strains that high interest rates have been needed, regardless of direct fiscal policy. But the structure of interest rates is complex. There is—or should be—a clear distinction between short- and long-term rates, and the authorities have not always operated on the most appropriate rate. The argument of the I.M.F. tends to the conclusion that Governments and central banks have relied too much on the mechanism of Bank rate and have not used resolutely enough the mechanism of the long-term interest rate. The criticism can hardly be made against Western Germany, where long-term rates are very high; and not all London bankers agree that long-term rates in Britain were kept too low. But it is a curious fact of the British monetary position that the difference between short- and long-term rates has virtually disappeared.

One of the difficulties of the British authorities in making their policy effective is the excessive liquidity of the financial system. The high ratio of the British banks' liquid assets to deposits would normally stimulate their lending; but the directive which restricts their lending has largely nullified the natural tendency to increase advances to their customers. Yet the "liquidity preference" of the business community in general has compelled the Government to cover its current deficit by issuing Treasury bills rather than long-term securities and has thereby disturbed the financial position. Britain's experience has shown that central monetary control cannot work promptly and efficiently while its effects are cushioned by ample liquid resources.

Whatever the economic trend, it is desirable to tighten the mechanism of control. One method of doing so is to re-establish the differential between short- and long-term rates, so that holders of liquid funds have a positive incentive to invest them on longer term. Another method is to convince these holders that long-term rates will not remain high much longer and that it is wise to invest in long-dated securities while they can do so on favourable terms. These methods can be combined by reducing short-term rates; but if long-term rates are raised confidence in capital values will be weakened and the "liquidity preference" will be confirmed. This is not quite the conclusion to which the I.M.F. seems to incline; nor, perhaps, is it practical economics at this time. Inflation can still reassert itself, and it would be deplorable if over-hasty action undid the good work of the past year or two. Yet the fact remains that high short-term rates stimulate liquidity, and that liquidity is an unstabilising force. Moreover, the restraints on consumption are not only restraining production to a degree that may soon be excessive but also curtailing industries' capital plans—based on current interest rates—for producing more in the future. It may be that a policy of restraining consumption, by taxes, and relaxing restraints on investment, through interest rates, would be rewarded.

New Delhi

PRIME MINISTER CLARIFIES ISSUES RAISED BY BLACK-KRISHNAMACHARI CORRESPONDENCE

RELATIONS WITH WORLD BANK REMAIN VERY FRIENDLY

(FROM OUR NEW DELHI CORRESPONDENT)

THE great debate started by the publication of the Black-Krishnamachari correspondence continues. The Prime Minister silenced many critics by declaring at a Press conference that the exchange of letters between the Indian Finance Minister, Mr. T. T. Krishnamachari, and the President of the World Bank had in no way affected India's relations with the Bank, "which are very friendly. Do not imagine that we are quarrelling with each other. We are dealing with each other as we have done for the last several years, in a friendly way. Mr. Black expressed his opinion and we have explained to him our point of view."

Mr. Nehru was asked whether it was within the jurisdiction of the World Bank to express an opinion like it did on the policy of a country. He said: "Well, anybody can express an opinion; it has nothing to do with jurisdiction. It may have unfortunate results or fortunate results, but we cannot challenge the jurisdiction of any individual. I do not suppose you would like your freedom to express your opinion restricted in any way, I mean people of the Press." Asked if the Planning Commission had formally considered the suggestions put forward by Mr. Black about giving more importance to private enterprise, Mr. Nehru declared: "No; this question we have already considered and we have made our broad policy, basic policy and our specific programme in the second five year plan. There it is." A correspondent said that Mr. Black seemed to suggest a particular revision of the approach to mineral exploitation, so that there should be some relaxation of restrictions concerning minerals. Mr. Nehru pointed out that Mr. Black had more or less said that India was not fully utilising private enterprise for the furtherance of her plans. "There is no question of our not doing so; but our judgment as to how best to utilise it may be different from his to some extent. But there is undoubtedly a basic difference in our approach and his approach. That difference will not affect our dealings with each other or our relations."

Foreign Capital

A questioner said that Mr. Black made a specific point that the Government of India's present policy towards foreign capital was not encouraging enough; did Mr. Nehru accept that there was any substance in that view, and, if so, was any modification of the Government's policy on the matter possible? Mr. Nehru replied: "The answer to that is not for me to give. It is merely for the owners of foreign capital to say whether they are encouraged or discouraged. He may be right, for what I know, in that particular matter. What can I say? But I don't think that foreign capital need have any kind of apprehension because, whatever our internal policies might be, if we deal with a foreign investor, we give him fair, reasonable terms and the guarantee of the State. What more can anybody require?" Asked if he thought it fair to say that foreign capital had been greatly frightened by the Suez Canal nationalisation, seizure of the Dutch assets in Indonesia and things that had happened in that part of the world, the Prime Minister said: "I do not know. Owners of capital, from all accounts—I have no intimate knowledge of these matters—are very sensitive human beings. The slightest thing that happens, they think it might perhaps involve some future risk. It makes them draw themselves into their shells. People are so sensitive and timorous. As a matter of fact, there were the great days of capitalism when it was adventurous, when it was not timorous. It simply went out, took risks and won. Those were the great days of capitalism, in the United States and elsewhere. But if you are thinking of China and India, that is a different matter. The whole of the nineteenth century has seen in the United States the adventurousness of the entrepreneur and the capitalist. They went ahead and took enormous risks and got enormous dividends out of that." A correspondent pointed out: "We have restricted the dividends very much now. The risks are there, but the dividends are not there." But Mr. Nehru contradicted him by saying: "Not at all. The dividend may be restricted, but the risk is also restricted. In fact, the dividend has been pretty sure." Asked whether Mr. Black's letter had been written in his personal capacity or on behalf of the Bank, the Prime Minister said that it was very difficult to distinguish between the two things. "He is the President of the World Bank. I do not know, I do not suppose, that the letter was put up before the Bank's directorate and passed. People do not function that way. As for whether what Mr. Black had said was believed to be the considered opinion of the board of the Bank, he declared: "How do I know? But one may presume that, apart from any particular details, this represents broadly the opinion of the Bank."

Ideology and Credit-worthiness

Mr. Black's Indian and foreign critics have accused him of interfering with the ideology of the Congress Party, and asserted that he should

have confined his comments to India's loan-worthiness. But some elucidation of the position is necessary. The Government has various institutions for financing or controlling the capital structure of undertakings in the private sector. The issue is whether, say, the Industrial Finance Corporation should offer loans solely according to the loan-worthiness of an undertaking, or whether it should take other factors into consideration also. It will be admitted that it should take all the relevant factors into consideration before advancing loans.

Then, again, there are cases in which the Controller of Capital Issues has refused permission for the flotation of shares on the open market on the ground that the companies concerned already had adequate resources to finance the projects for which additional capital was wanted. The machinery for the control of capital issues was largely created because of the shortage of financial resources. In fact, it has little to do with the credit-worthiness of an undertaking. The Government has set up the Industrial Finance Corporation because of the shortage of financial resources for the private sector, and its right to enquire into matters other than loan-worthiness is not questioned. The Corporation would, on the contrary, be criticised if it advanced a loan to an undertaking which was spending large sums of money not on the business of the firm, but on the ideology of its directors.

Limited Resources

The resources of the World Bank are limited. It is designed to assist the development of every member country in the world, including India. At the invitation of the Government of India, and not at the instance of Mr. Black, a World Bank mission came here to study needs for financial assistance for the specific purpose of implementing the second five year plan. The mission made a report. This was followed by Mr. Black's letter, in which it was implied that India would not seem to need extra resources if the party in power could afford to spend large sums of money to finance projects which were dictated purely by its ideology. The Finance Minister's letter to Mr. Black was very dignified and showed a high degree of economic soundness and diplomacy. It is confidently expected here that Mr. T. T. Krishnamachari will succeed in securing loans from the World Bank before long. As a first step, he has sent the Finance Secretary, Mr. P. C. Bhattacharyya, to Washington to assist Mr. B. K. Nehru in his negotiations with the World Bank. Mr. P. C. Bhattacharyya is a former Financial Commissioner for the Railways, and was responsible for drawing up their second plan. He is now Finance Secretary on the Revenue and Expenditure side, and is fully aware of the urgency of foreign exchange requirements, which amount to about Rs. 1,000 crores during the plan period.

Textile Policy Revision

The ideological battle, as Mr. Black might have called it, is going on over the Government's textile policy. The Commerce Ministry's demand that it should be allowed to expand the mill sector of the textile industry on the basis of a per capita consumption of 20 yards by 1961 has failed to secure adequate support. The section parading the cottage industry banner does not deny that consumption has been rising more rapidly than was expected by the Planning Commission, and that the target of 18 yards per capita will be reached much earlier than 1961. In fact, according to present trends, it should be reached by 1958. It is noteworthy that because of a large subsidy, the production of khadi has gone up. But in spite of huge rebates and other inducements, its consumption has not been encouraging so far. It remains unattractive because of its high cost and poor durability as compared with mill-made cloth. In plain language, khadi cannot appreciably ease a cloth famine if and when it comes. It is in this context that Government, according to reports, has asked the Ministry of Commerce to elucidate its plan for advancing the target date from 1961 to 1958 so far as the per capita consumption of 18.5 yards of cotton textiles is concerned. This means stepping up cloth production in all sectors—mills, powerlooms and handlooms. It means also a re-examination of the whole textile policy in 1958. An early decision is expected.

U.K. Heavy Industries Mission

The Coates mission on heavy industries, which arrived here last week, has had important talks with leading Ministers and Government officials. The mission has been told that since the tempo of development has already exceeded the estimates of the Planning Commission, it is expected that the 1961 targets of consumption for several industries, such as textiles, fertilisers, electrical goods and cement, will be reached by 1958. This will automatically enlarge the scope for development. India, it is explained, is anxious to start undertakings to manufacture machinery rather than to expand its imports.

Speaking at a Press conference, Sir Eric Coates said: "You have unlimited manpower and your raw material potential is of a high quality. Your transport is excellent, no doubt, but to assist big industrial development it will have to be developed." The primary purpose of the mission, Sir Eric said, was to find out what heavy industries already existed, to build on them, and then to take a view as to what further heavy industrial resources the country would need. "We shall not be picking or pin-pointing sites, but of course the general location of heavy industries is important."

Sir Eric added: "We shall advise the Government of India objectively and as well as we can, but we are not concerned with who produces or who continues to implement the advice we may give. Ours is purely a reporting mission." He said that it was also not concerned with the financial resources of the Government for these things. Answering another question, the leader of the mission said that the steel programme was basic to the development of heavy industries. He thought India would be self-supporting in steel in due course. Sir Eric hoped that the mission would be able to submit its report to the Government some time in January.

During its stay here, it will have group discussions on different aspects of its work. These include mining machinery, equipment for chemical plants, foundries, forges and heavy machine tools. The mission is now on a tour of Calcutta, the Chittaranjan locomotive works, the Sindri fertilizer factory, Ranchi, coal and iron ore mines (where the problems of mechanisation will be specially studied), and Jamshedpur (where it will visit the Tata Engineering and Locomotive works as well as the Tata Iron and Steel works). It is expected to visit a few other industrial centres also before concluding its tour by the middle of November. It will report on the lines of future development of heavy engineering industries to the Government.

Co-operative Sugar Factories

The number of licences issued so far, and those it is intended to issue during the second plan period, for establishing sugar factories indicate that 55 co-operative units will be working by 1960-61. Their establishment will involve a capital outlay of Rs. 50 crores. Their output will be more than a quarter of the total sugar production in the country. They are expected to bring cane-growers an additional income of about Rs. 3 crores a year. Of the 34 new factories for which licences have been granted so far, 14 will be in Bombay, five in Andhra, four in Punjab, three each in Uttar Pradesh and Madras, two in Mysore and one each in Assam, Bihar and Orissa. One of these factories has already started production. 11 more are expected to start operations during the 1956-57 season, and the remaining in the following two years. Machinery for 19 of these sugar factories has already been ordered. Fifteen plants have been purchased from Western Germany, two from Britain and two from Czechoslovakia. Most of them are of modern design, with automatic equipment, and have a crushing capacity of 800 to 1,000 tons, with scope for expansion up to 1,250 tons. Their prices range from Rs. 45.6 lakhs to Rs. 71.5 lakhs.

Buying Ships Abroad

In addition to the purchase of one ship from Yugoslavia, orders have been placed for two ships with German firms and for one ship with an Italian firm. Negotiations for the purchase of one more ship from Yugoslavia are now going on, as also are negotiations for placing orders for two ships in the United Kingdom. India has bought an oil tanker from Sweden.

Orders for Railway Under-frames

The Government has placed orders with a Polish firm for the supply of 650 broad-gauge under-frames for the railways, valued at Rs. 19.3 million. Orders have also been placed for three cranes with a British firm and for nine cranes with a French firm, at a total cost of Rs. 13 lakhs.

German Technical Mission Arrives

A German technical mission, headed by Professor August Ruecker and consisting of Professor Schoenfeld, Mr. Ingenieur Duensing and Professor Dr. Reiner Thedieck, arrived here last week. It has come in connection with the offer made by the West German Government of technical assistance in establishing a higher technological institute. The Government of India has set up a committee to collaborate with the mission. It consists of Mr. Y. N. Sukthankar, Cabinet Secretary (chairman), Sir Shri Ram, Dr. A. N. Khosla, Dr. D. S. Kothari, Professor M. S. Thacker, Dr. V. K. R. V. Rao, Mr. Tarlok Singh, Mr. Sudhir Ghosh, Dr. A. Nagaraja Rao, Mr. C. S. Menon, Professor B. Sen Gupta, Mr. A. Zaman, and Mr. L. S. Chandrakant. The mission will visit Dhanbad, Calcutta, Kharagpur, Madras, Bangalore, Poona, Bombay and Roorkee during its five-week stay in India. It will also visit important technical institutions, national laboratories and universities to acquaint itself with the nature and standard of technical education and research.

U.K. Financial Writers to Visit India

The Government has invited some leading British financial editors and economists to visit India during the cold weather. Among those who have so far accepted the invitation are: Mr. Bird, of the Economist; Mr. Duncan Bird, Financial Editor of The Times; Mr. Andrew Shonfield, of the Financial Times; Miss Barbara Wootton, of Norman Cramp, of the Sunday Times; Mr. Paul Bareaud, of the News Chronicle; and Mr. M. Filgate, of the Financial Times.

London

CHANCELLOR DETERMINED TO CUT EXPENDITURE

HEALTH SERVICE CHARGES TO GO UP

(FROM OUR LONDON CORRESPONDENT)

THE Chancellor of the Exchequer has not abandoned his intention to cut Government expenditure by £100 million in the current financial year. In June, it will be remembered, he announced cuts totalling £76 million and promised that further cuts would be announced later in the year. A further instalment, of £17½ million, was announced in the House of Commons on Thursday last. It met with a stormy reception from the Opposition benches, for the bulk of the total, £9½ million, comes from increasing, from December, the present one shilling charge on National Health Service prescriptions to one shilling for each item (to produce £750,000 this year and £5 million in a full year) and by raising the price of milk by a halfpenny a pint from 1st January, "Until the end of the winter" (to cut the subsidy by £4½ million this year). Those who are unable to pay the higher prescription fee will be reimbursed on the same basis as they are now, while school and welfare milk will not be affected by the increased price. A further £9 million is contributed to the fresh cut by the Defence Services, chiefly by reductions in manpower requirements in the Army and R.A.F. and by revision of the re-fit programme in the Navy.

Mr. Macmillan received a stormy reception, but was quite unmoved by the epithets—"a brute", "cruel", "heartless" and "Scrooge"—were among the milder ones—hurled at him. He explained that the cuts take no account of additional expenditure not provided for in the original Estimates nor of any underspending. There has been an additional civil expenditure of £15 million and there is the further expenditure, which cannot yet be estimated, on the Suez military preparations. The retail cost of living would only be increased by 0.22 percent from the changes he had suggested, and as there is an average of one and three-quarter items on each prescription, the additional average expenditure by the patient would be 9d. against the average cost a prescription of 8s. 9d. and of the service as a whole £59 million, according to the latest figures, of which the recovery is now estimated at £6.8 million and this will rise to £12 million with the extra charge.

Wage Problems

It must be obvious, however, that Mr. Macmillan's "courage" in adopting unpopular measures to fight inflation will furnish the Labour party with fresh political ammunition and the trade unions with what will be regarded as further justification for wage claims. The engineers have just put in theirs for a 10 percent increase, and though Mr. Cousins of the Transport and General Workers Union denied in a speech to the Institute of Directors that the unions were entering upon a recklessly militant period of industrial relations, he reaffirmed that they could not accept wage restraint and that the resolution passed at the Trades Union Congress was not "window dressing."

He was influenced in his attitude by a statement issued the day before by the British Employers' Confederation, which said that no general wage increases or changes in terms of employment which would increase costs would now be justified. The Confederation has been examining the Ministry of Labour's statistics on earnings, wages and the cost of living, and has concluded that wages have been rising faster than prices and output. The Confederation consists of 62 employers' associations whose members give work, between them, to about 70 percent of the workers employed in private industry.

The employers state that it is incorrect to suggest that prices have been forced up through the abolition of controls and the reduction of subsidies and that wages have lagged behind. This suggestion must be refuted, they say, or it will injure the national economy. The Confederation quotes the Ministry of Labour's figures for June, 1947, October, 1951, and August, 1956. Between October, 1951, and August this year retail prices had risen by 22 percent and wage rates by 34 percent. In the same period earnings rose by 38 percent. "In the last few months," it says, "prices have been relatively stable." Discussing the consequences, the Confederation asserts that wages are the largest single element in costs in industry as a whole. A general increase in wages would be self-defeating and would cause a further rise in prices.

September Trade Gap Explained

Details are now available in the *Trade and Navigation Accounts* of the disappointing trade deficit in September. This is always the slackest time of the year but the drop in exports was more than could be accounted for by seasonal factors. The trade gap widened as a result to £64 million, compared with an average in the third quarter of £56 million. Apparently, the sharpest drop was in engineering exports, which until last month had been doing exceptionally well. Exports of ships and railway vehicles were particularly low. Bicycles also did badly, their total value being £900,000 during the month, against £1,817,000 in September, 1955. The loss in this case seems to have been particularly concentrated in the American market, where exports in the first nine months of the year amounted to £1.8 million, against £3.2 million during the same period last year. The United States tariff on cycle imports was recently raised and this is obviously having an effect, but apparently the British trade has been worse hit than others. Apart from bicycles our exports to North America were well maintained in September at very little below the average monthly rate for the year, which has been some 26 percent above the 1955 rate.

Although the trade gap widened in September, the pattern of trade was good from the point of view of the reserves. Thus the main drop in exports was in sterling area shipments while the main cut in imports was from non-sterling area countries. This seems to continue the pattern of the Balance of Payments White Paper, which showed that it was the United Kingdom which was making the largest contribution to the rebuilding of the reserves.

Orders for Machine Tools

New orders for machine tools showed a sharp recovery in July, according to the Machine Tool Trades Association, both in the home and export markets, which was probably the outcome of the

International Machine Tool Exhibition held in London in May, as it usually takes a couple of months for orders to be finalised. Nevertheless, in the first seven months of this year the value of new machine tool orders from home and export markets together is shown as being about 6 percent lower than during the same period of 1955. That deliveries in July were at record levels to both home and overseas customers is welcome news, but the rise has been slow and slight over the past year and the industry has still not begun to catch up with the order-book. At the end of June outstanding orders still amounted to £104.6 million, equal to about 15 months' output. The value of export orders on the books was higher than ever before and formed over 20 percent of the total. The only sign that the slackening of demand has brought some relief to the hard-pressed industry is that the order-book has at least not increased much since March.

No Treasury Deposit Receipts

The Chancellor of the Exchequer rejected a suggestion made by Mr. Harold Wilson in the House of Commons this week that a system of borrowing by Treasury deposit receipts might be introduced again. These receipts were created during the war and maintained for about six years after the war in order to guide liquid bank funds directly towards the Exchequer. The idea of reviving them has been much discussed lately, not only as a possible means of sterilising the excess liquid funds of the banks which they are now unable to lend to customers, but also to reduce the cost of borrowing to the Government without affecting the general level of interest rates. Mr. Macmillan said he had examined but rejected the idea. As a further step to bring the lending rates of the Public Works Loan Board into line with those prevailing in the market, higher rates for medium and long-term loans were announced by the Treasury. These rate adjustments are in line with the official policy to encourage local authorities to raise funds from the market. They bring P.W.L.B. rates more strictly into line with recent local authorities' borrowing operations in the market. While the short loans for not more than five years (which are in practice very rare) are to remain at 5½ percent, loans for five to 15 years or longer, will in future cost 5½ percent instead of 5½ percent.

Savings on the Railways

In March this year the Minister of Transport asked the Transport Commission for a report about its future prospects. The chairman, Sir Brian Robertson, lost no time in getting on to the job, for on it depended the question whether he could raise fares and freights to make the railways cover costs and wipe out the steadily increasing deficit, which hangs like a millstone round the Commission's neck. The report made its appearance as a White Paper, and is sufficiently reassuring to have persuaded the Government to introduce a bill in the new session of Parliament to authorise the grant of new financial help to the British Transport Commission, so that it may be helped to meet annual deficits on the railways until modernisation and other changes produce profits. The Commission estimates that it will be able to do so from 1961-62 onwards. Until the railways have made good the deficiencies of the past 30 years, the Government proposes that special advances should be made to the Commission out of the Consolidated Fund equivalent to the revenue deficit in each year. The total so advanced may be limited to £250 million. The Commission would have to repay these advances by instalments. It would have also to meet interest charges on the advances at perhaps 5½ percent, but additional special advances to cover payments of interest would be available to the Commission. These two new advances would be distinct from the Commission's existing borrowing powers.

The Commission's report gives details of the improvements that British Railways are hoping to make in the next few years and lists under four main headings the savings that are expected to result from its modernisation programme. They hope to save at least £45 million by the modernisation plan itself, which envisages an important reorganisation of freight and passenger traffic and the electrification of many hundred miles of track. The savings expected from the elimination of unnecessary or unremunerative services would amount to about £3 million a year at the end of the next six-year period. Increased productivity should produce a saving of at least £5 million a year by 1961 and the railways' new freedom to levy competitive freight charges should enable them to increase revenue by £20 million a year in 1961 to 1962. It is anticipated that the staff of British Railways would support the new project, but when asked whether the Commissions financial forecast would be upset if there was to be an increase in railway wages, Sir Brian agreed that the railwaymen had it in their power to work not only the present plan but the very industry on which their livelihood depended. He did not, however, think that they would do so, and looked forward to a new era of co-operation.

Brevities

Advances to nationalised industries rose by £18 million in October, £12 million going to the C.E.A. and £3 million to the Gas Council. The Chancellor's "below-the-line" deficit, however, still compares well with that at this time last year. It now stands at £198½ million, against £344 million.

Mr. Stephen Garvin, head of the General Division of the F.B.I. Overseas Department, has just begun a series of visits to regional centres, where he will speak about India's second five-year plan and the Indian market for British goods.

Bombay

PORT TRUST HANDLES RECORD TRAFFIC

CALCUTTA FIGURE FOR 1955-56 SURPASSED

(FROM OUR BOMBAY CORRESPONDENT)

THE Bombay Port Trust set up a new record in 1955-56 by handling over 10,300,000 tons of cargo as against 7,600,000 tons in the previous year. Imported cargo touched a new level at 6,700,000 tons, compared with 5,630,000 tons in 1954-55. The increased inflow is accounted for by higher imports of metals, machinery and railway materials. Exports in 1955-56 amounted to 3,600,000 tons, which represents an increase of approximately 1,600,000 tons over the previous year. For the first time ever, the volume of cargo handled in Bombay exceeds the Calcutta figure by nearly a million tons. This record figure was achieved in spite of earlier fears that a substantial volume of shipping would be diverted to other ports because of recurring dock labour trouble here. The financial year closed with a surplus of Rs. 266 lakhs in the general account as against Rs. 217 lakhs in 1954-55, envisaged in the revised estimates. The revenue on general account amounted to Rs. 962 lakhs as against Rs. 678 lakhs in the previous year. The expenditure also correspondingly increased from Rs. 603 lakhs to Rs. 676 lakhs. The total revenue on general and pilotage accounts for the year was Rs. 981 lakhs as against Rs. 696 lakhs in 1954-55 and expenditure amounted to Rs. 689 lakhs against Rs. 613 lakhs.

A saving in expenditure was possible because the Government of India disallowed the contribution to renewal and replacement funds. The expenditure of approximately Rs. 111 lakhs on capital account was incurred by withdrawals from the general reserve fund. Since the institution of the Trust, the total expenditure on capital account amounts to Rs. 39.31 crores, but the net expenditure is Rs. 37.04 crores against which the outstanding debt is Rs. 19.02 crores. Of this, Rs. 6.54 crores is due to the public, Rs. 9.07 crores to the Government and the balance represents internal loans held by the Trustees themselves. The amount due to the Government is being repaid by annual equated instalments and the remainder by means of a sinking fund. The total expenditure on staff also increased in the year under review to Rs. 399 lakhs from Rs. 374 lakhs in 1954-55. It is expected that the volume of cargo arriving here will increase considerably when the deliveries of capital goods ordered for the development programmes envisaged under the second five year plan gather momentum. It was only during the first five year plan period that port improvement schemes could be taken in hand. Some of these are nearing completion while others have been carried over to the second plan period.

Marine Oil Terminal

One of the first projects to be taken in hand was the marine oil terminal in Butcher Island for the transport of oil to the two refineries in Trombay. The main contract for the deep water berths was first awarded to the Royal Netherlands Harbour Works Company Ltd. of Amsterdam, but this was subsequently transferred at their own request to their subsidiary, the Netherlands Harbour Works Company of India. A sum of Rs. 10 crores has already been spent on this project, most of which is now complete. Some minor works have yet to be finished on this project and a sum of Rs. 1 crore has been provided. There are seven submarine pipelines between Butcher Island and Trombay, of which three are 24 inches in diameter, two of 16 inches and of 12 inches diameter. These are for refined and crude oil and have already been commissioned and another one of 8 inches diameter is for the transport of fresh water to the island. The distance between anchor points is a little over 12,500 feet. Storage tanks, roads and bridges, power house building, storage reservoir and oil pump houses are now complete. Another scheme in hand is the development of Prince's and Victoria Docks at an estimated cost of Rs. 14 crores. This scheme envisages the construction of an entrance lock at the south-east corner of Victoria Dock to accommodate ships drawing up to 30 feet in the Prince's Dock and 32 feet at Victoria Dock, and to permit a round-the-clock movement of ships. The communication passage between the Prince's and Victoria Docks will be widened and the jetty berths in the Victoria Dock extended landward by 75 feet.

The present length of 1,000 feet of the Hughes Dry Dock is not sufficient to accommodate a T2 tanker and a large vessel at the same time. It is, therefore, proposed to extend the length by another 125 feet at a cost of Rs. 47 lakhs. This will give an additional passenger berth. Another scheme is to extend the upper arm of the Prince's Dock so as to provide four repair berths. This is estimated to cost Rs. 90 lakhs.

The electric distribution system is also to be redesigned. A scheme has been drawn up for receiving bulk supplies of electric energy at 22 kV at three primary stations from which 6.6 kV will be fed to several secondary sub-stations at various points in the docks. These secondary sub-stations will step down the supply to low tension at 420/240 volts. The total cost of this scheme is estimated at Rs. 27.31 lakhs of which over Rs. 8 lakhs has already been spent. The present hydraulic cranes

in use at Alexandra Dock and Ballard Pier will be replaced by electric cranes. Of the 88 cranes to be installed, 34 were scheduled for the first plan and the remainder for the second five year plan. The total cost of this operation is estimated at Rs. 324.9 lakhs of which Rs. 94.9 lakhs has already been spent. The hydraulic cranes now in use at Alexandra Dock will be removed and re-installed at Prince's and Victoria Docks. The Bombay Port Trust's railway system comprises over 134 miles of main lines and sidings. It handles about 2.5 million tons of traffic each year or approximately 50 percent of the terminal goods traffic of Bombay. The freight earnings amount to over Rs. 8 crores each year. There are also a number of open wharves and basins where the cargo carried by coastal and country craft and the overside cargo from the docks and the stream is handled. These wharves provide an aggregate quayage of 41,000 feet and are equipped with cranes and other facilities for handling and storing cargo. The Timber Ponds at Sewree cover an area of 60 acres and form an important part of the facilities available. The grain depot covering an area of 1,000,000 square feet and 90,000 square feet plinth area and the 432,500 square yard depot are examples of the storage facilities available for special types of cargoes.

L.S.I. SETS UP STRUCTURAL AND METALS DIVISION COUNCIL

The Indian Standards Institution has constituted a Structural and Metals Division Council, which was inaugurated recently by Mr. M. M. Shah, Union Minister for Heavy Industries. Sir Jehangir Ghandy, Director-in-Charge of the Tata Iron and Steel Co. Ltd. was elected chairman of the new Council. This new division has been created to integrate the work of standardisation relating to ferrous and non-ferrous metals, foundry, refractories, metalliferous ores, metal structural, structural engineering and welding. Every endeavour will be made to co-ordinate the metallurgical aspect with customers' needs. The division will also set up machinery to deal with the urgent problems of rationalisation concerning alloy and special steels. The aim will be to simplify and reduce the great diversity of present Indian requirements to make possible indigenous manufacture on an economic basis. Speaking at the inauguration, Sir Jehangir said that the formation of the Council marked a major step forward in the progress of the work launched three

years ago to devise ways and means of economising the consumption of steel and organising its use along rational lines. He referred to the expert view that as much as 25 percent of all steel employed in structural engineering in India today was being wastefully used involving a loss of some 150,000 tons a year, valued at over Rs. 10 crores (£7.5 million). Reviewing the work already done on the steel economy project, he said that I.S.I. had broken new ground in working out standards and practices based on modern manufacturing and fabricating techniques. This would ensure that wasteful uses based on outmoded ideas of design were eliminated and the output of the expanding steel industry was efficiently utilised. He felt sure that with the co-operation of all the interests represented on the Council, the new division would press on with its work as fast as possible and thus provide adequate support to the plans now under way for the development of steel and other heavy industries.

FUNCTIONS OF COMPANY LAW REGIONAL DIRECTORATE

The various requirements of the new Companies Act have been brought to the notice of the public from time to time by announcements from the Government. The office of the Regional Director, Company Law Administration, situated at P-29, Mission Row Extension, Calcutta, is also offering advice and guidance to those who approach it in connection with the implementation of the various provisions of the Act. This Directorate is staffed with the necessary technical personnel. Companies, especially the smaller ones, can freely use the facilities provided by this organisation. It has, however, to be borne in mind that while the department will be ready and willing to give any advice or assistance on matters relating to the observance of the law's various requirements, it cannot offer legal advice on problems of a personal or private nature with which the companies might be faced. To facilitate and expedite action on the various queries that might be made by companies, an advisory section has been formed in the Regional Directorate, and members of the public who desire to seek the aid and guidance of the department may contact the Officer-in-Charge, Advisory Section of the Directorate. As from 1st November this year, the jurisdiction of the Regional Directorate has been extended to West Bengal, Orissa, Assam, Manipur and Tripura.

BRAITHWAITE PRESSED STEEL TANKS

BRAITHWAITE PRESSED STEEL TANKS

are the ideal means of storage of all types of liquids.

BRAITHWAITE PRESSED STEEL TANKS

40 ft. x 24 ft. x 8 ft. deep on 10 ft. high steel staging.

HIDE ROAD, KIDDERPORE, CALCUTTA.

ORIENTAL FIRE AND GENERAL INSURANCE CO., LTD.

Head Office: Oriental Buildings, BOMBAY-1.

Sound underwriting and outstanding service to Policyholders are reflected in the rapid progress made by the ORIENTAL FIRE. Transacting Fire, Marine, Motor, Accident and all other classes of non-life business in the best ORIENTAL tradition, ORIENTAL FIRE also offers specialized cover against Machinery Erection and Breakdown and Boiler Explosion risks.

"CAPITAL" STOCKS AND SHARES INDEX*

The Capital Stocks and Shares Index (Base: 1939) has now been brought up to August, 1956. Compared with July, the August index for government securities shows a rise of 0.1 point, while that for preference shares indicates a drop of 1.5 points.

There were increases in banks 5.7 points, cotton 12.0 points, coals 3.0 points, jute 6.7 points, cement 3.6 points, engineering 7.3 points, sugar 2.6 points and miscellaneous 11.3 points, while decreases occurred in mining and oils 14.2 points, tea 9.8 points and papers 23.2 points.

Combining all the factors, the Capital variable yield securities index shows that the index for stock prices in the above classes of shares advanced by 2.8 points during August, 1956.

MIDDLE EAST DEVELOPMENTS PUSH UP GUNNY PRICES

LARGE BUSINESS IN RAW JUTE

THE delicate international situation in the Middle and the Far East has had a strong influence on the Calcutta jute goods and fibre markets. After a quiet opening, prices in particular saw its heaviest activity for several weeks. Over the week-end, it was estimated that mills purchased about 150,000 maunds of jute. Late on Tuesday, they again became general buyers, and another 500,000 maunds changed hands. Sellers were very firm throughout these transactions. As a result of buyers' keenness, they were in a position to dictate terms, and took their advantage to the full in the matter of price, assortment and delivery dates. All the business, however, was not confined to mills, as heavy covering was reported by several sellers against October shipment contracts. In most cases, these involved heavy financial losses, as the contract rates were considerably lower than current prices. It was also evident in some cases that mills were forced into buying by their low stock position, which was aggravated by the non-arrival of previous orders. These conditions caused sellers to adopt very bullish ideas, encouraged by the improved goods market.

One of the most difficult fibres to come by these days appears to be good Daissee. Many of the indications given out over the week were for this type of jute, but in most cases offers fell below expectations. It appears that the size of the Daissee crop has been miscalculated, and for a variety of reasons much of the better grade Daissee has gone "underground". Daissee, or the so-called "Daissee" which is for sale over the jetty, however, is not in short supply, but the reason for this is clear. A large percentage of the fibre sold in this way is not real Daissee jute, but is Tossa from good Murshidabad, Western and jungle agencies, which can be procured in most cases for about Rs. 2 a maund below the Daissee price. Much of this jute is first consigned to Cossipore and then delivered to the mill by lorry and country-boats. Pucca Daissee sellers have naturally taken exception to this procedure, so prices in the *mokams* have been pushed up as they have attempted to get the normal premium over the inferior fibre which is being sold at inflated prices. This has priced the jute out of the market, and prompted operators to hold on to their stocks in the hope of an improvement.

The finished goods market is very firm. Reports from America on the high level of burlap consumption, coupled with the tension in the Middle East, caused prices to rise steadily in the second half of the week. Fairly good business was reported, both with overseas buyers and for local consumption. Over the week, heavy goods rates advanced by about Rs. 3 a 100 bags, while hessian improved about Rs. 1-4 a 100 yards. Interest at the beginning of the week was very limited and prices tended to fall back. But speculative activity and shipper covering at the lower levels prompted a recovery, so the losses were made good. After the week-end, prices continued to rise, becoming very firm late on Tuesday as events in and around the Suez Canal area were publicised. The forward section of sacking was particularly strong at this stage, and January-March shipment commanded a premium of up to Re. 1 a 100 bags over the near positions. Less than a month ago this position was at a discount. Similarly, in hessian, forward shipment has risen to par with near deliveries, as against a discount of over Re. 1 at the beginning of October. This has lent some confidence to the gunny market.

THE JUTE MARKETS

Manufactured Goods: At the opening of the gunny market last Thursday, prices showed a general improvement as rumours of Government interest prevailed. B Twills advanced by 8 annas, so ready shipment was quoted at Rs. 114-4 a 100 bags and January-March at Rs. 114-10. Hessian also showed a rise, with 40in. 10oz. 3 annas better at Rs. 41-13 and Rs. 41-11 a 100 yards respectively for near and forward shipment. Only small business was done at this level and prices began to fall as speculative elements took their profit. Prices recovered again, however, and by Saturday morning ready B Twills had jumped to Rs. 115 with forward shipment at an 8-anna premium. Both near and forward 40in. 10oz. was quoted at Rs. 41-11. Business was again put through and overseas enquiries for forward shipment caused these positions to improve, so that over the week-end the premium in heavy goods advanced to 12 annas. Apart from this, there was very little alteration in Monday's opening prices but a very steady sentiment prevailed. Local markets were interested in various types of heavy goods, and this, coupled with overseas interest in hessian, pushed prices up throughout the day. By Tuesday morning, B Twills were quoted at Rs. 115-8 and hessian at Rs. 42-2. During the day, prices were influenced by the situation in the Middle East, and the market started a steady rise, with business reported at each new level. By the close, heavy goods had improved by about Rs. 1-8 a 100 bags. The market

STEADY PRICE LEVEL

(FROM OUR DUNDEE CORRESPONDENT)

THE raw jute market is maintaining quite a firm tone. The upset of the communications in Pakistan appear to be primarily responsible for the higher level, and no doubt when conditions return to something like normal, after the distribution of foodgrains has been completed, jute will be plentiful. There may be so much coming forward that sellers may be glad to sell at prices slightly lower than those obtaining at the moment. At the moment, there is a scarcity of raw jute through the failure of supplies to come in from the upcountry markets in the volume that is usual at this time of the season. Rail, road and steamer communications are more or less occupied with the transit of rice, etc., of which imports are enormous, into the ports of Chittagong and Chalna. How long the disturbance will continue cannot be determined, but the position will surely ease some day. There never has been any question as to the quantity of jute available this season being insufficient to meet the world's requirements. It is just unfortunate that the material cannot be got down quickly enough for shippers to implement their contracts in time. There is a natural fear on the part of spinners here and on the Continent that they will not receive their purchases on the due date. Anything available for near delivery is being eagerly bought up and at prices above the shipment values.

Mill Firsts are quoted now at £108 a ton lowest and £110 has been paid for that quality on spot, while Mill Lightnings rule from £93. Mill Hearts from £87 and grade Mill Hearts from £82, good marks of Daissee-2/3 from £92.10s and grade from £87.10s, grade Tossa-2/3 from £101.10s and fours from £92, c.f. U.K. October-November-December shipment. Spinners are buying moderately. The better grades of jute yarns were raised in price from Tuesday, 23rd October. No change is made in ordinary "JCH" or "JCC" yarns, but the small sizes and the Rio yarns are up by £5 a ton. Rove is also up, but by only £2.15s a ton for 48lbs. and also 96lbs., while 200 lbs. is left unchanged. The cloth market remains fairly busy, with a quiet and steady trade passing. Calcutta goods are quiet and easy, with 40in. 10oz down to 63s 3d and 70oz. to 48s 6d October-November-December, and B Twills at 173s 9d. same shipments, all f.o.b. Calcutta.

U.S. BURLAP CONSUMPTION AND STOCKS

U.S. burlap consumption continued at a high level in September. At 80 million yards, it was only 3 million yards below August—a record month—and was 10 million yards more than during September a year ago. The momentum which got underway in August seems to be continuing; but undoubtedly September's good performance was helped along by a substantial pick-up in piecegoods business, chiefly for the automobile trade. U.S. burlap stocks showed little change in September, having declined 1 million yards from August, which were, however, 23 million yards more than at the end of September, 1955. At an estimated 258 million yards at the end of the month, 124 million yards were spots and 134 million yards were afloats. Appearing below are two tables which include the September figures—(1) based on member reports to the Textile Bag Manufacturers Association and the Burlap and Jute Association and (2) projected to represent the estimated consumption and stocks for the entire industry:

Engineering and Transport

PLANS TO INCREASE OIL PRODUCTION IN INDIA

GOVERNMENT SEEKING FOREIGN AID
(FROM A CORRESPONDENT)

THE Indian Government has been seeking the assistance of foreign oil companies in working out its plans for the exploration and developing of domestic petroleum resources. The Indian Minister for Natural Resources, Mr. K. D. Malaviya, has returned from a four-week tour of the United States, Canada and France, accompanied by a team of geologists and geophysicists, during which he studied the different aspects of the oil industry in these countries and had talks with the leaders of the industry there. The Production Minister, Mr. K. C. Reddy, who is in Moscow might discuss with Russian authorities how far they can help India in setting-up a modern oil refinery on a long-term credit basis.

According to informed sources, the U.K. and the United States are interested in developing India's oil resources on fairly reasonable terms, provided "there are sufficient incentives." The Indian Minister will soon make a number of proposals to the Indian Government involving large-scale U.S. technical assistance in oil exploration. Although it is at present not clear how large these programmes will be, they will be sponsored by the International Co-operation Administration (I.C.A.), which recruits key personnel from private industry for sending abroad. Mr. Malaviya has confirmed that the Indian Government wishes foreign oil companies to explore and produce oil in the country. "It should be easier for such companies to deal directly with the Government and the Government is willing to consider concessions that may act as incentives for them," he says. U.S. officials have told him that the United States would be prepared to consider any proposal for technical assistance favourably. American officials, however, appear to have indicated that in a venture like the oil business, private industry should have the fullest scope to function freely.

There has been a distinct appreciation of the mixed pattern of economy that India has been trying to adopt in recent years. It was categorically said by the Indian Minister for Natural Resources, during his tour, that there need be no fear of nationalisation of private oil holdings.

Canadian Aid

Canada has offered to undertake further airborne surveys in India for the exploration of oil under the Colombo Plan. Her techniques are said to be economical and quick. The Canadian oil industry and Government have shown much interest in the development of India's oil resources. A Canadian team has already made an aeromagnetic survey of the Jaisalmer area and the Gangetic valley, the results of which are being collated. The new Canadian team which will arrive later this year will cover areas which have not so far been surveyed, but which hold promise of oil according to other indications. The Indian Government is also studying the Canadian system of granting oil concessions. Under it, the Canadian Government has received \$550 million in 10 years from the sale of oil concessions to the "highest bidders."

Geologically, India has large sedimentation basins where oil may exist, such as the areas north of Bombay, in Punjab, in the Ganges valley, south of Kashmir and in the Rajasthan desert region. At present, exploration is going on in western India under Government direction and in eastern India, under the private sponsorship of the British-owned Assam Oil Company and the American-owned Standard Vacuum Organisation. But India lacks technicians. Soviet Russia has sent some and is willing to provide equipment for prospecting and exploration. The French and Germans are also willing to help with this phase.

The controversial question relating to the refinery for the crude oil produced in the Assam oilfields has been referred by the Indian Government to an 11-man committee with Mr. S. S. Vasisht, Adviser to the Ministry of Railways, as chairman. Besides a Rumanian and a French expert, the committee includes a representative of the Government of Assam, and another of the Assam Oil Company. Other members are officials. It is to report by the end of November. The site for the refinery will be decided after taking into account the relative merits of the location of the oilfield itself or within its close proximity, and the question of its location at a centre of consumption or at a place from which the areas of consumption could be easily fed. These merits are to be governed by factors such as the areas and quantities of consumption, the means of transport available or proposed, cost of transport of the material for the erection of the refinery and ancillaries and the crude oil or refinery products. The controversy about the location of the oil refinery centres on the respective claims of Calcutta and Assam. The Assam Oil Company has suggested Calcutta on technical and economic grounds, while Assam pleads that the location of the refinery near the oilfield is vital to the State's economy and the only way of mitigating its backwardness.

Oil Yield in Assam

According to Mr. W. B. Metre, senior geologist of the Assam Oil Company, the proved and probable resources in the Nahorkatiya area in Assam are sufficient to plan a production target of

2,500,000 tons of oil a year, in addition to 45,000,000 cubic feet of gas a day, equivalent to 600,000 tons of fuel a year. The declining production of the Digboi refinery is likely to average 300,000 tons of oil a year during the next three years, and on the evidence, India can be expected to meet 56 percent of her present estimated crude oil needs of 5,000,000 tons. In Nahorkatiya, 19 oil wells have been drilled so far, including five "wild-cats," and of these only two have been completed as successful producers. Before the discovery of oil in Nahorkatiya, over 200 deep and shallow holes were drilled outside Digboi.

Drilling in West Bengal

The Standard Vacuum Oil Company which has received exploration licences from the Indian Government for the Indo-Stanvac oil exploration project will soon have to obtain a prospecting licence too. The company has ordered a drilling rig and other equipment required for trial drilling in the West Bengal basin. The Indo-Stanvac project is based on an agreement between the Indian Government and the Standard Vacuum Oil Company of New York, under which the company has obtained the right to explore and, if successful, produce oil in an area of 10,000 square miles in West Bengal. The proposed drilling project will be manned by Indian and American technicians. The U.S. experts will train Indian technicians.

The proposal from the private sector for establishing an oil refinery in Bhavnagar, Saurashtra, on India's west coast, has been referred by the Indian Government to an expert committee led by Mr. S. S. Vasisht. The sponsors of the proposal have agreed to allow the refinery to function under Government control or in the public sector with the Government owning a majority of the shares. The project is estimated to cost about £15 million (Rs. 20 crores). The Iranian Oil Company and a French firm have agreed to finance the project between them to the extent of one-third of its capital cost. The location of the refinery will be decided by the committee after taking into account the relative merits of the location of the oilfields or within their close proximity, areas of consumption, and other connected factors. It is, however, uncertain whether the Indian Government will approve the setting up of any more refineries, besides the one proposed in Assam or Calcutta.

Suez and Oil for India

Most of India's oil supplies do not come through the Suez Canal, but the dispute over the Canal would affect India by pushing up freight rates. According to sources close to the oil distributing firms functioning in India, there will be at the most a short interruption in the regular supply line; as happened at the time of the Abadan trouble over nationalisation. It is, however, likely that with the increased demand for oil and steel under the second five year plan, there might arise a shortage of steel containers for transporting oil and storing it. Oil wagons, which carry oil from the main installations to various places in the country, may also be in short supply for about 18 months from now. However, oil companies are making efforts to lay in adequate stocks before the wagon shortage becomes acute.

POPULARITY OF BRITISH TURBOPROP PLANES

DEVELOPMENTS IN U.K. AND U.S.A.

THERE are two-and-a-half times as many British turboprop airliners on order in the free world as there are others—437, against 173. The foreign aircraft are made up of two types, the American *Electra*, offered with Rolls-Royce Tyne engines as alternative power-plants and the Dutch *Friendship* which not only uses Rolls-Royce Dart engines, but British accessories and other equipment. Of the 243 turboprop air-liners on order in the United States, 100 are British. A turboprop consists of a jet engine whose efflux jet is used to turn a turbine which drives an airscrew. There is also a small residual amount of thrust which is quoted when stating the power of the engine.

Rolls-Royce pioneered the development of the turboprop and, as soon as the last war ended, proceeded to lay the foundations of that superiority in the turboprop field which Britain enjoys today. The Americans, who by agreement had had a monopoly of the transport field during the war, pressed on with piston-engined airliners, "stretched" versions of which are not only still being produced, but evolved. It was, therefore, a shock to the American industry when *Viscounts* penetrated the domestic market—a feat never previously achieved by a British aircraft in quantity. The *Viscount*, which began airline operations in 1953 with B.E.A., was the first and is still the only turboprop airliner in service in the world. The *Britannia* is expected to start service shortly, but no foreign competitor is expected to be in service before 1958 at the earliest.

Why should a great industrial power like the United States get left behind in this way? American airliner requirements are dictated to a large extent by official needs. Some 1,100 "militarised" airliners are in service with the U.S.A.F. today—all piston-engined—and it was not until the Air Force foresaw the need of a fast tanker to refuel its B47 and B52 jet bombers that the adoption of pure-jet airliners—in which the Americans at that time had little faith—was considered. The

KC135 tanker was the result and this aircraft was ordered, in due course, as the 707 airliner. The DC8 followed shortly afterwards. Thus, until very recently anyway, there was no call for military turboprops in the U.S.A. Civil development suffered accordingly.

Long-range Airliners

In the U.K. for a variety of reasons—some good and some bad—the producers have seen fit not to produce a long-range pure-jet airliner. They have, however, in the *Britannia* 310 and its proposed variants a first-rate long-range airliner due to be in service next year—almost two years before the DC 8 or 707. *Britannias* will be slower, but quieter and more economical than the American jets. They will not need lengthened runways. A recent survey by Flight indicated that, to prepare for DC 8 and 707 operation, runways at a minimum of 58 international airports would have to be lengthened and strengthened at a cost of £80 million. This does not take into account some 70 other alternative, or diversion, airports also affected. Of course, at a number of these aerodromes, lengthening runways is not a practical proposition because of location and other considerations.

The belief is growing in certain quarters in the United States that perhaps she is again going to be left behind in the next jet development stage. The British, they argue, are using turboprops for long routes, economical aircraft that will be in service next year costing about £1 million, against the £2½ million of the big American jets. In 1955 or thereabouts, when DC 8s and 707s are still entering service, the British may produce still faster airliners equipped with high-lift devices for really slow take-off and landing, such as the "jet-flap," which would render the American jets obsolete in performance and, perhaps, economy.

U.K. AIRCRAFT EXPORTS CREATE NEW RECORD

BIG DEMAND FOR AERO-ENGINES

THE British aircraft industry exports more in a fortnight than any other European country does in a year. Mr. Reginald Maulding, U. K. Minister of Supply, stated recently in assessing the value of the industry's current export drive to the national economy. The latest export figures to which he was referring show that the September total of £7,728,584 brings the aggregate for the first nine months of 1956 to £80,786,663, which is an increase of no less than 71.5 percent over the same period during 1955—itsself, a record year. Mr. Maulding described "a magnificent record of achievement". Of this total, the sale of aircraft totalled £56.7 million, engines £20.7 million, electrical equipment £1.9 million, tyres £491,000, and instruments just over £1 million. The U.S.A. was the U.K.'s best customer, buying £11½ million worth of aircraft. Australia bought almost £10 million and Sweden more than £4½ million worth.

World Market for Aircraft

It has been estimated that between 1958-1956, the world market for airliners will grow to about 2,700 aircraft, worth, with spares, more than £2,500 million. This will provide a rich harvest not only for airframe manufacturers but for engine constructors. Recent developments confirm that British companies are very much alive to this fact. Rolls-Royce, for example, are currently marketing four types of engine for the civil market. There are at present almost 500 airliners—many of them foreign—on order, powered by Rolls-Royce gas-turbine engines, and this is by far the largest number from any company in the world. The by-pass Conway has been specified for versions of the American DC 8 and 707, Avons, for the *Comet* and French *Caravelle*, Darts for the *Viscount* and Dutch *Friendship*, and Tyne for the *Avanguard* and American *Electra*. Although the *Electra* is not due to fly for some time yet, the manufacturer is already considering the purchase of two Tyne engines for evaluation. Meanwhile, Darts have logged almost 1½ million airline hours, and are still the only gas-turbine engines in airline service in the world.

The *Friendship*, orders for which are now, with options, approaching the 100 mark, is likely to provide a sizeable market for Darts for years to come. The Dart 10, scheduled for *Friendships* in 1960, will develop 3,000 h.p. and, already, Rolls-Royce are committed to build nearly 2,000 of these engines to meet existing *Viscount* and *Friendship* orders.

Bristol are engaged on developing the *Olympus* 6 which, with 16,000 lbs. thrust, is the most powerful engine yet announced in the world. Its great power and fuel economy make it eminently suited for installation in large airliners as well as in bomber aircraft. A batch of *Olympus* 10s—power-plant of the Vulcan bomber—has just been returned to the maker by the R.A.F. for overhaul, and their condition is such that the overhaul life may be extended shortly—a point of great interest to potential airline customers.

Most Powerful Engine

Napier are undertaking a powerful sales campaign in the United States following interest shown in the *Eland* turboprop engine during the recent I.A.T.A. conference. American airlines equipped with DC 6Bs, and with earlier marks of *Constellations* and *Conquairs*, are being encouraged to convert from piston to gas-turbine power. Reports indicate that *Eland* conversion kits are arousing interest. U. S. Army representatives have visited the Napier factory in this country to examine *Oryx*

and *Gazelle* powerplants for use in helicopters. These engines are advanced technically, and have already completed many hours of test running.

Military Engines

In the military field, de Havilland, engaged on *Cyrion Junior* and *Specter* development, have been, with other British manufacturers, negotiating for license agreements with German companies. Western Germany is already evolving advanced airframes, but it will be dependent on foreign engines for some time to come. Gas-turbine and rocket engines cannot be built at a moment's notice from scratch. Smaller civil aircraft are not forgotten either. Installation of an Alvis Leonides engine has resulted in the revival of an aircraft which was discarded some years ago because of lack of power. This is the Canadian *Husky*, which made its first with its new engine early in July. Flying time has since accumulated rapidly and the manufacturer states that performance is outstanding. Two other aircraft in use in Canada may be re-engined with *Leonides*, thus extending yet further a promising field in the dollar market. All *Husky* conversion work will be undertaken in Vancouver.

EXTRA IRON AND STEEL QUOTA FOR PROCESSING FACTORIES

With the object of promoting the export of Indian iron and steel goods, the Government of India announced on 16th November, 1952, its decision to make available to manufacturers additional quantities of iron and steel subject to certain conditions. The latest position is that additional allotment is available to the extent of 100 percent for all categories of steel other than sheets and plates and 10 percent of the manufacturers' quota for plates and sheets used in goods to be exported. This concession, says a Press note of the Engineering Export Promotion Council, is not largely availed of by engineering concerns. The Council requests them to avail themselves of this facility and in case of any procedural difficulty, they have been advised to contact it. As announced by the Government, the conditions governing the eligibility for additional allotment are as follows: (1) The manufacturer desiring additional allocation of iron and steel on the basis of exported articles shall produce satisfactory documentary evidence to prove that the articles for which additional allotments of iron and steel are claimed were actually manufactured by him and exported to a foreign country (For the purpose of this scheme, export to Nepal and the foreign possessions in India will not be treated as exports to a foreign country). (2) The additional allocation will be made only with reference to the article the export price of which is not less than Rs. 1,000 a ton. (3) The additional allotment of sheets and plates in a quarter will not exceed 10 percent of the quota of the manufacturer in the previous quarter, and of other items of iron and steel 20 percent of such quota.

Manufacturers who wish to take advantage of the scheme should apply by the first week of each quarter to the Industrial Adviser (Engineering), Development Wing, Shahjehan Road, New Delhi, for additional allotments, together with the following particulars and documents: (a) a full description of each article exported in the preceding quarter, the weight of each article, the number of articles of each kind exported, the export price charged for each article and the country to which exported, supported by the relevant documents; (b) a certificate from the State Director of Industries to the effect that the articles were manufactured by the manufacturer; and (c) the quantity of each category of iron and steel consumed by the manufacturer in the production of each article exported. In cases where it is definitely known that a manufacturer will export his products at least up to the limits indicated above, additional allotments of iron and steel may be authorised in advance during any period, necessary adjustments being made in the succeeding period on receipt of full particulars after actual export.

BOMBAY OIL TERMINAL NEARING COMPLETION

The three jetties of the new Rs. 10-crore marine oil terminal in Butcher Island, three and a half miles east of the Bombay harbour, are nearing completion. Two jetties are already in operation for crude oil and black oils, and the third is expected to be completed in 1957. The terminal is being built by the Bombay Port Trust. It will handle three large oil tanker of 34 feet draft simultaneously day or night. The jetty is L-shaped and 1,600 feet long. The longer arm of the L-shaped berthing jetty is so constructed that when tankers are in berth they will be in line with the tidal flow. Six submarine pipelines, each two and a half miles long, connect the terminal with the oil refineries in Trombay. These pipelines carry crude direct to the Burmah-Shell Refinery tank farm and are also used for shipment of finished products to other ports in India.

FIRST STEEL WORKS TO USE NUCLEAR POWER

On 17th October, the Workington Iron and Steel Company, a branch of the United Steel Companies Limited, became the first steel works in the world to use electric power generated by atomic energy. Earlier that day, the Queen of England visited the Calder Hall atomic power-station and formally opened the link connecting the station's 46 m.w. output with the national grid. Then she travelled to Workington

where, by pressing a release switch, she introduced the flow of electricity from Calder Hall to help drive the 2,500 h.p. and 2,750 h.p. D.C. motors of the Company's rail mill, which has been newly modernised at a cost of over £1 million. The Queen's visit coincided with the centenary of the Workington Iron and Steel Company, which was founded as the Workington Manganese Iron Company in 1856, in order to exploit the local deposits of the rich Cumberland iron ore. To mark the centenary of the company, the Queen unveiled a commemorative plaque in a new apprentices' training centre at the works. The plaque outside the Bessemer Memorial School, as it is to be called, also records the centenary of Sir Henry Bessemer's first announcement of his revolutionary steel-making process. Bessemer was the first to appreciate that Cumber-land hematite iron ore was particularly well suited to his process, and to this day Workington continues to use the original Bessemer steel-making method.

T.I.S.C.O. ORDERS SEVEN U.S. LOCOMOTIVES

The Tata Iron and Steel Company has ordered seven industrial locomotives worth over \$5,00,000 from the International General Electric Company. In making the announcement, General Electric said that the locomotives were slated for use as part of T.I.S.C.O.'s major plant expansion. The locomotives to be built will include two of the largest diesel-electric units built by the U.S. company, with ratings of 115 tons and 720 horse power. The others include four 80-ton diesel-electric and one 25-ton diesel-electric. Because they will operate in temperatures ranging up to 120 degrees and 100 percent humidity, as well as extremely dusty conditions, all will be fitted with air filters to the engine cab and traction motors. All will be broad (66 inches) gauge. Delivery is scheduled to begin in February, 1958, and the last units are slated for shipment in August.

RECORD U.S. STEEL OUTPUT IN 1957 FORECAST

Steel production in the United States of between 116 million and 120 million tons is being forecast for next year by the industry's market experts in their reports to top management. The *Wall Street Journal*, in a survey of steel industry factors, notes that high output might make 1957 one of the best production years on record, if not the best. Some industrial economists believe that there is a good chance of 1957 surpassing the peak production of 1955 when 117 million tons was achieved, the journal notes. Steel is now being made at the rate of about 130 million tons a year, the fastest rate ever, with production during the first week of October, scheduled at 102 percent of the rated capacity. The *Journal* points out that demand continues strong from almost every major consuming industry and the above-capacity level of operations, probably, will be maintained for the balance of the year to raise production for this year to around 115 million tons. An important uncertainty for steel producers, according to the *Journal*, is how the no-strike agreement with labour will affect steel buying and inventory policies. In past years, as labour contract deadlines approached, consumers built up stocks. They will not be confronted with strike threats next year, now that the industry and the union have a three-year no-strike contract. As a result, a good deal of the pressure for the spring build-up of inventories is likely to be off. Although mills generally have not opened their books for the first quarter orders, they have sampled their customers' plans and are convinced that orders will be plentiful.

B.O.A.C. TO BUY U.S. BOEINGS

The U.K. Government has given permission to British Overseas Airways Corporation to buy 15 American Boeing 707 jet airliners at an approximate cost of £44 million. The aircraft will be powered by British Rolls-Royce Conway engines and will be used on the Corporation's international routes, mainly in the western hemisphere. The Rolls-Royce Conway, which is the only by-pass engine in the world, has already been chosen by Air-India International for its three Boeings. The power plant is lighter than other comparable engines and has a much lower fuel consumption. The 707 can carry up to 147 passengers and its makers claim a cruising speed of 550 miles an hour and a range of 5,000 miles. When Mr. Gerard d'Arlanger became chairman of B.O.A.C. earlier this year, one of his first actions was to set up a committee to examine its aircraft requirements for the next ten years. Most of the Corporation's future needs had already been met by orders for *Comet* *Fours* and several marks of *Britannias*, but B.O.A.C. decided that if it was adequately to meet the severe competition on the North Atlantic, it would have to buy one of the very large American turbo-jet airliners.

In selecting the Boeing airliner, B.O.A.C. has been influenced by the fact that great deal of flying experience has already been obtained with a military version of it. The *Boeing* 707, which will be available for delivery in Europe about 1960, will be less flexible than the *Comet* and *Britannias* because it will require specially long and strong runways which are at present available at only a limited number of airports. Discussions are, however, taking place with leading British aircraft firms on the design of a new supersonic jet airliner which would be sufficiently flexible to meet B.O.A.C. requirements on world-wide routes. Such an aircraft should be ready to enter passenger service in 1962.

U.K. Tea Stocks

U. K. stocks of tea on 19th October, amounted to 108.7 million lbs. against 111.4 million lbs. a year ago (converted at 110 lbs. a package).

COCHIN TEA SALES

At Sale No. 29, there was a fair demand. Low Mediums and Mediums were 2 annas to 3 annas easier. Good Mediums and better liquorings were 4 annas to 6 annas lower. Whole Leaf grades had a good demand at barely steady rates.

NORTH INDIAN TEA CROP REPORTS

The following summary of crop and weather telegrams has been received for the month of September, 1956.

Upper Assam: Weather dry; rain badly wanted; hot dry weather interfering with outturn; unless rain falls shortly leaf prospects will generally be poor; immediate prospects fair; outturn last month about normal to good.

Central Assam: Weather dry and interfering with outturn; unless rain falls shortly leaf prospects will generally be poor; immediate prospects fair to bad; outturn last month about normal; crops below normal at Jorhat.

Lower Assam: Weather dry; the monsoon has ceased and an early cold weather seems imminent; weather too cold for the time of year at Bishnauth and is checking leaf, but hot at Tezpur where rain is much wanted, unless rain falls shortly leaf prospects will generally be poor; looper attacks heavy on some gardens in Borsola.

North Cachar: The monsoon has ceased and an early cold weather seems imminent; rainfall for the month has been deficient at North Cachar; immediate prospects fair to good; outturn last month about normal; blight not so severe.

South Cachar: Weather generally dry and is interfering with outturn; immediate prospects generally fair; outturn last month normal to good; helopeltis prevalent throughout the district; black rot prevalent in Hailakandi and Longai.

Eastern Doars: Weather dry; the monsoon has practically ceased and an early cold weather is imminent; immediate prospects fair; outturn last month normal to good; outturn to date considerably over last year at Kalchini; black rot lifting at Kalchini.

Central Doars: Weather seasonable; the monsoon has practically ceased and an early cold weather is imminent; immediate prospects fair to good; outturn last month normal; outturn to date considerably over last year; helopeltis prevalent at Binnaguri; despatch position remains acute at Binnaguri.

Western Doars: Weather generally seasonable but dry at Nagrakata; rainfall for the month has been deficient at Oodlabari and Nagrakata; immediate prospects fair to good; outturn last month about normal; outturn to date considerably over last year in Chulsa; black rot prevalent in Oodlabari and Chulsa; helopeltis prevalent in Cachar, but is lifting at Oodlabari.

Darjeeling: Weather seasonable; crop prospects generally unfavourable; outturn last month poor; helopeltis prevalent; blight blight prevalent.

Terai: Weather seasonable; crop prospects fair; outturn last month normal; helopeltis prevalent in the north and noticeable in the south.

Calcutta Markets

DECLINING TREND AT TEA EXPORT SALE

FAIR GENERAL DEMAND FOR DUSTS

AT Sale No. 19, held on 29th and 30th October, offerings at the Export Auction consisted of 62,200 packages. The market opened with a good general demand, but this weakened as the Sale progressed. Medium Assam Broken Pekoes opened steady, but eased later and at the close, were selling about 1 anna below last rates. C.T.C. teas and the better kinds of orthodox manufacture were 3 to 4 annas easier, while Whole Leaf grades were 1 to 2 annas lower and sometimes more. Clean Common Broken were 1 anna dearer, while Clean Black Fannings and non-wither Doars were a strong feature and were often 1 to 2 annas dearer. Darjeeling teas met with better demand and selected lines sold at dearer rates.

Quotations

	1956
Clean Black Pekoe	2 1 0
Plain B.P.	1 13 0 to 1 13 6
Medium Assam B.P.	2 1 0 to 2 2 0
Best C.T.C. Assam B.P.	3 0 0

At the Internal Sale, Dust offerings consisted of 18,949 packages. There was a fair general demand at easier rates. The Sale eased as it progressed and at the close, most kinds were selling a full 4 annas below brokers' valuations. The best liquoring C.T.C. descriptions, were 1 to 2 annas easier, while the medium C.T.C.'s were an irregular 2 to 4 annas easier. Assam Dust of orthodox manufacture declined by 2 to 4 annas, while black exportable types and non-wither Doars eased by 2 to 3 annas.

Quotations

	1956
Medium Doars Dust	2 2 0 to 2 3 0
Medium Assam Grains Dust	2 3 0
Medium Assam C.T.C. Dust	2 8 0 to 2 9 0
Best Assam C.T.C. Dust	2 14 0

Leaf catalogues consisted of 1,617 packages for which there was a fair demand at irregularly easier rates.

SECTIONAL RISE IN FREIGHT RATES

HIGHER rates have again been conceded in the American coal trades, and there has been a limited but steady demand for vessels on time charter. Single voyages Hampton Roads to the Continent were arranged at the higher rate of 76s and to Japan at \$(U.S.)21.50. Calcutta-Port Sudan paid 115s for a handy-sized November loader. Considerable activity was evident in the Indian ore trades with Vizagapatam-Northern Range paying \$(U.S.)24 and Madras to the same destination \$(U.S.)24.50. East Coast India (one port) Gdynia or Gdansk conceded 145s f.i.o. Bombay Genoa paid 116s f.i.o. and Mormugao-Rijeka 112s. In the time charter section a 9,300-ton motorship obtained 52s 6d for 12 months' trading and a 13,000-ton fast motorship \$(U.S.)7.60 for five months. Two Liberty ships obtained \$(U.S.)5.65 and 5.60 for 12 months and another similar ship \$(U.S.)5.10 for 33 to 37 months' trading. Black Sea-India was arranged at 126s for steel goods while in the grain trades, North Pacific-Bombay paid \$(U.S.)26.50 and U.S. Gulf-W.C.I. 250s.

LINSEED IMPROVES

After a very weak opening last week, slightly better conditions were noted at the close, following enquiries from crushers, chiefly for ready delivery. Arrivals were still very poor, and ready stocks were scarce. Although overseas prices were very much out of line, a few local enquiries helped strengthen the market. Latest quotations were based on ready at Rs. 23-12 a maund.

SUGAR PRICES FALL

During the week ended 31st October, sugar sales in the Calcutta market averaged 4,500 bags daily. Arrivals a day were 3,000 bags and stocks totalled 120,000 bags. Rates for ready sugar, ex-Kantapur delivery, were Rs. 31 for ordinary grain and Rs. 32-12 for big grain. The market went dull again, and prices fell by 6 annas to 8 annas a maund.

HIDES AND SKINS

The market in skins was firm and prices showed an upward tendency. Stocks were less than in the preceding week.

Bazaar Sales

(Between 23rd October and 29th October, 1956)
Cowhides: Wet salted (Ord.) 10,000 pcs. on the basis of Annas 9; Wet salted (Ord.) 6,000 pcs. on the basis of Rs. 6-8 to Rs. 8-6; Wet salted (Slaughtered) 16,800 pcs. on the basis of Rs. 13-8 to Rs. 20.
Goatskins: Wet salted (Daissee, Killed) 58,490 pcs. on the basis of Rs. 260 to Rs. 310 and Rs. 335 to Rs. 350; Assam-Dinajpur 31,700 pcs. on the basis of Rs. 220 to Rs. 310; Puneah-Kisanganj 2,500 pcs. on the basis of Rs. 255 to Rs. 265; Muzafferpore 13,000 pcs. on the basis of Rs. 275 to Rs. 285.

Bazaar Stocks

(29th October, 1956)
Cowhides: Wet salted 1,72,000 pcs.
Goatskins: Wet salted (Daissee, Killed) 44,000 pcs.; Muzafferpore-Patna-Pakur-Puneah-Kisanganj 1,66,000 pcs.; Assam-Dinajpur-Jalpaiguri 38,000 pcs.

A=Held by the Govt. of India.

JOINT STOCK COMPANIES PREFERENCE SHARES

Dividends are cumulative and shares carry a preferential claim on the property for the payment of capital and on the profits for dividend except in case of companies marked otherwise. Months against names of companies indicate approximately times of payment of dividends.

COAL COMPANIES

O. Po. F. and Dd. indicate Ordinary Preferred Ordinary Founders' and Deferred shares respectively. P next to the name of the company indicates that the company also has Preference Shares. Figures in "accounts closed" column indicate the months of the calendar year in which accounts are closed. For Managing Agents refer to the Key (last page) under the numbers indicated.

THE THREAT TO WORLD PEACE

A NEW OPPORTUNITY FOR THE U.N.

THE world has felt the hot breath of war in the past ten days. It has not been a pleasant experience and that may account for the confused thinking which has been going on about events which require dispassionate analysis, and for the over-hasty conclusions which are being drawn from them. It certainly explains the unprecedented expression of popular emotion in almost every country of the world against those who have broken the peace. A small and independent Arab nation has been attacked by its even smaller neighbour on the plea of anticipating aggression and two great powers have intervened, ostensibly to separate the contestants and safeguard their own and the world's interests in an object of international importance—the Suez Canal. Before following popular opinion into the simple-minded trap of condemning aggressors the first to open fire, it will serve the interests of clear thinking, and therefore a sensible and lasting solution, if the background to the affair is examined and some idea is formulated of what the world really wants the outcome to be. It will not help towards world peace to howl for a return to the status quo any more than it will for the United Nations to exonerate themselves from the real blame for the whole thing.

The reasons for Israel's attack on Egypt are clear enough. A small and weak State, completely surrounded on its land frontiers by avowedly hostile neighbours, must either have powerful friends or international guarantees if it is to survive. Israel has no friends. The patron of its independence, the United States, has recently interpreted its duty to its protégé as the propitiation of the Arab States with arms shipments; support from this source has been limited to the financial, and on private account. Britain's traditional rôle as protector and arbiter to the Arab countries, together with her own vital interest in the Suez Canal, has led her to ignore Israel's legitimate claims and turn a blind eye to the innumerable pin-pricks which that State has had to endure. The supporter of Jewish nationalism when there was mischief to be made out of it, the Soviet Union, has lately turned to other and more fruitful opportunities for stirring up trouble. Most regrettable of all, the self-appointed champions of freedom and independence for small nations, the "neutralists", have preferred to let their hatred of colonialism stand in the way of their friendship and support for the one party which needs it most. It is not surprising therefore that the world's attitude towards Israel, as expressed through the United Nations, should be indecisive, selfish, cowardly and lazy. Apart from pious resolutions and the maintenance of an undermined truce commission on the disputed frontiers, the U.N. has done nothing to guarantee Israel against her justifiable fears of aggression from countries which are technically at war with her, which are still smarting from earlier military defeats and whose Governments are unashamed in their promises to wipe Israel off the map as soon as they can secure the arms and muster the unity to do so. Under such circumstances as these, and with the growing fear that the Suez Canal issue would be settled without reference to Israel's rightful claims for its free use and that the unity of command between Egypt, Jordan and Syria was at hand, it is scarcely surprising that Israel should decide to take the law into her own hands. The Jews' own record is not an unblemished one, and it can be claimed that there is no excuse for resort to force on any occasion, however desperate. But the fact remains that Israel has only done what she considers to be necessary for her continued existence as a nation; if she has had to disturb the peace in the process, it might correctly be said that the world has only itself to blame.

Among the many unfortunate results of Israel's action is that it has given the real fly in the Middle Eastern ointment, President Nasser, and his mischief-making patron, the Soviet Union, the opportunity to enlist the open support not only of the self-interested parties to the dispute, but of peace-

loving popular opinion throughout the world. The extent to which a military dictator who differs only in the amount of strength he is able to command from those two exponents of armed aggression and individual subjugation, Hitler and Mussolini, has been able to enlist world opinion to his side, can only be explained by an all-pervading desire for peace at any price. The fact that it was this same wish which provided the philosophical basis for the disastrous policy of appeasement, and therefore led directly to the second world war, appears to have been lost sight of completely. Even the British public, whose memory of the damage that was done through fear of taking action, indifference to the legitimate interests of weak States and the willingness to accept the word of dictators, should be more vivid than most, appears to have forgotten the true lessons of the 'thirties. These are, that a dictator once set on the road to national self-assertion cannot turn back without losing his power and that a small preventive action undertaken in time can save a large and catastrophic one later. If the intervention of Britain and France has been undertaken with these lessons in mind, then the world will eventually owe them its gratitude. The fact that it has shown no sign of doing that yet, need not discourage the two great powers, history will be their vindicator.

What are the true motives of Britain and France is not yet clear. The world has a right to its suspicions. The exasperation about the seizure of the Suez Canal was plain enough to see and so was the tendency early in the dispute to seek a conclusion by force. There is no denying that Israel's attack provided a heaven-sent opportunity for cutting free from the frustrations of a negotiated settlement and disposing of the Nasser menace into the bargain. It is even reasonable to suspect collusion. In the middle of the Twentieth Century, these constitute dishonourable motives, although the ends sought may benefit the world at large as much as they are calculated to benefit the interests of the powers concerned. Sir Anthony Eden has denied that the actions of Britain and France have been moved by any such feelings. He claims that the two have acted in a way similar to that chosen by the United States in going to the aid of South Korea, that their desire is merely to separate the contestants and guarantee the security of the Suez Canal.

policies of ambitious socialists in the opulent West. As Mr. Santhanam himself was obliged to admit, "in a poor country like India, the burden of taxation cannot be as heavy as in richer countries." That being so, there can hardly be much practical purpose in glancing enviously at foreign Governments which are in a position to soak up larger proportions of their people's incomes.

There are two salient points which need to be borne in mind in discussing India's taxation policies for the future. The first is the Government's apparent determination to raise the financial resources it considers necessary for implementing the second five year plan—a determination which may have been redirected towards increased taxation and borrowing as the serious inflationary dangers of deficit financing have become evident in recent months. The second is the clear need to avoid damaging the incentives to greater personal and collective effort on which the progress of a free society depends. At the Press conference, Mr. Santhanam seemed to be preoccupied almost exclusively with the first of these considerations. He ignored the second, and in doing so was perhaps merely following the fashion advocated by Dr. John Matthai, who stated some time ago that the effects of monetary rewards on individual effort were often greatly exaggerated. It would be unfortunate, however, if this fashion were to spread, for the two requirements are not wholly opposed. The form of taxation which at present most seriously undermines incentives is the direct one; there is still a considerable field open for indirect taxation, especially in the agricultural sector, which has not been properly exploited. If the country's first need is greater investment in economic expansion, it is important to bear in mind that such investment as there is comes mainly from that section of the people on whom direct taxation falls most heavily. As such, to a large extent it involves merely the transfer of resources from private to public investment. If new resources are to be found, the taxation net will need to be cast over a far wider section of the population. For cheapness, and administrative convenience, this can best be done by extending the range and increasing the impact of indirect taxation. In this way, it is possible to secure, for productive investment a large part of the resources which normally disappear into boards or which are devoted to wasteful expenditure.

Mr. Santhanam subscribed to a common fallacy when he asserted that "it is not possible to take steps to increase the national income without simultaneously raising the level of taxation." The fallacy is based on the erroneous assumption that unless the Government mulcts the people of their money by taxing them, and then invests the money itself, it will simply go to waste. The record of the private sector, not only in India but in a much more spectacular way in West Germany, disproves this assumption. It is true that money will not be invested if economic enterprise is straitjacketed by irrational government regulations, if returns are limited, and if risk-taking is regarded as morally deplorable. The encouragements and discouragements are part of the general social climate on which official policies have a strong influence; the Indian Government's have not been particularly helpful in recent years, but the domestic investor has shown no inclination yet to decline the challenge which may come his way in a freer and more fruitful economy.

EFFECTS OF FREER EUROPEAN TRADE ON U.K. ECONOMY ADJUSTMENTS WILL BE PAINFUL.

BRITISH ideas on the European common market are taking more formal shape, both in the Government and in such bodies as the Federation of British Industries. But the favourable response of what appears to be the majority opinion has aroused vigorous opposition among the minority, and it is clear that if the scheme, in some form, is eventually approved there will be numerous demands for special exemption from the lowering—and finally elimination—of intra-European tariffs. These demands will be based on a precedent, the exemption of agricultural and horticultural produce; for Britain, like many other countries, protects her own food-producers no matter what policy she follows for other trade, and Britain, particularly, needs scope to grant preferential treatment to other food-producers of the Commonwealth. The British Government, and the country's industrial and trading associations, must decide whether they favour the principle of free trade with Europe in manufactured goods, and, if so, whether they are willing to accept its practical implications. It is futile to accept the principle and then allow exceptions whenever an industry sees its interests threatened. The plan is not worth serious consideration unless it "threatens" some industries, for more foreign goods must enter each country if more domestic goods are to be exported from each.

There are various methods of estimating the likely effects of the scheme on British trade, but

none of them can be accurate in detail. Obviously, those industries which have been most successful in export trade in recent years, thereby proving that they can compete abroad, can expect further expansion if Europe's internal tariffs are removed, and those which have declined even while protected must expect to suffer more without protection. But experience in the present circumstances is only an approximate guide to experience in the new circumstances, for tariffs are not all level and the elimination of some will be more effective than the elimination of others. If we define the expanding export industries as those whose exports have increased more than the average and the contracting ones as those whose exports have increased less than the average we find that the engineering groups (machinery, electrical equipment, vehicles, ships, and aircraft) and the chemical industry have expanded notably, while the textile industries have contracted seriously, since the pre-war era. (However, by comparison with 1951 the vehicle group—in its broad sense—diminished last year, while in 1951, compared with 1938, the wool industry had expanded.) Some lighter products involving big and costly equipment, such as paper (but not synthetic fibres), have also made good progress in recent years, and numerous manufactures, such as toys and food products, have sold well abroad. But in the broad sense the heavier metal-based goods are evidently the most dynamic element in Britain's export trade, while lighter "soft" goods have declined to an inferior position.

This is not, however, necessarily the pattern of development that will result if Britain is associated with a free-trade Europe. Some British import duties are high—for instance, 33-1/3 percent on

motor-cars, 50 percent on cameras; and purchase-tax applicable to many consumer-goods, irrespective of their origin, is charged as a percentage of total value, including import-duty. Thus, in the metal-based category, European cars would be much more favourably priced in the British market if the import-duty were removed. On the other hand, in the "soft" category, Britain's higher-quality textiles—especially wool fabrics—could probably expand their sales in Europe substantially if import duties were removed. As it is a principle of the plan that the more efficient producers shall expand their sales in the territory of the less efficient producers the weaker firms in Britain's weaker industries would necessarily (and the weaker ones in the stronger industries would probably) be absorbed or eliminated in due time. This is a natural process of adjustment, however painful to those concerned. A general inability to compete would be a very different matter. It would quickly result in a substantial surplus of imports over exports, and devaluation of the currency would logically follow, unless corrective action were taken promptly. It is suggested that France (certainly not one of the strongest advocates of the free-trade plan) faces such a dilemma; but not Britain. Britain has this year stabilised her share of world trade, which had been diminishing, and she might well increase her share of European trade if competition (which is essentially deflationary) compelled her manufacturers and traders to exert themselves a little more.

In finance, Britain would almost certainly gain from liberalisation of European trade—assuming that she were associated with the movement. London has, indeed, strong competitors in such financial centres as Amsterdam, but her bankers are confident that expansion of European trade would bring more financial business (including insurance) to London. This tendency would develop more strongly when the economies of production and marketing on a larger scale in Europe as a whole enabled the European countries—not only Britain—to accumulate more capital; for some of this capital would certainly be invested in the non-European sterling area, mainly, no doubt, through London. It is foolish to pretend that Britain's own relations with the other countries of the Commonwealth would be unaffected by such a momentous change in international trade. Britain

would be primarily an European country, only secondarily a Commonwealth country. The existing system of tariffs is, however, obsolete. Britain was predominantly a free-trade country until a protective policy was adopted in 1932. The Ottawa Agreements, complementary to and qualifying the Import Duties Act of that year, allowed Commonwealth products to enter the country without duty or at preferential rates. But the idea embodied in those agreements, that Britain was the manufacturer and the other countries were the primary-producers of the Commonwealth, is no longer tenable. Britain is jealously protecting her agriculture, and the other countries are proudly developing their industries. The Commonwealth itself is not a free-trade area.

CURRENT COIN

Dalmia Cement Rights Issue.—Dalmia Cement (Bharat) Ltd., proposes to make a rights issue of ordinary and preference shares in order to raise capital to expand further the Dalmiapuram cement works in Madras State. One part of the issue consists of 356,250 preference shares of Rs. 10 each, which will be offered at par to holders of preference shares of Rs. 40 each, in the ratio of six preference shares of Rs. 10 for each preference share of Rs. 40. The other part consists of 3,180,000 ordinary shares of Rs. 2-8 each, which will be offered at par to holders of ordinary shares of Rs. 2-8 each, in the ratio of three to one. The new shares will participate in dividends declared for the accounting year 1957. The preference shares will earn a cumulative tax-free dividend of 6 percent per annum. But if the ordinary dividend is above 10 percent, they will earn 7 percent. In the event of still higher ordinary dividends, the preference dividends can rise to a ceiling of 9 percent.

Bright Outlook for General Assurance.—Speaking from the chair at the 49th annual general meeting of the General Assurance Society (extracts from which are published elsewhere in this issue of Capital), Mr. B. L. Jalan reported that a dividend of 6 percent had been recommended. Although the Society lost its life insurance business last January, Mr. Jalan was able to report progress in the other branches of its activity and expressed his confidence in the overall prospects for the future. The profit for the year, which net figure now stands at Rs. 95,646, was depleted by Rs. 2,64,530 when the Pakistani rupee was devalued last year. Mr. Jalan referred to the deterioration in the international situation and the economic trials which India has to face in the first few months of the second five year plan. The tendency to seek relief from economic difficulties and rising prices in a reconstruction of the war-time control measures was deprecated by Mr. Jalan. Such controls, he pointed out, "not only do not check prices, but are notorious for creating artificial scarcities and other complications". The drift towards measures of this kind, he maintained, indicated the philosophy which guides the Government's economic policy and which has already led to the nationalisation of the Imperial Bank and life insurance companies, the reconstruction of the Company Law, and last April's Industrial Policy Resolution. Mr. Jalan mentioned the inadequacy of any excuse the Government might make for nationalisation based on alleged malpractices and misappropriation of funds. He pointed out that of the 165 insurers nationalised, subsequent investigation had revealed misappropriation of funds in the case of only three or four. There is reason, he added, "to believe that, except in one case, misappropriation may have been resorted to after the act of nationalisation". The only real source of malpractices in the industry, Mr. Jalan maintained, was the fierce internal competition. There have been attempts to check this evil by limits on commission, but this had given rise to rebating. Mr. Jalan maintained that the real motive behind the Government's nationalisation was an ideological one. In general insurance, the main problem, Mr. Jalan said, is that of inter-ine competition. Owing to tariff rates, he pointed out, it was possible to correct this in the fire and miscellaneous departments, but at present there appears to be no remedy against cut-throat competition and rate cutting in marine insurance. Mr. Jalan asked the Government, if it was contemplating any measure to curb the evils, to take the entire industry into its confidence and seek its advice.

Successes of Free Enterprise.—To the remark Mr. T. T. Krishnamachari, Union Minister for Finance, made in Madras a few days ago that private enterprise has "failed" him, Mr. A. D. Shroff, a leading Indian industrialist replied at length, while addressing last week the Commerce Graduates Association, Bombay. Mr. Shroff's was a very convincing reply, and he was on firm ground in maintaining that India owes its "eightth place in the industrial map of the world" entirely to the efforts of private enterprise. The statistics of its achievements which he provided are indeed impressive. It is a pity that the value of the rôle

that private enterprise can play in a developing economy is being so much under-rated in this country—a fact on which the President of the World Bank recently made some pertinent comments. Mr. Shroff did well to draw attention to the admission of the Government's own Planning Commission that while the public sector showed an investment of only Rs. 57 crores during the first plan, against the allotment of Rs. 90 crores, the private sector accomplished what had been planned for it by investing Rs. 233 crores. This alone, if nothing else, should have justified the assignment of a much bigger rôle to the private sector in the second plan. The Government has not only denied this sector its well-merited share in the planned economic growth, but it appears to have been doing everything possible to scare and squeeze it out of existence. The nationalisation of the airways, the Imperial Bank and life insurance are decisive straws in the wind; the new industrial policy has nothing in it to revive the private investor's confidence. Mr. Shroff dealt adequately with his critics, but he need not have passed such severe judgment on the economic policy under the British rule as he did by saying that it was "indifferent and apathetic and in some cases definitely antagonistic" to the cause of India's industrial progress. The history of India's industrial development also shows that two important factors enabled Indian enterprise to feel its way forward. First, the tariff wall against foreign goods, especially Japanese, which was built to protect nascent Indian industries and secondly, the construction of the vast railway system, developed entirely with British capital, which opened up the country's natural resources to the entrepreneurs of the day.

Aims of Economic Policy.—Mr. K. R. K. Menon, Chairman of the Industrial Finance Corporation, told the annual general meeting of the Indian Council of Economic Affairs in Calcutta last week that the aim of economic policy should be "the greatest good of the greatest number." As a plea, this is unexceptionable—so unexceptionable, perhaps, as to make its reiteration seem almost superfluous in an enlightened, democratic society. Where differences of opinion arise, they centre on the point whether a particular course of action does actually contribute to the fulfilment of the ideal. As Mr. Menon suggested, no hard-and-fast generalisations are permissible on such issues as whether nationalisation in itself is good or bad, or whether prohibition is justifiable. Each case has to be decided according to the conditions and circumstances which exist and which are likely to come into being. One suspects that, despite Mr. Menon's implied assumption to the contrary, this is normally done in intelligent discussion of any sort; when it is not done, the discussion of course ceases to be intelligent, as some party journals have often recently demonstrated in their ideological outpourings. Mr. Menon himself offers signs of a slightly similar tendency when he says that "given a guarantee of just and fair compensation, the nationalisation of certain industrial and commercial undertakings can hardly be called expropriatory or as offending any moral law or juristic concept or economic tenet." He may be right if he argues the virtues of nationalisation on the basis of convenient hypothetical examples backed by convenient theoretical assumptions. But in the light of actual Indian experience, which Mr. Menon presumably has in mind, it would not be easy to assert that nationalisation measures had not offended morality, equity or economic sense. Morally, for instance, it is open to doubt whether the Government has been right in nationalising all life insurance companies simply because it proved incompetent in curing the irregularities of a few; operated in reverse, the process could almost have involved the denationalisation or disbandment of the import control machinery whenever a few of its officers were shown guilty of having taken bribes. The External Affairs Ministry, on similar reasoning, might have been expected to surrender its responsibilities to some *lok sevak sangh* of proven patriotism if its underlings were found selling secrets to foreign embassies. As for the equity of nationalisation measures, evidence of the Government's troubled conscience might perhaps be found in the way it has made compensation non-justifiable by amending the Constitution; those who are sure of their own fairness cannot have reason to fear a judicial verdict. The economic basis for nationalisation varies from industry to industry; in the case of the posts and telegraphs, it may be substantial, but the airlines have yet to show what good their State ownership has done anyway.

Protection in Perspective.—The speech of Mr. K. R. Damle, Chairman of the Indian Tariff Commission, at the recent quarterly general meeting of the Association of Indian Industries, Bombay, provided a statistical perspective on the current importance of the protected industries to the Indian economy. According to the figures given by Mr. Damle, the total investment in these industries may not exceed Rs. 50 crores, and it is unlikely to be much higher. The volume of employment afforded by them is only about 2 percent, at

47,000 workers, of the total factory-employed labour force of 2,600,000. The yield from protective duties was Rs. 11 crores, or only 7 percent of the total import duty revenue of Rs. 141 crores in 1951-52; in 1955-56, the proportion increased to about 8 percent, at Rs. 10 crores, of the total income from this source of Rs. 127 crores. In the years to come, and especially during the second plan, some of the protected industries, such as aluminium, bicycles and electric motors, (these achieved spectacular results during the first plan) will play an increasingly important rôle in the national economy. Mr. Damle mentioned that during the period 1951-56, most of these industries showed a relative price stability. In a number of them however, substantial idle capacities existed, in some cases due to circumstances beyond the control of the industries concerned. The high cost of production in some was often due to such causes as their dependence on imports of certain components and a lack of co-ordination between the producers of components and finished goods. The cycle industry is a case in point and its high cost of production is due precisely to these reasons. The plastics industry is still depending on the import of moulds at high prices, which means that the "infant is yet to grow into an adult." Mr. Damle's advice to the industrialists enjoying advantages of protection was that they should do their best to reduce their cost of production and improve quality, which alone could induce the Indian consumer to patronise Swadeshi products.

"CAPITAL" CHRISTMAS TOY FUND CORRECTION

We regret there was an error in the account of the 1955 collection published last week. The balance of Rs. 1,199-7-3, as shown, should be reduced by the following sums, which were donated later than usual and were thus lost sight of in presenting the account.

Dr Graham's Homes, Kalimpong	Rs. 100
Calcutta Blind School	Rs. 100
St. John's Church	Rs. 25
Supdt., P. G. Blind School	Rs. 15
Salvation Army	Rs. 75
	Rs. 315

The correct balance in 1955 brought forward is thus Rs. 884-7-3.

We acknowledge with thanks the receipt of the following donations to the 1956 fund.

Rs. 100 each	"Anonymous", Blacker & Co. Private Ltd.
Rs. 50 each	J.H.M., Indian Copper Corporation Ltd.
Rs. 20 each	H.C.J., A.W.
Rs. 15	Calcutta Jute Agency Private Ltd.
Rs. 5	H.R.T.

The fund now totals Rs. 1,244-7-3, including a carry-forward of Rs. 884-7-3.

ROAD TO NATURAL RESOURCES

WE gather from the very excellent and readable report of Mr. Grimley on the Chota Nagpore Division that his administration for the last seven years has not been altogether a monotonous one. The construction of the Bengal Nagpore Railway brought the mineral wealth of the country into prominent notice, and caused a rush of applications for prospecting and mining concessions chiefly in respect of gold, copper and iron. This, as Mr. Grimley naively observes, introduced him to an entirely novel sphere of work and enlarged his vocabulary by sundry geological terms and expressions, which he fears were not always understood by those so-called experts from whose tongue they fell so glibly. "To ring out the false, ring in the true," to distinguish between honest prospectors and the plausible land grabber, was a task of considerable delicacy. Another result of the railway was to render accessible large tracts of forests of timber to contractors whose sole object was to clear away all saleable trees regardless of future needs. We are glad to see that this reckless denudation is no longer permitted and that rules for protecting forests have been passed. Mr. Grimley, so far back as 1890, made an enquiry into the system of cool recruitment for labour in tea gardens and submitted proposals to remedy the prevailing abuses, and consequent upon the works of the Labour Enquiry Commission he now hopes to see his proposals brought into operation.

Without Prejudice

MEANING OF SOLE ARBITRATION

CLAUSE INVALID AS BEING
VAGUE AND UNCERTAIN
(FROM OUR LEGAL CORRESPONDENT)

HERE is another exercise in English phraseology. It involves the interpretation—indeed any correct interpretation is possible—of a short English sentence. This is it. "All disputes between the parties shall be referred to the sole arbitration of Richard Roe/Thomas Doe." The writer's first impression of the sentence, which may coincide with the reader's, was that it is meaningless gibberish, incapable of being construed in any practical sense with certainty. But bearing in mind that the solution was considered by two courts in India recently, and that the policy of the law is to endeavour to attach a reasonable meaning to a written expression in a legal document by an attempt to gather from the wording the actual intention of the parties as to the meaning of the expression, and that the law is not bound by strict grammar or by rules of correct English construction in trying to attach a reasonable practical meaning to words, sentences and phrases, the writer made another effort and came to tentative conclusions. The first was that the dash, "—", must come out as being senseless and having no meaning. You won't find "—" in any dictionary of abbreviations nor in any book on commercial English. Thus the words will read ".....sole arbi-

tration of Richard Roe Thomas Doe." If there were a third arbitrator, there would now be no difficulty. The names would run "Richard Roe Thomas Doe and John Lee" and the arbitration would be by the three gentlemen sitting together. Unfortunately there are only two names with no conjunction between them. Still Richard Roe Thomas Doe constitute a plural, and, if forced to give a solution to what is almost meaningless, the writer would have said that the word "and" should be implied, and that Messrs. Roe and Doe are joint arbitrators. But the reader had better try his own hand at the answer, for the writer's view (which he nevertheless modestly sticks to) is wrong, so wrong indeed that neither the lower court nor the High Court on appeal even considered it.

The case was an appeal by a company, the Delhi and Finance Housing and Construction Ltd., against an order of the lower court dismissing the company's application under Section 34, Arbitration Act, and refusing to stay proceedings in a suit instituted by Mr. Brij Mohan Shah, respondent. The case of the latter gentleman, who was the plaintiff respondent, was that he and Nand Kishore, respondent 2, entered into a contract with the appellant company for carrying out the electrification scheme in the company's colony known as Rajauri Gardens on the Najafgar Road, Delhi, and deposited Rs. 12,000 with the company as security. The contract, it was said, was terminated by the company in November 1952, and the plaintiff filed a suit for the recovery of Rs. 21,000 on account of the return of his security deposit and also the price of goods supplied and work done. The company applied under Section 34.

Arbitration Act, for stay of the court proceedings, on the ground that the contract between the parties contained a clause for reference of any dispute to arbitration. The application was opposed on several grounds by the plaintiff, all of which were decided in favour of the defendant company, except one, namely, that the arbitration clause in the contract was invalid as being vague and uncertain.

This was the arbitration clause in the contract: "All disputes between the parties to the contract, arising out of or relating to the contract shall, after written notice by either party to the contract to the other of them, be referred to the sole arbitration of the Managing Agents/Technical Director, D. L. F. Housing and Constructions Ltd., New Delhi." The trial court held that this arbitration clause was invalid and unenforceable as being vague and uncertain. The company thereupon appealed to the Punjab High Court in Delhi, where Falslaw J. considered the clause and its meaning in a judgment of considerable interest and importance concerning the law bearing on arbitration, and this is the stage at which the reader, using his commonsense and his knowledge of the English language, its construction and interpretation, is invited to give his opinion as to the meaning of the clause. If, indeed, it has in his opinion any meaning at all.

The tentative view of the writer is completely bowled out by the very first sentence of Falslaw J.'s interpretation. "Since the words 'sole arbitration' are used, it must be assumed that the 'I' which occurs between the names of the two arbitrators means 'or' and that one or the other of them was to be appointed as arbitrator, and the question which arises is whether in the absence of any provisions as to how the choice was to be made between the two arbitrators, the clause is invalid as being vague and uncertain."

While loyally accepting the judicial correctness of this interpretation, one respectfully suggests that it would be violently repudiated by Dr. Johnson, Macaulay, A. P. Herbert or any of the recognised stylists and sticklers for verbal accuracy. It is submitted that what is simply a straight line "I" inserted in an English sentence has no grammatical meaning at all, and to say that it means a word, and a specific word at that, is to assume a great deal. And if we are obliged to assume the insertion of a word at all which in fact is not there, why "or"? Why not "and" or "with"? His lordship relied on the word "sole" in "sole arbitration" as implying one or the other of the two. But surely the word "sole" may connote the plural as well. It means "exclusive", "unaccompanied", and we quite properly talk of A and B as the "sole survivors" of a shipwreck or colliery disaster. In the same way, we may refer to X and Y as "sole arbitrators", meaning that the two of them are to act jointly, unaccompanied by anyone else. And that becomes, it is submitted, the meaning of the clause, if we strike out the "I" as without any significance at all, as we should do.

But this view is incorrect and one abandons it, albeit with considerable reluctance. So back we come to the word "or". On behalf of the company, it was argued that the clause meant either that the Managing Agents should be appointed as arbitrators, or failing them, the Technical Director, or else, that it meant that either of the two arbitrators named was to be selected by agreement between the parties, and that in either event the clause was good. "It seems to me, however," said his lordship, "that the very fact that even the learned counsel for the company could find at least two alternative meanings which could naturally be ascribed to the word clearly shows that some vagueness exists. Indeed, he more or less chose to concentrate on the second of his suggested interpretations, namely, that one or either of the arbitrators named was to be chosen by agreement between the parties and he contended that some such words were implied in the clause. In this connection he relied on the decision in *Indian Hosiery Works v. Bharat Woollen Mills Ltd.* 1953, Cal. 488. There the relevant words of the clause were 'shall be referred to arbitration at Calcutta'; and it was held by Chakravarti, C. J. and Sarkar J. that an arbitration agreement neither specifying the number of arbitrators nor specifying the mode of appointment is perfectly effective and valid, and the incidents of such an agreement are that it is to take effect as an agreement for reference to a sole arbitrator to be appointed by consent of the parties, or where the parties do not concur in making an appointment, to be appointed by the court. It will, however, be seen that that case was totally different and the meaning ascribed to the words in the clause by the learned judges is the perfectly natural meaning, but the case is different where, as in the present case, two arbitrators are named, with an indication that one of them is to be selected, but without any provision as to how the selection is to be made, and I do not find it possible to imply the words in such a clause, that one or either was to be selected by agreement between the parties..... An agreement to refer either to X or to Y is not an agreement (to refer to) a named arbitrator, because it is not certain who the arbitrator is. X does not become the appointed arbitrator because one of the parties makes the reference to him first. The agreement does not authorise one of the parties to appoint either X or Y as arbitrator by making a reference to him."

Agreeing with the finding of the lower court, the High Court held that the arbitration clause was bad as being vague and uncertain.

Delhi and F.H. Construction v. Brij Mohan, 1956, A.I.R. (October), Punjab, 205.

A DITCHER'S DIARY

burst against Britain especially is that opinion in India had long since done her the honour of believing her above such things. But the world can be forgiven for not appreciating these subtle points, and the confusion is reaching the stage where fair-minded opinion is beginning to ask where India stands. It will not only be Mr. Nehru's critics in the British Conservative Party who will benefit if this one-sidedness continues, it will be the forces of confusion, subjugation and aggression the world over.

It will be quite unlike the All India Congress Committee, which meets tomorrow in Calcutta, to concentrate only on the coming general elections, although the thoughts of it must be uppermost in the minds of the managers of the party. Foreign affairs have always received from this body an amount of attention considered excessive by some Congressmen themselves, and on this occasion there are many more subjects to pronounce upon—Israel, Egypt, Britain, France, the United States, and, one hopes, also the Soviet Union and a country called Hungary. It does not follow, however, that firm judgments will be easy to pass; indeed, they are likely to be more difficult than they have been hitherto. The second plan, I find, is on the agenda. I hope it will not be considered in isolation from the subjects relating to foreign affairs, with which the fate of the plan is in fact closely connected. Not the least hopeful development in this country's thinking on international questions in recent months has been the fact that considerations of India's own interests are receiving increasing recognition. Going by speculation in the daily Press, I think it a safe prophecy that the election manifesto now being drafted by a special committee will be a very comprehensive one. It is good to know that it may also be "specific" on certain points, for, although the party's previous manifestos have never lacked in comprehensiveness, there have been, on occasion, complaints on the score of clarity. The rôle of the private sector, I gather, will be defined with greater precision; it could certainly do with a little of that.

Oil being very much in the news, there is a certain topicality in the brochure called *The Oilfields of Britain*, recently issued by the British Petroleum Company Ltd. (late Anglo-Iranian Oil). It is an account of the search for indigenous petroleum in the United Kingdom. Until the 1914-18 war, not much was done by way of exploration, though it had been known from 1850 that there was a possibility of oilfields occurring in certain parts of England and Scotland. During the first world war a serious search was made, but the results were not very encouraging, either geologically or financially. Between the wars interest ebbed and flowed, even if the oil did not. Some shale oil has, of course, for long been worked in the Lothians by Scottish Oils Ltd., a subsidiary of British Petroleum and, in addition to B.P., Imperial Chemicals and Fisons have, for their own purposes, done a certain amount of experimental drilling over various parts of the country in the last twenty years. Indeed, their tests have ranged optimistically from Lancashire to the Isle of Wight, but so far with no great success except, of course, that these prospecting areas have served as very good training grounds for technical personnel who will eventually operate overseas. The conclusion of the B.P. booklet is that "while it looks unlikely that Britain will ever be a major oil-producing country,

there is a real possibility of further development in British petroleum production on a limited scale." Though indigenous production cannot be more than a drop in the bucket of the millions of pounds which Britain spends annually on imported crude, I searched in vain for any cash valuation of local output. All I could glean on this point related to the years of the second world war, of which it says: "The delivery of some 300,000 tons of native oil has been a notable contribution to the war effort, but the by-product of knowledge gained of carboniferous rocks under and about the edges of the coalfields was not less vital to the nation".

I referred last week to *The Manchester Guardian* as the "world's most honoured newspaper". If that is true—and I consider it no exaggeration—then the man who has been responsible, more than any other, for its transformation to that exalted position is surely entitled to be proclaimed the world's most honoured journalist. Alfred Powell Wadsworth had a solid foundation on which to work; the *Guardian* of C. P. Scott was no mere provincial rag. It has always been a solid newspaper with the seed of an international philosophy of liberal rationalism between its pages. But the world-wide reputation it has acquired in the last few years has been the outstanding achievement of a quiet man who, to my memory, once refused to address a students' society because, as he put it, "I am really no good at expressing myself in public". Wadsworth was expressing himself before a public spread throughout five continents—possibly six—when ill health forced him to resign the active editorship of the *Guardian* eight days ago. Five days after that he was dead; a swift end to a brilliant personality whose beneficial influence might have guided his newspaper for many years to come. Wadsworth was a Lancashire man and inherited the liberal outlook traditional of his country. He lived to see that liberalism, as expressed through the leading articles of the *Guardian*, become a power in the world. His successor is a Scot, a Mr. Alastair Hetherington, whose youth is matched only by the impressive weight of his new responsibilities. One can only wish him well in a most exacting task. At no time more than the present is the *Guardian* in the public eye with its uncompromising opposition to the Franco-British action in Egypt. Such a stand, against what it honestly considers to be an example of spiteful aggression, is in the finest traditions of British journalism and its leading articles on the subject are a vindication of the Anglo-Saxon tradition of free discussion. If they have sometimes been mistaken abroad as evidence that enlightened opinion in Britain can no longer be counted on to remain loyal to the country's elected Government in times of national crisis, then that is no doubt a price worth paying for the benefits of an unfettered Press. Perhaps the *Guardian's* stand would not have been so misleading had it refrained from issuing through its leader columns an implicit invitation to the British forces to mutiny and from seeking to increase the confusion in the public mind both in Britain and abroad by calling for a referendum to unseat the Government at the height of the crisis. Such misunderstandings about the true purpose of a newspaper are blemishes on the *Guardian's* record of responsible as well as courageous comment which will no doubt be erased as soon as Mr. Hetherington settles into his new chair and comes to realise the authority and influence which the *Guardian's* words have in the great world outside Cross Street.

THE DITCHER.

INDIA'S
NEW STEELWORKS

For the new integrated iron and steel plant to be built at Durgapur to produce 1½ million ingot tons per annum Simon-Carves will be responsible for the complete coal washing, blending and handling plant, the three coke oven batteries and coke handling plant, the by-product plant and sulphuric acid plant, and the steam-generating plant for the entire works.

The £15-million contribution of Simon-Carves to this great enterprise is characteristic of their close association of nearly half a century with the Indian iron and steel industry.

CAPITAL GROWTH IN U.K. AND W. GERMANY

PROBLEM OF AVOIDING INFLATION

IT was by a fortunate coincidence that the Bank Deutscher Lander published estimates of capital investment in Western Germany at the same time as the British Government published approximately comparable estimates in its analysis of the nation's income and expenditure. We can see both similarities and disparities between these two international trading nations. The fact that emerges most clearly from the comparison is that both nations have been "investing in the future" on a large scale. But investment presupposes saving, and in this respect there are important differences. Partly for this reason, no doubt, Western Germany's investment was relatively greater last year than Britain's; but the difference was mostly in construction of dwellings, which is not—or not directly—productive.

Western Germany's net investment in equipment and building increased last year, compared with 1954, from Dm.19.5 billion to Dm.25.1 billion—about 28 per cent. Britain's net investment in equipment and building increased (in terms of value at 1948 prices) from £227 million to £212 million—little more than 10 per cent. The figures are not, of course, precisely comparable, but they show an undeniable disparity. But in Britain's case there was a marked increase in investment in

plant and machinery (from £278 million to £338 million) and in new building other than housing (from £222 million to £283 million) and an appreciable decrease in the value of dwellings constructed (from £327 million to £291 million). Excluding dwellings (and also vehicles, ships, and aircraft), Britain's net fixed investment increased about 24 per cent last year. This increase in fixed investment has been a potent cause of inflation in both countries. In Britain, moreover, though not in Western Germany, there was substantial additional investment in stocks of goods and work in progress, but the essential factor in both countries was the increase in fixed assets.

The savings made available to finance this expansion varied remarkably between the two countries. In Western Germany, according to the Bank Deutscher Lander, the retained profits of companies increased nearly one-third to some Dm.12 billion and covered about 40 per cent of net investment in fixed and monetary assets, the balance being provided by issuing securities or by borrowing. In Britain, on the other hand, the "net balance" of companies diminished from approximately £490 million to approximately £130 million. Yet it was still—admittedly, with the aid of insurance, banking and other financial institutions—a credit balance. In other words, British industry was no longer a larger lender to other sectors of the economy, but it was still able, on balance, to pay for its own capital investment. Estimates of personal saving in either country are somewhat vague, but it appears from the latest assessments—and the revelation may surprise some observers—that the increase in incomes, common to both coun-

tries, is being spent much less freely in Britain than in Western Germany. In Western Germany, according to the German Bank, the expansion of incomes last year did not produce an increase in "voluntary" personal saving. In Britain, on the other hand, a larger expansion of incomes has not been reflected in any comparable increase in consumption; the official statisticians have estimated that last year, compared with 1954, personal incomes (before tax) increased 8 per cent, consumers' expenditure (in real terms) 3 per cent. In both countries, it appears, public authorities increased their net savings available for investment; but in Britain, the public corporations absorbed more savings even than previously.

These various comparisons show the British economy in a more favourable light than many of its critics would expect. Its recent development has been, indeed, quite impressive by comparison with prewar. After allowance for depreciation, net fixed investment was 6 per cent of the national income in 1938, about 6½ per cent from 1949 to 1952, and increased thereafter to 8½ per cent in 1955; and the total, with investment in stocks and net investment abroad added to net fixed investment, increased from 5 per cent of the national income in 1938 to 10 per cent in 1955. It is possible that, if the inflationary effects of military expenditure can be restrained, and if consumers can be persuaded that prices are being stabilised, so that increases in income are not immediately necessary and money can be saved without serious risk of depreciation, the increase in capital investment will significantly change Britain's trading position within the next year or two.

THE GENERAL ASSURANCE SOCIETY LIMITED

CHAIRMAN MR. B. L. JALAN'S REVIEW

Extracts from the Chairman's Address of Mr. B. L. Jalan delivered at the 49th Annual General Meeting of the General Assurance Society, Ltd., on the 7th November, 1956 at Ajmer.

When we met here about a year back on the same occasion we had noted with gratification the happy signs of reassuring developments on the international horizon. The Suez Canal dispute has assumed proportions of a world wide conflagration. Even our insurance industry could not escape these diplomatic overtures as we recall that the London Underwriters raised the war rates on both cargo and hull, negotiating through the Suez Canal. Before that, the frantic efforts, led amongst others by our own Prime Minister, could materialise the whole situation has worsened by invasion of the Egyptian territory by Israel and military intervention of England and France. The world opinion, including the public opinion in Britain, has expressed itself in unequivocal terms. It is hoped that peace forces will ultimately prevail and wrong perpetrated will be retraced.

On the other hand, we will recall that early in the year the Russian leaders themselves finally exploded the myth of a happy Soviet society by denouncing the communist regime of about 30 years since the dawn of the Stalin era. We have not forgotten the outbursts of discontent in East Germany. Recent popular developments in Poland and Hungary have further exposed the role of the Soviet activities in the so-called people's democracies of the Eastern Europe.

Nearer at home we have witnessed during the last few months a few unhappy events arising out of the State Reorganisation programme. Such untoward occurrences do not augur well for the unity of the country and smack of fissiparous and parochial tendencies.

With the even faster means of transport and communications and increasing rate of intercourse between peoples, the world is becoming smaller and a more compact unit. Historically, therefore, redistribution of areas, intranational or international seem to be a bit anachronistic. One wonders if the country should not have been divided on the more convenient geographical and administrative regional bases, facilitating balanced economic growth. Indeed, ever since the formation of Andhra, I have been suggesting the redistribution of the country on the basis of geographical regions. The Government has not only have fascinated our Prime Minister also and the Government have taken some steps in this direction.

While we met here last year, an unprecedented round of floods had overtaken the country including the Punjab and Delhi. It is unfortunate that they have appeared this season again with more severity.

Economic Situation

These floods have a even larger bearing on the general economic situation in the country and generally on the fulfilment of our plans and programmes. The commodity prices have shown an upward tendency during recent months. This tendency has been more spectacular in respect of food grains and other agricultural crops. Between May, 1955 and September, 1955 the General Index of wholesale prices (with the year ended August, 1954 as the base) showed an increase of 78 points or 23 per cent. But the index in respect of food articles has advanced by 117 points or 43 per cent. As against these the rise in prices in respect of manufactured articles has been much less marked; the index advanced only 4 per cent.

On the one hand, these variations in prices have to be set against the decline in prices a year before, and on the other, against the several measures of controls invoked or proposed by the Government. The changes in the price structure have to be studied further in the light of the food policy followed and the monetary expansion suggested by the Government. Actuated by the crop of 1954-55, almost all reserves of food grains had been liquidated. Furthermore, there has been an expansion of money supply during 1955-56 to the tune of Rs. 264 crores against and in addition to an expansion of Rs. 127 crores in the year earlier. Three fourths of the expansion was accounted for by the increase in currency alone. Disregarding these basic circumstances of the situation, we seem to seek the remedy in increased tempo of taxation and rigid controls. The Government do feel that the features of the situation are only temporary and more of a correctional nature. If so, taxation cannot and will not cut any ice. Moreover, so long as the tempo of government spending continues in the search of "green fields and pastures new" of public sector, taxation, particularly direct, will only defeat its own purpose. If currency inflation is the established feature, it is immaterial whether the purchasing power is brought to the market by this or that sector.

Public memory is proverbially short but I am sure we have not forgotten the difficulties involved in rigid commodity controls on production, distribution and prices prevalent during the War and immediate post-war periods. Such controls not only do not check prices, but are notorious for creating artificial scarcities and other complications. These measures only indicate the philosophy guiding the economic policy of the Government. Thus the nationalisation of the Imperial Bank and Life Insurance in the country and promulgation of the Companies Act were followed in quick succession by the Industrial Policy resolution of the Government of India dated the 30th April, 1956.

Nationalisation Policies

I recall that the Prime Minister had, in the larger interest of the country, given an assurance that it was not the intention of the Government to nationalise existing industries because that does not create fresh capital and income in the country. The resources of the State could be better utilised in sponsoring new and neglected lines of economic activity. Hardly had the echoes of the Prime Minister's assurance died out, that the Imperial Bank and Life Insurance were being proposed to be nationalised. I am not sure that we are not quite following this confusion. I will strongly urge the Government that the Prime Minister's assurance should be carried out both in letter and spirit.

I agree that we have been presented with a fait accompli and it is no use crying over the split milk. But as the question of nationalisation of life insurance touches the frontiers of our fundamental economic philosophy I will like to examine these arguments.

The Government appears to have given the assurance that they will continue to make available to the private sector of industry the same proportion of funds as heretofore. If that be so, it is not understood how does the Government intend to employ this industry as a source of funds for the implementation of the Second or for that matter, Third Five Year Plan. If, however, this was the intention; there was an easier recourse available to the Government, namely, increasing the limit of investment in Government and allied Securities from 50 per cent to 60 per cent or even 70 per cent. It may be interesting to note here that the total investment of life insurance companies in the United States in Government securities including those of the Federal, State, Local and Foreign Governments total about Rs. 5,760 crores out of total assets of about Rs. 40,230 crores in 1954. This share constituted less than 15 per cent of the total assets. In the same year such securities constituted a share of 54.9 per cent in India. As against this the share of business securities represented 45 per cent in the United States and of America and only less than 15 per cent in India.

Among the two arguments of malpractices and misappropriation of funds, I will take the latter first. The business of about 165 insurers was nationalised. A searching investigation was conducted by the Government of the affairs of all companies, by specially appointed investigators and custodians. Misappropriation of funds was detected in three or four cases. There is reason to believe that except in one case, misappropriation may have been resorted to after the act of nationalisation. Misappropriation of funds in one or even three or four cases cannot, by any sane judgment be a sole reason for nationalisation of any industry which was conducted by more than 165 companies and which is older than half a century. There are always certain rotting apples in every basket. No body argues, however, that because there have been stray instances of the so-called 'scandals' in government enterprises, the government have no right to start these or other industries. Moreover, there cannot be any doubt that such cases were only stray instances and certainly not the general rule.

There has been, similarly, a vague talk about other malpractices was the fierce internal competition. This was sought to be checked by limits on commission, which gave rise to the evil of rebating. Now certain type of competition reflected in one form or another will be present in every industry in the free sector as a result of market mechanism. If this mechanism was allowed to have its play, uneconomic units would have faced the wall and industry would have returned to normal functioning. If it was desired not to allow any company to collapse it was the responsibility of the controlling authority to institute and implement suitable means to curb the tendencies. The Government took the initiative and shouldered this responsibility. But the Government control not only failed to curtail the fierce competition and rebating, but problems. Further, the Government also failed to devise suitable ways and means to improve the situation. This failure of the Government and the worse problems as a consequence thereof, have become the crime of the industry and strangely enough the Government have taken recourse to it as argument for nationalisation.

Ideology and Prejudice

In view of what I have said so far we can get only one conclusion that it was ideological predilection which actuated the fateful step. However, we have, on the contrary, repeated assurances of our Prime Minister that the policy of India will not be governed by ideological fanaticism and prejudices in the internal and economic no less than international affairs. We hope that this cleavage will draw closer and closer and it will be possible to reconcile government measures with the avowed objects enunciated by our Prime Minister.

The Government proposed in the first instance to allow insurance companies to operate life insurance business abroad. A conference was also called to devise a formula as to what companies should be allowed to do so. We also offered our services for the same. All of a sudden however, it was announced, without taking us in confidence, that the Government had already decided that the Life Insurance Corporation itself will transact this business.

Although the problems of general insurance are no less embarrassing, they are akin to those in the sister industry. The main problem is the internee competition. Owing to tariff rates there is perhaps some way out in fire and miscellaneous departments, but there appears to be no remedy against the cut-throat competition and rate-cutting in marine insurance. It appears that this section has become a definite drain to the industry. Whereas other measures will no doubt be necessary, one wonders if the restrictions on commission rates may not be abolished. If it were done, perhaps, the only problem left to be tackled will be of cut-throat competition. I should, however, make it clear that I do not suggest that the over-all limit on expenses should also be removed.

We are told that the Government were contemplating some measures to curb the evils. Let me should repeat the mistake I would wish that the Government take the entire industry in confidence and seek their advice on the problems confronting them.

Among the new measures, perhaps some kind of test for the business-worthiness of the companies was being proposed. If this is an effective measure it will no doubt be very useful. But this is only the negative aspect. I believe we should explore possibilities of ways and means to deal with 'uneconomic units', if

some voluntary efforts can be initiated as for example amalgamation of smaller uneconomic units with larger units, the industry will benefit immensely.

It is also understood that there may be stricter inspection of companies. It may achieve some results but what will actually help the industry is a constructive approach. We should devise a programme first to put the industry on sounder footing and provide conditions for its smooth functioning. The type of inspection envisaged will play then a very important role in combing out any discrepancies which may be left over.

Reinsurance Corporation

We have taken a very salutary and welcome step in establishing a Reinsurance Corporation of India I recall with great pleasure that I had submitted a Scheme to the Government about three years back for establishing such a Corporation. We are glad that this Corporation will be collectively owned and operated by the companies themselves.

Now coming to the results of the working of the Society, as you must have noticed from the Accounts, the same have been divided and we have presented to you the results of the operations of the General Department.

The Profit and Loss Account has shown a net profit of Rs. 95,646 which is transferred to the Appropriation Account. This includes a sum of Rs. 1,34,125 transferred from Shareholders Life Profit Account representing the surplus allocated to Shareholders out of the actuarial valuation conducted for the period ending 31st December, 1954. On the contrary our profit was depleted by the loss on exchange on account of the devaluation of the Pakistani rupee to the tune of Rs. 2,64,530.

It would not be out of place if I mentioned here that in the interest of achieving the better underwriting results we did not hesitate to sizably curtail the production in Accident Department in the midst of overall expanding business. Thus, whereas our Fire and Marine premium income showed increases the premium income in the Accident and Miscellaneous Department was curtailed by more than 50 per cent.

We had a carry forward from the last year of Rs. 1,07,856. After providing for the dividend declared for that year there was a net surplus of Rs. 47,856 brought forward to the Appropriation Account. Added to this the net profit for the year and tax adjustment with Life Department, we had a balance of Rs. 1,71,667 for appropriation. As you are now aware, I am glad to say that your Directors have recommended a payment of a Dividend at the rate of 6 per cent on the Paid-up Capital of the Society.

I am confident, you will agree with me that the overall atmosphere is cheerful and optimistic and there is every reason to believe that we will make further strides of progress. In the midst of expanding economy and accelerated pace of industrialisation, the Society will not only have its own share of promise and success, but it will, in its own humble way contribute to the rebuilding of the nation as one of the sinews of modern progress. Whereas Life Insurance was an integral part of the Society's business and strength, I can assure you that, in its own sphere, the position of our existing business will be jeopardised on no account. Indeed, this will only prompt us to further consolidate our position and serve the industry with renewed vigour.

THE BANK OF BARODA LTD.

ESTABLISHED IN 1908.

Capital Authorised Rs. 2,40,00,000
Capital issued & Subscribed Rs. 2,00,00,000

As the Government of India has sanctioned expansion of Dalmiapuram Cement Works in Madras State from the present capacity of 750 tons of cement daily to about 1,250 tons per day, further capital is being issued for which sanction of the Controller of Capital Issues has been obtained vide letter No. R-332-CCI/56, dated 3rd October, 1956, as amended vide letter, dated 1st November, 1956.

The newly issued shares shall participate in dividend declared for the accounting year 1957 and any subsequent financial period. The newly issued ordinary shares of Rs. 2/8 each shall rank pari passu in all respects with the existing ordinary shares of Rs. 2/8 each. The newly issued preference shares of Rs. 10/- each shall rank pari passu with the existing preference shares of Rs. 100/- and Rs. 40/- each in proportion to the Capital paid up and shall carry the right to a preferential cumulative tax free dividend of 6% per annum, but will participate in dividend at 7% in the event of a dividend above 10% being declared on Ordinary Shares and will be entitled to 7½% in case of dividend at 20% and above being paid on ordinary shares and also an additional ¼% rising upto 9% along with 10% further rise in the dividend on ordinary shares but will have no further rights to participate in the profits or assets.

The voting rights attaching to the newly issued preference shares of Rs. 10/- each shall be in accordance with the provisions of Section 87 (2) of the Companies Act, 1956, while the voting rights attached to the existing preference shares of Rs. 100/- and Rs. 40/- each are wider.

The Renounceable Letters of Right will be issued to persons who are registered as on 30th November, 1956, as the holders of the shares carrying the

Right, and for this purpose, the share transfer register shall remain closed from 19th November, 1956 to 30th November, 1956, both days inclusive. The Letters of Right are expected to be posted by 10th December, 1956. Those who do not receive their Letters of Right to which they may be entitled by 15th December, 1956, should write to the Company.

Normally one Letter of Right for each class of shares, that is preference and ordinary shall be issued to the shareholders for full number of shares of each class respectively to which they may respectively be entitled. But if any shareholder desires to renounce the whole or any part of his Right in favour of one or more persons for one or both class of shares, he may intimate in advance

of the Company at Dalmiapuram, so as to reach there not later than 31-1-1957.

OR

(ii) By handing over the form and the amount of full value to the Bankers of the Company, M/s. National Bank of India Ltd. in any of its branches in India on or before 31-1-1957.

Allotment letters will be issued as early as possible after completion of Allotment but no receipt or acknowledgment of Acceptance Forms will be sent. Share certificates will be issued within 9 months of allotment.

The working results of the Company for the past few years are as follows:—

Year.	Production of Cement in tons.	Gross profits earned before providing for depreciation and Managing Agents' Commission.	Dividend on		
			Depreciation provided.	Ord. shares.	Deferred shares.
1952	2,28,950	40,01,482	11,31,311	6%	Nil
1953	2,20,256	40,75,904	12,48,101	6%	10%
1954	2,70,000	64,90,088	10,60,722	6%	10%
1955	2,66,285	68,23,654	5,37,945	7%	12½%

to the Registered Office of the Company the denomination in which he would like to get the Letters of Right to avoid wastage of time over getting split letters later on. This, however, does not prevent Right holders from applying for splitting of Letters of Right after issue but within the time allowed for the purpose. The last date for receiving requests for splitting Right Letters would be 31st December, 1956.

On and after 31st January, 1957, preference shares of Rs. 40/- each and ordinary shares of Rs. 2/8/- each shall cease to have any preferential right of subscribing towards fresh issues of capital.

The last date for receiving Acceptance forms duly completed in all respects will be 31st January, 1957. The shareholders will have to pay full value of the shares accepted along with the Acceptance form. The form can be sent and the total amount paid in one of the following two ways:—

- By sending the form together with remittance for full value to the Registered Office

The total original value of the gross block at the end of 1955 has been Rs. 1,86,81,654. Total depreciation including initial depreciation provided till end of 1955 has been Rs. 1,29,96,995. The 250 tons plant was installed before war some time in 1939 and the 500-ton plant was installed after war in 1949 bringing the daily production of the works to the present level of 750 tons per day.

All correspondence regarding the new issue should be addressed to the Registered Office of the Company. Shareholders are requested to make it a point to quote always their register of members folio number. The reference will avoid all possibilities of mistake and ensure prompt attention. It is presumed all shareholders have already taken note of their number. Those who have not, are requested to do it now. They will find it at the left side over their name appearing on the envelope in which the circular regarding the new issue has been sent to them or on the Letter of Right that will be sent.

Our City Cable

DOWNWARD TREND IN STOCK PRICES

MARKETS DOMINATED BY MIDDLE EAST AND HUNGARY NEWS

London, 7th November.

THE events in the Middle East and Hungary completely dominated the stock markets last week. They moved erratically, and at the end of the week, a downward movement prevailed with operators becoming extremely cautious. Movements in oils were very erratic, but many of the leaders finished lower on balance. British Petroleum generally led the movements either way. Activity in gilt-edged securities was generally at a very low level, but at the end of the week, prices developed a downward trend. In the foreign bonds section, the feature was the rise and the subsequent sharp fall in Hungarian bonds following the news from that country. German bonds lost ground. Dollar stocks were firmer on balance. Industrials moved erratically and here, too, the movement was towards lower levels at the end of the week. After fluctuating with the rest of the markets, Kaffirs fell sharply, following the announcement by Zandapan that certain recent borehole results now appeared unreliable and should be disregarded. Base metals generally lost ground. Teas and rubbers were generally idle and dull.

The Money Market

The slight softening of the credit squeeze, which has been noticed in the money market in recent weeks, was again in evidence in the past week. There was, however, no marked change in the supply of credit to the market, and there were one or two days when difficult conditions were created by the discount houses taking up large quantities of Treasury bills in view of their special maturity dates. However, the overall conditions were reasonably comfortable, although rather tighter conditions were felt towards the week-end.

Stock Market Prospects

The Investor's Chronicle market newsletter writes: "The outlook for all markets is obscure until the political picture clears. The news from Eastern Europe is the most encouraging since the war. Investors should not throw away good shares. Wall Street appeared set for a pre-election rally, but the immediate outlook is obscured by political events at home and abroad."

U.S. Federal Reserve Return

The U.S. Federal Reserve return for the week ended 31st October shows that gold stock was unchanged at \$21,909 million. Foreign deposits fell by \$2 million to \$25 million, while foreign investments rose by \$21 million to \$3,782 million. The Federal Reserve bought \$5 million worth of bills and a further \$79 million worth under repurchase agreements, and sold \$1 million worth of certificates.

GOVERNMENT OF INDIA

Ministry of Railways

(Railway Board)

TENDER NOTICE.

1. Tenders are invited from established foundries in India only for the supply of Forty Thousand Tons of Cast Iron C.S.T. 9 Sleeper Plates, Broad and Metre Gauge, to be supplied by 30th June, 1957.
2. No raw material will be arranged by the Railways.
3. Applications for copies of tender documents should be made to the Deputy Director, Works, Railway Board, New Delhi. Tender documents embodying conditions of supply and contract and relevant drawings will be supplied at Rs. 10/- per set and will be available for sale from 10th November, 1956 onwards on any working day during office hours.
4. Tenders will be received up to 13.00 hours on 1st December, 1956 and opened in the office of the Railway Board, New Delhi, at 15.00 hours on the same day.

New Delhi, 16. P. R. Chopra,
Deputy Director, Works,
Railway Board.

ANALYTICAL

Consulting and Technical Chemists

R. V. BRIGGS & CO. PRIVATE LTD.

16, Old Court House Street,
West End Watch Co., Top Floor.

Total discounts and advances fell by \$300 million to \$538 million, while the aggregate of excess reserves of member banks fell by \$231 million to \$234 million. The daily average excess reserves of member banks fell by \$181 million to \$383 million, while their daily average borrowings rose by \$78 million to \$674 million. Business loans of the New York city banks rose by \$164 million to \$10,949 million, compared with the rise of \$101 million to \$8,766 million in the corresponding period a year ago.

Canada Restricts Copper Exports

Canada is clamping down on the export of copper and other strategic materials because of the Middle East crisis. The Government fears that there will be heavy demand for metals from abroad and this will send prices sharply up. To prevent this, the Government has ordered a tightening of export permits. These are required before the strategic metals can be shipped out of the country, and are issued by the Department of Trade and Commerce.

Higher Price for Indian Manganese Ore

Indian 46 to 48 percent manganese ore is now nominally indicated at 110d to 125d a long ton, c.i.f. Continent, against 105d to 115d recently. Apart from any effect which the earlier centralisation of the Indian manganese ore trade and the higher export duties may have had on prices, some quarters feel that the Middle East developments also probably played their part in determining the current levels.

Vegetable Oils Firm

Firm and cautious conditions prevailed with selling reserve heightened by the new 15 percent freight surcharge on shipments from India-Pakistan. Groundnut oil was sparingly offered and substantially dearer with Nigerian bulk oil sold to the north Continent and Genoa at £130 c.i.f. November to January and South African for January-February at £131 to £132 c.i.f. Groundnuts also were very firm with the Nigerian Board holding for £79 c.i.f. January-March, after business at £78½ with the north Continent. France was a keen buyer of November shipments, but there were no offers in early positions. It is claimed £82 was refused for December-January Rhodesian groundnuts, and sellers were asking £85. Linseed oil was largely nominal, but activity was lacking, with British Standard grade mostly unchanged. Coconut oil was easier, but sellers were reserved with limited quantities of Straits sold to continental consumers at £92 c.i.f., net term. Copra was generally a quiet item with buyers reluctant to follow the moderate advance. Activity in castor oil was generally stalemated by the freight surcharge news and the market was unsettled. However, castorseed was firmer with November-January shipments of British East African sold, basis ports, at £72½ c.i.f. Both sesamum and sunflower seed sharply advanced with firm offers scarce. Soyabeans were dearer and linseed was marked higher, but European buyers were reluctant to follow.

Speculative Rise in Rubber

At the beginning of the week to 1st November, the rubber market became firm on higher prices ruling in Singapore, attributed to the disturbance there, coupled with the Middle East and European political crises. An advancing tendency was supported by some Continental demand for shipment parcels, as well as for settlement house contracts. As the Middle East tension developed, speculative interest took a dominant place and prices went to the highest since early last August, with 3½d a lb. paid for No. 1 R.S.S. on spot and for delivery up to March, 1957. Professional operators were unwilling to deal extensively in the unsettled state of the market. Towards the close, traders reported only small interest in rubber for shipment but some U. K. demand for near deliveries kept these positions at a premium over forward. The quotations finally were about 3d a lb. higher on the period. The sole crepe market was not much affected by the Suez position. Offers remained scarce and sellers reported that 45d was paid for 1½ inch smooth No. 1 on the spot.

Firm Conditions in Freight Markets

Firm conditions continued in the north American trades. In the Far Eastern section, good demand was noted for tonnage for miscellaneous cargoes. These included any size vessels for coal from Calcutta to Colombo in December and 7,000 tons of cement from Karachi to Bahrain, November-December, all being open for offers on f.i.o. terms. Extremely firm conditions ruled with a higher rate paid for coal from North America on European account. Elsewhere, however, both owners and charterers were apparently content to await further Middle East developments.

F.B.I. on European Free Trade Area

The reaction of the British industry to the proposed limited free trade area in Europe has been conveyed to the President, Board of Trade. The President of British Industries Federation in a letter to the Board of Trade President, says that many of the 287 trade associations in the Federation's membership have not felt it appropriate to express their views on the subject. The entry to limited free trade area over a period of 12 to 15 years will be supported or even be welcomed by many branches of industry if they are satisfied that safeguards can be negotiated, while it will be strongly opposed if they are not satisfied, the letter says. Many industries would welcome competition on equal terms, but fear that such terms will not be realised. The letter is in reply to an invitation from the Board of Trade asking the Federation to express its opinion on the question of the proposed free trade area.

LONDON INSURANCE LETTER

HUGE SUMS TO INVEST

By Air Mail.

WHEN danger broke loose again in the Middle East it knocked huge sums off the value of the insurance companies' investments, especially those in gilt-edged form. The often-deferred recovery of Government stocks was deferred again, and even this market's friends began to lose faith in it. The life offices' problem of disposing of the funds entrusted to them becomes more serious as the funds themselves continue to increase and conditions for investing them become more difficult. We have now the complete figures of the Life Offices' Association and the Associated Scottish Life Offices for 1955. They show that, compared with 1954, the total new sum assured rose 15 percent to £1,108 million and that the total of sums assured reached £7,192 million. A breakdown of the figures shows that some two-thirds of all new business related to individual life policies, but that the rate of increase in group and scheme business was considerably more rapid. Total business is now increasing with a new impetus from the Government's tax-concessions on pension annuities for self-employed persons.

It can now be calculated that saving through life-assurance accounts for approximately one-third of all the nation's net personal saving, and—in spite of the blandishments of high interest rates or possible lottery gains in the National Savings media—this proportion is tending to increase. Such expansion in other countries—in India, for instance, and more recently Ceylon—attracts the Governments' attention to the possibilities of integrating insurance more closely with national policies, and it may be that the British Labour Party's interest in nationalising the institutions will be revived before the next general election. At present, however, the companies are concerned less with this latent threat to their funds than with the problem of allocating these funds among the various categories of investment. Their interest in mortgages has aroused some criticism, for borrowers have often been provided with resources by these means after the banks have dutifully refused to extend advances to them, in accordance with the authorities' directive. There are remarkable divergences of policy within the movement itself. Some managements are still opposed to the whole idea of investment in ordinary shares; others keep almost one-third of their funds in that form. The broad tendency is certainly in favour of ordinary shares, as confidence in fixed-income stocks has been severely, and probably irreparably, damaged by inflation. But until the new relapse of the gilt-edged market at the end of October—reflecting a feeling that the Government's whole financial plan might fall out of shape—there were signs of a temporary preference for this market on the part of institutional investors.

Rising Costs and Claims

Other branches of insurance have quite different problems. They, too, are expanding their business, but premium incomes are not always increasing with claims. In accident and marine insurance this problem is acute. The British Insurance Association has published relevant figures for 1955. The outstanding increase in premium income was in accident business, by nearly 10 percent to £338 million. But an analysis of results covering the greater part of the members' accident business shows an increase in the claim ratio from 55.3 percent to 57.2 percent, and a decrease in the profit ratio from 5.2 percent to 2.9 percent, last year, compared with 1954. By contrast, fire insurance, on a much smaller increase in premium income, shows a slight increase in profit ratio from 5.6 percent to 5.8 percent. The main element in the increase in accident claims is the rising cost of repairing motor cars. Not only in congested Britain, but also in countries which look more spacious on the map, the increase in the number of vehicles causes more accidents; and the cost of repairing a modern car is relatively high. The increase in shipping fleets does not so automatically cause more accidents to ships, but the rise in costs is equally relentless.

Some 20 countries and 560 companies were represented at the conference of the International Union of Aviation Insurance in Torquay in October. The conference met at a time of momentous developments in aviation and, therefore, in aviation insurance. The world's long-distance airlines have shown a marked preference for the huge jet-propelled airliners that will come into service about two years hence, and providing adequate cover for these craft, and their passengers, at reasonable rates will not be a simple matter of routine. The hazard concentrated in one of these new craft will be far greater than any that the market has had to cover so far. The value of the hulls themselves will be two or three times that of big airliners now in service, and they will have capacity for many more passengers. At present, the Warsaw Convention limits the liability of passengers to £3,000, but it is expected that the limit will be raised to £6,000 before the new craft are in use. Understandably, the conference showed some anxiety over competition in these circumstances. Like the marine market, the aviation market has been subject to some rate-cutting in recent years, and it is felt that this practice, if continued, would make it difficult to provide satisfactory cover for the big airliners. In any case, the prospective state of the market does not seem to justify severe competition, for some airlines that have covered their own insurance in the past are finding the burden too heavy and are coming to the market.

Finance in India and Abroad

THE CALCUTTA MONEY MARKET

MORE BILLS PASSING

Wednesday, 7th November.

THERE has been little change in the money market during the past week. The sources which usually begin to absorb funds at this time of year have not yet made their appearance in the market, although there has been some increase in demand against the harvesting of the cotton crop. Sugar-crushing has begun, but accommodation has not yet been called for. Demand from the jute industry is steady. Even at the present low level of seasonal demand, monetary conditions are fairly tight, and anxiety is being felt in banking circles about the ability of banks to meet the seasonal increase in demand for funds when it comes. The ratio of scheduled banks' advances to deposits is still in the region of 75 percent. Last week's stringency has continued in the interbank market, and between 3½ and 4 percent is still being paid for call loans.

More bills have come to hand this week. Most of them have been on account of gunny shipments. Remittance has been steady. A large bear position appears to be building up against sterling on news of the present serious state of international affairs. Continental operators especially have been selling heavily, and the currency has been brought down almost to the point at which the authorities step in.

Silver was strong on fresh troubles in the Middle East and the price increased from the previous week's level of Rs. 170-15 to Rs. 172-12, quoted today. The rate for ready metal quoted is Rs. 173-2.

In sympathy with silver, gold was steady and the price advanced from Rs. 104-4 to Rs. 105-8. The sovereign at Rs. 69-15 showed a gain of Rs. 1-11.

During the week ended 2nd November, 1956 Government of India Treasury Bills for Rs. 62,71,75,000 were sold in favour of the Reserve Bank.

An increase of Rs. 24.70 crores to Rs. 1,443.59 crores in active notes was the notable feature of the return of the Reserve Bank of India for the week ended 2nd November, 1956. The total note issue was Rs. 74 lakhs lower at Rs. 1,451.21 crores. The currency contraction was adjusted by reducing foreign securities by Rs. 29.81 crores to Rs. 462.21 crores and increasing rupee securities by an equivalent amount to Rs. 750.50 crores. This has probably been made by a transfer to the banking department in which balances held abroad increased by Rs. 16.49 crores to Rs. 106.72 crores. Deposits of the Government of India declined by Rs. 3 crores to Rs. 52.15 crores, but other Government accounts were Rs. 19.37 crores higher at Rs. 47.18 crores. Balances of commercial banks improved by Rs. 3.48 crores to Rs. 54.87 crores. Investments at Rs. 83.39 crores showed a gain of Rs. 28.25 crores. Other loans and advances increased from Rs. 83.35 crores to Rs. 94.73 crores, of which advances to scheduled banks against usance bills totalled Rs. 43.43 crores (Rs. 40.29 crores). These advances amounted to Rs. 330.19 crores since 1st January, 1956. Ways and means advances stood at Rs. 6.35 crores against Rs. 3.88 crores.

The return of the State Bank of India for the week ended 26th October, 1956, shows a drop of Rs. 2.34 crores in total deposits to Rs. 229.60 crores. Investments in Government securities are down by Rs. 20 lakhs to Rs. 96.15 crores, while other authorised investments remain unchanged at Rs. 11.29 crores. Advances, including loans, cash credits and overdrafts, and bills discounted and purchased, have increased by Rs. 1.06 crores to Rs. 129.76 crores. Cash and balances are, in consequence, shown at Rs. 16.46 crores or Rs. 65 lakhs higher.

DECIMAL COINAGE SYSTEM FROM NEXT APRIL.

"A reform in the coinage system is a most vital reform as it touches the life and habits of every single individual", says Mr. A. C. Guha, Minister for Revenue and Defence Expenditure, in his foreword to a brochure entitled *India's New Coinage Scheme*. The scheme comes into force from 1st April, 1957. "For the success of such a reform, therefore, full appreciation of the problem and the purpose is essential," he adds. "The new coins will be put in the market (on 1st April, 1957) and the existing coins also will be current for about three or four years. The rupee will remain unchanged, as also the half and the quarter rupee coins. The rupee will be divided into 100 paise, instead of the present 64 pice or paise. There will be coins for the multiples of paise, as 2, 5, 10, 50 paise. For the transitional period, when both the old and the new coins will be current, to avoid confusion, the new paise will be called *Naya Paise*. After the transition period when the old coins will be gradually withdrawn, the lowest coin will no longer be called *Naya Paise*, but simply paise. The decimal system of coinage has been adopted by many countries in the world. Except India and Pakistan, practically all the important countries of Asia also have adopted the decimal system", Mr. Guha adds.

Stocks and Shares

MOST COUNTERS MARKED DOWN ON MIDDLE EAST CEASE-FIRE ANNOUNCEMENT

GUEST, KEEN, WILLIAMS ISSUE HEAVILY OVER-SUBSCRIBED

Wednesday Evening.

THE market has passed its dullest session for many months. The international situation, and the general shortage of funds, have both helped to depress prices among a range of investment shares which is usually comparatively unresponsive to the short-term fluctuations of the market. Speculative moves have moved according to the developments in the political situation. The impression that war is imminent has usually resulted in a strengthening of prices, while an improvement in the outlook has brought the opposite movement. The present position is one of extreme gloom following this morning's news of a cease-fire in Egypt, and it has not yet been relieved by the later reports that conditions had been laid down by Egypt which will almost inevitably bring a renewal of the fighting. Indian Irons, after being quoted at Rs. 34-14, have fallen to Rs. 33-1 ex-dividend. Disappointment over the terms of the rights issue has also helped to drive the price down.

One of the reasons for the fall in some of the market's best counters has been the general demand for money to take up today's issue of Guest, Keen, Williams ordinary shares. The issue opened at 10.30 a.m. and closed at 3 p.m. It has been reported as being heavily over-subscribed, a fact which is surprising considering the moribund state of the rest of the market. If this is any indication of the share's future, it appears likely that it will prove one of the market most favoured counters.

Details of the week's trading follow.

	Opening	Closing
	2nd Nov. 1956	7th Nov. 1956
3% Loan 1957	99 12	99 12
3% Loan 1958	99 10	99 9
3% Loan 1970-75	88 13	88 12
3% Loan 1974	98 8	98 7

In the preference share section very little business was reported and while it was difficult to obtain first class issues sellers of jute and managing agency shares predominated. In jute, Hastings were crossed at Rs. 91 and Chitavalah were offered at Rs. 108. Among miscellaneous issues, Associated Hotels were done at Rs. 72, Bengal Chemical Second at Rs. 83 and Calcutta Electric changed hands at Rs. 10-14. A small lot of Chrestian Mica Industries was crossed at Rs. 59 and Dunlop Rubber First were marked at Rs. 124. Indian Iron & Steel shares were depressed at Rs. 104 while India Rubber Manufacturers changed hands at the lower price of Rs. 88. A small lot of Indian Standard Wagon was marked at Rs. 127 ex-dividend. National Tobacco First came to hand at Rs. 75 and the Second at Rs. 67-4. New Victoria were done at Rs. 5-10.

In the banking section, Central Bank "A" were reported at Rs. 54-4 and United Commercial at Rs. 55-6.

Very little business was reported in cotton textile shares. Bengal Nagpur were crossed at Rs. 9-8 and later were sold at Rs. 9-8. Elgin Mills were shaded at Rs. 29-4 as were Kesoram Cotton at Rs. 16-8. New Victoria were placed at the previous rate of Rs. 2-10.

Coal shares were devoid of interest and the number of transactions recorded was the lowest for many months. Only four shares were dealt in during the short trading week under review, viz., a small lot of Bharat Collieries at Rs. 6-12, Burra-kur at around Rs. 16-4, Central India at Rs. 7-1 ex-dividend and Western Bengal at Rs. 6-5.

In jute too, a handful of transactions was reported. The only steady feature was Bally which, on confirmation that the managing agency had been taken over by Birla Brothers, improved from Rs. 184 to Rs. 190. Howrah were dealt in at Rs. 22 as were National at Rs. 24. India were reported at Rs. 140-8 and Kelvin at Rs. 206. Kankannarah were offered at Rs. 95 and New Central were lower at Rs. 15-4. Waverley came to hand at the lower rate of Rs. 4-4 against the opening quotation of Rs. 4-12.

A solitary transaction was reported in Calcutta Electric at Rs. 13-4.

Only two shares in the sugar section were mentioned, namely Durbhanga at Rs. 22-10 and Shree Krishna Gyanoday at Rs. 12.

In paper, Orient were marked down sharply from Rs. 37-14 to Rs. 35-10 and Shree Gopal were shaded at Rs. 17-4. Star Paper were quoted at Rs. 10-4 ex-dividend.

In the engineering section, Indian Iron & Steel shares fluctuated between Rs. 34-2 and Rs. 33-5 to close at Rs. 33-7. Little attention was paid by operators to the decision by the Board of Directors

to issue rights shares and the trend was influenced mainly by developments in the Middle East. Whenever there were rumours of war the price improved and when there were signs of a cease-fire the price moved downwards; the first reaction to the early confirmation of the cease-fire was a marking down in price from Rs. 34 to Rs. 33-9. Britannia Engineering were crossed at Rs. 16-2 and Jessop were lower at Rs. 36-4. Richardson & Cruddas were marked back from Rs. 27-15 to Rs. 27-2 and National Iron & Steel were subbed at Rs. 8-2. Textile Machinery fluctuated between Rs. 23 and Rs. 22-2 to close at Rs. 22. A few transactions were reported in Kumardhubi Engineering at around Rs. 9-8.

In cement, a small lot of Ashoka changed hands at Rs. 12-4 and Dalmia Cement were quoted at Rs. 15-10. Orissa Cement came to hand at Rs. 13-1 while Sone Valley were dull at Rs. 9-4.

In insurance, only one transaction was reported, viz., in Ruby General at Rs. 5-14.

In shipping, India General Navigation were dull at Rs. 91 x.d. and India Steamship, despite the announcement of a satisfactory final dividend of 8 annas per share, making Rs. 1 for the year, were neglected at Rs. 9-14.

In the miscellaneous section, Aluminium Corporation were done at Rs. 11-12 while Alkali & Chemical were lower at Rs. 22-8. Angelo Brothers were easier at Rs. 23-12 and Bengal Flour were marked at Rs. 35-2 ex-dividend. Balmer Lawrie were done at Rs. 167 and British Burmah Petroleum were unchanged at Rs. 3-11. British India Corporation reacted from Rs. 11-2 to Rs. 10-15 as did Dunlop Rubber from Rs. 29 to Rs. 28-12 and Eastern Investments from Rs. 146 to Rs. 143. Indian Aluminium were slightly better at Rs. 15-14 while Imperial Tobacco were easier at Rs. 14-12. Indo-Burma Petroleum were unchanged at Rs. 41-4 but there were strong buyers in an otherwise dull section of National Insulated Cables at Rs. 26-5.

1956 PLYMOUTH

with Aerodynamic styling

The 1956 Plymouth has the advanced FORWARD LOOK. It's a better-looking car with many new performance features.

Here are its most important features:

- * New 12-volt electrical system gives quicker, easier starting, longer spark plug life, plenty of current
- * Independent hand brake provides real emergency brake function

More Economical Performance The 6-cylinder engine is dependable and economical. You will like its new pep with increased horsepower.

Progressively Manufactured by:
THE PREMIER AUTOMOBILES LTD
KURLA, BOMBAY

New High-Sweep rear fenders contribute to impression of motion and speed

Dealers: Poddar Automobiles, 36, Chowringhee, Calcutta.

A TOWER OF STRENGTH in India's Economy

The Americas and the Middle East are not the only places with oilfields! Oil is produced here in India, too, and derricks are a familiar part of the landscape at Digboi in Upper Assam. The Assam Oil Company has been operating this oilfield for over fifty years, producing some 300,000 gallons of high quality petroleum products daily.

Everyone in the country benefits from this flow of home-produced oil. It speeds food production. Keeps factories running smoothly. Keeps goods moving by rail, road, sea and air. Takes people to work and provides work for them—as well as saving precious foreign currency.

The Assam Oil Company itself employs over 8,000 'oil men'. It spends much time and money in looking ahead. Not only in training technicians and executives, but also in finding new sources of oil and new methods of processing it into the much-needed petroleum products which are so vital to India's expanding economy.

does it all

THE TRAVANCORE RAYONS LIMITED

Rayonpuram P. O. Travancore-Cochin
Sales Office: Post Box No. 1571, Madras-1

National Carbon were offered freely at the lower rate of Rs. 27 with few declared buyers. Metal Box dropped 8 annas to Rs. 28 while Rallis were comparatively steady at Rs. 46. Indian Wood Products were reported at Rs. 44-8 and Midnapore Zemindari at Rs. 30-8. Martin Burn changed hands at the previous rate of Rs. 24-10 as did Clive Row at Rs. 11. Rohas Industries softened to Rs. 21-6. National Tobacco were steady today at Rs. 13-8.

In the mining section good business was reported in Indian Copper up to Rs. 4-8 but towards the close, in sympathy with the general trend, the shares reacted to Rs. 4-6. Burma Mines were easier at Rs. 2-14 as was Western Stockholders Investment at 14 annas.

Turnover in tea shares was extremely restricted and there was a general marking down of prices. Brahmaputra were done at Rs. 8-14 and Dejo Valley and Moheema changed hands at Rs. 49-10 and Rs. 24-10. Tezpur were marked back to Rs. 23-2 as were Hatikhira to Rs. 17. Patrakola came to business at Rs. 22-8 while Gungaram improved to Rs. 191-8. Carron were marked at Rs. 175 and Gaikhatta, Hantapara, Hasimara and Jaybirpara were transacted at Rs. 285, Rs. 197, Rs. 31-8 and Rs. 23-1 respectively.

The profit of the DIBRUGARH COMPANY has fallen from Rs. 9.55 lakhs to Rs. 4.25 lakhs for the year ended last December. The dividend has been cut from 40 percent to 20 percent. Buildings and machinery reserve is allocated Rs. 50,000 (same), leaving a carry-forward of Rs. 53,921. The crop increased from 7,222 maunds to 7,245 maunds, but the average sale price declined from 52.09 annas to 37.88 annas a lb. Estimates for 1956 have been made for a crop of 7,250 maunds at a cost of Rs. 9.35 lakhs.

The CENTRAL INDIA COALFIELDS have made a profit of Rs. 2.46 lakhs for the year ended last March, against Rs. 2.64 lakhs, after increasing depreciation by Rs. 1.25 lakhs to Rs. 3.97 lakhs. The dividend has been increased from 4 annas to 8 annas a share, leaving a carry-forward of Rs. 9,927, against Rs. 14,019 brought in.

The trading profit of the MEGNA MILLS COMPANY increased by Rs. 689 lakhs to Rs. 7.94 lakhs for the half-year ended last March. Providing Rs. 2.75 lakhs (Rs. 2.85 lakhs) for depreciation, bringing in Rs. 10,614 and making other adjustments, there is Rs. 4,71,137. The ordinary dividend has been raised from 1½ percent to 3½ percent, leaving a carry-forward of Rs. 1,64,942.

The INDIA JUTE COMPANY has increased its trading profit by Rs. 4.44 lakhs to Rs. 5.81 lakhs during the half-year ended last March. Bringing in Rs. 7,731, allowing Rs. 1.85 lakhs (Rs. 2.85 lakhs) for depreciation and making other adjustments, there remains a balance of Rs. 5,84,437. The ordinary dividend is increased from 1½ percent to 3½ percent, leaving Rs. 2,57,287 to be carried forward. The directors of both companies say that Messrs. Mackinnon Mackenzie and Co., Ltd. resigned from the office of the managing agents, and the companies have become director-controlled from 1st April, 1956.

WAR NEWS DOMINATES MARKET SENTIMENT

INTEREST SHOWN IN OUTCOME OF A.I.C.C. MEETING

Wednesday Evening.

QUIET conditions prevailed on the Bombay stock market last week. The price trend was generally downward, though occasional bouts of short-covering tended to improve values. Erratic fluctuations were mainly caused by the turn of events in the Middle East. Operators failed to take a view and were willing to restrict their commitments. The forthcoming A.I.C.C. meeting to be held in Calcutta this week, is likely to be watched with keen interest as the Congress will formulate its economic policy at the meeting. Towards the close, however, an improved sentiment has been evident following short-covering on the hope that the Suez Canal route might soon be freed from disturbances. Firm advances from commodity markets were regarded as an encouraging factor, though tightness of money, it is feared, will harden further in coming weeks as a number of new industrial issues are expected.

Tata Steels were maintained at Rs. 193, while Indian Irons dipped to Rs. 34 on selling pressure from Calcutta interests following disappointment over the proposed rights issue by the company. Premier Automobiles attracted attention at Rs. 116-8 on the publication of an ordinary dividend of 6 percent. Alcock Ashdown were lowered to Rs. 332-8, as were Tata Locomotives to Rs. 168-8. Hindustan Motors lacked interest around Rs. 9-7.

Among mill shares, Bombay Dyeings, Svadeshi and Century were in request at lower levels, their respective prices being Rs. 627-8, Rs. 253-8 and Rs. 550-8. Simplex came to hand at Rs. 139 and India Ordinary were done at Rs. 12-3. Except for sugar shares, interest in the miscellaneous group was at a low ebb. Belapur Sugar were steady at Rs. 250-8 and Walchandnagar Industries were taken at Rs. 285. Associated Cement declined to Rs. 194-8, as did Digvijay Cement to Rs. 193-8. In spite of dividend rumours, Scindia Steam lost at Rs. 18-14-6, while India Steamship rallied to Rs. 10-1 on short-covering. Great Eastern Shipping were steady at Rs. 22-9. In the mining group, Indian Copper have been maintained at Rs. 4-5-6 on firm metal prices on the London Metal Exchange. B. B. Petrol were steady at Rs. 3-10-6 on the publication of the company's development plans. Bombay-Burmah improved to Rs. 727-8 on rumours of a better distribution. Tata Chemicals were steady at Rs. 20-2, while National Rayon were easier at Rs. 261.

Routine business was transacted in banking shares, with Bank of India making Rs. 142. Central Bank were dealt in around Rs. 53-8. Sellers predominated in insurance shares, and New India were freely available at Rs. 46-4.

Scattered interest was shown in electricity supply undertakings, and Ahmedabad were transacted at Rs. 93-7. Tata Hydro came to hand at Rs. 126-8.

THE WEEK'S TRANSACTIONS

(In the following list of stocks and shares in which transactions have taken place during the past week the figures indicate. Opening Quotations. Highest for the week. Lowest for the week. Closing Quotations—Quotation for the Corresponding Closing Date a Year Ago, the last named being shown in parenthesis and will not be given where such a quotation is not available).

Carrying passengers and freight, Indian Airlines Corporation has an average load of about 4,500 lb. on every flight

SOMETIMES, freight claims aboard an aircraft come first. Would-be passengers are disappointed—especially if they hear afterwards of vacant seats. But, remember, the weight of a passenger may be taken up by a consignment of life-saving drugs, a shipment of vital foodgrains, or a bag of important mail!

The payload of an aircraft is made up by passengers and freight—it cannot be reckoned in terms of the number of seats provided. Please remember this, if you fail to get a seat on a certain flight. Remember, too, that Indian Airlines Corporation belongs to the people of India...and its wings fly in the service of all!

INDIAN AIRLINES CORPORATION

THE NEW TEST FOR STERLING

ECONOMIC CONSEQUENCES OF MILITARY PREPARATIONS

THE value of sterling was marked down against nearly all free currencies when the British Government made known its intention to invade Egypt. The reaction was not, however, as severe as might have been expected, and the authorities seemed to have little difficulty in supporting the currency within the limits of its official parties and of maintaining the unofficial relation between "official" and "transferable" sterling. Some observers have deduced from this behaviour that the pound is now, fundamentally, a firm currency. It is well to recognise, however, that the weakness has not been concentrated at a particular point of time, but has been spread over the months since the "Suez crisis" arose. The stability of the currency before the military action reflected a belief in some quarters that the crisis had permanently subsided, but it reflected also the completion in other quarters of arrangements that would be necessary if the crisis developed further. Some operators kept their holdings of sterling to the minimum consistent with their needs and did not,

therefore, appear subsequently in the market as sellers. Some holders of sterling who feared that they, like Egypt, might be prevented from using their money exchanged it into other currencies—a movement which is not repeatable.

Sterling survived that difficult earlier period in reasonably good shape, because, by ordinary economic tests, its condition was much sounder than it had been a few months previously. It survived the first impact of the military action without much further weakening, because some of the selling that such action would normally cause had already been completed. But it would be unwise to assume that Britain could undertake a prolonged military operation without seriously affecting the currency. Obviously, only the weaker holdings of sterling have been liquidated; there are still large amounts that could come on offer if their holders lost confidence. While the balance of payments is healthy—as it has been, on the whole, this year—confidence can be sustained by moderate official sales of gold and dollars, but if the ordinary trading account deteriorated such support would be ineffective. It is not difficult, in an emergency, to control import trade; it is on the export side of the overseas account that military operations are most damaging. One of the Government's first acts is requisitioning of ships; and Britain's export trade has suffered from lack of cargo-space ever since the dispute over the Suez Canal arose. This difficulty could continue a long time; or more foreign ships could be employed, at considerable extra cost in the invisible-payments account. But before long, Britain's need of commercial shipping might diminish: she might find that the world was no longer a willing buyer of her exports.

Danger to Export Trade

The main danger to export trade—and it is not absent from import trade either—is that, irrespective of the local war with Egypt, the British authorities will lose their grip on inflation. Laboriously, and not without opposition, the Chancellor of the Exchequer has almost achieved his intention to reduce by £100 million the estimates of expenditure embodied in his Budget last April. But this achievement is already academic; already so much additional expenditure has been incurred that the struggle against inflation has been weakened. A major reassessment of military needs—quite apart from current military action—would require a drastic revision of the financial programme. But even if new taxation and restraints were adequate to counter-balance the effects of increasing expenditure it might still be impossible to maintain the volume of exports, for the Government would

necessarily make extra demands on productive capacity (as on shipping and other services) that should be employed on export work. Modern Britain is beset by such problems whenever she is engaged in a war. In the past, however, she has been able to rely on the moral sympathy and on the practical assistance of the United States. The hostility of the United States on the occasion of the action against Egypt introduced a new unfavourable element into the economic situation. Most obviously, the willingness of the U.S. Administration to lend dollars for imports of oil from the western hemisphere could no longer be assumed. More generally, it had to be doubted whether the Administration would provide any kind of support to Britain's balance of payments, or even accept the new difficulties as a valid excuse for deferring the service of the postwar dollar loans.

Stability of Free Rate

If these unfavourable influences combined to weaken sterling, the British authorities would have to choose among various courses of action. They could not disregard the obvious fact that confidence must be based on the economic situation as a whole and cannot be secured by manipulation of the foreign exchange market. Exchange rates can be held firm by selling gold or dollars, but a decline in the reserve weakens confidence. It may, therefore, be necessary to confine the support to the official market, where the authorities are committed to specified rates, and to allow the unofficial rates for "transferable" sterling to fall back. The rates for "free" sterling have been held for many months very near the official rate, not because there is any commitment to support them, but because the authorities have been aiming towards a single rate for the currency and have wished to prevent the "shunting" of commodities from the sterling area to the dollar area through "third countries". However, commitment or no, a relapse of the "free" rates would damage the prestige of the pound. It is futile to close one's eyes to the fact that prolonged hostilities, or preparations for hostilities, could make devaluation of the pound unavoidable. It may be that this possibility is appreciated better in Britain than in other countries. Usually when doubt about the basic value of the currency is raised abroad there is no echo of it in Britain. But early in November, when external pressure on sterling was not severe, some big British financial institutions were investing substantially in U.S. Treasury bills, and the dollar premium which measures the difference between London and New York prices of North American securities reached the highest rate in years.

New Delhi

FINAL CONTRACT FOR DURGAPUR STEEL PLANT SIGNED

PROGRAMMES OF CONSTRUCTION

(FROM OUR NEW DELHI CORRESPONDENT)

THE final contract was signed last week between the Government of India and the Indian Steelworks Construction Company, London, (I.S.C.O.N.), a consortium of 13 leading British firms, to build an integrated iron and steel plant in Durgapur. Mr. R. J. Barritt signed on behalf of I.S.C.O.N. and Mr. S. Bhoothalingam on behalf of the Government of India. This contract was made in pursuance of the heads of agreement signed in March, 1956. The final specifications and tenders were submitted in June. Several changes were made after discussions with the Consulting Engineers to the Indian Government. These were designed to ensure the smooth and efficient operation of different sections of the plant, and to facilitate speedy expansion.

The construction programme provides for the completion of the entire works by 31st July, 1961. The first and second blast furnaces, with adequate coke-making capacity and ancillary services, will be in operation by 31st October, 1959, and 30th April, 1960, respectively. Also to be installed by 30th April, 1960, are part of the steel-making plant, the soaking pits, the 42-inch blooming mill, the intermediate mill and the continuous billet mill. Thereafter the steel-making shop and the rolling mill plant will be completed. The installation of the wheel, tyre and axle plant, along with related steel-making and casting shop facilities, will mark the final stages of the construction programme. The iron and steel producing sections of the Durgapur works are designed to produce 1,250,000 tons of ingots a year and 360,000 tons of pig iron. The provisional output programme for the rolling mill and wheel, tyre and axle plant is 790,000 tons, based on an ingot production of 1,000,000 tons a year. It will be made up of forging blooms and billets (100,000 tons), billets for re-rolling (150,000 tons), merchant bars and sections (440,000 tons), sleepers (60,000 tons), and wheels, tyres and axles (40,000 tons).

Site Preparation

The decision to build the Durgapur steel works is based on the recommendations of the Colombo Plan mission which was proposed by the British Government and which, under the leadership of Sir Eric Coates, visited India in April 1955 to advise the Indian Government on the development of the iron and steel industry. The works will cover an area of about seven square miles. Site preparation has already commenced. The companies of the consortium are:

1. Davy and United Engineering Co. Ltd.
2. Head, Wrightson and Co. Ltd.
3. Simon-Carves Ltd.
4. The Wellman Smith Owen Engineering Corp. Ltd.

For the engineering and supply of mechanical plant and equipment for the principal sections.

1. British Thomson-Houston Co. Ltd.
2. The English Electric Co. Ltd.
3. General Electric Co. Ltd.
4. Metropolitan - Vickers Electrical Export Co. Ltd.

For all electrical machines, plant and equipment.

1. Joseph Parks and Son Ltd.
2. Sir William Arrol and Co. Ltd.
3. Dorman Long (Bridge and Engineering) Co. Ltd.
4. Cleveland Bridge and Engineering Co. Ltd.

For the fabrication of structural steel for buildings, etcetera.

1. The Cementation Co. Ltd.

For all civil engineering work at site.

The technical co-ordination of the principal sections and ancillary departments, the engineering of the services for gas, water, steam, fuel and air, and of the road and rail services, is to be carried out by the Metallurgical Equipment Export Co. Ltd. (M.E.E.CO.), the British company which discussed with the Indian Government in 1955 the construction of the works by a British consortium and laid the foundations of I.S.C.O.N. Both M.E.E.CO. and I.S.C.O.N. have as consultants for all electrical engineering matters Messrs. McLellan and Partners. Consultants for the Durgapur and other steel projects of the Government of India are the International Construction Co. Ltd. of London.

Division of Work

While for the most part the plant and building materials for the Durgapur works will be manufactured in the U.K., about 33,000 tons of steel will be fabricated in India by sub-contractors to the British companies. In addition, certain refractories and construction materials will be obtained from Indian sources. The individual contribution of the British companies of the consortium will be

as follows: Simon-Carves Ltd. will build the three batteries of coke ovens to carbonise 5,200 tons of dry coal a day, and will be responsible for the design and construction of the coal washery, coal handling and blending plants, and the by-products plant. The latter will cater for the recovery of crude tar, benzol and sulphate of ammonia. A contact sulphuric acid plant is included. Head, Wrightson and Co. Ltd. will construct the three 27 feet hearth diameter blast furnaces, each with a rated capacity of about 1,250 tons a day of iron, and also the ancillary plant and ore handling, stocking and bedding plant and two double-strand pig casting machines. The ore unloading, handling and bedding plant will deal with about 45,000 tons of ore a week. The Wellman Smith Owen Engineering Corporation Ltd. will be responsible for the entire steelmaking plant and ancillary equipment. Included in this section are two 800-ton inactive mixers, eight fixed 200-ton and one fixed 80-ton basic open-hearth furnaces. The hot metal will be desludged, using oxygen from two 50-ton-a-day units. Davy and United Engineering Co. Ltd. will build the entire rolling mill and wheel, tyre and axle plant. The primary mill plant will include a 42-inch blooming mill and a 32-inch intermediate mill. The finishing mills are a 24-inch medium section mill, a Morgan continuous billet and sleeper bar mill, and a Morgan merchant mill.

Power House

The main power house will be the responsibility of Simon-Carves Ltd. and one of the four electrical companies of the consortium. There will be installed four gas-fired boilers, each rated at 150,000 lbs. an hour, of which two are equipped for alternative solid fuel firing, three 500 kW turbo-alternators, and four large turbo-blowers. Simon-Carves Ltd. will also be responsible for the distribution systems for coke oven and blast furnace gas, steam and tar. The engineering workshops will provide for all normal maintenance of plant and works rolling stock. A foundry for ingot moulds and a general foundry for ferrous and non-ferrous metals will be near the maintenance shops. Responsibility for the engineering of these departments has been undertaken by Davy and United Engineering Co. Ltd., which has as consultants for the foundry Campbell Gifford and Morton, and for the engineering shop machine tools William Asquith and Co. Ltd. The electric furnaces for the foundry will be supplied by the Electric Furnace Co. Ltd. The four electrical companies will be supplying a wide variety of plant, including power-station equipment, some 2,500 motors ranging in size from 1 h.p. to 7,000 h.p. (the latter being for the main drives for the rolling mills), and the complete distribution system for the steel works, including nearly 100 transformers, rectifiers, a considerable quantity of switch-gear and fuse-gear of various types for voltages up to 30 kV lighting, telecommunications cables and ancillary equipment.

The equipment to be built by the British Thomson-Houston Co. Ltd. will comprise the main drive for the 42-inch blooming mill, turbo-exhausters for the coke oven plant, diesel electric locomotives, a section of the electrical motors for auxiliary drives, switchgear and control gear, approximately half the lighting installation and telecommunications equipment for the complete works. The English Electric Co. Ltd. will supply the main mill drives for the 32-inch intermediate mill and the continuous billet mill, switch-gear, transformers and rectifiers, industrial and mill type motors, control gear and auxiliary motor generating sets as well as mechanical parts for the diesel-electric locomotives. The General Electric Co. Ltd. will supply the main mill drives for the Morgan continuous merchant mill, four turbo-blowers for the turbine plant, industrial and mill type motors, control gear and approximately half the lighting and tele-communications equipment for the complete works. Metropolitan-Vickers Electrical Export Co. Ltd. will supply the main and auxiliary electrical equipment for the 24-inch medium structural mill and wheel and tyre mill, three turbine generator sets, condensers for the turbo-blowers, together with a large number of the auxiliary motors, 3.3 kV distribution switch-gear, and transformers for supplies below 11 kV. The supply and installation of all cables and ancillary equipment, including steelwork, cleats, racks, cable trays and cable jointing throughout the steel works, will be undertaken by a cable group formed by Edison Swan Electric Co. Ltd., Pirelli-General Cable Works Ltd. and Siemens Brothers and Co. Ltd.

Steel Buildings

Responsibility for the design and construction of the steel buildings for the works has been undertaken by the four structural engineering companies of the consortium: Joseph Parks and Son Ltd., Sir William Arrol and Co. Ltd., Cleveland Bridge and Engineering Co. Ltd., and Dorman Long (Bridge and Engineering) Ltd. Some 65,000 tons of steel buildings will be fabricated in the U.K. The

Cementation Co. Ltd. will undertake in India all the civil engineering work, which will include all concrete work, laying of railway tracks and roads, water service mains, drainage systems and the buildings for offices, laboratories, canteens and other amenities.

Negotiations for concluding the contract were conducted in London by a Government steel delegation led by Mr. S. Bhoothalingam, Secretary, Ministry of Iron and Steel, and the contract documents were finalised in Delhi. The value of the f.o.b. supplies of plant, equipment and materials will be about Rs. 83 crores. The entire civil engineering work will be undertaken by I.S.C.O.N. and paid for according to an agreed schedule of rates. The structure of the arrangements for executing work in India is somewhat different from what was originally contemplated. I.S.C.O.N. will continue to have complete responsibility for the entire project as originally intended under the package deal arrangement. But a target of expenditure has been agreed upon for plant, equipment and materials manufactured or procured in India, labour and erection. This amounts to Rs. 20.83 crores. If actual expenditure is below the target, the first saving of Rs. 50 lakhs will accrue solely to the Government. If the target is exceeded, the first Rs. 50 lakhs of the excess will be borne solely by I.S.C.O.N. Only savings and excesses beyond these limits will be shared equally by I.S.C.O.N. and the Government. This arrangement will give I.S.C.O.N. a strong incentive to keep down costs.

Since the signing of the heads of agreement in March, I.S.C.O.N. has made considerable progress in preliminary preparatory work. It is expected that bulldozers will move into Durgapur within the next ten days and the preparation of the plant site will start immediately thereafter. The British Government has agreed to train under the Colombo Plan all the technicians required for the Durgapur steel plant. Three hundred trainees are proposed. As for the financing of the plant, the British Government, it will be recalled, has agreed to advance a loan of £15 million to India, and a consortium of British banks a further sum of £11.5 million.

Contract for Rourkela Plant

Negotiations are also reaching a final stage for signing a similar contract with the German consortium headed by Krupp-Demag for the steel works in Rourkela. According to present estimates, the f.o.b. cost of this plant will be about Rs. 96 crores. The costs of both the Rourkela and the Durgapur plants have thus increased since the original estimates. Being a Government-to-Government deal, the f.o.b. cost of the Bhilai steel plant, to be supplied by Russia, has not increased. But the other incidentals of the works, have risen. The cost of each township is placed at Rs. 12 crores.

The Government's policy for the export of iron ore and manganese ore was announced on 1st September. Under it, the quotas which had been granted were doubled and the period of their validity was extended to 30th June, 1957. The Government is already considering whether this policy calls for modification in the light of the experience so far gained. Transport was the main difficulty which was initially responsible for the new policy. The price factor is another consideration. The export trade in the two commodities is likely to rise if the foreign importer is assured of supplies and the prices. A timely announcement of the Government's policy is expected.

Dunlops and Levers

Indianisation of the capital structure of two British companies is being considered here. They are Dunlop Rubber and Lever Brothers. Permission has been accorded to Dunlops to issue preference shares of Rs. 1 crore at 4 percent premium, and ordinary shares of Rs. 1 crore at 100 percent premium. Levers are amalgamating their four Indian subsidiaries into one company with a total capital of Rs. 5.57 crores divided into shares of Rs. 10 each. They will shortly float on the Indian market 557,000 shares of Rs. 10 face value at Rs. 16-8, or at a premium of Rs. 6-8 each. The new company, Hindustan Lever Ltd., will be a public limited liability company.

Reports on Automobiles and Coffee

The Tariff Commission's report on the automobile industry has been received by the Government and is being examined. The second part of the Plantation Enquiry Commission's report on coffee has also been submitted to the Government.

Machine Tool Mission

A machine tool mission will shortly leave for the United States. It will also visit some European centres of production, and will be largely non-official in composition. The Government recently set up a machine tool committee, whose members were mostly drawn from the private sector. Its main function was to appraise requirements, assess existing and potential production, and suggest ways and means of meeting the deficiency in order to make India self-sufficient in machine tools. This committee has made a comprehensive and useful report, indicating the lines along which the public and private sectors might collaborate. It is on the basis of its recommendations that a mission is now being sent to important machine tool manufacturing countries. The services of the machine tool expert, Mr. Elliot, are being retained.

More Cement Factories Licensed

To help fulfil the revised 1961 target of 16 million tons for cement, three more cement factories

CAPITAL

Founded in 1888, is India's oldest and most widely read financial newspaper. It gives its readers in all parts of the world the most up-to-date service in Indian economic intelligence and information of any newspaper in the daily or weekly field, and includes a complete list of all shares and securities dealt in on the Calcutta Stock Exchange, together with full details of latest balance sheets.

The Research & Statistical Department undertakes research into industrial and financial problems and numbers among its clients, Government department, railway administrations, chambers of commerce and industrial associations.

were licensed last week, raising the installed capacity by 670,000 tons, it is learned.

Expanding Mysore Steel Works

It has been decided to expand the Bhadravati steel works in Mysore State. Tenders have been invited for one more melting furnace and rolling mill. Capacity for the manufacture of ferro-alloys is also being expanded.

Co-operatives in Communist Countries

Two missions have recently returned here—one from China and the other from Soviet Russia. Both have been studying the co-operative movement in these countries. Although their reports are still being drafted, extensive publicity has been given to their views in the Indian Press. According to these reports, the S. K. Patil mission to China was impressed by "the tremendous progress of agriculture". This, it thought, was largely due to "guaranteed prices, assured markets, the incentive to use green manures and night soil as fertilisers, elimination of pests, such as stray cattle, monkeys and sparrows, the organisation of co-operative institutions, cheap and plentiful credit, a well organised extension movement, the breakdown of production targets into provincial, district and village units, and the avoidance of improvident and unnecessary expenditure."

According to Dr. Punjabrao Deshmukh, who led the second mission, "consumers' co-operatives have taken a firm foothold in Russia. They cater for a variety of consumer services, such as the supply of bread, vegetables, fruits, etcetera. They also run restaurants, bakeries and shops for the sale of consumer goods, especially in the rural areas, where there are no Government shops. In fact, this is a sector in which co-operatives enjoy a monopoly."

It may be news that the Indian Ministry of Agriculture deputed Mr. M. R. Bhide to study the co-operative movement two years ago. His report, in two volumes, now remains the subject merely of occasional notes. As for using green manures and night soil as fertilisers, a study of Mahatma Gandhi's articles in *Harijan* may be of some advantage. He had never been to China and his recommendations were based on his study of purely Indian conditions. The main issue, however, concerns methods. Some members of the mission to China have indicated that the Chinese are a highly disciplined race. Others have talked of "the whip" the Communists have for idlers and for those who shirk work.

Transport Shortage

The Indian railways might be able to cover the "yawning gap" in goods transport capacity during the second plan period if another Rs. 150 crores are placed at their disposal, according to Mr. K. B. Mathur, Member for Transportation in the Railway Board. This provision would not cover the cost of any of the new lines which have had to be excluded from the railway plan because of a cut in its allocation. It would, however, include some major development of line capacity on trunk routes, which would be useful even during the third plan period.

According to Mr. Mathur, the "uncovered gap" in goods transport capacity is of the order of 30 million tons. He observes: "We cannot obviously leave this matter to chance. Since the main impact of additional traffic will come when the new steel works go into full production, there is yet time to plan." In a series of constructive suggestions, Mr. Mathur indicates the directions in which road services can supplement the effort of the railways. It goes without saying, he remarks, that the development of means of transport other than the railways must be proceeded with. The road services, he says, should be developed as ancillary to the railways and should work in co-ordination with them. Mr. Mathur points out that the increase of "general goods" traffic by rail by 30 to 35 million tons during the end of the second plan would mean that road hauliers would have to provide correspondingly increased terminal services. With the new emphasis on agriculture, more and more bullocks will be withdrawn from the roads to the fields, leaving it to the road services to fill the gap. Then, with the vast construction activity going on in the country, large quantities of goods will have to be carried by road. The volume of traffic will thus steadily grow. There are several areas which are not touched by rail or where rail transport has been deficient. "There is, in these directions, rich scope for the development of road transport, as a service supplementing the effort of the railways", Mr. Mathur says.

Pointing out that in the larger interests of the country road development must be well regulated, he advocates "strong machinery" to ensure that the road services are pressed into service only where they are really needed. Referring to passenger transportation, he says that the provision made in the railway plan for this purpose "hardly touches the fringe of the problem." Passenger transportation, therefore, "is a field in which road services can play a more important rôle than they are doing at present." In conclusion, he sounds a note of caution against allowing road transport to cater only to the higher-rated "cream" of traffic. This would inevitably result in the railway freight for industrial raw products being enhanced substantially. "If, like the railways in areas where the railways are under-developed, the road services were to carry low-rated traffic with high-rated traffic, mixing the lucrative with the less lucrative, they can certainly serve an important national purpose."

London

CITY REACTION TO MIDDLE EAST DEVELOPMENTS

STEEP RISE IN INSURANCE AND FREIGHT RATES

(FROM OUR LONDON CORRESPONDENT)

THE Middle East dominates not only the headlines but most of the pages of our daily newspapers, so it is hardly surprising that for the moment economic factors are not receiving much attention. The City's reaction to developments is difficult to understand. There has certainly been no panic. Apart from such inevitable consequences as a steep rise in insurance and freight rates, sharp rises and falls of prices in the stock and commodity markets, and a general cautiousness in financial business, the attitude was almost one of cheerfulness that the policy of drift of the last few months had given way to some sort of action. The first hint of the cost of the Suez action was provided by the gold and dollar balances at end-October, which showed a drop of £30 million for the month. The economic consequences of the Government's action in the Middle East will depend on the extent to which, and the period for which we are involved and the Suez Canal is closed to traffic. If these are limited, the outlook is not too bad. If a lengthy military campaign is involved, the outlook would be very serious indeed.

War risk insurance rates on cargoes passing through the Suez Canal have been increased by 10s a £100 to 10s 9d, for Egypt to 12s, and for Israel, Syria, the Lebanon and Jordan to 11s 6d. The Baltic Exchange has been disturbed by a rumour that the Government of India might boycott British-flag ships as a reprisal for British military action in Egypt, as has been done by dockers in the case of ships that have been in Marmagao. No confirmation was available from India House of the boycott being extended to British ships. The effect on the Baltic, however, according to *The Manchester Guardian*, was to lead owners of foreign tonnage to strengthen their claims for freights to Indian ports.

Industrial Production Index

The index of industrial production for September is provisionally estimated at 139 to 140, compared with 140 for September, 1955. In the first nine months of 1956, the index has averaged 135, compared with 134 in the corresponding period of 1955. But it was rising until the middle of last year; since then it has remained almost static, with small fluctuations from month to month. This is brought out particularly by the figures after adjustment for seasonal factors. The index figure for August is now estimated at 115, compared with 118 for August, 1955. This year August was more affected by holidays than last year. The July figure has been revised upwards from 126 to 128, and it compares with 112 for July, 1955. For manufacturing industry alone the July output was slightly higher than the total index at 131, but in August it fell back again to 115. Percentage changes in industries in September this year, compared with September last year, included: up—sulphuric acid 4, steel 5, and electricity generation 11; down—mined coal 2, bricks 5, cotton spinning 5, motor lorries 24, and cars (mainly small) 23.

Banks Buy Gilt-edged

The combined return of the clearing banks for 17th October shows that investment in Government securities increased by just over £20 million during the month. This was largely due to the purchase of about £20 million worth by the Midland and £5 million worth by Barclays, but is important nevertheless as marking the return of the banks to the gilt-edged market after a long absence. The statement marks a turning point for another reason as well. Deposits rose during the month by no less than £106 million, and for the first time since May, 1955, they were higher than at the corresponding date a year earlier. Allowing for cheques in collection, the net increase in deposits is still £73 million. The equivalent of this sum has been used partly for the purchase of gilt-edged securities and partly for an increase of £54 million in Treasury bills. Treasury bill financing has been increasing rapidly in recent months and the total bank holding of Treasury bills is now £233 million above that of a year ago. So long as this inflationary form of Government financing continues we can get little satisfaction from the fact that bank advances are being kept down.

The Treasury announces that the total bank overdrafts of certain nationalised industries on 17th October were £90,400,000, compared with £90,300,000 on 19th September and £123,400,000 on 15th August. The October figure is after taking into account Exchequer advances of £18,200,000, against £27,200,000 in August and £35,500,000 in September.

Triangular Deal with Pakistan

The need for exporters to adhere strictly to the instructions laid down for fulfilling agreement under the triangular deals whereby Lancashire exports cotton textiles to Asian countries and receives payment in the form of U.S. raw cotton by the Board of Trade has been emphasised by that Department. The Board has recently stated that imports of raw cotton already arranged under the latest agreement, exceeded in value the sales of textiles so far made, largely because of the previous limitation on the delivery period. Because of this situation, exporters could accept further orders for textiles without incurring any responsibility for the import of raw cotton to balance those orders. It was pointed out, however, that exporters accepting such orders should notify the Chartered Bank of India, Australia and China of their rupee value in order that a register could be kept of the extent to which contracts for textiles were placed against the total value of raw cotton purchases in hand. This warning takes on added importance as it is reported that another of these deals, with Pakistan as the third party, will be announced shortly. A new agreement with Pakistan would mean that a further quantity of cotton would have to be bought and the registration of orders with the bank would thus assume greater importance. An exporter who failed to register his orders would run the risk of being obliged eventually to undertake responsibility for arranging an additional import of cotton to balance any unregistered contract.

Tea Company Developments

Following the sharp setback of the previous year, Brooke Bond and Co. now announces excellent results for the year ended 30th June. Group profits after all charges rose from £467,862 to £2,722,376 and the dividend on the "A" and "B" Ordinary is being raised from 12s to 17s 3d. Due principally to the loss of over £1,200,000 by the parent company in maintaining steady tea prices in this country while auction prices were fluctuating violently, the 1955 profits were abnormally low. The latest figures, on the other hand, were inflated by £538,722, because of the low tax charge resulting mainly from the offsetting of the previous year's loss. The directors say that a better picture can be obtained by averaging the net results of the last two years and thinking in terms of a profit for each of these two years of about £14 million. With the preliminary results, the Brooke Bond directors also give news of fresh financing plans. They are to make a "rights" issue of three million "B" 5s. Ordinaries to "A" and "B" holders on a one-for-four basis. It is also proposed to capitalise £34 million of reserves and issue, in fully-paid form, 600,000 new "A" Ordinaries and 14,400,000 new "B" shares. These will be issued to "A" and "B" holders on a one-for-one basis.

Acting for clients in Ceylon, Seton Trust is offering £700,000 in cash for the ordinary shares of three tea companies with estates on the island. The bids comprise 37s a £1 share for Alliance Tea, 45s a £1 share for Imperial Ceylon and 10s a 5s share for Carolina. The offers are subject to Exchange Control consent and will be conditional on a 51 percent acceptance in each case. It is expected that the exchange approval will be obtained in time to enable formal offers to go out not later than 23rd November. Recently Nuwara Eliya Tea Estates made share exchange offers to the same three companies, but on much less favourable terms. All three companies are in the Thomson, Alston group and have similar boards of directors. In each case, the last balance-sheet showed proportionately large holdings of cash and investments.

Contribution to Colombo Plan

In the first six years the technical co-operation scheme of the Colombo Plan has arranged training facilities for 4,277 students from south and south east Asia and has provided the services of 572 experts. This is disclosed in the report of the Council for Technical Co-operation in south and south-east Asia for the year 1955-56, published last week. The report states that the U.K. has provided the largest number of experts—more than one-third—and ranks second to Australia in the number of trainees for whom facilities have been made available—1,274 against Australia's 1,610. Training has been provided in many subjects, among them engineering (which heads the list), food, agriculture and forestry, administration, education, medicine and health, industry and trade, transport and communications, and power and fuel.

Brevities

Lazard Brothers and Company has arranged a new revolving credit of £7,500,000 for the purpose of financing French purchases of wool in the British Empire during the 1956-57 season. As before, repayment of the credit is linked with the export of French woollen goods.

A scheme submitted by the British Burmah Petroleum Co. provides for sale of the South African subsidiary over a period while continuing to participate in its profits, and transfer of the company's domicile to India. If the scheme is approved there is to be a capital return of 1s on each 4s share, reducing the issued capital to £565,500.

Britain and India have decided that no grounds exist which make it desirable to replace the current financial agreement between the two countries, which expires on 30th June, 1957. The end of the agreement will not affect India's right to draw on her sterling balances, nor will it affect the treatment of remittances of savings and the voluntary repatriation of investments by British citizens.

Tourist allowances for the next 12 months will remain unchanged at £100 for an adult and £70 for a child under 12, but the amount in foreign currency notes that may be taken out of Britain will be increased from £25 to £100. The amount allowed out of the country in sterling remains at £10.

The basic price at which the Ministry of Agriculture, Fisheries and Food sells raw sugar has been increased from 42s 10d to 46s 10d a hundredweight to enable the Ministry to cover the cost of sugar supplies during the current financial year. The Ministry will continue to be responsible for the supply of sugar for the home trade until 1st January, the day on which the Sugar Board will fulfil its main functions under the Sugar Act, 1956.

Madras

CHINESE FARMING EXPERTS TOUR SOUTH

IMPLICATIONS OF NEW WAGE AWARD ON PLANTATIONS

(FROM OUR MADRAS CORRESPONDENT)

THE Chinese agricultural delegation which is now visiting this part of the country declared in Coimbatore that since 1950, agricultural output had risen absolutely and relatively in China which even sold 1,700,000 tons of grain in 1955. The delegation claimed that China is self-sufficient in cotton, the annual output being placed at 1,500,000 tons of ginned cotton, which means that she is ahead of India. The increase in output has been attributed by the Vice-Minister, Mr. Chiang Chi Hsien, to agrarian reforms as well as to science. China is credited with 12 agricultural institutes, 153 agricultural research stations and 159 tractor centres. The Chinese experts who are studying India's achievements in the field since her independence said nothing about the sugar or tea industry in their country. China's present output of oilseeds can only be guessed but it looks as if she would not buy Indian cotton or textiles any longer. With the progressive abolition of landlordism, the formation of collectives now holds the centre of discussion. Assurances given by Madras Ministers at Tiruchi were that those who own only 10 acres need have no fear on account of the land reforms. This may be taken to mean that ceilings for land are contemplated. The example of U.P. and Bihar is ignored, and the Ministers feel that the break-up of large holdings for redistribution is necessary to raise food production. The landlords who doubt the correctness of the idea also reject the idea of compulsory co-operation, as adopted in China, since they consider it the thin end of the totalitarian wedge. Since the President assented to the new tenancy laws, the landlords have lost hope, and in places, are thinking of setting up candidates to oppose the Congress party in the elections. It is quite likely that landlords as a class may prefer a rightist group, although the Congress can play both a conservative as well as a socialist role, according to its convenience. It is professedly anti-communal, but one communal body may support Mr. Kamraj Nadar.

Plantation Shares Slump

The Tribunal's Award fixing wages for all classes of plantation workers may affect the Government's yield from agricultural income tax, which is a growing source of State revenue. It is felt that workers in Mysore or Kerala also are likely to demand the new wage scales to be applied in Madras. But the industry is likely to go on appeal. A slump in tea rubber shares followed at once but the Stock Exchange put in new rules on Monday of last week. All transactions have to be concluded by the delivery of scrip within seven days, and the Stock Exchange Committee notified the brokers that in case the delivery did not follow automatically, no appeals were needed and buying in could be resorted to. This had a salutary effect at once, and on Wednesday, a brisk revival followed. There were few sellers and buyers started to rush in, as the war news transformed the mood of the Bombay market. But on second thoughts on Friday evening, it was realised that the Suez Canal was already blocked and the Indian tea exports might suffer, even if the export duty remained unchanged.

The flurry of covering against earlier sales is now almost over, and the usual caution has superseded. In the case of textile shares also the last week's recovery was due to technical factors and the change in the market sentiment in Bombay. The industry's prospects outside Andhra are not rated bright, for the burden of wages and bonus will be heavy and most of the mills will have to buy equipment for expansion. Fears of tighter money scare away investors hoping for a rise, and the post-holiday feeling is far from comfortable among brokers as well as clients who think that the cutting of the Commonwealth connection will detrimentally affect India's economic interests. The hints about higher taxation have gone home, and some Congress leaders' appeal to recast its foreign policy and turn to Soviet Russia for inspiration is regarded as distinctly ominous.

Revival in Hides and Skins

The hides and skins trade got a stimulus last week, as export demand increased for all weights and grades. The U.K. started to enquire for early shipments of kips and prices stiffened a little as a longer voyage implies a drain on U.K. stocks of tanned hides and skins. Little importance is attached to the growing use of rubber for shoe-making in the U.K. It is taken for granted that Indian hides and skins must have a big market, if Western Europe becomes a single economic unit. The proposed State-wide ban on cow slaughter may not hit the tanners much, but the trade view is that the ban is superfluous and will only raise the cost of raw material for an industry that helps the Harijans to secure employment.

Vegetable Oil Prices Rise

The new Suez Canal crisis helped push up the prices of vegetable oils last week, the demand from Calcutta interests being the chief factor. Forward rates are still well below the rate of Rs. 325 a candy for ready groundnut oil. The vanaspati industry is the chief consumer, but the prospect of a larger crop this year has served to keep down the market price of kernels. As exports are un-

likely the crushers have been compelled to ask for tax relief and a rigorous collection of the new excise duty so that expellers are not discriminated against. It is noteworthy that a Congress M.P. endorsed the view that the cottage industry should not escape the excise duty levied this year, and oil millers should not be placed at a disadvantage. From the Government's angle, exports on private account are unnecessary as the new excise duty takes the place of the old export duty and State trading will secure profits. The oil and oilseeds trade here is getting reconciled to the sharing of foreign markets with the new Government trading body, and to the loss of European markets to west African suppliers of groundnuts. But for Madras, the disturbing thing is that the vanaspati industry here is still in a poor way. While that in Bombay is prosperous and even the new units in Bengal are well off, the industry in Madras has not prospered. Some factories are shut and one is due for auction next month. Part of the difficulty may be due to the fact that consumers here prefer liquid oil to hard fat as well as the fact that many classes get their fat in the form of fish included in the diet. Adulteration is less rampant and more ghee is available. Oilcake is a stand-by for the mills in the south, and the demand is still rising as agriculturists feel that oilcake is safer than chemical manures for the soil, long cultivated intensively.

Grievances of Government Employees

While the addition of Rs. 5 to the dearness

allowance drawn by Madras Government employees has met with the approval of N.G.O.s in Andhra, the Government servants in the city feel that the concession is not enough. The demand made was for D.A. on the Central scale and the grant of Rs. 5 is considered a poor substitute. The addition to the Government's expenditure will be substantial; about Rs. 1.8 crores will be needed to meet the expenditure for the new increase of Rs. 5, but the disparity in pay as between the Centre and States (Bombay excepted) is the grievance of the N.G.O.s, who point out that the medical or educational concessions granted do not nullify the rise in the cost of living. A meeting of N.G.O.s held last week here recorded its view that the old demand stands.

Too Many Holidays

The complaints that India has too many holidays are heard here. One hopes that calendar reform will bring in its wake a reduction in the number of Government holidays, given without regard to the good of the State. The courts have suffered, and both lawyers and litigants have been put to hardship by unexpected holidays last month. The two holidays given last week in certain districts caused angry comment about the wisdom of stopping work in Government offices, while a good point was made about the celebration of birthdays of prophets in a private fashion without loss to the Exchequer through the closure of offices.

The Bank of India Ltd. Head Office Building in Bombay

A half century of Banking

"It is believed, not only that there is ample scope for a Bank of this kind but that there is a very pressing need in the trading community for a larger measure of the financial facilities which such a Bank would afford, and that there is every prospect that, if worked on sound principles and under prudent and careful management, such a Bank, while supplying a need to and conferring a boon on the people of India, would, at the same time, itself become a prosperous and lucrative concern."

These words are from the first prospectus of the Bank of India Ltd., which started on 7th September 1906 with an issue

of Rs 50,00,000. Small beginnings indeed, but even then its founders predicted a great future.

Today, with 36 Offices throughout India, the Bank has amply proved itself. It is represented overseas by 11 Branches, it has 92 Foreign Correspondent Banks abroad and Agents in most foreign centres. Its staff, in India alone, totals over 2,000. The Bank has a Paid-up Capital of Rs 2,50,00,000, a Reserve Fund of Rs 3,52,00,000 and a Working Capital of nearly Rs 100 crores.

Not chance, but prudence, caution and wise stewardship have been the cornerstones of the Bank's success. Thus, for the past 50 years it has withstood the trials of two world wars, banking crises, market fluctuations and political changes; and continues to play a vital, ever-increasing role in Indian commerce and industry.

All types of Banking business transacted:

Current Accounts—Savings Bank Accounts—Fixed Deposits—Loans and Overdrafts—Cash Credit Accounts—Discount of Bills and Hundis—Safe Custody—Foreign Exchange and Letters of Credit—Demand Drafts & Telegraphic Transfers—Executor and Trustee-ship—Safe Deposit Vaults—Guarantees etc.

Figures on 30-6-1956

Capital Authorised		Rs 5,00,00,000
Capital Subscribed		Rs 5,00,00,000
Capital Paid-up		Rs 2,50,00,000
Reserve Fund		Rs 3,52,00,000
Deposits		Rs 75,58,47,500
Working Funds		Rs 97,35,67,500

THE BANK OF INDIA LIMITED

Golden Jubilee

1906—1956

Head Office: Bombay

THE BOARD OF DIRECTORS

Sir Cowasjee Jehangir, Baronet,	Mr. Bhagvandas Chunalil Mehta
G.B.E., K.C.I.E. (Chairman)	Mr. Krishnaraj M.D. Thackersey
Mr. Ambalal Sarabhai	Mr. A. D. Shroff
Sir Joseph Kay, K.B.E.	Mr. Madanmohan Mangaldas
Mr. Dinsha K. Daji	Mr. N. K. Petigara
Mr. Ramnivas Ramnarain	Sir Vidulal N. Chandavarkar

Branches:

IN INDIA: Bombay (6 branches), Ahmedabad (5 branches), Amritsar, Bangalore, Bhub (Kutch), Calcutta (3 branches), Coimbatore, Delhi, New Delhi, Gandhidham (Kutch), Hyderabad (Deccan), Jamshedpur, Junagadh, Kozhikode, Madras, Nagpur (2 branches), Palanpur, Poona (2 branches), Rajkot, Sholapur, Surat, Veraval.

ABROAD: London, Aden, Karachi (Pakistan), Singapore. 5 Branches in East Africa at Nairobi, Mombasa, Kampala, Jinja and Dar-es-Salaam; 2 Branches in Japan at Tokyo & Osaka.

AGENTS: In all the principal countries of the world.

Jute

MIDDLE EAST HOSTILITIES KEEP UP GUNNY AND FIBRE PRICES

COMPLAINTS ABOUT WAGON ALLOCATIONS FOR JUTE

THE Calcutta jute and jute goods markets reacted strongly to the outbreak of hostilities in the Middle East, and in a very short time prices soared to new high levels. Speculative activity predominated in the early stages as operators indulged in heavy bear-covering in anticipation of good business. Conflicting reports on the international situation caused wide fluctuations; rumours were confirmed and denied, but within a very short time prices were higher than they had ever been this year. Many overseas consumers asked their Calcutta representatives not to ship any goods meantime until the position was clarified. This brought a certain amount of relief to operators who had blank sales on their books, and towards the end of the period the rush to cover these sales for steamers loading in port eased. Mills began to take an interest in the market as prices rose, and eventually became keen sellers for all constructions right through to the middle of next year. Overseas consumers took little interest at the higher rates and most of the business was absorbed in the bazaar by local bull operators. Towards the end of the week, continuous selling pressure by mills had an adverse effect. After the week-end, sacking prices were down to below last week's closing levels, having dropped about Rs. 2-8 from the top. Hessian remained fairly steady and at the close was still about Re. 1 better than a week ago. The difference between near and forward shipment underwent a big change during the week. The premium enjoyed by forward sacking was eventually reduced to a discount, and similarly in hessian January-March deliveries fell to 8 annas below the ready price, after ruling at par for some time. This appeared to be a reversal of last week's sentiment, but in fact it did not mean a weakening of the forward section. Rather it was due to the fact that speculative activity was confined to the near positions with a consequent jump in these prices which gave them a temporary advantage over other deliveries. Towards the close, there was a revival in all sections of the market on rumours of Russian intervention in the Middle East crisis, but when these were proved unfounded, prices again fell back.

Fibre closely followed the fortunes of the goods market, and although there was not any panic buying on last week's scale, steady but small purchases every day indicated the mills' general attitude. After the Kali Puja holiday, Indian mills made some "lucky day" purchases, which individually were of no great consequence, but collectively were enough to create a steadier feeling. The initial firmness was not maintained, and in spite of the business conducted, prices fell back in sympathy with the gunny market. Upcountry agencies were steady, following good covering business. As imports were well up to average, most sellers were keen to continue their activities. With the reduction in Calcutta prices, however, operators paused and agency rates were again higher than local prices. The allotment of wagons is causing much discontent at the railheads. It appears that there are plenty of them, judging by the large numbers lying idle in the marshalling yards, but allocations are slow and most applications have been drastically reduced. One of the strange things about the whole situation is that allocations for shipment to Cossipore are fairly easy to get, but restrictions have been placed on allotments to mills. This has encouraged sellers to consign large quantities intended for mills to Cossipore, in the hope that buyers will accept local delivery. But many of the latter have had unfortunate experiences with such local options in previous years. Sellers thus find themselves in the unenviable position of being in danger of having contracts cancelled through non-delivery from agencies due to non-allocation of wagons, while having ample stocks to cover these sales either in local godowns or in transit.

THE JUTE MARKETS

Manufactured Goods: As last Thursday was a holiday for Kali Puja, all markets were officially closed, but speculative activity continued because of the international situation. By the time regular trading opened on Friday, prices showed drastic changes. All rates were nominal, but were subject to sharp fluctuations. Ready B Twills jumped by Rs. 2-12 to open at Rs. 119-14 and November shipment was even higher at Rs. 120-4 a 100 bags. But activity in the forward section was restricted and January-March shipment only improved by Rs. 1-12 to Rs. 119-12, the premium previously enjoyed by forward shipment being thus nullified overnight. Hessian also reacted to the situation, and 40in. 100z. improved by Rs. 1-15 in the ready position to Rs. 44-11 a 100 yards, and Re. 1-8 for forward shipment to Rs. 44-6. Here also the slight advantage enjoyed by forward shipment was lost. These prices were the highest reached this year, but did not remain at those levels for long because of heavy selling pressure from mills. On Saturday morning, heavy goods and hessian both lost half of the previous day's gains. Mills continued to take an interest and business was again transacted at lower rates. The decline continued over

the week-end, and for the next few days prices fell by about 8 annas a day. By Tuesday morning, opening quotations in sacking were lower than last week's closing rates. This was mainly due to heavy bull liquidation following the initial buying space and over the week sacking rates dropped by Rs. 2-8 from the opening. At this stage, ready B Twills stood at Rs. 117-5, with forward shipment back to a premium of 4 annas. The reduction in hessian was not so drastic and 40in. 100z. was quoted on Tuesday morning at Rs. 43-14 for ready delivery and Rs. 43-5 for January-March shipment. This was 12 annas lower than at the beginning of the week, but still over Re. 1 higher than last week's closing quotations. At the close, prices were nominal in the absence of business, and opening quotations on Wednesday morning were as follows:

	Ready	Nov.	Dec.	Jan.-Mar.
40in. 80z.	35-12	35-10	35-6	35
40in. 100z.	44-4	44-5	44-4	43-10
B Twills	118-4	118-10	118-8	118-4
Heavy Ceers				
(Plain)	118-4	119	119	118-4
A Twills	139-8	140	140-8	141
Liverpools	130-8	131	131-8	132
Cornsacks	118-8	119-4	119	119

Raw Jute: Fibre prices were very firm at the opening last Thursday in sympathy with the goods market. Opening quotations for Dhurbi-Northern jute were based on Rs. 31-8 a maund basis Bottoms for November-December shipment. Good business was done during the day at full market rates in the form of "lucky day" purchases, but towards the evening values eased as gunny prices fell, and Saturday's opening was 8 annas down. Mills continued to take an interest, although on a much smaller scale than last week, but sellers were reserved and were not in the market after last week's large sales. Conditions eased further during the week-end, but sellers were reluctant to quote less in spite of Monday's opening rates falling to Rs. 30-8 a maund. Only small business was reported at this level, and in spite of the reduced prices, the undertone of the market was steady. Towards the close, the market improved on reports of Russian intervention in the Middle East, but no further business was reported.

During the week, mills' purchases were on a reduced scale. Assam and Northern jute was purchased at prices ranging between Rs. 30-8 and Rs. 31-8 a maund basis Bottoms for November-December shipment. Tossa from the same agencies was done up to Rs. 31 a maund, and Murshidabad District Tossa passed at Rs. 30 to Rs. 31. Good business was done in first-class Tossa from the Daissee districts, as also in Daissee, at Rs. 30-8 to Rs. 32-8 a maund basis Bottoms and Rs. 33 to Rs. 35 a maund for Middle only. Special Middle free from samla for Middle only. Daissee Mesta free from samla for Middle only. Local Northern was done at Rs. 37 to Rs. 38 a maund. In the lower grades of fibre, only small business was reported and Local Northern was done at Rs. 30 to Rs. 30-8 while Daissee Mesta passed at Rs. 28 to Rs. 29-8 a maund. Small lots of Bimli were done at Rs. 28 to Rs. 28-8 for F.A.Q. Good business was done in Pakistan Cuttings, both for ready bills of lading and for shipment, at Rs. 127 to Rs. 130 a bale.

At the close, the market was unchanged and opening quotations on Wednesday morning were as follows:

Indian Jute:	Landed at Mills Rs. a md. basis Bottoms.	Shipment. Nov.-Dec.
Lower Assam	30-8	"
Northern	30-8	"
Murshidabad White	29-8	"
Daissee	31-8	"
Daissee Mesta	29	"
Local Northern	30	"
Bimli	29 for F.A.Q.	"
Tossa is quoted at 8 annas to Re. 1 a maund above the price of white jute.		
Pakistan Jute:	Rs. a md.	Shipment. Nov.-Dec.
Jat	33	"
District	32-8	"
Northern	32	"
Pucca:	Rs. a bale.	Shipment. Nov.-Dec.
Mill Firsts 2/3	230	"
Export Firsts 2/3	210	"
Export Lightnings 2/3	195	"
Jat Cuttings	130	"

PROTECTION URGED FOR SWEDISH JUTE INDUSTRY

Protection for home-produced jute goods has been urged by the Swedish Textile Workers Union in view of the home industry's inability to compete with imported Indian goods, reports the *Jute Bulletin* of the Indian Central Jute Committee. The Union argues that higher customs barriers have been put up by other countries to protect their jute industry and that jute manufacturers in Sweden should not receive less protection than their counterparts in the linen, cotton and wool trades. The case for protection of the Swedish jute industry in the home market has been strengthened by its recent loss of business to India. A big agricultural organisation has

placed an order for 100,000 jute bags in India at a price considerably lower than the one quoted in the Swedish offer. Sweden's largest jute mill states that its ability to compete with foreign producers has been considerably weakened. In August 1955, Pakistan devalued its currency by 30 percent, but simultaneously fixed the raw jute prices at the previous pound sterling level and further introduced a higher export duty on it in order to protect her growing jute industry. India immediately counteracted by abolishing the export duty on jute products. The result, in spite of the increased customs protection for textiles introduced in Sweden in July 1955, has been a further widening of the difference between Indian and Swedish sales prices. The Indian manufacturers, the mill claims, pay £20 less a ton than European jute mills for raw jute.

THE FOREIGN JUTE MARKETS

RAPID RISE IN FIBRE PRICES

(FROM OUR DUNDEE CORRESPONDENT)

MOST jute traders are inclined to await further developments now. The advance in raw jute prices has been rapid, and spinners cannot afford to pay the rates quoted, although there has been an authorised rise in values of jute yarns of about £5 a ton. All prices for raw jute are well above the minima, for both white and dark material. The latter have taken some time to come up, but no doubt, the international situation has influenced the markets very greatly. Prices for all commodities have risen, especially metals, because the war in the Middle East might develop into something much greater than it is at the moment. The jute industry can make use of the Cape route to the U.K. and the Continent, if the Suez Canal is closed against ships carrying gunnies or raw jute, with a delay of only about 10 days, it is claimed. Offers of raw jute have been much fewer than usual, some of the biggest shippers refusing to quote. One or two are naming £120 for Mill Firsts now and £100 is the cheapest now for Mill Lightnings, with Mill Hearts at £95 and Grade Hearts at £90, November-December, c.i.f., U.K. The fixed minimum prices for these grades are £91, £81, £71 and £61, while Grade Tossa-2/3 is now £109 (minimum £100) and fours have been sold at £98 and £99 (£90), and good Daissee-2/3 quoted at £99 (£90) and Grade at £92 (£81), c.i.f., U.K.

In the Calcutta goods market, prices are nominal. The latest f.o.b. quotations are 18s for B Twills, 67s 9d for 40in. 100z. hessians and 51s 6d for 70z., November. Spinners sold a considerable quantity of jute yarns last week before the prices were raised by £5 a ton for the common varieties, "JCH". The value of common 8 lbs. cops is now 15.35d a lb., and that of medium 8 lbs. spools is 15.92d, with 3 ply 8 lbs twist at 17.61d and carpet 14 lbs. hard twist at 15.20d a lb. The finer yarns were put up in the previous week by a like amount and these remain unchanged, as also do sacking yarns at 12.35d a lb. for 24 lbs., weft and all the commoner grades of rove. The cloth prices are now 13.17d a yard for 40in. 100z. and 10.80d for 80z., with 8 por. 27in. 16oz. twilled sacking at 19.94d a yard and 14 por. 36in. 18oz. tarpaulin at 25.49d a yard.

GUNNY SHIPMENT STATISTICS

The following figures include coastal shipment relating to manufactured jute goods for shipment from the port of Calcutta. These are gross figures based on shipping bills presented:

	Hessian Bags (Tons)	Cloth (Tons)	Total (Tons)
1st to 31st October, 1956	4,782.7	31,516.7	36,299.4
1st to 30th September, 1956	2,265.0	30,257.5	32,522.5
1st to 31st August, 1956	3,711.0	38,809.8	42,520.8
	Sacking		
1st to 31st October, 1956	41,911.2	1,265.5	43,176.7
1st to 30th September, 1956	26,755.3	1,500.4	28,255.7
1st to 31st August, 1956	43,642.7	2,747.0	46,389.7

GUNNY SHIPMENTS DURING SEPTEMBER

The following are the total net figures of manufactured jute goods shipped from Calcutta during the month of September, 1956 after providing for short shipments. These figures include shipments to coastal ports.

	Hessian Bags (Tons)	Cloth (Tons)	Total (Tons)
Gross	2,265.2	30,258.0	32,523.2
Short shipped	46.0	1,148.7	1,194.7
September 1956 (Net)	2,219.2	29,109.3	31,328.5
August 1956 (Net)	3,330.9	37,120.5	40,451.4
July 1956 (Net)	2,803.0	30,699.6	33,502.6
	Sacking		
Gross	26,755.4	1,500.6	28,256.0
Short shipped	366.6	Nil	366.6
September 1956 (Net)	26,388.8	1,500.6	27,889.4
August 1956 (Net)	42,945.2	2,709.6	45,654.8
July 1956 (Net)	30,254.6	1,693.7	31,948.3

LABOUR-MANAGEMENT CO-OPERATION

LEGAL RIGHTS OF WORKERS IN WESTERN EUROPE

(FROM OUR NEW DELHI CORRESPONDENT)

WORKERS' participation in management has been considered by the International Labour Office primarily as consultation and co-operation between the employers and workers of an undertaking at the unit level. The most common method of workers' participation in management, viewed as a system of labour-management consultation and co-operation, is through special bodies variously denominated as joint production committees, works committees, works councils, management councils, and so on. Another method is through workers' representation on the directorate or the board of management of the enterprise. In Yugoslavia, the system of auto-management by the workers is practised.

Austrian and French laws confer on the works committees of limited companies the right to delegate two of their members to the boards of directors. In France, these delegates attend only in an advisory capacity; in Austria, they have the same rights and obligations as other members of the board. In western Germany, the Employees' Representation Act provides that in all share companies, except those of the mining and iron and steel industries and some small units with not more than 500 employees, one-third of the members of supervisory boards must be elected by the employees of the undertaking qualified to vote. A number, not exceeding two, of the employees' representatives must themselves be employed in the undertaking; the remainder need not be employees. The employees' representatives have exactly the same rights as those of the shareholders.

On the other hand, the Co-Management Act, which applies to share companies of the mining, iron and steel industries, provides for the equal representation of employees and shareholders on supervisory boards. The nomination of all the employees' representatives must be preceded by consultation with the trade unions concerned and with their federations. Two of these representatives, who must be employees of the undertaking, are nominated by the works council, and the remainder by the trade unions. In neither case, can the nomination be challenged. It is further provided that the board of management of each company must include a labour manager with the same rights as have the other members of the board; he is not considered duly elected unless a majority of the employees' representatives on the supervisory board vote for him.

Publicly Operated Services

In a number of countries the workers, through their representatives, participate in, or are associated with, the management of certain publicly-operated services—in particular, the railways. To mention a few examples only, one or more representatives of the staff are appointed to the boards of management of the State railways in several countries, such as Belgium, Canada, France, Italy, Norway and Switzerland. Three of the 21 members of the board of management of the Belgian State railways represent the railwaymen, and two of the eight members of the Norwegian board are similarly nominated. In Switzerland, the general secretary of the union concerned represents the staff on the board of management of the Federal railways and, in the case of some of the small private railways, a member of the staff sits on the board of management, as a member designated by the canton Government. In France, since 1933, five representatives of the railway unions, of which four are nominated by the National Federation of Railway-workers and one by the Federation of Christian Trade Unions, have sat on the board of management of the national railway company. In Canada, the unions have one representative on the board of directors of the Canadian National Railways.

While nationalisation in western Europe has been limited to a few of the most important industries in France and the United Kingdom and the electricity industry in Austria, in eastern Europe by far the greater portion of industry has been nationalised. The problems of co-operation, and especially the manner in which it is obtained, have been very different in the two cases. Only the position in western European countries will be considered here.

French Nationalised Industries

In France, after the war, the main organisation of the workers demanded the participation of their representatives in the actual administration of nationalised industries. They argued that the interests of capitalists should be eliminated, that bureaucratic control should be avoided and that the nationalised companies should be administered by boards of directors representing all classes of workers, the interests of consumers and the interests of the State. The legislature has, generally speaking, now made the administration of the nationalised undertakings a matter of genuine co-operation by giving them the status of public nationalised institutions of an industrial or commercial character, endowed with legal personality and financial autonomy, and administered in the interests of the community by all the parties concerned—the public authorities, consumers, workers and producers.

The important and the most regularly observed of the general principles in this connection is that which brings together on boards of directors representatives of the State, of the staff (appointed by the most representative of the trade unions), and those of general interests, chosen in most cases by trade union federations, large-scale family associations or various groups of consumers and users.

The management of the nationalised fuel mines throughout France is entrusted to a national coal board, the Charbonnages de France. This board has been given the functions of directing, supervising and co-ordinating the operations of the various coalfields, submitting for the Government's approval a plan for coal production and re-equipment, advising on import and export schemes and fuel prices, promoting research and training workers. Each coalfield has been placed under a regional board established as a public corporation responsible for production, operation and marketing. Six members of the National Coal Board represent the State and are appointed by the Ministers concerned, six represent consumers (three for industrial consumers and three for domestic consumers, one of the latter being appointed by family associations and two by trade unions) and six represent the different grades of staff (manual workers, salaried employees, supervisory staff, engineers and higher grades), being appointed on the recommendation of the most representative trade unions. Through this two-sided method of representation, therefore, the trade unions provide eight of the 18 persons entrusted with the overall management of this important industry. Of the 18 members of each regional board, seven representing the various grades of staff are appointed by the most representative trade unions in the coalfield. The director-general of each regional board is appointed by the competent Minister on the recommendation of the board itself.

Gas and Electricity

The nationalised electricity and gas undertakings are administered respectively by the electricity board, Electricité de France, and the gas board, Gas de France. Each is placed under a council of 18 members—six representatives of the workers (three for administrative and technical grades, one for salaried employees and two for manual workers) appointed on the recommendation of the most representative trade unions. In each region, there are electricity distribution departments and gas production and distribution departments, administered by boards appointed by the national services. Of the 18 members of each

administrative regional board, four represent the national board, eight represent the consumers and six represent the various grades of workers and employees.

There are no overall administrative boards for banking and insurance at the national level, each of the nationalised undertakings having its own separate board. Here again, however, the direct participation of all interests concerned is equally marked. The staff are represented on the General Council of the Bank of France. Each of the four main nationalised deposit banks is managed by a board of 12 members—four chosen by the Government from among persons engaged in industry, commerce or agriculture, and four appointed on the recommendations of the most representative trade unions concerned (two chosen from the higher grades and two from the subordinate grades of the staff of the bank) and four other members appointed by the Minister of Finance (two representing public credit institutions and two being persons with a wide experience of banking). The president of each bank is elected by the board, subject to approval by the Minister of Finance.

The nationalised insurance undertakings are also managed by boards, each composed of a chairman, appointed by the Minister of Finance after consultation with the board, three members appointed by the National Insurance Council for reasons of technical ability, three members representing the State, three members representing insured persons and three members appointed by the most representative trade unions (one representing employees, one representing senior staff and inspectors and the third representing agents).

Banking and Insurance

Although there are no general boards of management for banking and insurance at the industrial level, there are advisory agencies at that level in which trade union representatives also participate. The French Act of 2nd December, 1945, concerning the organisation of credit, set up a National Credit Council as the central agency of the new financial system. Of its 38 members, seven are nominated by the most representative trade unions—three represent general interests, appointed by the Minister of National Economy, and four represent the various grades of bank staff appointed by the Minister of Labour. The National Insurance Council is the central agency which advises the Minister of Finance on all measures concerning the general activities of nationalised and non-nationalised insurance undertakings.

Presided over by the Minister of Finance, the Council is composed of 21 members—seven representing the State, appointed by the Ministers concerned, seven representing insured persons, appointed respectively by the trade unions, the chambers of commerce, the trade chambers, the French Chamber of Foreign Trade and the family associations, and seven representing persons employed in insurance, appointed by the federations, trade unions or other national associations concerned (one for managers, one for the higher grades and inspectors, two for clerks, two for agents, and one for the staffs of agricultural mutual insurance funds).

The Austrian Government also has introduced the principle of direct co-operation by the representatives of occupational organisations in the management of the nationalised electricity services. The co-ordination of the regional and special electricity services is entrusted to a central company established on a commercial basis. One-third of its board of directors are appointed by the Central Government, one-third by the various regions, while one-third must consist of at least one representative each of the Chamber of Labour, the chambers of agriculture and of salaried employees and workers in the nationalised undertakings. In 1951, a joint Advisory Council was set up for nationalised industries, composed of four representatives each of the nationalised industries and workers, with the function of examining any social questions concerning the workers in these industries.

Engineering and Transport

THE SHAPE OF AIRCRAFT TO COME

NEW LANDING AND TAKE-OFF PROBLEMS

WHAT will the next generation of airliners look like? Ten years ago, the medium-sized, gas-turbine-powered Comet and Viscount were on the stocks, pioneers of the postwar era of air transport. The larger Britannia followed while the Vanguard is nearing completion now. In the early 1950s, the Americans and the British designed and started the construction of large trans-ocean pure jet airliners. As is well known, the British V-1000 was abandoned. These aircraft will be seen on the world's air routes for the next 10 to 15 years, perhaps longer. What will follow?

The vast increase in international air traffic forecast on all routes, short, medium and long, in the next 10 years presupposes more or larger aircraft. Yet mounting air traffic control problems point urgently to the need for restricting the number of airliners on all routes. Therefore, larger aeroplanes seem to be the answer, examples of which are already in being. A prewar 70-seater was considered very large; today, its equivalent holds 130 or more passengers. But if the present trend is followed, landing and take-off speeds and, consequently, runway lengths will go on increasing while safety factors decrease accordingly. Turbo-prop advocates that a relatively high cruising speed can be obtained without an excessive landing run, but the advocates of high sub-sonic and super-sonic cruising speeds are turning their attention more and more to high-lift devices which will, it is hoped, enable very fast aircraft to operate from runways of a reasonable length—say 2,000 yards. The problem has received much attention in the U.K. Handley Page are well known for their work on laminar-flow and boundary-layer control, and several other manufacturers are contributing in this field.

Jet-Flap Principle

Last year, the National Gas-Turbine Establishment announced the jet-flap principle. The jet-efflux from an aircraft's engines is discharged horizontally from the trailing edge of the wing in a long span-wise sheet, instead of from circular orifices directly behind the engines. On take-off and landing, this flat jet-sheet is directed downwards at an angle, thus forming, in effect, an aerodynamic flap of a size which would be impossible with a "solid", or mechanical, flap. The effective area is, in fact, similar to that of the wing itself. In addition, a certain amount of direct lift is obtained on the "jet deflection" principle. The National Advisory Committee for Aeronautics is reported to be "looking into the possibilities" of the British device. The Committee estimates that the jet-flap could cut take-off distance from 8,500 feet to 4,500 feet, landing run from 7,000 feet to 3,700 feet, take-off speed from 150 m.p.h. to 115 m.p.h. and landing speed from 115 m.p.h. to 80 m.p.h.

A small N.G.T.E. research team consisting of Messrs. I. M. Davidson, N. A. Dimmock and B. S. Stratford has been working on this device, and several points have emerged. The theory of the principle is being developed and wind-tunnel tests of models have done much to confirm its aerodynamic practicability. But quite apart from the principle involved, there are many purely structural problems to be solved. For example, it seems likely that a jet-flap airliner may have to have as many as six engines, three each side of the fuselage, to ensure stability in the event of engine failure. Obviously, a twin-engine aircraft would quickly be in trouble if one engine failed, because thrust extends almost to the wingtip and the remaining engine would veer the aircraft round and render it uncontrollable in seconds. Again, an aeroplane with a low aspect ratio wing—that is, short and fat—would be best suited for jet-flap installation. But this increases "induced" drag and lowers the efficiency of the wing at high speeds.

Risk of Fire

Wing fuel storage becomes a major problem, too. The "hot area" of the wing would be far greater than in a conventional turbojet aeroplane, thus increasing the risk of fire. A major aerodynamic problem is concerned with stability. Control difficulties assume large proportions when the wing area of an aircraft is, in effect, suddenly doubled. To make the aircraft manageable at low speeds may demand, for example, a tailplane of very different size and shape from that required for super-sonic flying. This and many other problems indicate that a quick application of an entirely new principle involving both structure and aerodynamic is not possible. Obviously, aircraft will have to be "built round" the jet-flap; modifying existing aeroplanes is not practical. The conventional airliner takes seven to eight years from design inception to airline service, so this time, preceded by the jet-flap development period, perhaps four years must be reckoned on before the first jet-flap aircraft is in service. Meanwhile, development work continues with the British aircraft industry taking an active interest.

RECORD PRODUCTION AND EXPORT OF U.K. DIESEL LOCOMOTIVES

The production and export of diesel locomotives built in the U.K. have broken all records this year.

In the first half, the combined output of British firms making diesel and diesel-electric locomotives was 501. This is a rise of 50 percent, compared with the same period in 1955. The English Electric Co. recently completed the delivery of 23 2,000-h.p. diesel locomotives for the Rhodesian railways and 42 mixed-traffic units for New Zealand. These orders are in addition to those for the Netherlands railways, the British railways, and others. Diesel locomotives built by English Electric are also operating in the Calcutta area. At present, British builders of diesel locomotives are executing orders from the Malayan railways, the East African railways, the Netherlands railways, and Irish State Transport, as well as from the British Transport Commission.

SHIPBUILDING INDUSTRY IN U.K.

COMPETITION FROM JAPAN

BRITAIN is traditionally the biggest shipbuilder and the biggest shipowner in the world, but the latest figures of construction shown in Lloyd's Register of Shipping have disturbed the complacency of those who assumed that this situation would last indefinitely. The stark fact is that in the third quarter of 1956 more ships were started, more were completed, more were launched, in Japan than in the United Kingdom; and the West German yards, though behind the Japanese, were ahead of the British. Only in tonnage under construction were the British yards ahead of their rivals. The comparison between Britain and Japan shows a remarkable difference between the two countries' achievements in the quarter-year. The tonnage of ships launched (which will soon become ships completed) amounted to 284,000 in the U.K. (including Northern Ireland), and 498,000 in Japan. The tonnage completed amounted to 245,000 in the U.K. and 417,000 in Japan. Yet tonnage under construction at the end of the quarter was 2,078,000 in the U.K. and 1,193,000 in Japan. This large volume of work in progress, plus an aggregate of orders that seems to ensure full employment for the next five years, may lull the anxieties of the British industry, but anyone outside can see that what matters is not how many ships are being built but how quickly they are being built. Both the large tonnage under construction and the large tonnage on which work has not yet begun reflect the slow rate of building as well as the big demand for ships. And shipowners who cannot expect delivery from Britain within a reasonable time are turning their attention to more active shipbuilding countries, even cancelling orders already placed.

Earlier this century it seemed impossible that the British cotton industry could be seriously challenged; now it must reorganise itself merely to survive. Only a few years ago the British shipyards' position seemed impregnable. In 1947, more than half of the world's tonnage of new ships was launched from British yards; but in the current year the proportion is less than one-fifth. A great British industry seems to be in decline. However, the cotton industry and shipbuilding are similar in only that respect, that they have failed to maintain their relative positions in an expanding world. The cotton industry has declined from its former size as well as from its former eminence, but the output of the shipyards is advancing, though too slowly—to higher and higher levels. The cotton industry has declined because there is not enough demand for its goods, but the shipbuilders' problem is to produce enough to satisfy their customers. Their launchings were rarely more than 1 million tons (in some years much less) in any year in the decade before the war; now the annual rate is about 1½ million tons. But the yards have been modernised and are using new methods (such as welding in place of riveting), and they could and should be producing more.

Antiquated Tradition

One obstruction is an antiquated tradition in the shipbuilding workers' unions. Under the impact of competition their restrictions will doubtless be modified. But the industry cannot in any case increase its output to the limit of its present capacity—probably 1½ million tons a year with the present labour force—unless it can get as much as it needs of its basic material, steel. Few British industries are any longer complaining of a steel shortage, but the shipbuilding industry is one whose needs are still unsatisfied. Others—the oil and the nuclear power industries among them—compete for the types of steel that the shipyards require, but much of their steel is in a more processed form and is, therefore, of more interest to the steel industry.

Whatever the explanations and excuses, the fact remains that in January-September, 1956, Japanese shipyards launched one-third more tonnage and began work on one-half more tonnage than British shipyards; and it must also be recognised that the rate of completions has risen rapidly in Japan while in Britain it is rather less than it was two years ago. For the British yards this is a record of relative stagnation; and it must be assumed that the relative decline will continue unless the British yards can improve their rate of output. Shipbuilding is still one of Britain's major export industries. Approximately one-third of its tonnage launched since the end of the war has been for registration in countries abroad; net earnings from sales of new and old ships (after deducting the cost of old ships, mostly for breaking-up) have averaged about £40 million a year in the period. Even so, shipbuilding earns

considerably less, in terms of overseas currency, than shipping services which have contributed, on an average, more than £100 million a year to the credit side of the balance of payments.

Handicaps of Industry

Shipowners, as well as shipbuilders, are, however, at a disadvantage in Britain. The British mercantile marine's aggregate of registered tonnage, now about 20 million, is nearly as large as it has ever been (it was a little more in 1930), but it has not grown in proportion with the world's shipping, which, above 100 million tons, is considerably larger than ever before. British owners are restricted by high taxation, while obscure maritime nations such as Panama and Liberia offer tempting facilities for registration under "flags of convenience". Even British shipowners have shown interest recently in the tax-advantages afforded by registration abroad, particularly in Bermuda. It is by shipping that Britain has gained her position as an international trader, and it is difficult to believe that she can maintain that position if her shipping is in decline. Already some British shipping companies' orders for new ships have been placed abroad, and while still pre-eminent in regular liner services, Britain uses more space in foreign tramp-ships than she provides to foreign charterers. But the market is expanding with the expansion of foreign trade; aircraft have the advantage for mails and for valuable freights (even some machinery), but they are not competitors with ships for carrying such commodities as oil. New methods of propulsion are improving shipping services, and Britain's engineering should enable her to keep well abreast of these new methods. British shipbuilders and British shipowners are now well aware that they must exert themselves.

EQUIPMENT FOR DOMESTIC WATER FILTRATION

It is often forgotten that pure water is not a natural product, but needs to be treated by filtration. Many serious epidemics such as typhoid, cholera and dysentery are usually caused by drinking water containing their germs. The World Health Organisation last year took for its theme "Clean water means better health", which has a particular significance in the south-east Asian countries where there is only too often no adequate supply of pure drinking water. Prominent in the field of water filtration and treatment are British Berkefeld Filters Ltd., (Sardinia House, Kingsway, London, England) who manufacture a wide range of both domestic and industrial filters made of stoneware, enamelled iron, aluminium, steel and other materials. The filtering medium of the "Berkefeld" filters is in the form of hollow candles of various sizes made of Kieselguhr, an infusorial or silicious earth, which on account of its enormous porosity, is an ideal filtering medium. These filtering candles are completely closed at one end, and the other end is fitted into a metal or porcelain mount. The water passes through the walls from outside to the inside leaving all impurities on the external surface, and then out through the small aperture of the mount.

Self-Sterilising Candle

As the standard candles required boiling at frequent intervals in order to restore their sterilising ability, the manufacturers have carried out intensive research and experimental work with the object of eliminating this process. As a result, they have recently introduced an entirely new design of self-sterilising candle, the "Sterasy" candle. This is a great advance on former types of Kieselguhr candle, not only acting as an efficient filter but sterilising as it filters, thus providing a complete safeguard against waterborne contamination. Germs are both trapped and destroyed on the exterior surface of the candle and filtered water can, therefore, be stored and will remain pure for lengthy periods. The candles, too, will last for a long time without renewal, and for cleaning purposes all that is necessary is to wash them occasionally with a soft brush in clean water to remove superficial dirt. No soap or detergent should be used. For domestic use where there is adequate pressure, the "Pattern H" filter is particularly suitable being available with right hand or left hand inlet, and in several styles of finish. The yield an hour at a pressure of 35-40 lbs. a square inch is 25 gallons of clear pure water, the height of the equipment in each case being 16 inches and the diameter 6 inches while the weight varies from 5½ to 9½ lbs., depending on the material or construction. Interesting also are the "Pattern I" stoneware filters with yields of three, six and nine gallons per 24 hours, which include a chamber for ice entirely separate from the filtered water compartment. In this way the filtered water is kept very cool, a great asset during warm spells of weather and in hot climates.

INDIAN FIRM REPEATS ORDER FOR U.K. DIESEL ENGINES

Automobile Products of India Ltd., Bombay, announces that it has placed a repeat order to the value of £1 million for 330 diesel engines and gear boxes with Henry Meadows Limited, of Wolverhampton, England. This order follows a previous £1 million order placed earlier this year. Mr. P. Matthen, director and general manager of the Indian firm, who returned early this month from Europe, stated in Bombay that his company was also making arrangements progressively to manufacture Meadows diesel engines.

CASHEW FACTORIES REMAIN CLOSED

SUBSTANTIAL RISE EXPECTED IN COFFEE OUTPUT

(FROM A SOUTH INDIAN CORRESPONDENT)

WITH the cashew industry dispute in Quilon still remaining unsettled, there appears to be little enthusiasm among the processors to make arrangements for the import of African raw nuts. According to information available now in the market, the African crop for the new season is likely to be about 80,000 tons, which will be a new record. Raw nuts from Africa reach India usually from December onwards. The harvest of the indigenous crop begins in April, and as such, it is too early to forecast its size. The normal supply of 60,000 tons, given favourable climatic conditions, can however be expected, and market circles expect an above the average supply in 1957. This may be one of the reasons for U.S. buyers' reluctance to offer more than 40 cents a lb. for forward contract against the current price of over 52 cents a lb. Another adverse factor is the threatened change in the management of the processing establishments: in a Press note issued on 14th October, the Travancore-Cochin Government has warned the processors that the factories would be taken over by the Government and handed over to workers' co-operatives, should the processors fail to reopen the factories immediately. Foreign buyers see in this move the possibility of production being maintained irrespective of the price obtained for the cashew kernel. Meanwhile, the Travancore-Cochin (new Kerala) Government has constituted a Cashew Board on which, strangely enough, neither the processors nor the workers are represented. It consists only of certain senior officers of the Government.

Suggestions for Solution

The South Indian Cashew Manufacturers' Association, which represents the processors in Quilon, in a memorandum submitted to the State Government has made the following suggestions to resolve the present crisis: the registration of all employed workers and no further recruitment, rationed distribution of raw nuts to the existing factories in proportion to the number of workers employed and the fixing of the export quota at the export point for each factory, on the basis of its labour force and a proportionate distribution at the purchase point. In the Association's opinion, the only way to do the maximum justice to the industry and labour is to give every worker now on the rolls his due share of the total work available. If the suggestions of the Quilon Association are accepted, the Government may have to drop its contention that the industry is non-seasonal because the quantum of work depends on the availability of raw nuts which varies mostly according to changes in climatic conditions. Processors in the north, who have formed another association last year, protesting against the Quilon manufacturers' efforts to perpetuate their monopoly, are not likely to agree on some of the proposals of the South India Cashew Manufacturers' Association, especially on export quota. The Government has referred the cashew dispute to the Industrial Tribunal in Trivandrum.

Coffee Crop Estimates

The preliminary estimate of the Coffee Board places the South Indian coffee crop for the 1956-57 season at 34,000 tons against the previous season's 33,775 tons. In the planters' opinion, this estimate is on the conservative side. They expect 3,000 to 4,000 tons more than the above estimate, which will make the total of 37,000 to 38,000 tons. The Board will probably revise its estimate when it meets some time this month, in the light of the crop reports it has been receiving. In view of the excellent crop prospects, a larger export next year is likely. The total allowed for export from the 1955-56 season's crop was 8,100 tons.

Wage Increase Award

The Madras Plantation Special Tribunal has awarded increase of wages for estate labour and allowance for the staff with retrospective effect from March, 1952. Planting shares fell substantially in the Madras share market when it came to know of the terms of the award. Increased selling pressure led to the withdrawal of the buyers, and the outlook seems gloomy for the holders of plantation scrip. Market circles fear that no bonus issue will ever materialise in view of the possible depletion of the reserves.

Rubber Output Rises

Although it was slightly less than the previous corresponding month's output, South Indian production of raw rubber in September at 2,293 tons was the highest so far this year. Production for the first nine months totalled 15,404 tons, compared with 14,565 tons in the same period of 1955. A corresponding increase in consumption also was noted; during the first nine months of the year, the manufacturers absorbed 21,699 tons, including imported rubber, against 20,771 tons in the corresponding period of last year. Stock figures reveal a build-up of rubber stocks with growers and dealers, while those with manufacturers show a decline.

Indian rubber output in September was 2,239 tons, according to the Rubber Board of India. Exports during the month were nil, and imports totalled 1,750 tons. Consumption by manufacturers

was 2,545 tons. Stocks with estates and dealers on the last day of the month was 3,816 tons, including 615 tons in transit. Stocks with manufacturers on the same date amounted to 3,157 tons of which 1,579 tons were imported. Manufacturers also consumed 303 tons of reclaimed rubber, their month-end stock being 449 tons and used 229 tons of synthetic rubber, of which they held a total stock of 781 tons.

LONDON TEA SALES

AT last week's London tea sales, the 53,163 packages on offer realised an average price of 6s 2.09d a lb. against 5s 10.45d at the previous sale and 4s 11.32d a year ago. Plain broken pekoe was quoted at 8s 9½d a lb. against 3s 5d at the previous sale. Prices obtained by some of the companies are given below:

	No. of packages	Average a lb.
Amalgamated	852	5/2½
Anglo-American	749	5/6½
Assam Co.	2,030	6/7½
Assam Cons.	540	5/4½
Assam Doars	855	5/7½
Assam Frontier	318	5/
Borelli	617	6/1
Buxa Doars	612	5/10
Central Province	330	5/9½
Chubwa	594	7/7½
Chulsa	1,179	5/6½
Cons. Tea and Lands	3,096	5/2½
Dekhari	516	8/0½
Doom Dooma	509	8/1½
East India	276	5/1½
Eastern Assam	648	7/10½
Eastern Produce	774	6/7½
Empire of India	1,226	5/3
Jetinga Valley	150	3/11½
Jhanzie	720	6/8
Jokai	2,230	6/9½
Jorehaut	664	8/7½
Kanan Devan	1,608	5/
Lanka Plants	282	6/6½
Lunava	936	6/7½
Nedem	429	4/11
Northern Doars	558	4/9½
Pabbojan	312	8/7
Rajawella	456	6/10½
Scot. Tea and Lands	1,112	7/0½
United Planters	486	6/8½
Upper Assam	282	7/10

U.K. Tea Stocks

U. K. stocks of tea on 26th October, amounted to 109.6 million lbs. against 110.6 million lbs. a year ago (converted at 110 lbs. a package).

COCHIN TEA SALES

At Dust Sale V, 600,000 lbs of tea were on offer. There was a good general demand. Prices were very strong and dearer at the bottom, but good liquoring Mediums and best liquorings were irregularly 2 annas easier. Medium sorts of good appearance were fully firm to 1 anna dearer.

NO CHANGE IN TEA EXPORT DUTY

The Government of India has decided that the export duty on tea during the month of November, 1956 should remain at the same level as in October, 1956, viz., 6 annas a lb.

COLOMBO RUBBER PRICES

The following prices have been issued by the Rubber Board of India from the weekly market report published by the Colombo Brokers Association:

	Closing prices on 26-10-56 (Rupees a lb.)	Average for the period (Rupees a lb.)
Sheet:		
No. 1	1.41	1.41
No. 2	1.38	1.38
No. 3	1.35	1.35
No. 4	1.11	1.11
No. 5	1.06	1.06
Sheet Cuttings 1	.98	.98
Sheet Cuttings 2	.93	.93
Crepe:		
Water White	—	—
R.M.A. No. 1X	1.35	1.34
R.M.A. No. 1	1.33/34	1.32½
Crepe No. 2	1.29½	1.29½
Crepe No. 3	1.21	1.21
Scrap Crepes:		
Sc. Crepe No. 1	90 Nom	90
Sc. Crepe No. 2	84/88	85½
Sc. Crepe No. 3	75/83	78
Flat Bark	70/73	70½
	Sc. Crepe 3X	82

To arrive at f.o.b. Colombo prices, add 53.45 cents a lb. for crepe other than Scrap Crepe and 31.45 cents for Scrap Crepe to the above market prices.

Commodity Markets

WHOLESALE PRICE INDEX ALMOST UNCHANGED

THE official wholesale price index (base: year ended August, 1939=100) remained almost stationary at 418.9 during the week ended 20th October, 1956, compared with 418.8 (revised) for the previous week. The index was lower by 0.2 percent when compared with the corresponding week of last month, but was higher by 16.3 percent than that of a year ago. The index for Food Articles advanced further by 0.5 percent to 395.6, compared with 393.7 (revised) for the previous week, as a result of an increase in the prices of rice in Vijayawada and bajra (+5% each), gram and dal arhar (+1% each) and rice in Calcutta (+1%) in spite of a decline in the prices of rice in Patna (-6%), sugar (-2%) and wheat (1-1%). Higher prices of raw jute (+2%) and groundnuts in Cuddalore and rapeseed in Calcutta (+1% each) raised the index for Industrial Raw Materials by 0.5 percent to 505.6, although the prices of gsumduts in Bombay (-6%), and raw silk and linseed (-1% each) were marked down. The index for Semi-Manufactures declined by 0.5 percent to 402.1 as compared with 404.2 (revised) for the previous week. Items which exhibited significant variations were: gingelly cake (-5%), copper in Bombay (-4%), groundnut cake (-3%), coir yarn-Anjengo superior (-2%), copra cake (+6%), groundnut oil (+4%), and mustard oil in Kanpur (+3%). Lower prices of rayon and silk manufactures (-4%) brought down the index for Manufactures by 0.3 percent to 389.0, compared with 390.0 for the previous week. A fall of 0.6 percent to 581.9 in the index for the miscellaneous group was caused by a decline in the price of black pepper (-7%); the price of chillies in Patna (+2%), however, witnessed a rise.

INDEX NUMBERS BY GROUPS AND SUB-GROUPS (Base: Year ended August, 1939=100).

Groups and Sub-Groups	20-10-56	12-10-56	22-9-56	22-10-55
I Food Articles:	395.6	393.7(R)	392.7	322.1
Cereals	516	511*(R)	508	391
Pulses	396	381	397	308
Others	246	249*	248	230
II Industrial Raw Materials:	505.6	503.2	505.1	407.9
Fibres	482	478	479	415*
Oilseeds	558	554	571	386

MAGNESIUM OXYCHLORIDE FLOORING COMPOSITIONS

The Indian Standards Institution has issued an Indian standard specification (IS: 657-1956) for materials for use in the manufacture of magnesium oxychloride flooring compositions (tentative). The specification forms a supplement to the code of practice for magnesium oxychloride flooring compositions (IS: 658-1956) issued by the I.S.I. some time ago. It lays down the requirements for materials which are to be used in the preparation and laying of magnesium oxychloride flooring compositions, such as calcined magnesite, fillers and aggregates, pigments and magnesium chloride, also known as gauging solution. The practice over the laying of magnesium oxychloride composition floors varies from purchaser to purchaser. While on a small scale the manufacturers of magnesium oxychloride flooring compositions undertake laying of the floors, large users such as the railways purchase the dry mix and the gauging solutions separately and use them when required according to the recommendations of the manufacturers. In the latter case, it is important that the dry mix and the gauging solutions should conform to certain essential requirements of quality as well as storage. This specification helps in testing the dry mix and the gauging solution to check whether they conform to the requirements. Copies of the specification can be had from the Indian Standards Institution, 19 University Road, Delhi-8, and also from its branch offices in Bombay and Calcutta.

Calcutta Markets

STRONG GENERAL DEMAND AT TEA EXPORT SALE

FALLING TREND IN DUSTS

AT Sale No. 20, held on 5th and 6th November, offerings at the Export auction consisted of 56,272 packages. There was a strong general demand with clean Common and Low Medium teas being the strongest features of the Sale. B.O.P.'s and Black Fannings were often 2 to 3 annas dearer. Medium teas of orthodox manufacture were well supported, the B.P.'s being 1 anna dearer. Some of the best B.O.P.'s however, often sold about 2 annas below last rates. Non-wither Doars were another strong feature and were up to 2 annas dearer, and there was more buying for C.T.C. teas, which sold well except for the very best. Well-made Whole Leaf grades and stylish B.P.'s were 2 annas dearer, and Darjeelings also shared in the general advance.

Quotations	1956 Rs.	1955 Rs.
Clean Black Pekoe	2 2 0 to 2 3 0	2 8 0
Plain B.P.	1 4 0 to 1 15 0	1 15 0
Medium Assam B.P.	2 3 0	2 0 0 to 2 1 0
East C.T.C. Assam B.P.	3 0 0	3 3 0 to 3 4 0

Dust offerings at the Internal Sale consisted of 19,589 packages. At the start of the Sale, there was a fair general demand, but at easier rates. Commons and Mediums were about 4 annas easier, although the powdery types were stronger than the grainy sorts. Medium and poor C.T.C. types were 2 to 3 annas easier while the better sorts were 3 to 4 annas below last rates. Middle East types were generally neglected and many were withdrawn, while the few Darjeelings and the poorer fibrous types received good support and were dearer to buy. Towards the close of the Sale, only a very few lots could be sold and withdrawals were very heavy. This week's quotations, therefore, should be considered to some extent, nominal.

Quotations	1956 Rs.	1955 Rs.
Medium Doars Dust	1 15 0	1 12 0 to 1 12 6
Medium Assam Grainy Dust	1 15 0 to 2 0 0	1 15 0
Medium Assam C.T.C. Dust	2 6 0 to 2 7 0	
Best Assam C.T.C. Dust 2 11 0		2 13 0 to 2 15 0

Leaf offerings consisted of 1,138 packages for which there was a fair demand at irregular rates.

COAL RATES RISE IN FREIGHT MARKETS

THE reaction of the markets to the Suez Canal situation has not yet become clear in the absence of chartering activity which has been at a minimum since the beginning of the month. What may happen is that spot vessels in the different trading areas may be forced to accept lower rates for "fill in" voyages pending clarification of the world situation. This trend, however, can only be temporary as rates before the crisis were on the rise and the diversion round the Cape will call for more tonnage. Transatlantic coal rates moved up to 80s, an increase of 4s a ton. Calcutta-Port Sudan was done at 115s for a December loader, while the high rate of 61s 3d was paid for a 14 knots, 9,730 d.w. motorship, delivery Australia re-delivery U.K.-Continent. Other time charter fixtures included a 7,850 d.w. motorship at 56s 6d, delivery Damman, re-delivery Japan via Mormunago, and an Indian round voyage for a 9,460 d.w. motorship 91 knots on 18 tons at £663 a day. Sale and purchase markets were featured by the disposal of the Bristol City, a 10,000 ton "Empire" type built in 1943 at the very high figure of £545,000. It is believed she was purchased by Pakistani interests, but there is no confirmation of this.

SUGAR PRICES UNCHANGED

During the week ended 7th November, sales in the Calcutta market averaged 5,000 bags daily. Arrivals a day were 6,000 bags and stocks totalled 130,000 bags. Stocks for ready sugar ex-Kantapur delivery were Rs. 31-2 for ordinary grain and Rs. 32-12 for big grain. The market was steady.

LINSEED BETTER

Better conditions prevailed during the past week, and some small transactions were recorded daily, chiefly for the ready and near positions. Arrivals were very scarce and sellers were reserved but crushers displayed a keen interest because of the better enquiries for linseed oil. Overseas business was at a standstill, but local enquiries were fairly good, and activity, although small, was better than in recent weeks. Latest quotations were based on ready November at Rs. 24-2 a maund.

HIDES AND SKINS STEADY

The market ruled steady. Stocks were less than in the previous week.

Bazaar Sales

(Between 31st October and 5th November, 1956.) Cowhides: Wet salted 22,000 pcs. on the basis of Annas 9; Wet Salted (Ord.) 20,000 pcs. on the

"That with effect from the commencement of the Companies Act, 1956, and in compliance with the provisions of Section 314 thereof, consent be and the same is hereby accorded to Mr. Sree Lal Mehta, a relative of Mr. Girdharilal Mehta, a Managing Director of the Company, holding and continuing to hold an office or place of profit as an Assistant to the Company on such terms as to remuneration or otherwise as have been or may be agreed from time to time between such Assistant and the Company."

The Transfer Books of the Ordinary Shares of the Company will be closed from the 14th November to the 29th November, 1956, both days inclusive.

By Order of the Board,

D. FORDWOOD,

Secretary.

4, Clive Row,

INDIA STEAMSHIP CO. LTD. Ordinary General Meeting.

NOTICE is hereby given that the Ordinary General Meeting of the members of the above-named Company will be held at the Registered Office of the Company, "India Steamship House", 21, Old Court House Street, Calcutta on Wednesday, the 12th December, 1956, at 10-30 a.m., in order to transact the following business:—

1. To receive the Directors' Report and audited Balance Sheet and Profit and Loss Account for the year ended 31st March, 1956.
2. To sanction payment of dividend on Preference Shares as recommended by the Directors for the year ended 31st March, 1956.
3. To confirm the payment of Interim Dividend and to declare a final Dividend on Ordinary Shares as recommended by the Directors for the year ended 31st March, 1956.
4. To approve the continuance of Directorship of Sir A. Ramaswami Mudaliar, K.C.S.I., D.C.L. (Oxon), and if thought fit, to pass the following resolution of which a special notice as required under Section 281 of the Companies' Act, 1956 has been received by the Company and the relative Explanatory Statement concerning which is annexed hereto as required by Section 173 of the said Act.

"Resolved that pursuant to the provisions of Section 281 of the Companies' Act, 1956, Sir A. Ramaswami Mudaliar, K.C.S.I., D.C.L. (Oxon), who has attained the age of 69 years do continue to act as a Director of the Company and it is hereby specifically declared that the age limit for the Directors prescribed under Section 280 of the said Act shall not apply to him."

5. To approve pursuant to Section 281 of the Companies' Act, 1956, the continuance as a Director of Sir A. Ramaswami Mudaliar, K.C.S.I., D.C.L. (Oxon), who was re-appointed a Director at the Ordinary General Meeting held on 20th December, 1955, and if thought fit, to pass the following resolution as a Special Resolution in respect of which a special notice as required by Section 261 of the said Act has been received by the Company and the relative Explanatory Statement concerning which is annexed hereto by Section 173 of the said Act is annexed hereto.

"Resolved that pursuant to the provisions of Section 261 of the Companies' Act, 1956, Sir A. Ramaswami Mudaliar, K.C.S.I., D.C.L. (Oxon), a Director of the Company who is also a Director and Member of Messrs. Lionel Edwards, Ltd., the Managing Agents of the Company and thereby an associate of the Managing Agents, do continue his appointment as a Director."

6. To appoint a Director in place of Sir B. P. Singh Roy, K.C.I.E., who retires by rotation and is eligible for re-election and to consider, and if thought fit, to pass the following resolution as Special Resolution of which a special notice as required under Section 261 of the Companies' Act has been received by the Company and the relative Explanatory Statement concerning which is annexed hereto as required by Section 173 of the said Act.

"Resolved that pursuant to the provisions of Section 261 of the Companies' Act, 1956, Sir B. P. Singh Roy, K.C.I.E., a Director of the Company who is also a Director and Member of Messrs. Lionel Edwards, Ltd., the Managing Agents of the Company and thereby an associate of the Managing Agents and who retires by rotation be and is hereby re-elected a Director of the Company."

7. To appoint a Director in place of Maharaja-dhiraja Sir Udaychand Mahatab Bahadur of Burdwan, K.C.I.E., who retires by rotation and is eligible for re-election.
8. To appoint a Director in place of Mr. S. C. Roy who retires by rotation and is eligible for re-election.
9. To elect Mr. R. K. Mitra, a Director of the Company who retires by rotation and is eligible for re-election.
10. To appoint Auditors and fix their remuneration.

The Share Transfer Register of the Company will be closed from 26th November, 1956 to 12th December, 1956 both days inclusive.

By Order of the Board,
A. MUKERJI,
Assistant Secretary,
India Steamship Co., Ltd.

Calcutta, the 31st October, 1956.

The dividend, if sanctioned, will be made payable to those Shareholders whose names stand on the Register of the Company on the 26th November, 1956 and the Dividend Warrant will be posted from 8th January, 1957 onwards.

N.B.—Member entitled to attend and vote is entitled to appoint a proxy and the proxy so appointed need not be a member of the Company.

Explanatory Statement as required by Section 173 of the Companies' Act, 1956.

1. In respect of Item No. 4 of the Notice of the Annual General Meeting, Sir A. Ramaswami Mudaliar, K.C.S.I., D.C.L. (Oxon), has attained the age of 69 years and hence his continuance as a Director needs your approval by a resolution in respect of which a Special Notice has been received from a Shareholder in accordance with the requirements of Sections 190 and 281 of the Companies' Act, 1956. Sir A. Ramaswami Mudaliar, joined the Board of Directors of the Company in 1947. During the long period of his association with the Company he has rendered very valuable service to the Company and it is in the interest of the Company that the Board should avail of his valuable advice which is of great asset to the Company, by retaining him as a Director of the Company.

2. In respect of Item No. 5 of the Notice of the Annual General Meeting, a Special Notice has been received from a Shareholder of the Company as required by Section 261, proposing that the appointment of Sir A. Ramaswami Mudaliar, K.C.S.I., D.C.L. (Oxon), as a Director, be approved in accordance with the provisions of the said Act. The Managing Agents of the Company, Messrs. Lionel Edwards, Ltd., have the right to appoint two Directors as ex-officio Directors of the Company. Mr. G. K. Khemka and Mr. K. M. Naik are the two ex-officio Directors of the Company. Sir A. Ramaswami Mudaliar, K.C.S.I., D.C.L. (Oxon) became a Director of the Company in the year 1947 and has for the last several years been associated as one of the Directors of the Managing Agents, who are entrusted with the management of the affairs of the Company and of which he has been the Chairman since the date of his appointment. As it is in the interest of the Company that it should continue to receive the benefit of his valuable advice and guidance, it is desirable that his continuance as a Director be approved by a Special Resolution in accordance with the provisions of Section 261 of the Act.

3. In respect of Item No. 6 of the Notice of the Annual General Meeting, a Special Notice has been received from a Shareholder of the Company as required by Section 261, proposing that the appointment of Sir B. P. Singh Roy, K.C.I.E., as a Director, be made and/or be approved in accordance with the provisions of the said Act. The Managing Agents of the Company, Messrs. Lionel Edwards, Ltd., have the right to appoint two Directors as ex-officio Directors of the Company. Mr. G. K. Khemka and Mr. K. M. Naik are the two ex-officio Directors of the Company. Sir B. P. Singh Roy, K.C.I.E., became a Director of the Company in the year 1945, and has for the last several years been associated as one of the Directors of the Managing Agents who are entrusted with the management of the affairs of the Company. As it is in the interest of the Company that it should continue to receive the benefit of his valuable advice and guidance as a Member of the Board, it is desirable that his appointment as a Director be made or approved by a Special Resolution in accordance with the provisions of Section 261 of the Act.

THE INDIAN IRON AND STEEL COMPANY LIMITED. NOTICE

NOTICE is hereby given that the Annual General Meeting (being the Thirty-ninth Ordinary General Meeting) of the Company will be held at the Registered Office, 12, Mission Row, Calcutta at 11 a.m. on Friday the 30th November, 1956 for the following purposes:

1. To receive and adopt the Audited Accounts for the year ended 31st March, 1956, and the Directors' and Auditors' Reports thereon.
2. To declare a dividend on the Ordinary share capital. The dividend, if declared, will be paid on or after the 17th December, 1956 to those Shareholders whose names appear in the Company's Register on the 30th November, 1956 or to their mandatees.
3. To appoint Directors in place of those retiring.
4. To appoint Auditors and fix their remuneration.
5. As special business to consider and if thought fit to pass with or without modification the following resolutions which will be proposed as special resolutions.

(1) That sub-clause 3 (16) of the Memorandum of Association of the Company be deleted and substituted by the following two sub-clauses:—

"16(a) To subscribe contribute or guarantee money for any national, charitable, benevolent, political, public, general or useful object or fund or for any exhibition."

"16(b) To establish and support, or aid in the establishment and support of associations, institutions, funds, trusts and conveniences calculated to benefit persons who are or have been employed by or who are serving or have served the Company or its predecessors in business or the dependents or connections of such persons and to grant pensions and allowances and to make payments towards insurance."

(2) That Article 150(18) of the Company's Articles of Association be

deleted and substituted by the two following sub-clauses:—

"(18a) Subject to the provisions of Section 293 (1) (e) of the Companies Act 1956 to establish maintain support and contribute or subscribe to any national, charitable, benevolent, political, public, general or useful object or fund and any institutions, society or club, which may be for the benefit of the Company or may be connected with any town or place where the Company carries on business."

"(18b) To give pensions, gratuities, allowances, bonuses, profit sharing bonuses or benefits or other charitable aids payments or monies to or for the benefit of persons who are or have been employed by or who are serving or have served the Company or its predecessors in business or the wives, children, dependents or connections of such person or persons as may appear to the Directors just and proper whether any such person his widow children or dependents or connections have or have not a legal claim upon the Company."

6. As special business to consider and if thought fit to pass the following resolution, namely:

"That the Books, Registers and other documents required to be maintained by the Company and kept open for inspection under the provisions of the Companies Act, 1956, and particularly under Sections 49, 118, 144, 163, 301, 302, 304, 307, 362 and 372 of the said Act, shall be available for inspection at the Registered Office of the Company by the persons entitled thereto to the extent and in the manner and on payment of the requisite fees, if any, specified in the aforesaid provisions, between the hours of 10 a.m. and 12 noon on each business day."

Provided, however, that the register required to be maintained under Section 307 of the Act shall be open for inspection of the members or holders of debentures of the Company between the times above mentioned only during the period prescribed by sub-section 5(a) of Section 307."

The Share Registers and the Transfer Books of the Company will be closed from the 20th November, 1956 to the 30th November, 1956 both days inclusive.

A member entitled to attend and vote at the Meeting is entitled to appoint a proxy to attend and vote on a poll instead of himself and a proxy need not be a member.

By Order of the Board,
MARTIN BURN LIMITED,
F. G. LIVERSEDEGE,
Managing Director,
Managing Agents.

Calcutta,
5th November, 1956.

HOARE, MILLER & COMPANY, LIMITED.

NOTICE is hereby given that the 36th Annual General Meeting of shareholders will be held at the Registered Office of the Company, No. 5, Fairlie Place, Calcutta, on Wednesday 5th December, 1956 at 11 A.M. for the following purposes:—

1. To consider and adopt the Profit & Loss Account for the year ended 31st December, 1955 together with the Balance Sheet as at that date and the Reports of the Board of Directors and Auditors.
2. To appoint a Director.
3. To appoint Auditors and to fix their remuneration.
4. Special Business.

To consider and if thought fit, to pass, with or without amendment the following Resolution which will be proposed as an Ordinary Resolution:

"Resolved that the accounts of the branch offices of the Company at Bombay and Madras be not audited as provided under sub-section (1) of Section 228 of the Companies Act, 1956."

The Share transfer books of the Company will be closed from 23rd November to 5th December, 1956, both days inclusive.

By Order of the Board,
For HOARE, MILLER & CO., LTD.,
C. C. PYNE,
Vice Chairman.

5, Fairlie Place,
Calcutta.
Dated, 31st October, 1956.

NOTE: A member entitled to attend and vote at this Meeting is entitled to appoint a Proxy to attend and vote in his stead. A Proxy need not be a member of the Company.

THE INVESTMENT & FINANCE CO. LTD.

NOTICE is hereby given that a General Meeting of THE INVESTMENT & FINANCE COMPANY, LIMITED, will be held at the Registered Office of the Company, Chartered Bank Buildings, Calcutta, at 11-00 A.M. on Tuesday, the 14th day of December, 1956, for the following purposes.

COAL COMPANIES

O. P. F. and Dd. indicate Ordinary Preferred Ordinary Founders' and Deferred shares respectively. P. next to the name of the company indicates that the company also has Preference Shares. Figures in "accounts closed" column indicate the months of the calendar year in which accounts are closed. For Managing Agents refer to the Key (last page) under the numbers indicated.

TEA COMPANIES

O. Po and Dd indicate Ordinary Preferred Ordinary and Deferred Shares, respectively. P next to the name of the company indicates that the Company also has Preference Shares. Figures in "accounts closed" column indicate the months of the calendar year in which accounts are closed. For Managing Agents refer to the Key (last page) under the numbers indicated.

A CONGRESS GUIDE TO SOCIALISM
LESS IDEOLOGY AND MORE CO-OPERATION

IT is neither complacency nor clairvoyance which prompts the prediction that the next Government of India will be a Congress one; it is a justifiable deduction from incontrovertible fact. That is why the resolution on economic policy presented to the Belaghata session of the A.I.C.C. last week-end calls for careful study. It gives some idea of the kind of thinking which will govern the economic decisions made in the next few years, and which will therefore be vital to the country's future. This resolution is by no means a lucid document, and it is so full of contradictions that the intelligent reader is tempted to reject it as meaningless. But it does possess a thread of consistency which is not too difficult to distinguish, and which it would be foolish to ignore simply because the rest of the resolution is such a jumble. There is a guide to the future here and it deserves consideration.

To begin with, the resolution is remarkably free from the usual tiresome ideological declarations. The "socialistic pattern" is reaffirmed. But it is a socialism tempered by expediency and chiefly expressed through a high level of welfare spending for which, in any case, there are certain political justifications. Promises of indiscriminate nationalisation have been avoided. The industrial pattern which emerges is a mixed one, not fundamentally different from that already established in Britain. How this moderation will survive the extremist pressures of the future, to say nothing of ministerial ambitions, is another matter. But at least it suggests that the development of the economy is being accepted as the major priority and that ideology may soon be relegated to second place. This may be because the second plan is already running into difficulties and it is ideology which must shoulder a good deal of the blame. The resolution affirms the importance of increasing the production of food and consumer goods. In an economy threatened with inflation, such an emphasis is simple logic. But it is one which, until comparatively recently, has been neglected in favour of grandiose schemes for heavy industry in the private sector. These have, of course, not been abandoned. The resolution specifies that priority is to be given to producer-good output as a basis for industrial expansion. But the impression is given that the dangers are now more clearly understood and the necessary sacrifices are being faced up to. This is a step forward. In fact, in some ways, the resolution is more realistic than the plan itself. It will require a good deal of hard thinking and adaptability to steer the country through the gathering clouds of inflation and, perhaps most important of all, the growing shortage of foreign exchange. To say that these virtues are visible in this document is not to deny that it could be better. But as a combined economic and political manifesto, given the prevailing feeling of the ordinary voter about such matters, it is difficult to see how.

If the emphasis on producer goods is not to lead to the kind of dangers experienced in early Stalinist Russia, more attention will have to be paid to agriculture than was originally intended in the second plan. This the resolution acknowledges, but still appears reluctant to draw the obvious conclusions. There is no doubt that the sentimental ideas which have governed land reform up to now are the best recipe for chronic starvation which it is possible to devise. If India is to feed her growing numbers with the quantity and variety of food they will require, without having to rely permanently on imports, more efficient farming will have to be introduced. Mention is made in the resolution of increasing agricultural credit and extending the scope of the Community Projects and National Extension Schemes. The question of co-operatives has also been touched on, but there remains an obvious reluctance to embark on a firm policy of increasing the size of the average farming unit by this method. That is not easy to understand. India has long since made the choice between compulsory collectivisation and voluntary co-operation. The latter has not proved; they will first have to pay an initial security.

popular yet. But there has been no widespread opposition to it and its importance would suggest that greater efforts might

with four delivery periods a year, business can be done simultaneously in the two periods immediately succeeding. The management of the futures market will have in reserve large powers presumably for use in special circumstances, for instance, to stop business, fix floor and ceiling prices, call margins and nominate due dates of settlement. The representation on the East India Jute and Hessian Exchange is being broadened considerably to bring a larger variety of jute and jute goods interests into closer association with the running of the futures market. The board of directors which will take charge after the first board resigns at the end of six months will consist of four persons nominated by the Government; four elected by the panel of manufacturers; four elected by the panel of raw jute dealers; and two each by the panels of jute goods shippers, jute goods dealers and brokers.

The basic dilemma which has been faced in the running of futures markets is an old one. It springs from the attempt to reconcile two apparently contradictory aims. One is to leave the futures markets free enough to reflect genuinely the prevailing ideas about commodity or general economic trends; and to ensure that business in them is neither so expensive nor so cumbersome as to discourage operators into alternative forms of trading. The other is to ensure that strict checks are kept on over-trading of the sort that has often brought such markets to grief and done lasting damage to confidence. India's regular stock markets have not yet been successful in completely superseding their irregular counterparts on the kurb; in some centres, the former still contemplate with envy the volume of business done by the latter. The new jute and jute goods futures market might conceivably be faced with a similar problem for some time. But its establishment is nevertheless to be welcomed; and its success might well depend as much on the discipline of its membership as on the co-operation it receives from a Government which may need to take strong police action against *fatka* and *katni* trading.

CREDIT PROBLEMS OF SMALL ASIAN FARMERS

DESPITE many efforts, few Asian countries have so far succeeded in lightening the weight of debts that burden the small farmer. Co-operatives are still weak as a rule, and credits from banks or other institutional sources are usually beyond reach. Heavy pressure of population on the available land and low productivity expose the small farmsteads inordinately to the hazards of nature and malpractices of moneylenders. Tragedy follows when short-term loans are turned by high rates of interest into perpetual debts. Present conditions affecting the economy of small farm holdings in Asia and especially their credit problems are described in a study* prepared by the joint agriculture division of the U.N. Economic Commission for Asia and the Far East and the Food and Agriculture Organisation. This report also contains proposals for a "new approach" to ease the credit situation of the small farmer. The prevailing high, and often exceedingly high, rates of interest, are a reflection of the weak position of the small farmer, whose productivity is undermined by the splitting up of land, and of the lack of banking institutions and co-operatives in rural areas. To some extent, the problem is aggravated by tenancy conditions and the tie-up between credit and marketing arrangements. In these circumstances, the small cultivator who needs credit either for farming purposes or for his domestic needs, has no option but to turn to village moneylenders who are naturally aware of this situation, and also of the possible risks they have to accept. However, as the report points out, there can be hardly any justification on economic grounds for the highest rates of interest charged to the small farmer. The report gives some illustrations of interest rates customary in rural areas in various Asian countries. In India, interest rates of 25 percent or more, and as high as 70 percent, are charged by private agencies; in certain areas, rates exceeding 50 percent per annum are not uncommon.

A common malpractice is the tie-up between loans and sales of produce. In certain parts of India, as also in some other countries, the bulk of the loan business of moneylenders consists in advancing money free of interest on condition that the farmer sells his produce to the lender. This tie between credit and marketing, which is common in most countries of the region, has a number of disadvantages, the study observes. The cultivator frequently receives less than the market price and he is often also hit by underweight, illegal deductions and other malpractices. Moreover, the moneylender does not generally pay a higher price for produce of better quality. Even worse is the

habit of the moneylender extending loans to the small farmer in the form of seeds, for this practice stands in the way of crop planning and improvement. Of the countries of the E.C.A.F.E. region, only Japan has a well developed co-operative credit system and interest rates have been brought down to between 5 percent and 10 percent. Moreover, a large proportion of loans from relatives in Japan are believed to be free of interest. Japan is the only country in the region where the middleman does not play any important rôle in the marketing of agricultural produce. Co-operatives handle 74 percent to 92 percent of the quantities of foodgrains (rice, wheat, barley, etcetera) sold by the producers, and in a number of other commodities co-operatives handle about 50 percent. In most other Asian countries the co-operative movement has failed to make any significant impact on the agricultural credit situation, the study remarks. Co-operatives cover only a fraction of the rural population and they account for only a small proportion of the credit needs of cultivators.

In addition to other economic and technical factors, the population pressure on available land and certain agrarian structures in Asian countries have greatly contributed to undermining the productivity of the small cultivator. The report points out that in most Asian countries pressure of population is not only high but continually increasing. Hence, the net area sown a head of the population has decreased in various countries. In India, it has shrunk by 24 percent in 20 years, and in the Philippines, by 32 percent in 30 years. In 13 selected countries of the Far East, the area under cereals a head of the population has decreased by 9 percent in 27 years. In certain Indian States, one-half to two-thirds of the owned holdings are of less than five acres. In Indonesia, over 95 percent of the farmers in East Java have only one to two acres. In the Philippines, nearly one-fifth and in Thailand 15 percent of the total holdings are less than one hectare in size. The report comments that the credit-worthiness of the small farmer is usually judged by banks and even by co-operatives too

much from the point of view of the security he can offer rather than according to his ability to repay. This places tenants in a weaker position.

The most important feature of agricultural credit in Asia, the report emphasises, is the overwhelming part played by credit from moneylenders, landlords, merchants, relatives, etcetera. In India, according to a recent survey, over 93 percent of the loans were from individual moneylenders, landlords, etcetera, and in Thailand the proportion was about 86 percent. Only in Japan have co-operatives had a larger share—over one-third of all borrowings, as against 3 percent in India and 14 percent in Thailand. In the Philippines, too, small farmers have had to rely almost exclusively on moneylenders, landlords, etcetera.

In these circumstances, a complete reorganisation of the agricultural credit structure appears desirable in many cases, the report concludes. Moreover, to break the vicious circle of "poverty, debt and high interest rates", measures designed to raise agricultural productivity must go hand in hand with improvements in the credit system. To approach the credit problem of the small farmer from a new angle, various measures are being proposed, especially in India and the Philippines. Co-operatives, it is generally agreed, provide the best basis for agricultural credit, but Governments will have to assume major, or even full, responsibility for providing funds for the development of the co-operative movement and its supervision. This would be a radical departure from the dependence of the co-operative on local savings and development entirely or largely independent of Government assistance. Co-operatives have to adopt an integrated approach to credit and marketing activities and have to begin dispensing credit on the basis of the repaying capacity of the borrower rather than on the security of his immovable property.

CURRENT COIN

Aluminium Loan Stock and Interim.—At an extraordinary general meeting of the Indian Aluminium Co. Ltd. on Monday, shareholders approved the issue of Rs. 2,68,13,200 worth of 5 percent Convertible Loan Stock repayable in 1971-81. The features of the Loan Stock were discussed at length in *Capital* on 1st November. A notable one is that until the end of 1970 stockholders will have the option of converting their Stock into ordinary shares at varying rates, depending on the length of time the Stock has been held. The new issue will provide part of the funds required by the company for the establishment of a new 10,000-ton aluminium smelter in Hirakud, involving an expenditure of more than Rs. 8 crores over the next four years. Aluminium Ltd., Canada, which is Indian Aluminium's principal shareholder, has decided to subscribe to one-half of the issue and, by limiting its subscription to this amount, in accordance with the desire of the Indian Government, is providing an opportunity for increased participation by Indian capital. The Stock will be offered to shareholders of the company on 20th December, and, if necessary, at a later date to the Indian public. Reflecting the doubling last year of Indian Aluminium's ingot capacity to 5,000 tons a year, profits for the first nine months of this year are estimated to be a good deal higher than those for the whole of 1955. A further substantial increase is expected when the Hirakud smelter comes into operation, bringing the company's total ingot facilities to approximately 15,000 tons a year. Indian Aluminium has just declared an interim dividend of 5 percent. It has completed the allotment of ordinary shares recently offered on a rights basis, and these shares also qualify for the interim dividend.

Burrakur and Kumardhubi.—A general meeting of the Burrakur Coal Company's shareholders is to be held on 4th December to consider a resolution authorising Burrakur to enlarge its investment in the Kumardhubi Fireclay and Silica Works Ltd. Kumardhubi Fireclay proposes to make a rights issue of 150,000 ordinary shares of Rs. 10 each at par. Burrakur, which holds a substantial portion of Kumardhubi Fireclay's capital, is entitled to take up 74,750 of these rights shares at a cost of Rs. 7,47,500. Burrakur's total holding in Kumardhubi Fireclay, after it takes up these shares, will be 41.53 percent. Kumardhubi Fireclay needs the extra capital from the rights issue to finance the second stage of expansion in its fireclay section, which will increase production by another 12,500 tons a year. In the light of plans to develop the steel industry, it is expected that this extra production will enjoy a ready market. It is also expected that Kumardhubi Fireclay will maintain its recent dividends of 15 percent on the increased capital.

Madras Plantation Shares Down.—The fixing of minimum prices for planting shares in Madras has followed the severe slump, caused by the Plantation Award published on 26th October. A fall of 25 percent in the price of active scrip has forced the Council of Management to reinforce its new rule of delivery of documents in seven days, by fixing floor prices at the level obtaining on Thursday last. Friday's business revealed no change in sentiment and sellers predominated. This was due mainly to reports that labour, including the I.N.T.U.C. Union, is pressing for immediate implementation of the one-man Tribunal's Award, thus denying implicitly the right of employers to seek the legal remedy. Another dispute over bonus is pending, but this is of little consequence compared with the Award. The Minister for Agriculture and Industry has told a labour deputation that the Madras Government will not intervene until trouble arises, and in any case, a tripartite conference could be held only after the Supreme Court has dealt with the employers' appeal. In circulars to shareholders a leading managing house has indicated how the award will lead to the erosion of reserves and heavy additions to the wages bill. This will mean not only the passing of dividends but a drop in agricultural income-tax paid by plantations. Plans for replanting will have to be held in abeyance. The Tribunal's view that Madras plantations are prosperous and can afford to pay for the benefits due under a socialistic pattern has been questioned by those claiming to speak for the small investors, who have a large and growing stake in the plantation industry. From circulars referring to the new burden, it is evident that rubber estates will fare better than tea or coffee. The estates in Wynad with modest capitalisation per acre stand to suffer like those in the Nilgiris with higher capitalisation, assuming that the Kerala State will give effect to the award handed down by the Madras Tribunal. In the case of the Chembra Peak estates, the sum payable at Rs. 19.25 lakhs exceeds the entire capital and reserves, put at Rs. 18,83,400 and the addition to the annual labour charges will be Rs. 4 lakhs. That is why the confident survey of the Chairman of the Coffee Board, describing a rise in coffee output with a promise of larger exports,

coinciding with better demand for mild coffee at higher prices, was coolly ignored by the market. The official chairman made no reference to the disastrous effects of the Award. Official neutrality has been carried very much farther than expected.

Problem of Coffee Exports.—The statistics of coffee production and consumption both in home and overseas markets, given in the address of Mr. K. Srinivasan, Chairman, to last week's meeting of the Indian Coffee Board, point to the necessity of exporting Indian coffee on an increasingly larger scale as indigenous production is rising. Coffee output at about 34,000 tons for 1955-56 was considered a record, but as the Board's Marketing Committee's estimate shows, the current year's (1956-57) production, at 35,890 tons, has surpassed that. Consequently, the surplus likely to be available for export has been placed at 7,924 tons, slightly less than the quantity actually exported during the previous year. Internal offtake has been estimated at 26,775 tons. Some consider that the estimates of domestic consumption are unduly high, and not justified by the rate of consumption in the recent past, so a larger surplus than the Coffee Marketing Board estimates should actually be available for export. This however makes a minor difference to the issue. The pertinent question is whether the Coffee Board itself should enter the trade when private interests have a satisfactory export record. Mr. Srinivasan's argument is that while the private exporter would be merely interested in getting the best price for his goods, he would be unlikely to take an abiding or long-term interest in such matters as "seeking new markets, or nursing or holding markets where he has gained entry." So he considers it necessary that the Board should think in terms of destination quotas, or straight trading with some foreign countries, as an effective measure against the problem of a continually growing exportable surplus. Mr. Srinivasan apparently does less than justice to private trade in underestimating its capacity for maintaining the existing markets and cultivating new ones. It would, on the other hand, do the export trade harm if a large proportion of it were to be handled by the State, especially in relation to the countries in which private traders have already established their contacts. Another matter which might also do harm to the export prospects as well as to the very development of the industry itself, is the latest Madras Tribunal award on the wages for plantation labour. Mr. Srinivasan discreetly withheld his comments on the issue, but he apparently fears that its effect on the plantation industries, including coffee, is bound to be adverse.

U.S. Economic Recovery.—The business news during October has provided further evidence of the strength of the forces supporting trade and industrial activity, says the First National City Bank of New York in its monthly newsletter. Steel mills, sold far ahead, have set a new monthly production record of roughly 11 million tons. Assemblies of the new model passenger automobiles more than doubled the September rate, although production delays cut output nearly one-fourth below original schedules. Encouraging signs of improvement have appeared in the textile markets. In September, industrial production, as measured by the Federal Reserve Board's index, rose to 144 (1947-49=100), equaling the all-time high set last December. Probably the index for October will move into new high ground. Part of the rise since the settlement of the steel strike has represented the recovery in steel production, but increasing output of industrial machinery and other capital goods continues to be the backbone of the advance. The support given to business by the capital goods boom is evidenced by the fact that manufacturers of machinery, including consumer and defence types, have added 223,000 workers to their rolls during the past year. In contrast, employment in auto and other transportation equipment plants was down by 82,000 persons. Other factories, on the whole, had about the same number of employees in September as a year earlier. In the aggregate, more people are at work in the industries and services than ever before. Statistical unemployment has dropped below the 2 million mark for the first time since late 1953. In manufacturing generally, overtime work increased in September, average earnings reached \$2 an hour for the first time, and payrolls were the greatest on record. With more people commanding higher wages, purchasing power has risen, consumers have continued willing buyers and business men have been ordering freely. The increased wage costs incurred by the industries in recent months carried with them the potential danger of either pricing goods out of the market or squeezing profit margins, and discouraging growth. In some instances these unfavourable effects can be seen. In a few markets, including copper, the pressure of demand has eased. Housing starts continue to lag. These soft spots, however, have only moderated the advance. In overall terms no slackening is evident. Figures are now available to measure the performance of the economy in surmounting the shortages and imbalances left by the five-week steel strike,

and they are impressive. Industrial production, as indicated above, jumped to its highest level this year in little more than a month after the steel strike ended on 5th August. General economic activity, as measured by the gross national product, showed scarcely a ripple as it rose from an annual rate of \$408,300 million in the second quarter to \$413,000 million in the third. This record provides evidence of the resiliency of today's economy.

Private Gold Hoards Increase.—Reversing the trend of the past two years, privately hoarded gold stocks throughout the world increased to \$11,900 million during the year ended 31st October, 1956, according to the November issue of *Pick's World Currency Report*. At the present annual rate of production it would take 12 years and three months to mine the 10,578 tons of gold which is dormant in individual hoards everywhere. The increase of 4.2 percent in the amount of coin, bar and sheet hoards, as compared with a drop of 2.6 percent last year, was due mainly to the Suez situation, to world-wide increases in the cost of living, the easing of gold restrictions in many countries and the continued universal distrust of paper currencies. Completely legal private stocks in France, the largest in the world, increased by \$100 million in the last year. Coin holdings accounted for most of this amount. Hoardings in other nations on the Continent reached \$1,700 million, against \$1,600 million last year, with those in Germany gaining by about \$40 million. The amount of the yellow metal hoarded in Asia and the Western Hemisphere also increased. The issue reveals that the stocks in Africa showed a decline from \$1,500 million to \$1,400 million. The uncertainty caused by the loss of the free international status of Tangier led to a marked shift of holdings from there to European centres. The world's total private hoard exceeds the combined official gold holdings of the Central Banks of Canada, Belgium, England, France, Germany, the Netherlands and Switzerland, which at present amount to about \$10,000 million.

"CAPITAL" CHRISTMAS TOY FUND

We acknowledge, with thanks, the receipt of the following donations:

- Rs. 175** Managing Directors of Bird & Co. (Private) Ltd. and F. W. Heilgers & Co. (Private) Ltd.
Rs. 51 Anonymous.
Rs. 50 each T.S.P., Stewart & Co.
Rs. 25 each F. F. Van Rhijn, Hercules Insurance Co. Ltd.
Rs. 20 each N.P.K., Members of Harrisons & Crosfield, Herbert & Co. Private Ltd.
Rs. 15 each Nivada Watch Co. Ltd., W. Mackay.
Rs. 12 The staff of Mackinnon Mackenzie & Co. (Private) Ltd., New Delhi.
Rs. 10 each R.H.D., A.H.B., W.T.C., O.C.A., J.A.D.
Rs. 5 N.C.L.
Total Rs. 533.
 Previously acknowledged Rs. 1,244-7-3.
Grand Total Rs. 1,777-7-3.

PORT FACILITIES IN CALCUTTA

AS is so often the case, at the eleventh hour, a correspondence is appearing in the *Englishman* regarding the merits and demerits of the new scheme of the Port Commissioners, whereby the jetties will be exclusively used for imports and the Kidderpore docks for exports. This is, as it seems to us, the best scheme that can be devised, if the jetties are really unable to cope with the import and export trade carried on by the "Liners" visiting this port. The docks were called into existence by the complaints of exporters, for importers were always content with the jetties; therefore, let the exports be either loaded into the vessels in the stream or in the docks. At the same time, we are by no means satisfied that the jetties are being worked to their fullest extent, for last year, the average stay of each steamer using the jetties was ten and a half days, and our opinion is that eight days should be ample. It is a curious commentary on our merchants that they invariably wake up too late. While the question of the construction of the docks was trembling in the balance, they made no active sign, but they woke up when, too late, the docks were here. So too this scheme, which they are now discussing, was settled in January and February of this year, over nine months ago, and it is now sought to re-open it when it is just on the eve of being given a trial. At the same time, better late than never.

Engineering and Transport

NEW HAWKER SIDDELEY
PLANESPRIVATE VENTURE MAKES
GOOD PROGRESS

THE Hawker Siddeley group has decided to invest many millions of pounds in two "private venture" aircraft, one civil and one military. Speaking in the House of Commons, Mr. Reginald Maudling, Minister of Supply, made the first official reference to the military project, a fighter. He said that Hawker Aircraft is one of the members of the group and has been developing a fighter of advanced design as a private venture. No public money has been spent on this aircraft. Mr. Neville Spriggs, Managing Director of Hawker, said: "It is true that we are proceeding with a fighter aircraft of advanced design. The project is going very well. It will be remembered that before the war we undertook as a private venture the development of the *Hurricane*, and we believe that the same kind of private initiative should be shown in present circumstances. We are not yet allowed to say how fast this aeroplane will fly or give away other details, but we will certainly have something to add later." Evolution of the aircraft is in the hands of a team led by Sir Sydney Camm, the man responsible for such famous fighters as the *Hurricane*, *Typhoon*, *Tempest* and *Hunter*.

The Hawker Siddeley group's other "private venture", a turboprop freighter-coach aircraft, was announced towards the end of August. Work has started on it at the factory in Coventry of Armstrong Whitworth Aircraft. Now more information has been released. There are to be two versions of this aircraft: the *AW.650*, a twin-engined, short-fuselage design, and the *AW.651*, a four-Dart version

with a longer fuselage. Both designs will have twin-boom layout and pressurised fuselages. Payloads of the short and extended fuselage versions are, respectively, 25,000 lbs (11,500 kg.) and 30,000 lbs (13,600 kg.). This flexible, medium-range aircraft is designed for use as a military transport, civil freighter, car ferry or air coach able to carry 66 passengers. The freighter version is to have large loading doors at each end of the fuselage.

Armstrong Whitworth say that stage lengths of up to 2,000 nautical miles (3,700 km.) and cruising speeds of between 300-350 m.p.h. (480-560 km.p.h.) are envisaged. Special attention is being paid to take-off and landing performance; moderate wing loading augmented by double-slotted flaps should ensure excellent slow-flying qualities. This project is in the hands of Sir Arnold Hall, Technical Director, Hawker Siddeley group, Mr. H. M. Woodhams, managing director, Armstrong Whitworth, and Mr. E. D. Keen, the company's chief designer who is heading a design team at A.W.'s new £1 million research and design centre in Whitley, near Coventry. This centre, as announced in June this year, will cover aircraft and guided weapon missile research and design and includes electronic computer and pressure chamber facilities. The company's £200,000 private venture Mach. 3 wind-tunnel, opened last year, is already established in Whitley, together with transonic and low speed tunnels. A "private venture" aircraft costs a great deal of money today and is a comparatively rare bird.

BRITISH INSTALLATION FOR INDIAN
LIGHTHOUSE

A British firm has just completed the manufacture of the entire installation of a lighthouse assembly, ordered by the Lighthouse Department of the Indian Ministry of Transport, for the island of Perotan in Bombay State. The complicated lens system is in two panels. The effect when the

apparatus is rotated at its correct speed is to give a 0.35 second flash every 10 seconds. Apparent beam intensity is some half-a-million candlepower, and is achieved by means of a small incandescent petrol-vapour mantle about the size of a domestic electric-light bulb. The optic will be rotated by a weight-driven clock, the weights rising and falling in the centre of the lighthouse tower. The optic will rotate in a mercury bath. The apparatus has been erected at the firm's new Crawley (Sussex) factory for inspection by the Indian lighthouse authorities prior to its despatch.

LARGE BATTERIES FOR U.K. ATOMIC
POWER-STATION

Chloride Batteries Ltd. of Clifton Junction, Swinton, Manchester, have supplied two large batteries for the nuclear reactors installed at the U.K. atomic power-station, Calder Hall. The batteries are each connected in parallel with a twin-bulb 400 kW mercury-arc rectifier set at 270 volts. Under normal conditions, this provides a floating trickle charge across the 120 cells—2.25 volts a cell. The pumps, fans, instrumentation and emergency lighting for each reactor are normally supplied by the rectifiers, but should their output fail, the batteries automatically take over the important load. Absolute reliability of the batteries is essential, for a complete failure of these services could cause severe damage to the reactors. Each battery is capable of supplying 1,200 amperes for half an hour. Following an emergency discharge, the rectifier is capable of charging its battery quickly and supplying the reactors' auxiliary services at the same time. Similar large Chloride stationary batteries are being manufactured at the Exide factory near Calcutta, and are working in automatic telephone exchanges, in new project power stations and sub-stations, in many parts of India.

BIGGEST CRAWLER TRACTOR IN THE
WORLD ARRIVES IN INDIA

The world's largest production crawler tractor, first built in 1955, and the largest tractor ever to be used on the Indian soil, was delivered recently. This machine is known as the "Caterpillar D9," manufactured by Caterpillar Tractor Co., Peoria, U.S.A., and has for the first time been brought to India by Tractors (India) Ltd. It is expected to be used on Government projects, either by the Government or private contractors, on construction work vital to the second five year plan. In other countries, the "D9" has set new earth-moving standards. In the U.K., after demonstrations on actual working sites, experts agreed that it "would revolutionise the country's open cast workings". The "D9" weighs 26 tons, or 31 tons with the gigantic blades, and is the first track-type tractor to be fitted with a turbo charger which, being driven by the engine exhaust, utilises power which is normally wasted energy. By this means, more h.p. is obtained, resulting in better performance. Brief specifications of the tractor are: length 17 feet 10½ inches; width 9 feet 11½ inches; height 8 feet 9 inches and gauge 90 inches.

U.K. TO PRODUCE BENSON ONCE-THROUGH
BOILER

A major advance in large-scale steam-generating practice in the U.K. is being pioneered by the Steel Company of Wales and Simon-Carves, who have collaborated in a scheme incorporating the first Benson "Once-Through" forced-circulation boiler to be ordered in Britain. The plant, which will be designed and built by Simon-Carves as an extension of the "E" power station at the Margam steel works in South Wales, will generate 240,000 lbs. of steam an hour at a pressure of 3,300 lbs. a square inch and a temperature of 1,060°F with reheat to 840°F. These are the most advanced steam conditions ever commercially used in Britain. The modern Benson "Once-Through" boiler has been developed from British designs patented by Mark Benson over 30 years ago. For steam generation at pressures near, at and above the "critical pressure" it has outstanding superiority in flexibility of operation and in speed and economy of construction and maintenance. Although of British origin, this type of forced-circulation boiler has until recently been developed and established mainly in Germany, and its advantages are already widely accepted in Europe and the United States.

INDO-BRITISH VENTURE TO MANUFACTURE
ELECTRIC TOOLS

Industrial expansion calls for an abundant supply of performance-proved tools. An Indo-British venture has launched a scheme for the manufacture of electric tools in India, and production has already commenced. The collaborators on this project are the Wolf Electric Tools Ltd., London and Rallis India Ltd., Bombay. This Indo-British venture, the first of its kind in India, will go a long way in ensuring adequate supplies of electric tools. The close collaboration of the participating firms and the frequent exchange of technical experts will ensure that the Indian-made "Wolf" tools are of the same high quality as those made in England. An interesting feature of this venture is that a substantial amount of indigenous materials are being used in the manufacture of Wolf electric tools in India.

A DITCHER'S DIARY

instincts. But the Indian reaction to news from Hungary, in defiance of the official line, makes me wonder whether there is not, after all, something to be said for the instinctive approach. Even as the agitation of the dissenters in Britain was, in the final analysis, a tribute to British democracy, the Indian protest too was, in the same way, a compliment to Indian democracy; and if one cannot, on the Hungarian issue, see eye to eye with Mr. Nehru, one must still recognise that it is he who has created conditions in which such free expressions of popular feeling are possible.

"A miracle has been wrought," says the epilogue to *Eight Years of D.V.C.*, a copy of which the Chief Information Officer has been good enough to send me. My native preference for understatement, together with an aversion from such imprecise expressions as "miracle," makes me resistant to official claims of this sort. But, with the memory of a recent motoring tour of the Damodar Valley still vivid in the mind, I see very little exaggeration in the claim. I had not seen the Valley before what has been called its metamorphosis, but a look at the areas still untouched by the Corporation gives one a pretty grim picture of what it must have been not so many years ago, indeed no more than eight years ago, this without any of those recurrent floods which used to ravage the whole vast region. The plan was certainly a very bold one, and it has so far been executed only in part. Unfortunately, it is not clear how much longer it may be before the entire idea is implemented. One frequently reads disquieting reports that some Ministers in the Government of India are more enthusiastic about certain other projects than about the D.V.C.; they may even have good reasons for such preferences; only I do not know them. What is clear to this layman is that the achievement of the D.V.C. is remarkable by any standard, and it will be a pity if the experience gained by the Corporation is to be made no further use of. Nor is it clear why, with so much of the original D.V.C. plan still unimplemented, there is so much fear of retrenchment, although I am not, of course, remotely in favour of paying men without work. Several projects are being started in many parts of the country; it does not appear to have occurred to everybody that it is easier, and more economical, to build on a foundation that is already there than to start anew elsewhere.

It is still too soon to say whether Sir Anthony Eden's attempt to cripple a military dictator by force was the wrong choice to make. Only history can pass that kind of judgment, although it must be remembered that he was proved right when he advocated the same sort of thing against Hitler and Mussolini twenty years ago. Certainly times have changed and public opinion, although rarely for the good, is a more potent force than it was then. But Russia has proved in Hungary that the United Nations is useless when it comes to stopping a fight unless at least one great power is prepared to act independently, as the United States did in Korea. And there is still this fact which might yet secure Sir Anthony a place among the world's heroes. One verdict which it is reasonable to give even at this stage is that the results of the intervention have not been worth the trouble and that the decision, having once been made, was inexcusably fumbled in the execution. If the Canal Zone had been completely occupied within, say, three days of the ultimatum expiring, the chances are that Nasser would have fallen before

world opinion and Russian promises could have come to his rescue. If such a thing was not militarily practicable, then the expedition should not have been attempted at all. It is my guess that Sir Anthony will be held accountable for his bungling after making the big decision, sooner than he will be for the decision itself. Thanks to the world's preference for self-delusion about men like President Nasser, it looks as if the Franco-British attempt to weaken him will fail. Indeed, with her usual genius for taking advantage of the prejudices and sentiments of the ordinary man, Russia is quite obviously determined that her protégé will now be re-equipped with all the implements he requires for stirring up more trouble. But if Russia's ambitions in the Middle East are to be allowed by world opinion to press on to a third world war—and now that Nasser's bacon appears to be saved that seems more than likely—nobody is going to spare the time to wonder how things would have turned out if Sir Anthony had shown the ability to match his courage. Such is human nature, that when war comes, the blame will fall on Britain in general and Eden in particular. The paradox can be seen when we remember which men were held accountable for the last war and of what deeds they were accused. But long before this, Sir Anthony's own party will need a scapegoat if it is to save its face with the electorate, and his country will need one if it is to salvage its reputation with the rest of the world. It would be surprising if a man with Eden's sensibilities did not appreciate the rôle for which events have now cast him.

I did not have a close relative die on 2nd November, nor did my routine commitments permit me a severe cold, an attack of fever, or a pain under't pinny; so I was not able to watch the Australian test players at work. But I did see the r faces smiling at me from a Press advertisement a few days later and that reminded me I had been promising myself a few minutes off to read a P.E.P. pamphlet which appeared on my desk some months ago. It is entitled, significantly it seems, *The Cricket Industry* and it confirms what the advertisement suggests—that the combination of cricketing ability and a photogenic appearance can be a money-making asset these days. It says that four or five of the top British players have even found it advisable to follow the example of film stars and form themselves into limited companies for tax purposes. And this is not the only way first-class cricketers are making big money. Almost all appear to be busy writing their memoirs, signing newspaper articles, making personal appearances, autographing cricket bats and, as the pamphlet puts it, "sponsoring the sale of anything from hair cream to flannel trousers." I do not know whether such things are permissible for amateurs without damaging their status. But if they are, I can see an excellent way round their tiresome piece of snobbery—to which of course there have lately been exceptions—which dictates that the captain of the English team should never be a professional. Indeed, there seem to be good pickings in cricket for those at the top. A 1st XI player, even in the more affluent counties, is rarely paid more than £1,000 a year. But the "benefit" system can put considerable capital sums in a pocket. For instance, Cyril Washbrook of Lancashire made £14,000 from his "benefit" in 1948, (he no doubt insured against rain), Alec Bedser of Surrey netted £12,866 in 1953, Denis Compton of Middlesex £12,200 in 1949 and Sir Leonard Hutton of Yorkshire £9,713 in 1950. And all that was free of tax.

THE DITCHER.

Completely at ease in one of Pan American's Super Stratocruisers to the U.S.A.

RELAX—you're on
the World's Most Experienced Airline

Enjoy yourself. You're surrounded by comforts and services unmatched anywhere in the air. Luxuries that are solidly backed by an unequalled record of air pioneering and accomplishment.

You're flying with the only airline that has made over 58,000 Atlantic crossings, over 38,000 Pacific crossings and 2,700 Round-the-World flights.

Pan American has carried 13 million passengers overseas in dependable speed and comfort—has flown over one billion miles overseas—and has 1200 pilots who have flown over one million miles each, 100 who have flown over three million miles.

This record is unmatched by any airline anywhere. So next time, choose Pan American—the only airline that gives you the priceless advantage of Round-the-World experience on every Tourist and First-class flight.

I.C.I. PROJECT REPORT ON THE DYESTUFFS INDUSTRY

NEED FOR UNIFIED AND INTEGRATED DEVELOPMENT

(FROM OUR NEW DELHI CORRESPONDENT)

"INDIA will find the goal of complete independence unattainable" unless a dyestuffs industry is created in this country. This is the opinion expressed in the project report submitted by Imperial Chemical Industries. A point in India's favour is that she is organising her industrial development centrally, and by the controls she has set up, is able to ensure that a logical plan, once adopted, is faithfully followed. She also has the advantage of an adequate home market. Against this, however, the shortages of raw materials, of ancillary industries and of trained personnel are factors which will retard the development of the industry. Some of them, such as the shortage of trained manpower or the lack of ancillary industries, will disappear in due course. But the lack of raw materials may not. These drawbacks, however, "have one point in common. They cannot be rectified by efforts confined to the dyestuffs industry, but demand action by the Government or other branches of industry. The development of the industry depends on the parallel development of other industries: those supplying raw materials, both organic and inorganic, and those supplying the chemical plant required on such a scale.

"A chemical plant probably reaches its maximum of complication in the dyestuffs industry. While Indian engineering is capable of producing certain items of plant, given time, there are simply not enough engineering facilities available in the country to service adequately a dyestuffs industry on the scale contemplated. Not only will the new plant of endless variety and in considerable

amounts will be required to create the new industry, but chemical processes, being of a highly corrosive nature, resulting in comparatively short life for every single item of plant, necessitate continuous replacements."

The project report, therefore, recommends the development of the industry "along the lines of a single, well-integrated unit, planned as a whole, and preferably managed as a whole. It would be idle to ignore the present situation in India, where attempts to create an industry by a number of independent, unplanned concerns are already under way. It would be clearly impossible to present a programme of action for the next stage until the position of the existing firms is defined. The difficulties here are two-fold, partly the ascertainment of the facts of the situation and partly a declaration of policy.

The report declares: "Our own experience leads us to the firm conclusion that the ideal plan for the development of the dyestuffs industry in India would provide for it to grow as an integrated whole on one side and under one control. In our view, this offers the best possible opportunity for the existence in due course of an industry which will satisfy the developing needs of its customers and hence of the Indian economy as a whole. We realise that there are difficulties in implementing the ideal arrangement. As a second-best plan, it would be practicable to build the industry on the basis of a number of individual producers of dyestuffs on different sites, each drawing his supplies of dyestuff intermediates from a single

manufacturer operating an integrated intermediate factory."

Having regard to the considerable distances likely to be involved in the transport of materials, and the economics of transport, it has been considered desirable to accept that all the basic raw materials are imported at their cheapest chemical stage, namely sulphur in preference to sulphuric acid; refined anthracene in preference to crude 40 percent; rectified benzene, toluene and xylene; ammonia in preference to nitric acid. For a similar reason, it is desirable that all processes which create by-products required by the dyestuffs industry, particularly where the usable by-product is hydrochloric acid, should be located on, or in the vicinity of, the dyestuffs and intermediate site. For these reasons, it is desirable to have closely linked together: 1. Chlorine-producing and chlorine-using plants. 2. Hydrogen-producing and hydrogen-using plants. 3. Plants producing, using and recovering sulphuric acid. 4. Plants producing and consuming hydrochloric acid, particularly where anhydrous hydrochloric acid is required.

Sub-division of Factory

Any absolute sub-division of a factory into areas dependent on the type of product, namely, primaries, intermediates and dyestuffs, is not completely practicable or necessarily desirable, particularly in the vat, triphenylmethane, rhodamine and sulphur dyestuffs fields. But there is a general advantage in attempting to concentrate each of the main groups specifically devoted to that type of activity for the purposes of general administrative control in view of the similarity of many of the problems and techniques. It is certainly preferable, if any mixing of plants is to be done in order to build up economic operating units, that it should be of dyestuffs and associated intermediates rather than of two dyestuffs types, particularly where one of the types is a basic dyestuff. It is also desirable to separate in the basic field the lighter colours from the blues and greens in view of the strong contaminating influences of dust. Four main manufacturing areas are suggested:

1. Primaries area covering caustic, chlorine, acids and the major products from coal tar raw materials.
2. General benzene and naphthalene intermediates.
3. Anthraquinone and durindone vat dyestuffs and intermediates together with standardisation.
4. Other dyestuffs groups—azo, basic, sulphur, together with standardisation.

Within each of the areas there would have to be provided centrally a local administrative office and process laboratories, an amenities area for changing, washing and messing for the operative workers, and an area workshop for minor jobs associated with the maintenance of the plant in that area. The local administrative office would house the departmental head in charge of the area generally and provide accommodation for the superintendents of the individual sheds when they are not engaged on duties within the shed. The process laboratories would be fitted for carrying out routine control tests on batches manufactured within the shed and for the conduct of minor experimental work associated with problems and difficulties arising during the course of manufacturing operations, and within the limit of time available to the plant staff for such work. The office would also house the technical engineering personnel responsible for the maintenance of plant within the area. The main engineering workshop would be located centrally in the general factory area, as would the power plant. Research laboratories, analytical laboratories, administrative offices, raw material warehouses, general stores and finished material warehouses would be located conveniently, generally on the fringe of the actual manufacturing area. The main feature distinguishing this area from other areas is that the majority of the plants are devoted to the production of a limited range of products, frequently one only, and the tonnages involved are appreciable. It is an area which could well expand appreciably over the years as many of the products suitable for inclusion in this area have uses outside the field of dyestuffs chemistry.

Caustic Soda Liquor

In this area, salt would be converted to caustic soda liquor, preferably in a mercury cell plant, chlorine and hydrogen being obtained as by-products. The hydrogen would be potentially available for a number of catalytic reductions, such as aniline from nitrobenzene, and alpha naphthylamine from alpha nitronaphthalene. The mercury-amalgam from the caustic cells would also be available for the reduction of nitrobenzene, o-nitroanisole and o-nitrotoluene in the first stages of the preparation of benzidine, dianisidine and toluidine by the Bonelli process. Ammonia would be converted to nitric acid; and sulphur to sulphuric acid and various strengths of oleum. The area devoted to the acid group would also house the equipment to make the various grades of mixed nitric acid and sulphuric acid required for many of the primary nitrations, and would be provided with a pot concentrator to enable the spent acid from bulk nitrations to be re-concentrated to 100 percent strength and its residual organic content destroyed. The pot concentrator would also re-concentrate the weak sulphuric acid produced in the concentration of 50-60 percent to 95 percent nitric acid, a considerable amount of this higher strength nitric acid being required for dinitrations. The production of chlorosulphonic acid from sulphur trioxide (tapped off from the oleum unit) and dry gaseous hydro-

chloric acid (a by-product of numerous chlorinations) would also be undertaken and the tail gases from the oleum unit, as well as a bleed-off from the sulphur dioxide stream, would provide the sodium bisulphite liquor required in intermediate productions.

Organic Side

So far as the organic side of the primaries area is concerned this would deal with the first stage reactions in the conversion of benzene, toluene, xylene, naphthalene and anthracene to intermediates. The general reactions involved are sulphonation, nitration, chlorination and oxidation, with complex sweating and/or distillation equipment to separate the isomeric nitrotoluenes and chloronitrobenzenes and to fractionate the mixture of mono and disulphonated benzenes. It is not, however, proposed to include in this plan capacity for the conversion of naphthalene to phthalic anhydride. The main uses of this intermediate are outside the dyestuffs field and it is considered preferable that the dyestuffs industry's requirements be produced at the site where hot pressed naphthalene is produced. It is also not proposed to make provision for the sulphonation of naphthalene as a first stage in the preparation of b-naphthol (although it would be the logical site for such manufacture) as adequate capacity is being provided elsewhere in India which should be able to meet the limited needs of this factory. It would be convenient to include in the primaries area those second stage reactions involving the reduction of a nitro group to an amino group to provide the primary amines such as aniline, alpha naphthylamine, o-toluidine, p-toluidine, etcetera.

The whole of this area deals with bulk quantities and involves a transport of the considerable quantities of raw materials in and finished products out, so that adequate rail access is essential. In view of the transport problems relating to incoming raw materials, very generous storages for all the basic materials (benzene, toluene, naphthalene, anthracene) will have to be provided to ensure that there is no hold-up in the steady working of these primary plants due to raw material shortages. Although not by any means a primary product, the manufacture of indigo could well be sited conveniently adjacent to this area in view of the bulk nature of the production and its consumption of aniline, and sodium bisulphite. It does not naturally fit in with any other dyestuffs group. It is by no means certain that the manufacture of indigo in India will prove economic, one of the raw materials required being metallic sodium. This may prove costly to obtain. Further investigation of this point is necessary before a firm conclusion can be reached.

Benzene and Naphthalene Intermediates

The intermediates to be manufactured in the benzene and naphthalene intermediates area would be mainly those required for the wide range of azo dyestuffs and for the general azoic field. The majority of the intermediate stages required for the sulphur, vat and triphenylmethane dyestuff fields are better accommodated alongside the respective dyestuffs units in the appropriate dyestuffs area. The problems involved in the intermediate field are somewhat different from those in the primaries fields, although many of the same reactions are involved. The scale of manufacture, however, is very much reduced as the primary products branch out into the various derivatives required to provide a comprehensive range of dyestuffs. Practically none of the intermediates required are needed on a scale that would justify a plant devoted specifically to the manufacture of any one intermediate and it is necessary to group a number of productions into a compromise unit based on the consideration of such factors as:

1. Nature of chemical reaction to be performed, namely, nitration, sulphonation, chlorination, acetylation, reduction, hydrolysis, alkaline fusion, etcetera.
2. Type of plant required for reaction, such as enamelled pans, stainless steel equipment, cast iron pans, tile lined vats, rubber lined vats, pressure vessels, distillation equipment, heating under reflux, etcetera.
3. Operating conditions: brine refrigeration, ordinary water jacket cooling; low pressure steam heating; high pressure steam heating; Merrill oil or Dowtherm heat circulation systems; and special agitation conditions.

It is then necessary to group these various unit plants into economic administrative and operational units, taking certain major common features as guiding points. For example, if a number of individual units require considerable quantities of sulphuric acid as one of the raw materials, these would be grouped to obtain the benefits to bulk storage and handling of acid. A series of units involving nitrobenzene or nitrotoluene as a reaction solvent would similarly be grouped to cover both the storage and handling of the solvent and the precautionary measures necessary to ensure the safe operation of the processes involving toxic products. In some cases it may be necessary to group two or more such groups to build an economic operational shed unit. In general, it is convenient to group these products into sheds based on the benzene nucleus on the one hand, and the naphthalene nucleus on the other.

More Complex Intermediates

A naphthalene intermediate shed would be almost exclusively devoted to the manufacture of the more complex intermediates derived from refined naphthalene. Such products as H acid, Peri acid, Laurent acid, Cleve acid, Oxytobias acid, Tobias acid, Amino G and Amino J acids, Gamma acid, J acid, Chicago acid, naphthol mono and disul-

phonic acids, naphthylamine disulphonic acids would be made here. The plants involved would require to perform a variety of reactions, such as sulphonation, nitration, reduction, lime-out, evaporation, autoclave fusion, acidification and absorption of released sulphur dioxide, filtration, etcetera. Certain of the processes involve amination under pressure and recovery equipment for the excess ammonia released after completion of the reaction. The range of products could probably be grouped into five appropriate units which would form an economic operating ensemble. The majority of the remaining general intermediates fall into the benzene field, generally being derived from one of the products produced in the primaries area. The types of reactions to be carried out are more diverse than in the naphthalene field and can be brought under the following main headings:

1. Methoxylations and ethoxylations of ortho and para chloronitro benzene and derivatives.
2. Sulphide reductions of nitro compounds to produce Brentamine base intermediates and other amino and nitroamino compounds.
3. Vacuum distillation equipment for the purification of volatile amines.
4. Nitrations in enamelware with suitable units for low temperature brine cooled nitrations.
5. Iron reductions of the metadiamine type.
6. Phenylations.
7. Hydrolysis of acetyl derivatives in acid media.
8. Hydrolysis in alkaline media.
9. Rotary baker units for sulphonations.
10. Acetylation unit.
11. Solvent iron reductions.
12. Aqueous pressure recrystallisations.
13. Brentamine base unit for the preparation of hydrochloric acid salts of amines.
14. Chlorination unit and still for Fast Red TR Base.
15. Chlorination unit for side chain chlorination of toluene and separation of mono, di and trichloro bodies.
16. Hydrolysis unit for conversion of benzal chloride to benzaldehyde.
17. Diazotisation and Sandmeyer unit for conversion of amino groups to chloro-groups.
18. Plant for general chlorinations and phosgenations.
19. Recovery plant for hydrochloric acid by-product of chlorinations.
20. Drying stores for Brentamine bases, and for intermediates to be sold to customers with some grinding and blending equipment.

Three or four sheds would be required to house the plant items necessary to cover this field. The intermediate field, with its multi-purpose plants, involves essentially the grouping of appropriate products and the design of plants to accommodate in one unit products apparently similar as regards the chemical operations required, but in fact far from identical as regards actual operating conditions.

Anthraquinone Intermediates

Next for consideration are Anthraquinone intermediates and dyestuffs (excluding Soledons). The reactions involved in the preparation of many vat dyestuffs intermediates are not significantly different from those involved in the preparation of vat dyestuffs. It is convenient, particularly in view of the limited range still left to be covered, to regard the whole field as an entity accommodating like processes together, whether dyestuffs or intermediates. On this basis, the whole range, including Alizarine, could probably be accommodated in three economic sized operating sheds, the types of reactions to be covered in each of the three sheds being as follows:

Shed A.

1. Condensations and benzoylations in nitrobenzene as solvent.
2. Fusions with aluminium chloride with and without solvent.
3. Condensations in other solvents such as o-dichlorobenzene.
4. Recovery plant for solvents and reactants used in excess in the condensations, namely p-toluidine.

Shed B.

1. Mono and di-sulphonations of anthraquinone.
2. Acid chlorinations, nitrations.
3. Ring closures in sulphuric acid.
4. Acid extractions, pastings and bleaching.
5. Alizarine.
6. Benzanthrone.

Shed C.

- Autoclave aminations.

The dyestuffs area can be divided basically into two sections:

1. Production of dyestuffs from intermediates.
2. Standardisation of dyestuffs.

The production of dyestuffs can be divided into a number of logical chemical-cum-dyeing groupings:

A. Basic dyestuffs.

1. Rhodamines and Eosines (Xanthene dyes).
2. Triphenylmethane derivatives.

B. Vat dyestuffs.

1. Anthraquinone type.
2. Durindone (thioglycolic acid) type.

C. Solubilised vat dyestuffs.

D. Azo dyestuffs.

E. Thionol (sulphur) dyestuffs.

A small manufacturing shed would be required for the Rhodamines and Eosines, including the special intermediates required. This shed might be associated with the manufacture of the Magenta range of intermediates and dyestuffs of the triphenylmethane series, and of Auramine, in order to build up a suitable sized operating unit of not too diverse a dyestuffs range. One shed would probably be required for the greens and blues in the triphenylmethane series, including provision for making the special intermediates mainly required for these dyestuffs, namely, alkylanilines. The anthraquinone vat dyestuffs have been incorporated into the acid using shed making anthraquinone intermediates. The Durindone vats and the special intermediates would require a small shed to themselves. Solubilised vat dyestuffs with the spray drying equipment and the pyridine recovery system would form the nucleus of a further shed. Azo dyestuffs would require a shed containing about 14 three stage units, together with some special equipment for the preparation of Ultralan dyestuffs. For the standardisation of these dyestuffs, the equipment is relatively simple in the case of the azo dyestuffs, sulphur dyestuffs, basic dyestuffs and Soledons. Only simple grinding, followed by mixing with diluent, is required, as the manufactured product which is in powder form is soluble in water. With the vat dyestuffs, however, which are insoluble in water, physical form is of importance and it is necessary to include operations which produce the dyestuff in the requisite finely divided form and include standardising ingredients which enable this physical form to be retained on drying. All this work is carried out in the standardising department prior to grinding and blending.

Standardising Sheds

Basic dyestuffs, because of their incompatibility with other dyestuffs, require to be segregated in standardising. Two standardising sheds would probably be required for dyestuffs:

1. For non-vat dyestuffs with two or three units separated from the rest for basic dyestuffs.
2. For vat dyestuff pastes and powders.

To run the factory a number of ancillary activities will be involved which can be broadly described under the main heading of services. These can be subdivided into three groups:

1. Engineering (operated by engineering personnel).
2. Technical (other than engineering).
3. Commercial.

The engineering services cover two broad fields:

1. Provision of steam, power, water, gas, etcetera, all being services directly associated with the carrying out of the chemical operations on the factory.

2. Engineering maintenance services.

For a factory such as has been outlined an area of at least 200 acres of suitable building land will be needed. More indeed would be an advantage in order to allow the expansion of certain sections of the factory, the products of which may find outlets in industries other than dyestuffs and also to permit the attachment to the factory of related manufactures, such as, for example, pharmaceuticals.

It is estimated that, given adequate water supplies, the capital cost of a factory built on an undeveloped site would be approximately £22 million, or say Rs. 30 crores. Of this sum, about £2.5 million would be required for inorganic and primary production plants, £6 million for intermediates production plants and £3.5 million for dyestuffs production plants. The further £10 million would be required to provide engineering and other services, roads, railways, offices, etcetera. No provision has been made in this estimate for any houses which may have to be built. Working capital to the extent of approximately £5 million would be needed to finance stocks, etcetera.

SOUTH EASTERN RAILWAY TENDERS.

The General Manager, S. E. Ry., Garden Reach, Calcutta 23 invites tender No. GM22/56/56 ICS(56) for supply of:

1. 3-Ton Petrol Driven Trucks with metal cab and body—8 Nos.
2. 5-Ton Diesel Driven Trucks with super structure and canopy—8 Nos.
3. 5-Ton Diesel Driven Trucks with metal cab and body only—8 Nos.

Tender forms are obtainable from the Controller of Stores, S. E. Ry., Garden Reach, Calcutta 23 (I. B. Section) on remittance of Rs. 5/- per copy (not refundable) by Money Order to him or on production of Cash Receipt from the Chief Cashier, Garden Reach. Closing date is 28-11-56 at 12 noon. Firms not on the South Eastern Railway's list of approved contractors must deposit Rs. 1000/- cash with the Chief Cashier as Earnest Money and enclose the Receipt together with a valid Income Tax Clearance Certificate with the tender.

longevity

Pipe mains conveying water and distributing gas, providing sanitary services and carrying oil, are the lifelines of civilisation.

Today the Cast Iron Pipe, with Spigot and Socket Joints, provides the most widely used medium for the transmission of water and gas.

PLANS TO PROCESS INDIAN RAW WOOL

LICENCES FOR COMBING AND CARDING PLANTS

THE Indian Government has launched a scheme for processing a considerable quantity of the indigenous raw wool. Two firms have been given licences for the manufacture of wool tops, while a third has been allowed to set up a wool carding factory. The British firm of Forbes, Forbes Campbell and Company, Bombay has been allowed to set up a wool combing plant with an annual capacity of 9 million lbs. of wool tops. This will involve an investment of about Rs. 2.5 crores and, if the project is pursued according to original expectations, production should normally begin before the end of 1957. Indications are that the factory will be located near Bombay. The other wool top plant will be set up by Birla Brothers in their Digvijay Woolen Mills, Jamnagar. This mill is already producing a wide variety of woollen fabrics. The combing plant will produce 5 million lbs. of wool tops a year and will cost about Rs. 1.4 crore. Both these projects are in their preliminary stages and apparently nothing is finalised as to from where the machinery and plant are coming. While it is more than likely that the machinery for the Forbes, Forbes Campbell factory might come from the U.K., it is not unlikely that Birla Brothers might tap other machinery sources in the Continent and the United States as well, especially in view of the tie-up their Textile Machinery Corporation, Gwalior, has with similar manufacturing firms abroad.

Carding Plant

The wool carding plant for which a licence has been granted to a Bombay firm, will be set up in Porbandar, Saurashtra. This will be the first factory of its kind in the country. This project will cost about Rs. 10 lakhs, and out of this, machinery and plant are expected to cost around Rs. 6 lakhs. At present, of the Rs. 5 crores worth of raw wool exported from India, about Rs. 3 crores worth goes through Bedi Port near Porbandar. This comes back to India after processing and refinement. It is expected that the Porbandar carding plant will cut India's raw wool exports by at least half. Between the two combing plants that are to be set up, they will produce about 14 million lbs. of wool tops, against India's annual requirements of 18 million lbs. Last year, India imported 13 million

lbs. of wool tops valued at about Rs. 7.5 crores, and most of this came from the U.K.

In the meanwhile, the Development Committee for Woollen Textiles Industry has set up three sub-committees to enquire into the condition of the organised sector of the industry, the carpets and the cottage sector and the woollen hosiery industry. These sub-committees will collect statistics on the employment potential, manufacturing capacity and the materials used by the different sections of the woollen textile industry. The sub-committee for the carpets and cottage sector will also collect details on the location of small units in different States, the wage structure and conditions of the workers employed. It will also enquire into the marketing of carpets and other woollen textiles manufactured on a cottage industry basis.

Wool Centre in S. India

The Madras Government has submitted a scheme to the Union Government on the setting up of a wool utilisation centre in or near Coimbatore. The proposed centre will conduct experiments on the right use of wool produced as a result of the adoption of various improved breeding policies and use of new implements. Besides making available valuable information to persons engaged in the industry, the centre will also train individuals. The scheme, according to informed sources, has been viewed with favour by the Wool Committee of the Indian Council of Agricultural Research at its recent New Delhi sitting.

ENQUIRY COMMITTEE URGES BAN ON NEW POWER-DRIVEN OIL MILLS

The Oilseeds Crushing Industry Enquiry Committee, which was set up by the Government of India in 1955 to carry out a rapid survey of the state of the oilseeds crushing industry in the country and to recommend lines on which the industry should be developed, has submitted its report. The committee's main recommendations are: (1) *Ghanis* have superior employment possibilities compared with mills and there is a case for giving every possible encouragement to them even if this means a slight loss of the total vegetable oil resources of the country. (2) While encouragement should be given to *ghanis*, the oil milling industry is also entitled to a place in India's economy. (3) No more power-driven mills should be set up in the country, and the installed crushing capacity of the milling industry may be allowed to operate for all oilseeds except sesamum. The recommendations of the committee are being examined by the Indian Council of Agricultural Research, Ministry of Agriculture, Government of India.

WHOLESALE PRICE INDEX FALLS

THE official wholesale price index (base: year ended August, 1939=100) moved down by 0.4 percent to 417.2 during the week ended 27th October, 1956, compared with 418.7 (revised) for the previous week. The index was also lower by 0.4 percent than that of a month ago, but was higher by 16.6 percent over the corresponding week of last year. The average for the month of October, 1956, worked out to 417.8 as against 419.8 for September, 1956, and 357.2 for October, 1955. The index for Food Articles declined by 1.0 percent to 391.8 resulting from a fall in the prices of rice in Calcutta (-5%) and gram (-3%). There was, however, a rise in the price of wheat in Amritsar (+2%). Lower prices of raw cotton (-4%), groundnuts (-2%), and linseed in Bombay (-1%) brought down the index for the Industrial Raw Materials group by 1.5 percent to 497.9, compared with 505.4 (revised) for the previous week, although the prices of castorseed in Bombay (+4%) and gingellyseed in Bombay and rapeseed (+1% each) were marked up. The index for Semi-Manufactures advanced by 0.8 percent to 408.6, against 405.3 (revised) for the earlier week. Items which exhibited variations were: gingelly cake (+9%), gingelly oil (+6%), castor oil in Calcutta (+3%), mustard oil and cotton yarn (+8% each), copper (-4%), linseed oil in Calcutta (+3%), coconut oil and groundnut oil (-2% each) and copra cake (-1%). The Manufactures group index remained stationary at the previous week's level of 386.5 (revised). A rise of 1.3 percent to 589.5 in the index for the Miscellaneous group was caused by an upward movement in the prices of chillies and tobacco, both in Calcutta, and an increase in the price of black pepper in Cochin; the prices of black pepper, turmeric and betelnuts, all in Calcutta, however, showed a downward movement.

Finance in India and Abroad

THE CALCUTTA MONEY MARKET

INTERBANK DEMAND EASIER

Wednesday, 14th November.

LITTLE change has been reported from the money market this week. Funds remain in short supply, but the seasonal "slackness" has only just begun to give way. There has been some increase in the requirements of the sugar industry, but so far most of the improvement is on account of cotton purchases and ginning. The Calcutta interbank market is considerably easier this week. This is said to be due to the action of one large commercial bank in transferring funds into the city. The call rate is moving between 3½ and 3¾ percent, and there are reported to be lenders over.

It has been a better week in the bill market. A fair quantity of tea bills has been passing and a number of gunny documents have also come to hand. Remittance has been fair. Sterling is still down at the support level and shows little sign of recovery yet, although it is now rather stronger in terms of Continental currencies.

After remaining firm early in the week, silver eased at the close on profit-taking. The price declined from Rs. 172-12 to Rs. 172-7, quoted today. The rate for ready was quoted at Rs. 172-14. The London market has remained unchanged.

Gold has been easy in sympathy with silver and the price has declined from the previous week's level of Rs. 105-8 to Rs. 105-1. The sovereign at Rs. 69-5 showed a loss of 10 annas.

During the week ended 9th November, Government of India Treasury Bills for Rs. 24,56,50,000 were sold in favour of the Reserve Bank.

Rises of Rs. 9.37 crores and Rs. 9.20 crores to Rs. 1,452.96 crores and Rs. 1,460.41 crores in active notes and the total note issue were notable features of the return of the Reserve Bank of India for the week ended 9th November, 1956. The currency expansion has been covered by increasing rupee securities by Rs. 10 crores to Rs. 760.50 crores. Deposits of the Government of India increased by Rs. 10.85 crores to Rs. 63 crores while other Government accounts fell by Rs. 27.12 crores to Rs. 20.06 crores. Balances of commercial banks were Rs. 2.40 crores lower at Rs. 52.47 crores. Balances held abroad declined by Rs. 8.55 crores to Rs. 98.17 crores, as did investments by Rs. 9.10 crores to Rs. 74.29 crores. Other loans and advances increased from Rs. 83.39 crores to Rs. 90.09 crores, of which advances to scheduled banks against usance bills amounted to Rs. 42.41 crores against Rs. 43.43 crores. These advances totalled Rs. 344.34 crores since 1st January, 1956. Ways and means advances stood at Rs. 84.35 lakhs (Rs. 6.35 crores).

The return of the State Bank of India for the week ended 2nd November, 1956, shows a drop of Rs. 23 lakhs in investments to Rs. 229.37 crores. Investments in Government securities are down by Rs. 35 lakhs to Rs. 95.00 crores, while other authorised investments are up by Rs. 1 lakh to Rs. 11.30 crores. Advances, including loans, cash credits and overdrafts, and bills discounted and purchased, have increased by Rs. 96 lakhs to Rs. 130.72 crores. Cash and balances are, in consequence, shown at Rs. 16.20 crores, or Rs. 26 lakhs less.

The statement of the position of scheduled banks for the week ended 2nd November, 1956, shows Demand and Time liabilities at Rs. 638.92 crores (Rs. 13.05 crores on account of borrowings from banks) and Rs. 456.34 crores (Rs. 3.33 crores), compared with Rs. 646.37 crores (Rs. 12.97 crores) and Rs. 457.61 crores (Rs. 3.86 crores), respectively in the previous week. Cash has declined by Rs. 4.22 crores to Rs. 34.09 crores, while balances with the Reserve Bank have increased by Rs. 2.75 crores to Rs. 51.77 crores. There is a drop of Rs. 4.21 crores in investments to Rs. 367.32 crores. Advances and bills discounted at Rs. 768.71 crores show a rise of Rs. 8.37 crores. The ratios to total liabilities of cash and balances, and of advances and discounts, are, in consequence, shown at 7.8 percent and 70.2 percent, against 7.9 percent and 68.9 percent.

The following is a statement of the cash balances of the Central Government on the last day of July, 1956:

	Rs.
(1) At the Reserve Bank of India in India	71,45,65,000
(2) At treasuries in India	2,29,37,000
(3) In England (sterling converted at 18d. the rupee)	2,44,98,000
Total	76,20,00,000

According to the landborne trade returns received in the Department of Commercial Intelligence and Statistics, the provisional figures of the total value of foreign trade of India by land with

Pakistan, Afghanistan, Iran and Burma during the month of September, 1956, are as follows (in lakhs of rupees):

	Exports to	Imports from
West Pakistan	14	11
East Pakistan	27	140
Others	6	69
Total	47	220

Total trade amounted to Rs. 267 lakhs. Re-exports and trade in treasure were negligible. There was thus an adverse balance of trade amounting to Rs. 173 lakhs.

TURNING A NEW ROLL

We have turned a new roll; and it has cost us three and a half crores of rupees.

To what purpose, pray?

At the end of the rolling, we get coils of flat, steel strip—skelp, as the steel man calls it. The skelp is passed on to the Indian Tube Company, which welds it into tubes.

So what?

Merely that steel tubes pipe up water from deep inside the earth to parched fields, helping to grow a rich harvest. In the cities, countless homes receive a protected supply of water through these pipes.

Soon, a new plant will turn out the kind of steel tubes that go into the making of bicycles. Remember also that the locomotive speeding along the track is kept going by steel tubes which hold the steam.

Tata Steel's new Skelp Mill, the first of its kind in India, has a capacity of 200,000 tons. When there is enough steel, this mill will roll all the skelp and strip the country needs.

TATA STEEL

SERVES THE NATION

Communications by Standard

One of the largest telecommunication engineering organisations in the British Commonwealth Standard Telephones and Cables Limited is engaged in the research, development, manufacture and installation of all types of communication and control systems. Concerned with every aspect of telecommunication engineering, the Company is in an unrivalled position to undertake, within its own organisation, the co-ordinated systems-planning of complete communication projects involving inter-dependent systems of various types.

'Standard' products include:-

Telecommunication Line Transmission Equipment
Radio Broadcasting Equipment
Radio Communication Equipment
Air Radio Navigational Aids
Supervisory and Remote Control Systems
Railway Communication Apparatus
Railway Control Equipments
Telephone Cable
Sound-Reinforcement Systems
Public and Private Telephone Systems

Standard Telephones and Cables Limited

Resounding VICTORY! FIRST AGAIN!

For the third consecutive year a
Hindusthan car beats all other cars
(77 competitors, 18 makes) in the official Endurance
and Reliability Trial for '56. Jointly organised by
AAB (Automobile Association of Bengal) & Calcutta Motor Sports Club.

The Hindusthan Landmaster we used proved perfectly reliable during the Trial. The engine was not stopped for a single moment on the 772-mile run that lasted 25 hours and yet there was no trouble whatsoever.

We had to maintain the prescribed average speeds on good metalled roads as well as on rugged and hilly tracks. Yet, the manoeuvrability of our Landmaster, its instantaneous engine response and excellent road holding made it possible for us to drive at the controlled high and low speeds required by the Trial without any difficulty. The well-cushioned seats and spaciousness added to our comfort and kept us relaxed even in this tough and fatiguing Trial.

Stocks and Shares

DULLEST STOCK MARKET OF THE YEAR

MONEY SHORTAGE AND WORLD SITUATION

DISCOURAGE OPERATORS

Wednesday Evening.

BUSINESS in the Calcutta stock market this week is reported to have been the dullest of the year. Turnover has been down to a minimum and even first class miscellaneous and engineering shares have fallen in price. Speculators have been quiet and depressed, with Indian Irons moving narrowly between Rs. 32-14 and Rs. 33-3; this evening's closing quotation was Rs. 33. The reason for the inactivity in the market is probably the extreme tightness of money, even before the busy season has begun to get under way. Another reason may be the fact that potential purchasers are reserving their funds for the new issues which are coming to the market soon, while the continued uncertainty of the Suez situation still overshadows future economic prospects.

Most sections of the market have suffered price falls. In coal, Burrakurs have featured on interested buying. Tea scrip have suffered a setback on reports from South India about the effect of the recent Plantation Award on the future of the industry. Government securities have been even quieter than usual.

Details of the week's trading follow.

There was a further contraction this week in the volume of business in Government securities and prices were once again marked down due to continued stringency in the money market, and lack of buying support. Three percent Conversion Loan 1966 receded further to Rs. 73-11 which is the lowest rate touched since the loan was issued in 1946.

Short-dated loans were unchanged with 3% 1957 at Rs. 99-12 and 3% 1958 at Rs. 99-9. Medium-dated issues were fractionally easier with 3% 1959-61 being offered at Rs. 97-15; 2% 1961 had sellers at Rs. 93-7 as did 2% 1960 at Rs. 93-6. Three percent 1963-65 was quoted lower at Rs. 94-4 and 3% 1964 was marked back to Rs. 94-6. In National Plan loans, 3% 1961 turned sellers at Rs. 99-4 while 3% loans 1964, 1965 and 1967 were marked back by one anna in each case to Rs. 98-7 sellers.

Long-dated issues were weak with 3% 1966-68 quoted at Rs. 92 and 3% 1970-75 at Rs. 88. Small business was reported in 3% 1974 at around Rs. 98-8.

State loans continued depressed with sellers over and prices were once again marked down substantially. Two noticeable price alterations were in 4% U.P. and Madras 1968 which were both quoted lower at Rs. 98 while other issues were on offer at lower rates without attracting any buyers.

Business in preference shares was of a retail nature with sellers predominating. In the miscellaneous group, Bowreah Cotton "A" and "B" were crossed at Rs. 140 and Rs. 70 respectively. British India Corporation changed hands at Rs. 123-12 and Calcutta Electric at Rs. 11. Aluminium Corporation 6% were crossed at Rs. 115 and a small lot of Birpara Tea at Rs. 120. Chrestien Mica Industries were sold at Rs. 57-12 and Calcutta Tramways at Rs. 8-12. Duncan Brothers came to hand at Rs. 61-12 and Indian Iron & Steel had sellers at Rs. 104. Indian Standard Wagon were taken at Rs. 125. New Victoria Cotton reported business at Rs. 5-8 and Textile Machinery were crossed at Rs. 97. In the jute section, Auckland Second were sold at Rs. 62. Hastings Jute were better at Rs. 95 and a small lot of Gourepore was reported at Rs. 85.

Little business was reported in the banking section. Hindusthan Commercial were offered at Rs. 10 and Hindusthan Mercantile were crossed at Rs. 13-8. United Commercial were shaded at Rs. 56 as were Punjab National at Rs. 55-8. United Bank of India "D" shares were unchanged at Rs. 4-8.

In railways, a solitary transaction was reported in Dehri-Rohas at Rs. 13-2.

Cotton shares were featureless. Elgin were easier at Rs. 18-12 and Cawnpore Textiles were lower at Rs. 9-2. Kesoram changed hands at around the previous quotation of Rs. 16-12 while Jayshree were easier at Rs. 6-10. New Victoria closed one anna easier at Rs. 2-8. Bowreah and Dunbar were marked back today to Rs. 138 and Rs. 248.

The outstanding and perhaps only feature in the coal section was Burrakur which was well supported and was taken up at one time to a new high of Rs. 17-8; profit-taking at the close brought the price down to Rs. 17-5. Bengal dropped five points to Rs. 490 and Central India reacted from Rs. 7-1 to Rs. 6-14. Dhemo Main were unchanged at Rs. 7-12 while Equitable were marked back from Rs. 28-12 to Rs. 28. East Indian were lower at Rs. 31-6 and South Karanpura were depressed at Rs. 8-12. New Beerbhoom were marked down sharply from Rs. 17 to Rs. 15-12. Pench Valley were crossed at Rs. 20-12, but later dropped to Rs. 19-12.

Jute shares were extremely dull and it was practically impossible to execute selling orders.

Here is a chart showing representative price movements:

	Opening 8-11-56	Closing 14-11-56
Anglo India	Rs. 168 0	Rs. 164 0
Birla	17 8	17 1
Dalhousie	94 0	90 0
Howrah	22 4	21 10
India	141 0	132 x.d.
Kelvin	205 0	195 0
Kinnison	155 0	141 0
National	24 0	23 10
Northbrook	24 0	23 0

Only two shares were mentioned in the electric supply section, viz. Calcutta at around Rs. 13-4 and Mirzapur at Rs. 9-8.

Sugar shares were more or less unchanged, but the volume of business was extremely small. Durbhanga were marked down from Rs. 22-12 to Rs. 22-4 and Dyer Meakin Breweries were wanted at Rs. 6. Ramnugger receded today from Rs. 24-12 to Rs. 24-6.

In paper, Titagur changed hands at Rs. 39-12. India Paper Pulp at the previous rate of Rs. 23-12 and Shree Gopal at Rs. 17-2. Orient met with some enquiry during the week and at one time were taken up to Rs. 36-12; tonight's closing quotation is Rs. 36-3.

In the engineering section, Indian Iron & Steel fluctuated narrowly between Rs. 33-5 and Rs. 32-14 ex-dividend to close at Rs. 33. Burn & Company dropped Rs. 4 to Rs. 370 and Indian Malleable Castings Deferred were reported at Rs. 4. Jessop & Company eased from Rs. 36-10 to Rs. 35-12 and Richardson & Cruddas softened to Rs. 26-12 against an opening quotation of Rs. 27-8. Indian Standard Wagon were comparatively steady at Rs. 219. Textile Machinery, after being sold down to Rs. 22, recovered at the close to Rs. 22-7.

In cement, Ashoka were steady at Rs. 12-7 as were Assam Bengal at Rs. 7-4. Dalmia Cement

SAVED...
Rs. 21,000
a year on
LUBRICATION
COSTS alone!

A PROMINENT
 textile mill in Ahmedabad
 is saving Rs 21,000 a year —
 because its management asked for
 our free advice!

After careful study, our lubrication
 expert found that the mill was over-
 lubricating its machinery — with the
 wrong grades of oil. Now,
 every month, the mill uses three
 thousand pounds fewer; thirty-
 six thousand pounds of
 industrial lubricants
 saved every year!

**Choosing
 the right grade**
 Our experts are backed
 by the world's greatest
 lubrication experience, 90 years
 of it. Besides, they have the right oils
 to work with — a full range of MOBIL
 Industrial Lubricants! No wonder they can
 give you correct lubrication, with
 the right grade of oil.

MOBIL Lubricants have been developed over
 many years of scientific research, and they
 are constantly being improved. When our
 expert says: 'Use MOBIL Lubricants,'
 he is offering your machinery
 the finest protection that
 science can devise, or
 money can buy.

**Correct
 lubrication is
 a matter for experts.**

WIDESPREAD LOSSES IN STOCK MARKETS EFFECTS OF MIDDLE EAST SITUATION

London, 14th November.

THE grave international situation again dominated the stock markets during the past week and widespread losses were recorded. Selling, apart from oil shares, was small, but buyers were completely absent. Prices rallied quite sharply afterwards on further consideration of the situation, and gains more than recouped losses. Apart from the Middle East situation, other news had little effect. The Chancellor of the Exchequer's statement in the economic debate in Parliament also failed to have any effect, while the October trade figures, although satisfactory, had no great influence on sentiment. The markets steadied later, but that was due largely to the rally on Wall Street. The gilt-edged market had another very subdued week and prices generally moved within narrow limits. The underlying tendency was towards lower levels, and small losses were recorded on the week. Foreign bonds inclined lower, with Hungarian 4½ percents sharply lower on Russian intervention in that country. Dollar stocks were higher, with the dollar premium strong at over 1 percent. The initial favourable response of the industrial market to the cease-fire news proved to be short-lived, and the earlier gains were wiped out in subsequent dealings. Compared with the previous levels, widespread losses ranging generally up to about 2s were recorded. Gold shares lost ground partly due to the general conditions and partly because of official doubts about the reliability of the Zandpan bore-hole results announced earlier in the year. New Riebeck shares established a small premium in first dealings. Base metal shares recorded extensive falls. Oil shares fluctuated widely, but showed substantial falls on the week. British Petroleum reached 15½s following the cease-fire news, but were later back to around 13½s. Teas and rubbers were very quiet, and prices were little changed generally.

The Money Market

It was more difficult to borrow in the money market last week. Credit was short from the beginning due to lack of maturities to bolster up

cash balances, and the market had difficulty in pulling itself up from a bad start. Wednesday saw an easing of the situation, but subsequently conditions became tight again. The rate for money generally ruled at 4½ percent, with 5 percent touched on Thursday, while the authorities were in greater evidence and supplied fairly large sums of money. The rates for bills were firm with January's sold at both 4-29/32 percent and 4-15/16 percent. The Treasury bill tender saw no change from the market side, while the average rates recorded little change. Applications for £200 million worth of 91-day Treasury bills totalled £333,165,000 and were allotted at an average rate of 9½s 10.86d percent against 9½s 11.55d percent in the previous week. Applications for £80 million worth of 63-day bills totalled £85,960,000, and were allotted at an average rate of 9½s 10.95d percent against the previous week's 9½s 11.00d. This week £280 million worth of bills are on offer comprising £190 million worth of 91-day bills and £90 million worth of 63-day bills. The Bank of England return for the week ended 7th November showed that notes in circulation were about £9 million higher at around £1,886 million, while bankers' deposits were about £18 million lower at around £238 million.

Stock Market Prospects

The *Investor's Chronicle* market newsletter writes: "The volume of selling of industrials has been remarkably small as investors were wisely reluctant to throw good shares overboard. The inflationary argument for equities because of defence expenditure is not strong as the Government will make a strenuous effort to contain inflation. Gold shares appear sold out. Ceylon tea shares have been active, stimulated by mergers and bids and by continued demand for good teas at above last year's prices. Holders should sit tight."

Vegetable Oils Dearer

With minor exceptions, most vegetable oils were substantially dearer on better demand, particularly for early shipments. There was active demand for British Standard Specification Grade linseed oil prompt despatch, at up to £127 ex-tank, U.K., with further buyers. Canadian linseed lacked features, while traders considered that there was a chance that the latest move in Argentina may result in exports of linseed. Groundnut oil advanced sharply, with business in Nigerian to north Continental ports, including November-December at £137, and December-January at £136½, c.i.f., with buyers over. South African oil was confined to tentative operations at a substan-

tial advance to £142 c.i.f., December, Continent. Indian oil was not mentioned below £138 c.i.f., January-February. Groundnuts were holding firm, although no trading of note was reported. Straits coconut oil was neglected and was a shade easier, but Ceylonese oil was holding steady, backed by firmer advices from the origin. At first-hand levels, castor oil was raised by £2 a ton, while Scandinavian, it was reported, was buying Indian commercial grade at £143, cost and freight drummed. Castorseed was steady although Marseilles paid £74½ for float, parcels of British East African oil. East African sunflowerseed made £42½, December-January, north Continent, while Nigerian seed was in stronger demand.

Sharp Fall in Rubber

A sharp decline at the start of the week ended 8th November was accelerated by selling on a market which some traders believed had been somewhat overbought. A report that releases were to be made from the U.S. stockpile to American industry caused a further temporary softness and uncertainty. After a mild rally on buying orders attributed to U.K. interests, values again slipped on the cease-fire news from Egypt, but the lower levels induced a good demand. Towards the close, the market was thin with renewed trade and speculative demand finding sellers reserved in view of the international uncertainties. Values finally were about a 1d a lb lower on the week. Small available quantities of sole crepe again found a ready market on the basis of 46d a lb for 1/8th inch smooth No. 1 on the spot.

Rubber Shipments to U.S.A.

Far Eastern shippers are sending most of the natural rubber to the U.S. east coast through the Panama Canal, while the Suez Canal is blocked, says the U.S. Business and Defence Services Administration. The Panama route will take about the same time as shipping through the Suez Canal and there will be no shortage in the United States before December, the B.D.S.A. adds. If a shortage occurs, it will be of a temporary nature only, caused simply by the time lost in re-routing ships. Rubber shipments to Europe will be made via the Cape of Good Hope. This will add about a week to the normal four week's voyage through the Canal. The B.D.S.A. forecasts that European manufacturers may buy and use increased quantities of American synthetic rubber in November and December because their stocks of natural rubber are not high. U.S. synthetic rubber stocks are above normal and production can be increased, the Administration says.

NEW SYSTEM OF FINANCIAL CONTROL

EFFECT OF SUEZ CANAL CLOSURE ON INDIAN ECONOMY

(FROM OUR NEW DELHI CORRESPONDENT)

THE work of streamlining the Union Finance Ministry has begun. In order to cut red tape, the Finance Minister, Mr. T. T. Krishnamachari, moves about in his Ministry, discussing day-to-day problems with the Secretaries and other officials. He has evolved a new system of financial control, under which the Secretaries of the spending Ministries are allowed to meet him and discuss their schemes, the soundness of which has to be guaranteed by the Minister. To set an example to other Ministries, he has already reduced the number of Deputy Secretaries in his Ministry by at least six. A reorganisation of the Company Law Department has also been undertaken. The traditional rôle of the Finance Ministry as the co-ordinating agency has been revived. A meeting of the Ministries of Heavy Industry and Transport was recently held under the chairmanship of the Finance Minister, when the problems in the development of heavy industries from the transport angle were discussed. More meetings on similar lines will follow.

The Finance Minister has repeatedly made it clear that there will be no difficulty in raising internal finances for the second five year plan. He is confident of raising the required money. The main difficulty is external finance. Here the price line will be a very important factor. India will need to import foodgrains and other essential consumer goods to resist any upward movement in prices. Price support, among other things, may also be needed to provide incentives to the cultivator if prices tend to fall sharply. In these matters, the Finance Minister needs the support of his Party in general, and his Cabinet colleagues in particular. The suggested revision of textile policy will be the first test as to whether this support will be readily available. Meanwhile, negotiations with the World Bank for loans are in progress.

Brief Budget Session

The final session of the present Parliament, according to plans, will be summoned by the middle of March, when the Finance Minister, Mr. Krishnamachari, will put forward his first Budget covering four months. The Budget estimates will be on the basis of the existing tax structure. Proposals for fresh taxation, if any, will be brought before the new Parliament which is likely to be summoned in May, 1957.

India and the Suez Canal

The Government of India has been discussing the economic consequences of the Suez crisis. The closure of the Canal has already led to an increase of freight rates, thereby raising the prices of imports, and reducing India's competitive advantage in her export trade. In brief, it has slowed down foreign trade, and its prolongation will be detrimental to the economy, particularly to the second five year plan. A short-lived dislocation, however, is not expected to affect the plan in any material respect, because the resumption of normalcy can be followed by an increased tempo of activity. The future of the plan also depends on the continuation of peace-time production in Europe, particularly in the U.K. and France. Any diversion of peace-time production to other channels will affect India's plan, it is feared.

Russia Offers Loan to India

Following the visit of the Production Minister, Mr. K. C. Reddy, Russia has offered India a loan of 500 million roubles, or Rs. 55 crores, carrying 2½ percent interest and repayable in ten years. The Government of India will soon decide what machinery and plant to import from Russia in order to utilise the credit.

Pending Legislation

The winter session of Parliament is to deal with a heavy legislative programme. The Lok Sabha has 18 pending Bills, six of which are at the Select Committee stage. With the exception of the State Bank of Hyderabad Bill, which has been put down for withdrawal, the remaining 17 are due for enactment. The Rajya Sabha, similarly, has four pending Bills, two of which are at the Select Committee stage. The provisional programme of new official business includes 19 Bills, four of which seek to replace Ordinances. The other new Bills include: (1) the Indian Telegraph (Amendment) Bill which seeks to regulate the use of telephones, (2) the Central Sales Tax Bill, representing legislation for the levy, collection and distribution of taxes on sales of goods in the course of interstate trade or commerce and the imposition of restrictions and conditions as to rates and other incidents of tax subject to which the States may impose tax on the sale of certain commodities declared to be of special importance to interstate trade or commerce; (3) the National Film Board Bill for the setting up of a National Film Board with the Film Production Bureau, Film Institute and Censorship Organisation as its constituent units, (4) the Employees Provident Funds (Amendment) Bill to bring certain non-factory industries within the scope of the Employees Provident Funds Act, 1952; (5) the Minimum Wages (Amend-

ment) Bill to extend the statutory time limit for fixing wages, laid down in the parent Act; (6) the Bar Council Bill to amend and consolidate the law relating to legal practitioners and to establish an all-India Bar; (7) the Coal Bearing Areas (Acquisition and Development) Bill to establish greater public control over the coal mining industry and promote development by providing for the State acquisition of land containing coal deposits; (8) the Railway Protection Force Bill to provide for better protection against thefts and pilferages of railway property and other property entrusted to the railways for transport; (9) the Cotton Textiles (Additional Excise Duty) Bill to provide for the levy and collection of an additional excise duty on cotton textiles issued out of mills in certain circumstances.

As usual, there will be a debate on foreign affairs and demands for supplementary grants.

Co-operative Warehousing

The Prime Minister last week inaugurated the National Co-operative Development Warehousing Board. It will plan programmes for the production, processing, marketing, storage, warehousing, export and import of agricultural produce through co-operative societies and warehousing corporations. The Board may advance loans or grant subsidies to State Governments for financing co-operative societies. The Board may provide funds to State warehousing corporations in order to purchase agricultural produce from co-operative societies on behalf of the Central Government. It may subscribe to the share capital of the Central Warehousing Corporations or advance loans or grant subsidies to it or to any other State warehousing corporation. The Board will plan and promote programmes through co-operative societies for the supply of seeds, manures, fertilisers, agricultural implements and other articles to cultivators.

To execute the programme of warehousing, a central corporation with an authorised capital of Rs. 20 crores and an issued capital of Rs. 10 crores will be set up. It will operate warehouses at 100 centres of all-India importance with a storage capacity of 10,000 to 20,000 tons each. In addition, every reorganised State excepting the centrally-administered territories, will have a warehousing corporation which, in turn, will set up 250 warehouses of 2,000 to 10,000 tons of capacity each. A warehouse will accept agricultural commodities such as food grains, cotton seeds, raw jute and vegetable oils, for storage on a reasonable rent from the farmers and will issue receipts to them. These receipts will indicate the quality and quantity of the produce, which according to the plan, will become negotiable instruments like a bank cheque. The bank will accept these receipts against which loans to their holders will be advanced without taking physical possession of the produce. In this manner, warehouses will ensure orderly marketing operations and will become an important agency for stabilising prices. According to the present programmes, Vishakhapatnam (Andhra), Hubli (Bombay), Raipur (Madhya Pradesh), Kumbhaknam (Madras), Moga (Punjab), Rajkot (Bombay), Balasore (Orissa), Hapur (Uttar Pradesh) and Cooh Behar (West Bengal) are some of the places where warehouses of the Central Corporation may be set up during the scheme's first year of operation. In addition, central warehouses will also be established in important cities like Bombay, Calcutta, Madras, Nagpur, Cuttack and Gauhati.

Wool Trade

India's trade in wool and wool goods showed marked improvement during the first six months of this year over the corresponding period of 1955, especially in raw wool and semi-manufactured products, but imports of wool tissues were considerably less. Raw wool exports particularly to the United States and the U.K. were higher, though the increase was less for the U.K. due to internal difficulties which caused U.K. manufac-

turers to withdraw from the Indian market for some months. Exports to "other" countries included the first wool shipment in June for Soviet Russia. It is reported that during January-September, Russia purchased approximately 3,500,000 lbs of wool, but the bulk of the shipments have been made in the last month or two.

India's increased imports of raw wool and wool tops were due mainly to larger purchases from Australia although in the case of tops, the bulk (5,869,000 lbs.) came from the U.K. Higher imports of wool yarn during the first six months of this year were due to the export by Italy of 1,304,000 lbs., compared with only 771,000 lbs. last year. This represents 89 percent of India's total imports. It is noticeable that the 50 percent reduction in imports of wool tissues has occurred in shoddy and mixed wool tissues; the imports of "woollen and worsted piece-goods" were higher than last year. Italy is still the largest supplier of wool cloth to India, although her exports, being mainly in the cheap categories, have fallen by two-thirds. In thousand linear yards, with the first half of 1955 in parentheses, the figures are: Italy 184 (636), the U.K. 110 (239), others 160 (115); total 454 (990).

Research on Sheep-breeding

The Government of Madras has sanctioned the establishment of a sheep breeding research station near Chinnasaalem in Salem district. The farm will be started in an area of about 1,500 acres and research on the improvement of the local woolly sheep will be undertaken on the farm. The Chinnasaalem sheep farm will be one of the biggest of its kind in India. In order to carry out further intensive work among the sheep breeders of Madras State, the Government has already given its sanction to the establishment of three additional sheep units during the current year, thereby bringing the total number of sheep units in the State to seven.

Water Supply for Durgapur Steel Works

A British water engineer is visiting India shortly to advise on a project for drawing water from the river Damodar for the proposed Durgapur steel works in West Bengal. Water supply equivalent to the needs of a small town is required for the new steel works in Durgapur and its employees' homes. Some £50 million worth of plant, materials and equipment for the steel works is to be imported from the U.K. The British water expert, who is to act as a specialist consultant on the principles of design and to give general guidance, is Mr. N. J. Pugh, water engineer of the city of Coventry. Most of the work he will do for the Indian project will be carried out in the U.K., but he will spend two weeks on the site in Durgapur. Mr. Pugh's assistance was sought by the Cementation Company, which is responsible for the water works. The development project, as a whole, is being carried out by the Indian Steelworks Construction Company for the Government of India. Mr. Pugh has long experience in water engineering. In March this year—as chairman of the British Standards Institution committee on plastic tubing—he led a British technical delegation to an international conference in Zurich.

Heavy Water and Fertiliser Consultants

The Government of India has appointed the U.S. firm of Vitro as consultants for the heavy water and fertiliser plant in Bhakra-Nangal, Punjab, which is estimated to cost Rs. 25 crores.

Problems of Regional Development

The B. M. Birla Committee's report on the industrialisation of Uttar Pradesh has focussed interest on the growing inequality among the States in general, and on the industrial backwardness of Uttar Pradesh, in particular. The object of planning should be as much to remove inequalities between man and man, as between one State and another. The question that is being asked here is to what extent these inequalities have been reduced by the first plan and how much more is likely to be reduced by the second. One school of thought holds that the Government's taxation policy has been effective in reducing inequalities in personal incomes. It is true that an average man, judging from the current consumption figures, is eating more food and using more cloth than he did before. This may or may not indicate greater economic equality. In the U.K. one result of the taxation policy has been the sale of many "stately homes of England." Has a similar movement been noticed in India? There does not seem to be much evidence of that outside theoretical essays. If the old saying that industrialisation is the parent of inequality is accepted, the process of industrialisation, which has

INDIAN WOOL TRADE (Thousand lbs.)

been helped forward by the first plan, should have sharpened inequality. Another school of thought claims that the first plan has accentuated disparities in the per capita income in various States and the second plan will further that process. In other words, the poor are becoming poorer and the rich richer.

There can be no objection to the industrialisation of any State, provided it has the natural and other resources. But the luring of industries by offering better terms to the private sector or the imposition of certain disabilities in order to reduce, if not to neutralise, the natural advantages of other States, are objectionable methods. It has to be pointed out that while equality is being claimed by some States in the matter of industrialisation, they have illogically opposed any move to whittle down the concentration of certain undertakings that exist within their territories. The dispersal of the sugar and cotton textile industries are examples. Between these two extremes, it is however, possible to find a *via media*. One method may be to disperse consumer goods industries to their principal marketing centres. Such a step would not only reduce industrial imbalance, but would also ease the transport problem. The case of cotton textiles illustrates the point. The industry is largely concentrated in Ahmedabad, Bombay and Madras State, while some of the biggest consuming areas are in West Bengal, Bihar, Assam and Orissa. Similarly, long-staple cotton is grown in the Punjab. A dispersal of this industry on a regional basis is economically possible. Sugar is another industry which needs dispersal. Regional self-sufficiency in consumer industries can be a major way of reducing inequality in industrial development between one State and another.

London

SUEZ CRISIS AND THE U.K. ECONOMY

SIGNS OF STRAIN IN STOCK AND EXCHANGE MARKETS

(FROM OUR LONDON CORRESPONDENT)

WITH the passage of another week of crisis, it is obvious that there has been considerable reassessment of the Middle East situation. So far the City may be said to have avoided "taking a view"—and perhaps thereby shown greater perspicacity than the politicians—and contended itself with a cautious slowing down of almost all activity. The probability that there is no swift or easy solution of the Middle East problem in sight has been emphasised. The City has been obliged to revise its attitude, and indeed has been encouraged to do so by the Chancellor's warning about the coming strain on the economy. Quite apart from the actual cost of operations in the area, our crude oil imports (if we can get the supplies) will not only cost more but will have to be paid for in dollars. The general rise in freight rates has not ended, exports cannot avoid being affected by the shipping shortage, and the first signs of strain have made their appearance in the exchange and stock markets, especially the former. All three varieties of sterling have been under pressure from Continental selling, with the result that all the good work which the Bank of England has put in over the last 18 months in establishing a unified system of

rates is threatened. The City is not given to panic reactions, and there will not be any now, but it is inexorably being forced into taking a view, and it will be interesting to see just what that view will turn out to be.

Against the crisis background, the proroguing and reassembly of Parliament for the new session appeared somewhat unrealistic, and the Queen's speech outlining the Government's proposed legislative programme attracted less interest than would have been the case otherwise. It is not a particularly imposing programme but it certainly contains quite a few measures which will create controversy. In the economic sphere is a Bill to allow the imposition of duties on goods "dumped" in Britain for sale at prices below the cost of manufacture in the country of origin. Existing emergency powers for hire-purchase transactions are to be made permanent, but the Government is to go further and regulate borrowing by hire-purchase finance companies. The Transport (Railway Finance) Bill to implement the Government's plans to make "special advances" to the British Transport Commission was expected, but the partial abandonment of rent control and the revision of various subsidies for housing in Scotland and the construction of agricultural silos, and other measures will meet with strong opposition. Meantime, the Board of Trade is closing another loophole in the present hire-purchase restrictions, making it illegal to make a hiring arrangement involving a sale at the end of the hiring period.

Shipping Freights and Fares

The main impact of the Suez position, though it is in one way or another affecting most markets, has so far been noticeable in shipping. To meet daily changes in the situation, Ministry of Transport officials are holding regular meetings with the U.K. Chamber of Shipping, acting as spokesman for the industry. Until the Government's needs are fully met and the time factor in clearing the Suez Canal of the blockships now sunk in it has been established, the outlook for shipping freight and fares will remain uncertain. There is little doubt that any movement, even when the situation clarifies, will be upward, if for no other reason than that shipowners will expect charterers to meet the additional war risk premium payable on the eastern routes while the general scarcity of vessels will push up rates elsewhere. The biggest increase in freight rates since the start of the crisis was announced by one of the Freight Rate Conference organisations in London last week. It was stated that on outward voyages from British and Continental ports, cargoes for Port Sudan would bear a 25 percent surcharge. Two days earlier, six of the conference organisations announced a 15 percent surcharge on cargoes bound for East Africa, India, Pakistan, Ceylon and the Far East. Later, this was also extended to homeward freight from India and Pakistan, but not from Colombo as yet. The closing of the Suez Canal has added another 3,000 miles to the voyage from London to Singapore, but in the case of Port Sudan and the Persian Gulf the increase is about 5,000 miles; this accounts for the higher surcharge. The voyage to Australia has been lengthened by about 1,000 miles, but so far there has been no increase in the freight rates, though it is thought one must come. The liner companies have added a 20 percent surcharge on passenger fares to the Far East, including the P. & O., the Nederland Line and the Rotterdam Lloyd Line. Importers in the City state it is too soon yet to make any estimate of the effect of the increased freight rates on prices. It is almost certain, however, that the increase will have to be passed on to the consumer. The cargoes on which increased rates will now be paid are principally jute and cotton from Pakistan, tea from India and Ceylon, coffee and sisal from East Africa, and iron ore, manganese, rubber, tin and vegetable oils from various parts of Asia.

Drain on Gold Reserves

The pressure of current events and the ups and downs of markets tended to detract from the usual importance attached by the City to the monthly gold and dollar statement. As mentioned briefly last week, the Treasury announcement showed that the reserves fell by \$84 million in October and stood at the end of the month at \$2,244 million. The only comfort to be derived lies in the fact that the drain has declined in the last three months. Excluding the lump sum received for the Trinidad Oil Company, the loss in September was \$125 million and in August \$129 million. Seasonal factors were still working against sterling last month, and the uncertainty over Suez kept traders and bankers abroad out of sterling. The October figures do not yet reflect the impact of the latest crisis. This must have cost dollars and gold in supporting the market. U.S. defence aid in October was \$7 million; \$25 million was paid to the E.P.U. on account of our deficit in September. The October deficit with E.P.U. was £13 million against £12 million in September, in spite of the end of the tourist season. The inference must be that imports are still running at too high a level and that some of the speculative pressure against sterling is reflected in the E.P.U. figures. The November figures may be no better, for the Suez crisis will affect those, and in December the U.S. and Canadian loan repayments fall due. The outlook is hardly bright.

The Employment Situation

The number of vacancies on the registers of employment exchanges is still declining. The Ministry of Labour has announced that vacancies, on 19th September, the day of the last count, were 334,000, or 27,000 fewer than on 22nd August and

90,000 fewer than a year ago. In the four weeks ended 19th September, there were 177,200 vacancies filled, compared with 176,330 in the four weeks ended 22nd August, and 264,400 in the corresponding month a year ago. In the Midlands, the respective figures were 28,749, 31,954 and 52,800. The number of workless on 15th October was 254,073, against 247,640 on 17th September and 215,155 on 10th October, 1955. In October, the percentage of unemployment was 1.2, compared with 1.1 in September, and 1.0 in October, 1955. A fall in the number of workers temporarily stopped was unusual for the period of the year and it is understood was largely the result of the return to work of Clydeside shipyard workers. The number in civil employment at the end of September was 23,085,000, which was 15,000 fewer than at the end of August.

Industrial Building Plans

Fewer firms asked for permission to build new factories in the third quarter of this year than in any three-month period for a long time. But the total area involved was larger than in the second quarter and roughly equal to that approved in the third quarter of 1955. The number of approvals was 550, compared with 641 in the second quarter and 611 in the third quarter of last year. The area approved was just over 20,000 sq. ft., compared with 14,300 sq. ft. in the second quarter and 20,700 sq. ft. in the third quarter of 1955. These figures indicate that industrial investment plans have been moderated but not that they have been sharply and suddenly cut down. Actual industrial building activity, which corresponds to approvals and "starts" of earlier periods, is still at full stretch. The Board of Trade states that the total factory area under construction at the end of July was the highest since the war.

Free Market in Europe

Qualified support on a wide basis has been forthcoming for British participation in a common European market, on the basis that the dangers of staying out would be greater than those of joining. The House of Lords favoured joining when it debated the question. So did a majority of the Regional Councils of the Federation of British Industries, and a joint meeting of the U.U.C. General Council with representatives of the Labour Party. This general agreement coincides with the announced views of the Government—that British membership should be on special terms to safeguard Imperial Preference and that it should not be full-scale membership—so the idea may be expected to make good progress. There will still, however, be a lot of haggling when the specific terms come to be negotiated, and even then it will be necessary for not a little "new thinking" on the part of all concerned.

For instance, some industries fear the flooding of the home market, with no compensating advantages of freer entry into European markets, since certain European countries enjoy natural advantages which cannot be overtaken by improvements in efficiency. Some are "deeply sceptical" of the possibility, in practice, of working out watertight safeguards enabling competition on level terms. Others consider the question of readjustments being possible by stages over 12 to 15 years. The U.U.C. fears dumping by European countries who might exploit workers to produce cheap goods and adopt other unfair competitive trade practices. It goes on to suggest: (1) the Government should be able to take adequate measures to offset any threat of unemployment in particular industries; (2) the Government must be ready with plans to help workpeople displaced as a result of free trade—adequate unemployment pay, retraining schemes and financial support during retraining, and assistance to workers and their families to move to new areas; (3) the Government must be free to control the distribution of industry and to provide special assistance on defined and agreed conditions to essential industries; (4) countries should be able to restrict imports for balance of payments reasons and to control movements of capital; (5) all the Governments concerned should take action to deal with international cartels in the area; (6) Britain should retain its right to make long-term trade and commodity agreements with the Commonwealth and other countries outside the free trade area.

Brooke Bond Financing Plans

With the full accounts, the directors of Brooke Bond, the tea group, give details of their financing plans, which involve the raising of over £1.8 million of new money. It is proposed to issue the three million new "B" Ordinary 5s shares at 12s 6d each on a one-for-four basis. Additional working capital was required to finance increased stocks and this has been met from temporary bank borrowings, which had reached £2.2 million by 30th June. The primary object of the new issue is to reduce the extent of these loans. The group is also continuing its programme of expanding its tea plantation interests, particularly in East Africa. The benefits of this policy, say the directors, should soon begin to be reflected in profits as the young plantations come into full bearing. After the issue for cash £3½ million of reserves are to be capitalised for a one-for-one free issue to "A" and "B" Ordinary holders. The "rights" issue is being underwritten for 3d a share commission. Trading prospects for the current year are good, say the Brooke Bond directors. Provided conditions do not change materially, it is intended to pay a dividend of at least 4½ percent tax free on the Ordinary as increased to 27½ million in 5s shares by the "rights" and scrip issues. Such a distribution would represent a gross yield of about 5½ percent on the issue price and would involve, excluding distributed profits tax, a cash distribution of £312,500. For the year ended 30th June, a total of 10 percent tax free was paid on the £3 million Ordinary.

Uttar Pradesh

U. P. SUGAR MILLS START CRUSHING EARLY

CANE PRICES AND QUALITY

(FROM OUR LUCKNOW CORRESPONDENT)

A LARGE number of sugar factories in the State have started crushing operations earlier than usual in order to avail themselves of the Government of India's offer that factories which start cane crushing by 4th November will qualify for a concession of 5 annas in the cost of each maund of cane crushed. According to the official announcement, the cane-growers will meet the cost of this concession to the extent of 1 anna. The rest will be borne by the Government of India and the State Government on a fifty-fifty basis. Incidentally, the cane crop at the moment is not fully ripe and the cane crushed at this stage will have a low sugar content. A warning to the sugar industrialists of U.P. and Bihar against "whimsical, unplanned and incongruous" growth of the industry was last week given by Mr. A. P. Jain, Union Minister for Food and Agriculture in Kanpur. Mr. Jain who was addressing the 24th annual session of the Sugar Technologists Association said that the pattern of sugar trade in India was going to change substantially in future. "The change that is coming," he added, "is likely to be to the disadvantage of U.P. and Bihar, the two leading sugar manufacturing States. The price at which sugar is going to be produced in Bombay and other States of South India would be lower than the prices of U.P. and Bihar products. The consumption of sugar is barely 20 percent of its production in U.P. and the same applies to Bihar." The bulk of additional sugar capacity and new licences has this year been granted to south India. Out of the 1,000,000 tons of proposed additional capacity, licences have already been issued for about 996,000 tons.

The Problem of Cost

The problem of cost in U.P. may never be solved unless cane prices are linked with its quality. Though this proposal has often been discussed in the past, it had to be shelved because of opposition from the growers who are a considerable electoral force in the countryside. According to Mr. Jain, the Government of India is again considering a proposal in this matter, and the Gopala-krishnan delegation which recently visited several sugar producing countries has favoured the idea. He was not prepared to entertain the suggestion that the Government subsidise sugar exports. "Is there any country," he asked, "which is giving subsidy to both production and export? Should the taxpayer pay subsidy if the prices of Indian sugar are below those quoted by other countries?"

Sugarcane Research

The Sugarcane Research Institute in Lucknow, it is understood, is to be further expanded at a cost of Rs. 1 crore, provision for which has been made in the second five year plan. The expansion programme envisages the extension of the existing sections and the setting up of new ones. The Government of India has dropped its plan to shift the Indian Institute of Sugar Technology from Kanpur to Lucknow. But the U.P. Government having decided to expand the Harcourt Butler Institute of Oil Technology in Kanpur, the Institute of Sugar Technology will not be able to share its buildings with the H.B.I.T.

Dearth of Technicians

The U.P. Government may have to forgo the bulk of the Rs. 40-lakh U.S. aid in the shape of technical equipment for the State's training institutes as it has not enough money to make use of the equipment. Originally, the plan was to cost Rs. 3.5 crores which was to be borne both by the Centre and the State Government on a 60-40 basis. The target set for the training of technicians during

the five-year period was 5,100. Eventually, the size of the plan shrunk from Rs. 3.5 crores to Rs. 15 lakhs and the number of technicians to be trained was also reduced from 5,100 to 200. A 35-acre site which was acquired in Kanpur for housing the institute is lying vacant and the U.S. equipment which keeps arriving at the site is also lying idle.

Employment Exchanges

The expansion of U.P.'s employment exchanges is likely to be affected because the State Government is unwilling to accept the Centre's terms for providing Rs. 45 lakhs by way of aid. The Centre is prepared to bear 60 percent of the cost, but the State Government maintains that it cannot meet the remaining 40 percent without cutting down some of its plan schemes. At present, the majority of the State's districts—30 out of a total of 51—remain uncovered by the Government's employment service scheme.

Achievement of a Jute Grower

By raising 51 maunds of jute an acre, a U.P. farmer, Mr. Bajru Kabaria, has earned his place among the best in the country. He has a small farm in Sikrora village in Gonda district. At a ceremony held last week in Gonda, Mr. Kabaria and other producers who had outstanding records to their credit were honoured by the State's Jute Development Officer, Mr. H. D. Nathani. With four years still to go, the State's jute output this year is expected to reach 100,000 bales or 10,000 bales behind the annual production target set for the final year of the plan. U.P. took to jute growing in 1948 and a beginning was made with six districts. It was extended during the first five year plan to 24 districts. The area under the crop was raised to 32,584 acres at the end of the five-year period, and the production went up to 68,000 bales. The average jute yield an acre rose to 13 maunds in the final year of the first plan and to 15 maunds in the first year of the second plan. The number of jute markets in the State rose from three in 1948 to seven at the end of the first plan.

Flood Control in U.P.

The Nepal Government, it is reported, has consented to the Government of India's Rs. 14-crore constructional programme in Nepal for controlling floods in U.P. and Bihar. The plan includes the construction of a dam on the Gandak and a retention reservoir on the Rapti, both in Nepali territory. A party of officials of the Irrigation Engineering Department will this month be going to Nepal to carry out a detailed survey of all the nine rivers and rivulets that have their sources in Nepal and flow into U.P. and Bihar.

Clearing the lines for Progress

More wheels may turn and more machines may manufacture... but this extra activity is meaningless without more transport to move passengers, raw materials and finished products. That's why of every rupee set aside for the Second Five Year Plan—an industrial plan, above all—no less than 3 annas will be spent on developing India's railways.

The Plan's allotment of Rs. 900 crores, will be used for rehabilitation of railway track and equipment, as well as to build 842 miles of new track, to buy 2,258

locomotives, 11,364 passenger coaches and 107,247 wagons, and to improve passenger amenities and working conditions for railway staff.

Burmah-Shell supply a lot of oil to Indian railways. And the railways move a lot of oil for Burmah-Shell. In fact, in one year, they carry not far short of 650 million gallons of oil to cities, towns and villages in every corner of the country. Railways and the oil industry do a vital job for each other—and they're doing it round the clock, year in, year out.

BOMBAY MARKETS FOLLOW ERRATIC COURSE

BRIGHT EXPORT PROSPECTS FOR OILSEEDS

(FROM OUR BOMBAY CORRESPONDENT)

COMMERCIAL activity in Bombay has followed a somewhat curious pattern in recent weeks, at a time of year when activity is usually strong all round. The textile market has been listless; cotton futures have been erratic; and bullion operators seem to be miscalculating events. Almost the only exception has been the oilseeds market. Leading textile mills in Bombay and Ahmedabad continue to follow a cautious policy in view of the Middle East crisis. There is no tendency to enter into forward commitments at the present price level and the volume of business has therefore remained moderate with only some of the smaller units selling their products on a forward basis. The wholesale trade, too, has not been over-anxious to augment stocks because enquiries from consuming centres have been somewhat disappoint-

ing. It is expected, however, that conditions will improve very soon because supplies in the interior markets are now dwindling, particularly in the Gujarat and Saurashtra areas. The lower level of prices now prevailing is also expected to stimulate demand. With the exception of Burma which purchased sizable quantities of printed chintz, mulls, voiles, shirtings and towels, and West Africa, with token business in grey sheeting, bleached long cloth, coating and dyed poplin, the export trade has also been slack. Singapore and Hong-kong appear to be interested in grey sheeting and long cloth, but hardly any business has been transacted, while trade with the U.K. continues to be limited, in spite of the renewed interest shown by U.K. importers. Indonesia and Sudan show no interest at all.

The cotton trade now believes that the new crop will not exceed 5 million bales as against an earlier estimate of 5.4 million bales and this should have some steadying effect on the wholesale textile market. Trade in cotton futures has been somewhat erratic, the fluctuations being very wide. The market has turned soft on increased long liquidation caused by large arrivals. Jarilla for March delivery has risen to Rs. 670-8 after being marked down to Rs. 649-8 earlier in the past week. At the close, the contract stabilised at Rs. 651-4, but kerb

quotations at Rs. 564 were also reported. Vijay closely followed jarilla. After declining from Rs. 757-8 to Rs. 751 it improved to Rs. 767, but dropped again to Rs. 750 at the close. The improvement during the middle of the week followed disturbing weather reports from growing centres, but the higher levels led to renewed bear pressure. Towards the end of the week, however, it was reported that the weather conditions had improved and large quantities had arrived in upcountry markets. Erratic futures quotations did not influence the spot market and the daily turnover averaged 7,500 bales mostly for near deliveries.

Export Demand for Raw Cotton

Cotton for export was in demand and prices hardened during last week. In view of the tight position of foreign exchange, the trade believes that the Government will announce a liberal export policy some time towards the end of this month. Business in foreign cottons was limited by the scarcity of supplies and Egyptian and Sudan growths were marked up because of the Suez crisis. The Foreign Agricultural Service of the U.S. Department of Agriculture has announced a procurement authorisation of \$23,925,000, with India covering about 146,000 bales of Upland cotton. The contracting period has been specified as 7th November, 1956 to 29th June, 1957 with shipments allowed up to 31st July, 1957. It is reported that all staples of 1½" and above will be allowed except American Egyptians. Although no official announcement has yet been made by the Government of India, trade circles hope that applications for import licences will soon be invited.

Rise in Castor Futures

Castor futures last week advanced to Rs. 144 from the previous week's quotation of Rs. 138-10. It seems that this healthy tone will continue because the supply position abroad is tight and Brazilian offerings have not come up to expectations. The U.K. and some European countries appear to be competing for Indian supplies. Britain purchased Commercial castor oil at £140 a ton as against the previous week's purchase price of £134. Latest reports here indicate that U.K. importers are willing to offer £143 for the commercial quality and £149 for the B.S.S. grade. American importers have also offered more, and limited business was done at 175 cents a lb. for the Commercial quality for delivery next month. It is, however, believed that American merchants will have to pay more for further deliveries in view of the activity in U.K. markets. This renewed activity in the U.K. and U.S.A. would seem to confirm reports that Brazil's castor crop has been seriously affected by rains and the total Brazilian supply will not exceed 125,000 tons. If this be true, then Indian exporters should be able to do considerable business. An adverse factor, however, is shipping. The Karmohom Conference lines have already announced a 15 per cent increase in freight surcharge, while American lines have announced the cancellation of freight to Mediterranean ports because of the Suez closure.

Groundnuts Gain

Groundnuts, too, recorded substantial gains because of persistent short-covering and bull support. After being marked down to Rs. 135-4-4, the February contract improved gradually to Rs. 142-14 and receded later to Rs. 141-4, but kerb quotations hardened to Rs. 142-8. Groundnut bears had their calculations upset by unfavourable weather reports. Crop estimates are now being revised and it is expected that the final outturn will not exceed 2,400,000 tons, as against earlier expectations of 2,700,000 tons. Arrivals continue to be below the normal level for this time of year, and the incoming supplies are being rapidly absorbed by crushers, whose stocks are running low. Overseas reports are encouraging. Nigerian groundnut is quoted in the U.K. and the Continent at about £142 10s a ton for November delivery, while the price for December and January deliveries is somewhat lower. This indeed is an attractive price, but because there is no export quota, Indian business men are unable to take advantage of the world conditions. It may be worthwhile for the Government of India to permit exports in order to earn foreign exchange. No doubt, there is a risk that the internal price level may rise if exports are allowed, but this may offset the greater advantage of increased foreign currency earnings. Another favourable factor is that the disparity between the local price and the price quoted abroad is wide enough to stand the increased freight rates. All things considered, it would seem to be a good opportunity to scale down the foreign exchange deficit. Linseed and linseed oil maintained a steady tone due to a scarcity of offers. Export business in oil was negligible because Indian prices continue to remain out of parity in spite of the recent improvement in overseas quotations. Linseed oil abroad has recorded a sizeable improvement, with the spot material quoted at around £128 and January delivery at £114 a ton. Cottonseed futures appeared to follow the up-and-down movements in cotton futures rather than the trend in the other oilseeds. After being bid up from Rs. 82-8 to Rs. 84-4, the February contract reacted to Rs. 85-4. Indian cottonseed oil continues to be in good demand abroad. Last week, Britain paid up to £119 a ton as against £114 in the previous week.

The Railway Board has authorised the South Eastern Railway to carry out a survey for a 15-mile long railway line from Bhilai to Deorjhal. This line is required for the movement of limestone from the deposits in Deorjhal for the Bhilai steel plant.

Jute

GUNNY PRICES IMPROVE AFTER EARLY DECLINE

SUBSTANTIAL FALL IN SACKING STOCKS

THE Calcutta jute goods markets showed wide variations during the past week. The situation in the Middle East continued to have an effect on local affairs, but the cease-fire made its influence less effective. As a result, speculators had to look for other reasons to fit their purpose, and were soon presented with ready-made ones in the form of various trade statistics. The first of these showed a drop in mills' sacking stocks of 11,400 tons to 77,200 tons at the end of October, which is the lowest figure since May 1956. This was most encouraging although a small decrease had been expected due to a number of groups converting many of their looms to hessian, which showed a greater profit margin. Sacking prices reacted strongly and a very steady undertone developed. But hessian received a setback with the news that its stocks showed an increase of 1,500 tons, although this was not unexpected in view of the conversion. Hessian stocks now stand at 30,900 tons. Stocks of other goods increased by 1,400 tons to 8,600 tons; they are reaching proportions which cannot be ignored, and now make up 7½ per cent of the grand total, which dropped to 116,700 tons, also the lowest since May 1956. The I.J.M.A. production figures were also published and showed a decline. At 80,400 tons, they were the lowest for one year. It is significant that out of the drop of 4,100 tons compared with the previous month, sacking production accounted for 3,300 tons. October had six working hours less than September. Compared with August, which had the same number of working hours (203½), production in October was 9,200 tons less. Out of this, sacking accounted for 7,700 tons, or nearly 84 per cent of the total. The consumption of raw jute during October amounted to 468,732 bales making the total for the current season 2,032,338 bales. Here again the effect of mills converting to lighter fabrics is demonstrated, as, compared with August, which had the same number of working hours, their consumption dropped by 53,636 bales.

Mills were keen for business in jute goods, but during the early part of the session, overseas buyers showed no interest. Towards the week-end, constant selling pressure caused prices to fall. After the week-end, reports of good business with America caused a recovery in hessian. By Tuesday, rates recorded new high levels, and were over Re. 1 higher than the week's opening. Very little interest was shown in sacking at first and prices tended to slip back, but the encouraging stock reports brought about a recovery, and until the week-end, rates recorded small but steady rises. Reports of a steamer being placed and closing about the middle of the month caught many local operators short. Over the week-end, and on Monday and Tuesday, heavy shippers covering forced sacking rates up by about Re. 1-8 to within 4 annas of the highest level recorded this year. Thus during the week, heavy goods prices moved through a range of Rs. 2-8.

The raw jute section had a comparatively quiet session compared with previous weeks, but more business was done than would appear on the surface. This is due to the growing practice among mills of "under-cover" or secret buying, and is detrimental to the trade in that it cuts out completely the element of competition. Those which resort to this type of purchasing are left completely at the mercy of a few sellers who, in the circumstances, can create to their own advantage a false market. In nearly all cases, it has been obvious by the prices paid that the same jute could have been obtained at least 8 annas a maund less if general indications had been given out. During the week, prices remained fairly steady and in general tended to rise, but up to the week-end only small transactions were reported. With the improvement in the gunny market, mills became interested. Over the week-end, and immediately afterwards, good business was done, so raw jute rates rose by 8 annas to Rs. 31 a maund. Rail transport difficulties were still a major headache for many sellers and applications for extension of delivery on this account were numerous. The moisture content of nearly all deliveries recently has been very heavy, and is causing anxiety to mills. The quality of all arrivals is reported to be the best for many seasons, but the moisture tends to cancel out this advantage.

THE JUTE MARKETS

Manufactured Goods: The cease-fire agreement in the Middle East caused gunny prices to slump at the opening of the market last Thursday, and heavy goods quotations lost about Re. 1. November shipment B Twills dropped to Rs. 117-6 and January-March to Rs. 117-2 a 100 bags, while 40in. 10oz. hessian was called over at Rs. 44-1 and Rs. 43-3 a 100 yards which was a fall of 4 or 8 annas. There was very little activity during the day and prices remained unchanged in spite of bull activity. With the publication of the trade statistics, however, sacking rates by Friday morning regained 8 annas of the previous losses. Hessian dropped few annas. There was very little change until

after the week-end when, following reports of good business in hessian with America, and heavy local shipper covering in sacking against steamers loading in port, prices rose. Over the next few days, all previous losses were wiped out, and both sections ran at a premium on opening rates; 40in. 10oz. hessian recorded a new high level on Tuesday morning at Rs. 45-2 for November shipment, this being a premium of Rs. 1-2 on forward shipment. B Twills showed a steady improvement, and quotations on Tuesday morning rose to Rs. 119-8 for November shipment. At the close, the market was easier but quotations were nominal due to the fatka market being closed. Opening quotations on Wednesday morning were as follows:

	November.	December.	Jan.-March.
	Rs.	Rs.	Rs.
40in. 8oz.	36	35-10	35-2
40in. 10oz.	45	44-9	43-13
B Twills	119-6	119-2	118-12
Heavy Cees (Plain)	119-8	119	118-12
A Twills	140	140-8	141
Liverpools	131	131-4	131-12
Cornsacks	119-12	120	119-4

Raw Jute: Raw jute prices tended to remain fairly steady during the past week. There was small but daily buying, both by the mills and their representatives, of a fair quantity of jute. Opening quotations were based on Northern-Assam jute at Rs. 30 a maund basis Bottoms for November-December shipment. Mills attempted to reduce these rates, but sellers were reluctant to meet any counter-bids. With the improvement in the gunny market over the week-end, they advanced their prices by 8 annas a maund. Business was done at the new levels and a steady tendency developed. After good business on Monday night, quotations were increased to Rs. 31 a maund on Tuesday morning. Encouraged by the firm goods market, raw jute sellers became reserved, and indicated higher prices, but buyers lost interest at this stage and no further business was reported.

During the week, business was done in good Northern and Assam agencies at Rs. 30 to Rs. 31 a maund basis Bottoms for November-December shipment, and in Northern Middles alone at Rs. 32 to Rs. 33-8 a maund for the same shipment. Large quantities of Murshidabad Tossa were purchased at prices paid varying between Rs. 29-8 and Rs. 30-8 a maund. Here again Middles only from selected agencies were taken up at Rs. 31 to Rs. 33 a maund. Karimnagar-Bongaon Daissee and Tossa came in for a great deal of attention, as did Daissee from the Sheoraphuli side. Business was done at Rs. 30-8 to Rs. 31-8 a maund basis Bottoms, and Rs. 33-8 to Rs. 35 for Middles only. Small lots of Daissee Mesta changed hands at Rs. 27-8 to Rs. 29 a maund basis Bottoms and Bimili at Rs. 27-8 for F.A.Q.

At the close, the raw jute market was unchanged, and opening quotations on Wednesday morning were as follows:

Indian Jute:	Landed at Mills Rs. a md. basis Bottoms.	Shipment.
Lower Assam	31	Nov.-Dec.
Northern	31	"
Murshidabad White	31	"
Daissee	31-8	"
Daissee Mesta	29	"
Local Northern	30-8	"
Bimili	29 for F.A.Q.	"
Tossa is quoted at 8 annas to Re. 1 a maund above the price of white jute.		
Pakistan Jute:	Rs. a md.	Shipment.
Jat	33	Nov.-Dec.
District	32-8	"
Northern	32	"
Pucca:	Rs. a bale.	Shipment.
Mill Firsts 2/3	230	Nov.-Dec.
Export Firsts 2/3	210	"
Export Lightnings 2/3	190	"
Jat Cuttings	130	"

The Cossipore markets have ruled steady due to continuous buying by mills' agents. All arrivals have found ready buyers, who are bidding against each other for the better fibres. Imports during the week totalled about 770 wagons, which is average for the time of the year.

I.J.M.A. STOCK FIGURES FOR OCTOBER

The Indian Jute Mills Association reports the total stocks of jute goods at the end of October, 1956 as follows:

Description	31st October, 1956 Lakh Yds. 000 Tons	30th September, 1956 Lakh Yds. 000 Tons	Increase over (+) or decrease from (-) last month Lakh Yds. 000 Tons	31st October, 1955 Lakh Yds. 000 Tons
Hessian Cloth & Bag	11.02	30.9	29.4 +66	11.29
Sacking Cloth & Bag	18.64	77.6	88.6 +114	29.7
Others		8.6	7.2 +1.4	29.0
Grand Total (000 Tons only)	116.7	125.2	-8.5	62.3

N.B. These figures are based on replies received and represent all members of the Association and Gagalbhai with estimates for three non-member mills.

I.J.M.A. PRODUCTION FIGURES FOR OCTOBER

The Indian Jute Mills Association reports the total production of jute goods for October, 1956, as follows:

Description	Quantity
1. Gunny Bags	
(a) Hessian	4,752 tons 1,401 lakh yds. 83.0 lakh Nos.
(b) Sacking	39,522 tons 9,273 lakh yds. 4,038 lakh Nos.
2. Gunny Cloth	
(a) Hessian	29,992 tons 11,166 lakh yds.
(b) Sacking	947 tons 22.6 lakh yds.
3. Other manufactures	5,139 tons
4. Total production (above figures combined)	
(a) All kinds	80,352 tons
(b) Hessian (both bags and cloth)	13,107 lakh yds.
(c) Sacking (" ")	9,499 " "

	Summary	(00,000 yds)	(000 Tons)
	Oct., 1956	Sept., 1956	Oct., 1955
Hessian	13.17	13.37	11.66
Sacking	9.50	10.47	10.36
Others			
	5.2	5.2	4.6
Grand Total	80.4	84.5	78.8
Hours Worked	203.5	197.5	189.0

N.B.—These statistics are based on replies received and represent all members of the Association and Gagalbhai with estimates for three non-member mills.

GUNNY SHIPMENT STATISTICS

The following figures include coastal shipment relating to manufactured jute goods for shipment from the port of Calcutta. These are gross figures based on shipping bills presented.

	Hessian Bags (Tons)	Cloth (Tons)	Total (Tons)
1st to 5th November, 1956	936.3	10,689.5	11,625.8
1st to 5th October, 1956	1,126.7	15,358.7	16,485.4
1st to 5th September, 1956	571.2	8,695.3	9,266.5
	Sacking		
1st to 5th November, 1956	12,213.3	97.0	12,310.3
1st to 5th October, 1956	15,402.0	721.7	16,123.7
1st to 5th September, 1956	7,304.2	224.9	7,529.1

THE FOREIGN JUTE MARKETS

SOFTER UNDERTONE IN FIBRE

(FROM OUR DUNDEE CORRESPONDENT)

THE tone of the raw jute market has become definitely softer, and buyers are inclined to look for lower prices. The prevalence of secured parcels, with holders wishing to take their profits, is making the position very irregular and the real state of the market is obscured. Offers are at most times not very freely made, though in general there are a good deal more than a week or two ago. Spinners are not keen to operate, even at the lowest quoted rates, but when there is anything available afloat or on spot, they are interested. Claims by sellers under Clause 3, for inability to ship, have been made for jute that should have been shipped in September. There are quite a number of these, and also some for October. The material has not even left Pakistan yet, and the bulk of it has been bought at round about the minimum prices which prevailed in the early days of the current season. Mill Firsts are nominal at £118 a ton (£27 above the minimum), with Mill Lightnings from £98 and Mill Hearts at £94, against the minima of £81 and £71 respectively, c.i.f. U.K. or Continent. Business has lately been done in Lightnings at £103 and Hearts at £99, afloat near at hand. The dark jute has gone firmer recently and good marks of Daissee-2/3 are quoted at £99 and grade at £95, with grade Tossa-2/3 at £108 and fours from £98, after business done a week ago in Tossa at £110 and £100 respectively, c.i.f. November-December.

Spinners are practically filled with orders for jute yarns for delivery this year in most quantities, and prices rule very firm. The better qualities, such as JC2R, JCC, JCR, JCT and the finer qualities of rove have all been raised by about £5 a ton since 5th November, and sacking weft, which was not raised on 31st October along with other common yarns, was also advanced to the same extent.

Majestic

FIRST CLASS SERVICE

Calcutta to London

This is indeed the luxury way to fly to London! B.O.A.C. First Class "Majestic" services offer you swift, smooth travel by four-engined, fully pressurized Constellation. Spacious cabins with fully-reclining "Slumberette" seats; superb food and wines; really personal service. Also comfortable "Coronet" Tourist Class Services.

Delicious Indian food will be served on all our services from India on prior request.

Consult your local Travel Agent or B.O.A.C., 41 Chowringhee (entrance Middleton Street), Calcutta-16. Telephone 44-3671/76

FLY YOUR CARGO AT PASSENGER SPEED

B.O.A.C.

COAL COMPANIES

O. Pa. F. and Dd. indicate Ordinary Preferred Ordinary Founders' and Deferred shares respectively. P. next to the name of the company indicates that the company also has Preference Shares. Figures in "accounts closed" column indicate the months of the calendar year in which accounts are closed. For Managing Agents refer to the Key (last page) under the numbers indicated.

TAKING A LONGER VIEW OF THE CREDIT STRINGENCY

DISTURBING TRENDS IN BANK DEPOSITS

SERIOUS concern has been felt in recent weeks about the growing stringency of credit for meeting the requirements of business, trade and industry. The money markets have only just passed what is normally the trough of their slack season. A steadily rising demand for accommodation is expected in the busier months ahead, but already the commercial banks find themselves in the not entirely comfortable position where they have advanced a record proportion of their loanable funds. A number of the bigger ones have secured higher rates from borrowers without apparently deterring them, while call money in inter-bank transactions has secured as much as 4 percent, sometimes reportedly even more. Disturbing signs of the new credit shortage have also been seen in the pulpy state of the share and gilt-edged markets. The developing situation has taken India's energetic Finance Minister, Mr. T. T. Krishnamachari, on a rapid tour of the main financial centres in search of remedies which may ensure that the genuine needs of trade and industry will be adequately met in a vital phase of economic expansion. The concrete results of the discussions he has held with bankers and sundry financial pundits are awaited; but it would be unfortunate if meanwhile, as reports suggest, attention were concentrated on purely temporary palliatives, to the neglect of measures of longer significance which may be necessary to deal with what otherwise threatens to become a recurring situation in the economy.

The causes of the credit shortage are partly long-term and partly short-term in nature. In a deep and fundamental sense, it reflects the changing pattern of activity in a rapidly industrialising economy. In former years, credit requirements fluctuated with seasonal variations in the tempo of agricultural operations. Funds went out from the banks as harvests arrived in the markets and had to be financed; they returned as the harvests were distributed, consumed, processed or exported. The rapid industrialisation of recent years has, on the one hand, lifted the demand for credit to new, higher levels. On the other, it has tended to smooth out the apparent ebb and flow of credit, since industrial requirements are year-round whereas agricultural requirements are mainly seasonal. The present stage represents the critical point where the years-old swelling of industrial requirements has reached so high that if agricultural requirements were superimposed on them (as they would be during the coming busy season), a position of acute embarrassment would result. Hitherto, the banks have been able to meet the demands made upon them, partly because their resources have increased with the growth in economic activity, and partly because there has been scope for stretching their lending capacity and thereby utilising the resources more fully. But, for the time being at least, both these processes have reached very close to their expected limits; and the situation is one where the rise in credit needs threatens to move rapidly past the much slower rise in the banks' credit-creating capacity.

Against this background of long-term developments, a number of special factors have been at work in the economy this year. Loan rotations by the Central and State Governments were bigger than expected; banks contributed large amounts to the latter, often after persuasion of the sort that allowed little concern for their intrinsic economic merits. What is more, the Reserve Bank, in its recent efforts to help ease the monetary stringency by open-market operations, has neglected almost everything except short-dated securities. These are precisely the type of securities banks like to keep in the interests of liquidity, but they can hardly do so as long as the Reserve Bank subscribes to the same unflattering opinion of long-dateds and State Government loans as many

of their existing holders. At a time when their investment portfolios have to suffer the cinderellas of the gilt-edged market, banks have been called upon to finance a swelling inflow of imports. A large proportion of these are on Government account, with the result that, in accordance with hoary bureaucratic traditions, payments arrive at a snail's pace. The funds thus locked up are believed to be very substantial, and it is encouraging that their prompt release is said to be among the Finance Minister's more immediate concerns. Public and institutional demands for money are also likely to have increased with the recent and prospective subscriptions to new capital issues. The queue of such issues is a long one, and is probably not yet even half way through; in the circumstances, the prospects for the less attractive ones—and some of these are to finance expansion in vital sectors of the economy—cannot be regarded with optimism.

Discussions, both official and unofficial, hitherto seem to have centred mainly on the short-term measures that may be necessary to tide the money markets over the approaching critical months of the busy season. Mr. R. M. Mitra gives the background to these discussions in a special article on a later page today. Short-term measures are undoubtedly the more urgent, but if "crises" are not to become an annual October-November phenomenon, deeper thinking on the fundamentals of the problem will be necessary. For the time being, it is possible that a series of expedients may suffice. Apart from prompter payments against import bills, or their discounting with the Reserve Bank, other measures have been suggested—such as expanding the scope of the usance bill market scheme and providing facilities for quicker remittances between bank branches. But these do not go to the roots of the problem. The majority of them are, in effect, merely means to release a portion of the banks' funds, at present blocked, for commercial use. But they do not necessarily imply the continued independence of the banks in relation to resources in the long run. Nor is it sufficient to dismiss the possible inflationary implications by saying that a certain amount of funds has to be produced and it does not matter how. Some bankers may be inclined to view with secret pleasure the prospect of being able to borrow more money from the Reserve Bank at, say, 3½ percent under the bill market scheme, and then

INFLATION AND FOREIGN TRADE

THE closing of the Suez Canal has seriously aggravated India's foreign exchange problems. The effect on the

much-needed competition and the need for maintaining standards among consumers and producers. These are important factors and it is doubtful whether the small savings which could be made by cutting token imports would compensate for their loss. Examples of the eagerness with which manufacturing interests will seize any opportunity for securing further protection were not lacking at the Advisory Council meeting. It would be a pity if the present shortage of exchange were allowed to become the excuse for encouraging a state of affairs which would certainly hamper economic growth in the long run. Such a risk could be excused only by acute national emergency.

The point which stands out from an examination of recent trade returns is that the widening of the payments gap is not the result of larger imports of steel, machinery and development goods, food or raw materials, many of these items are coming in under long-term credit or aid agreements and are not reflected in the value figures. The real reason for the deterioration seems to be an increase in consumer-goods purchases due to increasing inflation in the home market. To react to this situation by slashing the import of these goods would only increase the inflation further and so contribute to a problem which, if priorities must be assigned, is even more pressing than the shortage of foreign exchange.

The other side of the trading problem—exports—can only be considered as an extreme long-term solution. There are certain immediate advantages which might profitably be exploited, such as the opportunities which Indian goods will gain from having the supply lines of their main European competitors lengthened for an indefinite period. The present situation in the Middle East might prove a permanent boon to India's goods, although the eager opportunism of such formidable competitors as Japan will have to be reckoned with. But the problems involved in grabbing individual markets suddenly isolated from their main sources of supply, bear no relation to, and should not be confused with, those of closing the payments gap permanently by expanding exports. The two main factors with which this country's goods will have to contend are their own prices and quality. These are likely to increase rather than diminish in importance if the emphasis changes to finished and partly-finished goods, as was suggested to the Export Advisory Council. A market easily won will not be so easily held if the quality of the goods is not up to specification. It is not to be expected that India's manufactures will reach the standards of their older-established competitors for some considerable time. In certain lines, there might already be some comparison. But over the whole range of manufactured goods, the going will be hard. Any effort to force the pace might well result in serious setbacks; a disappointed customer is always more difficult than the one who has yet to buy. If India is ever to become a large-scale supplier of manufactures to the world's markets, there will have to be a great deal of improvement in standards throughout the whole of industry. This is just not to be expected at the stage of development where much of it is now.

Perhaps the greatest impediment to any move for the expansion of exports is the question of price. This is one which the present trend towards socialism threatens to make intractable. A cheap and efficient internal economic system is essential for all countries which hope to become large exporters. The alternative is to subsidise—an expedient which is guaranteed to secure unpopularity with the world's trading community. Where socialist countries are attempting to build large export markets they are having no alternative but to resort to it. No doubt many find it worth while economically, while others have their political reasons. But subsidy is unlikely to serve India's purpose and, anyway, the possibility has not yet been seriously considered. It remains to ponder carefully whether socialism is compatible with an expanding and buoyant export trade; the United Kingdom, for one, has not found it so. Taxation and labour policy are probably the two things most damaging to export prospects. The examples of the tea and the jute industries come most readily to mind. But the problem is not confined to the production of primary products. Political opinion throughout the country appears to be convinced that there is no end to the benefits which industry as a whole can afford to pay now to over-expanded and inefficient labour forces and into a rapacious tax system. Whether India prefers her socialism to the present dependence on foreign trade is a question which cannot be delayed much longer. It is useful to remember that other developing countries which have chosen socialism have always had to isolate themselves economically in the process.

Discussion on cutting imports and expanding exports should not distract attention from the fact that the remedy for the present situation does not lie with either of these, at least not for the duration of the second plan. It is clear there has been

serious miscalculation, either of the amount of foreign exchange required for the plan or of the volume of inflation likely with development, or of both. If the plan is not to come to grief, it is the internal inflation which will have to be tackled. After that, steps can be taken to close the gap with borrowings or assistance from abroad. In the meantime, it would be disastrous to submit to the pleadings of pressure groups for more protection, or to expect too much from the expansion of exports. Taken as a whole, the foreign exchange problem is only another consequence of the inflationary morass into which the plan is now threatening to sink. It would help towards a satisfactory solution if it were tackled with that fact in mind.

THE RESERVES SUPPORTING STERLING PAYING FOR THE SUEZ ACTION

IN the City of London, perhaps better than elsewhere, it was realised that the cease-fire in Egypt was not the end of sterling's troubles but nearer the beginning of them. Few people were convinced by the smoothing assurances of the Chancellor of the Exchequer and of the Minister of Supply that the financial situation was not serious; indeed, many people were disturbed by the Government's complacency. Whatever action the Government may take, the currency will be subjected to strain in the coming months, and that strain will bear most heavily on the "dollar segment" of the economy. Attention is now focussed on the gold and dollar reserve. Is it adequate? How much will it be reduced? What means are there of strengthening it? Mr. Harold

Macmillan, the Chancellor, has reminded us that a reserve is intended to take temporary strains such as the present one. He has also emphasised that the balance of payments of the United Kingdom has been much strengthened in the past year; and he could have added that the position of the other sterling countries, as a whole, had also improved, more recently. Fundamentally, changes in the sterling area's balance of payments are more important than changes in the gold and dollar reserve, for the former reflect the realities of trade, whereas the latter are often controlled by variable psychology. But it is the reserve that the world watches in an emergency. Anyway, it has no information on the balance of payments until the figures are too late to be relevant to an emergency such as the present.

That psychological factor can be supremely important, especially to sterling. If even a moderate proportion of the overseas money deposited in London is withdrawn, sterling may be heavily sold and substantial quantities of dollars may have to be expended to support it. If such a movement coincides with a strong commercial demand for dollars (to pay for oil, for instance) the pressure on the reserve will be severe. And the effects are cumulative; as the reserve falls so confidence weakens, and more funds flow out. It is quite true that the reserve is intended to take temporary strains and that psychology should not be affected by a temporary decline. But a reserve can act as a psychological support only if it is manifestly adequate to its practical function. And Britain entered the latest phase of the crisis in the Middle East with a reserve that was manifestly inadequate for all contingencies—at end-October, \$2,244 million. The Chancellor had, doubtless, the psychological factor in mind when he remarked: "Our reserves have behind them substantial reinforcements available which can be brought into play." The knowledge that these reinforcements are available should be a steadying influence, but the actual sight of them, in the monthly figures, would be even more effective.

The activities of the International Monetary Fund have disappointed many observers, but the

Fund can now show its value in an emergency—as it has done recently, indeed, for France. The U.K.'s gold subscription to the Fund amounts to \$236 million, and no more than formalities are involved in drawing the equivalent in dollars. The U.K.'s quota in the Fund amounts to \$1,300 million (including the \$236 million in gold), and total drawings within a twelve-month can be raised to 25 percent of that amount—i.e. \$325 million. Additional drawings would be subject to negotiation. In principle a member-country is entitled to draw to the full extent of its quota. In practice, the U.K. could probably negotiate (as France has done) a release of 50 percent—i.e. \$650 million. But the reserve held in London is on behalf of the whole sterling area. It should logically be reinforced by the drawing rights of the other sterling countries. These rights, on the assumption of 50 percent of quota, would add \$400 million. These are substantial figures, totalling, on that same assumption of one-half of quota, more than \$1,000 million—nearly one-half of the reserve as it stands at present. In fact, however, the true reserve of the sterling area is considerably larger than the monthly-published figure, for various sterling countries (apart from South Africa, which does not participate in the "gold and dollar pool") hold considerable reserves on their own account. For information on these supplementary reserves we rely on the U.S. Federal Reserve Board. The figures are not so recent as the British Treasury's, but they show approximately the proportion of the Treasury's figure to the total. At the end of June last, according to the American estimate, the value of the U.K.'s holdings of gold, short-term dollar balances, and U.S. Government securities, was \$3,124 million, and the total of such assets held by the whole sterling area was \$4,230 million. (The figure for the U.K. is not comparable with the Treasury's, which—showing the value of gold and dollars (U.S. and Canadian) held by the Exchange Equalisation Account—was \$2,385 million at the end of June).

It appears that one can add a further \$1,000-\$1,500 million to the national reserve on account of the rest of the sterling area, excluding South Africa's figure (\$246 million at end-June) and allowing for losses in the second half-year. Moreover, in addition to the U.S. securities included in the Federal Reserve Board's figures, the U.K.'s Exchange Equalisation Account holds a varied selection of dollar securities. Their value has never been disclosed, but is certainly substantial. It is estimated in banking circles at less than \$1,000 million, but it is worth mentioning that when the ex-Chancellor Mr. Hugh Gaitskell suggested last year that the value was about \$2,000 million the then-Chancellor Mr. R. A. Butler did not flatly deny it. These various supplements to the published reserve are considerably larger than the reserve itself—perhaps twice as large. But they are not, of course, equally "liquid." Nor would they necessarily be used in full in any emergency short of global war. It is still necessary to strengthen the reserve by making it scarce. And if the published reserve seemed likely to fall below \$1,700 million, as in the crisis of 1949, it might be necessary again to devalue the pound.

CURRENT COIN

Index of Industrial Activity.—Corrected for seasonal fluctuations, *Capital's* Index of Indian Industrial Activity shows a decline of 2.3 points during May, 1956. Mainly contributing to the decrease were jute manufactures, steel ingots and coals. Cheque clearances and notes in circulation dropped.

Hindustan Lever Shares.—The decision of Unilever Ltd., London, to offer for sale 557,000 ordinary shares in Hindustan Lever Ltd. is of great interest to Indian investors. These shares, which represent 10 percent of the company's issued capital, have a par value of Rs. 10 each, and are being offered to the public at Rs. 16-8. Subscription lists open on 3rd December. Hindustan Lever paid an interim dividend of 8 annas a share for the year ended December 1956, at the beginning of this month. The final dividend, to which the shares on offer will be entitled, is expected to be 6 annas, and is likely to be paid by May next year. The distributions are being supported by an estimated net profit of Rs. 90 lakhs for the current year. This net profit is expected after providing Rs. 1.08 crores for taxation (out of which Rs. 19.5 lakhs represents taxation due to capitalisation of reserves and is therefore a non-recurring element). The directors, it is reliably reported, hope to recommend a dividend of not less than Rs. 1-6 a share for 1957; this is on the assumption that the estimated levels of profit for 1956 are maintained and there is no major change in tax rates or trading conditions. It is noteworthy that after the shares on offer have been sold, the company will come under the purview of Section 22A of the Indian Income-Tax Act. The directors, it is believed, intend to recommend the distribution of a large portion of the profits to shareholders in future years. Hindustan Lever's entire issued capital of

Rs. 5.57 crores is in ordinary shares of Rs. 10 each; it is balanced by total net assets of Rs. 7.30 crores, of which fixed assets amount to Rs. 3.49 crores. The company's activities are chiefly concerned with the manufacture and distribution of soaps, detergents, toilet preparations, glycerine, vanaspati, margarine, edible oils and oilcake. There seems to be a considerable promise of expansion with the growth in consumer prosperity in years to come.

Vegetable Oil Industry.—In his address from the chair to the annual general meeting of the West Bengal Oil Millers Association, held last week, Mr. Kalicharan Bhagat stated the vegetable oil industry's case for larger production targets than have been allotted to it under the second five year plan. The industry, he pointed out, surpassed the first-plan target of 1,272,000 tons two years in advance, by producing nearly 1,400,000 tons in 1953-54 and 1,600,000 tons in 1954-55. The second plan target for the industry has been fixed on the basis of a consumption requirement of 2,100,000 tons by 1960-61, made up of 1,200,000 tons for edible purposes, 200,000 tons for export and the rest for the vanaspati manufacturing industry. The requirement has been calculated on the assumption of a certain rate of per capita consumption (8.8 lbs. a head a year) which Mr. Bhagat thought was erring on the low side. The consumption is likely to be higher than the planners' estimate due to the prospective increase in the national per capita income. The other strong reason for enhancing the target is the existence of considerable unutilised capacity within the industry. On the Planning Commission's own estimate, the mill sector at present has a crushing capacity of 5,600,000 tons a year, working on a single shift basis, and the non-mill sector has a capacity of 700,000 tons. Mr. Bhagat carried this argument into the export field also. India exported as much as 287,000 tons of vegetable oils in 1955-56, and the average export during the five years 1951-56 has been around 140,000 tons. Mr. Bhagat emphasised that the sharp fall in 1953-54 to a mere 30,000 tons was wholly due to the imposition of heavy export duties by the Government, and the subsequent rises and falls can also be attributed to the wayward course of the Government's export policy. He suggested that the export duties should not be levied again, in the interest of maintaining India's export markets in the teeth of acute foreign competition. An average of Rs. 31 crores to Rs. 35 crores of much-needed foreign exchange could be earned annually by selling vegetable oils abroad if the Government would stick to its present policy of encouraging exports.

Asian Foreign Trade.—The importance of foreign trade for the economic progress of less-developed countries was stressed at a one-week session of the Trade Sub-Committee of the U.N. Economic Commission for Asia and the Far East held in Tokyo from 29th October to 5th November. Among the topics discussed was a proposal, to go into effect in 1958, for establishing regional centres to train trade promotion personnel. Also considered were detailed suggestions to simplify trade regulations and procedures; increase trade among Asian countries in certain selected commodities, including iron ore, coal, salt, fish and fish products; improve arbitration facilities; increase the use of standards; and arrange fairs and exhibitions. Statements made at the meeting indicated that Asia's export trade in 1955, and to some extent so far also in 1956, had been more favourable than at any time since the Korean boom. It was stressed, however, that export earnings would have to increase even "more rapidly" to sustain economic development and to provide foreign exchange for essential imports. The region's foreign trade had benefited from favourable world economic conditions and increased external aid. Some progress had been made towards the liberalisation of trade and increased multilateral trading and payment arrangements. But there was a "wide divergence" in the situation in raw material markets. Rises in prices were not shared by all the major export commodities. Most Asian countries remained heavily dependent on export earnings from a few raw materials, and there were other obstacles preventing trade expansion. A proposal put forward by the E.C.A.F.E. Secretariat to establish training centres for trade promotion personnel was endorsed. The Governments of India and Japan immediately responded by offering host facilities for training and several countries from outside the region offered to send lecturers and experts. The conference recommended that funds be provided by the U.N. Technical Assistance Administration. According to information specially prepared for the conference, Asian countries increased their share in the world's seaborne trade from 32 percent before the war to 40 percent in 1954. The rise in the shipping activities of Asian countries has caused a series of problems connected with the shortage of shipping and port facilities. Considerable concern was expressed over the rise in freight rates and discrimination was alleged. Several delegates called for lower freight rates and the building of national merchant fleets, while other delegates warned against Government intervention in fixing ocean freight rates.

Activity in Dalmianagar.—With the opening of Ashoka Cement's new kiln in Dalmianagar by the Chief Minister of Bihar recently, the cement-production capacity of the concern rises to 600,000 tons a year. In 1951-52 it was at half this level. Incidentally, with the new capacity just installed, Dalmianagar becomes the biggest cement production centre in India, accounting for nearly 11 percent of the country's current requirements. Mr. S. P. Jain, chairman of Ashoka Cement Ltd., took the opportunity to inform the Government that the management is considering a project to manufacture cement and sugar machinery in this industrial centre; he also said that possibilities were being explored to expand cement production capacity even further. Proposals for this would soon be placed before the Governments of Bihar and the Union. Mr. Jain gave an idea of the growth of industrial activities in Dalmianagar over the past few years. The value of goods produced in 1955-56 from this centre was Rs. 11.5 crores as against Rs. 4.70 crores in 1950-51, a rise which corresponded to the increase in the economic activity and national income during this period in the country as a whole. Production of paper, an important line of activity, also recorded a big rise, the monthly production having at present doubled to 3,000 tons from that of 1950-51, and if the expansion plans now in hand are completed by April 1957, the capacity will further increase to 5,000 tons a month. A notable feature of the expansion plan is that bagasse pulp will also be used in the manufacture of paper.

Total Rs. 667.
Previously acknowledged Rs. 1,777-7-3.
Grand Total Rs. 2,444-7-3.

IMPERSONATION IN TRADE

AN observant critic has called humour the sunshine of life, and true it is that the magic of that influence, out of which is born a smile or a peal of hearty laughter, is super-excellent. While the spell lasts we are half-forgotten with the gods. Had Mercury not been among the immortals the reflection were perhaps humiliating that there exists an impudence of petty roguery as potent perchance to raise a smile as a groan, and if Cervantes laughed Spain's chivalry away, none the less true that Autolycus commands a kind of sneaking regard even among the straightlaced. To this latter fact may possibly be ascribed the reason why, in the present day, a number of petty rascals enjoy apparently an inglorious immunity from the consequences of their misdeeds. They are just as much rascals, yea far more so as a rule, than is the poor wretch who steals four annas and goes to prison for it; but then, this snapper-up of unconsidered trifles never makes us smile and consequently we cannot forgive him. A species of mercantile rascality which is becoming increasingly common in India just now is, what for want of a better name may be called "trade impersonation." It may be remembered that a little while ago a local firm, after procuring samples of cotton stuffs and piece-goods from some well-known manufacturers up-country, adopted the brilliantly ingenious method of cutting in half the samples it received and then sent these out at a lower quotation as its own manufacture. Doubtless it secured a few orders on the strength of this enterprising representation, and was enabled, by means of the value-payable system, to get rid of a certain quantity of its own inferior goods.

Without Prejudice

APPOINTMENT OF UMPIRE
BY ARBITRATORSDIFFERING JUDGMENTS OF
HIGH COURTS

(FROM OUR LEGAL CORRESPONDENT)

THIS is an interesting problem; and it is commended to the non-legal reader for his consideration because the writer thinks that the average commercial man, not being hampered by any legal knowledge, is in this particular case more likely to come to a correct conclusion on the point involved than the average lawyer. Indeed, we might go further and suggest that the more experienced the lawyer is, the more hesitant he will be in a case like this to give any definite opinion at all; for the authorities are conflicting to a marked degree. Moreover, whatever conclusion the reader arrives at, he will have the satisfaction of knowing beforehand that at least one High Court in India supports his view. The reason that, for once in a way, we back the lay opinion is that the answer on the one side is sheer commonsense, which generally speaking is usually the law, and on the other, purely legalistic and technical.

This is the problem. A private limited company applied to the Calcutta High Court (Mukharji J.) to set aside an award made by two arbitrators nominated respectively by the petitioning company and the respondent who had agreed to the following arbitration clause: "All disputes and differences arising out of matters relating to the agreement shall be decided by arbitration under the Indian Arbitration Act by reference to a single arbitrator if the parties to these presents so agree upon, and in default two arbitrators, one to be nominated by either of the parties and to be appointed." The

parties did not agree upon one single arbitrator. Each party nominated his own. The two arbitrators were appointed on 17th October, 1955, and 21st October, 1955, respectively. You will have noted that by the agreement it was specifically provided that the reference was to "arbitration under the Indian Arbitration Act." This is what is requisite under Clause 2 of the First Schedule of the Indian Arbitration Act, 1940. We have italicised one word in the clause to emphasise that the duty imposed by the latter on the arbitrators is obligatory and not discretionary, as it would be if the word "may" had been used. "If the reference is to an even number of arbitrators, the arbitrators shall appoint an umpire not later than one month from the latest date of their respective appointments."

This was a reference to an even number of arbitrators. The latest date of their respective appointments was 21st October, 1955. Therefore their duty was to appoint an umpire not later than 21st November, 1955. They did not appoint an umpire by that date, or at all; nor, according to the applicant company, did they allow the company to appoint an umpire in spite of repeated requests. What they did was to proceed with the arbitration. Various statements and counter-statements were filed before the arbitrators by the parties; and eventually the arbitrators published their joint award on or about 17th-19th March, 1956. The gist of the award was that the applicant company was to pay the respondent a stipulated sum, with interest at 6 percent per annum from the date of the award until payment, and specified assets of the company were charged for payment. The company objected; and the objection with which we are concerned here was the non-compliance by the arbitrators with the duty cast upon them by the Arbitration Act to appoint an umpire. The company urged on the basis of this statutory provision that the entire arbitration proceedings before the arbitrators without the appointment of an umpire were illegal and invalid, and the whole award was bad. And

that is the problem you are invited to consider and answer before you read any further.

The point is not a new one. It had already been decided by two High Courts in India. But, unfortunately, the two decisions completely contradicted each other. In 1951, a strong Bench of the Allahabad High Court (Sapru and Chandiramani JJ.) were in no doubt as to the correct answer and, in delivering the judgment of the Court, Sapru J. held in forthright terms, with which his colleague concurred, that "it is clear that the arbitrators, where there is a reference to an even number of arbitrators, are under a statutory obligation to appoint an umpire not later than one month from the latest date of their respective appointments. It strikes us that the arbitrators had no option in the matter of the appointment of an umpire... That being our view, it is clear that in the circumstances of this particular case the award made is not valid." The award was therefore set aside with costs. Their lordships' reasoning was clear enough. The Act imposed a certain definite obligation on the arbitrators. Said Sapru J.: "The provisions of para 2 of Schedule 1 are of a mandatory character, and it was clearly the duty of the arbitrators to appoint an umpire." This mandatory duty the arbitrators had failed to carry out. So their award was invalid. And the judgment never having been reversed, the above is the law where the High Court of Allahabad holds sway.

Nevertheless, it is not the law within the jurisdiction of the Nagpur High Court, where in 1954 exactly the same problem was considered by a Bench which came to a categorically opposite conclusion. It was, as in the Allahabad decision, a Division Bench. No amount of casuistic distinction can reconcile the two decisions. One must be wrong and one right. The Nagpur Bench, before which, most unfortunately, the Allahabad decision does not appear to have been cited at all, pronounced as follows, and in doing so put its finger with precision on the very point which one thinks will have decided the question in the mind of the average non-legal commercial reader who may hold this view: "Each party appointed an arbitrator. The arbitrators were unanimous. What need for any umpire?" To which the average lawyer might add: "Quite so. *De minimis lex non curat.*"

Said their lordships of Nagpur: "No universal rule can be laid down for the construction of the statutes as to whether mandatory enactments shall be considered directory only or obligatory, with an implied nullification for disobedience. When the command of the legislature is disregarded, nullification may be the usual consequence. But the mere presence of the word 'shall' does not necessarily mean that proceedings in disregard of the requirements of the statute are null and void, and the question whether it is so, is in the main governed by considerations of convenience and justice. An intention that the disregard of the provision should be followed by nullification of the proceedings must not be attributed to the legislature when that result would involve general inconvenience or injustice to innocent persons or advantage to those guilty of the neglect without promoting the real aim and object of the Act. The Arbitration Act does not say that when the reference is to an even number of arbitrators the failure to appoint an umpire vitiates the award... Whatever may be the result in a case of a disagreement between the arbitrators, where no disagreement arises between the arbitrators and there is no need for an umpire, to regard the omission to appoint him as fatal to the validity of all the proceedings would only result in general inconvenience without promoting any object considered essential by the statute... When the object cannot point to any prejudice because of the omission to appoint an umpire, the omission does not vitiate the award."

Well, there you have two absolutely contradictory decisions by two Division Benches on a plain, apparently simple question. What is the non-legal reader's view? One fancies that on the ground—the commonsense one—that as there was no need for the intervention of an umpire since both arbitrators were agreed and as no one was prejudiced by the non-appointment of an umpire, the award was valid and must stand. The writer's respectful submission would have been: laws are made to be complied with. By statute, these two arbitrators were under a mandatory obligation to appoint an umpire within a specified time. They did not appoint an umpire within the specified time or at all. By not so doing, they disobeyed the orders given them by the Arbitration Act. Therefore they committed "misconduct." Therefore their award was bad.

This second view is now unsound so far as Calcutta is concerned. Mukharji J., having both the Allahabad and the Nagpur decisions before him, preferred the latter. "I regret," said his lordship, "my inability to subscribe to (the Allahabad) decision insofar as it holds that the provisions of clause 2 of Schedule 1 of the Arbitration Act are of a mandatory character, and that therefore the absence of appointment of an umpire makes the award invalid. With respect, I consider the sounder view is the one expressed by the Nagpur Division Bench." Adding his own reasons in an interesting judgment, his lordship overruled the objection and upheld the award.

A DITCHER'S DIARY

It seems little short of slanderous to suggest she does. From the enthusiasm with which the adolescent caperings of the Haldanes were received in Calcutta, I suspect Indians were more impressed by this distinguished pair of academic cranks than is the more cynical British public. Whether they will continue to be so now that Mrs. Haldane has been seen to favour drunken violence in support of the causes she upholds, is something I for one will be interested to learn.

It is a pity diplomatic form requires that envoys should leave a reception at which their countries are being insulted, because, if Mr. Krushchev is as amusing to watch as he is to read about, the performance at the Polish Embassy in Moscow last Monday must have been worth watching. Perhaps the emotional outbursts of this born buffoon need not be taken too seriously, but I should like to know what Mr. Krushchev meant when he said of the capitalist countries: "Whether you like it or not, history is on our side. We will bury you." If that is a threat it is probably just as hollow as Mr. Bulganin's recent reference to rocket attacks on Britain and France. But it does reveal a distressing psychological outlook in a man who is supposed to guide the destinies of the world's second most powerful country—and certainly its greatest trouble-maker. So does the other part of his peevish wrangling "If you do not like us, don't accept our invitations and don't invite us to come to see you." If ever proof was needed that the brooding mistrust of the Stalin era is not dead, this is certainly it. Now that Mr. Krushchev is at last being impressed by events in Hungary that he might just possibly be capable of being in the wrong (the thought has already struck others, as we can gather from Mr. Mikoyan's remark to his chief: "When are you in the right?") a little self-evaluation might soon become fashionable in the Kremlin. If so that would be a good thing, because Mr. Krushchev has proved that he has much to contribute to the art of politics, especially on the more modern, lighter, public-relations side. He may even grasp the truth that posing as the world's benevolent uncle while sending tanks to murder Hungarian civilians is apt to get one a bad name for hypocrisy. There is also the chance of its eventually dawning on him that expressions of brotherly love and unbounded generosity—even to Asian minds, now that Mr. Nehru has said what he really thinks of the doings in Hungary—do not go well with a petulant leaning towards wholesale blood-letting.

I belong to a "noble" profession; Mr. K. M. Munshi says so. But I am more grateful to him for the other things he said about the Press in India, and they needed saying. He appealed to Indian journalists "to fight attempts by sections of the public to overwhelm the Constitution by direct action and the tendency to mobilise mob frenzy by playing upon popular passions." I have thought hard, and cannot remember a single instance in which the popular English-language Press has thrown its full weight in favour of the law. Violence is condemned in the mildest terms, and then followed by a reference to "police excesses," as though in extenuation of mob misbehaviour. This, in part, is a hangover from pre-Independence days, when breaking the law was the fashionable thing to do, but one cannot help observing that a hangover which lasts for nine years is a very long one indeed. Without pointing it out quite so bluntly, Mr.

Munshi did hit upon the crux of the matter when he described small papers as "the real voice of democracy, unhampered by the strings pulled by party loyalty, high finance or patronising advisers." I would not know about party loyalty, nor about patronising advisers, as far as I can see, most popular newspapers affect to be "independent" of parties, and patronage is rather difficult to establish. As for high finance, whatever that may mean, it appears to me to get the worst possible deal from the popular Press. If there is a "popular" newspaper in India which has come out with an outright condemnation of the tactics labour has been employing of late against employers, I have not yet seen it. Show the best possible reasons why the price of a commodity has just got to be increased, produce the best possible arguments why an industry must be treated more kindly by the State, and all you will get from the daily Press is an apologetic excuse, "You see, we'll be unpopular if we say that the price of coal has got to go up." And this from an industry which still keeps its own produce at 2½ annas a copy, long after the price of newspaper has come down.

It is not only those who read too many detective stories, or even the many who will always put Britain in the wrong, who are wondering whether there was collusion over the attack on Egypt. The average Briton dismisses the idea as unlikely. France, yes. But Britain, no—Sir Anthony is just not capable of it. He could be tricked, but to take part in a trick, never. The reasons for this conclusion vary from: He is too upright; his back-ground does not fit a man for that sort of thing, to: He just has not got it in him. The latter verdict is usually given with a regretful shake of the head, as if a touch of the rascal might perhaps be a good thing in a British Prime Minister. It is often followed by a sly wink and the comment: "Now if it were Churchill, that would be a different matter." But the question cannot be dismissed as a mere academic exercise either in forensic or psychological deduction; on its answer depends a great deal of Britain's future prestige. The most important task which Britain, and any other power which is not too self-interested or too blinded by indignation, has to look to, is that of keeping the dagger from being put back into the assassin's hand. I think this metaphor was Mr. Macmillan's and I cannot imagine one which describes better the rôle of Egypt before the Israelis forestalled her. But if it is proved that there was prior intrigue and collusion on the part of Egypt's attackers, it will not be easy for the world to keep this essential point in mind. And it does look as if there has been some collusion somewhere. There is no need to run through the evidence here; newspapers with a more voracious appetite for sensation will be busy reproducing it, with trimmings to suit all tastes, for months to come. Some of them have already started. Up to now the facts speak against France rather than Britain; Israel is excused, (and so she should be) as only doing what was indispensable for her own survival. They suggest that France and Israel did the plotting and that Britain only became a party through the pressure of events and from the justifiable conviction that the main obstacle to world peace is the Russo-Nasser conspiracy against Israel and the West. If Britain and France have anything to say in their own defence it is time they said it, because the world is fast arriving at a verdict anyway. So far as Britain is concerned the choice already seems to be between playing a Brutus or a Cassius.

THE DITCHER.

For every hour in the air, a Clipper receives two hours of maintenance on the ground.

Every day Clippers must pass the world's
toughest fitness test

Before and after each flight, a rigorous inspection is made of all operating parts. Even in flight, the state of a Clipper's* health is under constant scrutiny—through the electronic eyes of Pan Am's Engine Analyzer.

Every 11 weeks engines are taken down with critical interest. Instruments probe vital parts. From nose to tail each square inch is thoroughly inspected, every part replaced at the slightest drop from peak efficiency.

Exacting care like this is why experienced travellers will tell you, "Pan American knows how to run an airline!"

INDUSTRIAL TRENDS IN THE UNITED KINGDOM

UNSATISFACTORY FEATURES IN EXPORT TRADE

(FROM A SPECIAL CORRESPONDENT)

THE industrial world, in a sense, is dominated by the international political situation, but, at the time of writing, in only a few directions are there signs of any pronounced hesitancy, and there the reason may be due to causes quite unrelated to the complications in Hungary, Egypt and elsewhere. Not much of a precise nature can really as yet be said upon this aspect of business. Many orders now being executed were placed long ago. There are also special influences operating, as, for example, the laying in of winter stocks, early buying for Christmas and the large scale Government contracts, particularly for the attempted regeneration of the railways. There have been, too, several exhibitions, at which fresh machines and new methods of organisation have been in evidence, providing stimulation. The authoritative admission that the U.K.'s share in the ever-growing world market for goods is declining "almost at an alarming rate" has not seemed to have made much impression. Possibly, the seriousness of this fact is not brought home to the majority of people, because the U.K.'s exports over the past few years, measured by volume, still show an expansion of 12 per cent—which might of itself appear a fairly satisfactory figure. But it ought to be borne in mind that the far higher rate of increased power to export which her chief competitors have shown during the same period may imply that their export potentiality is becoming greater. Accurate knowledge of markets must have become greater by reason of their successful experience.

Psychology of Buyers

As a matter of fact, that this last is so, has been put on record in many reports from U.K. *attachés* overseas, who have given the warning that the British are lacking in psychological understanding of peoples abroad with whom they wish to trade. It is pointed out that British machines are offered whose appeal is lessened by some superficial drawback, from the would-be customer's point of view, which could easily be remedied. Similarly with products, upon which the comment has been made that too little trouble is taken in ascertaining the tastes and inclinations prevailing in the anticipated markets. However, the British people, or those who speak for them, are still confident that their own nation's technical advances during the past decade, together with those foreshadowed, will be able to ensure maintenance of prosperity for an indefinite period ahead. This reliance, as is well known, has come to be classified under the general heading of "Progress in Automation." There is, however, a failure in some quarters, to realise that automation is by no means a monopoly of the United Kingdom. The United States is years ahead in its practice, and almost completely automatic factories are to be found in continental Europe as well. Besides, there is nothing in the industrial world of today, nor can there be, which is not either quickly copied or "shared". So while according automation the respect that it deserves as an aid to industrial efficiency, it would be unwise to argue that psychological aid, or shall we say, human, factors have not also their own specific industrial value.

While automation can be engendered in all sorts of directions and places, it is probably true to say that determining the pace of the carrying out of this transformation is directly connected with the springing up of the atomic energy establishments; for there the present maximum feasible automatic control is to be seen from the start. Illustrations of what is being done at these establishments appear in the Press, popular and specialised, and therefore, so to speak, a pictorial urge is given to automation as an industrial ideal. It should also be noted that companies engaged in diverse activities send members of their staff to work in these establishments, and these persons become influenced by the extensive instrumentation and other practices with which they come in daily contact. Consequently, something of the automation spirit in its most powerful expression tends, through this agency, to infiltrate ordinary industry.

Manufacturers of machinery, equipment and instruments for chemical engineering have their

order books full to the utmost. Some sections of the chemical industry would be adversely affected by a diminution of Britain's oil supplies, since many chemicals are a by-product, or partly so, of petroleum. Nevertheless, the range of chemical products is now so wide that few industries are more strongly placed for continuous expansion than is the chemical, even in a period of political uncertainty. Imperial Chemical Industries announces that at its Wilton factory alone over £12 million a year is being spent on construction work for a single project, and that plans have also been made for the erection of numerous large-scale plants elsewhere. Indeed, it can be said that the capacity of these plants will be limited only by the difficulties of obtaining skilled workers. Plastics, titanium and refrigerants are prominent among the familiar products, outputs of which are to be vastly increased. Many quite new chemicals are to make their appearance soon. A few fore-runners of these are already on the market, including chemicals for which preliminary advertising ensured a quick public response, especially for the latest antiseptics intended for personal and household use. Competition between the giant chemical concerns of the U.K., the United States, Switzerland and Germany is more in evidence, but unless economic conditions are profoundly disturbed, there is no question of oversupply of their manufacture. Inevitably, some of the small chemical companies whose specialities have been superseded by the latest products, are finding it hard to devise policies of successful readaptation. But their domestic problems do not handicap the onward march of the chemical industry as a whole.

Quality Control

A conference on "Quality Control and Informative Labelling" does not sound exciting, but the gathering under that title which has been held recently in Gothenburg, Sweden, was more important than its title might suggest. It was called by the International Rayon and Synthetic Fibres Committee, and representatives from most textile countries, including Japan, contributed papers. Leading U.K. fibre manufacturers have long complained that the public does not get the full benefit of the outcome of their expensive research activities, since many fabric manufacturers do not observe high standards in spinning, weaving, processing, etcetera. A British rayon firm has endeavoured to counter this by allowing fabric manufacturers to fasten a guarantee on their products, backed by the name of the fibre suppliers themselves, provided that the fabric manufacturers have submitted their wares to independent tests. This has helped clear the position. But there is no quality control practice which is universally observed. In some countries, among them Denmark, the Government has taken the responsibility for ensuring that manufacturers adhere to minimum standards. This is akin to the utility standards upon which the British Government insisted during the second world war. The chief conclusion of the conference was that the best hope for bringing about quality control is through the association of proclaimed quality with branded goods—buy the latter and be safe. The second reform desired, namely, informative labelling, is difficult, because there is no widespread agreement at present upon the terminology necessary to be used. Where there is a measure of agreement, the public seldom understands the full significance of the terms employed. All that could be fallen back upon is the desirability of further educating the public in textile matters—a task made the more exacting by the frequent arrival of new fibres and new fabrics and revolutionary changes in their finishing treatments. It was conceded that the woollen manufacturer, supported by tradition and relying upon the reiteration of the simple claim "wool is best", has a strong position compared with that of the producer of fabrics made from man-made fibres, who would merely be regarded as precocious if he tried to put his case as tersely.

Isotopes and Textiles

The existing relations of isotopes to the textile industry is examined at length by a British textile journal. It finds that a good deal has been already accomplished and that what has been done justifies study by research workers, as indicating the line of developments likely to occur in future. The practical application most widely adopted so far is for the purpose of reducing static electricity, and simple radioisotope apparatus for this purpose is now to be found over looms in the U.K. Radioisotopes are used for measuring the thickness of materials or finishes; it is indicated that they will help in the early detection of fabric faults. The use of radioisotopes as tracers to determine the mechanism of a reaction or a physical process has attained eminence in biochemistry, and should eventually find many uses in industrial fields. The British paper industry is giving attention to the possibilities of radioisotopes, but most of the work in this connection has so far been in the pulp producing countries, where the use of radioisotopes in fibre mixing has been the subject of fruitful study.

In spite of the competition of other raw or semi-raw materials, rubber has entered into new industrial uses during the last year or so. This is due partly to increased research and partly to intensified propaganda on rubber's behalf. A further extension of industrial uses (apart altogether, that is, from any type developments) has been announced by the United States Rubber Company which has just acquired controlling interest of the North British Rubber Company Ltd., Scotland. Some of these uses are expected to lie in fresh uses of rubber for coatings, in which direction, rubber, although it has many rivals, has the advantage of favourable properties of its own.

Finance in India and Abroad

THE CALCUTTA MONEY MARKET

FUNDS REQUIRED FOR COTTON GINNING

Wednesday, 21st November.

THERE has been little change in the overall demand for funds this week, although a marked increase has been noted on account of the holding of cotton stocks now that ginning is in progress. There has been a slight tendency for advances to the sugar industry to rise, but the movement has not yet been appreciable. Demand from the jute industry has fallen considerably over the past few days. Funds are easier in the Calcutta interbank market this week, but the official call rate is still quoting 3½ per cent.

It has been a quiet week for bills. Those that have come to hand have been chiefly on account of tea shipments. Remittance is moderate. Sterling has not yet risen above the support levels, but it is reported from London that rather better tendency is developing.

During the week ended 16th November, Government of India Treasury Bills for Rs. 11,25,25,000 were sold in favour of the Reserve Bank.

Silver was steady following good support at the lower levels. The price advanced from the previous week's level of Rs. 172-7 to Rs. 172-12, quoted today. The rate for ready was Rs. 173-3. The London price increased to 80½d. The price of foreign silver in New York has been steady and stood at 91½ cents.

In sympathy with silver, gold increased from Rs. 105-1 to Rs. 105-8. The sovereign in Rs. 70 showed a gain of 8 annas.

A decline of Rs. 9.30 crores to Rs. 1,443.66 crores in active notes was the notable feature of the return of the Reserve Bank of India for the week ended 16th November, 1956. The total note issue was Rs. 1,39 crores higher at Rs. 1,461.80 crores. Notes held in the Banking Department consequently rose by Rs. 10.69 crores to Rs. 18.14 crores. Deposits of the Government of India and other Government accounts declined by Rs. 11.58 crores and Rs. 7.88 crores to Rs. 51.42 crores and Rs. 12.18 crores, respectively. Balances of commercial banks at Rs. 53.21 crores showed an increase of Rs. 74 lakhs. Balances held abroad declined by Rs. 6.71 crores to Rs. 91.46 crores, and investments by Rs. 15.07 crores to Rs. 59.22 crores. Other loans and advances declined from Rs. 90.09 crores to Rs. 82.76 crores, of which advances to scheduled banks against usance bills amounted to Rs. 40.80 crores (Rs. 42.41 crores). These advances totalled Rs. 358.22 crores since 1st January, 1956. Ways and means advances stood at Rs. 1.46 crores (Rs. 84.35 lakhs).

The return of the State Bank of India for the week ended 9th November, 1956, shows a drop of Rs. 1.65 crores in total deposits to Rs. 227.72 crores. Investments in Government securities are down by Rs. 16 lakhs to Rs. 95.64 crores, while other authorised investments remain unchanged at Rs. 11.30 crores. Advances, including loans, cash credits and overdrafts, and bills discounted and purchased, have fallen by Rs. 2.61 crores to Rs. 128.11 crores. Cash and balances are, in consequence, shown at Rs. 17.01 crores or Rs. 81 lakhs higher.

It was stated in the Press communique issued by the Reserve Bank on 3rd February, 1956, that the bill market scheme had been a striking success during the four years of its operation and that banks had been making full use of it to obtain funds during the busy seasons. The concessions concerning the rate of interest and the stamp duty were reviewed, and the Reserve Bank decided that, with effect from 1st March, 1956, advances to banks under the scheme should be made at 3½ per cent and the concession on the stamp duty withdrawn. The working of the scheme has again been reviewed recently. Taking into account the present economic and banking trends, it has been decided that with effect from 21st November, 1956, the rate of interest on advances to banks under the scheme should be at the bank rate, that is, at 3½ per cent a year. This rate will apply to the new advances granted.

The statement of the position of scheduled banks for the week ended 9th November, 1956, shows Demand and Time liabilities at Rs. 641.54 crores (Rs. 13.33 crores on account of borrowings from banks) and Rs. 454.63 crores (Rs. 2.07 crores), compared with Rs. 638.92 crores (Rs. 13.05 crores) and Rs. 456.34 crores (Rs. 3.33 crores), respectively, in the previous week. Cash has increased by Rs. 4.72 crores to Rs. 38.81 crores, while balances with the Reserve Bank have decreased by Rs. 2.95 crores to Rs. 48.82 crores. There is a drop of Rs. 1.39 crores in investments to Rs. 365.93 crores. Advances and bills discounted, at Rs. 762.30 crores, show a fall of Rs. 6.41 crores. The ratios to total liabilities of cash and balances, and of advances and discounts, are, in consequence, shown at 8.0 per cent and 69.5 per cent, against 7.8 per cent and 70.2 per cent.

Provisional figures of foreign sea and air-borne trade of India on private and Government accounts during October, 1956, according to data so far available in the Department of Commercial Intelligence and Statistics, Calcutta, are as follows: Merchandise, excluding transit trade of Pakistan but including that of other land frontier countries: Exports Rs. 5,226 lakhs, re-exports Rs. 42 lakhs (transit

trade negligible); imports Rs. 6,871 lakhs (transit trade Rs. 1 lakh); total trade Rs. 12,139 lakhs. *Treasure:* Exports of currency notes Rs. 110 lakhs, others nil. Imports of gold Rs. 1 lakh, currency notes Rs. 313 lakhs, others nil. *Balance of Trade:* The merchandise import figures are exclusive of the value of certain consignments of Government stores awaiting adjustment. Subject to this deficiency in import figures, and to the exclusion of figures for transit trade, the total value of exports (including re-exports) of merchandise, gold and silver fell short of imports by Rs. 1,603 lakhs.

LONDON FINANCIAL LETTER

POLICY FOR STERLING

By Air Mail.

THERE is no doubt of the British Government's intention to maintain the official value of sterling during the period of difficulty, but there are some sceptics in London doubting its ability to do so if that period is prolonged or if other problems supervene. The most satisfactory element in the position at present is the technical shortage of sterling on the part of interests which need it in the course of business. Payments for imports from the sterling area cannot be delayed indefinitely, and substantial quantities of sterling must soon be acquired to pay for imports of manufactures from Britain and of commodities from other sterling countries. In both these categories, the volume of trade has recently been large. Some weeks may, therefore, elapse before the currency shows signs of serious strain. The subsequent phase, when the sterling area's export trade is hindered and the reorientation of the oil trade is causing substantial net expenditure of dollars, will require very careful handling. The authorities have to decide how much of the reserve of gold and dollars they can safely sacrifice in support of sterling. There are signs already that they are prepared to abandon for a time the policy of unifying all rates for sterling and will concern themselves mainly with the basic official rate—which they are obliged to maintain, anyway, at \$2.78 to £1.

Transferable Sterling

It is not at present difficult to hold "official" sterling a little above \$2.78, but to keep "transferable" sterling at a discount of no more than 1 per cent, to which it had adhered for approximately 18 months, would evidently have been too costly, at least in proportion to the benefits gained by supporting it. There are no longer, apparently, large amounts of this currency available to convert in the open market, but the British authorities see no good reason why they should provide facilities for converting it almost at official rates. By mid-November the discount had widened nearly to 2 per cent, and in different circumstances, the "commodity shunters" would presumably have been preparing for action; but in the troubled state of shipping after closure of the Suez Canal, a much wider discount would be needed to ensure a profit on sterling commodities diverted to the dollar area by way of non-sterling countries. There is no practical advantage in keeping the other unofficial rate, that for "security sterling" (capital sterling immobilised by exchange control), near the official level, and this variety of sterling has, in fact, been jettisoned. It moved above \$2.78 in the second quarter of this year, when the unity of sterling seemed virtually achieved; by mid-November it was below \$2.50. At the same time, the "dollar premium" (a London rate reflecting British investors' willingness to pay more than New York prices for dollar stocks and bills) reached nearly 12 per cent. The policy of unifying all rates for sterling, initiated in March last year, has, indeed, suffered a damaging setback.

Hoarding of Gold

There has been some dispute in London concerning the status of gold in this new crisis. One interesting development is in the technique of relieving sterling by official selling of gold on a substantial scale in the bullion market. Of more interest to the disputants, however, is the demand for gold for hoarding. Has the metal's status as

the best store of value been confirmed in this crisis? Or is there evidence that the so-called "cult of gold" is dying? There is no disputing the fact that in the early days of November considerable quantities of gold were being bought by people whose instinctive reaction to the crisis was distrust of currency. They had no reason to be deterred by high prices such as characterised these critical periods in former years, for the only appreciable increases in price were in the few centres where—mainly because of temporary difficulties of transport—gold was not freely available. Even at a height of the crisis, the price in London (now the principal market) did not rise above \$35.08 an ounce, and a startling decline in the second week of November carried it actually below the official U.S. price of \$35.

It was this decline, while the international situation was still tense, that raised the question whether, with a final spasm of activity, the "cult" was dying. It appears, however, that increased selling rather than decreased buying was the cause of the decline. In London (to whose prices those of other markets are fairly closely related) the authorities found the gold market a convenient medium for supporting sterling by weakening the dollar. (Since gold in London is bought with a special "registered" sterling, which can be acquired only with dollars, an increase in the turnover of gold involves an increase in sales of dollars.) Moreover, while this decline was in progress the price of gold sovereigns was still rising.

For hoarding on a moderate scale, sovereigns are a convenient form of gold, whereas more substantial hoarding through the medium of gold bars has many practical inconveniences. It appears, indeed, that the intensification of the crisis actually caused some dis-hoarding—or reversal of a hoarding process that had not been completed. Some gold bought in the quieter phase of the Suez crisis was sold again in London when a major war seemed possible, because the previous buyers feared that this heavy material would be difficult to get out of the country. So the question whether there is still a strong latent tendency to hoard gold in times of unsettlement is not fully answered.

CREDIT NEEDS IN A GROWING ECONOMY

REORIENTATION OF THE BANKING SYSTEM

(By R. M. Mitra)

THERE seems to be a flutter in financial dovecotes. The onset of the busy season is occasioning some concern. Banks' advances have consistently maintained a high ratio to deposits. A survey of the position during the period 1950-51 to 1955-56 shows that, except for the slack season in 1952-53, the increase in banks' advances (including bills purchased and discounted) occurring in the busy season, has not been neutralised by a comparable fall in the succeeding slack season. The total increase in advances during the period 13th May 1950, to 11th May 1956, amounted to Rs. 740.1 crores, against a total decline of Rs. 440.5 crores. The net increase in banks' advances during this period, therefore, works out at Rs. 299.6 crores.

The rising trend in banks' advances is, perhaps, to be accounted for by the accelerated economic activities stimulated by the five year plans. The phenomenon of rising bank advances would, therefore, appear to be a natural development. Yet there is cause for anxiety. The weird processes of the monetary mechanism seem to have upset the apple-cart. The traditional concept of sound banking has tended to relate bank advances to a specified proportion of deposits. Banking thought in India has been moulded on the concept that advances should be about 50 percent of deposits. It is, therefore, regarded as disquieting that during the period 13th May, 1950, to 11th May, 1956, the net increase in banks' deposits and other normal resources aggregated Rs. 238.9 crores against a rise in advances of Rs. 299.6 crores. The rise in advances is more than 125 percent of the increase in resources. This disproportionate increase is becoming more pronounced as the economy is developing.

The period between October 1955 and October 1956 witnessed a rise of Rs. 66 crores, from Rs. 1,021.1 crores to Rs. 1,087.1 crores, in scheduled banks' liabilities in India, whereas scheduled banks' advances recorded a rise of Rs. 167.9 crores, from Rs. 592.4 crores to Rs. 760.3 crores, during this period. It would appear, therefore, that the recent rise in advances has exceeded 250 percent of the rise in resources, against 125 percent for the period May 1950 to May 1956. In terms of the relation between outstanding advances and outstanding resources, the percentage has increased from about 58 in October 1955 to about 70 in October 1956.

The Bill Market Scheme

The geometrical progression of the rise in advances has led to anxious reconsideration of the Reserve Bank's credit policy. The increase has been financed largely by drawing down cash reserves and by reducing holdings of investments. But the seasonal gap in banking resources has so far been met by money pumped in the system through the operation of the bill market scheme introduced in 1952. The *modus operandi* of the scheme is to allow scheduled banks to take advances from the Reserve Bank against the security of bills or notes executed by scheduled banks' borrowers in connection with loans or overdrafts extended by these banks themselves. When bank rate was increased to 3½ percent in November 1951, the Reserve Bank considered it necessary to devise suitable means to combat the contraction of credit supply attending higher rates of interest. It was, however, recognised that a sponsored addition to credit supply should be so designed as not to result in augmenting the normal flow of money supply.

The nineteenth century legend of banking has endowed "bills" with a magical power of creating useful and self-liquidating short-term finance. As genuine trade bills are not dealt in on any appreciable scale in the organised money markets of India, it was considered appropriate to start with an imitation. The scheme brought into force in January 1952 provided, therefore, for the conversion into usance bills or promissory notes of that part of banks' loans and overdrafts represented by temporary needs for increased finance. The Reserve Bank offered to make loans to scheduled banks against the security of these bills or promissory notes. Section 17 (4) (c) of the Reserve Bank of India Act, which empowers the Reserve Bank to grant such advances, read together with Section 17 (2) (a), requires that the bills and promissory notes accepted as security for these advances, should arise out of "bona fide commercial or trade transactions," bear "two or more good signatures, one of which shall be that of a scheduled bank or a State co-operative bank" and shall be "maturing within 90 days" (exclusive of days of grace) from the date on which they are accepted as security by the Reserve Bank. Section 17 (4) (c) also authorises the Reserve Bank to make advances to scheduled banks against other kinds of bills and notes, as provided in Section 17 (2) (b) and 17 (2) (c). But the scheme restricts the scope of advances to the requirements of section 17 (2) (a), because the purpose is to provide short-term finance for the genuine needs of trade and commerce.

Safeguards

The Reserve Bank has established appropriate machinery and evolved necessary procedures for assessing the creditworthiness of scheduled banks' borrowers and to ascertain the purposes for which the money borrowed is utilised. Thus the Bank can satisfy itself that there are two "good signatures" and that the overdraft or loan represented by bills or notes to be negotiated for the purpose of section 17 (4) (c) fulfils the tests of "bona fide commercial or trade transactions." There has been a great expansion of the volume of advances made under the bill market scheme. Although there was some initial uncertainty, as shown by the fall in total advances to scheduled banks under this scheme from Rs. 81.45 crores in 1952 to Rs. 65.84 crores in 1953, the scheme has since been increasing in attractiveness from year to year. The comparable totals for the respective years 1954 and 1955 are Rs. 147.52 crores and Rs. 225.44 crores. For the year 1956, the total recorded up to 9th November has reached Rs. 344.34 crores. The level of outstanding advances under the scheme rose by Rs. 30.5 crores during the first four and half months of 1955. It is true that a considerable portion of the rising scale of the increase is accounted for by the exchange banks' increasing participation in internal borrowing as a result of the present deterrent cost of borrowing in the U.K. (the exchange banks' outstanding borrowings under the bill market scheme rose by Rs. 9.5 crores during the first four and a half months of 1955, and they continued to be borrowers in the slack season also).

The overall expansion has assumed such large proportions as to threaten to burst the limits set for the scheme. It is suspected that, on the basis of tests applied by the Reserve Bank to determine eligibility of the offered bills and notes, scheduled banks may not have further advances of the required amount in their portfolios, fit for conversion into bills and notes within the meaning of Section 17 (4) (c) read together with Section 17 (2) (a) of the Reserve Bank of India Act. Suggestions were made by the Shroff Committee for liberalising the requirements of the bill market scheme. It was proposed that the scheme be extended to all scheduled banks with deposits of Rs. 1 crore and above, and that the minimum limits relating to advances be suitably reduced to

cover smaller loan or overdraft accounts. Although the Reserve Bank did not accept the Committee's specific suggestion for extending facilities to smaller banks, the scheme was modified in July 1954 to cover all scheduled banks licensed under Section 22 of the Banking Companies Act, instead of only banks with deposits of Rs. 5 crores and above, as originally provided in the scheme. The Committee's suggestion about minimum limits was, however, fully implemented, and along with wider coverage of banks, the minimum amount of borrowing by a bank was reduced from Rs. 25 lakhs to Rs. 10 lakhs and the minimum amount of a bill or note offered as security was reduced from Rs. 1 lakh to Rs. 50,000.

It is understood that the question of widening further the compass of the scheme is being considered. Suggestions seem to have been made, also, for liberalising the Reserve Bank's test of creditworthiness and to simplify its procedure of enquiry, so that a larger number of scheduled bank's loan or overdraft accounts may be found fit for conversion into eligible bills or notes, and so that the time-lag involved in offering securities and obtaining loans under the scheme may be shortened. It is also believed that further suggestions have been made to alter the scope of the scheme and to bring within its purview *bona fide* bills arising in the course of trade and commerce, instead of only pseudo bills created on the basis of conversion of loans and overdrafts. In this connection, bills relating to imports covered by letters of credit are reported to have received particular attention. It seems really interesting to note that while the scheme is supposed to be based on a "bill market" the relative instruments are neither bills in the proper sense of the term, nor purchased and sold as provided in the scheme for a market, and also as is the actual practice in the U.S.A.

Problems of Over-strained Resources

The real issue, however, does not seem to be that of devising ways of lending money to banks to enable them, in their turn, to re-lend to their own borrowers. It would seem that whatever measures of extension and liberalisation of the so-called bill market scheme may be introduced, the problem of bank credit being out of proportion to banks' deposit resources will remain to be dealt with. It has again been suggested that banks' existing resources may be more usefully employed in making loans, if quick movement of funds between a bank's different offices can be arranged through liberal remittance facilities provided by the Reserve Bank and its agents. In accordance with the recommendations of the All-India Rural Credit Survey, these facilities have already been liberalised. A scheduled bank or a State co-operative bank is now able to remit money free of charge, by draft, mail or telegraphic transfer, twice a week instead of once, as was the case up to 1st November 1955, to the extent of Rs. 5,000, or a multiple thereof, from any place where there is an agency of the Reserve Bank to any account which the remitting bank maintains with the Reserve Bank. Remittance facilities through a scheduled bank's accounts with the Reserve Bank at different places are available free of charge for a minimum amount of Rs. 10,000 and in multiples of Rs. 1,000 in excess of Rs. 10,000. There are other facilities also for remittances at concessional rates. It is possible that these facilities are capable of further improvement.

But again, the question is not simply that of activating banks' existing resources. The disproportion between a bank's resources and advances will not be lessened by a more active utilisation of its resources. It should be understood that the more intensive use of a bank's funds does not correspond with the operation of a quicker turnover (a higher velocity of money). Bank credit, whether built on borrowings from the monetary authorities or on maximum employment of banks' deposit resources, will tend to strain the liquidity of the banking system, unless suitable methods are evolved for impregnating banks' loan-assets themselves with elements of liquidity or ready marketability. Although new concepts of the liquidity of bank assets, and rationalised methods, may improve the liquidity and stability of the banking system, it must be realised, however, that so long as the money supply of the country is not channelled mainly through the banking system and banks' deposit resources consequently enlarged, the danger of uncontrolled and inflationary money in an expanding economy will present a constant threat. The problem before the monetary authorities seems, therefore, to be that of directing the existing flow of money into the banking system rather than creating new money (through loans to banks) on the top of money to be released in the process of planned deficit financing.

Redundant Money Dangers

It is to be noted that the authorities are alive to the danger of redundant money causing mischief. Measures are, therefore, being taken to increase loan resources on the one hand and restrict the availability and cost of loan funds, on the other. Although the restrictions imposed on scheduled banks' advances against rice and paddy, instituted on 17th May, have been withdrawn by a notification dated 14th November, similar restrictions relating to other foodgrains and cotton manufactures introduced on 13th September still remain in force. It is also worth noticing that the cost of loans under the bill market scheme is being steadily raised. The rate of interest went up from the original level of 3 percent to 3½ percent on 1st March, 1956, when the original con-

cession of the refund of half the cost of stamp duty on bills and notes, was also withdrawn. The rate of interest has now been increased to 3½ percent with effect from 21st November, 1956. It seems legitimate, however, to doubt whether a variant of the schoolboy's task of calculating the net supply of water in a tank fitted with one pipe for intake and another for outlet, will achieve convincing results. The recent trends of industrial growth and economic activity in the U.K. are causing misgivings about the success of the dual policy of expansion and contraction, if unaided by other factors needed to sustain confidence and buoyancy.

It is disquieting, therefore, to note that money supply in India circulates largely outside the banking system. In countries with organised money markets, bank deposits account for the greater portion of money supply, but in India legal tender notes continue to be the larger constituent of money supply. The demand deposits portion of the money supply represents little more than 30 percent of the total in India, whereas in the U.S.A. this component accounts for 80 percent. The recent tendencies seem calculated further to accentuate the disparity between bank deposits and notes in circulation outside the banking system. During the period April 1952 to March 1956, notes in circulation increased by Rs. 295.94 crores, whereas cash (including notes and coin) held by scheduled banks, after rising from an average of Rs. 34.68 crores during 1950-51 to Rs. 37.33 crores during 1951-52, fell to Rs. 34.64 crores during 1955-56. Again, cash held in banks' vaults accounts for less than 3 percent of notes and coin in India, compared with about 10 percent in the U.S.A.

Rationalisation of Money Supply

The tendency for legal tender notes to remain outside the banking system is likely to bring about new complications where increased advances under the Reserve Bank's bill market scheme are concerned. A stage may soon be reached where the notes flowing into the banking system out of the issue made in response to Government requirements, and against Government of India securities, may not be sufficient to meet the expanding requirements of the scheme. Although Section 33 of the Reserve Bank of India Act permits the Re-

serve Bank to issue notes against bills of exchange and promissory notes eligible under Section 17 (2) (a), 17 (2) (b) and 18 (1) (1), it appears from the statistics published in the Reserve Bank's monthly bulletins that such bills and notes have not at any time formed part of the rupee securities held in the Issue Department of the Bank. It seems that a further considerable expansion of the facilities under the bill market scheme may require the Reserve Bank to hold eligible bills and notes as part of its assets against note issue. This will involve a change in the hitherto familiar pattern of the asset structure of the Issue Department. But a more significant change involved may relate to the mechanism of the bill market scheme itself. It seems that bills and notes purchased by the Reserve Bank and not held merely as security, can form part of assets in the Issue Department. The scheme may, therefore, need to be modified to allow scheduled banks to hold bills and notes for purchase under Section 17 (2) (a) of the Act. It may be hoped that this change will result not simply in bringing into operation an unused but important provision of the Act, but also to promote a genuine, as distinct from a hypothetical, bill market.

But when all is said and done, the problems of increasing resources for expanding economic activity will require to be dealt with in a more constructive manner. So long as money supply flows largely outside the banking system and banks' deposit resources consequently fail to keep pace with the developing economy, the dangers of over-strained bank resources and of redundant and uncontrolled money, will continue to disturb the planned development of the Indian economy. It seems strange, therefore, that the authorities do not show sufficient awareness of the necessity for providing the requisite conditions to further the confidence of the money-using public in the Indian banking system. The need for a well considered move in this direction has been all the more heightened because of doubts and misgivings created by the increasing emphasis on nationalised banking institutions. It seems high time that the recommendations of the Shroff Committee relating to insurance of bank deposits received proper consideration. The example provided by the U.S.A. banking system should not fail to inspire necessary action.

For maximum payload—

The LEYLAND 'COMET'

It's the only 7½-ton payload chassis made in India!

FAMOUS throughout the world for rugged service over all types of road surface, the Leyland 'Comet' chassis offers exceptional strength, easy handling, low fuel and maintenance costs.

"CAPITAL" STOCKS AND SHARES INDEX*

The Capital Stocks and Shares Index (Base: 1939) has now been brought up to September, 1956. Compared with August, the September indices for Government securities and preference shares show drops of 0.6 points and 0.9 points, respectively.

There were increases in coals 2.6 points, jutes 1.6 points, minings and oils 17.6 points, cements 2.2 points, papers 4.7 points and miscellaneous 11.4 points, while decreases occurred in banks 1.5 points, cottons 18.6 points, engineering 6.0 points, teas 8.9 points and sugars 0.6 points.

Correlating all the factors, the Capital variable yield securities index shows that the index for stock prices in these classes of shares remained unchanged at 294.5 points during September, 1956.

Stocks and Shares

HIGH CARRY-FORWARD CHARGES DEPRESS SPECULATIVE ISSUES

TEA SHARES IMPROVE

Wednesday Evening.
THE stock market continued quiet this week. Speculative shares moved narrowly in response to changes in the international situation but prices fell before today's clearing in response to high budla charges. The only feature among these scrips was Burrakur which was active on interested buying. The carry-forward charge for this counter at the clearing was as high as four annas a share. Indian Irons have been rather steadier, and at one time touched Rs. 33-11. Profit-taking and technical considerations brought the share back to Rs. 33-1 at the clearing, but it is reported that the prices have jumped after hours this evening to Rs. 33-10. Other speculatives were generally depressed. Operators are troubled by a number of factors of which the present shortage of credit in the economy is probably the most important.

The various investment sections were inactive, with the solitary exception of tea. Better auction prices and the news that the Madras plantation award has been stayed have helped to improve sentiment. The prospects before the tea industry are improving considerably now that the crop is almost finished and it is seen that stocks with the main consumers are not high. Details of the Hindustan Lever ordinary share offer have now been released and are outlined on another page of this issue. Government securities continued depressed.

Details of the week's trading follow.

The Government securities market continued quiet and prices were once again marked down. The recent selling pressure appears to have subsided, however, considerably and with the exception of one or two loans, small buying enquiry was noticeable. Three percent Conversion Loan 1986 was marked back by As. 3 to Rs. 73-8, but closed better at Rs. 73-9. In short-dated loans, both 3% 1957 and 1958 met with enquiry at their previous quotations of Rs. 99-12 and Rs. 99-9 respectively. In medium-dated loans, 3% 1959-61 had sellers at Rs. 97-15, while 3% 1963-65 was traded at Rs. 94-4-6. Three percent 1964 was fractionally easier at Rs. 94-5; 2½% 1961 changed hands at Rs. 93-7 and 2½% 1962 was asked for at Rs. 93-14 with few declared sellers. In National Plan loans, 3½% 1961 had buyers over up to Rs. 99-5 due to the approach of the interest date (1st December, 1956), but in contrast, 3½% 1964 met with sustained selling pressure and was marked back to Rs. 98-5. 3½% 1965 had small buyers at Rs. 98-6-6 and 3½% 1967 was quoted at Rs. 99-6. In long-dated loans, 3% 1966-68 appeared to have stabilised at Rs. 92-4, but 3% 1970-75 continued weak and closed As. 4 easier at Rs. 87-12; 3½% 1974 was unchanged at Rs. 98-8.

There was a substantial turnover in State loans as buyers were attracted by the low level of prices. Enquiry was entirely confined to 4% 1968 issues with practically no business reported in other State loans. Four percent U.P. 1967 was taken at Rs. 97-15-6 while 4% Madras 1968 had buyers at Rs. 97-15. Four percent Orissa 1968 was reported at Rs. 97-11 and 4% Punjab at Rs. 97-11-6. Four percent West Bengal 1968 had sellers at Rs. 99-8 as did 4% Bombay 1970 at Rs. 99-10.

Except for a few enquiries for selected preference shares, this section suffered from lack of business. In the miscellaneous group, Alkali & Chemical were offered at Rs. 101-8 and there was a small enquiry for British India Corporation at Rs. 121. A small lot of Bengal Timber was reported at Rs. 32-12 and Calcutta Electric were marked at Rs. 10-13. Burn 6% were bought on investment account at Rs. 115 and Indo-Burma Petroleum were marked at Rs. 104. There was a small enquiry for Jardine Henderson at Rs. 66 and New Victoria were crossed at Rs. 5-11. Orient Paper second were done at around Rs. 71 and Rohtas Industries "B" at Rs. 65. Indian Iron & Steel met with selling pressure and were depressed further to Rs. 100. In jute, Anglo India changed hands at Rs. 102 and Goupreore at Rs. 86-8. Standard Jute came to hand at Rs. 86.

In the banking section, Punjab National met with selling pressure and were marked down from Rs. 53-8 to Rs. 49-12. United Commercial Bank were eight annas lower at Rs. 55 and United Bank were shaded at Rs. 36-12. United Bank of India "D" shares were transacted at Rs. 4-8.

No business was reported in railway shares during the period under review.

In cotton, Elgin were better at Rs. 29 while New Victoria were slightly easier at Rs. 2-7. Kesoram were unchanged at Rs. 16-12 as were Cawnpore Textiles at Rs. 9-2.

Business in coal shares was on a much reduced scale. Burrakur as usual were active and were taken up to Rs. 18-15 against an opening quotation of Rs. 17-12. Amalgamated were unchanged at Rs. 20-12 as were Bengal at Rs. 48. Bhagora changed hands at around Rs. 6-2 and Bharat Collieries were marked at Rs. 7-5 c.d. Central India were slightly better at Rs. 7-2 as were Western Bengal at Rs. 6-4. Seepore met with small enquiry at Rs. 29-12 and there was a sharp rise in South Karanpura from Rs. 8-12 to Rs. 10; profit-taking today brought the price down to Rs. 9-8. Talcher

were crossed at Rs. 3-1. In spite of the firmness of the finished goods market, jute shares continued their downward trend as will be seen from the following table:

	Opening 15th Nov. 1956	Closing 21st Nov. 1956
Agarpara	11 0	10 14
Anglo India	164 0	163 0
Cheviot	180 0	175 0
Bally	182 0	175 0
Birla	16 14	16 12
Kinnison	141 0	135 0

Contrary to the general trend, Howrahs were slightly better at Rs. 22-6 as were National at Rs. 23-8.

Only two transactions were reported in electric supply shares, namely, in Calcutta at around Rs. 13-3 and Jubbulpore around Rs. 14-10.

The only steady feature in the sugar section was Ramnugger which improved from Rs. 24-10 to Rs. 25. Belund were easier at Rs. 11-10 as were Cawnpore at Rs. 18-8. Dyer Meakin were wanted at Rs. 6 and Darbhanga changed hands at Rs. 22-4. Shree Krishna Gyanoday were done at Rs. 12.

In the engineering section, Indian Iron & Steel shares were, on the whole, steadier than last week and at one time were taken up to Rs. 33-11. Profit-taking, however, on settlement considerations brought the price at the close down to Rs. 33-1. Britannia Engineering, after being sold down to Rs. 13-13, recovered today to Rs. 15. Braithwaite were quiet at Rs. 27-4 and Burn at Rs. 37-1. Indian Standard Wagon were marked back from Rs. 222 to Rs. 218 and Jessop reacted from Rs. 36 to Rs. 35-8 as did Richardson & Cruddas from Rs. 27 to Rs. 26-6. Textile Machinery were done up to Rs. 22-11, but later encountered selling pressure and the price was marked back to Rs. 22-3.

In paper, Orient were marked down from

RELAPSE IN STOCK MARKETS

RENEWED UNCERTAINTY OVER WORLD SITUATION

London, 21st November.

ALTHOUGH the stock markets rallied prior to the week-end on a rather more hopeful interpretation of the international situation, prices receded again in the absence of support and most sections recorded losses on balance. Oils were the chief sufferers, but all other sections were affected. Following the week-end news of Sir Anthony Eden's indisposition, international political developments, and the possibility of a fall in industrial production due to the shortage of oil there was renewed uncertainty and softness. A further restricting factor was the spate of new issues which appeared suddenly after being held up as long as possible because of the Suez situation. Middle East oils lost ground, but some western hemisphere oils improved. Gilt-edged followed the later downward movement of the rest of the market. Foreign bonds were generally quiet and dull throughout. Industrials fell back on a broad front. Shipping shares rose exceptionally in response to the advance in freight rates. Gold shares attracted selective support and were firmer on the week. Coppers also were firmer. Rubbers and teas fluctuated within narrow limits, but a feature

here was a substantial rise in Hunwal Tea following the directors' circular which stated the reasons for which an offer of £300 a planted acre had been refused.

The Money Market

There was a further tightening of the credit situation in the London money market during the past week. Early conditions were affected by a lack of maturities, and on Wednesday when a large bill maturity transpired, there was no actual benefit, because recent operations by the authorities had relieved the banks of the bulk of the bills held by them and there was, therefore, no expansion in the credit base. Difficult conditions were maintained throughout the rest of the week, although better conditions were experienced on Friday. In view of the shortage of funds, the rate on Monday continued at the high level of 4½ percent to 4½ percent. The bill business was held in check by the tight cash position with February hot bills sold at 4-15/16 percent. Applications for £190 million worth of 91-day bills totalled £299,710,000, and were allotted at the average rate of 100s percent compared with 99s 10.86d percent in the previous week. Applications for £90 million worth of 63-day bills totalled £96,300,000 and were allotted at the average rate of 100s 10.30d percent against 99s 10.95d in the previous week. This week £290 million worth of bills are on offer, comprising £210 million worth of 91-day bills and £80 million worth of 63-day bills. The Bank of England return for the week ended 14th November

showed that notes in circulation were about £6 million higher at around £1,892 million, while bankers' deposits were unchanged at around £238 million.

U.S. Federal Reserve Return

The U.S. Federal Reserve return for the week ended 14th November shows gold stock unchanged at \$21,910 million. Foreign deposits rose by \$52 million to \$342 million, while foreign investments fell by \$105 million to \$3,625 million. The Federal Reserve bought \$105 million worth of bills and \$1 million worth of certificates, but sold \$18 million worth of bills under repurchase agreements. Total discounts and advances rose from \$188 million to \$375 million, while the aggregate of excess reserves of member banks fell from \$365 million to \$139 million. The daily average excess reserves of member banks rose by \$69 million to \$643 million, while their average borrowings rose by \$14 million to \$942 million. Business loans of the New York city banks rose by \$116 million to \$11,145 million, compared with a rise of \$118 million to \$8,928 million in the corresponding period a year ago.

Paris Gold Falls

The Paris gold market slowly moved down to a lower level. The absence of buyers, in spite of the international tension, was the main reason for the trend, but in the later stages, a brighter view of the Egyptian situation also contributed to the price decline. A steadier tone prevailed in the last session, in spite of a further decline in fine gold.

Demand for Ready Rubber

Demand for spot and nearby parcels was the chief feature of trading in the rubber market, ring the week ended 15th November. Rubber, was believed, was wanted mostly in connection with Russian orders, but confirmation was lacking. contributory factor in the firmer trend was an increased demand from the Continent, especially for afloat parcels of Malayan rubber, which traders attributed partly to a report that the Indonesian dock workers were refusing to load supplies for the U.K. and France. By the end of the period, parcels were at a premium of about 4d a lb. over the November shipment. No. 1 R. S. S. on the spot gained nearly 2d while most forward deliveries closed about 3½d a lb. higher on balance, although final quotations were slightly below the best. Supplies of sole crepe, now available and in prospect, were still short of current demand and sellers had no difficulty in maintaining their recent quotations of 46d a lb. for ½ inch smooth No. 1 on the spot.

U.S. Rubber Imports

The United States imported 40,185 long tons of natural rubber during the month of September, according to the Department of Commerce. Imports of latex amounted to 2,790 tons.

World Sugar Prices at New Peak

A wave of sugar buying, prompted by the Middle East situation, has taken the sugar price in the U.K. and abroad to the highest levels for years, according to sugar traders in London. The average price calculated by the British Sugar Terminal Market Association on Monday rose to 39½s a cwt, which is a rise of 6½d over the past week and the highest figure recorded since the price calculation started earlier this year. In New York, contracts for supplies to be made available next March were made on Monday up to 3.91 cents a lb. against 3.84 cents on Friday. This followed the rise of 14 points on Friday itself. World prices for spot supplies of sugar, traditionally reported from New York, have risen sharply over the past week. The Cuban raw sugar spot price which last Friday was quoted at 3.80 cents was only 3.30 cents a week before. Messrs. Czarnikows in their latest circular said that the Middle East crisis had brought a larger volume of business to the market than is normally expected this time of year.

U.K. Textile Delegation Postpones Visit

The visit of the Lancashire cotton delegation to India for talks with Bombay millowners on cloth imports into the U.K. has been postponed until January, according to trade circles. The reason for the postponement is the current international situation. The delegation was to have flown out to India this week to try and persuade Indian industrialists to agree to limit the volume of duty-free cloth imported and retained in the United Kingdom.

Petition on Cloth Imports

The move for organising a petition to the Government urging restrictions on foreign cloth imports is not now opportune. This is the view which the 220 delegates representing Lancashire mills workers held at the recent conference in Manchester. Mr. Lewis Wright, General Secretary of the Weavers Amalgamation, pointed out that a cotton board mission was about to go to India and Hongkong to seek the co-operation of the textile industry in those countries in solving the import problem facing Lancashire. If the mission reported failure on its return, then it would be time to consider organising a petition.

INCREASED OUTPUT OF INDIAN IRON ORE

The total output of iron ore in India increased from 318,583 tons in August, 1956, to 332,014 tons in September, 1956, according to official statistics released by the Chief Inspector of Mines, Government of India. Returns received from 107 mines for the month of September, 1956, show despatches totalling 232,753 tons to the iron and steel plants and 129,261 tons to the export market. The reported stocks at the end of the month amounted to 1,333,928 tons.

New Delhi

IMPORT AND EXPORT ADVISORY COUNCILS MEET

FOREIGN EXCHANGE SHORTAGE DESCRIBED AS NOT ALARMING

(FROM OUR NEW DELHI CORRESPONDENT)

MR. MORARJI DESAI joined the Union Cabinet last week. Soon afterwards, he presided over the six-monthly meetings of the Import and Export Advisory Councils. Inaugurating the meeting of the Import Advisory Council, he warned: "We do not know what impact conditions in the Middle East will have on our import and export trade. There is also the consideration of the foreign exchange which has to be raised to meet the commitments in the second five year plan. It may be necessary to control and curtail imports. I hope we will have your co-operation in this matter." The President of the Federation of Indian Chambers of Commerce and Industry was ready with a scheme to cut imports by Rs. 50 crores, with restrictions on fish, fruits, vegetables, liquor, tallow, chemicals, drugs, medicines, cutlery, hardware, dyes, paper, cotton and art silk yarn. The Joint Secretary of the Commerce Ministry, Mr. K. B. Lall, elucidating his Minister's observations, said that it would be wrong to interpret from the discussions that the foreign exchange situation was alarming. What had happened was that, because of the planned increase in imports of some commodities, the imports of a large number of non-essential items had to be pruned slightly more than before. Rounding up the discussions, Mr. Morarji Desai said that there was no reason for the people to become panicky about foreign exchange. There were difficulties, but they could be overcome provided "we work together and realise the necessity of adjusting ourselves."

the current year, we exported as much as 356 million lbs, as against 260 million lbs in the corresponding period of 1955.

Tea Promotion

"The external price of tea is fortunately tending to rise again and we are confident that tea will continue to make its rightful contribution to our foreign exchange resources. A ceiling of 160 million lbs has been fixed for supply to the London market and it is hoped that this will adequately cover the requirements of the customers who depend on that market. A goodwill mission led by the Chairman of the Tea Board, is at present touring the United States. This mission, we hope, will succeed in helping Indian exporters and American importers of tea to co-ordinate their efforts to promote sales in the United States. The Tea Board is also paying increasing attention to the west Asian markets and is proposing to set up a small promotional unit in Australia. We also expect to be able to sell larger quantities of tea to the Soviet Union and to some of the countries in eastern Europe. You must have seen the report of the Plantation Enquiry Commission. The recommendations made by the Commission are at present being studied by the Government and I will be grateful for your advice on them.

"Our jute manufactures have not fared as well as we would have liked them to. The recent increases in the export duty on raw jute by Pakistan have not been particularly helpful. In our

Addressing the Export Advisory Council, the Union Minister for Trade, Mr. D. P. Karmarkar, said: "The actual performance of the export trade in the first nine months of the current year has not been altogether reassuring. During this period, we have earned in all only Rs. 439 crores. This compares unfavourably with the Rs. 457 crores earned during the corresponding period of last year. The comparatively low earnings appear to be partly due to a fall in the external price level of some of the commodities that figure in our export trade; the index of declared values for the half-year ended June 1956 stood at 91, as compared with 94 for the corresponding period in 1955. The consequences of the downward trend have been in a small measure offset by the improvement on the quantitative side; the volume index stands at 109 for the first half of the current year, as against 108 for the like period in the previous year.

"The trends in value and volume indices must cause us some concern, for if external prices do not improve, we may be hard put to it even to maintain our performance on the quantitative side. With the increasing pressure of home demand on our products, the internal price level is tending to rise. If this pressure continues to increase, and as a result our internal prices tend to get out of step with external prices, it is not unreasonable to entertain the apprehension that our export promotion drive may be put in jeopardy. It is, therefore, necessary for us to give some thought to what we should do to overcome the difficulties inherent in our present situation and to create conditions for maximising exports. It will perhaps help us to think out some solutions for our difficulties more concretely if we review the performance of each of our major earners of foreign exchange. The performance of tea, which competes with jute for primacy of place in our export figures in 1956, was better than in 1955. In the first nine months of

plans, we have set considerable store by the export of cotton piecegoods. But our recent experience has not been particularly happy. During the first nine months of 1956, we have exported 538 million yards, valued at nearly Rs. 4½ crores as compared with 581 million yards, which earned almost Rs. 4½ crores in the corresponding period of 1955. It is somewhat comforting to note that while the export of mill-made piecegoods has gone down, the shipment of handloom cloth has remained unaffected; 46 million yards valued at Rs. 6.69 crores have been exported in 1956, as compared with 45 million yards valued at Rs. 6.37 crores in the corresponding period of the previous year.

Rise in Cloth Prices

"The two factors which are mainly responsible for the difficulties that face our exporters are the growing pressure of home demand and the upward trend in prices. The Government has recently taken some decisions which ought to make it possible for us to export larger quantities in the near future. You are aware of the decisions announced some time ago in regard to the expansion of loomage, particularly for export. You are aware also of the recent increases in excise duties. While steps are being taken to increase the availability of raw material for the textile industry, we have participated in the triangular arrangement linking the supply of cotton by the United States of America with the sale of textiles by us to Burma. We are hoping that it will be possible to arrive at a similar arrangement with Indonesia.

"When I survey the structure of our export trade, I sometimes feel that the activities of our traders are not adequately organised and co-ordinated to produce the best possible results for our country. I refer in particular to methods of contracting, to facilities for survey and for quality control, and to adequate arrangements for arbitration for the settlement of disputes between im-

porters and exporters. On our part, we are more than willing to lend a helping hand. You must have seen the very valuable report recently submitted by the Export Credit Guarantees Committee. This report is engaging the Government's earnest attention. In this connection, you will be glad to hear that an understanding has recently been reached for the bulk supply of large quantities of iron ore to the steel mills in Japan. We have taken steps to increase the usefulness of our trade representatives abroad and I hope you are finding their reports of some value in your efforts to promote exports. In the Ministry, we have set up a Foreign Trade Board which meets once in three weeks to co-ordinate the activities of the different wings of the Ministry engaged in disseminating commercial intelligence, in publicising our export wares, in removing impediments to the growth of our trade and in energising and guiding the activities devoted to export promotion."

Avoiding Scarcity

Mr. Morarji Desai, Minister of Commerce and Consumer Industries, asked representatives of the trade to see that "no scarcity develops" in any commodity, so that the tendency of internal prices to rise may be checked. If this could be done, he told the Export Advisory Council, "we can improve our export trade also." The last nine months' export trade had not been "quite a profitable transaction, to my mind." Exports had not been as good as they were in the previous year. Mr. Desai prefaced his brief speech by saying that he could speak with "a little more confidence" about export problems, because "I have become a little wiser about these after the meeting of the Import Advisory Council" on the previous day. "The problem that faces us today is the problem of how best we can improve our exports without in any way causing difficulties to our own people and earning a maximum of foreign exchange. It is necessary to see that our exports increase because it is vital for the implementation of our second plan."

The Plan for 1957-58

The Planning Commission is getting ready for the National Development Council meeting here early next month. The Council will discuss the plan for 1957-58. The Planning Commission recently asked Central Ministries and State Governments to send in their proposals for inclusion in the 1957-58 plan. It was emphasised that only those proposals would be considered as had already been included in the second five year plan, or had been specifically accepted by the Planning Commission in considering proposals for inclusion in the plan for 1957-58. The Planning Commission proposes the following general scheme of priorities:

1. Schemes in the plan which have not yet been commenced will be considered after adequate provision has been made for continuing schemes.
2. Schemes which are calculated to earn or save foreign exchange will be preferred.
3. High priority is to be given to training schemes. Training programmes should be undertaken at the maximum rate administratively feasible.
4. High priority is to be given to schemes for increasing or facilitating an early increase in production in agriculture and industry.
5. High priority is to be given to schemes for removing transport bottlenecks and ensuring the early expansion of transport facilities, especially in areas in which the demand for transport is likely to increase on account of the plan.
6. High priority will be given to schemes for utilising resources already created, namely, new irrigation, new power, installed capacity, etcetera.
7. Programmes relating to industry, transport and power must be properly dovetailed into one another. Programmes in these fields will be viewed together.
8. Schemes in which a substantial proportion of the cost is found through the provision of labour and other resources by local communities will be preferred. This applies especially to the States.

This list is not, of course, exhaustive, but it is intended to reflect the present requirements of the economy. Proposals which are not adequately covered by these suggestions will have to be examined on their merits.

Sterling Balances

It seems that the Planning Commission, and especially the Finance Minister, Mr. T. T. Krishnamachari, are worried about the resources for the plan. They have reason to be worried. India's sterling balances have been declining rapidly, as the following figures show:

	Rs.
At end of March, 1956	746 crores
At end of September, 1956	615 crores
At end of October, 1956	582 crores
On 9th November, 1956	560 crores

The Finance Minister has repeatedly said that price stability is essential for financing the plan as far as foreign exchange is concerned. But the Indian National Trade Union Congress, at its session here, advocated a general rise in wages which would inevitably raise prices.

State Plans

The Planning Commission has had a series of discussions with States' representatives, at which tentative ceilings for State plans were suggested, on the assumption that they would be fitted into an overall provision of Rs. 395 crores, including Rs. 21 crores for Part C States. An analysis of current State budgets, however, shows a total provision of about Rs. 442 crores for development. It is presumed that this provision will have to be reduced to Rs. 395 crores. On the basis of the budget docu-

Probably not—unless, of course, you're building railway wagons! Bogie bolsters provide the pivot point and carry the load too. Naturally we, at Mukand, are interested in bogie bolsters because we manufacture them. But they are only one of the many items we cast for the railways. Among the others are: buffer plungers and casings, axle boxes, cross heads, drag castings, bogie columns, steam elbows, brake hanger compensating beam brackets, etc.

The Second Five Year Plan calls for a total of 1,20,869 new locomotives, coaches and wagons. All this means that there will be a vast demand for railway parts. The Mukand steel foundry—one of the few casting these—is working round the clock to meet the needs of Indian Railways. By 1958 we plan to produce at least 7,800 tons of steel castings annually. And as our expansion programme gathers momentum we at Mukand will contribute more and more to India's industrial progress.

ments, the resources that State Governments can raise for financing their plan works out as follows:

	Rs. crores
(i) Balance from revenue account	1
(ii) Net receipts of loans from the public	44
(iii) Share of small savings	8
(iv) Contribution from miscellaneous items on capital account	—35
Total financial resources that States can raise for their plans	18

Some State budgets had not taken credit for the increased receipts from additional measures of taxation which were introduced at the time the budgets were presented. Similarly, while State budgets show a total receipt of Rs. 8 crores from their "share of small savings," the Central budget gives a figure of Rs. 18 crores. Actual net receipts from loans from the public have also been larger than those shown above. If allowance is made for all these items, States' resources for the plan would be as follows:

(i) Balance from revenue account	12
(ii) Net receipts of loans from the public	82
(iii) Small savings	18
(iv) Provident fund and other deposit heads	—35
Total financial resources that States can raise for the plan	57

Central Assistance

Assuming that the outlay on State plans is reduced to Rs. 395 crores and that States can raise Rs. 57 crores as shown above, the gap between the plan outlay and resources would be Rs. 338 crores. It is obvious that the whole of this gap cannot be met by Central assistance. The various Central Ministries have so far intimated allocations of Central assistance amounting to about Rs. 223 crores. Additional loan assistance for programmes of permanent improvement in scarcity areas, electrification schemes for employment relief and for large and medium industries are at present being considered. The figure of Rs. 223 crores does not include the assistance that will be given to Part C States. It is also understood that the Ministry of Finance has provided ways and means advances to States of about Rs. 50 crores in its budget. Part of this advance may be for development purposes and may therefore, form part of the Central assistance. The position on this is, however, not quite clear. While it is difficult to give any definite figure for Central assistance at this stage, it appears that the total this year might be something like Rs. 290 crores. Thus, Central assistance and the States' resources together would amount to something like Rs. 347 crores (Rs. 290 crores plus Rs. 57 crores). The gap between the plan outlay and the resources would thus work out to Rs. 48 crores (Rs. 395 minus Rs. 348 crores). The main reason why there is such a large gap is that a number of States have provided for large developmental expenditure outside the plan, both on revenue and capital accounts. It has been suggested that they reduce these non-plan outlays. Some with whom discussions have taken place have already agreed to make adjustments.

Outlay of Centre

The outlay on the Centre's plan for the current year works out to Rs. 363 crores. The estimate of financial resources is as follows:

	Rs. in crores
1. Savings from current revenues	68
2. Contribution from the railways for the plan	39
3. Net receipts of loans from the public	77
4. Small savings (net of payments of shares to States)	52
5. Provident funds and other deposit heads	—23
6. External assistance	82
7. Transfer of funds from the Centre to the States	—290
8. Balance available for the plan	3
9. Deficit financing	360
Total resources	363

In working out the balance for the plan from current revenues, the estimated additional yield from the recent changes in the excise duty on cloth (Rs. 17.5 crores) and from the export duty on manganese ore (Rs. 2 crores) has been taken into account. Similarly, in the case of loans from the public, the estimate of net receipts has been worked out on the basis of actual subscriptions to new loans floated by the Central Government in the current year. The minus figure of Rs. 26 crores under "Provident funds and other deposit heads" is explained mainly by the provision of Rs. 50 crores made in the Central budget for ways and means loans to States. Apart from this provision for ways and means, Central assistance for State plans in the form of grants and loans has been tentatively taken as Rs. 290 crores. Taking into account the adjustments indicated above, the deficit in the Centre's resources comes to about Rs. 360 crores, as compared with Rs. 356 crores shown in the Central budget.

Rourkela Steel Plant

The Minister for Iron and Steel, Mr. T. T. Krishnamachari, stated in the Lok Sabha that the contract for the steel melting shop for the Rour-

kela plant—where the L.D. process will be used for 75 percent of the output—has been given to the German firm of Krupp. Contracts have been concluded with 16 German firms for the rolling mills and ancillaries. The supply and erection of the power plant has been entrusted to Siemens of Germany. Tenders for the coke oven by-product plant, the grey iron foundry and the tonnage oxygen plant have been received and contracts will be concluded shortly. The project report for the development of the iron ore mines has generally been accepted, and preliminary work, like clearing the site and recruitment of staff, has commenced. In the township, 663 houses have been built and 1,489 houses are in various stages of construction. Preliminary work, such as excavation for the foundations, has commenced on the coke ovens and blast furnaces. There are 1,149 regular employees and 1,039 work-charged employees; 492 skilled workers and 25 engineers are under training in India and 68 engineers are under training in Western Germany.

Equipment for Bhilai Project

Eight consignments of equipment, structural steelwork, pipes and fittings have been received from Russia. Tenders have been invited in India for construction equipment, certain items of transport and tools and tackle. Civil engineering construction in three major zones—the blast furnaces, the open hearth plant and the rolling mills—has been entrusted to a reputable Indian firm. Water and power facilities for construction have been laid. The Madhya Pradesh Electricity Board has taken up the construction of a thermal power station in Korba to supply power primarily to the steel works. The Board has given an assurance that power will be available by August 1958. The location of the iron ore mines, dolomite quarries and limestone for the blast furnaces has been settled. Construction of a railway line from Bhilai to Dalli-Rajhara, the site of the iron ore mines, is in progress.

A broad lay-out of the township has been approved. Thirty-two bungalows, a hostel with 84 rooms, a double-storeyed building with 60 rooms and 50 blocks of permanent staff quarters have been constructed, and 250 staff quarters are in various stages of construction. Tenders have been received for another 600 quarters and 100 small bungalows. Two labour camps, temporary administrative offices and three storage sheds are ready. Thirty-four Russian experts, 88 Indian officers and 466 other staff are now employed in Bhilai. In addition to the first batch of 50 trainees, another 30 engineers are now under training in Russia.

Durgapur Steel Works

The final contract with the Indian Steelworks Construction Company of Britain has been concluded. Briefly, the structure and costs will be as follows:

	Rs. (Lakhs)	£ (Million)
Cost of supplies of plan and equipment f.o.b.		56.06
Sterling component of services		3.18
Technical services	988.76	
Civil engineering construction equipment and civil engineering works	1,384.24	
Erection of cables	161.52	
Target price for Indian plant and Indian work	2,084.54	
Shipping and insurance (estimates)		4.91
Customs duty	426.85	
Transport from dock to site (estimates)	148.45	
Works insurance	51.55	
	5,246	64.15
Or Rs.	85.54 crores	
Grand Total: Rs.	138.00 crores	

Under this arrangement, the company is responsible for the supply, construction and erection of the plant in its entirety. The construction of the township and certain works outside the perimeter of the plant, such as for water supply, will be the responsibility of the Government of India. Sixty houses are in various stages of construction. A temporary water supply scheme has been prepared. The Damodar Valley Corporation has finalised contracts for the construction of a big thermal power station which will be ready to consume the gases from the steelworks and supply the power requirements of the steel plant from March 1959. There are five officers and 199 other staff in Durgapur. Besides, there are two technical representatives of the consulting engineers.

Loans from I.C.I.C.

Replying to questions in Parliament, the Finance Minister said that during 1955 the Industrial Credit and Investment Corporation had underwritten public issues of shares for a total sum of Rs. 1 crore, and had made loans amounting to Rs. 10.25 lakhs. The industries assisted were concerned with the manufacture of paper, electrical equipment, fuel injection equipment, chemicals and equipment for the textile industry, the refining of sugar and metal ores, and cotton spinning.

I.F.C. Assistance

Replying to another question, Mr. Krishnamachari said that five applications had been received

from Punjab State for aid from the Industrial Finance Corporation during the period 1st July, 1955, to 30th June, 1956. Three of these had been accepted. The amounts sanctioned and disbursed were: the Janta Co-operative Sugar Mills Ltd., Bhogpur, Rs. 35,000 and Rs. 30 lakhs (interim loan); the Haryana Co-operative Sugar Mills Ltd., Rohtak, Rs. 35 lakhs and Rs. 34 lakhs (interim loan); and the Arun Textile Mills Ltd., Khanna, Rs. 20 lakhs.

Order for Radio-Telephone System

An order for a very high frequency radio multi-channel telephone system linking Jamnagar with Rajkot, and Bhavnagar with Surat, has been placed with a British wireless and telegraph equipment manufacturing company by the Government of India on behalf of the Western Railway. The system, with a potential capacity of 48 two-way telephone circuits between Jamnagar and Rajkot, and 24 between Bhavnagar and Surat, will be equipped initially to provide four circuits. The Bhavnagar-Surat link is some 58 miles in length, with no intermediate stations.

Dry Dock in Visakhapatnam

The project report for the construction of a dry dock in Visakhapatnam, prepared by Messrs. Rendel, Palmer and Tritton of the U.K. has been accepted. The firm has been appointed as consulting engineers for the project. It will be paid a lump sum fee of £40,000 and no separate fee will be given for the preparation of the project report. The estimated expenditure for the construction of the dry dock is Rs. 2.15 crores. The dry dock is expected to be ready by December 1959.

Farm Products from U.S.A.

Two ships bringing food and other products from the United States arrived in India last week. The commodities came under the Indo-U.S. agreement concluded in August this year. This agreement provides for the largest single transaction ever entered into with any country under the U.S. Agricultural Commodity Programme. It is the largest single transaction ever concluded between India and the United States, surpassing even the 2 million ton food loan of 1951. The new programme involves over \$360 million (Rs. 1,728 million) worth of commodities, weighing more than 4 million tons. Wheat and cotton are the main ones, the others being rice, tobacco and dairy products. They will all be shipped within the next two and a half years. The American Charge d'Affaires, Mr. Frederick Bartlett, said in this connection: "This agreement would seem to be one of those happy arrangements which combine rational economics with goodwill in a way which can only benefit both countries. India purchases these products for rupees and gains an additional supply of agricultural commodities. India's purchase of this additional supply will move forward her plan for meeting the consumption requirements of her people and provide a reserve for emergencies—a stabilising reserve against famine and its companion, very high prices. The United States secures the opportunity to assist a friend, and at the same time to make a constructive, beneficial use of its own present supplies. By far the largest portion of the rupees received from purchase will be loaned to India for economic development in pursuit of her five year plan. This sum, over \$234 million (Rs. 923 million), will be loaned on a long-term repayment basis. In addition almost \$55 million (Rs. 264 million) will be granted to India to assist in its great development effort. The remainder, some \$72 million (Rs. 345 million), will be used for various worthwhile and constructive purposes by the United States in India".

U.S. Trade Missions

Five trade missions are being organised in Washington to visit areas in south and west Asia and Latin America to seek means of increasing trade between those regions and the United States, it is learned. It is expected that the first of these newly-organised trade missions will visit Burma, Malaya and India. The tentative date for their departure is 1st February, 1957. They are expected to spend about six weeks in each of the three countries.

COST OF MILITARY ACTION IN SUEZ AREA

EFFECT OF SHIPPING SHORTAGE ON EXPORTS

(FROM OUR LONDON CORRESPONDENT)

IT seems to be virtually impossible to discuss anything these days without linking it specifically with the Middle East situation. That was certainly what happened to the economic debate in the House of Commons. The inevitable result was that it produced little information or clarification either of the present economic position or of the prospects for the future. For the Opposition, Mr. Harold Wilson concentrated his attack on the consequences which might be expected from the Suez action—which he felt sure Mr. Macmillan had supported wholeheartedly—and which he listed as increased costs of raw materials and foodstuffs; a big increase in freight rates; diminished exports; loss of oil supplies, possibly to the extent of producing industrial paralysis and consequently unemployment; and the almost inevitable boycott of British goods in Middle East markets. It was Mr. Maudling, the Minister of Supply, and not the Chancellor of the Exchequer who spoke first for the Government, and he accepted only two of Mr. Wilson's anticipations, the effect on exports of a shipping shortage (which would also affect Britain's competitors) and the loss of trade to the Middle East. For the rest he asserted that Mr. Wilson had been far too gloomy, and definitely unhelpful and untruthful in his reference to the possibility of devaluation. The cost to the Exchequer during the present financial year of military operations in the Suez Canal area will be between £25 million and £45 million—a big sum, but not big enough in Mr. Maudling's opinion to upset the disinflationary balance of the April budget. This was later reaffirmed by Mr. Macmillan when he wound up the debate, and for confirmation that the Government's economic policy was working reasonably satisfactorily, he referred to the October trade figures and the conclusions which might be drawn from them. Certainly, with the balance of visible trade going strongly in Britain's favour and personal savings increasing as they have been doing recently, there is at least a reasonable hope that the Government's confidence is not unjustified.

On the other hand, it is quite impossible at the moment even to estimate the actual losses which this country may suffer as a result of the closing of the Suez Canal and Colonel Nasser's apparent determination to complicate rather than simplify the negotiation of a settlement. Mr. Macmillan resolutely refused to do so. A reasonably early solution of the Middle East problem would leave us no worse off than we were before as a result of our other economic difficulties. Overall, the Government's measures have proved, and are proving, successful. What might happen in the future, however, is anybody's guess—and, as Mr. Maudling pointed out, this must be considered against what might have been had Britain and France not acted when they did.

Record Exports in October

As far as the Commons debate on the economic situation was concerned, the provisional figures for overseas trade in October came as the most welcome support to the official spokesmen. The volume rose sharply and the visible trade gap was much smaller. Exports reached a new record last month at £294.9 million. This was £11 million higher than the May total, the previous record month, 14 percent more than the monthly average for the first nine months of the year, and £72.6 million above the September figure. Exports in October are normally high, but last month covered the unusually long period of 28 working days. In spite of a sharp rise in imports, the adverse trade balance fell to £46.7 million. This was about £15 million lower than in August and September, and £6 million below the monthly average for the first nine months. Imports last month at £34.3 million were the highest since March last year and 9 percent above the monthly average for the January-September period. They compare with £295.2 million in September and a monthly average of £334.3 million in the last quarter of 1955. Dollar market sales at £41 million also improved substantially last month, excluding a further £2.8 million silver repayment to the United States, they were 18 percent above the monthly rate for the first nine months of the year. The best results were again in the U.S. market, where exports were worth £24.7 million. This was 24 percent above the monthly rate, compared with exports to Canada of £16.3 million, which were only 11 percent above the monthly average this year.

Bill Against Dumping

The first step towards the introduction of an Anti-Dumping Bill, foreshadowed in the Queen's speech at the opening of the new session of Parliament, was taken last week. The memorandum accompanying the usual Ways and Means resolution explaining the Bill proposed powers which the Bill will confer "will be to impose Customs duties (chargeable in addition to the full amount of any other duties to which the goods concerned may be liable) on imported goods of a kind which, in the opinion of the Board of Trade, have been dumped or assisted by a subsidy." A Government department, "or other authority," is to be given the function of deciding whether there has been dumping or the giving of a subsidy. The term "subsidy" is not to extend beyond its accepted

meaning—money or its equivalent given to traders or producers by a Government or other authority—to cover controls on the export of raw materials used in the production of goods for export. In any definition of the term "fair market price," no account is to be taken of the effects of any such controls. Goods are to be regarded as dumped if their "export price" is less than their "fair market price" in the country in which they originate or from which they were exported to Britain. To prevent evasion, the country of origin must be defined in such a way that goods which have been subjected to a minor process of manufacture since they left a country will still be held to have originated in that country. The resolution authorises provisions to be made for the allowance of drawback of duty and for other relief from duty. The Government will be able to provide that the duty paid on any goods does not exceed either the effect of the subsidy or the margin of dumping.

Lancashire Searches for Efficiency

Whether or not this legislation will meet the demands of Lancashire and of other industries affected by cheap imports remains to be seen, but it is good to learn that meantime the cotton industry is pursuing its search for rationalisation and greater efficiency of production. A preliminary announcement last week records that agreement has been reached between the Master Spinners' Federation and the Cardroom Amalgamation as a result of which the spinning section should be able, given full co-operation on both sides, to make a substantial advance in ensuring more efficient production and better prospects of continuous employment. Full details will not be available until 11th December, but it appears that employers are to be strongly recommended to adopt fair working conditions for an up-to-date industry and to develop modernisation on lines which provide conditions equal or superior to those stipulated. Workers are to be asked to accept as an alternative to that provided by the Aronson List a wage structure based on work study and intended to ensure the most economic use of operatives and machinery. Double-day shift working will be permitted on the basis of 38½ hours for a five-day week, the payment to be at the 45-hour rate for the shorter period, so that the shift premium will be 10.1 percent. This compares with one of 20 percent where payment is at the 45-hour rate for the 37½-hour week. Hitherto normally operated on double-day shift working. Under the new arrangements, it should be possible to make better use of the improvements in plant and machinery which have already been carried out and to derive greater benefit from the recent recovery in the demand for yarn. There should be a much stronger incentive, moreover, for managements to proceed farther with re-equipment and reorganisation, and thus to lay a firmer foundation for meeting competition in the future. It seems likely that, if external conditions permit, a great many progressive schemes which have been held in abeyance will soon be put into operation.

Changes in Trade Agreements

Less welcome developments in the context of Britain's trade prospects—and some explanation for the Government's interest in the European free market scheme and the expansion of world trade—are provided by the release of details of the new trade agreement negotiated with Australia. Briefly, the new agreement, which runs for five years and replaces one negotiated in 1932 as part of the Ottawa system, lays down that Britain will maintain tariff preferences on a wide range of agricultural products and will continue the duty-free entry enjoyed by Australian goods. Australia, while maintaining preferences for all British goods now receiving them, will reduce the levels of preference to new guaranteed minimum margins of 7.5 percent on capital goods and 10 percent on most other goods, against the present rates on capital goods of 12.5 percent and on other goods varying from 10 percent to 17.5 percent. Australia will consult Britain before reducing some margins of preference, but not before applying the 7.5 percent to a long list of goods, including engineering and electrical equipment, cars, cotton yarns, acetate rayon yarns, artificial silk yarns and sewing cotton in bulk, which comprise Britain's principal exports. The Australian and British Governments "desire and expect" that sales of Australian wheat and flour in Britain, made on commercial terms, will amount annually to the equivalent of 750,000 tons of wheat over the next five years. At present, about 650,000 tons of Australian wheat are imported into the U.K. annually.

The new arrangement will favour Australian rather than British trade, but it is defended by the Government on the ground that it preserves at least some preference for British exports—an achievement in view of the Australian Government's determination to reduce preferences on British goods so that domestic costs can be lowered and trade with other countries increased. It is hardly surprising that Mr. Thorneycroft, the President of the Board of Trade, came in for criticism from both sides of the House when he disclosed the details in the Commons, for the most that U.K. exporters can hope for is that the arrangements will soon permit substantial increases in Australian import quotas. Even then the British share of the increased trade would be limited by the reductions in the margins of preference. By contrast, the Commons offered little opposition to orders giving effect to the tariff changes involved in giving effect to the bilateral agreements negotiated at the G.A.T.T. meeting in Geneva in May with Benelux, Western Germany, Italy, Norway, Sweden and the United States, which made concessions covering about £94 million worth (in terms of 1954 trade) of imports into Britain.

Bombay

TECHNOLOGY FOR SMALL PRODUCTION

ROLE OF BOMBAY SERVICE INSTITUTE

(FROM OUR BOMBAY CORRESPONDENT)

THE Small Industries Service Institute, Bombay, has done some useful work since its inception. Regional institutes of this kind were established by the Government on the recommendation of a Ford Foundation team which surveyed the country's small-scale industries nearly three years ago. The fundamental object is to assist small-scale industries in technical processes and the use of improved types of machinery and equipment; the use of raw materials for particular types of industries including tests, wherever necessary, to ascertain the suitability of such raw materials; the use of improved methods of agriculture; and the introduction of economics of production in order to reduce costs and to improve the quality of manufactures. Assistance is given by correspondence and also by personal visits to the establishments concerned by the institute's field staff. A system also exists under which follow-up visits are made to check whether the methods recommended by the field staff have been adopted and, if so, the results obtained. The following figures indicate the number of establishments that have benefited by the service since the institute opened: number of parties who received technical advice 551; number of parties who received information for starting new industries 266; number of units visited by field staff 1,168; number of parties given other assistance 303; number of establishments who have accepted the suggestions offered by field staff 125, and number of factories revisited for follow-up action 185. It is disappointing that so few should have accepted the technical advice offered considering the comprehensive range of industries and problems handled by the institute. Some of the problems handled included a suitable method of turning to a desired curvature a large and a heavy alloy steel ring of about 50 inches diameter and 12 inches high on a vertical lathe. The demonstrating officer prepared a tool design for turning the ring and the drawing showing the working of the tool was explained. Another engineering concern was in difficulties because its atomiser fuel nozzles were being clogged at frequent intervals. It was explained to them that they had incorporated a very high compression ratio which was causing lock pressure in the nozzle. It was suggested that the ratio be limited to 17 percent. The measuring device for compression ratio was explained and the difficulty cleared up. Apart from the engineering industries, assistance was also given in other fields. For instance, a leather firm was shown the proper method of soaking Java hides. The conditions under which arsenic sulphide should be mixed with lime were given. The need for temperature control was demonstrated. By the use of a mixture of sodium nitrate, sodium chloride and sodium carbonate, a good soaking of Java hides was obtained and by controlling the temperature of the slating bath, the waste of arsenic sulphide was avoided and the lining was satisfactory. In addition, drawings and designs to meet specific needs were supplied to the factories requiring them. For instance, the drawings of a village oil ghani of metal construction were supplied to a unit while another received a drawing showing the arrangement of fixing five hand-operated knitting machines on a stand for power operation.

Foreign Experts

Apart from the technical officers of the institute, a number of foreign experts for specific industries have been invited to study local conditions and make suggestions for improvements. At least eight foreign experts have been attached to the Bombay institute who have advised over a wide industrial field. One of the objects of the institute is to make the village artisan conscious of the machine age. With this end in view, a fleet of mobile vans is maintained. The Bombay institute has so far constructed two mobile vans—one for a machine shop and the other for carpentry. These vans have already visited a number of places in the Bombay region and have given demonstrations to village artisans. Opportunity was also taken of repairing the simple tools in villages. The institute plans to acquire four more vans in the near future which will be concerned with carpentry, blacksmithy, electroplating including electrical wiring and motor winding, and a service van for repairs to oil engines and centrifugal pumps and agricultural implements. Various practical problems have been encountered. It was found that an average worker employed in a small-scale industry is incapable of blueprint reading and is therefore unable to understand from the drawings what he has to manufacture. So it was decided to start classes for blueprint reading, heat treatment and electroplating. The response was encouraging and it was decided to hold similar classes in other areas also.

The institute is equipped with an electroplating unit and a number of demonstrations were held for those engaged in the industry. Methods of testing the solution, control of current and the precautions to be taken during plating were explained. Classes were also held in the various processes of heat treatment. The institute has issued 10 bulletins to date on specific technical problems. These bulletins are designed to guide the small entrepreneur in day-to-day difficulties. In addition, the institute has formulated 16 model

schemes which are meant for those contemplating to establish a new industry. The industries covered include automobile batteries, radio components, electric cables, electrical accessories, electroplating, sole leather, western type footwear, plastic alkathene toys, industrial hand gloves, stainless steel utensils, low tension insulators, roofing tiles, glass beads, enamelware, tin printing and tin can making. It is also intended to establish a number of facility centres for various types of industries which will be equipped with modern machines suitable for specific jobs. The village artisans will be allowed to work on these machines on a roster basis and make use of the heavier machines such as production lathes, milling machines, shapers and grinders. It is proposed to levy nominal charges to recover the depreciation cost and expenditure on machine operation only. Overheads and staff salaries will not be recovered from the artisans. The advantages of such facility centres are that artisans will have access to equipment which they cannot afford to buy for themselves, and opportunity will also be taken of instructing the artisan on improved methods of production and also market demands.

Ancillary Production

An important aspect of assistance to the small units is their development as ancillaries to the large industrial units. The technical officers of the institute have various small and large-scale units and compiled lists of equipment which could be manufactured by the small undertakings. These lists consist of component parts required by the railways, other government departments and private industrial firms. The technical officers give the necessary advice to the small units and ensure that they receive adequate facilities in the form of raw materials machinery, equipment and finance to execute these orders. This procedure has met with success and the All India Manufacturers Organisation has appointed a special committee to look into the question of having certain component parts manufactured by small units. As part of the general assistance programme for village industrialisation, the Government of India has decided to assist the State Governments in establishing industrial estates. These estates will provide standard sheds with modern amenities and other common facilities to the small units who move into them. The institute is playing an active part in the selection of sites and in the equipping of these estates.

Madras

EFFECT OF SUEZ CLOSURE ON INDIAN ECONOMY

MR. KRISHNAMACHARI EXPECTS WORLD BANK LOANS

(FROM OUR MADRAS CORRESPONDENT)

THE Union Finance Minister, Mr. T. T. Krishnamachari, explained to Pressmen the implications of the Suez Canal closure from India's point of view. The implementation of the second plan, in his opinion, will not suffer, although delayed arrivals of essential imports might retard the execution of schemes. Referring to the correspondence with the World Bank President, Mr. Krishnamachari said that the leakage in Delhi was unfortunate, as the letters were of a "routine" nature. The loan for railways development is, however, expected along with these for the Koyra, Kundah and Neiveli projects. Incidentally, in the recent Indian coal statistics Neiveli has been mentioned as a new source, but production figures are lacking as pumping is still going on. The inclusion of lignite with the coal statistics may enhance the importance of the public sector in mining, but the figures relating to the Korba field are not very exciting. Referring to the Press comment on the Russian loan, Mr. Krishnamachari said that the purchases of Russian industrial equipment on credit would be made on the basis of world prices and the payment would be fixed in terms of rupees or sterling for convenience.

The Finance Minister was asked to comment on the fall in the market price of the State loan. A broker's letter to a local daily newspaper mentions the loss suffered by small investors who were compelled by official pressure to subscribe. The terrific success of the loan was due to some unusual methods, and those who bought it with borrowed money have been eager to sell their holdings at a loss. The drop in the quotation for the new 1958 loan to Rs. 97-14 suggests a kind of distress selling, and the Government's reluctance or inability to support the market, it is said, has shaken confidence in gilt-edged. But the official view is that tight money is at the back of the fall, and banks have got to reduce their invest-

ments to increase advances. Stability at lower levels is likely, but the State Government so far has absorbed only small lots for its sinking fund. There are no extra budgetary funds to absorb offerings of gilt-edged securities and no Government broker working in concert with the Reserve Bank is yet in evidence. The drop in the 3 per cent Conversion Loan to Rs. 72-10 has certainly set the pace for the decline in State loans, which in small lots realise prices well below the quotation. But it is noted that the loans of other States, too, have come down. The explanation is the poor holding capacity of the average investor.

Loss in Plantation Scrip

The loss in gilt-edged looks considerable compared with that on planting shares, which in the past week met with only small buying. Some rubber shares relating to Kerala plantations have been bid up since the impact of the plantation Award on those estates will be relatively small. It is also hoped that the controlled price will be raised to meet the higher cost of production on rubber estates. No official explanation as to the application of the Award to estates now out of the Madras Government's jurisdiction, has been given. Market men are however banking on the planters' appeal to the Supreme Court which has just been admitted.

Tourism and Hotels

A visiting British expert on tourism has suggested that an Indian atmosphere be maintained in Indian hotels by avoiding the imitation of foreign cooking and menus. It has also been suggested that a trained staff mostly of educated women is vital for the efficient operation of such a scheme. Interior decoration in the local style is likely to catch the eye. But the patrons of Indian hotels are not all foreigners and those who seek a home away from home may not relish the provision for worship, the hiring of the common hall for entertainments and so on. But hotels should like the idea of putting up lobby displays for Indian arts and crafts, the arrangement of kiosks for newspapers and books. Some hotels have already a shopping annexe.

Yarn Prices Improve

The yarn trade here is looking up, the demand for yarn having improved since the last Deepavali festival. At the meeting of the yarn merchants last week, the president mentioned the increased demand for handloom cloth due to the rebate and other concessions. But the concession has been withdrawn from fair price shops although it is hoped the exporters will continue to receive preferential treatment. It is, however, feared that a higher sales tax on yarn may be imposed in which case Andhra consumers will be penalised. The multi-point sales tax on art silk and staple fibre yarn is resented by the trade. Credit restrictions hamper traders and dealers are finding it hard to sell yarn on credit. Mills are charged with adjusting forward deliveries according to the trend of prices and the remedy suggested is to stick to the schedule. Mills have been asked to keep up a balanced and uniform spinning programme in order to help customers and maintain regular supplies of all counts in demand. Forward trading in yarn is considered desirable in order to prevent wide price fluctuation. But the threat of State trading is a bigger danger to the middle man. According to the annual report, it is noted that out of 168 mills in the southern region with 3,600,000 spindles, only 35 will be composite units. This reinforces the plea for installing looms in the South Indian mills undertaking expansion of their spinning capacity. The installation of about 3,000 power looms in the next two years will not help greatly to increase cloth supplies.

Congress Electioneering

Electioneering is already in the air and Ministers are now candidates. The T.N.C.C. has been interviewing those who seek the Congress ticket and those who as Congress candidates lost at the last election are not to be excluded. The Union Minister for Finance, during his visit to Madras was not present at the meeting of the Selection Board which has to choose candidates almost by itself. But he gave the campaign a fine start by drawing attention to the fact that socialism has been implicit in the Congress ideals since 1930. The Prime Minister of India was a socialist long before the Avadi resolution was passed and agrarian reforms show the courage of Mr. Nehru's convictions. The high cost of food-stuffs can be checked only by increased production. Paddy prices in the South are going up as Kerala is still buying, and even the prospect of a bumper harvest in January in nearly all districts does not prevent buying for stock as well as sale. There can be no return to controls but Mr. Krishnamachari expressed the view that the continuance of rationing would have placed Madras in a better position. The Chief Minister of Madras declared that poverty could not be ended all at once and redistribution of wealth would make little difference to the poor. Mr. S. N. Agarwal hoped that the Congress would sweep the board as it aimed at improving the condition of the people.

Border Disputes

The Congress Party's electioneering campaign is unlikely to be marred by border disputes. With the appointment of Mr. H. V. Pataskar as the referee, the north boundary agitation has been intensified. But a counter-claim to Hosur has also been admitted for adjudication because of the Telugu majority in a district adjoining Mysore. The case for Andhra taking over Hosur depends upon the acquisition of Kolar against which the Fazl Ali Commission pronounced its verdict last year. The Tamils seek to get seven taluks of Chittoor on the ground that the district was carved out of North Arcot.

Jute

U.S. CONSUMPTION FIGURES LIFT HESSIAN RATES

FIRM TREND IN PAKISTANI JUTE MARKETS

ONE of the main bullish features of the Calcutta markets during the past week was the announcement from the United States that burlap consumption there had jumped to over 85 million yards during October. This is the highest figure recorded for over four years, and brings the average monthly consumption rate to 72.4 million yards, which is 4 million yards more than in 1953 and 1955, and 7 million yards more than in 1954, for the same ten-month period. This was offset to a certain extent by the fact that American stocks of burlap rose to 262 million yards, which was also the highest figure recorded for over four years, but is equivalent to only a little over three months' needs at the present rate of consumption. Less than half this amount, however, is actual spot stock, and with the current delays in shipping, there is no certainty when the afloat stocks will reach their destinations. That is one of the reasons why there was heavy buying interest in the hessian markets both from overseas interests, local shippers and speculative operators, which succeeded in pushing up rates by about Rs. 40 a ton to new high levels. This increased the profit margin on hessian, because although the price of raw material also increased, the rise was only about Rs. 27 a ton.

There was very little overseas interest in heavy goods, but speculative manipulations ensured a steady rise, and in sympathy with hessian, sacking rates advanced by about Rs. 20 a ton. This held out no attraction to the mills as it was well below the rise in raw jute prices, and again demonstrated the present uneconomic working on heavy goods fabrics. Sacking, however, received some support from shipper interests, and good business was done by local shorts, mainly for quick delivery against steamers loading or due in port in the near future. Near shipment rates were quoted at a premium of about Re. 1 over forward shipment, whereas three weeks ago they were at a small discount. During the week, this section also recorded new high levels for the season.

Raw jute received considerable support from the Calcutta mills, and this, coupled with the improved gunny market, caused a gradual rise in prices. Sellers were very reserved due to a substantial rise in agency prices, which has taken them well above the parity of Calcutta quotations. The rise in Indian rates has been prompted, among other things, by the firm Pakistani markets, where, it is reported, prices have taken a definite upward trend in the last few days. The premium for Pakistani jute has now risen to over Rs. 3 a maund on Indian jute, and the former has been virtually priced out of the market. In the circumstances, it is surprising to note that the Pakistani authorities have decided to increase the acreage under jute next season, and are to make an all-out drive to increase its export. At present, their aim appears to be to restrict as much as possible the export of jute to India, if current regulations are any criterion, but the decision may bring about a relaxation of the restrictions. It is rather anomalous, however, in the light of their previous determination to curtail production and burn the excess jute.

THE JUTE MARKETS

Manufactured Goods: The market was depressed at the opening last Thursday as a result of heavy speculative selling pressure, and prices for both sacking and hessian fell. November shipment B Twills dropped by 10 annas to Rs. 118-12 a 100 bags, and January-March shipment lost 6 annas at Rs. 118-6. The loss in hessian was not so large and 40in. 100z. fell by 3 annas to Rs. 44-13 a 100 yards for November shipment, and Rs. 43-14 for forward shipment. Prices fluctuated narrowly throughout the day, but there was more support for hessian and rates increased by 4 or 5 annas. Ready B Twills were unchanged but forward shipment improved to rule at par with near deliveries. During the day, reports of an increase in American burlap consumption gave support to hessian, and heavy buying by local shippers in sacking boosted heavy goods, until on Saturday morning 40in. 100z. was quoted at Rs. 46-2, a rise of Re. 1, and B Twills stood at Rs. 120-12, which was Rs. 2 above the previous day. Both these quotations were at new high levels. The steadier tendency continued over the week-end, but was predominant in hessian, where American buying pushed up prices another 2 annas. Over the next two days there was very little alteration in the quoted rates, but the undertone of the market was firm.

At the close, the market was firm and opening quotations on Wednesday morning were as follows:

	November.	December.	Jan.-March.
40in. 80z.	37-8	36-14	36-2.
40in. 100z.	46-8	46	45
B Twills	121-2	120-12	120-6
Heavy Cees (plain)	121	120-12	120-6
A Twills	140-12	141-8	143
Liverpools	133	134	135
Cornsacks	120-8	121	121

Raw Jute: Calcutta raw jute prices ruled steady throughout the week in sympathy with the

finished goods market and as a result of a substantial increase in upcountry agency prices. They also received support from mills, who continued to take up small quantities daily. Opening quotations on Thursday last were Rs. 31 a maund basis Bottoms for Dhubri-Northern jute for November-December shipment, but rates soon advanced by 8 annas a maund as the volume of business increased. Sellers reduced the quantity on offer, and in many cases were reluctant to enter into fresh obligations until the backlog against previous contracts, held up by the lack of transport, had been cleared. Good business was done on Friday and Saturday, and by Monday morning general indications had advanced to Rs. 32 a maund. There was only limited interest then, and for the next few days the market ruled firm with sellers reserved.

During the week, business was reported in Dhubri-Northern jute at Rs. 30-3 to Rs. 32 a maund basis Bottoms for November-December shipment, and Northern Middles alone at Rs. 33-8. Small lots of Murshidabad Tossa were done on the basis of Rs. 31 a maund. There was a strong demand for good Daissee and Daissee-Tossa, prices for these types of fibre ranged from Rs. 31-8 to Rs. 33 a maund basis Bottoms, and Middles only from Rs. 33-8 to Rs. 35-8 a maund, all for November-December shipment. Large quantities of Daissee Mesta were purchased at Rs. 29 to Rs. 30 a maund, and jungli Mesta at Rs. 28-8. Pakistan Cuttings changed hands at prices ranging between Rs. 132 and Rs. 135 a bale for November-December shipment and ready bills of lading. Export firsts were also done at Rs. 235 to Rs. 240 a bale for November-December shipment.

At the close, the market was unchanged, but sellers were reserved and a very steady undertone prevailed. Opening quotations on Wednesday morning were as follows:

Indian Jute:	Landed at Mills Rs. a md. basis	Shipment.
	Bottoms.	
Lower Assam	32	Nov.-Dec.
Northern	32	"
Murshidabad White	32-8	"
Daissee	32-8	"
Daissee Mesta	30	"
Local Northern	31-8	"
Bimli	29-8	"

Tossa is quoted at 8 annas to Re. 1 a maund above the price of white jute.

Pakistan Jute:	Rs. a md.	Shipment.
Jat	35	Nov.-Dec.
District	34-8	"
Northern	34	"

Pucca:	Rs. a bale.	Shipment.
Mill Firsts 2/3	255	Nov.-Dec.
Export Firsts 2/3	235	"
Export Lightnings 2/3	220	"
Jat Cuttings.	135	"

Local Cossipore markets are very firm and all arrivals have found ready buyers. Mill representatives have been taking large quantities and are paying good prices. All imports still contain heavy moisture and dry jute is at a premium. Wagon arrivals were average for the time of the year and during the week totalled 650.

THE FOREIGN JUTE MARKETS

FIRM UNDERTONE IN FIBRE

(FROM OUR DUNDEE CORRESPONDENT)

ALTHOUGH there is a good deal of irregularity in prices for raw jute from day to day, there is nevertheless quite a firm undertone and no sign of weakness. Values of white jute are far above the minimum prices fixed by Pakistan and those for dark jute are now about £10 to £15 higher. Many spinners would have been well pleased with their purchases of the raw material had it been shipped at the time contracted for. But there has been so much delay this season on account of the disorganisation of internal communications in Pakistan that much of the "paper" profits have disappeared. Some long-headed spinners bought pretty freely at the beginning of the season when values were ruling at the minimum levels of £91 for Mill Firsts, £81 for Mill Lightnings, and £71 for Mill Hearts for August-September shipment, c.i.f. U.K. Unfortunately, there are still quite a number of parcels which should have been despatched in September but have not yet left Pakistan, and a very considerable number of October shipments are still in that country. Some spinners are very perturbed about the position, but the British Jute Trade Federal Council has given an assurance that stocks of raw jute stored in Dundee or afloat this side of the Suez Canal are sufficient for some considerable time. The statement of the Council says that "further cargoes of raw jute have recently left East Pakistan on the voyage round the Cape and there are also quantities purchased

by spinners which are awaiting shipment by this route." Certain grades may not be readily obtainable.

Mill Firsts are offered from £120 to £123, Mill Lightnings from £100 to £103, after business done in secure parcels at £98, £99, and £100, and Mill Hearts at £95, with good Daissee-2/3 at £99 (minimum £90), and grade at £95 (£80), grade Tossa-2/3 at £109 (£100) and grade Tossa-4 at £100 (£90), c.i.f. U.K. Calcutta goods have enjoyed a firm undertone at 68s 3d for 40in. 100z. and 51s for 40z. November, 68s and 50s 8d December, and 67s and 50s January-March, with B Twills at 181s 6d and 181s 6d and 181s for the respective positions of shipment, all f.o.b. Calcutta. Jute yarns and cloth rule very firm, and fair business is passing.

THE BANK OF BARODA LTD.

ESTABLISHED IN 1908.

Capital Authorised Rs. 2,40,00,000
Capital Issued or Subscribed Rs. 2,00,00,000
Capital Called Up and Paid up Rs. 1,00,00,000

COFFEE REPORT OF PLANTATION BODY

DIVIDEND RESTRAINT AND REPLANTING FUND URGED

THE Plantation Enquiry Commission, in its second report, dealing with the coffee industry, has recommended the creation of a Coffee Replanting Fund to which each coffee estate of 25 acres and above would be required to contribute a fixed amount of money. The fund would be used for the specific purpose of financing a programme of replanting. The Commission has recommended the setting up of a warehousing corporation, under the aegis of the Coffee Board to take over from the pool agents all functions connected with the marketing of coffee except curing. It has also suggested that the Coffee Board should market a certain portion of the coffee powder which is consumed internally. These sales should be subsidised from two "surplus" funds.

The Commission says that the immediate problems before the industry are the regulation of the internal distributive trade, an intensification of yield at economic cost in the existing areas and extension to the minimum necessary to meet the growing internal demand and to maintain and develop export markets. For promoting exports, it says, the export trade in coffee should be undertaken directly by the Coffee Board. The high quality of coffee earmarked for export should be maintained. The Commission's first report dealt with the tea industry. The Commission consisted of Mr. P. M. Menon (chairman), Mr. K. G. Sivaswamy and Professor M. V. Mathur (members). Mr. Sivaswamy has appended a note of dissent to the coffee report.

Surplus Funds

One of the "surplus" funds is to be created by setting apart the surplus in export realisations, that is, the actual export value, less the calculated value for exports on the basis of the internal auction value. The other will come from the excess in value as a result of gain in the weight of coffee in storage due to absorption of moisture. The Commission suggests that these two funds should

be used equally for subsidising retail sales of coffee and for a "pre assistance fund" for paying the basic price to the producer. The cost of production of different types of coffee, says the report, should be estimated in a most scientific manner by an independent expert agency. Recent trends indicate the need for a reduction in the cost of production. Pointing out that the percentage of gross profits in relation to the value of fixed assets has been very much above the figure considered adequate by the Cost Accountant, the Commission says that coffee companies should adopt a more prudent policy in the distribution of dividends in future. They should put by larger funds for financing schemes of development. Also recommended are: (a) a countervailing export duty equal to the Central excise duty levied on coffee; (b) adjustment of the excise levy on different types of coffee according to their market value, and (c) Central collection of the sales tax on coffee. Special recommendations have been made for assistance to small growers. Small holders should be induced to come into joint farming co-operative societies partnered by the State. The setting up of primary multipurpose coffee growers' co-operatives with whole-time managers has also been recommended. One of the important problems before the coffee industry is to improve standards of production so as to obtain a higher yield per acre. The yield in India is just about 60 percent of the yield in most of the important coffee-growing countries.

Dividend Restraint

The Commission finds that the percentage of dividends has ranged between 20 and 30 on ordinary capital. It says: "The fact that this dividend is declared on inflated capital (i.e., a capital which has been increased by the issue of bonus shares) masks the fact of the larger distribution of profits as dividends." The fixed assets of coffee plantations consist mainly of the coffee tree. By its very nature, the coffee tree is a wasting asset, and the Commission says that none of these companies has provided for this depreciation or made sufficient provision for replacing it. The working funds of the companies would not be sufficient to meet the entire expenses of replanting. Although the industry has made large profits, the growth in internal resources has not been sufficient to meet present replacement costs. The Commission, therefore, feels that coffee companies should have followed a more prudent policy in the distribution of profit as dividends and retain a larger part of it within the business so as to maintain the fixed assets in a normal condition. A limitation on dividends would in itself have put them in sufficient funds for carrying out necessary replanting and improvement of the coffee lands."

Regulation of Area

The Commission has recommended that powers should be conferred on the Coffee Board for regulating the area under coffee in relation to the needs of production. Amendments should be made in the Coffee Act to vest powers in the Board for licensing coffee production. Unless a phased programme of replanting is urgently begun, it is stated, certain coffee lands will have to be abandoned during the next ten years and production will seriously diminish. A greater rate of progress of replanting is necessary to save the industry's vitality and productivity. The Government should assume legal powers to make investigations and issue directions for the proper maintenance of fixed assets, including replanting, on any estate. The Coffee Board should have powers to issue directions on better farming.

Managing Agency System

Mr. Sivaswamy, in his note of dissent, says that the managing agency system in the coffee industry should be abolished. He says that the working of proprietary concerns and director-controlled companies, as compared with trustee companies under Indian and non-Indian managing agencies, shows that the latter had a smaller increase in reserves between 1946 and 1953, smaller working funds in 1953 an acre, a smaller increase in capital formation in 1953 over 1946 and a larger percentage of aged plants than the former. Their upkeep charges and commission to managing agencies and directors were high.

COFFEE BOARD MAY ENTER EXPORT TRADE

SOUTH INDIAN TEA OUTPUT LOWER THAN LAST YEAR

(FROM A SOUTH INDIAN CORRESPONDENT)

THE Coffee Board Chairman has confirmed that the current season's crop will exceed last season's record output of 33,775 tons, in the course of his address to the fourth meeting of the Board held last week. The Marketing Committee of the Board now estimates that the possible receipts of the season will be about 35,900 tons, against its original estimate of 34,000 tons. The Committee's estimate of internal consumption is 26,775 tons which appears to be on the high side. The exportable surplus is placed at less than 8,000 tons, against last season's 8,100 tons. As usual, the Board has underestimated the quantity available for export from the new season's crop, in spite of the increase in production.

The Chairman of the Coffee Board said that it was considering whether it should enter the export trade. Apparently, he is not satisfied with the present system of letting the export market completely to private enterprise. In his opinion, the exporter is not likely to give as much attention as might be desirable in seeking new markets or

nursing or holding markets which he already has. Therefore, the Chairman wants to consider whether the Board should try to sell a portion of the exportable surplus to certain countries and build new markets for Indian coffee, the production of which is steadily expanding. But Indian coffee does not seem to have suffered yet due to any negligence on the part of the private trade. On the other hand, there were occasions when the over-cautious policy of the Board and the hesitation of the Government in allowing larger coffee exports spoiled the chances of Indian coffee realising a better price in the world market. The usual uncertainty in the Board's export policy has proved too irksome to the exporter, and has been a great hindrance to his building up a market abroad. The first step towards consolidating the foreign market should be the adoption of a definite export policy by the Coffee Board, rather than itself entering the export business.

Tea Centre in Madras

Madras is expected to get a tea centre very soon. The Tea Board has selected a site near the Round Tana on Mount Road, and other preliminaries for opening the centre are nearing completion. One of the criticisms heard about the Bombay tea centre, which is the first of its kind in India, is that the price of liquid tea served there is exorbitant. A pot of tea for a single person costs 8 annas. This will be too much for the common man in Madras, who would naturally prefer to have his tea from a nearby restaurant where it costs him much less. Before finalising its plan for the Madras centre, the Board should take into consideration local preferences and the criticism of its Bombay centre.

S. Indian Tea Crop

South India harvested a slightly better tea crop in September, the figure being 9,600,000 lbs., compared with 8,800,000 lbs. in August and 9,100,000 lbs. in September, 1955. The production for the first nine months of the year amounts to 91 million lbs., against 96 million lbs. for the corresponding period of last year. In view of the loss in production, the case for south India adopting a crop regulation scheme, as has been done by north Indian producers, has lost some of its force.

Outlook for Pepper Market

The new pepper season has just started. Farm reports on the standing crop are encouraging and it is expected that the crop will be slightly better than last season's. According to certain trade estimates, last season's production was just over 24,000 tons. Carry-over into the new season is placed at 4,000 tons, which should be considered normal. Prices realised by the 1955-56 season's crop were considerably lower than in the preceding year. There has been a slight improvement in pepper prices due to the hostilities in the Middle East. Ceylon recorded an increase of Rs. 75 a candy to Rs. 700 a candy. But with a cease-fire ordered in the Suez area, the market again shows signs of weakening. Foreign demand cannot be considered satisfactory at present, so prices are likely to go down further as the pressure of new arrivals on the market increases.

WAGE AWARD FOR MADRAS PLANTATION LABOUR

APPEAL BY EMPLOYERS

(FROM A SOUTH INDIAN CORRESPONDENT)

THE United Planters' Association is appealing to the Supreme Court against the award of the Madras Plantation Special Tribunal. The planters feel that the Tribunal has not taken into consideration the capacity of the industry to pay the enhanced wages it has recommended with retrospective effect from March, 1952. They feel they have a strong case. The wages now fixed by the Tribunal are out of line with those paid either in the neighbouring State of Travancore-Cochin (now Kerala) or even in Assam, where the minimum wage has always been higher on account of the higher cost of living. The minimum wage laid down in the award is Rs. 2-4 a day for a male worker, compared with Rs. 1-7 a day paid in Madras, Rs. 1-9 in Travancore-Cochin and Rs. 1-12 in Assam. To pay at the enhanced rate with retrospective effect from March, 1952, means an expenditure for the planters of Rs. 13 crores to Rs. 14 crores, plus the annual recurring expenditure which would amount to another Rs. 24 crores to Rs. 3 crores. No correct estimate of the amount required to pay the staff increased allowances, etcetera, stipulated in the award, has been so far made. But on a rough estimate, something like Rs. 2 crores would be needed, besides the recurring expenditure of about Rs. 50 lakhs. If the award is fully implemented, it will eat away the entire reserve funds of the companies, and in many cases, even a part of their capital.

Burdens on Plantations

The plantation industry is over-burdened with taxes, labour charges and welfare measures. The Agricultural Income-Tax Act, the Plantations Labour Act, and the drastic recommendations of the Plantation Enquiry Commission, all add to the planters' burden, and the Special Tribunal's award is going to be the proverbial last straw on the camel's back. The implementation of the award will have serious consequences for the industry. It is felt that the liquid assets of many companies will not be sufficient to pay off the liabilities, as stipulated in the award, so they will be forced to sell away their properties or they will have to raise new funds from the market. The latter course has no chance of success. It is estimated that over 50 percent of the present shareholders of planting companies in south India are middle-class people.

Commodity Markets

WHOLESALE PRICE INDEX RISES

THE official wholesale price index (base: year ended August, 1939=100) moved up by 0.2 percent to 418.4 during the week ended 3rd November, 1956, compared with 417.4 (revised) for the previous week. The index was also higher by 0.2 percent and 14.3 percent respectively than those of the corresponding weeks of last month and a year ago. The index for Food Articles moved down by 0.4 percent to 390.5, compared with 392.2 (revised) for the previous week because of a fall in the prices of bajra (-7%), tea (-5%) and wheat (-1%). The prices of salt (+7%) and gram in Hapur and dal arhar (+1% each) were, however, marked up. Higher prices of raw jute (+5%), and castorseed in Bombay and groundnuts (+1% each) raised the index for the Industrial Raw Materials group by 0.9 percent to 502.4, although the prices of lac (-3%) and manganese ore (average export price) (-1%) showed declines. The index for the Semi-Manufactures group advanced by 0.6 percent to 411.2. Items which witnessed noticeable fluctuations in this group were: Coconut oil in Calcutta (+12%), cow hides and buffalo hides (+7% each), copper (+6%), groundnut oil (+4%), goatskins (+3%), zinc and castor oil (+2% each) and brass in Calcutta (-2%). The Manufactures group index rose by 0.4 percent to 388.5, compared with 386.8 (revised) for the earlier week reflecting an increase in the price of jute manufactures (+3%), rayon and silk manufactures (+2%) and glass (+1%). A rise of 0.2 percent to 590.2 as against 589.1 (revised) for the previous week in the index for the Miscellaneous group was caused by an increase in the prices of chillies in Calcutta and black pepper (+2% each).

INDEX NUMBERS BY GROUPS AND SUB-GROUPS (Base: Year ended August, 1939=100.)

FIRST ESTIMATE OF KHARIF PULSES SHOWS DECLINE IN ACREAGE

The all-India first estimate of kharif pulses other than tur for 1956-57 places the current year's area at 10,785,000 acres, as against the adjusted corresponding estimate of 11,096,000 acres for 1955-56. This shows a decrease of 311,000 acres or 2.8 percent in area over last year, according to the Directorate of Economics and Statistics, Ministry of Agriculture, Government of India. The decline in acreage under pulses has been shared mostly by Madhya Pradesh, Punjab, Madhya Bharat, Mysore and Rajasthan and has been generally attributed to unfavourable weather conditions at the sowing time due to excessive and continuous rains. The decline in acreage has, however, been offset to some extent by increases registered in Bombay, U.P., Hyderabad and Kutch. As between pulses, the decline has been suffered mostly by moth. This estimate generally covers the period up to the end of August, 1956. Till then, the condition of the crop was reported to be generally satisfactory. The information given in this estimate relates to the set-up of States before their re-organisation on 1st November, 1956.

SCOPE FOR INCREASED AUSTRALIAN EXPORTS TO INDIA

There are definite possibilities in India for increased exports from Australia, but these are not to be gained without difficulties, according to Mr. R. W. C. Swartz, Parliamentary Secretary to the Minister for Trade, who visited India in October. Visits by trade specialists are needed to examine at first hand the particular needs of the market, and to explore the future requirements of India's rapidly developing industries. A wide scope exists for exports to India of the raw and semi-processed needs of her secondary industries. Mr. Swartz said that the industrial expansion programme of India's five year plans offered ever-increasing opportunities for the products of Australia. As a general rule, the level of Australia's exports to India fluctuated according to the value of the wheat exports. While Australia's total exports to India fell from £A194 million in 1954-55 to £A12 million in 1955-56, the exports of Australian commodities other than wheat increased from £A7.7 million to £A8.8 million. The principal exports other than wheat were zinc, dried milk, butter and cheese, wool tops and tallow. India was Australia's best customer for wool tops.

The Federal Director of the Associated Chambers of Manufacturers of Australia, Mr. Latham Withall, who accompanied Mr. Swartz to India, said that there were increasing opportunities for Australian exporters in India because India's import policy was shaped by import licensing to meet the needs of the second five year plan. "Australian heavy industry has an opportunity to move strongly into the Indian market for contractors' equipment, road-building equipment, railway rolling stock, locomotives, agricultural equipment, machine tools, windmills, pumps, diesel electric generators, automobile parts, garage equipment, wheel tractors, electric cables and the like," he said. "For our lighter industries", Mr. Withall added, "there is business opportunity for such goods as domestic hardware, small air-conditioning units, builders' hardware, plain cutlery, chemicals, drugs and medicines, electric appliances, and wool textiles of tropical weight."

Mr. A. N. Curphey, general manager of the Victorian Chamber of Manufacturers, who accompanied Mr. Swartz and Mr. Withall to India, strongly advised Australian manufacturers to lower their prices, use cheaper materials, and pattern their products for the individual markets of India and south-east Asia, where golden opportunities existed to expand trade. Mr. Curphey said the potential of the Indian and south-east Asian markets was "terrific"; they were "crying out" for enterprising exporters and manufacturers. They must, however, be prepared to lower their costs, and this could be done by using cheaper materials. But Mr. Curphey emphasised that the standard of workmanship must still be high. "It is not a case of shoddy goods, but of good products cheaper." Other points Mr. Curphey made were: (1) packaging must be more eye-catching and appealing, (2) manufacturers should examine the market potential for themselves, and (3) shipping facilities between Australia and India were poor and would have to improve.

"CAPITAL" INDEX OF INDIAN INDUSTRIAL ACTIVITY **

The Capital Index of Indian Industrial Activity (Base: 1935) has now been brought up to May, 1956. Compared with the preceding month, there were decreases in jute manufactures 1.7 points, steel ingots 2.3 points, coals 3.4 points and wagons

loaded 6.3 points, while increases occurred in cotton consumption 4.1 points, pig iron 1.6 points, cement 18.3 points, papers 4.6 points and electricity 9.5 points.

The indices for cheque clearances and notes in

circulation also declined by 5.2 points and 1.5 points, respectively. Correlating all the factors, the Capital Index of Indian Industrial Activity declined by 2.3 points during May, 1956.

"CAPITAL" INDEX OF INDIAN INDUSTRIAL ACTIVITY (1935)

Calcutta Markets

STRONG GENERAL DEMAND AT TEA EXPORT SALE

DUST PRICES DEARER

AT Sale No. 22, held on 19th and 20th November, offerings at the Export auction consisted of 58,400 packages for which there was a very strong and excited general demand. With the exception of the best C.T.C.'s and some of the better liquoring Medium B.O.P.'s all kinds sold at dearer rates. Fannings and the poorest kinds were as much as 2 annas to 4 annas dearer, while the other kinds were 1 anna to 3 annas dearer. Darjeeling and Whole Leaf grades shared in the general advance.

Quotations

	1956	1955
Clean Black Pekoe	2 6 0	2 6 0 to 2 7 0
Plain B.P.	2 0 0 to 2 3 0	1 11 6
Medium Assam B.P.	2 6 0 to 2 7 0	1 13 0 to 1 13 6
Best C.T.C. Assam B.P.	3 2 0	3 0 0 to 3 1 3

At the Internal Sale, Dust offerings consisted of 23,871 packages for which there was a good general demand at dearer rates. Non-wither Doars were a strong feature and were 2 annas to 3 annas dearer, while the strongest feature of the Sale were the poor residue types which were 2 annas to 3 annas dearer. Commons, Doars and Medium Assams advanced by 1 anna to 2 annas, but the leafier kinds showed the greater advance in price. C.T.C. Assams also shared in the general advance and were dearer, but the better kinds were fully firm.

Quotations

	1956	1955
Medium Doars Dust	2 1 0 to 2 2 0	1 10 0
Medium Assam Grainy	2 2 0 to 2 3 0	1 11 6 to 1 12 6
Dust	2 2 0 to 2 3 0	1 11 6 to 1 12 6
Medium Assam C.T.C.	2 2 0	2 10 6 to 2 12 6
Dust	2 2 0	2 10 6 to 2 12 6
Best Assam C.T.C. Dust	2 12 0	2 10 6 to 2 12 6

Leaf offerings consisted of 1,695 packages for which there was a strong and excited general demand at much dearer rates. The few green teas on offer received better support than in recent weeks, and sold at about valuations.

RIISING TREND IN FREIGHT RATES

FURTHER rate increases in most markets have been noted over the past week, and there is no indication that the markets are anywhere near the top. In the American coal market, rates have risen to 94s 3d a ton to the Continent, and owners are confident that 100s will soon be reached. Madras-France paid 208s f.i.o. for 4,400 tons of manganese ore, January shipment, but the lower figure of 175s from Mormugao-Genoa was accepted by a Portuguese ship. In local markets, Calcutta-Colombo has paid 86s and Calcutta-Port Sudan 125s for a small ship. In the time charter section, a 3,000 tonner secured 50s for three months trading, delivery Dammam, redelivery West Coast India, and a 9,000-ton motorship was fixed at 65s for the trip out to Japan with delivery the U.K. in December. A major British oil company is reported to have chartered seven tankers at high rates for periods up to seven years with deliveries as far ahead as 1965.

LINSEED RISES

Prices have notably advanced during the past week, and a generally firmer undertone has been observed. Insufficient ready goods to meet the crushers' demands, and keener enquiries for oil following firmer advances from overseas, were the chief factors supporting the rise. Small activity has been recorded for near, as well as forward new crop deliveries, but sellers have been on the whole reserved. The oil section has been firm in anticipation of further exports; buyers have been fairly keen, while sellers have been reserved. Latest quotations were as follows: Ready-November Rs. 26 a maund; November-December Rs. 26 a maund; and April-May Rs. 22-8 a maund.

HIDES AND SKINS STEADY

The market ruled steady, and stocks were higher than in the previous week.

Bazaar Sales

(Between 13th November and 19th November, 1956)
Cowhides: Wet salted (Ord.) 21,000 pcs. on the basis of Rs. 8-8 to Rs. 9; Wet salted (Sloughered), 17,500 pcs. on the basis of Rs. 13 to Rs. 20-8.

Goatskins: Wet salted (Daissee, Killed) 42,200 pcs. on the basis of Rs. 285 to Rs. 300 and Rs. 375 to Rs. 390; Assam-Dinajpur 8,100 pcs. on the basis of Rs. 252-8 to Rs. 310; Purneah-Kissenganj 5,200 pcs. on the basis of Rs. 255 to Rs. 265; Patna-Pakur (Ord.) 7,400 pcs. on the basis of Rs. 245 to Rs. 255; Muzafferpore 27,200 pcs. on the basis of Rs. 300 to Rs. 312-8.

Bazaar Stocks

(19th November, 1956)

Cowhides: Wet salted 1,10,500 pcs.
Goatskins: Wet salted (Daissee, Killed) 34,000 pcs.; Assam-Dinajpur 54,000 pcs.; Muzafferpore-Patna-Purneah-Kissenganj 3,00,000 pcs.

SUGAR MARKET STEADY

During the week ended 21st November, sugar sales in the Calcutta market averaged 4,000 bags daily. Arrivals a day were 3,000 bags and stocks totalled 120,000 bags. Rates for ready sugar ex-Kantapur delivery were Rs. 30-14 for ordinary grain and Rs. 32-8 for big grain. The market was steady.

SHELLAC MARKET QUIET

During the week ended 20th November, the market was steady at the beginning and quiet at the end. The range of quotations was as follows:

Pure Buttonlac	Rs. 128 to 130 buyers, 129 value, 127 buyers.
Lemon No. 1 Shellac	Rs. 133 to 134 buyers, 133 done and buyers, 130-8 buyers.
Lemon No. 2 Shellac	Rs. 127-8 buyers, 128 done and buyers, 126 buyers.
F.O. Std. 1 Shellac	Rs. 123-8, 125 buyers, 124 done and buyers, 123 buyers.
Pure TN Shellac	Rs. 120-8 buyers, 123 to 120 basis done and buyers.
4% I.T.N. Shellac	Rs. 109, 110-8, 109 buyers.
No. 1 Kusmi Seedlac	Rs. 119, 121-8, 119-8 value.
No. 2 Kusmi Seedlac	Rs. 114-8, 116-8 value, 117 to 116 buyers.
Fine Bysaky Seedlac (Manbhumi)	Rs. 111-8, 113 to 109-8 buyers.
Fine Bysaky Seedlac (C.P.)	Rs. 107 buyers, 108 done and buyers, 105-8 buyers.
Ordinary Bysaky Seedlac (C.P.) Under 5%	Rs. 98-8, 100 to 97 buyers.
Ordinary Bysaky Seedlac (C.P.)	Rs. 93, 95 to 90-8 buyers.
Kireelac	Rs. 38, 37-8 buyers.

Calcutta, 13th November 1956.

N.B. A member entitled to attend and vote at the meeting is entitled to appoint a proxy to attend and vote instead of himself and a proxy need not be a member.

OCTAVIUS STEEL & CO. LIMITED

NOTICE is hereby given that the Thirty-fifth Ordinary General Meeting of the Shareholders of the Company will be held at the Registered Office, No. 14, Old Court House Street, Calcutta, on Friday the 14th December, 1956 at 12 noon for the following purposes:—

1. To receive and adopt the Directors' Report and the audited Accounts for the year ended 31st December, 1955.
2. To declare a dividend.
3. To elect a Director in place of the retiring Director.
4. To elect Auditors for the ensuing year and to fix their remuneration.

The Share Transfer Books of the Company will be closed from 8th December, 1956 to 14th December, 1956, both days inclusive.

By Order of the Board,
B. GHOSE,
Secretary.

14, Old Court House Street,
Calcutta, 21st November, 1956.

NOTE:—A member of the Company entitled to attend and vote at the meeting is entitled to appoint a proxy to attend and, on a poll, to vote instead of himself and the proxy need not be a member.

AMLUCKIE TEA COMPANY, LIMITED.

NOTICE is hereby given that the 80th Annual General Meeting of the Shareholders of Amluckie Tea Company, Limited, will be held at McLeod House, No. 3, Netaji Subhas Road, Calcutta, the Registered Office of the Company, on Saturday, the 15th December, 1956, at 10-30 A.M. for the following purposes:—

1. To consider the Profit and Loss Account for the year ended 31st December, 1955, and the Balance Sheet as at that date, and the Reports of the Directors and the Auditors.
2. To declare Dividends.
3. To appoint a Director in place of a Director who retires by rotation.

And, in this connection to consider, and if thought fit, to pass the following resolution which will be proposed as a Special Resolution in conformity with the provisions of Section 261 of the Companies Act, 1956:—

"That Mr. T. K. Basu be and is hereby re-appointed a Director of the Company."

Special Notice dated 13th November, 1956, of intention to propose the foregoing resolution as a Special Resolution has been received by the Company wherein it is stated that a Special Notice of the Special Resolution is given to satisfy the requirements of Sections 190 and 261 (1) (f), (2) and (3) of the Companies Act, 1956, for the reason that Mr. T. K. Basu is presently a Director of the Company, which is a subsidiary of McLeod & Co. Ltd., the Managing Agents to the Company, and he is an associate of the Managing Agents within the definition in Section 2 (3) (c) (1) of the Companies Act, 1956, who may only be appointed or re-appointed a Director by a Special Resolution, of which Special Notice has been given to the Company.

4. To appoint Auditors for the year ending 31st December, 1956, and to fix their remuneration.

As Special Business:

5. To consider and, if thought fit, to pass the following resolution:—

"That the Board of Directors be and is hereby permitted with effect from the commencement of the Companies Act, 1956, to borrow moneys from time to time for the carrying on of the business of the Company notwithstanding that the moneys to be borrowed together with the moneys already borrowed by the Company (apart from temporary loans obtained from the Company's Bankers in the ordinary course of business) will exceed the aggregate of the paid-up capital of the Company and its free reserves, that is to say, reserves not set apart for any specific purpose."

The Share Transfer Books of the Company will be closed from 1st December 1956 to 15th December 1956, both days inclusive.

By Order of the Board,
MCLEOD & CO. LTD.,
A. T. DOIG,
Managing Director,
Managing Agents.

3, Netaji Subhas Road,
Calcutta, 16th November, 1956.

NOTE: (1) A member entitled to attend and vote at the Meeting is entitled to appoint a proxy to attend and vote in his stead. A proxy need not be a member.

- (2) Payment of the proposed Dividends, if declared, will be made on or after 24th December, 1956, only to those members whose names are registered in the Books of the Company on the 15th December, 1956, or to their Mandatees.

No application for Warrants will be necessary. Claims on behalf of holders of Shares on blank transfer will not be entertained.

EXPLANATORY STATEMENT.

The Resolution being Item No. 5 of the above Notice is intended to provide the Board of Directors with authority to enable them to borrow moneys from time to time for the Company's business in excess of the statutory limit being the paid-up capital of the Company and its free reserves pursuant to Section 293 (1) (d) of the Companies Act, 1956.

THE CUTTACK ELECTRIC SUPPLY CO. LTD.

A dividend at the rate of 6½% for the year ended 31st December, 1955 without any deduction of income-tax paid by the Company, has been declared payable to the shareholders.

OCTAVIUS STEEL & CO. LTD.,
Managing Agents,
Calcutta, 19th November, 1956.

HASIMARA TEA COMPANY, LIMITED.

NOTICE is hereby given that the Fifty-first Annual General Meeting of the Members of Hasimara Tea Company, Limited, will be held at the Registered Office at No. 5, Church Lane, Calcutta, on Friday, the 14th day of December, 1956, at 12-15 O'clock in the afternoon for the following purposes:—

1. To consider and adopt the Profit and Loss Account for the year ended the 31st December, 1955, and the Balance Sheet as at that date, and the reports of the Directors and Auditors.
2. To declare dividends on the Preference and Ordinary shares.
3. To appoint auditors for the year ending the 31st December, 1956, and to fix their remuneration.

As Special Business.

4. To consider and if thought fit to pass the following resolution which will be proposed as a Special Resolution:—

"Resolved that the Company hereby accords consent to J. Thomas & Company Private Limited and W. S. Cresswell & Company Private Limited acting and continuing, with effect from the date of commencement of the Companies Act, 1956, to act as brokers of the teas produced by the Company."

As Ordinary Business.

5. To consider and if thought fit to pass the following resolution which will be proposed as a Special Resolution:—

"That Mr. H. R. Townsend be and is hereby appointed a Director of the Company."

Special Notice dated the 28th October, 1956 of intention to propose the foregoing resolution as a Special Resolution has been received by the Company wherein it is stated that the notice is given to satisfy the requirements of Sections 190 and 261 (1) (c), (2) and (3) of the Companies Act, 1956, for the reason that Mr. H. R. Townsend, a Director of the Company, who retires by rotation of directors at this meeting, is a Director and Member of W. S. Cresswell & Company Private Limited which customarily acts, as also does J. Thomas & Company Private Limited, as brokers of the teas produced by the Company, which may be construed as an office or place of profit under the Company. Having regard to the fact that the Managing Agents have a right to appoint a director to the Company, and to the provisions of Sections 261 and 314 of the Act, a special resolution re-appointing him as a director of the Company is considered requisite.

The Share Transfer Books and Register of Members of the Company will be closed from the 1st December to the 14th December, 1956, both days inclusive.

HASIMARA TEA COMPANY, LIMITED.

By Order of the Board,
DAVENPORT & COMPANY PRIVATE LIMITED,
Managing Agents.

Dated the 19th day of November, 1956.
Calcutta.

Note: A member entitled to attend and vote at the meeting is entitled to appoint a proxy to attend and vote in his stead and a proxy need not be a member of the Company.

DUNCAN BROTHERS & COMPANY, LD.

NOTICE is hereby given that the Fifty-seventh Ordinary General Meeting of Shareholders will be held at the Registered Office of the Company, No. 31, Netaji Subhas Road, Calcutta on Saturday the 15th December, 1956 at 11 A.M. for the following purposes:—

1. To receive and adopt the Directors' Report, and to pass the Audited Accounts for the year ended 31st December, 1955.
2. To confirm the dividend paid on the Preference shares and Interim dividend on Ordinary shares and to declare a final dividend on the Ordinary shares.
3. To elect a Director.
4. To appoint Auditors for the current year and to fix their remuneration.
5. To transact such other competent business as may be brought before the Meeting.

The Share Transfer books of the Company will be closed from 6th to 15th December, 1956 both days inclusive.

Warrants for dividends, when declared, will be forwarded in accordance with registered instructions, or, if no such instructions have been received, to the registered addresses of all shareholders whose names appear on the Company's Register at the date of declaration. No application for payment is necessary, and holders on blank transfer are therefore recommended to submit their shares for registration immediately.

By Order of the Board,
DUNCAN BROTHERS & CO., LD.,
R. H. DUGUID,
Director.

Calcutta, 21st November, 1956.

Note. A member of the Company who is entitled to attend and vote may appoint a proxy to attend and vote instead of himself. A proxy need not be a member of the Company.

DALMIA CEMENT (BHARAT) LIMITED.

P.O. Dalmiapuram, Dist: Tiruchirappalli.

THE Managing Agents of the Company have volunteered to resign their Right to subscribe to the new ordinary capital in favour of some of the registered-holders as on 30-11-1956 of the ordinary shares of Rs. 10/- each who want to subscribe to the new shares, in the ratio of three new ordinary shares of Rs. 2/8/0 each against one ordinary share of Rs. 10/- on payment of compensation of only annas eight per each such share. A circular giving the details of the offer together with necessary Form of Application has been sent by the Managing Agents to the shareholders concerned.

In partial modification of the previous notice, it is hereby notified that the Transfer Books of the Company, as far as transfers of ordinary shares of Rs. 10/- each are concerned, will remain closed only from 27-11-1956 to 30-11-1956 both days inclusive to facilitate the persons holding such shares under blank transfers to get the shares registered in their names to avail the above offer of the Managing Agents.

for DALMIA CEMENT (BHARAT) LIMITED,
for HARI BROTHERS PRIVATE LIMITED,

J. DALMIA,
Director,
Managing Agents.

Dated, 10th November, 1956.

THE INDIAN CABLE COMPANY LIMITED

THE Directors have decided to recommend at the forthcoming General Meeting of the Shareholders to be held on the 21st December 1956, Dividends for the year to 31st March 1956, as follows:—

- (a) Dividend on Cumulative Participating Preference Shares @ 12½% free of Income Tax.
- (b) Cash Bonus on Cumulative Participating Preference Shares @ 2½% free of Income Tax.
- (c) Dividend on Ordinary Shares @ 12½% free of Income Tax.
- (d) Cash Bonus on Ordinary Shares @ 2½% free of Income Tax.

By Order of the Board,
B. J. WOODLEY,
Managing Director.

Calcutta, 13th November 1956.

DUNCAN BROTHERS & COMPANY, LIMITED.

THE Board of Directors at their meeting held on 7th November, 1956 have decided to recommend to the forthcoming General Meeting of Shareholders a final dividend of 6% on Ordinary shares (without any deduction for income tax paid by the Company) for the year ended 31st December, 1955.

DUNCAN BROTHERS, & CO., LD.,
R. H. DUGUID,
Director.

Calcutta, 21st November, 1956.

THE RIDDLE OF CHINESE AGRICULTURE

LESSON IN TOTALITARIAN METHOD

THE report that Mr. P. N. Thapar, Secretary to the Ministry of Food and Agriculture, wrote on agricultural organisation and planning in China when he returned from Peking this autumn, did not succeed in throwing much light on why the Chinese Communists have pushed ahead so quickly with their collectivisation of the peasantry. Nor for that matter has any of the discussion that has centred on this point since. The volume of the discussion has been considerable, especially since the eighth congress of the Chinese Communist Party and since Mr. Chou En-lai outlined his country's next five year plan. Indeed, economists the world over have been puzzling about what has come to be known as the "collectivisation mystery". Needless to say, they have received precious little enlightenment from the Peking regime, most of whose statements on agriculture and on planning are a mixture of fantasy, boldness, secrecy and vagueness. Nevertheless, the matter is of immediate interest to us because India and China are supposed to be engaged in a competition in planned progress, and agriculture is the basis of economic advance in both countries. Moreover, there are not wanting in India advocates of collectivisation in particular and of imitation of Chinese methods in general—and they are not all Communists. Even Mr. Thapar, although lukewarm about Chinese agricultural policy, ventured to suggest that India adopt a pale and limited copy of Chinese collectivisation "as an experiment." In any case, the question concerns this country if only because it is embarrassing to be witness to one of the greatest agricultural revolutions in history without being able to see any point or use in it.

The mystery, briefly, is this. Chinese agriculture, even before the coming of the Communists, was much more efficient than India's. In 1951 the Communists put through a vast redistribution of lands, roughly parallel to India's *zamindari* abolition in that, without limiting private property, it nevertheless arranged it more equitably. Then the industrialisation programmes and the need to keep sustenance in pace with rapidly rising population called for a considerable increase in agricultural output. A so-called plan, which was really little more than a string of targets, was then brought forward. To us who are familiar with the difficulties of Indian agriculture, this Chinese plan seemed grotesquely optimistic, especially in relation to the amount of capital it was proposed to invest. At this point, when the question arose of how these high targets were to be attained, the Communist regime put its land policy in reverse gear and dictated the virtual abolition of private peasant property in favour of collectivisation first in co-operatives and then in Russian-style *kolkhozes*. This process was later speeded up and is now largely complete. But collectivisation has never been claimed, even by its keenest advocates, to bring any advantages unless accompanied by mechanisation of farming and the use of scientific techniques. Now China quite lacks the machinery and chemicals to implement such a programme, and is not likely to have them in the next ten years. So Peking has sacrificed the psychological utility of private peasant farming for an administrative reorganisation that is quite useless without the industrial equipment needed for large-scale farming. In short, millions of peasants have been herded into collective farms where their principal agricultural aid is still what it has been for thousands of years—their own nightsoil. Why?

That there is a mystery here is sufficiently indicated by the curious way these important policy decisions were taken. It is now known that the collectivisation programme was decided on in Peking in 1951, that is while the redistribution of private properties was still in full swing, but it was not made public until two years later, in 1953. Even then, Communist organisers were instructed to go slowly and to show consideration for the traditional unwillingness of the peasants to co-operate. But in July 1955 Mr. Mao Tse-tung sud-

denly denounced just this slowness as "bourgeois and capitalist" and decreed that greater haste be made. Again this important speech was kept secret until mid-October 1955, but since that date organisation of the peasants first into co-operatives and then into *kolkhozes* has gone on at gathering speed, until now it is claimed that out of 120 million farmers only 10 million are unorganised. This unpopular programme has been rushed through during the period of destalinisation, although forced collectivisation is associated exactly with the name of Stalin. That the results achieved are largely merely administrative is suggested by the fact that China now has one

foremost political regimentation. The collective farms are not businesses or little firms of farmers; they are squadrons that are being collected by the administration to be put to whatever use is judged best later.

One of the advantages of this form of organisation was mentioned by an official at the recent Party conference when he said: "It is easier to buy wheat from a collective than from innumerable individual peasants." This is rubbish. If suitable prices are offered the peasantry will, as they have done throughout human history, centralise supplies at marketing centres, and recent Indian experience confirms how much more efficient free marketing is than official procurement. But this is not rubbish if we read "extort" for "buy" in the above remark. If suitable prices are not offered, then grain can no doubt be more easily "obtained" from a few hundred thousand collectives, run by Communist organisers, than from millions of reluctant peasants. It is in this prospect, finally, that we see the fundamental significance of the Chinese collectivisation. It is a preparation for the relentless screwing down of consumption standards among the peasantry necessary, on the Communist plan, to provide the national surplus needed for industrialisation. The mass of the Chinese people (60 percent of whom are peasants) have been banded together in Communist-run collectives, not with a view to increasing output in the near future, but solely with the intention of extracting from them the forced limitation of consumption, the forced savings and the forced transfer of surpluses needed for ambitious industrialisation.

Those people in this country, and especially enthusiastic delegations returning from Peking full of praise for Chinese organisation and discipline, who suggest that India has something to learn from Chinese agricultural practice should realise that collectivisation without tractors or fertilisers has nothing to do with agricultural economics at all. It is a form of political regimentation designed to extort from the majority of the people the price in want and suffering that must be paid for too rapid industrialisation in the cities. When China and India are producing or importing in sufficient quantities fertilisers, tractors and other farming machinery, then we shall be able to discuss the economics of collectivisation. Until that time, no economic question arises. There is only the political question of how much millions of people should be made to suffer now in order that their grandchildren shall, thanks to industrialisation, possess sufficient tanks and guns to murder their free neighbours as Russia has just murdered Hungary.

THOUGHTS FOR ELECTION CANDIDATES

PRICES AND POLITICS

WHILE the argument continues whether the world has, or has not, taken too harsh a view of the Government of India's interpretation of recent happenings in Poland and Hungary, a primary cause of the trouble in those countries appears to have received little attention. Poland and Hungary wanted to be free, they hate the Russian troops stationed in their countries, and once the Stalin myth had been exploded by Mr. Khrushchev, explosions in the satellite countries were only to be expected. All this is true; but politics are the preoccupation of a few in every country, and the revolts would not have been so widespread if there were not something else which touches everyone—economic hardship. Among the many corpses the correspondent of the *Daily Worker* of London found on the streets of Budapest was that of an old man with a loaf of bread in his hand. That is just what could not be seen in the hands of many living Poles and Hungarians, and so came about the most serious challenge Russian Communism has known so far. After everything has been said for the inextinguishable flame of freedom which burns in every human heart, the fact is that political repression by itself is tolerated far longer than idealists are ready to concede. What cracks a system quicker than anything else is a lack of the essentials of existence. There is no doubt at all that the economies of the satellite countries had for years been geared to suit the Soviet economy, that agriculture had been sadly neglected under the impact of Communism's famous enthusiasm for heavy industry, and between them was created a condition in which the Poles and Hungarians came to see very little material difference between death by starvation and death under tanks. This is a point governments forget only at their peril.

It would be absurd to argue that the trend of rising prices in India is in the foreseeable future capable of producing conditions remotely comparable to those in Poland or Hungary. But one of the lessons the revolutions in Russia and China should teach us all is that no country is permanently insulated against the possibility of upheavals. It should not be a matter of less concern to those in power today in India that the Indian people

have in their hands the power to throw out their rulers through less violent means. Although no firm date has yet been announced for the next general election, it has already begun to inform the behaviour and pronouncements of many politicians. That the question of commodity prices, which have been rising steadily for some months now and Suez has come as a devil-send to the less scrupulous, figures only rarely in the speeches of Ministers is unlikely to encourage similar reticence among either the public or the politicians in opposition.

What had until recently been reflected chiefly in the cost of living indices published in this journal is beginning to draw wider attention. The daily Press in Calcutta, for instance, has in the past week given considerable importance to the hardship now being experienced in the middle class homes, and the administration would be unwise to ignore it longer. If it is true, and it is, that the price of mustard oil has gone up by as much as six annas a seer in the past three weeks, clearly there is something the Government has failed to do. There have been similar increases in the prices of many other commodities men need for their existence, and efforts to improve the position by opening fair price shops, which are in any case too few, have so far failed dismally. Cloth, rice, vegetables and dal—all these items have recorded increases in recent months, and the tendency continues unchecked. It should be a matter of concern to the Government that its failure to check prices is not invariably attributed to administrative incompetence; there are offences electorates excuse less easily.

Ministers have been known to harbour scepticism regarding the reliability of official statistics, and public disbelief in them is well known, but there seems to be reason to think that there is no absolute shortage of the commodities referred to above. Demand in some of them has probably increased, and inflationary trends have been there for over a decade, but indications are that it is at

the retail stage of a commodity's journey from the field or the factory to the consumer that prices lose all relation to cost. Retail trade is notoriously difficult to organise, more so when the country is as large as India and the number of traders involved runs into millions. And it is retail trade which must be ordered better if there is going to be an improvement obvious to the consumer. That the recent increase in the price of coal, for instance, was entirely justified cannot be accepted with enthusiasm by the consumer when he has to pay more than what he had been told by the organised industry. In the event, business itself gets a bad name in the country at large which cannot be expected to explore all the subtleties and ramifications of commerce for an accurate apportionment of blame.

Mr. Nehru has threatened with dire consequences such business men as might be tempted to take advantage of the international crisis following the nationalisation of the Suez Canal. The threat may not even reach that part of business which causes the greatest hardship to consumers, and it is unlikely to have been forgotten by all unscrupulous retailers that some of Mr. Nehru's previous threats led to little punishment and less reduction in crime. In West Bengal at any rate, the tortuous story of Government trading in mustard oil suggests that there can be losses to the State without commensurate profit to the consumer. In rice and wheat some improvement is to be expected when imports arrive, and these will be delayed only slightly by the trouble in Suez, but it is distribution to which the Government must then devote its energies. Fair price shops may well be the answer, but they must be opened in larger numbers—and before avoidable hardship has been caused. There is also something for organised industry to do. Greater scrutiny before the selection of retailers may be one way, a continuous check on their behaviour after selection another. When trade itself is in disgrace because of the conduct of a few retailers, punishment first visits—not the Government, as in Communist countries, but—trade and industry. The problem

is rendered the more urgent by the fact that not everyone in the Government itself can be considered an unfailing friend of free enterprise.

CURRENT COIN

Tea Prices and Export Quota.—Tea prices have shown an impressive rise over the past month, plain broken pekoe having increased from Rs. 1-13-6 to Rs. 2-6 a lb. in the export auctions in Calcutta, and from 3s 9½d to 5s 8½d a lb. in London. There has been strong buying, especially on U.K. account, induced mainly by fears that delays are likely to occur in replenishing stocks now that ships have to make the longer haul via the Cape of Good Hope instead of going through the Suez Canal. The re-routing of vessels has already brought an increase in freight rates, and some forecast a further increase if, for political or other reasons, the Suez cannot be reopened to free traffic within the next two or three months. The purchase of Indian teas has been boosted by two special factors. One was the threat of a dock strike, which seemed likely to bring port working to a complete standstill and which could conceivably have done lasting damage to the Hooghly's already difficult navigational channels. This threat has now fortunately been withdrawn. The other is the prevailing uncertainty about the export duty; under the slab system, this was due to be raised at the beginning of November, but for good reasons was not. Whether buyers and the industry will escape the heavier impost again, will not be known until later this week. Considering the large amounts of tea that have had to be sold below their production costs during the current season, and many gardens' struggle for financial accommodation from a tight money market, an extension of the relief seems necessary. One curious aspect of official policy this year has been the tardiness in releasing sufficient proportions of the export quota. The stage has now been reached where, with the heavy export demand of recent weeks, an acute shortage of quota rights is developing. This is reflected by the sharp jump in the price of these rights from 28 pices to 93 pices a lb. over the past month. It is strange that although north India has produced a much bigger crop this season than last, the quota release has actually been smaller. The official explanation presumably is that the domestic market should not be allowed to run short of supplies. But it is difficult to see how it can run short, considering that north India's crop until the end of October, at 486.6 million lbs, was running 27½ million lbs. ahead of the corresponding period of last year, and there is no evidence that internal consumption has increased by a corresponding amount. The lead will admittedly be reduced by the crop regulation scheme, which has already become effective on a number of gardens. But the scope for further export quota releases is still large enough to justify the immediate announcement of a substantial one.

Compensation for Life Insurers.—Considerable anxiety prevails among life insurance shareholders about the compensation it is intended to pay them for the nationalisation of their companies. Mr. Lakshminipat Singhania's address at the annual general meeting of the National Insurance Co. Ltd. (a fuller report of which appears on a later page) reflected this anxiety and said that the compensation proposed was not "worth the name," it amounted he declared, to hardly 1 percent of the life fund the Government had taken over. Banking and insurance, according to Mr. Singhania, were "practically the same business." When the Imperial Bank was nationalised, the compensation paid was considered inadequate, but it amounted to 8 percent of the total assets. Life insurance shareholders, however, were to get not even 1 percent of the total life fund. Moreover, the sum involved was not an investment to be made by the Government, but only a pre-payment of the surpluses the insurance companies had earned by right over decades of successful working. Mr. Singhania pointed out that even this sum had not been paid, although it was nearly 11 months since life insurance had been nationalised. He urged that the compensation be paid quickly so as to help rehabilitate general insurance and to assist those who had put all their investments in life companies. The Government's decision to take over the foreign life business of Indian companies had been particularly disappointing to National Insurance since it was among the major operators in this field. Mr. Singhania complained that the decision was a reversal of an earlier one, and would hamper the general business done abroad. National Insurance, he declared, had "suffered the most" as a result of nationalisation. Not only had life business been nationalised, but a subsidiary, the National Fire and General Insurance Company, had also been taken over. The process of rehabilitation would be a difficult one, but "I am sure that in course of time we would again build up the company." The results of National Insurance's general departments show a rise of Rs. 4.17 lakhs to Rs. 19.25 lakhs in total net premium income—a rise to which the fire, marine and miscellaneous departments have all contributed. Some loss has been suffered

with the devaluation of the Pakistani currency, and bigger reserves have been provided for unexpired business. A tax-free dividend of 6 percent is proposed.

New Mill for Titaghar Paper.—Further details are now available of the new pulp and paper mill which the Titaghar Paper Mills Co. Ltd. proposes to set up in Choudwar, Orissa. The limited space at the site of the company's present two mills is so fully occupied that any appreciable expansion there is physically impossible. Since they are situated in an extremely congested industrial area, there is little possibility of securing adjoining land for expansion purposes either. The directors explain in a circular to shareholders that there is no alternative but to set up a new mill elsewhere, and Choudwar is the most suitable place. The Orissa Government is helping in acquiring the land, and the site has the advantage of being close to the bamboo forest areas leased by the State Government. A licence has been granted by the Central Government for a mill with an initial production of 12,000 tons a year. In the first instance the mill has been planned as a two-machine unit, with the possibility of further extension later. The first phase will cover the installation of one paper-making machine and auxiliary equipment, together with the requisite chemical and preparatory plant to provide the pulp required. This phase is estimated to cost Rs. 1.75 crores. When it is completed and production begins, the second phase will start, covering the installation of a second paper-making machine, together with the auxiliary equipment. This phase is estimated to cost a further Rs. 65 lakhs. The cost of the first and second phases of the new mill will be financed to some extent from the company's own resources, the balance being provided by the Industrial Credit and Investment Corporation, which has agreed to make a loan of Rs. 1 crore with interest at 5½ percent, repayable after 15 years. The new mill is expected to make a favourable start. Some important items of machinery and plant will be available from the existing mills, the value of which is not included in the estimates given above. The directors state that a satisfactory future is expected for the new mill. It will have the advantage of cheaper raw materials, and will be conveniently situated for water, road and rail communications.

Expanding Pondicherry Port.—Pondicherry's importance as a port on the east coast may soon increase now that a pier is to be constructed, at a cost of Rs. 36 lakhs and within two years. The recent visit of Mr. Shastri, Railway Minister, to Pondicherry, where the administration has been assured of all help for the second plan, has led to an account of what is to be done to improve the port so as to handle 200,000 tons of cargo a year. It is expected that the new port will reduce congestion in Madras, since iron ore from Mysore could move to Pondicherry via Guntakal when the railway track is doubled up to Villupuram. Another object is to increase imports through Pondicherry where trade has languished in recent years, in spite of a 5 percent concession in tariff. Supplies of coal for the south of India could be shipped to Pondicherry. A metre-gauge line will link the port with the Southern Railway and trolleys will be drawn by a diesel locomotive along the 1,200-foot pier. Electric cranes will help loading operations and large stacking sheds are to be set up along new railway sidings in the port. Mr. Mathrani declared that when the pier is in commission, sea-going vessels can discharge imports for the south. The new structure of reinforced concrete will be designed to stand up to Bay disturbances.

Evasion with Automobiles.—India's automobile "manufacturers" have still to learn that prices and quality are the first, not the last, of the factors customers consider before buying their products. The Tariff Commission has recently been considering pleas for an increase in motor-car prices, which, if granted, may alone be sufficient to ensure that such inadequate expansion as has taken place in the market will not be maintained. To some, it has seemed slightly odd that higher prices have been asked during a period when authorised dealers have actually been offering discounts—discounts that have varied from time to time, from place to place and from person to person. Puzzled buyers may therefore be justifiably forgiven for wondering whose margins have been sufficient to support such discounts—the dealers' or the manufacturers? The more discerning may be inclined further to wonder whether the entire move for higher prices is not fundamentally a subterfuge to get competitors' prices up, while keeping one's own down through bigger discounts later. This may seem a rather smart way of capturing the market, or a larger part of it, except that competitors too can inflate their discounts and bring the whole trade to roughly the same basis as it is on now. In the circumstances it may be worth while for the Government to reflect, as it considers the Tariff Commission's report on automobile prices, what purpose is served by learned enquiries which lead merely to higher list prices but little change on the-road selling prices. Few deny that the work-

ing of automobile concerns has been less economic than their shareholders would have wished. But the latter owe serious thought to the question whether an industry with huge surplus capacity is best advised to cork down sales by steadily raising prices, or whether it should make a bold attempt to expand its market by holding prices down. Merely holding down prices, in itself, may not even be enough. A new emphasis on quality is needed, and this is especially the view of those who have had the doubtful pleasure of being obliged to get gear-boxes, for one thing, replaced in their new cars two or three times within the first few months of the warranty period. In this context, buyers will be interested to hear that a Press note was issued by the Heavy Industries Ministry last week containing information which, although nearly 1½ years old, will nevertheless be news to many. According to the note, automobile manufacturers were instructed in June 1955 to see that their dealers and sub-dealers "prominently displayed and properly maintained" complaint books in their service stations, in which buyers could say just what was wrong with their vehicles. It was also suggested to the manufacturers that "whenever a vehicle was sold by the dealers and sub-dealers, a blank vehicle defects report card should be supplied free of charge to the purchaser"; the buyer would then be expected to list the defects on this card and send it to the Ministry of Heavy Industries "for further action." It would be interesting to know how many defects cards have been received by the Heavy Industries Ministry, and how many times "further action" has been taken. It would probably be still more interesting to know how many dealers and sub-dealers supply such cards to customers, or even inform them of their existence. A random survey suggests that quite often the dealers' pleasure over having sold a car at all understandably reaches such a pitch that the mere formality of supplying a defects card is easily forgotten. As such, administrative measures may be necessary to make the provision of the card compulsory; after all, if customers sign for the receipt of the smallest spanner in their tool-kits, there can be no inconvenience in asking them to sign also for the defects card.

"CAPITAL" CHRISTMAS TOY FUND

We acknowledge, with thanks, the receipt of the following donations:

Rs. 10 The Governor, Bihar.
Rs. 100 Jessop & Co. Ltd.
Rs. 48 Partners & Staff of Place, Siddons & Gough.
Rs. 25 each E.A.H., J. Bowman.
Rs. 20 C.D.W.
Rs. 10 B.A.W.
Rs. 5 each R.F.B. Gubbin, J. J. O'German, D. R. M. Hamilton, I. M. L. Muncie, D. C. Khanna, P. D. F. Mogridge.
Total Rs. 268.
Previously acknowledged Rs. 2,444-7-3.
Grand total Rs. 2,712-7-3.

INSANITARY CALCUTTA

THE report of Doctors Vaughan, Deare, Peck, Dawes and Jagannadham on the sanitary conditions of Calcutta is indeed most appalling. Of the conservancy establishment, which is the most important, they say: "Regarding working, it is our opinion that inspection is neither sufficiently frequent nor sufficiently thorough; the condition of private latrines and gullies and the testimony and complaints of people and bustees appear to us to be sufficient evidence on this point." The Medical Board says that the reports "indicate a complete failure on the part of the Health Department of the Corporation to carry out the ordinary operations of town conservancy." This bears out all we have written on the subject. We have a highly paid executive Chairman on Rs. 2,500, Engineer Rs. 2,000, Health Officer Rs. 1,500, Vice-Chairman Rs. 1,200, Secretary Rs. 800 a month; besides a host of Superintendents, Overseers, Inspectors and the like, drawing salaries ranging from Rs. 600 downwards, and we are entitled to ask cut bone? The state of the town is appalling; the neglect a matter of years, dating before the electric system. As we have before observed, we are not enamoured of the 72 Bumbles of Calcutta, but let us not hang them without a trial; and let us remember that they are not all elected. What have the nominees of the Government, the Chamber of Commerce, the Trades Association been doing? They have made no representations on minority report which would have carried the day with the Government. If the Commissioners are to be blamed, these men must be blamed also.

Without Prejudice

COMPENSATION FOR DEATH IN AN ACCIDENT

CONSIDERATIONS ON WHICH IT SHOULD BE BASED

(FROM OUR LEGAL CORRESPONDENT)

"EVERY human benefit and enjoyment, every virtue and every prudent act is founded on compromise." We chanced on this apothegm of dubious truth, perpetrated by the great Edmund Burke in an effort to seduce the worthy electors of Bristol from their loyal allegiance to the slave trade, just prior to considering a claim for damages in a running down case wherein the main and simple question was, "How much?" And, slightly amended, it struck us as an excellent slogan for those whose daily task is to investigate such claims and fight or settle them. "Every successful accident assurance company is founded on compromise." "Compromise", not "appeasement". Often faced with exorbitant demands, one may have to stand and fight on the question of quantum alone. But, generally speaking, with the ultimate issue doubtful if contested, and a reasonable lawyer on the other side, the prudent act—compromise—pays dividends. The trouble is, especially in a fatal accident case with which we are mainly concerned in this note, on what principle and basis are you going to work out your maximum monetary offer in default of the acceptance of which you will fight the case and, if you lose on the question of liability, will leave the amount to be affixed by the court. Fortunately, you are not in so difficult a plight as you would be in England, where if the case comes before a jury, the 12 good men and true, knowing, as well they know, that an assurance company is behind the scenes, may mulct the nominally liable defendant in punitive damages. In India, these cases come before a judge alone. No jury. And though even judges sometimes run berserk, generally speaking an experienced and

trained one will take pains to affix the amount of his award on certain specific principles; wherefore it is of importance that you should know what these principles are. Remember that a "dependant", so-called, may not be a loser at all financially as the result of a death by fatal accident. He may be actually a gainer by it, e.g., he may succeed to an estate or be entitled to the proceeds of a life assurance policy.

But let us take an ordinary typical case. A man is travelling as a passenger in a bus. He is of middle age and of the middle class, working on his own account, earning, say, Rs. 300 a month or thereabouts. He has a wife, a minor daughter and dependent parents, though only partially so; the father has a commuted pension of Rs. 70 a month. The bus collides with a motor lorry and the man is killed through the alleged negligence of the lorry driver. Your company is the insurance company concerned and will have to pay any damages awarded. A suit is filed. You have investigated the facts of the accident and the evidence, and your opinion is that the chances of successfully defending the suit are extremely remote. You would like to compromise by an agreed lump sum payment. What will your maximum offer be, and how are you going to work it out?

The writer's idea would be. Right away strike out "extremely remote" chance of winning and substitute "impossible". You then have the right mental approach. Then estimate what a judge would award—a judge with a sentimental leaning, to be on the safe side. Start with an offer, say, Rs. 10,000 below that, and then work up to your estimate of the judge's award. If that maximum is declined, fight it out on the facts, the law and the amount.

We will now consider the principles upon which the judge would be guided. Of course, there are judges and judges; and occasionally the compensation is worked out judicially on an eccentric basis; or the amount may be estimated by the judge on a basis which, while it is in principle unassailable, is unduly generous. For example, the trial judge

in the case of the fatal collision referred to above, between the bus and the lorry, in estimating the probable gross income of the victim of the accident, proceeded to do so on the remarkable assumption that "the deceased was a Congressman, and after the Congress had come into power he would have obtained a better chance of 'business facilities' and to make larger profits than previously", without an atom of evidence to support such a proposition. True it is that the amount awarded was very substantially reduced on appeal, but the point is that in considering the amount in working compromise offer, you have to bear in mind the factor that the judge may go wrong in his law and have to be put right at the expense of an appeal, as well as the fact of the existence of some sentimental judges who, sound in their law, are nevertheless in cases of real hardship inclined to be over-generous in estimating the pecuniary solatium. Such exercises of judicial discretion as the latter in affixing the amount of compensation, unless the amount is flagrantly and on the face of it excessive and not merely generous and liberal, are unlikely to be substantially modified if at all on appeal, and the fact has to be remembered in working compromise settlement offer. But although it is hardly ever possible to arrive at a mathematically accurate figure such as would satisfy an actuary, the judges make their estimates on certain broad principles which have stood the test of time and which are useful guides in considering what the damages are likely to be if a weak case is contested and lost.

Nearly 80 years ago, Lord Blackburn gave us the general principle: The court should "as nearly as possible get at that sum of money which would put the party who has been injured or who has suffered in the same position as he would have been if he had not sustained the wrong for which he is now getting the compensation or reparation". Applying the principle, the court is required to take into consideration the benefits which might accrue and the loss which is incurred by the claimants on the ground of the death as a result of the accident. If the person claiming damages gets into possession of an estate because of the death of his relative who is killed by an accident, there is no loss. The claimant is really a gainer by the event. Whenever a person gets into possession of properties by reason of the death in question, that fact has to be taken into consideration. Some five years ago, the Privy Council took into consideration for calculating the amount of damages: (1) expectation of the life of the deceased, regard being had to the age, bodily health and the possibility of premature death; (2) what sums during such expectation of life he would probably have applied to support his wife and children; (3) the present worth of such recurring payments, to be calculated as a lump sum compensation to be awarded instead of being spread over a number of years; (4) further deduction of benefit accruing because of accretion of interest due to death; (5) possibility of the wife dying before the husband; and (6) possibility of accumulation of savings.

But such detailed considerations are seldom made in India in calculating the amount of compensation payable. More often than not, it is not possible for the judge in this country to take into account all, or substantially all, the details mentioned above for the simple and sufficient reason that such particulars are rarely brought out in the evidence. So the judge is forced back to the broad general principles based upon Lord Blackburn's venerable dictum, plus his own practical commonsense. The main criterion is the loss of the reasonably expected pecuniary benefit. The court has to consider the probable earnings and future prospects of the deceased, because on that it would depend to ascertain the benefit which the beneficiaries might have reasonably expected if the life of the deceased had not been cut short by the accident.

R. P. Mookerjee J., in a very informative and interesting judgment, indicated the considerations which should weigh with the court in determining the compensation payable: (1) what was the average net stable annual income of the deceased, as also what could be expected to be the future prospects of the deceased so far as his earning capacity was concerned? (2) what are the benefits which the claimants have lost by reason of the death of the person concerned? And for determining the nature of such benefits an attempt is to be made to find out how many members there were in the household, the earnings and income from such members and the amount which was contributed by the different persons as also whether the claimants have gained financially by the death; (3) the estimated amount of maintenance of the deceased; and (4) considering the age of the deceased and other conditions, what would be the present worth of the estimated recurring amount lost to the claimants which is to be compensated?

It is the exception rather than the rule for the whole of the above information to be available to the judge who tries these cases. He generally has to work out a just solatium, on very flimsy details, as best he can, on a claim which is often preposterous as to its amount. But where a compromise out of court is the object in view, the patience and hard spade-work involved in obtaining the information is well worth while; and if the compromise effort fails, the judge will be grateful for the details and act upon them.

A DITCHER'S DIARY

Bhutan and Sikkim are now being persuaded to look to India the way they should. That the methods employed in the process bear some resemblance to those seen before August, 1947, should cause nobody the slightest embarrassment. Plus ça change, plus c'est la même chose.

I can think of nothing more conducive to error and confusion than classifying one occupation as dignified and another as less so. On such judgments is the whole basis of class distinction, and therefore, conflict, based. The other day, an industrial labour tribunal was so rash as to accept the contention of the Madras Union of Journalists that the post of sub-editor is "a more dignified one" than that of reporter. I could not disagree more. Because reporters who are tired of the rough and tumble of a life dictated by the diary like to spend their declining years swinging in a sub-editor's chair, does not mean that they are graduating to a more dignified existence. While energy, initiative and originality are considered virtues in human beings, it can be said with safety that they are not. To my mind, the reporter has an altogether more dignified and worthy calling. On him the reputation of the paper for objectivity, adequate coverage and lively interest chiefly depends. And what does the sub-editor do: well, to quote a scribe whose name I do not remember: "He marks the type and ticks the caps for far better men." I read this some time ago in a British weekly journal which was attempting to review the changes in Fleet Street during the past twenty years or so. It did add that this had ceased to be true of sub-editors there; these have now developed into "bossy re-write men" whose task it is to dish up readers with "pre-digested pap"—hardly, I should say, a dignified occupation in spite of its status on present-day Fleet Street. Fortunately, that depressing state of affairs is still largely restricted to London journalism; it is unknown in the United States, for instance, where the reporter is by far the better paid, more respected character and sub-editors are exceedingly hard to come by. It is not my aim to demote the "sub". His job is an expert and vital one and we would be in a sorry state without him. What I am trying to do is to state that the reporter gets a fair trial at the bar of public opinion. Both callings tend to be as dignified as the ability and sense of responsibility of the incumbents contrive to make them. But to rank reporters permanently lower in the journalistic hierarchy is to confuse dignity with regular hours and shiny trousers.

There is nothing so valuable, or these days so rare, as good plain speaking. Statesmen cannot be relied on for it, and too many business men are apt to confuse the need for responsibility with their natural tendency to keep their own counsel and mind their own affairs. As for the journalists: Well, if a gold medal were awarded to every one who has written what he really feels about events in the past two months, it is unlikely there would be so much as a ripple on the world's bullion markets. Strangely enough, the London staff of the Daily Worker would probably be the best represented at the investiture. But one business man has just unburdened himself on the Suez crisis and seems to me to have talked more sense than most statesmen can claim. He is Sir William Currie, chairman of the P. & O., the group with the largest number of ships, after tankers, using the Canal. If others put sentiment before self-interest when judging President Nasser, Sir William does not. The dictator of Egypt has acted as dictators

will, without rhyme or reason, and has destroyed, temporarily, one of the world's arteries of commerce. He has seized the Suez Canal from its rightful owners and then blocked it in defiance of treaties and agreements. So says Sir William. One does not have to agree wholeheartedly with what he says to applaud his courage in saying it. There is so much conscience these days about colonialism, although Sir William is puzzled why there should be, that the world seems eager to forget that it was a piece of sheer brigandage that set the whole Suez business off. And although I do remember that Britain and France came in for much condemnation at the beginning when their action sank one ship in the Canal, the sinking of umpteen ships by the Egyptians has been accepted without comment. Sir William has an answer for those who say this had to be done because Egypt was attacked. The sinking, besides, of the Canal Company's ships and the wrecking of its workshops, he says, shows that spite was the real reason. It seems to me that whatever Egypt's grievances, she has no need to take it out on the rest of the world by objecting to the Canal being cleared. The way it was nationalised was, as Sir William put it, "armed robbery." To keep it closed now the fighting has stopped, cannot be justified on any grounds, certainly not defiance of colonialism. In the words of a recent Times editorial which Sir William quoted "It is all a matter of water. Let Russia or China or any other Power overrun, capture, dictate to, or even destroy any of its neighbouring countries and apparently all is well." Personally I am wondering how long this conscience about colonialism which, let us make no mistake about it, has played a major part in making the world a better place to live in, will long survive biased judgment of this kind.

I note that the Government has decided to ban the production and sale of horror comics. This has my entire approval. Such juvenile reading is known to have caused much teenage nuisance and even crime in the country of its origin, America, and has not been wholly without evil consequences in the U.K. In my boyhood, I did not read any horror comics for the simple reason there were none; so I can only wonder what effect they might have produced on my character and career if, like today's teddy-boys, I had been surfeited with them. But it is idle to speculate and, as it happens, I am quite content to clatter away on my typewriter week after week, instead of going out to cosh some luckless citizen or join a gang of house-breakers. One thing, however, strikes me. If by reading the ghost stories and fairy tales which were our staple literary fare as children, we have not grown, as I am perhaps justified in stating, into abnormally-terrified or ultra-romantic adults, why should today's children develop into delinquents and criminals? It makes me think that domestic training and social environment might have more to answer for than we in fact suspect. The modern father and mother are often both bread-winners, subject to the stresses of present-day industrial life: consequently children nowadays rarely get the attention at home that was once customary. Hence, the evil effects of horror comics which, I am afraid, are scarcely counteracted by the well-meaning, moralising comic strips published by the average newspaper in this country. Why do I say this? Because, I find that most of these are done with such conspicuous incompetence, artistic as well as literary, that they usually repel instead of attract children's interest. Now that horror comics are banned, it is to be hoped that some of the skill that has hitherto gone into them will find its way into the comic strips.

HISTORY

The Company was incorporated in India as a private company on 17th October, 1933, under The Indian Companies Act, 1913, with the name Lever Brothers (India) Limited. Shortly after incorporation the Company took over the Lever soap business established in India in the nineteenth century by Lever Brothers of Port Sunlight, Cheshire, since when the Company has carried on business continuously.

On 8th October, 1956, but with effect from the close of business on 31st December, 1955, by virtue of Orders of the Bombay High Court the Company was amalgamated under Sections 391 and 394 of the Companies Act, 1956, with the undenoted Companies whose assets thereby vested in the Company subject to their liabilities, duties and covenants:—

- (1) THE HINDUSTAN VANASPATI MANUFACTURING COMPANY PRIVATE LIMITED (Sometimes referred to in this Offer for Sale also as "HVM")
- (2) WILLIAM GOSSAGE & SONS (INDIA) PRIVATE LIMITED
- (3) JOSEPH CROSFIELD & SONS (INDIA) PRIVATE LIMITED

These companies (hereinafter collectively referred to as "the merged companies") have now ceased to exist. Previously they were closely associated with the Company all being wholly owned subsidiaries of Unilever Limited. Since the amalgamation the Company has been carrying on the combined business comprising the manufacture and sale of soaps, detergents, toilet preparations and glycerine, together with vanaspati, margarine, edible oils and oil cake, formerly products of HVM which since 1932 has been the largest producer of its kind in India.

Following the amalgamation, the Company was converted to a public company on 27th October, 1956 and changed its name to Hindustan Lever Limited on 1st November, 1956.

BUSINESS

The Company's main aim has always been to sell good quality products at fair prices. Its products now include SUNLIGHT and LIFEBOUY soaps, LUX toilet soap, LUX soap flakes, RINSO soap powder, VIM scouring powder, DALDA and LOTUS brands of vanaspati, BLUE BAND and other margarines, and MARVO cooking medium. The rights in India to all the trade marks applied to these products are the property of the Company. The Company has arrangements with companies of the Unilever Group outside India by which it manufactures and sells their products in India for its own account; these products include PEARS transparent soap and talcum powder, REXONA toilet soap, BREEZE toilet soap, ERASMIC shaving stick, and shaving cup soap, HIMALAYA BOUQUET toilet and talcum powder, PEPSODENT and GIBBS S.R. toothpastes and GIBBS dentifrice, CALIFORNIAN POPPY hair oil and ERASMIC coconut hair oil. The Company also produces industrial and B.P. quality glycerine which it sells under its trade marks PYRAMID and WHEEL. The Company also sells the soapless detergent powder SURF; supplies of this product are at present imported from the United Kingdom, but local manufacture is planned.

The Company's products are distributed throughout India. The Company's sales offices in Bombay, Calcutta, Delhi and Madras and its depots at Gauhati, Cochin and Bangalore deal directly with over 13,000 wholesalers and stockists in over 3,000

HINDUSTAN LEVER LIMITED—Cont'd.

towns. The Company's 375 salesmen are in touch with about 2,00,000 shops that deal in the Company's products.

As a member of the Unilever Group, the Company has access to Unilever's international knowledge and experience of the manufacture and marketing of detergents, edible fats and toilet preparations. To a great extent because of its membership of the Group, the Company has made a valuable contribution to the development of the soap and vanaspati industries in India and continues to do so.

The basic raw material of the Company's soap and vanaspati manufacturing businesses is vegetable oil. The quantities (to the nearest thousand tons) of such oil processed by the Company and by HVM whose business is now amalgamated with the Company, during each of the five years ended 31st December, 1955, are given below; a predomi-

nant part—about 88% in 1955—is purchased within India.

	1951	1952
81,000 tons	81,000 tons	91,000 tons
89,000 tons	89,000 tons	97,000 tons
1,04,000 tons	1,04,000 tons	1,04,000 tons

PERSONNEL

For many years the training of Indian employees for higher posts, whether technical or commercial, has been an important part of the Company's policy and selected personnel are sent overseas for special courses of instruction and for observation of advanced practices. More than 85% of the managerial staff are Indians.

In recent years during which relations between employers and workers in all industries have been subjected to many strains and stresses the Company has been loyally served by its workers and has on

its part endeavoured to think and act progressively in all matters pertaining to wages, conditions of work, retirement provisions and welfare. The wages and salaries paid by the Company have been acknowledged on several occasions by Labour Tribunals as the highest in the industry.

The number of people employed by the Company exceeds 6,000.

SUBSIDIARIES

The Company has four wholly owned subsidiaries. They are:—

United Traders Private Limited and Van der Berghs (India) Private Limited, neither of which are trading at present, and

Lever's Associated Trust Private Limited and Levindra Trust Private Limited, both of which are trust companies managing the Provident Fund of the Company's employees.

FACTORIES

Situation and Address	Approximate Area Acres	Nature of Tenure	Main Products
Haji Bunder, Sewri, Bombay.	24.0	Leasehold To 1983 with option for renewal to 2032	Soap, toilet preparations, glycerine vanaspati, margarine and oil cake.
Garden Reach, Calcutta.	3.4	Leasehold To 2008	Soap, toilet preparations and glycerine.
Athpur, Sharnagar, W. Bengal.	9.0	Freehold	Vanaspati.
Grand Trunk Road, Ghaziabad, U.P.	15.2	Freehold	Vanaspati.
Edamalaipatti Pudur, Tiruchirappalli, S. India.	19.7	Freehold	Vanaspati.
	39.5	Freehold	Vanaspati.

The Factories are well situated for the purposes of securing regular supplies of raw materials and ensuring efficient distribution of manufactured products to all parts of the country. They are equipped with modern plant and machinery, adequately provided with railway sidings, water and power and are maintained in good working condition.

Negotiations have been completed for acquiring a lease from the Government of Bombay of a site of about 0.9 of an acre in the area known as Back Bay Reclamation on which the Company proposes to erect a Head Office building to house members of its staff at present dispersed over five buildings in Bombay City.

AUDITORS' REPORT

The following is a copy of the Report received from the Company's Auditors, Messrs. A. F. Ferguson & Company:—

The Directors,
Unilever Limited,
Blackfriars,
London, E. C. 4, England.
Gentlemen,

Bombay, 12th November, 1956.

We have examined the audited accounts for the five years to 31st December, 1955, of Hindustan Lever Limited (formerly Lever Brothers (India) Private Limited) and those of its subsidiary companies at that date, all of which were wholly owned, namely:—

United Traders Private Limited
Lever's Associated Trust Private Limited
Levindra Trust Private Limited

and those of the following companies (hereinafter collectively referred to as "the merged companies"), whose assets and liabilities were on 8th October, 1956, transferred to Hindustan Lever Limited, namely:—

The Hindustan Vanaspati Manufacturing Company Private Limited (hereinafter referred to as "HVM")
Joseph Crosfield & Sons (India) Private Limited
William Gossage & Sons (India) Private Limited

We have also examined the audited accounts of Van den Berghs (India) Private Limited which was wholly owned subsidiary of HVM but which, on 8th October, 1956, on the abovementioned transfer of assets and liabilities, became a wholly owned subsidiary of Hindustan Lever Limited.

We have also examined the audited accounts of the following companies (hereinafter referred to as "the liquidated companies"), for the four years to 31st December, 1954, and the period to 27th July, 1955, namely:—

The North West Soap Company Private Limited
The Premier Soap Company of India Private Limited

which, as wholly owned subsidiaries of Hindustan Lever Limited, went into voluntary liquidation on 28th July, 1955, and held their final meetings in the liquidations on 23rd October, 1956.

Throughout the years under review we have acted as auditors of all the above companies.

No audited accounts of any of the above companies have been made up since 31st December, 1955.

1. PROFITS

We report that the combined profits of Hindustan Lever Limited, its subsidiary companies as at 31st December, 1955, and the liquidated companies, and the profits of each of the merged companies, (in the case of HVM, combined with those of its former subsidiary company), all arrived at on the basis set out below, were as follows:—

Year ended 31st December	Hindustan Lever Limited and its subsidiary companies	HVM and its subsidiary company	Joseph Crosfield & Sons (India) Private Limited	William Gossage & Sons (India) Private Limited	AGGREGATE		
	Profits before taxation	Profits before taxation	Profits before taxation	Profits before taxation	Profit before taxation	Taxation as defined in (ii) below	Profit after taxation
Col. 1	Col. 2	Col. 3	Col. 4	Col. 5	Col. 6	Col. 7	Col. 8
	Rs.	Rs.	Rs.	Rs.	Rs.	Rs.	Rs.
1951	1,28,85,262	11,67,798	35,228	37,766	1,41,26,054	61,36,005	79,90,049
1952	1,80,39,423	4,52,080	36,087	39,961	1,85,67,551	80,65,280	1,05,02,271
1953	1,64,71,799	82,80,750	35,753	39,170	2,48,27,472	1,07,84,433	1,40,43,039
1954	1,71,65,259	(53,31,230) Loss	35,758	38,052	1,19,07,839	51,72,468	67,35,371
1955	1,90,86,815	57,34,820	36,569	39,509	2,48,97,713	1,08,14,944	1,40,82,769

(i) The profits shown in columns 2 to 6 inclusive have been arrived at after charging all expenses of working and management, interest, and depreciation and after making such adjustments as are in our opinion necessary. Depreciation has been charged throughout the five years on a consistent basis and, in aggregate, exceeds the total income-tax allowances exclusive of initial allowances and development rebates.

(ii) The taxation shown in column 7 has been calculated on the profits shown in column 6 at the rate of 6.95% as in the rupee. This is the combined rate of income-tax and super-tax applicable to the profits of the companies for each of the years under review before taking into account the effect of dividend distributions out of such profits. In respect of 1955 the Finance Act 1956, imposed on companies taxation additional to the basic rate of 6.95% as to the extent that dividends declared during 1955 exceeded 6% of issued capital. On the basis of the Finance Act, 1956, and the present issued capital, the additional taxation payable by Hindustan Lever Limited in future years will be as follows:—

On the first Rs. 33,42,000 of dividends	Nil
On the next Rs. 22,28,000 of dividends	2 as in the rupee
On the balance of dividends over Rs. 55,70,000	3 as in the rupee

HINDUSTAN LEVER LIMITED—Cont'd.

The aggregate actual taxation paid or calculated as payable by Hindustan Lever Limited, its subsidiaries and the merged companies is as follows:—

Year ended 31st December	Rs.
1951	60,74,497
1952	75,94,460
1953	90,12,026
1954	80,44,480
1955	1,38,42,031

2. DIVIDENDS

The following rates of dividend were paid in respect of the five years to 31st December, 1955, by Hindustan Lever Limited and the merged companies:—

The capital of each company consisted wholly of fully paid ordinary shares of Rs. 10 each								
Year ended 31st December	Hindustan Lever Limited		HVM		Joseph Crosfield & Sons (India) Private Limited		William Gossage & Sons (India) Private Limited	
	Paid up Cap. Rs. Lakhs	Rate %	Paid up Cap. Rs. Lakhs	Rate %	Paid up Cap. Rs. Lakhs	Rate %	Paid up Cap. Rs. Lakhs	Rate %
1951	138	Nil	133	Nil	0.8	Nil	3.2	Nil
1952	200	Nil	133	Nil	0.8	Nil	3.2	Nil
1953	200	25	133	Nil	0.8	200	3.2	50
1954	200	55	133	30.075	0.8	Nil	3.2	Nil
1955	200	37.5	133	50	0.8	56.25	3.2	18.75

3. NET ASSETS

The net assets, based on the audited balance sheets as at 31st December, 1955, of Hindustan Lever Limited, its subsidiary companies at that date, each of the merged companies, and Van den Berghs (India) Private Limited at that date a subsidiary company of HVM, after making such adjustments as we consider necessary, were as follows:—

	Hindustan Lever Limited	The subsidiary companies of Hindustan Lever Limited	HVM	Van den Berghs (India) Private Limited, a subsidiary company of HVM	Joseph Crosfield & Sons (India) Private Limited	William Gossage & Sons (India) Private Limited	AGGREGATE

We are, gentlemen,

Yours faithfully,
A. F. FERGUSON & CO.,
Chartered Accountants.

PROSPECTS

The consumption of products of the types manufactured by the Company is likely to increase as the standard of living is raised. The Company expects to win a fair share of any increased prosperity that may accrue to the industries concerned.

Assuming a continuance of present rates of taxation the Directors estimate that the consolidated net profit of the Company and its subsidiaries for the year ending 31st December, 1956 (after taking into account taxation of Rs. 108 lakhs of which Rs. 19½ lakhs is in respect of the capitalisation of

Rs. 157 lakhs of profits on 11th October, 1956) will not be less than Rs. 90,00,000. On the 1st November, 1956 the Company paid an interim dividend of 8 annas per share absorbing Rs. 27,85,000. If the estimated net profit is realised and there is no substantial change in trading conditions the Directors would expect to recommend that a final dividend for the year 1956 of 6 annas per share, free of income tax, be paid before the end of May 1957.

For the future it is the intention of the Directors (in the absence of unforeseen circumstances) to recommend the distribution of a large part of the Company's profits by way of dividend. For

example, if the estimated level of profit for 1956 is maintained and there is no substantial change in rates of taxation or trading conditions, the Directors would expect to recommend for the year ending 31st December, 1957 a total dividend of not less than Rs. 1-6-0 per share free of income tax. On the sale of the shares now offered the Company will become a Company to which Section 23A of The Income Tax Act, 1922 applies.

As will be seen from the Auditors' Report one of the merged companies (HVM), the business of which is now carried on by the Company and is primarily concerned with the manufacture and sale

HINDUSTAN LEVER LIMITED—Cont'd.

of vanaspati, incurred a loss in 1954. In that year the price of Indian groundnut oil fell heavily. The profits of this particular business—as indeed of the Vanaspati industry as a whole—are governed to a great extent by price fluctuations in the Indian groundnut oil market. These fluctuations in recent years have been very wide.

STATUTORY AND OTHER INFORMATION

The Offeror was the promoter of the Company but no sum was paid to the Offeror for its services as promoter.

During the two years preceding the date hereof the Company issued 20,00,000 Ordinary Shares of Rs. 10 each credited as fully paid to Unilever Limited in consideration of the vesting in the Company of the assets of the merged companies and it also issued during this period 15,70,000 Ordinary Shares of Rs. 10 each credited as fully paid to Unilever Limited by capitalising Rs. 1,57,00,000 of profits standing to the credit of general reserve.

No amount has been paid to the Company by way of premium on any shares within the two years preceding the date hereof.

Apart from the dividends referred to in the report of the auditors, the shares above referred to, the sum of Rs. 5,22,590 being remuneration paid to the directors and secretary of the Company and the sum of Rs. 2,84,43,747 being payments made to or to be made to Unilever Limited for goods and services in the ordinary course of the Company's business, no amount or benefit has been paid or given within the two years preceding the date hereof to the promoter or any officer of the Company. It is not intended that the Company should pay or give to the promoter any amount or benefit other than such amounts as may become payable to the promoter in the ordinary course of the Company's business. It is not intended to pay or give any amount or benefit to any officer of the Company other than normal remuneration.

Except as beneficial owner of the whole of the Company's issued share capital and as a creditor of the Company from time to time in the normal course of the Company's business, the Offeror has no interest in the profits or property of the Company. The other members of the Company have no beneficial interest in the profits or property of the Company.

Since incorporation the Company has capitalised profits standing to the credit of general reserve (including the Rs. 1,57,00,000 referred to above) as follows: 20th March, 1937 Rupees Six Lakhs; 29th December, 1937 Rupees Eleven Lakhs; 22nd July, 1939 Rupees Three Lakhs; 20th August, 1940 Rupees Two Lakhs; 17th November, 1942 Rupees One Lakh; 6th September, 1943 Rupees Six Lakhs; 10th February, 1945 Rupees Thirteen Lakhs; 7th September, 1945 Rupees Twelve Lakhs; 24th December, 1946 Rupees Six Lakhs; 31st December, 1951 Rupees Fifty Lakhs; 22nd August, 1952 Rupees Sixty-two Lakhs; 11th October, 1956 Rupees One Hundred and Fifty Seven Lakhs. The Company applied the amounts capitalised in paying up in full ordinary shares of the Company of Rs. 10 each of a nominal amount equal to the profits capitalised. All the shares were allotted to the Offeror or its nominees, or subsidiaries of the Offeror incorporated in the United Kingdom or their nominees.

The Company has not issued any redeemable preference shares and does not at the present time intend to do so.

The premium receivable on the shares now offered for sale will be retained by the Offeror. No part of the proceeds of this Offer for Sale is receivable by the Company. The Offeror will pay all the expenses in connection with this Offer for Sale except the stamp duty on the transfers from the Offeror to the persons in whose names the shares are registered which will be payable by those persons. The Offeror will also pay brokerage as indicated below. The total expenses, including brokerage, payable, by the Offeror are estimated to be Rs. 3,50,000.

No commission (except brokerage as hereinafter mentioned) was paid during the two years preceding the date hereof or is payable to any person in consideration of his subscribing or agreeing to subscribe or procuring or agreeing to procure subscriptions for shares in the Company.

All the directors are whole-time directors and are not required to hold any qualification shares.

No director had any interest in the promotion of the Company and neither the promoter nor any director has any interest in any property acquired by the Company within the two years preceding the date hereof or proposed to be acquired by it other than the promoter's interest as a member of the Company and beneficial owner of the whole of its share capital.

No sums have been paid or agreed to be paid to any director in cash or shares or otherwise by any person to induce him to become or to qualify him as a director or otherwise or for any other purpose whatsoever for services rendered by him in connection with the promotion of or formation of the Company.

Mr. A. J. C. Hoskyns-Abraham is the beneficial owner of £200 Unilever Limited 8% Cumulative 'A' Preference Stock.

The Articles of Association of the Company contain provisions to the following effect:—

- The profits of the Company which shall from time to time be determined to be divided shall be divisible among the members in proportion to the capital paid up on the shares held by them respectively.
- Unless otherwise determined by a general meeting the number of directors shall not be less than three and not more than eleven.
- The directors including the Managing Director, if any, shall be paid out of the funds of the Company by way of remuneration for their services such sums as the Company in general meeting may from time to time determine, and such remuneration shall be divided among them in such proportions and manner as the Directors may determine, and, in default of such determination within the year by the Chairman, if any Director shall be called upon to perform extra services or make special exertions or efforts the Board may arrange with such Director for such special remuneration for such extra services or special exertions or efforts either by a fixed sum or otherwise as may be determined by the Board and such remuneration may be either in addition to or in substitution for his normal remuneration. A Director who is not a resident of Bombay City may be paid such sum as the Board may consider fair compensation for travelling, boarding, lodging and other expenses incurred in attending meetings of the Board in that City. If any Director is called upon to go or reside out of Bombay City on the Company's business, he shall be entitled to be repaid any travelling or other expenses incurred by him in connection with the business of the Company.

(d) Save as required by the Companies Act, 1956, no restrictions are imposed by the Articles of Association on the Directors' powers of management and the control of the Company's affairs is vested by the Articles of Association in the Directors.

(e) Subject to the provisions of the Companies Act 1956, the Board may appoint from time to time any one of its number as Managing Director of the Company for a fixed term not exceeding five years at a time upon such conditions as it thinks fit and may vest in such Managing Director such of its powers as it thinks fit and such powers may be made exercisable for such period or periods, and upon such conditions and subject to such restrictions as it may determine. The remuneration of the Managing Director shall be determined in the same manner as that of a Director.

The Board has not appointed a Managing Director and it is not its present intention to do so.

(f) The Directors may from time to time at their discretion raise or borrow or secure

the payment of any sum or sums of money for the purposes of the Company. Provided, however, where the moneys to be borrowed together with the moneys already borrowed (apart from temporary loans obtained from the Company's Bankers in the ordinary course of business) exceed the aggregate of the paid up capital of the Company and its free reserves (not being reserves set apart for any specific purpose) the Board shall not borrow such moneys without the consent of the Company in General Meeting. The provisions of the Articles of Association relating to borrowing are qualified by the relevant provisions of the Companies Act, 1956.

(g) Every Officer or agent of the Company shall be indemnified out of the assets of the Company against any liability incurred by him in defending any proceedings, whether civil or criminal, in which judgment is given in his favour or in which he is acquitted or in connection with any application under Section 693 of the Companies Act, 1956, in which relief is granted to him by the Court.

(h) Save as hereinafter mentioned in regard to joint-holders, on a show of hands every member who (being an individual), is present in person or (being a corporation) is present by a representative, shall have one vote. Upon a poll every member who (being an individual) is present in person or by proxy or (being a corporation) is present by a representative or proxy shall be entitled to one vote for each share held by him. No person may vote in person or by proxy if there remains unpaid any call or other sum due on any of his shares.

(i) If there be joint registered holders of any shares, any one of such persons may vote at any meeting either personally or by proxy in respect of such shares, as if he were solely entitled thereto, provided that if more than one of such joint-holders be present at any meeting either personally or by proxy, that one of the said persons so present whose name stands higher on the Register of Members shall alone be entitled to vote in respect of such shares, but the other or others of the joint-holders shall be entitled to be present at the meeting. Several executors or administrators of a deceased Member in whose name shares stand shall for the purpose of the Articles be deemed joint-holders thereof.

(j) The Articles of Association contain no restriction on the transfer of fully paid up shares. The Directors may decline to register a transfer of any partly paid shares to a person of whom they do not approve and may also decline to register a transfer of partly paid shares on which the Company has a lien.

(k) The special rights attaching to any class of shares may be varied, modified, commuted, affected, abrogated or dealt with by any agreement between the Company and any person purporting to contract on behalf of that class provided that such an agreement is ratified in writing by the holders of at least three-fourths in nominal value of the issued shares of that class or is confirmed by a resolution passed at a separate General Meeting of the holders of shares of the class and supported by the votes of the holders of at least three-fourths of the shares of that class.

MAIN OBJECTS

The main objects of the Company include the manufacture and sale of soap, soap powders, detergents, toilet requisites, vanaspati, margarine, edible oils, cattle food and foods of all kinds.

All the objects of the Company are in law main objects and therefore a copy of the objects clause of the Company's Memorandum of Association is annexed hereto and forms part of this Offer for Sale.

CONTRACTS

The following contracts, not being contracts entered into in the ordinary course of business, which are or may be material have been entered into by the Company during the two years preceding the date hereof:—

No.	Date	Particulars
1	2nd May, 1955	Assignment of the Trade Mark "Breeze" registered in India under No. 128300 to Erasmic Company Limited of Unilever House, London.
2	1st February, 1956	Assignment of the Trade Mark "Bris" registered in India under No. 163139 to Erasmic Company Limited of Unilever House, London.
3	12th November, 1955 to 18th September, 1956	Correspondence between the Company and the Government of Bombay by which the latter has accorded sanction to the grant of a lease of a site at Backbay Reclamation, Bombay of approximately 4258 sq. yards for a period of 99 years at a ground rent of Rs. 12 As. 8 per sq. yd. on condition that the Company erects thereon an Office Building of not less than Rs. 12 lakhs in value within the first four years of the said lease.
4	27th September, 1956	Agreement between the Company and its workmen employed in its factories at Sewri, Bombay, represented by Lever Brothers Employees' Union, Bombay, fixing generally the terms and conditions of employment for the years 1955 to 1960 both inclusive, and in particular fixing pay-scales, dearness allowance, grading of hourly-rated jobs, provident fund, gratuity and incentive payment and bonus.
5	10th October, 1956	Resolution passed by the Company in general meeting on 10th October, 1956, voting as the annual remuneration of all the Directors collectively a sum not exceeding Rs. 8 lakhs to be apportioned among them as they may determine.

UNDERWRITING

This Offer is not being underwritten.

APPLICATIONS FROM THE PUBLIC, which must be for 50 shares or a multiple thereof must be made on the official WHITE application form and will be declined if not so made. WHITE application forms, together with a remittance for the full amount payable on application, should be sent to any of the branches of the National Bank of India Limited, or to the Brokers to the Offer, at the addresses as given on the application form. A separate remittance must accompany each form.

APPLICATIONS FROM THE STAFF OF HINDUSTAN LEVER LIMITED for the shares reserved in the first instance for them, and which must be for either 25 or 50 shares, must be made on the official BLUE application form and will be declined if not so made. These forms are obtainable only from the offices of Hindustan Lever Limited.

HINDUSTAN LEVER LIMITED—Cont'd.

mentioned in the last paragraph of this Offer for Sale. BLUE application forms, together with a remittance for the full amount payable on application, should be sent to the Secretary of Hindustan Lever Limited at Scindia House, Dougall Road, Ballard Estate, Bombay. A separate remittance must accompany each form.

All remittances should be made by cheque or draft drawn on a bank in any one of the following towns, Bombay, Calcutta, Madras, Bangalore, Amritsar, Cawnpore, Delhi, New Delhi, Tuticorin, Cochin. Application forms sent with cheques or drafts drawn on banks in towns other than those stated above may be refused.

Cheques or drafts should be made payable to "National Bank of India Limited A/c Unilever" and should, for the applicant's protection, be crossed "A/c Payee only".

The Offeror reserves the full and uncontrolled right of accepting or rejecting any application in whole or in part. Where an application is rejected or not accepted in full, the whole or the balance of the applicant's remittance will be returned, in which event bank commission, if any, will be payable by the applicant.

Acceptance will be notified by the despatch of a definitive share certificate in the name of Unilever Limited together with a blank transfer executed by that company or on its behalf as transferor. These documents will be sent by registered post at the risk of the applicant. The Company has agreed to waive the transfer fee for the registration of such transfers from the Offeror.

A brokerage of 4 annas per share will be paid by the Offeror to the Managing Brokers in respect of all acceptances. The Managing Brokers will pay 2 annas per share to Certified Brokers of any recognised stock exchange and to the National Bank of India Limited on the basis of acceptances of applications received and bearing their stamp in addition to the 2 annas per share, the Managing

Brokers will pay to Messrs. Place, Siddons & Gough, Messrs. Kothari & Sons and the National Bank of India Ltd. remuneration for any additional services rendered by any of them to and at the request of the Managing Brokers.

The consent in writing of the above-mentioned Bankers, Solicitors and Brokers to act in their respective capacities has been obtained and none of them has withdrawn their consent to the issue of this Offer for Sale. Messrs. A. F. Ferguson & Co. have also given and have not withdrawn their written consent to the issue of this Offer for Sale with their Report included in the form and context in which it is included.

The foregoing written consents, copies of the contracts numbered one to five above and the written statement of the adjustments made by the Auditors in arriving at the figures shown in their Report and giving the reasons therefor have been attached to the copy of the Offer for Sale, which has been delivered to the Registrar of Companies, Bombay, for registration.

The documents mentioned below may be inspected at the Registered Office of the Company, Scindia House, Dougall Road, Ballard Estate, Bombay, during usual business hours (excluding Saturdays) until the Application List has been closed.

- (1) The Memorandum and Articles of Association of the Company.
- (2) Copies of the Contracts numbered one to five above.
- (3) Copy of the order of the Central Government giving consent to the Offer for Sale.
- (4) Copy of the order dated 8th October, 1956, of the High Court of Judicature at Bombay under Sections 391 and 394 of the Companies Act, 1956, vesting the assets (subject to the liabilities, duties and covenants)

of The Hindustan Vanaspathi Manufacturing Company Private Limited, in the Company.

- (5) Copy of the order dated 8th October, 1956, of the High Court of Judicature at Bombay under Sections 391 and 394 of the Companies Act, 1956, vesting the assets (subject to the liabilities, duties and covenants) of Joseph Crosfield & Sons (India) Private Limited, in the Company.
- (6) Copy of the order dated 8th October, 1956, of the High Court of Judicature at Bombay under Sections 391 and 394 of the Companies Act, 1956, vesting the assets (subject to the liabilities, duties and covenants) of William Gossage & Sons (India) Private Limited, in the Company.
- (7) The original Report of Messrs. A. F. Ferguson & Co., as set out herein and a copy of their statement as to the adjustments made by them in arriving at the figures shown in their Report and giving the reasons therefor.
- (8) Copies of the balance sheets and profit and loss accounts upon which the Report of Messrs. A. F. Ferguson & Co., Bombay, is based for the 5 years ended 31st December, 1955.

Copies of the Offer for Sale and WHITE application forms may be obtained by the public from all Indian branches of the National Bank of India Limited and from the Brokers. Copies of the Offer and BLUE application forms may be obtained by the staff from the Registered Office of the Company at Scindia House, Dougall Road, Ballard Estate, Bombay, and from the Company's offices at 4, Lyons Range, Calcutta; 12/1 Delhi-Aimeri Gate Scheme, Delhi; 11/14 Armenian Street, Madras; Mattancherry Main Road, Cochin; 2 Central Street, Bangalore; Athgaoon Road, Gauhati; Grand Trunk Road, Ghaziabad; Edamalaipatti, Pudur, Tiruchirappalli.

NATIONAL INSURANCE COMPANY LIMITED

MR. LAKSHMIPAT SINGHANIA ON THE FUTURE OF INDIAN INSURANCE

LIFE INSURANCE PLAYING A GREAT PART IN COLLECTION OF SMALL SAVINGS AND UTILISING THE SAME IN NATION BUILDING

Addressing the Forty-ninth Annual General Meeting of the National Insurance Company Limited, on 27th November, 1956, the Chairman, Mr. Lakshmi Pat Singhania, said:—

Gentlemen,

I welcome you to this meeting with a mixed feeling. This year embarks a new era in your company's future on account of the rational changes brought about by the nationalisation of life insurance which has been conducted for the last 50 years. Actually, the company had completed its half a century's public service when it handed over the life business to the State this year. The nationalisation of Insurance has opened a new chapter in the history of insurance in India which will now be carried by the State Sector. Your company will henceforth confine its activities only to general business like, fire, marine, accident, guarantee, motor accident, etc.

Events happening in the world today are beyond the expectations of all peace loving nations, specially India, which has worked so hard during the last 10 years, ever since becoming free to bring about world peace. So much so that neutrality itself is being questioned on account of invasion and interference of liberty in Egypt and Hungary. The world of today which till recently was preaching the gospel of peace has all of a sudden taken recourse to the law of jungle where might was right and mutual distrust the order of the day. Co-existence has yielded ground to co-destruction and the United Nations has become a place for debates and arguments between the power blocs. Military pacts are replacing trade agreements and science which could have been utilised in the service of humanity is without the least hesitation occupied in destroying it. I simply fail to understand what man has made of men. This is all due to an unlimited desire for power based on force and subordination rather than on mutual goodwill and understanding and if this continues we may not be far away from a third World War which will be a war of destruction of humanity. Our peace loving Prime Minister is working hard and making all attempts even today and I am sure he will continue upto the last to guide the world towards peace.

Under such unsettled circumstances, it is not unnatural that the economic life of our country has been disrupted and fear about the fulfilment of our ambitions crept in. The country has recently completed its First Five Year Plan and embarked on the Second Five Year Plan. This type of planning, the biggest experiment in democratic planning in the living world, has increased the national product by 18% and per capita income by 11% over 1950-51. The Plan has recorded a sharp rise in industrial production, even more than the plan targets, and the index of industrial production has gone up from 100.0% in 1951 to 130.0% in 1955. Similarly, the index of agricultural output has gone up from 100.0% to 120.0% during the same period. But more than anything else, it has made the people plan-conscious and created a momentum which is expected to gather greater and greater force in course of time.

The Second Plan which estimates to spend Rs. 7200 crores that is, Rs. 4800 crores in the public sector and Rs. 2400 crores in the private sector of national economy is expected to increase national product by 25% and per capita income by 18% over 1955-1956 level. The most important feature of the Second Plan is a greater emphasis on industrial production, specially of heavy and basic industries.

Second Plan

The Second Plan is ambitious, but the greatest handicap is the shortage of Rs. 900 crores in foreign exchange requirements which will have to be met from foreign borrowings. The world events and the closure of Suez Canal will increase our this gap to a further extent and thus hamper our Second Five Year Plan. During the first four months of the current year our adverse trade balance has shown an unprecedented rise and has reduced our sterling reserves to the extent of about Rs. 130 crores.

The private sector is, in my opinion, a misnomer as most of the production in the country until now has been carried by this sector and even a tiller of the soil or a small shop keeper in the farthest corner of the country is a private entrepreneur. The public sector, which again I feel in the present contrast of things is a misnomer, should be called only a State Sector. The so-called private sector is a more representative sector than any other sector although it cannot be called a free sector not being free in its functions and may be termed as "people's sector".

The country has adopted the socialist pattern of society as its ultimate objective. The term "socialist society" in my opinion is quite wide. Therefore, any sector which deals as a people's sector should cover in the pattern of socialist society. However, the adoption of the practice in the present contrast is to encourage more of state sector which unfortunately may lead to concentration of power in few hands than public at large. This is a very doubtful question whether in doing so, the country is going to be benefited by way of increased production and lower cost as otherwise the very object of decentralisation of economic power is hit at the root. The people of a free nation in a democratic set up should be allowed to have equal opportunities to work and live instead of being compelled by statutory laws because in that case it leads to totalitarian system of working rather than to

democratic methods. We want our people to be independent rather than dependant and thus a burden on the State.

Public Finance

Of late, the public finance has been squeezed to a much greater extent. According to the two Plans the disbursements are not keeping pace due to the delayed fulfilment of the planned objective whereas the system of collections are continuing on the same footing. The result is that the money supply with the public has been reduced to Rs. 204.82 crores from Rs. 197.49 crores in 1950-51 to Rs. 218.43 crores in 1955-56 during the First Five Year Plan which means an increase of 10.4% against an increase of 18% in the national income. By the end of August, 1956 the total money supply registered a decline and came down to Rs. 149 crores. At the same time, money disbursement goes to such areas and people who have no habit of investment or banking and has created a problem before the country and the scarcity of finance in the market has been evident in recent months. The only remedy in my opinion is unhampered production and distribution of consumer goods in India to help better circulation of money. This would also help raising the standard of living of the people and maintain price at a low level as other methods adopted for collection of small savings would not or rather cannot keep pace in present circumstances.

The Government in its zeal to take up a built up industry nationalised the Life Insurance business on the 19th January, 1956 and took over the activities of all companies carrying on life business in India. It is not necessary for me to go in detail at this moment into the merits and de-merits of nationalisation. It is a fait accompli. The question is whether such nationalisation is going to benefit the country as a whole, more than what has been done in the hands of the people. The progressive figures of last few years of this business reveal that insurance industry was playing its part with the economic growth of the country. If you take new insurance business of the first plan period, the total business jumped from Rs. 139.5 crores in 1950 to Rs. 229.5 crores in 1954. That means a rise of 65% in four years whereas the national income has risen by 18% only. It was expected that within few years Indian insurance would reach a new business of Rs. 1000 crores. Since during the Second Plan national income is expected to rise more than during the First Plan, achievement of this target was more than certain. I wish that Government should not lose sight of this important factor as life insurance was playing a great part in collection of small savings from door to door and utilising the same in nation building by investing in Government securities, housing and industries. I wish that this important source should flourish greater and greater and we should have place in parity with the world insurance according to the economic condition of our country. It is difficult to visualise what is going to be at the moment but I wish to emphasise with all force at my command that if the figures are not rising to our expectations we would be doing a great dis-service to the Nation for interfering with an industry which was serving the country so well.

It was also expected at the time of nationalisation that foreign life business of the Indian companies, here I take pride in saying that the National was one of the leading companies doing foreign life business, would be returned back to the Indian companies. But unfortunately, Government has changed its mind and it seems that they are going to carry the same themselves. I do not know what is going to be the future

of this business. As I have said on so many previous occasions, I wish that our country should do their utmost to increase this business which is an invisible export and a foreign exchange earner. With the taking over of foreign life business, our foreign general business will also be hampered and building of that organisation in foreign countries by Indian insurers will be another uphill task.

Compensation

Coming to compensation, I feel that we cannot call the compensation proposed to be paid worth the name. It is hardly one percent of the life fund Government has taken over. Banking and Insurance is practically the same business. While nationalising the Imperial Bank of India Government paid certain compensation which was considered to be inadequate and worked out at 8% of total Assets. But in case of insurance companies compensation is not even 1% of the total Life Fund. Moreover, that is not an investment to be made by the Government but only a pre-payment of the surpluses which the Insurance Companies had rightfully earned during decades of successful working of this industry. Even that has not been paid upto now although it is about 11 months since Insurance was nationalised. I hope the authorities would do their best to pay off this compensation which would help a long way at least in rehabilitating the general business and also helping the people who have investments in insurance companies and lost all income due to nationalisation.

The utilisation of the life fund in nation building activities is of no less importance. I will only deal with the investment in the private sector which at the time of nationalisation was of the order of about 16 per cent. It was emphasised and re-emphasised by the Government that this percentage in the private sector would be maintained, which was helping the investment market to a great extent. But since nationalisation nothing or very little money has been invested in private industry with the consequence that the investment market has been deprived of a great support. I hope that the Government would keep up to the assurances given at the time of nationalisation and maintain the tempo by investing in private industries, thus augmenting speedy economic growth of the country.

Now coming to your company, as I have said earlier, we have suffered the most. Not only the life business has been nationalised by the Government but the company's subsidiary, namely the National Fire & General Insurance Co., has also been taken over and your company has to rebuild completely both at the head office as well as the various branches where the business so far was run as a combined business. I am confident that in course of time we would again build up the company and serve the nation in the same way as we have been traditionally doing for the last 50 years.

You must have noticed that in the present balance sheet only the results of the general departments have been shown. This is because the accounts of the life department have been published by the Custodian and which I understand have already been circulated to the shareholders. Henceforth, only the accounts of the general departments would be submitted.

Premium Income

The total net premium income of all the departments was Rs. 19,24,761/- comprising Rs. 4,59,753/- of Fire, Rs. 6,40,214/- of Marine and Rs. 8,24,794/- of Miscellaneous. Against this, previous year's total business was Rs. 15,07,617/- composed of Rs. 4,23,855/- of Fire, Rs. 5,26,642/- of Marine and Rs. 5,57,120/- of Miscellaneous. Therefore, there is an overall increase of Rs. 4,17,144/-. Though the net result shows a loss in the balance sheet, it is mainly due to the loss in devaluation of Pakistan currency amounting to Rs. 96,555/- and provision for the increased reserve of unexpired business in all the departments, that is from 60% to 100% in case of Marine and 40% to 50% in case of Fire and Miscellaneous Departments. The loss during the year has been set off against the brought forward balance of the last year and the company is still in a position to pay a dividend of 6 percent free of income tax during the year absorbing Rs. 90,000/- which has been recommended for your consideration and the balance is to be carried over to the next year.

In the end, I solicit the good wishes and co-operation of you all in the great task of rebuilding this renowned institution of 'National', and bringing the same on the forefront.

With these few words, I propose that the Directors' Report and the Audited Accounts for the year 1955 be adopted.

KILLICK INDUSTRIES LIMITED

CHAIRMAN MR. E. D. SHEPPARD'S REVIEW

Speech of Mr. E. D. Sheppard, Chairman of Killick Industries Ltd., at the Company's Ninth Ordinary General Meeting on 27th November, 1956.

Gentlemen,

You will recall that during the course of the speech which I made last year at this Meeting, I attempted an analysis of the political and social thinking prevailing in the country in so far as it affects the formation of economic policy. As a conclusion from this analysis I suggested that there was no alternative to the co-ordinated efforts of both the State and of Free Enterprise, and that in order to achieve as quickly as possible a better life for all in India, the fullest advantage must be taken of the contributions which each system is capable of making. In effect this implied the application of "Mixed Economy" or as I would prefer to call it of "Joint Endeavour".

Since then the Avadi Session of the Congress Party has decided that the economic development of the country is to be directed towards the achievement of "A Socialistic Pattern of Society." Various policy pronouncements and Acts of Parliament which have followed in the wake of this decision have given the impression that it is to be implemented by a process of establishing uniformity and an official discouragement of incentives or individual gain. Indeed the thoughtful mind cannot help but feel the strongest misgivings that, if it is along these lines that the Socialistic Pattern is to be pursued, it will eventually lead to frustration, and the belying of the hopes for a fuller life which so many millions of people have pinned on it.

In a recent article entitled "The Dynamic Society," a leading economist has dubbed "the philosophy which forms the basis of this type of economic thinking as being 'like a dog in a barn-yard.' It cannot lay eggs itself and it will not let the hens do so." This writer points out that when men are not allowed to strive for their dreams and to enjoy the fruits of their strivings, they consume everything they produce from day to day and so make it necessary for the State to force them to abstain, in order to save and build tools for the future.

The same economist points out that there are two methods by which the economic donkey can be propelled forward. One is to offer him a carrot and the other is to beat him. In both the cases the result is forward movement. Similarly there are two dynamic economic systems prevailing in the world today. One is that of Free Enterprise, or development through individual incentive, and the other that of the authoritarian State and its methods of compulsion.

Stick and Carrot

We in India have rejected the stick theory and the concept of the authoritarian State as being alien to the traditional Indian way of life. Can we not therefore accept as a nation the logical corollary of the carrot in its stead? We are not prepared to accept interference with our political freedom, or with such matters as the freedom of speech, and of the Press; why then should we take a completely different stance in relation to economic freedom? In this sphere people who would resist to the utmost limitations being imposed on their social and political rights, accept without murmur controls over such matters as production, profits, wages, and prices, and feel that it is perfectly reasonable for Government to regulate them. In my view this is an inconsistency which could lead to a frustration of the National Economy.

The terms "Capital" and "Capitalist" have over a period of years been misinterpreted and distorted so much that in the public mind they are now associated with systems which are completely at variance to their real activities. "Capital" is widely identified with an undesirable concentration of power and the accumulation of personal wealth, rather than what it in fact is, namely the savings of people which have been created by hard work and self-discipline and which are thus available to start more good things growing. Now a similar process of distortion is in being which seeks to identify the term "Private Sector" with something that is anti-social and anti-national. "Private Sector" is a term which is at variance with the system which it purports to describe. There is nothing "private" about the finances and accounts of the major industrial units existing within the so-called "Private Sector." These units of Free Enterprise are as public as they can be. They are subjected to continuous and close audit, and are available for scrutiny to a wide range of people. The goods which these industries produce and the products which they market are sold only because there is public requirement for them and at a price which this public is prepared to pay. Shareholders of these so-called "Private Sector" units in fact represent a wide cross section of public society. The recent passage of the new Companies Act into law has stripped the last vestige of even legitimate privacy from these Joint Stock companies.

Furthermore, the tendency to associate the "Private Sector" with the relatively few major corporate industries is itself quite wrong. The truth of the matter is that the so-called "Private Sector" consists of all business activity and commercial endeavour except those few units which are operated and owned by the State. The vast range of these business and commercial interests varies from the largest industrial concerns on the one hand to the small shopkeepers carrying out their day to day trade in the bazaar on the other, and it is all these who are denoted by the misused term "Private Sector".

The Two Sectors

If it is necessary, as it apparently is, to differentiate within the mixed economy between those activities which are State controlled and State regulated on the one hand, and those which operate through the initiative of individuals on the other, then I would suggest that a more accurate way of describing the two sectors would be to rename what is today called the Private Sector as the "People's Sector" and the Public Sector as the "State Sector." Such renaming would, I feel, go a long way towards removing the unfortunate and erroneous association of ideas in the minds of the public regarding the structure of Free Enterprise.

We hear also a good deal of talk these days by socialistic planners of the desirability for increasing co-operative societies. I submit that a Joint Stock Company is nothing but a co-operative society in the fullest sense of the term. Its capital is created by co-operative faith in its venture, its direction is provided by those who reflect in their persons co-operative choice, its factories are worked by co-operative endeavour and finally its products are sold only if there is co-operation from the consuming public. The doctrinaire socialist, who suppresses or distorts facts that do not fit in with the theories that he has imbibed during his student days, tends to brush this argument aside with the remark that a handful of shareholders cannot be described as a co-operative society. To meet this contention I think it will interest you to know that in the major industries in India the ratio of shareholders to workers employed is approximately as follows:—

Steel	...	1 shareholder	to 1 worker.
Cement	...	1 shareholder	to 1 worker.
Textiles	...	1 shareholder	to 2 workers.
Electricity	...	10 shareholders	to 1 worker.

Surely the logical result of a dispassionate appraisal of all the facts is that the existing policy, namely that of a constantly increasing State Sector, and by implication a proportionately smaller People's Sector should be exactly reversed and the best interests of India would be served by the State doing only those things which the people cannot do by the exercise of their own initiative and judgment in the arena of the world market place. Can any Government truthfully say that it knows this market place better than its people know it?

Classless Society

On the subject of the use of terms which come to have a meaning foreign to their purpose, one must also comment on the "Classless Society" so much in current vogue. Inasmuch as this term denotes a society from which have been removed all hereditary privilege and unwarranted opportunity, and means the creation of a social organisation to which each one is entitled to contribute on merit alone, its implication can only be welcomed. Unhappily this is not the concept that is meant by those who so constantly refer to it as a type of "Classless Society" which these people appear to have in mind is one in which all men are dragged down to a level of uniform poverty.

Such a society must of necessity be a third class society. Any deliberate attempt to abolish a class by taxation or any other legislative means will never succeed in abolishing "Class." For in the vacuum so created an official bureaucratic aristocracy would emerge at once. What it would achieve would be to abolish variety, character, and those inspirational gifts which alone save a country from colourless uniformity. It is the personal vision and the difference between people that count and help towards the making of a nation. This difference of outlook must inevitably express itself in a search after varying environments. "Class" is not a matter of money and still less is it one of social ambition. It comes from the free exercise of choice in culture, environment, and the differences which life has to offer, it cannot be "ironed out" for the human soul does not lend itself to the process of laundry.

It is interesting to note the revulsion which has appeared in England against the dose of doctrinaire socialism that was injected into the economic system of that country for the five years immediately after the last war. In practice Socialism has meant the creation of huge irresponsible public corporations and the extension of bureaucracy. Nationalisation has not succeeded in changing the lives of the workers but has only added to the steady concentration of power in the hands of official classes. Trade Unions have become the strongholds of restrictive practices, limiting not merely industrial output but also the important liberties of individuals and those of minorities. It has become very clear to me that what people want is, as far as possible, to be allowed to choose from a bigger selection of things—material and spiritual. The way to satisfy them is not to cut down to a common size everyone else's choice. That is precisely the way to deprive the community of the flexibility, the diversity, and the incentives upon which the policy of plenty and a dynamic society must depend. The right way is to create incentives that lead to an increase in the total national product and thereby level upwards and not downwards.

Middle Class

I would like, during the course of my talk this afternoon, to deal especially with the plight of the middle class of our country and the constantly increasing bleakness of the future which faces it.

That the middle classes are depressed, that they are being destroyed by taxation and the high cost of living, that some Finance Minister of the Government of India must do something about it—and that none ever does; these are the truisms which have been with us ever since 1947.

What is this middle class and whom does it comprise? I would suggest that it embraces all those people who work with their brains and derive their income from salaries and professional fees or from the active management of property, those who do most of the organising and creative and inventive work of the nation gain its vitality. The spread of this class stretches from the clerk and salesman at one end to business executives, and professional men at the other. The thread which unites them is social rather than financial. The contributions which these people make come from intelligence, character and example. For the most part they do not clock in and clock out for eight hours a day, but are always on duty. They are compelled to keep up a standard of living not merely for the sake of appearances but in order to play their part in the social life which they guide and nurture.

Universal adult franchise in our country encourages politicians to look solely to the masses and to ignore the middle class as though it were negligible. Since

independence the well-being of the industrial working class has been the special care of the Central and State Governments, as also that of the majority of parliamentarians. As has recently been stated by the Labour Minister of the Government of India, there has been a rise in the real wages of this class. Not only can no one object to this, but indeed if the raising of the standard of life of all people in the country is to be achieved, then we must regard the betterment of the living conditions of this particular class as a matter of great satisfaction and unstinted pleasure. At the same time one hears that the agricultural class, which of course constitutes the great majority of the Indian people, has also taken a few albeit faltering steps forward, on the path to a better life. It is the hope of all people that this trend will be emphasised and speeded as rapidly as possible.

But what of the middle class? When attention is focussed on their betterment there appears to be a curious lack of interest in it. No political champions come forward to safeguard their interests. As has been suggested earlier, the reason for this may well be purely one of numbers—in a population of 360 millions they do not appear to warrant the interest and attention of those standing for parliament and whose political future is decided by the counting of heads. Consequently the middle class is left friendless and unsupported. Unless this process of deterioration in its standard of life, and therefore in the morale of the people constituting this class, is arrested, an irreplaceable component of the industrial and commercial structure of the country will be dangerously weakened, and no amount of planning or legislation will be able to replace it or revive it.

But are the numbers of the middle classes really so negligible? The figures I gave you earlier of the relative numbers of workers and shareholders in various industries show that the number of shareholders—about 90% of whom belong to the middle class—is by no means inconsiderable. They represent an integral and vital part of the social structure of all countries and can wield an influence out of all proportion to their numbers. I would liken them to the leaven of the mass and without leaven the mass cannot rise. In India today too much time and attention is devoted to the mass and far too little to the leaven of the mass.

It is true to say that over the past years there has been an erosion of incentives in the case of most salaried people, whether serving in public life or in a private capacity. The general standard of living of salaried workers has been considerably reduced. This has been brought about principally by means of taxation. To the plethora of already existing taxes which have hit the middle class hard the last budget added even more. It was a measure of the extent to which tax-payers have been demoralised in the country over the past few years that after the last budget, which in real terms made India—still in a relatively early stage of industrial development—the highest taxed nation in the world, there was a feeling of relief that it had not been even more penal on individual earnings. This matter of taxation has been written and spoken about at such length and in so much detail that there is nothing new which can be said about it. All the arguments of disincentives, of inequity, and of the frustration which will result, have been put forward time and time again. I feel however that the time has now come when the inroads of taxation upon the earnings and on the standard of life of the middle class must be faced up to if there is not to be a collapse in the morale of that class which will be irreparable.

Lower Profit

Turning now to the affairs of your own Company, you will doubtless have observed that the profit is lower than that of the previous year. This is accounted for by the reduced profits of the Koinoor Mills Co. Ltd., and the Ahmedabad Electricity Co. Ltd. for the period reflected in the accounts, and the reasons for which are well known to most of you. There was also, as anticipated, a loss on the first year's working of John Baker & Sons Steel Pipe Factory, though this was fortunately considerably less than was estimated when this undertaking was planned.

I am glad to say that both the Koinoor and Ahmedabad companies are now working at a normal rate of profit and that the steel pipe factory should—barring unforeseen eventualities—return a satisfactory profit for the current year.

Another factor which also contributed to the reduced profits is less easy to remedy. I refer to your Company's share in the Managing Agency commission of the Associated Cement Companies Limited which is received in the form of a dividend from Cement Agencies Limited. This became subject to the tax on dividends over 6% introduced in the 1956 Budget which had the effect of reducing the amount received by Rs. 1.25 lakhs. It is difficult to see what can be done about this so long as this inequitable tax remains on the Statute Book.

The expansion and diversification of your Company's activities continue to receive the closest attention of your Directors. As you will have seen from the Report permission has been received from Government to increase the production of the steel files factory and a licence has been granted for the manufacture of nuts and bolts, dogspikes and coach screws. In addition several other projects both large and small are in process of detailed examination.

Also your Directors have recently come to an agreement with the shareholders of Messrs. Killick Nixon & Co. Ltd. to purchase all the shares of that company and the matter is expected to be finalised early in the New Year. Killick Nixon & Co. Ltd., will then become a wholly owned subsidiary of this Company. Among their assets is this Building in which we are now meeting. Their Shipping and Trading interests will lend a healthy balance to the predominantly industrial activities which have hitherto represented the bulk of your Company's business.

Taking everything into consideration therefore I feel we can face the future with confidence and I have little doubt that when we meet here again next year the picture which I shall then be able to lay before you will be a happier one, though it may well be that the figure in the accounts which will show the most significant increase will be that under the heading "Provision for Taxation".

Note: This does not purport to be a record of the proceedings of the Annual General Meeting which will be sent separately to shareholders.

Finance in India and Abroad

THE CALCUTTA MONEY MARKET

INTERBANK FUNDS EASIER

Wednesday, 28th November

THE slow expansion of seasonal demand for advances has continued during the past week. Money is required for the holding of cotton stocks, and the needs of the sugar industry are expanding. Demand on account of holding of jute is unchanged. Funds are reported to be considerably easier in the Calcutta interbank market, and there are lenders over at the unchanged call rate of 3½ per cent.

There has been a better showing of bills this week. A fair number of tea documents have passed and a reasonable quantity of gunny bills have also been seen. Remittance has been good. Sterling remains at the spot levels and the forward position has weakened considerably in the past few days. It is, however, reported that the strength of sterling in terms of Continental currencies has improved slightly due to bear-covering following the selling which took place at the beginning of the month.

* * * * *

Bullion reacted on profit-taking. Silver declined from the previous week's level of Rs. 172-12 to Rs. 172-4, quoted today. The rate for ready was quoted at Rs. 172-12. The London price has remained unchanged at 80½d. and the price of foreign silver in New York was the same at 91½ cents.

In sympathy with silver, gold was quiet. The prices of gold and coin were unchanged at Rs. 105-8 and Rs. 70 respectively.

* * * * *

During the week ended 23rd November, Government of India Treasury Bills for Rs. 5,50,00,000 were sold in favour of the Reserve Bank.

* * * * *

A decline of Rs. 4.05 crores in active notes to Rs. 1,439.61 crores was the notable feature of the return of the Reserve Bank of India for the week ended 23rd November, 1956. The total note issue was Rs. 99 lakhs higher at Rs. 1,462.79 crores. Foreign securities have been cut by Rs. 4.97 crores to Rs. 457.24 crores, and rupee securities have been increased by an equivalent amount to Rs. 765.47 crores. In the Banking Department, deposits of the Government of India and other Government accounts have increased by Rs. 3.27 crores and Rs. 54 lakhs to Rs. 54.69 crores and Rs. 12.72 crores, respectively. Balances of commercial banks, at Rs. 52.04 crores, were Rs. 1.17 crores lower. Balances held abroad declined by Rs. 6.83 crores to Rs. 84.63 crores, while investments, at Rs. 61.13 crores, showed a rise of Rs. 1.91 crores. Other loans and advances increased from Rs. 82.76 crores to Rs. 83.48 crores, of which advances to scheduled banks against usance bills amounted to Rs. 45.34 crores (Rs. 40.80 crores). These advances totalled Rs. 372.17 crores since 1st January, 1956. Ways and means advances stood at Rs. 1.80 crores (Rs. 1.46 crores).

* * * * *

The return of the State Bank of India for the week ended 16th November, 1956, shows a rise of Rs. 2.93 crores in investments to Rs. 230.65 crores. Investments in Government securities and other authorised investments have decreased by Rs. 7 lakhs and Rs. 27 lakhs to Rs. 95.57 crores and Rs. 11.03 crores, respectively. Advances, including loans, cash credits and overdrafts, and bills discounted and purchased, have increased by Rs. 26 lakhs to Rs. 128.37 crores. Cash and balances are, in consequence, shown at Rs. 17.54 crores, or Rs. 53 lakhs higher.

* * * * *

The statement of the position of scheduled banks for the week ended 16th November, 1956, shows Demand and Time liabilities at Rs. 650.80 crores (Rs. 12.63 crores on account of borrowings from banks) and Rs. 457.79 crores (Rs. 2.11 crores), compared with Rs. 641.54 crores (Rs. 13.33 crores) and Rs. 454.63 crores (Rs. 2.07 crores), respectively, in the previous week. Cash has decreased by Rs. 1.69 crores to Rs. 37.12 crores, while balances with the Reserve Bank have increased by Rs. 2.15 crores to Rs. 50.97 crores. There is a drop of Rs. 41 lakhs in investments to Rs. 365.52 crores. Advances and bills discounted, at Rs. 761.27 crores, show a decline of Rs. 1.03 crores. The ratios to total liabilities of cash and balances, and of advances and discounts, are, in consequence, shown at 7.9 percent and 68.7 percent, against 8.0 percent and 69.5 percent.

* * * * *

According to the returns received in the Department of Commercial Intelligence and Statistics, the total gross sea and land customs revenue collected in the Indian Union during September, 1956, amounted to Rs. 1,517 lakhs compared with Rs. 1,418 lakhs in the corresponding month of the previous year. The comparison in the following should be taken to refer to that of the current figures with those of the corresponding period of the preceding year. Of the total customs revenue collections, import duties accounted for Rs. 1,238 lakhs as against Rs. 1,031 lakhs, export duties for Rs. 260 lakhs as against Rs. 377 lakhs, and land customs and miscellaneous for Rs. 39 lakhs as against Rs. 10 lakhs. The total gross collection of Union excise duties amounted to Rs. 1,542 lakhs,

compared with Rs. 1,238 lakhs. During the six months, April to September 1956, the grand total of gross customs and Union excise revenue realised was Rs. 16,618 lakhs, compared with Rs. 15,396 lakhs during the corresponding period of the preceding year. Of this amount, import duties accounted for Rs. 6,646 lakhs as against Rs. 6,062 lakhs, export duties for Rs. 1,211 lakhs as against Rs. 1,809 lakhs, land customs and miscellaneous for Rs. 163 lakhs as against Rs. 80 lakhs and Union excise duties for Rs. 8,598 lakhs as against Rs. 7,445 lakhs.

NEW HEAVY ENGINEERING COMPANY FORMED

The Associated Cement Co. Ltd. of Bombay, Vickers Ltd. of London and Babcock and Wilcox Ltd. of London, announce that they have concluded their arrangements for the formation of a company to be known as A.C.C.-Vickers-Babcock (Private) Ltd. The new company plans to build a heavy engineering works in the vicinity of Durgapur, West Bengal. The products to be manufactured will include cement making machinery, mining machinery, large pumps, heavy gears, steam generating plant of all types, pressure vessels, cranes and mechanical handling equipment. The construction of the proposed works will commence as soon as the Government of India's approval has been obtained.

GUJRAT

PLM

GIVE YOUR WARE PACK LABEL MARK CARE..

Crores of rupees are paid by the Railways every year to meet claims for damaged or lost consignments. This colossal drain on our National Exchequer can be easily and almost wholly prevented if only you, as a consignee, help the Railways by taking a little care.

THIS IS HOW YOU CAN HELP

- Pack the goods in strong cases. Nail properly and securely.
- Enclose a spare label.
- Remove all traces of old markings.
- Line the case with shock-absorbing and water-proof material.
- Mark correctly.
- Address neatly, boldly & indelibly.
- Indicate the nature of goods consigned.

Stocks and Shares**MARKET SLIGHTLY BETTER AT THE CLOSE****BOOMLET IN TEA SHARES**

Wednesday Evening.

THE Calcutta stock market has passed another quiet week. Speculative shares, with the exception of Texmaco, which closed a shade better on the week's trading, and Burrakurs, have moved down in price. Burrakurs continued their upward surge induced by interested buying and closed this evening at the record level of Rs. 20-1. Indian Irons opened at Rs. 33-7 and after touching Rs. 32-10, closed at Rs. 33-3. This improvement is thought to be due to short-covering because there is little sign of any improvement in market sentiment. The undertone remains dull now that the international situation appears to have reached a stalemate and there is nothing on the domestic horizon on which operators can base their views for the future.

Investment shares were no better than they have been for some weeks, except for the tea section which enjoyed something of a boomlet. Tea scrip has benefited from the improved auction prices and the general feeling that the prospects before the industry are better. Other sections remained quiet and in the miscellaneous and engineering group, many sound investment counters have fallen in price, apparently because of complete lack of buying interest. The Gilt-edged market remains dull.

It is reported that the Guest, Keen, Williams issue of 589,400 ordinary shares, which opened on 7th November and closed the same day, has been subscribed almost three times over. Altogether, more than 17,000 applications for over 1,650,000 shares were received. This is an excellent response considering the current stringency in the money market and the difficulties of the international situation. It is understood that the response for the minimum subscription of 50 shares, in itself, well over-subscribed the issue and that of the applications received from the public, 90 percent were for quantities of 500 shares and under.

Allotments have been made on the following basis:

Number of shares applied for	Number of shares allotted
50	20
100	30
150	40
200	50

and higher applications in a gradually reducing ratio.

Details of the week's trading follow.

Trading in the Gilt-edged market was of a mixed nature. The enquiry for short-dated issues was fully maintained, but once again long-dated issues came under selling pressure and prices in some cases dropped sharply. Three percent Conversion Loan was marked down from Rs. 73-9 to Rs. 73-4 with scarcely any business passing. In short-dated loans, 3% 1957 was taken at Rs. 99-12 and 3% 1958 at Rs. 99-9. In medium-dated issues, 3% 1959-61 was offered at Rs. 97-15, but 3% 1963-65 was taken at Rs. 94-6 and 5% 1964 was asked for at Rs. 94-5. Among National Plan issues, 3% 1961 improved to Rs. 99-6 buyers but the enquiry was purely for voucher considerations (interest due on 1st December, 1956); 3% 1964 was slightly better at Rs. 98-5 but 3% 1965 was offered at Rs. 98-7 as was 3% 1967 at Rs. 98-6. In the long-dated group, 3% 1966-68 appeared to have stabilised at Rs. 92-6 but 3% 1970-75 recorded a loss of almost Re. 1 at Rs. 86-13, but with the appearance of the Reserve Bank as a buyer today, the price recovered to Rs. 86-15; 3% 1974 was unchanged at Rs. 98-8 with sellers rather than buyers.

Once again the market for State loans was easier and sellers predominated. Four percent U.P. and Madras 1968 were marked back to Rs. 97-14, and 4% Orissa 1968 was offered at Rs. 97-11. Four percent West Bengal 1968 was quoted down to Rs. 99-2 and 4% Bombay 1970 had sellers at Rs. 99-10. Among other issues, 1% U.P. 1963 changed hands at Rs. 99-6 and 3% Bombay 1960 was traded at Rs. 96-4.

Business in preference shares was once again on a reduced scale. In the miscellaneous group, Aluminium Corporation 5% were done at Rs. 98 and the 6% at Rs. 114. A small lot of Bharat Collieries was crossed at Rs. 56. Burrakur First changed hands at around Rs. 114 and there was a small enquiry for British India Corporation at Rs. 121-8. A small lot of Cawnpore Sugar changed hands at Rs. 128 and Calcutta Electric Supply Corporation were crossed at Rs. 11. Duncan Brothers were depressed at Rs. 60-8 and Dalmia Cement Rs. 40 paid-up were done at Rs. 39-8. Gilanders Arbutnot were offered at Rs. 61. Indian Iron & Steel were slightly better at Rs. 101 while Indo-Burma were quoted at Rs. 104. Kumardhubi Engineering were crossed at Rs. 101 and Pussimbin Tea changed hands at Rs. 85. New Victoria Cotton were crossed at Rs. 5-4 and Textile Machinery at Rs. 95-3. Jute preference shares were extremely difficult to sell and in cases where business took place, prices had to be reduced by Re. 1 to Rs. 2 a share in order to attract buyers. Hooghly were crossed at Rs. 13-12 and Fort Gloster Second were marked at Rs. 74-8 as were Gourepore at Rs. 86-8.

Bank shares were more or less unchanged with Punjab National quoted at Rs. 50 and United Commercial at Rs. 54-8. Hindusthan Commercial were reported at Rs. 10-2 and United Bank of India "D" shares at Rs. 4-8.

In the railway section, Bukhtiarpur-Bihar came to business after a considerable period at Rs. 10 (small odd lot) while Dehri-Rohas were marked at Rs. 13-3.

In cotton, Dunbar were marked down from Rs. 248 to Rs. 240 and Elgins were slightly easier at Rs. 28-12. Cawnpore Textiles were crossed at Rs. 9-3 and Kesoram were easier at Rs. 16-8. Jayshree fluctuated narrowly around Rs. 6-8 and New Victoria were depressed at Rs. 2-5.

In the coal section Burrakur continued to be active with the price improving further from Rs. 18-9 to Rs. 20-1. Bengal were lower at Rs. 483 while Bharat Collieries were unchanged at Rs. 6-14 ex-dividend, as were Western Bengal at Rs. 6-4. Raneegunge were subdued at Rs. 10-13 while Rewa were better at Rs. 23-2. There was a good enquiry for Seebpore at Rs. 30 and Katras-Jherriah at Rs. 63-8 but there were no declared sellers. South Karanpura were slightly better at Rs. 9-8.

Jute shares continued to wallow in the mire and in the absence of support prices tended to lower levels as will be seen from the following table:

	Opening 22-11-55	Closing 27-11-55
Rs.	Rs.	Rs.
Agarpara	10 12	10 7
Anglo India	164 0	155 0
Bally	175 0	165 0
Barnagore	128 0	120 0
Birla	18 8	16 4
Cheviot	175 0	170 0
Howrah	22 6	21 8
National	24 0	23 10
Northbrook	22 8	21 15

Electric supply shares were unchanged and a minimum amount of business was put through. Calcutta were shaded at Rs. 13-2 and Cuttack were

a better life for all

WHEREVER INDIAN ALUMINIUM COMPANY has extended its production operations—from Bengal to Travancore, from Travancore to Bihar, from Bihar to Bombay—it has continuously sought to provide a better life for all its employees, and for its customers everywhere, in the shape of better products for a variety of new applications.

And now the industry moves to Orissa, where the Company is installing a new smelter which will more than double the country's production of aluminium. As in other phases of India's national effort, this smelter is dedicated to an era of plenty and a better life for all.

Indian Aluminium
Company Limited

A Canadian-Indian Enterprise

In shipping, India General Navigation were unchanged at Rs. 90 while India Steamship, after being done up to Rs. 10-4 ex-dividend, closed easier at Rs. 10.

The week witnessed a revival of interest in tea shares with prices showing handsome gains on substantial turnover. Of the Assam shares, Baghmari advanced to Rs. 27 as did Bateli to Rs. 27.8, Bishnauth Old to Rs. 25.9 and Bormah Jan to Rs. 21. Brahmaputra had buyers at Rs. 8-12 and Brooke Bond advanced from Rs. 20 to Rs. 21.8. Delhakhat improved to Rs. 23-12 and Dibrugarh and East India had buyers at Rs. 26-8 and Rs. 26-12 respectively. Gopnur Old and New changed hands at Rs. 25-8 and Rs. 22-8 whilst Grob "A" and Grob

the paper-making machines. This has been reflected in the production of saleable paper for the year ended 31st March, 1956, having been the highest in the history of the company. The Orissa Government has permitted the company to operate the new bamboo areas during the half-year under report, pending the signing of the leases which are now being prepared. Towards the end of the half-year under review, the Government of Orissa acquired and delivered the land for the railway siding and

* SMITH, STANISTREET and CO. LTD. has increased its profits from Rs. 4.26 lakhs to Rs. 7.15 lakhs. Providing Rs. 3.30 lakhs (Rs. 1.85 lakhs) for taxation and transferring Rs. 1 lakh (same) to general reserve, there is a balance of Rs. 3,68,395, including Rs. 83,868 brought in. The ordinary dividend is the same at 20 percent, but the ordinary capital has meanwhile been doubled by a rights issue at par. The carry-forward is Rs. 1,18,395. The proceeds of the new issue will be utilised to finance expansion, the directors say.

BUYING INTEREST SUBSIDES TAXATION FEARS HELP DEPRESS PRICES

DULL conditions prevailed on the Bombay stock market last week and trading was slow. Despite some good corporate news, there was complete apathy of investors towards the fresh buying. Even speculative transactions shrank to a mere trickle as operators were unable to take a view either way. Fears of fresh taxation in the coming budget seem to have cast their shadows on the market. It is generally believed that it will be hard for any worthwhile recovery to take place for the time being in view of the extreme stringency of funds. These apart, new industrial issues are expected to absorb a considerable amount of available resources.

As a result, equity prices touched new bottoms even on small offering in the absence of buying support. Tata Steels declined to Rs. 192, as did Indian Iron to Rs. 34 on continued selling pressure from Calcutta interests. Other engineering shares were mixed. Alcock Ashdown were lower at Rs. 317-8, while Premier Construction were supported around Rs. 210-8 on buying from knowledgeable quarters. In the expectation of an ordinary dividend of Rs. 6 a share Tata Locomotive improved to Rs. 170-8.

Mill shares showed an all-round decline and considerable bulk liquidation was seen. Bombay Dyeing were lowered to Rs. 628-12, as were Century to Rs. 347. Kohinoors were available at 346 and Simplex were bought at Rs. 195. Apollo lost at Rs. 2-11 and India United Ordinary came to hand at Rs. 12-2. Svadeshi met with scattered interest around Rs. 254-8.

Miscellaneous issues eased in sympathy with the general pattern. Automobile shares weakened further, with Hindusthan Motors declining to Rs. 9.5. Premier Automobiles lost at Rs. 113. Cement shares showed losses on balance, except for Asoka Cement which were supported around Rs. 12.8.

Associated Cement were transacted at Rs. 194-8. Shipping shares were relatively steady on prospects of increased freight earnings. Great Eastern Shipping were a shade better at Rs. 17-0-6 x.r. Scindia were done at Rs. 19-3½ and India Steamship were maintained around Rs. 9-15. Short-covering induced by prospects of drastic cuts in imports helped to reinstate a portion of losses in National Rayon, which closed around Rs. 263. Gwalior Rayon, however, were freely offered at Rs. 15-10-2. Chemicals slipped back to Rs. 19-9 and Tata Oil were done at Rs. 50. Sugar shares were about steady, with Belapur making Rs. 252-8. Mining shares were quiet on predominance of sellers. Indian Copper declined to Rs. 4-3 and B. B. Petro were lower at Rs. 3-2. Bombay Burmah were quiet around Rs. 690.

Banking shares received scattered support in the belief that earnings would make a good showing. Central Bank of India were taken at Rs. 55- and Bank of India came to hand at Rs. 142-8. There was little interest in the insurance sector, with British India General declining to Rs. 13-10, while New India Assurance gained fractionally at Rs. 45-12.

Routine turnover was registered in electricity supply undertakings, and Ahmedabad were transacted at Rs. 91-4. Tata Hydro realised Rs. 123-8

WIDESPREAD LOSSES IN STOCK MARKETS

HEAVY SELLING IN OILS

London, 28th November.

FURTHER widespread losses were recorded in the stock markets during the past week, although prices ended above the worst after a modest rally. Oils particularly suffered from heavy selling and were substantially lower, but all equity shares and most other groups fell. The grave international situation continued to dominate the markets, but there were a number of other adverse influences also. The more noteworthy of these included the serious oil shortage, the activity in the new issue market, the continued weakness of Wall Street and concern about Sir Anthony Eden's health. In addition, there was talk at one time of the possibility of a general election, although this was quickly forgotten. During the week, the 3½ percent War Loan equalled its recently established all-time low and the Financial Times Industrial Ordinary index reached its lowest point for over two years. A recovery subsequently lifted prices. Gilt-edged lost ground on persistent small selling, and although a modest rally developed later, prices were at or not far short of their lowest levels. Falls generally ranged to about a point. All-round declines were recorded in the industrial markets, and despite a modest rally, losses extended to several shillings in some shares. Steels particularly were affected by election talk, although a fair proportion of the losses were subsequently recovered. Shipping shares eased on profit-taking after their recent advance, while Imperial Chemicals fell back on issue talk. Heavy selling, some of it reported to be forced, was responsible for substantial losses in oil shares, among which British Petroleum was the chief sufferer with a fall of over 10 shillings. Golds receded on a broad front, partly on forced selling, while coppers also lost ground following the copper belt companies' annual reports. Rubber shares were easier in quiet conditions, but tea shares showed useful gains.

The Money Market

Stringent credit conditions have persisted in the London money market during the past week. To maintain the credit squeeze, the authorities had been operating previously and that deprived the banks of necessary maturities to keep their cash balances at a reasonable level. Only on Wednesday was the money supply comfortable, but during the rest of the week, 4½ percent had to be paid for day-to-day loans, with 5 percent for money lent by the authorities. Business in bills was held in check by a stringent cash position and under pressure, 4½ percent was the general rate for January and February maturities. The continued poor monetary situation led to a slight hardening of bill rates at the week's tender. Applications for £210 million worth of 91-day Treasury bills totalled £354,595,000 and were allotted at an average rate of 100s 3.34d percent against 100s percent in the previous week. Applications for £80 million worth of 63-day bills totalled £85,990,000, and were allotted at an average rate of 100s 10.83d percent against 100s 10.30d percent in the previous week. This week £290 million worth of bills are on offer comprising £220 million worth of 91-day bills and £70 million worth of 63-day bills. The Bank of England return for the week ended 21st November showed that notes in circulation were about £2 million higher at around £1,694 million, while bankers' deposits were about £1 million higher at around £239 million.

U.S. Federal Reserve Return

The U.S. Federal Reserve return for the week ended 21st November shows that the gold stock was unchanged at \$21,910 million. Foreign deposits fell by \$42 million to \$300 million and foreign investments by \$59 million to \$3,566 million. The Federal Reserve bought \$165 million worth of bills and sold \$1 million worth of certificates. It also bought \$34 million worth of bills under repurchase agreements. Total discounts and advances rose by \$22 million to \$595 million, while the aggregate of excess reserves of member banks rose by \$442 million to \$581 million. Daily average excess reserves of member banks rose by \$48 million to \$691 million, while their daily average borrowings fell by \$282 million to \$660 million. Business loans of the New York city banks fell by \$54 million compared with a rise of \$15 million in the corresponding period a year ago.

Rubber Market Uncertain

Uncertainty was the keynote of trading in the rubber market during the week ended 22nd November. An easier tendency at the outset was reversed by renewed demand for nearby rubber on U.K. Continental and Russian account, but business later was spasmodic. Prices fluctuated in thin trading and in line with the Singapore market. In a dull phase relieved by a little profit-taking, softness occurred and the market was disturbed by the news of petrol rationing. Towards the close, the list was marked up sharply on an unexpected advance in Singapore. A few orders were put through at a higher level and traders reported good offtake of No.1 RSS, on the spot, but there was not enough general interest to sustain the advance. Prices again eased and finally were about 1d a lb higher on the week. In the virtual absence of spot supplies, small quantities of sole crepe were quickly absorbed at up to 47d a lb. for No. 1 smooth 4th inch on the spot.

New Delhi

KRUPPS-DEMAG DIRECTORS TO RESIGN FROM ROURKELA STEEL PLANT BOARD

GERMAN CONSORTIUM RELEASED FROM OBLIGATION TO INVEST MONEY IN PROJECT

(FROM OUR NEW DELHI CORRESPONDENT)

THE directors representing Krupps-Demag will submit their resignations from the board of Hindustan Steel Ltd. at a meeting due to be held in Calcutta on 30th November. This will mark the termination of the shareholding of their principals in the undertaking set up to establish the one million ton steel plant in Rourkela. The German consortium, however, will continue to collaborate with the Government in setting up the plant. The equipment for it is now on order. Under the agreement, Krupps-Demag was to invest about Rs. 10 crores in the project, the sum being repayable by 1963. As Krupps-Demag is not a financier, the amount of money to be so invested affected the prices for the equipment and plant. The Bhoothalingam mission, which went to Western Germany to finalise the details of the agreement, was able to secure a price reduction by releasing Krupps-Demag from its obligation to invest money. This, incidentally, has also eliminated foreign participation in the management of a key enterprise. A further price reduction was secured when India agreed to make most of the payments in the first 18 months of the erection of the plant, instead of spreading them over the entire period of commissioning. For India, the advantages claimed are a reduction in prices over those originally quoted, and a strengthening of the public sector by the total elimination of foreign interests from the management of a State undertaking. It may be added that these amendments in the agreement were made possible by the willing co-operation of Krupps-Demag. The articles of association of Hindustan Steel Ltd. are being amended, particularly so as to enable the company to undertake the processing and management of all the three plants in the public sector.

I.N.T.U.C. Demands Wage Rises

Two important developments are worth reporting. Following a conference which was attended by the Irrigation Minister, Mr. Gulzarilal Nanda, and the Labour Minister, Mr. Khandubhai Desai, the Indian National Trade Union Congress has announced its decision to demand a general wage increase of 25 percent for workers. The President of the I.N.T.U.C., Mr. S. R. Vasavada, speaking in Ahmedabad, said that his organisation would serve notices "for equitable wage increases in seven industries in the private sector, namely, textiles, cement, coal, steel, sugar, jute and engineering." (Why not also in the khadi industry?) These seven industries, he said, employed 2.2 million workers. In the public sector, the railways would be the first to be approached. A demand, which incidentally has already been conceded by the Labour Minister, for setting up Wage Boards would also be made. Mr. Vasavada concluded: "There would be no further demands during the second plan. Another demand for wage increases would be after the completion of the second plan." The other development is the demand for wage increases from employees of port trusts.

The demand of the I.N.T.U.C. is based on the assumption that there has been a great increase in prosperity during the first plan, as is evident from the Planning Commission's claim of a rise in the national income and the per capita income. Some questions arise. Firstly, what is the contribution of industrial labour to the increase in prosperity? One yardstick is the per capita productivity of workers. In the coal industry, output per man has gone up from 0.34 tons in 1951 to 0.38 tons in June 1956. The average weekly hours of work during the same period have similarly increased from 46.63 to 47.58, and total cash earnings have risen from Rs. 10-15-5 to Rs. 12-14-1 a week. The question is whether similar figures are available for the other six industries in which a rise of 25 percent has been demanded.

The second question relates to the contribution of industrial labour in general, and the labour of the seven industries in particular, to India's recent prosperity. It is worth considering whether this prosperity will continue if there are no favourable monsoons for a number of years. Also worth considering is the contribution to this prosperity of agricultural labour, for which no minimum wages have been fixed on all-India basis.

The influence of the coming general elections on the demand for higher wages is clear. It seems contradictory that Congressmen sitting at the annual session of their party demand austerity from everyone, but sitting in their sectional organisation demand wage rises of 25 percent. This is happening at a time when the Finance Minister is emphasising the importance of price stability for orderly development. A broad outline of the effects is needed. A rise of 25 percent in coal wages would increase railway freights. A 25 percent rise in the wages of railwaymen would increase freights further. A rise of 25 percent in the wages of textile workers would increase the price of cloth. The combined effect of these three increases would be

to reduce the competitive strength of Indian textiles and other goods in the world market, and to that extent the earnings of foreign exchange would also be reduced. A reduction in foreign exchange earnings would affect the development programme, and to that extent reduce the scope for new employment.

A rise in transport charges, plus an increase in the price of cement, plus an increase in the price of gunny bags for cement, plus an increase in the prices of engineering goods, plus an increase in the wages of labour following an increase in the price of sugar and textiles, would increase the total outlay on every project in the second plan. As resources are not unlimited, this would reduce the number of development projects, which in turn would reduce the employment potential. In the ultimate analysis, the fight is with the Communists, and the demand for a 25 percent wage rise is a bid against them. But will even such a large wage rise help root out Communist influence? The case of bank employees gives some idea of what often happens. After the full implementation of the Bank award, they went on strike in spite of the Prime Minister's appeal. In order to win over the non-Communist elements, the Government gave certain concessions. In the end, it was a triumph for the Communists, because the bank employees got everything that the Communists had demanded. There is also the case of insurance employees, who have been accused of indiscipline by the Finance Minister. What assistance is Mr. Vasavada's organisation rendering to the authorities in this dispute, the responsibility for which has been laid on the Communists? The effects of the welfare State ideology in Britain should be studied before it is adopted wholesale in India. Because of this ideology, workers in Britain are losing pride in their work and competitive efficiency is suffering.

Discipline among Insurance Employees

The question of maintaining discipline among the employees of the Life Insurance Corporation featured in the Lok Sabha last week. The Finance Minister, Mr. T. T. Krishnamachari, told the House that "lack of discipline" was something which had

been reflected in the efficiency of the Corporation and that the latter was "certainly not what it ought to be". Mr. Sadhan Gupta asked whether it was indiscipline if the employees agitated for the retention of their previous system of bonus and against cuts in scales of pay. The Finance Minister replied that lack of discipline and the question of making representations for better pay scales were entirely different. Representations could be made and deputations could be sent. Even some mild agitation could go on, but lack of discipline was totally different. He quoted an instance in Madras when he visited the office of the Insurance Corporation recently. At 11-45 a.m., over 200 employees there had barricaded the staircase and stayed away from work until 1-15 p.m. shouting slogans. What happened to their work? He added that the Communist Party to which Mr. Sadhan Gupta belonged was responsible for keeping this agitation going. Mr. Gupta rose to say: "Prove it, it is a lie." But the Finance Minister retorted: "To my friend these facts appear to be lies."

Indo-Japanese Iron Ore Pact

An Indo-Japanese agreement has been reached for the supply of iron ore on a long-term basis. Under it, India has contracted to supply 1½ million tons of iron ore a year to Japan over a period of five years. Negotiations are afoot for Japanese collaboration in the development of transport, particularly of certain ports on the west coast, such as Karwar, Redi and Honewar. A visit by a Japanese mission is expected.

Foreign Exchange and Official Purchases

The foreign exchange squeeze will be reflected in the January-June import policy, it was indicated last week. The issue is a complicated one. The shortage of foreign exchange cannot be attributed solely to heavy imports or to the fall in exports. The policy of drift and indecision has also contributed to it. It may be interesting if the Government were to appraise the extra cost of delayed decisions about purchases from abroad. The buying of Viscount aircraft illustrates the point. The delay in implementing the recommendation of the Airlines Corporation has cost a considerable sum of money, and to that extent involved a larger outlay of foreign exchange.

Newsprint Factory in Andhra

As already reported, a decision has been reached to set up a newsprint factory near the Nizam Sugar Mills in Hyderabad (now Andhra). Bagasse will be the raw material. A team of German consultants is now on its way to India to negotiate an agreement for collaboration in the project, which is expected to go into production by 1961, raising India's output of newsprint to 140,000 tons.

The Napanagar newsprint factory in Madhya Pradesh is producing 60 tons of newsprint a day and will shortly raise its production to 100 tons a day. Newsprint imports at present cost about Rs. 6.65 crores a year.

Manufacture of Synthetic Rubber

A number of units to manufacture synthetic rubber are planned. This follows the project report

AN EDUCATION IN Oil

This is not an abstract design in an Art Class. It is one of the chemist's symbols for the structure of hydrocarbons. And hydrocarbons are the most important ingredients in oil—that vital fluid on which India depends so much for the progress of industry, transport and agriculture.

In the Assam Oil Company, chemists, physicists and geologists are engaged all the time on research, helping to find new sources of oil, devising more efficient and more economical methods of refining oil and discovering new uses for oil.

The results of such research mean that more and more of the oil and oil products which are needed for our expanding economy come direct from India's own oilfields.

TURNING A NEW ROLL

We have turned a new roll; and it has cost us three and a half crores of rupees.

To what purpose, pray?

At the end of the rolling, we get coils of flat, steel strip—skelp, as the steel man calls it. The skelp is passed on to the Indian Tube Company, which welds it into tubes.

So what?

Merely that steel tubes pipe up water from deep inside the earth to parched fields, helping to grow a rich harvest. In the cities, countless homes receive a protected supply of water through these pipes.

Soon, a new plant will turn out the kind of steel tubes that go into the making of bicycles. Remember also that the locomotive speeding along the track is kept going by steel tubes which hold the steam.

Tata Steel's new Skelp Mill, the first of its kind in India, has a capacity of 200,000 tons. When there is enough steel, this mill will roll all the skelp and strip the country needs.

TATA STEEL
SERVES THE NATION

of an American team which came to India earlier this year. At least three American firms are interested in the project. The location of the units will be Uttar Pradesh, where power alcohol from sugar factories is available, and Rourkela, where coke oven gases will provide the base. A fertiliser factory is also being set up in Rourkela. The synthetic rubber units will be in the public sector.

Orders for Ships

Orders for ships worth over Rs. 23 crores have been placed with several countries during the recent visit of India's Director-General of Shipping to the U.K., Germany, Italy and other places. The Transport Minister, Mr. L. B. Shastri, told the Lok Sabha that within six months of the inauguration of the second plan, shipping companies in the public and private sectors had been able to place orders for ships worth over Rs. 36 crores—almost the total sum allotted for shipping in the second plan period. Asked whether the Government had taken any steps to purchase second-hand ships, Mr. Shastri said that the purchase of ten-year-old second-hand ships could be considered. But it was not easy to get such ships, and only ships which were 15 or 20 years old were available. Asked whether any steps had been taken to get ships from the U.S. reserve fleet, he replied that India did approach the U.S.A. in this connection before the recent Presidential election. She was told that legislation by the U.S. Congress would be necessary for the transfer of the ships, and such legislation could not be undertaken in view of the Presidential election then. When asked whether India had been able to send as many ships to Russian ports as she had undertaken under the recent Indo-Russian shipping agreement, the Minister replied that at present India did not have enough ships. The Government had asked private shipping companies to divert some of their ships to Russian ports, if possible. They had not been able to do that. As soon as there were more ships, the number going to Russian ports would be increased.

U.K. Assistance for New Shipyard

The Production Minister told Parliament that the U.K. Government has offered assistance in establishing a second shipyard. Its proposal to send a small expert mission under the technical co-operation scheme of the Colombo Plan is being considered. It has been suggested that the mission, after visiting possible sites and studying the data available, may prepare a preliminary project report on the lay-out of the new shipyard and the equipment required to establish it, together with estimates of the capital costs and the construction costs of the types of ships to be built in the yard.

Shoes for Russia

An agreement has been reached by the State Trading Corporation with Russia for the export

of shoes worth Rs. 118,05,000. Deliveries are to be completed by the end of February 1957. Most of the supplies will pass through the National Small Industries Corporation, which will execute orders through co-operative societies, small shoe-making establishments as well as individual shoe-makers. The Government has given the Corporation a loan of Rs. 25 lakhs to help it to organise production.

Using Russian Loan to India

Proposals are being examined here to utilise the long-term credit of 500 million roubles, which Russia has offered to import equipment, including equipment for an oil refinery and fertiliser plants.

Foundry for Hindustan Machine Tools

A proposal to set up a foundry in the Hindustan Machine Tool factory is being examined here. The capacity of foundry will be 2,000 tons of net castings, all of which will be required for the factory. Its cost is placed at Rs. 60 lakhs. German collaboration in the project is expected.

Training Steel Technicians

The Russian Government has agreed to train in Russia 686 engineers and technicians for the Bhilai steel works. Eighty young engineers are now there getting training in three modern steel works. The expenditure on them will be borne by the U.N. Technical Assistance Fund. Another 109 engineers and 497 supervisory staff will be sent for training during 1957 and 1958.

I.S.C.O.N., the British consortium, has agreed to provide training facilities for approximately 300 engineers and technicians of the Durgapur steel plant in U.K. steelworks. The U.K. Government has agreed to underwrite the cost of the training under the Colombo Plan.

Approximately 16,000 operatives and skilled workers for the three State steel plants will have to be trained in India. A technical committee was appointed to assess the existing training facilities in India for skilled workers required by the steelworks. It recommended:

1. The Government should recruit skilled technicians from the training centres run by the Ministry of Labour and the State Governments, existing steelworks and the open market.
2. Special metallurgical courses should be arranged at the Indian Institute of Science, Bangalore, the Engineering College, Poona, the College of Mining and Metallurgy, Banaras, the Bengal Engineering College, Calcutta, and the Indian Institute of Technology, Kharagpur.

The committee also made a list of suitable engi-

neering works, with an assessment of the likely number of persons who could be given practical training in them. At present, 22 supervisory trainees, nine graduate trainees and 492 trade trainees are being trained in Indian steelworks and other engineering workshops. As part of the overall programme, the training of about 3,500 technicians of different categories in a number of engineering and metallurgical works spread all over the country has been agreed to in principle by the engineering association, the Bengal Chamber of Commerce and the Ministry of Iron and Steel. The Indian Government has made arrangements with some leading American steel manufacturers for the training of Indian technicians for employment in its steel plants. A feature of the scheme is that the Ford Foundation will defray the expenditure of the Indian personnel during their training period, while the American companies will employ them as soon as their training has been completed. The Government of India's liability will be confined to the passage money to and from the U.S.A. It will thus have a group of trained men who will be kept in employment, ready to be brought back to India when their services are needed, at the lowest possible cost.

Consultant on Railway Electrification

A French railway engineer, M. Bouloungne, has been appointed consulting engineer to the Indian railways for their electrification schemes. M. Bouloungne was a member of the French railway mission which recently submitted a report to the Government of India on certain technical issues connected with railway electrification. According to the present proposals it is expected that the electrified route mileage on the Indian railways will be more than trebled by the end of the second five year plan. A provision of Rs. 80 crores has been made for this purpose.

Purchase of Boeings by A.I.I.

The Air India International Corporation signed a letter of intent on 30th August, 1956, for the purchase of three Boeing 707 jet aircraft. The contract with the Boeing Airlines Company is still being negotiated. It is hoped that the aircraft will be delivered between January and March, 1960.

Indian Trade with South Viet-Nam

The Governments of South Viet-Nam and India have agreed to accord each other "most favoured nation" treatment on tariffs. The market for Indian goods in South Viet-Nam was explored in discussions with the South Viet-Nam trade delegation which came here last August. As a result of these discussions, the lists of commodities available for export from either country have been drawn up and publicised. The question of granting import licences for goods from India is being discussed by India's representative in South Viet-Nam.

Yugoslav Iron and Steel Delegation

A delegation consisting of the representatives of some iron and steel works in Yugoslavia is at present in India. It has not been sponsored by the Yugoslav Government. The members of the delegation have had exploratory talks with the State Trading Corporation and the Ministry of Railways for the supply of steel, rails, etcetera, and also with the Iron and Steel Controller, Calcutta. No business has so far materialised.

Zonal Industrial Cells

It has been decided to establish four Zonal Industrial Cells to study the economic geography of each Zone, assist in the collection of data, and give technical advice and guidance. Steps are being taken to recruit the technical staff.

Licences for Sugar Mills

The broad principles followed in granting licences for establishing new sugar mills, or for expanding existing ones, are the availability of adequate supplies of sugarcane around the proposed site and the capacity of the applicant to execute the project. This was mentioned last week in a statement laid on the table of the Lok Sabha by Mr. A. P. Jain, Union Minister for Food and Agriculture in a written reply to a question. The statement added that, as for the available capacity to be licensed, the matter has recently been reviewed and it has been decided to grant licences in the following order:

1. For expanding existing factories so that the capacity after expansion might be up to 1,000 tons of cane a day.
2. For balancing the plants of existing factories up to a crushing capacity of 2,000 tons of cane a day. This would be applicable to factories whose mill and boiling houses are not balanced at present.
3. For the expansion of sugar mills having some special features, such as where large supplies of bagasse are required to sustain a paper mill.
4. For establishing co-operative factories where sugarcane sufficient for an 800-1,000 ton factory is already grown and the promoters have collected a substantial amount by way of share capital.
5. For establishing new factories at sites where sugarcane cannot be utilised for any purpose other than the manufacture of sugar, such as the Terai areas of U.P.
6. For establishing new factories by private and joint-stock concerns. These applications will be considered on their merits as hitherto.

The additional capacity required during the first and second plan periods has been assessed at one

London

BUSINESS TAKES A LONGER VIEW OF SUEZ SITUATION

SHIPPING POSITION AND FUEL OIL RATIONING RESPONSIBLE

(FROM OUR LONDON CORRESPONDENT)

AS anticipated in recent despatches from this part of the world, the "wait and see" attitude which appeared to govern the reactions of the business community to developments in the Middle East has at last had to be abandoned in favour of taking a long-term view. Two factors in particular have been responsible for this change—the rationing of fuel oil supplies so as to make an overall saving of 10 percent in consumption, and the increasing evidence of a shortage of shipping space. The full consequences, of course, will depend on how long the shortages will last and the measure of improvisation that will be possible in the interim, but it seems to be generally accepted in the many assessments which have so far been attempted that we must expect some lowering of production and of the volume of international trade, and certainly short-term working over a wider section of industry, if not indeed substantial unemployment, should the crisis drag on for any length of time. These are the more doleful prospects, and it is particularly unfortunate that they should have impinged on the economy at the time when—and this is also widely accepted—the Chancellor of the Exchequer's anti-inflationary measures were being initiated to get the situation under control. There are apparently some more encouraging possibilities. The fuel problem might well be tackled successfully on a co-operative basis, both nationally and internationally, and that of shipping at least minimised by the release of requisitioned shipping by the Government and the reactivation of ships from the American "mothball" fleet. Costs and prices will rise, but industry will be concerned more with maintaining activity rather than profits and dividends, with the result that there may well be some interruption of the wage spiral. Consumer demand will be reduced, with at least an opportunity for essential materials going to the export industries. If sterling can withstand the pressure to which it is being subjected, the economy could emerge from the crisis it is now facing with a renewed vitality.

Shipping Difficulties

Most markets in the City are busy discounting, or attempting to discount, the worst possibilities. Stock Exchange prices have been written down substantially, whereas shipping freights have been raised to new peak levels. The unfortunate consequences of the latter are widespread, much more so, surely, than Colonel Nasser realised when he embarked on his Guy Fawkes celebrations in the Suez Canal. They will be particularly severe on Western Europe, as of course he anticipated, but also on India and the Levantine countries as a whole. On the basis of a round voyage via the Cape, in ballast and laden, it now costs about 343s. a ton to ship oil from the Persian Gulf to Britain, against about 105s. via the Canal, and the trip takes almost twice as long. As the Manchester Guardian points out, in dealing with this question: "Manganese ore from India to the Continent, which was paying around 132s. 6d., now offers over 200s. without finding ships. The rate for fertilisers from Baltimore to Karachi has jumped \$5 a ton to \$30.50. Sharp though these increases have been there is no finality about them. An ordinary tramp ship of the Liberty type and worth some £600,000 second-hand can today earn £800 a day clear profit in the Atlantic coal trade. To get a similar profit in the Far Eastern or Indian trades the rates prevailing before the canal was closed would have to be doubled." Colonel Nasser hardly did his Afro-Asian "friends" or his Arab associates much of a good turn, and it makes things worse the longer the clearing of the canal is delayed.

October Trade Details

Faced with the rationing of fuel oil supplies, it is not very encouraging to learn from the detailed overseas trade figures for October that exports of petroleum products in that month were no less than 32 percent higher than the average for the previous nine months. It is true that imports of petroleum were also higher, but only by 10 percent. It turns out that the general increase in British exports in October was largely due to two special factors. October this year had the unusual number of 27 working days; and some goods which had been held up by the requisitioning of ships in August and September were despatched in October. Even after allowing for these factors, however, the October figure was still an improvement on the third quarter exports. The "underlying" rate of increase in the value of exports is only a little less than the rate of over 10 percent achieved in the first half of the year. Heavy increases were recorded in the exports of non-ferrous metals and steel. Shipments of cotton yarns and fabrics were 18 percent above the nine months' average. It is clear that the shipping shortage which has now begun to affect exports had not yet made its impact. October is usually no more than an average month for imports, and much of last month's sharp rise of £59 million in imports was in foodstuffs. Among industrial materials imports of non-ferrous metals were considerably larger than the average monthly rate for the third quarter of this year.

Trade Terms Worse

A disagreeable foretaste of the impact of high freight rates on the balance of trade is also to be found in the October trade returns. In that month

the index of our export prices was constant at 107, while the index of import prices rose by two points to 106, causing the terms of trade to move two points against us, from 97 to 99. The rise in import prices was due to a seven point jump to 115 in the index for imported fuels, largely due to a higher oil tanker freight rates. There was also a sharp increase in tea prices. Since October, freights, and particularly tanker freights, have been rising faster, so that the terms of trade must be expected to worsen further.

Commodity Prices Steady

A notable aspect of the present crisis has been the relative steadiness of basic material prices. The Board of Trade's index (based on monthly averages) fell by 1.1 percent in October to a level only 0.8 percent above that of July, when the crisis began. Since then events have taken another twist and there has been a further flurry in the markets, but once again prices seem to be settling down quickly. Thus tin, which rose by £100 a ton between mid-October and the beginning of November, reaching a peak of around £890 a ton, has now lost nearly half the increase. Copper rose during the same period from £285 a ton to £300 a ton but has now come back to £282 a ton. Rubber has held its gains and is still 4d. a pound higher than a month ago. The general trend makes it seem unlikely that basic material prices will cause much deterioration in the terms of trade in November.

Hire-Purchase Debt Falling

Hire-purchase sales by household goods shops rose during September. While partly seasonal, the increase also reflects a slight rise in the proportion of goods sold on credit terms from 28 percent in August to 29 percent in September. The index number of the value of goods sold on hire-purchase each week by retailers on the basis of December, 1955=100, rose from 67 in August to 77 in September. It is estimated that the total hire-purchase debt at the end of September of at least £374 million was about 17 percent below the level at the end of last year. Of the total, about £222 million was owing to retailers, of which furniture and furnishings accounted for £125 million.

P & O. Subsidiary for Bermuda

The tax fight of shipping companies to Bermuda continues. The giant P. & O. shipping group is about to register a subsidiary in Bermuda "in case it should be decided in the near future that an investment in this company would be desirable." Only last week, Court Line announced that it was seeking Treasury consent to form a subsidiary in Bermuda, where profits are practically free of tax.

Other shipping companies have already embarked on similar plans. Discussing the question of "flags of convenience" at the P. & O. meeting in May, Sir William Currie, the chairman, said that while the advantage for an established British company is not at first sight very obvious, the position was being carefully studied. It is thought that P. & O.'s plans for Bermuda are largely connected with the group's £37 million tanker programme. Earliest deliveries of new tanker tonnage are not expected before the middle of 1958.

Developing Northern Ireland

As a result of the joint efforts of the Northern Ireland Development Council and the Northern Ireland Ministry of Commerce, six firms—including one from the United States—have decided to establish new factories there, with a total initial employment target of 1,200, of whom 1,000 will be men. Giving these figures in his first annual report to the Prime Minister, Lord Brookeborough, the chairman of the Council, Lord Chandos, adds that a further 500 jobs will be provided from two schemes for the expansion of existing industry, and the other negotiations are nearing their final stages. Lord Chandos points out that, apart from the year 1953, when his own concern, the British Thomson-Houston Company, announced its decision to build a plant at Larne with an employment target of 3,200, the figure of 1,200 was the largest announced by new firms for any year since 1948. The Council considers it urgent that a decision on the timetable for establishing an atomic power station in Northern Ireland should be taken and announced. The exemption of Northern Ireland from certain aspects of the credit squeeze should prove an advantage, the report says, but plans for industrial expansion had suffered through uncertainty regarding future markets. The Council has taken up only £2,500 of the £20,000 granted for the establishment of its administrative organisation.

Cost of Living Rises

The cost of living rose last month for the first time since Mr. Macmillan launched his campaign to achieve a "plateau" of economic stability. Announcing this, the Ministry of Labour stated that the official index of retail prices on 16th October was 103, one point higher than in September. The index had remained at 102—Mr. Macmillan's "plateau"—for four months. This summer has been one of the most stable periods the index has seen since the war. Last year, and in 1954, it rose two points between the months of June and September. During the last ten months the cost of living has risen by three points on the present index, although on the old or "interim" index the rise has been five points.

give these hands better light — at less cost!

A factory cannot afford faults—because faults mean hold-ups, unfulfilled quotas, reduced profits. That's why most modern factories have fluorescent lighting. Production experts have discovered that a good light reduces faults greatly... increases production.

Philips 'TL' Fluorescent Lamps give more than three times more light than filament lamps of the same current consumption! That's real economy! And the light is not harsh—it lights up the working bench evenly. The worker's eyes do not get tired easily if the lighting is well planned! He can do better work. Install Philips 'TL' Fluorescent Lighting and watch output go up... costs come down.

PHILIPS

'TL' FLUORESCENT LAMPS & FITTINGS
—make light work for you!

A Philips Fluorescent Lamp gives more than three times more light—lasts on an average 7,500 hours!

Can we advise you? The Philips Lighting Service Bureau will be glad to show you how you can use fluorescent lighting in your factory—free of charge and without obligation. Please write to Philips Electrical Co. (India) Private Ltd.

Bombay

DEVELOPMENT PROBLEMS OF THE RAYON INDUSTRY

CAPITAL SHORTAGE AND HIGH PRODUCTION COSTS

(FROM OUR BOMBAY CORRESPONDENT)

SPEAKING to the local branch in Surat, Mr. Dhirajlal Shroff, president of the Bombay Silk and Art Silk Mills Association, said that a delegation would soon visit African territories with the object of promoting the export of Indian rayon fabrics there. It would be sponsored by the Export Promotion Council for Art Silk and the final details would be discussed at a meeting called by the Government of India in New Delhi. Mr. Shroff appealed to Indian manufacturers to help the export drive and added: "Indian producers should take advantage of the atmosphere created by the recent visit of Mr. Nehru to the Arab countries and promote the export of art silk cloth to these countries." But it seems that Mr. Shroff himself was somewhat doubtful about the success of this delegation when he informed his listeners that a similar mission which recently visited the Persian Gulf countries had found it extremely difficult to interest importers there in Indian rayon fabrics. "There merchants were wary about the quality of our cloth," he said. Mr. Shroff must also have realised, despite his appeal, that it takes more than mere goodwill and a friendly atmosphere to create an export market.

Based as it is on the results of the delegation to the Persian Gulf, Mr. Shroff's apparent scepticism

appears to be well founded, but his subsequent remarks confuse the issue. He said: "The further improvement of the art silk industry depends to a good extent on the industry promoting exports and earning foreign exchange," and in furtherance of this objective, he suggested that Indian producers consider the possibility of selling certain quantities of cloth without profit in foreign countries in order to create a market. It is difficult to see how the future development of the industry depends on exports. The converse would seem to be the case, considering that Indian mills cannot compete in foreign markets in terms of quality and price. The Indian industry's output is but a drop in the ocean, compared with the mass production of the Japanese industry, and its manufacturing techniques are relatively primitive. In these circumstances, Indian exports will continue to be negligible and the quantum of foreign exchange earned equally insignificant. The suggestion of selling at cost price is surprising. Unless the industry has an investible surplus, it obviously cannot expand. On the other hand, there is a tremendous internal market which needs to be exploited. Despite prohibitive import tariffs, Japan offers keen competition to the domestic industry, and it is significant that Indian mills find it difficult to work to full capacity. This extraordinary situation would seem to indicate that some drastic changes are necessary within the industry.

Two Requirements

There are two vital requirements which must be met before the Indian industry can run on an economic basis. The first is that a programme of rationalisation should be undertaken. Most of the present equipment was installed as far back as 1937 when the industry first came into existence and it was even then not new. There has been little rehabilitation since then, so the industry has been deprived of modern technological advances which make for economic and efficient production. The problem of foreign exchange expenditure in importing the latest type of machinery will have to be faced. It is true that some equipment is being manufactured within the country, but mill-owners complain that locally manufactured products do not conform to international standards. It is also necessary to differentiate between spare parts for the existing machinery and the modern type of equipment which is not produced in India. The second condition relates to a satisfactory supply of yarn. Indian mills consume nearly 60 million lbs. each year and a very considerable percentage of this quantity is imported. The position is complicated by the fact that in addition to the manufacturers, import licences are also issued to merchants. Supplies restricted by an overall ceiling are, therefore, divided between two distinct groups whose interests are not in harmony. The merchants are frankly concerned to get the maximum possible profits and are quick to take advantage of any temporary shortage that may occur with the mills. Speculative activity has led to large variations in prices, to the detriment of the mills who are the ultimate consumers. The entire supply system needs to be reorganised in the larger interests of the industry. If it is not possible to eliminate the middleman entirely, it should be possible to evolve a compromise formula which would ensure a reasonable margin of profit for the merchant importer without taxing the mills to unreasonable limits.

The import duty of 36½ percent on yarn is another crippling factor. The procedure of levying import duty in Bombay Port is somewhat unusual. For some unknown reason, the import duty in Bombay Port is not calculated on the invoiced value, but on the market value prevailing in the city at the time of the arrival of the consignment. This means that if the market price stands at a particularly high level because of speculative activity or temporary scarcity, the mills have to pay excessive import duty which bears no relation to the actual cost of the material. It has happened that they have had to pay duty on an exaggerated market value which has worked out to an *ad valorem* rate of 50 percent to 60 percent. Moreover, market value is a factor which varies beyond normal limits and it is impossible to forecast what it will be on the day any particular consignment arrives. This means that the mills can never compute their cost of production in advance and the normal procedure of forward sales becomes a hazardous venture. No industry can flourish if the supply and price of its essential raw material are subject to violent fluctuations at short intervals and often without warning.

Need for Raising Yarn Production

The ultimate solution, of course, is for the country to develop its own yarn industry. A start has already been made, but the present output is inadequate, and there is an urgent need for further units. The rayon piecegoods industry did attempt to solve this problem on its own account by entering into a deal with Snia Viscosa of Italy for setting up a rayon and staple fibre yarn factory, but finance proved a serious handicap. The main difficulty is that the mills are small units and find it hard to contribute their quotas of the investment for a co-operative venture of this type. The biggest unit controls 600 looms and the smallest has 25 looms. Their approximate turnover amounts to a little over Rs. 1 crore and Rs. 6 lakhs, respectively, which is inadequate to finance a project, the initial cost of which is estimated at about Rs. 6 crores. Nevertheless, the industry has shown initiative and deserves to be encouraged. It may be worthwhile for the Government to consider whether financial assistance could be given to set up a yarn producing unit on a co-operative basis. Unless the existing plant is replaced and adequate supplies of yarn made available at world prices, the Indian mill industry will not be able to hold its own either in the domestic or in foreign markets.

Uttar Pradesh

METHODS OF RAISING FOOD OUTPUT

U.P. CHIEF MINISTER OPPOSED TO CO-OPERATIVE FARMING

(FROM OUR LUCKNOW CORRESPONDENT)

WAYS of securing a 40 percent increase in agricultural production in the second plan period were discussed at a four-day inter-State regional seminar on development in Hardwar early last week. Besides Uttar Pradesh, delegates from eight other States including Kashmir, Orissa, West Bengal and Delhi attended. The most noteworthy speech was that of U.P.'s Chief Minister, Dr. Sampurnanand, who warned the planners against being over-enthusiastic in their approach to the Indian farmer. The Japanese method of paddy cultivation, according to him, did not evoke the same interest now as at the beginning, because it was found that the practice had nothing revolutionary in it and was only as good or as bad as the indigenous methods. Dr. Sampurnanand was also not in favour of co-operative farming, unless certain pre-requisites were fulfilled. For co-operative farming to prove successful, State guarantees for both prices and markets had to be introduced such as in China. But under a democratic set-up, it would not, he said, be easy in any case to switch over from individual farming to collective farming. The Government of U.P. does not favour co-operative farming and instead will go ahead with its programme of the consolidation of holdings. Scepticism about the immediate success of the community development programmes was also expressed by the State's Planning Minister, Mr. C. B. Gupta. He expressed his doubts because he felt the co-operatives, the *panchayats* and other peoples' organisations had not taken root in the country, one proof of which was the conspicuous absence of local leadership. "We must confess," he said, "that the community development programme has not been able to touch more than a fringe of the problem."

Views of a Congress Minister

The State Transport Minister, Mr. Vichitra Narain Sharma, who is also a member of the All-India Khadi and Village Industries Board, has accused the Centre of being biased in favour of big business. Addressing a Press conference in Lucknow last week, Mr. Sharma said he was unhappy to find that a propaganda campaign was going on against Government subsidy to the khadi and handloom industries. The Union Government spent, by way of subsidy to mills, a sum of Rs. 1,176 crores in the last 25 years, which worked out to Rs. 56 crores a year. It was the same beneficiaries of this subsidy, Mr. Sharma alleged, who were conducting the campaign against the subsidy to khadi. He said that political parties which took financial help from others would be naturally influenced by them. "The business magnates," he added, "are increasing their influence on political parties by financing them and confusing and hoodwinking the public by controlling the press." Questioned if his views on this point were also shared by the Cabinet, Mr. Sharma replied that no one could be blind to these facts. Mr. Sharma's outspoken comments have created some sensation in local political circles, which are at the moment busy with the distribution of a little over 500 Congress tickets to much more than 1,000 applicants.

New Service Terms for Insurance Workers

The Insurance Corporation of India which two months ago, opened its Northern Zone office in Kanpur, has begun enforcing restrictions on agency holders. Members of the staff who were earning from the old insurance companies agency commissions apart from their emoluments, will henceforth be given only a fixed monthly remuneration. They will, however, have the option of continuing to serve either on a fixed salary basis or commission basis. The list of agency-holders is also being revised. Under the new scheme, only such persons will be retained as agency-holders who can guarantee a minimum life business of Rs. 40,000 a year. An interesting fact that has come to light in the course of the revision of the agency lists is that 90 percent of the agents are women. This preponderance of female agents can be explained by the well-known practice of Government servants and others, proxying for the female members of their families. The Corporation's northern zone has also announced plans to recruit 250 new hands in subordinate posts. The decision is apparently unwise since it is proposed to make fresh recruitments without making provision for the old employees. According to one interpretation, the recruitment programme is official counter-action against the threatened strike from 5th December which some of the existing employees propose to resort to in resentment against the new service terms.

Kota Coalfield

The State Government has made a representation to the Centre for the provision of transport facilities to exploit the Kota coalfield in Mirzapur district. This coalfield where the preliminary survey has already been carried out by the Government of India's Geological Survey Department has an estimated reserve of 2 million tons. It can be worked as a second class colliery with a production of 100 tons a day and thus last for well over 35 years with a recovery of 65 percent of the reserve. Its commercial working, however, will be as hampered as it is far away from the rail-head.

The Central Government has been considering a proposal to connect the Pipri-Garhwal road by railway. If this is implemented, Pipri will be the rail-head for the coalfield as it is situated about 25 miles away from there.

New Chemical Factory

The Government of India has granted a licence to a Calcutta firm to set up a soda ash-cum-ammonium chloride factory in Moghalsera. The U.P. Government has already sanctioned a loan of Rs. 1.45 crores to this firm for setting up the factory. Land has already been acquired, and Government appraisers have been appointed to carry out the evaluation work. The total investment needed for the industry is about Rs. 2.9 crores. The rated capacity of the factory will be 120 tons of soda ash, and 120 tons of ammonium chloride a day. The factory will employ over 300 skilled and 350 unskilled workmen on a permanent basis, in addition to other supervisory staff.

The chairman of the Tata Iron and Steel Co., Ltd., Mr. J. R. D. Tata, recently said in Jamshedpur that the loan of \$75 million (about Rs. 36 crores) granted by the World Bank to the company for its expansion programme, designed to raise output to 2 million tons by mid-1958, became effective from 20th November, following the completion of legal formalities and an inspection of the company's documents by World Bank officials.

Ports measure
the
nation's pulse...

Watch the cranes at any one of our six major ports—loading India's produce into ships and unloading the raw materials she must have. It is in these ports that the economic pulse can best be measured. And as the economy expands, the pulse beats faster.

During the next five years Rs. 71 crores will be spent on developing major ports and harbours, and five crores for some 150 minor ports along India's coastline. Also four crores will be used to build new

lighthouses and modernize existing ones.

In most of India's big ports, ships are fuelled by the Bunkering Service operated by Burmah-Shell. We supply many special lubricants for vessels of all kinds; diesel oil and petrol for port equipment; bitumen for surfacing dock roads and roofs; and grease for slipways...in fact we are rather proud of our part in India's nautical life.

Plantation Topics

ESTIMATE OF NEW COFFEE CROP
RAISEDBIGGER EXPORTABLE SURPLUS
EXPECTED THIS YEAR

(FROM A SOUTH INDIAN CORRESPONDENT)

ALTHOUGH the Marketing Committee of the Coffee Board has raised its estimate of the coming crop to 35,800 tons from 34,000 tons, the planters think that it is still on the conservative side. In their opinion, the crop will be about 40,000 tons. The carry-over from the previous season, which is estimated at about 5,000 tons. Such a large amount may create serious problems for the Coffee Board, which is even now having difficulties over the handling, warehousing, financing and marketing of coffee, the production of which has gone up from 24,000 tons to 34,000 tons during the past four years. Home consumption is not increasing to the same extent as production, so it is expected that a larger volume will be available for export in 1957. According to certain estimates, at least 12,000 tons can be exported out of the 1956-57 crop, against the Marketing Committee's estimate of about 8,000 tons. The Board officials expect that 1957 will be another bright year for Indian coffee, and they stress the necessity for the entry of the Coffee Board into the export field. In the world market, prices are ruling at a fairly high level, mainly on account of the fear that supplies will be adversely affected by the untimely rains reported from the coffee producing countries of Latin America. The latest estimate of world production is about 42 million bags, of which 36 million bags will be available for export.

U.S. Offtake of Pepper Falls

According to a trade report, arrivals of pepper in the terminal markets along the west coast amounted to 400 tons during October, against exports of 700 tons. Shipments to European countries amounted to 550 tons. A disquieting feature was the very low offtake of the United States, the actual figure being 40 tons. Arrivals of the new crop have started in small quantities and they are now being sold at prices ranging from Rs. 350 to Rs. 575 according to quality. India's new pepper crop is estimated by the trade at over 24,000 tons, and that of Sarawak at 18,000 tons, against her 1955 crop of about 15,000 tons.

High Price for Lemon-Grass Oil

Lemon-grass oil prices remain at the fairly high level of over Rs. 100 a dozen bottles, in spite of a larger output. There are roughly two months

more for the season to close in Kerala. India's production of lemon-grass oil during the current season is estimated at about 1,200 tons to 1,400 tons, compared with last season's 1,000 tons, which in itself was a record. Exports have been fairly high this year and about 125 tons were shipped from Cochin during October.

Coconut Oil Shoots Up

Coconut oil prices are sky-rocketing; within the past one month, Alleppey, which is the chief oil market on the west coast, registered an increase of Rs. 70 a candy to Rs. 490 in the price of spot delivery coconut oil. This is largely a reflection of the Middle East crisis and is in keeping with the increases in the prices of other edible oils. Other contributory factors are a keen demand from up-country markets and the low stock. The Oil Millers and Merchants Association in Alleppey, which controls futures trading, has fixed ceilings for forward contracts to save the heavily committed bears. Coconut growers, who have been complaining against the low price of oil, should feel happy but it is doubtful whether the boom will last long.

Cardamom Crop

South India's cardamom crop has been affected by the heavy rains this year. During the last financial year, 18,774 cwt. of cardamom worth Rs. 1,53,74,220 were exported from India. Cochin is becoming an important market. The auctions started there on 17th October.

Internal Tea Propaganda

Sir Percival Griffiths discussed the problems of internal propaganda with tea distributors when he visited Madras on 23rd November. He met representatives of the United Planters Association also. Mr. Stephen Mukerjee, Director of Propaganda, Tea Board, accompanied him.

NORTH INDIAN TEA CROP REPORTS

The following summary of crop and weather telegrams has been received for the month of October, 1956:

Upper Assam: Weather generally seasonable; the monsoon has practically ceased in Sonari and an early cold weather is imminent; rainfall below normal in Sonari and Naharkatiya and dry weather is interfering with outturn in Naharkatiya; cold weather has set in at Dibrugarh; immediate prospects generally fair; outturn last month normal to good; outturn to date slightly over last year in Sonari.

Central Assam: Unusual rain in Jorhat; weather otherwise generally seasonable; crop prospects slightly poorer in Jorhat; immediate prospects fair; outturn last month about normal.

Lower Assam: Weather generally seasonable; the cold weather has set in in certain districts; early closing of season anticipated in Bishnauth and Borsola; immediate prospects fair; outturn last month about

normal; outturn to date slightly over last year in Nowgong.

North Cachar: Weather generally seasonable; immediate prospects fair; outturn last month normal to good; helopeltis prevalent in some districts.

South Cachar: Weather generally seasonable; the cold weather has set in in Hallakandi and Longai; immediate prospects fair to good; outturn last month normal to good; outturn to date above last year in Chullabheel and Chargola; helopeltis prevalent throughout the district; black rot prevalent in Longai; blight severe and is checking leaf in Hallakandi.

Eastern Doorgas: Cold weather has set in; immediate prospects good; outturn last month good; outturn to date considerably over last year in Kalchini; blight has disappeared from Kalchini.

Central Assam: Cold weather has set in in Binnaguri and an early cold weather is imminent in Dalgong; weather too cold for the time of year in Binnaguri and is checking leaf; immediate prospects fair; outturn last month about normal; helopeltis and blight blight prevalent in some districts.

Western Doorgas: Weather generally seasonable; cold weather has set in in some districts; immediate prospects fair to good; outturn last month normal to good; black rot, helopeltis and blight blight prevalent in some districts; black rot lifting in Oodlabari.

Darjeeling: Outturn last month poor; cold weather has set in and the season has practically closed.

Teral: Weather normal; cold weather setting in; crop prospects fair; outturn normal; helopeltis and blight blight in evidence.

LONDON TEA SALES

AT last week's London tea sales, the 52,732 packages on offer realised an average price of 6s 1.15d a lb., against 6s 1.96d in the previous sale and 4s 10.56d a year ago. Plain broken pekoe was quoted at 5s 1d a lb., against 4s 7d in the previous sale. Prices obtained by some of the companies are given below:

	No. of packages	Average a lb.
Amalgamated	1,048	5/9 1/2
Amgoorie	120	7/6
Anglo-American	774	5/8 1/2
Assam Frontier	251	7/2 1/2
Attaree Khatri	504	6/3 1/2
Bordubi	716	7/8 1/2
Budla Beta	312	7/0 1/2
Euxa Dooras	1,008	5/11 1/2
Chulwa	348	6/11
Chulsa	336	5/7 1/2
Cons. Tea and Lands	3,270	5/9
Deamoolie	341	5/6 1/2
Doom Dooma	1,029	7/3 1/2
Eastern Assam	757	6/9 1/2

U.K. Tea Stocks

U.K. stocks of tea on 16th November amounted to 110.3 million lbs. against 102.0 million lbs a year ago (converted at 110 lbs a package).

COCHIN TEA SALES

At Sale No. 31, 1,400,000 lbs of tea were on offer. There was a very strong and general demand, particularly for Medium sorts which were 2 to 3 annas dearer. Best sorts were rather easier following quality. Whole leaf grades were much dearer.

COLOMBO RUBBER PRICES

The following prices have been issued by the Rubber Board of India from the weekly market report published by the Colombo Brokers Association:

	Closing prices on 16-11-1956 (Rupees a lb.)	Average for the period (Rupees a lb.)
Sheet:		
No. 1	1.41	1.41
No. 2	1.38	1.38
No. 3	1.35	1.35
No. 4	1.11	1.11
No. 5	1.06	1.06
Crepe:		
Water White	1.67	1.62 1/2
R.M.A. No. 1X	1.62/65	1.60 1/2
R.M.A. No. 1	1.58/61	1.57 1/2
Crepe No. 2	1.50 1/2	1.50 1/2
Crepe No. 3	1.35	1.35
Scrap Crepe:		
Sc. Crepe No. 1	1.05	1.05
Sc. Crepe No. 2	.98/104	1.01 1/2
Sc. Crepe No. 3	.86/95	.91 1/2
Flat Bark	.80/85	.83 1/2
Sc. Crepe 3X	.96 1/2	.96 1/2

To arrive at f.o.b. Colombo prices, add 53.45 cents a lb. for crepe other than scrap crepe and 31.45 cents for scrap crepe to the above market prices.

Jute

MILD RECOVERY IN GUNNY PRICES AFTER
EARLY FALL

STEADY TREND IN RAW JUTE

LAST Thursday, the Calcutta jute goods market suffered one of those sudden reversals to which it is often prone. Until Wednesday evening, sentiment had been bullish. It was thought that the Middle Eastern crisis would bring still higher prices, because delays in the arrival of goods at their destinations would encourage consumer stockpiling on an extensive scale just in case the area of conflict spread. Overseas buyers had paid more for both gunnies and jute, U.S. burlap consumption in October had been the highest for a long time, strong overseas demand for raw jute had caused a sharp rise in prices in Pakistan, and Indian gunny shippers had been busy covering their short positions. Then, on Thursday morning, the gunny fatka markets suddenly became easier. The first reason given was that a large operator had been selling heavily. Then it was stated that the change had occurred because of the probability of a dock strike in Calcutta. The first reason was probably the more correct, though the selling was not confined to one operator. After the rise which had taken place a few days earlier, it was only to be expected that there would be profit-taking. Besides, overseas consumers had bought heavily and it was not reasonable to assume that they would continue to purchase on the same scale at rising prices.

During the week-end, the weakness in manufactured goods continued but raw jute did not ease to the same extent. In fact, raw jute has shown considerable resistance to any lowering of prices. That is partly because rates in the growing districts are unusually higher than Calcutta parity and there has been a seasonal drop in imports. To some extent, it is due to the belief of dealers, in both Calcutta and the mofussil, that there is not enough jute in India to carry the mills into the new season. But the most influential factor was probably the sharp rise in the price of jute in Pakistan, which increased the disparity between Indian and Pakistani fibre. This rise in the Pakistani prices is explained by the anxiety of foreign consumers to make sure of supplies for early shipment, though, considering the heavy arrears of early contracts awaiting shipment from Pakistan, it is not apparent how fresh buying at higher prices is going to help unless it is expected that the dearer jute of the new contracts will be given precedence for transport.

THE JUTE MARKETS

Manufactured Goods: There was less business in the market during the past week. The drop in the speculative section caused overseas buyers and local shippers to pause. Previously, mills had been able to dispose of considerable quantities of hessian and smaller quantities of sacking. But now there has been less enquiry from abroad and shippers have been inclined to delay their covering in the hope of a further fall in prices. On Tuesday, some enquiries were received and the news that the dock strike would not take place improved rates. On Wednesday morning, the market opened steady and quotations were as under:

	Nov.	Dec.	Jan.-Mar.	April-June
40in. 8oz.	36-14	36-8	36	35-8
40in. 10oz.	46-6	46-1	45-2	44-6
B Twills	120-12	120-14	120-10	119-8
Heavy Ceas (plain)	121-4	121	120-10	119-8
A Twills	120-12	120-14	120-10	119-8
Liverpools	132-6	141-12	142-8	..
Cornsocks	121-4	121-8	121-8	120-4

Raw Jute: While the market for manufactured goods was firm and mills were able to sell substantial quantities, there was good demand for raw jute and a fairly large turnover took place. When the gunny fatka dropped and buyers withdrew, mills showed less interest in jute, but some of them continued to make enquiries at lower prices. In spite of the easier feeling in the goods market, jute sellers were unwilling to reduce their prices, because of the firmness of upcountry markets, so mills found difficulty in making purchases at any substantially lower rates. After a pause of a day or two, when very little business was done, mills again showed more interest on Tuesday and put out enquiries at about Rs. 1-3 a maund below the highest paid. The response from sellers was very meagre and buyers were not able to secure much, unless they were prepared to take delivery from the local bazars. Business was reported during the week in Assam jute at Rs. 32-8 to Rs. 31-8 a maund basis Bottoms, Northern ex agency at Rs. 32 to Rs. 31, and Northern ex Calcutta at Rs. 31-8 to Rs. 31. Kishanganj and Agartala were sold at Rs. 31 basis Bottoms. Murshidabad Tossa was done at Rs. 34 and Rs. 33-12 for Middles only, and at Rs. 32 for Bottoms. Other transactions included Daissee Mesta at Rs. 30-8 to Rs. 29-8 basis Bottoms, Northern Tops at Rs. 37 to Rs. 36, and Bimil at Rs. 29-8 to Rs. 28-8 F.A.Q. Pakistan Export Firsts were taken at Rs. 235 and Rs. 240 a bale, and Pakistan N. C. Cuttings at Rs. 138 a bale.

Opening quotations on Wednesday morning were as under:

Indian Jute:	Landed at Mills Rs. a md. basis Bottoms.	Shipment.
Lower Assam	31-8	Dec.-Jan.
Northern	31-8	"
Murshidabad Tossa	31-8	"
Daissee	32	"
Daissee Mesta	29	"
Local Northern	31	"
Bimil	29-8 F.A.Q.	"
Pakistani Jute (Pucca):	Rs. a bale.	Shipment.
Export Firsts	250	Dec.-Jan.
Export Lightnings	230	"
Mill Firsts	265	"

Tossa is quoted at 8 annas to Re. 1 a maund above the price of white jute.

THE FOREIGN JUTE MARKETS

UPWARD TREND IN PRICES

(FROM OUR DUNDEE CORRESPONDENT)

MATTERS have recently been moving rapidly. From 17th November, prices for jute yarns and cloth were advanced by £5 a ton and then again on 20th November the trade awoke to find that another £5 a ton had been granted to spinners and manufacturers on their production. Of course they needed it because of the big rise in values of raw jute in Pakistan. The higher prices have brought out buyers in all sections of the market and spinners and manufacturers are now well booked up with orders for yarns and cloth for the first quarter of the year. Any consumer who has still to buy yarns or cloth for delivery this year has simply missed his market. Mill Firsts have been raised to £130 a ton, though a secured lot or two might be had at less. Mill Lightnings are lowest at £112 and sellers are usually asking £2 to £3 more, while Mill Hearts are from £107 to £110 and grade Hearts from £103 to £105, November-December, c.i.f. U.K. Daissee is very sparingly offered, but current quotation is £111 for good marks, while grade Tossa-2/3 is from £121 and grade four from £111, same shipment. Spinners here have been buying where they have seen a favourable buy and it is remarkable how many parcels are available at something less than the generally quoted rates for shipment.

The Calcutta goods market has weakened slightly and the "break" is surprising considering the strength of the raw material. Hessians are under their best at 71s 9d for 40in. 10oz. and 53s 3d for 71oz., November, 71s and 53s 3d for December, 69s 9d and 62s 6d January-March, with B Twills offered at from 135s 9d (a cheap price) to 187s 9d, 185s 9d and 185s 3d for the respective periods of shipment all f.o.b. Calcutta. Common 8lb. cops were raised to 15.92d and then to 16.50d a lb., and 8lb. spools to 16.50d and 17.64d a lb., with 3-ply 8lb. twist now up to 18.71d lb., and 24lb. sacking weft jumped from 12.93d to 14.09d a lb. Rove is now at £104 15s for 48 lbs. and £86 5s for 200 lbs. Cloth prices are up to 14.72d a yard for 104oz. 40in. hessians, 13.96d for 102z. and 11.42d for 80z. a yard. Tarpaulin 14 por. 36in. 18oz. is 26.89d a yard.

U.S. BURLAP CONSUMPTION AND STOCKS

U.S. burlap consumption reached the highest figure for four years in October. At an estimated 86 million yards, it is the best month's performance since October, 1952. For the first ten months this year, there has been a gain of 6.3 percent in burlap use over the same period last year. Undoubtedly the expansion in returnable burlap bag programmes, the effects of which appeared to be first reflected in August, is continuing. Increased industrial use of burlap (piecegoods)—some improvement in which was noted in October as a result of the introduction of the coming year's models of automobiles—has also continued. U.S. burlap stocks increased 4 million yards during the month. At an estimated 262 million yards, at the end of October, 134 million yards were spots and 128 million yards were floats. Appearing below are two tables which include the October figures—(1) based on member reports to the Textile Bag Manufacturers Association and the Burlap and Jute Association and (2) projected to represent the

estimated consumption and stocks for the entire industry:

GUNNY SHIPMENT STATISTICS

The following figures include coastal shipment relating to manufactured jute goods for shipment from the port of Calcutta. These are gross figures based on shipping bills presented:

	Hessian Bags (Tons)	Cloth (Tons)	Total (Tons)
1st to 20th November 1956	3,767.5	22,973.6	26,741.1
1st to 20th October 1956	3,466.4	19,605.0	23,071.4
1st to 20th September 1956	1,160.2	19,101.2	20,261.4
1st to 20th November 1956	26,297.7	1,116.3	27,414.0
1st to 20th October 1956	24,947.8	958.9	25,906.7
1st to 20th September 1956	13,907.5	1,450.7	15,358.2

GUNNY SHIPMENTS DURING OCTOBER

The following are the total net figures of manufactured jute goods shipped from Calcutta during the month of October, 1956, after providing for short shipments. These figures include shipments to coastal ports.

	Hessian Bags (Tons)	Cloth (Tons)	Total (Tons)
Gross	4,782.8	31,516.9	36,299.7
Short shipped	85.4	1,096.0	1,181.4
October 1956 (Net)	4,697.4	30,420.9	35,118.3
September 1956 (Net)	2,219.2	29,109.3	31,328.5
August 1956 (Net)	3,330.9	37,120.5	40,451.4
Gross	41,911.5	1,265.6	43,177.1
Short shipped	3,062.9	Nil	3,062.9
October 1956 (Net)	38,848.6	1,265.6	40,114.2
September 1956 (Net)	26,388.8	1,500.6	27,889.4
August 1956 (Net)	42,945.2	2,709.6	45,654.8

Commodity Markets

OCTOBER CLOTH OUTPUT FALLS
DISTURBING EFFECT OF EXTRA
EXCISE LEVY

(BY A SPECIAL CORRESPONDENT)

WITH the recent domestic shortage of cloth and the fall in exports, the cotton mill industry was able to show better output in September at 463 million yards, but the production in October fell to 420,300,000 yards. This is smaller than the October, 1955 output of 437 million yards, but the overall total for the first ten months of the year is higher at 4,381,300,000 yards, against 4,241,000,000 yards in January-October, 1955. High profits made by the industry in recent months, it was said, prompted the Government to raise the excise duty on mill cloth, which was calculated to raise revenue from Rs. 44 crores to Rs. 79 crores. The official directive that the extra amount of the levy should not be passed on to the consumer has obviously disturbed the industry, because despite the rebate of 6 pias a yard on all cloth produced in excess of the January-August, 1956 average, allowed on output till March, 1957, the performance has been below normal. The industry's plea for permission to raise capacity has, to some extent, been granted. The policy announced in July has sanctioned the installation of 14,500 additional automatic looms and 2,100,000 spindles for producing export cloth. This additional capacity is based on a per capita consumption which, it is calculated, will rise to 18.5 yards by 1961.

Informed sources indicate that of these 14,500 looms, the Government has finalised allocations for 12,500 looms and such additional spindleage as will be sufficient to meet the needs of these new looms. The remaining 2,000 looms will be allotted later, presumably in the light of how the looms now allotted are installed and put to work. Mills had sought permission to instal 30,000 looms, indicating that the industry is prepared to invest still further, despite the higher levies and other factors. These additional looms are to begin production within 12 months, and will give 262,300,000 yards of more cloth each year. It has been specified that each additional loom should report a production of 21,000 yards a year from the time of normal working. A period of grace of two months is allowed for initial experiments in the first year for the purpose of calculating the annual production figures. The output from these looms is to be utilised exclusively for export. The amount of penal duty on the quantity of cloth "short-exported" and the manner in which it is to be levied, are yet to be decided. Originally, the Government stipulated a penal levy of 3 annas a yard of cloth "short-exported," over and above the excise levy. The time limit for the operation of the export condition relating to the automatic looms has been put at four years, against the millowners' request that this be reduced to three years.

Domestic Machinery

Constant opposition from the advocate of the handloom has been standing in the way of the Government allowing the expansion of the mill industry, and the import of foreign machinery and plant. As a compromise, the Government has now decided to liberalise the grant of licences for the manufacture of textile machinery in the country as part of a drive to produce as soon as possible the new equipment, such as spindles, ring-frames, looms and the like which the mills require. Already, the value of textile machinery manufactured in India has gone up from Rs. 1.52 crores in 1951 to Rs. 4.1 crores in 1955. The value of imported machinery has declined from Rs. 16.4 crores in 1952-53 to Rs. 6.58 crores in the nine months to September, 1956. Fresh plans for the production of textile machinery with an overall turnover of

Rs. 17 crores a year are being worked out by several units and these are expected to be in their full production stage by 1960.

If the production did not rise of late, it was because the equipment in the industry was working under heavy strain. According to sources close to the industry, about 20 percent of the mill machinery now functioning should be considered to be already in a "run down" condition. The preparatory machinery in the different departments, from the blow room to the weaving shed, is outmoded. According to official sources, during June this year, nearly 170 composite mills in India were working three shifts, 98 mills two shifts and nine units only one shift. Among spinning units, 54 were working three shifts, 51 two shifts and 10 one shift. The normal production for the purpose of the 6 pie rebate is to be reckoned on the basis of the average two-shift output, and therefore, those mills which were working partially will not be entitled to the rebate.

Excise Duty Burden

The incision as to who should bear the additional excise levy—whether the millowners or the wholesalers, or both—affected the domestic offtake of cloth for some time, but conditions have now slightly improved. Although the rebate for larger output was supposed to raise production by at least 5 percent, the performance in October was below expectations. A survey of the conditions of the industry shows that most mills will not be able to bear this additional levy alone. Due to cost factors, most of them are severely handicapped, and even prosperous units will find it difficult to scrape up enough money for meeting heavy rehabilitation costs, after paying the heavy excise duty, and their expansion plans will suffer a setback. The case of marginal and uneconomic units will be precarious.

Rising Consumption

The present allocation of automatic spindles is based on the quantity allotted to the mill sector under the July textile policy which assumes the per capita consumption to rise to 18.5 yards in 1961. But from a study of the increase in expenditure on cloth and the yardage of cloth at a given average price, it appears that the consumption of cloth will rise from 15.2 yards a head in 1955-56 to 22.5 yards a head in 1960-61. Per capita consumption has already been showing a steady rise over the past five years, increasing from 11.7 yards in 1951 to 14.4 yards in 1952, 15 yards in 1953 and 1954, and 15.9 yards in 1955. This improvement has been maintained in the first seven months of this year and the figure has moved up to 16.8 yards. It is widely recognised that in view of the development programmes under way, and the expected rise in the per capita income, there will be a relative rise in consumption expenditure of the individual. It has been computed that this expenditure increase during the second plan period will be of the order of Rs. 40. It is estimated that nearly one-sixth of any increase in consumption expenditure is generally used in the purchase of cloth in the country.

Exports Broaden

Export demand for Indian textiles is slowly recovering, and the quantity of cotton goods passed for shipment in October is higher at 63,930,000 yards, against 55,040,000 yards shipped in September, and 49,990,000 yards in August. But the total quantity shipped in the first ten months of the year has been lower at 627,310,000 yards, against 749,710,000 yards in the corresponding period of last year. On this basis, even on a very conservative estimate, India's cloth exports this year may not exceed 800 million yards, against the target of 1,000 million yards. The setback in India's cloth exports has been due to the general recession in world textile trade—arising out of the changed trading pattern in several countries, revision of import policies by many, emergence of former cloth importing countries as manufacturing exporters, and increased world trade in rayon and other

man-made textiles. India had a privileged position in Asian and African markets. But keen competition from Japan, China, Russia, Britain, Poland, Czechoslovakia and Hungary has affected India's exports to these destinations. Russia which did not supply even a yard of cloth to Iran five years ago, is now Iran's largest supplier of cloth—a position which India enjoyed several years back. India's cloth exports to Asian countries in the first nine months of the year have suffered a sharp decline to 181,800,000 yards from 244,200,000 yards in the corresponding period in 1955, while those to Africa and Europe at 192,500,000 yards and 78,900,000 yards showed a fall of 10 million yards and 2,100,000 yards, respectively. Shipments to the United States during the period dropped to 22,500,000 yards, against 24 million yards shipped in January-September, 1955, while shipments to the Oceanic zone dropped from 42,100,000 yards to 39 million yards.

In recent weeks, however, there have been increasing enquiries for Indian cloth. Burma which has agreed to lift 6 million yards of Indian cloth under the Indo-Burmese agreement, the shipping period for which quantity has been extended to March 1957, is buying another 36 million yards and has received world tenders for this quantity. Recent shipments of printed goods, mulls, voiles etcetera to Burma appear to have been much liked there, and India is likely to obtain a reasonable share of the new order. India and Indonesia are negotiating an arrangement to exchange Indonesia's U.S. aid cotton with Indian cloth, and should this succeed, Indonesia will authorise the import of Indian textiles soon. There have been enquiries from Hongkong for medium greys, while Singapore has evinced interest in the usual styles. Modest business has been concluded with West Africa in grey bafts and coatings. Enquiries from Dar-es-Salaam were negligible, while Mombasa bought some quantities of grey sheetings, drills, leopards and coatings. Ethiopia also accounted for some business, as did the Sudan and Aden. Iraq has recently bought some bleached cloth, and Saudi Arabia has booked some negligible quantities. The closure of the Suez Canal for normal traffic and the consequent diversion of traffic from the Continent and Britain via the Cape has delayed supplies to many Asian and Far Eastern destinations, so much so that many countries, which were not importing cloth from India as much as they did in the distant past, have rushed with enquiries for Indian textiles. With a reasonable amount of care and precaution, India can easily regain a portion of the lost ground in the world textile trade in this situation.

Poor Record

Quite apart from the keen competition Indian textiles have to encounter, the shippers have a poor performance record in these markets. A survey of the trading pattern of the countries which buy Indian textiles reveals that the Indian exporters' inability to supply cloth with consistency in quality and price has been an important factor compelling some of the countries to look to other sources of supply. Nor are these people inclined to supply goods in foldings, assortments and packings to the specifications of the buyers. The Cotton Textiles Export Promotion Council recently sponsored a delegation to study the textile markets in the Middle East, and it received several complaints from importers there against packings and the lack of conformity to standards and samples. Another complaint is that the appearance and finish of Indian cloth is not as bright and attractive as that of other countries. It appears that materials sold as "fast colour" do not retain their colour after first washes, and Indian shippers and mills are insisting on unreasonably large quantities for export in each colour, size, design and width when specifically sought by importers—whereas other countries do not insist on any such huge minimum.

ESTIMATED DECLINE IN SESAMUM AREA

The all-India second estimate of sesamum, 1956-57, puts the current year's area at 4,011,000 acres, against the corresponding adjusted estimate of 4,222,000 acres for 1955-56, according to the Directorate of Economics and Statistics, Union Ministry of Agriculture. This shows a decline of 271,000 acres or 6.3 percent in area during the current year, compared with that of last year. The decrease in acreage under sesamum during the current year has been shared mainly by Madhya Bharat, Madhya Pradesh, Rajasthan and Bombay and to a lesser extent, by Uttar Pradesh, Bhopal, Madras and Vindhya Pradesh, and has been generally attributed to unfavourable weather conditions at the sowing time and continuous and heavy rains, especially in Bombay, Rajasthan and Bhopal. The decrease has, however, been offset to some extent by increases reported mainly by Hyderabad, Saurashtra, Andhra and Kutch. The information given in this estimate covers the period generally up to the end of September, 1956. Till then, the condition of the crop was reported to be generally satisfactory in all the States except Bombay, Rajasthan and Bhopal. In many parts of Bhopal and the Gujarat division of Bombay, the crop was reported to have been damaged on account of floods caused by heavy rains. In parts of Rajasthan, the crop was also reported to have been affected by drought in the month of September, 1956. This estimate does not cover the entire area sown with the crop during 1956-57. Past experience has shown that the area at the second estimate stage forms roughly 70 percent of the area under the crop finally reported. The information given in this estimate relates to the set-up of the States before their re-organisation.

Engineering and Transport

THE NEW INDO-BRITISH AIR
AGREEMENT

DELAY OVER RATIFICATION

(FROM OUR NEW DELHI CORRESPONDENT)

THE Indo-British Air Agreement has not been ratified by the Government of India, although it was concluded in London last year and was to come into force from 1st April, 1956. The main feature of the Agreement, which is subject to ratification by the two contracting parties; is that the carriage of traffic under the Fifth Freedom was limited to 40 percent. B.O.A.C. operates its services both to the west and to the east of India, although they originate from London. Under the existing Agreement, the quantum of these services is calculated separately. B.O.A.C. is not permitted to carry more than 40 percent of its total traffic to the west or to the east of India, both services being regarded as distinct from each other, and the calculation of traffic being made for each side separately. In the nature of things, this provision operates to the disadvantage of B.O.A.C. in so far as its east-of-India services are concerned. It was, therefore, agreed to merge the two services for the purpose of calculating traffic under the Fifth Freedom and limit the carriage of traffic to 40 percent of the total of both the services. It may be added that any U.K. territory, whether to the east of India or to the west of India, is not regarded as a third country. Self-governing dominions are, however, not U.K. territories. Looking at it from that angle and in the light of coming changes in the constitutional status of Malaya and Singapore the new agreement has provided that the categories of traffic will not be affected for the duration of the Agreement. In other words, for the purposes of the Agreement, Malaya and Singapore will not become "third countries" despite prospective change in their constitutional status.

Points of Difference

The Government of India, it is gathered, objects to both these provisions in the new Agreement. It wants to continue the percentage of Fifth Freedom traffic separately for B.O.A.C. services operating to the west and east of India, and to regard Malaya and Singapore as countries outside U.K. territory as soon as they become self-governing dominions. For this purpose, it wishes to curtail the duration of the Agreement from three years (1st April, 1956 to 31st March, 1959) to two years (1st April, 1956, to 31st March, 1958). Eight months of the period have already expired.

With Singapore and Malaya becoming self-governing dominions, there will be almost no U.K. territory east of India. The total traffic of B.O.A.C. east of India, in that event, if the Government of India's contention is accepted, will be limited to 40 percent of its total traffic on that route. This operates both ways. India is also planning to extend its India-U.K. services to the American continent from April 1957. Having no territory west of the U.K. she will have her traffic limited to 40 percent of the total.

Traffic Rights

Under other provisions of the Agreement, India has secured traffic rights between India, Prague and London, between India and Kuala Lumpur (Malaya), between India and Singapore and Colombo, and between India and Indonesia. She has also secured calling rights in the same flight in Switzerland and Germany and in Syria and the Lebanon. B.O.A.C., similarly, has secured traffic rights between India and Istanbul, India and Kuala Lumpur, India and Kandahar and calling rights in the same flight in Switzerland and Germany. As for the frequencies, India has secured an increase from five services a week to seven services a week between India and the U.K., and will have the right to extend these services west of the U.K. and increase the frequencies to 14 a week. B.O.A.C. has so far two services a week through Bombay. It will be permitted to increase the frequency to three a week. India has two services a week to Australia via Singapore. These can be increased to three. The India-Tokyo service, which has a frequency of two a week, can be increased to four a week during the pendency of the Agreement. Both the contracting parties are permitted to operate freighter services twice a week between India and the U.K. and India and Singapore. B.O.A.C. is operating this service already.

International Airport for Delhi

The Indian Minister for Communications told Parliament last week that the question of an international airport for Delhi is still under consideration. The question has been under consideration for at least five years. The issue is whether Palam airport should continue with the Indian Air Force or whether it should become an international airport for civilian traffic. Palam was originally developed by the Indian Air Force. The Willingdon aerodrome was built for civilian use. As the aircraft industry developed, bringing in bigger and bigger aircraft which needed longer and longer runways, the Willingdon aerodrome could not serve the growing needs of international air traffic. Instead of looking round and building a new one, the Civil Aviation authorities have been using Palam and now refuse to get out of it. They want the Air Force to get out instead. In the ultimate analysis, it is the same tax-payer who will have to pay for a new airport, whether it is built by the Civil Aviation Directorate or the Indian Air Force. The new jet aircraft, Boeing, is expected to be in service by 1960. It will need a very long runway. Plans costing over Rs. 5 crores are already under examination to modernise the Bombay and

Calcutta airports to bring them up to international standards. The question is whether Delhi should have an international airport of the requisite standard, and if so, where should that airport be? That Delhi should have an international airport is not in dispute. What is in dispute is its location. The Government of India must soon make up its mind and choose which it will develop into an international airport. In its makeshift condition, Palam lacks some of the necessary facilities needed for international traffic. It has inadequate medical facilities, say, for the fumigation of planes. It has only a land customs post and no facilities for warehousing to keep goods in bond. Prohibition laws have been slightly relaxed at this airport. A bar is now provided in the "transit" enclosure where passengers in transit or even those starting from Delhi can buy drinks, provided they go to an aircraft from their enclosure and do not come back to "non-transit" areas.

A NEW TUBE COMPANY IN INDIA

PRODUCTION LIKELY TO BEGIN
NEXT YEAR

THE annual report of the chairman of Tube Investments Ltd., Sir Ivan Stedeford, mentions that good progress has been made towards the establishment of a new tube company in India, and "we have high hopes of commencing production in the spring of next year." Sir Ivan's report adds that the new venture is to be called Tube Products of India Ltd., and is being formed in association with Messrs. Murrugappa and Sons. So satisfactory has the progress been that Sir Ivan is looking forward to attending the opening ceremony in Avadi, near Madras, early in 1957. He describes it as a most promising new enterprise. In the chairman's report—which notes that the year under review has been one of considerable activity for the Steel Tube Division and shows a record volume of output—it is stated that the progress made in research and development has strengthened the conviction of the directors that the long-range programme of scientific research, designed to advance the organisation's technological developments, will be of great value to Tube Investments Ltd.'s operating companies. To this end, the various technological sections are being grouped at one centre in premises near Walsall airport (Staffordshire). Four of these sections—control engineering, nuclear engineering, plastics development, and data handling—are already installed in Walsall. Another development on the technical side is the appointment to the Tube Investments board of Sir Ben Lockspeiser, one of Britain's most distinguished scientists, who is to guide the concern's research and development activities.

TRANSFORMER PRODUCTION BY

C. A. PARSONS

Two orders just completed by C. A. Parsons and Company, Ltd., England, indicate the wide range of transformers produced at the company's works in Heaton. C. A. Parsons, who are one of the largest British manufacturers of mining type transformers, have recently completed several units which are to be installed underground in a colliery in Nova Scotia, Canada. The transformers are rated at 400 kVA 6,600/2,200-550 volts 3-phase 60 cycles. The alternative voltages on the low tension side are obtained by means of a linking arrangement accessible through inspection openings in the tank cover. A circuit breaker, incorporating overload and earth fault protection and equipped with flit plug is mounted on the 6,600 volt end of the transformer and, due to the large current when operating on 550 volts, the L.V. air-filled chamber is provided with two flit plugs. At the other end of the scale, Parsons also manufacture high voltage power transformers and have just delivered the largest 3-phase unit to be connected to the British Central Electricity Authority's super grid. The transformer (one of two similar units being supplied by Parsons) is rated at 120,000 kVA 275/66/33 kV, is equipped with ON/OFF type cooling and, due to the three windings, the equivalent frame rating approaches 150,000 kVA. The transport weight was 165 tons and the total weight on site, complete with oil, was 234 tons. The transformer was fully tested at their Heaton Works before delivery to site, the tests including an impulse test. Parsons have also just received an order for an even larger 3-phase generator transformer, rated at 210,000 kVA 13.8/295 kV and equipped for OFW type cooling.

LONDON AIRPORT CUTS DOWN ON
CUSTOMS DELAYS

London airport is now virtually free of customs restrictions for goods arriving for transhipment to other parts of the world, according to the statement of Air Chief Marshal Sir George Pirie, chairman of the Air League of the British Empire, made in London on 20th November. The League had been pressing for three years, he said, that every facility should exist for the rapid handling of transhipment cargo—which, in turn, depends more than anything else on the utmost possible freedom from customs formalities. Customs routine has now, with the co-operation of the authorities, been reduced by successive stages to a point where, so far as any restrictions on speedy transhipment of goods is concerned, it can be regarded as non-existent.

Calcutta Markets

GOOD GENERAL DEMAND AT
TEA EXPORT SALE

MIXED TREND IN DUSTS

AT Sale No. 23, held on 26th, 27th and 28th November, offerings at the Export auction consisted of 64,804 packages. There was a good general demand. Commons and teas for price, which were the strongest feature, were 2 annas and sometimes up to 4 annas dearer, especially the Fannings grades. Non-wither Doosars were also a strong feature and were up to 4 annas dearer, while Medium Assams with good liquors were from 1 anna to 2 annas dearer. Low-priced C.T.C.'s, which consisted mainly of fibrous grades, were in strong demand, but the higher priced C.T.C.'s were virtually neglected. The cheaper Whole leaf grades advanced by 2 annas to 3 annas, but the more stylish kinds were only fully firm. B.P.S. were very well supported and were 3 annas to 4 annas dearer, and there was a fair demand for Darjeeling teas.

Quotations

	1956 Rs.	1955 Rs.
Clean Black Pekoe	2 6 0 to 2 7 0	2 8 0 to 2 9 0
Plain B.P.	2 5 0 to 2 6 0	1 13 0
Medium Assam B.B.	2 8 0	1 14 6 to 1 15 0
Best CTC Assam B.P.	3 0 0 to 3 2 0	3 0 0

At the Internal Sale, offerings amounted to 24,291 chests for which there was a good general demand and the market opened at firm to dearer rates, but this eased as the Sale progressed. The very best C.T.C. Assams were the strongest feature of the Sale and were firm, while the remaining C.T.C. teas were irregular and closed at easier rates. Medium Assams and Commons were 1 to 1½ annas dearer at the beginning of the Sale, but at the close, all were a full 2 annas lower. There was much less support for the poor residue teas, while Darjeelings, although receiving fair demand, were irregular.

Quotations

	1956 Rs.	1955
Medium Doosars Dust	2 0 0	
Medium Assam Grainy Dust	2 1 6	
Medium Assam C.T.C. Dust	2 7 0 to 2 8 0	Not available.
Best Assam C.T.C. Dust	2 12 0	

Leaf offerings amounted to 1,445 chests for which there was a good demand at about firm rates. Once again the green teas on offer met with improved demand.

FIRM UNDERTONE IN FREIGHT
MARKETS

ALTHOUGH further large rate improvements have not taken place during the past week, the undertone of the market is very firm. Grain fixtures have been prominent with five different importing countries competing for available tonnage from U.S.-Gulf with the result that Antwerp-Hamburg range discharge has paid 130s compared with 84s in November 1955, and 137s 6d to U.K. ports. American coal to the Continent rose again to 95s and Indian fixtures noted were 80s to Colombo and 85s 9d to Singapore with charterers open again for this destination and for Hongkong. Ore from Vizagapatam to Antwerp was done at 215s and to Northern Range at \$(U.S.)29 while scrap was arranged at \$(U.S.)202,500 f.o.s. from California to Japan for 9,400 tons. In the time charter section, a 10,000-ton motorship was fixed at 52s 6d for the round trip, delivery India via Northern Range while a Scindia vessel obtained 62s 6d for the trip out to Persian Gulf with delivery the U.K.

SUGAR MARKET IMPROVES

During the week ended 28th November, sugar sales in the Calcutta market averaged 4,500 bags daily. Arrivals a day were 1,500 bags and stocks totalled 100,000 bags. Rates for ready sugar ex-Kantapur delivery were Rs. 31-8 to Rs. 31-12 for ordinary grain and Rs. 31-11 to Rs. 33 for big grain. The market tended to rise after being quiet early in the week.

LINSEED RISES

A further advance in prices has been noted during the past week and the undertone has remained steady. Arrivals have been very poor and crushers have been keen buyers. A fair daily turnover has been recorded, chiefly for November-December deliveries, at progressively higher prices. In the oil section, values have increased with the higher trend prevailing in the U.K., and keen enquiries from shippers and crushers have resulted in a fairly active week despite business being reserved: some fresh export business has been possible due to better overseas demand.

MIDDLE CLASS COST OF LIVING INDEX NUMBER FOR CALCUTTA

(Base: August, 1939)

THE Middle Class Cost of Living Indices, by groups, have now been brought up to October, 1956. As compared with September, the October Index for Food shows a rise of 2 points, while those for Clothing, Fuel and Lighting, and Miscellaneous

cellaneous remain unchanged at 546, 268 and 283 points, respectively.

Correlating all the factors, the Middle Class Cost of Living Index for Calcutta shows that the cost of living increased by 2 points during October.

COMPANY AND PUBLIC NOTICES

THE NATIONAL ROLLING & STEEL ROPES LIMITED. NOTICE.

NOTICE is hereby given that the 14th Annual General Meeting of the shareholders of The National Rolling & Steel Ropes Limited will be held at the Registered Office of the Company, Stephen House, 4, Dalhousie Square East, Calcutta, on Saturday, the 29th December, 1956, at 11 A.M. to transact the following business:—

- (1) To receive and adopt the Directors' Report and the audited Balance Sheet and Profit & Loss Account for the year ended 30th June, 1956.
- (2) To declare Dividend on the Preference and Ordinary shares.
- (3) To appoint a Director in place of Mr. George Morgan, C.I.E., who retires by rotation and is eligible for re-appointment subject to section 281 of the Companies Act, 1956 and in this connection to consider and if thought fit to pass the following resolution of which a special notice as required by section 281 of the Companies Act has been received by the Company.

"RESOLVED that pursuant to the provisions of Section 281 of the Companies Act, 1956, Mr. George Morgan, C.I.E., who has attained the age of 89 years and who retires by rotation be and is hereby re-appointed a Director of the Company and it is hereby specifically declared that the age limit for Directors prescribed under Section 280 of the said Act shall not apply to him."

- (4) To appoint a Director in place of Mr. S. C. Roy, who retires by rotation and is eligible for re-appointment and in this connection to consider and if thought fit to pass the following resolution as a SPECIAL RESOLUTION in respect of which a special notice has been received by the Company as required by Section 261 of the Companies Act, 1956:—

"RESOLVED that pursuant to the provisions of Section 261 of the Companies Act, 1956, Mr. S. C. Roy, a Director of the Company who is also a Director of Messrs. Associated Industrial Development Co. (Private) Ltd., the Managing Agents of the Company and thereby an associate of the Managing Agents and who retires by rotation be and is hereby re-appointed a Director of the Company".

- (5) To appoint Auditors and fix their remuneration.
- (6) As SPECIAL BUSINESS to consider and if thought fit to pass the following resolution with or without modification which will be proposed as a SPECIAL RESOLUTION:—

"RESOLVED that the Company hereby consents to Mr. T. S. Sitapati being employed for the several Managed Companies under the Managing Agents—Messrs. Associated Industrial Development Co. (Private) Ltd., including this Company on and from 1st November, 1956, under the designation—Technical & Commercial Manager of the Managing Agents and to his being in the Pay Roll of the Managing Agents for administrative convenience and to this company contributing such proportion of his remuneration as may be considered fair and reasonable by the Board of Directors of the Company from time to time".

- (7) To transact any other business that may be brought forward.

The Share Transfer Books of the Company will remain closed from 15th December to 29th December, 1956, both days inclusive.

A Member entitled to attend and vote at the Meeting is entitled to appoint a proxy to attend and vote instead of himself and that a proxy need not be a Member.

The Dividend if declared will be paid on or after 22nd January, 1957, only to those members whose names appear in the register of the Company on 15th December, 1956, or to their mandates.

By Order of the Board,

For THE NATIONAL ROLLING & STEEL ROPES LIMITED

P. P. ASSOCIATED INDUSTRIAL DEVELOPMENT CO. (PRIVATE) LTD.

K. M. NAIK,
General Manager,

Calcutta-1.
20th November, 1956.

EXPLANATORY STATEMENT AS REQUIRED BY SECTION 173 OF THE COMPANIES ACT, 1956:

Item No. 3:—Mr. George Morgan, C.I.E., who retires by rotation and is eligible for re-appointment has attained the age of 89 years and hence his re-appointment needs your approval by a resolution in respect of which special notice has been received from a shareholder in accordance with the requirements of Sections 190 and 281 of the Companies Act, 1956. Mr. George Morgan joined the Board of Directors of the Company in the year 1945. During the long period of association with the Company he has rendered valuable services to the Company and it is in the interest of the Company that the Board should avail of his valuable advice by retaining him as a Director of the Company.

Item No. 4:—Mr. S. C. Roy, a Director of the Company retires by rotation and a Special Notice has been received from a shareholder of the Company as required by Section 261 of the Companies Act, 1956 proposing that the appointment of Mr. S. C. Roy as a Director be made in accordance with the provisions of the said Act. The Managing Agents of the Company—Messrs. Associated Industrial Development Co. (Private) Ltd., have the right to appoint one Director as an Ex-officio Director of the Company. Mr. G. K. Khemka has been appointed as an Ex-officio Director of the Company by the Managing Agents. Mr. S. C. Roy has been a Director of the Company since the year 1951 and has for some years past been associated as one of the Directors of the Managing Agents who are entrusted with the management of the affairs of the Company. As it is in the interest of the Company that it should continue to receive the benefit of his valuable advice as a Member of the Board, it is desirable that he be re-appointed as a Director by a Special Resolution in accordance with the provisions of Section 261 of the Companies Act, 1956.

Item No. 6:—It was felt that in the interest of all the managed Companies of Associated Industrial Development Co. (Private) Ltd., the Managing Agents this Company it would be desirable to avail of the services of Mr. T. S. Sitapati, a technically qualified Engineer and experienced Commercial Personnel by all the managed companies. Accordingly Mr. T. S. Sitapati has been employed for all the managed Companies under the Managing Agents and has been designated as Technical & Commercial Manager of the Managing Agents. For administrative convenience he will be in the Pay Roll of the Managing Agents. He will do the work of all the managed companies and his remuneration will be shared by all the managed Companies. This Company will bear such proportion of his remuneration as may be considered fair and reasonable by the Board of Directors of the Company from time to time. Consent of the shareholders is being sought for the arrangement by a Special Resolution.

To All Shareholders:
And in particular to:

R. R. Bhandary Esq., Kaviraj Shrivath Rimal, H. H. Lt. Genl. Shanker Shum Shere J. B. R., Grihya Kumari and Rani Raj Kumari Devi.

DALMIA CEMENT (BHARAT) LIMITED

Dated: 20th November, 1956.

THE NATIONAL INSULATED CABLE CO. OF INDIA LIMITED. NOTICE.

NOTICE is hereby given that the 14th Annual General Meeting of the Shareholders of The National Insulated Cable Co. of India Ltd. will be held at the Registered Office of the Company, Stephen House, 4, Dalhousie Square East, Calcutta, on Saturday the 29th December, 1956 at 11-30 A.M. to transact the following business:—

- (1) To receive and adopt the Directors' Report and the audited Balance Sheet and Profit & Loss Account for the year ended 31st March, 1956.
- (2) To declare a Dividend.
- (3) To elect a Director in place of Mr. B. P. Khaitan, who retires by rotation and is eligible for re-election.
- (4) To elect a Director in place of Mr. R. R. Bhandary, who retires by rotation and is eligible for re-election.
- (5) To approve pursuant to Section 261 of the Companies Act, 1956 the continuance as a Director of Mr. S. C. Roy, who was re-elected a Director at the Ordinary General Meeting held on 29th December, 1954 and if thought fit to pass the following resolution as a SPECIAL RESOLUTION in respect of which a special notice as required by Section 261 of the said Act has been received by the Company:—

"RESOLVED that pursuant to the provisions of Section 261 of the Companies Act, 1956, Mr. S. C. Roy, a Director of the Company who is also a Director of Messrs. Associated Industrial Development Co. (Private) Ltd., the Managing Agents of the Company and thereby an associate of the Managing Agents do continue his appointment as a Director of the Company."

- (6) To appoint Auditors and fix their remuneration.
- (7) As SPECIAL BUSINESS to consider and if thought fit to pass the following resolution with or without modification which will be proposed as a SPECIAL RESOLUTION:—

"RESOLVED that the Company hereby consents to Mr. T. S. Sitapati being employed for the several managed Companies under the Managing Agents—Messrs. Associated Industrial Development Co. (Private) Ltd., including this Company on and from 1st November, 1956 under the designation—Technical & Commercial Manager of the Managing Agents and to his being in the Pay Roll of the Managing Agents for administrative convenience and to this Company contributing such proportion of his remuneration as may be considered fair and reasonable by the Board of Directors of the Company from time to time."

- (8) To transact any other business that may be brought forward.

The Share Transfer Books of the Company will remain closed from 15th December to 29th December, 1956 both days inclusive.

A Member entitled to attend and vote at the Meeting is entitled to appoint a Proxy to attend and vote instead of himself and that a Proxy need not be a Member.

The Dividend if declared will be paid on or after 22nd January, 1957, only to those members whose names appear in the register of the Company on 15th December, 1956 or to their mandates.

By Order of the Board,
For THE NATIONAL INSULATED CABLE CO. OF INDIA LIMITED,

P. P. ASSOCIATED INDUSTRIAL DEVELOPMENT CO. (PRIVATE) LTD.,

K. M. NAIK,
General Manager,
Managing Agents.

Stephen House,
4, Dalhousie Square East,
Calcutta-1
20th November, 1956.

EXPLANATORY STATEMENT AS REQUIRED BY SECTION 173 OF THE COMPANIES ACT, 1956:

Item No. 5:—A Special Notice has been received from a Shareholder of the Company as required by Section 261 of the Companies Act, 1956 proposing that the continuance of Mr. S. C. Roy as a Director of the Company be approved in accordance with the provisions of the said Act. Although Mr. S. C. Roy does not retire by rotation it is felt that his continuance as a Director requires approval of the Shareholders. The Managing Agents of the Company—Messrs. Associated Industrial Development Co. (Private) Ltd. have the right to appoint under the present Articles of Association of the Company one Director as an Ex-officio Director of the Company. Mr. G. K. Khemka has been appointed as an Ex-officio Director of the Company by the Managing Agents. Mr. S. C. Roy has been a Director of the Company since April, 1942 and has for some years past been associated as one of the Directors of the Managing Agents who are entrusted with the Management of the

affairs of the Company. As it is in the interest of the Company that it should continue to receive the benefit of his valuable advice as a Member of the Board, it is desirable that his continuance as a Director be approved by a Special Resolution in accordance with the provisions of Section 261 of the Act.

Item No. 7:—It was felt that in the interest of all the Managed Companies of Associated Industrial Development Co. (Private) Ltd. the Managing Agents of this Company it would be desirable to avail of the services of Mr. T. S. Sitapati, a technically qualified Engineer and experienced Commercial Personnel by all the Managed Companies. Accordingly, Mr. T. S. Sitapati has been employed for all the Managed Companies under the Managing Agents and has been designated as Technical & Commercial Manager of the Managing Agents. For administrative convenience he will be in the Pay Roll of the Managing Agents. He will do the work of all the Managed Companies and his remuneration will be shared by all the Managed Companies. This Company will bear such proportion of his remuneration as may be considered fair and reasonable by the Board of Directors of the Company from time to time. Consent of the Shareholders is being sought for the arrangement by a Special Resolution.

To All Shareholders:
And in particular to:

Basakhi Ram, Raja Ram, Mr. R. R. Bhandary, H. H. Princess Abida Sultan, Mrs. Allu F. Dastur, Mrs. Dinbai Minocher Kotwal, Mr. P. R. Kavashji, Mrs. Lucy Campos Serrao, Commdg. Genl. Sir Baber Shum Shere J. B. R., Mrs. Banoo Bai Framroz Pavri, Miss Ana Maria Pais, Miss Maria Ascenza C. D'Souza, Mrs. Angela De Sa and Narendra Shum Shere J.B.R.

"That Mr. K. P. Goenka, be and is hereby appointed a Director of the Company whose period of office is liable to determination of directors by rotation."

As Special Business.

To consider and, if thought fit, to pass with or without modification, the following resolution which will be proposed as a Special Resolution:—

(i) That the requirements of Articles 85, 86, 90, 125, 177, 181 & 182 of the Articles of Association of the Company be not complied with in respect of the half-year ended the 30th September, 1956.

(ii) That the Articles of Association of the Company be altered in manner following:—

(a) That Articles 85 and 86 shall be deleted and the following new Article 85 substituted therefor:—

"85. In addition to any other meetings, General meetings of the Company shall be held within such intervals as are specified by Section

166(1) of the Companies Act, 1956, and subject to the provisions of Section 166(2) of that Act at such times and places as may be determined by the Board. Such general meetings shall be styled Annual General Meetings and shall be specified as such in the notices convening the meetings."

(b) That Article 90 be deleted and the following new Article substituted therefor:—

"90. The ordinary business of an Annual General Meeting shall be to receive and consider the Profit and Loss Account, the Balance Sheet and the Reports of the Directors and of the Auditors, to elect Directors in the place of those retiring by rotation, to appoint Auditors and to fix their remuneration and to declare dividends. All other business transacted at an Annual General Meeting and all business transacted at an Extraordinary Meeting shall be deemed special business."

(c) That in Article 125—Line 1, the words "Second Ordinary" shall be deleted and the words "Annual General" substituted therefor.

(d) That Article 177 shall be deleted and the following new Article substituted therefor:—

"177. At every Annual General Meeting the Board shall lay before the Company a Profit and Loss Account made up to the 31st March immediately preceding and a Balance Sheet as at that date and such Profit and Loss Account and Balance Sheet shall comply with the requirements of Sections 210, 211, 212, 215 and 216 and of schedule VI to the Companies Act, 1956, so far as they are applicable to the Company but save as aforesaid the Board shall not be bound to disclose greater details of the results or extent of the trading and transactions of the Company than they may deem expedient."

(e) That in Article 181—Line 1, the word "Twice" shall be deleted and the word "Once" substituted therefor.

(f) That in Article 182—Lines 1 and 3, the words "Second Ordinary" shall be deleted and the words "Annual General" substituted therefor. In sub-para 3, the word "Ordinary" where it appears shall be deleted and the words "Annual General" substituted therefor.

The Share Transfer Books of the Company will be closed from 14th to 28th December, 1956, both days inclusive.

By Order of the Board,
DUNCAN BROTHERS & CO., LD.,
Managing Agents.

Calcutta, 26th November, 1956.

NOTE: (a) Warrants for dividends, when declared, will be forwarded in accordance with registered instructions, or if no such instructions have been received, to the registered address of all shareholders whose names appear on the Company's Register at the date of declaration. No application is necessary for payment of dividend.

(b) A member of the Company who is entitled to attend and vote is entitled to appoint a proxy to attend and vote instead of himself. A proxy need not be a member of the Company.

THE MOZUFFERPORE ELECTRIC SUPPLY COMPANY, LIMITED.

NOTICE is hereby given that the Annual Ordinary General Meeting of the Shareholders will be held at the Registered Office of the Company, No. 14, Old Court House Street, Calcutta, on Friday the 21st day of December, 1956 at 11 A.M. for the following purposes:—

- (1) To receive and pass the Directors' Report and the audited Accounts for the year ended 31st December, 1955.
- (2) To elect a Director in place of the retiring Director.
- (3) To elect Auditors for the ensuing year, and to fix their remuneration.

The Share Register of the Company will be closed from 14th December, 1956 to 21st December, 1956, both days inclusive.

By Order of the Board,
OCTAVIUS STEEL & CO., LTD.,
A. H. GALLOWAY,
Managing Director,
Managing Agents.

Calcutta, 22nd November, 1956.

NOTE:—A member of the Company entitled to attend and vote at the meeting is entitled to appoint a proxy to attend and, on a poll, to vote instead of himself and the proxy need not be a member.

TEA COMPANIES

O. Po and Dd indicate Ordinary Preferred Ordinary and Deferred Shares, respectively. P next to the name of the company indicates that the Company also has Preference Shares. Figures in 'accounts closed' column indicate the months of the calendar year in which accounts are closed. For Managing Agents refer to the Key (last page) under the numbers indicated.

Vol. CXXXVII No. 3437

DISINCENTIVE AND CONFUSION FOR THE PRIVATE SECTOR

MR. KRISHNAMACHARI'S "SOAK THE RICH"

BUDGET

FRESH taxes had become almost inevitable considering the rising level of internal prices and the fall in the foreign exchange reserves. Those announced last Friday did not come as a surprise. Nor must they be expected to be the last, although it is unlikely there will be more before the election because the next instalment will probably have to aim at the consumption of the ordinary people. The new Finance Minister has already shown that he will do whatever he considers necessary to meet the situation, even if he has to claim the politician's right to choose the best time for it. Last Friday's tax proposals have some slight economic justification, but a great deal more of the political; there is no denying their popularity with the rank-and-file Congress member who must soon face his constituents. But the country would do well to recognise them as harbingers of much greater indirect taxes to come, and in fields where they will be politically far more dangerous than is the case this time. Those who are alarmed at the obviously severe economic damage which Mr. Krishnamachari's measures must cause, can take the consolation that they are probably indispensable, given the political situation as it is, if the greater necessity of taxing the masses is ever to be seriously approached.

The Finance Minister's proposals can be divided quite simply into the economic and the political; for the latter, the only relevant question is whether they are going to be worth the heavy price which will be paid for them. Increased customs and excise duties are the approved method of mopping up surplus spending power and cutting down the flow of imports. Bearing in mind the seriousness of the internal price situation and the drain on foreign exchange, Mr. Krishnamachari's proposals are reasonable, if not in fact lenient. Only the tax on big cars stands out as a piece of vote-catching strategy at odds with the Government's declared policy of expanding the use of motor vehicles. Apart from this one diversion into bullock-cart thinking, the new indirect taxes can be accepted as the minimum necessary in a situation which, one suspects, is more desperate than Mr. Krishnamachari would care to admit. What is certainly to be welcomed is the open acknowledgment of the need for foreign assistance. Where this is on the official plane, it is likely to depend more on the attitude of the External Affairs Ministry than on that of the Ministry of Finance. But at the private level, there is some evidence here that the importance of the foreign investor, and the problems he has to face in a socialist economy, may soon be better appreciated. It is fast becoming clear that the foreign exchange situation, more than any other single factor, is going to decide the performance of the plan. The announcement that another Rs. 400 crores or so will be required, need cause the taxpayer little anxiety. The chances of his having to raise it during the next five years are slight. If the Finance Minister did not find it easy to explain so near to a general election that it will be the foreign exchange cloth to which the plan's coat will have to be cut, and that this will mean a slower pace of economic development, the fact need not be overlooked. Mr. Krishnamachari has acted wisely by attacking the problem with new indirect impositions, but perhaps even more so by admitting that these alone will not be enough.

* e customs and excise duties exhaust the list of the new taxes which have economic value. The remainder are chiefly political and all damaging, some seriously so. The re-introduction of the capital gains levy, after the fiasco of so few years ago, is a piece of pure socialism. Any attempt to present it as one of Mr. Kaldor's ideas is simply to use this economist's carefully-considered system as a justification for political expediency. It

is to be hoped that this is not simply the first of a series of attempts to take individual Kaldor proposals out of their context and present them as steps towards a just and economically viable tax system. The yield from this measure will be negligible. And the political gain will have to be bought at a prohibitive price administratively and in terms of lost confidence among private investors. It is depressing that such a blow to saving and encouragement to cash transactions should have been introduced when the economy is facing a severe credit shortage traceable chiefly to the reluctance of the average person to abandon his traditional preference for liquidity. Nowhere in the world has a capital gains tax been imposed at these rates and at a level of income-tax such as already exists in India. It cannot be expected to affect any but the small minority of persons who are honest and conscientious in their tax payments. Indeed, it will be the evasions which will make it possible for the measure to exist at all. It is ironic that Mr. Krishnamachari's announcement last Friday should have put huge capital gains into the hands of a few speculators on the Calcutta stock market, if on no other, and that the Finance Minister is unlikely ever to see an anna of it. The opportunities which are now open for further harassment, corruption, arbitrary assessment and administrative muddle are numerous enough. The fact that the new levy is to be coupled with the income-tax can only mean that things will be even worse than they were in 1947 when it was based on a separate assessment. This is a bad measure and the more effective it is the more damage it must do. And its method of introduction has violated one of the most sacred of all taxation precepts—that no personal tax should be retrospective.

* Another imposition which threatens to be seriously damaging for the saving habit at a

more difficult to raise capital and will be forced further into dependence on the Government. These are features which, while regrettable, have long since been accepted as inevitable under socialism. It is the immediate impact on the economy which threatens to be the most serious in its consequences. Given the slow growth of banking habits and the lack of confidence in the stock market, these provisions could send business into a sharp recession which would make the achievement of the plan even less likely in the prescribed five years than it is now. The trend towards tax evasion, cash transactions and a general unwillingness to take risks must be expected to continue. It is interesting to consider whether the Finance Minister took into account the revenue he stands to lose through the many other taxes which depend on the level of economic activity in the private sector when he arrived at his figure of Rs. 64 crores.

One fact which is already apparent is that the country's stock markets have sustained a blow comparable with that of January this year when the life insurance companies were nationalised. Once again, certain large operators were able to get wind of what was in store before it was actually announced and so relieve their fellow gamblers of considerable sums of money. If these are eventually paid, the Calcutta market may be in for a period of sustained disorganisation similar to that which brought its activities to a standstill earlier this year and from which the recovery was so painful and prolonged. Whether the present shock to confidence will be taken without complete collapse, only the future can reveal, but it is clear that the rôle of the stock markets in the Indian economy is going to be a smaller one. In the summer of 1955, the then Finance Minister, Mr. Deshmukh, pointed to the health of the stock exchanges as an index of public confidence in the Government's newly-declared socialistic policy. The price of Indian Irons touched Rs. 43 shortly after; in the Calcutta market last Saturday they were cleared at a nominal quotation of Rs. 31. Since then they have been down to Rs. 29-13.

AN AMERICAN VIEW OF INDIAN ECONOMIC POLICY

VIRTUE IN AMBIGUITY

IT is customary for official spokesmen to claim that the Industrial Policy Resolution presented by the Prime Minister last April is helping the progress of private enterprise in this country. The assertion is made that the Resolution has clearly defined the functions and scope of the private sector; that investors reacted favourably to it, since prices rose on the stock market; and that every entrepreneur now "knows exactly where he stands". A mild subscription to this view, but with many important qualifications, comes from Mr. Harry Robinson, an American research economist who has been assisting the Government of India in analysing the needs and opportunities of private investment in this country. Mr. Robinson says: "The public reaction to the 1956 Resolution was diversified, but in most instances favourable. Prices on the stock exchange recorded a moderate rise. The Tata interests could have been seriously affected by an unfavourable Resolution, especially since they own a large iron and steel plant. However, on the day the Resolution was released, their stock advanced Rs. 6 a share."

Without entering into a controversy about whether share rises reflect a favourable reaction, or whether they reflect that a measure is less damaging than had been feared, there is no denying that merely issuing the Resolution, in itself, has been welcome. Like the one which appeared in 1948, it reflects the Government's line of thinking on industrial matters at a particular, more recent, point of time. But to say that the 1956 Resolution represents "policy" any more than the 1948 one did might, it seems, prove an exaggeration. The latter contained no mention of nationalising the airlines, the Imperial Bank or life insurance—yet all three came under the knife. The latest Resolution, drafted obviously in the light of these major defections from the fundamental provisions of its predecessor, seeks refuge in a mass of ambiguities. It lists 17 industries, the development of which will be the "exclusive responsibility" of the State; but then says that the State may secure the co-operation of private enterprise in establishing new units in these industries, when the national interests so require. It leaves the development of a host of other industries to the private sector; but adds that "it is always open to the State to undertake any type of industrial production," presumably also when the national interests so require. In other words, the Resolution implies that the State can do what it likes with whichever industries it likes at whatever time it likes—"when the national interests so require"; the judge of national interests always being a Government which is subject to varying political pressures from time to time. On 30th April this year, it is certain, the Government thought that 17 industries should be its own responsibility, and 12 more should pro-

gressively become so. What it thought on the 30th of each subsequent month is nearly as certain; but what it will think on the 30th of each of the coming months seems to be much less so. Mr. Robinson mentions the virtues of ambiguity. "In a certain sense, ambiguity may be understandable during this period in which India is developing a socialistic society.... Rather than be forced into definite commitments, it appears that this 'feel-as-you-go' technique is the one which will govern, regardless of the uncertainties such a policy engenders. This procedure permits deviations to be made which politically might not be possible were the Government to commit itself at this time to a well-defined programme." But it would be rash to assert either that a series of ambiguities, however necessary they may be politically, constitute an industrial policy; or that they are sufficient to allay the doubts of investors. Mr. Robinson justly points out that "the Resolution leaves much to be desired by the private investor, particularly a foreign investor, in the way of removing misgivings and uncertainties."

It is often argued that the reason why the Government has vigorously to expand its industrial interests during the second plan is that private enterprise has failed to do what was expected of it. The charge will come as a surprise to those who have examined the statistics, and discovered that whereas the public sector's investment outlay during the first plan fell far short of the targets, the private sector's fully achieved the expected figures. Mr. Robinson mentions two of the reasons generally given for the supposed lethargy of private enterprise: "inadequate national savings, and a general desire for investment in short-term transactions." But he does not examine them more closely to show that the first is the combined result of inflation and taxation, whereas the second is, to some extent at least, a product of the general economic uncertainties. Nor does he emphasise sufficiently the fact

NOTICE

With the weekly issue of CAPITAL dated 20th December, it is proposed to issue a supplement of approximately 148 pages, the Annual Review of Commerce, Trade and Industry. Besides essays on specific industries, e.g., jute, coal, tea, etc., the Review will contain exclusive articles by, among others, the Cambridge economist Mrs. Joan Robinson on unemployment and the second plan; the Oxford economist Dr. T. Balogh on the balance of economic power; Mr. V. T. Krishnamachari on the aims of the second plan; Dr. B. R. Shenoy on the prospects of the second plan; Mr. Neil McInnes on the costs of economic progress; Mr. Geoffrey Tyson on the growing idea of a common European market; Dr. N. Das on managerial autonomy in public enterprises; and Mr. Naval Tata on the jealousies of private and public enterprises. The Review will be distributed free to all registered subscribers. Additional copies at Rs. 5 each may be obtained from the Manager, CAPITAL, at 5, Mission Row, Calcutta-1. Orders for extra copies should be placed early.

that private investors do not put their money in coal or road transport while Governments cheerily debate their nationalisation; they put their money only reluctantly in other industries after they have seen such things as the Imperial Bank and life insurance disappear into the bag without notice. This reluctance, moreover, is liable to grow if no claim is permitted before a judicial authority on the quantum of compensation the Government owes when it takes over assets from a private investor.

India's need for foreign investment is great, and there seems to be a poor prospect that the figures expected by the planners from private sources abroad will be fulfilled. Mr. Robinson is justified in pointing out that the present policy "reflects the old approach of treating foreign investment with suzerainty. The possibility of expanding private foreign investment in India would have been materially enhanced had the Resolution been more specific in defining the nationalisation policy in more general terms, as well as in terms of specific interest to the foreign investor." The reason why this has not been done may be largely political; there is an unusual eagerness to avoid seeming appreciative of the foreign investor, in deference to party diarchs who nurse the notion that capital and technical expertise from abroad are the unchanging symbols of imperialist exploitation. In Mr. Robinson's opinion, "it would appear that the probability of nationalising foreign companies in India has now been reduced to the same risk level that any foreign investor subjects himself when operating abroad." But it would be interesting to know which place abroad he has in mind when making his sweeping comparison. As with Koestlerian yogis and commissars, the "spectrum" of the nationalists too has many gradations. At one end are the Stalins and Nassers of our age; nearer the other end are sometimes the gentlemen of Indoneisa who repudiate debts which do not exist. Somewhere between them perhaps lie India's State and Central Governments, which apply unsophisticated rules of division and subtraction to expert valuations of nationalised assets.

CURRENT COIN

Finance for Industry.—Addressing from the chair the second quarterly general meeting of the Indian Chamber of Commerce last week, Mr. K. P. Goenka discussed private industry's current difficulties in obtaining finance for its day-to-day operations, and also the prospects of the private sector as a whole being able to find the Rs. 2,400 crores that will be needed in the second plan period to fulfil the targets allotted to it. The funds in the investment market, said Mr. Goenka, are limited and "whatever surplus funds have been available they are being used up in the modernisation of plant and equipment and such other schemes, without leaving anything substantial for investment in new industrial undertakings." The resources of the concerns themselves have also been depleted in financing replacement of fixed stock or in modernising and expanding it, and to the extent that they have drawn on bank finances "money has been withdrawn from circulation, thereby adding to the tightness in the money market." Other factors such as the delay in government payment of bills, investment of employees' provident fund moneys in officially-conducted small savings campaign and the difficulty in the rediscounting of import bills, have also contributed to the scarcity of funds. Mr. Goenka stressed that this is "not a healthy climate for new industries to be started and big industrial developments to take place." The Reserve Bank has the direct responsibility of ensuring that more funds are available to the commercial banks for investment and that rediscounting policy is in line with the needs of the day, Mr. Goenka suggested. Speaking about the performances of the various credit institutions which have been created to administer loan aid to private industry, Mr. Goenka said that the Industrial Finance Corporation, the State Finance Corporations and the Industrial Credit and Investment Corporation "had not lived up to the expectations". He pin-pointed the difficulty as being mainly their credit policy, which required suitable revision in the light of private industry's financial needs for expansion. This is also what other critics of these institutions have stated.
